4. Are these contracts on a management fee basis, are they cost-plus contracts, or were they given as a result of tender?

Mr. HOWE:

1. Six contracts have been let to St. Catharines Steel Products Limited on Canadian account.

2. The estimated total value of these contracts is $4,454,000.

3. Three types of armour piercing and semi-armour piercing ammunition of a highly technical nature are being manufactured for Canadian account.

4. All of the contracts mentioned in 2 have been let on a target price basis.

Note.—The British government have requested us not to give information regarding United Kingdom contracts placed in Canada.

WAR LABOUR BOARDS

Mr. DOUGLAS (Weyburn):

1. What is the personnel of the wartime labour boards?

2. What organizations do these individuals represent?

3. What salary, travelling expenses and other remuneration have been paid to them, as at March 31, 1942?

Mr. MITCHELL:

War Labour Boards

National Board	Remuneration	Travelling Expenses
Hon. Humphrey Mitchell (Chairman), Department of Labour	No remuneration	
Dr. Bryce M. Stewart (Vice-Chairman), Department of Labour	No remuneration	
A. Deschamps, President, Builders Exchange, Montreal	$ 75 00	$ 154 95

MILITARY SERVICE—JOLIETTE-L'ASSOMPTION-MONTCALM

Mr. FERLAND:

1. To what point have the French-language recruits in the electoral district of Joliette-L'Assomption-Montcalm, summoned to receive their military instruction at training centre No. 42, Joliette, Quebec, actually been sent?

2. Is it true that young men of the province of Quebec are sent to centres of military instruction outside the province?

Mr. RALSTON:

1. Such men have not been sent to any one point but have been sent to various advanced training centres according to the arm or service in which they were to be trained. After completion of advanced training they have been dispatched to various units for duty. Recruits who do not speak English are sent to advanced training centres and units in which the French language is spoken, such as: Petawawa, Borden, Barriefield, Farnham, Three Rivers, Valcartier and Halifax. To prepare a complete list of points at which men trained at Joliette are now serving would require a study of the individual documents of all such men.

2. Men from the province of Quebec may be sent for training to training centres in Quebec, of which there are 11 basic and 3 advanced, or to other provinces, depending on the arm or service in which they are trained. Similarly men from other provinces may be sent to the province of Quebec for training, for example, all reinforcements from all over Canada for infantry (machine gun) battalions, are trained in Three Rivers.

CANADIAN BUREAU OF INFORMATION IN UNITED STATES

Mr. BRUCE:

Has anything yet been done in respect to the establishment of a Canadian bureau of information in the United States?

Mr. THORSON: The question of the establishment of a Canadian bureau of information in the United States is at present under review with the United States authorities concerned with the field of public information.

NATIONAL SELECTIVE SERVICE ADVISORY BOARD

Mr. BENCE:

1. Who is the director of national selective service?

2. Where was his residence immediately prior to his appointment?

3. What does he receive by way of pay and allowance in such position?

4. Who is the associate director of national selective service?

5. Where was his residence immediately prior to his appointment?

6. What does he receive by way of pay and allowance in such position?

7. What are the names and addresses of the national selective service advisory board and the pay and allowances paid to each one for acting in such capacity?

8. Give the names and addresses immediately prior to appointment, and pay and allowances of all other officers, clerks, and other employees appointed under the provision of section 5, subsections 1 and 2 of the order set forth in order in council P.C. 2254.

Mr. MITCHELL:

1. Elliott M. Little.

2. 136 Moncton Avenue, Quebec, P.Q.

3. Mr. Little's services are gratis.

4. Paul Goulet.

5. 46 Glencoe, Outremont, P.Q.

6. $7,000 per annum.

7. (a) The national selective service advisory board is composed of the members of the national war labour board and the interdepartmental committee on labour coordination as follows:

Hon. Humphrey Mitchell, Minister of Labour.

Mr. E. M. Little, Director of National Selective Service.

Mr. A. Deschamps, Builders Exchange, 680 Sherbrooke St. W., Montreal, P.Q.

Mr. George Hodge, Canadian Pacific Railway Co., Montreal, P.Q.

Mr. G. Jackson, Sentinel Secruities of Canada, Ltd., Toronto, Ontario.

Mr. J. H. Stovel, Dome Mines, South Porcupine, Ontario.

Mr. H. Taylor, Canadian National Carbon Co. Ltd., Toronto, Ontario.

Mr. John A. Bell, Order of Railroad Telegraphers, 139 Pacific ave., Toronto, Ont.

Mr. W. J. Dunn, Toronto District Labour Council, 404 Merton street, Toronto, Ont.

Mr. J. A. McClelland, Trades and Labour Congress of Canada, Valois, P.Q.

Mr. A. R. Mosher, Canadian Congress of Labour, 230 Laurier ave. W., Ottawa, Ont.

Mr. Gerard Picard, Confederation of Catholic Workers of Canada, Quebec, P.Q.

Dr. Bryce M. Stewart, Department of Labour.

Mr. H. C. Goldenberg, Department of Munitions and Supply.

Lieut.-Col. G. S. Currie, Department of National Defence, Army.

Mr. H. F. Gordon, Department of National Defence, Air Services.

Mr. H. A. Wilson, Department of National Defence, Naval Services.

Major-General L. R. LaFleche, Department of National War Services.

Dr. G. S. H. Barton, Department of Agriculture.

Dr. W. A. Mackintosh, Department of Finance.

Mr. K. W. Taylor, Wartime Prices and Trade Board.

Dr. C. Blackler, Department of Pensions and National Health.

(b) No special remuneration for their services in this connection.

8. L. A. Wright, Montreal, P.Q., assistant to director, $6,000 per annum.

Miss D. E. White, Quebec, P.Q., clerk, $1,620 per annum.

Miss Y. Bryson, Ottawa, Ont., clerk, $1,620 per annum.

Miss A. Weaver, stenographer, $780 per annum.

Miss H. O'Donnell, typist, $900 per annum.

Miss L. Graham, typist, $720 per annum.

JOHN DOBBIE

Mr. NICHOLSON:

1. Is there a Mr. John Dobbie from Port Arthur in the Department of Munitions and Supply?

2. If so, what is his occupation and salary?

3. When was he appointed?

4. What is his age and qualification for that position?

[Mr. Mitchell.]

Mr. HOWE:

1, 2 and 3. Mr. J. C. Dobbie of Port Arthur, Ontario, was appointed as a clerk, grade 3, economics and statistics branch, Department of Munitions and Supply on October 10, 1941. Salary $1,380 per annum.

4. (a) Twenty-five years of age (medically unfit for military service);

(b) Graduate of Queen's university. Majored in economics.

INDEMNITY CLAIMS FOR LAND APPROPRIATIONS FOR WAR PURPOSES

Mr. FERLAND:

1. Did the Department of Justice receive from the office of the Secretary of State on February 5, last, petitions of right from Joseph Landry, Arthur Foucher and Victor Langevin of L'Assomption, and from Edouard Urbain, all farmers, claiming indemnities on account of land expropriations for war purposes?

2. Have these petitions of right been submitted to His Excellency the Governor General?

3. If not, does the Department of Justice intend to deal with these petitions?

Mr. ST. LAURENT:

1. Yes.

2. No.

3. These petitions are under consideration by the Department of Justice, and a report from the department concerned is awaited to enable the Minister of Justice to advise whether fiats should be granted.

*EXPRESSION BY MILITARY OFFICERS OF PRIVATE POLITICAL OPINIONS—LIEUT.-COL. MESS

Mrs. NIELSEN:

1. Are military officers forbidden to express private political opinions when acting in an official capacity?

2. If so, what disciplinary action has been taken against Lt.-Col. Mess for his address before the Canadian club in Saskatoon on May 6?

Mr. RALSTON: I might make an oral answer to these questions. In answer to the first question, which evidently has reference to Lieutenant-Colonel Mess who is mentioned in the second question, Colonel Mess is not a military officer, and therefore I do not think either of the questions applies. In that connection, however, I should like to tell the house the situation with regard to the address of Colonel Mess to which reference is made in the questions.

The statement reported as having been made by Colonel Mess was made in the course of an address to the Canadian club and the Women's Canadian club of Saskatoon. Colonel Mess told his audience he was president of the Association of Canadian Clubs, director of army recruiting, a Canadian business man and

a civilian. He asked that his remarks be considered as coming from a civilian. His remarks regarding the communist party of Canada were quite incidental to one short section of his main address which was devoted to the duties of citizens in a number of fields.

In that particular section of his address he asked for consideration and tolerance by his fellow Canadians for those of other nationalities. He pointed out that we had in Canada over two and one-half million citizens who are often referred to as "foreign nationals." He emphasized that 95 per cent of these were faithful people who were loyal to our institutions. He did in this connection refer to the communist party of Canada, which, as the house knows, is an illegal organization, and indicated his views as to what the methods of the communist party of Canada are. As I have said, Colonel Mess stated that in making these remarks he was expressing his views as a civilian. He was not authorized by the government or the department to express any views or make any statement on this subject.

I have made it clear to Colonel Mess that such matters more properly pertain to the realm of the Royal Canadian Mounted Police, and the intelligence and security branch of the army, than to the recruiting branch and that the interests of security make it inadvisable for any official of the department to discuss in public the methods which an illegal organization may be or may not be supposed to be using.

Lieutenant-Colonel Mess has, in his capacity of president of the association of Canadian clubs, delivered many addresses on matters affecting Canadian citizenship, and he has explained to me, what I can quite understand, that he did not realize the importance which, on account of his official position, would likely be attached to what he might say on the subject in question. I may say that any subversive influences which might affect either our armed forces or the civilian population are having and will continue to have the most vigilant attention by the governmental authorities concerned.

JOINT DEFENCE BOARD—COLONEL O. M. BIGGAR

Mr. GILLIS:

1. What remuneration in the form of salary, or expenses, or both, is paid by the government to Colonel O. M. Biggar in his capacity as chairman of the Canadian section of the permanent joint board of defence?

2. What remuneration in the form of salary, or expenses, or both, is paid by the government to Colonel O. M. Biggar in his capacity as director of censorship?

Mr. MACKENZIE KING: No remuneration has been paid or authorized to be paid to Colonel O. M. Biggar for his services either as chairman of the Canadian section of the permanent joint board on defence or as director of censorship. His remuneration in the latter capacity will be considered when the reorganization has been completed and the burden of the duties ascertained. Colonel Biggar has received his actual expenses incurred while away from Ottawa on the business of the permanent joint board on defence and will do so when required to be away in discharge of his functions as director of censorship.

QUESTIONS PASSED AS ORDERS FOR RETURNS

CATTLE AND BEEF STATISTICS

Mr. WRIGHT:

1. What was the total number of cattle exported to the United States during the first four months of 1941, (a) dairy cattle, (b) calves, (c) other cattle?

2. What was the total number of cattle exported to the United States during the first four months of 1942, (a) dairy cattle, (b) calves, (c) other cattle?

3. What was the total number of cattle marketed in Canada in the first four months of 1941, (a) dairy cattle, (b) calves, (c) other cattle?

4. What was the total number of cattle marketed in Canada in the first four months of 1942, (a) dairy cattle, (b) calves, (c) other cattle?

5. What was the total number of cattle marketed in the first four months of 1941 in, (a) stock yards, (b) direct to packers?

6. What was the total number of cattle marketed in the first four months of 1942 in, (a) stock yards, (b) direct to packers?

7. What was the total amount of beef in storage in Canada on January 1, 1941, and May 1, 1941?

8. What was the total amount of beef in storage in Canada on January 1, 1942, and May 1, 1942?

NATIONAL FILM BOARD—APPROPRIATIONS AND EXPENDITURES

Mr. JACKMAN:

1. What was the total appropriation voted by parliament during each of the last two fiscal years for the work of the national film board?

2. What was the total amount made available to the national film board during each of the last two fiscal years from the war appropriation acts?

3. What was the total amount made available to the national film board during each of the last two fiscal years by transfer from grants made by parliament for other branches of government service?

4. What was the grand total of all the expenditures of the national film board during each of the last two fiscal years?

MARITIME LOBSTER INDUSTRY

Mr. BLACK (Cumberland):

1. What are the names and addresses of persons employed by the government in the marketing, handling and storage of canned lobster for 1941 in, (a) Prince Edward Island, (b) Nova Scotia, (c) New Brunswick?

2. For what period was each such person employed, what were his or her duties, what was the rate of remuneration and the total amount paid to each for, (a) services, and (b) expenses?

3. What were the rents or charges paid for offices, storage or warehouse space, the location and the periods of lease or use, to whom were payments made and the amount paid for each?

4. What were the additional expenditures in each province, stating for what purposes they were made and to whom paid?

5. What number of cases of lobster 8 doz. tins, (a) ½s, (b) ¼s, (c) 4 doz. flats, did the government buy in each province during the spring season of 1941, also during the fall season of 1941, and what prices were paid and from whom were purchases made?

6. What quantity of each size was sold and at what price?

7. (a) In what newspapers and magazines did the government place advertisements regarding canned lobster, (b) what was the cost of such advertising, and (c) what was the name of the person or agency handling such advertising and the percentage and total commission paid to each?

8. Did the government charge buyers 8 per cent sales tax on every sale, if not, why not?

9. Did the government reject any lobsters, if so, state reasons, names of packers and addresses and quantity in each instance?

10. Did the government oversell during the spring season, or fall season, if so, state quantity of each size and full particulars?

11. What profit or loss did the government incur on the 1941 canned lobster business, including advertising and all other expenses?

JAPANESE NATIONALS IN BRITISH COLUMBIA

Mr. REID:

1. What has been the total expenditure up to the end of April, 1942, made by the security commission set up to handle the movement of Japanese from the coast of British Columbia?

2. What amount of money has been spent on equipment at the Hastings park camp or depot, showing, (a) number and cost of beds, (b) number and cost of cooking stoves or ranges, (c) cost of lumber and hardware used in construction of fence, (d) cost of labour?

3. What number are employed in this camp, including clerical staff, police and all other help?

4. What total number can now be accommodated at Hastings park?

5. Is it the intention to leave any particular class or classes of Japanese at the Hastings park camp?

MOTIONS FOR PAPERS

WHEAT ACREAGE REDUCTION BONUS

Mr. HAZEN:

For a return showing—(a) the names and addresses of the persons to whom cheques were issued for $4,000 to $5,000 as wheat acreage reduction bonus; (b) how the amounts were made up; (c) how much each person received.

Mr. GARDINER: Mr. Speaker, this motion deals with the same matter that was brought up in a question on the order paper at an earlier stage of the session. I only wish to state that I think this should be allowed to pass subject to the conditions which were stated before, that it is without prejudice and without setting a precedent.

SALT FISH BOARD—PICKLED OR VINEGAR-CURED HERRING

Mr. BLACK (Cumberland):

For a copy of all correspondence between the Department of Fisheries or the salt fish board and the government of Nova Scotia, companies, agencies or persons with respect to the curing and the marketing of pickled or vinegar-cured herring and the bonusing or assisting same during the years 1939 to March 31, 1942.

ATWOOD'S BROOK, N.S., POSTMASTERSHIP

Mr. BLACK (Cumberland):

For a copy of correspondence during 1941 and 1942, in connection with the appointment of postmaster at Atwood's Brook, Shelburne county, Nova Scotia, and the application of Mr. Ernest Kenney and Robert G. Stoddart, an ex-service man; and the retirement of the previous incumbent and the appointment of his successor.

DUTY ON COAL CLEARED AT PORT OF TORONTO

Mr. NOSEWORTHY:

For a statement showing the amount of duty paid on coal cleared at the port of Toronto between April 15 and July 15 (inclusive), 1940.

Mr. GIBSON: In view of the fact that monthly returns of customs figures are readily available, the hon. member for York South has consented to amend the question to read "between May 1 and July 31, 1940, inclusive." I would request that the motion be passed as amended.

CANADIAN ARMY

DISPATCH FOR DUTY OUTSIDE CANADA OF MEN CALLED UNDER MOBILIZATION ACT

On the orders of the day:

Hon. GROTE STIRLING (Yale): I should like to direct a question to the Minister of National Defence, of which I have given notice. I hold in my hand a copy of order in council P.C. 4105, dated Friday, May 15, 1942, passed under the authority of the War Measures Act, which empowers the government to send detachments of the Winnipeg Grenadiers and the Canadian Fusiliers (City of London regiment) to the United States in connection with certain service and duty. It is recited

in the order in council that the detachments will include men on the strength of these battalions who have been called out for training, service or duty under the National Resources Mobilization Act.

As this is the first instance in which men called out under the mobilization act have been dispatched for duty outside of Canada, I should like to ask the minister to give the house some explanation of the background of this order in council. I should like also to ask if it is the intention of the government to invoke the authority of the War Measures Act for the purpose of sending troops, called up pursuant to the National Resources Mobilization Act, out of Canada for duty in other parts of the world.

Hon. J. L. RALSTON (Minister of National Defence): Mr. Speaker, the duty to which my hon. friend refers is escort duty in connection with prisoners of war. When we came to decide what troops should be provided for that purpose, along with the veterans guard and provost corps personnel, I was advised by the officers concerned that to use troops from these two units would avoid interference with operational, training and other requirements in which other units were engaged. It has been indicated more than once, I think, that the War Measures Act would be used for purposes of this kind when required, and this was a case in which that course was considered advisable.

I do not think my hon. friend will expect me to make any statement with respect to future policy. I can only say that as to the intention for the future, it will be indicated as the circumstances arise.

HONG KONG COMMISSION

INQUIRY AS TO PRESENTATION OF REPORT

On the orders of the day:

Mr. M. J. COLDWELL (Rosetown-Biggar): I should like to ask the Prime Minister if there is any possibility of the house receiving in the near future the report of the Hong Kong commission.

Hon. J. L. RALSTON (Minister of National Defence): All I can say to my hon. friend is what I said the other day, that I am advised that due to the illness of the gentleman who was nominated by the leader of the opposition to take part in the inquiry as counsel, a long extension had to be granted in order to permit briefs to be filed. I indicated last week that those briefs were to be filed within a week. I think they are to be filed to-morrow, if they have not already been filed. At any rate there is some sort of meeting to-morrow in connection with it—some sort of hearing. Further than that I cannot say. The question as to when the report is actually to be filed is one for the commissioner. The delay as I understand it is merely on account of the illness of the gentleman to whom I have referred.

Mr. COLDWELL: Is the minister doing his best to see that the report is expedited? There are many people anxiously awaiting it.

Mr. RALSTON: I can only say to my hon. friend that it is in the hands of the chief justice, and I do hesitate to say that I would take any part in influencing him one way or another. But I will say that so far as the government is concerned, the brief has been ready. As a matter of fact the brief was ready within a week, or perhaps even less, after the hearing was concluded. Therefore there has been absolutely no delay of any kind on acount of anything the government or those representing the government might have been able to do.

BEEF

INQUIRY AS TO ACTION BEING TAKEN TO RELIEVE SHORTAGE

On the orders of the day:

Mr. G. K. FRASER (Peterborough West): Mr. Speaker, I should like to ask a question of the Minister of Agriculture (Mr. Gardiner), because according to a report in a Toronto paper of yesterday this matter is urgent. The report is as follows:

> Beef For Week-End To Hit New Low.
> Greatest Shortage Since Scarcity Started, Live Stock Dealers Predict.
>
> There will be a greater shortage of beef this week-end than has been the case through the whole beef scarcity, live stock dealers at the Union Stock Yards predicted at noon hour to-day. Receipts have not been nearly sufficient to meet the retail needs, only 1,000 cattle, half a normal Tuesday run, was received to-day.

Is the Minister of Agriculture prepared at this time to make a statement to the house with respect to the question I asked on April 20, 1942, and which is reported at page 1743 of *Hansard*? My question had reference to the shortage of beef in the butcher shops in Canada. Replying on that day the minister said he would make a statement within a few days.

Mr. SPEAKER: This is really a question which should be on the order paper.

Mr. FRASER (Peterborough West): I think it is too urgent for that.

THE MINISTRY

REPRESENTATION OF THE PROVINCE OF QUEBEC

On the orders of the day:

Mr. LIGUORI LACOMBE (Laval-Two Mountains): Mr. Speaker, I should like to direct a question to the Prime Minister. Is the Prime Minister through with the consideration of the question as to whether or not the province of Quebec is to be given its proper representation in the cabinet?

Right Hon. W. L. MACKENZIE KING (Prime Minister): My hon. friend has asked that question several times. If he is desirous of having himself considered for such a position, I can tell him immediately that his chances are very slight indeed.

DEFENCE OF CANADA REGULATIONS

INQUIRY AS TO PROBABLE DATE OF FUNCTIONING OF COMMITTEE

On the orders of the day:

Mr. ANGUS MacINNIS (Vancouver East): Mr. Speaker, could the Minister of Justice tell the house when the committee on the defence of Canada regulations is to start its work? The motion was passed two weeks ago to-day.

Hon. L. S. ST. LAURENT (Minister of Justice): Mr. Speaker, the Minister of Justice is not a member of that committee. I suggest the question should be asked of someone who is a member of it.

VICHY REPRESENTATION

FRENCH CONSULATES AND CONSULAR AGENTS IN CANADA

On the orders of the day.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, yesterday I made a statement to the house with respect to diplomatic relations between Canada and France. At that time I made no reference to the position of French consulates and consular agencies in Canada. As hon. members are aware, there are four consulates in Canada, one at Vancouver, one at Winnipeg, one at Montreal, and there is a consular office at Quebec. The consul himself was removed from the Quebec consulate a few days ago, but the office itself is not as yet closed.

There are consular agencies of France in Halifax, Toronto, Edmonton and Vancouver. I should like to say however that the normal commercial and shipping functions of the French consulate and consular agencies have been in abeyance for some time. Their residual duties have been much diminished in volume and importance by the course of the war. The consulates themselves are, as a consequence, rendering very little in the way of service, and their presence has become a focus of suspicions and misunderstandings.

In the circumstances the government have thought it advisable to request the French minister to take the necessary steps to suspend the operation of French consulates and consular agencies, and I have to-day advised the French minister accordingly.

Mr. STIRLING: Would the Prime Minister indicate whether these are French nationals who will have to be returned to France, and whether there are Canadian nationals there who will also have to be returned to Canada?

Mr. MACKENZIE KING: I would have to make inquiries in order to give my hon. friend an exact answer.

COAL

PURCHASES BY CANADIAN NATIONAL RAILWAYS FROM INVERNESS MINE

On the orders of the day:

Hon. C. D. HOWE (Minister of Munitions and Supply): Mr. Speaker, in reply to a question asked by the hon. member for Cape Breton South (Mr. Gillis) regarding the purchase of coal by the Canadian National Railways from the Inverness coal mine, I am advised by the management of the railways that for the past ten years the purchases from the Inverness Coal company have made up a very small proportion of the total tonnage of the mine. For example, in 1941 the railways purchased approximately 15,000 tons out of a total production of 150,000 tons. Contracts have been negotiated recently for the purchase of 250 tons per week. This should help to improve the situation referred to by the hon. member.

BUSINESS OF THE HOUSE

VICTORIA DAY

On the orders of the day:

Hon. GROTE STIRLING (Yale): May I ask the Prime Minister to intimate to the house whether it is the intention that the house shall sit on Monday next?

Right Hon. W. L. MACKENZIE KING (Prime Minister): If there were a general desire on the part of hon. members to have Monday observed as a holiday, in order that they might visit their constituencies on Victoria day, the government would be prepared

to consider such a request. I should say however, from the government's point of view, that we feel we should endeavour to expedite the work of the session as much as possible. As we are now nearing the end of the fourth month of the session and there is still a large amount of business to be done, unless there should be a general wish on the part of hon. members not to sit on Monday, the government proposes to have the regular sitting on that day.

BUSINESS OF PARLIAMENT

REALLOCATION OF WORK OF COMMONS AND SENATE TO MEET WAR CONDITIONS

On the orders of the day:

Mr. T. L. CHURCH (Broadview): Mr. Speaker, I should like to ask if the Prime Minister would care to make a statement in connection with the matters I raised in the house during the past two sessions and the reply he made to me on those occasions, with reference to the reallocation and readjustment of war work between the two houses of parliament. I suggested last session that matters connected with war contracts and expenditures might be one; and some matters on foreign affairs he mentioned yesterday and to-day might be dealt with there, although it is not their function. They have been away now for nearly eleven months, with the exception of a few hours, since last June. Will the Prime Minister give consideration to this matter?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I have been discussing that very matter with the Hon. Doctor King, who is acting leader in the senate at the present time, and I think what my hon. friend has in mind may possibly be furthered as a result of our conversation.

Mr. COLDWELL: Does the Prime Minister consider the war expenditures committee to be a proper function of the other place?

Mr. MACKENZIE KING: I took the remarks of the hon. member for Broadview (Mr. Church) as being general in character, and as not having reference to any particular subject, other than that the other house might interest itself in matters which might be of assistance to this house. I would say to the hon. member for Rosetown-Biggar (Mr. Coldwell) that war expenditures are a primary concern of the House of Commons.

Mr. CHURCH: They should be given more real war work, or the senate should be abolished. They have been sitting here only about six hours since last June.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Tuesday, May 19, consideration in committee of a resolution to provide sums not exceeding $2,000,000,000 for the year ending March 31, 1943, for granting to his majesty aid for national defence and security—Mr. Ilsley—Mr. Vien in the chair.

Mr. MACDONALD (Brantford City): Mr. Chairman, last Thursday when I was out of the house on business affecting the working men of Brantford and the war effort of Canada, my very dear friend, the hon. member for Northumberland, Ontario (Mr. Fraser), whose friendship I have always valued, and of whose friendship I trust I shall always be worthy, made certain remarks respecting an address made by me in the house on the preceding Thursday. His remarks were not entirely complimentary. When I heard what he had said my first impulse was to rush into the house and reply in language just as uncomplimentary. However, I recalled the words of that great Canadian statesman, Sir Wilfrid Laurier, which have been of great help to me and have prevented me from saying things which I might have regretted later on. I would impress these words upon my hon. friends. Sir Wilfrid's words were: "It does not do to bear resentment in public life."

It was evident from my hon. friend's remarks that he was not in the house when I spoke on the previous Tuesday. Apparently he was engaged, as most of us are so frequently, with committees or departmental work which makes it absolutely impossible for us to be in the house all the time. Apparently he relied upon the report of my speech which appeared in the Ottawa *Journal*. That paper was kind enough to honour my remarks with front-page publicity. Doubtless there was a scarcity of other sensational news that day. Those remarks were widely read, if not by the people of Canada at least by the people of Ottawa, and they tended to place a false light upon what is being done by the people of the constituency I represent, the city of Brantford.

If my hon. friend had taken the trouble to read my speech he would have found that I was not speaking about the city of Brantford. My only reference to the city of Brantford was with regard to our happiness in having airports in our vicinity. I want to remind hon. members that these airports are not in the city of Brantford; one is three or four miles away, and the other, seven miles. What I said was:

The commanding officers, the officers, the instructors and the young pilots and the ground

crew have all established for themselves a place in the hearts of the people of Brantford city and we are indeed happy to have them in our midst.

If my hon. friend had taken the trouble to read my remarks he would have found that neither the citizens of Brantford nor those who live in the township were complaining at all about the noise from the aeroplane. There was no suggestion of complaint from anyone. My hon. friend boasted—and I have read his remarks—that he slept in his bed at night next to the airport. I find that my hon. friend's home is not next to the airport, but some considerable distance away. He may have a very good imagination; in fact, I know he is a man of wonderful imagination and energy; but his imagination must have been remarkable if he could go to bed at night and think, or perhaps dream, that he was sleeping next to an airport and then wake up and find that he was several miles away.

My remarks were merely in appreciation of those people whose farms and homes are not separated by miles from these airports. When the aeroplanes take off they pass only twenty-five or fifty feet above the tops of their homes and their buildings. Let me make myself clear: those people were not complaining. I was merely expressing to them a word of appreciation, and I am sure the hon. member for Northumberland, Ontario, would join with me in that appreciation. He spoke also of a certain spirit of complacency which was abroad in this land. Let me hasten to assure him and the committee that there need be no fear of any spirit of complacency being abroad in the city of Brantford or in the county of Brant.

I would remind hon. members that in the last war the county of Brant gave to the armed forces as large a percentage of her population as any county in the Dominion of Canada. I would again remind hon. members that at the present time the county of Brant has given to the armed forces more than 5,000 men and women. I would remind hon. members also that at the commencement of this war the city of Brantford, in association with the city of St. Catharines, so ably represented in this house by my friend the hon. member for Lincoln (Mr. Lockhart), suggested to the government that waste should be collected. The idea of the collection of salvage started in those two cities. The idea of using bags which are distributed and left in the homes originated in the city of Brantford. I remember when the present Minister of Agriculture (Mr. Gardiner) was Minister of National War Services he went to the city of Brantford and investigated what the local council of women were doing, and the national salvage organization was set up after an investigation into what had been done in Brantford. If the collection of salvage throughout Canada were undertaken on a voluntary basis, as it is done in Brantford by the local council of women, it would be a greater success than it is at the present time.

I should like to remind hon. members of two other matters. When the second victory loan was being organized this year it was suggested that Brantford and the county of Brant should subscribe $3,600,000. Instead of subscribing $3,600,000, we subscribed more than $4,900,000. The Red Cross campaign is now being carried on in Canada. The total required is $9,000,000. The total population of Canada is approximately 11,000,000, which means that there must be obtained a little less than $1 a head. What happened in the city of Brantford? With a population of approximately 30,000 people we are being asked to subscribe $60,000, or $2 a head, and I am sure that the subscription will be nearer $90,000.

I feel sure that if my hon. friend had read my few remarks he would have agreed with most, if not all that I said. I concurred in the suggestion made by the hon. member for Lambton West (Mr. Gray) that commissions should be given to all members of the air crew. I went further and said that if that could not be done at the present time, commissions should be given to all men who had flown over Germany. I said that hockey players got excellent treatment in Canada and I thought that men who flew bombers and fighters over Germany were entitled to as good treatment. I am sure my hon. friend would have agreed with that statement. I stated further that there should not be so much talk about defence, that the talk should be more about offence. Let me read my remarks from page 2350 of *Hansard*.

Some hon. MEMBERS: Order.

Mr. MACDONALD (Brantford City): Perhaps my hon. friends would like to read those remarks themselves instead of my doing it. I would remind them that my suggestion was that there should be less talk of defence and more talk of offence. I suggested that instead of having a Minister of National Defence, a Minister of National Defence for Air and a Minister of National Defence for Naval Services, we should have ministers of war. I stated and I repeat that this war will never be won or lost in Canada. If the war is going to be won—and it must be won—we must go abroad and find Hitler and defeat him abroad. We can never do it in Canada. My remarks have met with the approval of a large section of the press.

If hon. members will bear with me, I should like to refer to two editorials which have appeared in the press since I made those remarks. Comment upon them was made in an inland paper, the Brantford *Expositor,* of Thursday, March 14, and also in a paper published on the Atlantic coast, the Halifax *Herald,* of the same date. I shall not take the time of the committee to read these editorials but would recommend them to the attention of hon. members. I am sure, Mr. Chairman, that the member for Northumberland, Ontario, would agree with me that we must have more of the go-out-and-fight spirit than we have had if we are going to win this war.

In my remarks I also referred to the question of the taxation of airports. These airports were built when the present Minister of Munitions and Supply (Mr. Howe) was Minister of Transport, and I wish to commend him and his officers for the splendid job they did. The question of taxation of crown lands is a very broad subject. Some buildings owned by the crown are of special benefit to the community in which they exist. Take, for example, a customs house. A customs house serves the people in the immediate vicinity, in the town or city in which it happens to be. But airports are, in most instances, built in townships, many miles from a city, and any benefits from their establishments do not come to the township but come to the city. My suggestion was that the government might consider paying taxation on that land. My hon. friend the member for Northumberland, Ontario, had the right to take the opposite view, and other members also have the same right. I repeat, the question of taxation of crown lands is a very broad subject.

The Minister of Munitions and Supply has through his department set up throughout Canada private companies which have purchased lands. Do these companies pay taxes, or are the lands bought in the name of the crown and are they exempt from taxation? The Department of Munitions and Supply has also advanced large sums of money to private organizations. Often these private organizations buy lands. In fact, I am informed that the capital advanced to these private organizations is often considerably greater than the capital of the organization itself. Therefore, to all intents and purposes many of these private organizations are now crown companies, but I do not for one minute think they are exempt from taxation.

As I walk along the streets of Ottawa from day to day I notice that almost every few days another building is being taken over by the government. I should like to ask the minister whether, when buildings are taken over by the government, the government pays taxes to the city of Ottawa upon them; and whether, when the government tears down buildings or takes over vacant lands, the government pays taxes to the city of Ottawa for the lands which have been taken over. It must be very difficult, it would seem to me, for the city of Ottawa to set its tax rate if, throughout the year, buildings and lands are taken over by the government and taxation upon these properties ceases. Personally I do not see how the city could meet its expenditures from year to year if the city's taxes are cut into in that manner.

I raise these questions because there seems to be considerable unfairness in the question of taxation of crown lands. The whole question should be reviewed in order that some fair system can be arrived at.

I also wish to bring to the attention of the Minister of Munitions and Supply the question of the shortage of gasoline and rubber. I should like the minister and hon. members to know that my remarks are not at all critical of the minister or of his department. I am convinced that no nation has had a finer Minister of Munitions and Supply than we have had in Canada. But I notice according to the press reports that bond salesmen are entitled to buy used automobile tires while other business men have not that privilege. In what respect are bond salesmen doing a more essential business job than the ordinary business man? Why should the bond salesmen get rubber tires while other men cannot carry on business because they can get no tires?

There is another thing I would draw to the attention of the minister. A man driving a truck cannot take along in it the members of his family. Is it so that a farmer living a few miles from the market must drive his truck and his farm produce to market and that his wife and perhaps his family who sell on the market must go there by some other conveyance? That does not seem to me to be reasonable. If the farmer is going to sell his produce on the market, he should be allowed to drive into the market not only with his produce but also with the members of his family who are going to help him in selling his produce.

With regard to gasoline I notice that the same restriction applies to all business men with the exception of the bond salesman. The bond salesman is again placed in a higher category. I notice by the press reports that a number of business men who have been issued gasoline ration books for categories higher than A have had their books called in and that practically all business men to-day

are on the same basis as pleasure drivers in securing gasoline. It comes to my mind that there are many men carrying on business as commercial travellers, not necessarily selling wares essential to war industry, but selling wares that are essential to those who are carrying on war industry. Why should these commercial travellers be put in the same class with those who do not need their cars for business purposes, with those of us who use cars just for pleasure? I was very glad to hear the minister say in the house last night that every effort is being made to eliminate unfairness in rationing. I say to him and the members of the house that it seems most unfair that men should be put out of business while other people are allowed to go on driving their cars in their usual way for pleasure. I would suggest to the minister and to those who make these regulations that every pleasure-car driver should be put off the road before any man is put out of business through rationing, whether he be a commercial traveller or other business man.

Mr. FRASER (Northumberland, Ont.): I cannot neglect the opportunity of saying to the hon. member for Brantford City that, if one has to be spanked or chastised, it is a pleasure to undergo that discipline from a gentleman who conducts himself and presents his case in the language of my hon. friend.

I should like, now that hon. members have had an opportunity of learning that there is such a place in western Ontario as Brantford, to congratulate the people of that town upon the selection of the hon. gentleman who represents them in this house, and I should like him to pass on to them individually, as far as he possibly can, these words of congratulation on my part.

I think my hon. friend's presentation in connection with government payment of taxes on airports in townships—something to which I neglected to refer on Thursday—is a little far-fetched, because it is my experience that the townships immediately raise the assessment of the property adjacent to airports because of the benefits which accrue to people with money-making ideas in the vicinity of airports.

In conclusion, I would express appreciation to my hon. friend of the very gracious way in which he "panned" me.

Mr. HARRIS (Danforth): Now that we have decided among ourselves that we should have a minister of war, I suggest that his first duty should be to settle the war which is going on upon the benches opposite. Perhaps in that one instance we might allow him to function as an appeaser; let us have a little appeasement in that direction, and get on with the war which is so serious and affecting us all so much.

I would have hesitated to say anything, being anxious to let the minister get on with his work, had not the hon. member for Wellington North (Mr. Blair) made some remarks not only with regard to the general conduct of hon. members, but having reference to Toronto: no speech coming from Wellington seems to be complete unless the city of Toronto is dragged in.

Mr. MACKENZIE (Vancouver Centre): Another war.

Mr. HARRIS (Danforth): When the war in which we are engaged is over, I hope I shall be spared to take my place in this chamber, and we will start a little war and clear up some illusions which possess the mind not of the people of Wellington North or any other Wellington, but of the representative of Wellington North. In the meantime my remarks will be addressed to the subject matter which is under review.

I received within the last two hours three different letters with regard to the department over which the Minister of Munitions and Supply presides, and jointly therewith, the Department of Finance. Inasmuch as yesterday we were discussing national housing and wartime housing, perhaps I might be permitted in order to save time to put on the record a letter which I have received on this subject. I agree that some of the answers to the questions raised should come from the Minister of Finance, but he will have time to cogitate, and when his turn comes he can deal with them. Meantime the letter is sufficiently important, perhaps, to go on the record. It is signed by L. R. Campbell, 190 Bingham avenue. I have not the privilege of knowing the writer, who evidently is a constituent of mine. It states:

> The practical application of the regulations of the Real Estate Branch . . . is working out to the great detriment of the very class they were supposed to protect, the people who rent their homes.
>
> The setting of ceilings on rentals, without a corresponding ceiling on selling prices, presents landlords with the choice of renting their properties in a controlled market, or of selling in a free market. They naturally choose to sell, and due to the influx of population into the larger centres as a result of the war, they can sell at prices which are out of reason compared to normal conditions.

I pause to explain that in my particular community we are favoured by having on the outskirts a very large plant at Scarboro and another large munitions plant at Pickering. Each of these plants employs between 3,000

and 5,000 workers, all of whom, on account of wartime conditions, find it necessary to obtain homes within the proximity of these plants. This particular constituent is within a few minutes' journey of the large Scarboro plant, which has some 4,000 employees. I repeat:

—due to the influx of population into the larger centres as a result of the war, they can sell at prices which are out of reason compared to normal conditions.

Wartime Housing should take note of that.

Houses in the $35 to $50 per month class have completely disappeared from the rental market in Toronto. Many thousands of tenants are being told that the homes they occupy are being put up for sale, and after the sale takes place they are given three months notice to locate other living quarters. There are no houses to rent, and the tenant is forced, regardless of his personal circumstances or financial position, to undertake the heavy task of buying a home at an inflated price. The post-war depression will see most of the houses purchased under these circumstances taken back by the owners under foreclosure. The tenant will lose his investment and the owner will turn a neat profit.

The matter is urgent. The poor and middle classes of this and other cities are being inexorably driven by the squeeze set up by the government's lop-sided policy to buy homes on terms which are certain and sure to mean heavy losses to those least able to afford them. The remedy is to set ceilings on sale prices or residential properties, thus removing the condition where it is more to the landlord's interest to sell than to rent.

The housing situation is very serious in the area mentioned, and I hope that Wartime Housing will take some cognizance of these conditions.

The second matter that I want to bring to the attention of the minister has to do with our war effort and the speeding up of production in the war plants. As the minister is prone to ask for facts, to demand who writes letters and who says such and so, I purpose to put on the record this letter which has just come to my hand, and in due course the officers of the department can look into it. Some of the statements may be a little far-fetched. If they are, I am not accountable. I do not think anything in it will harm the war effort; if for a moment I did think so it would not go on *Hansard*. I ask the minister to accept the remarks in the spirit in which I read them to the committee, believing that we are anxious to check each and every misadventure which happens in such a gigantic department.

The letter comes from S. Armstrong Goff, 62 Richmond Street West, Toronto. He is a constituent of mine, although I have not the pleasure of knowing him. He writes:

There is a condition which I deem of very great importance and which I think should be brought to your attention. As a practising solicitor I receive information from clients who are working in the different war plants and it seems inconceivable to me that in some of the plants men are being laid off for part of the time because either the plant or the workmen are producing too much. This has happened within the last two months repeatedly in the de Havilland aircraft plant, and I am advised that one man at least was discharged from this plant and the reason given was that he was producing too much. I am also advised that the workmen have been laid off every week-end, usually Saturday and Sunday, for the last six weeks and there seems to be definite indications that during the next month there will be lay-offs of a week at a time. This plant is only turning out about one plane per day and it has previously turned out three and one-half to four planes per day and I am assured that it is capable of turning out five every day in the year. This is a—

I will not use his adjective.

—condition if we are only working at 20 per cent capacity while a shortage of supplies is reported on the battle fronts. We must as Canadians hang our heads in shame as we witness—

The losses we have suffered. I will not read the next section. Then he continues:

I am also advised that one of the foremen in the general engineering plant at Scarborough was given instructions that he was not to produce more than 1,300 units where he had showed the ability of producing 2,000 units of work.

This is the plant I just referred to as having a housing condition.

The reason which has been given to avoid the responsibility of slackness of work is that there is a shortage of material. I cannot accept this reason since the shortage seems to be a refusal on the part of the government to give the necessary permit for these materials. Surely with the man-power, skill and natural resources which we have in this country there need be no such reason advanced. I have recently been advised by an employee—

In the same community.

—that they were held up for certain steel clips which could be purchased in the retail stores of this city. If one goes through this plant at the present time they will find the washrooms full of people loitering around and they have been told by their foremen to keep out of sight as much as possible. On one occasion an employee at the de Havilland Air Craft was required for some work and when they finally found him he was fast asleep in one of the unfinished planes along with six others who were also asleep. Surely this is not the type of thing we are paying for in taxes and government loans. . . .

One of the difficulties seems to be that a great many of the contracts from the Canadian government are on a cost plus 10 per cent basis. This is putting a premium on waste. It is quite obvious that if a company could waste $50,000 they could make a profit of $5,000 and men unfortunately are not unselfish enough to prevent them taking advantage of such a situation. No doubt the contracts should be revised and be on the basis of the contracts given by the British government which are on

the basis of a fixed price for each plane turned out. This would spur the management on to increased production rather than the demoralizing condition at the present time. I know that the latter type of contract leaves a loophole for excessive profits being made but surely the cost of any unit of work can be easily established by the proper officials.

I appreciate of course that the building of these plants was too rapid to immediately iron out all the difficulties but it seems strange that things which are so obvious to the ordinary workingman should not be taken into consideration by the management . . . .

It is well known that when General McNaughton inspected the war plants there was a great show of activity put on for him which must have given him an erroneous impression of the actual condition.

I am not giving you this information merely to knock the government but to find if there is some way of spurring on our production. I can give you the details of a great many of these matters and if you deem it of sufficient importance I shall be glad to see you at your convenience when you are back in the city . . . .

In some correspondence which I have had with Ottawa an official has made this statement "I have found that the opposition in parliament seems particularly ineffective in any complaint they (my clients) might make and I believe that much more favourable results could be obtained by dealing directly with the department concerned".

Why are we ineffective? I think the minister knows why; I think the chairman knows why; we all know why—we are so anxious not to do anything which will injure our war effort. But here is the feeling of a constituent: we are ineffective because we do not complain.

I may say that one matter which I took up with them regarding one of the war plants was seriously considered and I spent two hours with the management. However, the matter has not been entirely cleared up yet. I am satisfied that the Canadian people will not tolerate such conditions existing if they once become aware of them.

Mr. HOWE: If I may interrupt for a moment, does not my hon. friend think he takes quite a responsibility in spreading a letter like that on the record? He says he does not know the writer. I can assure my hon. friend that a number of statements in that letter are wholly untrue. Does he think it is wise to put that sort of thing on the record with his sponsorship?

Mr. HARRIS (Danforth): If I may finish my statement, I extend to the minister the same courtesy he extended to me on a previous occasion when I interrupted before he had completed his statement. I know that some of these instances are overdrawn.

Mr. HOWE: Some have no foundation at all.

[Mr. J. H. Harris.]

Mr. HARRIS (Danforth): I will take the minister's word for that. But I know that some of them must have some foundation in fact, and in that connection, inasmuch as an officer has been appointed to build up morale in this industry and iron out some of the difficulties, the government might be well advised to put at the disposal not only of these organizations but of those dealing with them, some official who is paid and whose expenses are paid by the government. Industries have such officials, openly, public relations officers. Our bureau of public information is useless and impotent with regard to a condition of affairs such as is mentioned in this letter. It is a bureau of public information; it has no dealings with the pharisees over here except to gather information and disseminate it. There is nothing in that department that is of any help in ironing out the state of affairs mentioned here by my constituent. When our friend Ralph P. Bell was mentioned in connection with an incident which was supposed at one time to have been closed and then later was opened by one of the hon. members from Vancouver and the hon. member for Cumberland, and which I now consider open; when an indiscreet letter of his came to the surface, there came to the mind of all of us the question, how many more in other departments are functioning in like manner? If work of that kind is going to push on our war effort, well and good; let it push it on, but let the facts be made public so that they can be reviewed. It is not enough for any hon. member to rise in his place and defend indiscreet actions of this kind by saying: "I have known the gentleman for ten years or fifty years, and he is an honourable man; he has push and energy and vim and vitality," and all the rest. If something indiscreet happens it is not that department only we are concerned about; we are worried about others.

I am worried about the Hull Steel and Iron Foundries, as to where the money came from to pay for those half-page advertisements. It came out of their treasury, no doubt; but when I find that they are participants in government contracts I wonder where the cost of all that advertising boosting our war effort comes from. I wonder whether it comes out of cost-plus contracts, and whether when that 5 per cent is added to the 100 per cent of cost of that work we did not pay these aircraft companies $105 in order to get $100 worth of work. I know Mr. Hirst; he has been a customer of mine and I a customer of his ever since I have been in business. He is an admirable man, a man of energy and all that, but this is not the place to speak of personalities; this is the place to discuss and lay

down principles. All those charged with any part of our war effort must keep constantly in their minds the fact that they are discharging a public responsibility and are open to the searchlight of those in this chamber who also are responsible for serving their constituents.

When we are charged with being ineffective as an opposition, with acting as though there were no war on, let me say this. We could hold this house in session, as perhaps it ought to be held, twelve months a year, six or seven days a week, dealing with all the work the government is trying to do. But we are more anxious to serve and to help. We are not ineffective. In the main we hope that we are effective. The indiscretion of the Bell transaction which was revealed in this house is almost unbelievable. Of course it is unfortunate; I say it is inexcusable. I say the policy which was followed during the last war should have been followed in this case. At that time an hon. member of this house, enjoying the confidence of his constituents, was found to be dealing in horses being sold to the army. One of his colleagues, operating a drug business in a very small way, also was found to be selling drugs to a nearby military establishment of some kind or other. I refer to the late Mr. Garland in connection with the drug transaction, and the late DeWitt Foster in connection with the horses. What happened? They gave up their seats in this house at the request of their leader of that time; they were read out of the party. Later, of course, they regained the confidence of their constituents and found their way back into this house. They were honourable gentlemen; who will say nay to that? The person concerned in the present instance is an honourable gentleman; no one will say nay to that, but a principle is involved, and we should be very serious about it.

At four o'clock to-day I am supposed to be serving on the war expenditures committee. This is a rather innocuous and impotent sort of organization, but in our anxiety to help we are willing to serve in any way. We are not touching one-tenth of one per cent of the problems facing us, but we are glad to give whatever help we can. I ask the Minister of Munitions and Supply to make available to that committee the balance sheets of all organizations enjoying government contracts on a cost-plus basis. I ask that the minister give instructions that payments such as those gathered together by Ralph P. Bell be not permitted to be included in the balance sheets as a charge in the operation of these companies. Have that practice stopped forthwith. I also ask that all organizations which have been advertising in support of the government's war effort, and I have in mind particularly the outstanding company in that connection in this geographical area, be reviewed in order to ascertain how the cost of such advertising is paid. I will let the matter rest there. I am sorry the hon. member for North Battleford has gone out; I wanted to say a word about that constituency, but I will wait until another occasion unless she returns to the chamber before I am finished.

My next word has to do with gasoline. I agree with what the hon. member for Brantford City had to say as to commercial travellers being reduced so suddenly to the A category. I believe this situation ought to be reviewed. I should have preferred, in this part of Ontario at least, cutting down the number of gallons permitted to all categories. I have had five or six letters from men who are not exactly commercial travellers but who are tradesmen who have to go hither and yon, who have been reduced to the A category. I think another policy should have been adopted, that of reducing the gasoline allowed to all those driving for pleasure. You might make a corresponding reduction in the other classifications, if that is necessary, but the gasoline allowed pleasure seekers should be cut down. I do not see why on Saturday afternoons, Sundays and holidays officers could not stop people speeding along the highways in their motor cars and ask them to produce their coupon books. If they are found to be in the categories permitted a large gallonage, then put them back to A category. That is what should be done when we find them wasting gasoline on pleasure; and at the same time the A category might be reduced also.

I am going to make one further suggestion; that is, that the war expenditures committee be given by the minister full details of all capital assistance and all working capital that has been furnished by the government. Put it all on record so that we may know exactly what is going on. What I have in mind is that with industry at its present pitch in Canada it should not be necessary for us to supply very many large organizations with working capital. I believe that in the operation of their whole organization they could very well provide their own working capital. That is to say, if they have one small contract, why should they isolate that from the larger part of their business and require government working capital, when their business could very well finance its own working capital? I would

ask that in the provision of this working capital, the very minimum amounts should be provided.

I have just one other observation. I think we should realize that we have been a little late and a little slow in a good deal of the work we have been doing. I believe the entire energy of government should be directed to the war, and we in this chamber ought to slow down on matters that have to do with reconstruction and the lectures we get from university professors as to what is going to happen after the war. Let us put all our energy into the war effort.

Mr. HOWE: I should like to say a word with respect to the remarks of the hon. member for Danforth (Mr. Harris). He has conveyed the definite impression that it is the practice of the department to award contracts on a cost-plus or percentage basis; a great deal of his speech dealt with that point. I have stated in this house repeatedly that this is not the practice of the department. In very exceptional circumstances we may award a contract of that kind; I am not saying we have never done so, but it is very unusual. My hon. friend pats himself on the back for his willingness to serve on the war expenditures committee. I am not sure that this will be very much protection to us; for he has been on the committee a year now and surely he should know, the fact should have impressed itself upon him by this time, that we do not award contracts in that manner. When he states that a man can crawl inside an aeroplane, go to sleep, and make money for the company, he is very far afield indeed.

I think it is questionable practice to read in this house a letter received by the hon. member from a man he says he does not know, especially when that letter contains very damaging statements against Canadian war contractors and Canadian workmen. I think at least the hon. member ought to be able to sponsor the man who wrote the letter which, since he does not know the writer, comes to him practically as an anonymous document.

Mr. HARRIS (Danforth): It was the thought in the letter I wanted to get across.

Mr. HOWE: I have heard before the statement as to great activity when General McNaughton viewed the plants. Could anything be more absurd! Those plants are running on an assembly line basis, and they could hardly speed their belts up only when General McNaughton was in the plant. They run as fast at one time as at another.

With respect to the aeroplane business, I have said before in the house that it is not possible to schedule those plants as you can an assembly line or mass production plant, especially when the tooling process is on. The hon. member has spoken about aircraft plants reducing production. I know the plant to which he is referring, and that particular plant is closing off its old line of production in order to produce four-engine bombers. It will be some time yet before that four-engine bomber comes out of the plant and before its production will therefore be heavy. If these matters were taken up one at a time, and if denouncements were to follow a full exposure of the facts, it would be much fairer to war industry and to war workmen than to have the reading of a letter such as has been read.

I also resent bracketing Ralph Bell, in my department, with DeWitt Foster and a former member who was in the drug trade. It is quite obvious, I think, that no hon. member suggested that any of that money went into Mr. Bell's hands or into his pockets, at any time.

Mr. HARRIS (Danforth): I did not bracket them, nor did I suggest it. I did not suggest for one moment that any money was used improperly, I just told what had happened in the last war.

Mr. HOWE: I am glad my hon. friend has cleared up that point, and indicated that he is not bracketing Mr. Bell with those two men. Perhaps we had better let it go at that. The situation has been discussed at some length. I stated I agreed that the letter was quite improper, and when it came to my attention I took steps to correct what had been done. I think it was generally accepted by the house that it was done more by way of an effort to get on with the job than through any desire to break the rules; that that was what prompted Mr. Bell to write the letter. I make these remarks in order to correct any impression which may have been left by the observations of the hon. member.

Mr. SLAGHT: I desire briefly to call the attention of the minister and the government to a matter which I believe to be of great importance at the moment. It has to do with a new process for the manufacture of rubber.

A few days ago I endeavoured to place a question on the order paper, but I had not given notice the day before and Mr. Speaker quite properly ruled that I should not proceed. This is the first opportunity I have had of personally bringing the matter to the minister's attention.

Before a subcommittee of the senate in Washington a few days ago Mr. Wickard, secretary of agriculture in Mr. Roosevelt's government, urged that there be an extension of

the government's programme of making synthetic rubber by using grain alcohol produced from surplus wheat and corn. He stated that the use of 80,000,000 bushels of grain would make 200,000,000 gallons of alcohol, which in turn would produce sufficient butadiene to make 240,000 tons of synthetic rubber, or about a third of the normal needs of that great country. Mr. Wickard further told the committee that after full discussion with members of his technical staff he was convinced that immediate attention should be given to expanding their programme for the production of synthetic rubber, and that it could be accomplished in 1943—that is, next year.

We in Canada are all agreed that the rubber situation in relation to the war effort is extremely acute. In the non-war effort we find ourselves about to be more severely restricted in the use of rubber on motor vehicles. I understand some preliminary steps have already been taken, but I would urge upon the minister that he send experts in research from his own department—because we have many competent engineers—to confer with the technical advisers of Mr. Wickard who have told him that this process is feasible. We should pursue an immediate and vigorous policy, if our experts confirm that statement, in creating plants at once in Canada to convert our surplus grain first into alcohol and then into rubber.

In Canada we have at least 400,000,000 bushels of wheat stored in our elevators. We have carried a similar surplus for many years. Although somewhat restricted, this year's crop will no doubt add to that surplus. Surely if this information be accurate—and I have investigated Mr. Wickard's reputation—we should proceed. Mr. Wickard is secretary of agriculture, and he is also an engineer who attained high academic degrees. He is a practical man who has been successful in his own business. This is a matter of such great importance that I suggest we should rush our investigation. If the process is found to be sound we should immediately divert some of the money in these estimates to the installation of substantial plant facilities.

If 80,000,000 bushels of grain produces 240,000 tons of rubber, and if that be sufficient to supply one-third of the normal needs of the United States, then 40,000,000 bushels of wheat from our surplus used for that purpose would more than supply the entire needs of Canada for a whole year for all war purposes, and would leave a plentiful surplus for use on our own civilian commercial vehicles. In my opinion this offers to the government one of the greatest opportunities for quick and aggressive action. I suggest that it put money into at least one large trial plant, and then follow it up so that the acute rubber situation may be relieved.

Mr. MacNICOL: I wish to speak briefly about the production of magnesium metal. Anyone who has been associated with the iron and steel industry for many years, as I have been, naturally would come in contact with questions connected with magnesium metal. At the conclusion of my brief remarks I am going to ask a number of questions, and I shall now send the minister a copy of them. He may not wish to answer to-day, but if he chooses to do so, he will have the list before him. If, on the other hand, he wishes to wait until to-morrow, I shall be content.

Magnesium metal is not a new metal, as many would be inclined to believe. During the last war magnesium metal was made at Shawinigan Falls in the province of Quebec by one of the most expert engineers in Canada of that time. He was well qualified in connection with everything pertaining to the subject of magnesium metal. It is a most necessary war product and perhaps Canada should have been making it or at least starting to make it before war broke out.

It is not the lightest metal as most people believe, although it is the lightest commercial metal now produced, being only two-thirds the weight of aluminum. Lithium is the lightest metal. After I decided to go to Great Slave lake I had a discussion with an engineer, and he told me that I would find a great deposit of spodumene, the raw product for lithium. However, when I reached there I found the deposit was over on the north shore, too far for me to go. Lithium is the lightest metal, being one-half the weight of magnesium metal, but it is not produced commercially to-day. I believe we are now using from one to two thousand pounds of magnesium metal per plane, depending upon the type of plane being manufactured. Magnesium metal is used in the manufacture of bombs. It is used in the manufacture of planes for the very sound reason that it is so much lighter than aluminum and therefore permits the plane to travel faster and farther and carry heavier loads. Anything the government is prepared to do in connection with the production of magnesium metal I am sure will have the support of this house.

Last year, I believe on June 14, I asked the Minister of Mines and Resources (Mr. Crerar) if anything was being done in Canada in connection with producing magesium metal. He stated that some distance up the Gatineau river a plant was being erected. The next

thing I heard about the production of magnesium metal in Canada was a statement in the press that a plant was being built some distance west of Ottawa. What I am interested in particularly is whether a thorough investigation has been made into the system or process to be used to produce magnesium metal in this country. Engineers in Canada have developed processes. Some time ago I was taken over to a plant in Hamilton by the associate editor of the *Monetary Times,* Mr. H. E. Willmot, a very bright gentleman who makes a number of investigations into matters of this kind. This was a small pilot plant where a process was being developed. I am not just sure where the plant was located but it was not very far from the gun factory being operated by the Westinghouse company. In this plant Mr. Ralph Keemle, in my judgment one of the best engineers in the country in this line, was producing magnesium metal by a thermic process. I do not know whether the government investigated this process, but it has been tested by the university of Toronto and, I was informed, commented upon favourably in the press of the United States.

Before an investment of $2,500,000 or more is made in a process to manufacture magnesium metal, I believe experienced engineers, men who know this subject, should be invited to advise as to the best process to be used to manufacture magnesium metal. In the United States the WPB is now the headquarters of a special branch or board that has gone into and is going into most carefully all the processes in use in that country. They are undertaking to produce magnesium metal in a very large way. Whether we have done that in Canada, I do not know; but, if not, I think we should. The matter is too important not to be thoroughly investigated before money is invested in a plant. I do not say that this matter has not been investigated; I do not know, and perhaps the minister will tell us.

According to *Business Week* of January 10, 1942, there are now several companies in the United States manufacturing magnesium metal. The principal manufacturer is the Dow Chemical company. I believe the system used by this company was used at Shawinigan Falls during the last war, although I make that statement only from what I was told by an engineer. The Dow Chemical company system is well known and has been used continuously in the United States. The *Globe and Mail* of May 14 contains this paragraph:

> Up to now the magnesium used in United States fighting aeroplanes has come from the brine wells and sea water plants of the Dow Chemical Company.

The Dow Chemical company have always produced magnesium metal either from brine wells or from sea water. They produce in a big way. This year they have projected to produce some 63,000 tons. There is nothing new about the system used by this company. It has been thoroughly tried out and has given splendid results. Whether it has been investigated here, I do not know. Another large producer is the Basic Magnesium corporation which produces magnesium from magnesite, which is said to contain more pure magnesium than any other matter. This company is undertaking to produce 56,000 tons this year. The Diamond Alkali company and the Mathieson Alkali works in the United States produce magnesium metal from dolomite. That is what the Hamilton inventor, Mr. Ralph Keemle, used. There are vast quantities of dolomite between Hamilton and Georgian bay and the magnesium metal is produced by the thermic process.

During the last war there was an engineer in Ottawa whose name has just slipped my mind but who was sent out to investigate the dolomite to be found at Portage du Fort. He reported that at that point in Quebec there were over a billion tons of brucite, which is very much like dolomite but perhaps a little stronger. This raw material is available for the production of magnesium metal, and there are electrical potentialities in the Ottawa river nearby. Electrical power is needed in the production of magnesium metal. International Minerals and Chemical corporation uses brine and sea water to produce magnesium metal, the same as does the Dow Chemical company.

There has been a good deal in the press lately about the Permanente plant in California which appears to be going into production. I have an article here, taken from the *Globe and Mail* of May 14, which says:

> The entire United States supply has been coming from a salt water process. But now in San Francisco area a plant is in operation successfully extracting magnesium from dolomite rock.

There is nothing new in that because, as is well known, dolomite is the basis of several processes for producing magnesium metal.

All I ask is that before Canada embarks upon an expenditure of from two to five million dollars to make magnesium metal by what is called the ferrosilicon process, every tried and true system first be investigated as well as the process developed in Hamilton by Mr. Ralph Keemle, known as the thermic system.

I read a few days ago that the Tennessee Valley Authority in the United States, which I presume is under the direction of the government of the United States, is going to produce magnesium metal from olivine. That

is a chrysolite with a good deal of magnesium in it, indeed more than in anything else except magnesite itself. What process are the Tennessee Valley Authority going to use? It is a tremendous corporation, and I presume that before going into production it will investigate every available process of producing magnesium metal. What is Canada doing?

I read an item in the press some time ago which announced the production of magnesium metal in Canada. It was a Canadian Press dispatch, dated March 17. I quote it:

> Formation of a new government-owned company to be known as Wartime Metals Corporation was announced to-day by Munitions Minister Howe. The new company, said Mr. Howe, will assume responsibility for arrangements that have been made for the production in Canada of metallic magnesium and for any other emergency projects that may be undertaken for the production of war metals.
>
> Between $5,000,000 and $6,000,000 will be spent by the federal government—

on this project.

Another item in the press on March 21 states that the amount to be spent will be $2,600,000. In either case a very large sum of money is to be spent.

I have been told that Mr. Keemle, of Hamilton, believes a 2,000-ton plant using his process would cost $500,000. We read in the press that the plant which the government has in mind putting up at a cost of between two and five million dollars will not produce very much more magnesium metal. I read this in a Canadian Press dispatch, dated May 17:

> Actual production at Haley's Corners is expected to begin by mid-summer with an output from the initial units of two tons of the metal per day. As additional units are built this rate will be progressively stepped up to ten tons per day. Later twenty tons a day will be produced.

Producing twenty tons a day for 365 days a year would give a total production of 7,300 tons from an investment, according to this dispatch, of between five and six million dollars.

According to what I read in the press—and that is the only place where we can get information about it—the process to be used by the government is the ferrosilicon process. I am not intimating for one moment that the ferrosilicon process may not be the very best possible process. We have not heard anything about it officially. I know the minister will likely say something about it when he replies. Perhaps it is the best possible process, but I should like to hear what the minister can tell us about it.

I would also ask the minister to tell us about the set-up of the company which was originally known as the Dominion Magnesium company; later the name was changed, or a subsidiary company was formed called the Wartime Metals corporation, with 150,000 shares of stock, which is to be divided between several companies, one-third, or 50,000 shares going to Bobjo and God's Lake mines; another one-third or 50,000 shares going to the Moneta Porcupine mines, and another one-third, or 50,000 shares, going to Ventures, Limited. Where does the government come in? If the government puts up all the money, how is it that these companies possess all the shares? It has been intimated in the press that a good deal of experimental work has been done in this connection by government engineers of the national research council. Then where does the government come in on the shares? How do these companies come in for something that was produced by the national research council I presume, on government time and at government expense? If the government has initiated this process, and it is, I hear, an excellent process; I have no reason for thinking otherwise—why does the government not take the whole thing over and produce magnesium metal itself. It is immaterial to me personally who produces it, but I should like to have some information on the set-up.

I shall conclude by asking some questions, but first let me say that I do not want the minister to feel that I am in any way criticizing him or passing any unfair comment upon this matter. I would not do that. I am simply looking for information, because I feel it is my duty to do so, having been for a long time associated with the iron and steel industry and having had a lengthy experience with many different kinds of metals. I am going to ask these questions which the minister may answer to-day or when he sees fit:

1. Was the ferrosilicon process evolved by national research council, in the national research council quarters, at government expense?

2. If so, would Dominion Magnesium have to obtain the consent of the minister to sell this process in the United States? It was intimated in one newspaper that that may be done, although I have not read of any United States company using the process. Nevertheless one or more United States companies may be using the process.

3. If the dominion advances, $2,600,000 for a plant to use the ferrosilicon process, how is it that the 150,000 shares of the Dominion Magnesium company are owned by the mining companies I have named?

4. If any profits accrue, to whom do they go?

5. Has the department (a) the percentage purity of ferrosilicon needed in the process to be used, and (b) the number of pounds of ferrosilicon needed to produce one pound of metallic magnesium in the process to be used?

6. What is the estimated power consumption in kilowatt hours to make one pound of ferrosilicon?

7. What is the estimated power consumption in kilowatt hours to make one pound of magnesium metal?

8. Where is the electric power to come from? There is no available power around here, unless it can come from the Gatineau or unless the Ottawa river is dammed at Carillon or somewhere further up the river; and this process takes a very large amount of electric power.

9. What is the cost per pound of magnesium metal if made by the process the government has adopted?

I am informed by the Hamilton people that they can produce magnesium metal for ten cents a pound. I do not know whether they can or not. If their system has been investigated, I am sure the department would know.

As a member of this house I am anxious that we should produce magnesium metal as cheaply as possible, according to the best process possible, and as quickly as possible.

Mr. HOWE: Several questions have been asked, and perhaps it will be more convenient if I keep fairly up to date.

First, as to the use of wheat for the manufacture of rubber. I announced in the house or in the press a month or two ago that we are embarking on a large programme for the manufacture of synthetic rubber. We expect to spend around $40,000,000 for the purpose, and our experts have been at work on the project for some weeks.

Synthetic rubber of the buna type, which has been agreed upon as a desirable type to replace natural rubber, of which it has practically all the qualities, is made of two ingredients. One is butadiene and the other is stearine. Stearine is made from the products of coke ovens, and is quite a process in itself. Butadiene can be made in several ways, one of which—from petroleum—we have been investigating up to this time, and to which we are very favourably disposed. By cracking petroleum by a certain process we can produce butadiene and several other products. An alternative method is to make butadiene from alcohol. Alcohol, of course, is made from wheat or some other cereal by a fermentation process.

[Mr. MacNicol.]

We are collaborating with the United States on this problem. The petroleum process was favoured above all others. I may say that these processes are by no means perfected on this continent. The best information available indicated that the manufacture of butadiene from petroleum was a cheaper and more efficient method than by the use of alcohol. The study of production from alcohol has been advanced recently. Not long ago I asked an experienced Canadian chemist, president of the Ontario foundation, to go to the United States and collect all available information on the manufacture of butadiene from alcohol. I talked with him on the telephone to-day just before I came in the chamber, and learned that he is to be here next Tuesday with one or two experts from the United States to give his report. His thought is that the production of butadiene from alcohol can be brought about more quickly than from petroleum, and his suggestion over the telephone I took to be that the two processes be combined; that is, that a portion of our requirements would be provided from alcohol and a portion from petroleum. In any event I wish to assure the hon. member for Parry Sound that we are keeping very close watch on developments in both fields, and we hope that the solution we adopt will be the best available.

In the matter of magnesium metal, of course the uses for magnesium metal in this war have grown by leaps and bounds. Being a light metal, stronger than aluminum, it is used extensively in the manufacture of aeroplane engines and certain fittings of aeroplanes, and it also has an extensive use in the manufacture of incendiary bombs. The known and proved processes—there are two—for the manufacture of magnesium are: the Dow process, mentioned by the hon. member for Davenport, which has been principally used on this continent, and the magnesium electron process, which has been more generally used in Great Britain. The latter process originated in Germany.

Mr. MacNICOL: Is that the one they call Murex?

Mr. HOWE: I do not know. I have not heard it called by that name; I have always called it the magnesium electron process. The product is, of course, exactly the same by either process; it is pure magnesium metal. Both processes require a very large capital investment, and both require considerable time to build.

At the outbreak of the war there was a great expansion of both processes. The Dow

Chemical have expanded their production many times, and Magnesium Electron are building a very large development at Las Vegas, California and Nevada.

It has been the feeling of those who know the chemistry of magnesium that there is a better and more efficient way of producing magnesium than by the chemical process, and for several years experiments have been going on with a view of production by a thermal process. Several thermal processes have been developed. Magnesium Electron have their own process in England; it has been under experiment, but they have never brought it into successful production. The plant at Permanente mentioned by my hon. friend employs another thermal process. I am glad to have his assurance that the plant is now producing metal.

Mr. MacNICOL: It was so reported in the newspaper.

Mr. HOWE: I know that it has been on the point of production for a considerable time, but I have not heard that it is in actual commercial production. The difficulty in the thermal process is not in making the magnesium but in collecting it. If a faucet is turned, instead of getting a liquid we get flame, and the result is a very highly divided metal which is inflammable the minute it is touched by oxygen. The difficulty has been to collect the metal after it is manufactured in this final, divided form. General McNaughton undertook the study of the thermal process some years ago, and experiments have been carried on in our own laboratories for a considerable time. Doctor Pidgeon did develop a process which was entirely practical in the laboratory. Of course it is difficult to use a process direct from the laboratory. By what means I do not know, but a group of mining men was formed to prove the so-called Pidgeon process. The company was called Dominion Magnesium. Subscriptions were obtained from various mining companies. I think around $50,000 was expended in building in Ottawa a full-sized unit. A full-sized furnace has been installed and vacuum tubes have been developed to collect the magnesium. The plant has been in operation here for some time. It has been making magnesium on a commercial scale, and that magnesium has been sold as metal for use in aeroplane construction.

When we decided to manufacture magnesium we first looked at the chemical process. We investigated the Dow process, and the magnesium electron process, and a new process in which the Consolidated Mining and Smelting corporation were interested.

Mr. MacNICOL: Was the Keemle process investigated?

Mr. HOWE: Yes, if you can call it a process; it has never been proved. The difficulty with all of these processes was that the capital cost was enormous I think some $10,000,000 for a production of 5,000 tons per annum.

We were also faced with the fact that the chemical process is an obsolescent process. It seemed that we should risk something to get a satisfactory process rather than take a process that would produce an expensive magnesium that would place Canada at a disadvantage with other countries.

We investigated the Pidgeon process very thoroughly. We had experts from New York —the best metallurgists we could find who looked into the process and gave it their blessing. We had here an expert from England who was not sympathetic to the process, but he also recommended it. It seemed to him that the process had proved itself. We decided that we would go ahead with the Pidgeon process. The patents were owned by Dominion Magnesium company—

Mr. MacNICOL: Were those patents obtained on the results achieved in our own laboratories?

Mr. HOWE: Yes.

Mr. MacNICOL: How could you get a patent?

Mr. HOWE: Doctor Pidgeon, who developed the process, is an officer and a shareholder of the company. What arrangements were made with the national research council I do not know; I never inquired.

Mr. MacNICOL: Is he an employee of the government?

Mr. HOWE: Not now. He was at one time. I presume the national research council were compensated. However, I simply took the patents as they were. I discussed the matter with Dominion Magnesium company. The company offered to do the engineering on a full-scale process. Obviously the next stage is a full-scale plant, and they offered to do the engineering of the plant without charge to the government and to put their patents and other assets at the disposal of the government for the duration of the war and six months thereafter without cost. The plant is being built by and will be owned by

the federal government. The land, the quarry and the plant itself are owned by the federal government. Dominion Magnesium are furnishing the engineering, and the understanding is that an arrangement will be made that Dominion Magnesium will operate the plant for the government on a management fee basis. I should be glad to lay on the table the contractual arrangements between the government and Dominion Magnesium.

This transaction has very little to do with Wartime Metals Limited. Wartime Metals Limited is a wholly-government-owned corporation, set up to act for the government in several mining developments which the government has in hand or under examination. We are developing a chrome property in the eastern townships and are examining other properties with the thought of developing them for scarce strategic metals.

Mr. CASTLEDEN: Anything in iron ore?

Mr. HOWE: No, we have undertaken nothing in iron ore. Dominion Metals has supervision over the construction of the magnesium plant and will have supervision over the contractual relations with Dominion Magnesium, and with the operation of the plant. But I would emphasize the fact that the plant is owned by the government and will be operated by the government through a management fee contract with expert operators. So that the Dominion Magnesium company will make no profit out of the government.

I am not certain, but it is my impression that the contract also provides that Dominion Magnesium will manage the plant for the government without fee. I will lay the contract on the table.

After we decided to use that process the United States took a great interest in it. To-day I am told they are investing about $100,000,000 in plants built under the Pidgeon process.

Mr. MacNICOL: The government of the United States?

Mr. HOWE: Yes. It is government capital, although, just as Dominion Magnesium are acting for us, various firms in the United States are acting as agents for the United States government. It indicates that the pioneering work done by Doctor Pidgeon and by the research laboratories will bear splendid fruit if the process turns out as we expect.

Answering the hon. member's questions:

"2. Would Dominion Magnesium have to obtain the consent of the minister to sell this process in the United States?" The answer is no. The patents are owned by them. However, I understand that a very reasonable arrangement has been worked out, on a small royalty basis, which is quite satisfactory to the United States.

"3. If the dominion advances $2,600,000 for plant to use the ferrosilicon process, how is it that the 150,000 shares of the Dominion Magnesium company are owned by the mining companies I have named?" I may say that the advance of $2,600,000 is to build a plant for the government. The ownership of the magnesium company is with the companies that subscribed to the development cost of the process.

"4. If any profits accrue, to whom do they go?" The answer is that there will be no profits. The government plant will be operated at cost.

"5. Has the department (a) the percentage purity of ferrosilicon needed in the process to be used?" To the best of my information it is not a ferrosilicon process; it is thermal reduction of dolomite.

Mr. MacNICOL: According to the newspapers it is ferrosilicon.

Mr. HOWE: I do not think that is correct. There is no ferrosilicon in it that I know of. We always call it a thermal process, from brucite or dolomite. A plant is being put in to manufacture magnesite from brucite, which is the first stage. We are taking magnesite from an operation in Hull until the quarry operation is further advanced at the location of the plant near Renfrew.

As to (b), the number of pounds of ferrosilicon required to produce one pound of magnesium, there again I think my hon. friend is mistaken. In regard to the estimated power consumption, all I can say is that we are building a plant to turn out ten tons a day, and we are using about 18,000 horsepower. That is about all I can tell my hon. friend at the moment. Of course this is not a process that has been demonstrated on a large scale. When I am asked the production in pounds per day, I cannot say.

Mr. MacNICOL: Then it is more or less in the nature of a pilot plant?

Mr. HOWE: A pilot plant is one thing, and a large scale operation is something else. I do not wish to be too specific about costs. They depend on the life of the furnaces and the tubes, very largely, and that has yet to be demonstrated in the large-scale operation. Then my hon. friend asked where the electric

power comes from. The area is served by the Ontario hydro-electric power commission, and a new development is being carried out there.

Mr. MacNICOL: Above High Falls?

Mr. HOWE: Yes, but there is quite sufficient power available at the moment.

Mr. McNIVEN: By whom is the power plant being constructed?

Mr. HOWE: By the Ontario hydro-electric commission. Then I was asked as to the cost per pound of the magnesium produced by this process. I will be very anxious to learn that, too, but we think it will be cheaper than the chemical process, and the development will be brought in many months sooner than it could have been if the chemical process had been used. We expect to get into production by July.

Mr. MacNICOL: Is there no estimate of the cost per pound? I read in one report 19 cents and in another 38 cents.

Mr. HOWE: The market price of magnesium to-day is around 33 or 34 cents, buying it from existing sources. We expect to get it for about half that, but I would not care to be too specific about it.

Mr. LACOMBE (Translation): Mr. Chairman, the aims mentioned in the resolution now under study will not be achieved until the government ceases to hinder our agricultural production by exempting from military training farmers, farmers' sons and the farm labour so essential to our first line of defence, which is agriculture. If the farmer is to be drafted into the army and have all his requests for postponement of training rejected, I fear that we are facing disaster. Why does not the government formally instruct military camp commanders to forward without delay to the proper boards the requests for postponement submitted by farmer draftees? There have been unpardonable delays in the forwarding of these very legitimate applications. Many are the aged or sick famrers still waiting in vain for the help they need to cultivate their land. This assistance is often so late in coming that sowing time and even harvest time may have gone by before the farmer's son can obtain the few weeks' leave so essential to agricultural production. The resolution which this committee is discussing at present provides for the granting to His Majesty of sums aggregating more than two billion dollars in the interest of our war effort. That is the sole aim of this measure. Indeed, each paragraph of this resolution calls for certain estimates as a result of the existence of a state of war and in the interest of our war effort. How is it possible to pursue this effort effectively unless we take the means to protect agricultural production, without which our army and the civil population of this country will go hungry? Why not establish in each Canadian county exemption boards for the purpose of reviewing the merits of all applications submitted to them? They could render their decisions accordingly. How many times have I not asked the government to do this in fairness to our farmers, to their sons and to the farm labour without which there can be no agriculture, Canada's most valuable contribution to the war effort and to the defence of this country?

My remarks apply also to the workers occupying essential jobs in the munition factories of Canada. Many are the young graduates of our best technical schools, who have been called up under the mobilization act. I know a certain number of young craftsmen who had acquired very valuable experience in our war plants, but who had to leave their jobs and report for training. Who is there to believe that a mechanic, an expert machinist, an experienced solderer, can be replaced adequately by an apprentice, or by what we commonly call a "dimwit."

It is ridiculous. Since when is it possible for a mere nobody to substitute his ignorance to the knowledge and experience of a thoroughly practical professional who is well prepared by serious study and hard work to solve mechanical problems which, at times, are so complicated? I have urged, in this house, the exemption from military service of workers who are indispensable to our munition plants production. All my efforts have been unsuccessful. These workers are still being called up for training.

With the hon. member for Gaspé (Mr. Roy), I urged that we refrain from calling up all persons who are essential to the fisheries industry. Here again our efforts have been of no avail. Nevertheless, our fishermen contribute a large share to the feeding of the army and civilian populations. I suppose that my remarks, made in the best interests of our country, will command the usual attention. Why should I care. I shall have done my duty. I shall not be responsible for a sin of omission. Neither shall I bear the shame of having neglected the defence of Canada, in allowing the government to ruin agriculture and industries which are essential to the safety of the homeland.

Here is another subject I wish to deal with: the pay allowed to our army, navy and air force. As long ago as January 28 last, I insisted on a higher pay for the army. I suggested that it be allowed $4 a day. I renew my request in this connection.

Mr. DUPUIS: Would the hon. member allow a question?

Mr. LACOMBE: If it is similar to those the hon. member generally asks, I am sorry, I will not allow it.

Mr. DUPUIS: Does the hon. member know that a soldier cost the government $11 a day, besides his pay?

Mr. LACOMBE: Certainly. It has been computed time and again. But I know that certain war plant superintendents receive $20 a day.

Mr. DUPUIS: They have to pay 75 per cent in excess profits tax.

Mr. LACOMBE: Is it fair for our soldiers to get an insignificant pay when war industry employees are sometimes paid as much as $8, $10 and $12 a day? I refer here to skilled workers and not to some superintendents who get as much as twice those amounts. The real soldiers are not sparing of their blood. Their country, for which they are willing to lay down their lives or risk their future if they survive the conflict, should not be so stingy in their remuneration, when money is plentiful and war contracts are distributed by the thousands to contractors who are building up colossal wealth. You might ask: where shall we find all the money necessary to allow such a high rate of pay? I shall give you and the hon. member for Chambly-Rouville (Mr. Dupuis) the same answer: tax, tax to the extreme limit the war profiteers who have sold and are still selling foodstuffs to our soldiers at a profit of 200 per cent.

Mr. DUPUIS: Name them.

Mr. LACOMBE: Canada Packers Co. If my hon. friend will follow me, I shall give him plenty of details in a moment. Tax those unscrupulous companies who, last fall, stored potatoes costing them 40 cents and 50 cents a bag, when bought from the farmers of Chambly-Rouville and Laval-Two Mountains, to sell them in the military camps for $2.50 and $2.75. Tax the millionaire who accumulates gold while our soldiers are shedding their blood. Tax the friends of the government, the suppliers of every kind whose most ardent hope is that the war may last so that they may increase their wealth.

There are some who keep their own counsel, and others who dare give utterance to their thoughts. Bring taxes to bear on the extreme inequality of worldly goods, such as the allied war aims, His Majesty the King and the Archbishop of Westminster have even recently condemned. Tax to the utmost the restricted group of capitalists who have for years exercised a dominating influence over economics, finance and government in Canada.

Should this appeal for social justice be not heard, should this call for justice and equity remain unanswered, what is to become of democracy? The question carries its own answer.

As regards the war effort, the province of Quebec has done her duty, her whole duty. Thousands and thousands of her sons have enlisted in the army, in the navy, and in the air force. She has amply contributed to the war loans. And when I urged, just now, the Prime Minister (Mr. Mackenzie King) to give our province the cabinet representation she is entitled to, I did so in the name of my fellow-citizens who have never failed through the years to shower honours and marks of confidence upon the Prime Minister. Quebec is the mother province in this country. Quebec is the pioneer province. She is a constituent element in the Canadian confederation. The Prime Minister is free to joke and make amusing remarks. We do not view the matter in that light, however. The hour is altogether too serious, sacrifices are too great for such an unjust treatment of our province to be perpetuated. I am not asking for any concession from the Prime Minister, but only for what is rightfully due. Since Quebec is engaged in this conflict, as is every other province in this dominion, the Prime Minister should treat her with justice and give her a voice in his cabinet. The recognition of this rightful claim is long overdue. In so far as I am personally concerned, despite the innuendos from the leader of the government, I have no wish for any post in his conscriptionist cabinet. I do wonder, however, whether the hon. member for Chambly-Rouville does not harbour fond hopes of his own.

Mr. DUPUIS (Text): Mr. Chairman, I had not intended to say a word this afternoon but in answer to the hon. member from the unique party, I am forced to do so for a few minutes.

Mr. LACOMBE: The Canadian party.

Mr. DUPUIS: The unique—not the union—party. He is a one-man power, as has been suggested. I do not wish to take much time, but I shall have to say a few words in French.

Mr. DUPUIS (Translation): I had no intention of speaking this afternoon. My hon. friend can give free rein, at this time, to his demagogic leanings. My hon. friend—

Mr. LACOMBE (Text): I rise to a point of order. The hon. member for Chambly-Rouville, is stating that I am making statements as a

demagogue. According to standing order 41 he is not permitted to do so, and I ask him to withdraw.

Mr. CRUICKSHANK: What were you making?

Mr. LACOMBE: I want a decision on the point, from the chair. I submit the hon. member must withdraw.

The ACTING CHAIRMAN (Mr. McCann): I did not hear the term used.

Mr. DUPUIS: If the expression does not suit the hon. member I will use another word.

Mr. CRUICKSHANK: I can give you a dandy.

Mr. DUPUIS (Translation): I can say to the hon. member, if he does not relish the term "demagogic"—

Mr. LACOMBE (Text): Mr. Chairman, I rise to a point of order. The hon. member has not withdrawn his remarks and is making another speech at this time.

Mr. CRUICKSHANK: That is more than you did.

Mr. DUPUIS (Translation): I wish to reply to my hon. friend. He is opposed to my using the term "demagogic". I was merely going by what he said. Naturally the truth is always painful.

Mr. LACOMBE (Text): The hon. member for Chambly-Rouville (Mr. Dupuis) is stating now that he told the truth a few moments ago, but he has not withdrawn.

Mr. DUPUIS: The whole thing is settled. I am sorry to have entered into this discussion.

Mr. LACOMBE: It is too bad.

Mr. DUPUIS: It is too bad that my hon. friend should take up the time of this committee by making the speech he has. Hon. members will be able to judge its worth by the translation to-morrow.

(Translation): My hon. friend said a moment ago that our soldiers were underpaid and that they should receive $4 a day. This is rather strange coming from the hon. member for Laval-Two Mountains (Mr. Lacombe) who has, on more than one occasion, stated his opposition to any participation in this war. Can it be that he has changed his mind on the subject? The hon. member is inconsistent. I fail to understand the reason for his acting in such a way. I know he has gone over to the other side of the house—

Mr. LACOMBE (Text): I rise to a point of order. The hon. member is making a second speech in answer to my speech.

Mr. MacINNIS: That is quite in order.

The ACTING CHAIRMAN (Mr. McCann): What is the hon. gentleman's point of order?

Mr. DUPUIS: He has none.

Mr. LACOMBE: Go ahead.

Mr. DUPUIS (Translation): I was saying, Mr. Chairman, that my hon. friend the member for Laval-Two Mountains (Mr. Lacombe) is inconsistent when he requests that our soldiers be paid $4 a day, after he has formed a party of which he is the sole member and leader—

Mr. LACOMBE: With the people behind me.

Mr. DUPUIS: With the people who subscribe so generously when he passes the hat around. My hon. friend is inconsistent since he opposed participation of any kind, which means that there should be no army, navy or air force. Now he urges that we pay our soldiers $4 a day, although he knows perfectly well that it costs the country about $11 a day to keep a soldier in the army.

He has referred to trusts. I am convinced that there is not, in this house, a single member favouring capitalists who abuse their powers. The hon. member for Laval-Two Mountains is not alone in condemning the attitude of capitalists who misuse their money and impose upon the working class. The hon. member for Laval-Two Mountains should be the first to state before this house and the whole country that the man who has made the greatest contribution, through his writings and his deeds, to improve the conditions of the working class and repress the endeavours of capitalists against the worker, is the Right Honourable Prime Minister of Canada, whom he is now endeavouring to discredit.

Mr. LACOMBE: May I ask the hon. member a question?

Mr. DUPUIS: Certainly.

Mr. LACOMBE: Would he tell me in what way I have discredited the Prime Minister in the speech I have just made. Let him quote my words.

The ACTING CHAIRMAN (Mr. McCann) (Text): I understand that both hon. gentlemen are speaking about matters that have nothing to do with the Department of Munitions and Supply. While I cannot rule that they are strictly out of order, I suggest to hon. members that they take advantage of the presence of the Minister of Munitions and Supply and deal with matters that have to do with his department. This is not a rule or regulation, but it is an arrangement which was made and which should be observed.

Mr. HATFIELD: I should like to ask the minister if a car owner living in New Brunswick near the Quebec border can drive across the border and get full value for his gasoline coupons?

Mr. HOWE: I am sorry but I cannot answer that question. I know of no regulation to prevent it.

Mr. HATFIELD: I understand that car owners living in the northern part of New Brunswick are driving from two to forty miles to the Quebec border in order to buy gasoline, and thus they receive three gallons more per coupon than they would in New Brunswick. They are wasting from one to two gallons of gas, and using up tires, in order to fill their tanks, receiving from six to eight gallons more. I should like to ask the minister when we can expect some relief from this discrimination between the provinces.

Mr. HOWE: If my hon. friend can help us with the submarine sinkings—I notice that last Friday we lost the largest tanker we had in the Canadian fleet—I may be able to answer his question. I am sorry, but I am not conducting Germany's war.

Mr. HATFIELD: It is not the fault of the people of New Brunswick that we are losing tankers.

Mr. HOWE: That is just too bad, isn't it? It is not the fault of the province.

Mr. BROOKS: In connection with this same matter, the minister accused me yesterday of casting aspersions because I suggested that there were reports that gasoline had been shipped from the maritime provinces to Quebec, and that if such were the case the maritime provinces should be treated the same as Quebec. Quebec is receiving five gallons per coupon while we in the maritime provinces have been reduced to two gallons per coupon. I did not have any clippings before me at that time, but I have since received a clipping from the Halifax *Chronicle* dated May 18. This article quotes no less an authority than the premier of Nova Scotia. It reads:

"We in Nova Scotia, I think, have demonstrated our willingness to cooperate in the war effort but cannot accept arbitrary discrimination," the telegram states. The premier recalls that, "with a refinery at our door gasoline for the maritimes has always been available at the lowest possible price." In referring to "discrimination" the telegram states "authorities claimed they were obliged to ship gasoline to Quebec at a loss thus preventing discrimination against Quebec. To-day, however, the situation is reversed and because there is a shortage at the Halifax refinery we are not on a par with the rest of Canada."

[Mr. McCann.]

I have just received a telegram from Saint John. Naturally the people are much concerned, and they are not altogether satisfied with the explanation the minister made yesterday in this committee regarding the shortage of gasoline in the maritime provinces. The telegram is addressed to me and reads:

We have to-day wired Hon. C. D. Howe as follows with further reference to our unanswered telegram and your statement in the House of Commons yesterday. We insist and are entitled to know why your department reduced coupon value. Your statements yesterday do not explain situation in view of the following. It is our understanding that at a meeting held in Halifax on May 11, coupons would not be cut as oil stocks would permit full coupon value for essential users, leaving balance for non-essentials. Why then your unexplained action? Was it done at the request of any oil company? Who were tank cars shipped to, and does the number exceed their nominal shipment by this means of transportation?

New Brunswick Automobile Dealers Association, J. W. O'Brien, President.

Saint John Automobile Dealers Association, R. M. Lawson, President.

The situation could hardly change so drastically between May 11 and May 17, the latter being the date, I think, when the unit was reduced from five gallons to two. I think the minister owes an explanation to the people of the maritime provinces beyond the brief explanation that he gave yesterday. As has been stated by members from the maritime provinces, if it is absolutely necessary that we have to suffer in the interests of this war effort we are willing to do so, but we do not feel that we should be asked to suffer more than any other part of the dominion. We are certainly bearing our fair share of the burden of this war down in those small provinces. Indeed, I do not think any portion of Canada can claim to have done more than we have done, if as much. In justice to the maritime provinces I think the minister should answer some of the questions asked in the telegram which I have just read, and which I will send over to him, and I would ask him to enlarge upon the oil situation in particular as far as the maritime provinces are concerned.

Mr. HOWE: I am surprised to hear it suggested that either I am or any of my officers are deliberately trying to keep the maritime provinces from getting gasoline. The situation is this. The maritimes are served from the Halifax refinery, as stated by the premier of Nova Scotia. Unfortunately a refinery does not produce gasoline unless crude oil is put in at the other end of the refinery, and the difficulty is to get crude oil at that point.

The sinkings along the Atlantic coast in the first two weeks of April were appalling, so serious that major shipping did not move for ten days following. If we had had five times as many tankers as we had, it would not have helped us because they were all tied up in harbours between south America and Nova Scotia. We are moving them out again, but as announced in the paper this morning the largest tanker we owned was sunk last Friday with considerable loss of life. Every ocean tanker that we have is in service to Halifax, and we are asking for all the help we can get from the maritime commission, who are facing exactly the same situation in New York state and the New England states that we have in the maritime provinces. The Portland-Montreal pipeline has been shut down for three weeks and we have had to depend on feeding Montreal from Sarnia. We have diverted all our tank-car space to Halifax. In addition, we had to move petroleum products from Sarnia and from Montreal to Halifax. I say quite frankly that we are not moving gasoline. We think it more important to supply the navy. We are moving heavy fuel oil and light fuel oil as best we can, and we are protecting the naval situation on the Atlantic coast and also the aviation situation. I do not know of anything that can be done that is not being done to get supplies of petroleum to the maritime provinces. The situation is exactly the same in New England.

Mr. BROOKS: Are tankers being used to carry supplies from Montreal to the maritimes?

Mr. HOWE: There are tankers on the way to the maritimes from Montreal. Naturally there is no source of supply in Montreal. The source of supply is the pipeline at Sarnia. Before we can move very much gasoline or oil from Montreal we have to move it from Sarnia to Montreal, and that takes tankers.

Mr. BROOKS: In Montreal and the province of Quebec the people are allowed the full unit of gasoline, five gallons. Could not the people of Montreal and the province of Quebec be asked to make a little sacrifice so that some of that gas could be sent to the maritime provinces?

Mr. HOWE: How would it help the maritime provinces if we have not transportation to take it there? It is a transportation problem. There is plenty of gasoline in the wrong place. If we have gasoline in Ontario, would it be of any assistance to reduce the unit from five to two gallons if we have not transportation to put any more gasoline into the maritimes?

Mr. O'BRIEN: Would it not be possible to divert to the maritime provinces, say one hundred cars destined from Sarnia to Quebec?

Mr. HOWE: Every car we have is on the way to the maritime provinces loaded with oil.

Mr. O'BRIEN: Assume that a thousand cars are moving into Quebec to-day from Sarnia to supply gasoline at the full unit rate of five gallons. Could not one hundred of those cars be sent to the maritime provinces if the unit in Quebec province was reduced from five to, say four gallons? Would that not be possible?

Mr. HOWE: If we are using all the equipment we have for the maritime provinces, you cannot get any more. We are trying to meet the maritime situation. It is not the automobile owners we are worrying about at all. We have much more serious worries. But we are operating every bit of transportation we have for sending oil to the maritime provinces, and operating from the nearest point where we have a supply of oil.

Mr. O'BRIEN: Perhaps the minister did not understand my question. If one hundred out of, say one thousand cars which are being used to service the province of Quebec—

Mr. HOWE: We have eight hundred tank cars in this area, and they are all on their way to the maritime provinces.

Mr. O'BRIEN: Every car?

Mr. HOWE: Every car.

Mr. O'BRIEN: With fuel oil?

Mr. HOWE: Yes.

Mr. O'BRIEN: How is Montreal being serviced to-day with gasoline from Sarnia?

Mr. HOWE: By tankers.

Mr. O'BRIEN: Boats.

Mr. HOWE: Yes.

Mr. O'BRIEN: Are any railway cars being used to take gasoline from Sarnia to Quebec?

Mr. HOWE: No.

Mr. HAZEN: I appreciate the fact that the navy has to be served first. It is hardly necessary for me to say that there is only an imaginary line dividing the province of Quebec from the province of Ontario. If the minister will look at the map he will notice that to go round the Gaspé peninsula one has to go along the Atlantic side and then round the other side, a distance of about five hundred miles. The distance from Rivière du Loup to Fredericton would be about two hundred miles, and some relief might be given in that way to New Brunswick if part of the long trip round the Gaspé coast were cut out by reducing the amount of

gasoline which is being supplied to that area. Possibly that might not work out, but the suggestion occurred to me.

Mr. HOWE: All I can say is that the ablest oil men we have in this country are trying to work out the situation in the maritime provinces. We are hopeful that we can work it out. The important thing is to keep our armed services going. If anything happens to them, you can imagine the consequences. We believe that the present situation is temporary and that we shall get relief through ocean tankers. We hope so. There may be a little straightening out to do on the border of Quebec. We are not trying to penalize people. If they live ten miles within the province of New Brunswick, they can drive to the province of Quebec and get a higher unit value of gasoline. That is no great loss to the war effort. That is a situation I am not worrying about particularly because I think all the people of Canada can see the writing on the wall and appreciate that they will get less gas before they get more gas. We are trying to divide up the gas fairly in the receiving areas, and will continue to do so.

Mr. McNEVIN: Is it not true that a number of eastern states have had to accept a lower amount of gasoline than some of the central states?

Mr. HOWE: Yes. There is sharp rationing of certain eastern states, but none at all of the bulk of the states. Seventeen states, I believe, have been rationed, and if I can believe the press, three gallons a week is the allowance in certain states. But the other states, that is all but the seventeen, have no rationing at all; they can buy all the gasoline they like.

Mr. HOMUTH: I have had a number of inquiries with respect to the fuel oil situation in the coming winter in Ontario. Could the minister give the house some time soon a report on the fuel oil situation, so that those who are using oil for heating purposes may have some warning as to what their position will be?

Mr. HOWE: I think I can give that without notice. There will be no heating by oil next winter in homes or in factories anywhere.

Mr. STIRLING: In the whole of Canada?

Mr. HOWE: In the whole of Canada, yes.

Mr. HOMUTH: The minister means that we can take that statement and advise our people that all heating with fuel oil will be stopped for the coming winter?

[Mr. Hazen.]

Mr. HOWE: That is right.

Mr. HOMUTH: Is it contemplated that there will be any such drastic move in regard to natural gas in western Ontario? I have in mind the fact that a great many people have installed gas furnaces which are not convertible; in each case an expenditure of hundreds of dollars will be required to take that type of furnace out and put another in. If they are to be under any such necessity they should receive fair warning.

Mr. HOWE: I think most householders got their warning last winter. The fact is that the natural gas supply in Ontario is dwindling very rapidly. As my hon. friend knows last winter was mild, yet there were certain days when war industries were without gas and householders had very low pressure. We are attempting to meet the industrial situation in the Hamilton area by extension of the artificial gas supply, but I believe that householders who have furnaces which were originally built for coal and have been converted to gas may expect to be asked to transfer back. As to whether furnaces which were installed to burn gas only can be kept going, I am inclined to think that everything possible will be done to avoid the expense of tearing out that type of furnace and putting in another. But I am sure that those who have coal equipment which they are now using for gas will be asked to change back to coal.

Mr. CRUICKSHANK: Does that apply to ordinary fuel oil too?

Mr. HOWE: Yes.

Mr. CRUICKSHANK: In *Hansard* of yesterday, page 2548, the minister stated that arrangements would be made so far as possible to provide work for garages and small shops in connection with what is known as the bits-and-pieces programme—provided, he added, the establishment is used exclusively for war work. Do I understand from that that a garage which has a machine shop in connection with it cannot go on repairing cars and still get small orders?

Mr. HOWE: My hon. friend must interpret that reasonably. What we are trying to do, strange as it may seem to a good many, is not to provide employment for all but to get all the war material we can. If a garage is two hundred miles from the nearest large factory it is very difficult to service that garage. A garage within five miles of a gun plant will be taken care of before one fifty miles away, because every

operation of that kind has to be closely supervised and timed. There is nothing I can say about country garages that would apply to every country garage; there is nothing I can say about city garages which would apply to every city garage, because there it depends on what equipment there is, and the class of mechanic that is employed. But we are attempting to spread bits-and-pieces in garages wherever we can do so to the benefit of the war effort.

Mr. CRUICKSHANK: I was not criticizing. I was asking for information.

Mr. HOWE: Yes. I hope I have made it clear.

Mr. CRUICKSHANK: As I understand the report in *Hansard*, it means that a garage, no matter how fine its equipment or how good its mechanics, could not have one part of its establishment repairing cars and another part, entirely segregated, doing war work.

Mr. HOWE: Well, I did not say that. I said we could not mix war work with repair work. It is very difficult to obtain costs where the two operations are running parallel. It might be possible if there was a segregation to work out the cost so that we would not have the danger of mixing repair work with war work as far as costs are concerned, and so that we could predict the output. Naturally, if we place bits-and-pieces with a garage for delivery on a certain day we must get the bits-and-pieces on that day. If they are two or three days late they may tie up the production of a whole plant. For that reason we cannot mix the two operations very well. But I would not be dogmatic on that. Each proposal must be studied on its merits.

Mr. MacINNIS: Costs could be placed on piece-work. Delivery, of course, is another matter.

Mr. HOWE: Delivery, of course, is just as important as costs.

Mr. HOMUTH: Is it not a fact that the bits-and-pieces programme is more a question of subcontracts?

Mr. HOWE: Oh, yes.

Mr. DOUGLAS (Weyburn): Could not the department bring the subcontractor into direct contact with the government?

Mr. HOWE: No. The main contractor must have control of his product. Take the manufacture of 25-pounders. This gun contains 1,200 pieces, of which about 560 are subcontracted, some of them to garages. I know one two-car garage which is making a particular bit for that gun. But the main contractor must be the one who controls his product. The government, unless it has an assembly plant of its own, cannot deal in bits-and-pieces. The man who assembles the product is responsible for seeing that all his bits-and-pieces are there, and that they fit, and he must be, in the nature of things, the primary contractor.

Mr. DOUGLAS (Weyburn): Some of the men in the west who have machine tools feel that about the only things they are being offered by the main contractors are articles they cannot possibly handle or are not very profitable to handle, and that these small men are not being given much of a show.

Mr. HOWE: There has been some difficulty in the west. We are trying to break it down. This is a matter of education in both directions; we have to educate the main contractor to break down his product, just as we have to educate the small shops as to what they must do in the way of cost accounting and production work. In the Sorel situation, the 25-pounder gun furnished the first great example of what could be done there. That set the pace for the eastern contractors, and we have been very successful in eastern Canada in getting contractors to break their production down. We are having more difficulty in the west, but are working away there, and expect to get better results as we are able to educate the main contractors further.

Progress reported.

At six o'clock the house adjourned, without question put, pursuant to standing order.

Thursday, May 21, 1942

The house met at three o'clock.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

PRICE CEILING SUBSIDIES—GRAPEFRUIT

Mr. BRUCE:

1. Is the government still subsidizing grapefruit imported in tins?
2. If so, to what extent?
3. Is grapefruit itself subsidized?

Mr. RALSTON:

1. Canned grapefruit was included in the "schedule of specified exclusions from sub-

sidy" issued with the statement of import policy of the wartime prices and trade board in extra No. 124 of the *Canada Gazette* dated December 29, 1941.

2. See above.

3. No.

FARMERS' CREDITORS—DEFINITION OF DEBTOR

Mr. DOUGLAS (Weyburn):

Will the government give consideration to bringing down legislation defining the term debtor, under the Farmers' Creditors Arrangement Act, notwithstanding the absence of privity of contract?

Mr. RALSTON: While the matter is one of government policy as to which no final present statement is possible, it is not the intention of the government to introduce a bill amending the Farmers' Creditors Arrangement Act during the present session.

NATIONAL FILM BOARD—LEGAL ACTION BY MARCH OF TIME INC.

Mr. HOMUTH:

1. At any time, since September 1, 1941, has legal action been started in the courts of the United States or Canada against the national film board by March of Time, Inc., or the producers of the series of films known as "March of Time"?

2. If so, on what date was such action commenced and upon what alleged grounds?

3. Was this action dropped by the producers of "March of Time" and, if so, on what date?

4. Was settlement made as between the producers of "March of Time" and the national film board, its agents, or any other incorporated company against whom action had been taken jointly with the national film board?

5. What did the producers of "March of Time" allege with respect to their ownership of film material?

6. Was settlement of the action arranged by the payment of money to the producers of "March of Time" by either the national film board or companies associated with the board in the distribution and exhibition of films in the United States?

7. If so, what was the amount paid to the producers of "March of Time" from the public treasury or from funds accumulated from the receipts from the distribution in the United States of films produced by the national film board?

8. What was the total amount expended by officials of the national film board for travelling and other purposes in connection with the settlement of this action?

Mr. THORSON:

1. No. "March of Time" entered an action in the District Court, Southern District of New York in December, 1941, against Loew's Incorporated, Warwick Pictures Inc., and Moredall Realty Corporation to restrain them from exhibiting in the United States a film entitled "War Clouds in the Pacific" produced and released in Canada by the national film board in November, 1941. The grounds alleged were that a certain quantity of film material furnished by the "March of Time" and used in the film had been supplied for exhibition in Canada only. This allegation was denied by the defendants. The action was discontinued after a conference between the interested parties, at which the government film commissioner, the assistant film commissioner and Mr. Stuart Legg, producer of the Canada Carries On Series, were present, together with representatives of the "March of Time," Loew's Incorporated and Warwick Pictures, Inc. It was agreed that a subtitle in the following terms should be added to the film: "This motion picture was produced by the national film board of Canada with the cooperation of the 'March of Time'." No money payments of any kind were involved in this settlement. The film secured nation-wide distribution in the United States.

2, 3, 4, 5, 6 and 7. See answer to question 1.

8. $179.23. (See answer to question 1.)

NATIONAL FILM BOARD—16-MILLIMETRE PROJECTION CIRCUIT

Mr. MacKINNON (Kootenay East):

1. Does the national film board either alone or in conjunction with the director of public information operate a 16-millimetre film projection circuit?

2. How many persons are employed in connection with this work?

3. What are their names?

4. What is the total salary paid to each such person?

5. What is the total amount of travelling expenses paid to each such person during the past year?

6. What is the previous experience of each such person?

7. What equipment, if any, has been purchased for use in this work?

8. What was the total cost of such equipment?

9. What was the budget of the amount required for this work?

10. What has been the actual expenditure to date upon this work?

11. For what purpose or purposes is this work carried on?

Mr. THORSON:

1. Yes. The national film board has been operating, in conjunction with the director of public information, since January 1, 1942, some forty-three 16-millimetre travelling theatres serving remote rural areas in every province in Canada. The Canadian council of education for citizenship collaborates in the project.

2. Thirty-seven. In addition, the services of ten projectionists have been supplied free of charge by cooperating organizations.

3, 4, 5 and 6.

Name—Classification	Total salary paid per month	Total travelling expenses during past fiscal year	Previous experience
D. W. Buchanan, National supervisor	$270 00	$116 02	Former national secretary, National Film Society of Canada, and supervisor of public affairs broadcasts, Canadian Broadcasting Corporation.
Stanley Rands, Regional agent.....	100 00	102 08	School teacher.
J. A. Bramham, Regional agent and projectionist.....	140 00	590 26	16 mm. projectionist.
R. K. Nevers, Regional agent, part time.....	50 00	266 94	Director of New Brunswick Visual Education Bureau.
J. D. Nadeau, Projectionist.....	130 00	358 65	16 mm. projectionist.
Hilda Gillis, Projectionist.....	130 00	252 92	Visual education, Prince Edward Island Libraries.
Gaston Morin, Projectionist.....	108 33	374 69	16 mm. projectionist.
Elmer Brownell, Projectionist.....	130 00	197 97	16 mm. projectionist.
Mrs. S. C. Perry, Projectionist.....	130 00	Employment began since March 31, 1942	16 mm. projectionist.
J. C. Peck, Projectionist.....	130 00	Employment began since March 31, 1942	16 mm. projectionist.
Robert Taylor, Projectionist.....	130 00	304 30	Rural extension service, Macdonald College, Ste. Anne de Bellevue.

W. A. Thomson, Projectionist.....	130 00	480 31	16 mm. projectionist.
A. F. Mitchner, Projectionist.....	130 00	385 15	School teacher.
C. W. Gray, Projectionist.....	130 00	412 82	16 mm. projectionist.
A. E. Gawreluck, Projectionist.....	130 00	492 81	16 mm. projectionist.

Name—Classification	Total salary paid per month	Total travelling expenses during past fiscal year	Previous experience
Paul Gutoski, Projectionist.....	$130 00	$447 75	16 mm. projectionist.
Damase Bouvier, Projectionist.....	130 00	584 33	16 mm. projectionist.
K. E. Purdy, Projectionist.....	130 00	527 81	16 mm. projectionist.
J. A. Black, Projectionist.....	130 00	651 03	16 mm. projectionist.
Thomas Prime, Projectionist.....	130 00	459 58	Music teacher.

Also certain fees for assistance in supervising the operation of the circuits are paid to certain cooperating organizations as follows:

Department of Extension, University of Alberta, $30 per month.

National Film Society of Canada, Ottawa, $30 per month.

Joseph Morin, Director, Service de Cinephotographie, Quebec, $200.49 until March 31, 1942.

7. Thirty-five 16-mm. projectors and complete accessories. Also fourteen portable power units for operation of projectors when electricity is not otherwise available.

8. $22,446.51.

9. $93,000.

10. $84,006.65.

11. To bring the full story of Canada at war to rural areas which do not normally see motion pictures, and which are less effectively served than other areas of Canada by the various information media. Motion pictures explaining the strategy of war and depicting the training of Canada's armed forces, her industrial production, and every other aspect of Canada's war effort are shown, as well as films describing the geographical and social structure of the dominion. Special care has been taken to reach communities of non-Anglo-Saxon extraction, including Ukrainians, Germans and Mennonites.

ATLANTIC SHIPPING—SAILING TIME FROM ENGLAND TO CANADIAN PORTS

Mr. HATFIELD:

What is the average sailing time of a sixteen-knot vessel from the port of London to the ports of Saint John, Halifax and Montreal, respectively?

Mr. HOWE: Approximately 182, 172 and 203 hours respectively.

GRAIN ELEVATORS

Mr. HATFIELD:

1. How many grain elevators in Montreal, Saint John, West Saint John and Halifax are owned or controlled by the government?

2. Are they operated under lease?

3. If so, what is the name of the person or company holding each lease?

[Mr. Thorson.]

4. If any elevator is leased to a company, who are the directors of said company?

5. What rental is paid by each lessee?

Mr. HOWE:

1. Seven.

2. Only one of the elevators is operated under lease namely, the National Harbours Board elevator at West Saint John.

3. Canadian Pacific Railway Company.

4. Sir Edward Beatty, G.B.E.; L. J. Belnap; Col. Henry Cockshutt; D. C. Coleman; Aimé Geoffrion, K.C.; G. Blair Gordon; Hon. Eric W. Hamber; John W. Hobbs; Right Hon. Reginald McKenna, P.C.; R. S. McLaughlin; Ross H. McMaster; Maj.-Gen. Frank S. Meighen, C.M.G.; Sir Edward Peacock, G.C.V.O.; Robert C. Stanley; W. N. Tilley, K.C.; Morris W. Wilson and W. M. Neal.

5. $4,000 plus one-tenth (1/10) cent per bushel on all grain received into the elevator and one-tenth (1/10) cent per bushel on all grain shipped through National Harbours Board grain galleries and twenty-five (25) per cent of all storage revenue accruing on grain stored in both the National Harbours Board elevator and the Caandian Pacific Railway elevator and in railway cars.

Rental received in 1941—$73,420.62.

NATIONAL FILM BOARD—"HIGH OVER THE BORDER"

Mr. HOMUTH:

1. Was the film entitled "High Over the Border", recently released by the national film board, produced in Canada?

2. If so, was it produced either wholly or largely by the regular staff of the national film board and was the work, including the sound recording, carried on in the plant of the national film board in Ottawa, or, was it produced by private enterprise under contract or agreement with the national film board, or was it purchased as a completed film from a private company or individual?

3. If produced by private enterprise, did the national film board advance funds to the producer or producers to meet expenses in connection with the film, and, if so, what amount?

4. Was this film produced in Canada?

5. If not produced in Canada, where was the film assembled and edited and by whom?

6. Where was the sound recorded, and by whom?

7. What was the total amount expended from public funds on the production or purchase of this film, including any salaries or fees paid to persons engaged upon the production of the film, travelling expenses, purchase of film material for use in the film, sound recording and all positive prints of the film made to date?

8. From what appropriation or vote of public funds for the current fiscal year was the cost of this film met?

9. Was the film made on behalf of any part of Canada's war effort, and, if so, what relation has the subject matter of this film to any such war effort?

Mr. THORSON:

1. In part.

2. (a) No. (b) No. (c) This film was produced by the national film board in collaboration with the New York Zoological Society and the government of the United States.

3. See answer to question 2 (c). No advance was made for expenses.

4. In part.

5. Assembled and edited in New York and Ottawa by Irving Jacoby.

6. Sound recorded in New York—English version by Fox Movietone News, French version by Reeves Sound Studio.

7. $5,252.38.

8. The national film board share of the cost of this film was met from the war appropriation for the fiscal year 1941-42 by the public information division, Department of National War Services.

9. The film is a parable of unity in the Americas, with emphasis upon the importance of free movement across international borders, illustrated by the migrations of birds common to north and south America. It is a comment on the deep natural forces making for mutual understanding between peoples, and contributes to an appreciation of the common interest of the countries of the western hemisphere in wartime defence.

NATIONAL FILM BOARD—"CHURCHILL'S ISLAND"

Mr. HOMUTH:

1. What was the total footage of the film called "Churchill's Island", produced by the national film board?

2. What was the total number of feet of film used in this reel which was purchased or acquired in any other manner from any British film company or organization?

3. What was the total number of feet of film used in this reel which was seized from Germany or other enemy sources?

4. What was the total number of feet of film used in this reel which was actually taken in Canada?

5. What was the total cost of this film?

6. By whom was this film distributed (a) in Canada; (b) in the United States?

7. Upon what arrangement was this film distributed by such organization or organizations?

Mr. THORSON:

1. 1,924 feet.

2. 957 feet.

3. 762 feet.

4. 205 feet.

5. $4,990.15.

6. (a) Columbia Pictures of Canada; (b) United Artists Corporation.

7. Under terms of contracts agreed upon.

NATIONAL FILM BOARD—SECRETARY AND CONTROLLER

Mr. HATFIELD:

1. Who is the secretary and controller of the national film board?

2. What is his salary, and/or allowance?

3. What is the total amount paid to him since March 31, 1941, as travelling or living expenses?

4. When was he appointed and/or assigned to this position?

5. By whom was he appointed and/or assigned to this position?

6. By whom was he recommended for this position?

7. Has he any blood relatives employed by the national film board?

8. If so, what are their names and what positions do they hold?

9. What salaries and/or allowances are paid to them?

10. When were they appointed to their present positions?

11. By whom were they appointed to their present positions?

12. By whom were they recommended for their present positions?

Mr. THORSON:

1. A. G. McLean.

2. Salary—$4,500 per annum. No allowances.

3. Travelling expenses—$120.02.

4. October 21, 1941.

5. Services of A. G. McLean, executive assistant in the Department of National War Services, loaned by Department of National War Services to the national film board, to act as controller and secretary.

6. Appointment of A. G. McLean as controller and secretary of the national film board recommended by motion of the national film board at its regular meeting, August 12, 1941.

7. Yes.

8. (a) Ross McLean—assistant government film commissioner.

(b) C. Grant McLean—temporary assistant camera man, employed by the government film commissioner under Section 12 (1) of the National Film Act.

9. (a) Ross McLean—salary, $4,500 per annum. No allowances. (Out of pocket expenses when travelling on business of the national film board.)

(b) C. Grant McLean—Salary, $108 per month. No allowances. (Out of pocket travelling expenses necessary to production of specific films for which he is engaged.)

10. (a) Ross McLean—September 1, 1941.

(b) C. Grant McLean—First appointment, December 19, 1941 to January 31, 1942. Second appointment, February 1, 1942 to March 9, 1942. Third appointment March 12, 1942.

11. (a) Ross McLean—By civil service commission.

(b) C. Grant McLean—By government film commissioner under Section 12 (1) of the National Film Act for production of particular films, on a temporary assignment basis.

12. (a) Ross McLean—Recommended by Hon. J. T. Thorson, as chairman of the national film board, pursuant to a motion of the national film board passed at its regular meeting, August 12, 1941.

(b) C. Grant McLean—Recommended by the government film commissioner.

MILITARY SERVICE—FARMERS AND FARM WORKERS

Mr. LACOMBE:

1. How many young farmers, sons of farmers and farm labourers have been mobilized to date under the terms of the mobilization act of 1940?

2. How many underwent their training of one month?

3. How many were in training for four months?

4. How many, having failed to obtain leave, are still in the military training camps?

Mr. THORSON: The statistics respecting persons called up under the provisions of the national war services regulations for military training are not kept on the basis of occupations. The answering of this question would entail the reviewing of files of over 120,000 persons. This would take a great many weeks and the work of a considerable staff which is already heavily pressed. I therefore ask that the question be dropped.

Question dropped.

QUESTIONS PASSED AS ORDERS FOR RETURNS

GOLD—HOLDINGS IN CANADA AND EXPORTS

Mr. HANSELL:

1. How much gold (in ounces and value) is now held in Canada by, (a) the Canadian government, (b) the Bank of Canada, (c) foreign exchange control board, (d) the chartered banks?

2. How much of this gold is held on behalf of foreign governments?

[Mr. Thorson.]

3. How much gold was exported from Canada and to what countries during each of the years 1930 to 1941 inclusive?

Mr. McLARTY: Return tabled.

BRITISH COLUMBIA AND YUKON AIRPORTS

Mr. BLACK (Yukon):

1. What amounts has the government expended to date on each of the following airports, Dawson Creek, Fort St. John, Watson Lake, Fort Nelson, Whitehorse, Dawson?

2. What amount has been spent to date on each of the airports on Vancouver island, and what are the names of such airports?

Mr. POWER: I would ask the hon. gentleman if he would be satisfield with a statement of the aggregate amount spent on all these aerodromes, in answer to question No. 1, and on the aerodrome on Vancouver island in answer to question No. 2. My officers advise me that it might be giving information to the enemy as to the capacity of each aerodrome if the figures of the expenditures were given for each individual aerodrome. If my hon. friend would be satisfied with the aggregate amount, so many million dollars for the aerodromes mentioned in question No. 1, and so many millions for those in question No. 2, I should be very glad to furnish that information.

Mr. BLACK (Yukon): I cannot agree with the minister that the enemy would get the slightest information through this question being answered. If the minister thinks our enemies the Japanese do not know as much about the details of what has been done and what is being done in Canada as we do, and as the minister does, then he has more faith in human nature than I have.

Mr. POWER: Then I am afraid I will have to take the stand that it is not in the public interest to give the information as it is requested here, but I will give it in the manner I have indicated.

Mr. BLACK (Yukon): Many of these are civilian aerodromes; they are used by Trans-Canada Air Lines and other civilian organizations operating civilian planes. The government has spent large sums of money on them, and surely the public is entitled to know what those sums amount to.

Mr. SPEAKER: Stand, in the meantime.

Mr. POWER: I do not see why it should stand, because I do not believe I could change the position arrived at by my officers. I am forced to the position where I say it is not in the public interest to answer the question in

the manner in which it has been put. I will give such information as I can to my hon. friend.

Mr. SPEAKER: Dropped.

Mr. POWER: No; it should stand, but with the understanding that the answer will be given in the manner in which I have indicated.

Mr. SPEAKER: Stands as amended.

Mr. POWER: Perhaps it might best pass as an order for return.

PRINCE GEORGE AND GRANDE PRAIRIE AIRPORTS

Mr. BLACK (Yukon):

What amounts has the government expended to date on each of the airports at Prince George and at Grande Prairie?

Mr. POWER: I should like to make the same answer as I made to the previous question of the hon. member. Perhaps this question should be passed as an order for return.

NATIONAL FILM BOARD—STAFF

Mr. FRASER (Peterborough West):

1. How many of the following persons, appointed to the staff of the national film board under authority of the National Film Act, to wit: Ross McLean, Allan G. McLean, Annette Allard, Alan H. Adamson, Irene Baird, Gudrun J. Bjerring, Maurice Blackburn, Lois M. Bright, Kathleen F. Brooks, Donald W. Buchanan, James A. Beveridge, F. Elizabeth Bertram, Edward Buckman, Henry C. Campbell, Marguerite C. Chestnutt, May Kathleen Corp, Doreen Curry, A. P. Cote, Thomas C. Daly, R. J. Edmonds, Donald G. D. Fraser, Herbert G. Glover, Dorothy R. Hazel, Alice Heggtveit, Robert J. Humble, Margaret Humble, Charles C. Hyndman, Richard J. Jarvis, Mrs. S. Josie, Anne MacDonnell, Graham B. McInnes, Robinson F. MacLean, W. A. Macdonald, C. Grant McLean, Jane Marsh, L. G. Marcotte, Sydney C. Newman, R. K. Nevers, John A. O'Meara, Vincent Paquette, Margaret M. Palmer, Nicholas C. Read, Roger Racine, Lois Rae, Leon M. Shaw, Douglas Sinclair, Janet C. Scellen, Edwin W. Scythes, Hazen E. Sise, D'Arcy Sheard, Katharine P. Symons, Fay Thomson, Gordon Weisenborn, Pamela Wilcox, have had any technical or professional experience in motion picture production and laboratory work, prior to their appointment, indicating in each case the experience which such person has had?

2. How many of the above persons have been continuously employed for more than three months, indicating which persons?

3. How many of the above noted persons have been in receipt of a regular weekly or monthly salary, honorarium or fee from the national film board since the date of their appointment?

4. Before each of the above noted persons were appointed to the position he or she now fills, what steps, if any, were taken by the national film board or its executive officers to advertise the positions or to provide so that other Canadian citizens, including the heads of families and war veterans, with equal or better qualifications and experience, especially in film production, distribution and laboratory processing work, might have an equal opportunity to make application and receive equal consideration for appointment to the positions now filled by the above noted persons?

5. How, upon what basis and by whom was each of the above persons selected for and upon whose recommendation was each of them appointed to the position he or she now fills?

6. Prior to the appointment of each of the above persons were any recommendations submitted to the national film board for approval or were the appointments, in each case, made by officers of the national film board on their own initiative and responsibility and the board then asked to confirm them?

7. Has treasury board at any time ruled that the National Film Act should be interpreted as applying to persons employed casually for the duration of individual projects and not to any person continuously employed?

8. If so, when, and what was the full import of such ruling?

9. Has the treasury board at any time ruled that the authority of the National Film Act for the employment of staff without prior approval of the establishment by treasury board could not be accepted?

10. If so, when and what was the full import of such ruling?

NATIONAL FILM BOARD—WARWICK FILMS OR WARWICK PICTURES OF NEW YORK

Mr. HATFIELD:

1. Has the national film board any (a) production contracts; (b) distribution contracts with Warwick Films or Warwick Pictures of New York?

2. If so, how many in each category?

3. What is the total number of feet of film which have been acquired by Warwick Films or Warwick Pictures of New York from the national film board since March 31, 1941?

4. Upon what arrangement or arrangements was such film acquired by Warwick Films or Warwick Pictures of New York from the national film board?

5. Has the national film board sold to Warwick Films or Warwick Pictures of New York any seized German films that have come into the board's possession or any copies or reproductions thereof other than that contained in completed films produced and released by the national film board?

6. If so, how many feet of (a) negative, (b) duplicate negative, (c) duplicate positive and/or (d) positive has been sold to Warwick Films or Warwick Pictures of New York, and on what terms and conditions?

7. Has the national film board, at any time since the outbreak of war, made available to Warwick Films or Warwick Pictures of New York any seized German films that have come into its possession or any copies thereof in order that the latter might duplicate or reproduce all or any portion of such films or copies thereof?

8. If so, who authorized such loan and upon what terms and conditions were the films or copies thereof loaned to Warwick Films or Warwick Pictures of New York.

Mr. THORSON: Subject to the reservation, in the first place, that it might not be in the public interest to indicate the extent to which German films have been seized, and likewise reserving the giving of information which may be helpful to competitors, this might pass as an order for return.

NATIONAL FILM BOARD—PRODUCTION AND DISTRIBUTION OF FILMS

Mr. JACKMAN:

1. What are the names of all films produced by the national film board since January 1, 1941?

2. What was the total number of feet of film used in each such film which was purchased or acquired in any other manner from any British film company or organization?

3. What was the total number of feet of film which was seized from German or other enemy sources?

4. What was the total number of feet of film used in each such film which was actually taken in Canada?

5. What was the total cost of each such film?

6. By whom was each such film distributed (a) in Canada, (b) in the United States?

7. Upon what arrangement was each such film distributed by each such organization or organizations?

Mr. THORSON: Subject to the same reservation as to the giving of information which may be helpful to competitors, and likewise as to information with respect to the supply of German films which have been seized, this might be passed as an order for return.

NATIONAL FILM BOARD—FILM PRODUCTION CONTRACTS

Mr. JACKMAN:

1. How many contracts in connection with the production of films have been awarded by the national film board since March 31, 1941?

2. Of these, how many were for amounts in excess of $5,000?

3. How many were approved by the Minister of Trade and Commerce or the Minister of National War Services in his capacity of chairman of the national film board prior to being awarded?

4. How many were approved by the treasury board and/or the governor in council prior to being awarded?

5. How many were awarded after tenders had been called or on a competitive basis where two or more companies or individuals had been given an equal opportunity to submit tenders or proposals?

6. Of those for total amounts in excess of $5,000, how many were awarded to, (a) companies owned and operated by Canadians in Canada; (b) foreign controlled companies operating in Canada; (c) British companies; (d) companies owned and operated in the United States of America?

[Mr. Hatfield.]

Mr. THORSON: It will not be possible to answer paragraph 6 of this question. Subject to that however it may be passed as an order for return.

NATIONAL FILM BOARD—FILM DISTRIBUTION CONTRACTS

Mr. JACKMAN:

1. How many contracts in connection with the distribution of films have been awarded or entered into by the national film board since March 31, 1941?

2. How many, if any, of such contracts were submitted to and approved by the national film board prior to being signed?

3. Upon whose recommendation were these contracts approved and awarded by the national film board?

4. In each case, who signed the contracts on behalf of the dominion government and/or the national film board?

5. How many of such contracts were awarded by public tender or on a competitive basis where more than one company or individual submitted proposals?

6. How many of such contracts were entered into as a result of direct negotiation with one company, without others being given an equal opportunity to submit proposals?

Mr. THORSON: Subject to the reservation that information which may be helpful to competitors ought not to be given, this question may be passed as an order for return.

Mr. SPEAKER: Order for return, subject to the reservation stated.

WARTIME HOUSING

Mr. CHURCH:

1. What is the total guarantee to the banks, by provinces, on account of capital building expenditure for subsidized houses built, (a) by federal subsidy; (b) by local authorities and private enterprise; (c) the wartime housing commission for war munition workers?

2. What number of the wartime housing houses have been utilized and in what cities, (a) for civilians out of homes; (b) for families of soldiers?

3. What municipalities have asked the government for aid to house soldiers' families?

DEFENCE OF CANADA REGULATIONS

PRESS REPORT OF SPEECH DELIVERED IN MONTREAL BY MEMBER OF QUEBEC LEGISLATURE

On the orders of the day:

Hon. GROTE STIRLING (Yale): Mr. Speaker, I should like to ask a question of the Minister of Justice, of which I regret I have not been able to give him notice. I should like to ask him if his attention has

been drawn to the press reports of a speech delivered on Tuesday evening, the 19th instant, at St. James Market, Montreal, by Rene Chaloult, member of the Quebec legislative assembly for Lotbinière? If so, has he considered the question whether this speech contravenes the defence of Canada regulations, and whether it is not a case for action similar to that taken in the instance of one Camillien Houde?

Hon. L. S. St. LAURENT (Minister of Justice): My attention was called to the fact that the press were reporting a speech which might be of a doubtful nature. Before coming to the house I secured a copy of a newspaper which purports to give a full text of that speech. I have not yet had time to consider it. When I have had an opportunity to see it, if it seems to require further attention I shall refer it to the officers of my department for a report as to what action if any should be taken.

PATENTS

SEIZURE IN THE UNITED STATES OF PATENTS CONTROLLED BY ENEMY NATIONALS

On the orders of the day:

Mr. J. K. BLAIR (Wellington North): Mr. Speaker, I should like to draw the attention of the house to the following article:

Roosevelt Orders Seizure of Patents.
Because of the many charges that American-German patents pooling arrangements have restricted production essential to the nation's war programme, President Roosevelt has ordered the seizure of all patents directly or indirectly controlled by nationals of enemy countries.

May I also refer—

Mr. SPEAKER: The form of the question indicates that no answer is possible at this time. I suggest that it stand as notice of question.

HON. WALTER NASH

ADDRESS OF NEW ZEALAND MINISTER TO WASHINGTON AT MEETING OF EMPIRE PARLIAMENTARY ASSOCIATION

On the orders of the day:

Mr. J. H. BLACKMORE (Lethbridge): Mr. Speaker, before the orders of the day are called I should like to ask a question of the Prime Minister. Some time ago we had the privilege in the house of listening to the then Prime Minister of Australia who on that occasion gave a most inspiring address. We have in our midst at the present time a most prominent official from New Zealand, our other sister dominion. I am wondering if the Prime Minister has made arrangements whereby Mr. Nash might come here and make his speech, as Mr. Menzies did.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I have already expressed to the Hon. Mr. Nash the hope that he would give over the radio to the people of our country the speech he delivered to the members of the parliamentary association who met him at luncheon to-day. If that is done a very much larger number would have the privilege of hearing Mr. Nash than would be possible were he to speak only in the House of Commons.

On the occasion of Mr. Menzies' visit Mr. Menzies was returning to Australia as the Prime Minister of his country. He was invited to addresss this House of Commons in his capacity of Prime Minister of Australia. Mr. Nash as hon. members know has for many years been foremost among the members of the government of New Zealand, and I know what a great privilege it would be to all hon. members to hear him. I should think however that we would have to consider carefully the precedent which would be set of having others than those holding the office of Prime Minister addressing the House of Commons during its proceedings. I feel sure Mr. Nash would be the first to appreciate the reason that would govern if he were not invited on his present visit to Ottawa, to address the house.

Mr. COLDWELL: May I ask the Prime Minister if he has taken the opportunity to see that an invitation is extended to Mr. Nash to speak to the people of Canada through the facilities of the Canadian Broadcasting Corporation.

Mr. MACKENZIE KING: I expressed to Mr. Nash the hope that he would speak over the Canadian Broadcasting Corporation facilities, and I shall certainly make it a point to see that that organization is asked to make an effort to see that he does give an address.

Mr. BLACKMORE: Did not the occasion of Mr. Menzies' addressing the House of Commons create a precedent? It might be easy so to arrange matters that no new precedent would be set by asking Mr. Nash to address the house. If he did so his address would appear in *Hansard*.

Mr. MACKENZIE KING: I believe a precedent had been established at the time of the previous war when a prime minister of another country addressed the House of Commons from beside the speaker's chair. In these matters the government must necessarily consider very carefully the precedent it establishes. Otherwise it seems to me we might

on some occasion be obliged, by failure to extend an invitation, to adopt a course which might seem to be invidious.

GLASS CONTAINERS

AVAILABILITY TO BEER AND SPIRITS MANUFACTURERS AND MILK DISTRIBUTORS

On the orders of the day:

Mr. J. H. LECLERC (Shefford): Mr. Speaker, I hold in my hand a copy of the *Temperance Advocate,* which states that the liquor bill for Ontario this year will be $88,000,000 as compared with $73,000,000 last year. It is not my intention to scold the people of Ontario for this rather high consumption of liquor, but I should like to ask the government how it is that the distributors of hard liquor and the brewers of beer seem able to get all the bottles they need when the milk distributors have to beg the glass controller to give them the bottles they need.

Mr. SPEAKER: I think that question is in the same category as the previous one.

VICHY REPRESENTATION

FRENCH CONSULATES AND CONSULAR AGENTS IN CANADA—OTTAWA LEGATION

On the orders of the day:

Hon. H. A. BRUCE (Parkdale): In view of the statement made yesterday by the Prime Minister that he had advised the French minister to take the necessary steps to suspend the operation of French consulates and consular agencies in Canada, I should like to ask the Prime Minister if he does not think that the reasons which he gave apply with equal force to the continuation of the French legation. Secondly, does the French minister continue to enjoy the usual diplomatic immunity in so far as telegraph, telephone, correspondence or other communications with Vichy are concerned?

Right Hon. W. L. MACKENZIE KING (Prime Minister): In reply to my hon. friend I would say that I do not think that the reasons which I gave with respect to the closing of French consulates and consular agencies would apply in equal measure to the French legation. The day before I gave reasons why it was thought advisable to maintain the diplomatic relations that exist at the present time between France and Canada. So far as the privileges and immunities which the French minister enjoys are concerned, they are the same as those enjoyed by all who hold the position of minister to Canada from another country.

[Mr. Mackenzie King.]

The acting leader of the opposition, the hon. member for Yale (Mr. Stirling), asked me yesterday whether as a result of the forthcoming suspension of French consulates and consular agencies there would be any consuls and employees of the consulates who were French nationals and who would be obliged to return to France. He asked also if Canada had consuls in unoccupied France whose offices would be closed and who would be obliged to return to Canada. I was unable to give my hon. friend the exact information at the time, but I can now give him the following reply to his question.

The various consuls and vice consuls, and some of their employees, are French nationals who came to Canada solely in their official capacity. When a consulate is closed, the official status in Canada of the consular officers and employees is automatically ended and such officers and employees would naturally leave Canada. Consular officials who lived in Canada before their appointment are not in the same category as full-time career officials. Some are British subjects and some are French nationals, but their status as residents of Canada is not affected by the closing of their offices. There are no Canadian government consuls or officials in unoccupied France and therefore no question of any exchange arises.

Hon. GROTE STIRLING (Yale): I should like to ask the Prime Minister a question with regard to the phrase which he used in his reply. He said:

> The consul himself was removed from the Quebec consulate a few days ago, but the office itself is not as yet closed.

What are the implications of that word "removed"? Removed by whom?

Mr. MACKENZIE KING: It was suggested to the French minister that it might be advisable if the gentleman occupying that position were removed somewhere else, and at the instance of the minister himself the change was made.

BUSINESS OF THE HOUSE

ORDER OF PROCEDURE AS TO SECOND READING OF MOBILIZATION ACT AMENDMENT BILL

On the orders of the day.

Mr. J. G. DIEFENBAKER (Lake Centre): Mr. Speaker, I should like to ask the Prime Minister if he could indicate to the house whether it is the intention of the government to proceed with the second reading of the bill to amend the National Resources Mobilization

Act immediately the war appropriation measure has been concluded by the committee of the whole?

Right Hon. W. L. MACKENZIE KING (Prime Minister): My hon. friend will have to allow the government to decide the order in which the public business will be taken up. I cannot give him an answer at the present time. In connection with the bill to which he has referred, as well as with respect to other legislation, I assure him that the government will endeavour to take the course which it believes will be most in the interests of all concerned.

VICTORIA DAY

On the orders of the day:

Mr. T. L. CHURCH (Broadview): I have a suggestion to make to the Prime Minister (Mr. Mackenzie King) and the other leaders in the house. To-morrow will be empire day. Appropriate services are to be held in nearly all the schools and elsewhere in the provinces. I suggest respectfully that this house should pause to-morrow to pay some tribute to the mother country for what she has done in the war, having borne the brunt for over two years, and for the way in which she has stood for the protection of the weak the world over. As in the parable, I do not believe that in history she will be considered like the priest and the Levite, but will be declared to be the good samaritan of the world.

Right Hon. W. L. MACKENZIE KING (Prime Minister): As I understand it my hon. friend is referring to Victoria day which is May 24. My hon. friend seems to be just a little ahead on his time. I did not catch the whole of his question, but I shall be glad to consider his suggestion when I have had the opportunity of reading it.

Mr. CHURCH: Will the Prime Minister be good enough to clarify his reply? To-morrow is empire day and it is being celebrated all over the empire. I think we should take this opportunity to express our appreciation of the mother country. The new world of America owes her a debt of appreciation and gratitude.

Mr. MACKENZIE KING: I must confess to my hon. friend that I did not realize that May 22 was Victoria day; I have always understood that it was May 24.

Mr. CHURCH: We will not be sitting on the 24th because it is Sunday.

Mr. MACKENZIE KING: I believe the celebration of the holiday is to take place on Monday, which puts my hon. friend still further ahead.

Mr. CHURCH: All I wanted was that we should not forget it this year anyway.

PRISONERS OF WAR

EXPERIENCED OFFICER PERSONNEL IN PRISON CAMP ADMINISTRATION

On the orders of the day:

Hon. H. A. BRUCE (Parkdale): I should like to direct a question to the Minister of National Defence arising out of his answer on Monday to a question which I had placed on the order paper. Is there not a filing system in his department which would classify the 40,000 offers of services which he has received and which would make it easily possible to find the list of British officers now resident in Canada with experience in large prison camps during the last war?

Hon. J. L. RALSTON (Minister of National Defence): I can say to my hon. friend that I have no personal knowledge of the filing system. The answer which I made was the answer given to me by a responsible officer of the department in whom I have confidence. This answer indicated that the classification to which my hon. friend refers is not made. There need not be any mystery about this thing. If my hon. friend will just give me the name of the gentleman to whom he refers I shall be very glad to have it looked up to see whether he made an offer of his services. There should be no need to go through 40,000 applications in order to find some British officer who had experience in internment camps. If my hon. friend does not care to give this name publicly, he can give it to me privately and I shall be glad to have it looked up.

Mr. BRUCE: I have received permission only to-day to give the minister the name, and I shall give it to him in private.

DEFENCE OF CANADA REGULATIONS

INQUIRY AS TO PROBABLE DATE OF FUNCTIONING OF COMMITTEE

On the orders of the day.

Mr. A. H. BENCE (Saskatoon City): As the Minister of Fisheries is the only member of the government who is on the defence of Canada regulations committee, I would ask him if he can inform us when that committee will be convened.

Hon. J. E. MICHAUD (Minister of Fisheries): I understand that orders have been given to ask hon. members who have been appointed to sit on that committee to convene to-morrow if they are available for organization purposes.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Wednesday, May 20, consideration in committee of a resolution to provide sums not exceeding $2,000,000,000 for the year ending March 31, 1943, for granting to his majesty aid for national defence and security—Mr. Ilsley—Mr. Vien in the chair.

MUNITIONS AND SUPPLY

Mr. O'BRIEN: I understand that the Minister of Munitions and Supply (Mr. Howe) expects to be finished in a short time and I wish to assure the committee that it is not my desire under the circumstances to take up a great deal of the time of the committee or of the minister. But in fairness to the constituency I represent and to the province of New Brunswick I feel I should make reference to certain subjects which are of the utmost importance to New Brunswick and to the dominion, in so far as New Brunswick is a unit in the confederation. First of all let me say that I realize fully my responsibility in taking up any of the time of the committee, but I trust I have done so to a minimum since I have had a seat in this chamber.

As a background for my remarks I should like to place on the record part of a resolution passed by the Maritime board of trade at Moncton, New Brunswick, on November 20, 1941. It says in part:

> Be it resolved that relative to population and resources, the maritime provinces have made an immense contribution to the war effort in men and money, and whereas the larger portion of expenditure on new industrial plants is being made in central Canada, thereby threatening to make an acute state of economic dislocation permanent and irreparable, and whereas through lack of this development we are failing to harness a large part of the potential industrial population of these maritime provinces to the war effort, the maritime board of trade earnestly recommends that the government of Canada take immediate steps to alleviate and rectify this unbalanced condition through a process of decentralization of new war industry so that all social and population factors shall receive an equitable opportunity to participate in the industrial life of Canada.

This resolution I regard as background to my remarks, because it comes from the most responsible commercial body in the maritime provinces, representing New Brunswick, Nova Scotia and Prince Edward Island.

I can understand that in the war effort we must submerge our commercial hopes and desires with due regard to the permanent good of the nation, so that in the most speedy way Hitlerism and all it stands for may be defeated.

[Mr. Michaud.]

But if Canada is to remain a united country of nine provinces, greater consideration must be given to the maritime provinces. We have heard a good deal in days gone by of so-called maritime rights. Unfortunately that movement, I think, was badly handled so that maritime rights developed more or less along the lines, shall I say, of something jocular. I am not so sure that we have any "rights" in the maritimes; in fact, I do not know that any person or any assembly of persons has any particular "rights". I do know positively, however, that we have a great many wrongs, and perhaps that is one and the same thing.

What I mean by wrongs are those things perhaps which one must charge to the march of events since the first conferences on confederation were held in the Provincial building in Charlottetown prior to 1867. Again, some of our troubles are due to things that nature in her providence has failed to place in our province. That is not an unusual thing. Few provinces, indeed few countries in the world, have possession of all the raw materials required to make them a complete economic entity. One important thing we lack in New Brunswick—which province I admit is small geographically, but, after all, the finer things in life should not be overlooked entirely through consideration of might and enormous size, as seems to be the case in this mad age of speed—I refer particularly to water power. Evidently Canada's war effort is primarily based upon large available power resources in close proximity to war industry. While the provinces of Quebec and Ontario have been bountifully endowed by nature with water power, which man has developed, nevertheless, in Ontario particularly, coal is almost completely lacking, and all the coal requirements of that province must come from the maritimes, principally from Nova Scotia. That of course assists the province of Nova Scotia in an economic sense, but it seems to me that in this time, since money has ceased to be the important factor we considered it to be in the so-called days of peace, if not of happiness, a plan could be worked out by which industries requiring coal to develop steam for power could be located in the maritime provinces, and here I speak for Nova Scotia as I do for my native province.

At Grand Lake in the province of New Brunswick there is a steam-developed electrical plant supplying the province through a hook-up. It seems to me that that should be further developed at this time. I realize that the answer will be that the electrical machinery required to put in such a development is not available, although one hon. member a day or so ago mentioned that some

used electrical machinery of this sort was available in the United States. Whether that is so I am not prepared to say, but I do think that the Department of Munitions and Supply, in seeking to get supplies, might well be actuated by another motive also, that of trying to build up Canada. This machinery might be found by that department, with a view to a further development in New Brunswick.

Without wishing to be carpingly critical, let me say that the other day I received a reply to a question I put on the order paper asking what was the amount of money provided by the dominion government by way of capital assistance to private industry and to wholly owned government corporations. I asked:

1. What is the total amount of capital assistance given by the Department of Munitions and Supply to (a) private industry, (b) wholly owned government corporations since war was declared?

The answer to that was:

(a) $498,766,451
(b) $71,464,857
as at December 31, 1941, for United Kingdom account and January 31, 1942, for Canadian account.

Figuring that out according to the arithmetic table, which so far at least has not been changed by order in council or government regulation, I find that we have received what I might call the ridiculous percentage of ·00019 of that total for (a) and (b) of $570,231,308. At least New Brunswick has received plenty of zeros. But our people down there cannot consume or live on zeros. Perhaps after many years Euclid has been proved to be correct when he said that a point (or zero) is that which has position but no magnitude. I do think, Mr. Chairman, that these figures illustrate that there is not a consistently conceived national policy prevailing in Canada at the present time. We in this chamber do represent our own constituencies; when we become members of parliament, as I have said on a previous occasion, we lose our personal identity and become a symbol, the member for a particular riding. But in the larger sense the 244 members, not counting Mr. Speaker, endeavour to govern this country as a national entity, and I cannot understand how we can hope to have a united Canada if each province is to be governed by a sort of patchwork system, putting a patch on when pressure develops here, hoping the patch will hold the pressure back until pressure in another location will call for a patch elsewhere. True, the Department of Munitions and Supply cannot be used at this time as a means of promoting social welfare for the present or into the future if it is going to retard Canada's war effort. But I cannot understand why 500,000 people in the province of New Brunswick and the populations of Nova Scotia and Prince Edward Island cannot participate in a larger way in Canada's war effort.

In New Brunswick we have some oil shales. This was mentioned yesterday, and the minister explained, rather briefly, I thought, the situation prevailing there. I put a question on the order paper and received a reply. I now wish to state that a lease covering some 10,000 square miles in New Brunswick was made to a company to promote the development of products from that area. This company was primarily engaged in the production of natural gas, and as a result confined itself to sinking shallow wells, the idea being that if deeper borings for oil were made the pressure of the natural gas, in which this company was chiefly concerned, might vanish. But the general welfare of the province suffered as a result, and I am glad to say that I understand within the last few years that lease was cancelled. I was also glad to know, from a statement made by the minister, that he is asking officials of his department to determine to what extent oil may be developed from shales in New Brunswick. As I understand it, the deepest well in the province is down to about 3,500 feet. I believe there are about 126 such wells.

The situation there was somewhat similar to that which prevailed prior to 1936 in the Turner valley, where only shallow wells had been put down. But six years ago very deep wells were sunk, and as a result the Turner valley became one of the bright spots in our Canadian industrial life, and is proving to-day to be of the utmost importance in, may I say, the preservation of civilization. If such is our objective, and we believe it is, considerations of dollars and cents should vanish completely, and the New Brunswick deposits should be thoroughly investigated and promoted. Nature gave us these resources, and man should put them to use.

In New Brunswick we also have a coal supply, principally at Grand Lake. The coal deposits in the province have never been developed, although there are, I believe, some thirty outcroppings, appearing in eleven out of the thirteen counties. There again, it seems to me, nature has provided us with something which might be developed.

What I rose to discuss principally was the situation regarding pulpwood in New Brunswick and the maritimes, as this is another commodity which comes under the Minister

of Munitions and Supply. Busy man though he is, it also has been attached to his department, and in turn, of course, a timber controller was appointed, and a deputy controller for pulpwood under the timber controller. I happen to know something of the pulpwood business, because lumber is the product to which I devote my private activities. It is not the first time that I have referred here to the pulpwood situation in New Brunswick. In December, 1940, the Minister of Finance had a resolution before the house regarding tax concessions to be given to pulp and paper companies, upon the theory that they were depressed during the basic period 1936-39. At that time I said I agreed that business generally should be treated flexibly. Here is a brief quotation from my remarks which appear on page 746 of *Hansard* of December 6, 1940:

> . . . the newsprint industry should be informed that the primary producer of pulpwood, the farmer, is not receiving a sufficient return in view of the increased profits and the much greater returns which evidently the newsprint companies are making to-day.

By "returns" I of course referred to the financial return. At that time, Mr. Chairman, pulpwood was being purchased in the province of Nova Scotia at $7 per cord of 128 feet. Again, as recorded in *Hansard* of March 18, 1941, and in November, 1941, I was forced to quote from the press references to the pulp and paper companies indicating the enormous earnings they were then making, which in one case increased from 44 cents per share to $4.14; in another case it advanced from 14 cents per share to $6. If these companies were earning at that rate, I submitted, they were in a position to pay more than $7 per cord for pulpwood to the farmer-producer. Nothing was done in the way of appointing a controller. However, as always happens, the law of supply and demand operated, and pulpwood began to acquire in the hands of the primary producer a greater value. Because of some requests, a controller or deputy controller was then appointed. There was a great fanfare of publicity, and we were told that an acute shortage of pulpwood existed in Canada. I could not understand, if that were so, why there was no great demand—and there was no great demand in the province of New Brunswick. In a return brought down on April 28 the following question and answer appears:

> 5. Is there a serious shortage of pulpwood in Canada?
> Answer: No.

If that be so, it seems to me that the appointing of a controller with the embargo which that controller has placed on pulpwood constitute another very serious handicap against the people of New Brunswick. After all, if Canada is short of any commodity—it makes no difference what that commodity is—and it is necessary to the winning of the war, it follows, first, that the primary producer should receive a fair and just return for his product, and, second, if it is needed by the nation it should not be allowed to go beyond the boundaries of the nation.

May I, without wishing to become too parochial, cite a case in point? One of my keenest competitors in the Miramichi district received a contract from a mill in the United States which would have brought into the constituency, in United States funds, between $80,000 and $90,000 in a few weeks. That gentleman was refused a permit to ship the total quantity of cordwood mentioned in the contract and was permitted to ship only 500 cords. Yet the Montreal *Star* referred about a month ago to a further tax concession given to two particularly-named companies because they were extending their plants. One company was bringing in just over $200,000 in United States exchange in a year. Now, why is this New Brunswick person, who is the keen competitor to whom I refer, not permitted to bring $90,000 in United States money over a short period of time into the constituency of Northumberland for the benefit of the people of that constituency and for the benefit of the foreign exchange control board, while another company was given tax concessions because it would bring in, in the course of a year, approximately double that amount?

That seems to me to be most illogical and not quite fair. Again, to-day we are facing, we were certainly facing several weeks ago, a most acute shortage in Canada of meat for human consumption. What did happen? In western Canada the farmers held their cattle off the Canadian market, so we are informed, in order that they might receive a higher price by exporting them to the United States, notwithstanding the fact that there was and still is a ceiling on meat in Canada. It has been reported that the Minister of Agriculture (Mr. Gardiner) refused to abide by the ruling of the wartime prices and trade board, on the theory—and I think he was certainly sound in this, morally if not legally—that all through the years the farmers in western Canada had received poor prices for their cattle and are therefore entitled to something more in those particular areas. I say, that is humanly understandable. But if that is proper in western Canada, I should like to know by what line of argument or on what theory the producers of pulpwood in eastern Canada are refused a permit to ship this wood to the United States, there being no shortage in Canada.

I want to make it clear that the ruling, so far as I can find out, is that if an exporter of wood in Canada had been shipping to the United States prior to the placing of this embargo, that Canadian exporter could go on sending wood to the United States, but not to a new company or to a new purchaser in that country. What logic is behind that? Let me ask this question. How would the Canadian government, the minister himself, individual Canadians feel if we suddenly found placed against our Canadian effort a ruling by the United States government that because a Canadian company had not purchased steel or any other article going into war work that company would not be permitted to buy from a United States manufacturer? To me these things do not in the slightest degree spell consistency or logic. There is a way of sabotaging Canada's war effort indirectly, unconsciously and innocently. We sometimes think of the saboteur as a man who in the dead of night creeps into some power plant and, as a culprit, blows up and destroys that property. But in higher places, in broad daylight, I might even use the words through stupidity, certainly through lack of knowledge —that would be a kinder expression—Canada's war effort can be sabotaged. I do not say for a moment that any person is trying deliberately to do these things; but innocently such things can be done. Members of parliament, because of their experience from day to day, are in close contact with what is going on in industry and other lines, and surely they should be in a position to advise the minister, not necessarily here in the house, but at any rate in private in his office, or they could advise his officials, as to what might be done in a practical way to make governing regulations workable. There are so many regulations being passed now, and after all, Canadians are, if I may use the term, free thinkers in these matters; certainly they are of a pioneering spirit, and it seems to me that all these orders and regulations imposed upon business are seriously retarding Canada's war effort.

I believe that members of parliament could be made use of in this respect. They are elected to represent the people in all parts of Canada, and they are in constant touch with every phase of industrial life in the dominion. Their advice could be given, but instead we are wasting our time in this house when we could be devoting our attention to something more useful. Frankly, I wonder why I spend my time in Ottawa. This experience of being a member of the House of Commons has been a great disillusionment to me. True, I realize that we are passing through most strenuous times, but at the same time the situation demands of us much greater sacrifices and greater energy than we may be able to afford in times of peace. I plead with the minister and the government to recognize members of parliament as human beings possessing some degree of intelligence and devoting their time in parliament to the end that this institution may not, through its present trends, completely vanish as a part of our governmental life. It can happen here; it has happened in other places. A similar governmental institution vanished from Venice, for example, many centuries ago, and all that was heard in pre-war days in the empty senate in Venice was the click of the heels of tourists. Am I to ask myself whether some day tourists will come in here, walk through the building, look at this gorgeous chamber, and say, "Here once democracy functioned, but those who were charged with that democracy failed, so that it is now a museum?"

I repeat, these things can happen here. In my opinion, this institution of parliament is sick and diseased. That disease, that atrophy, is creeping on from day to day, from week to week, unless leadership comes from the government. The things that I mention are not simply the result of my own phobias. I know them and they are presented to me. I am not taking up the time of the house from any desire to embarrass the minister or his department. No. I wish in any way I can to be of service to others, to represent those who have been of great service to me. I, sir, have been most fortunate; but I must say that down in New Brunswick, one of the oldest provinces in the dominion, a young man starting in life to-day to build up for himself a future, such as my father built for me and passed on to me, has not the chance of the proverbial snowball. It just cannot be done, because business to-day in Canada has become involved in enormous corporations and these corporations are so far-reaching that it is the balance sheet that is ever present whenever human values are to be considered.

Again I plead that this house take unto itself very quickly the idea that politics and the seats we hold here are secondary things and that we must preserve our institutions to pass them on to those who will come after us. Let us realize that if we squander these things we shall some day be held greatly responsible. As a case in point, it is a dreadful thing for me to have to say at this moment in Canada, in our present circumstances, that because of the lack of Canadian policy in days of peace, when we thought we could talk ourselves out of depression, if it had not been for the Germans buying pulpwood in eastern Canada

many of our people would have starved. I sat at my desk in my own office and opposite me sat the captain of a German boat. He said, "Mr. O'Brien, what a wonderful country you have here. If we only had this country what would we not do with it!" And I, sir, in great humiliation sat there and listened to that man, knowing that if the Germans had this country they would make it indeed industrially a wonderful country. The river up which his ship sailed for forty miles, from the sea, with 35, 40 and 45 feet of water at the docks, is now completely abandoned. There is not to-day the slightest sign of a ship or a sail or of any animation on that river. Can any other country squander these natural resources and fail to develop them as the governments of Canada down through the years have been doing?

I have spoken about pulpwood, but I have not made any recommendation. I think I should make at least a suggestion. I ask the minister to have his officials seriously consider the lifting of the embargo on pulpwood, until such time as it can be proved beyond the shadow of a doubt that there is a shortage in Canada and that the interests of the Canadian people, not necessarily those of the owners of Canadian pulp mills, are to be served. If that is done then, as in the case of the recent gasoline restrictions, our people, rich and poor, will submit to the very last ounce of endurance. But if there is no shortage in Canada and these people are restricted in their God-given right to earn a livelihood, then I think something is seriously wrong.

I have here a short clipping which rather expresses my experience here in this House of Commons. The article was written by Mr. Bruce Hutchison and appeared in the Victoria *Times;* I found it extremely interesting. I quote:

> One leaves Ottawa with a certain relief, like a man leaving a well-kept hothouse and getting into the fresh air. Ottawa is a hothouse and many of its most attractive growths are orchids, which can survive only in a high temperature and with the greatest care. In fact, Ottawa, speaking in an entirely non-partisan sense, is much too orchidaceous to be the capital of a rough, tough young country like Canada.
>
> It is easy to be absorbed into the official hothouse of Ottawa. Few men survive it. In an intellectual sense they become orchidaceous very quickly and seldom can stand intellectual frost and rain any more.
>
> This is not due to any particular sinfulness of the capital. The House of Commons, in fact, is probably as moral and straight-laced a group of men as you could ask for. There is no management wickedness such as the movies have given Washington; no glorious sirens who lure state secrets from fat old prairie statesmen: no dramas of blackmail and seduction; but rather an intolerable respectability, a dullness which numbs the heart.

[Mr. O'Brien.]

That article which I have quoted in part rather expresses my views. I am one of those who desire to serve, and from my seat in this House of Commons I freely offer my assistance to the government. I cannot do more. Again I plead with the minister to make use of the members of this house coming from New Brunswick, irrespective of party. We have ten members here, and I am quite sure those ten will submerge their political leanings at a time like this for the ultimate good of New Brunswick and of Canada. If I can be of any assistance in that respect, even in a small way, I freely offer my services.

Mr. HOWE: I am always glad of the advice of members of parliament; I am always glad to draw upon their experience, but if the advice is to the effect that we should lift our export restrictions on raw material, I am afraid that would not be very helpful in winning the war. As hon. members know, we have a controlled economy in Canada, and have had for a very considerable time. There is a legal limit to the price which may be paid for pulpwood. There is a legal limit to the price that may be paid for steel, as there is in the case of many other raw materials and finished products. The country to our south, and the various countries to the south of it, have not economies controlled to the same extent that ours is controlled. The price of almost anything is higher in the United States, and higher again in central and south American countries, than it is in Canada. What would be the result if we did not exercise export controls? Almost everything we have in the way of raw materials would be sent abroad as raw materials. For instance, there would be no lumber industry in this country, because the logs would go over the border. There would be no paper industry, because the pulpwood would go over the border. There would be no steel industry, because the pig iron and billet steel would go across the border as such. There would be no munitions industry, because all the copper, nickel and other materials we have would go over the border as such. In other words we would be left as producers of the rawest of raw materials, and our manufacturing industry would cease to exist. We control the prices of our finished products, and of course in order to make those products it is necessary to retain in Canada sufficient raw materials at prices consistent with our whole price structure. Pulpwood is not a munition of war,

as such. By putting it through a paper mill or an explosive plant it can be made into a munition of war. My hon. friend speaks of the export of pulpwood to Germany, which he says saved the economy of New Brunswick. Britain is getting that pulpwood back now in the form of explosives. Many of the bombs dropped on London probably were charged with explosives produced from New Brunswick logs.

Mr. O'BRIEN: I should like to deal with that matter right now. The people of New Brunswick, or certainly the exporters of pulpwood, are being more or less accused of having sacrificed the greater and better things of life for the selfish bank account, and I protest most vigorously against that suggestion. At that time there was never any thought of war. But the minister who just made that statement belonged to a government which permitted exports to go to Japan in time of war to be made into bombs which now are falling upon helpless people, and which before long may be falling on helpless Canadians. Our people in New Brunswick have been subjected to this sort of economy for so many years that it would have been nothing short of ridiculous then to refuse that business from Germany, when the Canadian government of the day was unable to offer them any other relief.

Some hon. MEMBERS: Hear, hear.

Mr. HOWE: I am glad to hear those cheers. That was a very illuminating explanation, and I am sure everyone is quite convinced that any control over the exports of pulpwood is entirely wrong. However, if I may be allowed to continue until I complete my statement—my hon. friend now having made two speeches, he may permit me to make one—the reason there is control over the export of pulpwood is that there is only so much pulpwood available in Canada. Everyone is allowed to log as much pulpwood as he will or can; there is no restriction on the logging. All we ask is that the needs of Canadian industry for pulpwood be filled first. We impose the same regulation on lumber. We tell the lumber industry to manufacture all the lumber they can. We would like them to manufacture every piece of lumber that can be manufactured, but before they export to a market where prices are higher they must fill the needs of the Canadian market, at Canadian prices. That is what we say in regard to pulpwood and what we say in regard to any number of raw materials. There are very few materials required in the war economy of Canada that are allowed to be exported freely. I thought everyone understood that; I am surprised that I must explain it. However, I am very glad to do so, because it seems that the explanation is necessary. There is no restriction whatever on the logging of pulpwood, and every stick may be disposed of.

The reason we ask our manufacturers not to accept new customers in the United States is that we wish to manage our own economy while causing the least possible dislocation in the United States. We take the view that if manufacturers in the United States have been in the habit of coming to Canada for their supplies, we would like to see these customers given a preference when we are disposing of our commodities. But we do not wish our people to take on new customers in the United States because of the dislocation that might be caused in that country due to Canada's domestic regulations.

Mr. HAZEN: Madam Chairman, arising from the discussion which took place in the house yesterday afternoon with regard to further restrictions in connection with gasoline rationing in the maritime provinces, I have received a further telegram from the New Brunswick automobile dealers' association, and from the Saint John automobile association, which I should like to read to the minister. It is as follows:

With further reference to yesterday's discussion in the house in which Mr. Howe states that no tank cars are being used transporting gasoline from Sarnia to the province of Quebec he cannot deny that tank cars are being used to distribute gasoline from bulk storage plants to plants in Ontario and Quebec. How then does he justify his statements of a few days ago—

Mr. MACKENZIE (Vancouver Centre): I rise to a point of order. It is obvious that the hon. member or any other hon. member cannot read outside comment on statements by a minister while the debate is in process.

The ACTING CHAIRMAN (Mrs. Casselman): Under citation 306 I rule the hon. member out of order.

Mr. HAZEN: Perhaps I may be permitted to give a summary of the telegram.

Mr. MACKENZIE (Vancouver Centre): That is all right.

Mr. HAZEN: And then I might be permitted to put a question to the minister. The purport of the telegram as I have read it so far is that the minister states that no tank cars are being used in transporting gasoline from Sarnia to the province of Quebec. That statement appears at page 2617 of *Hansard*.

The ACTING CHAIRMAN (Mrs. Casselman): Order. The rule to which I have referred contains the expression "emanating from persons outside the house". Therefore the hon. member's observations are not in order. The rule is:

It is not in order to read articles in newspapers, letters or communications emanating from persons outside the house and referring to, or commenting on, or denying anything said by a member or expressing any opinion reflecting on proceedings within the house.

I believe the hon. member is still out of order.

Mr. HAZEN: I shall not read the rest of the telegram, but I will read the question asked yesterday afternoon by the hon. member for Northumberland (Mr. O'Brien) and the answer given thereto by the minister. They are as follows:

Mr. O'Brien: How is Montreal being serviced to-day with gasoline from Sarnia?

Mr. Howe: By tankers.

Mr. O'Brien: Are any railway cars being used to take gasoline from Sarnia to Quebec?

Mr. Howe: No.

If I am not permitted to refer to the telegram my difficulty is increased. If tank cars are being used to distribute gasoline from bulk storage plants to plants in Ontario and Quebec, then these tanks are enabling the owners of cars in Ontario and Quebec to get five gallons of gasoline while the people in New Brunswick have to be content with two gallons. Yesterday the minister said he was trying to divide the gasoline fairly. Would it not be fair to divert some of these cars to New Brunswick, even if it meant that the people in Ontario and Quebec who drive motor cars were obliged to be content with four gallons instead of five? If some of those cars were diverted to New Brunswick it might result in the people of Ontario and Quebec getting only four gallons. Surely New Brunswick is entitled to more than two.

I am sorry I am not permitted to read this telegram, because I believe it puts the matter in a better light than I have been able to.

Mr. HOWE: I shall be glad to look into the situation, and if there are any cars that can be diverted for transporting gasoline to the maritimes I will examine the situation to see whether such cars can be diverted.

Mr. HAZEN: I will send the telegram to the minister.

Mr. O'BRIEN: Madam Chairman, I should like to reply to the minister. I believe I am in order, since in the meantime other hon. members have made statements. The minister referred unkindly to the people of New Brunswick, presumably exporters, shipping pulpwood to Germany. I wish to state clearly, however, that just as soon as war broke out and the British empire needed pitwood, although we knew nothing about this product in New Brunswick—the sizes required were from 4 to 12 feet in length, with top sizes 2½ to 8 inches—New Brunswick operators immediately entered into the production of pitwood. But one of the large Canadian pulp and paper companies operating in New Brunswick, through a subsidiary, refused to turn their organization into the making of pitwood for the United Kingdom until they were paid a price of $14.80 per cord. At that time, nearly two years ago, pulpwood in Nova Scotia was being bought by a pulp mill at $7 per cord. A cord of pulpwood contains approximately 87 to 90 cubic feet, and weighs approximately 3,000 pounds. Now the price is fixed by the timber controller at $10.

I remember some months ago in this house the Minister of National Defence (Mr. Ralston) and the leader of the opposition (Mr. Hanson) had a very interesting argument regarding the price paid for hemlock lumber by the Department of Munitions and Supply in Nova Scotia. The minister defended the price of $32 a thousand for hemlock lumber, which is an inferior grade in eastern Canada, and cited the timber controller as his authority for that price. A thousand feet of lumber converted into cubic measure is about 87 cubic feet and it weighs approximately 3,000 pounds.

Here is one branch of government which through the timber controller has said that $32 for hemlock lumber is a fair price for 87 cubic feet; yet another branch of government says that the farmer producing pulpwood shall get only $10 for the same volume by cubic measurement, and the same weight content, for his valuable pulpwood. At the time the timber controller authorized the Minister of National Defence to state that $32 was a fair price for hemlock lumber, the Canadian National Railways, under the guidance of the Minister of Transport, was permitting that organization to buy railway ties for approximately $17.80 a thousand. If these things are consistent, then I do not understand consistency.

Mr. NOSEWORTHY: Madam Chairman, I should like to call a few points to the minister's attention before he becomes com-

pletely bored. I am sure his patience must be wearing thin. Let me assure him however that that is the price one pays for greatness.

I have been particularly delighted to note the grasp the minister has shown of details in his department. Following him one is filled with amazement because he speaks with freedom on so many phases of the immense undertaking over which he has charge. My purpose this afternoon is not to criticize. I have a number of questions to ask in which a number of people in Toronto and the surrounding area are interested.

I was rather disappointed to hear from the Minister of National Defence for Naval Services (Mr. Macdonald) that there is no organization in Canada made up of scientists and investigators which is working for the improvement of designs sent here from the old country to be applied to boats we are building in this country. The hon. member for Yale (Mr. Stirling) called attention to this fact during the discussion. I think our war effort would be improved if we had some organization to check the specifications laid down in Great Britain for boats and for war equipment to be produced in this country. I am informed that a plant in my riding at the present time is making porthole covers from bronze costing forty cents per pound, whereas the engineer of the plant is reported to have said that the purpose for which these are made could be equally well served by a material costing four cents per pound. This is only one small item, but I feel that there are many items of this nature which could be checked.

Another matter of greater importance to me is in connection with our cargo boats. The minister has thrilled the country with the report of the speed shown in the production of these boats. However, if the minister and his department had deliberately set about to build boats that would serve as good targets for submarines, I doubt if they could have done better than the cargo boat that is being built to-day. These boats are of 10,000 tons, and I am told that they are somewhere near 400 feet in length. They are propelled by reciprocating steam engines weighing 100 pounds per horse-power produced, the engines being placed in the centre of the boat, which necessitates a long tunnel to house the drive shaft. These boats move along at from ten to twelve knots, which is approximately the same speed as the underwater craft. As I say, they make particularly good targets. According to reports published in the United States, in order to replace the ships being sunk on the Atlantic route between Canada and Great Britain it would be necessary to build approximately two ships a day, which is more than we are producing in both Canada and the United States.

I should like to ask the minister if any attempt has been made to improve the design of these cargo boats which bear the precious munitions of war manufactured in this country, which carry the aeroplanes which we make and which are so esesntial to our allies. I have been informed on what I consider to be good authority that small diesel engines are manufactured on this continent, and that these could be arranged in groups on a ship near the stern, thus permitting greater loading capacity and almost doubling the speed. I am told that ships can be built with watertight compartments along the side in which could be loaded grain or other cargo that would absorb moisture and enable the ship to remain afloat long after it was attacked.

I am informed that these boats have practically no armour and carry light guns only, which give them practically no defence against a surface raider. I should like to know if any attempt has been made to change the structure of these ships in order that they may carry heavier guns and be able to defend themselves. This is an important issue in our war effort. I am convinced that Canadian ingenuity and Canadian engineers should be given the opportunity of improving, if possible, upon merchant marine designs which were antiquated long before this war began.

Since we have in the greater Toronto area a number of aeroplane plants, I should like to deal for a moment with the question of aeroplane production. I asked the Minister of National Defence for Air (Mr. Power) a question about the Martin bomber project at the Malton plant. I think when a project costing well over three quarters of a million dollars and employing hundreds of men for nine months is abandoned without a single ship having been built, we are entitled to a more satisfactory explanation than that given by the minister. I take it that the Minister of Munitions and Supply is informed of this project and can give us an explanation.

I should like to call the minister's attention, as I did the attention of the Minister of National Defence for Air, to the condition of the road running to Malton. When discussing roads running to another munitions plant the minister explained that their condition resulted from the fact that they ran through private property. This road runs through publicly-owned property; it is a publicly-owned road, yet because of the conditions of this road many thousands of man-hours have been lost at the Malton plant. The manager told me

that one of his greatest difficulties was to keep his men. The plant is situated a long way from the centre of Toronto, and the transportation problems are so great and the workers find it so difficult to get to work that they take the first job offered nearer the city. This matter is of such vital importance to the nation that no provincial government or municipal authority should be allowed to hold up the improvement of this road.

I want to call the minister's attention also to the situation of the plant of Canadian Associated Aircraft Limited. I have a letter from employees indicating that they have been informed that the plant, which has been engaged in the production of Hampden bombers, is to be closed until such time as the neighbouring plant, the National Steel Car company, is in a position to take it over and proceed with the production of Lancaster bombers. Since coming into the house to-day I have received a telegram from the employees of that plant to the effect that they have just been notified that 35 per cent of the employees of the plant are discharged, while the rest are to be put on part time until such time as the nearby company is able to absorb their labour. There you have a group of workers who are anxious to get on with the job of building Hampden bombers. They have written to the department and asked why the production of that particular bomber has been discontinued. The only satisfaction they received—I have a copy of the letter which was sent in reply to the employee who wrote—from the official who replied was an inquiry about the writer of the letter, who he was and what his interest was in that plant. The situation is such that unless the men are put to work a group of experienced aircraft production workers will be dispersed, and then there will be a further hold-up of production until the new company find skilled mechanics for the project they have on hand.

I should also like to call the minister's attention to a complaint I have received regarding de Havilland. I am told that that plant is working on a four-engine bomber of English design, most or many of the parts of which must come from England. The hazards of shipping may render the receiving of these parts difficult, or at all events delay may be experienced in their reception, and those who work at that plant are questioning the advisability of that production. I have no doubt the minister has much more knowledge of the situation than these men have, but here are men who are interested in war production and they are anxious to know that the best possible means are being taken to increase our war production. I think the questions they ask should be answered. The statement which the minister has already made on the work of his department, and the knowledge it has given to the people of this country of the vast ramifications of our war effort, is all to the good. I am simply bringing these questions before the minister in order that he may have an opportunity of clearing up much suspicion and many doubts in the public mind regarding this work.

Turning to the field of construction, I have a letter here signed by an employee of the Massey-Harris plant on Weston Road. He has been employed at that plant for three years, and is a reliable man. He tells me that the plant is very much overstaffed, that the employees are actually getting in one another's way. His suggestion is that the work that is being done at that plant could be done by half the number of people who are now employed. I should like the minister to tell us whether or not that plant is working on a cost-plus contract.

I am also told by the same writer that at that plant skilled workmen are engaged in producing kitchen and office furniture from American whitewood which costs approximately $100 per thousand feet—furniture that could be made from Canadian wood and serve the purpose equally well. The Canadian taxpayers who see these things or hear these things from men working in these plants want to know where their money is going and whether they are really getting value for all the money they are spending on the war.

I am further informed that at the small arms plant at Long Branch, also near York South riding, very expensive building material is being used, material so costly that a building in which it is used should last for fifty years. It may be that it is the intention of the minister or the department that that building should last fifty years. It is possible that they have plans in mind that will thoroughly justify the use of these expensive materials. But you have the public wondering why. They wonder why, in an office building for the air training scheme, we are using cut stone, 7,500 feet of it, I am told, in one building. The people are asking whether that expenditure is warranted.

I have also a few questions for the minister about the fuse-filling plants, one of which is situated in that locality. I am not sure whether the minister's department has any responsibility for contracts placed with United States companies, but he told us the other day that he received orders for material from various ministries and that he places the contracts wherever he can get the material. There are a number of fuse-filling plants in the United States working on the same type

of contract and filling the same type of fuse as the plant at Scarborough and Cherrier Field. These American companies are Exell Foundry, Falls River, Boston; National Fire-Works, Elkton, Maryland; and National Munitions, Elrick, Pennsylvania. My information is that the first shipment of 90,000 fuses delivered by National Fire-Works at Elkton—I have reference to fuse 119, mark 4—were rejected by the inspection board of the United Kingdom and Canada. That knowledge is spreading among the workers in these plants. I have been asked to find out whether these are the facts.

I am also informed that the Canadian factories are filling these fuses at about half the rate of the United States plants, and that a very high percentage of the fuses filled at the Scarborough and Cherrier Field plants are rejected.

My attention has also been called to the fact that considerable difficulty has been experienced with workers in structural steel and heavy steel generally, and that many plants have received shipments of steel and found that they had not the skilled help required. The help in the meantime has probably gone to another plant. A foreman in an industry of that kind asked me to suggest, and I pass the suggestion on to the minister, who has probably thought of it already himself, that there be formed a pool of steel workers under the direction of the minister or some official, so that when a plant does receive a shipment of steel, the officials will know immediately where the workers may be found, whence they may be sent immediately to that plant and be available for plants working in the steel industry, in order that there may be no delay through loss of time on that account.

Finally, I would ask the minister if any steps are being taken in his department to set up a cooperative effort between workers and management. We have received numerous reports from the United States where this cooperation between managers and workers by means of cooperative committees has speeded up production in numerous instances. I understand that the workers' representatives have been asking for a long time that some such committees be set up in the munitions plants and other war industries in Canada. I doubt whether that can be done unless the government itself is prepared to take the initiative and show some leadership in that respect. I think it should be done. Managers and workers alike are interested in production, and given some leadership from the government, it is quite possible that cooperative committees can be set up in our industries which will assist us greatly in our war effort.

Mr. HOWE: Regarding the design of ships, I think it is hardly fair to say Canada is contributing nothing. We have a firm of marine engineers and designers, Messrs. Lambert and German and Mill—to give them some publicity. They have been here for many years; they are very expert; they have designed a large part of the shipping which has been produced in Canadian yards. Mr. Mill is retained permanently by our director of shipbuilding. He has, I think, contributed a good deal to the design of ships which have been built in our shipyards during war time.

My hon. friend referred to the type of 10,000 ton cargo ship we are building to-day and said that it might be greatly improved. I may say that this ship was designed particularly to meet present day war conditions. All the designers in England pooled their ideas to produce the design which came from England, and I might say that in the United States and in Canada that design was accepted with very slight modifications. I understand that the Liberty ship in the United States is slightly, but only very slightly, different from the 10,000 ton freighter which we are building in Canada. Both follow the design which is being used in England for common type cargo ships. The ships which are being built in the three countries are practically of the same design. The reason that it is a slow ship is that all ships to-day travel in convoys, and the speed of even the so-called fast convoy is only about ten knots, so that a ship of eleven and a half or twelve knots is as efficient travelling in a fast convoy as a ship whose speed is five or six knots greater.

Early in the war it was the practice that ships of fifteen knots and over travelled without escort. However, it has been found that losses of ships travelling without escort, even at considerable speeds, are heavier than of ships in convoy. To-day very few freighters, regardless of their speed, travel out of convoy. As a matter of fact, ten knots is a rather high speed for a convoy. I believe that nine knots is more nearly the speed of a fast convoy, and about six knots is the speed of the so-called slow convoy.

Steam is used as a propellent for several reasons. One is that the steam engine is cheaper to construct. Another is that coal is a fuel available everywhere. And of course, in case of damage steam engines are the most easily repaired. Diesel capacity is highly regarded for high-speed passenger ships, but in the freighting trade steam has always been preferred to internal combustion engines.

The story of the Martin bomber is typical of what the aircraft industry is up against in war time. The story is that our air force

ordered the procurement by my department of a considerable number of Martin bombers. It was decided that the Martin bomber should be manufactured in Canada, and arrangements were made to manufacture them at the National Steel Car plant at Malton. The job was put in hand at Malton and a considerable amount of work was done in setting up jigs for that type of manufacture. When the work was nicely under way we received a very urgent demand from Great Britain to arrange in Canada for the manuufacture of a new-type four-engine bomber which was believed to be superior to anything then in combat. Naturally we objected that we had no suitable capacity. We had an emissary come from England to urge the necessity of developing this type of production, and after consultation with the air force we finally decided that the urgency and the needs of Britain were such that we would be well advised to change over from the Martin bomber to the British type. The British-type bomber is on the secret list, and it is not permissible to mention the name.

Britain had an order of Martin bombers in the United States, and these bombers for Britain were the first off the production line in the United States. To compensate us, or at least to ensure the procurement of the Martin bomber for our own air force, we were promised the first bombers off the production line for British account. The understanding was that there would be an exchange of dollar for dollar: we would get the Martin bombers from the United States through Great Britain and we would credit Great Britain with the cost of the Martin bombers in the United States against the British-type four-engine bomber in our plant. The cost of tooling was included as part of the amount for which we were to receive compensation in the form of Martin bombers from the United States. There was no monetary loss to Canada on tooling, but of course there was a dislocation there, which has been unfortunate. However, the Anson project was close to production at that time or perhaps had started production. We put a very considerable number of Anson bombers into the plant, and there was actually very little dislocation of labour through the change in arrangements.

I might say that that sort of thing is an everyday incident in the aircraft industry. Unfortunately it is not possible to take a pre-war type of plane and continue to manufacture it indefinitely, for the reason that the art of building fighting planes advances as conditions of combat change. At the beginning of the war the Hurricane was perhaps the plane that saved England, but to-day it is not suitable for fighting over England because the fighting takes place at altitudes which the Hurricane cannot reach, so that other types are used there. The Hurricanes we are making at the present time are sent to other areas where different conditions apply. From time to time we have had in almost every type of production radical modifications of design which have necessitated interrupting production and introducing changes into the plane, with a good deal of loss of production and slacking off of employment.

The road to Malton is a subject about which I have heard a good deal. As hon. members are aware, the building of highways is not a matter for the federal government. The provincial government, cities and counties are responsible for the building and maintenance of highways with the limited exception of the Trans-Canada highway in which the dominion takes an interest. We have sponsored improvements in the road from Toronto to Malton and have made a gratis contribution of a considerable proportion of the cost of building the road. That contribution has been paid in cash to the provincial government. The sub-grade of the new road is built. We are aware that the road is in bad condition and are making proper representations to the provincial government. I am hopeful that the governments concerned will take action shortly to improve that situation, but it is not a matter in which the federal government can go further than it has already gone.

The matter of Hampden bombers is as my hon. friend states. The plant alongside the National Steel Car plant was assembling Hampden bombers, and the National Steel Car plant was building components of Hampden bombers. That bomber is no longer of sufficient value as a fighting machine to be useful in the war, and production in this country has been suspended. The production of the four-engine bombers, to which I previously referred, will supersede that work in the plants formerly operated by the Associated Aircraft companies. This plant will become an annex of the National Steel Car plant. I doubt whether there is any great interruption in employment. As a matter of fact the National Steel Car plant has been, I understand, short of aeroplane mechanics for some time. I rather imagine the men will be absorbed by the plant in Toronto and that the men in Montreal will be absorbed into overhaul work. In any event anyone who calls himself an aeroplane mechanic will have no difficulty obtaining employment in any of

the various plants in Toronto—the National Steel Car, de Havilland, Massey-Harris and one or two others. No man in the aircraft industry will have any difficulty in being reabsorbed immediately into the aircraft industry even though he must leave the plant in which he is working at the present time.

My hon. friend spoke of the de Havilland plant and criticized the type of plane being built there. I hardly think that his statement, that a great number of parts must come from England, is correct. It might have been true with regard to a few initial planes, but my understanding is that the new plane being produced by de Havilland will be an all-Canadian product except for the engine. Here again we are building a very modern British plane. It is also on the secret list. We think it marks a definite advance in the type of plane to be built in Canada. It is quite fast, well armed, and capable of flying the Atlantic. It is equipped with twin engines, not four engines, and should be one of the most useful planes in the war. We undertook the construction of this particular plane because we were urged to do so by Great Britain. They felt it highly desirable to have a Canadian source of supply for this aeroplane. My hon. friend spoke of Massey-Harris as manufacturing furniture. I was not aware that Massey-Harris manufactured furniture.

Mr. NOSEWORTHY: Furniture from American wood at $100 a thousand.

Mr. HOWE: I was not aware that they manufactured furniture and I am sure it is not for our account.

Mr. NOSEWORTHY: My report is that the employees there were engaged in making kitchen and office furniture from American wood at $100 a thousand.

Mr. HOWE: I suggest that my hon. friend may have another plant in mind. I would not be dogmatic about it, but I have never heard of this company manufacturing furniture. Certainly I doubt that they are manufacturing furniture for the Canadian government. It is my information that very little wood from the United States is imported into Canada in connection with the furniture business. However, I am not competent to deal with this question without obtaining more information.

In the matter of small arms, this is a government arsenal for the manufacture of rifles and sub-machine guns. The number of employees per square foot at the plant is very high as manufacturing plants go. To afford employment of that kind it is necessary to have an air-conditioned plant, the best lighting, and conditions that cannot very well be maintained in a temporary building. I am familiar with the type of construction at Small Arms, and I hardly think it is extravagant considering the extensive use made of floor space. Those familiar with manufacturing will agree that the cost of building is reasonable in proportion to the output. The monthly output valued in dollars from that plant is quite high in comparison with the cost of the plant. I appreciate the spirit in which my hon. friend has given the information, and I hope I have covered the points he raised. If not, I shall be glad to amplify what I have said.

Mr. MacNICOL: Can the minister give us some information in reference to the telegram I left with him?

Mr. HOWE: The hon. member for Davenport (Mr. MacNicol) sent me a telegram stating that 35 per cent of the employees of Canadian Associated Aircraft at Malton would be discharged in three weeks.

Mr. MacNICOL: Signed by some of the workers' committee.

Mr. HOWE: Yes. That is very likely correct. This is the plant which was formerly making Hampden bombers, but I feel sure the workers will be absorbed in the adjoining operation or in the de Havilland or Massey-Harris plant.

Mr. NOSEWORTHY: Will the minister give some information on the question I raised with regard to the fuse plants?

Mr. HOWE: In regard to the fuse plants, we did buy a few fuses before our plants came into production. We got them from a British order in the United States. I daresay there were some rejects, but if there were they were not paid for. They were purchased subject to inspection. I believe the record for fuse filling and small arms ammunition is very much better in Canada than in the United States. At the moment we are obtaining no fuses from the United States; as a matter of fact we are shipping filled fuses to the United States. Everything I learn about the fuse-filling operation at Scarboro leads me to believe that it is a very efficient operation. I know that the costs are good, because we have no difficulty in disposing of the fuses outside the country. I believe the operation is very efficient as to both quality of ammunition and cost.

Mr. DIEFENBAKER: The minister has dealt with Canadian Associated Aircraft Limited, the employees of which apparently sent quite a number of telegrams to members of the house this afternoon in regard to the closing of the plant and their discharge from employment. From time to time letters have

been received by hon. members in regard to conditions in various aircraft factories in Canada. Within the last day or so I received one such letter, and I think I should mention the name of the plant. I refer to the Noorduyn factory at Cartierville, Quebec. In that factory are a thousand workers, many of whom, according to the information I have received, are idle part of their time because of a shortage of materials. That is something which requires explanation. It is all very well to say that these things are just gossip, but the fact remains that not only in this case but in the case of the plant at Malton there are substantial grounds of complaint.

Mr. HOWE: Did I say it was gossip? My hon. friend has given me a specific case.

Mr. DIEFENBAKER: I am dealing with a specific case.

Mr. HOWE: Do not put words in my mouth. I have not said anything.

Mr. DIEFENBAKER: I have heard that expression used by the minister on several occasions when such matters were mentioned, but I hope he will not regard this as gossip.

With regard to the Noorduyn factory, is it a fact that those employed there are idle during some part of their working time because of a shortage of materials? Is it a fact that there has been a shortage of materials? I think there would be a great deal less recrimination in regard to this subject if the minister would place before the committee such surveys as he has made, which will set forth any shortages that have been found and any delays that have resulted therefrom, together with the number of men who have been kept idle due to the fact that there has been any shortage of materials. As far as the aircraft production in December last is concerned, there must have been a decline; otherwise a director of morale would not have been appointed, his duties being to increase aircraft production. I think the committee is entitled to know the circumstances connected with his appointment, including any surveys that were made leading up to the appointment of such an official. My information is that not only was such an official appointed—and I am not now dealing with the circumstances connected with his appointment—but two journals, one in English and one in French were turned out for circulation among the aircraft workers. Is it a fact that such journals were published and circulated among the workers? If so, was the cost met by the government, or was it indirectly financed as overhead? What in general were the circumstances that impelled the director of aircraft production to undertake a morale building campaign?

According to the evidence that was given before the Truman committee in the United States, which went into the matter very fully, there was a hold-up in aircraft production, for which the committee found several reasons. The first was that too much red tape held up production. Is that one of the reasons in Canada? The next reason was that there were too many changes in specifications, with a lack of standardization in combat and bomber planes. The explanation given to-day by the minister in regard to the change from Martin bombers to four-engine bombers was, I thought, very reasonable. Explanations like that clarify the situation; recriminations do not. Is it a fact that there have been too many changes in specifications in Canada? Have we yet arrived at a point where there is uniformity as great as can be secured in view of changing conditions and the exigencies of war?

I would also ask the minister what plans are being made for the production of aircraft engines in Canada. Is not difficulty being experienced in securing aeroplane engines in the United States, now that that country is in the war? The Truman committee also found that there were hold-ups because of the action of certain organizations which interfered with labour engaged in the production of aeroplanes. Has that been the case in Canada? I do not think so. I believe labour has cooperated well, but if it has not, let us have the particulars. Let us know why production is not what was expected. Have any manufacturers, producers or distributors of supplies been negligent in furnishing the aeroplane factories with necessary supplies? Has their neglect resulted in hold-ups in the various factories? If so, have these men been punished? What has been done in order to accelerate proper distribution on their part?

After taking evidence over a long period of time the Truman committee came to certain conclusions, and acted thereon. That was last January, and as a result aircraft production in the United States has greatly increased. So great was this increase that according to a recent authoritative statement, the United States is producing more aeroplanes than Germany. I ask the minister: Has there been an increase in aeroplane production in Canada since the appointment of a director of morale? Does he find that there are wide-spread shortages? These are things which, if explained, may very well go a long way toward explaining the situation which apparently exists in a number of aircraft plants throughout the dominion to-day.

In November, 1940, when the minister first enunciated in this house his scheme of giving financial assistance to industry, he told us he had plans for this industry after the war. The other day he told us that some $380,000,000 had been advanced to industry. The Truman committee looked into the matter of advances to industry in the United States; they wanted to know what were the plans of the government for the post-war period, in connection with the industries so financed by the government. The dominion government has put millions of dollars into private plants by way of subsidy or capital assistance. Is it the intention that after the war these plants shall compete with private industry?

In November, 1940, the minister said he had a post-war plan for these plants. What are the plans or what is the nature of the contracts he has entered into with these private industries, and the general purport of the government's plans for their utilization after the war? According to the evidence given before the committee in the United States, the general plan in that country is that private industry to-day operating government plants to which advances have been made are in the position where they shall have priority after the war in the leasing of those plants, and their continuance in civil production.

I would ask the minister frankly to set out the situation with regard to his difficulties in the aeroplane industry. If he places the matter fairly before us, we will give him our cooperation. We are not asking for particulars as to amounts or as to production in any one factory, because to furnish such information may cause harm. But we want to know something more than mere generalizations in connection with production of aircraft. We want to know whether all is well and, if all is not well, what can be or is being done to accelerate production.

Mr. HOWE: I shall surprise my hon. friend by answering this simple question with a simple answer. He asked if there was a shortage of material at Noorduyns, and I will say, yes, there is, and surprise him very much.

Mr. DIEFENBAKER: No; that is being frank; we want that.

Mr. HOWE: I was going to say that there is a temporary shortage of aluminum forgings at Noorduyns.

Mr. DIEFENBAKER: How long has it continued?

Mr. HOWE: It has been temporary. It has affected production for about a month, and we think we are catching up with it fairly quickly. Production at Noorduyns has been stepping up very fast indeed.

I would point out that an aeroplane plant such as Noorduyns is really an assembly plant. It assembles the product made by a great many other plants across Canada. If one of those plants gets out of step, the assembly line is closed down. When we are expanding industry as rapidly as we have—and I said the other day that the aeroplane industry had expanded fortyfold in the last two years—it is, in my experience, impossible always to keep a balance. We may be short of labour or materials at one point; for instance, in the Noorduyn plant we are temporarily short of aluminum castings. However, I do not think anyone has been laid off entirely on that account, although some of the staff may have been put on shorter hours. Instead of working overtime they have been working regular hours, or perhaps curtailed hours. I do not know how it can always be kept in balance. As I said before, a plant, if it is fully manned and fully machined, and with an unlimited rate of output, can be streamlined so that the product comes through evenly every day. But I do not think one could achieve that in the aeroplane business to-day. These temporary upsets or shortages of one kind and another—labour and material—do occur from time to time. That is why the production figures for various months are uneven, and they are bound to be uneven. However, the industry as a whole is making tremendous strides.

The hon. member has asked why a director of morale is necessary. I suggest to him that when 2,000 men come in from the farms and the cities every month, a little help in that direction is necessary to enable those men to be absorbed into industry. I think morale building has had a good effect. Just how it has affected the output of planes I do not know, but I presume it has not done any harm. I would think, too, that it has done some good because the output of planes has risen from week to week, and at this stage of our programme has reached a very healthy figure, especially when we remember that three of our plants are still tooling, and not producing.

I must say that I have not given a great deal of thought to the disposal of our plants after the war. I should like to get a little further along with the war before giving my attention to this. As I said earlier, capital assistance to industry in the form of plant and equipment is retained in the ownership of the

crown. That is, the product of the expenditure remains in the ownership of the crown. When we build a plant, we own the land on which it stands. When we put machines in, we own them. As far as the use of plants built by capital expenditure is concerned, all I can say is that everything is under rigid control. When the war is over, we can do what we like with these plants. We can turn the key in the door, if we wish, and shrink an industry back to its pre-war size. Or, if circumstances warrant it, we can use the addition to a plant for any type of production we may wish.

Very few commitments have been made. Commitments have been made only where secret processes have been used, and in that event we have given the firm which provided the process and supervised the building of the plant the opportunity of first refusal, in the event of the government deciding to sell. This is the only commitment we have made in connection with any plant built with public moneys. In other words, a plant could not be sold to a competitor without our first having offered it to the firm which designed, built and supervised it, and whose process we used without cost. In that way the plant would not pass into the hands of a competitor without first being offered to the firm in question which had built the plant.

An hon. MEMBER: At the same price.

Mr. HOWE: Yes, refusal at the bid price.

Mr. JACKMAN: On Thursday last, speaking of this morale-building campaign, the minister said, as reported at page 2451 of *Hansard*:

> I do not believe in this kind of propaganda in an industry. However, it was represented to me that the industry decided this was a desirable thing to do.

I am at a loss to understand whose policy prevails in the department, whether it is the policy which the minister believes to be the correct one, or the policy put forth by the director general of aircraft production. In that regard also, when the letter first came before the house last Thursday the minister said that when he learned the circumstances he stopped the charging to overhead of any contribution to this morale-building campaign. If the morale-building campaign would help the production of more aeroplanes, which we so badly need, then why is it not just as legitimate a charge against operations as labour or material costs? I fail to understand why the minister at that time had Mr. Bell's suggestion cancelled. What is the position to-day?

[Mr. Howe.]

Mr. HOWE: As the hon. member knows, by unanimous vote the industry asked that the campaign be continued. My reply was that if the industry itself wished to continue the campaign, it was at liberty to do so. But there were several objections to the letter, the chief of which was the suggestion that printing be diverted, as a means of compensation. I took strong objection to that. I took objection, too, to an officer of my department asking an industry to contribute money for any purpose whatsoever. If the industry had started a morale-building campaign within the industry, it would have been a legitimate undertaking. My objection was to the letter, not to what was done. There are certain rules of costing which provide for the payment of certain personnel. The director of personnel is a legitimate employee and if he wishes to conduct a morale-building campaign and associate himself in doing so with other directors of personnel, that would be legitimate. My objection was to an officer of my department appointing a man and asking the industry to pay him. If we appointed the man we should pay him.

Mr. JACKMAN: I quite appreciate that, but the minister was most definite on Thursday last, and I think again on Friday. On Thursday last, as reported on page 2451 of *Hansard*, he said:

> I also made sure that the payments would not become an element of overhead cost on the part of any of the subscribers.

While I agree that it was outside the functions of the director-general of aircraft production to organize this campaign, apparently without very much knowledge on the part of some of the constituent companies, nevertheless I do not see the difference between charging it to the cost of operations when carried on by the director of personnel of one company, and having an association of aircraft producers get together for this purpose and hiring a man to do the job for the whole industry. I do not yet understand if the function was legitimate. If the manner of doing it was not reprehensible, I cannot understand why there should be the slightest objection to charging the cost to operations. The minister was quite sensitive to it at that time; but if it is now being carried on with his endorsation, or at least with his consent, by an association or an officer who is not a direct employee of any one company, I cannot understand why it should not be a proper charge against the operations of the various companies.

Mr. HOWE: The collections made at the request of my director-general were not a

legitimate charge in my opinion, and I made sure that they were not so regarded. The rules as to what are legitimate manufacturing costs are laid down very exactly and agreed upon between my own officers, the treasury and the auditor general. If personnel work can be carried on within the four walls of these rules, no doubt it will be carried on. I did not wish to have funds raised at the request of my director-general for any purpose whatever and have those funds included in costs, and I took steps to see that that particular fund was paid for by those who subscribed and not by the government.

Mr. CASTLEDEN: Was there an arrangement with the treasury contained in that letter?

Mr. HOWE: I could find no evidence, and my colleague could find none.

Mr. BLACK (Yukon): In effect the resolution now before the committee is a $2,000,000,000 item in the estimates, and I should like to ask the minister a few questions about a matter, the expenditures for which will probably come within the vote to be based upon this resolution. Is it the intention of the government to put Trans-Canada Air Lines on the route from Vancouver and Edmonton to the Yukon and Alaska in competition with planes now being operated over that route? Are airports for this purpose to be built by the government to constitute a route in addition to the route now in use? Does the minister consider that the present temporary abnormal volume of business due to the construction of the Alaska highway will continue? In normal times the planes now operating this route are able to carry all the business offered. What is the estimated cost of putting the government air line on this route?

Mr. HOWE: Trans-Canada Air Lines is owned by Canadian National Railways, and reports to me at the moment because I am Acting Minister of Transport. I am not in very close touch with the company at the moment. The airfields on the route to Alaska are being built to provide an air route, but we are not going to duplicate. Any aeroplanes using this route will use the fields now being built.

Mr. COLDWELL: The government is building those fields?

Mr. HOWE: Yes; just as it has built all the fields along Trans-Canada. The purpose of Trans-Canada Air Lines is to operate a mainline service from coast to coast and certain international routes. Trans-Canada is operating certain international routes to the south, and it was the intention that it would operate any international route to Alaska and northward. Another company has been operating in this area for some time, and I cannot say just what will be the future policy. It will depend upon the wishes of Trans-Canada Air Lines and the decision of the board of transport commissioners which has jurisdiction over all air service routes in Canada. The decision is not likely to lie with me unless I happen to be Acting Minister of Transport at the critical time, which is unlikely. I do not remember my hon. friend's other question.

Mr. BLACK (Yukon): I asked the estimated cost of putting the government air line on that route. I am asking this question because up to the present time the transport commission have taken great care, and properly so, to prevent any overlapping of aeroplane services in Canada. They decide whether an established service is sufficient and, if it is, they will not allow another service to go in. As I see it, this is going to be overlapping of a most serious nature.

Mr. HOWE: The only recompense that any company using this route would get from the government would be payment for carrying the mails. The company operating there now is being paid for carrying the mails. If Trans-Canada went into this territory, the only recompense it would get from the government would be payment for carrying the mails. I may say that the Post Office Department has always protected the future position of Trans-Canada as the company to carry the mails on this route. The present contract is a month to month contract, and there have been warnings issued at all stages that eventually Trans-Canada will probably operate on the route. There will be no question of competing lines; if Trans-Canada goes in, the other line must go out.

Mr. HATFIELD: Will the minister consider issuing permits to pulpwood dealers selling to kraft mills in the United States who are manufacturing war material? These mills were not in operation before the war and are now denied permits because they were not purchasing pulpwood in Canada at that time.

Mr. HOWE: I assume they can find sources of supply in the United States. If the production of pulpwood in Canada extends beyond all previous figures so that it can supply the needs of Canada plus the former purchases by all customers, I have no doubt the timber controller will consider applications for permission to take on new customers.

Mr. HATFIELD: The newsprint mills have had no trouble in getting permission, but these new mills which are manufacturing war materials are denied permits. In my opinion these mills should have preference.

Mr. McNIVEN: I was interested in the remarks of the hon. member for Northumberland, New Brunswick (Mr. O'Brien) who, in a forceful, clear and logical manner, presented the case of what he described as the forgotten province.

Mr. HOWE: We have now passed to the war of the provinces.

Mr. McNIVEN: Coming from a province which is in that category industrially, I think I can justify an intrusion upon this debate even at this late hour. I was also interested in his conversation with the German merchant who called at his office some time in 1936. In 1933 the world's grain show was held at Regina and that exhibition was attended by representatives of all the grain producing countries of the world, including Germany. The representative in attendance from Germany had visited all parts of Canada before coming to Regina, and after he had been in that city for a day or two he was asked to give a summary of his impressions of what he had seen and of his experiences. He readily consented, and said that it could be given in two words—"waste" and "space." That description has constantly come to the minds of many Canadians and suggests the thought as to whether or not at this critical time we are making a maximum use of our resources, both natural and man-power.

Recently, owing to the courtesy and consideration of the hon. member for Verdun (Mr. Coté), I had the privilege of visiting a couple of munitions plants in the city of Montreal, and were this an earlier stage of the debate I would have been glad to portray what I saw in those two plants. But since being there, I have seen the edition of *Maclean's* of May 15, and I want to congratulate the publishers of that magazine upon that particular issue. It contains a description of certain parts of Canada's war effort. It describes it graphically and dramatically and gives to the Minister of Munitions and Supply a great deal of credit for what has been accomplished in a very short time. After reading the account of Canada's development in the last two and a half years, and after having seen what I have seen, one can readily understand how it is and why it is that the universities of this country are conferring degrees upon the hon. gentleman in recognition of his accomplishments for Canada and the empire, and I personally congratulate the minister upon being honoured by one of the most eminent of Canadian universities.

Arising out of my visit to Montreal I should like to bring to the attention of the minister and of the committee three or four matters. First, the plant utilized by Defence Industries Limited at Verdun was in use in the last war. I believe it was built by the British government, and following the last war it was used, prior to eighteen months or two years ago, by the Dominion Textile company as their manufacturing plant. What I draw from that is that plants constructed during this war may have and should have a post-war use, and this plant did have a post-war use and was readily converted to the needs of the nation when the occasion arose.

The next point is that of the four men I first met on entering the plant three were from my own city of Regina and the fourth was from Estevan, Saskatchewan, which is an indication of the migration from the prairie provinces to eastern Canada and of the part our people from the prairies are taking in industry.

Apart from the tremendous production in that plant, I think what interested me most was that part of the plant devoted to the manufacture of machine tools, and I was informed that they were manufacturing right in the plant, in the building itself, all the machine tools they required.

The next matter that interested me was a delicately constructed balance which weighed the cartridges after they had been inspected, automatically eliminating those that were underweight, or overweight, and sending down another chute those that were of the proper weight. That machine was constructed by the Bata Shoe company, an institution which has come into this country within the last four or five years, and is an indication of what Canada has drawn from troubled Europe in the way of industrial development and of what can be developed in the future.

On this occasion I had the privilege of hearing the Hon. Charles A. Dunning, who is the chairman of the board of Wartime Industries. Hon. gentlemen will be glad to know that the Hon. Mr. Dunning is gradually recovering a measure of good health, and he had not been speaking very long before he exhibited much of that old-time vigour which we knew so well on the floor of this house. Mr. Dunning was responsible for this statement, and I do not think in repeating it here I am breaking any of his confidences or imposing on the restrictions laid down by the minister himself with regard to quantitative production. Mr. Dunning stated that the plants of Defence Industries were now pro-

ducing more ammunition every month than was produced by the whole of Canada in the last war, and I understand that at the conclusion of the last war Canada was producing approximately 55 per cent of all the ammunition used by the allies.

While I do not intend to elaborate on what I saw at the two Montreal plants, I do wish to make a more detailed reference to a plant in Regina, my home city. That plant up to the 15th of August last was operating an assembly line for General Motors and employing between five and six hundred men. During each one of its productive years it turned out approximately 10,000 motor units. About the 15th of August, they started clearing out the assembly line and to acquire and install new machinery. Much of that machinery had been installed by the first of the year and production started. The plant is not fully equipped yet. When it is, it will employ approximately 1,000 men, and at the present time there are between six and seven hundred men engaged there. The plant is manufacturing the most modern anti-tank gun that mechanical science has yet produced, and those guns are being turned out every day in the Regina plant and have been turned out for a considerable time. I saw those guns boxed and labelled ready for shipment to a far distant point.

I have always felt—and I am glad to have some confirmation of my ideas in that regard—that it is wiser and safer, and costs less in the long run, for industry to be taken to labour rather than for labour to be removed to industry. Recently there was a conference of national war labour leaders in the city of Ottawa, and on his return to Saskatchewan, Hon. R. J. M. Parker, minister in charge of municipal affairs, said this, in summary of what occurred at the meeting:

> Mr. Humphrey Mitchell, federal Minister of Labour, also dealt with labour conditions in the dominion and suggested that the proper policy to follow with respect to the employment of people was to take the work to the people rather than to transfer large numbers to the work. Such a policy might have averted the exodus of people from Saskatchewan in recent years, had industry been established here.

That seems to me to be a very wise policy, and one that will avoid many of the difficulties which undoubtedly will arise in the post-war period.

When General McNaughton was here I had a short conversation with him during which he outlined his experiences in going through one of the large industrial plants in eastern Canada. In going through plants he engaged the foremen in conversation and ascertained what their duties were and where they came from. Himself a Saskatchewan man, he was proud of the fact that eight out of twelve foremen with whom he conversed in one plant came from that province. That emphasizes the migration of skilled labour from our province to eastern Canada. It is established by the fact that since 1936 Saskatchewan has lost 42,000 people, to say nothing of the natural increase which has not been tabulated during that period.

Mr. Little has ordered a new registration of unemployed. Every unemployed man between sixteen and sixty-nine years of age is required to register. I have no quarrel with that order; I think it is as it should be. But when the unemployed are registered in Saskatchewan, what is Mr. Little's intention? Is it his intention to move those unemployed persons to industries in the eastern provinces, or will he recognize as a principle that which his minister enunciated, namely that it is better to take industry to labour rather than the reverse?

Recently the teachers of my own city sent me a communication which to a certain extent applies to the teachers of the rest of the province. They are anxious to know where they can obtain employment for the two months of their holidays, because they wish to devote their leisure time to the war effort. It seems to me that in view of these facts—I am not censuring the Minister of Munitions and Supply, for I know it is his duty and responsibility to get production, and get it in the shortest period possible—there might be greater collaboration by the Minister of National War Services and the Minister of Labour in setting up war industries which will impose a minimum of trouble in post-war years.

The other evening I referred to the coal deposits in Saskatchewan and expressed the opinion that they should be converted to national use at this time. That thought was emphasized by a recent visit of Mr. Jeckell to western Canada. While there, he consulted authorities in Manitoba concerning the development of 100,000 horse-power of electrical energy, and indicated an intention, should it be found, of building a $40,000,000 aluminum plant. The authorities in Manitoba could not provide the necessary power, and his investigations proceeded no further. I suggest that consideration should have been given to the development of power at the lignite coal fields in Saskatchewan. It may be said that that is a far too ambitious undertaking for an agrarian province, but the manufacture of aluminum depends on bauxite brought from British Guiana, on cryolite brought from Greenland, and on coke brought

from Mexico; and if Mr. Jeckell was willing to take all these commodities brought from such great distances right up to the city of Winnipeg, they could have been carried another 300 or 350 miles to the lignite fields of Saskatchewan, where a head of power can be developed sufficient to produce the required aluminum.

It seems to me that those who are interested in locating large industrial undertakings for these and other departments are equipped with hundred-league boots, and when they come into western Canada just one stride takes them over the province of Saskatchewan. It seems to me, too, that somebody has whispered that Saskatchewan can only produce wheat. That is not so. In military matters, somebody has said that our province is the coldest in the dominion, but that is not so. Somebody else has whispered that it is the centre of the dust bowl, but that is not so.

Much has been said at different times with reference to the bits-and-pieces policy. The trouble in that regard is not peculiar to the Dominion of Canada but obtains also in the United States. I noticed in the issue of *PM* for April 13 last that that magazine had financed a delegation of idle owners of machine shops and workers to Washington for the purpose of making representations to the authorities there. The reason that *PM* gave for undertaking that responsibility was this statement:

> Every idle machine, every idle worker, is a national scandal at this date in American history; and to ask this question—Why 85 per cent of the hundred billion dollar war contracts were awarded to only 350 corporations while the rest were spread thin over 186,000 small manufacturers. And later received the answer quite frankly—that limited inspection and clerical facilities made it easier for the government to dump the orders into the hoppers of General Motors, Remington Arms, Bethlehem Steel and General Electric.

Pretty much the same situation has developed in this country, and we find the large corporations being given major orders and then developing their own institutions to the point where they can take care of much that is required in the way of component parts. I find similar complaints voiced by the mayor of the city of London who, on returning to his home city after visiting Ottawa, said:

> "It was difficult to find out exactly how industry should go about getting contracts directly from the Department of Munitions and Supply," he said. "By persistence it developed that practically all the large prime contractors had been selected already and that only these were being asked to tender on new jobs. Therefore he advised London industrialists to appeal directly to other manufacturers with prime contracts for war work."

[Mr. McNiven.]

We have a prime contract at the city of Regina, and the management of that plant for the time being must, because of conditions which it is not necessary to discuss, obtain their manufactured component parts from certain eastern connections. It is equally true that the management has been instructed by the Department of Munitions and Supply to obtain its manufactured component parts in western Canada, but in the search for these manufactured component parts they have spread their requirements from Winnipeg clear through to Vancouver. They have not attempted to centralize it in Saskatchewan but have distributed it pretty fairly over the three prairie provinces and to some extent in British Columbia. As far as our machine shops in Saskatchewan are concerned; as far as our other producers are concerned, all we ask is reciprocity, similar consideration. There is an office of the minister's department in the city of Winnipeg, and manufacturers have gone there seeking places where component parts could be manufactured; but because of the freight regulations in effect, because of freight tariffs that have burdened the development of western Canada for many years, they refuse to go further than Winnipeg. The Eastern Car company is an example. They refused to consider employment of any subcontractor for the manufacture of component parts west of Winnipeg, and the only reason given is freight rates. The Ogden shops at Calgary have substantial orders, but these shops, although they were instructed so to do, to my knowledge, have to a very limited extent distributed the manufacture of component parts. Western Steel Products, another company that has been favoured with large war contracts, has not utilized its own facilities either in Regina or in Saskatoon for the manufacture of component parts or anything else. My only thought is that the minister's Winnipeg office should be clothed with some authority in the distribution of war orders and in the spreading out of contracts for the manufacture of component parts.

The question has been asked, what is going to happen after the war is over? The minister said a moment ago that he had no clear-cut opinions in that regard, but in *Maclean's* magazine, in a biographical sketch, the minister is quoted as follows:

> After the war? Mr. Howe isn't worried about overproduction or excess plant. We are penning back a tremendous demand for things—houses, office buildings, apartment blocks, motor cars, goods of all kinds. It will not be difficult to adapt war plants to civilian needs. Invention will find new products to raise the standard of living and put people to work. There will be Europe to rebuild, and China and India will

be great markets. There is no reason for anybody to be discouraged about post-war problems.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. McNIVEN: Mr. Chairman, I had almost completed what I wished to say. In conclusion, I would point out to the minister that in Saskatchewan ours is a badly balanced economy, and that we are now reaping the harvest of that economy. We have regarded ourselves as an agricultural province and have tried to do that which we were best equipped to do, leaving the industrial production to other parts of Canada. A distribution system has been established in my province, but daily the components parts of that system are receiving notice from the eastern manufacturers that no longer will it be possible for them to deliver goods, that the goods produced in their plants are required in the immediate district in which they are produced. In other words, the central provinces are looking after their own customers. We have relied upon the eastern manufacturer, but he has not made an equitable distribution of the goods he has been able to produce in these strenuous times. He is depriving his western customer of those goods in order to supply local demands.

That is one reason why we are alarmed at the continued industrial expansion of eastern Canada. In the east we are building up an industrial Frankenstein which, immediately the war is over, will absorb our markets and keep us in the position we have occupied thus far, namely, hewers of wood and drawers of water for those who live in the more favoured parts of this country. We think that because of our contributions of men to the army, the navy and the air force, western Canada deserves a better deal by way of industrial expansion. We think it deserves greater consideration by the Department of National Defence in the matter of camps for the training of men. I was greatly interested in a question placed on the order paper by the hon. member for Lethbridge (Mr. Blackmore), a question which I was afraid to ask. The hon. member wants to know the number of men who were recruited in Saskatchewan and the number of men who were trained in that province. I know that when that question is answered he will be told of the 500 men from Saskatchewan who have been sent to Lansdowne park, Ottawa, this year; of the 250 men who have been sent to Windsor; of the group sent to Three Rivers; of another group sent to Sherbrooke; of another group from Dundurn camp sent out to Chilliwack, British Columbia; of the 450 men sent to Sarcee camp, notwithstanding the fact that we have a modern, well-equipped, up-to-date training camp at Dundurn, Saskatchewan, which the Minister of National Defence has described as a "natural". At the present time we have fewer than two thousand men at that camp, and there have not been more than that there at any time.

I need not detain the committee any longer, Mr. Chairman, but I do ask for a better and fairer deal for the prairie provinces and in particular for the province of Saskatchewan, a deal that will enable us to assist in the solution of post-war problems.

Mrs. NIELSEN: Mr. Chairman, during the time this matter has been under discussion I have had a number of questions to ask, but either the minister has given the information himself, or other hon. members have asked the questions I had in mind, and I have avoided any repetition because I believe the valuable time of the minister should be used as effectively as possible. But under this bill we are spending tremendous sums of money, and my only reason for taking part in this debate is to say a word on behalf of the people whom I represent and who are helping to provide this money. The only thing we wish is to get full value for the money spent, and to be sure that in the spending of this money the munitions of war are made as quickly as possible, and in the largest possible quantities. The Department of Munitions and Supply and the Department of Labour are very closely connected, and in the spending of this money I want to impress upon the minister one matter which perhaps has not as yet been stressed sufficiently in this house; that is, that in the placing of contracts and the obtaining of supplies, it is not only a question of getting raw materials, having the machinery and the factories, and all the rest of it. There is also the human element, which plays such a tremendous part in production.

The question of morale has been mentioned in connection with the aircraft industry. I noticed that this afternoon the minister said he was satisfied that morale had reached a healthy stage; I believe those were his words. Personally I am continually surprised that morale is as good as it is among the working people of this country, considering the conditions under which many of them have to work. I really was surprised when I heard the minister say that he thought morale in the aircraft factories had reached a healthy stage. I wondered whether it was Mr. Bell who had given him that impression, because my infor-

mation, coming from the men who work in the aircraft factories, is to the effect that Mr. Bell is not doing a great deal to increase morale, that in fact, in their opinion, he has done something calculated to destroy it. Only the other day I received a letter from the international association of machinists, Montreal aircraft lodge No. 712, in which they discuss the question of morale among the workers. They say they think it is very timely that Mr. Bell has given attention to the problem of morale building, but they feel he has chosen a most unfortunate way of going about it. They say:

We are convinced that morale can never be built by the superficial method of having someone who is a virtual stranger to the workers in the industry touring the country and setting up citizens' committees. We know that morale can only be built among workers themselves under the leadership of their own chosen representatives. This was clearly demonstrated in Great Britain and the United States.

This particular lodge, No. 712, say that they can be very justly proud of the work they have done, together with the management and Mr. Bell, in raising the morale in the Montreal plants. They go on to cite many instances of the type of activity to which they have contributed. Then they say this:

We wish to emphasize that for appeals of this kind to win the greatest response from the workers they must come from the ranks of the workers themselves, from their own chosen leaders in whom they place their confidence and trust.

I suggest that the minister might see to the proposals of the workers themselves, as well as to those of men like Mr. Bell, because from the men who day by day work in the factories a considerable influence may be brought to bear to increase production. They say:

Our proposals would be that an authoritative representative of labour, preferably a member of the international association of machinists, be appointed by the government to assist Mr. Bell.

We would propose further that an apparatus similar to the war production board in the United States be set up in Canada, and that the establishment of joint production committees be encouraged in every war plant in the country.

While we are discussing the question of morale we must point out that the speech which Mr. Bell recently made to the war labour organization production conference here on May 7, which was published in the press, has had a very bad effect on the morale of all war workers in this area.

We have refrained from replying to some of the allegations made in Mr. Bell's speech which are most bitterly resented by workers, because of our unwillingness to do anything which would endanger the spirit of national unity which we have striven to create. But we feel it is in order to point out here that speeches and

[Mrs. Nielsen.]

statements of this kind must inevitably have the effect of breaking down whatever good might develop out of Mr. Bell's desire to conduct a "morale-building" campaign.

In the speech to which they refer, Mr. Bell is reported to have said that the workers in industry were "in the front line—like hell." In my opinion a statement of that kind was an insult to the workers of this country, and certainly it would not be one which would help to build up their morale.

I know, myself, that morale is an intangible thing. Yet it is built up upon certain concrete and physical things. But no man going around to industry and giving pep talks to the men is going to increase morale. However, unless we do have an increase in morale in this country we are never going to have the total war effort which we are supposed to be having, and which we have pledged to the other countries fighting in this war—the allies.

We must have a total war effort. We cannot have it without better morale than we have at the present time. What does morale depend upon? I am not just speaking of aircraft factories; I am speaking of factories in general. It seems to me that morale is built up on certain things. The main factor would, in my opinion, be this: the physical and mental health of the working people, an understanding of what they are fighting for, and an assurance by the government that in this war effort it is a case of one for all and all for one, that one being Canada.

I remember at this time last year during the debate on the war appropriation bill I placed on record some figures with regard to loss of time in the United States due to strikes, sickness and industrial accidents. Figures of that kind are rather difficult to get in Canada. In fact I have not been able to get anything very recent from the dominion bureau of statistics. But I did notice a while ago a report issued by the Canadian institute of public opinion, and a release by the Gallup poll. I know a Gallup poll is a Gallup poll, and that it is not anything like as authentic or as true as a statement from the dominion bureau of statistics. On the other hand it paints a fairly accurate picture in a very general way of conditions as they are.

The report of the Gallup poll published in the Toronto *Daily Star* states:

It has been estimated that there are some four million Canadian workers to-day, including farmers. Assuming a 48-hour week, and a 4-week month indications are that among employed people alone, 26,000,000 man-hours were lost through sickness in February, or

three and a quarter million man-days. A man-day, of course, represents the amount of work done by one man in one day.

To put the same thing in another way, this means that every Canadian worker on the average, lost six and a half hours, or four-fifths of an entire working day, because of illness of some kind.

Here again I should like to be fair and say that in February sickness is possibly at its highest level, because there is more illness in winter, mostly by way of colds. The report of the Gallup poll goes on to say:

In terms of production, this amount of lost time equals approximately 370 medium bombers, or 70 corvettes, or 377 cruiser tanks.

I know these are very general figures; they are not specific. But they do show what a saboteur of our total war effort sickness can be. When we consider the money we are spending to buy raw materials and the money we are putting into contracts, and then realize that at the same time we are permitting sickness, the thief of time, to destroy our total effort, it seems such an idiotic thing that we have not done something to combat it, to get more for our money, more for our people, and speed up production by keeping the people in a state of physical health whereby they may contribute as they want to do.

I can quite agree that sickness is one of the arch saboteurs of Canada's war effort. As long as we have sickness going on as it is to-day, without something more being done to ensure health to our working people, a great deal of the money being spent on war appropriations is not going to be used as expeditiously as it should be. Nor is it going to give us the value it should, because at the present time the whole value in munitions of war is to get the war won quickly, and not to continue it unduly into the future.

I got some further figures from the bureau of statistics which I felt were worthy of consideration. They have to do with the keeping up of the morale of our workers. These figures represent one further thing which seems to indicate that the remark of Mr. Ralph Bell was entirely out of order, when he said that the working people in industry were "in the front line—like hell". Mr. Chairman, I hope you will excuse my language, but you will remember that I am quoting Mr. Bell.

The increase in industrial accidents in Canada is quite alarming, as shown from these figures from the bureau of statistics. The following table will give a comparison between 1939 and 1941:

Province	No. of accidents, 1939	No. of accidents, 1941
Nova Scotia	11,823	15,150
New Brunswick	8,126	12,292
Quebec	53,942	82,568
Ontario	53,110	104,655
Manitoba	9,401	12,927
Saskatchewan	5,260	5,825
Alberta	11,832	14,903
British Columbia	27,776	46,496

The very small increase in Saskatchewan is due to the fact, of course, that there is no industrial activity in that province. I say again that in the matter of health and industrial accidents insufficient provision is made to ensure that the health of the workers in the factories is safeguarded. I was speaking to friends in Toronto a while ago who were greatly alarmed at the number of accidents which had occurred to women in industry, small things such as the loss of a finger from standing too close to a wheel or a lathe and other accidents of that kind. Hundreds of thousands of industrial accidents could be prevented.

I know, of course, that on March 2, 1942, order in council P.C. 1550 was passed. To tell the truth, I did not know anything about this order in council until I saw it mentioned in the Toronto *Star*. I do not know whether hon. members are able to keep pace with these orders in council, but I confess that I cannot. In my opinion it certainly would have been a good thing if this matter had been discussed before the order in council was passed. As far as orders in council go, if they can be considered as being good, this is one of the best. It makes provision for the supervision of factories and provides regulations with regard to sanitary conditions and so on. Food served inside a factory must be up to certain standards. A few doctors and welfare workers are now taking greater interest under this order in council in the working conditions of the people. All that is to the good.

However, I do not believe for one moment that sufficient attention is being paid to the care of our working people. It is by such things that morale can be built up. In the same article which appeared in the Toronto *Star* on April 13, 1942, mention was made of this Gallup poll. It says:

Doctor J. J. Heagerty, chief of the dominion public health service, has written that tuberculosis rates are beginning to rise in Canada. The reason for it, he says, are the longer hours, the intense strain, the inadequate diets and the low standard of living still prevalent among many workers.

The basic question affecting the health of our people is not the sanitary arrangements in the factories in which they work; it is the amount of wages they need to give them necessary food which is a primary consideration in building up the health of a people. We should realize the amount of time lost in this country through strikes and other causes. Because of strikes in 1941 there were 23,997 days lost. In a whole year only 23,997 days were lost because of strikes, but according to the Gallup poll, in the month of February alone 3,125,000 man days were lost from sickness. Some people think that our industrial workers have sabotaged the war effort with strikes; but when we come to analyse the reason for strikes, we find that it is, first, wage disputes and, second, the question of collective bargaining. In most instances the attempt to obtain collective bargaining by the workers is made so that they may be in a position to bargain for better wages rather than go on strike. If more money were expended to build up the health and morale of our people, we would not be losing 3,215,000 man days in a month like February.

In my opinion the Minister of Munitions and Supply has more to do than just to consider where various contracts should be placed. As a minister of this government it is part of his responsibility to see that the workers in our factories are given an opportunity to make their maximum contribution. It is part of his responsibility to use properly the money which he is expending through these contracts in order to get the most value and to produce things more speedily. I believe the minister has said already that the contracts have always been turned out in time, that all that Great Britain and Russia have been asking for has been supplied by the factories. But if we had not lost time through sickness and industrial accidents, these contracts could have been filled much sooner than they were and we could have gone on with other contracts. Our war effort could have been speeded up just that much more.

Perhaps the Minister of Munitions and Supply considers that these things are outside his department, but in my opinion he shares responsibility with the Minister of Labour and with others of the government to see that we do not lose time through strikes, sickness and other causes. Because of that I would urge upon him that if he wants to build up the morale of the people of this country, he should not listen to men like Mr. Bell. Rather he should listen to the legitimate demands of the workers in the industrial plants who are working and have been working for a long time in order to obtain the right guaranteed by this house of parliament, the right of collective bargaining. If it were mandatory to give that right to the workers in industry, I dare to say that we could speed up the war effort considerably and provide more munitions and other things in which the minister is interested.

The second requisite for building up morale is to look after the mental health of our people. The industrial workers want to know why they are asked to speed up, why they are asked to accept certain hours of labour and so on. Not only that, they want to be assured that in this war it is a case of one for all and all for one. I dare to say that at the present time the industrial workers are not satisfied that in this war it is a case of one for all and all for one. Ninety-nine per cent of the people of Canada are willing to sacrifice and are already sacrificing for the sake of this war. They are not afraid to go on sacrificing, to sacrifice even more than they are at the present time. But the 99 per cent of the people who are sacrificing are not satisfied in their minds that the other one per cent of the Canadian people are doing their share of sacrificing. In fact, in the minds of many people there is a great deal of apprehension that the one per cent, those who control industry in this country, are more concerned at the present time about what is going to happen to them after the war than they are with putting everything they have into the winning of this war and making the sacrifices which are demanded of them.

That is the thing which is causing an unhealthy mental condition among thousands and thousands of Canadian people. Do any of us know where we shall be after the war is over? Thousands and thousands will be underneath the sod with nothing but a little cross over them, if they are lucky enough to get that. Many will be blown to smithereens long before there is a chance of picking them up and putting them together in order to put them underneath the ground. After the war is over, many will be in the relief lines again. No; this one per cent, those who are to-day in charge of the industry of this country, must realize that they will be very lucky if they come through this war. They will be very lucky if we win this war. They must realize that if through their own selfishness, if because they refuse to go ahead maybe and increase their production, because they are afraid that after the war they will not be able to make their profits, if they refuse to make the sacrifices, if by any chance we lose the war they will find out that German big busi-

ness will kill them just as effectively as German bombs can kill women and children in the cities of Europe.

Let us consider the long history of the war against Hitler. I do not like to be too severe in my criticism, but through the long years of the war against Hitler the record of this present government has been a rotten one. It has been a record of appeasement, and the government know it. The individual members of this government have all along taken a position of isolationism and appeasement to Hitler. The people of this country want to see from this government no more appeasement. I think they are pretty well satisfied that the government do not now want to appease Hitler, but what they are afraid of is that the government are appeasing the one per cent. As long as they have that feeling in their minds it is going to be difficult to build morale and get a total war effort.

As far as the workers of Canada are concerned, I know they are out to win the war. They are going to win the war; they are going to defeat Hitler. But the thing I would like this government to consider is this. Are the people going to win this war with this government—or in spite of it? They are going to win it; of that they are sure, and I am sure; and if they do not come to feel that they can win it in cooperation with the government, it may be necessary that they change some of those who to-day are conducting our war effort. It will be necessary to find men who are not willing to appease, but rather men who are willing to listen to the voice of the working people and to build national unity and build morale so that we can attain to a total war effort.

Labour itself has said that it wants to be treated as a responsible group. Only the other day I received a copy of a speech which was made by Elliot M. Little, Director of National Selective Service, on May 9, when he spoke before the Canadian Weekly Newspapers Association, and I would commend heartily the sentiments he expressed in that speech. If we had more of that attitude expressed not only by men like Mr. Little but by our leading industrialists, we would have a far better tone of morale in this country. I should like to quote briefly what Mr. Little said:

> Do not mistake what I am talking about. By better employer-employee relations I do not mean a concession to the workers here, a privilege there, such as a cup of tea at four o'clock. Those things have their place. I am talking about the whole broad field of personnel management which boils down to mean the best possible personal relations between management and the employees. The workers I meet and have worked with do not want employers to hold their hand. They simply asked to be treated as you want to be treated—as an adult and a responsible citizen.
>
> Considering the times and the circumstances, considering what is being asked of our workers to-day, I think it is high time factory managers and employers recognized this and, having recognized it, do something about it.
>
> Men do better work if they feel they are working with you and not merely for you. I know what amazing benefits will flow from away down the line, if men are encouraged to take an interest in their jobs and in the operation of the plant. I will go this far: I feel certain that if the masses of our workers were permitted that interest in their plant, and allowed a reasonable voice in the affairs of their plant, many of the problems now hampering our production efforts would disappear.

Labour itself has expressed its opinion and has said in relation to the filling of contracts that if only it could share with the management the right to suggest improvements, it is positive that it could speed up the work which has to be done.

I noticed in *PM* magazine of April 13 an article which deals specifically with this very question in the United States, and I see no reason why there should be a difference between the United States and Canada. The article says:

> Colt's Patent Fire-arms Manufacturing Company, situated in an open-shop stronghold, is one of the first companies in New England to form a labour-management production cimmittee.

It also says that immediately after this committee was set up, the management wanted to see what help they could get from it, and so they asked the union to investigate why, during the early days of the contract, spoiled machine-gun barrels in one plant were running to 17 per cent. With company encouragement union shop stewards investigated. The article goes on to say:

> This ordinarily would be a "management" problem.

But because the company had the cooperation of the union this is what happened:

> Union shop stewards investigated. The stewards found the faults: defective steel, improper inspection, and the fact that some operators were wandering away from their automatic borers.

The union representatives reported their discoveries to the management and spoke quietly to the errant operators, with the result that spoilage was reduced to eight-tenths of 1 per cent. That was quite a reduction from 17 per cent.

There was one other case where the company had been absolutely unable to discover the cause of a certain stoppage of work, but as soon as this labour-management committee

was set up, the union was responsible for finding and putting its finger on the hitch and was able to speed up production.

When one realizes the difference these things make, how can any one of us be willing to authorize the spending of vast sums of money for giving certain contracts unless we see that these other things are also done which are so necessary to make that money really go the farthest in producing the most in the quickest possible time?

I want to leave this idea with the minister. I feel that if only he would consider more the suggestions which labour itself is puttting forward and take labour into his confidence as much as he takes Mr. Bell and others like him into his confidence, he would find that the money spent by his department would bring back greater returns to him more quickly.

A while ago in the city of Montreal delegates met representing 75,000 workers organized in unions affiliated with the Trades and Labour Congress of Canada, and they themselves drew up what they considered to be a programme which would assist in the speeding up of industrial production. It seems such a pity that many people in this country are allowed to think that labour is demanding things that are absurd and altogether out of proportion at the very time when, as can be seen by this conference of 75,000 workers, labour was drawing up most reasonable suggestions. Hon. members will see how conservative they are. Certainly they are not what I would call at all out of proportion with what the demands of industry might be. Here is what these union delegates offer in their production programme. They ask first of all for a labour partnership because, as has happened in the United States, it may be responsible for finding the causes of delay in production. Then they say that the question of wages and hours must be considered because of its relationship to the building up and maintaining of health standards. Actually they said this:

> Wages and hours: Workers earning less than $25 a week or 50 cents an hour to be enabled to negotiate with employers for increases to these levels.

There comes in collective bargaining. Were we to assure the worker the privilege and the right to sit in and negotiate, we would not find these strikes occurring day after day because there would be no necessity for them. The men do not want to strike; they never wanted to strike. They will strike only of necessity for the sake of health and their families. The strike is the last extremity to which they will resort when industry has refused to listen to them in any other way. Strikes have been few in proportion to the time lost through sickness, and even these strikes would be absolutely obviated were the government to guarantee the workers this right.

They suggest with regard to post-war reconstruction:

> The inclusion of labour on all government commissions studying post-war reconstruction, and also at the peace conference after victory is won.

They also said with respect to war finance that there should be a limitation of individual incomes to $20,000 a year. That does not seem to be an exorbitant suggestion. Anybody who receives $20,000 a year should be able to manage; I do not think they would starve on that sum. I feel convinced that taking these suggestions of labour as the sensible arguments brought forward by people who are anxious and willing to make their contribution to the war effort, they are worthy of more consideration than the government has given them up to the present time.

We do not want to have any one group in Canada running the war. We want the people in this country to feel that all are making their contribution and that all are sacrificing. If you once can obtain that feeling among the Canadian people, you will have got 100 per cent total war effort—you will have got your morale. I bring these suggestions to the minister because I really do believe they are worth considering.

Mr. JACKMAN: Mr. Chairman, the minister has been good enough to give this committee some account of the war production of this country at the present time. He has told us something of the number of machine guns, tanks, automatic rifles, automotive equipment and many other individual items, that are being manufactured. I find myself, however, in the position of a builder who has a lot of materials but no general blueprint to which to work. I know that the minister will know and appreciate just what that feeling is, for without a plan it is difficult to know what to do with the materials which we may collect. All hon. members understand that, when a modern sky-scraper goes up—and after all we must liken the war effort to that—the steel framework goes up first, and the bricks and all the parts are merely fillers-in to finish the completed building. I do not think the minister, despite the pains he has taken at times to give us information, has yet given us the general framework of our industrial contribution to this war. I would ask him, there-

fore, what is the blueprint, what is the general plan? What are we aiming to accomplish from an industrial point of view? It is hardly enough to say that we are busy. We cannot proceed helter-skelter. We must proceed according to plan if things are to go along smoothly and we are to avoid bottlenecks and achieve the maximum production of which we are capable.

Let us take, for example, the steel supply in this country. What do hon. members know about the considerations which entered the minds of the government when steel was first considered in the early days of the war, or even after the fall of France, or even at the present time? How much has this country expanded its iron and steel production so that we shall have enough of that basic commodity out of which nearly all armaments are made?

May I ask the minister, for instance, what were the considerations which his department entertained when the Ojibway plant was considered, as I assume it must have been considered at some time? If I am correctly informed, some two years ago it was understood that this plant, which had never been brought into production as a steel producing unit, although parts of it had been brought into production as a fabricator of steel products, would have required no less than two years and possibly twenty-five million dollars to bring it in as a great steel producer. What were the expectations in the mind of the government at that time, that they did not go ahead with the production of steel at the Ojibway plant, entailing, as I have said, two years of time and possibly twenty-five million dollars? When did the minister and the government expect the peak of industrial war production would occur in this country? Would it be in 1941, let us say the fall of that year, or in 1942, or in 1943?

These are major problems which hon. members should consider, and they should be given information, to some extent at least, in so far as the government can do so without giving away secrets which would be valuable to the enemy, so that we may know what we are aiming to accomplish, what we can reasonably expect to do; and we, not a few closeted together, should have something to say and should be able to make some contribution to the decisions which are made.

May I ask him also whether or not I am correctly informed that the Canadian Car and Foundry company had a steel-producing plant at Welland, Ontario, a plant which made a fairly notable contribution during the last war to war production, and yet has only recently been dismantled, during this war, not having turned a wheel?

I saw in the Montreal *Gazette* not long ago a dispatch from the New York *Times* of February 16, stating that Japan's scrap steel supply was ten million tons, all from the United States, and that it was held that this would be enough to last for three years. With Japan four thousand and more miles away from this continent, why was it that we in Canada did not make available to ourselves some of the scrap which went to that country? It is a fact that we are not producers of iron ore in any quantity ourselves. The situation is somewhat different from the production and export of some of our own minerals, because we have them in the bowels of the earth to-day and can get them out for our own production, perhaps not so fast as we should like; nevertheless we have them. But we have not a commodity like scrap, and at the present time we cannot get it in sufficient quantity to achieve the maximum production which I am sure the minister himself would like to see.

In fact the hon. member for Broadview (Mr. Church) last night stated that some of the scrap which Japan got came from Canada, and I noticed that his statement was not challenged. Were we afraid at that time, as a country, to borrow from the United States in order to accumulate this very necessary supply of scrap for armament purposes in this country? We all knew that we were faced with the possibility of war, and that we must import iron ore and scrap if we were to engage in a major struggle. It is true that we have some of these materials ourselves, but not nearly enough to carry on a major conflict. Or was it that Canada was unwilling to put restrictions on the consumption of goods imported from the United States so that we could accumulate sufficient United States dollars with which to purchase scrap and store it in this country?

Only last summer a delegation from Toronto waited upon the steel controller in order to obtain a priority for the construction of a sewage disposal plant in that city. The director, who was then new to his office, explained to us that he believed that our cause was a very necessary one, and that, inasmuch as we would need the steel, not immediately but in a few months—the first requirement would then be needed and it would extend perhaps over two years—it would not be unlikely that we could get the steel. However, he had been in his office only a few weeks, and, shall I say, had not become politically conscious, as every civil servant must be to some extent, and he said, "So far we have no balance sheet." That is, after two years of war the Minister of Munitions and Supply did not have—if I take this state-

ment at its full worth, and I see no reason why I should not—a balance sheet of the steel production and the steel requirements of this country. He did not know in what form he could get iron and steel, what shapes were available, what the needs of essential civilian industry would be, and what would be available for war industry.

If I am mistaken in the presentation of this picture I know the minister will correct me. But I also took some steps to check the impression which I gained, and I found, from what I could learn, it was by no means an incorrect one. Is it any wonder then, Mr. Chairman, we find that there is an announcement on the part of the government that two destroyers will be built, and then, that this programme is to be cancelled because the steel is not available in this country and cannot be purchased in the United States?

These are things which parliament and the people of Canada want to know.

There are many small, vexatious and perhaps inconsequential things, like delays when there is a change-over from production of one model to another. But it is the vast general plan, respecting steel, aluminum and other essential products which are what one might call primary products and which go into the making of the finished article, with which we are deeply concerned.

There have been times when the shipyards have been closed down temporarily because of shortage of steel in particular forms. Why is it that, when we have steel in great quantities available for some things, we do not have it available for other things? Of course, the answer is that certain implements of war have priority. But the questions which this committee should be informed about, so that they may have a reasonable opinion on them, are questions like these.

There is a plant not very far from where I live which is turning out millions of large shells every year—a tremendous and extremely creditable output. The amount of steel which is consumed in the production of these shells must be staggering. Yet we find there is a shortage of steel for certain other commodities. Would the minister explain to the committee, if it is not a military secret, just what is being done with these shells? Is too much steel going into that production as against certain other essential war materials which require steel? We should have some understanding as to why so many shells continue to be turned out even though this has not yet developed into what we would call a shooting war.

Again, we are now to produce aero engines. That subject came up in the house a year or eighteen months ago and it was held that it was not worth while, that it was not economically feasible to use certain of our productive capacity and our mechanics for the making of aircraft engines. Yet we find that only within the last few months, within recent times at any rate, we have begun a programme of building a fairly simple aero engine. Surely mechanics are scarcer to-day than they were when the subject was first mooted in this house.

I should like the minister to say a word or two about his experience with industrial councils. They are now coming to the fore more and more, and I notice that his director-general of aircraft production stated that he had found them very useful. It may be that the workers in industry have something to contribute in the way of ideas to management. We hear a great deal about this nowadays, and I feel that the minister must have had many reports sent him as to what can be accomplished in the way of workers sharing by contributing their ideas to more effective management. One cannot help feeling, on the other hand, that the problems of management are very grave. Managers are for the most part qualified men who have had experience; nevertheless, most of the managers in this country and in the United States are, like Mr. Knudsen, men who have themselves come up from the ranks of industry, and it is the same type of brains they have that exists in the ranks, only perhaps in a lesser degree.

I have been informed also that there are certain difficulties in some of the departments —and I do not think the Department of Munitions and Supply is any exception in this regard—in finding capable men to carry out the war effort. It is difficult to get men through the civil service because of the regulations and the fixed salaries there. Perhaps the minister would outline the situation to us. There are civil servants who have been given very much greater responsibilities because of war work, and I am told that there are civil servants to-day who are getting $1,500 to $2,000 though they have assistants from outside business who are second or third in command, and who receive substantially more than themselves. Surely the rules of the civil service are not so rigid, so impossible to rectify, that recognition cannot be given the splendid work which some civil servants are doing and the responsibilities which they now bear, responsibilities which are out of proportion to those which they had prior to the war.

Before leaving the subject to which I referred this afternoon, namely the Hirst matter, I do not want the minister to feel that those of us on this side of the house do not recognize

what a serious principle is involved in what I may term dereliction on the part of the director-general of aircraft production. We know that he is a splendid man in many ways. We understand that he is doing a good job, and there is no desire to hamper in any way the maximum production of aircraft. But I am constrained to point out to the minister that if he allows directors of production, or directors anywhere throughout the government service, to commit these faults, very serious faults, such as the one in question, and says that we cannot do anything about it; that we have two alternatives—either to dismiss the man or to retain him; if we adhere to the policy which I hope is the right one in this case, namely, that of retaining the man; nevertheless, we are putting these dollar-a-year men, some of them directors of production, in a position where they become a power above parliament. We must have men who will act according to the principles which must obtain in the carrying on of government business. We cannot have men given the tremendous power which a director of production has to-day and have such men abuse that power by taking away business from citizens of the country and giving it to those whom they favour. It is a principle which is reprehensible and one which the minister has admitted to be such. What I want to point out is the general principle behind the retention of a man who does such things. While willing to make an exception in this case, I want the minister to know that we feel deeply that an essential principle is at stake in this matter.

I cannot help saying a word here about the letter of endorsation which the minister brought down in the house last Friday, whereby various members of the aircraft industry endorsed this morale building campaign undertaken by Mr. Bell through Mr. Hirst. It would have been better if the minister had left that alone. Here he is in a position of awarding contracts to every one of these aircraft producers. Their action may have been spontaneous; I do not know to the contrary; but they produce a letter signed by each one of them endorsing what is admitted by all in this house to have been an act which should not be too lightly condoned. Perhaps I should not say they put their stamp of approval on it, but they certainly put their stamp of approval on the subject matter around which the whole thing revolved, namely, the morale-building campaign.

Mr. HOWE: May I interrupt to ask if the hon. gentleman is suggesting that the resolution from the industry was not spontaneous? I want him to answer yes or no.

Mr. JACKMAN: I do not think I am required to answer the question. I did not say it was not spontaneous, but let me tell the minister this. That letter was signed, I suppose, by every aircraft manufacturing company in this country; but what amazed me mostly was to see the name of Trans-Canada Air Lines, a wholly owned government corporation, supervised by the minister himself, on it. The minister might just as well have signed it.

Mr. HOWE: My hon. friend can accept this or not. It just so happened that while this debate was on, the gentlemen represented by those signatures were in conference in Ottawa, and they walked into my office at a quarter to three on the day I presented the letter and asked me to accept it. I thought it of interest to the committee and I read it. If the hon. gentleman suggests that there was propaganda on my part, or on the part of any officer of my department, I wish he would withdraw the suggestion or accept the onus of the statement, because this should be publicized.

Mr. JACKMAN: I do not feel myself compelled to do either. If the minister thinks I suggested that he did it, he may read that into my remarks. I did not intend that he should.

Mr. HOWE: What was the purpose of saying it?

The ACTING CHAIRMAN (Mr. Roebuck): I think the speaker is required by the rules to accept a statement made by some hon. member whom he is criticizing with regard to that gentleman's own actions. I think the hon. gentleman should accept the minister's statements in that regard.

Mr. JACKMAN: I accept the statement of the minister that it was spontaneous on the part of the aircraft producers. I am not surprised that it should be because they are all beholden to him for contracts.

Mr. HOWE: That is my hon. friend's opinion. Take a look at him, imputing motives.

Mr. JACKMAN: Not at all. I want to point out this, that the power which the minister has to-day is perhaps the greatest power in this country. He has, according to his own statement, placed contracts to the value of four billion dollars, a sum which he states was greater than the total debt of this country prior to the war. Every citizen of this Canada of ours knows the power that is his through the spending of the $15 or $20 a week he may earn, at the corner grocery store or the chain store, and these stores all compete for his money. In the same way industry competes for the orders given out by the

minister; it is anxious to get those orders, and there is not a single industry of any size in this country that cares to run foul of the Minister of Munitions and Supply.

Mr. HOWE: I think the industry would be very glad to know my hon. friend's view of their action. I think they will be glad to know that they are accused of kowtowing to my power and trying to please me. I had nothing to do with that letter. I stated that I took no responsibility for it, that I believed it was a very improper letter. The industry had no particular reason to please me, but I shall be glad to have the public know the view my hon. friend takes of their action.

Mr. JACKMAN: I must say I do not feel very badly about what the minister has just said. Some of my friends are in the industry, and personally I would think the minister was not well advised in bringing the letter down here.

Mr. HOWE: A very cheap remark!

Mr. JACKMAN: The minister is very fond of saying things about various people. I might mention a few things he said during one day, Mr. Chairman. He referred to one hon. member's speech as "hysterical" and to the hon. member as a displayer of "histrionics." We in this house are great sinners if we dare to rise in our places and criticize the Department of Munitions and Supply. Another hon. member was called a perpetrator of "trick questions"; another was admonished not to talk so "glibly"; another was told he was making a "sales talk," while still another was advised to "stick to matters that he could understand." All I can say is that when I find myself in such good company I really do not feel badly off at all.

The minister has said that the opposition, and even some members of his own party who occasionally have matters they wish to bring up, should not rely on gossip. I should like to tell him one reason why we have to rely on information which may not be quite as authentic as scripture. I find that business men who favour the principles of the party of which I am a member but who, like all business men to-day, are doing business with the government in one way or another, do not want to be seen with Conservative members because they are afraid it might work to their disadvantage.

Mr. HOWE: I think there may be other reasons.

Mr. JACKMAN: I am not suggesting that the minister has any gestapo or anything like that to watch over them, but they do not like to be seen—

[Mr. Jackman.]

Mr. HOWE: Do not be too sure of the reason, though.

Mr. JACKMAN: Thank you very much; that is another of the innuendoes which the minister is so fond of handing out. However, it is a fact that it is most difficult to get information because, as we know, this is a party government; there is no national government, as so many of us on this side would prefer to see. We are not interested in politics, and I hope I am not talking politics now.

Some hon. MEMBERS: Oh, oh.

Mr. JACKMAN: I want to read to this committee a document for which the minister is responsible, which I think is one of the principal reasons for our failure to get authentic information. Let me read the oath which is required to be taken by every officer of the Department of Munitions and Supply, and this oath applies to men who are appointed as directors of government corporations and who are serving without remuneration.

Mr. POTTIER: Including a number of Conservatives.

Mr. JACKMAN: Indeed, yes; in fact it was a Conservative who let me know about this. I dare say the minister would like to call out, "Who is he"? so that I might name somebody, and then possibly the services of that gentleman, at $1 a year, would be terminated. This oath applies to our friends the dollar-a-year men who might furnish us with responsible information. My good friends to the left do get information from their particular sources. They get some of it from working men, as we do, and in addition some of us happen to know these dollar-a-year men. Here is the oath:

> I . . . solemnly swear that I will faithfully and honestly fulfil the duties which devolve upon me and shall not divulge any knowledge or information obtained by me in the course of my employment to anyone not employed by the Department of Munitions and Supply unless expressly authorized by my superior officers. So help me God.

An hon. MEMBER: What is wrong with that oath?

Mr. JACKMAN: If you wish us to make constructive suggestions, surely members of parliament can be trusted with the information these men may have; and if the minister does not want us to rely on gossip—

Mr. MACDONALD (Brantford City): Is that oath not similar to the civil service oath?

Some hon. MEMBERS: Order.

Mr. JACKMAN: If the minister is not opposed to our obtaining correct information; if he does not wish us to have to rely on what he terms "gossip", surely he would be willing to put through an amendment to that oath, to make it read, "shall not divulge any knowledge or information obtained by me in the course of my employment to anyone, other than members of parliament, not employed by the Department of Munitions and Supply". That would be purely permissive; it would not make them tell anything they did not want to tell. But as ordinary business men, surely these men can be trusted. Those appointed as dollar-a-year men are placed in those positions, by the minister if you like, because they are men who are able to hold their tongues when they should, and who do not talk out of turn. But surely if they believe that something is wrong and that it should be rectified in parliament, they should be in a position to tell their member about it.

Mr. HOWE: I would not speak again but for the fact that my hon. friend has made two statements which I should correct. In the first place he said we have given up the idea of building destroyers because we cannot get steel. I do not think it is any secret that the Minister of National Defence for Naval Services attended the ceremony of the laying of the keels of two destroyers some days ago. The other statement was that we are building aeroplane engines in Canada. That is not correct. I have stated many times in this house that we believe our industrial effort can be used to better advantage than in the building of aeroplane engines; that we had made satisfactory arrangements for all the aeroplane engines we required for our programme, and that we did not intend to manufacture aeroplane engines in this country.

Then the hon. gentleman wished a blueprint of Canada's war effort. If he could give me an accurate blueprint of the progress of Canada's war for this year, next year or any other time, I think I could give him an accurate blueprint of Canada's industrial effort for a concurrent period. But I think all we can do is try reasonably to anticipate the requirements of the war and plan our course from week to week and month to month accordingly. We have had an objective, which is to put into the hands of Canadian troops every weapon and every supply they require to carry on the war and to make them the best equipped troops in the world. Beyond that it has been our objective to make the maximum contribution to the munitions programme of the allied armies as a whole. We have found that certain lines of production are particularly adapted to this country, and we have gone full out on those lines. Certain exigencies of the war have made it necessary for us to go full out in directions which we did not intend to go in earlier stages. We have changed our course from time to time, as the developments of the war have indicated. We have watched our material situation very carefully. We have had a well-considered chart of that from the beginning, and had that not been so we would have had no munitions programme to-day. I say that because we have expanded our programme beyond anything that could have been anticipated eighteen months ago.

In the matter of steel Canada has never been self-contained. It has been our custom to import from the United States about a third of our steel requirements. We determined to plan our programme on continued importations in the same proportions. We discussed the matter thoroughly with responsible officers in the United States, and it was agreed that if we maintained this proportion we could reasonably count on the United States furnishing the same proportion of our requirements that had been their custom to furnish in peace time.

We have increased our production. Our billets production to-day is about 50 per cent greater than pre-war capacity. To those who know the time and money involved in developing capacity for basic steel, the tremendous increase will be readily understood. No other country in the world has, I think, had the same proportionate increase in the same period. I am speaking of basic steel.

In the matter of alloy steel we have gone considerably farther, and we have multipled our pre-war capacity by more than five, and, I think, more than six times, to make possible the gun programme and other programmes involving the use of alloy steel in this country.

My hon. friend has said that we have no balance sheet. The interview he had took place at a time when we were moving from a system of priorities into a system of definite allocation. The practice is to-day to place in the hands of every producer of steel a rolling schedule which will cover his rollings for the next month, and to attach to that schedule definite allocations for every pound of steel that is rolled. That requires, as hon. members know, an accurate balance sheet. It requires an accurate forecast of steel requirements for the succeeding months, and an accurate breakdown into rolling schedules.

In the first phase of the war steel was not as tight. We could get along very well with priorities; that is, giving the first call on steel to types of production where war requirements were most urgent. We have watched our raw materials situation very closely. However, we have not proceeded timidly; rather we have proceeded boldly. We have stretched our resources, as we think, to their limit. Under these circumstances it is not surprising that the increase in raw products sometimes gets out of step with the increase in finished goods. There are times when finished goods are planned at a certain rate of production, and it is found that the machines will do better than anticipated, and turn out an increased production. Unfortunately we cannot stretch basic steel production as we can the production of finished goods, and we have situations where we have temporary shortages of steel. Similarly, in connection with United States steel, on which we depend, and which is about a third of our total supply, we have found difficulties from time to time. Our shipments get out of step, and we do have shortages. Such conditions are inevitable, if we want to proceed boldly and get the last ounce of finished production out of our factories. But the situation is improving all the time. Production is coming in from the factories, and these delays are getting less as time goes on. We hope they will shortly be eliminated. We still have considerable basic steel production coming in. I think we have a half million ton capacity of pig-iron under construction at the present time. Part of that will be in in July of this year, and part of it in the early months of next year.

We have carefully assessed our scrap capacity, and the ability of this country to produce scrap. We believe that that situation is well in hand. My hon. friend rather implied that while the Japanese had been piling up the scrap we had done nothing about it. As a matter of fact we have in this country substantial reserves of scrap which we are doing everything possible to protect, through salvage campaigns.

My hon. friend asks why we did not proceed with steel development at Ojibway. The situation at Ojibway is this: Two blast furnaces were built there many years ago. They were never brought into production. Essential parts of the furnaces, such as blowing equipment, which is in fact the most important part of a furnace, were never supplied. The only operation carried on there was galvanizing of steel plate. That, of course, is not in any way an operation having to do with basic steel. The furnaces were there; we looked at them at the earliest opportunity to see whether they would offer a reasonable point at which to expand our steel production. It is quite obvious from the report made to me by the best experts in this country that the same capacity could be obtained very much more cheaply by expanding the steel plants already in operation. The expansion at Ojibway meant putting in coal-handling equipment, ore-handling equipment and dock facilities. The docks there are not in any way equipped. It involved improving the blast furnaces which, while modern at the time they were installed, are entirely out of date to-day. They are not of the size or capacity which anyone would buy or install at this time. As I say, the expense was vastly greater than would be the expense of expanding the existing plants. The result is that our expansion was made at existing plants, namely Dominion Steel and Coal Corporation at Sydney, the Steel Company of Canada at Hamilton, Canada Foundries and Forgings Limited at Hamilton, and the Algoma Steel Company at Sault Ste. Marie. We have stepped these plants up, and balanced them up, until we have increased our production of basic steel by more than 50 per cent over the pre-war capacity.

We have expanded our production of aluminum in this country by some five times. We have heard a great deal about the expansion of aluminum production in the United States, but to-day in Canada we have a greater capacity for aluminum production than we ever had in our history. I think about 44 per cent of the aluminum which is produced on this continent is produced in this country.

We have carefully weighed our power resources, and have stepped them up in a practical way. Our industries have been distributed to use those resources to the utmost. I believe to-day we are making a very efficient use of the power at our disposal.

The hon. member mentioned one further point, namely the oath of secrecy. We thought we should go the whole way, because we were doing very secret work with secret weapons. For clients in connection with whom secrecy was necessary we thought we should go the whole way. We made provision that our employees must obtain the consent of their senior officers before information could be given to anyone. I think that is the usual form, and I think there are few countries in the world that do not exact that oath from employees handling confidential war documents.

Mr. JACKMAN: I presume the minister has no objection to members of parliament who represent the people of Canada having the information at their disposal. That would not force his dollar-a-year men to give information; it simply puts them in a position where they would feel that they are not breaking their oath.

Mr. HOWE: My hon. friend has been a member of parliament for a sufficient length of time to know there is a proper way to obtain any information that he wishes from any department of government. The proper way is to apply to the minister of the department for the information. As he knows, it is highly improper for a member of parliament to go to a deputy minister or a minor officer in the department to obtain information, particularly information which he intends to use in this house. The net result of that is that he embarrasses a man who has no protection except the ordinary protection he gets in his duties. I think it is highly improper for any member of parliament to question an officer of a department for material which he intends to use in this house. I think the position in the Department of Munitions and Supply is exactly the same as that in any other department of government. I have men delegated for the express purpose of providing information to members of parliament when that information is asked for through myself. I challenge any hon. member to say that he has been denied any information by my office when he applied for it in the ordinary way.

Mr. BLACKMORE: I have greatly enjoyed the discussion thus far, but I believe we should revert for a time to the question of labour supply and the attitude of labour. That there is a most gratifying extension of Canada's war production, no one could possibly doubt. One great danger I see, however, is the spread of deterioration in the morale of our labouring ranks. I have seen some evidence of great indiscretion during the last two or three months with respect to labouring men. I should like to comment on the labour situation and draw to the minister's attention some of the causes for anxiety that I feel exist.

As an example of the sort of thing that I think ought not to appear in Canada, may I refer to a leaflet which came to my desk not a great while ago. This contained advanced pages from the May, 1942, issue of *Industrial Canada*. The heading of the leaflet is "Recent appeals by the press in the United States and Canada for an all-out war effort." I read this through with some care and marked certain passages which I rather wished had not appeared in print in Canada. One of these appeared in the Windsor *Star* of April 21, 1942, and it reads:

> The workers in our shipyards are undoubtedly entitled to fair and decent treatment. They are entitled to take every fair and decent means to obtain it. They are not entitled to demand the lives of soldiers and sailors in order to gain their ends.

I think we must all grant that there can be no objection to what the words say, but what the words imply is extremely offensive. There may be nothing wrong with this, but what came into my mind was: What is a fair wage? I wonder if it ever entered the minds of the printers of the Windsor *Star* to canvass the whole wage situation in Canada in order to determine what would be a fair wage and then examine the wages paid in the particular plants involved to see whether they conformed to the level of desirable wages throughout Canada? There is in evidence the greatest amount of loose, slipshod, careless and unscientific thinking on this matter. The former Minister of Labour (Mr. McLarty) is looking at me very earnestly, but I think he will agree with me that there is a lack of objectivity in thinking with respect to the wage situation in this country.

Mr. McLARTY: The only thing is that I doubt if it is the duty of one particular newspaper to make an analytical study of all the wages paid in Canada to see if they are relatively fair and decent.

Mr. BLACKMORE: I will grant that it probably is not the duty of any particular newspaper; but when the newspaper endeavours to obtrude itself into a discussion and makes remarks which might be offensive to people, it pretty nearly becomes essential for that newspaper to have something constructive to offer.

Mr. McLARTY: I would not agree with the hon. member for Lethbridge. Newspapers do inject themselves into many discussions without assuming the basic responsibility of conducting a national canvass to see whether or not their observations are entirely well founded.

Mr. BLACKMORE: I did not rise to discuss newspapers, so I am not going any farther. I have said what I think and the minister has said what he thinks, so we will leave it at that. They say that labouring men are entitled to fair and decent treatment, but again there is a lack of objectivity. People are not agreed as to what constitutes fair and decent treatment, and the result is that bitterness is likely to be engendered. We must not have bitterness engendered in the minds of the men

or in the minds of their employers. The newspaper goes on to say that the men are entitled to take every fair and decent means. What are fair and decent means? To what can the miners or the labouring men resort?

Mr. MITCHELL: The Industrial Disputes Act of this country stands out in bold relief when compared with any other form of labour legislation of a like nature.

Mr. MacINNIS: Is it working to-day?

Mr. MITCHELL: My hon. friend knows that it is working to-day.

Mr. BLACKMORE: The retort which naturally comes into one's mind is, "ye shall know them by their fruits." I believe before I get through I shall be able to show that there are sufficient fruits from the labour policy of this country to show that it is not working as it should.

Mr. HOWE: Would my hon. friend let me interject a remark? The Minister of Labour and I made a very important engagement for 9.30 o'clock and we have been postponing it, relying on the fact that we would be kept here for only half an hour this afternoon. Would my hon. friend excuse us for a few moments and let the acting Minister of Labour carry on? I think it is going to be a labour argument, and we promise to return as soon as we can.

Mr. MITCHELL: I will say to my hon. friend that the matter he is discussing is one my colleague and I are going to discuss, and it will affect the welfare of thousands of working men in this country.

Mr. BLACKMORE: Then I certainly wish the Minister of Labour could be here. May I just say to him that I think he is doing the job in a way that is going to make for improvement, and I wish him well in the very difficult task ahead. I was referring to certain passages in certain newspapers. I turn now to the Toronto *Globe and Mail* of April 14, 1942, where these words appeared:

> We have not read that these gallant seamen are quarrelling with their employers about overtime pay. There can be no excuse for a shut-down in any Canadian shipyard. Unfortunately, Canada has had more than one. Less than ten days ago a Quebec shipyard was closed down pending adjustment of complaints about wage schedules.

Again there is an insinuation and an implication which is offensive. I notice that this paper attaches the blame entirely to the poor working men and never a word of blame to the man who is employing the men. If there develops in a plant ill feeling as a result of which the men feel themselves obliged to take drastic measures, no blame is attached to the man who goaded them on and refused to listen to their plea. That is entirely as it ought not to be. The paper goes on to say:

> Men producing guns, tanks, planes and ships ought not to be allowed to down tools in face of the enemy. They are entitled to fair wages.

Again we have fair wages mentioned with no definition as to what fair wages are. I believe we will grant that the men who are working in munitions plants ought not to down tools, but may I say once more that the men who are managing these plants ought not to put the working men in a position where they are obliged to lay down their tools.

I turn to the Montreal *Gazette* of April 22, 1942. These newspapers by the way are commenting on the strike which took place in the shipyards at Midland and the sympathetic walk-out that took place in the Kingston plant. The Montreal *Gazette* says:

> Shipyard workers at Midland, Ontario, downed their tools last Wednesday mainly because a semi-skilled workman had been dismissed or transferred. It does not appear to have been a good enough reason for paralysing an essential industry.

Once more the blame is attached to the men, and not to the man who dismissed this worker. We are not given any details to show whether the dismissal of this worker was justified. The whole thing is left in such a way as to cast reflections on the men who are working in our munitions plants. That is decidedly not fair; in fact, it is decidedly pernicious. May I read another passage from the same editorial?

> Labour interests can be safeguarded, and where legitimate will be safeguarded, without the necessity of strikes which interrupt war production and are gifts to the enemies of this country.

If only Canada would safeguard those rights! If only we had the evidence to prove that they had been safeguarded! If only we had evidence to show that provision would be made to safeguard these rights, things would be so different from what they are to-day in Canada. I wish to point out to the minister that this situation is, in my judgment, exceedingly grave. It is far easier to keep men feeling enthusiastic when they are not bitter than to get them back into the right frame of mind after their morale has been destroyed.

I believe that all the members of the federal cabinet who have anything to do either directly or indirectly with labour policy in this country ought to get together in the most earnest manner and, having regard to

the way in which labour problems are taken care of elsewhere, draft a policy which will be most completely designed to make the labouring men in Canada happy, for unhappy men cannot produce as well as happy men. The cabinet should have in their minds in approaching this task this principle, that they will make the labouring men in Canada partners in Canada's war effort and not servants in Canada's war effort.

There may be those who will think I am probably overstressing this matter but, Mr. Chairman, I find on the streets as I talk with the ordinary man here and there an antagonism to the interests of the labouring man which undoubtedly has been engendered by such things as the newspaper comments to which I have referred already in this speech. Such antagonism undoubtedly offends the labouring men whenever they come into contact with it. The whole effect is altogether undesirable. So I say that every cabinet minister who has anything to do with the labour situation in Canada should devote himself most earnestly to the drafting of the finest labour policy that can be drafted for this country.

In that policy there are several important principles which should be incorporated, and the first one is the principle of the fair wage. A board of men in Canada should be set the task of determining what a fair wage policy in Canada is; whether or not, we will say, a wage of $120 a month which might perhaps be fair in one city is fair in another city, and whether sufficient allowance is made for the cost of living and other considerations, so that we can be sure that the wage rate throughout Canada from coast to coast is fair and equitable.

There will be those who will answer me in this way: "Now, look, you simply cannot have the wage rate in Canada raised without causing inflation. The freezing of wage rates is a necessary precaution against inflation." Let me answer them thus. Inflation is a rise in price. When men were given additional reward for their labour, if the added pay were not registered in increased costs or increased prices there would be no inflation. The only danger then would be in having extra purchasing power going out into the hands of the people, which might, by their using the goods which were available, tend towards inflation.

There will be no increase in the costs of the articles produced if the government subsidizes the wage rate in a given plant so that the government pays the additional increase. Such procedure would obviate the necessity of the plant adding anything to its costs and raising prices.

Mr. WOOD: Who will pay the subsidy?

Mr. BLACKMORE: The government will pay the subsidy.

Mr. WOOD: Who is the government?

Mr. BLACKMORE: The government must use credit, the credit of Canada, to do it.

Mr. WOOD: Where are we going to get the cash?

Mr. BLACKMORE: I know my hon. friend does not understand that. I know he is quite earnest and sincere, but may I tell him that he is living in the middle of the twentieth century, in a time when orthodox methods of finance can no longer safely be used or relied upon. There are financial principles as a result of the application of which the government can use the credit of Canada to increase the wages of the men working in plants without causing an increase in the costs of the goods those men are producing, and without causing additional taxation or occasioning additional borrowing.

Mr. McLARTY: Or inflation?

Mr. BLACKMORE: No, it is not inflation. Remember that inflation is a rise in price. Does my hon. friend accept that as the definition of inflation?

Mr. McLARTY: No.

Mr. BLACKMORE: That is true. I know my hon. friend does not know that, but I am telling him.

Mr. McLARTY: I wonder whether the hon. gentleman has analysed the experience in the last war as to the rise in the cost of living, which exceeded much the rise in wages as this rise in the cost of living progressed.

Mr. BLACKMORE: Now, Mr. Chairman: before very long, in this whole general debate, the question of inflation will be discussed in great detail. I am thoroughly familiar with what happened in the last war. I know the causes of it, and I know the way in which it could have been remedied and prevented. But to obtrude a discussion in detail on the subject of inflation at this time would probably not be in order, as the minister will acknowledge.

Mr. McLARTY: Quite true.

Mr. BLACKMORE: So that, while the subject is exceedingly interesting, and there is no subject which I would rather discuss, if he will permit me we will not go into inflation now. In passing, however, I wish to say one other thing about the question of inflation. I have shown that if the government pays the additional increase of the wage—

An hon. MEMBER: Who is "the government"?

Mr. BLACKMORE: Well, I did think my hon. friend knew that. The result is that, if the government pays the increase of the wage there will not be a rise in price of the product of the industry, so there will not be inflation in that respect.

With respect to the money which would go out into circulation, we must, by increasing production, prevent that from causing inflation. Canada has not by any means attained her maximum of production of milk, cream and various other commodities for which people spend money. Meanwhile if the government find there is too great a pressure on the supply they will have to ration—that is all—to prevent inflation. Or they will have to use some means, let us say, of paying in victory bonds, or war savings certificates, or something of that sort, which cannot be spent at once but which the labouring men can hold to comfort them for the future.

I think I have dealt enough with the question of inflation to show that there is no reason why the government cannot step into a given plant and, by subsidizing the rate of wage which is paid in that plant, raise all wages in that plant to a level which will be equitable.

The second principle which should be involved in our labour policy is the right to organize. I have under my hand at least seven different memoranda prepared and submitted by the labouring men throughout Canada, and I have magazines and other periodicals here which have been published in Canada in which are articles by men who are leaders of thought with respect to labour. In every single one of these the request is made that the men be given the right and allowed to exercise the right of organization and collective bargaining. I do not believe, sir, you can content the labouring men of Canada unless you give them that right and guarantee it to them and allow them to use it—the right to organize and to bargain collectively.

Why should Canada be the only one of the British countries in which this right of collective bargaining is denied the men. Why should it be possible to grant it to the men in Britain and the United States—

Mr. McLARTY: Does the hon. member suggest that any act of this government or any other government of Canada refuses the right to organize to employees in industry?

An hon. MEMBER: Another straw-man!

Mr. BLACKMORE: At another time probably I shall discuss this matter in the presence of the minister, and I believe he will be astounded to learn how completely this government—the government which holds office right now—has destroyed in Canada the right of collective bargaining.

Mr. McLARTY: Let us be fair about this. There is no act of this government which has disputed or in any way challenged the right of men engaged in industrial enterprise to organize.

Mr. BLACKMORE: And to bargain collectively?

Mr. McLARTY: And to bargain collectively, yes.

Mr. BLACKMORE: And if a company discovers an organizer in its ranks and fires him, what does the government do?

Mr. McLARTY: Under the criminal code, if anyone is discharged by reason of the fact that he belongs to a legitimate trade union, the company concerned is subject to prosecution.

Mr. DOUGLAS (Weyburn): How many prosecutions have taken place?

Mr. McLARTY: I could not answer that question offhand. There are some that I remember quite well. There was one in Vancouver and, I believe, one in Montreal. I do not remember the actual number. Naturally, I have not the facts beneath my hand now. But there is a definite introduction into the criminal code, made, if I remember correctly, in 1938, that no man can be discharged from employment by reason of being a member of a trade union. It was introduced by this government.

Mr. BLACKMORE: I must perforce accept the word of the minister, but I believe he will find some difficulty in explaining the passage which I have already read from the Montreal *Gazette:*

> Shipyard workers at Midland, Ont., downed their tools last Wednesday mainly because a semi-skilled workman had been dismissed or transferred. It does not appear to have been a good enough reason for paralysing an essential industry.

The minister will have upon his shoulders the burden of explaining why the men would consider it necessary to strike if they had assurance that their interests would be protected. I think the mere fact that these men in Midland did strike was the very best possible evidence that they had lost confidence in the government's willingness or ability, or both, or courage, to protect them in their demands to organize and bargain collectively.

As I say, I must accept what the minister said, but I have plenty of evidence, which I just do not happen to have under my hand and organized so that I can deal with the subject to-night, to show that in this country to-day there remains hardly anything substantial of the right of collective bargaining. It has been emasculated. It has a form of reality, but denies the power thereof.

The third principle which must be embodied in the labour policy of this country is that labour shall be permitted, be invited, be guaranteed to enjoy the right to participate with the management of industry in determining the policy of the plant concerned. That has not been done. I have here comments, statements in memoranda, every one of which agrees that all the offers of the men to cooperate with plants have been rebuffed. There has been a determination manifest on the part of industrial managers to treat the labouring men as servants, not as partners. That must be changed. It has been changed in Great Britain; it has been changed in large measure in the United States, and it must be changed in Canada.

There is one other thing which I think is rather important in this connection. May I give an illustration? Some time ago we were discussing the matter of pensions. We were discussing the Pension Act for soldiers, and a good deal of misunderstanding arose on account of the fact that we were looking only at the pensions Canadians were receiving and not at the social benefits which they were not receiving. Hon. members would rise in this chamber and say that the Pension Act of Canada grants higher pensions to men than does any other country in the world. That may possibly be. But in order properly to gauge or assess the value of the Canadian pension one must first examine and see whether or not there are other benefits to be found in other parts of the world which are not to be found in Canada. We in Canada are the most laggard nation on earth in the matter of social services. I have never heard of a modern nation anywhere that neglects the welfare of the common people as Canada does, and before I am through I shall be able to prove it. Those of us who were fortunate enough to be in the empire parliamentary group at luncheon to-day and heard Mr. Nash of New Zealand must have blushed for shame to think how pathetically inadequate was Canada's showing in comparison with what is being done in little New Zealand. If there was anyone who did not feel ashamed he must have become very callous. In Canada we lack social services, and therefore we must have a higher wage scale than is to be found in other countries. I do not believe there is any other country among the British peoples in which the wage scale is lower than it is in Canada. I may be wrong, but I have not read about it if there is such a country.

Mr. McLARTY: Will the hon. member give us figures to substantiate such a statement, which is directly opposite to what I have understood to be the fact.

Mr. BLACKMORE: Very soon I shall give figures which will impress the minister.

Mr. GRANT: Just dealing in platitudes.

Mr. BLACKMORE: What is the hon. gentleman's complaint? Murmuring as usual! I shall read three or four statements from labour men themselves. The hon. member for Vancouver East (Mr. MacInnis) the other day referred to a pamphlet called "Victory needs steel", by C. H. Millard, executive director of the steel workers organizing committee, Canadian region. I am not in a position to know a great deal about this organization, but the pamphlet bears evidence of having been prepared in a scholarly manner and is written with apparent regard to accuracy and moderation. I am going to read several passages giving the labouring man's point of view. The first one appears on page 14:

> The workers oppose nazism with all their might because they hate slavery. They want nothing more than an opportunity to share in the country's effort for victory, and they cannot make their best contribution if they do not feel secure in their jobs; if they are not permitted to associate themselves in the union of their choice; if their wages are inadequate, and if they see lack of planning and great mismanagement around them without being able to do anything to remedy the situation. Under such conditions their minds are worried and their spirit depressed, they lose confidence, they become discontented and bitter. They begin to distrust their government and their faith in the democracy of their country becomes shaken.

The implication is that conditions are not by any means as rosy in this country as the minister has been led to believe they are. Again on page 17, and this bears on the minister's question:

> Wage rates in the Canadian steel industry are both woefully inadequate and chaotic. In the four basic steel plants the minimum rates vary all the way from 37½ cents an hour to 46½ cents an hour, or a spread of 24 per cent.

How you can justify that, needs a lot of explaining.

> The same spread is to be observed in the rates of most of the skilled workers. Thus, the wages of a machinist vary from 62 cents to 75 cents an hour, or a spread of 20 per cent, and those of a pipefitter from 46 cents to 76 cents an hour, or a spread of 65 per cent.

I think the erstwhile Minister of Labour will grant that there is a condition there that needs explaining.

Mr. McLARTY: Far from bearing out the remarks which the hon. member made earlier, it deals with the relative spread as between particular employees in a particular industry and not the relative spread as between wages paid in Canada and wages paid in other countries, to which he earlier referred.

Mr. BLACKMORE: I will very soon reach a passage which will deal with the minister's question. There is another one coming. I quote from the same page:

The central committee of our union in the basic steel plants justly said of this condition:—

Notice that it is the central committee that said this.

—The wide variation within plants and across the country for the same or similar jobs is indisputably a disruptive influence. Uniformity in this matter and a planned national wage structure would eliminate one of the prime causes of industrial unrest and make our citizens part of one well-coordinated production machine. There is no justification for some of the wide differences established. Steel sells for the same price across Canada. It takes as much physical and mental effort to perform any similar job, whether in Hamilton, Algoma, Sydney or Trenton.

With respect to the matter for which the minister asks evidence, may I turn to page 18:

Yet in the basic steel plants in Canada almost a third of the workers receive only the minimum rate, which in every case is less than 50 cents an hour, and 55 per cent of the employees receive less than 55 cents per hour. When these wages are compared with those paid in the United States their inadequacy becomes more apparent. Broadly speaking the minimum rate in the basic steel plants in that country is 72½ cents per hour. In Canada this is almost the maximum paid to the highly skilled steel workers.

There is one of the countries.

Mr. REID: What about Great Britain?

Mr. BLACKMORE: I am sorry to say I was not prepared to deal with that. I did not come prepared to deal with the whole thing in an encyclopaedic way.

Mr. REID: I challenge the hon. gentleman's statement that this country is paying the lowest wages of any British country. I say to him without fear of successful contradiction that wages are lower in Great Britain, but that does not mean that they are suffering more.

Mr. JOHNSTON (Bow River): What are the wages in Great Britain?

[Mr. Blackmore.]

Mr. REID: I can give some of the trades. Take the moulders. They are earning $10 a week, and in this country they are earning $1 an hour.

Mr. JOHNSTON (Bow River): More than $10 a week, surely?

Mr. REID: Two pounds.

Mr. DOUGLAS (Weyburn): They make more than that now.

Mr. REID: From two pounds to two pounds ten shillings. I challenge the hon. member to say that they pay more in Great Britain than we pay here.

The ACTING CHAIRMAN (Mr. Roebuck): The hon. member for Lethbridge (Mr. Blackmore) has the floor.

Mr. BLACKMORE: If it be so, that the labourers in Great Britain are receiving less than the labourers in Canada, it is only to be excused. I am not prepared to prove that Canada is receiving the lowest rate of all. Let us bear in mind that Great Britain is not in a position to supply the goods which would enable her to pay the rate Canada could pay. But Canada should be far ahead of Great Britain; and, since the hon. member referred to actual living conditions, from what I could gather, those of the people of Great Britain were far ahead of the living conditions of the people of Canada.

Mr. REID: That is a different point.

Mr. BLACKMORE: I grant that. I wish now to read another short extract, from a pamphlet called "Labour's plan for production," recently issued by the Canadian Congress of Labour. On page 1, I find the following statement:

The workers on the job are fully aware that present production policies are inadequate; they know that vastly more can be done; they realize that only by the widest and most efficient use of the machinery of production, the material resources, and the man-power of the nation can victory be achieved. The congress therefore believes that a plan should be adopted which will arouse the enthusiasm and release the energies of the workers by treating them as partners in the war effort, with a full understanding and a voice in the determination of production policies. Labour management co-operation is the key to maximum industrial efficiency, as has been proven by the experience of Great Britain and the United States.

Undoubtedly the men who wrote this are far better informed on the subject than I possibly could be, since as a member of parliament I have to wrestle with scores of problems. I take it these men know what they are talking about. Let me read another passage, which is quite significant.

The ACTING CHAIRMAN (Mr. Roebuck): I am sorry to have to tell the hon. gentleman that his time is up.

Mr. DOUGLAS (Weyburn): I desire to take only a few moments to say something about the matter of production in the aircraft industry. When I suggested yesterday afternoon that I should like to ask the minister a question or two I had no intention of keeping the minister tied up here all day, but I have been trying to ask these questions for a day or two. If I had not found an opportunity before eleven o'clock to-night probably I would have forgotten about it, because I do not like to see the minister tied down here when he has so much work to do.

Mr. CRUICKSHANK: Then why waste time?

Mr. DOUGLAS (Weyburn): I do not think it is a matter of wasting time, but the hon. member may judge for himself. I think there is some information we should have, and this is the only place where we have an opportunity of bringing certain facts to the attention of the minister. I can assure my hon. friend that I am not going to take time to make any general speech or indulge in any rhetoric.

I think to-day it is recognized by everyone, even by those of us who have no technical knowledge, that the aircraft industry has become one of the most vital industries to the winning of the war. Every battle we have lost has, in the main, been lost through lack of support in the air. The few battles we have won, Dunkirk, the Coral sea naval battle and one or two other engagements, have been won because for a time at least we had mastery of the air. For that reason the production of aircraft has become of increasing importance in the eyes of everyone who wants to see the united nations not only win the war but win it as quickly as possible. Therefore, during the last two sessions I have been asking the minister some questions about aircraft production. He will remember that last year we discussed the question of the Malton plant, and at that time the minister said he was not very well satisfied with production there. The other evening the hon. member for Bow River said that in his opinion the aircraft factories were not working to full capacity. I do not think there should be any misunderstanding when that statement is made. There is no doubt that aircraft production in this country is much better than it was last year and that last year it was better than the year before; and any person who criticizes that production must not be understood as saying that we are not making progress. I think those responsible are making progress; but the questions I raise to-night are whether we are making that progress fast enough, whether we could not have made more progress, and whether we are utilizing our full capacity.

The hon. member for Bow River said his experience was that we were not utilizing our full productive capacity. The only answer I heard was in a speech by the hon. member for Fort William, who painted a rosy picture of what was happening in that city, where we have probably one of the best aircraft factories in Canada. I was rather amused, because the other evening when the hon. member for Mackenzie and myself were asking some questions about wartime housing, the minister intimated in a very kindly way that two ministers of the gospel, as he called us, could not know much about these matters. But when the hon. member for Fort William, who is also a minister of the gospel, was eulogizing the minister as the new Napoleon of the mechanized age, the minister seemed to consider a theological training a good thing in that it helped a man to discern what constituted a really great national figure. As a matter of fact, what the hon. member for Fort William said about the aircraft industry is, in my opinion, not altogether borne out by the facts. He spoke of the industry being in full swing, with everyone being very busy; but, in the language of one of the radio comedians, "that ain't the way I heared it." A great many men have left western Canada and gone to work in these factories. I know quite a number of these men, some of whom were soldiers in the last war, many of whom took technical training and went to these factories with the idea that they might render a real service to Canada's war effort. I have had communication with a number of them, with some by correspondence and with others by personal conversation as I have moved across the country, and one hears disconcerting statements from men who have become disillusioned. A man writes, for instance, that the slogan seems to be, "Don't work too fast or you will find yourself out of a job." One hears of men given a certain amount of work to do and told they must spread it over a considerable period of time. Another man points out that these factories work five and a half days a week, with only one shift a day. I know there may be many factors to cause that, which I do understand and which these men do understand, but there is a feeling among these people that somehow or another they are not being given an opportunity to pull their weight, and I think it only fair to draw that fact to the attention of the minister.

I am not in a position to speak with first-hand knowledge, and neither is the hon. mem-

ber for Fort William, who painted such a glowing picture. But in looking through the newspapers I find, for instance, that the Port Arthur board of trade, who would have no reason to be unsympathetic to the minister or the work he is doing, sent a resolution to him protesting the fact that there did not seem to be a full-out effort being put forth in the aircraft industry in Fort William. I understand the minister replied to that resolution. In a little publication called *The Effort,* which is the official organ of aircraft lodge 719, International Association of Machinists, an affiliate of the A.F. of L., I noticed an editorial which I should like to read. This is written by men working in the plant, men who have reason to know what is going on. If they were only interested in earning their bread and butter they would simply take their wages and say, "Whether we produce planes or do not produce them is not the essential thing"; but these people are interested, as we all are, in the winning of the war. This is what the editorial says:

In a letter from the Hon. C. D. Howe, Minister of Munitions and Supply, to the Port Arthur trades and labour council, we are informed that our plant has produced 726 Hawker Hurricanes to March 12, 1942, and considering the comparatively brief period during which our plant has operated we should be proud of this production record. Yet, we, the aircraft workers cannot be proud of such a record, after thirty months of war with nazism.

We do not blame the local management for this poor production record, but we do blame those in high places, and we state that there is something wrong in our aircraft industry, and our effort is not total war. We have not seen a great change-over from peace to total war in this country, we will agree that Canada is endeavouring to fight Hitlerism, but at the same time interfere as little as possible with the profit system and the standard practices of the controllers of industry. It is true that excess profits are heavily taxed, but the scramble for profit still goes on, and the exploitation of the great mass of workers continues as in the days of peace.

The main question of self-satisfaction will not get us anywhere, it is time all bottlenecks be removed and that the government should realize that the workers are not satisfied with present production records. Labour has already made many sacrifices in order to expedite the general war effort. This was done for two reasons: primarily because organized labour is composed of good substantial Canadians with a sense of real patriotism, and second, in an effort to show in this emergency that we stand one hundred per cent for total war, we the workers have buried the hatchet and are concentrating our efforts upon the common enemy, Hitlerism. There is a little question as to just what must be done—not to-morrow, but to-day, to do away with all bottlenecks, also governments and management must realize and confess that they don't know all the answers. Invite labour to participate more fully in the readjustment to meet the war emergency, and don't hide behind

[Mr. T. C. Douglas.]

726 planes as a total war effort. We, as labour, do offer one suggestion—one that should be accepted willingly: Establish in all war industries a board of six members, three from the management and three from labour, to be called the production board.

I notice, incidentally, that in the same issue of this little paper appears an article which shows that this feeling is not confined to the one plant. This article states: "Lodge 712, Montreal, charges plane output 'below possible output'," and it quotes Robert Haddow, grand lodge representative assigned to the aircraft industry. The article states:

Robert Haddow, Grand lodge representative assigned to the aircraft industry, said the meeting was giving expression to the opinions of about 7,000 aircraft workers in the Montreal district and that indirectly they represented the 17,000 in the aircraft industry of the district, who were "in the front lines of this great battle to produce the sinews of war." The conference was held to put "more steam, more pressure behind that battle, for the men and women behind the machines will not fail the men behind the guns."

There is this further paragraph:

He further stated: "We, of course, do not know what plans the government may have for stepping up Montreal aircraft production," he continued. "The planning of production is Mr. Bell's job, not ours. However, we do know that machines are standing idle in our factories for many hours in the week, that production schedules have not been increased to any considerable extent this year, that workers are being laid off at a time when, to win the war our industry should be humming 24 hours a day, when production schedules should be accelerated, when, instead of lay-offs we should be training thousands of new workers."

Naturally I am not in a position to judge as to the accuracy of this statement. But it is disconcerting to me, as a member of this house, and to any other hon. member, to find men actually engaged in production of aeroplanes in two different places in Canada making known to the minister and to the public the fact that they do not feel that industry has yet anywhere near reached its maximum output. What steps has the minister in mind to step up this production?

I know that one of the reasons why they are not working three shifts a day, six or seven days a week, must, of course, be the lack of raw material. I am sure that must be a factor. Another factor would be the difficulty of getting aeroplane engines. But I think the committee would like some assurance that plans are being laid and steps being taken to mobilize all the resources of the aeroplane industry, with a view to getting maximum production, because while some very rosy pictures have been given by different officials as to the total number of planes produced per

month, the fact remains that a large percentage of those planes are training planes—not front-line planes.

Mr. HOWE: No.

Mr. DOUGLAS (Weyburn): Well, I will not argue with the minister.

Mr. HOWE: It switches the other way. In the beginning it was training planes; now it is combat planes.

Mr. DOUGLAS (Weyburn): I will not argue with the minister; but as a member of the war expenditures committee I have seen some of the production figures. However, I will not argue with him just now, but will argue it out with Mr. Bell when he appears before the war expenditures committee. I have seen production figures, but I would not make any statement which would involve a breach of confidence. That, however, is my impression.

Mr. JOHNSTON (Bow River): Quite right, too.

Mr. DOUGLAS (Weyburn): I wish to make two suggestions. I cannot make suggestions along technical lines, because that is not my business. It seems to me, however, that there are two things which could be done, the first of which was mentioned to-night by the hon. member for North Battleford. It seems to me that if labour were taken into partnership to a greater extent than has been done, we would get much better production. I believe there is a great reservoir of skill and cooperation the government has not yet begun to tap. I believe the production committees in Great Britain, and the labour movements both in Australia and New Zealand are to a very great extent responsible for the whole-hearted cooperation which those people have been able to give in their production effort.

When I say that, I am not casting any disparagement upon our own effort. But I do say to the minister that if labour were given the feeling that it had a voice in the councils of the nation, and that in the different shops it was sitting in with the management, planning production, offering suggestions about the removal of difficulties, and putting forth concrete recommendations for new ways and new methods, and, in some instances, providing substitutes where certain raw materials are no longer available, it might be possible to step up production much more rapidly than has been done.

The second suggestion I wish to make is one which I hope the minister will not misunderstand. From time to time it is our task to bring suggestions and even to offer criticisms of government policy. We have not always agreed with the policies of the minister, or with some of the policies of this government. I hope the minister will never take that as meaning that we do not appreciate the work he has done for Canada. I think every hon. member—certainly every member of the group with which I am associated—has admired the minister's dynamic energy and the tireless way in which he has worked for this country. He started in with a department, from scratch, and he has built up a tremendous organization which has produced very worth-while results. That does not mean it has produced all the results it could have produced; but I should like the minister to know that, as a general rule, the Canadian people look with a great deal of favour upon his work, and are appreciative of it.

I say that because I wish to make a suggestion. The Department of Munitions and Supply has now grown to a point where in the interests of Canada's war effort it ought, in my opinion, to be divided. As has already been said, here is a department which has already placed contracts to an amount in excess of the national debt of Canada prior to the outbreak of war. In the early days when this department was being set up, probably it could be set up only in the way it was. But we have moved to the place now where it is the largest spending department in the government, larger than all the other departments put together as far as the actual placing of orders is concerned.

It seems to me that the department falls legitimately into two categories. First, it is a purchasing department, and for that reason there ought to be a separate ministry of supply charged with the responsibility of placing contracts, looking after the rationing of gasoline, rubber and many other products. These are things which ought not to be laid upon an already overworked minister, no matter how ambitious, energetic, and tireless he may be. He should not be loaded down with the purchasing, even though he may do it through subordinates, of hundreds of millions of dollars worth of commodities, all the way from boots and shoes to tanks. This is a responsibility which no one person can humanly carry.

As I say, there ought to be a ministry of supply and, on the other hand, there ought to be a ministry of production. I think the government would be well advised to turn over the whole task of placing orders and of making purchases, which has now been organized probably to a point where it is routine, to another minister and leave the present minister free to become the minister of production. He could then devote all

his drive and energy to the task of getting production. This problem is becoming more pressing. Steel has been talked about a great deal. It is not only a problem of getting steel production up to capacity; there is also the problem of whether or not the capacity can be increased.

There is now the question of getting oil. When I was home at Easter I talked to one or two men interested in the oil business and in geological surveys. They mentioned a Mr. Gower, who I believe works for the Regina Industries Limited. I do not know the gentleman, but I am told that he has spent a good deal of his own money—I believe he appeared before the national research council—working on a formula for extracting high-grade gasoline from the tar sands of Alberta. As far as I know, his formula has never been adopted. There is a whole field which ought to be investigated with a view to finding whether or not we can secure additional oil resources in Canada.

There is also the question of synthetic rubber. I believe a government-owned company, the Polymer company, has been formed, but I do not think it is anywhere near production. This is something to which a great deal of attention ought to be given. The work in this connection will have to be speeded up. Let there be a lot more drive put into it. We cannot wait six months or a year in order to get synthetic rubber. It seems to me that here is a full-time job for the best minister the government can get, and I suggest that the present Minister of Munitions and Supply should be placed in charge of production. There should be left to him the task of speeding up production if it is humanly possible in the different lines pertaining to Canada's war effort.

I make these suggestions in the best of faith. I ask the minister if everything that can be done is being done, if the complaints made by men who work in these factories have any justification in fact. I should like to ask what steps the government proposes to take in the near future to put the aircraft industry on a full-time basis in order that it may produce more of the planes without which it will be absolutely impossible for the united nations to achieve the victory we all desire.

Mr. HOWE: I may say to my hon. friend in connection with the aircraft industry that if we agreed to level off the industry and call it a day, if we said that this was our maximum objective and concentrated on reaching that objective, we could produce more planes than we are doing. The reason why we are not producing more planes is the fact that we are constantly expanding. We have three plants that are producing nothing at the moment. They are coming in with a new type of plane and will produce eventually. I do not think we have ever stopped adding floor space to the aircraft plants. Incidental to that, we have never stopped expanding the personnel of the industry. I think every week since the war began has seen more workers in the aircraft industry than were there the previous week.

It is impossible when you are introducing new types to streamline the industry. I know my hon. friend is quite a student of production and has probably been to these plants, but I can take him to plants which he would call streamlined where every man's work is balanced against every other man's work. Every man putting in a full day's work can balance out the production of the plant. I am sorry to say that that has not been possible in the aircraft industry. There are a great number of learners in this industry, and the absorption of these learners slows down the general production. The output per man is not as great as it would be if we levelled off the industry and balanced out each man's production.

There are inequalities of that kind; nevertheless we are producing a very respectable number of planes. On the basis of comparative floor space, I would not hesitate to compare our production with that of any other country. I quite understand why people in the industry say that they are slowed down. There may be legitimate cases of that kind, but I would point out to my hon. friend that a campaign is in progress which has emerged from the country to the south. This is a campaign on the part of labour to form labour-management councils. I am not quarrelling with the objectives of that campaign; I am not quarrelling with the methods; but I say to my hon. friend that if he read the press of the United States six or seven months ago, he would have seen the claim made that management was holding back and that the only way to cure the situation was to institute management-labour councils. That campaign has been brought over here holus-bolus and is now being carried on. I do not object to it, but I think my hon. friend, when quoting letters of that kind from labour organizations, should bear in mind that this campaign has that objective in view.

Mr. DOUGLAS (Weyburn): Does the minister think that is the only objective?

Mr. HOWE: No; I think that is the principal objective of the campaign. I do not think that fact is serious enough to warrant the publicity it has been given.

Mr. DOUGLAS (Weyburn): Does the minister think they are not genuinely interested in increasing production?

Mr. HOWE: I believe they are, but I think the concentration on that particular phase of the thing is too true to form. Quite often I sit down with labour groups. I sat down with one in Windsor a few days ago, and I sat down with one in the House of Commons just recently. I sit down with these groups almost every week, and the story is exactly the same. In Windsor it was the automobile industry. I hear the same thing about the aircraft industry and about the gun-making industry. As I say, the objectives of this campaign are quite legitimate and I have no objection to its succeeding. In fact, in a quiet way I am willing to help, but I do not think it is my problem.

The aircraft industry is probably the most vulnerable for the reasons I have given. It is an industry that is being expanded tremendously. We have orders on our books for well over 10,000 planes; I think it is more like 15,000 planes to-day. We must expand the industry farther to fill these orders. Not only is the number of planes quite high, but larger and more difficult types of planes are being produced. As my hon. friend knows, back of the industry itself is a great multitude of plants making components which will also have to be expanded. All these parts must flow into the aircraft plant in a uniform way to bring about streamlined production.

Mr. DOUGLAS (Weyburn): Could the present plants work more shifts, or is there a lack of raw material?

Mr. HOWE: They can when we get levelled off, when we get uniform production. If they are working on a standard order there is an unlimited scope. Some plants are; some plants are not. For example, Noorduyn has a standardized plane and is working on a very large order. I hope that the whole industry can get on a three-shift basis in a reasonable time. But National Steel Car and de Havilland are changing to different types of planes and it is impossible for them to do it.

Mr. MacNICOL: For the very simple reason that the companies manufacturing the component parts cannot begin to manufacture until they receive the templets.

Mr. HOWE: Yes, it takes a long time to get templets made and distributed back to the parts industry. No plane has ever been brought into production in any country in less than a year or fifteen months, and while the change is being made there is a disorganized period, finishing up odds and ends. We are now in the process of changing over to make parts for the new planes and, in such a period, production drops. The period of disorganization is longer with some managements than with others, depending upon the type of management. Some managements are more expert than others.

Mr. DOUGLAS (Weyburn): Canadian Car and Foundry have an order for a standardized plane?

Mr. HOWE: No. They are changing from the Hawker Hurricane to a new type of dive bomber. The production of the Hawker Hurricane is tapering off, and parts for the new dive bomber are being manufactured, but it will not be assembled as a plane that can be flown for a good many months yet. In the meantime, there will be a gradual tapering down from one kind of production, and a gradual stepping-up in the production of a totally different type of plane. That is the nature of the industry. It is not a streamlined industry such as our gun industry, where we are working four shifts a day, three shifts and a swing shift to take up the seven-day week. The tools are being worked every hour of the seven-day week. That is incidental to the gun industry.

All I can say is that we have developed good management in the aeroplane industry. My hon. friend will remember that there was no aircraft industry in this country at the beginning of the war. Every man in a management position in our aeroplane industry, with very few exceptions, is new to the industry. We had very little background in this type of industry. Nevertheless we have developed top-notch production men in the aircraft industry and top-notch designers, but they have been developed over the last two or three years. It is an industry apart. I make no great claims for it.

I will not deny that there may be people putting in time at the factory who may not be usefully employed because their section is ahead of some other section. If it was peacetime such a condition might lead to lay-offs in the aeroplane industry, but when the industry is carrying the men it can tell them frankly that their section is ahead of another section; that that is holding up the assembly, and that they had better ease down a little. That may happen. When it happens, it is not done with any idea of slowing down production as a whole or anything of that

kind. It can happen where a change-over is taking place and a new plane is coming into production.

Mr. JOHNSTON (Bow River): That is what I was pointing out to the minister the other day.

Mr. HOWE: I know my hon. friend knows a great deal about production, having been in it most of his life, but this time I am making a statement.

Mr. JOHNSTON (Bow River): I was simply pointing out that the minister objected when I gave the very same explanation the other day.

Mr. HOWE: I think I have covered the aeroplane industry now. I am probably the goat of the industry, but I think, as the months go by, the people of Canada will be more and more pleased with the output of the industry. We could have closed the door on expansion six months ago and had a very satisfactory industry to-day, with plant on a three-shift basis and production coming out in a streamlined way, but we have tried to keep abreast with new developments in the war and take on new types of production rather than go on making planes which were becoming obsolete. We are making the changes as fast and as efficiently as we can.

My hon. friend spoke of dividing my job. I would give three cheers for that. I would like very much to have less work. But the tendency in all countries is not to divide up, but to centralize. My hon. friend has followed the progress of events in Great Britain. He knows that they have three supply ministries and that they recently appointed a ministry of production to coordinate the work of the other three branches.

Mr. DOUGLAS (Weyburn): Production and supply are separate in Great Britain.

Mr. HOWE: The three supply ministries are subordinate to the minister of production, who is a coordinating officer; the same has happened in the United States. The United States had separate agencies for army and air and for the navy and for the navy air arm, and it was found that they were competing in the same factories and that there was conflict. Then the office occupied by Donald Nelson was set up as a coordinating office with complete authority over all procurement. There is a reason for that. The work of procurement and production is subdivided. But to have authority divided leads to disorganization. There is a great advantage in having all production procurement centred in one office. My method has been to subdivide the work under me as often as it has seemed necessary, and to delegate as much work as possible. I am busy enough, it is true, but I do not know that I am doing more work than a good many other people in this country. I can say to my hon. friend that the reason why the work of procurement is not divided is that it would mean a loss of efficiency.

Mr. DOUGLAS (Weyburn): I thank the minister for the explanation he has given. I appreciate it very much, but he did not have to intimate that I was a student of production. He was either pulling my leg or being sarcastic.

Mr. HOWE: My hon. friend was very nice to me, and I thought I would be very nice to him.

Mr. DOUGLAS (Weyburn): I did not appreciate his either pulling my leg or being sarcastic. The explanation given by the minister is the kind of statement which, it seems to me, does serve a useful purpose because when the men in these plants are not being utilized to the full, the impression gets around that this thing is a racket. That is how they talk, and some explanation of why they are idle ought to be forthcoming. I do not know anything about production, it is true, because a member of this house cannot be a student of everything that comes within the departments of all the ministers, but it is the duty of a member of this house to bring these matters to the attention of the minister so that he can make the kind of statement he made to-night. I do not think the minister ought to pull anybody's leg or be sarcastic about members being students of production all their lives.

Mr. HOWE: I did not intend any sarcasm. My hon. friend has shown a great interest in production.

Mr. JOHNSTON (Bow River): The sarcasm was intended for me.

Mr. DOUGLAS (Weyburn): I did not take any offence. I want to thank the minister again for his statement, and if statements of that kind were made more often it would be of great value to the country. The explanation is that there is a tapering-off from one type of production so that the plant can move into the production of another type of plane because some of the older types have become obsolete. But in the case which the minister mentioned at Fort William, that is a plane which, I understand, is still in use—the Hawker Hurricane.

Mr. HOWE: Yes.

Mr. DOUGLAS (Weyburn): What is the object in making a switch there? Men who have done some reading along the line of aircraft production say that one of the things that got Great Britain off to a bad start before the war was the fact that, whereas Goering went into mass production of Messerschmitts and probably produced inferior planes but produced them on a standard line, the British constantly kept changing their designs, which meant long periods of delay. Is there a danger of us doing that here? Is a lot of this switching necessary? Is it necessary to be constantly changing some of the types? Are we reducing the number of types and trying to get down to two or three standard lines which could be produced on a steady basis, rather than making these constant switches which, as the minister has said, must entail periods of non-production?

Mr. FRASER (Northumberland): That is the first change which has been made.

Mr. HOWE: The reason why we are leaving the Hawker Hurricane for another plane is that our air force demands the best and the Hurricane is getting out of date. To-day there are much better fighting planes, faster and more manoeuverable planes, than the Hurricane, and I think it is desirable not to maintain in production an obsolescent type. It is true that far more planes would have been produced by this time if the British had kept to pre-war types, but I would point out that by getting more advanced types they have gained control of the air, and gained it at a time when they undoubtedly had fewer planes than the enemy. I certainly have to accept the judgment of the operational forces as to the type of planes which we should produce.

Mr. REID: I have a question to ask regarding the manufacture of steel. We know that steel is in great demand these days. The last time I visited Trail smelters I noticed they had a mountain of what looked like good material if it were smelted down and perhaps manufactured into steel. This was the residue from their mining operations. I do not know how many tons would be there, but it seems to me that the mountain they had was about a mile long. Has the minister had any report regarding the great mountain which they have there and which I believe they are willing shall be used?

Mr. HOWE: I have no report on it, but I think there would be transportation difficulties in the way. The equipment necessary to turn ore into steel is very rare. We have only three places in Canada with sufficient equipment to take ore of any kind and make finished steel from it—Sault Ste. Marie, Hamilton and Sydney, Nova Scotia. While I have no knowledge of this particular situation, I assume the transportation difficulty is there. I will, however, make inquiries.

Mr. REID: I believe that it is worth looking into. I am under the impression that it could be smelted there, and there is sufficient to warrant the installation of a small smelter.

Mr. MacNICOL: In Great Britain they design planes. Their engineers design a new plane from experience of their pilots in the air in opposition to planes which have been designed in Germany or elsewhere. In the United States also they design planes. In Canada we do not do any designing; we make only what has been proved to be satisfactory in Great Britain. Is that not one of the main differences between conditions of aircraft manufacture in Canada and Great Britain? So, when we undertake to make a type of plane which has been proved to be satisfactory in Britain, our companies first have to make their blue prints, of which there may be 20,000 or 25,000 for one new design; then they have to adjust their tools to suit that work, or retool, and arrange for all the component parts involved in the new design. But we do not really design any new plane in Canada in the sense that they do in England—for instance, a Lancaster.

Mr. HOWE: Please do not mention the names of new planes. We do design in Canada a Fleet-60 which is used for advanced training by the air force. We have designed some very important modifications of planes, but of course the designing industry is new in Canada as it is elsewhere. We have brilliant designers, but they have not the background of experience which is possessed by designers in either the United States or Great Britain. Designing talent is improving month by month, and I think that if occasion calls for the designing of a new type of plane in Canada, we have people here who are competent to do it. I may say, however, that when we take a British or even a United States design, but especially the former, there is a good deal of redesigning to do to fit Canadian methods. We here are fairly well advanced in mass production, and our methods are different from those in the old country. So we have quite an engineering department in our aircraft industry.

Mr. MacNICOL: What I meant was the new planes.

Mr. HOWE: The Fleet-60 is, I think, the only case of a new plane which was completely designed in Canada.

Mr. JOHNSTON (Bow River): It has been brought to my attention that in some cases where contracts have been given for aeroplane construction, for example, where the government would place a contract for, say twenty-five planes with a company, the plant would get tooled up for that work, and they have represented that they could have made thirty-five planes just as easily—I am using this number as an illustration—in practically the same length of time, but their instruction was to make twenty-five planes and they could not go ahead any faster than that limited order would permit. If, however, the order had been increased they could have manufactured quite a number of additional planes in the same period.

One other point. In the minister's remarks a while ago I think he stated—I am not arguing the point with him—that in some departments of a factory it was possible that the management would require the workers to slow up a little bit. I think that is a fair interpretation of what he said, and it bears out exactly what I was trying to tell the minister the other day, that in some of those places the fellows have come to me and told me they were requested not to do so much work.

Mr. HOWE: But the implication my hon. friend drew was that they were trying to slow down production of the finished article—which is not the case.

Mr. JOHNSTON (Bow River): Whether that was the final result or not is not the point I am now discussing. The point is that these people were deliberately advised to slow down. They came to me as a member of parliament and objected to that, and I think they were perfectly right in doing so. The minister now admits it would be possible in some instances that the management would go to these fellows and say to them that they might not have to work very fast, that if they did they would run out of a job.

Would the minister straighten up the question I asked him about the limited number in a contract? Would these companies be allowed to make five or ten planes more if they could, if they had the material?

Mr. HOWE: When my hon. friend speaks of twenty or twenty-five planes he is talking about pre-war days. Planes to-day are built certainly in the hundreds; I do not know of any contract for less than two hundred that has been placed in the last two years. However, we do build planes to meet a demand. Sometimes we build them without knowing exactly who wants them, if they are a plane in common use. But in pre-war days we used to tool up to make ten or fifteen or twenty planes, when the industry was very small. To-day we place large orders. Any factory that is in production to-day is either working on an unlimited order or is tooling up to make planes for which it will have an unlimited order. Therefore my hon. friend's question is hardly pertinent to the present-day situation.

Mr. JOHNSTON (Bow River): If they are working on a limited order will they be allowed to go over that?

Mr. HOWE: It would depend on whether we thought we could get rid of the planes. We would have to find a use for the planes. We are not flyers ourselves and we do not want the planes to rust. The Hurricane plant at Fort William had an order for 600 Hurricanes; they were coming to the end of the order and I told them to make 400 more. I did not know at the time what do with them, but since then I have found uses for them and now the plant are unlimited in the sense that they can make all the Hurricanes they can until the new plane comes into production. That is the usual situation in our plants to-day. Fairchild has all the work it can do until the end of 1943 and Nooduyn until the end of 1944. These might be called unlimited orders.

Mr. JOHNSTON (Bow River): That is the way it should be.

Mr. HOWE: That is the way it is. Nevertheless, we do get modifications. For instance, there may be modifications interjected into a programme which might slow the plant down for a month or two. That is incidental to war. If actual experience indicates that better results can be obtained through a modification, we have to stop the production line and make the modification; but of course we appreciate the desirability of working without interruption, and we are as anxious to do this as my hon. friend is to have us do it.

Mr. DOUGLAS (Weyburn): If you are on an unlimited order for Hurricanes, could you not get greater production? Is it a matter of trained personnel?

Mr. HOWE: It is a matter of both supervision and trained personnel and organizing the shops behind the assembly plants to feed the material in.

Mr. FRASER (Peterborough West): Are you making any torpedo-carrying planes?

Mr. HOWE: Yes; we are coming into production.

Mr. ROSS (St. Paul's): Is anything being done with regard to duplicating oil pipelines from Oklahoma to Sarnia? I do not quite understand why the notification has been given about no oil for homes. I do not know why it has come so suddenly seeing that a month ago we were told that heating for homes would be all right. Two months ago, I know, several buildings in Toronto were notified to put coal in. I was wondering if something had suddenly happened in the central provinces to make the difference.

Has the minister's department done anything in connection with the study of camouflage for factories and so on, as they are doing in the United States?

Mr. HOWE: We are not building pipelines at the moment. With regard to oil, I was asked a question in the house and I gave an answer which I wish to amplify. Our study of the situation has not been quite completed. There is no doubt in the world that those who have converted coal furnaces into oil burners will be required to convert them back to coal. For the furnace which has been put in as an oil furnace, and which cannot be converted except by removing the furnace and putting in a new furnace, we will, I think, endeavour to find a supply, for the reason that it is not practical to build furnaces and supply them under such circumstances. Here again, every hon. member knows that the oil situation is extremely critical. The best I can say is that a complete statement will be made on the whole fuel situation for next winter in the course of a week or two. In the meantime I should like to amplify the statement I made yesterday to that extent, that an effort will be made to supply the oil installation which cannot be converted to coal.

Mr. BLACK (Cumberland): Will that rule apply to the ferryboat serving between the mainland and Prince Edward Island? It is only within recent months that there was a change over from coal to oil.

Mr. HOWE: The reason why that was done is that it is impossible and always has been impossible to keep up steam with a coal-fire boiler when that boat is working in the ice. It was changed to oil as a measure of security having regard to the fact that there is no standby for this ferry. I do not wish to speak finally on that, but that might be one of the cases where the use of oil as fuel would be considered imperative for the sake of safety. That again is the subject of investigation.

As regards the question of camouflage, we are camouflaging key plants in areas that are regarded by the military authorities as dangerous. That work is going on at the present time.

Progress reported.

At eleven o'clock the house adjourned without question put, pursuant to standing order.

Friday, May 22, 1942

The house met at three o'clock.

LABOUR CONDITIONS

DOMINION ENGINEERING COMPANY AND MONTREAL LOCOMOTIVE WORKS—CHARGES OF DISCRIMATION AGAINST UNION WORKERS

On the orders of the day:

Mr. M. J. COLDWELL (Rosetown-Biggar): Mr. Speaker, before the orders of the day are called I should like to ask a question of the Minister of Labour to whom I sent notice of my intention to do so. I have a telegram from the Montreal trades and labour council, signed by J. Gariepy. The trades and labour council protests the dilatoriness of the Department of Labour and urges the appointment of a commission immediately to investigate charges of discrimination againt union members by the Dominion Engineering Company and the Montreal Locomotive Works, which have been brought to the attention of the trades and labour council by responsible officers of the Montreal war labour organization production committee. Will the minister give immediate attention to this matter, in order to prevent serious trouble developing in these war industries?

Hon. HUMPHREY MITCHELL (Minister of Labour): Mr. Speaker, I received a telegram similar to the one received by the hon. member, and made inquiries. These are the facts. A telegram was received from Paul Fournier, president of the trades and labour council, Montreal, on May 6, complaining that the Dominion Engineering Company, at Longueuil, Quebec, had dismissed an employee because of labour activities. The telegram was acknowledged on the same day and a Montreal conciliation officer immediately dispatched to investigate the situation. The company alleged that the man was discharged because he stayed away from work three nights without giving a satisfactory explanation. This is the first time we have been asked to investigate this matter through the appointment of a commissioner. We have no knowledge of anyone having been discharged by the Montreal Locomotive Works for the reason

alleged in the telegram just received. I shall be glad, however, to make further inquiries into the matter, and if the circumstances warrant the appointment of a commissioner to investigate the matter I shall be very glad to see that that is done.

BUSINESS OF THE HOUSE

VICTORIA DAY

On the orders of the day:

Mr. J. H. LECLERC (Shefford): Mr. Speaker, is it the intention that the house shall sit on Monday night?

Right Hon. W. L. MACKENZIE KING (Prime Minister): Yes, it is.

PROCEDURE AS TO PRIVATE AND PUBLIC BILLS

Right Hon. W. L. MACKENZIE KING (Prime Minister): Last night the hon. member for Regina City (Mr. McNiven) asked if at an early day it would be possible to consider private bills. There are fifty-two private bills standing on the order paper for second reading, fifty of which are divorce bills. The other two deal with incorporations. I am informed that none of them is controversial. The second readings would in all probability be passed as a matter of course, and the bills would be referred to the private bills committee. The clerk of the house is of the opinion that the matter could be disposed of in about fifteen minutes, as one motion could be made for the second reading of all of them.

Under the circumstances I suggest it might be understood that these bills be taken up at the first hour on Friday, a week from to-day.

Mr. GEORGE BLACK (Yukon): May I ask the Prime Minister if a similar arrangement could be made for the consideration of public bills? With all due respect I think some of them are more important than many of those appearing in the list of private bills.

Mr. MACKENZIE KING: I am afraid they are in a different class. However I shall be glad to have consideration given to the hon. member's request.

HON. WALTER NASH

ADDRESS OF NEW ZEALAND MINISTER TO WASHINGTON AT MEETING OF RECONSTRUCTION AND REESTABLISHMENT COMMITTEE

On the orders of the day:

Hon. GROTE STIRLING (Yale): Has the Prime Minister any observations to make with regard to my suggestion of last night as to Hon. Walter Nash's address?

[Mr. Mitchell.]

Right Hon. W. L. MACKENZIE KING (Prime Minister): The hon. member's observations have been drawn to my attention, and I have considered them. I believe it would be inadvisable to create a precedent which would involve an adjournment of the house to listen to an address being delivered in another part of the building.

TORONTO HARBOUR COMMISSIONERS

DECLARATORY POWERS WITH RESPECT TO DEBENTURES AND BORROWING

Hon. J. E. MICHAUD (For the Minister of Transport) moved the second reading of Bill No. 68, respecting the Toronto harbour commissioners.

Motion agreed to and bill read the second time, considered in committee, reported, read the third time and passed.

CANADIAN NATIONAL RAILWAYS

APPOINTMENT OF GEORGE A. TOUCHE AND COMPANY AS AUDITORS

The house resumed from Monday, February 23, consideration of the motion of the Minister of Transport for the second reading of Bill No. 9, respecting the appointment of auditors for national railways.

Motion agreed to, bill read the second time and the house went into committee thereon, Mr. Fournier (Hull) in the chair.

On section 1—Appointment of auditors.

Mr. COLDWELL: Where are the explanatory notes for this bill?

Mr. HOWE: Apparently there are none. It is a routine bill to appoint auditors for the Canadian National Railways, and it is passed every year in exactly the same form. I think it was assumed that members of the House of Commons had seen the bill so often that explanatory notes were not necessary.

Mr. MacNICOL: Are the auditors the same as a year ago?

Mr. HOWE: Exactly the same. There is no change of auditors or salary.

Bill reported.

Mr. HOWE moved the third reading of the bill.

Mr. FRASER (Peterborough West): Would it be possible for the minister to have a more complete statement in the auditor's report than we have this year?

Mr. HOWE: So far as I know the auditors are a law unto themselves as to what

they put into the report, but I shall be glad to call their attention to my hon. friend's remarks.

Motion agreed to and bill read the third time and passed.

PETROLEUM

REPEAL OF PETROLEUM AND NAPHTHA INSPECTION ACT

The house resumed from Monday, February 23, consideration in committee of Bill No. 2, to repeal the Petroleum and Naphtha Inspection Act—Mr. Gibson—Mr. Fournier (Hull) in the chair.

On section 1—Act repealed.

Mr. STIRLING: When this bill was before the committee last the minister was not present, no doubt there have been drawn to his attention certain remarks which were made on that occasion by the leader of the opposition (Mr. Hanson). The point which he desired to make was that just after the house adjourned last year an order in council was passed doing away with the operation of the act, and he expressed regret that so shortly after the adjournment of the house the government had seen fit to take that action. The bill now before the committee is simply for the purpose of repealing the whole act, and we would raise the contention that as long as the proclamation runs for the use of the War Measures Act, ample power is in the hands of the government to do anything it wishes. But when the proclamation ceases, in effect we shall then be in the position where we shall be without an act of this description. The act provides for the placing of a considerable number of powers in the hands of the government, and the question arises whether there are other dominion acts under which the government can control the storage, importation, refining, inspection, licensing and so on of petroleum products. Would the minister explain how he contemplates carrying on these most necessary functions after the War Measures Act has ceased to be used for this purpose and after this act has been repealed, and does he not consider that instead of repealing the whole act it would be preferable to amend sections in it to have them meet the usages of to-day?

Mr. GIBSON: Mr. Chairman, when this bill was before the committee earlier in the session I was unable to be in the chamber, but I understand that at that time the leader of the opposition raised several points with which I should like to deal to-day. First of all he referred to sections 3, 4 and 5 of the act being repealed, and he expressed the view that some competent authority should provide regulations concerning the importation, transportation and storage of petroleum products. At that time he took the view that this act was being repealed because the oil controller had practically unlimited powers to deal with the petroleum industry, but that is not the reason why this act is being repealed.

When the original act was passed in 1877 there were no regulations governing the petroleum industry, and it was considered desirable that some regulations should be provided to control the petroleum producers. Since that time the essential provisions of the act have been largely duplicated and superseded by provincial legislation, municipal by-laws, the Customs Act, the customs tariff and regulations of such bodies as the board of transport commissioners, the national harbours board and various fire marshals. I should like to read an extract from the report of the dominion fire commissioner presented at a national conference which was held in connection with the regulation, control, transport and storage of flammable petroleum products. At that time he stated:

> For more than a quarter of a century the dangers incidental to the use of gasoline have been recognized in restrictive legislation. The dominion within its limited jurisdiction, the provinces under general powers, the municipal authorities, the railway companies, the insurance interests and the petroleum industry itself have, each and all, prescribed rules and regulations for the transportation, storage and handling of this flammable product.

As a result of the regulations which had been enacted under authority of provincial and municipal laws and by-laws, the provisions of this act became entirely outmoded. I am informed that there is no essential requirement of this act that is not being dealt with by some competent authority.

With regard to the suggestion that this act should not have been suspended by order in council, I might add that when it came to my notice that the act was entirely outmoded I did prepare a bill for introduction at the last session of parliament. But it was not considered an important bill; the session went on until about the middle of June, and it was decided that no further legislation should be introduced at that session. In order to carry out the provisions of the act an annual expenditure of about $25,000 is required, together with the services of employees who are very much needed in other branches of our customs work. Under the circumstances the government passed an order in council under the

provisions of the War Measures Act suspending the operations of the act until such time as a bill could be brought in to repeal it. I do not think anyone has paid the slightest attention to the matter during the interval since the act has been suspended, and certainly no one has been inconvenienced.

Mr. COLDWELL: A good many things were done under this old act which is now said to be obsolete, and in view of the present oil situation and the necessity for securing the greatest possible supplies of oil I should like to bring to the attention of the committee a matter which I believe should be dealt with under a bill which has to do with petroleum products, and which I think is related to the bill now under discussion. Only to-day I received from Sudbury, Ontario, a copy of a resolution passed by Indians on Manitoulin island relating to petroleum leases and capped oil wells located there. They point out that all records of these leases have been lost; that they cannot get any information from the local Indian agent; that there is very little record among the surviving Indians as to what took place, except that the chief of their band at that time signed some leases and outside capital did some drilling for oil prior to the last war. There are several wells capped, and for years there has been oil seepage on these lands, so the Indians are sure valuable oil wells can be developed there. I also have a copy of a letter by Doctor H. W. McGill, of the Department of Mines and Resources, who says:

> . . . it is presumed that reference is made to the petroleum and natural gas mining rights which were granted by letters patent in 1909, under the Great Seal of Canada, to Philomine Poirier, of Shediac, New Brunswick, and the Great Northern Oil Company Limited, and subsequently transferred to other parties. These patents cover some 60,000 acres of the unceded reserve, and although no development has apparently been attempted in the intervening period, this department has not the right or authority to lease or dispose of these petroleum and natural gas mining rights to other parties.

It seems to me that in the present circumstances we need on the statute books a petroleum act which will deal with this very important natural resource, perhaps in a different way from that in which the act that is now said to be obsolete does. Why should companies be able to cap wells and keep them capped, sometimes for many years, as in this particular case, while the government apparently has no power either to transfer the leases to somebody else or to compel certain work to be done to develop such oil reserves? Of course I know perfectly well that our legislation regarding property is designed in the interests of property owners, and we have gone far beyond the old idea that the right of a man did not go beyond the tilling and possession of the surface. But we have also ceded valuable rights which from time immemorial have belonged to the Canadian people; and I seize this opportunity to bring this matter to the notice of the Minister of Mines and Resources as well as the minister in charge of this bill, in order that this and other similar cases may be investigated. I believe we should at least give the Dominion of Canada, in view of the circumstances now existing, the right to deal with companies and corporations who are holding valuable resources, including petroleum, without allowing the country to reap any benefit from them. It is about time we revised our laws regarding leases and the right of companies to prevent the use of resources which properly belong to all the people and which are of vital importance to the nation.

Mr. MacNICOL: I want to follow on from where the hon. member for Yale left off. If I understood him aright he suggested that this act should not be repealed but that a new bill should be drawn up and introduced, if not now, then some time later, and from what the minister said I gathered that he had this in mind a year ago.

Mr. GIBSON: Not to draw up a new bill.

Mr. MacNICOL: What was it the minister said?

Mr. GIBSON: I was going to ask for the repeal of this bill a year ago.

Mr. MacNICOL: And not draw up a new one?

Mr. GIBSON: No. The reason for not drawing up a new bill is that the control of petroleum products is a matter coming largely within the jurisdiction of the provinces and that jurisdiction is being exercised. Consequently there is no need for such a bill.

Mr. FRASER (Peterborough West): I do not agree with the minister at all; this act does not deal entirely with matters now under the jurisdiction of the provinces, because it deals with the inspection and checking of the qualities of oil and naphtha. If that provision is done away with, how can we be sure that we get what we pay for? The various provinces may have different laws, and we might have different kinds of oil and gasoline throughout the country. I realize that at the present time the Minister of Munitions and Supply has absolute control over oil, gasoline and everything else, including even the clothes we wear. But after this war is over we want to know that we

got what we paid for, and I honestly feel that the act should be redrafted. Of course it is entirely out of date now; it mentions coal oil and naphtha street lamps, though we may have to come back to those before the war is over. As I say, however, the act is out of date at the present time, and I feel that it should be sent to a committee or be redrafted by the department and a new bill introduced. The act should not be simply repealed. I took this stand on February 23, when the matter was before the house previously. If the act is simply repealed it will be like throwing off a coat; we shall be left without a cover. The minister said that it cost the country about $25,000 to administer the act, but that $25,000 is well spent if we get what we are supposed to get in connection with oil and gasoline.

Mr. MacNICOL: Perhaps I might go on from where I left off. The minister says that the whole matter is under the control of the provinces, but one area, which I hope may become one of our most important, is under federal jurisdiction. That is the area at Fort Norman, in the Northwest Territories. There is every prospect that the area to which I refer may be very largely developed. A day or two ago I had a letter from a former Hudson Bay factor who is well acquainted with that area, and he stated that in his opinion there is a large oil deposit, so far untapped, in the vicinity of Mackenzie river, north and south and east and west of Fort Norman. I had a letter from another geologist who has been in that part of the country, who made a similar statement. Therefore that oil, which may develop into something important, is under the control of the federal government.

I should like to add something to what was said a moment ago about leases. This has to do with land in northern Alberta which was formerly under the control of the federal government, but latterly has been turned over to the province. There were a number of very valuable oil leases on the Peace river and several wells were drilled near the town of Peace River, presumably under leases granted by the federal government. Who owns those leases now?

I have said here before, and I say again, that in any new bill of this kind a limit should be placed upon the duration of leases. I am altogether opposed to granting to any individual or company leases which will last indefinitely; there should be a provision whereby in default of development the property reverts to the crown. That, of course, cannot apply to the property of the province of Alberta, but it should be applicable to oil leases hereafter granted in the Mackenzie river valley or anywhere in the Northwest Territories. Evidences of oil are to be found along the Hudson bay, in the Northwest Territories. If there is no federal measure to control the leasing of lands in that territory, by what method will they be controlled?

I strongly support the contention of the hon. member for Yale that the act, instead of being repealed, should be kept in force until after the war. In any event at the present time the government have all the power they require. Then, after the war, will a new petroleum and naphtha inspection bill be brought before the house? I assume that any new enactment should be broad enough to include gasoline, diesel oil, fuel oil, and the rest. At the time the original act was drawn, in 1877, probably gasoline was a waste product, having no value. To-day it is the most important product from the distillation of oil. It is the first off; kerosene is second, naphtha third, fuel oil fourth, diesel oil fifth; and lesser oils, I suppose, follow after that. I think the hon. member for Yale has made a suggestion to which the minister should listen.

Mr. GIBSON: This act, of course, does not deal with leases or with the production of oil. It provides for handling at the refinery, and—

Mr. MacNICOL: There is a refinery at Fort Norman.

Mr. GIBSON: Yes. I say that the act provides for inspection at the refineries. At one time it was necessary to prevent gasoline from being mixed in with coal oil for illuminating purposes, and, gasoline being a by-product, that sometimes occurred. But since the advent of the internal combustion engine every effort has been made to secure gasoline for the purposes of automotive power, with the result that the refiners themselves are taking every possible means to see that the gasoline is produced for the purposes for which they require it, and very careful tests are being made by the refiners themselves. While we have our officers there they are simply duplicating the tests which are already being made in the interests of the refiners.

In addition to that, the provincial governments have very long lists of requirements. I might quote briefly from provisions contained in the Gasoline Handling Act of Ontario to give some indication of the supervision, particularly that which is exercised by that province. I will not read the items in full, but under the provisions of section 12 of that act:

The lieutenant-governor in council may make regulations,—

(a) providing for the appointment of . . . inspectors, . . .

(b) providing for the issuing of licences. . . .

(c) prescribing the records and books . . . to be kept. . . .

(d) providing for the making of returns. . . .

(e) exempting any person or class of persons from the operation of . . . this act;

(f) requiring that all gasoline stored or offered for sale in Ontario shall be graded according to such scale as the regulations may prescribe;

(g) requiring importers, manufacturers, jobbers and vendors of gasoline to indicate the grade and price of gasoline offered for sale;

(h) fixing the grade or quality of gasoline which may be offered for sale;

(i) providing for the sealing of pumps, tanks, reservoirs and other containers of gasoline;

(j) prescribing the construction, equipment and operation of conveyances and containers used for the transportation and storage of gasoline, kerosene and distillate;

(jj) prescribing the method, manner and equipment to be used in the handling, storing, selling and disposing of gasoline, kerosene and distillate.

(k) providing for the holding of inquiries into the operation of this act. . . .

(l) generally for the better carrying out of the provisions of this act.

That indicates the amount of control which is now being exercised by a province. To have the dominion duplicate the control is an unnecessary expense, one which is serving no good purpose.

Mr. MacNICOL: In relation to, say Fort Smith on the Slave river in the Northwest Territories, which as yet is only a very small community, there are motor cars there, but what distance they can travel I do not know. I motored over some of the roads in the immediate vicinity of Fort Smith. Will there be an act on the federal statute book to control matters such as the minister has just read, and which now apply in provinces, in the Northwest Territories?

Mr. GIBSON: I understand that these matters can be regulated under the provisions of the Northwest Territories Act. In addition, those refineries will come under the provisions of the regulations of the board of transport commissioners, which deal exhaustively with the transportation of petroleum products.

Mr. MacNICOL: Suppose someone wishes to drill for a well in the Northwest Territories, or Baffin Land, where there are large coal deposits, and probably oil deposits; to whom would he make application for a licence to drill or to produce?

[Mr. Gibson.]

Mr. GIBSON: I assume it would be to the council of the Northwest Territories that he would make application or pay any licence fee payable.

Mr. MacNICOL: Does the act which pertains to the Northwest Territories cover everything under the Petroleum and Naphtha Inspection Act as it now exists?

Mr. GIBSON: Well, I have not studied the Northwest Territories Act, but I know they have power to bring in any regulations which they deem necessary to safeguard the people of the Northwest Territories.

Mr. FRASER (Peterborough West): I am pleased that the minister read the Ontario regulations, because this proves what I said before. If there are regulations in each one of the provinces, what assurance will the people have that they are going to get the same grade of gasoline, oil and petroleum products throughout the country? At the present time I understand there is uniformity in the grading of gasoline and oil from coast to coast, but if this act is repealed we shall have one grade for Ontario, another for Quebec, another for Nova Scotia, and two or three grades in the west. That is why I feel that the federal act should remain in force so that the people of Canada will be protected under it, because, as the minister said, it carries penalties and regulations covering inspection. That is why I say it should be revised and reenacted.

Mr. STIRLING: The minister appears to be quite satisfied in his own mind that the powers contained in this act are in the hands of other authorities. I can follow that argument with regard to some of these powers, but it still appears to me that such questions as storage and perhaps importation should remain in the hands of the dominion government. It is possible that under the Customs Act he has full sway over importation, but in the case of storage I am not so sure. The great distributing companies import their crude and first of all they have to store it. There are very considerable expenditures of capital on the shores of both oceans and on islands, and it would seem to me very desirable that the control of storage, for instance on the Pacific side, should remain in the hands of the dominion government. From the point of view of regularizing the methods of storage and overseeing the carrying out of all kinds of storage that are permissible, it would be desirable to have that in the hands of the dominion rather than leave it to the different views which may be held in the various provinces.

Mr. GIBSON: In regard to dominion regulations over importation, that is covered by the customs regulations, as respects one part, and the regulations of the various dominion harbour boards where petroleum products are imported by water. At the same time, importation by rail is controlled by the board of transport commissioners; consequently there is dominion control over importation. When it comes to storage, while I do not want to be unduly modest, I do think that perhaps the members of the different harbour boards have more knowledge of what the regulations should be than I could have here in Ottawa.

Mr. STIRLING: Of course, storage is taking place outside the domain of the harbours.

Mr. GIBSON: Yes. I will come to that. So that where any petroleum product is stored in harbours it is dealt with by the regulations of the harbour boards; and the regulations under this act are not applicable where municipal by-laws exist providing special regulations for storage in cities and towns. Consequently, in cities and towns, by-laws have been provided and the provisions of this act do not apply in such cities or towns, so that it is of little real value from that point of view.

Mr. FRASER (Peterborough West): When I spoke on February 23 I mentioned the fact that aeroplanes in Canada and the United States are using 100 octane gasoline. After this war is over it is most likely that automobile engines on this continent will be using 100 octane gas—that is, the new engines made. That gasoline is just as powerful as any explosive made to-day. We have an explosives act, and I am afraid that if you do not keep this act you will have a good many accidents and the minister will be sorry he ever threw it out.

Mr. GIBSON: If what my hon. friend says is true, any enactment that might be necessary could be brought in dealing with situations that might arise of that sort. At the present time, however, these matters are regulated by the provinces, and it is only duplicating provincial jurisdiction for us to have on our statute books an act which duplicates a provincial act.

Mr. COLDWELL: One thing disturbed me when the minister was speaking. He said that most towns and cities had by-laws governing this matter, but he did not say that all towns and cities had such by-laws. Is it compulsory under any statute for a municipality to enact by-laws dealing with the matters that are repealed under this particular bill? If not, then the member for Peterborough West (Mr. Fraser) is perfectly correct in his contention that we may be sorry we have repealed the dominion act.

Mr. GIBSON: Each province has a fire marshal, and there is the dominion fire commissioner. He calls them together and I believe he coordinates the work that they do. Each provincial fire marshal draws up suggested regulations for the prevention of fires and explosions, and these are incorporated in municipal by-laws. I cannot say that every individual town has adopted these by-laws, but I know that that is what the provincial fire marshals endeavour to have carried out. The object is to have by-laws enacted in each of the municipalities for the prevention of fires and to safeguard the handling and use of flammable material.

Mr. DIEFENBAKER: The explanatory note says that practically all the operative provisions of the act have been superseded by other acts and regulations. Could the minister furnish the committee with information as to which sections are not now superseded by other acts or regulations? Secondly, having regard to the fact that the entire act is being repealed, the utility of which has been proven over the years, I should like to know how many prosecutions for infractions of this act have taken place during the past five years. One could then conclude whether or not the act is a dead letter, or what the reason is for its repeal at this time. If the act has been used during the past five years, if penalties have been imposed for the infraction of various sections of it, then a further explanation by the minister would be necessary as to the reason for complete repeal of the act.

Mr. GIBSON: I understand that the act has been practically inoperative for the last twenty years, with the exception of the collection of licensing fees by the Department of National Revenue and the tests carried out at the refineries. There are at present fifty-one refiners in Canada. We have to provide an inspector to make tests at each of these refineries, duplicating the tests made by the refineries themselves; and samples have to be analysed, and so forth. I do not know of any prosecutions that have been laid under this act. Beyond these tests that are being made the act has practically been out of use for, I understand, about twenty years.

Mr. DIEFENBAKER: That still does not answer the question. It is too general. I should like to have information as to how many prosecutions, if any, have taken place under this act. Prosecutions would not arise necessarily in connection with inspections; there are many other types of penalty imposed for other offences, and I should like that information, which could be readily procured by the minister.

Mr. GIBSON: I have just procured it. I understand there have been no prosecutions in the last five years.

Mr. FRASER (Peterborough West): When this war is over we shall probably have a great influx of tourists. If these tourists come to Ontario, their carburettors on their motors will be set at such and such a point. They go into Quebec, get a different grade of gasoline and have to change the carburettor again, and that will be the condition right across the country. That is why I say that this measure should remain in effect so that this government may have control over gasoline, oil and petroleum products and that the grade will be uniform.

Mr. GIBSON: I should think any province that wants to encourage tourist traffic would provide regulations that would ensure good gasoline being provided to tourists.

Mr. FRASER (Peterborough West): Yes; good gasoline is all very well; we are supposed to get good gasoline now, but there is grade 1 and grade 2, and both grades are different from what we used to get. For the gasoline we are using at present you have the carburettor set at one town; then you go to another town and have to set the carburettor again. Of course at present we are so short of gasoline that there is little automobile travel, but even if you drive around town, the carburettor has to be adjusted all the time.

Mr. GIBSON: These measures, of course, have been brought in under the War Measures Act as a war necessity. I think the provinces would try to set their standards after the war, when there is no war necessity, to have similar standards for the whole country.

Mr. MacNICOL: I am not clear yet as to control in the Northwest Territories. The present act covers the whole of Canada, including the Northwest Territories?

Mr. GIBSON: Yes.

Mr. MacNICOL: How are you going to repeal this act which covers the Northwest Territories? As the minister says, it does not make any difference in the provinces, but still it covers one million square miles of the Northwest Territories. What dominion act will apply to the Northwest Territories?

Mr. GIBSON: The Northwest Territories council is responsible. It has the same powers as any provincial government, and can make such regulations as it sees fit.

Bill reported.

[Mr. Diefenbaker.]

Mr. SPEAKER: When shall said bill be read a third time?

Some hon. MEMBERS: Now.

Mr. COLDWELL: Next sitting of the house. I think we should satisfy ourselves on one or two points that have been raised.

CITY OF OTTAWA AGREEMENT

AUTHORIZATION OF PAYMENT OF $100,000 FOR THE YEAR ENDING JULY 1, 1942

Hon. J. E. MICHAUD (Acting Minister of Public Works) moved the second reading of Bill No. 11, to authorize an agreement between His Majesty the King and the corporation of the city of Ottawa.

Hon. GROTE STIRLING (Yale): Does the minister wish to make a statement now, or in committee?

Mr. MICHAUD: I would prefer to make it in committee, because I understand that several hon. members wish to speak and have statements to make; they can make them all at the same time.

Mr. STIRLING: There are one or two observations I should like to make at this stage. This is a measure that comes before the house every year. For many years it has seemed to me not a desirable way to arrive at an adjustment which has been considered necessary as between the dominion government and the city which is the capital of Canada. It is not an adjudication; it has not been arrived at by any form of arbitration; it is rather in the nature of something which the dominion government holds out to the city of Ottawa and intimates that it may take it or leave it. That does not seem to me to be a desirable way to arrive at what this sum of money should be, if a sum of money should pass. If we are to proceed once more with a bill which shall be debated and examined in committee I think that examination in committee could be better made in the banking and commerce committee than in committee of the whole house. It is almost impossible for me, an individual member of this house, sitting in committee, to possess myself of the very considerable number of facts which should have weight in arriving at a decision as to whether or not I should support this measure.

The financial relations between the city and the government, and the expenditures which the city has to make and those which the government has to make cover a very wide field. I believe I am right in saying that in the last four years properties which have

been expropriated by the dominion government in Ottawa have reduced the assessment roll of the city by somewhere in the neighbourhood of $2,750,000. That naturally has had a distinct effect on the rate of taxation which the city has had to collect for its revenue. I believe it has affected the revenue of the city by as much as $106,000, which, it will be noticed, is $6,000 greater than the proposed grant. But besides that effect on the revenue of Ottawa, the city has also lost an additional $11,000 in business tax revenue. Then there is the question of street cleaning. When property passes into the hands of the dominion government the city does not charge the government the cost of swilling the streets, which is on a footage rate. Then again the city takes the view that its expenditures for fire protection have been increased consequent on the addition of so many wooden buildings.

On the other hand, there are facts which must be given due weight. There is the federal district commission which receives a grant of about a third of a million dollars from the dominion government; there is the expenditure of, I think, $2,750,000 by the dominion government for dominion government properties and lands; there is the further expenditure by the dominion government on the central experimental farm. In these ways there is a contribution to the health and happiness of the citizens of Ottawa in the provision of most beautiful parks. All these factors have to be taken into account, and perhaps the largest of them all is that consequent on the existence of the dominion government in this capital city there is an immense expenditure of money by what we know as the civil service, which money passes through the tills of the various business premises and creates a feeling of business satisfaction of a very large monetary value. All of these are matters to which due consideration must be given in arriving at a decision.

I maintain that it is not possible for us on second reading, and particularly in committee of the whole, to collect the necessary information, and to give it the consideration which must be given, before we can arrive at a decision on the value of this bill. I think a better method should be devised, and it should be devised for one reason, namely that we endeavour to get away from this annual hand-to-mouth arrangement between the capital city and the dominion government. We must endeavour to arrange for an agreement on a basis longer than that of twelve months.

Mr. G. J. McILRAITH (Ottawa West): Mr. Speaker, each year as this bill comes up in the house for discussion there seems to be some uncertainty on the part of some hon. members as to the relevant facts bearing on the relationship between the government and the corporation of the city of Ottawa. Having the honour of representing the constituency of Ottawa West, which comprises about two-thirds of the area of the city of Ottawa, I think it might be useful if I brought certain of these relevant facts before the house for consideration.

There is a little uncertainty as to the exact origin of the claim that formed the basis of the first grant; but it appears that in 1897, as the result of a petition from the city of Ottawa, an arrangement was made which resulted in the creation of the Ottawa improvement commission, and the payment by the dominion government of certain moneys to be expended through that commission.

In 1919 a new arrangement was made on a different basis, and in that year provision was made for the payment of a sum of money directly to the corporation. Later on, in 1927, the Ottawa improvement commission was changed, and the federal district commission was set up.

The grant for which provision was made in the bill now before the house is not to be confused with the provision made for the federal district commission for other purposes. Part of the lands and parks controlled by the federal district commission are within the limits of the corporation, and part of them are in the adjoining municipalities. As I have pointed out, there is some obscurity as to the original claims asserted, and the agreement itself referred to in the bill before the house does not seem to throw much light on this point. It appears, however, that the payment was intended at least indirectly, if not directly, as a payment for the substantial loss in taxes by reason of the exemption of crown properties.

The agreement of 1919, which was the first one providing for a direct payment to the corporation, provided for $75,000 a year. That agreement is set out in a schedule to chapter 15 of the statutes of 1920. In 1925 a new agreement was drawn changing the amount payable to $100,000. In other respects, however, it renewed the agreement of 1919. The 1925 agreement was for a period of five years. From 1930 on, there has been an annual statute, and the agreement has been renewed each year.

There are a great many items which must properly be brought before any body considering a proper and fair allowance. My suggestion as to the best method of arriving at a fair amount is to have the whole matter gone into by a special committee which would hear the detailed evidence of the various depart-

ments of government and city departments. I see no other way of arriving at a satisfactory amount and certainly there are too many factors entering into the matter to permit of arriving at an accurate amount in this house.

I have obtained some tabulated information from the assessment department of the city of Ottawa. In order to understand the basis of what has been done, and to show the inadequacy of the present payment, I suggest it is necessary to have this information before us. I hold in my hand a statement showing for the years 1925 to 1941 the amount of exemption from assessments on lands and buildings of the dominion government, exclusive of the federal district commission, and also the tax rate and the levy equivalent; the same information with respect to lands and buildings of the federal district commission; a statement showing for the years 1920, 1925, 1930, 1935, 1938, 1939, 1940 and 1941 the grants to the city of Ottawa by the dominion government; the tax levies for those years, and the percentages of those levies which the dominion government grants represent. Then, in addition, I have a statement showing the assessed value of properties taken over by the dominion government and the federal district commission for the years 1921 to 1941, both inclusive.

With the permission of hon. members I would ask to have these figures placed on record.

Mr. SPEAKER: That could be done only with the unanimous consent of hon. members.

Mr. STIRLING: I would draw the hon. member's attention to the fact that if this bill is to be disposed of this afternoon hon. members will not have the benefit of that information, unless it is now imparted to the house.

Mr. McILRAITH: I shall gladly do so, if it is the wish of the acting leader of the opposition. It would take some time to refer to all of them, and I had in mind referring to only a few.

Mr. COLDWELL: In view of the large revenues the city of Ottawa is receiving just now, this could be put on the record and the bill read six months hence.

Mr. McILRAITH: I can say to my hon. friend, the leader of the Cooperative Commonwealth Federation, that the city of Ottawa is not receiving anything like the revenues to which it is entitled.

Mr. STIRLING: Might I suggest that the hon. member deal only with the last four or five years.

Mr. McILRAITH: That was what I had in mind.

[Mr. McIlraith.]

For the purpose of illustration I shall take the year 1925. In that year the assessment of dominion government property, exclusive of the federal district commission, was $5,739,875 for land, and $28,234,150 for buildings, or a total of $33,974,025. The tax rate in that year for public school purposes was 31·10 mills. The levy equivalent would have been, on the public school rate basis, $1,056,592. That was the first year in which the payment of $100,000 was made.

In 1941 the assessment of dominion government land, exclusive of that of the federal district commission, was $19,146,925, and that of buildings in the same year was $40,604,750, making a total assessment in that year of $59,751,675. I had not the 1942 tax rate at that time, but it has since been fixed, and it would show well over $2,000,000 payable. The figures for 1940 are land, $18,651,100 and buildings $38,584,784, a total assessment of $57,235,884. The tax rate for public school purposes in that year was 37 mills and the levy equivalent would be $2,117,727. I might say that the separate school assessment rate is something over 7 mills higher for all the years I have given. In each case I have taken the public school rate which is the lower rate by a considerable margin. It will be noticed from these figures that the levy equivalent has more than doubled since this sum was first arrived at. The grant has not been increased in any amount.

Then dealing with the federal district commission, in the year 1940 the assessed value of their lands in the corporation of Ottawa was $3,947,537, and of buildings, $83,350, or a total of $4,030,887. At the tax rate for public school purposes of 37 mills the levy equivalent would be $149,142, or considerably more than the total grant.

Dealing with the assessment value of properties taken over by the dominion government and the federal district commission, we have the following:

1937	$349,450
1938	870,225
1939	651,750
1940	376,725
1941	848,900

It will be seen that there is a continuous loss of revenue each year by virtue of the new expropriations, in addition to the permanent condition that exists. I can give these figures in detail for all the years.

Mr. BOUCHER: Perhaps with the consent of the house the hon. member could file them.

Mr. STIRLING: With the agreement of hon. members, perhaps those might be placed on *Hansard*.

Mr. McILRAITH: The statements follow:

Statement showing, for years 1925 to 1941, the amount of exemption for assessment on land and buildings of the government, tax rate and levy equivalent.

Year	Assessment exemptions			Tax-rate, mills	Levy equivalent
	Land	Buildings	Total		
1925	$ 5,739,875	$28,234,150	$33,974,025	31·10	$1,056,592 02
1926	5,770,725	28,297,700	34,068,425	31·70	1,079,969 23
1927	6,141,525	28,442,000	34,583,525	31·70	1,096,297 90
1928	5,870,725	28,635,059	34,505,784	31·35	1,081,756 33
1929	6,696,925	29,540,209	36,237,134	31·35	1,136,034 15
1930	7,442,125	31,289,359	38,731,484	35·59	1,378,453 51
1931	7,478,125	32,375,559	39,853,684	35·00	1,394,878 94
1932	7,478,025	33,393,609	40,871,634	37·95	1,551,078 51
1933	7,615,150	33,376,309	40,991,459	36·80	1,508,485 72
1934	7,590,025	33,317,459	40,907,484	36·80	1,505,395 26
1935	7,648,800	33,751,659	41,400,459	39·00	1,614,617 90
1936	7,881,725	35,667,509	43,549,234	39·00	1,698,420 13
1937	8,332,375	35,609,209	43,941,584	39·00	1,713,721 77
1938	17,870,900	35,438,309	53,309,209	38·50	2,052,404 58
1939	18,110,750	36,094,159	54,204,909	39·00	2,113,991 45
1940	18,651,100	38,584,784	57,235,884	37·00	2,117,727 70
1941	19,146,925	40,604,750	59,751,675	1942 rate not yet struck	

NOTE.—The tax rate shown is the rate to public school supporters.

Statement showing, for years 1925 to 1941, from date of annual grant by the dominion government to the city of $100,000, the amount of exemption for assessment on land and buildings of the Federal District Commission, tax rate and levy equivalent

Year	Assessment exemptions			Tax rate, mills	Levy equivalent
	Land	Buildings	Total		
1925	$2,079,350	$ 18,500	$ 2,097,850	31·10	$ 65,243 14
1926	2,081,750	20,000	2,101,750	31·70	66,625 47
1927	2,186,250	19,200	2,205,450	31·70	69,912 76
1928	3,720,450	24,700	3,745,150	31·35	117,410 45
1929	3,848,550	17,200	3,865,750	31·35	121,191 26
1930	4,097,925	67,200	4,165,125	35·59	148,236 36
1931	4,112,725	67,200	4,179,925	35·00	146,297 37
1932	4,098,600	81,200	4,179,800	37·95	158,623 41
1933	4,079,150	81,350	4,160,500	36·80	153,106 40

1940	3,947,537	83,350	4,030,887	37·00	149,142 82
1941	3,690,537	83,350	3,773,887	1942 rate not yet struck	

Note: (1) The tax rate shown is the rate to public school supporters.

(2) Figures of 1925 and 1926 are for the Ottawa Improvement Commission which became later the Federal District Commission.

Statement Showing, for the Undernoted Years, the Grant to the City of Ottawa by the Dominion Government, the Tax Levy for these Years and the Percentages of these Levies which the Dominion Government grants Represent.

Year	Grant	Tax levy	Grant in percentage of levy
			Per cent
1920	$ 75,000	$3,207,987	2·338
1925	100,000	4,304,513	2·323
1930	100,000	4,730,106	2·114
1935	100,000	5,840,822	1·712
1938	100,000	6,118,878	1·634
1939	100,000	6,172,525	1·620
1940	100,000	6,181,631	1·617
1941	100,000	5,903,950	1·693

The above figures do not include the old city hall site nor part of Queen street now used for park purposes.

[Mr. Coldwell.]

Assessment Value of Properties Taken Over by the Dominion Government and Federal District Commission

Years 1921 to 1941 inclusive

Year	Total assessment
1921	$ 87,550
1922	718,400
1924	79,325
1927	443,925
1928	960,850
1929	74,800
1930	817,080
1931	12,000
1933	139,425
1934	1,300
1936	27,150
1937	349,450
1938	870,225
1939	651,750
1940	376,725
1941	848,900

The assessment values in the above statement are those of the years in which the properties were taken over.

In the statement showing the assessment value of properties taken over by the dominion government and the federal district commission, the figure for 1930 is $817,080. This figure includes a property which was already exempt from taxation. I refer to the Knox church property, so that the figure would be misleading to that extent. I am sorry I have not the precise information as to the assessed value of this property. As an offset against that, these figures do not include certain properties which were owned by the city and taken over by the government. I have particular reference to the property known as the old city hall site, and also part of Queen street.

Mr. BOUCHER: Now part of the park.

Mr. McILRAITH: All are now part of confederation square park and Elgin street. As I said a moment ago, the taxable real property in the city of Ottawa for 1941 amounted to $157,279,947, and the assessed value of the dominion government real property exempt from taxation—this is exclusive of federal district commission property—is $59,751,675. It will be seen that the dominion government property exempt from taxation by virtue of being owned by the crown is equal to approximately two-fifths of the taxable real property in the city. This perhaps will illustrate, better than anything else could, the seriousness of this situation.

In previous years it has been stated that this was a condition that existed in all cities in Canada, but as nearly as I can find out the assessment figures in other cities do not seem to support that statement. For example, the annual report of the assessment commissioner for the city of Toronto for the year 1941 shows an assessment for all rates of $886,105,856, while the total exemptions amount to only $156,476,799.

Mr. MacNICOL: What is included in the $156,476,799 figure for Toronto?

Mr. McILRAITH: That would be all real property exempt from taxation.

Mr. MacNICOL: Federal government property, Ontario government property, and so on?

Mr. McILRAITH: I take it that it covers federal government property, church property, and so forth.

Mr. MacNICOL: Has the hon. member the value of church property in Ottawa?

Mr. McILRAITH: I have not the value of church property, but I have the total exemptions.

Mr. MacNICOL: What is the amount of total exemptions in Ottawa?

[Mr. McIlraith.]

Mr. McILRAITH: $102,181,163, and of that amount the dominion government exemption is $59,751,675. It will be noted that the exemptions in Ottawa are relatively a very substantial item, whereas those in Toronto are not nearly as large. I have the figures for other cities in Ontario which more or less show the same situation as exists in Toronto. If any hon. member would like to refer to this booklet I should be glad to let him have it. I think it will show that the problem is perhaps peculiar to this city, although it may exist in small measure in other areas.

Mr. STIRLING: It may differ in extent, but not in principle.

Mr. McILRAITH: That is probably the correct way of expressing it, but the extent has become so serious in Ottawa that we feel it is a problem which ought to be dealt with. I do not at the moment suggest that the problem is a simple one that can be dealt with by taking the value of crown properties and assessing them in the ordinary way, because, as was stated by the acting leader of the opposition, there are other considerations that enter into the matter. However, I think it is fair to say that as properties are expropriated the city must maintain practically all the services that it has to maintain when those properties were owned by private commercial concerns. Perhaps there is some difference when it comes to police service, because policing costs of government buildings do not exist as they do in connection with private commercial concerns.

There are two particular services with respect to which the situation is rather serious. There is the matter of fire protection. The contour of the ground in this city is such that the great majority of the government buildings, including the parliament buildings, are on relatively high ground. This involves the necessity of maintaining rather expensive booster stations in connection with the waterworks system in order to provide adequate fire protection. I believe that this was the reason for the construction of a booster station in Ottawa in 1912, and at the time the parliament buildings were destroyed by fire, during the last war, the fact that this booster station had been erected contributed greatly to the saving of the library of parliament. With the added fire hazards due to the erection of the new wooden buildings, quite a substantial burden has been cast upon the city, and as a result the fire department must be maintained at a higher degree of efficiency than otherwise might be necessary. There is another item, small perhaps but nevertheless worthy of consideration. As these new build-

ings are completed it becomes necessary to install additional fire hydrants and other water facilities, and this has become quite a substantial item during the last few years.

Then there is the whole question of the supply of water. Under the present agreement the city supplies without charge all the water used on the grounds of the government buildings; water for street cleaning; all the water used on the parks and driveways within the limits of the corporation, and so on. In 1939 the estimated cost of supplying this water was placed at an amount in excess of $30,000. Since 1939 there has been a very substantial increase there also. With respect to water supplied for use in government buildings, the government makes payment. The water rates now being charged had their origin in the agreement of 1920, to which I previously referred. In 1932, following the installation by the city of a new water plant, those rates were increased. The present rate is 16·25 cents per thousand imperial gallons up to 200,000,000 gallons, and 12·5 cents per thousand imperial gallons for water in excess of that amount. This basis of payment is lower than that charged to private commercial users of water in the city. The water rate on any commercial property is determined on the assessed value of the property, with a meter rate for the excess. That commercial rate is ten and a half cents per thousand cubic feet, which amounts to 16·82 cents per thousand imperial gallons. The only year for which I have figures in connection with water supplied to government buildings is 1939. In that year the amount paid by the dominion government for water was $45,808.77. Had the government paid for this water on the same basis as a commercial user in the city, it would have had to pay $123,213.75, or perhaps a little more if there should be any excess in some buildings.

I think it is clear, therefore, that in addition to the water being supplied free under the agreement, to the value of something over $30,000, the water used in the buildings is paid for at a rate which would appear to be below the actual cost, and if paid for at the ordinary rate the difference would amount to more than the entire grant of $100,000. In other words, if the city sold the water to the dominion government at the rate it charges private commercial users, the government would have to pay for the water alone $100,000 more than it now pays.

Mr. STIRLING: Is the total quantity greatly in excess of the 200,000,000 gallons which carry the 16·25 cents rate?

Mr. McILRAITH: I have not the precise figure, but the average rate for 1939 was 15·5044 cents per thousand gallons. I believe the amount used was almost twice the basic figure.

There are, of course, certain compensating factors which have been mentioned and I think the residents of Ottawa are duly mindful of them. We do not attempt to overlook them or in any way pass them by, but at the same time I think the few figures I have given indicate the complete inadequacy of this amount, and moreover they tend to show the impossibility of dealing with this matter in an ordinary bill each year. Last year, when this measure came up for discussion, I took the position that while the amount was very much too small, because of the war situation and the urgent need of money for war purposes I was willing to acquiesce and let the bill pass. That is still my position, but I think it only fair that a committee should be set up to put this whole matter on some proper basis, so that the city may receive proper compensation and private taxpayers may not be required to carry an unfair burden. I would ask that the government take steps to have this done at the very first opportunity.

Mr. G. R. BOUCHER (Carleton): I am very glad of the opportunity to say a few words on the principle of this bill, and to add to what has been said by the acting leader of the opposition as to the gigantic problems that have to be faced in connection with the services rendered by the city. There are, of course, corresponding advantages to Ottawa in having the capital of Canada located here. I am sure the people of Ottawa take second place to none in civic pride and I do not think any hon. member of this house, or anyone outside the house, would express anything but pride in the location, the efficient operation and the careful maintenance of this capital city. May I point out some of the advantages to Canada in having its capital in other than an industrial centre, located as nearly as possible in the centre of the dominion, in a particularly scenic portion of the country.

Mr. REID: The hon. member would not say it was very central, would he?

Mr. BOUCHER: The hon. member for New Westminster doubts the generally central location of our city, but possibly when he gets beyond the mountains he loses to some extent his sense of direction, so that I shall excuse him. Having the capital in the city of Ottawa is, of course, a great advantage to the people of Ottawa. There are here all the members of parliament; it is the seat of government and its departments, and there is a large number of civil servants, of whom we in this city are very proud.

Mr. POTTIER: The mayor doesn't seem to be.

Mr. BOUCHER: I might also mention that we have a mayor who is honoured and respected not only by the citizens but by all hon. members of the house.

Speaking for a small portion of the city I would express on behalf of my people our appreciation of having the capital here. I might personally extend appreciation to several members of the cabinet who, seeking the finest portion of Ottawa in which to maintain their homes, have located in the riding of Carleton. Apart from its advantages as the capital city, the location of Ottawa is such that it is suitable for a very fine industrial city. We have probably the cheapest power in the world, certainly the cheapest on the north American continent.

Mr. COLDWELL: Except Winnipeg.

Mr. BOUCHER: We cannot except even Winnipeg or Rosetown-Biggar. We are convenient to great supplies of pulpwood. Our attractions as a tourist centre provide a valuable source of income to the dominion. Our water power, our railway connections and other facilities provide the basis of a very desirable industrial centre.

I would ask hon. members, in considering what compensation should be made, not to Ottawa, but to the people in Ottawa, seriously to reflect whether the accommodation provided and the services rendered are adequately compensated by a mere hundred thousand dollars. As pointed out by the last speaker (Mr. McIlraith), if the dominion government, and the federal district commission controlled by the federal government, were charged water rates and were assessed on a similar basis to the residents of Ottawa, they would pay over $155,000 a year, one and a half times the actual grant.

As long ago as 1899 there was a grant of $60,000, which has now reached $100,000, and I do not think that it should continue at this inadequate figure even in war time. To illustrate how important the matter is to the people of Ottawa, let me put on *Hansard* a statement of the value of appropriated properties removed from taxation by the municipality within the last five years:

Year	Assessed values of properties removed from taxation or revenue production
1937	$349,450
1938	870,228
1939	651,750
1940	376,125
1941	848,900

Mr. COLDWELL: What is the mill rate, so that we may get some idea of the loss of taxes?

Mr. BOUCHER: The mill rate would be governed accordingly. I might answer my hon. friend's question by a definite illustration.

Mr. COLDWELL: The mill rate, I understand, is 37 mills.

Mr. BOUCHER: About 37 mills.

Mr. REID: It was about 37 mills in 1940. It is down one mill, I think, this year.

Mr. BOUCHER: Between the years 1921 and 1941 the dominion government and the federal district commission have taken over property in Ottawa of a total assessed value of $6,431,530, not including the two properties mentioned by the previous speaker, namely the old city hall and the Knox church property. It is estimated that further property assessed at $1,370,000 will be exempt in the present year. The assessed value of government-owned land to-day is almost five times as great as it was in 1909, when the grant was $75,000.

True enough, it would be foolish for one to contend that loss of taxation on appropriated property, loss of revenue, or even increased services, should be the deciding factor. But here are we in this house, more than 240 members, dealing with the affairs of the nation, living in the capital city, benefiting by services rendered to properties which produce no revenue, without having had placed before us a true picture of the circumstances with which we are dealing in this bill.

Mr. REID: What about the pleasure of spending our money?

Mr. BOUCHER: The hon. Scotsman from New Westminster speaks very loudly of the pleasure of spending his money. We might even take that into consideration, though when I see some hon. members walking across the river to our neighbouring town, I sometimes wonder whether all their money is spent in the city of Ottawa.

The previous speaker placed on *Hansard* some interesting facts relating to assessment. May I, by way of further reply to the hon. member for Rosetown-Biggar, cite a few more figures relating to tax levies. Were the dominion government to pay taxes on its property to the city of Ottawa, in 1937 they would have paid into the city treasury $1,698,385 in general tax, $409,177.35 in busi-

ness tax, about $125,000 in water rates, plus $30,000 in water rates for the federal district commission. In 1939 payments to the city treasury would have been $2,052,404 general tax, and $470,902 business tax. In 1941 the income to the city of Ottawa from dominion-owned property would have been $2,117,727; the business tax, if levied against the government as it is against the ordinary taxpayer of Ottawa, would have been $492,362; the water rates, about $155,000, or a total of around two and three quarter million dollars. In dollars and cents the problem becomes a very serious one. I suggest therefore that it would be only fair to the country at large and to the city of Ottawa particularly if this whole matter were referred to a committee, giving to the city of Ottawa power to make representations through its mayor, board of control and civic officials, and power to the members of this house to estimate as nearly as they can the services we get. We need not dwell upon what those services are. Anyone must know that the water service itself is something gigantic and has been increased tremendously by virtue of the temporary buildings erected in Ottawa. Police protection has increased, snow removal has increased, the work of keeping the streets in orderly condition has increased. The very existence of Confederation square, a beauty spot to Canadians, necessitates many extra policemen in every busy hour of the day. Surely the members of this house should take these things into consideration and realize that in dealing with a bill of this kind, even though these are extreme days, a great deal more consideration should be given than merely repeating what has been done for the past twelve years or so. I suggest therefore to the Acting Minister of Public Works that he take the matter into consideration and if he cannot see fit to do it this year, at any rate he should be prepared to give the whole subject much more attention than it has received.

Mr. M. J. COLDWELL (Rosetown-Biggar): I think the member for Ottawa West (Mr. McIlraith) made about the best case it was possible to make for the grant contained in this bill for the city of Ottawa. The member who has just taken his seat (Mr. Boucher) added to those representations. As I have sat here and listened, I have wondered if a big philanthropic institution was looking after us all and making life a pleasurable experience for us. I agree that Ottawa is probably one of the most beautiful cities in the world; I know of nothing finer anywhere. But we must not overlook the fact that Ottawa is beautiful because the people of Canada chose Bytown as the capital, and the people of Canada have expended vast sums of money in public buildings, in the planting of trees, in the upkeep of a fine driveway around the city, and so on. I did suggest to the hon. member for Ottawa West that since he wishes to study the figures placed on the record we might study them six months hence. Of course, I was not quite serious in that suggestion, but I suggest that the citizens of Ottawa do not all quite appreciate what the parliament of Canada means to this city. For I have a very vivid recollection of the chief citizen of this city, the present mayor, saying that the members of parliament for all they did here might just as well go home. I thought when I saw this bill on the order paper that we might go home, perhaps, before passing the bill this year, as a sort of protest against the insult cast on the members of the House of Commons.

I am not going to oppose the bill, because there is much merit in the suggestion advanced by the two members who have spoken, that the whole matter be referred to a committee, where the rights of the city of Ottawa and the rights of the whole dominion might, so to speak, be put one against the other and a proper decision arrived at. I agree that this is no way to do the business of the country in relation to the city of Ottawa, simply by making a grant, because none of us know exactly on what grounds the grant is made. I know there has been loss of revenue on account of the pulling down of buildings, but I know also cities in this dominion where I should like to pull down half the buildings. I can look across the river from this beautiful parliament building, over to the city of Hull, and I should dearly love to have the opportunity of tearing down about half those buildings and putting up a set of buildings there that would more nearly approximate the city here, instead of looking upon it, my good friend the member for Hull (Mr. Fournier) notwithstanding, as an eyesore.

Mr. FOURNIER (Hull): We would accept a grant of $100,000 over there.

Mr. COLDWELL: I am sure the hon. member would, but so far the city of Hull has shown no indication that they would appreciate it in the way I should like them to. They should begin to clean up their doorstep, and it might be considered. Seriously, however, the matter now under discussion ought to be, as the member for Ottawa West suggested, the subject of inquiry by a parliamentary committee, or a committee of some sort, where representations could be heard and a proper

disposition of the question made. As I have said, I am not going to oppose the bill, but I hope that sooner or later we may have, instead of the city of Ottawa coming to us as a suppliant for funds, or instead of our making grants to the city of Ottawa, on any grounds, compassionate or otherwise, a capital which the Dominion of Canada can call its own in a federal district of its own.

Mr. J. A. PINARD (Ottawa East): I do not intend to add very much to the excellent speech made by my colleague (Mr. McIlraith), which I believe was the best case for Ottawa ever presented to this house. Some years ago I did present the case, not as brilliantly as he has done, because I was not privileged, as he and the member for Carleton (Mr. Boucher) have been, to get as much information on the subject from the mayor of the city—the present incumbent was in office at that time. Nevertheless I did the best I could. I was in the council for twenty years; I knew a good deal about the federal district commission and other matters affecting the city and its interests, and from such knowledge as I had I presented the case as forcibly as I could, with the result that I had the support of a few members of the opposition—I am speaking of the Tory opposition. My friend here is the one most entitled to represent the city of Ottawa because he had the pleasure of receiving the largest number of votes cast for any member of this house. That being so, the "Washington of the north", as Sir Wilfrid Laurier was known to have called this city, is well represented, and the people of the city have shown their representatives that we intend to make Ottawa the Washington of the north.

As to what the mayor said in regard to what we do in this house, I must say that until not long ago I had quite a lot of patronage, but it has been cut off from me. Nevertheless I am doing my duty as much as the mayor is, and when he makes in public such utterances as these I can say that he speaks for himself alone and not for the citizens of Ottawa.

I offer my thanks to the hon. member for Carleton. I do not know whether the farmers of his county will be pleased by his action this afternoon, because, like the hon. member for New Westminster (Mr. Reid), they are all Scotch. I am afraid that it will be hard for the hon. member to get reelected next time. I hope this vote will be carried this afternoon. I am glad of the suggestion made that a special committee of this house should be named by the government to hear the representations not only of the city council but of the government and hon. members of the house and other citizens who are much interested in the welfare of Ottawa.

Mr. FRASER (Peterborough West): The hon. gentleman has just made a political speech; that is all it was. He said we are making Ottawa the Washington of the north. I think that is an absolutely wrong attitude to take.

Mr. PINARD: At any rate it is not politics.

Mr. FRASER (Peterborough West): Ottawa is Canadian and we should keep it so.

Mr. J. R. MacNICOL (Davenport): I have always felt that the vote to Ottawa is too small. I hope that when this bill goes to the committee the committee will view the necessities of Ottawa more generously than they have been viewed in the past.

For some reason big business is not located in Ottawa. Perhaps on account of the government buildings being here, large factories are not encouraged to come. It is true that Ottawa is a very beautiful city, and the municipal authorities perhaps wish to protect it from the smoke that is associated with large factories. Therefore the city's opportunity to obtain revenue is not comparable with that of cities like Toronto or Montreal, or even Hamilton, Brantford, London and other manufacturing cities.

Mr. REID: But they have a larger constant payroll than any other city.

Mr. MacNICOL: I am well aware of that. On the other hand large industrial cities have many people with much larger salaries than are paid in Ottawa. Outside of a few heads of the main departments of government, salaries generally in Ottawa are not nearly as high as in the large cities. That is another reason why the tax revenues are lower than they otherwise would be for a city of the same size with big industries.

Did I gather that the acting leader of the opposition recommended that a committee be set up to consider the question?

Mr. STIRLING: The banking and commerce committee.

Mr. MacNICOL: And that that committee be invited to consider increasing the vote. In the meantime I will support the bill, and if the banking and commerce committee propose a larger grant I will support that.

Hon. J. E. MICHAUD (Acting Minister of Public Works): Since it has become my lot to sponsor this bill, which in recent years has become a hardy perennial in this house, I think it well that I should give to hon. mem-

bers a few facts by way of information in order that they may properly understand the relations of the dominion government to and with the city of Ottawa.

I admit that a very good case has been built up by hon. members representing the city and citizens of Ottawa and those closely associated with the city, and by the hon. member for Carleton (Mr. Boucher). They have built a very good case for imposing upon the dominion government recognition of an obligation towards the city of Ottawa to pay taxes or compensation in lieu of taxes. But one must not forget that no government has ever recognized any obligation to pay to the city of Ottawa any compensation for taxes on property owned, purchased or expropriated within the city limits, and I doubt whether for a long time to come any government would admit the principle. It will be realized that were the government to admit such a principle, any city, town or muncipal corporation which has within its limits any property owned by the dominion government would be just as much entitled, as the city of Ottawa, to ask for some allowance by way of compensation for loss of taxes, and on the same basis and in the same proportion. The principle that His Majesty the King cannot be taxed applies to the property owned by his majesty in the city of Ottawa as well as to property owned by his majesty in any other city or municipality in Canada.

Ever since Ottawa was selected as the capital of Canada no government has ever recognized any obligation to the city or to any municipality for payment for loss of taxes or in lieu of taxes or compensation for the right to own property in the municipality. Up to 1899 the dominion government did not pay anything to the city of Ottawa for the buildings that the government owned in the city limits and for the services that were rendered by the city for the care and protection of government property, much less for loss of taxes, or taxes on property owned. It is of course a good argument to present the value of property owned in the capital of the country and say that if that property were taxed on the same basis as any other property such and such an amount of money would be owing by the government to the city. But the principle is false and cannot be admitted, and I am sure no one will admit it.

The argument is that the city treasury is placed in a difficult position by the fact that from year to year the government erects costly new buildings within the city, and expropriates property which previously had been assessed and on which taxes had been paid; and that if that continues the taxpayers in the city will have to shoulder an additional burden. It is possible that that may happen. But things may also work the other way. For example I am told that last year, notwithstanding the fact that the government took over property valued at close to a million dollars and that amount of property has been removed from the tax roll of the city, the tax roll has been increased by $2,000,000 and the tax rate in the city has been lowered. Of course this is quite understandable. The more the government expropriates real estate in this city, and erects office buildings, the more people have to be brought into the city to be housed in those buildings. Those people are put on the payrolls, and spend most of their earnings in the city. Those who possess commerical properties see the value of their commercial establishments increased, and the city assessment lists increase in the same proportion.

However, argument could be adduced to support the claim with respect to the payment of taxes, once it is admitted that his majesty is liable to the payment of taxes either in this capital city or in any other place. That principle is not admitted.

In 1899 the public-spirited citizens of Ottawa decided to make Ottawa a beautiful city. At that time Sir Wilfrid Laurier was a citizen of this city. In that year the Ottawa improvement commission was formed, and a grant was demanded to support the operations of that commission. As a result, by chapter 10 of the statutes of 1899, a grant of $60,000 a year was voted by parliament. Section 15 of the statute sets out the reasons why the government of the day agreed to pay that amount of money to Ottawa, and to make that concession. The section states:

> The annual grant payable under this act shall be in full payment, satisfaction and discharge of all claims and demands by or on the part of the corporation on the government of the Dominion of Canada in respect of water supplied, including charges for street sprinkling by the corporation for use in and on all buildings, lands and premises in the said city of Ottawa.

This first grant of $60,000 a year was made to pay for the water supplied and the sprinkling system used in all buildings and on all lands. That principle has been maintained throughout the various enactments, and even in the agreement of 1920.

The agreement we are now asked to ratify was signed on May 11, 1920, and has been modified very little since that time. The principle remains the same. The amount of $100,000 paid annually to Ottawa is still being paid in discharge of all claims and demands by the corporation of the city on

the federal government with respect to water supplied for street sprinkling and for use in the parks and driveways under the control of the federal district commission, as well as for fire protection in the various government buildings. It is understood of course that the sprinkling is to be restricted to hours named by the city. Since 1899 the amount has been increased to $100,000 a year; and since 1919 it has been paid direct to the city of Ottawa.

The main clauses of the agreement provided (1) annual payment of $150,000 to the Ottawa city improvement commission for ten years from July 1, 1919; (2) annual payment of $75,000 to the city of Ottawa, for five years from July 1, 1919; (3) payment for water supplied by meter; (4) cancellation of the exemption of civil servants from income tax and, in addition to this, (5) the government assumed the repair and maintenance of sidewalks on the north side of Wellington and Bank streets as far as the Perley home.

These were the five conditions which formed the basis of the contract of 1920. Since then the principle has not been changed, but the amounts payable under the various clauses have been increased. For example, the amount to the Ottawa improvement commission, which was to be $150,000 a year, is now in this year $333,500, or about a third of a million dollars. That amount was for the beautification of driveways and the improvement of the general appearance of the city. The annual payment of $75,000 to the city proper has been increased to $100,000. Naturally that is done because the amount of water used has increased since the signing of the contract in 1920. Then, payment for the water used and metered in the buildings has been increased, and so has the rate. For example, in 1941, the government consumed 371,498,840 gallons of water, for which it paid $53,937.37. Besides that, the government paid a meter rental at the rate of ten per cent of the purchase price of the meter, amounting to $1,459.34. So it would appear that last year the government paid to the city of Ottawa for the water used and metered in buildings the sum of $55,396.71.

This is by virtue of the agreement with the city of Ottawa whereby the water is being bought at 13 cents a thousand gallons for any quantity up to 200 million gallons, and an increase of 25 per cent for any quantity over and above the basic quantity. Negotiations are now under way between the city and the government further to increase the rate on the water being metered, because of the increased costs in pumping water to the buildings. I understand that negotiations are now in progress to ascertain a proper increased rate to be agreed upon by the parties.

[Mr. Michaud.]

In addition to the third of a million dollars paid by the government to the Ottawa improvement commission, the $100,000 paid to the city for the water used in the sprinkling system and on the ground, and the amount I have just mentioned for water used in the buildings, the government has paid taxes on property occupied by different foreign legations. Last year that item amounted to $39,321.44. The amount of income tax which the government was authorized to collect from civil servants and from which the civil servants were exempt before the agreement was amended in 1919, amounted to $57,175. Last year the government paid the sum of $60,512.90 as taxes on properties which had been expropriated during the year and which had been previously assessed but for which taxes had not been paid for the current year.

Those are the payments which the dominion government makes to the city of Ottawa without recognizing any obligation to pay any taxes on real estate or property owned or purchased, either by contract or by expropriation, in the city of Ottawa. I believe the only thing that might be adjusted by a committee or another body to which the matter might be referred would be the amount the government should pay because of increased consumption of water in the buildings or outside the buildings to take care of the grounds, and also for fire protection. It is admitted that there has been an increased fire risk in certain districts of the city because of the erection by the government of temporary wooden buildings. However, these buildings are equipped with fire protection facilities in the form of automatic sprinkler systems and by having janitors or fire guardians on the premises to protect the properties from fire. It is possible that this agreement, which dates from May, 1920, should be revised, but I think this is a most improper time to attempt to arrive at any definite agreement. The future of some of the properties which we have in the city is most uncertain, and I submit that for the time being the city of Ottawa should be satisfied to accept this amount and then continue negotiations with the government with a view to coming to an understanding as to the real obligation of the government on account of increased consumption of water and increased cost of fire protection of government buildings during war time. I think this is a matter which can be adjusted by the officials of the government and the officials of the city. As soon as the war is over it may be possible to come to a more definite understanding as to what should be the relations between the city and the government in the future.

Motion agreed to, bill read the second time, and the house went into committee thereon, Mr. Ross (Calgary East) in the chair.

On section 1—Agreement with city of Ottawa extended for one year.

Mr. STIRLING: I realize that the suggestion I made that this matter could properly be referred to a committee—I suggested the banking and commerce committee—has received the support of several hon. members, but two or three of them have supported it because it might result in an increased grant to the city of Ottawa. I do not find myself in that position because the basis of my suggestion was that I did not know. If the matter goes before a committee a great deal of relevant information could be given, some of which the minister gave us in the statement he has just made. It may be possible there to endeavour to turn into dollars and cents the very considerable benefits that the inhabitants of Ottawa receive from the existence of the capital city here, and from the civil servants, whose total powers of expenditure are considerable. In reciting the five bases of the agreement the minister referred to the exemption of civil servants from the payment of income tax. That alone is a considerable contribution which the dominion government forgoes and which the citizens of Ottawa receive.

Mr. PINARD: That does not exist now.

Mr. MICHAUD: Ontario collects it and pays it to the city.

Mr. STIRLING: I was going to ask permission to interrupt the minister toward the end of his remarks to ask him if that was the case, but he reiterated that that exemption still lived. That is one of the factors which is obviously not within the knowledge of several of hon. members here to-day and which could be brought out in a committee which could easily assess the pros and cons before arriving at a decision.

Section agreed to.

Bill reported, read the third time and passed.

CANADA EVIDENCE ACT

AMENDMENT TO MAKE PHOTOGRAPHS OF BOOK ENTRIES ADMISSIBLE IN EVIDENCE

Hon. L. S. ST. LAURENT (Minister of Justice) moved the second reading of Bill No. 66, to amend the Canada Evidence Act.

Motion agreed to, bill read the second time and the house went into committee thereon, Mr. Ross (Calgary East) in the chair.

On section 1—Definitions.

Mr. ST. LAURENT: Since the bill was introduced applications have been received from utility companies and from insurance companies that the provisions of this bill be extended to them. I would ask one of my colleagues to move these amendments. In section 1, lines 9 to 12, the definition is to be that of a corporation, instead of that of a bank. The new definition reads:

(a) "corporation" means the Bank of Canada, every bank to which the Bank Act applies or to which the Quebec Savings Banks Act applies, and each and every of the following carrying on business in Canada, namely, every railway, express, telegraph and telephone company (except a street railway and tramway company), insurance company or society, trust company and loan company (except a company subject to the provisions of part 2 of the Small Loans Act, 1939).

Then comes the definition of the word "government" as follows:

(b) "government" means the government of Canada or of any province of Canada and includes any department, commission, board or branch of any such government.

This would require subparagraph (b) to become subparagraph (c). Then in section 1, line 17, the word "bank" will be struck out and the words "government or corporation" substituted. Then it is suggested that in the same section, line 21, the word "original" might very well be omitted, where it appears before the word "instrument". It is felt that the inclusion of the word "original" might give rise to some difficulty in interpretation. Without the word I think it is obvious that it will be the document itself, while if the word "original" is retained, some difficulty might arise as to what is meant by an original instrument.

Mr. DOUGLAS (Weyburn): It might prevent photographing a duplicate, for instance.

Mr. ST. LAURENT: Yes. Then also in line 21, the word "bank" is to be replaced by the words "any government or corporation". Similarly in line 25 the words after "any" to the end of line 27 are to be struck out and the words "government or corporation" substituted therefor. That comes about because "government" has been defined in subparagraph (b). Then on page 2, in lines 4 and 5, the words "bank, department, commission, board or branch" are struck out and the words "government or corporation" substituted. In lines 9 and 10 also the words "bank, department, commission, board or branch" are struck out and the words "government or corporation" substituted therefor. The same change is made in line 14. "Government or

corporation" both having been defined in the first paragraph, this substitution merely follows, if the first suggestion is adopted.

Mr. DOUGLAS (Weyburn): If I understood the minister correctly, "corporation" is defined as including express companies, railway companies—

Mr. ST. LAURENT: "Corporation" would include banks under the Bank Act or the Quebec Savings Banks Act, and would include also railway, express, telegraph and telephone companies, except a street railway or tramway company, and an insurance company or society, trust company and loan company, except a company subject to the provisions of part 2 of the Small Loans Act of 1939. These are all companies which, having seen the bill after it was introduced into this house, have written to ask whether its provisions might not be extended to them. As the hon. member realizes, the bill is for the purpose of supplementing legislation along the same lines being adopted by the provinces, because the evidence requirements are governed both by federal and by provincial legislation, the purpose being to permit the destruction of original records and to retain photographic records. Unless both federal and provincial legislation permit the use of the photographic records, a company could not take the risk of destroying the original voluminous records.

Mr. DOUGLAS (Weyburn): The reason for not including private corporations and companies is that they would be covered by provincial legislation?

Mr. ST. LAURENT: Well, I am not sure that in every instance they would be covered by provincial legislation. Our evidence act applies to evidence in criminal cases and also to evidence in civil cases governed by the statutes of Canada. The ordinary litigation before the provincial courts is governed as to evidence by the provincial dispositions. But if a company wishes to destroy original records and retain only photographic copies, it takes a risk in doing so unless both the federal act and the act of the province in which it is located permit a photographic record to be used as evidence. If there is only a provincial act allowing a photographic record to be used as evidence, a case might arise which would be governed by the Canada Evidence Act, and as a result the company having destroyed the original would be embarrassed, because there might be nothing in the federal act allowing the photographic record to be used.

Mr. DOUGLAS (Weyburn): Then why is this not extended to deal with private corporations and companies? Is it that they have not asked for it, or is it that their records would not extend over as long a period of time?

Mr. ST. LAURENT: It has not been asked for. This matter was considered by the government departments. Then a formal application to the committee on uniformity of legislation that sits in conjunction with the Canadian Bar association was submitted by the bankers' association. They pointed out that under the Bank Act the statute of limitations did not apply to them, and in consequence they have to be ready at all times, no matter how many years may have elapsed, to prove what they may have done with moneys deposited with them. They represented that on a microfilm two hundred feet in length they could conserve copies of 2,700 letter-sized sheets, that this could be done very quickly and I understand at a cost of about $7 per film, that it would reduce very considerably the storage space required to conserve these records, and that whenever one is necessary it can either be thrown on a screen in enlargement, or an enlarged print can be made from the microfilm and submitted as evidence.

The bill having been introduced in its original form dealing with government records or bank records, the Canadian Pacific Railway and the Canadian National Railway, both for railway purposes and for telegraph and express purposes, wrote in asking if there seemed to be any objection to extending the same principle to them. They felt they could also bring about a saving in storage space if the principle were extended to them. That was followed by an application from the Bell Telephone company. Then came an application from the life insurance companies, and the amendment submitted would include trust companies, utility companies, and insurance companies. They will not, merely by virtue of the adoption of this federal statute, take the risk of destroying their old records. They will have to get also concurrent provincial legislation before they will feel safe in destroying their old records. But there has been no application from private companies, and I do not know that even in the United States where the system is used it has been extended to any but these public or semi-public corporations.

Mr. DOUGLAS (Weyburn): It is not being extended also to include the government itself?

Mr. ST. LAURENT: Oh, yes; it includes the government—the federal government or any provincial government.

Mr. DOUGLAS (Weyburn): That was not in the original bill?

Mr. ST. LAURENT: That was in the original bill. That was in the original recommendation. If the hon. member will look at the bill he will see that, at lines 24 and following, the government records were also included:

(c) any record, document, plan, book or paper belonging to or deposited with any department, commission, board or branch of the government of Canada or of any province of Canada.

Mr. DOUGLAS (Weyburn): Now the minister is putting it in the definitions.

Mr. ST. LAURENT: Now we are putting it in the definitions, so that the application may be general.

Mr. DOUGLAS (Weyburn): Has the minister satisfied himself that the photographic records are perfectly accurate? Most people are familiar with trick photography and what has been done by people who are clever with films. Are they considered by the Department of Justice to be a very satisfactory method of keeping accurate records?

Mr. ST. LAURENT: The Department of Justice consider that the precautions provided for here would make it reasonably safe that authentic copies only would be preserved. The bill provides that when a copy is made and when the original is to be destroyed, an affidavit will be made by the person making the photograph and attending to the destruction of the original, verifying the correctness of the photographic record.

Mr. DOUGLAS (Weyburn): The affidavits will have to be kept, then?

Mr. ST. LAURENT: The affidavit will have to be kept; and the bill provides that if the person who made the photographic record is not available to give evidence when the copy is to be used, a copy of the affidavit may be supplied with the photographic record to complete the evidence.

Mr. DOUGLAS (Weyburn): Will the affidavit be photographed, too?

Mr. ST. LAURENT: No. The affidavit will be taken in the ordinary form.

Mr. BOUCHER: Notarized.

Mr. ST. LAURENT: Notarized, and will be preserved in that form.

Mr. DOUGLAS (Weyburn): There will be one affidavit for the entire film?

Mr. ST. LAURENT: Yes.

Mr. DIEFENBAKER: The minister is to be complimented on accepting the recommendation of the uniformity committee of the Canadian bar association, of which he was for a term its distinguished president. But the amendment he suggests to-day goes a long way farther than was ever recommended by the Canadian bar association, and for that reason certain questions come to one's mind. One is this: in the United States are the photographic records of railway and express corporations accepted?

Mr. ST. LAURENT: I am unable to inform the hon. member to what extent they have extended their act to the conservation of business records.

Mr. DIEFENBAKER: I understood the minister to say that the same principles were being used in the United States.

Mr. ST. LAURENT: That was the representation made to us by the railway companies, but I have not myself verified it.

Mr. DIEFENBAKER: I notice that another change has been made. In the recommendation that was made to the Canadian Bar association in connection with this matter, and which appears in the 1939 proceedings of the association, at page 308, it is stated as follows:

The photographic record in such case would be prima facie evidence only, however, and could be rebutted by positive evidence to the contrary.

That was in the brief submitted by the Canadian Bankers' association to the Canadian Bar association, and to that was appended a suggested amendment of the Canada Evidence Act—the amendment which is now before the committee, except in one particular, that in the suggested amendment of the commissioners on uniformity of legislation the probative value of the entries in any book or record which had been filmed was to be received as prima facie evidence only. There has been an alteration in the amendment now before the committee. It—

—shall be admissible in evidence in all cases in which and for all purposes for which the object photographed would have been received upon proof. . . .

I would like the minister to explain why, though in general the amendment suggested by the Canadian Bar association is accepted, the change was made altering the probative value as prima facie evidence only and making photographs admissible in evidence. Why the alteration in that regard? I would also like the minister to explain why it is that in the definition of "bank", restriction is made to the Quebec savings banks. Are there any other savings banks?

Mr. ST. LAURENT: These are the two banks which require to have their charters

renewed by this parliament every ten years like the ordinary chartered banks: the Montreal City and District Savings Bank and the Caisse d'Economie de Notre Dame de Quebec. Those are the only two, and for all other purposes they are on a par with the chartered banks.

Mr. DIEFENBAKER: The minister has said that he wants to bring about uniformity in the evidence acts of the dominion and all the provinces. Have the provinces accepted the suggested amendments which he spread before the committee to-day? If they have not, then you are going to have a situation which will make proof more confounding than ever before.

Mr. ST. LAURENT: I think the answer to the hon. member is this. Five of the provinces so far have accepted the recommendation of the committee on uniformity of legislation. This bill includes everything that is in the recommendation, and, at the request of the insurance companies, the trust companies and the utility companies, goes beyond that. But before these companies will take the risk of relying upon this statute they will have to get concurring legislation from the provinces. If they do not get the two, they may find themselves in the position where they will have destroyed an original and will not have any justification for attempting to use something else.

This bill, of course, will apply only to cases to which the Canada Evidence Act applies; in all other cases they will have to rely upon provincial legislation. We may be taking one step in advance of what these five provinces have already done, and if they do not follow, the companies not now included in the provincial legislation will probably not take the risk of destroying their old records.

Mr. DIEFENBAKER: That just shows the ambiguous position in which the law of evidence will be should the amendment suggested to-day be accepted by this committee. As originally submitted to the house there could be no possible objection to the suggested amendment: it covered matters under federal jurisdiction—the Bank of Canada and any bank to which the Bank Act applies and to which the Quebec Savings Banks Act applies. If we pass this bill, instead of bringing about uniformity of legislation in Canada as desired by the Canadian Bar association, it will have the opposite effect so far as the evidence act is concerned. You will have an act of the dominion allowing certain matters to be proven in a certain way and you will have provincial acts not permitting that. I suggest that the amendments moved to-day by the Minister of Fisheries (Mr. Michaud) go rather too far, because they may create a situation that will place this parliament in the position of passing legislation in amendments that will give rise to any amount of litigation and will not result in any improvement in administration.

Mr. ST. LAURENT: I am not convinced by the argument of the hon. member. When concurrent legislation is required, it cannot be secured absolutely simultaneously from all the bodies concerned. In this case, in order to have uniformity, it will be necessary to have an enactment by this parliament and enactments by nine legislatures and probably a regulation under the Northwest Territories Act. It takes considerable time, as the hon. member knows from his experience, paralleling mine with the Canadian Bar association, to get any of these bits of uniform legislation completed. Someone has to be the first. Five of the provinces have got ahead of the federal parliament in carrying out the suggestion of the uniform legislation committee.

Mr. DIEFENBAKER: Only in so far as the original recommendation is concerned.

Mr. ST. LAURENT: In so far as the original recommendation went. There are still four provinces that have not adopted a uniform statute. If this parliament adopted the bill in its original form it would be possible for banks and for the governments of those five provinces to avail themselves of the new provision without incurring any risks. They could destroy records and they would have to make evidence only in federal courts or in the courts of their respective provinces. The dominion government would not be able to avail itself of the provision because it might have to comply with the evidence act of some of the other four provinces in litigation. The banks would not be able to avail themselves of it because there would still be four provinces where they might have suits, where evidence would be regulated by provincial legislation, and where they could not avail themselves of these provisions. It will be some considerable time before the nine or ten or eleven legislative bodies have all acted. It has been represented to the department that the amendments suggested would serve as an invitation to the other legislatures to extend to these insurance companies and public utility companies the same principle that the bill embodies. I do not think it will create any confusion whatsoever. This will cover a wider field than has been covered yet by any provincial legislation, and the amendments will not be operative until

legislation of a similar nature is adopted by the provinces wherever any of these companies may feel that at any time they will have to go into courts or see applied to them the provisions of a provincial statute.

Mr. DIEFENBAKER: Will the minister explain why there is the change in the words from "prima facie proof" to "admissible in evidence"? I regard that as significant.

Mr. ST. LAURENT: It seemed to us that if there were a photographic record, made under proper control, it could not be other than the exact reproduction of the document, and the provision suggested here is that the copy will make the same kind of evidence that the original would have made. In very many of these cases the original merely makes prima facie evidence, but you would have had, with the suggestion, this duplication, that the photograph would be prima facie evidence of the original, and the original would be prima facie evidence of the fact. It seemed that if the photograph were to be made under the conditions the bill provides for, the purpose would not be served unless the photograph could stand in lieu of the original, whenever there was occasion to call for the document. The real purpose is to facilitate the destruction of old records and save storage space, and it was felt that if the photographic record were not going to be in the same position in court as the original would have been in, the real purpose would not be achieved.

Mr. DIEFENBAKER: There is not the same reason for the keeping of the records, on the part of these other corporations, that there is on the part of the government of Canada or on the part of the bank.

Mr. ST. LAURENT: No.

Mr. DIEFENBAKER: Then why did they want this method of proof? These other corporations do not have to keep their documents, and there is no reason for them to keep them. Why then do they want provision made by parliament to photograph documents which they are at liberty to destroy?

Mr. ST. LAURENT: They are not required to keep them for all time. They do have to keep them for such a period as will enable them to go into court and say, "Our practice is to destroy these records after so many years", and have the court recognize that as a proper business practice. The volume of the documents, especially in the case of insurance companies, which these concerns do keep is large, and the department admitted the usefulness of these amendments. The bill as orginally introduced was one that had been recommended by the committee on uniformity of legislation. It was introduced in that form because I would have felt it desirable to bring in a bill in a form in which it could be passed without having to ask hon. members in committee to make changes in it. It was after the bill was introduced that these others came along and suggested that they might be able to get the legislatures also to extend the legislation, and the officers in the department, after discussing the matter with the Department of Transport, as concerning the railway companies, and with the superintendent of insurance, as concerning the insurance companies and the trust companies, saw no good reason for refusing to submit their request to have the bill extended to them.

Mr. HAZEN: There is nothing in the bill to provide that proof must be given that the photographic film had been compared with the original document and found to be a true photograph of the document before the print could be put in evidence.

I do not know whether any consideration was given to that point. But I am not speaking of photographs of documents now; I am speaking of photographs I have seen at times, made with the intention of having them put in evidence, and I know that sometimes those photographs do not give a correct picture of what they are supposed to represent. It seems to me it might be advisable to have a provision in this bill that the affidavit which is made must state that the photographic film was compared with the original document and found to be a true photograph of the document. Has consideration been given to that?

Mr. ST. LAURENT: It was considered that the requirement contained here would be a sufficient guarantee that it was a photograph properly made of the original record. Subparagraph (i) provides that the copy may be used upon proof that:

(i) while such book, record, bill of exchange, promissory note, cheque, receipt, original instrument or document, plan, book or paper was in the custody or control of the bank, department, commission, board or branch, the photographic film was taken thereof in order to keep a permanent record thereof; and

(ii) the object photographed was subsequently destroyed by or in the presence of one or more of the employees of the bank, department, commission, board or branch or was lost or was delivered to a customer.

Mr. HAZEN: Yes; it says it was taken, but there is nothing that says they compared it.

Mr. ST. LAURENT: It was not considered necessary to go beyond that. They are the employees who are making these copies for the purpose of keeping a record of a thing to be destroyed; and it was thought that if they made an affidavit that they had taken the photograph for the purpose of keeping a record of the thing to be destroyed, and that it had been destroyed, that sufficiently established that they were not making a trick photograph.

Mr. HAZEN: Should it not say when it was taken? Should the date not be given to show that it was taken in the ordinary course of business? An unscrupulous person could take a fake photograph and then destroy the document when some trouble developed.

Mr. ST. LAURENT: That may be possible, but it was not considered that that was something that needed to be guarded against in enabling government departments or institutions to make microfilms of their records. One could conceive of a record being falsified. But this is for the purpose of enabling the compression of records into a smaller space.

Mr. BENCE: I am not very favourably impressed with the method of furnishing proof by means of photographs. It seems to me that the legislation went as far as it should when it was confined to the original draft, and I think it is a dangerous precedent to set to extend that. There is a possibility, as suggested by some hon. members, that a document might, for example, have had an erasure or mutilation which was cleverly covered up, and a photograph probably would not show that erasure or mutilation.

In addition, it provides that any employee of the company may give evidence of the fact that it was a photograph of the particular document. An office boy in any one of these companies could give that evidence. It is conceivable that some minor employees of a company might collaborate in endeavouring to deceive the courts in connection with such a thing. Furthermore there is no question that the old method of cross-examination which has been the backbone of our judicial system for so many ages would be completely done away with, and in addition there is no provision—although I thought the minister suggested it—that an affidavit would be taken at the time and filed with the film in order that proof might be adduced at a later date. Take an instance where proof might be required five or ten or fifteen years after the photograph was taken; what person could give evidence of the taking of the film? Suppose all the employees had left the institution by that time. Certainly the provisions of subsections 3 and 4 could be materially strengthened to provide that an affidavit should be furnished and filed with each film at the time it was taken, and then a notarial copy of the affidavit could be used if wanted ten or fifteen years afterwards.

Mr. ST. LAURENT: It must be realized that whoever destroys his original record is taking some risk. If he destroys a record and thinks he may at any time in the future be called upon to make evidence of it he is going to have this affidavit made at the time the original record is destroyed. That is the way it will work in practice. Those who are destroying records, in making their microfilms will file with the microfilm an affidavit of which a notarial copy can at any time in the future be produced to verify the correctness of the microfilm and enable them to make proof of it.

Mr. BENCE: A notarial copy by whom?

Mr. ST. LAURENT: A notarial copy of the original affidavit that will necessarily be made at the time the record is destroyed.

Mr. BENCE: The bill does not so provide.

Mr. ST. LAURENT: If the hon. member were the manager of a company that was going to rely upon this film and authorized the destruction of an original record, he would certainly want to have, contemporaneous with the destruction of the record, the thing that would be evidence at any time under the terms of the measure, and he would require those who were proceeding with the destruction of the record to make the affidavit at once. He would not take the risk even of waiting until the next day to have the affidavit made.

Mr. BOUCHER: On the other hand here we are extending to a person who wants to destroy an original document the privilege of substituting a form of proof in its place. We are not merely saying the substituted form of proof shall be prima facie evidence; we are saying it shall be admissible as evidence.

Mr. ST. LAURENT: As evidence of the thing it replaces, not as evidence of the facts.

Mr. BOUCHER: But we are giving them the privilege of having that as evidence of the thing it replaces without any way of checking as to whether a comparison was made of the photograph with the original document, or when the affidavit was made. My opinion is that in this day and age we are getting rather loose with affidavits. With the present custom of requiring affidavits and declarations almost to the filling of your

individual teeth, the affidavit is becoming, I fear, a very common and rather sloppy method of proof. We are leaving the door open. We are not saying that the court may, in adjudicating on a matter, say, "I have some doubt on this, it not having been proven that a comparison was made with the original document and that the affidavit was made at the time that comparison was made".

We leave much to the vagaries of mortal man. In the case of the banks particularly, if a lawyer is filing a proof of probate he makes a notarial certificate that he has compared this document with the original one. He puts his notarial seal on it. The banks almost invariably insist upon getting the original probate as well as the notarized copy and comparing them before they will even accept the notarial certificate. So that if we were to deal with the request of those who ask for this legislation on the basis of the policy they themselves adopt, we would see at once the danger involved in granting their request. I submit we should proceed with extreme caution, and should at least require the filing of the affidavit almost immediately after the document has been compared with the original. Before it could be admitted as evidence, or even as prima facie evidence, such circumstances should be proven to the court.

Section stands.

Progress reported.

On motion of Mr. Mackenzie (Vancouver Centre) the house adjourned at 6.03 p.m.

Monday, May, 25, 1942

The house met at three o'clock.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

LABOUR CONDITIONS—LAY-OFF AT STELLARTON, N.S., COAL MINE

Mr. McCULLOCH:

1. Has the Minister of Labour been notified in respect to a lay-off of men at the Allan shaft, Stellarton, Nova Scotia?
2. How many men were affected by such lay-off?
3. What caused the lay-off?
4. What action, if any, has been taken to pay unemployment insurance to these men?

Mr. MITCHELL:

1. Yes.

2. Approximately 400.

3. An explosion occurred which damaged the shaft making it impossible to continue to work until the damage was repaired. The provincial mine department is investigating the accident and a report has not yet been received as to the cause.

4. Men whose employment is temporarily interrupted will be paid any benefits they are entitled to under the Unemployment Insurance Act.

JAPANESE NATIONALS—LAND LICENCES

Mr. STIRLING:

1. How many licences have been granted by the Minister of Justice pursuant to order in council P.C. 1457 to persons of Japanese race or to Japanese controlled companies, (a) to acquire land: (b) to hold land; (c) to hold crop-share agreements; (d) to acquire or hold any other interest in land or growing crops?
2. What investigation does the Minister of Justice make before granting a licence pursuant to this order in council?
3. In which constituencies have licences been granted and how many in each such constituency?

Mr. ST. LAURENT:

1. None.

2. If the person of the Japanese race to whom the land is to be transferred was actually in or ordinarily resident in a protected area in British Columbia at the time of the orders of the Minister of Justice to evacuate such area, the Minister of Justice requires the approval of the British Columbia security commission and of the attorney general of the province in which the land is situate before any licence will be granted pursuant to order in council P.C. 1457 of February 24, 1942. If the person of the Japanese race to whom the land is to be transferred was resident outside of the protected areas, the Minister of Justice requires the approval of the attorney general of the province in which the land is situate. In either case, if the Minister of Justice is not satisfied, he may require an investigation to be made by the Royal Canadian Mounted Police.

3. Not applicable.

OFFERS OF SERVICE IN WAR EFFORT

Mr. BRUCE:

1. Have the names of those who have offered their services to the government in various capacities in connection with Canada's war effort, been kept in files and properly card-indexed as to qualifications?
2. If so, are these files referred to before special appointments are made?

Mr. THORSON:

1. Yes.

2. Frequent reference has been made to these files. Whenever the civil service commission or any department of government requests information from these records, such information is forthwith furnished.

UNIFORM COMPANY REG'D—KHAKI DRILL JACKETS

Mr. ROY:

1. Has the government awarded a contract for khaki drill jackets to the Uniform Company Reg'd. of Quebec?
2. If so, (a) for what quantity, (b) at what price per unit?
3. Has there been an increase in the initial price of this contract? If so, what was the increase and what was the total cost of the contract?
4. Who is the owner, president or manager of the company, and where is his office located?

Mr. HOWE:

1. Yes. Contract No. A21-B-73, serial 2-110416 was awarded to the Uniform Company Reg'd, on October 16, 1941, as the result of tender. P.C. No. 7777.

2 (a) 135,000 jackets, khaki, drill.

(b) It is the policy of the department not to give unit prices.

3. (a) No.

(b) Total contract amount, $399,129.45.

4. It is our information that Mr. Morris Pollack is the president of this company which is located in Quebec city, Que.

CONTRACTS TO CANADA PACKERS

Mr. CASTLEDEN:

What is the total value of all contracts let to Canada Packers by the government from September 30, 1939, to March 31, 1942?

Mr. HOWE: $13,257,544.

NATIONAL FILM BOARD—IRVING JACOBY

Mr. ROSS (Souris):

1. Is Irving Jacoby now in the employ of the national film board?
2. If so, in what capacity?
3. On what date was he appointed to his present position?
4. What in detail are the duties he performs?
5. Is he in receipt of a yearly, monthly or weekly salary or is he employed on a fee or commission basis?
6. Is he a British subject and, if not, of what country is he a national?
7. What is the total amount he has received, (a) in salary, fees or commissions, and (b) for travelling expenses from the date of his appointment to his present position to the present date?
8. Before he was employed in this present position what steps, if any, were taken by the national film board or its officers to ascertain whether any Canadian-born British subject with appropriate qualifications and experience was available to fill the position now occupied by Mr. Jacoby?
9. On whose recommendation was Mr. Jacoby appointed to his present position, and was the approval of the national film board sought prior to his appointment?
10. Was the position now filled by Mr. Jacoby established with the approval of treasury board prior to his appointment?
11. At any time, was Irving Jacoby associated directly or indirectly with the Film Centre, London, England, while the present government film commissioner was chairman of that organization?
12. Is he now associated with an organization in New York city known as the American Film Centre?
13. If so, in what capacity?
14. Is the present government film commissioner associated in any capacity with that organization?
15. If so, in what capacity?

[Mr. Thorson.]

Mr. THORSON:

1. Yes.
2. Film producer and liaison officer in respect of groups of films produced by the national film board, which require assistance and cooperation with United States organizations in New York.
3. Appointed for duties outlined in answer to question 2, February 28, 1942.
4. Acts on behalf of the national film board in respect of production needs, and as liaison officer respecting personnel, supplies, and laboratory needs in New York; in addition acts as liaison officer with the various civic, state and federal government agencies in New York, and such additional duties as the government film commissioner might specify.
5. Weekly salary basis.
6. (a) No; (b) United States citizen.
7. (a) $650 U.S. funds; (b) None.
8. None. Mr. Jacoby's wide experience in documentary film production and his intimate knowledge of personalities and of production, distribution and equipment companies in New York make him of invaluable assistance to the national film board. His previous production experience on behalf of the national film board at the Canadian government motion picture bureau between December, 1939, and July, 1940, familiarized him with Canadian needs and methods. The post he fills is one which requires a familiarity with persons and organizations, private and governmental, in New York which only one long active in the film field in New York could be expected to possess.
9. (a) Government film commissioner; (b) No.
10. No.
11. No.
12. No.
13. See answer to question 12.
14. No.
15. See answer to question 14.

AIR OBSERVER SCHOOLS

Mr. POWER: Mr. Speaker, in order that the matters to which I wish to refer may be in proper sequence, I should like to file and have inserted in *Hansard* answers to certain questions which were put to me by the hon.

member for Lake Centre (Mr. Diefenbaker) on May 12, at pages 2357 and 2358 of *Hansard* during the course of the discussion on the war appropriation bill. Copy of these replies has been handed to the hon. member for Lake Centre, and I may say that he has no objection to the questions and answers being placed on *Hansard*. It is a long series of questions which were put to me, and I undertook to reply to them. I think it would be just as well if they could be placed on *Hansard* in the section dealing with questions and answers.

Mr. HANSON (York-Sunbury): Would the minister indicate their purport?

Mr. POWER: They deal with civilian air observer schools.

Mr. HANSON (York-Sunbury): Yes, I know, but what is the effect of the answers?

Mr. POWER: They cover many pages.

Mr. HANSON (York-Sunbury): Do they not indicate that the statements of the hon. member were in the main correct?

Mr. POULIOT: That may be discussed afterwards. The practice is very good.

Mr. HOMUTH: Who is running this house?

Mr. SPEAKER: With the consent of the house the questions and answers will be inserted in *Hansard*.

(The questions and answers follow):

1. How many air observer schools are in operation in Canada?

Ten schools.

2. Where are said schools located?

No. 1—Malton, Ont.
No. 2—Edmonton, Alta.
No. 3—Regina, Sask.
No. 4—London, Ont.
No. 5—Winnipeg, Man.
No. 6—Prince Albert, Sask.
No. 7—Portage la Prairie, Man.
No. 8—Ancienne Lorette, Que.
No. 9—St. Johns, Que.
No. 10—Chatham, N.B.

3. Are any of the said schools owned or operated by the government or the Royal Canadian Air Force?

No.

4. What companies operate each of said schools?

No. 1—Dominion Skyways (Training) Ltd.
No. 2—Canadian Airways (Training) Ltd.
No. 3—Prairie Flying School, Ltd.
No. 4—Leavens Bros. (Training) Ltd.
No. 5—Winnipeg Air Observer School, Ltd.
No. 6—Prince Albert Air Observer School, Ltd.
No. 7—Portage Air Observer School, Ltd.
No. 8—Quebec Airways (Observers) Ltd.
No. 9—Dominion Skyways (Observers) Ltd.
No. 10—Northumberland Air Observer School, Ltd.

5. What is the capitalization of each of said companies?

$50,000.

6. When did each of said schools commence operation?

No. 1—27th May, 1940.
No. 2—5th August, 1940.
No. 3—16th September, 1940.
No. 4—25th November, 1940.
No. 5—6th January, 1941.
No. 6—17th March, 1941.
No. 7—28th April, 1941.
No. 8—30th September, 1941.
No. 9—7th July, 1941.
No. 10—21st July, 1941.

7. Who is the manager, assistant manager and secretary-treasurer and/or treasurer in each of said schools, and what salary does each receive?

No. 1—Manager, W. A. McLeod, $5,400; Asst. Treas., W. R. Stephens, $2,700.

No. 2—Manager, W. R. May, $5,850; Asst. Treas., W. L. Parr, $3,250.

No. 3—President and General Manager, R. W. Ryan, $6,000; Sec.-Treas., G. T. Connor, $1,300; Assistant Sec.-Treas., R. L. Bamford, $3,000.

No. 4—President, C. R. Leavens, $7,180; Treasurer, D. W. Forrester, $4,000; Secretary, B. A. O'Brien, $600.

No. 5—Manager, D. S. Ormond, $7,200; Asst. Treas., A. M. Olafson, $2,400.

No. 6—Manager, R. Mayson, $5,400; Asst. Manager, A. R. Eddie, $3,600; Sec.-Treas., H. Holroyde, $3,600.

No. 7—Gen. Manager, A. M. Berry, $6,000; Treasurer, J. R. Giles, $3,600.

No. 8—Gen. Manager, G. R. Beck, $5,700; Asst. Treas., S. J. Billings, $3,600.

No. 9—Gen. Manager, W. Woollett, $6,300; Treasurer, G. H. Turpin, $3,300.

No. 10—Gen. Manager, R. H. Bibby, $6,000; Sec.-Treas., A. B. MacKinnon, $4,000.

8. How much did each of said companies receive every lunar month since it commenced operations as the management fee and what expenditures were made by each under this head for each lunar month since commencement to date?

(a) $2,700 per lunar month.

(b) Lunar month ending (as follows):

	No. 1	No. 2	No. 3	No. 4	Period ending	No. 5	No. 6	No. 7	No. 8	No. 9	No. 10

13. Do any of the said companies operate directly or indirectly as subsidiaries of other companies? If so, give particulars?

No. 1 A.O.S. Malton, operated by Dominion Skyways (Training) Ltd. subsidiary of Canadian Pacific Air Lines, Limited.

No. 2 A.O.S. Edmonton, operated by Canadian Airways (Training) Ltd. subsidiary of Canadian Pacific Air Lines, Limited.

No. 3 A.O.S. Regina, operated by Prairie Flying School, Ltd., was subsidiary of Prairie Airways, Ltd.—now independent.

No. 4 A.O.S. London, operated by Leavens Bros. (Training) Ltd. sponsored by Leavens Bros. Air Services, Ltd.

No. 5 A.O.S. Winnipeg, operated by Winnipeg Air Observer School, Ltd. subsidiary of Canadian Pacific Air Lines, Ltd.

No. 6 A.O.S. Prince Albert, operated by Prince Albert Air Observer School, Ltd.—an independent company.

No. 7 A.O.S. Portage la Prairie, operated by Portage Air Observer School, Ltd. subsidiary of Canadian Pacific Air Lines, Limited.

No. 8 A.O.S. Ancienne Lorette, operated by Quebec Airways (Observers) Ltd. subsidiary of Canadian Pacific Air Lines, Limited.

No. 9 A.O.S. St. John P.Q., operated by Dominion Skyways (Observers) Ltd. subsidiary of Canadian Pacific Air Lines, Limited.

No. 10 A.O.S. Chatham, N.B., operated by Northumberland Air Observer School, Limited —an independent company.

14. Did any of the said companies make payment of any sums to a parent company out of the moneys received from the government as management fee? If so, (a) what are the names of the said companies? (b) What was the total amount paid by said companies to the parent company?

The following operating companies have paid to their parent companies, out of the fixed management fee, the amounts set opposite their names to cover the estimated cost of procuring skilled personnel (both flying and ground trades) exercising general supervision, supplying certain extra tooling equipment, as well as to reimburse travelling and legal expenses and to cover secretarial duties, vide, evidence submitted before the parliamentary committee of enquiry.

No. 1 A.O.S.—Dominion Skyways (Training) Limited, $12,000.

No. 2 A.O.S.—Canadian Airways (Training) Limited, $11,000.

No. 3 A.O.S.—Prairie Flying School, Ltd., $2,500.

No. 4 A.O.S.—Leavens Bros. (Training) Limited, $10,500.

No. 5 A.O.S.—Winnipeg Air Observer School Limited, $8,500.

No. 7 A.O.S.—Portage Air Observer School Limited, $6,000.

No. 8 A.O.S.—Quebec Airways (Observers) Limited, $3,500.

No. 9 A.O.S.—Dominion Skyways (Observers) Limited, $5,000.

15. What undivided profits if any remain in the hands of the said companies as the last statement or report given to the government?

Answered by No. 10.

16. What profit per flying hour is provided in the agreement between the government and each of the said companies? Has any reduction thereof taken place? If so on what date and does such reduction apply and is it being accepted by all the said companies?

The contract originally provided $1 profit per flying hour. As increased pupil population demanded increased flying hours, the profit was reduced to 35 cents per flying hour, effective as from 1st June, 1941. All companies volunteered reduction and contracts were amended accordingly, on 6th October, 1941.

17. Was reduction from $1 to 35 cents per hour recommended by war expenditure committee incorporated in new agreement?

Answered by No. 16.

18. When were new contracts drawn up?

Answered by No. 16.

19. Is there any control over the profits of these companies?

Answered by No. 16.

20. On what dates were the 6 companies now owned by C.P.R. taken over from original companies?

Canadian Pacific Air Lines Limited completed the purchase of the controlling interest of the holding companies on 19th December, 1941.

21. Was there a new A.O.S. contract drawn up in April, 1942?

No.

22. Do shareholders get a 5 per cent dividend?

Companies are authorized to pay 5 per cent per annum on subscribed capital.

QUESTIONS PASSED AS ORDERS FOR RETURNS

R.C.A.F. TRAINING CENTRES

Mr. WINKLER:

1. How many training schools are there under the Royal Canadian Air Force?

2. Of these, how many are located in centres possessing other war industries, and what are the names of these centres?

3. Have any bonus or consideration or anything in the form of services been offered by civic corporations to the government in order to assist or induce the construction of air training centres?

4. If so, what are these and where?

RECRUITING AND MILITARY TRAINING IN SASKATCHEWAN

Mr. BLACKMORE:

1. How many men have been recruited for the army in the province of Saskatchewan during the present war?

2. How many soldiers of the active Canadian army are being trained in Saskatchewan in 1942?

3. What was the maximum number of soldiers being trained in Saskatchewan during each of the years 1939, 1940 and 1941?

MEMBERS OF PARLIAMENT SENT OUTSIDE CANADA

Mr. SHAW:

1. Were any members of parliament sent outside of this country by or for the dominion government since the beginning of this session?

2. If so, who were they? Where have they been sent? How long have they been away from this country? What were their duties, remuneration, living allowances and travelling expenditures?

Mr. POWER: I should like to make an inquiry of the hon. member who is asking this question. Does he intend his question to cover members of parliament who are overseas with the armed forces? In any case the question will be passed as an order for return, but I should like to know whether the hon. member wants that information.

Mr. SHAW: I did not have that in mind when asking the question.

Mr. POWER: It will be passed as an order for return with the limitation that it will not include members of parliament who are overseas with the armed forces.

Mr. SHAW: Yes.

CANADIAN ARMY—CONDITIONS IN DETENTION BARRACKS

Mr. CHURCH:

1. What action is the government taking with regard to conditions at detention barracks of those who belong to his majesty's forces in Canada and are any improvements to be carried out in the near future?

[Mr. Power.]

2. Will any departmental investigation be undertaken as to treatment, training, accommodation and feeding of these soldiers while under sentence in military prisons and detention barracks?

NATIONAL FILM BOARD—WESLEY GREENE

Mr. FRASER (Peterborough West):

1. Is Wesley Greene employed by the national film board?

2. If so, in what capacity?

3. When was he first employed by the national film board?

4. In what capacity?

5. On what date did his present appointment commence?

6. Is he a citizen of the United States of America?

7. At the time of his first appointment, was he the owner or part owner and/or manager of either the College Film Center or the International Film Center or both?

8. Are these two organizations, or either of them, engaged in the commercial enterprise of selling and distributing films in the United States?

9. Is he still associated with the ownership and management of either or both of these organizations?

10. If so, in what capacity?

11. At any time since the first engagement of Wesley Greene by the national film board have either the College Film Center of Chicago, Ill., U.S.A., or the International Film Center of Chicago, Ill., U.S.A., been engaged in the sale or rental of copies of films produced by the national film board?

12. At any time was either of these two organizations granted any form of exclusive rights to sell and rent copies of films produced or released by the national film board in any part of the United States?

13. Are either of these organizations now engaged in the sale or rental of copies of films produced by the national film board, and do they, or either of them, now enjoy exclusive rights to the sale or distribution of copies of such films in any part of the United States?

14. Between August 1, 1941, and January 31, 1942, did Wesley Greene make his headquarters in Chicago, Ill., U.S.A.?

15. During that time, or any part of it, was he directly associated with the management of the College Film Center or the International Film Center?

16. Between August 1, 1941, and January 31, 1942, was he in receipt of a regular monthly or weekly salary or fee from the national film board?

17. If so, what was the amount?

18. In addition to any such salary or fee, did he, during this period, receive any commission on the sale or rental of copies of films produced or released by the national film board?

19. What was the total amount paid to him by the national film board for travelling expenses between August 1, 1941, and January 31, 1942?

20. Was he in receipt of living expenses while in Ottawa during this period?

21. If so, what is the total amount paid to him?

22. On what date did he enter Canada to accept his present position?

23. Did he enter Canada as an immigrant or as a United States citizen accepting employment in Canada?

24. Was he granted a permit to enter Canada as a United States citizen to accept employment?

25. If so, on what grounds and for what period?

26. Before such permit was granted, what steps, if any, were taken by the immigration authorities to ascertain whether any British subject, resident in Canada, with appropriate experience and qualifications was available to fill the position which Wesley Greene entered Canada to accept?

27. Was the position of supervisor of film distribution of the national film board established prior to the appointment of Wesley Greene?

28. If so, on what date?

29. If previously established, was this position filled prior to the appointment of Wesley Greene?

30. If so, by whom and at what salary or fee?

31. When did the previous incumbent of the position cease to be employed and for what reason?

32. Has the previous incumbent of the position of supervisor of film distribution been reemployed by the national film board and, if so, on what date was he first so reemployed, in what capacity and at what salary?

33. Is the employment of Wesley Greene temporary?

34. If so, for what period?

35. If not temporary or for a stated period, is it the intention of the national film board to advertise the position and fill it by competitive examination or will the board seek authority to confirm Wesley Greene in the position either permanently or for an indefinite period without affording others who may possess the appropriate experience and qualifications an opportunity to qualify for appointment?

CANADIAN ARMY—OFFICERS

Mr. CASSELMAN:

1. How many of the officers on the reserve list at the outbreak of war now hold commissions in the Canadian army?

2. Of the above how many are, (a) active army, (b) reserve army?

VICTORY LOANS—PICTOU COUNTY, N.S.

Mr. BLACK (Cumberland):

1. What were the (a) salaries, (b) commissions, (c) expenses, incurred in Pictou county, Nova Scotia, in connection with each of the last two victory loan campaigns?

2. To whom were such payments made?

3. What was the total amount subscribed in Pictou county, Nova Scotia, in each campaign?

ADJUTOR SAVARD

Mr. FRASER (Peterborough West):

1. What position did Adjutor Savard hold with the R.C.A.F. overseas?

2. What were the duties of that position?

3. What were his qualifications for that position?

4. What salary and/or pay and allowances did he receive?

5. Is he still connected with the R.C.A.F.?

6. If so, what duties is he performing?

7. What salary and/or pay and allowances does he receive?

8. Did he complete the duties for which he was sent to England?

9. If so, why has he been brought back to Canada?

10. What results, if any, were achieved by his mission in England?

11. Has his position overseas been fitted by the appointment of any other person?

12. If so, by whom has it been filled?

Mr. FRASER (Peterborough West):

What is the total amount which has been paid to Adjutor Savard from the public treasury for any duties performed by him for any department of the government since October 23, 1935, specifying the amount paid by each department and the services rendered in each instance?

NATIONAL FILM BOARD—WALT DISNEY PRODUCTIONS, INC.

Mr. MacKINNON (Kootenay East):

1. How many films have been produced for the national film board by Walt Disney Productions, Inc., of Hollywood, California?

2. What is the name of each such film, its length and its total cost including all positive prints supplied to the national film board?

3. For what government department or governmental organization was each such film produced and for what purpose?

4. What government department or governmental organization defrayed the cost of each such film and from what vote or appropriation was the cost of each such film defrayed?

SIR EDWARD PEACOCK AND SIR ARTHUR SALTER

Mr. POULIOT:

1. Was the hon. Minister of Finance in Ottawa on or about June 25, 1941?

2. If not, was there at the time an acting Minister of Finance?

3. If so, was it the hon. Minister of National Defence?

4. If so, did he meet either Sir Edward Peacock or Sir Arthur Salter, or both, around that time?

5. Were Sir Edward Peacock and Sir Arthur Salter also met on that or on other occasions by the hon. Minister of Munitions and Supply in United States or in Canada, or in both countries?

MOTIONS FOR PAPERS

BUILDING OF STAFF AND PREFABRICATED HOUSES

Mr. NICHOLSON:

For a return showing plans, specifications and other details prepared by national housing administration, with a view to building staff houses and prefabricated houses prior to the incorporation of Wartime Housing Limited.

PENSIONS—MERCHANT SEAMEN AND SALT-WATER FISHERMEN

Mr. GILLIS:

For a copy of all correspondence, telegrams, recommendations, orders in council and other documents passing between the Department of Pensions and National Health and the treasury branch, relative to the inclusion of merchant seamen and salt-water fishermen under the terms of the Canadian Pensions Act.

Mr. ILSLEY: It has not been the practice to include interdepartmental correspondence in returns brought down to the house, and I shall have to take exception to the part of the motion calling for such correspondence.

Mr. SPEAKER: Carried with the reservation stated.

NATIONAL FILM BOARD—A. G. MCLEAN

Mr. STOKES:

For a copy of all correspondence, reports or other documents in the possession of the Minister of National War Services, the Minister of Trade and Commerce, the Deputy Minister of National War Services, the Deputy Minister of Trade and Commerce or any other official of either department, the Prime Minister, the Minister of Mines and Resources, the civil service commission or any official thereof, the national film board or any official thereof, with reference to the appointment, assignment or loan of A. G. McLean to the position of secretary and controller of the national film board.

Mr. THORSON: There would be a limitation as to documents that may be privileged communications; otherwise there is no objection to the motion passing.

Mr. HANSON (York-Sunbury): What particular privilege would attach to anything like this? It simply calls for correspondence with reference to the assignment or loan of a particular person to the position of secretary and controller of the national film board.

Mr. THORSON: There might, for example, be communications between the minister and his deputy, or vice versa. Communications between departments relating to the assignment or loan of Mr. McLean might be quite in order.

NATIONAL FILM BOARD—EMPLOYMENT OF STAFF

Mr. STOKES:

For a copy of all rulings made by treasury board since November 1, 1940, on the question whether the National Film Board Act gives authority for employment of staff without prior approval of the establishment by treasury board and also on the question whether the National Film Board Act should be interpreted as applying to persons employed casually for the duration of individual projects and not to any person continuously employed.

[Mr. Pouliot.]

Mr. THORSON: Stand.

Mr. HANSON (York-Sunbury): Why does the minister ask that this motion stand? If there is a ruling of the treasury board, we should have it. It is a public document.

Mr. THORSON: My understanding is that rulings of the treasury board may be privileged. Minutes of the treasury board may not be.

Mr. HANSON (York-Sunbury): I dissent from that. A ruling of the treasury board is a public document.

Motion stands.

GOVERNMENT FILM COMMISSIONER

Mr. ROSS (St. Paul's):

For a copy of all reports made by John Grierson to the government or any minister or official thereof prior to his appointment as government film commissioner.

HONG KONG COMMISSION—GEORGE DREW

Mr. POULIOT:

For a copy of the order in council for the appointment of Mr. George Drew as the representative of the hon. leader of the opposition on the Hong Kong probe.

Mr. POWER: Carried.

Mr. HANSON (York-Sunbury): I should like to make one observation with respect to this motion. Colonel George Drew was appointed not by order in council but by the Chief Justice of Canada, who had asked me to nominate counsel for the inquiry. I have the correspondence.

Mr. POWER: I had forgotten. I quite agree with the leader of the opposition that that was the case.

Mr. SPEAKER: Dropped.

Mr. POULIOT: Can a motion be dropped after it has been carried?

Mr. POWER: If my hon. friend insists, he will have the report anyway.

Motion dropped.

FUEL OIL

RESTRICTIONS ON USE—FOR HEATING PURPOSES

On the orders of the day:

Mr. KARL K. HOMUTH (Waterloo South): In view of the answer given to me by

the Minister of Munitions and Supply a few days ago with respect to the restrictions on the use of fuel oil, and the subsequent modification of his statement and the protests that I and others have made as a result of the minister's announcement, may I ask him if some time this week he would give the house a complete clarification of the whole order so that people will be in a position to make their own heating arrangements in accordance with the situation as then outlined?

Hon. C. D. HOWE (Minister of Munitions and Supply): No order as yet has issued from the oil controller's office on this subject, but I expect that an order will issue very shortly. At that time I shall be very glad to make a statement to the house and to clarify the situation as much as possible.

GASOLINE

REDUCTION IN VALUE OF RATION COUPONS IN MARITIME PROVINCES

On the orders of the day:

Hon. R. B. HANSON (Leader of the Opposition): May I ask the Minister of Munitions and Supply whether he will reconsider the position with respect to the limitations imposed on the eastern provinces in gasoline rationing? I find that there is a good deal of uninformed criticism—I will put it that way—of the minister's action. I have not joined in the hue and cry after the oil controller because I think I understand the position; but it would be, I think, in the interests, shall I say, of national unity if that situation were corrected as soon as possible. May I ask the minister whether he and the oil controller will give consideration to the fact that the coupon holders have lost 60 per cent of what may be a very limited supply of gasoline left to them? Perhaps, should conditions warrant, some arrangement may be made to make up that loss to the coupon holders.

Hon. C. D. HOWE (Minister of Munitions and Supply): The purpose of rationing is to divide available supplies of gasoline as fairly as possible. The situation in the Halifax refining area permits only a certain amount of gasoline to be available, which in the opinion of the oil controller warrants the present allowance per coupon. I do not know that anything more can be done to divide more fairly, pending an increase in supply being available. It has been suggested that we let the coupons stand and allow the dealers to ration. We tried that before rationing came in, and there was a great deal of objection to it from hon. members. It is the only alternative I know of. That would, of course, mean first come first served, and a great many people would not be able to get gasoline for their coupons. In our opinion the present method is the fairest, and until supplies are more abundant there is nothing very much we can do about it.

Mr. HANSON (York-Sunbury): Certain wholesale dealers in the maritime provinces say they have on hand an ample supply of gasoline. It was reported to me that one man had three million gallons in storage.

Mr. HOWE: If that is the case I shall be very glad to take appropriate action.

Mr. HANSON (York-Sunbury): I will give the minister his name.

Mr. HOWE: I should be glad to have it; but I am confident that no such supply exists. The situation has been canvassed very carefully.

WAR APPROPRIATION BILL

AMENDED SCALE OF PAY AND ALLOWANCES FOR NAVAL SERVICES

On the orders of the day:

Mr. A. H. BENCE (Saskatoon City): I wish to address a question to the Minister of National Defence for Naval Services. On May 8 the minister advised the committee, concerning his estimates on the appropriation bill, that he would place on *Hansard* the amended scale of pay and allowances with respect to the naval services. So far as I am aware that has not been done. Could the minister give us that information? We have similar information already in connection with both the army and the air force.

Hon. ANGUS L. MACDONALD (Minister of National Defence for Naval Services): I am glad my hon. friend raised that point. I tabled rates of pay on the date promised, two weeks ago to-day, and it was only this morning that, looking over *Hansard* for that day and the day following, I observed that this information had not been placed on *Hansard*. Apparently it was felt that tabling the information was the appropriate way of answering the question, as on an order for return, but I will speak to the Clerks and see that the figures appear in *Hansard* to-morrow.

BUSINESS OF THE HOUSE

VICTORIA DAY

On the orders of the day:

Mr. JEAN FRANÇOIS POULIOT (Témiscouata): As this is Victoria day, sir, may I ask the leader of the house if we shall sit to-night?

Mr. CRERAR: Yes, it is the intention that the house shall sit.

LABOUR CONDITIONS

BANQUE CANADIENNE NATIONALE—STRIKE OF EMPLOYEES

On the orders of the day:

Mr. WILFRID LaCROIX (Quebec-Montmorency): May I direct a question to the Minister of Labour? What have been the results of the intervention of the department in connection with the strike of employees of the Banque Canadienne Nationale in Montreal to secure justice from their employers?

Hon. HUMPHREY MITCHELL (Minister of Labour): Mr. Speaker, this question was raised by the hon. member for Vancouver East (Mr. MacInnis) on May 14, when a strike had been called of the employees of this bank. On that occasion I pointed out that a dispute of this kind did not come within the jurisdiction of the federal Department of Labour. However, we have always endeavoured in every way possible to compose differences between employers and employees, and we sent in a conciliation officer in the hope of arranging a satisfactory settlement. He was able to arrange for a conference between the organization and the bank manager; unfortunately the manager was not willing to continue with the negotiations.

Mr. HOMUTH: He looked with his glass eye, did he?

Mr. MITCHELL: I do not know whether he has a glass eye; the hon. member probably knows him better than I do. I said at that time I regretted that in this day and age such a position should be taken, but in view of the lack of authority and jurisdiction on the part of the federal government the matter was one for the government of the province of Quebec to deal with. I do think it is regrettable that the negotiations could not have been continued so that an amicable settlement might have been made of the dispute.

PETROLEUM

REPEAL OF PETROLEUM AND NAPHTHA INSPECTION ACT

Hon. C. W. G. GIBSON (Minister of National Revenue) moved the third reading of Bill No. 2, to repeal the Petroleum and Naphtha Inspection Act.

Hon. R. B. HANSON (Leader of the Opposition): Mr. Speaker, I understand that in my absence the minister turned a cold and stony eye on the observations I made on a previous occasion with regard to this bill. I assume he considered the matter carefully with the officials of the branch of his department concerned. I had hoped that they would find some merit in the observations I then made. I still think they had merit. I still believe the day will come when it would be useful to have preserved some of the powers which I suggested should be preserved.

Motion agreed to and bill read the third time and passed.

INCOME AND CORPORATION TAX

AGREEMENT WITH PROVINCES—COMPENSATION FOR VACATING TAX FIELDS AND ARRANGEMENTS FOR SUBSIDIES

Hon. J. L. ILSLEY (Minister of Finance) moved the second reading of Bill No. 16, to authorize the governor in council to enter into agreements with the governments of the provinces of Canada respecting the vacation by the provinces of the personal income and corporation tax fields for the duration of the war.

He said: This bill received its first reading on March 23. There was very little discussion at that time because the house was requested to defer discussion until the bill was in committee on its second reading. At various times, however, the house has had an opportunity of discussing the general principles of the bill.

During the budget debate last year there was some discussion of the general principle. Then again there was discussion when vote 476 of the supplementary estimates for the last fiscal year was passed by the house. During the present session of parliament, various questions have been asked and statements made in regard to the dominion-provincial tax agreements, and the agreements themselves together with the correspondence with the provinces in regard to the agreements have been tabled.

Mr. HANSON (York-Sunbury): The completed agreements?

Mr. ILSLEY: Yes.

Mr. HANSON (York-Sunbury): Not the draft agreements?

Mr. ILSLEY: No. I think the complete agreements have been tabled; in fact I am sure that they have.

Vote 476 in itself constituted authority to enter into these agreements and to make the payments required thereby, excepting any payments arising out of the guarantee of provincial receipts from gasoline taxes. It had been the intention of the government to submit an estimate in each succeeding year for the term of the agreement covering the exact payments to be made to each province including any payments on account of the

gasoline tax revenues. It will be remembered, however, that one of the provinces raised the question that while in signing the agreement it would be binding itself for the full term of the agreement, the compensating payments to be made by the dominion would be dependent upon the passing of an annual vote in the dominion parliament. I therefore agreed to introduce the present bill which would give continuing statutory authority to make the annual payments required for the duration of the agreements.

With regard to the general principles, as I have intimated, there has already been a great deal of discussion of the general principles of this bill, and I think the house is wholly familiar with them. This should make it unnecessary for me to make an extended statement at this time. Perhaps, however, I may summarize the essential features of the legislation and of the agreements.

What the provinces are required to do is to vacate the personal income and corporation tax fields for the duration of the agreement, which will run until one year after the cessation of hostilities, although, as the house will remember, provision is made by which any province may terminate the agreement at the end of any fiscal year if notice of its intention to do so is given in writing to the Minister of Finance, thirty days before such date. Income and corporation taxes are carefully defined in the agreements. In general, corporation tax includes any tax or fee the imposing of which singles out for taxation or for discriminatory rates or burdens of tax, either formally or in effect, corporations or any class or classes of corporations or any individual corporation, but excludes certain bona fide and reasonable licences or fees and business or occupancy taxes, and certain other taxes imposed by municipalities. Income tax is defined to mean any tax imposed upon the net income of a corporation or upon the net income or gross income of an individual or partnership, and includes a poll or head tax based on income. In compensation for the vacation by the provinces of these tax fields, the dominion agrees to make certain annual payments and to give as well a guarantee of gasoline tax receipts.

In regard to the annual payments, the house will remember that the provinces were given two options. They might elect either to receive an annual payment equal to the actual cash revenues received by the province from the taxes temporarily suspended during the fiscal year of the province ended nearest to December 31, 1940; or alternatively to receive an annual payment equal to the cost of the net debt service actually paid by the province during its fiscal year ended nearest to December 31, 1940, not including contributions to sinking funds, less the revenue obtained from succession duties, during the said fiscal year. In addition, the offer I made in the budget provided that such annual payments might be augmented by providing fiscal need subsidies in cases in which it could be shown that these were necessary. This provision is implemented in the agreements which have been tabled in the house. The house will remember that the special amounts paid in recent years to the three maritime provinces and to Manitoba, Saskatchewan and British Columbia and which were voted annually by parliament were discontinued.

Finally, the agreement provides for a guarantee by the dominion of the amount of the net receipts by the province from gasoline taxes during its fiscal year ended nearest to December 31, 1940. I may add that agreements have already been entered into under authority of vote 476 of last year's supplementary estimates with all of the provinces except Quebec. In the case of Quebec, the provincial bill suspending income and corporation taxes and giving authority to the provincial government to enter into the agreement is either still before the legislature or has only recently been passed. It is my intention to sign the agreement with Quebec under the authority of the present bill, when it has been enacted, and when the necessary action has been taken by the province of Quebec, if it has not already been taken.

The bill itself is a simple instrument giving formal authority to the Minister of Finance, with approval of the governor in council, to enter into an agreement along the lines I have mentioned, with the government of any of the provinces of Canada and to make the payments and give the guarantees required. Two or three of the amounts contained in the agreement are incorrect in certain particulars. One of the amounts is incorrect because of a clerical error, and two of the others will have to be corrected to a very small extent by reason of small mistakes having been discovered since the bill was printed. Section 2 gives formal authority to enter into the agreements. It may be said that this section is unnecessary because of vote 476 passed last year, but I think it is desirable to have this formal authority set out in the terms of the statute. The statute is to be known as the Dominion-Provincial Taxation Agreement Act, 1942.

Section 3 provides continuing statutory authority to make annual payments to the provinces equal to the yield of the taxes temporarily suspended by the province, or

to the cost to the province of its net debt service in the fiscal year ended nearest to December 31, 1940, with the deduction that I have mentioned. In the case of five provinces, namely, British Columbia, Alberta, Manitoba, Ontario and Quebec, the option selected is the tax option, and the amounts payable are as shown in the bill, except that in the case of Manitoba the correct amount is $5,054,740.92 instead of $5,634,740.92. That is the clerical error which I mentioned. I should point out that the figures shown, like all other figures in the bill, represent the results of a careful audit of provincial books by an auditor appointed by the dominion for this purpose. The other four provinces, Nova Scotia, New Brunswick, Prince Edward Island and Saskatchewan, selected the debt option, and the amount paid to each of these provinces is as shown in the bill. I would, however, ask the house to note the proviso clause at the end of section 3. It will be noted that any arrears of personal income and corporation taxes collected by the province after the close of its fiscal year ended nearest to December 31, 1940, may, in accordance with and subject to the terms and conditions set out in the agreement, be deducted from the annual amount payable to the province. The amounts so deducted are to be paid to the provinces after the termination of the agreement.

The general effect of this proviso is to assure that each province will have revenues accruing to it during the year following the termination of the agreement, and that the revenues during the war years will not be abnormally inflated. It is obvious that after the agreement terminates it may take some little time to get started again the collection of personal income and corporation tax revenues, and were it not for this provision provincial revenues would therefore be unduly low in the first year following the agreement.

Clauses 11 to 15 of the agreement deal with the way in which annual payments are to be made by the dominion, and the terms and conditions under which the deductions are to be made. Reference to these clauses will facilitate an understanding of the precise meaning of the proviso clause in section 3 of the bill.

Section 4 of the bill provides for the payment of fiscal need subsidies during each year of the term of the agreement to the provinces of Nova Scotia, New Brunswick, Prince Edward Island, Manitoba and Saskatchewan. When this clause is under detailed consideration by the committee I shall explain the basis upon which these fiscal need subsidies have been calculated. I may point out however that in considering them the house should remember that the special grants previously voted annually to all the five provinces involved, as well as British Columbia, have been dropped. The amount of subsidy in the case of Nova Scotia should be $325,769.31 instead of the amount printed in the bill, $324,122.10.

Section 5 of the bill is the clause relating to the guarantee of gasoline revenue. The amounts set out after the names of the provinces represent the net receipts from the tax imposed by each province on the sale of gasoline during its fiscal year ended nearest to December 31, 1940, as determined by the dominion audit, except that the amount for New Brunswick should be $2,101,072.01 instead of the amount of $2,104,685.81 as shown in the bill. It is apparent that this section of the bill is going to prove a very important one for all provinces. In view of the increasingly severe war-time restrictions being placed on the use of gasoline and the shortage of rubber for rubber tires I am convinced that were it not for this tax agreement, including this particular clause, several at least of the provinces would inevitably have to face acute financial problems which presumably would have had to be solved otherwise by *ad hoc* solutions of a less fundamentally sound character.

Section 6 of the bill merely makes the payments to be made to the provinces pursuant to the agreements a charge upon the consolidated revenue fund and payable out of any unappropriated moneys forming part thereof.

Section 7 of the bill provides that the act shall be deemed to have come into force on March 15, 1942.

The bill by its nature is one which can be discussed more satisfactorily in committee of the whole house, and when we get into committee I shall try to answer any questions that may be asked by hon. members.

Hon. R. B. HANSON (Leader of the Opposition): The Minister of Finance has given us a rather meagre sketch of the provisions of this bill. As the subject is one which demands a great deal of study on the part of hon. members—and I trust they have studied these agreements—I desire to make some brief observations with regard to it, reserving detailed questions, as the minister has suggested, until we reach the committee stage.

It will be remembered that the genesis of this proposal was contained in the Rowell-Sirois report—in much larger form than the present arrangement; but that was its true origin. I assume every hon. member has read that report, especially the part relating to this

matter. Hon. members will recall that in consideration of the assumption by the dominion of the burden of unemployment relief and certain other social security measures, and of the deadweight cost of the provincial debt service, it was recommended in that report that the provinces should relinquish the tax on personal incomes and a multitude of other taxes levied principally against corporations, and succession duties. As hon. members know, the report itself proved abortive, or at least it was so treated that the proposals of the report were not adopted.

Now the minister has tried another scheme which as I apprehend it is not nearly so far-reaching as the recommendations of the Sirois report. But it is a very important matter. It strikes at one of the fundamental principles of our system of confederation. It constitutes a direct encroachment on the heretofore existing taxation rights of the provinces. I have no doubt that by certain of the provinces it has been agreed to with considerable reluctance. So far as my own province is concerned I would say that this agreement will be a benefit to it. The New Brunswick authorities have probably driven a rather good bargain with the minister; but there are some inequities and some inequalities with respect to the municipalities of that province, to which I have alluded on former occasions and to which I shall direct attention briefly this afternoon.

The question of the elimination of the provinces in the field of succession duties has been dropped. I regret that exceedingly. I am not an out-and-out proponent of the centralization theory, but it has its advantages. There should be one succession duty taxation measure in this dominion and one only. But that seems impossible of accomplishment. We have the spectacle in this country of the same dollar being taxed twice, if taxable at all; I could give examples of the same dollar of value being taxed at least three times. Of course that is only justified in the case of the dominion on the principle of necessity. I regret that the minister did not pursue his efforts to persuade the provinces to vacate the succession duty field. But I am aware of the extreme opposition that developed in certain provinces with respect to this important matter; they have looked upon that field of taxation as their own and are not willing to give it up.

These proposals in their present form certainly visualize the principle of encroachment upon provincial rights of taxation and upon the whole matter of provincial autonomy. I do not propose to raise any debate on that point. I know there are two schools of thought in this dominion, and that in some of the provinces provincial autonomy is adhered to very strongly. But there is no doubt that the vacation by the provinces of the field of direct taxation in relation to incomes of corporations in favour of the dominion is a very distinct change and one more step towards centralization. I do not object to that at the moment, although if it were to be permanent it would deserve a great deal of study at the hands of the membership of this house.

Of course it may be argued that there are compensations. Undoubtedly there are. And I warn the house that the compensations that will be payable under this measure and under these agreements will be very much larger than any that the minister visualized when he made his former statement. It will be recalled that in his budget speech of April 29, 1941, the minister referred at considerable length to his offer to the provinces. In doing so he mentioned the position taken in a budget speech by his predecessor, the present Minister of National Defence. He stated then that after the most careful consideration of all the questions involved, the government had reached the conclusion that the rates of personal and corporation income taxes should be raised by the dominion to the maximum levels which would be reasonable at this time, if the provinces were not in those fields. Their plans were drawn therefore on that basis, and in due course, he said, he would outline proposals to increase the minimum rates of corporation income tax to 40 per cent; to increase the rates of personal income national defence tax. Then he put upon the record what the concrete proposals were, as follows—

> —that the dominion will offer to pay each year for the duration of the war, to any province which, together with its municipalities, will temporarily vacate the personal income tax and corporation tax fields either
>
> (a) The revenues which the province and its municipalities actually obtained from these sources during the fiscal year ending nearest to December 31, 1940, or
>
> (b) The cost of the net debt service actually paid by the province during the fiscal year ending nearest to December 31, 1940 (not including contributions to sinking funds), less the revenue obtained from succession duties during that period.

Then he went on to say:

> Such payments will be augmented by appropriate fiscal-need subsidies where it can be shown that these are necessary.

And he made the further declaration—

> . . . it is proposed to discontinue the present special grants which are voted annually by parliament.

Those are grants arising in the case of the maritime provinces out of the Duncan report and the White report, and special provisions made for the province of British Columbia.

Mr. ILSLEY: And two others, namely, Saskatchewan and Manitoba.

Mr. HANSON (York-Sunbury): Yes; for the moment I had forgotten about them. Then the minister went on to emphasize that this was not an attempt to get the provincial tax field permanently. I have one observation to make in connection with this latter statement, and it is this, that having regard to the gigantic expenditures the dominion is obliged to make in respect to the war, I see no possibility of our vacating in any degree—at least, if at all, in a very minor degree—the high income tax rates we shall have to pay as the years roll by. We might as well face that situation. And if we are to have these high rates existing—and perhaps extended; who knows?—it would be the part of wisdom, taking the long range view, that some permanent arrangement should be made with the provinces to stay out of this field permanently. I offer that simply as a personal view, speaking on behalf of the taxpayers of this country, who, after all, have to bear the brunt of the whole thing. Of course I have no hope that anything I may say will have any influence in public policy with respect to the provinces. It is unthinkable that we should return to a system under which, on the same income, taxes would have to be paid three times. Such a condition would be unbearable; and it would not be the proper or the just thing to do.

Therefore I suggest to the minister that while he has emphasized the point that this is only temporary, at least from the federal point of view, we should look forward to its being part of the permanent tax structure of the country. I suggest there should not be a return on the part of the provinces, or of the municipalities through the power delegated to them by the provinces under appropriate legislation, to the collection by them of income and corporation taxes.

I said a minute ago that I thought an examination of the figures would indicate that the minister's previous estimates were low. Without giving effect to the minor corrections which the minister has pointed out to-day—which in respect of Manitoba, by the way, is not so minor, being somewhere in the vicinity of half a million dollars—it will be observed that the total payments to the five provinces which have adopted proposal (a) aggregate $71,316,083.17, while the total payments under proposal (b) to the four provinces which have taken the option of servicing of the net debt, less succession duties, is $10,457,124.10, or a total of $81,773,207.27. Then there has to be added a further payment to five provinces, the maritime provinces and the two central prairie provinces of Saskatchewan and Manitoba, the sum of $3,232,789.32, making a grand total payment of $85,005,996.59. Again there must be added, under a separate section of the bill, on the basis as stated, the amount calculated as equivalent to the net receipts of the province from the provincial gasoline tax during the fiscal year ending nearest December 31, 1940. In that connection the total gasoline tax guarantee is $56,738,519.76, and, as the minister had indicated, it may be much more than that. This makes a total possible commitment out of the dominion treasury of the huge sum of $141,744,516.45.

If hon. members will refer to the minister's budget speech of last spring they will find a table in which it is indicated that the minister estimated a net increase in dominion revenue, in a full year, as a result of the changes made in the income and corporation tax fields, of $90,000,000. That is, the difference between $155,000,000, the yield from increases in existing taxes, and the payments by ways of grants of $65,000,000, or $90,000,000. I suggest to him that the excess of actual payments over the estimate made by him, and the possible expenditures on the gasoline guarantee, have made very considerable inroads into that estimated increase in revenue. Therefore the result will be somewhat disappointing. Of course the whole thing is a war measure, and we are assured at the moment at all events, that it is temporary, that it is only for the duration and that upon giving notice any province may withdraw.

The true test from the standpoint of the taxpayer, the citizen of this country, is the effect upon him. The objective of course is to raise revenues for war purposes. After all, the taxpayer is entitled to some consideration from the point of view of how it may affect him. It never was intended to give him any relief, judging from the increased rates imposed by the federal budget of 1941. From the point of view of the taxpayer there is really no relief; but there is one circumstance to consider. There is only one tax gatherer, only one taxing master, and that is something for which he should be devoutly thankful, even though the amount of money which he has to pay has not been lessened in any degree—indeed has been increased.

I have referred to the policy of centralization. I doubt if the fathers of confederation

ever contemplated that we should go as far as we have gone even with this measure; but the fathers of confederation never contemplated that there would be a war of the calibre and character of the present war, or that the necessity for raising huge sums of money by way of taxation would be so pressing as it is to-day. I have stated already that I believe the present situation should continue permanently rather than for the duration of the war only. Of course that is something which does not lie directly within the province of this parliament; there are nine legislatures which are parties to this agreement and which would have to consent.

Mr. REID: They are doing so nicely that they are not likely to go back.

Mr. HANSON (York-Sunbury): The hon. member is an optimist. My own view is that the more money these people get the more they want and the more they want to spend, especially if it comes as easy as it does when it comes from the federal treasury.

Mr. REID: British Columbia is doing well.

Mr. HANSON (York-Sunbury): There is one quarrel—I will not dignify it by the use of the word "quarrel," but I would like to comment upon the fact that the figure is frozen at the 1940 level. This may raise some difficulty with the municipalities. I understand that in the negotiations with the provinces, or with some of them at least, the minister was inflexible on that point. I should like to point out to him the injustice of that position as I see it. The 1940 income tax returns for the municipalities of New Brunswick were based on 1939 incomes. The war began in September, 1939, and the increase in the national income as a result of war expenditures—I think we can all agree that the great increase in the national income has been largely the result of war expenditures—did not begin to filter down to the individuals who pay income tax until late in 1940 or perhaps in 1941. In my province, where we have no war industry, or no war industry of any calculable amount, very little of the increased national income has filtered down to the taxpayers of the province. I am giving New Brunswick as an illustration, but I believe the principle is much more applicable to provinces which have been receiving a greater portion of the national income than New Brunswick. In that province we are being frozen under this agreement at the 1940 figure, and that is less than justice to the province. The provinces and municipalities had every right to assume that with the increased national income, more would filter into provincial and municipal exchequers as the war proceeded and as the tempo of expenditure increased. That will not be true under this agreement. That position is not reflected in this agreement, and it ought to be.

Some of the municipalities in my province were just beginning to utilize the powers which had been delegated to them by the province with respect to taxation on incomes. Other more settled municipalities, such as the cities, had used these powers for many years. I have paid income tax ever since I had an income. True the rate was not high, but we have always had to pay income tax. The effect of freezing the figure at the 1940 assessment based on the 1939 income, the pre-war income, has been that there is a deficit in the budget of all these municipalities, and presumably of the provinces. It is true that the government is to reimburse the provinces the amount of the frozen figure, but that is not sufficient to take care of the difference between the 1939 income and the 1941 income, or the increase in 1941, or the still greater increase in the 1942 income. Unless the municipalities are prepared to reduce their services, or to cut their expenditures—my experience in municipal affairs is that the municipalities are very well run, that there is little waste and that expenditures cannot very easily be cut—these deficits cannot be met.

Mr. REID: Is the amount not made up by the province?

Mr. HANSON (York-Sunbury): The amount is paid by the federal authority to the province, which in turn reimburses the municipality, but this is based on the 1939 income which is assessed in 1940. In the case of my own city the tax is payable about the middle of the year. If I have made my position clear, it will be apparent that there is a gap there. The result has been that the municipal councils in figuring up their budgets for this year and succeeding years have had to fill this gap. They have gone to the legislature and the legislature has granted them authority to make new imposts. In my province these new imposts have taken two forms. First, there is a householder's tax which in effect is simply an increased tax on real estate. There is no doubt that this tax will bring in money, but I shall not go into the details as to how much it will be. This tax is being imposed by the cities of Saint John and Moncton. It is being placed on visible, tangible property which cannot escape. There is a legal lien against it. I say to the minister that we will have this tax upon our backs as long as we live, or at least as long as the present situation continues. I am not sure that I made my suggestion quite clear. It was that there should have been some flexibility with

respect to these income tax receipts. In the case of the municipalities, they should be assessed every year. They could be audited every year and then there could be either an increase or a decrease in the amount paid to the municipality, so that they would not have to resort to new imposts and new forms of taxation such as the one I have described.

The other impost is such that every stenographer now must pay a poll tax. Some people may say that that is all right, but the fact is that in my city everybody over twenty-one years of age, other than a housewife or a domestic servant, must pay a poll tax. These people are here to-day and gone to-morrow; you may get it and you may not. If there is a deficit, what happens? You just heap a little more on real estate. I do not think any hon. member believes we should impose further taxation on real estate. The reasons are obvious. Real estate has always borne the brunt of municipal taxation. During the depression this load increased to such an extent that real estate became a liability instead of an asset. To-day real estate is just beginning to recover the position it held formerly as a good asset, but this new taxation makes its position that much more difficult. I suggest to the minister that if it is not too late the position should be revised. I tell him frankly that this is my main objection to the bill.

I do not think it is equitable, I do not think it is fair, I do not think it is just, to freeze the amounts that are to be reimbursed to the municipalities, via the provinces, to the pre-war income position—because that is what it is. It does seem to me it would have been quite feasible in working out the mechanics of this thing to have the position reviewed every year so that we might have avoided a fixed impost, from which I feel we shall now never be free. That is the main objection I have to the general principle of this measure.

I want to refer for a moment to certain other features of the bill. The chief point I make against the agreements is the inflexibility of that one position, and I have no doubt that the municipalities have also made their representations. I do not know how far the minister dealt with the municipalities. I assume he saw them, but of course I can understand that he did not find it desirable or convenient to deal with them directly. I want to impress upon him again that it would have been much fairer to the municipalities, and of course much fairer to the provinces, particularly such a province as Ontario with a large income tax revenue, if there had been some flexibility, having regard to the greatly increased national income which filters down through to all the citizens of our various provinces, so that as the war proceeds and expenditures grow greater they would receive a much larger share of the national income from year to year—unless of course the minister peremptorily takes the view that the increased national income should be taxable only by the federal authority. That may be the proper view to take; it is debatable. But the municipalities and the provinces have their social and other services to keep up and they cannot do it without money. The very fact that there are increased activities in a community make it incumbent upon a municipality to increase its own services and expenditures. Without going into details I can say that nearly all the cities of the maritime provinces have had to increase their police force, for example, and I know that the cost of fire protection has also been increased in some of the municipalities because of the increased tempo of war activity. But in the agreements no regard has been paid to these considerations.

I should like to call the attention of the minister to a few portions of the New Brunswick agreement, and then I shall be through. The New Brunswick agreement, as I have it, was tabled in the form of a draft. The minister says that the completed agreements were tabled in this house, but I am not aware that that is the fact. On April 22, over a month ago, on the motion of the hon. member for Hastings South (Mr. Stokes), an order of the house was passed for a copy of all final agreements entered into between the government of Canada and the government of any province with respect to this matter. This return, so far as I know, has not yet been brought down. I am subject to correction; if the return was tabled, it escaped me. I do suggest that while we should proceed with the second reading of this bill we should not take it up in committee until the minister has laid upon the table copies of the final agreements with the provinces, so that hon. members may study them. After all, hon. members from the different provinces are very much interested in this proposal. It will take from the federal exchequer possibly $200,000,000 in a given year, and that is no matter of small importance. Aside from the war itself I do not know of any question which demands more study on the part of hon. members of this house than these agreements, and I hope they have given study to them. I will say frankly that I have not analysed completely all nine agreements; I have contented myself with a limited study of the agreement affecting par-

ticularly my own province. I invite the minister, if he has not already done so, to lay on the table, at the earliest possible day, copies of the final agreements.

I am not opposing the principle of the bill, but I do say that there are inequalities and injustices. I think on the whole the dominion has done well by the provinces in the amounts it has allocated to them. I sometimes wonder, after all the pleas that have been made for retrenchment so that every dollar may be devoted to the war effort, why it is that some of our provincial governments—not all of them perhaps, but I think this remark will apply to most of them—show not the slightest evidence of retrenchment in what must be peacetime expenditures. Take the little province of New Brunswick with 500,000 people. This year they budgeted for the highest sum in the history of the province, away over $10,000,000. I think Nova Scotia perhaps is just as bad.

Mr. MacNICOL: Are they going to have an election?

Mr. HANSON (York-Sunbury): No, I do not think there is an election coming. There are several reasons, I suppose. I should not attribute motives, but I hold this view: there is not the sense of responsibility among provincial governments that there ought to be, having regard to the difficulties of the taxpayers and the financial demands made upon them by this war. Because times are good, because there is a lot of money going through the country as a result of war expenditure, the provincial governments think they might as well have some of it. One of the most disgraceful things in the country to-day is the amount of money the provinces are making out of the liquor traffic. In the little province of New Brunswick in the year 1935 the net revenue from liquor was a little more than half a million dollars. Last year the net revenue of the province from government sales of liquor was away over two million dollars.

Mr. REID: The people must be buying more liquor.

Mr. HANSON (York-Sunbury): I sometimes wonder. I am not going to preach temperance here. My principles are pretty well fixed and they are not going to be changed at my time of life. But I read a statement the other day which astonished me. The total budget of the Christian churches of Ontario in a given year was something like ten million dollars, while the drink bill of Ontario was perhaps ten or twenty times that amount—I am not attempting to give the actual figures. Is that a creditable comparison? Governments are in this business now for the profit there is in it. They ought to cut it down; the hours of sale ought to be limited. In New Brunswick they call it liquor control. It is not liquor control at all. It is liquor monopoly—that is what it is, and you and I, who perhaps do not spend any money in that way, witness the spectacle of somebody else paying what perhaps ought to be contributed to the provincial exchequer. I do not think it is creditable to the country. But that is by way of an aside. I had not intended really to say that at all.

My experience over a long number of years indicates that the greater the amount of money that is given to a province, the more they will spend, and some of it in a very questionable manner. I am glad to think that the municipalities operate perhaps in a better manner. I have in mind the little city of Moncton, which last year cut down its budget by $80,000, a very creditable performance.

I do not intend to say anything more about this bill. I think it is in pursuance of a compromise policy which the government had in mind having regard to the failure of the Rowell-Sirois report, which the government, I believe, was prepared to sponsor if it got the consent of the provinces. I regret very much that there was failure on the question of succession duties, but that has gone now and it is hardly worth our while to speak of it here.

I suggest to the minister that in dealing with the provinces he was a bit too lenient with respect to the power to impose new imposts. There is a provision in the New Brunswick agreement which leaves the way open for the province to impose new imposts, not of this particular class or kind, but nevertheless permitting annual levies from which I fear the taxpayer will never escape.

Mr. J. H. BLACKMORE (Lethbridge): Mr. Speaker, since the leader of the official opposition (Mr. Hanson) has spoken as he has, probably something more should be said before this bill passes. The leader of the opposition made three or four remarks with which I personally, and perhaps, a good many people whose views should be heard here could not agree.

First, may I say a word with respect to the need for the taking over by the dominion of the power to tax corporations and the power to tax personal incomes. The leader of the opposition expressed the idea, as I understood him, that never again in the history of Canada would it be possible for the dominion government to recede from this field, that from now on it would be obliged to retain the power to tax corporations and personal incomes; and

the reason he advanced, as I gathered it, was that there would be so heavy a burden on the dominion government after this war that in order to discharge the burden the government would require so much money that it would be impossible to raise it except by invading provincial fields of taxation.

Now, I readily concede that the leader of the opposition is completely on valid ground when he forecasts that the dominion government will have such a burden of financial responsibility that it will no longer be able to discharge that burden.

Mr. HANSON (York-Sunbury): I did not say that or anything like it.

Mr. BLACKMORE: Well, to what extent am I deviating from the principles which the leader of the opposition laid down?

Mr. HANSON (York-Sunbury): What I said was that the necessities of the occasion would compel the federal government to hold on to this type of revenue and, probably, to this amount of revenue. I never suggested that the Dominion of Canada would repudiate its obligations.

Mr. BLACKMORE: Mr. Speaker, I certainly did not suggest that it would repudiate its obligations. I believe that if the leader of the opposition reads to-morrow in *Hansard* what I said he will find it very difficult to distinguish between the meaning of my words and the meaning of his.

Mr. HANSON (York-Sunbury): Then I misunderstood the hon. member.

Mr. BLACKMORE: True, the dominion government will never be able to discharge the responsibilities which it is assuming as a result of the expenditure incident to this war, and the members of this house should be objective enough to face that fact squarely now and govern their behaviour for the future accordingly. I am not suggesting that the dominion government repudiate its debts, but I am raising this question: if the time comes that the dominion government has so many financial commitments that, no matter what means it uses, it will be unable to raise enough money by way of taxation to meet those commitments, will someone tell me what the dominion government will be able to do? Something simply must be done; if the dominion government is to be able to meet its commitments it must find a new source of revenue, which source of revenue must involve a great deal more than invading provincial taxation rights and rendering it next to impossible for the provinces to carry on their responsibilities under the British North America Act.

[Mr. Blackmore.]

The leader of the opposition implied, I thought, a few moments ago that the provincial governments were more or less careless in the use of their money. I do not wish to misrepresent what he said, but the idea was that the more money you gave the provinces the more they would spend. Well, in a time like this, when people from end to end of this dominion are needing more social services every day, when they need more money for old age pensions, for state hospitalization, state medicine and a dozen and one other things long overdue in this country, and when you bear in mind the fact that the responsibility for these social services in large measure rests upon the shoulders of the provinces, what can we possibly expect but that the provinces will spend more and more money?

One matter which I hope to bring to the attention of hon. members is that of education. At the present time our provinces do not possess the financial resources with which to support adequately the educational responsibilities resting upon them. Teachers from end to end of this dominion are too poorly paid. Schools are too poorly equipped. We are neglecting our sacred responsibilities to the generations of the future by failing sufficiently to provide for the training of youth. That is only one thing for which the provinces need money.

My own impression from what I have seen is that the provinces are not spending any money carelessly. Theirs is the responsibility for building and maintaining roads. Consider my own province as an example. In Alberta there are 90,000 miles of roads, with not quite 800,000 people to support those roads. When you bear in mind the fact that the people of that province are spread all over it in little communities here and there, to such an extent that they need 90,000 miles of road; when you bear in mind the amount of telephone service, the amount of inspection service for schools, the amount of medical service, and scores of other things which are necessary to provide adequately for the needs of that province, you can understand how the provincial revenues as they now are are tragically inadequate. Instead of the dominion government endeavouring at this time to invade the provincial taxation fields and take from the provinces some of that which they already possess, the Minister of Finance should be occupying himself with ways and means whereby he could increase their revenues by adding to them supplies of money from the dominion treasury. At once, those who have never looked forward in the matters of economics and finance will say, "Where is the money to come from?"

The money must come from somewhere, and if this generation of members of parliament lack the vision to see where it will come from, then I do not know what is likely to happen in this country. We may have too great a tragedy long before we are able to elect a number of members with vision. I hope the house will come to see that.

I thought it would be a good thing for members of this house who are interested in the subject if I were to read two or three excerpts from a book which I have here, and which I think every member of the house should read. It is called "Economic Tribulation," and the author is Vincent C. Vickers. It might be well for me to state who Vincent C. Vickers is, in case anyone should not have discovered that up to the present. Let me read from the introduction:

Vincent Cartwright Vickers was born on the 16th January 1879 and educated at Eton and Magdalen college, Oxford. He was a deputy lieutenant of the city of London, a director of Vickers Limited for 22 years, and a director of London Assurance, from which he resigned in January, 1939. In 1910 he was made a governor of the Bank of England, and resigned this appointment in 1919. Later he became president of the Economic Reform Club and Institute.

I should think a record like that would at least entitle this gentleman to respectful attention. His book was published in 1941; there is no doubt it is pretty well up to date. Let me read two or three quotations. I quote first from page 50:

If once we can decide what it is that constitutes the barrier between the producer and the consumer, whilst both remain dissatisfied, we shall have discovered not only the main cause of the world's discontent and of the existing enmities and jealousies among the nations, but at the same time the true road to the peace of the world. If the producers are waiting to produce more, if ships are waiting to carry the goods, if there are railway and transport services wheresoever there is demand for them, then the fault must lie with the consumer. Why does he hold back the trade and commerce and progress of the world and prevent the consummation of a lasting peace by deliberately refusing to avail himself of the good things the world can offer him? The answer is obvious. The consumer cannot afford to buy more. He has not enough money. Let us discard all biased opinions and we shall find it possible only to arrive at one decision, that the health and welfare of the individual, the happiness of the community, the contentment of the nation and the peace of the world are mainly if not entirely a monetary problem.

And Mr. Vickers has not taxation nor borrowing in mind when he speaks of a monetary problem, as will be made abundantly clear by quotations which I shall read further on. At page 65 I read:

Strenuous efforts have been made over some twenty-five years to patch up the money system in an attempt to make it last a little longer, but it has stood and now stands in the way of progress and social betterment, thereby creating universal unrest and a tendency to obtain by force what cannot be obtained otherwise. For the sake of our children let us take warning in time. Let us discard the policy of inaction and pretence and boldly face the fact that it is not the inevitable smoke of the galley stove which assails our nostrils but that a fire is raging in the hold and that the ship of state is in imminent danger.

These words bear particularly on the discussion this afternoon:

Our democratic system and our existing financial system can no longer live together. One of them must give way to the other.

The measure we have before us this afternoon is a move in the direction of reducing the democratic rights of the Dominion of Canada.

Mr. MacNICOL: Or the provinces.

Mr. BLACKMORE: Or the provinces; it is the same thing. You cannot think of Great Britain as a democracy without thinking of the democratic rights of the great cities and towns of England, the great counties of England. Wherein lie the true sources of democracy in England? In the towns and in the counties. And wherein lie the chief guarantees of democratic principles in Canada? In the towns and in the provinces. Destroy the autonomy of the provincial governments and you have struck an irreparable blow at democracy throughout the dominion.

I am going to read one more passage, which I think will show just the line along which Mr. Vickers' mind is running, and then I have a comment or two to make. When I have done that I shall have finished. At page 74 I read his suggestions for the future:

1. State control and state issue of currency and credit through a central organization managed and controlled by the state.

2. Stabilization of the wholesale price level of commodities. That is to say, a fixed and constant internal purchasing power of money; so that a pound will buy to-morrow what it bought yesterday; an honest pound, not a fluctuating pound. And this can be done by so issuing and regulating the volume of available credit and currency that it shall at all times be adequate to permit of the purchasing power of the consumer being equated with the volume of production; not by limiting the purchasing power but by firstly increasing purchasing power more in proportion to the productive capacity of industry.

May I pause a moment to make this comment. The measure before us is decreasing the purchasing power in the hands of the community.

An hon. MEMBER: How?

Mr. BLACKMORE: By drawing money out of the provinces.

Mr. POTTIER: They are getting it back.

Mr. BLACKMORE: Only a small portion of it. The more you examine it the more you will see the force of what I have said. While the provinces have struck a good bargain, the minister has made a good bargain too. Let me continue with the quotation:

> Any additional supply of money should be issued as a clear asset to the state; so that money will be spent into existence and not lent into existence.

Again:

> The fluctuating quantity of gold lying in the vaults of the banking system should never be permitted to govern the volume of credit and currency needed by the country.

Again:

> The elimination of slumps and booms; and more direct procedure for eliminating unnecessary poverty.

And again:

> The abolition of the debt system where all credit is created by the banks and hired out at interest to the country.

I should like to say just a word to the Minister of Finance. I realize how heavily burdened he is, how difficult is his task of guiding this country through this great crisis, and in large measure I sympathize with him. But let me tell the minister and tell this house that the minister can never successfully finance this war so long as he stays with the principles of the debt system of money. He will never create that happiness and union in this country which ought to exist so long as he thinks in terms of taking away from someone what he has, so long as he thinks of reaching out and invading provincial fields of taxation and filching from the provincial governments the means of obtaining the money which they need to discharge their responsibilities to their people. And he will never succeed so long as he thinks in terms of centralizing power at Ottawa. Sometimes in listening to hon. members such as the hon. leader of the opposition I wonder whether they have forgotten entirely that Ottawa was created by the provinces, that the first political organizations which we had in this country were provincial organizations, and that the provinces put Ottawa here to do work for them, not to dominate them, not to render their position impossible.

Mr. HOMUTH: Confederation was a mutual arrangement.

Mr. BLACKMORE: Exactly, but the fathers of confederation never envisaged a time, we may be sure, when Ottawa would grow into a huge colossus threatening the very existence of the provinces.

Mr. HOMUTH: They never envisaged a time when we would grow into a nation either.

Mr. BLACKMORE: I am afraid I do not grasp the significance of that remark. Did they imagine that the confederation when first formed was not a nation?

Mr. HOMUTH: No, definitely no, we were not.

Mr. BLACKMORE: I wonder what the hon. member has in mind. Does he look upon a nation as being an organization of people dominated completely by a central power, or does he look upon a nation as an organization of great units which can pull together?

Mr. HOMUTH: Exactly; the latter is my conception of a nation, and that is what was brought about by confederation.

Mr. BLACKMORE: Then how does the hon. member say that the fathers of confederation did not visualize a nation?

Mr. HOMUTH: I say they never visualized a nation that would take the place in the world that Canada occupies to-day. We are now taking a place as one of the most important nations in the world, such a place as the fathers of confederation never visualized; consequently we must take on national proportions, and we cannot do it as long as we are divided provincially.

Mr. BLACKMORE: There is no need for division provincially. There are eight provinces in this dominion that are as vitally concerned in the conduct of this war as the dominion government is.

Mr. HOMUTH: Every one.

Mr. BLACKMORE: I think we would be safe in saying nine provinces. And these provinces are looking to Ottawa for leadership, not drivership.

Mr. HOMUTH: I am not admitting that we are getting leadership from the Ottawa government, but I say we ought to have national unity.

Mr. BLACKMORE: What I am afraid of is that the Ottawa government is manœuvering itself into a position where it can be a driver.

Mr. HOMUTH: I agree.

Mr. BLACKMORE: Then why all the argument? Let my hon. friend vent his spleen on those he needs to quell.

Mr. HOMUTH: There is no spleen to vent between the hon. member and myself.

Mr. BLACKMORE: There is a way of managing this dominion without resort to these hurtful and offensive measures. There is no need of such an abomination as was proposed in the Sirois recommendations, to hamstring the provinces of this dominion. There is no reason why every province should not be majestic in the greatness of its autonomy. No province in this dominion desires anything which is not in the interest of the whole dominion, and surely Ottawa ought to be looking only to that which is in the interest of the whole dominion.

It is possible so to organize and manage the finances of this dominion that the provinces can be peaceful and prosperous and happy and strong. But measures such as the bill now before us are not the kind which will produce that desired result. If this dominion is to reach a position where it can discharge its responsibilities with respect to the debts accruing during this war, the dominion government must adopt the principles which Mr. Vincent Vickers laid down, particularly the one with respect to the state control and state issue of currency and credit; the one in which he says that any additional supply of money should be issued as a clear asset to the state, so that money will be spent into existence and not lent into existence; and the one expressed in the words "the abolition of the debt system where all credit is created by the banks and hired out at interest to the country."

In my judgment the minister should be coming to this house asking for authority to establish in Canada a currency commission through which he could issue the amount of money which the goods and services producing and consuming power of this country would support without causing inflation. If he were occupying the time of this house with that proposal he would be dealing with a measure by which a solution of the vexatious problems which confound the people of Canada could be found, and there would be no reason whatsoever for weakening in any respect the autonomy of the provinces or impairing their financial stability.

Mr. J. W. NOSEWORTHY (York South): I am in agreement with the general principle of this bill. I believe that the principle of having one agent collecting these income taxes and corporation taxes is sound. Moreover I am in agreement with the sentiment expressed by the hon. leader of the opposition (Mr. Hanson), that by taking over from the provinces two of their most flexible and expanding sources of income and replacing them by fixed amounts over a period of years we are handicapping the provinces in the field of social service.

The fathers of confederation, to whom reference has been made, very rightly I think gave to the provinces certain powers of taxation. Undoubtedly they never visualized such fields as income tax and corporation tax, certainly not in the immensity to which they have now grown. But they left with the provinces control of certain public services that they must have known would be found to cost the provinces increasing amounts from year to year. To compensate for those services which were certain to become more costly the fathers of confederation left the provinces with certain fields of taxation which also were possible of expansion.

I am thinking particularly of two services in the field of social services, namely, health and education. We take away from the provinces the right to collect income and corporation taxes, the two fields in which provincial income has been expanding in the past. We leave them with the responsibility of taking care of health and educational services, with the result that we are forcing them to sell liquor in order to provide our boys and girls with educations.

Mr. HOMUTH: Does the hon. member want them to stop it?

Mr. NOSEWORTHY: Stop what?

Mr. HOMUTH: Stop selling liquor.

Mr. NOSEWORTHY: I certainly would like to see the selling of liquor curtailed during the war.

Mr. HOMUTH: Are you against the selling of liquor, or do you want to curtail it?

Mr. NOSEWORTHY: That is not the point I am discussing. My point is that when you take away from the provinces their two greatest sources of revenue, sources from which they would probably derive continually increasing amounts, and saddle them with social services, the costs of which increase from year to year, you leave the provinces only two other expanding sources of revenue, those from the sale of liquor and gasoline. For the duration of the war the sale of gasoline will be regulated, so that there is no source of income open to the provinces which can increase in large amounts from year to year, except that derived from the sale of liquor.

The leader of the opposition quite properly pointed to the rigidity of the amount to be returned to the provinces, and suggested that a certain flexibility in the amount payable might have been better. I suggest it would have been in the interests of the nation if, when adopting a flexible amount, and taking over these sources or revenue, the dominion had at the same time undertaken at least a partial responsibility for some of the social services which are expanding, and which will continue to expand from year to year.

The hon. member for Lethbridge (Mr. Blackmore) has called attention to the state of education. When our schools open in September four thousand class rooms will be manned by unqualified teachers. Fully 120,000 young people beginning in September will be placed in charge of teachers without any professional training. That circumstance is brought about largely by reason of the fact that the public school teacher can go into a war industry and earn double the amount he or she can earn teaching school. Our educational system is left to be largely the responsibility of local communities. Our provinces are most reluctant to assume more than 10, 12 or 15 per cent of the cost of that public service. The result is that we are getting the type of education that the local municipality is capable of providing.

If in this bill, instead of taking from the provinces this source of revenue and returning to them a frozen sum to replace the amount taken, the dominion government had assumed a certain percentage of the cost of those increasing provincial services, I believe it would have been a proper procedure. After all, these are national services. The type of education a boy or girl gets is surely a matter of national responsibility. The boy or the girl may not remain in the municipality or in the province in which he or she was born. When the boy in adolescence or manhood moves to some other province he becomes the responsibility of that province. He becomes a national responsibility, just as health is a national responsibility. We are finding that out to-day in our enlistment figures, when we take note of the number of young men who in the prime of life are rejected through physical unfitness.

We have long passed the day when the dominion government should have begun to realize that these two vital services are of national importance, and should have undertaken to accept some responsibility for them. That, it is true, is the responsibility of provincial governments, as set out by the British North America Act. But I suggest that in making this financial arrangement with the provinces, under which the sources of revenue are taken over by the dominion, instead of giving a fixed amount of money in lieu thereof the dominion should accept a percentage of the responsibility in respect of those expanding, ever-increasing national services, namely health and education.

Mr. KARL K. HOMUTH (Waterloo South): Mr. Speaker, I do not wish to delay, unnecessarily, the passage of the bill, but one or two things I believe should be said. So often we have heard protests from various provincial governments respecting the inroads the federal authority is making on provincial jurisdiction. It is quite true we are doing that. But after listening to the last two speakers one is almost led to the belief that they are advocating the taking over of all the services by the federal government. They say at least that we ought to pay more for this and ought to pay more for that.

We are now in a period of war. The minister of lands and forests in any province has practically nothing to say about the administration of his department, because the sale of timber, the cutting of timber and everything in that connection is under the jurisdiction of the timber controller, an officer of the dominion government. I am not one who says that we should do away with provincial governments; but if we are going to ask the federal government to take over the responsibilities indicated by the last two speakers, namely, the leader of the New Democracy group, and the hon. member for York South, then we might just as well come to the point where the federal government is going to take everything over. The last speaker referred to the possibility of taking over some of the social services.

Mr. NOSEWORTHY: The cost of them.

Mr. HOMUTH: Well, if you take over the cost you take over the service; what else do you do? The fact of the matter is that if one looks over the various social services in Canada he will find that we have a checker-board system. I was astonished the other day by the replies I received from some hon. members from Saskatchewan when I asked them to give me figures showing the amounts paid under the mothers' allowance provisions in that province. I asked for the information because of comparisons which had been made in my constituency with respect to payments made in Ontario and in Saskatchewan. To my mind the payments in Saskatchewan were absolutely inadequate, but perhaps to the minds of those in Saskatchewan they were adequate.

Mr. NICHOLSON: What minds?

Mr. HOMUTH: Those who put it through, or who brought it into force.

Mr. NICHOLSON: They cut their garments to suit their cloth.

Mr. HOMUTH: It is time we did that in a great many instances. If we have not the cloth we should try to get it. We get it for war purposes; let us get it for paternal legislation. When we begin to compare things we find that we have a checker-board system across the country. Some provinces have not the social legislation that other provinces have.

So far as this bill is concerned I consider it to be a war measure. It may end up eventually as a national measure that will always be in effect, that will always be the law of this country. The various provincial governments, having studied this matter, I hope carefully, have decided to enter into agreements with the Minister of Finance of Canada under which they make certain concessions. I feel that these things may have to be regulated as time goes on. Apparently this is leading eventually to a general federal policy under which the provinces will no longer collect either succession duties or income tax. I believe that all the provinces are asking for is that the responsibilities which are theirs under the British North America Act should be taken over by the federal government and be of no particular burden to the provinces.

While I am critical of some of the provisions of this bill and of some of the arrangements to be made under it, we must face the fact that we are at war. No matter how great a burden it may be upon the provinces, no matter how difficult it may be for them to meet their obligations, for the time being we are at war and we have to do everything we can to win that war. If we do not win the war there will be no succession duties and there certainly will be no incomes. Let us make up our minds to the fact that we will all be enslaved by an enemy who will not care whether we have food or incomes. While there are certain provisions of this bill with which we are not in accord, it is a war measure and so far as we know now will be only for the duration of the war. When the war is over we can debate this measure, we can debate matters of social legislation and paternal legislation and other things which are not only in the minds of members of the Cooperative Commonwealth Federation. The members of the C.C.F. often pose in this house as being the only ones who look after the so-called working people, the farmers and others in this country. We are all Canadians, whether we are industrialists or otherwise, and our sympathies are with Canada. We want to act in the best interests of Canada and in the best interests of the working people and other classes of people in Canada. That does not rest only with the C.C.F.

Mr. GILLIS: Actions speak louder than words.

Mr. HOMUTH: Actions speak louder than words, and the people know what we have done.

Mr. NOSEWORTHY: You had plenty of time to correct the abuses.

Mr. HOMUTH: You certainly have not corrected the abuses either. In spite of the argument that can be made against this legislation I feel that it is in the best interests of Canada and in the best interests of our war effort that it should be passed. When the time comes to have a readjustment of the equalities or inequalities under these acts, it will be after the war. The first essential of this and other legislation must be the winning of the war.

Motion agreed to, bill read the second time and the house went into committee thereon, Mr. McCann in the chair.

On section 1—Short title.

Mr. HANSON (York-Sunbury): I think the minister will agree that the final agreements have not been tabled and that an order of this house has not been complied with. I do not want to hold up the passage of the bill for the tabling of the agreements, but perhaps the minister can tell us whether they have all been signed.

Mr. ILSLEY: The agreement with the province of Quebec has not been signed, but all the rest have. I thought that the agreements had been laid on the table, but apparently they were being held up until the Quebec agreement came in so that they could all be tabled at the one time. The draft agreements have been tabled, and in all or nearly all the provinces the draft agreements are schedules to provincial acts and it is not possible to change them. It is the amounts only that are in question at all; all the clauses of the agreements will be in the form of those in the draft agreements.

Mr. HANSON (York-Sunbury): Are there any special provisions in the Quebec draft, or provisions that differ from those in the Ontario agreement?

Mr. ILSLEY: In regard to the schedules, they all differ one from the other to a certain extent. I feel sure that the draft agreements that are on the table show those differences. There are minor variations as between the provinces, especially with regard to municipal

taxes. I do not expect the committee to take in the significance of those variations, but specifically, at the end of appendix B—

Mr. HANSON (York-Sunbury): To which agreement?

Mr. ILSLEY: There is an appendix B to each agreement. Appendix A is a list of the acts that are to be repealed by the provinces, and appendix B is a list of the acts that are to be retained by the provinces. It is not an exclusive list in either case; it is a list of acts which it is submitted should be retained, in the case of appendix B, and a list of those which it is submitted should be repealed, in the case of appendix A. There are some general words at the end of appendix B in the Quebec case which differ slightly from the words of appendix B in the Ontario case.

Mr. HANSON (York-Sunbury): What is the significance?

Mr. ILSLEY: It is a complicated question. The words at the end of appendix B in the Ontario case are these:

and the following enactments—

It will be borne in mind that I am talking of a list of enactments which are to be retained unrepealed by the province:

(a) any enactment heretofore or hereafter passed which provides for the imposing of any fine or penalty for any act or omission or for the costs of any action or prosecution;—

Mr. HANSON (York-Sunbury): That is in violation of some provincial statute?

Mr. ILSLEY: Right. It goes on:

(b) any enactment heretofore or hereafter passed which singles out municipal corporations, any boards or commission exercising the powers of a municipal council, boards of education or boards of school trustees for the payment of any amount; and

(c) any enactment heretofore passed as a private act and any enactment which is unrepealed and is not consolidated in any of the revised statutes of Ontario, which prescribes or fixes the assessment of or taxes payable by any corporation for the purposes of municipal taxation.

The words at the end of appendix B in the Quebec case are:

and to the extent that taxes or licence fees were imposed thereunder on April 1, 1941, any other enactment of the province providing for the imposition by a municipality of taxes or licence fees other than income taxes, unless such enactment is enumerated in appendix A.

It is just about impossible without an hour's exploration of these differences to make their significance apparent.

[Mr. Ilsley.]

Mr. HANSON (York-Sunbury): I suppose that under that wording a long list of licence fees is retained to the municipalities?

Mr. ILSLEY: That is right.

Mr. HANSON (York-Sunbury): Are they in the nature of income tax or corporation tax?

Mr. ILSLEY: They are not in the nature of an income tax. Whether or not they are in the nature of a corporation tax depends upon how you look at it. It is a matter which was discussed between the provinces and the dominion in every case. There is nothing hidden from any province as to what is happening in another province. The local situation varies to some extent as between provinces. The net result is not significantly different in these two provinces.

Mr. HANSON (York-Sunbury): They would vary in every province?

Mr. ILSLEY: Oh yes. It must be borne in mind that if taxes still continue to be imposed by municipalities in a province they are not bought out by the dominion. If there is a slight difference of treatment; if a $500 licence fee is left in force in one province and nothing is said about a $300 licence fee in another province, it simply means that we did not pay as much money in the one case as in the other. It is not a matter of very much importance. I do not pretend that these appendixes are uniform in wording. It is a highly detailed matter. There are thousands of tax-imposing jurisdictions, or at least hundreds, and in the provinces of Quebec and Ontario, thousands, with all kinds of local variations. The situations in these two provinces in substance are approximated to one another pretty closely, but the treatment is not identical.

Mr. MacNICOL: Have all the different variations in thousands of cases been thoroughly studied by the departmental experts?

Mr. ILSLEY: Oh, yes. I would not say that we have examined the situation in every municipality, but a tremendous amount of work has been done in examining the municipal taxation situation in the provinces where it exists, and that goes for the provinces east of British Columbia.

Mr. HANSON (York-Sunbury): The correspondence would indicate that a good many specific requests were made for special consideration and that in a good many cases the minister gave in to these requests. I have studied the correspondence with New Brunswick. They wanted to maintain certain things there, and the minister consented to their maintaining them. The same would be true, I suppose, with respect to the other provinces?

Mr. ILSLEY: Yes.

Mr. HANSON (York-Sunbury): Therefore, while each agreement varies in detail it follows the general form and substance, and the details are different to meet particular exigencies that have arisen?

Mr. ILSLEY: Yes.

Mr. HANSON (York-Sunbury): What payments have been made to each of the provinces in respect of the last fiscal year ended March 31 last? Have payments been made to any or all of the provinces in respect of these agreements?

Mr. ILSLEY: I will give the committee a list of the payments that have been made. All these payments have been charged to the appropriation for the last fiscal year because no authority exists for charging anything to this year's appropriation.

Mr. HANSON (York-Sunbury): Under the supplementary vote for last year?

Mr. ILSLEY: Yes.

Mr. HANSON (York-Sunbury): That was for $45,000,000, was it not?

Mr. ILSLEY: Yes, $45,000,000. The payments by provinces that have been made are: Prince Edward Island, $689,502.20; Nova Scotia, $1,300,000; New Brunswick, $2,112,516.86; Quebec, nothing.

Mr. HANSON (York-Sunbury): New Brunswick has received over half its amount?

Mr. ILSLEY: Yes. The other payments were: Ontario, $2,896,403.95; Manitoba, $2,306,467.84; Saskatchewan, $2,887,458.11; Alberta, $2,055,911.87; and British Columbia, $6,872,182.49.

Mr. HANSON (York-Sunbury): How much of the two million dollars odd which has been paid to New Brunswick has been passed along to the municipalities? I know that in the agreement there is an undertaking by the province to pay to the municipalities, but the agreement is silent as to when. It seemed to me that that was a weakness in the agreement because the province may hold the money for four months after they receive it or they may not pay it until it suits them.

Mr. ILSLEY: I am not able to say what amounts, if any, have been paid out to the municipalities of New Brunswick. On the general question as to how far it is this government's responsibility to see that payments are made to the municipalities, the view was first taken by myself that that was not any part of our duty at all, that we would leave that entirely to the provincial governments, depending upon their own sense of fitness to pay the municipalities as and when they thought the municipalities ought to be paid. Certain provinces wished the matter left in that way. I know one province expressed the view that the municipalities were their creatures, that they could and should be allowed to deal with the municipalities and that the dominion government should not intervene at all. In the case of New Brunswick we provided, I believe, in the agreement or by a schedule that certain amounts were paid to the province for the account of the municipalities.

Mr. HANSON (York-Sunbury): Yes.

Mr. ILSLEY: It is provided in that agreement that a certain amount will be paid for the account of the municipalities.

Mr. HANSON (York-Sunbury): I think there is an undertaking there that they will do it.

Mr. ILSLEY: Yes. It is in clause 10:

which sum—

That is the sum payable to the province.

—includes the sum of $1,384,410.23 payable to the province on account of the said municipalities computed as set out in appendix DD.

Mr. HANSON (York-Sunbury): Is that the only clause referable to that? I had an idea that there was a covenant or something in the body of the agreement whereby the province agrees to pay these amounts to the municipalities, but I cannot put my hand on it at the moment.

Mr. ILSLEY: No.

Mr. HANSON (York-Sunbury): It does not go beyond that?

Mr. ILSLEY: No.

Mr. HANSON (York-Sunbury): Of course, the clear intent and meaning of it is that the province shall pay it, and I have no doubt they will in their own good time. The minister stated the principle, and I do not think there can be much objection to it. Certainly the municipalities are the creatures of the provinces, and in all the dealings we have had in days gone by between the dominion and the provinces in respect of the municipalities the federal government has always taken the position that it could not deal direct with a municipality. I do not know whether there have been exceptions to that, but I am not questioning the decision taken by the minister. I do think, however, that care should have been taken—and I believe that the provincial governments, if properly pressed, would have agreed to this—that if, as and when the money was paid, the propor-

tion would be handed over to the municipalities. The suggestion in my part of the country is that the province intends to hold the money for four months. I do not know how well-founded that is, but of course it means interest on overdrafts. Some of the municipal officers of the city of Saint John are here to-day, and, coming up in the train last night, they pointed out that if they have to wait for four months for $500,000, when their assessment is paid now or very little later, it will mean a substantial sum in interest to them. The department was, I think, a little lax in not providing that the money should be immediately paid over to the municipalities. However, the minister takes the view that, the municipalities being the creatures of the provinces, the provinces must be left to deal with them, and perhaps that is the proper attitude for the federal government to take. I am not going to question it. But the municipal officers are fearful that they will not get their money as soon as the province gets it.

Mr. BOUCHER: Does the Ontario agreement contain a provision similar to the New Brunswick agreement, that a payment shall be made to the province, earmarked for the municipalities?

Mr. ILSLEY: No; the New Brunswick agreement is the only one which contains that clause.

Mr. REID: Can the minister give any information as to what will be the probable gain to the dominion under this agreement?

Mr. ILSLEY: No; I cannot do that.

I listened with interest to the figures given by the leader of the opposition. He quotes a passage from my budget speech of about a year ago in which I estimated the additional revenues realized from the higher rates of income tax to be $90,000,000.

Mr. HANSON (York-Sunbury): The net gain.

Mr. ILSLEY: The net gain, $90,000,000; and we are paying to the provinces a little under $85,000,000. The figure given by the leader of the opposition included a $500,000 overerror in the case of Manitoba.

Mr. HANSON (York-Sunbury): Yes. I made the figures up before I came here.

Mr. REID: Can the minister state, apart from any saving by centralization of the collection of taxes in one bureau, what the gain will be, or will he be in a position at some time to tell us? We know what the provinces are getting, and I think it is important to know what the dominion gets.

[Mr. R. B. Hanson.]

Mr. ILSLEY: It will be very hard to break down.

Mr. STIRLING: I am glad that the hon. member for New Westminster raised that point, because, had he not done so, I was going to raise it. It is quite clear that the dominion government will pay to the provinces $142,000,000 in toto.

Mr. ILSLEY: Oh, no.

Mr. STIRLING: That is the total. You add these various payments together and make allowance for the gasoline—

Mr. ILSLEY: No; we will pay them 84½ million dollars or thereabounts.

Mr. STIRLING: On behalf of income tax?

Mr. ILSLEY: Income and corporation taxes and debt services and fiscal need subsidies. That all comes to about 84½ millions; and then we give them a guarantee to keep their gasoline revenues up to the amount which they were in 1940, namely $55,000,000 or $56,000,000. Practically nothing was due under that guarantee for 1941.

Mr. STIRLING: Except for this gasoline trouble.

Mr. ILSLEY: And the amount that will be due for 1942 will depend very largely upon the extent of the gasoline restrictions.

Mr. HANSON (York-Sunbury): In other words, the gasoline guarantee is not a guarantee of a specific sum of money?

Mr. ILSLEY: No.

Mr. HANSON (York-Sunbury): It is a guarantee to take up whatever slack there may be?

Mr. ILSLEY: Yes.

Mr. HANSON (York-Sunbury): That is indeterminable?

Mr. ILSLEY: Yes.

Mr. HANSON (York-Sunbury): But so far as 1941 is concerned the minister assures us that there will be no payment in respect of that?

Mr. ILSLEY: About $50,000.

Mr. HANSON (York-Sunbury): That is a mere nothing. But for the coming year it looks as though there would be a substantial sum paid under that guarantee. You might look forward perhaps to $125,000,000.

Mr. ILSLEY: I do not think so.

Mr. HANSON (York-Sunbury): Well, judging by the traffic on the highways there is not so much gasoline being burnt in my

part of the country. I travelled 400 miles on Monday and Tuesday, and you could count the cars almost on the fingers of your two hands. There are hardly any by comparison with the situation a year ago, and I think the situation from that point of view will become progressively better or worse according to one's point of view. If the two-gallon ration is maintained it is likely that practically all motor traffic will disappear. I believe it is well to have that situation cleared up, that the gasoline guarantee is just a guarantee against ultimate loss on the part of the provinces, not a guarantee of any specific sum.

Mr. STIRLING: Let us not take it that any particular sum is arrived at. I quite understand that the gasoline guarantee is simply a guarantee and cannot now be measured. But I am looking at it from the point of view of what is so commonly called the man in the street. This bill comes before this house as the result of nine agreements arrived at with the provinces with considerable difficulty and after a great deal of work.

Mr. ILSLEY: Yes.

Mr. STIRLING: Even to us who sit and talk in this committee it is no easy matter to follow the details; in fact, we do not know the details of the work which has been accomplished in bringing this about. As a member of this house I am asked by a constituent, "Well, the dominion is paying out this sum of money; we quite understand that in future we shall not have to pay provincial income tax; possibly we shall not make certain other payments; but what does the dominion get in benefit in response to this expenditure which it is making, and how will that come on my shoulders?" That is what the residents in any province are asking.

Mr. ILSLEY: I cannot put any dollar value on it. The dominion is now free to increase its income tax to the level which the people of the country should properly be asked to bear. That may be of very substantial benefit to the dominion as the war years go on. In fact, that has been and is regarded as virtually essential if the dominion government is to finance the war with any degree of efficiency and equity.

Mr. STIRLING: Releasing money for loans and savings certificates?

Mr. ILSLEY: No; in taxes. While the provinces were imposing income taxes and corporation taxes, and the municipalities were doing the same, then, whenever a minister of finance approached his budget, he had to examine a variegated picture. He had to consider the effect upon a taxpayer in Halifax, Vancouver, Toronto, Montreal and so on, and he was restricted and hampered and crippled in dealing with the situation. He would not be if we were in times of peace; not at any rate to anything like the same extent.

Mr. REID: Was not the argument put up to the provinces that owing to the fact that the dominion government was making large expenditures it was unfair to allow the provinces to take income taxes from expenditures coming from the dominion government? It is therefore most important that it should be known what the revenue is.

Mr. ILSLEY: That is a second and separate point. But even if there had not been any increase in incomes in the provinces as a result of dominion government expenditures, growing incomes as a result of growing expenditures out of revenues which the dominion has obtained somewhere or another—even if that had not been the situation, nevertheless the government would have been crippled in imposing taxation to too high levels by reason of this irregular and uneven income tax situation that existed from the Atlantic to the Pacific.

Mr. HANSON (York-Sunbury): The dominion now has the field clear to itself.

Mr. ILSLEY: It gives a clear field to the dominion and enables the dominion to impose equitable taxation, the same weight on persons with the same capacity to bear that weight, whether they live in Vancouver or in Halifax or in any other part of the country. This sweeps away the debris—perhaps I should not use that word—of all these heterogeneous income taxes and corporation taxes that made it so difficult for us to impose taxes of a proper weight with any equity, and it became important only when taxes became so high. Perhaps I should say it became so important when taxes became so high. It would be important under normal conditions, but it is extremely important in a time of war.

Mr. MacNICOL: It will equalize taxation throughout the country.

Mr. ILSLEY: Yes.

Mr. HANSON (York-Sunbury): We know what the cost is approximately.

Mr. ILSLEY: Perhaps I may interrupt my hon. friend. The hon. member for New Westminster (Mr. Reid) raises another and interesting point, a very important one, and that is that when the government is spending $2,500,000,000 for war and other purposes, as we shall do this year, in all probability the

national income is going to be very much greater than it otherwise would be, and the dominion government are responsible. They have to get, by loans and taxation, money with which to meet that enormous expenditure. From my point of view at least, it is hardly fair to us to be paying out these billions of dollars and increasing the incomes for the benefit of the provincial income tax revenues. It means in the normal course that the provinces will have large and ever larger surpluses and we shall have large and ever larger deficits, and it is perfectly fair to freeze the amount that the provinces get from income tax and corporation tax sources at the level which existed at the beginning of the war. That is one theory that underlies these provincial agreements. It may be that this freezing, so to speak, will prove an advantage rather than a disadvantage to the provinces. It may be that personal incomes and corporation incomes, as a result of price ceiling policies, will not increase as the years go on, and it may be that the provinces are getting more out of this arrangement than they would otherwise, but I do not think so. I think that normally the income tax and corporation tax would rise; the arrangement is fair enough for the provinces, as long as they are assured of a pretty heavy return from income and corporation taxes; and the period taken was not unfavourable for the provinces. It is reasonable that they should take that amount and that the dominion should undertake to pay them that; and in view of the income created by enormous dominion government expenditures, which will bring tax returns up as the years go on, I think the taxation on that income should come back for the benefit of the dominion.

Mr. REID: For war purposes?

Mr. ILSLEY: Yes.

Mr. HANSON (York-Sunbury): It is based on the 1939 income, and that was for the most part a period of depression. I do not think it can be said that we were clear out of the depression before the war came. As a matter of fact, I am inclined to the other view, and one point I tried to make against this agreement was the freezing of the returns to the provinces, and to the municipalities in my province, at a figure based on a pre-war period, which might be said to be more or less a depression period. There is no doubt that in New Brunswick, there was in the municipalities an increase in the 1940 assessment over the 1939 assessment. That is why I think there should have been a little flexibility. I am impressed with the argument of the minister that if they were allowed to go on, having regard to the rising rate of national income due to federal government expenditures, they would have had what I might call an unearned increment or something of that sort.

Mr. ILSLEY: A windfall.

Mr. HANSON (York-Sunbury): A windfall. I think there is something in that. I still think, however, that it should not have been frozen on the 1939 income. The minister, I understand, was pretty inflexible about that, and I should like to know the reason why. Is it because he felt that there was substantial government expenditure in 1940 which should not be taken into account.

Mr. ILSLEY: I took the actual tax receipts in the year 1940.

Mr. HANSON (York-Sunbury): Yes, but that was on 1939 income.

Mr. ILSLEY: Yes, in some cases, and in some cases it was not. I would not condemn the 1939 income too readily. A great many companies had a fine year in 1939; a good many taxpayers had a good year; their inventories were enhanced in value at the end of the year for some reason.

Mr. HANSON (York-Sunbury): There was a war on.

Mr. ILSLEY: The last four months of 1939 were war months, and income was not poor at all. However, it is a matter of judgment as to what year to take and how to select your year. We did the best we could in taking the fiscal year which ended nearest to December 31, 1940, and we stuck to it. The leader of the opposition says I was inflexible. I certainly was, because if there was one feature of this agreement that one had to stick to it was that. If we began varying the amount payable to the provinces according to an estimate—

Mr. HANSON (York-Sunbury): It would not be an estimate; they could make their assessments. I understand how it could be worked out. I think the minister could have given more effect to that theory. However, he has not, and these agreements do not incorporate it, so I suppose it is a waste of time to discuss it now, except to point out the position.

Coming back to the point raised by the hon. member for New Westminster and my colleague, we have on one side $85,000,000 of which we are certain. I suppose there is no chance of these people from the provinces coming back and asking for more, on the basis of fiscal need. Later I am going to ask about these grants for fiscal need. It looks to me

like a hand-out. I should like to know something about the basis. On the other hand we must know with some degree of certainty what we are getting to balance this $85,000,000, plus the contingency arising out of the gasoline guarantee. Certainly it will amount to a substantial sum if things go as they are going now. Last year the minister said it did not amount to much, $50,000, which is really nothing. But we had a 10 per cent increase in corporation income taxes plus excess profits tax. The department should know what that means because they have the returns in. The personal income tax returns were in by March 31 at the increased rates. The corporation income tax returns were in by April 30. I do not know if they have been compiled yet. While the amounts are not fixed, there must be some estimate of what the increased taxes arising out of the 1941 budget total, which are to compensate for and out of which the dominion government pays this $85,000,000 plus the guarantee. If we are not going to get $85,000,000 plus the guarantee we did not make a very good bargain. I think the minister should give that information, or he should ask that the committee rise until it is obtained.

Mr. ILSLEY: I do not think that information could be obtained in such a form as to be of any value. The estimate that the leader of the opposition read was that $90,000,000 additional would arise from the increased income tax rates—

Mr. STIRLING: That has nothing to do with this.

Mr. HANSON (York-Sunbury): But I am offsetting it against the $85,000,000.

Mr. ILSLEY: Yes; that has to do with it. The question I understand is, how much money shall we get from the increase in income tax and corporation tax rates which these agreements make possible. Is that not the question?

Mr. HANSON (York-Sunbury): Not quite that. You could have had the increased rates without these agreements at all; but we all agree that it would have been inequitable to do so. However, you made the agreements; you got these provinces to vacate the field; you buy them off to the amount of $85,000,000. What are you going to get to recoup these outlays? The minister made an estimate of $90,000,000; that is how I interpret the figures of his last budget speech. If that is all, it is hardly worth while. I think myself it will be more. But when you take into account the contingent liabilities that the government has incurred with respect to the gasoline guarantee you may find a deficit on this instead of a credit.

Mr. ILSLEY: The liability under the gasoline tax guarantee should not be set off against what we get, because we would have been obliged to look after the provinces in some way. If by putting in gasoline regulations we take ten or twenty million dollars off the revenue of a province like Ontario we could not shut our eyes to that. It might not be so fatal in the case of Ontario, although their gasoline tax revenue was $26,000,000 in 1940. We would have been obliged to do something; we cannot bankrupt a province by our acts without some provision. What would have happened would have been that the provinces would come here and by pressure, by successful presentation—

Mr. HANSON (York-Sunbury): They would have had a case.

Mr. ILSLEY: Yes; by way of advocacy they would have argued for this and that; we should have been obliged to work out something as fair as possible; and I doubt if it would have been as fair as this.

Mr. HANSON (York-Sunbury): The minister says that if he had not given the gasoline tax guarantee it would have been inequitable to pass the rationing regulations and such things. What has the minister to say about this question of price-fixing? He did not think much of it in 1941. In the debate on the address in November, 1941, he condemned the whole policy of price-fixing.

Mr. ILSLEY: I do not think so.

Mr. HANSON (York-Sunbury): I have not the minister's words here; I will send upstairs and get them. However, that is only in passing. What does he think of the situation brought about by the price-fixing policy? Is he going to bankrupt all the small grocers? By adopting a policy of rationing tires and gasoline he has put out of business an army of men who were engaged in selling automobiles. Does that appeal to the minister as ethically wrong? In the United States I read that they have appropriated $600,000,000 or so to take care of the wreckage of that business. We have not done anything like that in Canada. And, believe me, that business is a wreck. If you do not believe me, go to any of the big garages in this country that were engaged in selling automobiles. You will see men vainly striving to adjust themselves to the condition, coming to Ottawa to try to get some part of the "bits and pieces" programme, with very little success. I think there is a man in this city to-day; there was last week, from a big, well-equipped garage

in New Brunswick, who was trying to get something to help save his investment. On the same principle as applies to the provinces and the gasoline tax, what does the minister say he should do for these people? Take the corner grocer who, before the price-fixing, sold peas based on a certain cost, not on replacement cost at all. To-day he has to sell at the same price, which may be three cents a tin less than they cost him. What is going to happen to him? Either he must sell these peas at a loss or not handle peas. The same thing will apply to his whole stock in trade. The result is that he has either to do business at a loss or to go out of business. They are going to the wall just as fast as they can. What is the government going to do for these men?

Mr. ILSLEY: I do not admit that that is the situation at all.

Mr. HANSON (York-Sunbury): I can demonstrate it. The minister living here in Ottawa does not know what is going on round him, and his people do not tell him.

Mr. ILSLEY: Does the hon. gentleman say that bankruptcies have increased?

Mr. HANSON (York-Sunbury): I have not any figures, but I know that men tell me, "I just cannot go on if I cannot have a cent or two on my prices." These men are not profiteering, they just want a chance to live, and they are not being given a chance. However, this is aside from the point we have been discussing. But I think I ought to tell the minister that the retail trade in this country is suffering. It is suffering because of the inflexibility of the position taken by the government with respect to prices. There is going to be no subsidy for these men. Perhaps something ought to be done with respect to the cost of production, so that there could be a spread between them and the wholesale. But there is no doubt that these men either must sell certain commodities at a loss, or must not sell them at all. If you carry that far enough, they are out of business.

Mr. ILSLEY: Well, these are very general statements, and they are irrelevant to the discussion.

Mr. HANSON (York-Sunbury): I agree with that.

Mr. ILSLEY: The hon. member mentioned some commodity; was it tea?

Mr. HANSON (York-Sunbury): I believe it was peas.

Mr. ILSLEY: I think it will be found that the hon. member's statements are entirely too broad, and that they are not justified by the facts. Certainly an enormous amount of work has been done in giving reasonable protection to people in business in connection with the application of this price-ceiling policy. I might have said what I thought was happening in the instance to which the hon. member has referred, but I am not quite sure enough of my facts to make a statement.

Mr. BOUCHER: If the minister wants an illustration I will give him one to which my attention was drawn to-day. I refer to a merchant right in this city who is selling cured meats, and who has found himself in a position in the last three weeks of having orders he cannot fill. The price ceiling has limited the market to such an extent that he cannot get meat to cure. Then, he has had trouble with the Department of Munitions and Supply. He used his car to deliver from his wholesale producing plant to local grocers. It was a touring car, not a truck, and he received a C-3 permit. Yesterday that permit was called in, and he has received an A-1 permit which will not permit him to deliver his goods. I have just drawn this point to the minister's attention, although perhaps the discussion is wholly irrelevant. However, my observation would lead me to believe that the small independent retail grocer or the small business man, by subsidies more than by fixing, is being submerged to a level where he cannot get the commodities at a price at which he can retail to the public, and at the same time compete with the mass production carried on in chain stores and cooperative enterprises. That is definitely the situation in this section of the country, and particularly in the city of Ottawa where the independent retailer in the merchandising business is paying a very, very severe penalty for price fixing.

Mr. MacNICOL: I am not going to refer to the question of price fixing, but I wish for a moment or two to speak respecting the small business man, whose position was mentioned by the leader of the opposition.

Mr. ILSLEY: I do not wish to be too strict, because I always hope that these little flurries will die down, but when the debate reaches a point where it is one of another subject entirely, I feel I have to raise a point of order.

Mr. O'BRIEN: Perhaps the point I wish to make might be brought up more properly on section 5. However, there is a broad principle which might be discussed under this section. I understand the tax on gasoline sales has been fixed as of the year 1940. In view of the rationing of gasoline, which has been so severely inaugurated in the maritime

provinces, there would seem to be a great danger of loss in revenue, due to the fact that cars will not be put on the road. New Brunswick—and I speak particularly for it, believing that the other maritime provinces are in a somewhat similar position—will lose a great amount of revenue which it formerly received from that source. I am just wondering if at the time these agreements were signed there was any provision whereby because of some act of the federal government, such as the procedure of rationing, a further study could be made to compensate provinces for changes which were unforeseen when the agreement was signed.

Then again, in somewhat the same category might be placed the sales of liquor. If it was expected that those sales would bring in a certain revenue, as was the case with respect to motor cars when the agreements were signed, in the event of some change being made by the federal government can the provinces ask the minister for a reconsideration?

Mr. ILSLEY: The fiscal needs subsidies were fixed once and for all, and were not based on the principle of flexibility. That principle had to be decided at an early stage in the discussion with the provinces.

Mr. HANSON (York-Sunbury): They were merely hand-outs, were they not?

Mr. ILSLEY: No; fiscal needs subsidies are, in my judgment, necessary to enable the provinces to carry on. I could give reasons why they are.

Mr. HANSON (York-Sunbury): We shall come to that later.

Mr. ILSLEY: It must be remembered that part of the time critics are saying that we have not made adequate provision for the growing requirements of the provinces and the municipalities, and the other part of the time they are criticizing what we are giving as a mere hand-out.

Mr. HANSON (York-Sunbury): That feature is certainly a hand-out.

Mr. ILSLEY: But, with regard to the point raised by the hon. member for Northumberland, New Brunswick—

Mr. MacNICOL: Which, by the way, was the same point I was going to raise, but the minister objected to it.

Mr. ILSLEY: Then the hon. member for Davenport made a bad introduction, if he was going to speak on that point.

Mr. MacNICOL: Maybe I did; but I did not get a chance to start.

Mr. MacINNIS: Your approach is bad.

Mr. ILSLEY: I thought the hon. member for Davenport was beginning a sympathetic examination of the problems of the small business man. That was the subject upon which he was launching.

The point raised by the hon. member for Northumberland, New Brunswick, namely that of revenue from motor car licence fees, was given careful consideration. It is an important element in the revenue of New Brunswick. It is also an important element in that of Nova Scotia, and also in that of some of the other provinces.

Mr. HANSON (York-Sunbury): We have there, I believe, the highest tax in the world.

Mr. O'BRIEN: On automobiles.

Mr. HANSON (York-Sunbury): Yes.

Mr. ILSLEY: I do not know whether they are record taxes or not, but I know they are important.

Mr. HANSON (York-Sunbury): They are.

Mr. ILSLEY: My information is that for this year, 1942, there will be no important diminution in revenues from car licence fees. However, it is feared there will be an important diminution in 1943.

Mr. O'BRIEN: May I interrupt to say that licences in New Brunswick are sold in two divisions; that is they are sold for half years. That might be an important factor there.

Mr. ILSLEY: It might be a factor, yes. But answering specifically the question the hon. member asked, I must say that no provision is made for that affecting the fiscal needs subsidy. When the request was made that a guarantee be given with respect to the revenues from car licence fees, similar to that with respect to revenues from gasoline, I declined to give it favourable consideration. I said that if we were to examine all sources of revenue, the dominion perhaps should be receiving a guarantee that a certain amount of the service should be taken over by it. For example, if liquor revenues and car licence revenues were considered together instead of separately, and were frozen at the level of 1940 or 1941, probably the province would sustain a substantial loss.

Mr. MacNICOL: And the minister might have added marriage licences, too.

Mr. ILSLEY: While some of the provinces would have liked an arrangement whereby they could have obtained a guarantee of all the revenue that we are likely to take, and had been left free to keep the surplus of all

revenues we are likely to raise, I did not consider that would be a fair arrangement for the dominion—and neither it would have been. If something very bad happens, I suppose the matter can be considered, but in connection with these agreements the fiscal needs subsidies are not to vary.

Mr. O'BRIEN: If it is the result of action by the dominion government, then the dominion government should consider the situation more favourably than it has.

Mr. ILSLEY: I never can say what will be done in any particular emergency, but the government will have to discharge its responsibilities when the time comes. I do not want to lay down the general proposal here that we are going to guarantee absolutely that the provinces will be kept in a particular position. The gasoline matter is so big and so important and fundamental to the revenues of the provinces that I say that we could not do something drastic like prohibiting altogether the use of gasoline for pleasure driving, a prohibition which might possibly come during the war, and shut our eyes to the financial consequences to the provinces.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. ILSLEY: Mr. Chairman, the leader of the opposition this afternoon asked me to try to get some figures indicating the increase in the revenue derived from income tax for 1941-42 over 1940-41. The hon. member for Yale put the problem in this way. He said: The man on the street may say to me, "In order to get the provinces out of the income and corporation tax fields, you as a member of parliament voted and paid out to the provinces $84,500,000 to $85,000,000. To what extent did the dominion recoup itself?" I expressed the opinion that it would be impossible to give an answer to that in figures. I tried to outline some of the advantages from the point of view of taxation policy which accrued from getting the provinces and the municipalities out of the field, but I did not think a value in figures of any accuracy could be put upon that advantage. I have, however, ascertained the increase in revenue from national defence tax, personal and corporation income tax and excess profits tax for the twelve months ending May 31, 1942, there being a small element of estimate in that figure, compared with the revenue for the twelve months ending May 31, 1941. The increase is startling, tremendous; it is $347,200,000.

Mr. HANSON (York-Sunbury): That would be partly attributable to the increased rate. The minister lumps the three together. Can he give the figures for income tax alone, divorced from excess profits tax and national defence tax?

Mr. ILSLEY: Yes. The increase in personal and corporation income tax alone is $105,100,000.

Mr. HANSON (York-Sunbury): Therefore the minister's estimate of $90,000,000 was really under the actual figure.

Mr. ILSLEY: The two are not comparable. One must put them all in because the increase in the tax on corporations from 30 to 40 per cent was an increase in excess profits tax. The corporation income tax is 18 per cent, and we did not change it. We increased the minimum excess profits tax from 12 to 22 per cent, and therefore the excess profits tax must be included with personal and corporation income tax in any fair comparison. National defence tax should be in there too, because that is really an income tax and was part of our total increase in taxation provided for in the 1941 budget. It is not fair to say that we have paid out $84,500,000 and that we have got in return $347,200,000.

Mr. HANSON (York-Sunbury): Not to put it bluntly like that, I agree.

Mr. ILSLEY: No, for two reasons. In the first place we could have increased our income and corporation tax and the national defence tax to some extent, even if the provinces and municipalities had stayed in the field. As a matter of fact, we increased the excess profits tax and the income tax on corporations from 30 to 40 per cent, an increase of 10 per cent of the income, but we calculated that the provinces were collecting only 7 per cent, so in that case alone of corporation and income taxation we put on a little more than we got the provinces to take off.

Mr. HANSON (York-Sunbury): That is my understanding.

Mr. ILSLEY: That is the first qualification of this figure which must be taken into account. The second qualification of course is that this tremendous increase of $347,200,000 for this year over last year is not due entirely to an increase in the rate but partly due to an increase in business.

Mr. HANSON (York-Sunbury): Quite so.

Mr. ILSLEY: No hon. member need be under the apprehension that we are paying out this $84,500,000 or $85,000,000 and that our receipts from taxation have gone up that much. They have gone up $347,200,000, but—

Mr. HANSON (York-Sunbury:) From all the sources the minister mentioned. I suppose it is not possible to separate the figures and show what was due to the increased rate and what was due to increased business.

Mr. ILSLEY: No.

Mr. HANSON (York-Sunbury): That would be a tremendous task, and I could hardly expect the minister to get the figures. But the figures the minister has given are revealing. They are perhaps a little beyond what I had anticipated. Of course the rates are exceedingly high. Has the minister given any consideration to the question whether he has not reached the saturation point in this class of taxation?

Mr. ILSLEY: I should not like to say anything about that at this stage of the session.

Mr. HANSON (York-Sunbury): There is no harm in flying a kite once in a while. I have been examining a comparatively large number of financial returns as they have been published from time to time in the financial papers, and I have been impressed with this fact, that owing to the very heavy increase in taxation the net profits are, in most instances, away below what they were before the increase in taxation. I am not complaining about that because the country must have the money, but I know of a company which showed a gross profit of $5,400,000, the best in its history. The write-offs for various items reduced that figure to a net of $2,400,000, and because the tax had not been assessed the directors of the company had to appropriate the whole sum and the shareholders got nothing.

Mr. NICHOLSON: I am very glad that the minister answered the leader of the opposition as he did. I think it would be unfortunate if any statement should be made at this time indicating that we have reached the maximum.

I have two interesting tables before me. One is in the account of the budget speech delivered by the present Minister of National Defence (Mr. Ralston) in 1940, when he was Minister of Finance. On page 17 is a table showing the income tax payable in the different provinces. I notice quite a wide variety of rates. In British Columbia, for example, married persons receiving $500,000—

An hon. MEMBER: If any.

Mr. NICHOLSON: —are taxed, according to the 1940 rate, $357,000. There is a provincial tax of $135,000. Elsewhere the provincial rates are approximately:

Alberta	$145,000
Saskatchewan	181,000
Manitoba	50,000
Ontario	24,000
Quebec and Montreal	76,000
Prince Edward Island	15,000

It will be seen that the rates range from $15,000 in Prince Edward Island to $181,000 in Saskatchewan. I suppose it can be taken for granted that there is no one in Saskatchewan in receipt of so large an income.

Mr. HOMUTH: Is the hon. member sure of that?

Mr. NICHOLSON: I am quite sure of that, although the rates are not broken down on that basis.

Mr. HOMUTH: How about summer-fallow?

Mr. NICHOLSON: Could the minister explain how the rate brought down last year was arrived at, as shown on page 15 of his budget speech. I find that for the same income group, now that the provinces have retired from the field, the proposed tax is $401,000. That is a good deal less than the combined provincial and federal taxes imposed in 1940 in all the provinces with the exception of Ontario and Quebec. Indeed, in respect of incomes of $200,000, $150,000 and nearly all the way down the line, the amount is lower than the rate which was in effect in the previous year in the province of Quebec and Montreal. I imagine that in that province, particularly in Montreal, there is quite a large number of people in these higher income groups. Could the minister give any good reason why, under these new rates of taxation, which according to his statement last year are about as extreme as we can expect, the rates are lower than those previously prevailing in the province of Quebec when his predecessor brought down his budget?

Mr. ILSLEY: I shall have to check the statements, to begin with. I think the hon. gentleman has left out any investment surtax, has he not?

Mr. NICHOLSON: I am simply comparing these two similar tables.

Mr. ILSLEY: I think he has also left out national defence tax, which is very substantial.

Mr. NICHOLSON: No. The figures I have given are after providing for national defence tax.

Mr. ILSLEY: I suggest that, if the hon. member can spare his documents he should send them over. Perhaps I can check them here and give him an answer. I may have to ask him to wait until another day. Usually figures of this sort require a little study before a categorical answer can be given.

Mr. HOMUTH: It is rather difficult to preserve sequence in this debate. Just before six o'clock the hon. member for Northumberland, New Brunswick, asked certain questions with respect to the gasoline tax and the liquor tax. I was about to ask a question when the hon. member for Renfrew South (Mr. McCann), who was in the chair, declared that it was six o'clock. We come back at eight o'clock and find that we have to take up an entirely different trend of thought. We were discussing whether there would be any agreement as between the provinces and the dominion government with respect to the lowering of gasoline tax revenues as a result of war conditions. At that time the minister said that there are certain things which we cannot control; that we cannot predicate our taxation on war conditions. I quite appreciate that. But one thing which war conditions do not particularly affect is the revenue derived by the provinces from liquor. I know the minister and all other hon. members realize that, apart from provincial revenues from mining and lumbering—and even those are more or less controlled by the federal government through the controllers whom we have appointed—the greatest provincial revenue comes from liquor taxation. In view of the arrangement made as between the federal government and the provincial governments there is something which I think it is important that the provinces should know, particularly in view of the campaign which is going on from Halifax to Vancouver in favour of curtailing not only the sale but also the manufacture of alcoholic beverages. Would the minister be prepared to say now, so as to give some assurance to the provinces that are depending on this revenue to carry on their various paternal and social legisative enactments, that the federal government has no idea at the present time of making any change whatsoever in the liquor laws which would adversely affect—

An hon. MEMBER: The breweries?

Mr. HOMUTH: No, the revenue. I am not talking about the breweries alone. I am speaking of revenue. This is the revenue which hon. members connected with the Cooperative Commonwealth Federation are always asking about—revenue belonging to the provinces. Is the minister prepared to say that the federal government will not introduce any legislation which will adversely affect the revenues of the various provinces so far as it is dependent on the sale of alcoholic beverages?

Mr. ILSLEY: I would not care to make a commitment of that kind. I wrote the premier of Ontario some months ago that it was not the intention of the dominion government to step into the field of regulation of the sale of liquor, that the dominion considered that that should be left to the provinces; and that is what I do feel about that. I believe that the provinces should assume and properly discharge the responsibility of regulating the sale of liquor. But if the hon. gentleman wants me to go to the length of saying that no legislation will be introduced which may adversely affect the revenue from the sale of liquor, I do not know what the ramifications of that commitment would be, and I would not like to make it.

Mr. HANSON (York-Sunbury): There is no question about the jurisdiction to do it, though.

Mr. HOMUTH: The minister perhaps misunderstood me. I realize that his budget may, through taxation, affect indirectly the sale of liquor. What I am getting at is, that the federal government is not prepared to bring down any legislation which will curb sales, apart from the fact that extra taxation may be levied. The federal government does not intend to bring about any question of prohibition in the country?

Mr. ILSLEY: The statement I made in my letter to the premier of Ontario, which was given publicity at the time, still stands. It is not our intention to regulate the sale of liquor. That we consider is primarily at least within the jurisdiction of the provinces, and the provinces should assume and discharge that responsibility. I think they are prepared to do so.

Mr. HANSON (York-Sunbury): The government is not prepared to exercise any measure of control over the sale of intoxicating liquors, but the question of taxation is quite another matter. The minister distinguishes between the two.

Mr. ILSLEY: Yes. I can imagine other ways. I do not want to foreshadow anything, because I have nothing in mind as likely to be done, but I can imagine other things that might possibly affect the production of liquor, or something of that kind.

Mr. HANSON (York-Sunbury): Or the importation.

Mr. ILSLEY: Yes, something of that kind. I do not know what it may be necessary to

do before the war is over, but it is not our present intention, any more than it was at the time I wrote Mr. Hepburn and gave the letter to the press, to enter into the field of regulation of sale in the provinces.

Mr. HANSON (York-Sunbury): Although the jurisdiction is there.

Mr. ILSLEY: We have the power under the War Measures Act.

Section agreed to.

On section 2—Agreements with the provinces

Mr. NICHOLSON: Will the minister make a statement with regard to the point I raised?

Mr. ILSLEY: It is unfortunate that the hon. gentleman has not these documents before him so that he can follow what I say. The tax on a married person with no dependents, having an income of $500,000, is now $401,120. That includes national defence tax, but does not include the surcharge on investment income. This was not exactly a new feature, but the tax on investment income was changed last year so that it became a much more important feature of taxation than it was before. But without that, the tax on a married person with no dependents is $401,120. Before that, it is quite true that in Alberta the combined dominion and provincial taxes amounted to $502,935. That is more than 100 per cent of the income and is not in accordance with my views as to what taxation should be. I do not believe in more than 100 per cent income tax.

Mr. NICHOLSON: If the minister would confine his comparison between the present tax and the tax prevailing in Ontario and Quebec, that would give real cases, because there are no people getting $500,000 in the western provinces.

Mr. ILSLEY: I will read them and come to Ontario and Quebec. I do not know how many people have incomes of $500,000. I think they would be confined practically to Ontario and Quebec, but since the hon. gentleman mentioned the other provinces I may give the figures. The tax in Saskatchewan on a person of the description I have mentioned, having an income of $500,000, was $538,332.18 which was a bit heavy even for so rich a man. British Columbia, I believe, was mentioned.

Mr. HANSON (York-Sunbury): Give us the whole picture.

Mr. ILSLEY: I want to mention the ones the hon. gentleman mentioned.

Mr. NICHOLSON: I mentioned them all.

Mr. ILSLEY: In British Columbia the tax was $492,230. We now come to Ontario and Quebec. Ontario would be the most important province from this point of view and the tax was $381,103.30. That was raised to $401,120 plus the special tax on investment income, whatever the amount might be. In Quebec, the figure given by the hon. gentleman included three taxes—the dominion tax, the provincial tax and the city of Montreal tax. These three taxes did amount to $433,682. It may have been that there were taxpayers in the city of Montreal—I do not know—who paid in one or more years $433,000 dividing it up among the dominion, the province of Quebec and the city of Montreal, and that did become $401,120 plus the surtax on investments. The hon. gentleman asks, why did we reduce that? I presume we thought that $401,000 was pretty good, that it was about a fair rate of taxation. It is a pretty large proportion of the income and raised substantially the tax on persons in that category in Ontario, where I believe most of them would be. It is not fair to base a tax on a triple tax. The triple tax that existed in Montreal was recognized as—not exactly a scandal, but an undesirable arrangement.

Mr. HANSON (York-Sunbury): Inequitable.

Mr. ILSLEY: Yes, inequitable.

Mr. NICHOLSON: While I discussed just this one group—and I agree that we have not a very large number of people in this $500,000 category—I quoted figures all the way down the list in the province of Quebec and in Montreal of taxes prevailing higher than the present tax. I cannot agree with the minister's statement that the $433,000 tax in the province of Quebec is too high under present circumstances. The President of the United States in one of his recent addresses referred to a maximum income of $25,000, and the taxation that prevailed in Quebec left around three times that amount to people in this particular bracket. It seems to me that the tax prevailing in Quebec before the minister brought down his budget last year should be the minimum rate that should prevail under the new legislation. I know the rates arrived at have been a compromise between Ontario and Quebec, where most of the people in these higher income groups are found. It seems to me that consideration might have been given to retaining the rates which prevailed in Quebec.

Mr. ILSLEY: My hon. friend should say the city of Montreal.

Mr. NICHOLSON: And Quebec.

Mr. ILSLEY: No; the hon. gentleman has selected the one place in the province of Quebec where he gets these rates; he gets them by combining three taxes: dominion, provincial and municipal; and he says that should have been our model, that we should have based our legislation on the Montreal situation. I do not agree with him. With regard to whether the rate should have been raised this year to that figure or a higher figure or to an amount that would leave a man only $25,000 is a matter for consideration. But a year ago there certainly was no $25,000 ceiling in the United States nor was one thought of.

Mr. HANSON (York-Sunbury): Nor will there be.

Mr. ILSLEY: Nor is there yet, for that matter.

Mr. NICHOLSON: I do not wish to labour this point, but when the present Minister of National Defence brought down his budget in 1940 I remember one hon. member from Montreal, I think the hon. member for Westmount, stated that he had no doubt there were more people in his constituency who would be affected by this drastic increase than perhaps in any other constituency, and he was pleased to say that he had not received a single criticism from anyone in his constituency regarding this increased taxation. While I agree that the tax scale which prevailed in Montreal was higher than any in the rest of Canada, I think, in view of the statement of that hon. member, that scale should have been maintained in subsequent budgets in deciding what would be a fair rate.

Mr. MacNICOL: I should like to ask the minister a question in reference to the latter part of section 2 reading:

> . . . and subject to such exceptions as may be set out in such agreement, for the duration of the war and for a certain readjustment period thereafter. . . .

Has the minister arrived at any understanding with the provinces as to the length of this "certain readjustment period"?

Mr. ILSLEY: Yes, that is provided for in the agreement, section 23:

> This agreement shall continue in force until and terminate on the last day of the fiscal year of the province ending nearest to the thirty-first day of December in the first calendar year which begins after the date of cessation of hostilities complete or substantial between the Dominion of Canada and Germany, Italy and Japan unless sooner terminated pursuant to the provisions hereof.

[Mr. Ilsley.]

Mr. HANSON (York-Sunbury): How long might that be? My lightning calculator says it might be anything from thirteen to twenty-three months. Does the minister agree?

Mr. ILSLEY: I would have to work at that to see what the maximum might be. I think something would depend on the dates on which the fiscal years of the provinces end.

Mr. HANSON (York-Sunbury): That is one of the starting points.

Mr. ILSLEY: Yes. I do not want to work it out now unless I am obliged to.

Mr. HANSON (York-Sunbury): This bill must have been drafted after the agreements were drafted. I wonder why this rather indefinite phrase is used when the minister has in the agreements themselves what would appear to be a definite statement which could be worked out mathematically in respect of each province. Why should that not be in the bill?

Mr. ILSLEY: There was not much need to insert it; the agreements were all prepared and agreed on, and everyone knew what it was. A short summary description of the period after the duration of the war was all that was necessary for the bill.

Mr. HANSON (York-Sunbury): In other words, this phrase is merely descriptive?

Mr. ILSLEY: Yes.

Mr. HANSON (York-Sunbury): I think it could have been better drafted.

Section agreed to.

On section 3—Annual amount of compensation.

Mr. HANSON (York-Sunbury): Were the figures contained in 3 (a) in the case of the provinces which elected to accept their income and corporate tax payments audited by the federal authorities?

Mr. ILSLEY: Yes; that is correct.

Mr. HANSON (York-Sunbury): Those figures are vouched for?

Mr. ILSLEY: Yes. I have a correction to make, an amendment to move relating to the amount for Manitoba.

Mr. HANSON (York-Sunbury): How did the error occur?

Mr. ILSLEY: It was either a typing error or a printing error. I think it arose in this way, that the first instead of the corrected copy of the bill was handed to the officers for

printing. It was not an error in calculations. That is shown by the fact that the last five figures are the same.

Mr. HANSON (York-Sunbury): What should the figure be for Manitoba?

Mr. ILSLEY: It should be $5,054,740.92.

Mr. HANSON (York-Sunbury): There was another amendment—

Mr. ILSLEY: They come in sections 4 and 5.

Mr. MacNICOL: I should like to ask a question based on that part of paragraph (a) of section 3 which reads:

> . . . being an amount in each case calculated as equivalent to the total revenue obtained by the said provinces from personal income and corporation taxes during the fiscal year of each of said provinces and of municipalities therein ending nearest to the 31st day of December, 1940. . . .

And that part of paragraph (b) of the same section which reads:

> . . . being an amount in each case calculated as equivalent to the net debt service paid by the province during its fiscal year ending nearest to December 31, 1940.

Is the basis on which these amounts are granted the same, in spite of the expressions used in describing how the amount is made up? In one case we find the expression "equivalent to the total revenue obtained by the said provinces from personal income", and in the other case "equivalent to the net debt service".

Mr. ILSLEY: Those are different bases, entirely.

Mr. MacNICOL: What is the difference? What is the reason for the different bases?

Mr. ILSLEY: Because the option is given to provincial governments to accept the amount of the tax collections or the amount of the debt service, less succession duties. Some of the provinces took one option and some took the other one.

Mr. McLARTY: I move, in accordance with the observations of the Minister of Finance:

> That the figure $5,634,740.92 on line 33, subclause (a), clause 3, be amended to read "$5,054,740.92."

Mr. REID: With regard to the proviso, what is really involved by saying to any province that any arrears of personal income and corporation taxes collected by them shall be deducted from the annual amount provided them by the dominion government, and later on be paid? Why should a province not be allowed to collect its arrears of income tax and immediately apply those arrears to its annual expenditures?

Mr. ILSLEY: It would give them entirely too much the first year. It would give practically twice the revenue they require. If that were done in Ontario, for instance, it would mean that instead of having about $30,000,000, Ontario would have about $60,000,000 on which to operate in the year 1941-42. That would, of course, be entirely unnecessary. It would mean that at the end of the time there would be a year when Ontario would have nothing. Therefore the arrearages—I believe that term was used by an hon. member—are held back by the dominion to be paid at the end of the time.

Mr. HANSON (York-Sunbury): Payment is just postponement. I should like to ask a question with respect to the figures in paragraph (b). I believe Nova Scotia had an income tax, had it not?

Mr. ILSLEY: No.

Mr. HANSON (York-Sunbury): A personal income tax?

Mr. ILSLEY: No, no provincial personal income tax.

Mr. HANSON (York-Sunbury): Neither did New Brunswick. Prince Edward Island did, did it not?

Mr. ILSLEY: Yes.

Mr. HANSON (York-Sunbury): And Saskatchewan did?

Mr. ILSLEY: Yes.

Mr. HANSON (York-Sunbury): It is obvious that New Brunswick, not having had any personal income tax, and having a limited corporation tax, would have fared rather badly if the other alternative had been chosen. I believe they have chosen the wiser course. In the case of Nova Scotia, what would be the difference? I understand they had a corporation tax, but no income tax?

Mr. ILSLEY: That is correct.

Mr. HANSON (York-Sunbury): The same with New Brunswick.

Mr. ILSLEY: Nova Scotia had a corporation income tax, as well as corporation taxes; they are different.

Mr. HANSON (York-Sunbury): They had a profits tax.

Mr. ILSLEY: Yes.

Mr. HANSON (York-Sunbury): I think New Brunswick had something like that; and Saskatchewan had an income tax.

Mr. ILSLEY: Yes.

Mr. HANSON (York-Sunbury): Has the minister the figures available for Saskatchewan to show what the figure would have been, had that province accepted the alternative (a) rather than the alternative (b)?

Amendment agreed to.

Mr. ILSLEY: I shall answer the question now. Before section 3 as amended is carried, I believe some hon. members would like to discuss it further. Had Saskatchewan taken option (a) they would have received $2,092,922.69; but by taking option (b) they are receiving $4,330,471.29, in addition to the fiscal needs subsidy.

Mr. HANSON (York-Sunbury): That comes in under section 4.

Mr. ILSLEY: Yes.

Mr. HANSON (York-Sunbury): What would be the figures for New Brunswick?

Mr. ILSLEY: Had New Brunswick selected option (a) they would have received $2,450,-067.45, instead of which, by selecting option (b), they receive $3,278,574.15, in addition to the fiscal needs subsidy.

Mr. HANSON (York-Sunbury): Will the minister put Nova Scotia and Prince Edward Island on record, too?

Mr. ILSLEY: Yes. I shall give the figures for Prince Edward Island first. Had Prince Edward Island selected option (a), they would have received $251,943.96, but by taking option (b) they got $264,769.94, in addition to the fiscal needs subsidy. If Nova Scotia had taken option (a), they would have received $1,611,-078.03, but by taking option (b) they received $2,585,308.72, in addition to the fiscal needs subsidy.

Mr. HANSON (York-Sunbury): The proviso is that the provinces are not entitled to the arrears at the moment. They are postponed until after the termination of the agreement. What is the position with respect to arrears of income tax qua municipalities? I understand that they are allowed to collect their arrears. Is that correct?

Mr. ILSLEY: They are treated the same as the provinces.

Mr. HANSON (York-Sunbury): Is the minister quite certain about that? The impression has gone abroad in New Brunswick that they are entitled to retain their arrears of income tax in addition to the government grant provided for in appendix D, which aggregates $1,384,000.

Mr. ILSLEY: It all depends upon what is meant by arrearages. It must be remembered that the term of this agreement, in the case of New Brunswick, begins on November 1, 1940.

Mr. HANSON (York-Sunbury): That is the beginning of their fiscal year.

Mr. ILSLEY: Each agreement begins on the beginning of the provincial fiscal year nearest to January 1, 1941. In the case of New Brunswick their fiscal year begins November 1, 1940. They are entitled to the payment provided for by this agreement for the period beginning November 1, 1940. At the same time, during the first fiscal year of the agreement and during subsequent fiscal years, but to a smaller degree, they will be actually collecting arrearages. During the first year they will collect a very substantial sum, perhaps nearly as much as the amount payable to them from the dominion.

Mr. HANSON (York-Sunbury): Say 50 per cent as an illustration.

Mr. ILSLEY: We could find out exactly, but I think it might go as high as 90 per cent of what was due them from the dominion. They would keep those arrearages and the dominion would simply pay them the remainder.

Mr. HANSON (York-Sunbury): Deduct them.

Mr. ILSLEY: It would be the same as if they deducted the amount of the arrearages. Those arrearages would be accumulated by the dominion in that and subsequent years. If they collected some back taxes, which would be truer arrearages, they would subtract those from the payment due from the dominion until the dominion had in its hands a sum equal to the payment due the province for the first year. Then, after that, if the province collected any arrearages they could keep those arrearages and do anything they liked with them. At the end of the agreement they would be entitled to the accumulation of arrearages which the dominion would have in its hands and which would be a sum equal to the payment due the province for the first year.

Mr. HANSON (York-Sunbury): I understand that.

Mr. ILSLEY: That is the arrangement applied to the municipalities.

Mr. HANSON (York-Sunbury): I am glad to have the minister make that specific statement because the municipalities think they are going to have their grant from the dominion through the province on the basis of this agreement and hold their collections as well. I think nearly all the municipalities run their fiscal years coincident with the calendar year, and a comparison is a little difficult. In the case of Fredericton, the assessment just out is on the basis of their getting the full amount named in the appendix, namely $79,949.93. But there are always collections on account of arrearages, and those would be deducted from that item by the province, or be paid over to the province and handed to the dominion, or whatever machinery might be used. It would be accumulated until the end of the period. They are not going to have that now—that is quite clear from the minister's statement—in addition to the grant.

Mr. ILSLEY: I do not think that is the situation.

Mr. HANSON (York-Sunbury): Then I should like to know what it is.

Mr. ILSLEY: It is so hard to explain this.

Mr. HANSON (York-Sunbury): Perhaps I am dense.

Mr. ILSLEY: The hon. gentleman certainly is not; it is just one of those matters that mixes anyone up for the first three months. We shall have to take the city of Fredericton and see what the exact transaction would be. In one sense they do keep their arrearages, but in another sense they do not.

Mr. HANSON (York-Sunbury): They do not get them twice.

Mr. ILSLEY: I think what happens to the municipalities is set out pretty well in the agreement.

Mr. HANSON (York-Sunbury): What is the section?

Mr. ILSLEY: Sections 10 and 11.

Mr. HANSON (York-Sunbury): I think section 11 makes it quite clear. I should like to have some publicity given to this, because there is some misapprehension throughout the province and especially in the city of Fredericton with regard to it. I may be wrong in making that statement, but that is what I gathered from discussing the matter with his honour the mayor who is a visitor to Ottawa. In talking to him on the train last night I got the impression that they expected to keep their arrears. I think section 11 of the New Brunswick agreement makes it very clear. It reads:

> From the sum of $3,650,067.45 payable by the dominion each year under the provisions of section ten, there shall be deducted from time to time pursuant to the provisions of section 14, the amount of any income and corporation taxes collected by the province during the term of this agreement and the amount of such taxes collected by its municipalities during the twelve months following the last day of the year one thousand nine hundred and forty, under the provisions of any of the enactments enumerated in appendix A—

That would be another matter.

Mr. ILSLEY: Appendix A covers income and corporation taxes.

Mr. HANSON (York-Sunbury): The section continued:

> —less the amount of any such taxes so collected which are later refunded to the taxpayer pursuant to the provisions of sections 5 and 6; provided that after the cumulative total of all such deductions amounts to $2,450,067.45 no further deductions shall be made.

That amount is the difference between the $3,650,000 and the amount referred to in section 10.

Mr. ILSLEY: That is not it.

Mr. HANSON (York-Sunbury): Then I should like the minister to explain it. I thought I had it, but I am afraid I have not.

Mr. ILSLEY: The city of Fredericton is entitled to the amount collected in income and corporation tax in 1940—

Mr. HANSON (York-Sunbury): Which was?

Mr. ILSLEY: I do not know.

Mr. HANSON (York-Sunbury): It was $79,949.93.

Mr. ILSLEY: I do not know. Perhaps I can get that in a minute.

Mr. HANSON (York-Sunbury): That is the amount indicated by the attached memorandum.

Mr. ILSLEY: Let us assume that that is the figure, $79,949.93. If it is wrong I will correct it later. Let us say that the city of Fredericton in 1940, which is their fiscal year and is also the calendar year, collected $79,949.93. They get from the dominion, through the province, that much each year during the term of the agreement. In 1941, let us say they collected $70,000 over and above refunds that they would have to make pursuant to the agreement. Let us say they collected $70,000 in 1941. Would they collect more or less?

Mr. HANSON (York-Sunbury): This is 1942. I think it was around $80,000.

Mr. ILSLEY: If they collected more than $79,949.93 they would keep the whole thing and would get nothing from the dominion, and they could keep their arrearages thereafter and get $79,949.93 each year.

Mr. HANSON (York-Sunbury): That is what I understand, but I did not understand that the minister agreed with that.

Mr. ILSLEY: There is so much chance of misunderstanding and ambiguity about what arrearages are.

Mr. HANSON (York-Sunbury): This is my understanding about arrearages. A man is assessed on his income for 1938 in 1939 and he does not pay the tax, but he pays it during 1941 after this agreement takes effect. Does the city keep that irrespective of this $79,000?

Mr. ILSLEY: In the case I put they would.

Mr. HANSON (York-Sunbury): I think they ought to, myself. That is the minister's interpretation of the contract?

Mr. ILSLEY: There is no doubt about that.

Mr. HANSON (York-Sunbury): That is good. That is all I wanted to know.

Mr. ILSLEY: But you might have a municipality that did not collect as much that year.

Mr. POTTIER: Under this section large amounts are to be paid to the provinces for the purpose, I have no doubt, of enabling them to carry on. Let us assume that a province decides to default on one of its obligations. Is there anything in the agreement whereby the payments are affected by such act? The province could very well make money by defaulting on its interest and the like unless some steps were taken to prevent it. What has the minister to say about that?

Mr. ILSLEY: There are certain provinces with which we have made an agreement on the basis of assuming their debt service less succession duties. We have done that for the purpose of putting them in funds with which to pay the interest on their debt. Some provinces have taken the debt service option, which is option B. If, after entering into this agreement, any province repudiates and does not pay the interest which is due to its creditors, after having got the money from us on that basis, I can assure the committee that we would take a very grave view of that situation. I do not think any province would do it. I certainly hope that no province would undertake to do it; but if they did, speaking for myself, I would give very serious consideration to a reduction in the amount paid to that province, despite the terms of the agreement.

Mr. HANSON (York-Sunbury): I am glad to have the minister make that declaration. I think any government ought to take a very grave view of a situation like that if it arose. I have no thought that it will arise. I think everything will be done in good faith. But I would point out to the minister that that situation is not covered in the agreement, and the question is whether he should proceed on the assumption that a province might possibly make default, or on the other assumption that a province would honourably carry out its contractual obligations and pay its carrying charges, having regard to the fact that the money is being supplied by the federal treasury. I would give the minister my vote in the position he has assumed that the province would carry out its obligations. But if it did not, whether he would dare to take drastic action is another question. You have a contract between the crown in the right of the province and the crown in the right of the dominion, and I would not suppose that you could override that contract except by act of parliament. I do not think any other action would be upheld by the courts. But I was glad to have the minister make that statement.

I want to review the position on which the payment to New Brunswick is based. The province accepted option B, the debt service grant, less all dues. I am going to spread on the record the items which make up the total of $3,278,574.15 which the federal treasury is to pay to the province. Some of these figures are striking, having regard to the fact that New Brunswick has only half a million people and a budget a little in excess of $10,000,000.

The debt charges are as follows: Interest on funded debt, $4,277,129.34; interest on treasury bills—that means interest on floating debt—$98,164.53; interest on bank drafts, overdrafts, and temporary loans—that is not floating debt but I assume temporary loans are temporary deposits, bearing interest, with the government—$16,145.62; other debts—it does not distinguish what they are—$7,221.74. Then follows this item: Foreign exchange, $310,061.83. That, I assume, was the cost to the province for the fiscal year ended October 31, 1940, of exchange on the principal and interest of its debt held in the United States and payable in United States funds, which of course is a very heavy charge. Then follows: commission and

other charges of management, $8,847.93. I would say that that was a proper item of debt service or debt charge. Altogether these items make a total of gross debt charges, excluding debenture, discount, amortization, sinking fund or debt retirement, which is properly excluded, of $4,717,570.99. That is, approximately 40 per cent of the total revenue of the province is required to take care of the interest charges and the foreign exchange on the public debt of New Brunswick. That is a very serious situation for the province. It just means this, that the province for a long time—and I am not confining it especially to recent years—has been heaping debt upon debt upon the backs of the people of the little province of New Brunswick. A very large portion of that was incurred during the last five or six years, and it is not a creditable situation. Against that are these credits of interest received, made up of interest on sinking fund investments, $416,694.01; investments in government utilities—hydro and the like—$400,715; advances and amounts receivable—whatever that means—$68,978.66; sundry loans and deposits, $4,786.34. The total interest receipts are $891,174.01, leaving the net debt charges, excluding debenture, discount, amortization and sinking fund or debt retirement, $3,826,396.98. Deducting succession duty receipts for the same fiscal period, namely the fiscal year ended October 31, 1940, $547,822.83, we find there is left a net debt charge of $3,278,574.15, as stated in the bill.

Of course, this is a generous payment to New Brunswick. I have said that from the very beginning. But the pity of it is that so much of the revenue of the province—approximately 47 per cent—has to go in interest. I will not say that it shows profligacy, because I do not want to use so strong a term, but at least it indicates that they were very careless with the province's credit in the days gone by, with the consequence that the province's debt is top-heavy to-day.

I am going to have something further to say, on section 4, with regard to the fiscal needs subsidies.

I want to put those figures on *Hansard* because the minister has not done so. I think it would be illuminating if hon. members of this committee from other provinces were to put on the record the figures as stated by the federal government, so that the public might have before them a comprehensive statement of the true financial position of some of the provinces.

Section as amended agreed to.

On section 4—Additional subsidies.

Mr. MacNICOL: This section sets out the additional subsidies during each year of the term of the agreement to the provinces of Nova Scotia, New Brunswick, Prince Edward Island, Manitoba and Saskatchewan. On what basis are these five provinces accorded the extra subsidies set out in this section?

Mr. ILSLEY: On the second reading of the bill I stated that when section 4 was under discussion I would wish to give the house more information in regard to the principles and considerations which led us to fix upon the fiscal needs subsidies recommended for the three maritime provinces and for Manitoba and Saskatchewan.

Unfortunately, there was no ready-made formula which could be used for this purpose. It was a question of judgment based on a great many factors. Of necessity the decisions had to be somewhat arbitrary, but there were a number of important factors or principles which were taken into account.

In the first place, we considered it preferable to settle once and for all the amounts of the annual payments under the agreement to the provinces, including the fiscal needs subsidies, if any. The alternative would have been for the dominion to review the provincial budgets each year, which would entail a careful and detailed scrutiny of all expenditures.

Mr. HANSON (York-Sunbury): Would that have been an unmixed evil?

Mr. ILSLEY: I think it would have been undesirable.

Mr. HANSON (York-Sunbury): That is, they would resent it.

Mr. ILSLEY: I would rather have the hon. gentleman doing it than myself.

Even if the dominion were in a position to do this effectively, which it is not, it would tend to create antagonism and friction between the dominion and the provinces, and in addition would have involved a number of other undesirable factors. Under the circumstances, it seemed wiser to fix the subsidy where one was needed at an amount which would permit a province to stand on its own feet until the end of the war without coming back to the dominion for further assistance. This does not, of course, mean that if something in the nature of a national catastrophe should occur, it would not be necessary for us to review the situation again and perhaps take necessary supplemental action.

Mr. HANSON (York-Sunbury): That is leaving the door open.

Mr. ILSLEY: It is not very far open. I think the committee will agree that barring such developments of a grave and emergent nature, no province should feel that it has any right to come back to the dominion for further assistance under present conditions.

Mr. HANSON (York-Sunbury): That is positively closing it.

Mr. ILSLEY: As a result of the agreement, it knows pretty well what its total revenues will be; it should know the total amount of cloth available to it and it should cut its coat according to its cloth.

Second, it was desirable to use as far as practicable "objective criteria" as a basis for assessing the financial position of any of the provinces requiring fiscal needs subsidies. This phrase "objective criteria" was used frequently in the discussions with the provinces. In other words, it was desirable that consideration should be given to known facts rather than to hypothetical considerations. This meant that the basic consideration had to be the financial position of the province during its last completed fiscal year, together with any other known factors which might reasonably be expected to alter such position in the future, but that no attention should be paid to contingencies of an intangible or a speculative nature or provisions for emergency situations.

It will be understood that several of the provinces argued for something of the nature of insurance against emergent situations. They argued that they could not tie themselves up in this way, that they might have to do this and they might have to do that which would cost them money, and that the dominion, if they were fixing these fiscal need subsidies once and for all, would have to take account of possible or certainly probable developments.

Mr. HANSON (York-Sunbury): In other words, they wanted the dominion to assume responsibility in any emergencies.

Mr. ILSLEY: Yes. I do not say they were unfair about it at all; but the principle we went on was that we could not base our payments upon hypothetical considerations, or possibilities of emergencies, or anything like that.

Third, while some increases in provincial costs may be expected, particularly in connection with cost of living bonuses for civil servants, interest on indebtedness, maintenance of highways and bridges which are being subjected to heavy traffic wherever near army, navy and air force camps, and possibly in certain cases higher salaries to retain public schoolteachers, there should be a reasonable limit to any of such increases in costs in view of the ceiling which has been placed over prices and wages. Furthermore, these increased costs will be offset partly or wholly by reductions in unemployment relief and by increased revenues.

Fourth, the relative level of costs and services in the different provinces cannot be ignored, but in view of the tremendous sums which the dominion must raise for war expenditures, this was not considered an appropriate time for certain of the provinces to bring their services up to the levels prevailing in other provinces. There is an obligation on all governments to defer until after the war every expenditure which can possibly be avoided.

It was in the light of these general principles and considerations that the fiscal needs subsidies provided for in the bill were determined. In view of their strong budgetary position it was obvious at once that no fiscal needs subsidy could be justified in the case of Ontario, Quebec, Alberta and British Columbia.

In the case of the maritime provinces there was a special situation in view of the fact that the special grants voted annually to these provinces as a result of the recommendations of the Duncan and White commissions represented in fact additional subsidies which the dominion is bound to continue. It was for this reason that a special clause was inserted in the agreements with the maritime provinces to the effect that the dominion recognizes that these grants are in the nature of a subsidy and undertakes to continue paying them upon the termination of the agreement. As the committee is aware, Bill No. 17 has been introduced in order to incorporate this undertaking in dominion legislation so as to avoid any possibility of misunderstanding at a later date.

Under these circumstances none of the maritime provinces could reasonably be expected to enter into the agreement if it was going to result in an out-of-pocket loss to the province on the basis of its 1940 operations. Otherwise the province would be better off if it continued to receive the annual special grant from the dominion and continued to collect the relatively moderate taxes imposed upon its residents. In the case of all three maritime provinces there would have been out-of-pocket losses, and for this reason alone fiscal needs subsidies would have been justified and required.

The subsidy of $325,769.31 which is recommended for Nova Scotia is in fact the amount of the out-of-pocket loss to the province; in other words, the total loss of its fiscal needs subsidy plus the annual payment to be made

to Nova Scotia under section 3 of the bill will merely place Nova Scotia in the same position it would have been in if it had retained its special annual grant or subsidy and had not suspended its income and corporation taxes—on the basis of 1940 results from these taxes. Any additional payment was not considered justified in view of the province's strong budgetary position. After making up the out-of-pocket loss referred to, the province would have a surplus of $1,096,000 on the basis of its 1940 operating results after provision for debt retirement. That answers the question as to the basis for the fiscal needs subsidy for Nova Scotia.

In the case of Prince Edward Island, the out-of-pocket loss to the province on the basis of its 1940 operations, had no fiscal needs subsidy been provided for in the agreement, would have been $262,174.02, and the province would have had a deficit of $280,000 before making any provision for debt retirement or providing any cushion whatever for possible increases in certain costs. It was believed that the dominion should not assume responsibility for placing every province in a position where it could meet its full obligations for sinking funds or debt retirement. To do so would mean that the dominion, out of its own current revenues, would be paying off the capital obligations of a province. Furthermore, the required provisions for sinking funds and debt retirement vary considerably in the different provinces; they are particularly high in Prince Edward Island where they average some 2½ per cent of the total debt. On the other hand it could be argued that the dominion should leave the province in a position to make some minimum capital expenditures or, alternatively, to make some moderate provision for sinking funds or debt retirement and, in addition, have something as a cushion against increased costs. In the case of Prince Edward Island, therefore, it is recommended that the dominion should pay a fiscal needs subsidy of $175,000 in addition to the $262,174.02 necessary to make up the loss which, as I have already pointed out, Prince Edward Island would otherwise have suffered under the agreement; this means a total fiscal needs subsidy of $437,174.02. On the basis of the 1940 results this would leave a surplus of $157,000 before provision for sinking funds. A sinking fund provision of one per cent of the province's outstanding debt at December 31, 1940, would be $85,000, leaving $72,000 as a cushion against increased costs. Actually sinking fund requirements were $205,000 in 1940, so that on this basis, after making this very heavy provision for debt retirement and giving effect to all the dominion's proposals, there would have been a deficit of $48,000 on the basis of 1940 operations. I think that answers the question in regard to Prince Edward Island.

In the case of New Brunswick, the out-of-pocket loss to the province already referred to would have been $71,493.30. It is proposed to make up this loss and to pay, in addition, $300,000 as a fiscal needs subsidy, making a total of $371,493.30. This would leave the province, on the basis of its 1940 operations, with a surplus after provision for normal debt retirement—which is somewhat less than 1 per cent of its total outstanding debt—of $353,000, which we do not consider excessive at all and which we thought was fair. I think that answers the question in regard to New Brunswick.

So much for the maritime provinces. I have still to deal with the provinces of Manitoba and Saskatchewan.

After deducting the loss of the $750,000 special grant to Manitoba, which was cancelled last year, Manitoba would have had a surplus of $1,040,000 on the basis of its fiscal year ended March 31, 1941, before making any provision for sinking funds or debt retirement. A provision, for this purpose or for capital expenditure, of one per cent of the province's outstanding debt would amount to about $900,000, leaving only $140,000 for increased costs in the future. Costs have been held down and services starved in Manitoba in recent years to a very considerable extent, and some increases are to be expected in the future, particularly for highway maintenance and education. In view of this, it was proposed that Manitoba should be given a fiscal needs subsidy of $600,000 per annum, instead of the special grant of $750,000 which the province had been receiving in recent years.

In the case of Saskatchewan, after giving effect to the new arrangement—apart from any fiscal needs subsidy—the province would have had a deficit of $653,000 on current account for the year ended March 31, 1941, before making any provision for sinking funds or debt retirement. A sinking fund provision of 1 per cent of the outstanding debt would require $1,261,000, which, if added to the deficit of $653,000, would mean a total deficit of $1,914,000. Actually Saskatchewan has not been providing for its full sinking fund requirements for some years, so that it would not be reasonable for the dominion to make up the full amount of the deficiency referred to plus a cushion to take care of any increases in costs. After all the factors were considered, it was decided to recommend that Saskatchewan should be granted a fiscal needs subsidy of $1,500,000 which, after the current

account deficit of $653,000 is deducted, will leave $847,000 for debt retirement or as a cushion for future increases in costs. Actually the provision made by Saskatchewan for debt retirement in its fiscal year ending April 30, 1941, was only $170,000. On the basis suggested, Saskatchewan should be able to stand on its own feet for the first time in many years and should be required to do so.

Mr. MacNICOL: Is not Alberta in a more unfavourable financial position than Saskatchewan as regards what the minister has been saying?

Mr. ILSLEY: No. Alberta has a comfortable surplus without any fiscal needs subsidy.

Mr. MacNICOL: I understood they were repudiating a portion of their debt interest.

Mr. ILSLEY: They are paying half the interest on their debts, but they have a substantial surplus.

Mr. MacNICOL: Why should we not help Alberta too?

Mr. HANSON (York-Sunbury): In the light of the statement with respect to fiscal needs and the suspension of certain subsidies, what is the effect of the estimate, page 10, 1942-43, "Subsidies and special compensations to provinces", $13,768,953.24? That was the vote last year. Will it be effective now after this bill goes through—these grants to the different provinces? What is this money?

Mr. ILSLEY: What we call constitutional subsidies will continue to be paid to the provinces.

Mr. HANSON (York-Sunbury): That is the 80 cents a head?

Mr. ILSLEY: And its developments, yes.

Mr. HANSON (York-Sunbury): They are continuing to be paid?

Mr. ILSLEY: Yes.

Mr. STIRLING: These will be additional to that?

Mr. ILSLEY: Yes.

Mr. HANSON (York-Sunbury): So that New Brunswick, in addition to the amount mentioned in section 3 of this bill, $3,278,574.15, and $371,493 for fiscal needs, receives $693,040 based on population; that grant has not been altered in any way?

Mr. ILSLEY: No; New Brunswick gets its regular constitutional subsidy under the British North America Act as usual. That is not affected in any way. It is only its special grant that was terminated; that is under the White and Duncan commissions.

[Mr. R. B. Hanson.]

Mr. HANSON (York-Sunbury): The $900,000 under the White and Duncan commissions is cancelled, but the statutory provision always in force is continued?

Mr. ILSLEY: That is right.

Mr. HANSON (York-Sunbury): So that under the present arrangement New Brunswick will now be receiving three different payments:

$3,278,574 under section 3 of this bill
$ 371,493 under section 4 of this bill
$ 693,040 as shown by the main estimates.

And in addition a guarantee against any deficit in the gasoline tax?

Mr. ILSLEY: Yes; that is correct.

Mr. HANSON (York-Sunbury): I think the federal treasury has been pretty generous to them.

I want to ask a question about this special grant in aid under section 4. It is stated in the bill to be $371,493.30. On reference to appendix D, the break-down figures for New Brunswick, that is arrived at as shown: Loss of revenue to the province under the proposals, $1,065,657.22; municipal, $1,384,410.23; total $2,450,067.45. Added to that are the special grants of $900,000 under the Duncan and White commissions, or a total of $3,350,067.45, from which stands to be deducted the amount mentioned in section 3 of this bill, namely, the debt service charges as indicated in the break-down of $3,278,574.15 which I put on the record. Therefore the net loss of revenue to the province under the proposal is only $71,493.30. Then the minister out of the goodness of his heart gives them a lump sum of $300,000. If I followed him correctly, the minister has done that on the basis that the sinking fund payments were not quite adequate, and consequently the province should have a cushion or some fund to pay increased costs. Are those the two bases on which the $300,000 is figured? In any event it would appear to me to be a mere arbitrary figure, more in the nature of a hand-out than an earned grant.

Mr. ILSLEY: It puts the province in this position: they will have a surplus of $353,000 on the 1940 basis if they provide their normal debt retirement, which is very moderate, less than one per cent. That province, like other provinces will undoubtedly be confronted with slightly increased costs.

Mr. HANSON (York-Sunbury): Well, they ought to have cheaper money on refunding.

Mr. ILSLEY: They may have rapidly increasing costs. Hon. gentlemen should have heard these provinces, heard about their difficulties. We turned a deaf ear to about

seven-eights of it, I must say, but there was some of it that was valid. I do not want to deny any generosity on the part of the dominion government, but I do not think we were unduly generous in the case of New Brunswick, or any other province for that matter. The level of social services in New Brunswick is not high; anyone who reads the Duncan report will know that. They are simply put in the position, on the basis of the revenues and expenditures remaining the same as in 1940, of having a surplus of only $353,000 after meeting their normal debt retirement, which is something less than one per cent, so I do not think we are giving them any encouragement to extravagance. I admit that their liquor revenues will probably be greater in 1941 and 1942 than in 1940; their gasoline revenues are guaranteed, and with the expansion of activity they may work up revenue here and there. That is something we did not get much information about from the provinces. I admit we got much more information about possible increases in expenditure. Nevertheless I think the arrangement made with New Brunswick is a reasonable one and about in line with the arrangements made with the other provinces. Some provinces were inclined to think they were badly treated in comparison with others, and the judgment we were called upon to exercise was difficult, but I think we made an arrangement that was defensible.

Mr. HAZEN: In addition to the compensation provided by this measure and the compensation for gasoline tax and the subsidies, I understand the provinces will get their constitutional subsidies provided by the British North America Act?

Mr. ILSLEY: That is correct; they were not disturbed.

Mr. HAZEN: In addition, do they get the subsidies provided by Bill No. 17?

Mr. ILSLEY: No; Bill No. 17 does not provide any subsidy until after this agreement ends.

Mr. HANSON (York-Sunbury): To make sure that they will get it after this terminates?

Mr. ILSLEY: Yes.

Mr. BLACKMORE: I wish to say a word regarding the way in which the minister has dealt with the provinces. I wish to support him in his generous stand. I do not know what is the matter with the leader of the opposition. He seems to have a particular animosity against the provinces; he seems to think they are legitimate prey.

Mr. HANSON (York-Sunbury): I have not expressed any animosity toward the provinces, but I think the little province of New Brunswick is very extravagant. I am free to say that here, and I shall say it again many times. I do not make any reflection on any other province.

Mr. BLACKMORE: Judging from what I have heard regarding the history of New Brunswick and the position in which she has been placed by the fiscal policy of the dominion during past generations, I think she must have been exceedingly parsimonious not to be head over heels in debt.

Mr. HANSON (York-Sunbury): That was not the cause of her debt.

Mr. BLACKMORE: I believe that the attitude of the Ottawa officials in the main for past generations has been altogether too callous toward the provinces. I commend the minister for having shown a different attitude in these agreements. He can afford to be a good deal more generous. I resent the expression which the leader of the opposition has used in designating some of these allowances as "hand-outs." The organizations in this dominion that have been giving hand-outs since 1867 are the provinces; they have been "handing out" generously. Ottawa has not, I think, realized the extent to which they have been handing out, and it is time a little began to be handed back.

Mr. ESLING: Would the minister revert to paragraph (a) of section 3 under the British Columbia agreement, and give a word of explanation? What is the situation in British Columbia with reference to the 2 per cent mineral tax?

Mr. ILSLEY: Income and corporation taxes are levied in British Columbia under the income tax act. Certain taxes are also levied under taxation acts which are alternative to the payments required under the income tax act. These have been classified as output taxes, and are not included in the computation of the grant. Licence fees up to $1,000 are imposed on fisheries and canning companies, and with the exception of the fish buyer's licence fees, with a maximum of $25 per licence, these are included in the grant.

Mr. ESLING: Does that mean that the 2 per cent mineral tax will still apply in British Columbia?

Mr. ILSLEY: Yes, that is correct. It is an output tax, a tax on the natural resources, and the province by agreement expressly retains the right to impose such tax and, I presume, will continue to impose it.

Mr. GERSHAW: Speaking with respect to section 3, the minister said that any province under option (b), which was being paid by servicing its debt, in the event of failing to pay such debt would be regarded rather seriously by the dominion. That would not apply to any province under option (a), where they were being paid, irrespective of servicing of debt?

Mr. ILSLEY: I would not like to say that the dominion would not seriously take a grave view of the action of any province which repudiates its debt.

Mr. GERSHAW: Surely it would not assume any control.

Mr. ILSLEY: I am not prepared to make a statement about that. I do not like to say anything at all which would give any encouragement to a province to repudiate. I do not believe any province ought to do so, under present or any other conditions.

Mr. HANSON (York-Sunbury): It seems to me that this question of the Alberta position was raised last year, and I urged the minister on one occasion at least to use his influence with the government of Alberta to keep their contractual obligations.

Mr. ILSLEY: What influence would I have?

Mr. HANSON (York-Sunbury): I have heard it said that he who pays the piper calls the tune. At the moment I do not just remember in what connection the point was raised last year.

Mr. ILSLEY: I remember.

Mr. HANSON (York-Sunbury): I pressed the minister hard to take a different attitude, and he was loath to take it. To-day he has thrown out a serious warning, for the future I assume; but I should not like to think he is absolving them for the past.

Mr. ILSLEY: No.

Mr. HANSON (York-Sunbury): Perhaps the dominion ought to do something to try to have Alberta meet its contractual obligations.

Mr. ILSLEY: My hon. friend wanted me to pay it to them, and I would not do that.

Mr. HANSON (York-Sunbury): Oh, I did not remember that.

Mr. BLACKMORE: I should like to ask the leader of the opposition what he would do.

Mr. HANSON (York-Sunbury): I will answer that question.

Mr. BLACKMORE: I will make it clear—

[Mr. Ilsley.]

Mr. HANSON (York-Sunbury): You asked me what I would do. I would pay my debts, to the last dollar. I would be just before I would be generous. That is what I would do.

Mr. BLACKMORE: Supposing the leader of the opposition were the Prime Minister of Canada; I should like to know where he would get the money to enable a province to pay its contractual obligations, when the province has not the wherewithal to pay.

Mr. HANSON (York-Sunbury): That is a question of fact. I would ask the minister to tell us what the surplus of Alberta was on last year's auditor's statement.

Mr. ILSLEY: For the year ended March 31, 1941, the Alberta surplus on current account was $4,875,000.

Mr. HANSON (York-Sunbury): That is a sizeable sum of money.

Mr. BLACKMORE: Can the minister say whether with that $4,000,000 odd Alberta paid off some of its outstanding debt? For example, what about savings certificates, $10,000,000 of which were against Alberta when the present administration assumed office?

Mr. ILSLEY: The amounts are these: public buildings, $257,000; highways, bridges, forests, wharves and docks, $1,146,000; other public works, $113,000. agricultural loans, $447,000; miscellaneous expenditures, $3,000; leaving an overall surplus of $2,909,000.

Mr. BLACKMORE: Has the minister any information as to what was done with that $2,000,000 odd?

Mr. ILSLEY: Some of it was used to redeem savings certificates, and other forms of debt.

Mr. HANSON (York-Sunbury): Has the minister any information—

Mr. BLACKMORE: I want to ask—

The ACTING CHAIRMAN (Mr. Ross, Calgary East): Order; the leader of the opposition has the floor.

Mr. HANSON (York-Sunbury): Does the auditor's statement which the minister has before him show how much Alberta has increased taxation in the last seven years?

Mr. ILSLEY: I have not that information.

Mr. HANSON (York-Sunbury): It is quite easily available, and I think it is very large.

Mr. BLACKMORE: Since the question of Alberta has been raised, I might tell the leader of the opposition I am ready to take him on at any time, on the question of Alberta.

He seems to think he knows a lot about it, but there are several things he does not know yet. In the first place—

Mr. BOUCHER: Shall I hold the coats and the boxing gloves?

Mr. BLACKMORE: Yes, all the trimmings. In the first place, he will find, if he examines the expenditures with respect to public works, that they were expenditures which were utterly unavoidable. The remainder of the money, as the minister has indicated, was largely used in the reduction of savings certificates, which constituted a $10,000,000 floating debt against the province, and was destroying the credit of the province. The question arises as to what an administration should attend to first, whether it should leave a floating debt like that, with thousands of poor people holding certificates, or whether it should pay interest. I think the leader of the opposition has not indicated a very statesmanlike attitude to the problem of provincial finances and provincial problems in this dominion. I do not care to say any more now.

Mr. HANSON (York-Sunbury): I am rebuked by the hon. member for Lethbridge; but I think I hold the orthodox view, one held by most people in Canada, with respect to the repudiation of contractual obligations by the present administration in Alberta—and I am not receding for one minute from that position.

Mr. BLACKMORE: I wonder whether the leader of the opposition remembers that after the last war the British government had to repudiate its debt; and if he remembers, what would he say about that?

Mr. HANSON (York-Sunbury): I had not heard that before.

Mr. BLACKMORE: There was an impossible situation there.

Mr. ILSLEY: I think they made an agreement.

Mr. BLACKMORE: Perfectly all right, but if we know the whole story there is not so much of the offensive about it.

The ACTING CHAIRMAN (Mr. Ross, Calgary East): Hon. members should confine their discussion to section 4 of the bill.

Mr. McLARTY: I move that the figure "$324,122.10" in line 34 of section 4 be amended to read "$325,769.31".

Amendment agreed to.

Section 4 as amended agreed to.

On section 5—Compensation for loss of revenue re tax on sale of gasoline.

Mr. MacNICOL: This section reads:

> The agreement may also provide, in accordance with and subject to such terms and conditions as may be set out therein, that the dominion shall pay to the province the amount by which the net receipts from the tax imposed by the province on the sale of gasoline are less in each case than the following amounts.

Then amounts are set out opposite the names of the nine provinces. The section continues:

> . . . being an amount in each case calculated as equivalent to the net receipts of the province from the tax imposed by the province on the sale of gasoline during the fiscal year of the province ending nearest to December 31, 1940.

I have been wondering whether, with the amounts set out in this section being fixed, the federal government does not stand to lose. What is happening in connection with the gasoline shortage? Five business men called to see me over the weekend. They represented two different classes of business, the first being small cleaners and pressers. There are perhaps thousands of these throughout Canada, there being hundreds in Toronto alone. Their gasoline ration has been cut down from approximately twenty-five gallons a week, which was altogether too little, to approximately eight gallons a week. These Toronto men told me that this will mean they will have to close shop. The government will not only lose revenue on what they would have made if these men had continued in business, but will have to make up to Ontario and the other provinces a considerable amount in connection with the gasoline tax.

The next class of business were those small business men who travel round the country in their own cars, taking with them the goods they sell for immediate delivery. These men have also had their gasoline ration severely cut, and they told me that they will be put out of business. I was just wondering whether the government is not going to lose a lot of revenue. As the leader of the opposition said earlier in the day, the ministers located here in Ottawa are not up against the cushion like the average member of parliament when he returns home. I am besieged by business people, and if I am told the right story, the government is not only going to lose a lot of revenue through these men being put out of business, but going to have to pay out the amounts set out in this bill.

Mr. ILSLEY: We shall have to make good to a considerable extent this year, and I do not know what the situation will be in future years. The liability under this undertaking for 1941 amounted to only about $50,000.

Mr. MacNICOL: I am very much concerned over the situation. I think regulations have been issued that are not in conformity with the facts in reference to the gasoline situation. The amounts the provinces are to receive are fixed, but the Dominion of Canada has no surety as to what it is going to receive in connection with the gasoline tax.

Mr. REID: Is this gasoline tax confined to gasoline, or will it cover gasoline and fuel oil?

Mr. ILSLEY: In some provinces certain types of fuel oil are treated as gasoline and are subject to the same taxation. That would be covered by the guarantee.

Mr. McLARTY: I move that the figure $2,104,685.81 in line 46 of section 5 be amended to read "$2,101,072.01".

Amendment agreed to.

Section as amended agreed to.

On section 6—Charge upon consolidated revenue fund.

Mr. HANSON (York-Sunbury): Does this mean that hereafter these payments are to be statutory and will not be reviewed by parliament?

Mr. ILSLEY: That is right. They will not need to be voted.

Mr. HANSON (York-Sunbury): They will appear as statutory votes?

Mr. ILSLEY: Yes.

Mr. HANSON (York-Sunbury): What opportunity will there be to consider the question of deficits on gasoline taxation? I do not think these should be made statutory charges altogether. I would not object to the items in sections 3 and 4 being made statutory because they are fixed, but the amounts to be paid under section 5 ought to be voted by parliament after discussion. This is simply giving a blank cheque to the government to pay what it wants to pay without parliament or the House of Commons having anything to say about it.

Mr. ILSLEY: We can pay only in accordance with the agreement. The payments would be reviewable by the auditor general, and there would be that protection.

Mr. HANSON (York-Sunbury): Why not parliament?

Mr. ILSLEY: We are meeting the province of Ontario here.

Mr. HANSON (York-Sunbury): What is the secret?

[Mr. Ilsley.]

Mr. ILSLEY: We intended to have annual votes for the whole thing, not only this but the rest of it, but the point was raised very strongly by Ontario. The hon. gentleman may remember that it was back about the end of February or the early part of March and a tremendous demand was made that this be made statutory. They said that they could not rely and should not be asked to rely on an undertaking which would be subject to a vote of parliament. They contended that there might be a term of several years during which this agreement would be operative, and they might be at the mercy of a hostile vote in the House of Commons when their agreement actually entitled them to the payment of so much money.

Mr. HANSON (York-Sunbury): That would be with regard to the principle involved in the payment, but surely the quantum of the amount should be open to discussion.

Mr. ILSLEY: I do not know.

Mr. HANSON (York-Sunbury): What would happen if there was a change in the tax imposed by the province?

Mr. ILSLEY: They cannot do that.

Mr. HANSON (York-Sunbury): They might do that.

Mr. ILSLEY: It is provided against.

Mr. HANSON (York-Sunbury): There ought to be some provision. In New Brunswick we have the highest tax rate on gasoline in the world, 10 cents a gallon.

An hon. MEMBER: Not in the world.

Mr. HANSON (York-Sunbury): Residents of Nova Scotia and Prince Edward Island also pay 10 cents a gallon on gasoline. It is a very heavy tax, too high in my judgment especially when one realizes that the crude oil comes to the refinery in normal times at a cost of less than 10 cents, landed in Halifax, and we are paying 36½ cents a gallon for Esso.

Mr. STIRLING: I cannot understand how the amount of $3,763,625.95 can have an "S" against it in the estimates if that sum be not the amount that will be paid. As I understand it, it will be looked upon as a statutory item in the estimates of next year, but how can that be if that be not the correct sum to be paid?

Mr. ILSLEY: The $3,763,000 will not necessarily—

Mr. STIRLING: I understood the minister to say that it would appear in the estimates as a statutory figure.

Mr. ILSLEY: The amount that is payable, the net total.

Mr. STIRLING: The adjusted figure.

Mr. ILSLEY: Yes.

Section 6 agreed to.

On section 7—Coming into force.

Mr. HANSON (York-Sunbury): Why was March 15 fixed?

Mr. ILSLEY: That was just prior to the conclusion of the first agreement. The first agreement was signed with British Columbia on March 18.

Section agreed to.

On the preamble:

Mr. HANSON (York-Sunbury): The estimates are made up in the fall, depending of course upon when parliament meets. How would it be possible to have this provision made in the main estimates? The amount of the deposit may have to be dealt with by special estimate.

Mr. ILSLEY: I have not given any thought to it. Perhaps we could vote it in two parts.

Mr. MacNICOL: A short time ago when we were on section 4 the minister said with reference to the amount granted to Saskatchewan, with which I am in accord, something that indicated that Saskatchewan had been treated generously. I asked why was not something given to Alberta, because I understood it was in perhaps a more unfavourable position, and the minister said that it had an operating surplus on last year's operations —that is current operations, I presume—of $4,000,000 more or less.

Mr. ILSLEY: Yes.

Mr. MacNICOL: There was no reference to debt interest. I was wondering whether, if Alberta were treated in the same way as the other provinces, particularly Saskatchewan, would it be in the unfavourable position it is in? Is the parliament discriminating against Alberta for repudiating or threatening to repudiate its debt interest? Would it be in the position of having to repudiate its debt interest if it were treated the same as the other provinces?

Mr. ILSLEY: Alberta cut its interest rate in two on June 15, 1936. The question of the hon. gentleman perhaps is this: Was Alberta treated fairly before that date? Was there some discrimination that made it do that. That is a little far back for me, but I must say that I do not think so. I am strongly of the impression that it was not the fault of the dominion government at all in any way, shape or form.

Mr. HANSON (York-Sunbury): I think the minister will find that Mr. Bennett made a very strong argument once to the opposite effect.

Mr. GERSHAW: Alberta has needed social services very badly because of the general poverty which has prevailed there for some time. The minister has read out the expenditure of the province. Would he give the committee the sources of Alberta's revenue? Was it affected by taxation? Were some of the payments from the wheat pools and some payments on railway debt or was it all ordinary taxation?

The ACTING CHAIRMAN (Mr. Ross, Calgary East): I do not think these questions are relevant at this stage.

Mr. ILSLEY: I am not familiar with the rules, Mr. Chairman; I do not know what can be taken up on the preamble.

Mr. HANSON (York-Sunbury): By common consent, it can be done.

Mr. ILSLEY: Alberta's revenue for the base year ended March 31, 1941, was $20,875,000, made up as follows:

Corporation taxes	$3,017,000
Income tax on persons	1,041,000
Gasoline tax	3,222,000
Succession duties	417,000
Real property taxes	1,171,000
Amusement taxes	208,000
Motor vehicle licences	2,572,000
Other licences	1,254,000
Public domain	2,264,000
Liquor control	3,158,000
School lands, interest	477,000
Other current revenues	286,000
Ordinary subsidies	1,788,000

These items make up the total of $20,875,000.

Preamble agreed to.

Bill reported, read the third time and passed.

MARITIME PROVINCES

AUTHORIZATION FOR PAYMENT OF ADDITIONAL SUBSIDIES

Hon. J. L. ILSLEY (Minister of Finance) moved the second reading of Bill No. 17, to provide for the payment of additional subsidies to the maritime provinces.

He said: Mr. Speaker, I have not prepared any statement with a view to making it on the second reading of this bill. The whole story is found in the preamble to the bill. Briefly I may say that these grants have been voted year by year by parliament, pursuant to the findings of two commissions, the Duncan commission and the White commission.

The maritime provinces considered that since they are forgoing these grants for the period of these agreements, they should have some statutory guarantee that the grants would be resumed at the termination of the agreements. It was considered that it was desirable to do this because these payments are fixed and settled by the findings of commissions, judicial bodies which went into all relevant matters at great length, and there is no reason that I can think of why the payments should not be guaranteed to these provinces by statute.

Mr. CRUICKSHANK: This bill is not particularly clear to me, coming from the far west. It is intended, as I understand, to pay subsidies to the maritime provinces. Am I to understand that, like Alberta, New Brunswick is asking for some special allowance of $25 a month in lieu of the subsidy it got for lobsters?

Mr. HANSON (York-Sunbury): Perish the thought.

Mr. ILSLEY: No such request has been made.

Hon. R. B. HANSON (Leader of the Opposition): I have no objection to this bill. The grants were made, as the minister stated, after royal commissions were issued and judicial reports were made, and the grants are now looked upon by the maritime provinces as part and parcel of their provincial revenues. I can imagine what would happen if they were to be discontinued at any time. While they are discontinued in name now, they are really not being discontinued in fact. But when the agreement provided in Bill No. 16 ends, this will make sure that they will be resumed. It is really an insurance policy to the maritime provinces.

Mr. ILSLEY: Yes.

Mr. HANSON (York-Sunbury): That is all there is to it. As a matter of fact, the title of the bill as set out at the front and on top of the bill is rather misleading; it should be, an act to preserve the payment of additional subsidies to the maritime provinces after a certain point of time.

Mr. ILSLEY: They are not technically subsidies now.

Mr. HANSON (York-Sunbury): That is true; they are not. They are special grants. It is not an act to provide something now. It is an act to preserve something which is already in existence. That is the only suggestion I have to make.

Mr. KARL K. HOMUTH (Waterloo South): I am not opposing the bill; but from time immemorial there has been a feeling both in the maritime provinces and in the western provinces, through all of which I have travelled annually for perhaps the last twenty-five or thirty years, that the people of the provinces of Ontario and Quebec are more or less parasites, that we take from those various provinces—

An hon. MEMBER: In high tariffs.

Mr. HOMUTH: The hon. member says, "in high tariffs." I will argue that with him when the budget comes up. I believe—in fact I know—that he is wrong.

Mr. BLACKMORE: The hon. member is surely mistaken.

Mr. HOMUTH: The leader of—I do not know what they call the group—

Mr. BLACKMORE: Social Credit group.

Mr. HOMUTH: No—New Democracy group; he does not even know the name of his own group. He also has some diffidence, I notice, about admitting the facts. But there has never been in the history of the House of Commons a time when members from Quebec or Ontario have opposed anything for the benefit of the maritimes or the western provinces. We have supported those proposals, because we—that is, the members of the opposition and at least a few members of the Liberal party—believe in national unity. It is true that we do not have national unity to-day. The blame for that condition may be laid on the government; that is a matter which will come up in debate later on. But I often wonder whether the minister has given careful attention to some of the freight rates which have a great deal to do with the trade of the maritimes. We grant certain subsidies to the maritime provinces. I realize that, for instance, their textile industries have a certain barrier to overcome in order to compete with the textile industries in Ontario and Quebec, in sales to the west. It has often seemed to me that our subsidies to the maritimes are not adequate. We may be dealing with this thing in a rather half-hearted manner. We make deals with the provinces; we tell a particular province that we will do this and we will do that. Well, we, the people of Canada, own a railway: can we not work out some system of readjustment of freight rates which will give the great industries of the maritime provinces an opportunity of competing with the industries of Ontario and Quebec? Speaking as one who, one may say, represents industry in Ontario, I am not sure

that we should not start now, by means of subsidies, freight rates, or some other method, to develop industries in western Canada; because, if there is anything which will bring prosperity to our farming community, it is the building up, in agricultural areas, of towns and cities. If you want proof of that fact, go through western Ontario. It has always known prosperity. Even in the days of deepest depression the farmers had at least a semblance of prosperity because our industries were so diversified that considerable numbers were working. The farmers came into our towns, sold their products, and so provided themselves with spending money from week to week until their big crop was sold and their cattle marketed.

I do not object to this legislation; indeed I agree with it; but I suggest that all governments, not merely this one, have forgotten that to build up unity in this country we must industrialize it, provide local markets, and spread the process from one end of the country to the other. We have not done this. So, while not opposing this bill, I would urge the government to give a great deal of consideration to subsidizing those provinces which have not the advantage of the industrial development which exists in Ontario and Quebec.

Mr. CRUICKSHANK: I should like to be clear upon the purpose of section 2. As I understand it, at the termination of the new agreements, the existing or old agreements with the maritime provinces will be carried on. Am I right?

Mr. ILSLEY: Yes.

Mr. SPEAKER: May I point out to the hon. member that his question, having regard to a particular section, should be asked when the house is in committee.

Motion agreed to, bill read the second time, and the house went into committee thereon, Mr. Ross (Calgary East) in the chair.

On section 1—Short title:

Mr. STIRLING: At the very time in 1934 when the White commission was appointed, the dominion government, as I recollect, realized that the subsidy being paid to British Columbia was not commensurate with the subsidies being paid to other provinces, and it was then increased and has been passed by parliament each year on the increased figure. I think I am right in saying that. Would the minister explain the reasons for treating the maritime provinces differently in this respect from British Columbia?

Mr. ILSLEY: The British Columbia figure was never settled. It was an interim payment which was not judicially determined. It was a tentative payment and had not reached the stage of settlement.

Mr. HANSON (York-Sunbury): It was a matter of government policy.

Mr. STIRLING: It was recognized and paid.

Mr. ILSLEY: For a number of years. There is a clause in the British Columbia agreement with respect to this matter. Let me read it:

> Neither the execution of this agreement nor anything herein contained shall affect or prejudice any right or claim, moral or otherwise, which the province may have to the restoration and continuation, at the termination of this agreement, of the $750,000 special grant discontinued by the dominion in the year 1941.

A similar clause is found in the Saskatchewan agreement and in the Manitoba agreement with regard to their special grants. The committee will realize that there were six of these special grants, three for the maritime provinces, one for British Columbia, one for Saskatchewan and one for Manitoba. They were of differing degrees of finality. There was no doubt about those with respect to the maritime provinces having been finally settled.

Mr. STIRLING: Based on the findings of a commission?

Mr. ILSLEY: Yes, and finally settled and determined. British Columbia was in an intermediate position. It was not as fleeting and temporary as in the case of Manitoba and Saskatchewan; nevertheless it was not judicially determined. Of course, there is this about the British Columbia grant, that the payment to British Columbia is very large. It is some twelve or thirteen million dollars because of the very high taxes—the height of the corporation taxes.

Mr. STIRLING: Under the bill just completed.

Mr. ILSLEY: Under the principles laid down in my budget speech, it would have been perfectly impossible to justify the payment of any further sum by way of fiscal needs subsidy.

Mr. HANSON (York-Sunbury): They do not need it.

Mr. ILSLEY: There was no pretence that they did. I would not go to the length of saying that they would not have accepted it; nevertheless no contention could be put forward that British Columbia needed more than that twelve or thirteen million dollars.

Mr. CRUICKSHANK: It may not be clear to me, and I am sorry I could not hear all the minister has been saying. As I understand him, however, this is merely carrying forward, after the termination of the new agreements, the agreements which were in effect with the maritime provinces.

Mr. ILSLEY: That is right.

Mr. CRUICKSHANK: Is it the intention of the present government to carry on, at the termination of the new bill, the agreement with respect to the subsidy of $750,000 to British Columbia? The minister has looked after British Columbia very well so far, and I will also endeavour in a small way, with the assistance of the member for Yale (Mr. Stirling), to look after British Columbia. I do not want to repeat myself, but I understand that we are merely carrying on the old agreements. As I understand the minister—and, as I say, I have not heard him very well—this $750,000 subsidy is left to the will of the government of the day. I cannot agree with the minister, as I understood his remarks, with regard to extra grants in the case of British Columbia, because he did not state that if any extra moneys were allotted to that province during the last few years of depression, it had been allotted purely and simply by way of grants to British Columbia to care for exceptional circumstances which we had in that province, to look after some unfortunate people from the prairie provinces. Does the minister expect British Columbia to concur in the continuation of the subsidy to the maritime provinces and at the same time to concur in the subsidy granted by the last government under Viscount Bennett, to the province of British Columbia, amounting to $750,000? Is it the intention of the present government, at the termination of the new agreement, to continue the special grant of $750,000 to British Columbia?

Mr. ILSLEY: I should not like to say that we have any intention one way or the other, but the rights of the province, if any, to that subsidy are expressly preserved by the section I have read. This agreement is not to affect or prejudice any right or claim, moral or otherwise, which the province may have to the restoration and continuation, at the termination of this agreement, of the $750,000 special grant discontinued by the dominion in the year 1941. It is not, in my judgment, a right. It is a claim rather than a right, never finally settled. I understand the province always contended that they were entitled to much more than that.

Mr. HOMUTH: It is not an obligation?

[Mr. Ilsley.]

Mr. ILSLEY: It is not an obligation at all, but it was voted for a number of years. If there is any obligation or if there is any right there, it is expressly preserved by this clause of the agreement. I do not think the province would want us to pin that down definitely to $750,000 as we are doing in the case of the maritime provinces, putting it in statutory form. They would not want that themselves.

Mr. CRUICKSHANK: I was not suggesting that the minister should pin it down. We realize that we have been penalized for a great many years, and I am glad that the member for Waterloo South (Mr. Homuth) has come to the assistance of the Minister of Finance (Mr. Ilsley), but I cannot see why there should be a specific bill stipulating that it should be so much for the maritime provinces, while it is decided that it may or may not be the case for British Columbia. All I want the minister to say is this. In so far as the policy of the present government is concerned, will the subsidy be continued or possibly increased—and I think it should be increased? If so, then will there be a bill to that effect? I do not know much about monetary reform—I am not from the province of Alberta—but I cannot see any consistency in stating that there should be a certain subsidy for the maritime provinces, irrespective of the fact that the leader of the opposition (Mr. Hanson) comes from one of those provinces, and that they should have a guarantee to that effect, while British Columbia is left problematical. I cannot see any reason for a special bill providing that they should get a guaranteed amount while ours is left in that uncertain state. Surely the minister can say that, as far as the government of the day is concerned, the amount will not be reduced below $750,000.

Mr. ILSLEY: No, I cannot.

Mr. CRUICKSHANK: I would like a little clarification. After all, British Columbia is one of the provinces of this dominion, a most important part.

Mr. ILSLEY: I cannot say anything more than I have said. In the case of the maritime provinces those amounts were settled by two royal commissions, and as far as they are concerned it is the end. There has been no such settlement of the British Columbia amount. The British Columbia amount has been carried on in a tentative way awaiting settlement year after year, and any rights that province has are preserved, but it is not in any such settled state that it can be embodied in a statute.

The hon. gentleman asks me for a statement of intention; I cannot give any such statement. The matter will have to be taken up at the end of the agreement where it is left. Whether it is resumed or not is a matter for consideration at that time. But no rights are lost by this.

Mr. CRUICKSHANK: I can take it that it will have the same consideration that the maritimes have had, even, if necessary, a royal commission?

Mr. ILSLEY: I cannot give any such undertaking.

Mr. CRUICKSHANK: But I want the minister's opinion.

Mr. ILSLEY: I should not like to make any commitment in that regard.

Mr. GILLIS: Am I right in my interpretation of this: Prior to the enactment of the dominion-provincial taxation agreement the amounts set out in the schedule were paid to the provinces of Prince Edward Island, New Brunswick and Nova Scotia?

Mr. ILSLEY: Yes.

Mr. GILLIS: What is taking place now is that the amounts set out here are discontinued; that the provisions of the dominion-provincial taxing agreements displace that, and that statutory effect is now being given to the undertaking that the arrangement as carried on previously will be picked up on the expiration of the dominion-provincial taxing agreement?

Mr. ILSLEY: That is correct.

Section agreed to.

On section 2—Additional annual subsidies.

Mr. POTTIER: The minister said this afternoon that the agreement could be terminated by a province on thirty days' notice before March 31 each year. Is there a similar provision that the dominion can give notice and cancel the agreement?

Mr. ILSLEY: No; there is not.

Mr. REID: The section says "the following additional annual subsidies". What would be the total subsidies as outlined in the present bill?

Mr. ILSLEY: These are in addition to what we call the constitutional subsidies provided in the British North America Act and amendments. Those subsidies were instituted at the time of confederation and, I think, have been modified from time to time. They are fundamental subsidies; they are paid not only by virtue of a statute of this parliament but by virtue of a statute of the imperial parliament; they are British North America Act subsidies. These are additional to those.

Mr. REID: The reason why British Columbia is not mentioned here is that British Columbia has not come to a definite settlement as to the total amount. They were receiving $750,000, but they were not altogether satisfied. No definite agreement has been arrived at?

Mr. ILSLEY: That is right.

Mr. REID: If they had arrived at a definite agreement, it would be included in this bill?

Mr. ILSLEY: It might or might not. We may not have agreed to that on account of the annual payment to British Columbia being so large. It is some $12,000,000 or $13,000,000, due to the fact that so much of that province's taxation was income tax and corporation tax. The size of the payment to British Columbia I think I may fairly say has almost been a stumbling block to concluding agreements with the other provinces. I should not like to say we would have made the same kind of offer to include those amounts if they were settled. I do not think myself that there would have been any difficulty about enacting that they would be picked up at the end of the agreement if they had been settled.

Mr. REID: I take it then that British Columbia stands to lose because of the fact that after the termination of this agreement the income tax payment will cease a year after the cessation of hostilities; the subsidy of $750,000 is also gone, and the province will have to come then to the federal house and begin all over again arguing for a subsidy? It is left out in the cold.

Mr. ILSLEY: Many things may happen before that. I do not know what will happen at that time. This was all discussed at the conference of the provincial premiers and treasurers and myself, and it was finally decided that this was the best way to handle the matter of the subsidies to British Columbia, Saskatchewan and Alberta, because these were never settled as being the correct amounts. So, whatever rights British Columbia had before, they have again. I do not think they have any rights.

Mr. REID: The minister has repeated the statement that they have no rights. I am wondering whether it was made clear at the conference with British Columbia that they were letting go their subsidy of $750,000, and that on the cessation of hostilities they would have to come back and deal with the federal government again.

Mr. ILSLEY: They were letting nothing go any more than they do at the end of every calendar year. They have no agreement, no award of any commission; they were simply dependent upon the dominion parliament voting that sum year by year. What did they let go?

Mr. REID: That is very true, but no government would just cut them off. They are now cut off.

Mr. CRUICKSHANK: This is very important to us in British Columbia. The hon. member for New Westminster has brought it out in specific terms. I am not grudging the maritimes their subsidy, but they get it automatically under the act. As I understand, however, at the end of this agreement the question comes before parliament whether or not British Columbia continues to receive the $750,000. It is not a question whether the $750,000 is or is not ample; the question whether or not the province gets one dollar must come before this parliament. When the minister asks us to approve a bill which definitely states that at the termination of this agreement the maritimes will receive the amount specified in the bill, I think the minister should state that as far as the present government is concerned they will be agreeable to continuing the existing subsidy to British Columbia. As a member representing British Columbia I should like a definite statement as to whether the provincial authorities thoroughly understood in agreeing to this new bill, that there was only a possibility of the subsidy of $750,000, which might be classed as a special subsidy, being restored.

There are two things the minister should state, and they are of vital importance to British Columbia. Apparently we do not come under any royal commission or any act of parliament, as do the maritime provinces. I suggest, however, that at least morally it is recognized not only by this government but by the preceding one, that we are entitled to something. It would appear to me that under this bill we from British Columbia would have to appear before the parliament of Canada, at the expiration of the present new bill, asking parliament to grant us a subsidy of $750,000, as a temporary amount pending a final solution. All this would happen while the maritime provinces by an act of parliament receive a specified amount. The minster should state whether this government is in favour of the subsidy of $750,000 being continued, in the same manner as is the maritime subsidy. I should like to know, too, if the provincial treasurer of British Columbia agreed to the bill as it now reads, namely that it is liable to continuation subject to the approval of parliament.

Mr. ILSLEY: As I said before, I do not wish to make any agreement with respect to restoration, because action may depend upon a great many factors. Just consider what the situation is likely to be. These agreements may last three or four or five years. At the end of that time the question will arise as to whether the province will resume the collection of income and corporation taxes, or whether it will not. There will, in all probability, be a completely new arrangement with the provinces. Then, that may not happen; it may be that the agreement will just come to an end, and that there will be no arrangement. The province will simply pick up where it left off. A person cannot foresee what the situation will be. One cannot foresee what concession or new arrangement will be made by the provinces, or between the provinces and the dominion. It may be that at that time this grant will be a very unimportant thing, and that something else will take its place. Possibly something more advantageous will take its place. It may be that the amount will be too small, that it will need to be larger. It may be that no subsidy at all will be required, or that a lesser amount may be required. It is not a settled thing, and I cannot make any commitment or give any undertaking in regard to what the policy of the government in power in Canada at that time will be, or what our policy will be if we are then in office. There are too many factors in the situation which would have some bearing on the matter, and I do not think we should be asked to do anything more than it was agreed at the conference we would do, namely insert a clause protecting such rights as there may be, and put that clause in the agreement, so that it cannot be said at the termination of this agreement that a certain thing went by the board, and that something was forfeited at the time the agreement was entered into. We have protected the provinces to that extent. Beyond that we have not gone.

Mr. CRUICKSHANK: The minister has said that what happens depends a great deal on circumstances, which may be different. In that connection I cannot see how it is possible now to state exactly what subsidies may or should be granted to the maritime provinces, when it is not possible to do the same for British Columbia. That does not seem reasonable to me. If we can say definitely now that the sum for Nova Scotia will be $1,300,000; for New Brunswick $900,000, and for Prince Edward Island, $275,000, and yet as the government of the day we cannot say that British Columbia will or will not require a minimum of $750,000, that does not seem to be a reasonable situation. I want to say

now, as I have said before, that I have no quarrel with the maritime subsidies. As a matter of fact, they may not be ample. But if we can say definitely in parliament that they must have a minimum of a certain amount, then why is it not possible to say, subject to revision, that there shall be at least a minimum of $750,000 for British Columbia?

Possibly the minister did not understand my second question; I may not have made it clear to him. Did the provincial treasurer for British Columbia, knowing that a specified sum was to be allocated to the maritime provinces, agree that that sum was to be given to them, by act of parliament, and that they would automatically have that amount? Did the provincial treasurer of British Columbia know that he might possibly secure for his province—I repeat the words "might possibly" —the sum of $750,000, subject to the right, will or permission of parliament?

Mr. ILSLEY: Oh, yes, the arrangement was thoroughly explained, understood and agreed to at the conference. But the hon. member must realize that we are not agreeing that the maritime provinces are to get at least a certain amount. We are agreeing that they will get a certain amount. British Columbia is not prepared to do that. From their point of view it may be much better for them to be in an undetermined position.

At the conference the provincial treasurers and premiers were expressly informed that it was my intention, or the government's intention, to introduce a bill fixing the maritime provinces grants, to take effect after the termination of the agreement. The other three subsidies were discussed—one for Manitoba, one for Saskatchewan and one for British Columbia. There was considerable argument as to what should be done to give some protection to these provinces. Finally I believe it was I who suggested—it may have been someone else—that the clause which appears in the agreement should be put therein. I drafted it there and read it to the premiers and provincial treasurers, and no exception was taken to it. I do not know how formal it was, but that certainly was the settlement of the matter which was made at that conference in the presence of everybody, with a complete disclosure of all the facts. The agreement is signed by British Columbia on that basis. It was signed on March 18, and the conference to which I referred was about December 18. So three months later, after there was the fullest opportunity to think it over, as to what should be done, the government of British Columbia signed the agreement. Certainly I do not think they have forfeited anything, and they do not think they have. I do not believe they would be in any better position if we introduced a bill like this to apply to that province. Of course, if we introduced a bill saying that they would get a minimum of $750,000, they would have everything to gain and nothing to lose. They would have that much anyway, and whatever more we did for them. But that is not the maritime provinces bill. This is a settlement of the matter. This is what they get, and all they get, by way of subsidy.

Mr. CRUICKSHANK: I understood the minister to say that that is the minimum; but that is not necessarily all they get?

Mr. ILSLEY: That is all they get on account of the special claims which were dealt with by the Duncan and White commissions.

Mr. CRUICKSHANK: British Columbia has never been overpaid, and we are sent here to see that they get their fair share.

Mr. MacINNIS: Representing a constituency in Vancouver, I thought it would be better to see if I understood what the situation really was before I said anything. The agreement made must be fairly satisfactory to British Columbia because, as far as I know, no representations have been made to members here. I am speaking only for myself, but from conversation with other members I have not heard of any representations having been made. Premier John Hart is an astute man, and I do not think he would let very much slip. My understanding is that the subsidy which is paid to British Columbia was never settled, but that the province has been accepting $750,000, thinking it was entitled to more.

Mr. STIRLING: That is additional to what it had been before.

Mr. MacINNIS: In the agreement referred to in Bill No. 16 there is an undertaking that the case of British Columbia will not be prejudiced in any way when the provisions of that bill expire after the war. The province will be still in the same position as it was before, and will be able to claim the $750,000 annually and press for a greater subsidy if it can get it.

The bill now before us is a little different. The maritime provinces receive their subsidies as a result of the findings of two royal commissions, and the bill before us makes these amounts as definite and static as anything can be between provinces and the dominion. They are no worse or no better off than they were before. As far as I can see, no further assurance can be given in connection with this bill, since the representatives of British Columbia did not insist on a bill. I do not see how they could have insisted on a bill

unless the $750,000 had been agreed upon as a definite amount.

Mr. EDWARDS: Were the recommendations of the commission implemented before? Have they been given effect to at all?

Mr. ILSLEY: These amounts have been paid to the maritime provinces since early in the thirties.

Mr. EDWARDS: By agreement?

Mr. ILSLEY: Year by year.

Mr. CRUICKSHANK: I should like to say one word by way of compliment to the Minister of Finance. I am sure British Columbia will be delighted to know that the hon. member for Vancouver East (Mr. MacInnis) is endorsing the action of this government, while the hon. member for Fraser Valley is doing otherwise.

Mr. MacINNIS: I do not want the hon. member for Fraser Valley (Mr. Cruickshank) to put words in my mouth. I expressed myself quite clearly as to what was done. I am sorry to note that the hon. member for Fraser Valley is out of line, not only with this government but also with the government of British Columbia.

Section agreed to.

Bill reported, read the third time and passed.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Tuesday, May 26, 1942

The house met at three o'clock.

BANKING AND COMMERCE

First report of standing committee on banking and commerce.—Mr. Moore.

NAVAL SERVICES

REVISED RATES OF PAY AND ALLOWANCES

Hon. ANGUS L. MACDONALD (Minister of National Defence for Naval Services): Mr. Speaker, I should like to lay on the table of the house information in reply to certain questions asked during the discussion of expenditures of my department arising out of the war appropriation bill. This information was tabled previously, but I table it now again, in more up to date form, and ask that it be printed in *Hansard*.

Mr. STIRLING: Does the information now being tabled contain the rates of pay?

Mr. MACDONALD (Kingston City): Yes, the information shows the revised rates of pay. With the consent of the house I should ask that it be printed in *Hansard*. The table follows:

RATES OF PAY AND ALLOWANCES—ROYAL CANADIAN NAVAL SERVICE

Rank	Rate per Diem (Basic Pay)	Allowances per Diem			Single per Diem		Married—per Diem					
							In Quarters			Out of Quarters		
		Lodging and Compensation	Maximum Dependents	Maximum Children	In Quarters	Out of Quarters	No Children	One Child	Two Children	No Children	One Child	Two Children
	$ cts.	$ cts.	$ cts.	$ cts.	$ cts.	$ cts.	$ cts.	$ cts.	$ cts.	$ cts.	$ cts.	$ cts.
Commodore 1st Class	17 00	3 10	2 00	0 40	17 00	20 10	19 00	19 40	19 80	22 10	22 50	20 09

Children's Allowance:—In addition to above, allowance of 30c. per diem for 3rd child and 20c. per diem for 4th child is payable to ratings only.

Officers' Allowances:—Allowances to Officers specialized in certain branches of the service and Command and Staff pay are authorized in addition to basic pay. Rates vary according to the rank of the Officer and degree of responsibility and qualifications.

Ratings' Allowances.—Non-substantive pay and miscellaneous allowances for special duty are authorized for certain ratings. Rates vary from 5c. per diem to 50c. per diem according to rating, qualification and experience.

Skilled tradesmen are entered in their own branch on rates of pay which exceed the Seaman's rate by from 10c. to $1.00 per diem.

BUSINESS OF THE HOUSE

MOBILIZATION ACT AMENDMENT BILL—PROGRESS OF SESSIONAL BUSINESS

On the orders of the day:

Hon. R. B. HANSON (Leader of the Opposition): I should like to ask the Prime Minister (Mr. Mackenzie King) when he proposes to move the second reading of Bill No. 80, to amend the National Resources Mobilization Act.

Right Hon. W. L. MACKENZIE KING (Prime Minister): In reply to my hon. friend I would say that that depends upon the progress which the house makes with the legislation which is before it at the present time. I need not tell my hon. friend that the government is anxious to get on with the business of the session, and the bill to which he has referred is one of the most important of the session. It is our wish to proceed with it at an early day. But it will not be proceeded with until the present war appropriation bill has been completed. The house has already given some four or five weeks to that particular bill, and I should hope that it would be possible to conclude its consideration, along with one or two other small measures, this week. I should hope it would be possible to go on with the other bill some day next week.

I would direct the attention of hon. members to the fact that up to the present time there has been practically no supply considered by the house, and the budget has still to be brought down. There are one or two other important measures on the order paper, and of necessity there may be further legislation before the present session is over—not that I am aware of any at present, but usually something unforeseen crops up at the last moment. If we are to get through before autumn I think we should begin very soon to make more rapid headway than has been made up to the present time. I am not at all sure that it might not be advisable in connection with further proceedings of the house to divide the days between some of the different measures, rather than to sit continuously in discussion of one particular measure. Might I in that connection say further that in my opinion some of the matters being dealt with under the war appropriation bill would be more properly dealt with in supply of the departments concerned. I do not refer to the defence departments. I am told it is the desire to consider some matters with relation to the Department of Agriculture, and if that were to take the form of a discussion in committee of supply we might have the whole discussion over again when we are in committee of supply. Perhaps time might be saved if the matters to which references are made in the discussion on the war appropriation bill were confined to that bill itself.

Mr. HANSON (York-Sunbury): To a large extent I agree with what the Prime Minister has said; but may I point out to him that while we are in the seventy-second sitting day of the session, we took twenty-one sitting days in the debate on the address. In those twenty-one days we heard no less than ninety supporters of the government. Then we were asked to put through to a conclusion another measure brought forth by the government, namely the plebiscite bill. Over half of the time of the house has been occupied in the discussion of those two matters.

With respect to the war appropriation bill I would point out that this is the largest money bill which has come before parliament, and I do not think our time has been lost in discussing it. It is the one occasion on which private members have the opportunity, and I say the duty, to investigate what the armed forces and the defence departments are doing. I suggest that the government should have brought on the ordinary estimates before this. There has been opportunity. The whole matter is in the hands of the government. They have taken authority to give government orders precedence; the order of business of the day is as the government directs, and the responsibility is on the leader of the house.

Mr. MACKENZIE KING: Well, may I say to my hon. friend that I think he has to take a little of the responsibility.

Mr. HANSON (York-Sunbury): I am willing to take mine.

Mr. MACKENZIE KING: He mentioned the time taken up on the plebiscite bill. There would not have been a day taken up on it if my hon. friend had not objected to it. It was fought so strenuously from the other side of the house that it was necessary to make clear the reasons why it should be supported, and my hon. friend came round in his point of view before the debate was over. I am not either complaining or explaining; I am simply stating what I think all hon. members recognize to be a fact, that we might get along a little more expeditiously than we have been doing.

Mr. HANSON (York-Sunbury): I hope so.

THE MINISTRY

APPOINTMENT OF HON. J. H. KING AS MINISTER WITHOUT PORTFOLIO

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, the Hon. J. H. King, who is acting leader of the government in the Senate, was to-day sworn in as a minister without portfolio, it being thought that the acting leader of the government in the Senate should hold that position in the cabinet for the time during which he is acting as leader of the government in the Senate.

DEFENCE OF CANADA REGULATIONS

PRESS REPORT OF SPEECH DELIVERED IN MONTREAL BY MEMBER OF QUEBEC LEGISLATURE

On the orders of the day:

Hon. GROTE STIRLING (Yale): May I ask the Minister of Justice whether he has given consideration to the Chaloult speech and whether he has decided to take any action thereon?

Hon. L. S. ST. LAURENT (Minister of Justice): I have given consideration, and advisers of the department are giving consideration, to the Chaloult speech, and I hope to have information to impart to the house about their conclusions to-morrow.

AIR TRAINING CONFERENCE

INQUIRY AS TO INVITATION TO THE GOVERNOR GENERAL TO OPEN THE PROCEEDINGS

On the orders of the day:

Hon. H. A. BRUCE (Parkdale): May I ask the Prime Minister if the Governor General, who is commander in chief of the forces in Canada, was asked to open the air conference last week?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I am not aware that His Excellency the Governor General asked anything of the kind. If he had—

Mr. BRUCE: I inquired if he had been asked.

Mr. MACKENZIE KING: No, I am not aware that His Excellency was asked. Has my hon. friend any objection to raise?

Mr. BRUCE: I am asking only because of the public interest which has been aroused in the question.

[Mr. R. B. Hanson.]

SUPPLY

Hon. J. L. ILSLEY (Minister of Finance) moved that the house go into committee of supply.

Motion agreed to and the house went into committee, Mr. Fournier (Hull) in the chair.

INTERIM SUPPLY BILL

Mr. ILSLEY moved:

Resolved, that a sum not exceeding $38,803,172.40, being one-sixth of the amount of each of the several items to be voted, as set forth in the estimates for the fiscal year ending 31st March, 1943, laid before the House of Commons at the present session of parliament, be granted to His Majesty, on account, for the fiscal year ending 31st March, 1943.

Resolved that a sum not exceeding $1,101,311.83, being one-sixth of the amount of each of the several following items to be voted, as set forth in the estimates for the fiscal year ending 31st March, 1943, laid before the House of Commons at the present session of parliament, in addition to the sum mentioned in resolution No. 1, be granted to His Majesty, on account, for the fiscal year ending 31st March, 1943, namely Nos. 31, 80, 116, 117, 128, 129 and 300.

He said: I am asking for two months' supply, that is one-sixth of the main estimates. It is necessary to have some interim supply voted because only one-sixth was voted before, and that runs out at the end of May. We are now nearly at the end of May, and some provision has to be made for payment of the public service and other obligations of the government in the next month or two. I am requesting therefore that two months' supply be voted, because it is very doubtful whether the estimates will be through before the end of July. Certainly they will not be through before the end of June.

Mr. HANSON (York-Sunbury): Mr. Chairman, on account of considerations which were adverted to by the Prime Minister and myself a few moments ago, we find ourselves now in the seventy-second sitting day of the session without having voted any supply. The major part of the session up to the time of the introduction and discussion of the war appropriation resolutions was more or less of a political character. Parliament primarily in times of peace is called upon to vote supply, but for seventy-two days this parliament has been in session and no supply has been voted to his majesty. I suggest that all through these war sessions the government has not pursued the proper procedure, in putting off the voting of supply until the dying days of the session. In the interim they come to the House of Commons and ask for one-sixth now and one-sixth

again. What does that mean? It means that until the end of July they need not ask the house to go into committee of supply. I do not think that that is a proper procedure for the government to pursue.

There are two fundamental objectives of parliament in the ordinary course of proceedings. One is to vote supply to his majesty and the other is to provide ways and means of securing money. Both those considerations have so far been ignored. I do not think the government is justified in asking for a second one-sixth of these appropriations, especially in view of the fact that while we vote the money on the peace-time estimates as well as on the war-time appropriation, parliament is given practically no accounting of how the money is being spent. If you do not believe that, examine the auditor general's report as it stands to-day. In other words, parliament is being asked to vote money en bloc twice in the earlier stages of this session and then to put through the final votes with a rush at the end of the session. That is not treating the members of the House of Commons properly. I protest against this kind of procedure, and I protest against a whole one-sixth being voted to-day.

I realize that the minister has intimated that we are near the end of the fourth month of the session, that the interim supply already granted will run out on the 31st day of May, and that if we do not pass some interim supply to-day, or between now and the 31st, some people, including members of parliament, may have to go without their salaries or indemnities. Well, it would not hurt hon. members if they had to go without the indemnity for a little while, if we could be brought to a realization of the true function and position of parliament. I protest against the granting of one-sixth; I am willing to grant one-twelfth, and that is as far as I am going. I am not going to start a filibuster against this measure, I shall not do anything of the sort. But I ask the minister to confine himself to one-twelfth, especially in view of the fact that he was very generously treated on a former occasion when he asked for one-sixth.

This is the seventy-second sitting day of the session. We spent twenty-one days on the debate on the address. The government could have brought in supply at any time. Then came the plebiscite bill. The Prime Minister says that that would have gone through immediately had I not taken the position I did. I wonder whether it is the thought of the Prime Minister that the opposition in this house should abdicate its functions. We have a responsibility to the country just as much as the Prime Minister or the government. It is true that it is lesser in degree; nevertheless there is a distinct responsibility on the official opposition; and if we had let the plebiscite bill go through without discussion, unquestionably we would have been recreant to our duty.

After that came the billion dollar resolution and the bill based thereon. That was not held up. We supported that measure and helped to put it through. Then came the resolution on the war appropriation of two billion dollars. I do say at the risk of repeating myself that while that debate is long and is bound to be long, it affords the one occasion in this session when the people of Canada, on the anvil of discussion, can bring out the truth, so far as the government is willing to reveal it, in relation to the war effort of this country. Any time that is spent on the war appropriation bill is time well spent, and I believe I am in the judgment of the country when I make that statement. If the minister gets this one-sixth through to-day he need not bring up the question of supply until the end of July when the heat of summer will be on us and everyone will be crazy to get home. It is not a right position for the government to take and I protest.

Mr. COLDWELL: In the main, I support the contention of the leader of the opposition. I believe the time has come when the rules of the house ought to be revised. There was a time when, as the leader of the opposition has said, the main function of this house was the granting of supply and finding ways and means to give that supply to the government. But times have changed and to-day this house has the responsibility of supervising and inquiring into vast economic undertakings and of assuming responsibility in a larger way than ever before for social conditions and social legislation. The result is that parliament's function has to a very large extent been extended in the last twenty years or so, and consequently members come here not only to supervise the expenditure of money and to find ways and means of granting it to the crown, but also to advance social policies now of permanent interest to the community and to inquire into the vast economic undertakings which now belong properly to the government and will probably in future years be extended. I know that at Westminster the rules have been changed to some extent so that the government from time to time sets aside certain periods when certain things are under discussion and are expected to be discussed within that limited time. They have a time table, as my hon. friend the member for Vancouver

East (Mr. MacInnis) suggests to me. The same is true, I know, in New Zealand, in Australia and in other parliaments across the world. Our function as a parliament has greatly changed and extended and it seems to me that we are trying to operate under rules which no longer altogether meet the situation under which we are operating.

I agree with the leader of the opposition that it is wrong in principle for this house to grant supply for two months and then two months again, without going into the matter more carefully than we are able to do to-day. That does not imply any lack of confidence in the Minister of Finance (Mr. Ilsley) or the officials of his department, or the government generally, but I think it is unsafe and unsound that we grant vast sums of money to the government without adequate and proper inquiry and discussion. I also agree with the leader of the opposition that the war expenditures bill which is now before us, granting to the government the most stupendous sum that we have ever been called upon to vote, ought to be the subject of most careful inquiry in this house, even if it is a prolonged inquiry. I think, however, that if the opposition groups as well as the government would endeavour to departmentalize their own activities a little bit and assign to members of their groups criticism on behalf of the whole group we should probably facilitate the business of the house as opposition groups. We have tried to do that in our little group, and perhaps this has been noticed from time to time. I think that upon the opposition as well as upon the government some responsibility for facilitating the business of the house really rests. In the main, I repeat, I agree with the general criticism of the leader of the opposition.

Mr. POULIOT: I cannot agree with the leader of the opposition but to-day I will express similar views. This is the old discussion. I am a supporter of the government and the Minister of Finance is a personal friend of mine, as he knows. If I rise to-day it is because of the promise that was made to me by the Prime Minister (Mr. Mackenzie King) last year, that the public accounts would be prepared more carefully this year than they were last year. Unfortunately, according to what the leader of the opposition said during the course of my remarks on March 17, no item below $35,000 now appears in the public accounts. This is a serious matter. Members should be given an opportunity to secure more detailed information from the auditor general. We have two sources of information with regard to public expenditure. In the first place we have the estimates, and secondly we have the public accounts. As to the estimates, I find that there is a great difference between ours and those in the United States. The other day I mentioned the budget which is yearly presented to congress by the President of the United States, and I said that it was a big book the size of the telephone directories of the city of New York, probably two of them, Bronx and Manhattan, bound together. Here I hold in my hand that very official document which was published in Washington, D.C., this year and which is entitled "The budget of the United States government for the fiscal year ending June 30, 1943". It is the budget of the United States at war. I observe with deep regret that British parliamentary traditions are better kept in the United States Congress than they are in the Canadian House of Commons. For instance here at page 764 start the estimates for the navy. They are rather detailed. They extend from page 764 to page 819. I have already said in this house that during the war there should be no secret about money expenditures. I protested with the hon. member for Danforth (Mr. Harris) when he complained that the war expenditures committee was sitting behind closed doors. Hitler can get no help from knowing what amount of money is spent in this country for war purposes. It will not improve his chances in any way; therefore I do not understand why such a committee is sitting behind closed doors. And I cannot understand why it is that in the United States they can have such detailed estimates for the navy, and we cannot have them here. However I was pleased to congratulate the Minister of National Defence for Naval Services on the way he handled his war estimates in committee of the whole.

But that is not all. There are also very detailed estimates for the war department in the very same United States budget for the next fiscal year. They extend from page 895 to page 964, with all details. The United States take war seriously, they do it very well, and of course the President of the United States is well enough qualified as a business man and as a shrewd diplomat not to put in his budget anything that would handicap the war effort of his country. Here we have it, and it is a big book.

Mr. ISNOR: It is a big country.

Mr. POULIOT: It is a big book for a big country and for a great war effort.

I heard the Prime Minister say—I do not know whether these are his exact words, but

they express the meaning of what he said—that some time has been wasted since the beginning of this session. It is my contention that the very reason why the discussion has continued so long with regard to the tremendous amounts spent for war is that we have no detailed estimates about war expenditures in this country. If we had them the discussion would have been much shorter; we would have proceeded in the same way as we did in years past, and after an item had been adopted no hon. member would have been allowed to discuss it again. If there are repetitions in the discussion of that war expenditure it is precisely because hon. members have no guidance in the matter; the discussion jumps from one subject to another in complete disorder and complete chaos.

I was greatly surprised when that course was followed. I regret to have to say that I foresaw that, and I warned the government about the danger of adopting this new practice. No member of the government can complain about any private member discussing fully before this committee any matter regarding expenditure. That right will not be denied. Since it is an unquestionable right, hon. members cannot be blamed for taking advantage of it and using it.

May I ask the government, in the first place, if the statement made by the leader of the opposition is correct that amounts below $35,000 do not now appear in the public accounts? If that is so, why has that course been followed? Secondly, why did the government not put in the estimates detailed information about the expenditures of the war departments? These questions seem reasonable. I should like also to know if it is because it would impede or decrease or handicap our war effort, and if so, how is it that the United States give precisely the information that we have been asking for? As everybody knows, they are doing very well in their war effort. I am ready to give the government a chance on this motion, but this is the last time.

There is another thing I want to tell the house. For many years past I have complained of the intelligentsia. I find that the men who are the arbiters or the high pundits of finance and who are graduates in economics, social science and so on are a curse to all the countries of the world. I say that as a war measure the teaching of economics and social science in universities should be stopped at once, and that all those who are doctors in economics or doctors in political and social science should be fired at once from government jobs. We see now the prodromes of a revolution that existed in Russia before the communists took power in that country at the end of the last war. I love my country, and I want to see sound reasoning in matters of finance, as there is in law or any other science. Of course finance is a science, as law is a science, as geometry and mathematics are sciences; but political economy and the social sciences are not real sciences. Of course I may be told that political economy is part mathematics and part law, and that since mathematics and law are sciences, political economy or the social sciences are also sciences. This is most untrue, for the reason that what is called political economy, what is called social science and what is called political science are mostly just a conglomeration of divergent views which have been put together and which cause headaches to the students of such matters when they really have brains from which to suffer. What happens? The doctors of those half-baked sciences try experiments, not in a scientific way and on an infinitely small scale; but all their experiences are nation-wide, and when they are unsuccessful it is a nation-wide failure.

Mr. CRUICKSHANK: Does the hon. member for Témiscouata believe in Darwin's theory?

Mr. POULIOT: I would not offend my hon. friend by telling him that he should not have risen to the occasion. Since the house is in a jovial mood, I remember what was said by a great educator of the city of Quebec, that one should always be able to smile even in his deepest affliction. It is very sad to discuss these matters, but even in war time—the more so during war time—we should come back to fundamentals. Everyone will agree to this. We must come back to fundamentals, and the fundamental of finance is common sense. More than that, it is the responsibility of the government to parliament, and of parliament to the nation. How can we satisfy the legitimate curiosity of our constituents about the expenditures that we vote if we are not in a position to give them all the information that may be asked by any one of them? Even if only one elector, one constituent in only one constituency in Canada, asks for full information about the expenditure of public money by this government, he should be entitled to get the information; and the money spent in gathering and printing it would not be spent in vain; for that citizen is only being true to the old British parliamentary tradition of governmental responsibility in regard to expenditures. I do not want to be cruel to anybody, but I warned the government before my hon. friend the Minister of Finance occupied his present high post. I warned them that a man who was

responsible for the bankruptcy or failure of a very large United States concern was not qualified to occupy a high post in the Department of Finance.

Mr. ILSLEY: No one in the Department of Finance was responsible for the bankruptcy or failure of a large American concern.

Mr. POULIOT: All right; then I ask the minister what his deputy did during the years which are left blank in the parliamentary guide?

Mr. ILSLEY: What years were they?

Mr. POULIOT: Several years. I do not want to be hard on anyone, but I want the minister to have advisers worthy of him. That is all I want; and when that is done I am ready to close my eyes. The years were from 1923 to 1930, when this gentleman was employed by Mr. Hoover in the United States, I do not know whether in connection with the tariff or other matters; it is not stated. But if my information is correct, he was first employed by and later became a director of the S. W. Straus corporation of New York, a very large concern, which among other subsidiaries controlled the Straus Investment corporation, with offices on Fifth avenue. He was treasurer and director of the investment corporation and a director of the parent company. I have asked for this information; the Minister of Finance must remember the time. He was then Minister of National Revenue; and when I brought the matter before either the committee or the house, one of his colleagues prevented me from mentioning these facts. Therefore I could not say anything; I have not said anything then. It is not a question of attacking someone who is not here. It is a question of being free in this country from that sort of intelligentsia which brought revolution in Russia some years ago. I do not want revolution in this country; I want order. And my suggestions regarding the estimates and regarding the public accounts were precisely intended to reestablish order in the finances of this country during the war. It is of the utmost importance that the discussion of public accounts should be orderly. It cannot be orderly unless we have complete figures in the estimates and in the public accounts, so that we may check all expenditures.

That being said, I shall not insist further. I think I have made myself clear enough on the matter. I have no grudge or grouch against anybody, and I have spoken in a very serene manner about matters of the greatest importance to the state as well as to the Canadian people. I shall support the motion on the understanding that there will be no other motion of the kind and that the estimates and the public accounts are completed according to the promise that was given to the committee by the Prime Minister last year. There can be no question as to cost, because the presses down at the printing bureau were busy for twenty-four hours a day for weeks, printing propaganda for the plebiscite, and it is my humble view that the printing of detailed information regarding public expenditure is much more important to the people of this country than any futile and frivolous propaganda of that kind.

Mr. CLAXTON: Mr. Chairman, I have only a word to add to the suggestions which have been made by the three previous speakers in connection with the organization of debate, and I speak with a great deal of humility as a younger member of this house. I believe most hon. members feel, with the three previous speakers, that some improvement could be made in that respect, and as a younger member I think that if we think an improvement could be made we should do something to bring it about. One or two connected matters I shall mention briefly.

A great deal is said about government by order in council. The house has been told that some 24,000 orders in council have been passed during the war. It is perfectly evident that if any considerable number of these orders in council had been brought before the house they would not have been passed and the work necessary to get on with the war would not have been done. It is obvious therefore that we must have orders in council to do things that must be done quickly. On the other hand this does not dispose of the objection that parliament's powers are gradually being removed from it in this way by legislation of a very substantial character. I suggest that if parliament is to remain anything it is time some new device was worked out by which orders in council having a generally legislative character could be periodically brought before parliament, or some committee of parliament, there to be reviewed.

We have an idea in this house—I had when I came—that our system of parliamentary procedure is modelled on the British system. I read the British *Hansard* as regularly as I can, and I find that it is practically impossible to reconcile the debates and the procedure in the British house with the debates and the procedure here. They are not similar in any respect. I do not suggest to Canadians that they should adopt every British thing as a model, but if you look at the procedure followed in Britain you will find that it has been brought up to date, much more up to date

to meet the needs of to-day and the needs of the war than ours is. I do not believe our procedure has been looked at dispassionately and constructively for the past fifteen years; consequently I suggest that for this reason, and a good many others which those who have had more experience in the practice of the house may bring forward, the time has come when a committee of this house should be set up to look into the rules of procedure, not so much from the technical point of view as to see how this parliament can better carry on the nation's business, particularly in connection with the war.

Mr. DIEFENBAKER: I have listened with a great deal of interest to the hon. gentleman who has just spoken (Mr. Claxton), but I cannot follow his argument as to the necessity of orders in council in regard to non-war matters. I can understand the need of orders in council so far as war measures are concerned, but the expansion in that regard during the last two years has been justified because we are at war, and it has been used as an excuse by the government to remove from parliament the opportunity of looking into many matters which should have been dealt with by parliament and not through the medium of order in council.

When the Prime Minister is asked what statutes of this parliament have been abrogated, amended or suspended by order in council, he is unable to answer because there is no record of them. He says to this parliament that the government does not know what statutes passed by parliament have been amended by order in council.

I am glad to see the attitude that is being displayed in recent weeks by so many members in all parts of this house, an attitude for which we on this side have contended from the very beginning of this parliament; that we must once and for all demand our rights as members of this house. We have a duty to perform. Parliament is being emasculated under the guise of the exigencies of war.

The Minister of Finance makes application to the house for the extension of supply for another two months without giving the house what the leader of the Cooperative Commonwealth Federation party said was so necessary —an examination of the accounts, of the expenditures being made by the government. We as an opposition do not discharge our responsibility as members before the people of this country simply by saying to the government: We give you carte blanche; we will vote one-sixth of the estimates, and further, we will extend the time for examination of the expenditures until the month of July or the early part of August. When we come to that period, Mr. Chairman, we shall have been sitting here almost five or six months. We shall be desirous of returning home, for a short time in any event, and in the latter days of the session tens of millions of dollars of expenditure which should be looked into will not be examined by parliament at all. Why cannot the estimates be brought down now?

Mr. ILSLEY: They are down.

Mr. DIEFENBAKER: Oh, yes; the Minister of Finance says they are down, but what opportunity do we get to discuss them?

Mr. ILSLEY: Give us a chance.

Mr. DIEFENBAKER: We do not get a chance. How do we deny the government the right to the chance that should be ours?

Mr. ILSLEY: By discussing other matters.

Mr. DIEFENBAKER: To-day the government controls the public business of this country. The hon. member who spoke just before me mentioned—at least I gathered so from his remarks—that there has been a diminution in the powers of parliament, and he compared it with the situation in the old country. In my opinion one of the reasons this parliament is becoming weaker as the days go by is that it is becoming a government by caucus. That is the procedure, instead of having matters fully discussed in parliament and determined by the representatives of the people in parliament. Determination as to course and as to attitude is being made elsewhere than here.

I think the time has come for the Minister of Finance, who has a ready command of the resources of the people of Canada—and they are willing to pay; they are willing to submit to any amount of taxation—to give a clarion message to our people stating that unnecessary civilian expenditures will be drastically reduced. The government should give the lead.

Is the government giving a lead this year? I have in my hand the estimates for the year ending March 31, 1943. They show that there will be a reduction in expenditures from $511,099,822.64 to $454,884,365.59, a decrease of about $56,000,000. These figures have all the appearances of an intention on the part of the government to reduce civilian expenditures. But when one looks at the reduction, what does it reveal? A reduction in agriculture of some $30,000,000. What does that represent? It represents a reduction in prairie farm bonus payments to the extent of $29,775,000. Then there is a further reduction under the head of "Finance".

Mr. ILSLEY: If the hon. member would suggest some specific cuts in agricultural estimates I should be glad to see what can be done.

Mr. HANSON (York-Sunbury): That is your duty.

Mr. ILSLEY: I have discharged that duty.

Mr. DIEFENBAKER: We want the opportunity of assisting the Minister of Finance in the discharge of his duties. We want to look over these estimates one by one, make recommendations, and be able to say to the people of Canada that the only consideration in expenditures for civilian purposes will be need, not demand.

Then, turning to page 11 of the estimates—

Mr. ILSLEY: And that has been for two or three years, since the outbreak of the war.

Mr. DIEFENBAKER: —there is a reduction of $45,000,000 over the expenditures of 1941-42, and that is placed under the heading of "Compensation to Provinces". So that in point of fact there is no reduction in the estimates for civilian expenditures in Canada in the coming year.

The Minister of Finance has said that that to reduce civilian expenditures has been the purpose, the idea, the aim of the government in the past two years. All that may be true, but the results do not show it, and the estimates do not bear out the minister's contention. The same attitude is prevalent in the provinces. Canada, individually, provincially and federally, seems to be on a kind of spending spree, on an orgy of expenditure, uncontrolled, because parliamentary institutions are not being utilized. Opportunity is not given to hon. members to demand reductions.

Let us examine the position of the provinces—because the figures tell their own story. Let us look into the ordinary expenditures of 1938 in the provinces as compared with those of 1941. Even though relief expenditures have been taken away from the provinces since the outbreak of war, because of greater employment, it will be found that in almost every case there has been a very heavy increase in ordinary expenditure. The total ordinary expenditures of the provinces in 1938 and 1941 are as follows:

Province	1938	1941
P.E.I.	$ 1,974,248	$ 2,194,810
Nova Scotia	11,658,246	14,177,656
New Brunswick	8,549,782	10,046,806
Quebec	50,335,751	52,455,879
Ontario	95,228,877	100,659,054
Manitoba	16,427,700	17,982,274
Saskatchewan	19,306,527	25,762,485
Alberta	21,359,739	20,570,676
British Columbia	27,672,043	29,653,164

These figures indicate that since a year before the outbreak of war, instead of there being a reduction in civilian expenditures, in all provinces with the exception of Alberta there have been increases. In the dominion the same situation prevails.

There is no sufficient examination to-day of the estimates. In the last two or three days of the last session we literally voted hundreds of millions of dollars. The minister has said that we have opportunities all during the session to examine estimates, but I say to him that that opportunity has not been given to us as yet. If to-day we vote one-sixth of supply it simply means, as the leader of the opposition has stated, that the Minister of Finance need not again come before parliament and ask for any supply until shortly before August 1. In other words, the opposition, and the people of Canada as a whole, are to be denied the opportunity of any intensive or critical examination of the estimates, at a time when wherever possible the most drastic reductions should be made.

Mr. HANSON (York-Sunbury): Mr. Chairman, I should like to congratulate my colleague the hon. member for Lake Centre (Mr. Diefenbaker) on the clarity and cogency of his remarks. An opportunity should have been taken long ago to call attention to the illusory nature of the claims of the government with respect to peace-time reductions.

When the estimates were brought down some weeks ago—and not since proceeded with—I made a more or less cursory examination to see if there was any justification for the claim which had been headlined to the country that there had been a reduction in peace-time expenditure. I think I can prove the thesis that that statement is not based on fact, according to the figures revealed by the estimates. It is a matter of surprise to me that with one or two possible exceptions the press did not get the true import of the figures, produced, I assume, by government propaganda, at the time the main estimates were tabled.

As was pointed out by the hon. member for Lake Centre, a summary of the main estimates for the fiscal year ending March 31, 1943, appearing at pages 2 and 3 of the estimates, indicates on its face a reduction of $56,215,457.05. As I have said, this reduction was blazoned in headlines all across the country, and it was suggested that the government was performing miracles in retrenchment. As a matter of fact a clear examination of the position reveals the exact opposite. But that was the impression which went out to

the country, and hitherto it has not been contradicted or exposed as misleading or ill founded.

In actual fact the main estimates for the fiscal year 1942-43 show a considerable increase as compared with the main estimates for the fiscal year 1941-42. The means by which the apparent reduction has been achieved is to lump together, under the total for the fiscal year 1941-42, the main estimates, the supplementary estimates and the further supplementary estimates for that year. It will be recalled that we had three doses of them. The result is that the comparison is between the total estimates for the fiscal year 1941-42 and the main estimates for this fiscal year 1942-43.

Let me recall the position with regard to these supplementaries. The supplementary estimates and the further supplementary estimates for the fiscal year 1941-42 contained an item of $35,000,000, to which the hon. member for Lake Centre has referred, to provide for wheat acreage reduction payments; and an item of $45,000,000 to provide for compensation to the provinces which agreed to vacate the corporation and income tax fields for the duration of the war. These two together amount to $80,000,000. As the minister indicated yesterday, $22,000,000 of the latter amount has been paid out to the provinces, and I believe nearly all the $35,000,000 has been paid out to the western farmers in respect of wheat acreage reduction bonuses. But in this year's estimates for wheat acreage reduction payments the main estimates provide only $5,225,000, a difference of $29,775,000. I suggest that that is not a true picture, because the government has introduced special legislation to replace the wheat acreage reduction payments, and the final or net result will be in all probability in excess of the $35,000,000 provided for last year. In respect of the new wheat policy to take the place of the policy of last year, they have raised the price but they will not tell us what they are getting, they will not tell us what the loss is, they will not tell us what the gain, if any, is, with respect to their dealings in wheat—although we all know that there is no gain, but rather a huge loss every year. I am not particularly complaining about that at the moment. I am trying to expose the position with respect to the press notices sent out with regard to the estimates tabled here in January.

No item comparable to the $45,000,000 voted for the provinces appears in the main estimates for the fiscal year 1942-43, although it is indicated that provision will be made in the supplementary estimates; and I refer you in that connection to page 11 of the estimates. Consequently in respect to this one item a reduction of $45,000,000 is apparently shown. But that is a most misleading situation, because it is to be paid, and paid doubly, as we know from the figures that were indicated yesterday—very much more than the $45,000,000 voted last year. I suggest to the minister that the correct comparison should be between the main estimates of the two years: the total main estimates for 1941-42, $433,000,000 in round figures; the total main estimates for 1942-43, $454,000,000.

What does that mean? It means a substantial increase. To be exact, a comparison between the main estimates of the two fiscal years shows an increase in ordinary operations of government to the tune of $21,752,726.09—a huge increase, and one which I do not think is justified in war time. I put myself in the judgment of the country when I make that statement.

I do not believe hon. members have analysed this situation, and I am glad to have the opportunity now to give my views with regard to it and to expose a hollow piece of sham—if that is a parliamentary expression—on the part of the administration towards the people of Canada in respect to these civilian expenditures.

That may be one reason why they have not brought on a discussion of these estimates. The minister says, give us a chance. They have had four months' chance to bring on these estimates. One of the very first things this parliament did was to take away all the rights of private members. You cannot do anything in this parliament unless the government so direct. They call the tune and we are permitted no rights save and except the withholding of supply. Of all the rights that private members have had, all the rights that opposition members have had with relation to this government the only lever we now have on the government is to withhold supply. When we let that right go, we are finished. That is the only right under a set-up whereby we give government business precedence for the whole session. In ordinary peace time there is a supplementary right, the somewhat attenuated right to bring in private members' resolutions. But how many of them are accepted by governments? Not many. To-day there is not a single opportunity for any hon. member to air even a grievance except on a debate on a money bill. Then how far does he get with it? I want to impress that position not only on the membership of this house but upon the

people of Canada. It amounts to the abrogation of our functions. What good will it do to revise the rules if you do not revise the will to carry on public business? I was on the revision of the rules committee fifteen or sixteen years ago. The committee did good work. It might have gone much farther, but nobody wanted to be too revolutionary. The mere setting up of codes of operation is not going to cure the evil. The cure has to come from the administration, in listening to reason in connection with these civilian estimates, and there is no evidence that the government is doing that.

The minister may take credit to himself for having pruned a lot of the estimates. I have no doubt he did so. I know something of how estimates are made up. They are prepared in the first instance by the departmental officials, and I have never known a departmental official in my life who did not want to increase his jurisdiction and his spending power. That is human nature. I am not blaming officials for that; it is the history of bureaucracy wherever you find it, even in a democracy. I have no doubt that the Minister of Finance prunes them and the treasury board prunes them again. That is always done. Nevertheless, unless there is the greatest firmness on the part of those who have the ultimate responsibility, the estimates will grow and grow and grow. In peace time it is almost inevitable, but it should not obtain for a minute in war time.

The primary responsibility is on the members of the administration who have to deal finally with the question of the quantum of the expenditures on the services. Do you mean to tell me that all the peace-time activities of the public works department are still required in Canada when we are practically at a standstill with regard to the operation of public works? Well, I shall have to be shown before I can believe that that is true.

I indicated a moment ago that the increase in ordinary operations of the government amounts to over $21,000,000, and I put the exact figures, as indicated by the two sets of estimates, upon the record. In addition, a further increase will be indicated and evident when the supplementary estimates are brought down—and make no mistake about it, there will be supplementary estimates; there always are—and probably further supplementary estimates will be brought down.

Whereas last year the amount of compensation to the provinces was $45,000,000, the Minister of Finance, in a press release as long ago as January, and again here yesterday on the floor of this chamber, indicated that we would have to pay about $85,000,000 to the provinces, plus a guarantee with respect to gasoline. Fortunately that guarantee did not represent much last year, but I venture to say that for the coming year it will represent a huge sum.

Mr. HOMUTH: A tremendous sum.

Mr. HANSON (York-Sunbury): It will be so tremendous that the people will be astonished. It may bring them to a sense of realization of how much money the country spends in gasoline in ordinary times, and perhaps we shall get the people of Canada back to the practice of one of the oldest virtues, and I should say the most unfashionable, the practice of thrift. If we can do that it will be a good thing, because we seem to have forgotten that there is such a virtue as thrift.

The total payments to the provinces for the fiscal year will be, we will say, $85,000,000 as opposed to $45,000,000 voted in the estimates last year. That means an increase in that item of $40,000,000, and that is civilian expenditure. It is important; it is necessary. I admit that, and because there is an increase, additional moneys must be raised.

Mr. CRERAR: What item is that?

Mr. HANSON (York-Sunbury): That is the vote to the provinces under the agreements; $45,000,000 last year as compared with $85,000,000 which will be voted in the supplementary estimates this year, plus the estimated deficit in respect of gasoline. That is civilian activity. True, it arises because of a war-time condition, but I hope the government will not pay that out of the war appropriation bill. We have not yet heard whether they will or not, and before this motion is adopted the minister should make that clear. I shall object if it is paid out of the war appropriation bill.

Then there is the legislation with respect to the wheat growers. That will involve a large expenditure either directly or indirectly on the part of the federal treasury as it did last year. Indeed, we may safely assume that in this respect there will be an increase. I do not know what the amounts will be. I do not suppose any reasonable forecast has been made.

Mr. HOMUTH: The government does not know.

Mr. HANSON (York-Sunbury): Probably the government does not know. When it put up the price to 90 cents I doubt if it did know.

Mr. POTTIER: The opposition wants more.

Mr. HANSON (York-Sunbury): That is all right; the farmers are entitled to more. Does the hon. member for Shelburne-Yarmouth-Clare (Mr. Pottier) say that they are not?

Mr. POTTIER: Why does the hon. member criticize it?

Mr. HANSON (York-Sunbury): Because I am trying to expose the hollowness of the government's contention that there has been a reduction in the civilian activities of this administration, and I am right. I say therefore the comparisons that are made in the main estimates, the government blue book itself to which I have referred, are wholly misleading and present to the people of Canada an entirely false impression of the existing situation. I am surprised at the members of the press, who are usually very alert. I am surprised that the gentlemen of the press gallery have not analysed the situation before this and given the people the real facts. The only journal in Canada I can find which has become seized of the situation is the *Globe and Mail*, and I will take the liberty of putting on the record of this house an editorial of the *Globe and Mail* of February 23 last under the caption "Few signs of economy". I read:

The federal government tabled on Friday the estimates of the ordinary non-war civilian expenditures for the fiscal year 1942-43 and they will make rather depressing reading for the Canadian public. For the fiscal year 1941-42 the original civilian estimates were $433,131,000 but they were swollen by later supplementary estimates to a total of $509,566,000. Mr. Ilsley now places the civilian requirements for the coming fiscal year at $454,884,000 and there accordingly appears temporarily on the surface a reduction of some $55,000,000, but the decrease is patently illusory. For the 1941-42 estimates included an item of $45,000,000 designed to compensate the provinces for the revenues which they would lose by withdrawing from the field of income taxation upon individuals and corporations. But this sum was not paid over—

I understand that half of it has been paid, but I do not think it was made clear whether it was paid in this fiscal year or in the past fiscal year. The minister should tell us.

But this sum was not paid over, and so the total civilian expenditures in 1941-42 were cut to about $464,500,000. Now if agreements are consummated with all the provinces about the transfer of taxation rights, this compensatory item of $45,000,000, which was not included in the estimates tabled on Friday, will have to be added later; and even if there were no other supplementary estimates, which is unlikely—

Quite unlikely, I suggest.

—our civilian expenditures for 1942-43 would thus be raised to roughly $500,000,000—

Yes, and a good deal more than $500,000,000, depending entirely on what the deficit is in the guaranteed tax.

—which would mean that they will eventually be at least $35,000,000 greater than the total sum required for 1941-42.

I will not read the rest of it, which is along the same line. I ask the minister this question, and it is the appropriate occasion on which to ask it: Why is it that the government has not grappled with this problem of civilian expenditures and endeavoured to lead the country? I heard my hon. friend over the radio suggest that the people of Canada should tighten their belts. What evidence is there that the government is tightening its belt?

Mr. HOMUTH: They haven't got a belt.

Mr. MARTIN: Braces are more secure.

Mr. HANSON (York-Sunbury): I find them so myself. The people of Canada are asked, in this figure of speech, to tighten their belts; but I repeat, what evidence is there that the government of Canada is tightening its belt? Go through the purlieus of this house and look at the number of men on the House of Commons payroll. Has there been any cut in the personnel of this house? I ask the minister. There has not been any.

Mr. ILSLEY: Now you are getting somewhere.

Mr. HANSON (York-Sunbury): I am dealing with a situation which comes right under my own nose. There are as many men on the payroll of this house as there ever were. Go to the senate and you will find there men who are actually doing nothing because the government will not give the senate anything to do. They serve a useful purpose and they have to be there. What are these men in the senate doing during the long recesses? They are not doing anything. The government should use the senate. Those fifteen vacancies should be filled with some of the best brains in the country, who could assist the government to carry on the war effort. There are men in the ranks of the Liberal party, and if there are not, there are men in the ranks of the Conservative party, who could help the war effort of the country, and could do wonderful work in the senate of Canada. But because of past considerations, past commitments which ought never to have been made, this cannot be accomplished. Let me impress upon gentlemen who claim to represent minorities the fact that the senate, which was set up by the wisdom of the founding fathers to be the bulwark of minorities in this country, is being allowed, by the action of the administration, to lapse into desuetude and decay.

One other matter. I was interested when the hon. member for Témiscouata (Mr. Pouliot) brought to his place in the house and exhibited to us the detailed budget of the United States in connection not only

with peace-time activities but also with war-time expenditures on the navy and other armed services. What have we that is comparable to that? We get nothing but a few lump sums, without any statement that the amounts indicated be adhered to; they are simply a guide or chart. We have heard about charts before at the hands of my right hon. friend. A chart is something to be disregarded if it is the will of the administration so to do. This House of Commons ought to insist that when the next war appropriation bill comes down, be it $3,000,000,000 or what not, the government, with all the staff they have available, shall produce to the people of Canada and the membership of this house reasonable details of their expenditures, what their proposals are with regard to military expenditures. I serve notice on the administration now that if I am here I shall demand that that be done, and I ought to receive the support of every private member of this house, irrespective of where he sits. Do you know, any one of you, where your money is going? Do you know, any one of you, how much of your money is being wasted through irresponsible officials or appointees of a government who have no responsibility to parliament? You do not, do you? Not one of you. Do you know how much money an aeroplane costs? You have not an idea in the world how much money you are putting into aeroplanes. All these things are done with the taxpayers' money, voted by this parliament more or less willingly I think perhaps for the most part, and as far as I am concerned most willingly. All the money the government want with which to wage this war successfully will be given by the noble Canadian people, who have always been ahead of this government. They will give it to them with the best of grace. But how much are we told as to what is being done with our money and how much of it is wasted?

Let me give an illustration. Early in the war representations were made to this government that they should build an airport at Pennfield, engineers were sent down. I myself thought it might be a proper place to build an airport. When the engineers came back I understood their report was adverse. I took occasion to send for the director and for the engineer who made the inspection, and they gave rather convincing reasons that owing to atmospheric conditions it was not a proper thing to build an airport at Pennfield. I did not agree with them; I do not agree with them yet. But the project was first proceeded with and then abandoned, and the reason given was its proximity to the bay of Fundy. Last Sunday night on my way here, at the railway junction at MacAdam across the track from me stood a special train, the cost of which would be thousands of dollars, to move to Rivers, Manitoba, the officers and staff that had been at Pennfield. They do not know why they are going, but I believe there has been some condemnation of the establishment of an airport at Pennfield because of certain climatic conditions. This should be explained to us by the Minister of National Defence for Air.

Now, what happened? Notwithstanding the adverse reports that I learned of through the medium I have mentioned, someone some time decided that an airport should be established at Pennfield. A contractor was brought here from New Brunswick, a good contractor with ample plant. He went home with me on the train one day and he had a smile like the smile on the face of a tiger—after he got a contract at his own price. Millions have been spent on that airport, and now it is to be abandoned.

An hon. MEMBER: How many millions?

Mr. HANSON (York-Sunbury): I do not know. I want to know. I am told it is now to be abandoned; that remains to be seen. At all events the school that was there has been moved out lock, stock and barrel. I saw them going myself. That is the type of thing that the people of Canada do not understand and that they want explained. And they want the truth. I venture to say that twenty-five cents out of every dollar—it certainly was true in the early stages of the war—paid for war expenditures was absolutely wasted. Not a dollar's worth of labour or return was given for a dollar of expenditure. Speed was the only thing. And why was speed necessary? Because this government in the first nine months of the war did absolutely nothing to meet the situation. They were going to have a moderate war. A moderate war! Ask any hon. member from the province of Quebec if they were not promised that Canada's contribution would be a moderate contribution.

Mr. MARTIN: Promised by whom?

Mr. HANSON (York-Sunbury): By the Liberal party at the last election. I can turn up in my files dozens of clippings and reported speeches.

Mr. HOMUTH: What did the hon. member for Essex tell them in Windsor?

Mr. HANSON (York-Sunbury): I will say to the minister that this debate will have served a useful purpose if it calls the attention of the country to the present situation, and if he will heed the voice of public opinion. It is not right that he should ask for two months'

interim supply and then in the closing days of the session, in July next, when hon. members who have been here for nearly seven months are anxious to get away, seek to pass these estimates. That is not the way parliamentary business should be done.

I commend these considerations to the Minister of Finance. I hope he will take them in good part. I hope there will be some improvement, and I hope that press notices will not be given out, as they were in January last, that in my view are wholly false.

Mr. ILSLEY: My colleague the Minister of Mines and Resources is I believe about to make a few remarks, but before he does so I want at once to take exception to the suggestion that there was any sham or any falsity about any press statement issued by myself as Minister of Finance. I remember the press release very well. Pains were taken to make it in no way misleading. There was nothing misleading about it, nor was there anything misleading about the summary of expenditures for the last fiscal year or this fiscal year. The hon. gentleman has not suggested any manner in which the presentation could have been improved. The facts were presented exactly as they were, and any interpretation that has been put upon those figures has been put upon them by the hon. gentleman himself. I shall have something more to say about that later.

Mr. HANSON (York-Sunbury): Of course the minister has not said my interpretation was wrong.

Mr. CRERAR: We have listened to a very interesting speech from the leader of the opposition. I only wish he had put as much profitable advice into it as he did sound and fury.

Mr. HOMUTH: You would not understand that.

Mr. CRERAR: The hon. member for Waterloo North—

Mr. HOMUTH: Waterloo South.

Mr. CRERAR: Then I congratulate the electors of Waterloo North.

Mr. HOMUTH: They are not so proud either.

Mr. CRERAR: My hon. friend has taken a great deal of exception to this interim supply vote. He says, "Why didn't you have your estimates before the house?" They have been before the house.

Mr. HANSON (York-Sunbury): They never have been before the house, except pro forma.

Mr. CRERAR: Just a moment. The estimates were tabled immediately after the debate on the address was concluded. My hon. friend knows what the situation has been; it has not been possible to get these estimates by departments before the house except on a few occasions. I should like to give the committee a brief summary of the matters which have been discussed since this session opened at the end of January. I agree with the leader of the opposition that the debate on the address dragged on for a great length of time, and that a large number of the speakers who took part in that debate were from the government side. I would not wish to deny him any satisfaction he may get from that fact. But there were other matters. He has referred to the plebiscite debate, which came on after the debate on the address was disposed of. The plebiscite debate did not take nearly as long as the hon. leader of the opposition would suggest.

Mr. HOMUTH: But it was unnecessary.

Mr. CRERAR: There were other measures. For instance, there was a very important measure having to do with the reestablishment in civilian life of those who enlisted in the army.

Mr. HANSON (York-Sunbury): That was just a bagatelle and did not take any time.

Mr. CRERAR: I sat here patiently and listened without interrupting my hon. friend I should be glad if he would accord me the same courtesy.

Mr. HANSON (York-Sunbury): Quite right; I apologize to the minister.

Mr. CRERAR: That debate lasted several days, but it was a very important measure and surely there can be no criticism of the fact that the debate lasted so long. Then there was the wheat legislation, which also took considerable time in this house. I was much intrigued, if I may use that word, by the remarks of the hon. member for Lake Centre (Mr. Diefenbaker), who criticized the government severely, in his impassioned manner, because of its lack of economy. "Why are you not saving money," he said. "Look at your expenditures; look at the taxation the country is paying." But what was the attitude of the hon. member for Lake Centre when the wheat legislation was before the house? If he will look up *Hansard* and read his remarks at that time he will see that his whole criticism of the government was that we were not spending nearly enough money

for the relief of the wheat farmers. And he had a very good seconder in his colleague, the hon. member for Qu'Appelle (Mr. Perley)

Mr. HOMUTH: They wanted to take it from the elevators and give it to the farmers.

Mr. CRERAR: Perhaps it would be a good idea if the hon. member for Waterloo South would hide in an elevator for a while.

Mr. HOMUTH: Well, you have done pretty well out of it.

Mr. CRERAR: That was the position taken by the hon. member for Lake Centre. What did he advocate? Parity prices for wheat. And the hon. member for Qu'Appelle: parity prices for wheat.

Mr. PERLEY: And no bonuses or waste.

Mr. CRERAR: Well, it is generally understood that parity prices for wheat would have required probably another $100,000,000 or $120,000,000 on a normal crop.

Mr. HOMUTH: Is that a government admission?

The ACTING CHAIRMAN (Mr. Fournier, Hull): Order.

Mr. CRERAR: I would ask the hon. member for Waterloo South for once please to restrain himself for a bit.

Mr. HOMUTH: I just want to know if that is a government admission, that to give parity prices to the wheat farmers would cost $100,000,000. I think we should have an answer.

Mr. CRERAR: I am not taking back what I stated a moment ago, that this was the criticism of the hon. member for Qu'Appelle and the hon. member for Lake Centre. First we were not doing enough; we should be spending more money. We should have parity prices for the farmers. They did not offer any calculation as to what that would cost, but on the basis of the representations made it would cost well over $100,000,000. And when these two hon. members were making impassioned pleas for the expenditure of more public money in wheat payments to western Canada, the leader of the opposition was applauding them most heartily.

Mr. DIEFENBAKER: Would the hon. gentleman allow a question?

Mr. CRERAR: I did not interrupt my hon. friend.

Mr. DIEFENBAKER: I should just like to ask the hon. gentleman if he thinks the farmers should not receive the same consideration as all other producers of war-time necessities.

Mr. CRERAR: Now my hon. friend is shifting his ground a bit. I am not criticizing the payments which were made to the wheat farmers, but I am saying that these great apostles of economy advocated in this house a programme which would have meant the expenditure of additional scores of millions of dollars. In that, may I repeat, the hon. member for Lake Centre was ably seconded by the hon. member for Qu'Appelle, and both hon. members were applauded by the leader of the opposition, who chastises us this afternoon for our lack of economy. Where is the consistency in that?

Mr. HOMUTH: And some of the farmers from the west.

Mr. CRERAR: I am getting a little tired of these interruptions. The hon. leader of the opposition and the hon. member for Lake Centre have criticized the volume of the estimates for this year. I find myself concerned about that also. I do not think there is any business coming before parliament more important than the matter of providing money for the public service, and finding the means of raising that money. It touches the whole question of taxation—how taxes shall be levied, how the money shall be secured, and how it shall be spent. I agree with the leader of the opposition and the hon. member for Lake Centre that there is no more important duty resting upon parliament than that responsibility. If we go back to earlier days we find that our parliaments had their origin in controversies over that very question, which is, and I think always will be, as long as we have a proper appreciation of our responsibilities as members of parliament, one of the most important matters with which we have to deal. But it is not very often, when you come to consider the expenditure of money, that you hear the voice of economy raised in this house, and I am sometimes alarmed at the extent to which our expenditures have grown. There are, however, many items which are in the nature of fixed expenditures. The leader of the opposition referred to the fact that in these estimates we were voting something over $450,000,000 for the current year. Of that total, in the Department of Finance alone over $226,000,000 is statutory. I do not think my hon. friends or any other hon. member of the house would suggest that we should repudiate or cut down the interest on our debt. I do not hear anyone suggest either here or anywhere else that we should cut down old age pensions.

Mr. COLDWELL: Increase them.

Mr. CRERAR: On the contrary the argument is that they should be increased. Take another very important item, the amount expended by the Department of Pensions and National Health. The vote there is for almost $55,000,000. Is there any suggestion that practically all this money is not well spent? Most of it goes in pensions to men who returned from the last war and in looking after men who came back broken in body. Is there any suggestion that these pensions should be cut down? I do not hear it, and I do not think you will find it in the house or anywhere else. In these two items alone we have a total of $280,000,000 out of the expenditures of $454,000,000, leaving approximately $175,000,000 for all the other purposes of government, entirely apart from the war appropriation. It may be that in the expenditure of that $175,000,000 some economies could be introduced.

The leader of the opposition referred to the staff of the House of Commons and the staff of the Senate. Possibly you could reduce those staffs, but even if you cut those staffs in two, the saving effected in comparison with the whole expenditure would be negligible. When I say that I am not quarrelling at all with the principle which the leader of the opposition enunciated.

As to whether we should have one month's supply or two, my colleague the Minister of Finance will deal with that. I do not think the government can be fairly criticized because it has not had the estimates before the house up to the present time. It is true that we have had one very large estimate before the house in the appropriation bill which embraces a total expenditure of over $2,000,000,000. Certainly that has been fully discussed. We have spent from twenty-six to twenty-seven sitting days in discussing the war appropriation measure. And so, Mr. Chairman, I come to this conclusion, that while the speeches made by the leader of the opposition and the member for Lake Centre created an interesting diversion in the committee, I do not think they contributed very much to the business of the house.

Mr. HOMUTH: They certainly put the government on its toes.

Mr. CRERAR: If my hon. friend thinks that, he is entitled to get all the satisfaction he can out of it. We have the budget coming along, we have the amendment to the National Resources Mobilization Act, and the strong probability is that the house will not be through by the end of June—

Mr. HARRIS (Danforth): July.

Mr. CRERAR: If the house granted only one month's supply, it would mean that the Minister of Finance would have to come back at the end of June for another month's supply, but if we are granted two months' supply now we think we are reasonably sure of getting through. So that while the Minister of Finance may accept supply for one month or two months, I do think the house would be well advised to grant two months' supply.

Mr. ILSLEY: I am very glad that the leader of the opposition and the hon. member for Lake Centre made the speeches they did this afternoon. I want to congratulate them upon discharging their duty, although I cannot congratulate them upon the manner in which they did it or upon the time they selected for doing it. Sound and valid criticism of expenditure is a wholesome practice in this house, and I am sorry there is not more of it rather than less. From the Social Credit party we get nothing but advice to make greater and greater expenditures on the ground that money is easily obtained by government issue. From the Cooperative Commonwealth Federation party we get practically nothing in the way of a suggestion for economy of any kind.

Mr. COLDWELL: I take exception to that. We have suggested great economies in the cutting out of profit in connection with the war effort, where the greatest economy of all could be made. We want more in the way of social legislation, I grant.

Mr. ILSLEY: Larger expenditures by the government, but higher taxes.

Mr. COLDWELL: No.

Mr. ILSLEY: Higher taxes on the rich.

Mr. COLDWELL: On the rich, yes.

Mr. ILSLEY: That is a fair summary of the position of the Cooperative Commonwealth Federation party. I am glad that the Conservative party has at last started, even in this imperfect way, to discharge its historic responsibility, which is to criticize the expenditures of the government. It is true that this debate this afternoon is an old-fashioned one, if I may put it that way. It is the kind of debate to which I have listened many times in this house during the past fifteen or sixteen years.

Mr. PERLEY: And in which the minister has himself taken part.

Mr. ILSLEY: I have taken part in some of it myself. The practice usually pursued by the opposition is about as follows. In the first place there is a devastating onslaught on

the government, on general principles, for its total expenditures, just as was done this afternoon. When further dissent is invited to particulars, they show great adroitness in escaping any such temptation.

Mr. HANSON (York-Sunbury): Speak for yourself.

Mr. ILSLEY: This afternoon, for example, I was able to get only one concrete suggestion, and that was that we cut down in some way the number of messengers and others who are on the staff of the House of Commons. I said to myself when he had reached that point: now at last we are getting somewhere. I am grateful for the suggestion and I hope that members of the House of Commons will come forward with concrete suggestions of that kind.

Mr. GRAYDON: Will the minister accept them when they come?

Mr. ILSLEY: I will accept as many of them as are practicable, I can assure you, Mr. Chairman. I sincerely wish that members of the house on this side and in all the opposition parties would show a little more concern than they do about public expenditure.

Mr. HANSON (York-Sunbury): Would the minister allow me one question?

Mr. ILSLEY: Yes.

Mr. HANSON (York-Sunbury): Does he think it is part of the function of an opposition in urging retrenchment to single out individual items when we have not the known facts in front of us. I do not think that is our function.

Mr. ILSLEY: Certainly it is. It is the function of the opposition, and it is what a courageous opposition would do. The easiest thing in the world is to do what certain newspapers have done and what the Conservative opposition has done this afternoon—just to take a lump sum and say: There is really no reduction in that lump sum, and there should have been.

I will tell the committee of an incident that took place a year ago when the estimates were in preparation. One of the great newspapers of this country which is strongly and sincerely in favour of governmental economy was criticizing the government, and fairly, from its point of view, for not having further reduced the main expenditures. I think the main estimates as then introduced were $432,000,000, and it was said that we should be able to reduce that total to at least below $400,000,000. About that time a great interest in this country which was generally supposed to be fairly close to the newspaper in question was making representations to the government and to treasury board, and curiously enough, just at the very time these editorials were coming out urging economy—it was before the estimates were tabled—the treasury board had before it no less than five submissions from the interest in question for specific increased expenditures.

Mr. GRAYDON: May we know what that interest was?

Mr. ILSLEY: No. I must say that they made a very good case for several of these expenditures, and increases were allowed in two or three cases. But the incident showed me that the easiest thing in the world to do is to say to a government: cut down your total amount of expenditure, and if you are not doing it you are showing a callous disregard for the principles which should be followed in time of war. But the hardest thing in the world to do is to select the specific items for reduction.

I want to thank the hon. member for Lake Centre for one remark he made this afternoon. He said that the country was willing to stand any weight of taxation at all. I am going to remind him of that later, and I am going to remind the members of the opposition of that statement later, assuming that he is reflecting the sentiment of the leaders of the opposition. My experience in this house has been this—

Mr. HANSON (York-Sunbury): Was there not an "if" attached to it?

Mr. ILSLEY: There was no "if". I can almost pick out the members now who, when we get into our estimates, are going to rise and condemn the government for the smallness of certain items in the estimates. I could remind hon. gentlemen of what they have done in this regard during the past three years. I could start with the hon. member for Peel (Mr. Graydon) and tell him what he wanted an increase in, and I could go back to the hon. member for Vancouver South (Mr. Green) who is a particularly serious offender in that regard. He is always advocating higher expenditures. I could go on to an hon. member from Toronto, who is particularly hard on increases in taxation, and so on. I could go over hon. members of the opposition and—

Mr. JACKMAN: Would the minister permit a suggestion? I do not take exception to what he has said; I do not know whether it is quite in accordance with the fact or not, but I would tell him this: If he wishes a concrete suggestion to decrease the civil expenditures of this government, and wants to know how I think it can be done, he can do exactly the

same as all citizens in Canada are having to do to-day; that is, the heavy taxpaying class who have not the income they formerly had, by reason of the fact that they have had to contribute so much more in taxation. If they are going to pay their taxes, as they must, then they must go over every item, and reduce, whether they think it is possible or not. If the minister will say that the civil expenditures of this government will not be $500,000,000 this year because the money is not there, but that they will be $450,000,000 or $400,000,000, he will find a method of doing it, the same as every other citizen in this country is finding a way.

Mr. ILSLEY: Just as I expected; I did not get a concrete suggestion.

Mr. HANSON (York-Sunbury): Perhaps the minister will let me give him one, then. In *Votes and Proceedings,* No. 69, brought down on May 21, there are certain questions with regard to the position of Mr. Adjutor Savard, with the Royal Canadian Air Force overseas. The minister's answer is that he was director of overseas press relations, Department of National Defence, whatever that means, and he was paid $5,800 per annum plus $10 per diem living allowance. I would suggest that there is a case where the minister could do something.

Mr. ILSLEY: The leader of the opposition thinks that is a good suggestion? That was paid out of the war appropriation.

Mr. HANSON (York-Sunbury): It does not matter where it came from. It came from the people of Canada.

Mr. ILSLEY: I know that.

Mr. HANSON (York-Sunbury): And it was wholly unjustified.

Mr. ILSLEY: It may be that there are salaries which are too high in the service.

Mr. HANSON (York-Sunbury): The whole position was unjustified.

Mr. ILSLEY: I will deal with the question of salaries at the proper time; but I wish to say that the government has been fighting salaries, not only in the government but throughout the country, harder than anybody else has been. We have been criticized by business interests, by parliament, and by persons in the service and out of the service because of the rigidity and the severity—what is sometimes called the cruelty and the unreasonableness of trying to keep the salary ceiling on.

Mr. FRASER (Peterboorugh West): That is in private business.

Mr. ILSLEY: Just a moment; if I am going to make a speech, then I cannot let everybody rush in when they have a stray thought.

Mr. FRASER (Peterborough West): Mine was not a stray thought. With respect to salaries, let us consider these dollar-a-year men. In a number of cases they are marked as not having any salary, but as receiving a living allowance of $20 or $25 a day. Would the minister tell me if those are taxable for income?

Mr. ILSLEY: Absolutely.

Mr. FRASER (Peterborough West): Are they?

Mr. ILSLEY: Yes; they certainly are; there is no doubt about it.

Mr. FRASER (Peterborough West): In all circumstances?

Mr. ILSLEY: Yes.

An hon. MEMBER: Only a portion of them.

Mr. ILSLEY: Oh, do not get on to the question of taxation of living allowances. No rule of the treasury board has been more resented than that one. It has been regarded as absolutely unfair and unjust. But it has been stuck to, on the ground that living allowances are in the nature of salaries. That is, actual expenses accounted for are not taxable. But if a person is paid a flat sum of so much a day, it is the same as if he were paid so much a year or so much a month, whether he calls it a living allowance, or whatever he calls it.

Mr. FRASER (Peterborough West): The government treats all living allowances on that basis?

Mr. ILSLEY: I shall have to disregard what the hon. member has said. I was going to complete my discussion with respect to what has been said by the opposition. I am not saying this with respect to any particular opposition. All oppositions are this way; I have seen it go on and heard it go on for many years. The programme, as I say, is to make a general attack on the expenditures of the government, in toto, and to run away completely from specific expenditures. On the contrary they attack the government, and then demand large expenditures.

Mr. HARRIS (Danforth): Mind your own business.

Mr. ILSLEY: Oh, the hon. member is losing his temper.

Mr. HARRIS (Danforth): No. We will look after our business, and you mind your own.

Mr. ILSLEY: Mr. Chairman, the hon. member is losing his temper. That is the first time in the house I have ever seen that come over the hon. member for Danforth.

The opposition this afternoon was discharging its duty, and I am discharging my duty now. I am putting this thing in its proper light. I am putting the whole position in its proper light. It must be remembered that this afternoon the government was accused of issuing false statements, and there was mention of issuing a statement which was wholly misleading. The government was accused of extravagance, and of asking people to do things which it was not prepared to do itself. This was done in a pretty highly efficient manner, I think, by the leader of the opposition and the hon. member for Lake Centre. I am putting the position exactly as I see it. The opposition makes its general attack, and then it runs away from a specific item or a specific suggestion. It attacks us for not spending more on this service or on that service. There will be a lot of items like that in these estimates.

Let us consider the imposition of taxation, that the hon. member for Lake Centre was so very brave about this afternoon. We shall have opposition from every member in the opposition with regard to some item or another, if we undertake to increase taxation. We had it last year; we had it the year before, and we shall have it this year. Just wait and see.

This discussion all started on a matter of interim supply. This is wholly within the control of the opposition, not of the government. If the opposition says that we can have no interim supply I will announce, to-morrow morning, that there will be no interim supply. If the opposition says that we can have one month's interim supply, then we shall have to take one month's interim supply. That month will soon be over, and in the latter part of the month of June we shall have another one of these pleasurable occasions. The hon. member for Témiscouata said this afternoon that this is the last time for him, and that he is not going to agree to the passing of interim supply again—until he has gone into the way in which we are passing our accounts. Then we can expect a midsummer debate, I presume, which will last some days on the question of whether the government is to be given another sixth or twelfth at the end of June.

In my judgment parliament is more and more on trial, at the bar of public opinion. There is something wrong with this House of Commons. I am not reflecting on the house, and I do not know what is the cause. But there is something wrong with it. I have asked myself, "Is this the fault of the government, in any way?" Someone rises in his place this afternoon and says that the government has not brought along its main estimates, and asks why the government has ignored parliament. They ask, "Why did they hold their main estimates up?" We placed our main estimates on the table of the house on January 21. We worked day and night to get our main estimates ready in order to put them before parliament, so that parliament would have something before it—if it could get to those estimates. Since that time we have not taken any time off. We have gone on and on; we have sat on holidays—at least, we sat yesterday, at any rate. We have carried out our business—and we have always had an accumulation of business pressing for the attention of parliament. I do not know of any way in the world to get everything before parliament, unless hon. members curtail their discussions or unless we sit all night, or something of that kind.

A lot has been said this afternoon about changing the rules. I believe it was the hon. member for Rosetown-Biggar (Mr. Coldwell), who said that the rules were obsolete and that we should change them. However, he made no suggestion as to the manner in which they should be changed, and his suggestion that the rules be changed did not meet with the approval of the leader of the opposition. The hon. member for St. Lawrence-St. George (Mr. Claxton) said that we should bring our rules up to date. I do not know what he had in mind, but I want to say this—

Mr. COLDWELL: May I say to the Minister of Finance that I did not think this was the proper place to make suggestions. I have suggestions which I could make.

Mr. ILSLEY: Whatever rules we adopt, we are not going to be able to consider more subjects in this house and get through faster unless there is less discussion on each subject in the house itself. Is it the government's fault that so much discussion goes on, that it takes so many days to get through a particular item? I tried just before the Easter recess to crowd the house a little. I will not do it again. If the government starts to crowd the house, the house crowds the government. That always happens. The moment we indicate to the house that we want to get ahead, we simply precipitate speeches about the right of the House of Commons to discuss matters and to discuss them thoroughly.

What has been the criticism this afternoon? Not that we have put too much before the House of Commons, but that we legislate by order in council, that we have used this power we have of doing almost everything by order in council to "emasculate the House of Commons", if I may employ the language of the hon. member for Lake Centre. If we were to bring along all the important measures which we transact by order in council there would not be, at the rate we are going, enough months in the year in which to get them through. We bring everything we possibly can to the house. We could have enacted our war risk insurance measure by order in council. We specifically had that power in the War Appropriation Act. It is contained not only in that act; in every war appropriation act since 1914 or 1915 there has been the specific power to bring into force a measure for war risk insurance. But out of respect for the House of Commons, and because the subject matter of war risk insurance is peculiarly a field which the house should occupy, I put the measure before them. Time after time we are confronted with these alternatives: Shall we bring this matter before the House of Commons, or shall we deal with it by order in council; and whenever we can, we bring it before the house. The result is that we have to wait from January 21 to some time in June to get our first estimates before the House of Commons. There is no way that we can avoid this unless we neglect something else. The House of Commons at the present time is discussing, as the leader of the opposition said, the biggest money bill which has ever been brought before it. We cannot bring peace-time estimates before the house at the same time as it is discussing the others. I have heard that in one legislature in the world two speeches go on at the same time for the purpose of effecting dispatch of business, but I do not suppose that this is the amendment of the rules which the hon. member for Rosetown-Biggar has in mind.

So here we are. In what way is the government wrong? What could the government have done?

Mr. HANSON (York-Sunbury): The minister said that just before the Easter vacation he undertook to crowd the House of Commons. I should like to ask him if he did not get pretty good cooperation from hon. gentlemen on this side of the house.

Mr. ILSLEY: I got very good cooperation before Easter, but I felt that I would have been further ahead if I had not tried to push quite as hard as I did. We are strongly indisposed to tell the house to stop its talk and get ahead, because we do not think we have quite the right to say that. I am simply remarking that I do not know what the government could have done to get these estimates before the house.

Mr. HANSON (York-Sunbury): I will tell the minister one thing they could have done. They need not have had the plebiscite, or the long adjournment at Easter.

Mr. ILSLEY: The hon. gentleman is opening up a very important question of policy, as to which opinions differ, but it seems to me that when an issue of this sort is being discussed, that is scarcely the kind of argument which should be advanced.

One hon. member, I believe the hon. member for Rosetown-Biggar, said that possibly it was the fault of the opposition. I think that if there were one opposition instead of three oppositions, it could organize its work much better than can possibly be done at the present time.

An hon. MEMBER: Do not suggest an amalgamation!

Mr. ILSLEY: There will be no danger of that. I quite realize that it is just about impossible for three oppositions to coordinate—

Mr. ROWE: Five.

Mr. ILSLEY: —their laudable efforts. If the Conservative opposition were to select their critics on certain features of the government policy and assign them to their tasks, as the Cooperative Commonwealth Federation does; if they were to do that, and I do not see any evidence that they do—

Mr. HANSON (York-Sunbury): The hon. gentleman does not look very far.

Mr. ILSLEY: —they would not get very far, because a Conservative speaker would take up one line; when he sat down a Cooperative Commonwealth Federation member would come in on a totally different tack; then a Social Crediter would come in; and inevitably with these three oppositions we must have a very much disorganized opposition to the government policy. I said at the beginning of the session that I wondered if these parties thought it was the responsibility of the government to organize them. We did not think it was.

It all comes to this: I do not know what the government could do that they have not done. This afternoon we have been told that we are derelict in some respects. In what respects? In what way are we derelict about these estimates? There was no way in

which they could have been placed before the house for discussion without crowding out other government business.

Mr. HANSON (York-Sunbury): Does the minister suggest there was any way that we could have brought them before the house, when the government took away all private members' rights?

Mr. ILSLEY: No; I am not suggesting anything like that. The hon. member for Témiscouata—

Mr. COLDWELL: He is the "unorganized opposition" on the government side.

Mr. ILSLEY: The hon. member for Témiscouata asks two questions. The first is, is the government prepared to see that the auditor general changes his report so that all expenditures below $35,000 are reported on fully?

Mr. MacNICOL: Just the same as they were a few years ago.

Mr. ILSLEY: I am sorry that I am not aware of the terms of the rule which now prevails in regard to the production of these reports. The auditor general, it must be remembered, is an officer of parliament, and I assume that he presents his reports to parliament in a manner which he thinks is sufficient. I believe I have heard it said that if all expenditures were detailed in the way they were some years ago, an enormous number of volumes would be necessary for their presentation to parliament.

Mr. COLDWELL: Does the minister not think that is a proper matter to be referred to the public accounts committee, so that the auditor general might explain the situation to the committee, and parliament might determine whether the reports are satisfactory or not?

Mr. HANSON (York-Sunbury): Did not the Prime Minister make the promise to which the hon. member for Témiscouata referred? If he did, he must have some responsibility in the premises.

Mr. ILSLEY: Well, I did not make the promise myself and was not present when it was made, if it was made, and I cannot answer that. As to whether the question of the form which the auditor general's report should take should be left to the public accounts committee, I do not know whether that is a function of that committee or not. I thought the main function of the public accounts committee was to review and probe expenditures which appear in the auditor general's report.

[Mr. Ilsley.]

Mr. COLDWELL: The auditor general cannot appear before this parliament, and therefore we have no opportunity to inquire as to the form and find out whether it is satisfactory or not. The public accounts committee might do it.

Mr. ILSLEY: It might very well. I have not given any consideration to that.

The other question was, why do we not present detailed estimates of our war expenditures, as they do in the United States of America? The book which was produced today is a very thick book. What it contains, I do not know; whether peace expenditures or war expenditures or both, I do not know. I have not seen it. But when we were presenting our estimates of war expenditures to the House of Commons, we considered that we should be very careful of the possible consequences. These estimates, it must be remembered, give a picture of the military plans of the government. When I introduce the war appropriation bill I put on *Hansard* a brief summary of the war estimates of the government. If hon. members wish that the amounts and the brief summary should be broken down, consideration is given to the request; and if they can be further broken down without revealing information which should not be given—I mean, from the point of view of the public interest in the real sense —that further information is supplied.

Mr. GREEN: In that connection, we have had a break-down of the amounts for the army, the navy and the air force, but no break-down of other items. Could such a break-down be placed on *Hansard*? There are several other departments which get a share of the money provided by the war appropriation bill, but we have had no details as to how that money is spent.

Mr. ILSLEY: It is a good deal easier to ask for a break-down than it is to define a break-down. Break-downs are asked for, and sometimes the person asking thinks that compliance is entirely inadequate. If an indication were given as to the items that were required I do not see any objection.

Mr. GREEN: Take, for instance, the minister's own department, the Department of Finance. Could the expenditures of that department under the war appropriation bill not be broken down—so much for such and such an item, so much for something else, and so on. No one is asking for information which should not be disclosed.

Mr. ILSLEY: If anyone wants that further break-down, I think a further break-down would be possible.

Mr. GREEN: Could that be done with each department? It would greatly simplify questioning in the house.

Mr. ILSLEY: If the request were specific, I do not see why more could not be done, but the request should be specific and it should be made, I was going to say, by the leader of the opposition; otherwise every hon. member would want something different.

Mr. HANSON (York-Sunbury): I have given some consideration to that point, and I am impressed with the statement the minister made, that estimates are a summary of the government's war plans. I therefore hesitated to ask for greater detail on the theory that perhaps it would not be in the public interest to do so. I am between two opinions. I do not know enough about the question to come to a conclusion, and I should not be blamed for not pressing the matter, because I have not convinced myself that it is the proper course. But there are certain estimates in connection with which more details ought to be given as a matter of course. I will ask the minister in future to give some consideration to that aspect of the situation and to bring down if possible, if it is not against the public interest, estimates in more detail so that members may have them in advance to study them. We do not get them in sufficient time to study them, nor do we get them with sufficient detail. I do not intend to delay the passage of the one-twelfth estimate. I will ask the minister to accept that. This discussion will do some good, both in the house and in the country, and I will ask him to accept the one-twelfth interim supply to-day.

Mr. ILSLEY: I have no option but to accept it. I cannot do anything else; it is as the opposition says. I do not agree with the leader of the opposition at all. I think we would be further ahead in every way if we had two months supply instead of one, but I have no option but to accept the latter.

With regard to civil expenditure economies, as I said, one cannot take totals and compare them; one must deal with specific individual items, and believe me, the last minister of finance, who was minister from the beginning of the war, now Minister of National Defence (Mr. Ralston), did an almost incredibly efficient job in reducing the estimates for civilian expenditures. I have tried to carry on along the same line and have asked the public to cut out unnecessary expenditures, and I realize that the government must be prepared to show that it is practising what it preaches. I would not say in thousands, but in hundreds of items, therefore—in connection with every possible item—a considerable amount of time has been devoted to the preparation of the estimates, more time indeed than members of the house have any conception of. I will change the motion, dividing the figures in two, and will ask that they go through.

Motion as amended agreed to.

Resolutions as amended reported, read the second time and concurred in.

WAYS AND MEANS

INTERIM SUPPLY

Hon. J. L. ILSLEY (Minister of Finance) moved that the house go into committee of ways and means.

Motion agreed to and the house went into committee, Mr. Fournier (Hull) in the chair.

Mr. ILSLEY moved:

Resolved, that towards making good the supply granted to His Majesty on account of certain expenses of the public service for the fiscal year ending 31st March, 1943, the sum of $19,952,242.11 be granted out of the consolidated revenue fund of Canada.

Motion agreed to.

Resolution reported, read the second time and concurred in.

Mr. ILSLEY thereupon moved for leave to introduce Bill No. 81, for granting to his majesty certain sums of money for the public service of the financial year ending March 31, 1943.

Motion agreed to, bill read the first and second times and the house went into committee thereon, Mr. Fournier (Hull) in the chair.

Sections 1 and 2 agreed to.

On section 3—Additional interim vote of $550,655.91 granted for 1942-43 on certain items.

Mr. HANSON (York-Sunbury): The minister asks for $19,401,586.20, and then in section 3 the half of $1,101,311.83, and the schedule refers to certain specific votes totalling $6,607,871. Why these particular items? Do they have to go through now, and are there funds to cover the others? I do not understand the *modus operandi.*

Mr. ILSLEY: I am sorry, I do not know either. If it is important, it will have to stand.

Mr. HANSON (York-Sunbury): The minister will give it at a later stage perhaps, just for information.

Mr. ILSLEY: Yes; I will give it at a later stage.

Mr. HANSON (York-Sunbury): Is this item for agriculture in addition to the amounts voted in the estimates last year?

Mr. ILSLEY: The amount voted last year was $35,000,000. That was not all spent. I do not know how much was spent.

Mr. HANSON (York-Sunbury): But this is a new vote in addition to what was spent last year?

Mr. ILSLEY: That is right.

Section agreed to.

Section 4 agreed to.

Bill reported, read the third time and passed.

CANADA EVIDENCE ACT

AMENDMENT TO MAKE PHOTOGRAPHS OF BOOK ENTRIES ADMISSIBLE IN EVIDENCE

The house resumed from Friday, May 22, consideration in committee of Bill No. 66, to amend the Canada Evidence Act—Mr. St. Laurent—Mr. Fournier (Hull) in the chair.

On section 1—Definitions.

Hon. L. S. ST. LAURENT (Minister of Justice): When section 1 was called the other day I stated that there were some amendments that were being suggested to extend the provisions to railway, telegraph and express companies and insurance and trust companies. I was under the impression that my colleague the Minister of Fisheries who was beside me at the time had moved the amendments. The amendments were discussed, but I find on reading *Hansard* that it does not appear that a formal motion was submitted. I will ask my colleague the Minister of Mines and Resources (Mr. Crerar) if he will be good enough to move the amendments.

The amendments were read on the former occasion and noted by hon. members who were present at the time. I have a copy for the leader of the opposition (Mr. Hanson). They are included in *Hansard,* although no formal motion was submitted.

Mr. CRERAR: I move the following amendments:

Clause 1, lines 9 to 12: strike out paragraph (a) and substitute therefor the following,

"(a) 'corporation' means the Bank of Canada, every bank to which the Bank Act applies or to which the Quebec Savings Banks Act applies, and each and every of the following carrying on business in Canada, namely, every railway, express, telegraph and telephone company (except a street railway and tramway company), insurance company or society, trust company and loan company (except a company subject to the provisions of part II of the Small Loans Act, 1939);

(b) 'government' means the government of Canada or of any province of Canada and includes any department, commission, board or branch of any such government;"

2. Clause 1, line 13: strike out "(b)" and substitute therefor "(c)";

3. Clause 1, line 17: strike out the word "bank" and substitute therefor the words, "government or corporation";

4. Clause 1, line 21: strike out the word "original";

5. Clause 1, line 21: strike out the words "a bank" and substitute therefor the words, "any government or corporation";

6. Clause 1, line 25: strike out all the words after "any" to the end of line 27 and substitute the words "government or corporation";

6a. Clause 1, page 2, line 2: strike out the word "original";

7. Clause 1, page 2, lines 4 and 5: strike out the words "bank, department, commission, board or branch" and substitute therefor the words "government or corporation";

8. Clause 1, page 2, lines 9 and 10: strike out the words "bank, department, commission, board or branch" and substitute therefor the words "government or corporation";

9. Clause 1, page 2, line 14: strike out the words "bank, department, commission, board or branch" and substitute therefor the words, "government or corporation".

Mr. HANSON (York-Sunbury): I regret that I was not here when this matter was under discussion last week. That is, of course, my fault.

The object of this bill is to alter the common law, or the practice, of eight of the Canadian provinces, and, I assume, the practice of the province of Quebec, with which, of course, I am not familiar, by amending the Canada Evidence Act with respect to these matters which are within the jurisdiction of parliament. Having regard to the fact that the same kind of legislation is to be presented to the legislatures of the provinces, there may be uniformity of practice in all jurisdictions.

The law of evidence is a very technical law. It is one of slow growth, and has grown up over many years. Those who are practising lawyers know that no matter how much theory you may have in your mind with respect to the law of evidence, if you are not an efficient trial lawyer you are not able to put into practice the theory which is comprised within the law of evidence.

One of the fundamental things is what is called the best evidence rule. Of course that is based on reason, that the best evidence in the trial of an issue should be the only evidence that a court shall receive. Because at times there is difficulty—I appreciate that

what I am saying is very elementary—because at times the best evidence is not immediately available, all sorts of efforts are resorted to in order to provide for the admissibility of secondary evidence. This bill is but an extension of that practice which has grown somewhat in recent years.

My understanding was that this bill as originally drawn was the result of an agreement between the representatives of the various provinces gathered at the annual meeting of the Canadian Bar association with the idea of having uniformity of legislation throughout the various provinces, including, I assume, the province of Quebec. With respect to any legal matter affecting that province I speak with the greatest deference because I really am not qualified to express any opinion.

In theory and practice uniformity of legislation in the various provinces is a proposal that I have always commended and supported. I agree that many substantial results have been obtained through the committee which has been set up by the Canadian Bar association. We have now standard acts covering the bulk sale of goods and various other matters to which I might refer in which the laws of the provinces approach uniformity. That was the basis of the inception of this legislation.

When the legislation was brought in, it was very much limited in its scope and rather innocuous. The amendments that are now proposed are extensive. I am fearful of change just for the sake of change itself. I realize that it will make things somewhat easier for certain corporations in this country to be relieved of the responsibility which the laws at present impose upon them with respect to the preservation of their records. But we all have responsibility imposed upon us. I have in my own office a book of practice extending now forty years back and files extending back for forty years, and more than that. I am glad to think that my firm goes back a good many years prior to that. While I cannot say that we have all the old records of the predecessor firm, we have a good many of them and they have proved very valuable. While they would not perhaps be in the same category as the records of a bank or big corporation, they are of some importance and occasionally we have had to refer to them. That is one responsibility that attaches to your business. So I say that unless there is an imperative need for change in this particular case, we should not agree to change just for the sake of change itself.

I can understand that from a working point of view the records in an institution like a bank must accumulate and constitute a tremendous volume as the years go by, but that is a responsibility which they assume for being in business. The cost of accumulating and preserving these records in good condition is part of the cost of operating their business, just as any other business has its responsibilities. Whether it is advisable to relieve the banks of this responsibility it is for the minister who has given much more thought to it than I have and can perhaps express a better opinion than I can, to say. But there is a fundamental objection to making it easier to prove cases in a court of law by evidence that is not the best evidence. We know of many a battle over the admissibility of evidence in important legislation, where some litigant confronted with a certain situation has not been able to present the evidence which the law required and in all kinds of cases, I shall not say has resorted to questionable methods but has certainly used great resourcefulness in endeavouring to get around the carrying out of the best evidence principle.

This bill is an effort to make that sort of thing much easier. Where is it going to stop? This legislature, as far as the Canada Evidence Act is concerned, I suppose could make hearsay evidence legal evidence, although it would never be convincing evidence because it violates our powers of reasoning. Hearsay evidence can never be convincing evidence, and yet how many people accept hearsay evidence as true, real evidence.

I suggest that the minister is going a long way in making this change which has not been passed upon by the experts—I will so call them—who gather at the annual conference of the Canadian Bar association and sit on the committee on uniformity of laws. I understand that they have not recommended these additional amendments and were consulted only with respect to the original proposal.

Mr. ST. LAURENT: The amendments would not become effective until concurred in by the legislatures, so that there is no urgency about the matter.

Mr. HANSON (York-Sunbury): If that be so, there is no great urgency to pass the amendments to-day or this session.

Mr. ST. LAURENT: No; there really is no urgency to pass the amendments because they will not become effective until they have been concurred in by the legislatures. If the hon. member feels that this house should not take the lead in any of these steps towards uniformity, no public interest would be prejudiced by our not adopting the amendments at this time.

Mr. HANSON (York-Sunbury): I am thinking particularly about criminal evidence. The provincial jurisdictions really have no right to legislate in respect to that, have they?

Mr. ST. LAURENT: No; but this kind of evidence will be used only if the originals have been destroyed. None of these companies will take the risk of destroying its originals until all the legislatures which have jurisdiction to deal with the custody of these originals have passed legislation to provide for photographic copies to be used as evidence.

Mr. HANSON (York-Sunbury): That would be the proper way. I do not like to take the responsibility of asking that the amendments be not considered now. But my reaction from the very beginning with respect to this bill has been that it is a departure from well-established practice and that the change ought not to be made unless there are most cogent reasons why it should be made. The reasons advanced, as I understand them, are that it is a matter of convenience to the banks.

Mr. McNIVEN: And expense.

Mr. HANSON (York-Sunbury): And some expense, but I do not attach much importance to that. The most important part of it is the fact that it may be difficult to prove the proper custody of documents; but my recollection is that if they come from a proper source, proof can always be given by a proper officer.

One of the greatest objections to the principle of this bill is that the progress which modern scientific photography has made may enable it in cases of fraud or collusion to defeat the ends of justice. I am not suggesting for a moment that any reputable institution like a bank or telephone company or trust company would for a moment be a party to anything of that kind, but we do know the resourcefulness of the human brain and what human ingenuity can do. I have taken part in litigation where photographs were an important consideration in respect of the evidence. I am sure that nearly every member of the legal profession has been engaged in accident and collision cases arising out of the use of automobiles. It is marvellous what a photographer can do toward making a position appear just a little different from what it actually is, if he is adroit—and to-day many of them are adroit. I do not wish to take the responsibility of holding up the bill as originally drafted, but I suggest that the proposed amendment might stand.

Mr. MARTIN: I should not like to pit my legal knowledge against that of the leader of the opposition—

[Mr. St. Laurent.]

Mr. HANSON (York-Sunbury): That would not be difficult.

Mr. MARTIN: Oh, I think the leader of the opposition is much more eminent at the bar than he is prepared to admit. The fact is that I am inclined to give my support to this measure, and I should like to hear from the Minister of Justice. I missed his remarks of last week.

I rise first of all to ask the minister to tell us in what other common law jurisdictions, other than in some of the provinces, this practice prevails. For instance, what is the practice in the United Kingdom and in the United States? I believe there is a great disposition on the part of members of the legal profession, and particularly some very eminent jurists, to regard our laws of evidence, generally speaking, as deserving of great relaxation. There are many instances when the rules with respect to hearsay evidence could easily be broadened. I believe we have adhered to a strict regime unnecessarily, and one which in many instances works considerable injustice.

My purpose in rising is to ask the Minister of Justice, if he has not already done so, to tell us what the practice is in the United States, where litigation is much more intensive than it is with us. I believe the experience in that country would be of some value. My impression is that in England, if they have not gone quite this far they have gone pretty far in admitting copies of documents.

Mr. HANSON (York-Sunbury): Anything can be done by consent.

Mr. ST. LAURENT: In a supreme court judgment in the United States, in December, 1939, the admissibility of what are known as recordaks was asserted and confirmed. These recordaks are photographing machines to retain on film the impression of cheques. They were admitted by the court in the case of the United States v. Martin T. Manton, the justice of the court in New York, who got into difficulties. In his trial a question arose with respect to the legality of evidence of the fact that cheques had passed through the banks and had been paid.

The purpose of this legislation, as originally drafted by the commissioners on uniformity of legislation, sitting in conjunction with the Canadian Bar association, was to allow microfilm to be made of old records. The reason was that on one film could be placed the material of 2,600 letter-sized sheets, and a film could be made, I am told, at a cost of $7. In other words, less than one-

thousandth of the space is required to conserve the record, and if at any time it is required, the microfilm can be thrown on the screen and enlarged. If it is required for the purpose of evidence in court, an enlarged print can be made. The bill provides for the making of an affidavit at the time the old record is photographed and destroyed. Therefore the print made from the microfilm, and the affidavit, can be admissible as evidence, not of the facts but of the documents destroyed.

The suggestion was made by these utility companies that although the five provinces which have already adopted this principle, in their provincial evidence acts, have not gone beyond the original recommendation, if they were included in the act passed by parliament they would be able to get concurring legislation from the legislature, and would, after having obtained concurring legislation, get the benefit of being able to conserve records on the microfilms, instead of having to provide the storage space now required to take care of them.

Therefore the amendment is not one of urgency, because no one will venture to use it until one or other of the legislatures has adopted it as a rule of evidence in the province concerned. But with respect to the bill as originally submitted may I point out that already five legislatures have passed concurring statutes.

Mr. MARTIN: But not covering the present amendment.

Mr. ST. LAURENT: No. Therefore, if in this committee it is considered that it is not desirable to go beyond what has already been adopted by the five legislatures, the amendment can be dropped and the bill passed in its original form. If, on the other hand, there is no objection found to taking this lead—and in the department it was not felt that the practice would be objectionable—

Mr. MARTIN: What does the minister think about it?

Mr. ST. LAURENT: I do not think there can be any serious objection to this practice, because of the kind of institutions the bill contemplates. Those institutions are going to be very careful, because if they take the risk of destroying records they are going to be careful to comply with all the conditions, so as to justify the destruction of the records.

It is suggested that at this time full storage space cannot be provided. The controllers in the Department of Munitions and Supply will not authorize the use of materials for such purposes, and the reducing by means of film seems to be a desirable end to accomplish. I have heard the leader of the opposition say that he has files going back for forty years, and although my practice has not been quite that long I believe both he and I have found that there is a very large accumulation.

Mr. HANSON (York-Sunbury): There is, yes.

Mr. ST. LAURENT: If we were to go on, not for the usual span of one man's life, but as a corporation, for a very long time, it would be convenient to be able to compress that material into one one-thousandth of the space. If we found it practicable to do so at a cost of only $7 a film, we would probably be effectuating a saving in that way.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. NICHOLSON: I should like to present a point of view that has not been discussed so far and ask the minister whether he has any information from the different companies concerned as to the amount of space that might be released and the number of tons of paper that might be salvaged if this measure goes through. My reason for raising the question is this. I have visited the bureau of statistics and the post office branch where this principle is at work, and I was impressed with the large volume of space which has been released since the practice has been introduced.

While I appreciate the points which have been raised by some of the learned members of the house I think that companies like express, insurance and telephone companies and banks which operate under charters granted after considerable investigation could scarcely afford to run the risk of falsifying their records with a view to their own advantage in evidence which they might later wish to present. If I remember correctly, the Post Office Department advised me that all the letters that could be contained in two filing cabinets of four drawers could be photographed on a film four inches by four inches by one inch, and in view of the storage space that would be made available as well as the number of tons of paper that might be salvaged I think the amendments proposed should be accepted. Certain risks will be involved, but we also run the risk of not winning this war, and much of this evidence would be of very little value to us if we did not win the war. In view of the growing shortage of paper in this country and the shortage of filing cabinets

which are more necessary for a great many other uses, I think the committee would be well advised to support the proposed amendments. Has the minister any information from these companies as to the number of filing cabinets and the number of tons of paper that might be made available under these amendments?

Mr. ST. LAURENT: I have not precise information beyond the statement that it is very considerable and that the use of these microfilms would reduce to about one-thousandth the space that is at present required to store the original records.

Mr. NICHOLSON: That means that a thousand filing cabinets now in use might be released for more essential purposes and the information contained in them recorded in one filing cabinet. Is that it?

Mr. ST. LAURENT: I would not say that it would be one filing cabinet, but a document photographed on microfilm would not occupy more than one-thousandth of the space the original record occupies.

Mr. POTTIER: The bill and the amendment deal with the Canada Evidence Act under the heading, "documentary evidence." Section 19 of the act refers to copies by king's printer; section 20, imperial proclamations; section 21, proclamations of the governor general; section 22, proclamations of the lieutenant-governor; section 23, evidence of judicial proceedings; section 24, official documents of Canada; section 25, books and documents of a public nature; section 26, entries in books kept in offices under the dominion government; section 27, notarial acts in Quebec; section 29, banker's books. That provision regarding banker's books is the only departure from any government, judicial or public document referred to in the Canada Evidence Act under the heading, "documentary evidence."

What we propose to do by this amendment, not the bill as first presented, is to add entries in books kept by railway companies, express, telegraph and telephone companies, insurance companies, trust companies and loan companies except a certain kind of loan company. I suggest that we are going a bit afield under the amendment itself that has been proposed by the Minister of Justice, and that the thing to do at this time would be to pass the bill as originally submitted without the amendment. Let us try it as an experiment, if I may use that word, rather than bring into the Canada Evidence Act the possibility of all sorts of evidence that was never contemplated by the framers of the act. I suggest that we should stick to the bill suggested rather than press the amendment.

[Mr. Nicholson.]

Mr. ROEBUCK: Mr. Chairman, I did not have the advantage and the privilege of listening to the debate when this matter was before the house on a previous occasion, and so perhaps I am at a slight disadvantage, but I want to say a word of commendation of the proposed change. The leader of the opposition has said that we should not make changes, particularly in fundamental laws, just for the sake of change, and I agree with him in that statement. At the same time we should not resist change just for the sake of preserving old forms, once it is evident that the old forms are not entirely satisfactory.

I have myself seen progress in the matter of court procedure. In the short span of one life considerable changes have taken place. If we go back in history, we shall observe that our court procedure to-day is very much changed compared with what it was one hundred years ago. There was a time when we refused to hear the parties to a suit. The litigants themselves were debarred from giving evidence because the idea was held that the rascals would lie about the case, having a special interest in it. So cases had to be proven without the assistance of those most interested and most intimately in touch with the matters in hand. There was a time when men were put on trial and not allowed to testify in their own defence. They had to bring somebody else to give evidence for them. We have progressed greatly since that time, and largely by a process of making changes step by step for the mere purpose of convenience. Our present system of rejecting all hearsay evidence and insisting on the best evidence only is perhaps a salutary regulation, but it is the cause also of considerable inconvenience. Men in their private capacity and in their business often act upon secondary evidence and form their opinions, and sometimes very accurately, on hearsay evidence. Perhaps we could leave it to courts to give the right weight to evidence if it is secondary and a greater weight to evidence if it is first hand, and relax to a certain extent the rigid rules of evidence to which our forefathers adhered.

This bill is a matter of convenience. It is true that when you relax the severity of your regulations you may open the way for crooks to deceive you. But in life we do that. We do not run our lives on strict rules; we do the best we can and arrive at pretty sound conclusions.

It seems to me that this bill would be real progress because it will not only allow banks to destroy evidence by keeping photographic impressions of previously existing evidence, but also record evidence which

inevitably will be destroyed. For instance, when a cheque is returned to the drawer it is probably lost to the bank and lost to the parties to some later cause. It has gone into private hands. But if this bill were passed, as I understand it, a photographic copy of the cheque could be kept, if desired, and be a permanent record in the hands of the bank. This would be a convenience.

My hon. friend who preceded me used the word "experiment". He said he was diffident about making an experiment in a matter of courts. Well, all life is a matter of experiment, and all progress must involve some element of experiment. We cannot positively know how things will work out until they are tried, and the trying is an experiment. I do not think we should be afraid of making experiments because, if they do not work, we can go back to the old scheme. If this rule of evidence is found to be too loose, and is abused—I do not think it will be—it could later on be abolished, and we would have added at least that item of experience to our own knowledge.

So I am in favour of this bill as it stands.

Mr. HANSON (York-Sunbury): Does the hon. member suggest that it should be limited to being made prima facie evidence and therefore rebuttable? Would that not be an additional safeguard?

Mr. ROEBUCK: Was that question directed to me?

Mr. HANSON (York-Sunbury): Yes.

Mr. ROEBUCK: Would it make any change? If a document were proved by the production of a photographic copy, it could still be proved not to be a true record.

Mr. MARTIN: That could happen to any production.

Mr. ROEBUCK: Of course, it could happen to an original document. Facts stated in a document are rebuttable; that is, evidence can be brought to court to show that the facts stated are not true; and also evidence can be brought to show that the document itself is not what it purports to be. I was thinking that perhaps some provision might be made to ensure honesty in the matter of photographs, because, as the leader of the opposition has pointed out, photography can be used to perform tricks; it is not always just what it seems. One might make a false photograph of a true document.

Mr. MARTIN: There is subsection 3.

Mr. ROEBUCK: Does subsection 3 cover it? It may be covered here, but if it is not covered in the bill itself, the making of a false photograph of a document and bringing it to court as evidence of the document itself would be forgery.

Mr. HANSON (York-Sunbury): Absolutely.

Mr. ROEBUCK: It would be attempting to make something appear that which it is not, and that is forgery. So my point is covered, I think, in the criminal code if not in the bill itself.

Mr. GREEN: The proposed amendment extends these privileges to several different types of company. Could the minister tell us whether there would be very many companies or comparatively few? For example, the following words are used, "insurance company or society." Evidence was given this morning before the banking and commerce committee that there are several hundred small insurance societies in the province of Quebec, and the same may be true of some of the other provinces. I assume that, under the wording of this amendment, all these societies would be entitled to this privilege, and I think it would be interesting to the committee to know whether the amendment will mean that several hundred companies will have this privilege, or only a few. The same is true of loan companies; there must be very many of them in Canada, and the words in the amendment are simply "and loan company." That may cover a great many companies.

Mr. ST. LAURENT: I imagine that the amendment as drafted would extend to a great many companies. It would extend to all the companies registered under the various provincial insurance acts and to the loan companies similarly registered. I am not sure about all the provinces, but I know that in many of the provinces the loan companies are required to register and to have a licence similar to the licence required to do business as an insurance company. It would extend to those companies but would not be made use of by them until there had been concurring legislation by the province in which they operated.

Mr. GREEN: Well, under the criminal code it can be used?

Mr. ST. LAURENT: For purposes of evidence in criminal trials it could be made use of immediately, but only in cases where the originals had been destroyed; and it would be surprising if those in charge of any company took it upon themselves to destroy the originals unless they had legislation, both under the Canada Evidence Act for the purpose of trials to which that act applies, and

under provincial statutes for the more numerous cases to which the provincial evidence acts apply.

Mr. GREEN: Why has the line been drawn where it has been drawn? For example, why should other types of companies not be included? With regard to utility companies, a telephone company has this privilege but a street railway company has not. Why this picking and choosing? It does not seem to be sound law.

Mr. ST. LAURENT: The explanation, whether it be a good one or not, is that after the bill was introduced, the two large railway companies, the Bell Telephone company, and several insurance companies, represented by the Canadian Life Underwriters' association, came to the department and asked if the same provision could not be extended to them. The officers of the department communicated with the Department of Transport to ascertain if there would be any objection to its being extended to railway companies and were assured that there did not seem to be any objection. We communicated with the superintendent of insurance, and he seemed to be of opinion that it would be a useful provision to allow the insurance companies under his jurisdiction and supervision to have this privilege of destroying voluminous records and replacing them with something more compact.

Mr. GREEN: Will companies which are not under his jurisdiction also have the privileges given by this bill?

Mr. ST. LAURENT: It was drawn in this way because it was not felt that there should be a statement here that it would apply only to the insurance companies registered with the superintendent of insurance. That was for a reason which perhaps is not a very serious one, but the hon. member knows what conflict there has been between provincial and federal authorities over insurance companies, and we did not want to give the impression that we were taking some roundabout way to try to bring a larger number of provincial companies to register with the federal authority. That may not be a very good reason, but it was desired to avoid the risk of a contention that we were taking a roundabout way to encourage provincial companies to come under federal inspection and jurisdiction.

Mr. MARTIN: Does this cover trust companies?

Mr. ST. LAURENT: Yes. Trust companies, as the hon. member knows, are also required under, I believe, all the provincial legislation to be registered with the provincial authority.

Mr. HANSON (York-Sunbury): That is, those incorporated under provincial law?

Mr. ST. LAURENT: Yes.

Mr. HAZEN: I would call attention to the wording of a part of section 29A, subsection 2, which reads:

a print, whether enlarged or not, from any photographic film of . . .

Certain documents.

. . . shall be admissible in evidence. . . .

The words are "a print, whether enlarged or not." The Minister of Justice has told us that you can get on 200 feet of film, which would be twenty-four inches, 2,700 letter-size documents. If you can get 2,700 full letter-size documents on 2,400 inches of film, it means that the document will be smaller on the film than an inch in size, and consequently if a print that is not enlarged is taken from one of these films, you will get a print of a letter that is less than an inch in size. Nevertheless, according to the wording of this section, you can put that print in evidence. A print, "whether enlarged or not", "shall be admissible in evidence." What is the judge going to say if there is submitted to him, to be put in evidence, a print of a letter less than an inch in size? It would not clearly show the signatures, and therefore one would have to get a microscope to examine it. As the section stands, however, the judge would have to receive that in evidence. I suggest that the section be amended to provide that a print, enlarged to the approximate size of the original document, shall be admissible in evidence; otherwise you can put in evidence a print that is less than an inch in size, of a letter which I presume might be on a letter sheet about ten or twelve inches in length.

Mr. ST. LAURENT: I should imagine that the lawyers engaged in any trial would take proper means of making their evidence intelligible to the judge who was to determine the issue. I would take it that if a document were drawn in Chinese it would have to be admissible in evidence, but if I were on the case and wanted to use it I would take some means of making it intelligible to the judge who had to determine the case. I do not think the language suggested by the hon. member would be entirely appropriate in all cases. There may be photostats that would be of the appropriate size and would not be enlarged. In using the microfilms there would be occasion for producing an enlargement, and I think we can rely on the usual practice of lawyers conducting cases to see to it that what they submit is not only admissible but submitted in such a form or with such aids as to make it of value in determining the issue, just

as, if it were a document in a language unknown to the court, they would accompany it with a translation properly proved. I think the practice now existing, in my province at least, by consent is to leave with the court, instead of original documents, photostats that are usually of the exact size of the document photographed.

Mr. HANSON (York-Sunbury): That is done for convenience.

Mr. ST. LAURENT: It is done for convenience. As regards the objection of the leader of the opposition that perhaps these prints might serve as prima facie evidence, the bill does not purport to say what value they would have. They are merely to be admitted, not as evidence, but in evidence. They do not establish the fact but are admitted in evidence for whatever they are worth.

Mr. HANSON (York-Sunbury): They go to admissibility but not to weight of evidence?

Mr. ST. LAURENT: That is correct.

Mr. JEAN: Would the minister clarify the meaning of this provision? The amendment reads:

> . . . shall be admissible in evidence in all cases in which and for all purposes for which the object photographed would have been received upon proof that—

—the object photographed was subsequently destroyed by or in the presence of one or more of the employees of the bank, and so on. Does this mean that an employee of the bank or of any company concerned would be authorized to destroy a document after it had been photographed, without the consent of the party who had signed the document?

Mr. ST. LAURENT: The bill does not purport to affect the rights of third parties at all, but affects merely the obligation of the custodian to have the original available to be put in evidence if required.

Mr. JEAN: Should that not be made clear in the bill? As the section now stands, an officer of the company has the right to destroy a document without the consent of the party signing it.

Mr. ST. LAURENT: The bill does not purport to authorize the destruction of any document. It purports to authorize the use of a photographic copy if the original has been destroyed. But it gives no right to make evidence of originals which have been destroyed.

Mr. HANSON (York-Sunbury): Does the minister desire to proceed with the amendment?

Mr. ST. LAURENT: When the committee rose at six o'clock it seemed that hon. members then present thought it would not be desirable to proceed with the amendment, but in the discussion this evening there seems to be a desire that it be retained. The situation is this. The amendment will not immediately become operative, because none of these companies will take the risk of destroying their records until they have obtained concurring legislation from the provincial legislatures. Those companies that asked that they be included stated that they would attempt to get concurring legislation from the provincial legislatures, realizing that if they did not they would not be in a position where they could afford to take the risk of destroying the originals. Therefore there is no urgency about the amendment; it could be left and dealt with on another occasion if provincial legislatures do enact legislation in that form. If the amendment is not passed at this time and the provinces do adopt that legislation at some other date, a further amendment to the Canada Evidence Act would be submitted. If the amendment is passed at this time, it will be the first step and may become operative when concurred in by the other legislatures.

Mr. HAZEN: I suggest that the proposed amendment might very well be submitted to the uniformity of laws committee of the Canadian Bar association for their consideration and that we get their views on it before we pass it.

Mr. NICHOLSON: For my part I am prepared to make a decision on a question of this sort, and I think all hon. members should be prepared to make decisions without reference to any bar association or any other association. I imagine a company like the Canadian National Railways would have many carloads of paper that might very well be released. The same applies to the other railway, to all our chartered banks, and to insurance companies. These corporations are required to retain large volumes of paper for long periods of time, and the shortage of paper is now so serious that I think we should take the first step and pass this legislation. If there are objections that the bar association wishes to make, let it make them to the provincial legislatures before the enabling legislation is passed. Hon. members who have spoken so often about the urgency of the present situation should not block this amendment.

Mr. HAZEN: But this is not going to save any paper; the same amount of paper is going to be used, unless the paper is afterwards salvaged.

Mr. NICHOLSON: But it will be salvaged.

Mr. FRASER (Peterborough West): Has the minster any record of how long these microfilms will last? This is practically a new thing; with other films you have to keep them at a certain temperature and so on, or they will fade and crack and break.

Mr. ST. LAURENT: No; we have not in the department any information on that. I know from my own experience that films of my early childhood still serve to make prints that are quite clear. But even that is not so very long ago.

Mr. EDWARDS: Does the same objection not apply to the original itself? Does that not fade?

Mr. HANSON (York-Sunbury): Not if good paper and good ink are used.

Mr. EDWARDS: It seems to me we should encourage modern methods and practices—

Mr. HANSON (York-Sunbury): Never mind the rules of evidence, they do not matter!

Mr. EDWARDS: —and encourage business firms and institutions to do business in a modern way. The only objection I see is the one to which the leader of the opposition drew attention, that some trick photography might be done. I have found from experience in trials, where there are three dimensional objects or scenes or positions on a roadway, that a clever photographer can make the scene look different from what it actually is. I do not, however, think the same observation applies to a flat object such as a document. I am wholeheartedly in sympathy with the amendment and the bill itself.

Mr. GREEN: It scarcely seems to be showing the judgment that should be shown by this august body to have an amendment of this kind approved in order to make waste paper. Surely that is not a sound basis on which to make the laws of Canada. Yet that has been given as the main reason for this amendment. Here we are in this position: a bill is brought in, the terms of which have been approved by several of the provinces, by the committee on uniformity of legislation of the Canadian Bar association and by the Canadian Bar association, so that there could be no justifiable complaint about having the legislation pass in its original form. But now this ministry bring in an amendment which has not been considered by the committee on uniformity of legislation, presumably not considered by any of the provinces, which is obviously giving a privilege to some companies and not to others, which is not drawing the line in any set place, but, for example, the Bell Telephone company asked to be included and so telephone companies are included in order to meet that wish. Surely we are not going to let legislation of that type slide through in this way. I urge upon the minister that he let this amendment stand for another year. He has admitted that no harm will be done if it does stand, and in the interim the committee of the Canadian Bar association can consider the amendment, and it can be whipped into shape so that it draws a proper line, instead of one company being in and another out. To put through legislation of this kind without further consideration will make this committee ridiculous.

Mr. HANSON (York-Sunbury): I am inclined to agree with that. The crux of the whole question is, is this change in the law of evidence a justifiable change? This question of salvage is wholly extraneous; it has nothing to do with the principle underlying this measure. I am willing to support the original bill, but I think the amendment should stand over.

Amendment agreed to.

Section as amended agreed to.

Bill reported.

ALBERTA NATURAL RESOURCES

AMENDMENT OF TRANSFER AGREEMENT RESPECTING ROYALITIES ON OIL PRODUCTION

Hon. T. A. CRERAR (Minister of Mines and Resources) moved the second reading of Bill No. 18, to amend the Alberta Natural Resources Acts.

He said: When the bill was introduced several weeks ago I gave a brief explanation of the purpose it seeks to carry out. It was in the latter part of March, as I recall.

Mr. STIRLING: March 25.

Mr. CRERAR: The explanatory notes accompanying the bill give a full explanation of the purpose of the measure. It will be recalled that prior to 1930 the federal government had the administration of the natural resources of the prairie provinces. The provinces were in a unique position in that respect since every other province from the time of its entry into confederation had retained full and complete control of all its public domain. When the resources were transferred in 1930 it was found that a substantial number of leases covering various parts of the public

domain were outstanding. Those leases had been issued by the federal authority. What we are concerned with in this bill are those leases that cover gas and oil properties.

Mr. HANSON (York-Sunbury): Issued prior to the transfer?

Mr. CRERAR: Yes. I said a moment ago that at the time of the transfer leases for various parts of the public domain in the prairie provinces had been issued by the federal authority. The measure with which we are now dealing relates to the oil and gas leases issued in the province of Alberta.

Mr. MacNICOL: Was there a termination date in the leases?

Mr. CRERAR: The leases were issued under regulations, the authority for which had been granted by the parliament of Canada. The regulations were passed by order in council and they governed the conditions of the leases. At this time there are approximately 810 leases that had been issued covering gas and oil rights, and of those, 169 are in the Turner valley where substantial quantities of crude oil were discovered. As hon. members know, to-day that field is an important source of supply for crude oil for the prairie provinces.

There was no question of the authority of the federal government to vary the terms of the leases. The terms that we are particularly concerned with in this measure are those relating to royalties. But I repeat, there was no question of the power and the right of the federal authority to vary the terms of the leases as far as royalties were concerned. When the resources were transferred and agreements were made between the prairie provinces and the federal authorities, I believe all the agreements contained a section which is known as section 2 in the particular agreement that we have under consideration to-night. That section will be found in the explanatory notes to the bill and it reads:

> The province will carry out in accordance with the terms thereof every contract to purchase or lease any crown lands, mines or minerals and every other arrangement whereby any person has become entitled to any interest therein as against the crown, and further agrees not to effect or alter any term of any such contract to purchase, lease or other arrangement by legislation or otherwise, except either with the consent of all the parties thereto other than Canada or in so far as any legislation may apply generally to all similar agreements relating to lands, mines or minerals in the province or to interests therein, irrespective of who may be the parties thereto.

Mr. HANSON (York-Sunbury): The government is now seeking to give authority to the province to do that very thing?

Mr. CRERAR: It was held by the owners of the leases that this section acted as a prohibition on the provincial authority in varying the terms of the leases that had been issued. I believe the legal advisers of the provincial government in Alberta held a contrary view.

Mr. HANSON (York-Sunbury): Has it ever been submitted to the courts?

Mr. CRERAR: I shall come to that in a moment. At any rate there appears to be a difference of opinion among the legal fraternity as to the precise meaning of this particular clause. Does this section 2 of the transfer agreement tie those leases for all time, in the matter of royalties for example, to the terms that were set out in the leases when they were issued? Or does it give to the province of Alberta what every other province in Canada enjoys, that is the power to vary the terms in so far as royalties are concerned?

In 1938 a very important question arose in Alberta in connection with the conservation of gas in the producing oil fields in the Turner valley. There was no doubt of the power of the Alberta legislature to pass regulations respecting the utilization of gas. That is, they could pass regulations requiring, for instance, that wells under gas pressure could permit only so much gas per certain unit of time to escape. But if they did that it was held, whether rightly or wrongly I am not prepared to say, that such regulations under section 2 would have to apply generally over the whole province. The Turner valley has been the main source of production of crude oil, but there are other fields in Alberta, which, while smaller as far as production is concerned, are still important. It was recognized, I think by everyone who knew anything about the subject, that while regulations might apply properly and wisely to the development in the Turner valley, they might not apply so wisely or so properly to the development, say in the Wainwright field. Consequently, rather than adopt the tedious procedure of testing the matter in the courts, the federal government and the government of Alberta entered into an agreement to amend the transfer agreement and give to the province of Alberta the powers it sought to enable it to carry out these conservation measures.

Mr. HANSON (York-Sunbury): I think the minister is making a substantial omission of fact, and I should like to ask him a question with his permission. Is it not a fact that after the natural resources were transferred to Alberta, they made a claim against the dominion, arising out of the loss of revenue

which they contend they would have sustained by reason of the fixture of the royalties? And is it not a fact that an award was made giving them some $5,000,000? I think Mr. Justice Tweedie was one of the arbitrators, and they got paid for this very thing years ago, by the federal authorities. Now they want it twice.

Mr. CRERAR: No.

Mr. HANSON (York-Sunbury): I think I am right about that.

Mr. CRERAR: No; the compensation claimed by Alberta was for the part of the public domain that had been alienated.

Mr. HANSON (York-Sunbury): Including the petroleum leases.

Mr. CRERAR: The petroleum leases were only a very minor factor, because there was not any question that the Alberta government, as successor to the federal authority, had the power to collect the royalties specified in the leases.

Mr. HANSON (York-Sunbury): Undoubtedly.

Mr. CRERAR: But large quantities of timber had been alienated, and there were large acreages of public lands which had been alienated. Coal mines had been alienated, and worked out; and the Alberta government had never derived any benefit whatsoever from those alienations. This had taken place over a long period of years, and it was in compensation for these alienations that the claim was set up.

I recall the matter very well, because I was one of a commission of three royal commissioners who adjudicated between the province of Manitoba and the federal government as to the amount of compensation that should be paid Manitoba because of the alienations which had taken place in prior years.

The purpose of the bill is to give the Alberta legislature the power to vary these royalties. As a matter of fact, over a year ago the federal government was approached by the Alberta government, who asked that the agreement be amended at that time. Very strong exception was taken to the procedure by, I believe, practically all of those who held oil and gas leases. As a matter of fact, the gas leases are not so important. The real core of the matter is connected with the oil leases.

This happened toward the end of the session a year ago, and I made the suggestion personally to the minister of lands and mines of Alberta that the Alberta government should endeavour to reach an understanding with the holders of those oil leases, particularly those in the Turner valley. I might interject here that they are the leases mainly concerned. Of the 810 leases I mentioned earlier which had been issued, a large proportion are in areas where no oil has been produced. I understand many of the leases could be cancelled for failure to conform to the terms of the lease. However, that is not germane to the measure before us.

The Alberta government undertook to vary the terms of the leases, and a court action was instituted. As the leader of the opposition quite properly stated a little while ago, the courts would be the place in which to settle these differences and difficulties, and in which to get a final judgment as to what section 2 in the transfer agreement really meant. But another matter intervened, one which again is directly traceable to the war. We have heard a great deal in recent days, and will probably hear more in days to come, about shortages of gasoline and oil in this country. It is believed, and with substantial reason, that there are other fields in Alberta in addition to the Turner valley, where oil will very likely be found. As a matter of fact, the federal Department of Mines and Resources is this year directing quite a number of its geological parties to the search for oil structures in Alberta. I believe one party is in Saskatchewan. The situation as it existed meant simply this, that the uncertainty was preventing the development of those fields. Those who had oil leases, and who desired to get capital to develop them, found the capital a bit timid because they did not know what royalties might be assessed against them in the future. They did not know whether the Alberta government had the power, or whether section 2 of the transfer agreement was good law.

As a result of this, through negotiations between a large majority of the active oil interests of Alberta and the government of that province an understanding was reached which, if approved, would give that security to capital which would lead to development, and to the possible relief, to a considerable measure, of the stringency in gasoline and oil we have at the present time. The terms of the agreement are set out.

In the first place, all the wells in Turner valley which were producing or were financed for production prior to 31st May, 1941, remain at a royalty of 10 per cent. That is, they were developed and financed on the expectation that the royalty would remain at 10 per cent. For developments subsequent to

that date a scale of royalties has been agreed upon, with a minimum of 5 per cent and a maximum of 15 per cent, or an option to the person developing the well of 12½ per cent, this to apply not only to federal government leases but equally to a quite substantial number of leases issued by the provincial government, subsequent to their taking over the administration of the resources. This arrangement is to continue for a period of ten years.

As I said a moment ago, it is felt by the oil producers themselves and by the government of Alberta that this will lead to a much greater development than would be possible if the whole question were still in the clouds of uncertainty I mentioned a moment ago.

Mr. HANSON (York-Sunbury): Does the minister say, on his authority as a minister, that the leaseholders have agreed to this?

Mr. CRERAR: No; all leaseholders have not agreed to it, but the majority of leaseholders with active or potentially active properties have agreed. In addition to that, the oil controller was interested in this matter, and he urges—I do not think that is too strong a word—that the agreement should be amended to permit of conditions which will produce stability and get production.

Mr. HANSON (York-Sunbury): I do not think that is a factor, at all.

Mr. BENCE: Did he prepare a brief on it and, if so, could it be made available?

Mr. CRERAR: No; he discussed the matter with Doctor Camsell, deputy minister of mines and resources. That, I believe, covers the main points in the measure. I have no hesitation in recommending this measure to the house. If it should fail to pass I think we would have a period of uncertainty, and consequently a lack of development. Representations have been made to me by those representing the majority oil interests, and they express themselves as wholly favourable to the passing of this legislation. I have no doubt that if it should pass, as I hope it will, it will be beneficial not only to the province of Alberta but to Canada as a whole.

Hon. R. B. HANSON (Leader of the Opposition): At this stage, Mr. Speaker, I desire to make some observations on this bill. I think hon. members would be well advised to study all its implications. On a previous occasion I asked that all the correspondence be tabled. I do not recall that that has been done. I think it should have been done. Some evidence should be furnished to this house that the leaseholders or the great majority of them, as has been alleged, have agreed to this legislation. I do not think that is the case.

Mr. CRERAR: I can assure my hon. friend that it is the case.

An hon. MEMBER: How many of them?

Mr. CRERAR: I have forgotten at the moment.

Mr. HANSON (York-Sunbury): I should like the minister to produce evidence that they have agreed. My information is that the leaseholders are afraid to move for fear of what may happen in the future. I think very few of them are willing to take a public stand for fear of jeopardizing the interests which they have in the province and future interests which they may have there.

This seems a rather strange piece of legislation, having regard to the fact that there was a contractual right vested under the laws of Canada prior to the passing of the legislation transferring the natural resources. If there is any doubt about the meaning and interpretation of section 2 in the agreement to which the minister referred, there is a proper tribunal to which to take the case, and that is the Supreme Court of Canada, on a stated case. If the subject matter has been under discussion for at least a year, as the minister has intimated, there has been ample time to have that done and to have any anomaly and ambiguity in the section settled by the court.

I have not approached this matter of my own motion, but information has come to me from various quarters, from parties who are interested in preserving the contractual rights of certain of the leaseholders, many of whom spent large sums of money in developing these properties, much of which money was lost. Everybody knows that developing an oil field is a highly speculative enterprise, and a great deal of money that has gone into prospecting and development has been lost.

I would point out to the minister and to the house that some of the leaseholders look to the dominion government to preserve their rights in the situation which existed prior to the transfer of the natural resources.

In passing, let me say to the minister that the arbitration tribunal set up by agreement between the former government of Alberta and the government of Canada submitted the case of the natural resources, including petroleum and natural gas, alienated prior to the transfer, and as a result the province of Alberta received very generous compensation from this government. I think that ought to have settled the question once and for all with respect to the rights of the leaseholders,

because the people of Canada, under the authority which this government possesses, and under the arrangement between the two governments, paid to the government of Alberta that which they claimed they had lost. That is a factor that must not be lost sight of.

Just in passing, I should like to point out this as a consideration, not a primary consideration by any means, but in recent years the dominion government or the courts, or both, disallowed, or declared ultra vires, many of the acts passed by the legislature of Alberta which had the effect of interfering with contractual rights of mortgagees and vendors under agreements of sale. That I think is a correct statement of the principle.

The federal government is now, I am sure at the instance of the provincial government, initiating legislation which clearly interferes with the contractual rights of individuals made with the dominion long anterior to the transfer of the natural resources. The federal government is moving, not of its own motion in this matter, but at the instance of the government of Alberta.

It is suggested—and I commend this to the minister—that it is improper for the dominion government to sanction and aid in what is considered a breach of trust and a breach of its own agreement under dominion laws, which would only be possible by a legislative enactment such as we now have before us. That is the only way in which this can be done, and such action cannot be justified. I lay that down as a principle. If that is true with respect to the violation of contractual rights under acts passed by the Alberta legislature in 1941, which have been disallowed, then I say that any reasons which would cause the dominion government to disallow such legislation interfering with contracts to which the federal government was not a party would apply with far greater force to the initiation of legislation affecting adversely contracts to which the federal government is a party. I lay that down as a principle of law for the guidance of the minister. He ought to think about that and give some attention to it.

I am advised—I do not know how correct my advice is—that not one single holder of a dominion licence favours this legislation.

Mr. CRERAR: That is not correct.

Mr. HANSON (York-Sunbury): Then I ask the minister to produce evidence of its incorrectness; I think we are entitled to that. I do say this, that not one of these companies can afford to come out into the open and fight this sort of thing because of the fear of the wrath to come later on.

[Mr. R. B. Hanson.]

Mr. BENCE: Particularly if they hold a provincial lease.

Mr. HANSON (York-Sunbury): Absolutely, and most of them are under the jurisdiction of the provincial government. It is human nature, just the same as it is human nature to them to look to this parliament to see that they are given fair play. I think this parliament ought to see that they are given fair play.

Mr. REID: We are giving them fair play for a lifetime if we give them royalties for all time.

Mr. HANSON (York-Sunbury): There is no doubt that the leaseholders spent their money and took a chance. A great number of them sank their money in the venture; some of them won, and many lost. That is true of all such developments. I think the whole effect of this legislation, as far as I have been able to study the case, is that, in effect, it will be a breech of trust with the original leaseholders. That is my view.

I have before me a submission with respect to the history of this transaction. I am going to take a little time to read parts of it and to comment on it.

Prior to the transfer of the natural resources by the dominion to the province of Alberta pursuant to the natural resources agreement of 1929, a large number of agreements between the dominion and individuals and companies were entered into. These dealt, as the minister has very properly said, with dominion lands, but included, among other things, leases of petroleum and natural gas.

Large expenditures were made by companies and individuals, by holders of the leases, in exploring and drilling for oil in Alberta during the period from 1914 down to the date of the agreement.

Many of these leases were issued and were subject to and developed on the strength of regulations approved by order in council of this government under date of March 11, 1911, and these provided, among other things, the following:

> No royalty shall be charged upon the sales of the petroleum acquired from the crown under the provisions of the regulations up to the first day of January, 1930, but provision shall be made in the leases issued for such rights that after the above date the petroleum products of the location shall be subject to whatever regulation in respect of the payment of royalty may then or thereafter be made.

That, of course, was an inducement for people who put out their money to make these researches and to explore and drill for oil.

If they struck oil, well and good; if they did not strike oil, they lost on the speculation.

The order in council goes on to say:

A royalty at such rate as may from time to time be specified by order in council may be levied and collected on the natural gas products of the leasehold.

In 1914, drilling in the Turner valley area was extensively engaged in, and I am informed that millions of dollars were spent by leaseholders in endeavouring to secure production under leases subject to these regulations.

Then followed the great war, and there was a period of stagnation in that area. But the majority of dominion leases comprising central and southern portions of Turner valley were held by lessees at great financial sacrifice, with the result that further developments took place during the several years when oil development was renewed, notably in 1926 and in subsequent years.

The regulations to which I have referred as having been passed under the order in council of 1911 were rescinded, and in 1919 further regulations were made by the federal authority, including, among others, the following:

The sales of the products of any location acquired under the provisions of these regulations shall be subject to the payment to the crown of such royalty thereon as may from time to time be fixed by the governor in council, the royalty to be collected in such manner as may be specified by the minister.

That certainly was narrowing down the time in which there could be no royalty, which under the present arrangement would not accrue until 1930.

Mr. CRERAR: Royalties were provided for in 1919.

Mr. HANSON (York-Sunbury): Yes. I am saying that. That is just what I read to the minister, if he followed me. In 1919 further regulations were provided which had an overriding effect on the authority of the order in council of 1911, and royalties were provided for in 1919.

Then there was a further order in council, to which I direct the attention of the minister; no doubt he is familiar with it. It was passed on October 29, 1920. Perhaps the minister was not Minister of the Interior at that time; I have forgotten at what date he ceased to be so, but it would be under his jurisdiction as such.

Mr. CRERAR: I was not formerly Minister of the Interior.

Mr. HANSON (York-Sunbury): I beg pardon. He was Minister of Agriculture. I am quoting from that order in council:

The minister states that representations have been made to the Department of the Interior that failure to fix the royalty—

Contemplated, I assume, under the regulations of 1919.

—which may be charged on the products of petroleum locations has the effect of retarding development, as persons contemplating investment in this industry hesitate to incur the large initial expenditure necessary to insure success without knowing what tax may be placed upon the oil which may be discovered. . . .

That was a very natural position for them to take. They would not put out the money until they knew what the tax was to be.

Therefore the minister recommended that—

—for five years after the date upon which the Minister of the Interior may decide that oil in commercial quantities has been discovered on land acquired under the provisions of the regulations aforesaid the royalty to be collected by the crown shall not exceed 5 per cent of the output of the well or the sales of the products of the location as may be decided by the minister, nor shall it be less than two and one-half per cent of such sales during that period; that for a further period thereafter of five years the royalty to be collected shall not exceed 10 per cent of the sales of the products of the location, nor shall it be less than 5 per cent of the sales during that period; and that thereafter the royalty shall be 10 per cent of the sales of the products of locations acquired under the provisions of the said regulations.

After that order in council was passed, I am advised that around 1926 there were extensive developments in the Turner valley area.

Large sums have been spent by leaseholders in development, in many cases without any adequate returns or any returns at all, and without prospect of the return of the capital expended, on the strength of the regulations attaching to the leases and on the strength of subsequent regulations fixing for all time a maximum royalty of 10 per cent of production. To these regulations I have referred.

Mr. CRERAR: Not necessarily for all time.

Mr. HANSON (York-Sunbury): Well—

. . . and that thereafter the royalty shall be 10 per cent of the sales of the products of locations acquired under the provisions of the said regulations.

Certainly it would be for the length of time of the lease under the regulations.

Mr. CRERAR: No. The federal government had the power to vary that clause.

Mr. HANSON (York-Sunbury): Yes; I think the minister is right; the federal government had power to vary it.

Mr. BENCE: Why did they put in a limitation then, in 1929?

Mr. HANSON (York-Sunbury): Quite so. The province of Alberta now proposes that the dominion government should by legislation sanction a deliberate breach of contracts carried out in their entirety by leaseholders; that is, leaseholders who have kept their leases up. I am not speaking on behalf of men who have forfeited their leases or left themselves liable to forfeiture; I refer to men who have in good faith carried out the terms of their leases.

Mr. JOHNSTON (Bow River): Most of the big oil companies.

Mr. HANSON (York-Sunbury): I am not speaking on behalf of any of the big oil companies. I would like the hon. member to understand that exactly. I am speaking on behalf of a taxpayer of the province of Alberta who objects to the principle of this bill and the measures under it. The province now proposes that the dominion should approve and sanction a breach of trust by the dominion to the detriment of those to whom the dominion owes a duty. I put this to the minister, that, as a trustee, the dominion owes a duty to the holders of dominion leases, the sole consideration for which is an agreement by the province of Alberta to confer a benefit on a group of individuals to whom the dominion government owes no duty and with whom the dominion government has not contracted, that is, the holders of provincial leases.

Just why the dominion government proceeds along the lines indicated I do not think the minister has made clear. Why should the dominion government be a party to an agreement which violates the contractual rights of holders of dominion leases? I suggest that that problem has not been clarified and is just as obscure as when the minister moved the second reading of this bill. I suggest to the minister as a sound principle of law, of policy and of legislation, that because the majority has authority it may not use its power to further its own ends by oppressing a small minority, which perhaps is afraid to move to protect itself and must look to this federal authority to protect it. In other words, if this legislation goes through, this government is lending itself to the principle of allowing the province of Alberta to increase the contractual obligations of holders of dominion leases without consideration to them, and that is wrong, particularly in the face of their objection to such a breach of contract, such a breach of trust, so that provincial leaseholders may obtain limitation of their contractual obligations without consideration from them.

I suggest that we ought to move very slowly in this matter. The minister himself moved very slowly last year. He was not convinced that this was the right thing to be done, and he has been convinced—if he has been convinced at all—on the theory that everybody is agreed to this and that if the province wants it we should give it to them. I demand to know the minister's authority for saying that all the leaseholders have agreed, because in effect he is lending himself to a violation of contract. He stands, the dominion stands, in the position of a quasi trustee for these leaseholders. There is no one else to protect them. I am on absolutely sound ground there. There is no one to protect them but this federal authority. And that authority in the dominion should not be lightly cast aside or overthrown, because grave injustice may accrue to these people. Nobody knows what they may be asked to pay. I have already referred to the position of the compensation paid by this government to the Alberta government for the alienation of these leases. That debt has been paid, and, I suggest, it was paid generously to all the three prairie provinces. I remember something about this in the nineteen-twenties. Arbitrations were held here. In the case of Manitoba, Mr. Justice Dysart—

Mr. CRERAR: Mr. Justice Turgeon.

Mr. HANSON (York-Sunbury): Mr. Justice Dysart sat on one.

Mr. CRERAR: Saskatchewan and Alberta.

Mr. HANSON (York-Sunbury): And Mr. Justice Tweedie sat on the Alberta case some years ago. All these considerations moved the arbitrators to pay the province of Alberta what they thought had been alienated from them by reason of the granting of these leases. That is an additional reason why the leaseholders should be protected by this government, and this agreement should not be given the sanction of law by this parliament.

I have not very much to add to that, although there is in the minds of some legal gentlemen of the province of Alberta a question as to the constitutional right to do this thing. I will not raise that because it is rather obscure; and from a cursory reading of the statutes, without attempting

to give any concentrated study to the subject, my view would be that the constitutional question which might be raised has in a degree at least been cured. Therefore I will not argue that this bill is unconstitutional. If anyone is aggrieved and believes that by this transaction, if it passes, which I hope it will not, there is a constitutional right which is being violated, I am quite content that they should go to the courts, and so far as I am concerned, I will abide by the result of any litigation there is.

I suggest two reasons why the minister should not pass this measure. In the first place it is a breach of trust to the federal government's own leaseholders who have spent their good money, and plenty of it—and many have lost their money. How many people bought oil stocks? Only one in a hundred is anything but a gamble. You take a chance, and so do the prospectors and the drillers, and especially in a field which is as precarious as are some parts of Alberta. Why should this government lend itself to the violation of a contractual right, and why especially should the government lend itself to the handing over to Alberta of a right which it does not possess to-day and for which it has received compensation at the hands of the federal treasury by judicial decision? There in a nutshell are the two counts of the indictment against the measure. I think the minister ought to withdraw the bill. This proposal of the government of Alberta does not differ very much in principle from the illegal position which the legislature of Alberta has taken with respect to certain other contractual obligations which this government itself has disallowed as being illegal. I ask the minister to reconsider the whole position and drop this bill.

Mr. M. J. EDWARDS (Calgary West): I come from that part of Alberta which is vitally interested in the oil resources of the one and only province of this dominion which has a potential supply of one of the most vitally necessary commodities for carrying on this war. When this agreement was proposed a year ago I offered objection to it, in that I, too, felt that the dominion government should not alter what was considered to be a binding, contractual obligation of this government with those people, firms and corporations, who had taken oil and petroleum leases from this government on terms and conditions which were, at least in their minds, and in that of the investing public, clear and unambiguous, namely, that the royalty was fixed and certain. The order in council was passed in 1920 to make the matter certain and to give a feeling of security to those adventurers who might be interested in investing their money in exploring the oil potentialities of Alberta and the subsequent development of them. It was because of the very uncertainty which had existed up to that time that men were loath to spend the enormous sums necessary, particularly in southern Alberta, because of the peculiar and difficult rock formation and the depth to which it had been determined drilling had to be carried in order to ensure production. It was not an uncommon thing for an oil well to cost in those days anywhere from $150,000 to $300,000.

Mr. MacNICOL: And some, $500,000.

Mr. EDWARDS: Yes; some as high as $500,000. No person was going to gamble any such sum unless he knew with some degree of certainty what portion or share of whatever he did find would have to go to the crown. That was the reason why the order in council was passed in 1920, as the recital to the order in council states. It was to give certainty where uncertainty had theretofore existed, and that certainty was given to encourage and ensure the development and the expenditure of the large sums necessary not only to locate but to develop the oil resources of the province. There is not a shadow of doubt that, from that time on, the holders of all leases issued by the federal authority and, up until as late as a year ago, the provincial authority, felt that that regulation or that order in council was binding in so far as any federal leases were concerned which had been issued prior to October, 1930, when the actual transfer of the resources took place and the oil and petroleum resources passed to the provincial government.

At the time the Alberta resources agreement was entered into the government of the dominion deemed it necessary and prudent, and I think wholly justified, to insert clause 2 in that agreement, which provided that the provincial government as such would carry out in accordance with the terms of the existing leases all their covenants and agreements, included in which I believe, and certainly every federal leaseholder believed, was the term or stipulation in regard to royalty, which would go to the provincial government instead of to the federal government. The oil industry in Alberta has carried on in reliance upon that up to the present time, and even as late as last year denied the right and the jurisdiction of the provincial government to change the royalty stipulations in any of the outstanding federal leases. I thought at the time, and I so intimated, that before the federal government agreed to any alteration in the terms of the Alberta resources agreement, the

least it should do was to consult with and get the consent of those leaseholders who had dealt with it in good faith and had invested their money in oil leases on the strength of those orders in council which were in effect at the time they got their leases.

So the bill was not introduced in this house a year ago. But it was ratified by the legislature of Alberta. And the Alberta government, as any one from that province knows, notwithstanding the fact that the agreement had not been ratified by the federal government proceeded to enforce or try to enforce the increased royalties. Not one of the old federal leaseholders paid the increased royalty demanded by the provincial government. I understand on very good authority that the provincial government decided to make an issue of it, decided to start a lawsuit against one of the biggest oil operators to enforce payment of the increased royalty. But then they thought better of it, and following the usual custom and practice now of the government of Alberta they decided that instead of going to the courts and trying to enforce their legislation, they had better refer the legislation itself to the courts to find out whether it was valid. That is the procedure that was adopted. The Alberta attorney general is none other than the premier himself; he has no legally trained attorney general. Several years ago he fired the only one he had, and the result is that in the interval this parliament and the courts of this country have disallowed or set aside more Alberta legislation than legislation enacted by any other province since confederation. As late as March 28 of this year this government disallowed three acts passed by the Alberta legislature. They all related for the most part to contractual rights and obligations. They were the debt suspension act of 1941, the orderly payment of land debts act, and the limitation of actions act of 1935 amendment act of 1941. Any one in Alberta knows of the numerous acts of the Alberta legislature relating to debts which have been declared ultra vires by the courts.

Instead of pursuing a lawsuit as I indicated, the Alberta government referred their new royalty legislation to the supreme court of Alberta to ascertain in advance, if possible, whether it was good or bad. Then they thought better of that, and representatives of the government got together with certain of the larger leaseholders and operators and entered into a deal. Those with whom the deal was made are those parties or leaseholders referred to in the schedule to this agreement. In effect, the deal was this: "If you will support this bill and application to the federal government in so far as those federal leases which you have already drilled are concerned we will guarantee that you will not pay more than 10 per cent for all time to come. We will go a step further and say that with respect to any provincial leases that you hold, we will agree with you that for the next ten years the maximum royalty that you shall have to pay will be 12½ per cent."

Mr. CRERAR: Fifteen per cent.

Mr. EDWARDS: From 5 to 15 per cent. There was an alternative rule which was proposed that the lessees should pay the square root of their daily production. In other words, if your well produced one hundred barrels of oil a day, you would pay by way of royalty to the provincial government ten barrels a day, with the stipulation that the maximum should be 15 per cent. What happened? The firms and individuals which held federal and provincial leases endeavoured to decide which would be better for them. If they had more potential provincial leases than they had federal, the question obviously arose as to whether they should not agree to this and have the guarantee of the federal government that the maximum royalty that they should have to pay on the provincial leases they held would be 12½ per cent for the next ten years. However, the firm or institution or individual that had no provincial leases, but that had a number of federal leases which had not been developed and upon which a great deal of money had been spent as well as for annual rentals, had nothing to trade. Perforce the consideration for this whole transaction comes out of the present holders of federal leases.

I think that is an unfair, inequitable and unsound proposition, because of the fact that the provincial government found it nesessary to come to this government at this time in order to get rid of the fair, just and equitable provisions of clause 2 of the Alberta resources bill. If there was nothing inequitable; if there was nothing unfair or unsound in so far as the petroleum leases were concerned, then there was no occasion for the Alberta government to come to this government at this time and ask to be relieved of the provisions of that clause in the agreement. I say that every one of those firms which signed that agreement did so not because they thought that it was fair, not because they thought it was equitable, not because they thought it would create stability; they signed it in order to get the protection of a covenant from the government of Canada with respect not only to the federal leases which they held but to the provincial leases as well.

I maintain that this government should have no part or parcel in the administration of any

agreement with reference to the natural resources over which it never had, has not now and will not in the future have any control. If the federal government is going to exercise any control, I contend that its objectives should be to encourage and increase the discovery and production of our oil resources wherever they may be found. That is not done by increasing the royalty which a developer or producer must pay to the federal authority.

An hon. MEMBER: Or by breaking faith.

Mr. EDWARDS: Thank you for the phrase —or by breaking faith with those who have heretofore dealt in good faith and who at the present time have their money invested in the development of the oil resources of this country. One of the things which has retarded the development of the oil resources of Alberta and forced large firms and institutions into the adjoining provinces of Saskatchewan and Manitoba and the northern part of British Columbia, or even out of the country altogether, is the lack of confidence in the stability of the government which presses this bill upon the people of Canada at this time.

Mr. FAIR: It is the Liberal government at Ottawa that the hon. member is talking about; it is their bill.

Mr. EDWARDS: I am talking about the so-called social credit government or new democracy government, or whatever it is of Alberta. I submit that this legislation should not pass simply because some firms with large interests have sponsored it and have subscribed their names to it. Look through the portfolios of the companies which are involved and which own the wells and you will find, I doubt not, that most of their holdings are provincial and not federal leases. I doubt if you will find any who hold nothing but federal leases. There is no quid pro quo for them.

Mr. MacNICOL: Does the hon. member think that if this bill passes it will discourage the opening up of new wells in Alberta instead of encouraging new oil production?

Mr. EDWARDS: If you can tell me what the reaction of the man or the firm with trust funds or money for investment will be to such a proceeding as this, then you will have the answer. Not being a moneyed man myself and having no investment in Alberta oil wells, I cannot say, but I do know that I have met representatives of large and substantial firms which are interested in the development of the oil resources of Alberta and which—

Mr. JOHNSTON (Bow River): That is where your law practice comes in.

Mr. EDWARDS: That is not true, because I did not act for a single oil company in Alberta.

Mr. JOHNSTON (Bow River): I did not say that you did.

Mr. McNIVEN: You suggested it.

Mr. EDWARDS: That has nothing to do with the matter. I think it will be found that my remarks in regard to the subject under discussion are—at least I hope they are—more accurate than the remarks of the hon. member for Bow River a few days ago with regard to the steel industry in his own constituency.

Mr. JOHNSTON (Bow River): I was waiting for you to bring that up; why don't you go ahead?

Mr. EDWARDS: Another reason I have for objecting to this legislation is that it is retroactive. If one refers to the agreement he will find that paragraph (e) of section 2 of the agreement states:

> (e) The royalties provided for in subparagraphs (a), (b), (c) and (d) of this paragraph shall be due and payable as and from the 31st day of May, 1941.

Mr. HANSON (York-Sunbury): That is when they were negotiating, a year ago.

Mr. EDWARDS: Yes; that is when they were negotiating, a year ago. So the provincial government is now attempting by this legislation to recover what has gone in the past. If this agreement was bad in May, 1941, I say it is equally bad and untenable in May, 1942. The minister states that there were outstanding, and I understand that there are at the present time, some six or seven hundred federal leases which are or can be affected by this legislation. I further understand, from reliable information, that not more than 125 or 150 of those leaseholders are parties to this bill. What about the other federal leaseholders who know nothing about this procedure?

Mr. CRERAR: My hon. friend is not correct in that regard. As a matter of fact, as I recall, more than three-quarters of the leases are dormant, and never have been produced. No oil has been discovered in the territory of those leases. The vast majority of them, I understand, are in a position where they could be cancelled to-day.

Mr. HANSON (York-Sunbury): But they are still outstanding.

Mr. EDWARDS: Why have they not been cancelled, if what the minister says is correct?

Mr. A. H. BENCE (Saskatoon City): Mr. Speaker, I have just a few remarks to make in this connection, along more or less general lines. It does seem to me that before the house should be asked to pass a piece of legislation which so drastically interferes with the rights of minorities, we should have more information before us than has been given by the minister this evening.

He made the statement a few moments ago that a large number of these leases are dormant. He said that there were approximately 810 leases, and I am wondering whether he can tell us how many of those leaseholders are also leaseholders of provincial rights, acquired since 1930. I wonder whether he can tell us how many owners of the leases he has described as dormant, have paid their necessary dues or fees to the provincial government, and are in good standing. Furthermore, it seems to me he should inform us more specifically than he did as to the reasons why the oil controller has favoured the passing of this legislation.

Mr. CRERAR: I can tell my hon. friend, if he will permit me. The oil controller favours the passing of this legislation because he thinks it will lead to the production of oil—and oil is a very scarce commodity to-day.

Mr. BENCE: I agree with the minister that that is so; but surely, rather than give us the blank statement that the oil controller says it will be conducive to the increasing of oil production in Canada, he should give us some reasons.

Mr. CRERAR: That is pretty thin.

Mr. BENCE: As far as I can see, the only thing that is being done is that the dominion government is releasing the rights and protection it gives to these minority leaseholders, and turning them over to the province of Alberta. How in the world can action like that be conducive to producing oil in Alberta, in view of the record of the Alberta government in the past in connection with its contractual obligations?

On that point it seems to me that if the minister wished to have stability, and if this government wished to have stability, as far as the leaseholders are concerned, he should have entered into an agreement with the provincial government which would have provided specifically that those leaseholders who acquired their interest before 1930, and who come within the provision of the legislation referred to, and are described as not having financed or proceeded with their leaseholds, would have been protected, and that the royalties which would be charged to them would not exceed 10 per cent. If that were done, it would give them stability. The province of Alberta would know where they were, and the Dominion of Canada would have complied with the trust reposed in it on behalf of these minority leaseholders.

I suggest to the minister and to the house that this is a breach of the fiduciary relationship between these minority leaseholders and the dominion government. As pointed out by the leader of the opposition (Mr. Hanson), on March 25 the minister advised the house that he would table the correspondence he had received in this connection. He has not yet done so. Surely there must have been some objection to the passing of this legislation. Surely those persons who were interested in this field, and who were not in the position of being squeezed, if I may use that expression, because of the fact that they own provincial leases, have made some representations to the administration as to the advisability of not proceeding with this legislation.

Due to the fact that the minister agreed to table the correspondence, I suggest that he should do so, and that we should have an opportunity of examining it before proceeding further. There are various things which occur to me and which seem rather strange in connection with this matter. In the first place the minister suggested that one of the reasons was the fact that they did not wish to proceed through the courts, and to spend all that length of time which he felt would be entailed in court proceedings. Well, this matter arose a year ago and, as was pointed out by the hon. member for Calgary West (Mr. Edwards), the agreement is predated to May 31, 1941. If the federal administration had wanted to obtain the opinion of the court, they could easily have done so in that interval.

In any event, why should they assume the onus of discharging a responsibility which is purely that of the province of Alberta? Why should they assume the onus of the possibility of having actions for damages brought against them by these minority leaseholders? I wonder if the minister has considered that point. I wonder if he has asked for an opinion from the Minister of Justice (Mr. St. Laurent) and if he has ascertained whether these people would have an action against the dominion government for damages, if this legislation is proceeded with? The minister shakes his head. Has he obtained an opinion from the Minister of Justice on the point?

There is this further very important point. The leader of the opposition referred to the question of constitutionality. I believe there is a duty upon the administration to ascertain from its advisers whether this procedure is

constitutionally possible and whether, in view of the fact that the original legislation was sanctioned by an act of this parliament and had to be taken from here to the imperial parliament in Great Britain, an amendment like this would also have to be taken to the imperial parliament. I am not suggesting that it should, nor am I expressing any opinion in the matter. But in view of the fact that that action was taken before, can the minister assure us that it is not necessary in the present instance?

The memorandum of agreement states:

> The owners have agreed to withdraw their objections to section 2 being amended as above mentioned provided that the royalty on all wells in the Turner valley field that were producing or financed prior to May 31, 1941, would be fixed for all time at 10 per cent, and that the royalty on all other leases, both dominion and provincial, would be fixed until June 1, 1951, at a graduated rate with a minimum of 5 per cent and a maximum of 15 per cent, the owner having the right to elect to pay 12½ per cent.

We are not given very much information there, but the statement is made that "the owners have agreed." Does the government intend us to infer that that refers to the owners in the Turner valley field alone, or that it refers to a majority of the leaseholders who own dominion leaseholds? To whom does it refer? In that connection the minister should inform us how many leaseholds that are not in the Turner valley are affected by this legislation. I know that the other fields are smaller. I have not the personal knowledge of the oil fields of Alberta which hon. members who come from that province have, but there is the Wainwright field and the Vermilion field. Are there any royalties in those fields which were held by dominion leaseholders before 1930, and are they referred to in the statement "the owners have agreed"?

It seems to me that the point raised by the hon. member for Calgary West is particularly cogent that a great many of these leaseholders own provincial and dominion leases together, and consequently a great deal of pressure could be exercised on these individuals because there is no limit to the royalties that may be fixed by the provincial government with respect to provincial leases. These men may have accepted the agreement, but they have accepted it unwillingly. How many have signed the agreement or indicated their willingness to accept it? The people I am mostly concerned about are those who have acquired a right, are getting no *quid pro quo* and are being absolutely discriminated against by this legislation.

I am not very familiar with the tar sands of northern Alberta, but can the minister assure the house that this legislation will not in any way prejudicially affect the situation there, and will he also state whether, if it does apply, there were dominion leases held there before 1930?

The minister should also explain—he may have done so, but it was not clear to me—what steps were taken to consult the dominion leaseholders. I understand that certain objections were made a year ago by the Alberta association—I am not sure what it is called, but I think it is the Alberta petroleum association—and I should be glad if the minister would give the house the benefit of the objections that were made by the association at that time, and whether the association objected on the ground that the legislation involved a breach of trust. Would the minister also state by what method the dominion government approached the dominion leaseholders with a view to getting their sanction? The minister should give us that information because I do not imagine that the dominion government would proceed unless they had first canvassed the situation carefully.

The minister, during the course of his remarks made a statement which I did not understand, and about which I attempted to question him at the time but was not allowed to do so. Would he explain what he meant by the statement that there was no question about the authority of the dominion government to change the royalties before, and why was it so specifically agreed upon, when the resources were turned over to the provincial government, that no alteration would be made in the agreement except under exceptional circumstances, as set out in the clause referred to by the leader of the opposition a few moments ago?

I shall reserve one or two further questions I have to ask until the bill is in committee.

Mr. E. G. HANSELL (Macleod): Mr. Speaker, I was going to refrain from speaking on this bill. I had not intended to do so until the hon. member for Calgary West (Mr. Edwards) spoke on the bill and prompted the remarks I wish to make.

It seems to me that there is a type of mind that is vehemently opposed to the Alberta government. That type of mind has been prominently exemplified to-night in the speech delivered by the hon. member for Calgary West. It is strange that we cannot discuss a sane piece of legislation without questioning, shall I say, the character and the ability of a government duly elected by the people.

The hon. member, as an argument against what he believes to be a government that passes legislation which should not be passed, referred to the fact that some of the provincial legislation of Alberta over the past years had been disallowed by Ottawa. Let me remind him that even though some of the statutes passed by the Alberta legislature have been disallowed by this government, nevertheless the people of Alberta returned the same Social Credit government to Edmonton. Evidently the hon. member for Calgary West does not regard the will of the people as of any account.

In speaking on a bill, it seems to me that we must have in view whether the bill is going to benefit Canada, whether it would be regarded as beneficial to the people. I am not so much concerned whether it is regarded as beneficial by this individual or that group or this interest; if it is regarded as beneficial to the people, that is my guide.

The hon. member for Calgary West claims to have a peculiar interest in the oil development of Alberta. I am sure he is not going to monopolize that interest. There are a few of the rest of us who are also concerned about the production of oil in that province. I remind the house that the hon. member opposes a bill introduced by his own government, and his speech is singularly coincident and in complete harmony with speeches which have come forth from—

Mr. JOHNSTON (Bow River): Other oil interests!

Mr. HANSELL: —the large opposition group in the house. This is one time when a Liberal has aligned himself with the Conservative party on a bill. Whether he can justify himself I will leave the people to judge.

If I analyse the will of the people with respect to the Alberta government—and I am now talking about those who live in the districts which produce oil—I would remind the hon. member for Calgary West that in the town of Turner Valley the people gave support to his colleague to the extent of sixty-eight votes—

Mr. BROOKS: What has that to do with this?

Mr. JOHNSTON (Bow River): If the hon. member listens he will find out.

Mr. HANSELL: —and they gave support to the social credit-new democracy candidate with 154 votes. It has just this to do with it: I would not have had to mention it if the hon. member for Calgary West had not cast a reflection upon the integrity of the Alberta government and some of us who stand behind that government. I am simply saying that the people spoke in the last election in a voice which is contrary to the voice of the hon. member for Calgary West. In the district of Longview, which is in the heart of the southern Alberta oil fields, his colleague received 104 votes and our candidate received 173. In the district of Royalties, also in the heart of the southern Alberta oil fields, the people gave 71 votes to his colleague and 179 votes to the Social Credit-New Democracy group. The town of Hartell, similarly located, gave 39 votes to a Liberal candidate and 48 to our Social Credit-New Democracy candidate. In every one of those oil field centres the people showed their confidence in the Alberta government by returning Social Credit-New Democracy candidates to this house. I remind my hon. friend of these facts in the hope that he will not so vehemently oppose a government which has been put in office by the will of the people.

As far as the bill is concerned, evidently the minister's conviction is that the passing of it is in the best interests of all—of our war effort at this time when we need oil and gas, and of the country at large. We support the bill.

Mr. CRERAR: Starting with the speech delivered by the hon. member for Saskatoon City (Mr. Bence), perhaps I can give him some of the information for which he, quite properly, asked.

He inquired if steps were taken by the federal government to assure itself that the leaseholders were not opposed to this legislation. All I can say in reply to that is that the interests and the gentleman who spoke for them and who made representations to me a year ago against the passing of the legislation at that time were the same gentleman and the same interests who came this year and said that they were in agreement with the Alberta government and desired that the legislation should be passed.

He also raised the question whether a measure of this kind should be passed without reference to the imperial parliament. I think the hon. member for Calgary West (Mr. Edwards) mentioned the same point. There is a provision in the agreement by which the resources were transferred to Alberta, that reads as follows:

The foregoing provisions of this agreement may be varied by agreement confirmed by concurrent statutes of the parliament of Canada and the legislature of the province.

So there does not appear to be any question about the power to amend the agreement in the manner proposed here.

He also raised the question as to the authority to change the royalties, and the hon. member for Calgary West argued, if I understood him aright, that the royalties which existed at the time the resources were transferred to the province of Alberta were the royalties which would govern for all time to come. In that my hon. friend is quite mistaken. I believe the leader of the opposition (Mr. Hanson) also gave currency to that contention.

Mr. HANSON (York-Sunbury): That is the interpretation I put upon one of the regulations.

Mr. CRERAR: Well, leases which were issued under the authority of the federal government long before any understanding was reached for the transfer of the resources to the western provinces contained a provision to this effect. I shall not read the whole section, because it provides for the period of the lease and how it may be renewable, but it goes on to say:

> . . . and also rendering and paying therefor unto His Majesty a royalty at such rate as may from time to time be prescribed by order of the governor general of Canada in council on the products taken out of the said lands, such rent and royalty to be free and clear of and from all rates and taxes and assessments and from all manner of deduction whatsoever except as hereinafter mentioned.

There was another section in the lease, section 16, which touched the conditions of the lease, and let me point out that these leases were all similar in character. This section 16 reads:

> And provided further, and it is hereby declared, that this lease is subject in all respects to the regulations of the governor in council relating to petroleum and to any regulations that may be issued in amendment of and in substitution therefor.

Mr. BENCE: In what year were these passed?

Mr. CRERAR: These were passed away back in 1911, if I remember rightly. At any rate they were the forms of lease under which these leases were given to the people who staked their claims or took whatever steps were necessary to get them. That makes it clear beyond any question of doubt that, if the resources had remained with the federal government, the federal government undoubtedly had power to change the royalties from time to time as it saw fit. It had power to change the terms and many of the conditions under which the leases were issued.

Mr. BENCE: What about the provisions of the amendment to the regulations passed in 1920, referred to by the leader of the opposition (Mr. Hanson), the preamble to which indicated that because of the uncertainty of the position with respect to royalties they would set these royalties for a certain time after the wells came into production?

Mr. CRERAR: That confirms the point I am making. These leases were issued first in 1910, and in 1911 regulations were passed which were referred to by the leader of the opposition. These regulations did not provide royalties. The royalties were first provided for, I believe, in 1919 and 1920, and the terms under which they were provided were these: For the first five years a maximum of 5 per cent and a minimum of 2½ per cent; for the second five years a minimum of 5 per cent and a maximum of 10 per cent; and thereafter 10 per cent. These were the royalties fixed in the order in council of 1920; but they were not fixed for all time to come at that rate, because under the provisions of the lease I have just read, the federal government had power to vary these royalties. There can be no question of that. It is a very interesting legal point, and I realize that the whole debate is more a debate for lawyers than for laymen. It is, however, an interesting point as to whether or not in clause 2 of the transfer agreement the federal government passed over to the provincial government all the powers that it had exercised and could exercise in respect of these leases. That is the legal point which is in doubt. The leader of the opposition stated in his remarks that that was the question which should be resolved by the courts. As a matter of fact, when the legislation was not proceeded with in the federal parliament a year ago the government of Alberta, as stated by the hon. member for Calgary West, passed a regulation in regard to the leases issued prior to the transfer of the resources by the dominion government assessing such leases at the same rate of royalty as the provincial lease carried. I am not sure what it was, but I think it was 15 per cent. I speak subject to correction on that. That was resisted. Then steps were taken to test this very clause in the courts, and that court action was in progress when the arrangement was reached which this amendment seeks to ratify. Why was that arrangement arrived at?

Mr. HANSON (York-Sunbury): They could not have been very sure of their legal position.

Mr. CRERAR: It may be that there was doubt in the minds of both parties to the transfer as to their legal position, but I do not pass any opinion on that.

Mr. EDWARDS: There was no action. Action was never started. The Alberta government, instead of starting action, made a reference to the supreme court.

Mr. CRERAR: I accept my hon. friend's correction. At any rate it was a reference to test the quality of the law. The situation has changed greatly in the last year. I would draw the attention of hon. members to this fact, that a year ago we were not concerned with an oil shortage, nor were we concerned with the question of rationing. German submarines were not operating on this side of the Atlantic. Tankers carrying oil to Canadian ports had not been sunk, and hon. members are aware of the fact that within the last few months a number have been sunk.

Mr. HANSON (York-Sunbury): There is no oil shortage in that area. That is a red herring the minister is now drawing across the trail.

Mr. CRERAR: I should be grateful if my hon. friend would allow me to complete my argument instead of making interjections about red herrings and all that sort of thing.

Mr. HANSON (York-Sunbury): There is no oil shortage in Alberta.

Mr. CRERAR: If there is no oil shortage in Alberta, why is rationing in effect in that province?

Mr. HANSON (York-Sunbury): The Minister of Munitions and Supply (Mr. Howe) from his place in the house said that Alberta was self-sufficient. Can we depend on what he says? There is no oil shortage in Alberta and consequently no rationing would be needed there.

Mr. CRERAR: Rationing is in effect.

Mr. HANSON (York-Sunbury): I know it is in effect, but possibly for another reason.

Mr. CRERAR: It is in effect for this reason, that the oil from Alberta can be distributed over a wider territory to serve the needs not only of industry but of agriculture as well. That has changed the whole situation. We do not know what is ahead of us in regard to oil production, and I am passing on to the house only the information that was given me and which I believe is correct. It was given by both sides to the controversy, or to the differences that have existed in the past, and that was as regards the stability which would be secured through the ratification of the amendment to the agreement would be a factor in promoting development. This ratification, may I remind the house, was given in the Alberta legislature practically unanimously, and in that legislature they are not all supporters of the Social Credit government. In fact, there is considerable opposition, I believe, in the Alberta legislature. But according to the information given me it was approved in the Alberta legislature practically unanimously, and I submit that those who had opposed to the Social Credit government there, who come from various parts of the province, would be probably just as jealous, just as desirous and anxious to protect the rights of these leaseholders, as the leader of the opposition or any other member of this house. I think that is a fair statement.

Mr. BENCE: The point is that the province of Alberta would not give that stability unless they had this legislation.

Mr. CRERAR: The royalties were fixed at 10 per cent. It did not matter whether a person drilled a well in Alberta, if he had any dominion lease he paid the royalty of 10 per cent. There is no question about that. It was felt, though, that in some fields a royalty of 10 per cent might be too high at the beginning. That principle was recognized in the first royalties established by the federal government in 1920 when it stated that for the first few years the royalty should be on a lower scale than it would be in succeeding years. But under the agreement, that is under the assumption that section 2 was good law or protected leaseholders, the Alberta government did not have the power to vary royalties on those leases. So it wants to achieve two things; the power to vary the royalties from 5 to 15 per cent, or, if the leaseholder prefers, he can take a royalty of 12½ per cent. I think I am correct in stating that the usual oil lease of a similar nature in the United States carries 12½ per cent and sometimes 15 per cent royalty.

Mr. HANSON (York-Sunbury): That has nothing to do with this.

Mr. CRERAR: Except that it is an indication of how these things are valued.

This amendment will give stability for ten years. What is the alternative? Perhaps lengthy actions in the courts, the higher court in Alberta, the Supreme Court of Canada, ultimately the privy council, to decide the question; and that might take two years or more. During that time there is uncertainty, indecision and lack of development. The oil interests recognize that. I admit that there may be something to the argument of the

hon. member for Saskatoon and that some holders of dominion leases who are also holders of provincial leases wanted to have some security in the fixation of the royalties on their provincial leases. Well, is that going to hurt development; is that going to hurt anyone? I cannot see it.

Mr. BENCE: But that might have been given without discriminating against these minority leaseholders.

Mr. CRERAR: There cannot be discrimination against anyone. Wherein does the discrimination lie?

Mr. HANSON (York-Sunbury): In raising the royalties of the old leaseholders illegally.

Mr. CRERAR: I submit there is no discrimination. I submit that that very fact will tend to stability and to development, which is something we all want and is greatly needed in this country.

The leader of the opposition argued at considerable length that we were violating a contractual right, or that we were consenting parties to the violation of an understanding that these leaseholders had when they took their leases. I dispute that. We are not violating that, because these leaseholders took their old federal leases on the distinct understanding, explicitly stated in the lease, that the terms of royalty could be varied by the federal government. There is no question of that. As I have said, it is a question whether or not the federal government in section 2 passed that authority over to the provincial government. That is a question which could be settled by the courts, and as a matter of fact that was the question which was sought to be settled by the courts in the reference made in the higher court in Alberta.

Mr. HANSON (York-Sunbury): Why was it not left to the courts to determine, rather than coming here?

Mr. CRERAR: One of the chief reasons, as I have stated twice already this evening, is to get a measure of stability which would lead to development, and get production which is badly needed.

Mr. HANSON (York-Sunbury): This has been going on for two years, and during that time they could have gone to the courts.

Mr. CRERAR: The question would probably have been fought through the courts. When you find a considerable majority of the active leaseholders in areas where oil is likely to be found, in support of this measure, it is something which should not be thrown lightly aside. I ask the hon. member for Saskatoon City to take my word for that, because I saw the list and I had the representations made to me by the gentlemen who acted on their behalf. When they had agreed to this; when they along with the Alberta government are asking for it; when they got together and settled it in that manner, I think we shall not make any mistake in ratifying that understanding.

Mr. HANSON (York-Sunbury): They agreed on the theory that if they did not consent, something worse would happen. That is a species of duress. Individuals are afraid of governments.

Mr. CRERAR: If that were the case, why did they change their attitude from that of the year before? I want my hon. friend to accept my statement that the people who made representations against it a year ago were those who came and made representations in favour of it this year.

Mr. HANSON (York-Sunbury): I have given the answer; the answer is that if they did not agree to it, something worse would happen to them.

Mr. CRERAR: I have never had that suggestion made. I do not think there is anything to it.

Mr. HANSON (York-Sunbury): I know there is.

Mr. BENCE: Was the agreement not arrived at as a result of negotiations which resulted in these leases set out in the schedule to the bill being set at a limit of 10 per cent? Is that not part of the quid pro quo?

Mr. CRERAR: No; the reason for that was, as I stated in my opening remarks, that these leases have been developed and financed on that basis; that was a concession they were able to get—

Mr. BENCE: It was a concession, though.

Mr. CRERAR: Well, I would not say concession; it was an understanding that was reached. But there is another point. I cannot help feeling that there is in the minds of at least some hon. members a doubt as to the manner in which the Alberta government might deal with these leaseholders. In other words, there is a feeling that the Alberta government perhaps cannot be trusted to do the right thing in the way other governments might be. I am not passing any judgment on the merits or demerits of that point of view. But there is not a province in Canada outside of the prairie provinces that did not have and has not to-day complete control of its resources. For example, if they find oil in New Brunswick the provincial government can assess royalty of 5 per cent or 50 per cent; there is no question about its power, or that of Ontario, British Columbia, Quebec

or any other province except the three prairie provinces. The question has yet to be settled as to whether legally the restraints are placed on the provincial governments of the prairie provinces that some people think are implicit in section 2 of the transfer agreement.

Mr. HANSON (York-Sunbury): What about the point of compensation under the arbitration?

Mr. CRERAR: Really I do not think the question of compensation applies to oil leases. I believe I am correct in saying that there was no oil discovered in Turner valley when the resources were transferred to Alberta. There was gas in large quantities.

Mr. HANSON (York-Sunbury): When was the arbitration?

Mr. CRERAR: The arbitration was in 1930.

Mr. COLDWELL: Oil was discovered in the Turner valley about 1911 or 1912—that is gasoline, not crude oil; I will correct myself to that extent. Crude oil was discovered much later.

Mr. MacNICOL: Gasoline does not come from the ground.

Mr. CRERAR: It is only within the last twelve or fifteen years that crude oil has been developed in Alberta. I am pretty sure of that, because I have a recollection of investing some money a number of years ago in the expectation of helping to develop an oil well, and my expectations went for naught.

There was one other point raised by the hon. member for Saskatoon City. There was a question whether any dominion leases were outstanding on the tar sands in northern Alberta. I speak subject to correction, but my definite impression is that no dominion leases are outstanding on those tar sands. Any leases that have been issued were issued subsequent to the transfer of the resources to Alberta.

I do not know that I have much more to say. As I said earlier, I have no hesitation in recommending this legislation to the house. I do not think any injury is going to be done to any interests. I think the people who are mainly affected desire it. I believe it is in the public interest to stabilize the situation in Alberta by this measure. This should be done in order to get the production of oil which is so badly needed in these days.

Mr. DEPUTY SPEAKER: Shall the motion carry?

Mr. HANSON (York-Sunbury): On division.

[Mr. Crerar.]

Motion agreed to on division, bill read the second time, and the house went into committee thereon, Mr. Vien in the chair.

On section 1—Short title.

Mr. ROSS (Calgary East): Perhaps I should make some observations now that I hoped to make on the motion to go into committee. I suggest to the minister that instead of proceeding with this bill now, he have it referred to one of the standing committees. My reason for asking this is that I should like to hear witnesses and counsel for the different interested parties. I think interested parties should be given a chance to be heard. Pursuant to the agreement under which the natural resources were turned over to the province, a number of lessees feel that they have the right to have their royalties continued at 10 per cent. The province challenges this right. Whether the lessees are correct or whether the province is correct, I shall not discuss here; but assuming that the lessees are correct, there are a number of lessees—I thought there were seven hundred of them—whose contracts will be broken by the province of Alberta if we pass this legislation. Apparently the number of lessees is less than I thought. However few or however many there may be, it is a serious matter for an individual to break his contract. But it is much more serious for a province to break its contract, and it is an extremely serious matter for this parliament to give its consent to a province breaking its contracts.

It has been urged by the minister that it is necessary to pass this bill in order to assist our war effort. If it will assist our war effort, then we should go ahead and break these contracts, but we should compensate the people whose contracts are broken. For my part I should like to be shown how this will help our war effort. I gather from the discussion that it is thought this will stabilize the industry. I wonder if putting a ceiling on these leases would not stabilize the industry just as much as entering into an agreement of this kind to raise royalties would? Let us fix the royalties at what they were a year ago; let us fix them at the 10 per cent which is all these people have had from the time oil was first discovered in Turner valley. If a ceiling were put on, it should stabilize the industry for the duration of the war. That is the proper way to attempt to stabilize the industry. The oil controller can deal only with movable property, with the oil, with the product; he has no control over leases. But this government has control over leases. I wonder if the oil controller considered a fixed ceiling on leases when he expressed the opinion that it

would stabilize the oil industry if this legislation were passed. I should like to see this bill go before a committee of this house where we can find out what his opinion really is in so far as this particular phase of the matter is concerned.

One of the companies opposed to this legislation has a great many oil leases that will be affected by the legislation. The name of this company is Okalta Oil company which was organized by W. S. Herron, who was a pioneer in that field. I doubt if there would be a Turner valley oil field to-day if it were not for W. S. Herron. He and Mrs. Herron sacrificed a great deal and suffered many hardships to acquire these leaseholds, develop this oil field and bring it to the point where it is to-day. If we pass this legislation, their holdings will be affected seriously. If it is in the interests of the war effort that we should pass the legislation, then we should compensate these people and others affected for their losses. This compensation should be paid either by the provincial government or by this government. The losses of these people will be in the tens of thousands of dollars; I suppose $100,000 would be a moderate figure at which to fix them, but the uncertainty is so great that one cannot fix them with any definiteness. I submit that the Okalta Oil company and others should have the privilege of appearing before a committee of this house to state their case.

There is another class of case to which I should like to refer. Sixty persons invested $11,200 in 2½ per cent royalties in small holdings in the Turner valley field. They are advised by counsel, so I am instructed, that if this legislation passes, this 2½ per cent will be wiped out. I shall give some more particulars with regard to it, so that hon. members may see how it will be wiped out. There was a dominion lease granted under which a 10 per cent royalty was reserved. A 2½ per cent royalty was then sold to these sixty people for $11,200, paid in cash. The other 87½ per cent was turned over to a company. The property has been developed, and a good producing well now exists on it. The position now is that they are advised by counsel that if this legislation goes through, and that 2½ per cent additional royalty is taken by Alberta, the 2½ per cent royalty bought and paid for by these sixty people will be lost to them. Who is going to compensate them? It seems to me that they should be compensated. I say it will be lost to them, because their names do not appear in the schedule among those who are being protected.

For these reasons I urge the minister to move that the committee rise, and that the matter be referred to one of the smaller standing committees of the house which can hear evidence. These sixty people should be represented and should have a chance to be heard before a committee of the house. I submit, too, that the Okalta Oil company should have a chance to be heard.

The CHAIRMAN: In the consideration of a section of the bill I do not think it is in order to move that the committee rise and that the bill be referred to another committee. The house has determined that this bill should be referred to committee of the whole. When the committee of the whole reports, the hon. member might move that the report be not now received, but that the bill be referred to another committee. This is not the stage, however, at which such a motion can be made. It is not permissible for committee of the whole to discharge an order in that way.

Mr. BENCE: I wish to make one further point. Certainly I would not want anything I said to have the effect of in any way slowing up the war effort or slowing up the production of oil in the oil fields of Alberta. The point which I endeavoured to make, and which I shall repeat is this, that I thought the same results could be obtained and protection could be given to these minority leaseholders. I felt that the province of Alberta was—and I use the expression advisedly—wielding the big stick, to a certain extent, with respect to provincial leaseholders who held dominion leases, in order to get this legislation through. I felt that if the Alberta government had been willing to give a little more, and protect the dominion leaseholder, with respect to the matters on which we have been speaking, the same results could have been obtained and equity would have been retained for the minority leaseholders.

Mr. COLDWELL: I should like to say a few words on this bill because, as I understand it, both the province of Alberta through its government and the dominion government have reached an agreement which is as satisfactory, I suppose, as any agreement that could have been negotiated between them.

I would draw this to the attention of the committee that this again illustrates the whole situation regarding our natural resources. When the resources are returned to the jurisdiction of the provincial government, that government should have jurisdiction over those resources, and any strings attached to the return ought to be strings that can at least be cut by the province under conditions which the province and the others concerned may agree upon at a later date.

I do not believe in confiscation, but I do believe this, that the natural resources which

are the common heritage of the Canadian people are fast being acquired and held in a manner which is against the best interests of this country. I dealt very briefly the other afternoon with oil leases which had been in the hands of a company for a number of years, and about which probably the minister will be able to report on another occasion. We have had so many instances in this dominion of our rich resources being exploited by small groups of people who have acquired them in one way or another and which have not benefited this country as they might have done. We have now a great new resource, a resource which was first of all indicated by the naphtha discovery in 1911 or 1912, and then by the crude oil very much later; I think the minister was right when he said about 1930.

It seems to me that instead of discussing the question of leases and royalties, we ought to be finding out upon what basis we can restore this great resource to the Canadian people, so that in this time of stress and strain and in the post-war period we can utilize this resource for the building up of a better Canada. I dislike very much sitting and hearing discussions in this house and seeing bills which, though they may not be designed to do so, nevertheless have the effect of still keeping away from the Canadian people the right to benefit wholly from the resources which nature has placed in this dominion and under its soil.

I realize, of course, that we live under a system which is based on property rights. I do not believe in taking property rights away without compensation, that compensation to end within a measurable period of time. I realize that we live under such a system and that it is very difficult to get away from it. But I want to lift my voice in this house to say briefly to-night that this alienation of our natural resources to private interests should cease and that we should find ways and means of restoring resources of this kind to the Canadian people in order that they may be used for the benefit of the Canadian people.

Section stands.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Wednesday, May 27, 1942

The house met at three o'clock.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

[Mr. Coldwell.]

WARTIME PRICES AND TRADE BOARD—PRINTING

Mr. FRASER (Peterborough West):

1. What is the cost per month of all the printing and the mimeographing done by or for the wartime prices and trade board?
2. How much has been expended to date on this work?
3. What are the names of those responsible for the material used in the news summary of the wartime prices and trade board?

Mr. ILSLEY:

1. For fiscal year terminated March 31, 1942:

April	$ 6 25
May	99 53
June	996 08
July	730 41
August	127 36
September	567 89
October	865 74
November	2,397 32
December	980 32
January	2,673 55
February	11,237 30
March	57,810 55
2. Total	$78,492 30

The enlarged expenditure during February and March is accounted for by the accumulation of accounts covering previous months' commitments, together with increased activity of the board following the introduction of the price ceiling legislation.

3. Mrs. Hathaway of the staff reports section, secretarial branch.

SHELBURNE, N.S., BOOM DEFENCE DEVELOPMENTS

Mr. BLACK (Cumberland):

1. What contracts have been let in connection with the boom defence developments at Shelburne, Nova Scotia?
2. How many men are being employed by the government?
3. What are the classifications and pay, (a) regular, (b) overtime, (c) Sundays?
4. Is any technical or expert help employed? If so, what are their names and rates of pay?
5. Who is in charge of this operation and what remuneration and expenses have been paid?
6. Has there ever been a surplus of men employed?

Mr. MACDONALD (Kingston City):

1. (a) Rental of tug "Alice" from Foundation Co. of Canada (two parts), $6,375.00; $3,875.00. Total $10,250.00. (b) Construction of boom layout grounds—M. A. Condon and Sons, Ltd., $19,050.00. (c) Anti-submarine net—Foundation Co. of Canada, $29,439.00.

2. Gate vessels, attendant and work boats, tugs, etc., are manned by naval personnel. In addition to naval personnel, thirty-four civilians are employed at the boom defence depot, Shelburne, N.S.

3. Naval personnel are paid the pay and allowances of their rank or rating. Civilian

personnel are paid at the following rates: One foreman, 75 cents per hour; one chargehand, 70 cents per hour; one crane operator, $1.00 per hour; one blacksmith, rate of pay not yet available; fifteen riggers, 65 cents per hour; four skilled labourers, 51 cents per hour; three unskilled labourers, rate of pay not yet available; one civil servant, clerk, $1,080 per annum; six civil servants, watchmen, $900 to $1,080 per annum; one civil servant, driver, $1,200 per annum. Employees on hourly rates are paid time and a half for overtime and double time for Sundays. Personnel on annual rates are not paid any overtime.

4. No.

5. A naval officer who receives the pay and allowances of a mate, R.C.N.R., is in charge of operations.

6. No. The number of employees has fluctuated frequently due to seasonal activities and alterations in the location of defence.

WARTIME HOUSING—ST. CATHARINES AND MERRITTON SUBDIVISION

Mr. CASTLEDEN:

1. What different types of houses were erected under wartime housing at St. Catharines and the Merritton subdivision?
2. How many of each type have been built?
3. What is the average cost of each type?
4. What construction firm received the contract for the building of these houses?
5. What is the monthly rental charged for each type of house?

Mr. HOWE:

1. St. Catharines, H1 and 2, H11 and 12, H21 and 22; Merritton, H1 and 2, H11 and 12.

2. St. Catharines, 178—H1 and 2; 20—H11 and 12; 15—H21 and 22. Merritton, 34—H1 and 2; 8—H11 and 12.

3. Average cost of the completed houses to date May 24, 1942, at St. Catharines: H1 and 2, $1,779.97; H11 and 12, $2,336.34; H21 and 22, $1,875.

Average cost of houses under construction at St. Catharines: H1 and 2, $1,891.07; H11 and 12, $2,560; H21 and 22, $2,058.33.

Average cost of houses under construction at Merritton: H1 and 2, $1,820.14; H11 and 12, $2,441.67.

4. The Redfern Construction Co. Limited.

5. H1 and 2, $22; H11 and 12, $30; H21 and 22, $25; with the exception of the Victoria Park project at St. Catharines which is $2 per month less than the above on each type of house.

BREWERIES AND DISTILLERIES—EXCESS PROFITS TAX

Mr. CRUICKSHANK:

1. Has any brewery or distillery been permitted to pay arrears of dividends since 1939 out of current earnings?
2. If so, were they allowed to deduct these payments from excess profits tax?
3. Has any brewery or distillery been permitted to retire debentures before the due date, since 1939, out of earnings?
4. If so, were these payments deducted from excess profits tax?

Mr. GIBSON:

1. No information.
2. If paid, no.
3. No information.
4. If paid, no.

PRICE CEILING—CITRUS FRUITS AND FRUIT JUICES

Mr. CRUICKSHANK:

1. Is any subsidy now being paid on any citrus fruit or its by-products?
2. Is any subsidy being paid on (a) apple juice, (b) tomato juice?

Mr. ILSLEY:

1. Fresh fruits have never been eligible for import subsidy. Canned citrus fruits were ruled ineligible on January 1, 1942. Citrus fruit juices were ruled ineligible on May 11, 1942.

2. (a) Yes, on domestic production; (b) Yes, on domestic production.

GASOLINE RATIONING—NURSERY, LIQUOR AND INSURANCE SALESMEN

Mr. CRUICKSHANK:

1. What general gasoline category is allotted to nursery, liquor and insurance salesmen?
2. Are any special categories allowed to such salesmen?
3. If so, to whom, what category and what firms do they represent?
4. What gasoline category is allowed to stock and bond salesmen?
5. Are any special categories allotted to any of the above?
6. If so, to whom, what category and what firms do they represent?

Mr. HOWE:

1. Nursery salesmen—category A; liquor salesmen—category A; insurance salesmen other than life insurance—category A; life insurance salesmen—up to category C upon proof of necessity.

2. Answered by 1.

3. All salesmen in nursery, liquor and insurance categories are treated on the same basis. The names of the firms represented are not readily available.

4. Stock salesmen—category A; bond salesmen up to category C upon proof of necessity.

5. Answered by 4.

6. Names of firms represented are not readily available.

HONG KONG COMMISSION—GEORGE DREW

Mr. POULIOT:

What was the arrangements between the government and Mr. George Drew, K.C., regard-

ing, (a) the remuneration, (b) the living allowances, and (c) the travelling expenses of the Hon. George Drew for attending the Hong Kong probe?

Mr. MACKENZIE KING: There has been no arrangement between the government and Mr. George Drew, K.C., for attending the Hong Kong inquiry commission.

Pursuant to section 11 of the Inquiries Act, chapter 99 Revised Statutes of Canada, 1927, a commissioner appointed under the act has full authority to engage counsel to aid and assist in the inquiry. This power is specifically mentioned in P.C. 1160, February 12, 1942, appointing the Right Hon. Sir Lyman Poore Duff, P.C., C.M.G., a commissioner under the Inquiries Act.

NATIONAL WAR SERVICES—COMMITTEE ON COOPERATION IN CANADIAN CITIZENSHIP

Mr. WINKLER:

1. Who comprise the cultural relations committee in the Department of National War Services?

2. What are their qualifications and salaries?

3. When were the appointments made?

Mr. THORSON:

1. There is no cultural relations committee in the Department, so named, but there is a committee on cooperation in Canadian citizenship. The chairman of this committee is Professor G. W. Simpson, senior adviser to the Director of Public Information. Professor Simpson has been connected with the University of Saskatchewan for nineteen years and is, at present, head of the Department of History. Mr. Tracy Philipps, adviser to the Director of Public Information, is European adviser of the committee. He is an expert on recent political conditions in southern and eastern Europe. The members of the committee are as follows:

Professor H. F. Angus, of the University of British Columbia, now attached to the Department of External Affairs, appointed December 13, 1941.

Honourable C. H. Blakeny, Minister of Education in New Brunswick, appointed December 10, 1941.

Major J. S. A. Bois, Professor of Philosophy, University of Montreal, now personnel consultant in the Canadian army, appointed December 31, 1941.

Professor Jean Bruchesi, author and educationalist, appointed April 14, 1942.

[Mr. Pouliot.]

Mr. D. Cameron, Director of Extension Work, University of Alberta, appointed December 27, 1941.

Dr. S. D. Clark, Lecturer in Sociology, University of Toronto, appointed January 15, 1942.

Mr. Robert England, Department of Pensions and National Health, executive secretary to the rehabilitation committee, appointed December 11, 1941.

Mr. J. Murray Gibbon, author of "Canadian Mosaic", appointed December 9, 1941.

Professor Watson Kirkconnell, Professor of Literature, McMaster University, appointed December 10, 1941.

Mr. Tracy Philipps, D.C.L., F.R.I.A., foreign diplomatic correspondent, appointed November 27, 1941; salary, $4,392 per annum.

Mrs. R. F. McWilliams, fromer Winnipeg city councillor and social worker, appointed December 12, 1941.

Professor G. W. Simpson, head of the History Department, University of Saskatchewan, appointed November 1, 1941; salary, $4,500 per annum.

Mrs. O. D. Skelton, author and educationalist, appointed February 4, 1942.

All members, except where otherwise stated, serve without salary, but all receive out-of-pocket travelling expenses incurred while on official business of the committee.

2. See answer to 1.

3. See answer to 1.

NAVAL SERVICE PERSONNEL LISTED IN DEFENCE TELEPHONE DIRECTORY

Mr. MACDONALD (Kingston City): I should like to submit an answer to a question which, though it did not appear on the order paper, was asked by the hon. member for Témiscouata (Mr. Pouliot) on May 11, during the course of the debate on the appropriation bill, and appears at page 2292 of *Hansard*. It has reference to the number of bilingual employees whose names are listed in the telephone directory.

So far as the naval service is concerned, there are 326 names listed in the directory in question. Of these, 280 have resided in Canada during the past 5 years, of whom 60 are bilingual and 220 are not bilingual. Eleven persons listed have not resided in Canada for the past 5 years, and of this number one is bilingual and 10 are not bilingual. Thirty-five naval officers whose names appear in the directory have been drafted away from naval service headquarters since the directory list was prepared and details are not available.

NAVAL SERVICES—SYLLABUS OF TRAINING FOR PROBATIONARY SUB-LIEUTENANTS

Mr. MACDONALD (Kingston City): I should like to table a document, the syllabus of training for probationary sub-lieutenants, in answer to a question asked by the hon. member for St. John-Albert (Mr. Hazen). It is rather lengthy and perhaps it would suffice to print it in *Votes and Proceedings* rather than in *Hansard*.

Mr. HANSON (York-Sunbury): It would cost the same to print it in *Hansard*, and it would be much more convenient there.

Mr. MACDONALD (Kingston City): If the house so wishes, though it might clutter up *Hansard*.

Probationary Sub.-Lieutenants, R.C.N.V.R.
Short Gunnery Course
Duration—22 days

Officers Short Course "G"

The order in which the subjects are given to the officers under training varies considerably.

Number of days	
1 day	General Gunnery—(No Examination). Marks of respect. Gunnery Rates and Badges. Types of Ships. Complements. Organization. Degrees of Readiness. Preparation for action. Supply and Repair Parties. Stores briefly—differentiations.
3¾ days	Field Training—Exam. ¼ day—Marks 150. Squad Drill. Rifle Drill. Pistol Drill.
½ day	Ranges—(No Examination). Rifle shooting: application, rapid and snap. Pistol shooting.
1 day	Lewis Gun—Exam. ¼ day—Marks 50. Loading, aiming and firing a Lewis Gun. Immediate Action Routine for Stoppages. Care, Maintenance, Preparation for Firing and Cleaning of the Gun.
2¼ days	Director and Sights—Exam. ¼ day—Marks 100. Object and principle of Gun Sights. Types of Sights. Corrections required and how made at 4·7″ Q.F., 4″ B.L., and Q.F., and 12-Pdr. Guns. Distant object Sight Test Principles of Director Firing. Corrections necessary and how made with general description of "Light" "Repeat W" and "H" types Directors and Receivers—Very briefly. Use, care and maintenance of Sights, Telescopes and Binoculars.
3¼ days	Fire Control—Exam. ¼ day—Marks 150. Terms used in Fire Control. The Fire Control Problem as it affects an O.O.Q. Standard Methods of Passing Orders. Sequence of Orders. The Dumaresq. Fire Control System in Destroyers. Instruments and Crews. Methods of Firing and Control—Very briefly. Spotting Rules for:—(a) O.O.Q. controlling two or more guns. (b) O.O.Q. controlling a Single Gun. (c) Gunlayer's Control. Night Action as it affects an O.O.Q. Organization for Night Fighting, Range for the Night—Very briefly.
3 days	Gun Drill—Exam. ¼ day—Marks 150. 1½ days—4″ Q.F. 1 day—4″ B.L. ¼ day—12-Pdr. ¼ day— 2-Pdr. Pom Pom. (Including missfires.)
2 days	Stripping—Exam. ¼ day—Marks 100. General arrangement of "P" and "C.P." Mountings. Breech Mechanisms 4·7″ Q.F., 4″ Q.F., 4″ B.L., 2-Pdr. Pom Pom, and 12-Pdr.—Briefly. Preparations for Firings, Care and Maintenance.
1½ days	Ammunition—Exam. ¼ day—Marks 50. Brief description of B.L. and Q.F. charges, types of shell, fuses and tubes used. Care of Explosives, disposal of charges removed from guns, embarking ammunition. Fireworks. Typical flooding, spraying and ventilation arrangements in a magazine and shell room. Magazine Logs.
1¼ days	Close Range High Angle—Exam. ¼ day—Marks 50. Types of aircraft and attacks. Defensive Measures. Close Range Weapons, capabilities, methods of use and ammunition used. Eye-shooting Sights. A.A. Lookouts. Close range barrage with single HA/LA Gun.
½ day	Rangefinder—(No Examination). Principles and limitations of Coincidence Rangefinder. Rangefinder Errors, Testing and Correcting—Very briefly. Care and Maintenance of Rangefinder—Very briefly.
6 hours	Night Lookout Table—(No Examination). 6 hours during the course.
2 runs	Shooting Teacher—(No Examination). 2 runs during the course.

Total days of instruction..... 20
Total days of examination..... 2

Total days..... 22
Total marks..... 800

Probationary—Sub.-Lieutenants, R.C.N.V.R.

Torpedo Course

Duration—3 Weeks

Torpedo Course—Remarks

1. As much practical experience at sea as possible is carried out throughout the course. This is dependent on the season of the year and the Tenders available.

2. Saturday forenoon of the first and second week will be devoted exclusively to practical Seamanship at H.M.C.S. *Kings*.

First Week

Monday: Whitehead.
General outline of the Torpedo. History. Development and capabilities.

Tuesday: Whitehead.
Depth-keeping mechanisms. Gyroscopes. Discharges.
Theory—The Torpedo Control problem.

Wednesday: Explosives.
Tests. Stowage regulations. Demolitions.

Thursday: Depth Charges.

Friday: Depth Charges.
Discharges, Primers, Pistols.

Second Week

Monday: Minesweeping.
Paravanes. "A" Sweep. Oropesa.

Tuesday: Organization of Torpedo Department.
Personnel. Material.

Wednesday: Electricity. High Power. Search Lights.

Thursday: Electricity.
Low Power. Fire Control Circuits. Batteries.

Friday: Electricity.
Degaussing. Magnetic Minesweeping.

[Mr. A. L. Macdonald.]

Third Week

Monday to Friday (Inclusive):
Standard 5½-day Anti-Gas and Chemical Warfare Course.

Saturday (a.m.):
Examination covering work of whole Torpedo Course.

Probationary Sub.-Lieutenants, R.C.N.V.R.

Anti-Submarine Course

Duration—1 Week

1. Early History. Limitations and Capabilities.

2. Tactical requirements. Analysis of echoes. Conduct of the hunt. Counter attacks.

3. Signals used. Depth Charge Patterns, and when used.

4. Operating procedure.

5. Organization of A/S personnel. A/S sets (Type 123A, etc.).

6. Directing Gear. Oscillator, Recorder, etc.

7. Attack Teacher.

8. Search Schemes.

9. Torpedoes. Avoiding action. Screening. General Notes on Submarines.

10. Transmission Units. Echo-Sounding. Exercising with own Submarines. A/S Harbour Defences. General Review.

11. Examination (Written).

Probationary Sub.-Lieutenants, R.C.N.V.R.

Seamanship Course

Duration—1 Week

Seamanship Course—Remarks

(a) As much Practical Boat Work as possible is carried out throughout the course. The number of hours is dependent on the season of the year and the boats available.

(b) Officers under training receive instructions in practical boat work in Service Cutters and Whalers, under oars and sail.

(c) Week-end cruises are undertaken in the auxiliary yawl H.M.C.Y. *Glencairn,* whenever possible.

(d) Visits are made to different classes of war ships during the Pilotage Course.

(e) During the period allocated to training at sea, Officers carry out the duties of Officer of the Watch, Quarter Master, Lookouts by day and night, in addition to attending organized instruction.

Day	A.M.	P.M.
MONDAY	Knots, Splices, Purchases Lights	Practical and theoretical Boat Work
TUESDAY	Rule of the Road	Anchors and Cables
WEDNESDAY	Cordage, Wires Rigging and Towing	Salvage and Rescue Work, including rafts. Watertight Doors and Fittings Damage Control 1700—Join Tender and proceed to sea
THURSDAY	Steering and Altering Course Duties of Bridge Personnel (PRACTICAL)	Steering and Altering Course Duties of Bridge Personnel (PRACTICAL)
FRIDAY	Lead and Line. Sounding Machines Letting go and weighing anchors (PRACTICAL)	Sea Boats. Hoisting and Lowering Sea Boats. (PRACTICAL) 1800—Return to Harbour
SATURDAY	EXAMINATION	

Probationary Sub.-Lieutenants, R.C.N.V.R.

Divisional Course

Duration—14 Weeks

(Two Evening Lecture periods of 1½ hours' duration per week for first 14 weeks)

Lecture Subjects

1. Discipline.
2. Rank and Command.
3. Customs of the Service.
4. Naval Regulations.
5. Organization (General).
6. Organization (Destroyer).
7. Organization (Minor War Vessels).
8. Cyphers and Codes.
9. Logs and Records.
10. Victualling and Canteen requirements.
11. Certificates and Forms.
12. Pay and Allowances.
13. A.R.P. Organization.
14. Anti-Submarine Operations (General).
15. R.D.F. (General).
16. Plotting requirements.
17. Duties of Officer of the Watch—1.
18. Duties of Officer of the Watch—2.
19. Duties of Officers.
20. Naval Discipline.
21. Convoys.
22. Duties of Divisional Officers.
23. 24. 25. 26. 27. 28. First Aid.

QUESTIONS PASSED AS ORDERS FOR RETURNS

GASOLINE REDUCTION CARBURETTORS

Mr. ROY:

1. Have any carburettors for reducing gas consumption in automobiles, invented and patented in Canada since 1930, been sold to the government of the dominion or that of the United Kingdom, to individuals, companies, or in foreign countries?
2. If so, (a) by whom, (b) to whom, (c) at what price, (d) are they still in use, (e) where and how?

ALDERSHOT, N.S., MILITARY TRAINING GROUNDS

Mr. BLACK (Cumberland):

1. Were lands purchased in 1941 and 1942 for military training grounds at Aldershot, Nova Scotia?
2. If so, (a) from whom were such lands purchased, (b) acreage of each purchase, (c) amount asked by each owner and the amount paid?

MOTIONS FOR PAPERS

NATIONAL FILM BOARD—LEGAL ACTION BY MARCH OF TIME INC.

Mr. HOMUTH:

For a copy of all letters, telegrams, memoranda or other documents dated since July 1, 1941, in the possession of the Prime Minister, the Minister of National War Services, or any other minister of the crown or of the national film board or any member or official thereof with reference to any legal action or proposed legal action by March of Time, Inc., or the producers of the series of films known as "March of Time", against Loew's Incorporated, Warwick Pictures Incorporated and Moredall Realty Corporation.

NATIONAL FILM BOARD—EMPLOYMENT OF STAFF

Mr. STOKES:

For a copy of all rulings made by treasury board since November 1, 1940, on the question whether the National Film Board Act gives authority for employment of staff without prior approval of the establishment by treasury board and also on the question whether the National Film Board Act should be interpreted as applying to persons employed casually for the duration of individual projects and not to any person continuously employed.

Mr. ILSLEY: I have made inquiry, and I find that it has never been the practice to bring down what are called the rulings of the treasury board. These are merely letters written by the treasury board to departments or to ministers of departments, and are regarded as interdepartmental correspondence. There is no secret as to what treasury board wrote about this matter, so far as I know, but the letters themselves are not produced and, as I say, are regarded as privileged.

Mr. HANSON (York-Sunbury): I have no objection to the statement of general principle, that as a matter of right we could not get this ruling, but I happen to know that there has been a ruling in this particular matter and if the minister has no objection I should like to have it laid on the table. I should like him to consider that.

Mr. THORSON: The same question has arisen previously and will arise also in connection with the next motion. May I ask that this motion, as well as the next one, in the name of the hon. member for Saskatoon City (Mr. Bence) be allowed to stand so that consideration may be given to the matter.

Motion stands.

WHEAT ACREAGE REDUCTION BONUS—ORDERS IN COUNCIL

Mr. CASTLEDEN:

For a copy of all orders in council, regulations and instructions issued by the Department of Agriculture, between March 1, 1941, and May 15, 1942, concerning the wheat acreage reduction bonus.

CALGARY ROLLING MILLS

Mr. JOHNSTON (Bow River):

For a copy of all letters, telegrams, recommendations and other documents exchanged between the government and/or any department thereof, and corporations, companies and individuals, dealing in any way with the Calgary rolling mills, since 1938, to the present time.

Mr. GIBSON: This motion is worded in such general terms that it might be taken to include income tax returns. I must object to its being passed in its present form unless it is understood that income tax returns are not included.

Mr. JOHNSTON (Bow River): That is satisfactory.

MILITARY SERVICE

GRANTING OF LEAVE TO FISHERMEN DURING FISHING SEASON

On the orders of the day:

Mr. J. S. ROY (Gaspe): I wish to direct a question to the Minister of National War Services (Mr. Thorson). According to information I have received from fishermen syndicates and fish dealers on the Gaspe coast there is a shortage of fishermen and it is feared that they will not be able to fulfil the requisition of the British department of food for fresh cod fillet. Could not all the fishermen at present in the army be granted leave for the time of the fishing season?

Mr. SPEAKER: That is a question that should be placed on the order paper.

PRAIRIE FARM ASSISTANCE

INQUIRY AS TO PAYMENTS UNDER BONUS PLANS

On the orders of the day:

Mr. VICTOR QUELCH (Acadia): I wish to address a question to the Minister of Agriculture (Mr. Gardiner) based upon a matter of urgency. Just before coming into the house I received by air mail a letter from the town of Veteran, Alberta. I will quote one paragraph from it:

Dear Sir:

Owing to the dissatisfaction with the promised bonus payment, a meeting was called in Veteran on May 23, which was attended by a large body of farmers who had not yet received their bonuses. Some of these men had not received any bonus whatsoever.

Mr. SPEAKER: Order. That is evidently a question that should be placed on the order paper. The question has been asked several times in the house and I cannot see the degree of urgency which the hon. member claims.

Mr. QUELCH: Attached to this letter was a list of fifty-nine names of farmers who had not received the bonus.

Mr. SPEAKER: The question should be placed on the order paper.

HONG KONG COMMISSION

INQUIRY AS TO PRESENTATION OF REPORT

On the orders of the day:

Mr. M. J. COLDWELL (Rosetown-Biggar): With due deference to those who are compiling it, may I ask the Prime Minister when we may expect the report from the Hong Kong commission? It has been so long in abeyance that the house and the country are anxious to receive it.

Right Hon. W. L. MACKENZIE KING (Prime Minister): There is only one person I know of in the world who can answer that question, and that is the chief justice who is the commissioner. The chief justice, I am sure, has been giving his closest attention to the proceedings of the commission and, as has been explained two or three times in the house, he has been obliged to wait until one of the counsel who appeared before him had an opportunity to file a brief which the chief justice was prepared to consider before making a final report. I believe that brief has come in. I cannot say with certainty but I understand that it has. I have no doubt that the chief justice will let the government have his report as soon as he has had an opportunity to consider this brief, and the moment the report is received it will be tabled—the next day.

Mr. COLDWELL: I understand the brief had been presented ten days ago.

Mr. MACKENZIE KING: I cannot say as to that.

MOTION FOR ADJOURNMENT

TO DISCUSS MATTER OF URGENT PUBLIC IMPORTANCE—RULED OUT OF ORDER

On the orders of the day:

Mr. LIGUORI LACOMBE (Laval-Two Mountains): In accordance with standing order 31 of the House of Commons I wish to move the adjournment of the house in order to discuss a definite matter whose urgency and seriousness demand public attention. While the country is at war and in these moments of exceptional seriousness, it is necessary that the French-Canadian element of the dominion—

Mr. SPEAKER: Order. The hon. member has invoked standing order 31. He rises in his place and makes a statement, asking for the adjournment of the house. He must then submit to the Speaker a written statement of the matter he proposes to discuss.

Mr. LACOMBE: This is my statement. It is not a speech; it is my statement under rule 31. It is a very brief statement, a copy of which I will send to the Speaker.

Mr. SPEAKER: I would refer the hon. member to section 1 of standing order 31 which he has cited:

Leave to make a motion for the adjournment of the house (when made for the purpose of discussing a definite matter of urgent public importance) must be asked after the ordinary daily routine of business (standing order 15) has been concluded and before notices of motions or orders of the day are entered upon.

We are now on orders of the day; therefore a motion to adjourn to discuss a matter of urgent public importance is not in order at this stage.

Mr. HANSON (York-Sunbury): We have just called the orders of the day.

Mr. MACKENZIE KING: No, routine proceedings.

Mr. SPEAKER: We are on the orders of the day.

[Later:]

Mr. LACOMBE: Mr. Speaker, I rise to a point of order. According to standing order 31, leave to make a motion for the adjournment of the house—

Mr. SPEAKER: Order. I do not wish to deprive the hon. member of any of what he may consider his rights and privileges, but I have already given my ruling. We are now on a point of order on a matter that has already been settled. The incident must be considered as closed.

DEFENCE OF CANADA REGULATIONS

PRESS REPORT OF SPEECH DELIVERED IN MONTREAL BY MEMBER OF QUEBEC LEGISLATURE

On the orders of the day:

Hon. L. S. ST. LAURENT (Minister of Justice): Yesterday I promised to give an answer to a question put to me by the hon. member for Yale (Mr. Stirling) on May 21 concerning a speech reported to have been delivered in Montreal by Mr. Rene Chaloult.

The legal advisers of the Department of Justice have informed me that in their opinion the speech made in Montreal by Mr. Rene Chaloult on the evening of May 19, as reported in the newspapers, clearly disclosed a seditious intention, and constitutes an offence against the defence of Canada regulations; and I agree with that conclusion. They have also called my attention to the fact that Mr. Chaloult, speaking in the legislative assembly of the province of Quebec on May 22 on a question of privilege, stated that the newspaper reports of this speech were not strictly accurate, and conveyed an impression which was not warranted by the language he had used.

In view of this dispute as to the facts, it has been decided to institute proceedings against Mr. Chaloult under the defence of Canada regulations, in the district in which the offence is alleged to have been committed.

So that there may be no misunderstanding about the policy of the department under the defence of Canada regulations, I wish to add that this decision does not mean that there has been any departure from the policy of ordering detention as provided for by the defence of Canada regulations when that is found to be necessary. Seditious conduct or utterances cannot be tolerated. During peace-time the procedure for repression is prosecution before the courts under the criminal code; during war-time there may be prosecution before the courts or detention.

Everyone is agreed that in such a case as this, prosecution before the courts is the preferable method, when it can be looked upon as sufficiently effective. But the repression must be effective, and when it appears that prosecution before the courts does not produce the desired result, or does not produce it with sufficient dispatch, the interests of the state require that detention be resorted to; and in these last mentioned circumstances detention will continue to be resorted to.

CANADA EVIDENCE ACT

AMENDMENT TO MAKE PHOTOGRAPHS OF BOOK ENTRIES ADMISSIBLE IN EVIDENCE

Hon. L. S. ST. LAURENT (Minister of Justice) moved the third reading of Bill No. 66, to amend the Canada Evidence Act.

[Mr. Speaker.]

Motion agreed to and bill read the third time and passed.

ALBERTA NATURAL RESOURCES

AMENDMENT OF TRANSFER AGREEMENT RESPECTING ROYALTIES ON OIL PRODUCTION

The house resumed from Tuesday, May 26, consideration in committee of Bill No. 18, to amend the Alberta Natural Resources Acts —Mr. Crerar—Mr. Vien in the chair.

On section 1—Short title.

Mr. MacNICOL: I want to refer briefly to an answer that the minister gave yesterday to a question asked by the hon. member for Saskatoon City (Mr. Bence). As reported at page 2802 of *Hansard*, the minister said:

It is only within the last twelve or fifteen years that crude oil has been developed in Alberta.

Further on:

There was one other point raised by the hon. member for Saskatoon City. There was a question whether any dominion leases were outstanding on the tar sands in northern Alberta. I speak subject to correction, but my definite impression is that no dominion leases are outstanding on those tar sands. Any leases that have been issued were issued subsequent to the transfer of the resources to Alberta.

I believe the provinces of Alberta and Saskatchewan were created in 1905. Between 1905 and 1930 the natural resources were administered by the dominion government, that is until some twelve years ago. I wonder whether the minister's statement was correct. I have in my hand what I presume are minutes of the company that operated the Murphy claim on the Athabaska river, sent to me some few months ago when I first began to get ready to make a speech on the Alberta tar sands. The book is entitled, "Particulars of Tar Sand Lease No. 15 known as the 'Murphy Claim', Alberta, Canada." This company must have been operating long before 1930, and to have operated it must have had a lease from the dominion government. On page 47 of this book I notice a picture illustrating the laying of a roadway in the city of Edmonton in 1915. The picture is entitled, "Beginning to lay asphaltic concrete from 'Murphy claim' on Kinnaird street, Edmonton, Alberta". That claim I believe is some thirty to forty miles down the Athabaska river from Fort McMurray.

Farther down the river there is another claim that has been operated for years, the Fitzsimmons claim. I am sure the hon. member for Edmonton West (Mr. MacKinnon) will be thoroughly familiar with that. From what I saw there I imagine that this later claim has been operating for more than ten or twelve years. They have shipped a large

quantity of material from that claim. When I was there last summer they were shipping several hundred barrels.

To come back to the claim of which I have full particulars before me, the Murphy claim, that goes to show that there must have been leases prior to 1915, for the company had been in production and had shipped material to Edmonton and, I believe, other cities in the western provinces.

I read on page 51 of these minutes the following:

Certified copy of regulations for the disposal of the tar sands, the property of the crown, in that portion of the province of Alberta lying north of township 80, and between the fourth and fifth initial meridians.

Approved by order in council, dated the 14th of February, 1910.

Therefore from 1910 on the dominion government must have issued leases for the development of the tar sands, either to obtain oil or bitumen or asphalt, all of which come from the tar sands.

A note follows, which reads:

These regulations will come into effect on Saturday, the 19th day of March, 1910. . . .

Then on page 52 I read:

The tar sand deposits which are the property of the crown in that portion of the province of Alberta lying north of township 80, and between the fourth and fifth initial meridians, may be leased to applicants for a term of twenty-one years at an annual rental of 50 cents an acre, payable yearly in advance. The term of the lease shall be twenty-one years, renewable for a further twenty-one years.

I presume that would be under the conditions enumerated herein. This would mean that anyone obtaining a lease at that time could have had that lease for forty-two years, and I am just wondering if any of these leases are still in effect. If they are, perhaps that would have some bearing on the bill now before the committee, or perhaps not; I do not know, but I thought I should inform the committee that the leases were renewable, since I believe this lease is the same as all others which were issued at that time. Then I quote from page 55:

In case the tract applied for is located on the margin of a river or lake—

This particular lease covered an area on the Athabaska river.

—it shall not include more than one mile in direct distance along such water frontage, and shall be marked on the ground by two legal posts firmly fixed in the ground, one at each end of such front boundary.

This particular lease extended back from the river for a distance of three miles, and included within its boundaries some 1,920 acres, which I believe is the maximum that could be granted. That is a fairly large grant, in any event, since we have been told by engineers that an acre of 100 per cent tar sand should contain approximately 70,000 barrels, which would give a large volume of oil, bitumen or asphalt. So that was a fairly substantial lease. Whether or not it is still in existence I do not know, but on page 58 I notice this clause, providing that leases may be transferred:

The leases shall not assign, transfer, or sublet the rights described in his lease, or any part thereof, without the consent in writing of the minister being first had and obtained.

So a lease could be transferred from one person to another, and I understand that was done with this particular lease. I believe it is now in the possession of an operator who is about to develop it, because when I went north on the river last summer a gentleman, a geologist and engineer, got off the boat. I understood he was getting off in the vicinity of the Murphy claim, from which I took it that his principals must have secured the renewal of some previous lease covering the point at which this gentleman left the boat.

I do not know what regulations were introduced by the provinces after they secured the return of their natural resources in 1930, but on page 59 of this volume I find this paragraph with regard to royalties:

No royalty shall be charged upon the products of any tar sand location granted under these regulations, or on the sales of the products of such location up to the 1st day of January, 1930—

That would be prior to the provinces taking possession of their natural resources. I do not know the exact date when the act to return the natural resources was passed, but it was some time in 1930, so they must have come into possession of the resources some time after January 1.

—but provision shall be made in the lease issued for such location that after the above date, the products of the location shall be subject to whatever regulations in respect of the payment of royalty may then or thereafter be made.

Whether the regulations put into effect by the dominion government were retained by the provinces after 1930, I do not know; but it may be that those holding these leases on January 1, 1930, were able to have them renewed on the same terms that existed before January 1, 1930. Then in the latter part of his reply to the hon. member for Saskatoon City last evening, the minister said:

Any leases that have been issued were issued subsequent to the transfer of the resources to Alberta.

If what I have just read is correct, would the minister's statement also be correct? I

know he qualified what he said by saying that it was according to his best information, or something like that; but what I have read indicates that leases were granted while the dominion government retained possession of the natural resources, that those leases could be transferred, and that they could be extended for a total period of forty-two years, which would bring them up to 1952. Whether or not the bill now before the committee should be amended to protect leases made prior to the return of the natural resources is something I cannot say. But, Mr. Chairman, having this information in my possession, I thought I should place it upon *Hansard*.

Mr. CRERAR: When the hon. member for Saskatoon City asked the question last evening, I think I qualified my reply by saying that I was speaking subject to correction. I have not been able in the interval to get full details as to the point now raised by the hon. member for Davenport, but I think there was either a crown grant or a lease given a great many years ago covering an area of tar sand on the Athabaska river corresponding to what the hon. member for Davenport has said. As far as I am aware that was the only lease outstanding. It was not given, however, for the purpose of developing oil. Again I am speaking subject to correction, because I have not had an opportunity to get all the facts in connection with the matter, but at that time it was thought that these tar sands provided a natural road surfacing material; that is, if you could take the tar sands, with the amount of bitumen they contained, and transport them and surface a road with them, you would have a good surfacing material. It is quite true, as the hon. member for Davenport has stated, that a certain quantity, not a very large quantity, was placed on one of the streets of Edmonton, more as a test in order to see how it would endure.

Mr. MacNICOL: It is there yet; I saw it last summer.

Mr. CRERAR: Then I believe a year or two later, though I am not certain as to the time, a certain amount of this material was taken to Jasper park, and the road between the railway station and the Canadian National lodge is almost entirely surfaced with this material. That was done in order to test its durability, and it appears there is no question now as to the quality of this material for hard surfacing roads. At that time, however, the purpose was to use the material for hard surfacing, and not for the extraction of oil.

[Mr. MacNicol.]

I believe it was recognized from the first that these tar sands had potential oil value. The problem was to find a formula for treating the sands so as to extract the oil. I recall that the university of Alberta carried on laboratory experiments for some time in an effort to determine a method of extracting the oil from the sand. If my information is correct, it had in its early stages rather doubtful success; but as time went on the resources of science applied itself to the problem, with the result that within comparatively recent years a process, although perhaps not a perfect one, has been discovered for extracting the oil from the sands. As a matter of fact, a company was operating for this purpose on a modest scale near Waterways, and had some degree of success in extracting oil from these sands.

It is obvious to members of the committee familiar with the geography of the district that the handicap in developing this as a commerical proposition arises from the fact that it is so remote from the centres of population.

Mr. HANSON (York-Sunbury): How far from Edmonton?

Mr. MacNICOL: It is 305 miles by rail and 250 miles as the crow flies.

Mr. CRERAR: Yes, about 300 miles by rail transport.

Mr. HANSON (York-Sunbury): That is not far for a pipeline?

Mr. CRERAR: No, it is not far. I know, as a matter of fact, that responsible business interests have been considering the possibility of laying a pipeline from Fort McMurray to the more settled parts of western Canada. Whether or not at some time in the future that may develop remains to be seen. Undoubtedly, however, there are vast quantities of oil in these sands. No doubt science can find a satisfactory method of extracting that oil, and I believe there is every likelihood that at some time in the future, and perhaps not too far, it will become an active commerical proposition.

I wish to return to the point that the early efforts toward developing these sands commercially were made with the idea of utilizing them for road surfacing materials, and not for the purpose of extracting oil. The possibilities of oil extraction were always present and, later on, as I said a moment ago, became a reality as a result of many years of careful experimenting.

Mr. MacNICOL: Did the leases not cover oil, bitumen and asphalt?

Mr. CRERAR: I should think it likely that they would. I cannot say at the moment,

because I have not before me particulars with respect to the leases issued over thirty years ago. I should think it likely, however, that the leases would cover anything that might be taken from the leased area.

Mr. MacNICOL: May I add one further word to what the minister has said? I made a very careful survey covering several days, and my observation was that the difficulty was not that of taking the oil out of the sand. That, in fact, was a very simple matter. The difficuty to overcome—and it has been overcome—was one of getting the sand out of the mine. The sands were shaved off, and the sand itself, a sample of which I have in my hand, acted like a sand blast. In the business in which I was engaged we used sand blasts, and I know that sand blasts will cut right through steel. Therefore, as the shavers or scrapers went round and round on a wheel belt the sand would wear them out. That was the biggest part of the difficulty.

May I add in passing, that the department is greatly blessed in having a man like Doctor S. C. Ells in its employ. I believe it was Doctor Ells who discovered the system of taking the oil out of the sand. It is a simple process which involves the use of hot water, and when this process is used the oil can be taken out in two minutes. I have often said to myself that the Minister of Mines and Resources has a wonderful opportunity to develop the resources of this country when he has in his department a capable oil expert like Doctor Ells. I know if I were minister I would be inclined to send Doctor Ells up to the Athabaska district, with instructions to produce oil. I am sure he would produce it in quantities sufficient to warrant the building of a pipeline to Edmonton.

Mr. HANSON (York-Sunbury): The minister has never brought down the correspondence for which I asked in March, and which I understood was to have been brought down. I would assume that there has been a considerable amount of correspondence between him or his department, the government of Alberta and the leaseholders. I should not be surprised if in that correspondence between the minister and the leaseholders, or those representing the leaseholders, the question of breach of trust was not raised. Under those circumstances I suggest we ought to have the correspondence. Furthermore it would not be surprising if in that correspondence the minister himself was gravely concerned about the question of breach of trust, and raised that question in correspondence with the government of Alberta. Following along that line of thought, I would not be surprised if that was one of the main reasons why the minister did not proceed with this legislation last year. I would ask him to state quite frankly what happened on that point.

This morning I read over somewhat hastily the observations made last night by the minister, but I could not find any place where he dealt adequately with the question I have raised. Undoubtedly in law, by reason of the circumstances which have arisen, in a degree the dominion has been occupying a fiduciary position. That fiduciary position will be lifted if this bill is passed and confirmation is given to the agreement between the dominion and the province. That agreement, as a schedule to the bill, is part and parcel of the legislation. When the bill is passed, the last refuge of those who have complained against the legislation will be gone; all their protection will have vanished, and they will be at the mercy of the provincial administration. At that time, of course, the provincial administration will be free to do whatever it likes.

I suggest that the minister ought to tell us whether this theory—possibly it is more than a theory—this cogent argument against what he is now doing was not raised directly by the parties and interests who, I shall not say will be the victims, but will be placed under the jurisdiction of the provincial authorities with respect to leases for petroleum rights originally issued by the dominion over this area. I would ask if that question did not seriously affect the minister's judgment. Is that not one reason why he refused to proceed last year, and one reason which actuated him, if I understand his statement correctly, when he sought to get the consent of these parties. In that connection I think the minister ought to tell us how many leases were issued by his department prior to the transfer and were outstanding in 1941. I mean those that were in good working order, those in connection with which the leaseholders had paid the annual fee or whatever was required by the department even though they might not be operating. I understood there were some 810 leases. That is the number outstanding at the time of the transfer of the resources, but I should like to know how many are still outstanding and might be said to be in good standing legally. Then I should like to compare that number with the number of lease owners who are alleged—I am going to use that word—or who it is said have agreed to this legislation. I think it will be found that a large number have never agreed. If they have not agreed they may be prejudicially affected by this legislation. The position occupied by the federal authority still stands with respect to them.

This matter has attracted a good deal of attention in the west, and I have had some representations made to me, I suppose largely because of the newspaper reports of the discussion that took place yesterday. This morning I was in receipt of a telegram from a gentleman whom I do not know but who signs himself Robert Wilkinson, and who, I understand, is president of the National Petroleum Corporation Limited of Calgary. As far as I know, this man has not been consulted, and according to his observations he certainly has not given his consent. His telegram reads:

> Regarding debate Alberta oil royalty situation operators here strongly support your opposition to passage of this measure particularly now when every encouragement should be given producers and those providing finances for new development. Ten large rotary drilling rigs now idle, all owned by independent operators. Please refer letter editorial page Toronto *Star* dated 15th July, 1941.

Then he makes reference to *Hansard* but I could not find the page to which he refers. And the telegram concludes:

> Suggest that passage of bill in present form will be near approach to sabotage and must be effectively prevented.

That is how this man characterizes this legislation.

If I interpreted the remarks of the minister correctly, they were to the effect that this legislation would bring about stability and from that there would follow action with regard to the production of oil. This man's statement is entirely contrary to that. He wrote a letter to the Toronto *Star* on July 15, 1941, and I have a copy of that before me. It was entitled, "Canada's Western Oil", and in it he indicates the reasons why there is no development of these oil fields. He states that the reason for this is the fact that the basic price has been put down so low having regard to the cost of operating that the independent operators cannot go on. He refers to the increased cost of drilling and so forth. He stated that there was $2,000,000 worth of equipment now idle. This position is not due to the position of the leases. This stagnation is due to the low prices which have been set by the oil controller or by some authority as the basic price for crude in the Turner valley field.

His letter was written just about the time the agitation was taking place in the province of Alberta and they were undertaking to do this by other methods, by going to the courts. I submit that that is where the matter should have been decided. It is a dangerous thing to interfere by legislation with a position affecting third parties, to walk in by legislation of this superior legislature and wipe out the defences that people may have in a court action. I think the minister is taking a pretty serious responsibility upon himself. On principle, this is bad legislation. I am reminded of a position that existed years ago in my own province. While a case was still before the courts an amendment was passed to the conditional sales of chattels act which completely wiped out the defence in an action then pending before the courts. The attorney general of the province was acting for one of the parties while, as attorney general, he was putting through legislation which affected his own position. If the minister wants to see what the courts thought about that state of affairs, I shall send him the citation. The case is the Port Elgin Woollen Mills v. Goldie and McCullough, reported in the New Brunswick reports.

This is a vicious type of legislation because it may affect directly the position of third parties. I do not think the minister can say that these leaseholders have freely and voluntarily consented to this legislation. They have done so under a species of duress. I do not mean that there has been a direct application of duress, but I am told by some of those who have given their consent to the position being attained that is now sought to be attained, that they gave it in the belief that if they did not consent, something worse would happen. A man from Edmonton told me that he could not come out in the open for fear of what would happen to him. That is a dreadful situation, and that may be just what Mr. Wilkinson means when he uses the term "sabotage" in his telegram.

I do not think the minister has followed this thing through to see what the effect of this legislation will be. I contend that he ought to withdraw this bill and review the whole position with reference to stability and increasing the facilities for the flow of oil in the fields of Alberta. The true position has been that it was so unprofitable to drill that the very thing that ought to have been done has not been done. I am going to read the letter which this man wrote and ask the minister what he thinks about it. It is addressed to the Toronto *Star*, dated July 15, 1941, which is less than a year ago, and reads:

> It is high time that the Canadian public be made acquainted with the developments in domestic production and supply of crude oil. It is even more important that it becomes especially informed about the situation in the Turner valley oil field, in the province of Alberta. Until recently, governmental interference has been negligible, particularly prior to the date of transfer of natural resources from the federal to the provincial authorities in 1930. In consequence,—

In consequence of the negligible interference by the government.

—a healthy industry has been built up—largely by independent operators—until an aggregate of 10,000,000 barrels annually were being produced.

The posted field price for crude oil is set by Imperial Oil Limited, and at present, with the concurrence of oil controller Cottrelle.

That is his statement, not mine. He goes on to say:

At the time of discovery in 1936 of crude oil in quantity, that field price was $1.55 per barrel. It has since then, in successive graduations, been reduced to $1.22 per barrel, which is the prevailing price as at July 9, 1941. Meanwhile, drilling charges—including purchase of equipment, wages, and extra depths, et cetera—have added nearly 30 per cent to the costs of wells, which now approximates $200,000 for a single well in Turner valley.

One reason why progress has not been made is the advanced cost of equipment and drilling and operating, on the one hand, and the reduced price of crude, on the other. I do not know who is responsible. This man says that Imperial Oil, being the largest producer, fix the price, and that may be true; but, he says, it has the concurrence of the oil controller. The letter proceeds:

Operators are now discovering they cannot continue development when handicapped by: firstly, a ridiculously inadequate price structure maintained by official government mandate under order of oil controller Cottrelle, and secondly, by the entirely unwarranted interference with the royalty structure affecting crown leases, coupled with the inopportune changes in oil and gas regulations with respect to the acquisition and development of same. The results of this discriminatory legislation are now becoming apparent. Where there are less than twenty, and none commencing,—

Mark these words:

Where there are less than twenty, and none commencing, there should be thirty new wells now drilling, and there are upwards of $2,000,000 worth of new drilling equipment standing idle at this date.

Canada is facing an oil famine, both east and west.

The man was a prophet.

Instead of placing every conceivable obstacle in the way of producers, governments should at least recognize the fact that oil is just as important in the life struggle in which we are now engaged, as are lumber, iron and chemicals, in some of which industries millions of government funds are being invested. Five or ten million dollars provided by our government for oil development could be the greatest victory insurance of all and should be considered at once.

The situation can be temporarily improved, but most certainly more aid is needed by the immediate restoration of the posted field price for crude oil produced in Turner valley to a minimum of $1.62 per barrel, basis 40° gravity—

I suppose that means specific gravity.

Forty cents per barrel added to the present schedule of prices would provide sufficient funds to drill ten new wells, all of which are going to be sorely needed to maintain the present allowable of 26,000 barrels daily. The withdrawal by the Alberta government of its recently introduced legislation dealing with royalties and oil leases would also assist in restoring public confidence.

This letter constitutes in one respect an indictment against the situation which has been existing in that field. It also, I think, carries with it a certain amount of conviction as to what the real situation is.

I ask the minister to review the whole position. He should do so in the interests of equity and justice, and not pursue a policy of appeasement towards the province of Alberta who want to violate what these oil leaseholders have considered were their just rights. If they are wrong, let the courts determine it. Let it not be said that the parliament of Canada legislated these men out of business or legislated away from them a right which they claim they hold. I do not know whether they do or not; I have not given the question sufficient intensive study. But I will never be a party to this class of legislation, if I understand the circumstances; and I am warning the minister now what the circumstances are. This parliament should not be a party to passing legislation which will have the effect of doing injustice to anybody. I do not believe the minister himself would agree to that. I know him too well for that. I am appealing to him to let the legal aspect of this question be referred to the courts, even though there be delay, and use his influence with the oil controller to get the basic price in Turner valley raised to cover the cost of production and to permit of some funds being used for exploration and drilling. Get this production up where it ought to be. As I understand it, production in Turner valley to-day is limited to a quota. I want the minister to correct me if I am wrong, but I read not long ago that there is a prorated quota. Well, if oil is required, for heaven's sake let us lift that kind of government regimentation; let us have production. You can never go very far wrong if you encourage production, but the minute you begin to restrict production of any natural commodity you run into trouble. You are just driven from one expedient to another to take care of the condition which develops when you interfere with ordinary laws of supply and demand in domestic production.

I suggest to the minister that he was right a year ago, if my premises are correct. If I had the file I believe I could soon find the

correspondence. The minister has never yet brought down the file, and he has not given any reason why he did not do so.

Mr. BENCE: He promised to bring it down.

Mr. HANSON (York-Sunbury): Yes, and he did not do it. I am surprised at that. I am not going to attribute any wrong motives. I suppose he forgot about it. Any human being is likely to do that. I do not attribute any blame to the minister on that account. But if he will allow this bill to stand over and review the file I think he will find exactly what I have stated to be the case. I have a telegram to-day from a man who is very much interested in this matter; he it was who gave me the information. In the departmental file it will be disclosed that a year ago the minister was tremendously influenced by this doctrine of breach of trust, with which I have tried to deal,—very inadequately, I fear, because I have not had time to study the question fully.

Mr. CRERAR: I can say at once to my hon. friend that this is wholly incorrect.

Mr. HANSON (York-Sunbury): That may be true, but it is the information I have, and how can I contradict the minister even were I disposed to do so? Why not bring down the file and let us have a look at it?

Mr. CRERAR: I will deal with it.

Mr. HANSON (York-Sunbury): That is a fair enough proposition,—let the bill stand over. And then I am going to ask the minister to commune with his own conscience. I submit to him in all seriousness that there is an ethical principle involved in putting through legislation of this kind which may affect the contractual rights of third parties. We ought not be parties to it.

I am not going to repeat myself. I think I have made abundantly clear, this afternoon at all events, if I did not do so yesterday, what my position is with regard to this legislation, and what I suggest the minister should do. He should review the whole position. He should not deliver these men, these people who think they have rights, unprotected into the hands of those who may not practise the golden rule.

Mr. CRERAR: Mr. Chairman, I must confess that I am amazed—

Mr. HANSON (York-Sunbury): You are always amazed.

Mr. CRERAR: —at the leader of the opposition. So far as the correspondence is concerned there is no objection to bringing it down. I can tell my hon. friend and the committee the circumstances with regard to the whole matter as I recall them, and I think my memory is accurate. As I recall now, it was in March a year ago that Mr. Tanner, the Minister of Mines and Lands in the province of Alberta, was in Ottawa, and he came to see me about the possibility of getting an amendment—the present proposed amendment—of the natural resources transfer agreement put through. As I recollect, he desired to do that in order to get a measure of stability in the Alberta situation.

That was considered. It looked to me to be a not unreasonable request, for this reason: there was no other province in Canada which had its resources that did not have that right and that power. Moreover—

Mr. BENCE: Except Saskatchewan. What about Saskatchewan?

Mr. CRERAR: Well, excepting the prairie provinces.

Mr. BENCE: Because their natural resources were not transferred to them until 1930.

Mr. CRERAR: My hon. friend knew I was referring to the prairie provinces, if I mentioned the province of Alberta; it applied to the prairie provinces. It does not apply in Manitoba or in Saskatchewan so far as oil is concerned; at any rate it has not arisen yet. But Manitoba took a different kind of action, and rather drastic action, with timber leases that were outstanding, and it rectified the situation to its own satisfaction without coming back here to get any amendment to the agreement.

Mr. HANSON (York-Sunbury): I suppose the timber licences were in default.

Mr. CRERAR: Well, probably some of them were in default.

Mr. HANSON (York-Sunbury): Of course they were.

Mr. CRERAR: And they attached conditions which they had a right to attach.

Mr. HANSON (York-Sunbury): There was a legal right there.

Mr. CRERAR: But we are dealing now with the situation in Alberta. I want to continue with what I was saying about the correspondence. The matter was discussed and examined after Mr. Tanner was here, and it was my intention to recommend to council that a bill be introduced giving effect to what is proposed in the present measure. That became known and of course strong recommendations—I am willing to use that word—were made against it by those representing the

licence holders in Alberta. These representations were made, not by correspondence but in person by the people who came here to represent them. The session was getting late and I wrote to Mr. Tanner and told him that I felt we could not proceed with the legislation that session and pointed out that strong objection had been taken to this procedure by many of the licence holders.

Mr. HANSON (York-Sunbury): What were the grounds of the objection?

Mr. CRERAR: The ground was that they feared the province of Alberta, I presume, might raise the royalities.

Mr. HANSON (York-Sunbury): Did they not take the ground that it would be a breach of a condition, that it ought not to be done on ethical grounds?

Mr. CRERAR: I do not recall that that condition was mentioned. At any rate I wrote to Mr. Tanner and said that it would be impossible to proceed with the legislation and I suggested in my letter to him that he should endeavour, or that the Alberta government should endeavour to reach an understanding with the oil interests. It was not a matter upon which we wished to legislate here if there was any considerable measure of opposition. That was the situation a year ago. What happened? The Alberta government later on assessed these dominion licences at the provincal rate of royalty. Exception was going to be taken to that and they made a reference to the higher court in Alberta to see whether or not they had power. That hinged upon the point I mentioned last night as to whether or not the federal government, in section 2 of the transfer agreement, passed over to the Alberta government all powers it enjoyed in respect of these licences. There is no question whatever that had these resources remained with the federal government under dominion administration the dominion had the right to vary the terms of royalty. That is not disputed.

Mr. HANSON (York-Sunbury): I think it is disputed, but I should not like to pass judgment on it.

Mr. CRERAR: I read last night the clause from the form of licence, and for the benefit of those who did not hear it perhaps it might be well for me to read it again. This was the condition of the licences granted. The clause, as I said last night, recites the period for which the licence is issued, the fact that it is renewable, and then says:

—and also rendering and paying therefor unto His Majesty a royalty at such rate as may from time to time be prescribed by order of the governor general of Canada in council on the products taken out of the said lands.

Mr. HANSON (York-Sunbury): That was in 1919?

Mr. CRERAR: That was a condition in the licence under which all these operators are operating to-day.

Mr. BENCE: And after that it was set at a definite amount for a definite length of time by order in council of October 29, 1920.

Mr. CRERAR: When the licences were first issued, no rate of royalty was fixed, but they had power to vary it from time to time.

Mr. HANSON (York-Sunbury): And they did in 1920. They made it a definite length of time.

Mr. CRERAR: No.

Mr. HANSON (York-Sunbury): Yes.

Mr. CRERAR: They had power to vary it. At any rate, I am not going to get into an argument with my hon. friends of the legal profession because I quite realize, I hope, that I have the short end of the stick in a debate of this kind.

Mr. HANSON (York-Sunbury): This is a question of fact.

Mr. BENCE: What then was the purpose of section 2 of the agreement of December 14, 1929, if it was not to preserve these rights?

Mr. CRERAR: The contention of some authorities, I believe, is that the purpose of that section was that the government of Alberta would observe the conditions of these licences, and one of the conditions of the licences was that the federal government had power to vary the royalties from time to time.

Mr. HANSON (York-Sunbury): As I understood it, the legal question with respect to section 2 was, did the government, having regard to the language of the section, have the right to raise royalties, or were they bound by the condition as it then existed. That was the legal question and that is the question that should have been left to the courts.

Mr. CRERAR: In ordinary cases there is a good deal to commend the position just taken by the leader of the opposition. However, let me pass on. There is no question that under these licences—it has never been disputed at any rate—they were under the necessity of paying 10 per cent royalty. There is no question about that.

Mr. HANSON (York-Sunbury): After a certain period.

Mr. CRERAR: No, from 1930 on. There is no question that to-day the royalty that can be collected in Alberta on these oil licences is 10 per cent.

Mr. HANSON (York-Sunbury): To-day, yes. I think that is right.

Mr. CRERAR: Now what is proposed here? My hon. friend made a great deal of play on the fact that it was this condition of affairs that was leading to the cessation of drilling.

Mr. HANSON (York-Sunbury): No, that was only one factor. The main factor was the low price of crude.

Mr. CRERAR: So far as the low price of oil is concerned, we have nothing to do with it.

Mr. HANSON (York-Sunbury): The oil controller has.

Mr. CRERAR: Perhaps he has during the currency of the time of his office, but within a few months of the cessation of war his powers disappear. Under the proposed arrangement the licence holders can agree to take 12½ per cent royalty for a period of ten years. The maximum they can be charged will be 15 per cent. There will be a minimum of 5 per cent.

Mr. HANSON (York-Sunbury): Unless the Alberta government should change its mind.

Mr. CRERAR: There will be a minimum of 5 per cent, and they can vary it in between those two points. I do not think that is the factor that has led to the cessation of drilling—

Mr. HANSON (York-Sunbury): I never said it was.

Mr. CRERAR:—and to the condition which we are trying to remedy under this amendment to the agreement. The reason why drilling has ceased is the reason which I stated last night—uncertainty, instability, lack of security, doubt as to what may happen in the future.

Mr. HANSON (York-Sunbury): This man says that the reason is the low price fixed and maintained by law. He probably knows what he is talking about.

Mr. CRERAR: If that is so, my hon. friend cannot urge it as a reason why this legislation should not pass.

Mr. HANSON (York-Sunbury): They are two separate things.

Mr. CRERAR: That has nothing to do with it.

Mr. HANSON (York-Sunbury): My hon. friend urged that as a reason why there is instability—because of this situation.

Mr. CRERAR: Suppose we were to throw this bill out of parliament—

Mr. HANSON (York-Sunbury): Throw it out.

Mr. CRERAR: Would that change the price paid for oil?

Mr. HANSON (York-Sunbury): No. You could begin *de novo* and get a fair price.

Mr. CRERAR: My hon. friend is moving rapidly from one position to another. It would not affect it at all. The main purpose of this is to get stability. I do not know whether these people who hold these oil licences, when they sent a representative here to discuss the matter, knew what they were talking about, but I presume they did. When they tell me that an agreement of this kind, giving stability for ten years not only on dominion licences but on the provincial licences that have been issued since, would lead to development and help to relieve the oil shortage, I say with due deference that I must pay more respect to their opinions than to those expressed this afternoon by the leader of the opposition.

Mr. HANSON (York-Sunbury): What about those who have not agreed, who, I believe, are a majority?

Mr. CRERAR: I cannot at the moment say how many, but I know a considerable majority of the leases that were outstanding when the resources were transferred cover areas in which no drilling has been done and in which oil will perhaps never be found. I stand by the statement I made yesterday, that of the active interests that have possibilities of producing oil, a considerable majority support this legislation. I do not know who Mr. Wilkinson is; I never heard of him or his company, but I believe I am within the mark when I say there are scores of oil companies—

Mr. HANSON (York-Sunbury): He is probably a driller.

Mr. EDWARDS: If I may intervene, Mr. Wilkinson is a very well known and successful operator in the drilling of oil wells.

Mr. CRERAR: I am glad to have a halo hung around Mr. Wilkinson's head. I do not wish to do the gentleman any injustice.

Mr. EDWARDS: He is no friend of mine

Mr. CRERAR: There was another point mentioned by the leader of the opposition, a complaint he made about the pro rata production provisions under which the wells in the Turner valley are operated. That, again, is a matter of provincial legislation.

Mr. HANSON (York-Sunbury): That may have been all right at one time.

Mr. CRERAR: It was made possible by an amendment passed in 1938. It was believed that in some wells, unless there was a control of production, that is of the amount of oil allowed to be taken from the well, say in each twenty-four hours, the well would be exhausted more rapidly and in the end less oil would be taken from it. Those regulations have, I understand, been in effect in most oil producing fields in the world. I do not, however, think it really has anything to do with this discussion.

I come back to the point I made last night, that in the judgment of those who, I believe, are competent to judge, this measure will provide stability for a period of at least ten years. Every person holding a provincial or dominion licence in Alberta will know what is ahead of him for the next ten years. Under those conditions I submit that there will be increased interest, more encouragement to capital to go in and develop and operate all these drilling rigs which the leader of the opposition said were now idle—

Mr. HANSON (York-Sunbury): I did not say that. This man said they were idle.

Mr. CRERAR: Well, the authority my hon. friend quoted said they were. They will have a chance to get to work. What is the alternative?

Mr. BENCE: Leave it to the Alberta government. They can provide stability if they want to.

Mr. CRERAR: If this measure is defeated, the alternative is that the corresponding measure in Alberta ceases to have any effect. The agreement remains just as it was.

Mr. HANSON (York-Sunbury): Ten per cent royalty.

Mr. CRERAR: It will probably start again the long procession through the courts to determine whether or not the government of Alberta have the power to assess a higher royalty.

Mr. BENCE: Only if they insist on proceeding.

Mr. CRERAR: Please let me continue. It will probably start a long procession through the courts again to determine what the powers of the Alberta government are under the transfer agreement, and during all that period the people who would be interested in drilling wells under conditions of stability stand back.

Mr. HANSON (York-Sunbury): That is a perfect *non sequitur*.

Mr. CRERAR: That is a perfectly pertinent fact in regard to this question. The result will be to lessen the production of oil in Alberta, increase the oil difficulties of this dominion, and do no one any good.

Mr. HANSON (York-Sunbury): The minister might now give some attention to the question of breach of trust that I raised. He has evaded that in every case.

Mr. CRERAR: I will deal with that now. I dispute that there is a breach of trust. Suppose this legislation does not pass—

Mr. HANSON (York-Sunbury): Then there is no breach of trust.

Mr. CRERAR: —then the Alberta government take action through the courts to establish that they have the right.

Mr. HANSON (York-Sunbury): All right; then that will be the position; that will be the law.

Mr. CRERAR: Would there be any breach of trust then by the federal government?

Mr. HANSON (York-Sunbury): No; they will be relieved of responsibility. But until that point is determined, they will say there is a breach of trust and they will have the right to say it.

Mr. CRERAR: I think my hon. friend is straining at a gnat and swallowing a camel there.

Mr. HANSON (York-Sunbury): Not at all; there is a principle involved.

Mr. CRERAR: As I said last night, I have no hesitation whatever in recommending this measure to parliament; I have no doubt that it will lead to stability of conditions in Alberta that will promote development and help to relieve our present difficulties.

Mr. CHURCH: I oppose any variation of this transfer agreement between the government of Canada as represented by the Minister of Mines and Resources and the government of Alberta as represented by the provincial minister of mines. I do so first from the legal point of view and, second, as a matter of public policy. It is strange the enthusiasm of the present minister for this proposed variation. It is strange the things that are done in the name of the war. You can hardly blow

your nose, as the hon. member for Témiscouata said one day, without its being said it is for the war. You can scarcely blow your nose now anyway because we have dollar-a-year men limiting the length of your handkerchief.

The principle of law in this variation transfer has been before the privy council in what was known as the Alberta great waterways case, which was on all fours with the proposed agreement. The law is quite clear. The crown in the name of the dominion or the crown in the name of the province cannot vary agreements or contracts or bonds or any such matters. They may do it in British Honduras; this variation agreement is almost on a parallel with the Alberta privy council case to which I referred, but the decision of the privy council in the great waterways case was the ground on which the bill of sale was based when the province of Ontario purchased the $32,000,000 property of the power companies in the Niagara district. All the papers in this new agreement matter should be tabled. Who is asking for this thing? There are 860 leases affected by this agreement. Did the holders of any of them object? If one objected, that one on behalf of himself and the other leaseholders could enter action against the attorneys general of the province and the dominion to set aside the proposed transfer in view of the decision of the privy council.

I oppose this measure on other grounds. We have a supreme court in Canada. Under the Supreme Court Act it is the duty and function of the government, where vested rights are involved as in this particular transfer agreement; it is not only the duty but one of the functions of the Attorney General of Canada, that is the present Minister of Justice who is measuring up as a great lawyer and a gentleman who, I believe, will be a great Minister of Justice, to refer the matter to the Supreme Court of Canada.

The functions and duties of the government in transfer agreement cases of this kind are set out in the decisions of the privy council to which I referred. Under the Supreme Court Act it is the function of the government of the day, where doubt has arisen, to refer the matter for the opinion of the Supreme Court of Canada. There is doubt in this case; both governments knew they had no power to vary these contracts legally and so make an agreement as a matter of policy. If they did not know that they would not have framed this bill in this language. They knew the courts would set it aside, on the ground that the government had no right to vary a contract in the manner indicated. A reference should have been made to the Supreme Court of Canada, and in less than three months a decision on the text of the reference would have been given. It was bad enough in peace time to squander the natural resources of this country, the products of the sea, the soil, the forest, the mine and so on. I hope the hon. gentleman will not leave—

Mr. CRERAR: I am coming back immediately.

Mr. CHURCH: If you would also leave the agreement alone it might be better for the resources of the country, or if you would leave the decision to the people. Where do the people who own this property come in? The dominion government is simply the trustee of the public domain of this country. Our natural resources have been squandered so much that future generations will wonder what kind of people were sitting in this parliament to allow that to go on. I remember 1927, when it was proposed to hand over the natural resources of the whole Ottawa valley to the Sifton interests. We were in opposition at that time; we started a debate and talked out the bill, so that it did not go through. If it had gone through, all the resources of this great Ottawa valley would have been handed over forever to private greed and gain.

This is the second war session we have done something in the way of giving away the natural resources of Alberta in the name of the war. Last session a bill was introduced by the Minister of Mines and Resources having to do with power development in Banff national park. Considerable discussion took place on that bill, and many questions of law and public policy were raised. At the time, in 1927, the Ottawa valley matter was under consideration I quoted some of the words of the late President Theodore Roosevelt and the late Sir Adam Beck on the need of a national policy for our resources. Perhaps I might recall what I quoted at that time. The late President Theodore Roosevelt said:

> The people of our country are threatened by a monopoly more powerful than has ever been seen, as it affects very closely their domestic and industrial life. Our next generation will witness a shortage of those natural resources, petroleum and gas. The price of coal will be such that hydraulic power turned into electrical energy will, owing to its cost, become the prevailing factor for transport, for manufacturers, for lighting and heating our towns. Our hydraulic power alone, entirely and judicially employed, would be adequate for the present needs of transport, industries, municipalities and private individuals.

And Sir Adam Beck, in opposing the bill that would have given away those great natural resources which belong to the people of the whole dominion, said:

> In my judgment, no government in Canada can stand against the opposition of the public

opinion that will be expressed by the people of the provinces of Ontario and of Quebec once it is fully appreciated what sacrifice of their interests is involved. . . .

He was then referring to the giving away of the Carillon water power development on the Ottawa river, and the right to export power to the United States. Ever since I have been a member of this house I have been asking for a national policy with regard to oil, gas, coal and power. We have 42 million horse-power available in Canada of which less than one-sixth, or 7 million horse-power, has been developed, and of that a part is only seasonal. Here you are, giving away the heritage of the people without their authority or consent. I have also asked for a national policy in connection with coal. There was a debate in this house on that subject on my resolution for a national coal supply, all British, on March 18, 1923, and that discussion went on for ten years before anything was done about a coal supply from Alberta or the maritimes or Wales. We also had many debates, from 1923 on, on a policy of conserving the oil, coal and petroleum resources of Alberta and other parts of Canada. The government have had almost twenty years in which to formulate a policy. Why did they have to wait for a war to come along before doing anything about it? I agree with what was said in this chamber last evening by the hon. member for Rosetown-Biggar (Mr. Coldwell) that notwithstanding the royalties, leases and all that sort of thing, the time now has come when instead of proposing amendments such as this the government should bring in a national policy with regard to coal, gas, oil and the power inherent in falling water. Here we are giving away these natural resources in the name of the war, and calling it conservation. What sort of conservation was it when we gave Japan large quantities of our resources of timber, pig iron, scrap iron, aluminum, nickel, platinum, copper and all the rest. Our natural resources were given to our enemies to make munitions for land, sea and air, who are making war against us on the seven seas.

I can tell you that one of these days, when this giving away of the heritage of the people is fully understood, there will be a rebellion in this country. Public opinion will be against such squandering of the public domain. This coming winter we are faced with a coal shortage, but what are we doing? We are sitting around here amending a transfer agreement that will bring about ten times as much litigation as we have had in the past, and Alberta since 1930 has had a lot of it. As I have said, any or all of the 860 people holding these leases can issue a writ against the attorney general of the province and the dominion and have this whole agreement set aside. The people of Alberta should have voted on this deal, because I venture to say that in the years to come it will be regarded as just as iniquitous as the Ottawa valley and other gifts of resources. What was refused in the Ottawa and Georgian bay canal principle of dealing with resources in the days of peace is now put forward as a conservation measure in days of war. I do not believe a single gallon of oil will result from this agreement, because there is no doubt it will be taken to the law courts and kept there for years.

We had this matter of conservation and public ownership under discussion from 1902 to 1930, in Ontario, which finally has been redeemed from this sort of power slavery of private greed. I think every other province should do the same thing; for if it had not been for the power development in Ontario our effort in the last war would have been greatly reduced. At one time during that war fifty per cent of the munitions produced in the war came from Ontario, thanks to the magnificent power reserves that were available here under public ownership at cost. I believe that if the dominion had had a national policy designed to preserve these natural resources of the sea, the soil, the forest and the mine; the coal resources, the oil and gas resources and the power resources, it would have been a blessing to the people of this country long before the war began, and it will come quickly, after the war. It belongs to the people.

Mr. CASTLEDEN: I understood the minister to say that at the present time there was a curtailment or stoppage in the production of oil. To what extent has there been curtailment, or by what percentage is last year's production to be reduced this year?

Mr. CRERAR: I did not make the observation to which my hon. friend alludes; I think it was made by the leader of the opposition.

Mr. CASTLEDEN: Then I should like to know if it is true.

Mr. CRERAR: I think it was made by the leader of the opposition. I understand, however, that certain conservation measures have been put into effect in the Turner valley field which for the time being reduced, with the existing number of wells, the amount of oil produced. But those measures were taken to lengthen the life of the field. I am not a technical expert in the matter of oil produc-

tion, but I understand that you can take oil from a well in a way which will lengthen its life, and in the end get more oil, or you can follow another method which for the moment will give you more oil, but which will shorten the period of operation of the well.

Mr. BLACKMORE: That is correct.

Mr. CASTLEDEN: Was there any deliberate curtailment in the production of oil?

Mr. CRERAR: There was no deliberate curtailment as far as I am aware. The only measures taken were measures for conservation.

Mr. BENCE: I would point out in reference to the remarks of the minister that section 2 of the agreement dated December 14, 1929, contained the following statement with respect to the matter of leases:

. . . and further agrees—

That is, the provincial government.

—not to affect or alter any term of any such contract to purchase, lease or other arrangements by legislation or otherwise.

That is much broader than the minister has indicated to the committee. It covers not only the originally leased contracts, but any arrangement by legislation or otherwise.

Actually what happened in this instance was that in 1920 an order in council was passed for the specific purpose of giving stability to oil production in Alberta. That stability was given by virtue of the fact that the men who owned the leases knew definitely the amount they would have to pay, and knew it would not be exceeded by the amount set out in the order in council.

I suggest to the committee that if there were any instability, such instability was created by the action of Alberta, and that Alberta itself could easily stabilize the thing without the necessity of this legislation, by agreeing that section 2 did not give them the authority to change the royalties. If the province would agree to that, there would be no necessity for any litigation in the courts, no necessity for uncertainty in the minds of the leaseholders, and no necessity for members of this committee, who, I suggest, have only a meagre amount of information before them on which to base their judgments, to pass upon something which I contend, with the leader of the opposition, is definitely a breach of trust. After all, if there is any dispute in the courts as to whether Alberta was entitled to increase its royalties, surely it is not the duty of this parliament to settle the matter for the courts, and to place Alberta in the preferred position they have endeavoured to obtain, by deliberately coming out and committing what I consider to be a breach of section 2 of the agreement.

I ask the minister to inform the committee as to whether or not that stability could be obtained just as easily if Alberta would take the action I have suggested. I would also ask him the question I propounded last night, namely, whether or not section 2 of the agreement dated December 14, 1929, was considered by the law officers of the Department of Justice, and whether the minister obtained an opinion from that department as to the reason for the incorporation of section 2 in the agreement at that time, and whether or not it was put in for the purpose of protecting the dominion government against possible action for damages. In the event of any uncertainty in the minds of the law officers of the Department of Justice as to the dominion's liability for damages, did the minister consider whether or not the dominion government should make itself liable for any damages which were actually incurred as a result of the passing of this legislation? I should like to have an answer. Was this matter referred to the Department of Justice and, if not, does the minister not think it should be referred before we pass upon it?

Mr. CRERAR: The bill we are considering received the approval of the Department of Justice.

Mr. HANSON (York-Sunbury): As to its form, but not on the legal point raised.

Mr. CRERAR: It was approved as to form. The question of policy involved would not naturally be one for the Department of Justice to consider.

Mr. STIRLING: Section 2 is a contentious section.

Mr. CRERAR: Section 2 was agreed to by both parties to the agreement ten or twelve years ago when it was passed. I have not consulted the Department of Justice as to whether or not in its opinion that section carried over to the Alberta government the power which the federal government undoubtedly had to vary leases.

Mr. HANSON (York-Sunbury): Did the minister not think it wise to consult the law officers of the crown as to the legal effect, not the policy, of this bill? Surely that is a pertinent question. If that has not been done, I suggest it ought to be.

Mr. CRERAR: What does the leader of the opposition mean by the legal effect?

Mr. HANSON (York-Sunbury): I mean the legal effect of paragraph 2. I need not

read the agreement, but I shall read the part in question:

> And whereas by paragraph 2 of the said natural resources transfer agreement the province agreed that it would carry out, in accordance with the terms thereof, every contract to purchase or lease any crown lands, mines or minerals and every other arrangement whereby any person had become entitled to any interest therein as against the crown—

That is to say, they were to carry out the position as it was.

> —and further agreed not to affect or alter any term of any such contract to purchase, lease or other arrangement by legislation or otherwise, except either with the consent of all the parties thereto, other than Canada, or in so far as any legislation may apply generally to all similar agreements relating to lands, mines or minerals in the province or to interests therein, irrespective of who might be the parties thereto.

There is a definite commitment on the part of the province. To seek to do this by legislation, when a vexed legal point has arisen with respect to the principle, is wrong. The principle is wrong to seek to undo something to which Alberta agreed. Otherwise the minister of lands and mines of Alberta would not have come and asked for this legislation. It relieves them of an obligation imposed upon them by paragraph 2 of the transfer agreement. The minister is not doing himself justice when he plays into the hands of a government which wants to do by an indirect method what it cannot do directly. That is what he is doing. If bad, it is bad in policy, bad in substance, bad morally, bad in law and bad in equity. For the moment I cannot think of any further language to describe it.

Mr. ROSS (Calgary East): I understand the oil controller has expressed the opinion that this legislation would be helpful in our war effort. If that is so, I cannot agree with the leader of the opposition when he says that the matter should be referred to the courts. That would mean that more than a year would elapse before the case could be disposed of. Anything which will help our war effort we should have as quickly as possible.

Mr. BENCE: How do we know it will, though?

Mr. ROSS (Calgary East): I understand the oil controller expressed that opinion.

Mr. HANSON (York-Sunbury): That is only hearsay.

Mr. ROSS (Calgary East): Has the minister considered the alternative proposition of placing a ceiling on the royalties reserved by the crown under these oil leases? We have a ceiling on wages and a ceiling on nearly everything else in this country. I think the minister should consider placing a ceiling of 10 per cent on the royalties payable. They have never collected more than that, and I cannot see why it would not create as much stability as this legislation, if not more.

Mr. HANSON (York-Sunbury): And it would settle the matter.

Mr. ROSS (Calgary East): It would settle the matter for the duration of the war. The oil controller has expressed the opinion that the passing of this legislation would help our war effort by stabilizing the industry. Has he had before him for consideration this alternative proposition of placing a ceiling on crown royalties? If so, what conclusion did he come to as to its merits? It seems to me that the placing of a ceiling would do more to stabilize the industry and help our war effort than would the raising of the royalties by 2½ per cent.

This is a tremendously important matter, far more serious in its implications than most of the legislation that comes before this house. Assuming that the lessees are right in their contention that Alberta has no right to increase the royalties, then we are consenting by this legislation to Alberta breaking contracts with hundreds of lessees. As I stated last evening, if it is going to help the war effort let us do it; but if the war effort can be helped more by adopting the alternative proposition of putting on a ceiling, I submit that that should be done. If the minister has not already had the opinion of the oil controller on this alternative proposition then I suggest he move that the committee rise, report progress and ask leave to sit again, and in the meantime he can get the information from the oil controller.

Mr. HANSON (York-Sunbury): And from the law officers of the crown.

Mr. ROSS (Calgary East): Yes. This matter is too serious to deal with at this time without further consideration by the oil controller.

Mr. CRERAR: I might deal with the point raised by the hon. member for Calgary East (Mr. Ross). So far as I am aware the question of placing a ceiling on royalties was not discussed with the oil controller, and I do not think it had been raised until it was brought up by the hon. member. It occurs to me that if you are to place a ceiling on royalties it can be done in two ways. First, it can be done by an understanding with the Alberta government. As a matter of fact this legislation does provide a ceiling for a period of ten years, although there may be a difference of opinion as to

what that ceiling should be. It provides a ceiling for ten years not only on the licences that were issued by the dominion government prior to the transfer of the resources, but on the licences issued by the provincial government subsequent to the transfer of the resources.

Mr. HANSON (York-Sunbury): It does not cover those who did not agree.

Mr. CRERAR: My hon. friend is first class at interrupting.

Mr. HANSON (York-Sunbury): All right; I do not want to be nasty about it. You have not quite stated the position. This does not provide a ceiling upon those who are not parties to it. It affects only those who have agreed to it. Let us have the true position stated.

Mr. CRERAR: As I stated, I am a bit handicapped—

Mr. HANSON (York-Sunbury): It is only those who come into the arrangement.

Mr. CRERAR: I will let my hon. friend finish, then.

Mr. HANSON (York-Sunbury): I wanted to have it correctly stated.

Mr. CRERAR: If my hon. friend is finished I would be grateful if he would let me go on for a while.

Mr. HANSON (York-Sunbury): Do not make misstatements.

Mr. CRERAR: I am not.

Mr. HANSON (York-Sunbury): Yes, you are.

Mr. GRAYDON: Perhaps it would be a good idea if both hon. gentlemen addressed the Chair.

Mr. CRERAR: The other way to get a ceiling on prices on royalties would be by arbitrary action of the oil controller under the powers given to him under the War Measures Act. I would point out to the hon. member for Calgary East that if that procedure were followed any ceiling that might be established would cease to have effect when the war was over.

Mr. HANSON (York-Sunbury): So it should.

Mr. CRERAR: We would then revert to the old condition of affairs. I am going to adhere to my argument that this does establish a ceiling on royalties in Alberta for a period of ten years. As I said a moment ago, there may be a difference of opinion as to where the ceiling price should be; nevertheless a ceiling is established. I think when you compare it with the prices prevailing in fields in other parts of north America it will be found that it is established at a reasonable level.

Mr. EDWARDS: There was one point the minister seemed to be quite sure about in his statement last night, and it is something over which I have been considerably exercised since. He referred to the undoubted power of the federal government to alter or change the terms and conditions of a lease by regulation after the lease had in fact been passed over to a private individual. This very matter has been the subject of judicial questioning only as recently as April of this year. The provisions of section 2 of the natural resources agreement came before the supreme court of Alberta in connection with the case of Anthony v. the attorney general of Alberta and the minister of lands and mines, reported at page 833 of volume 1 of 1942 "Western Weekly Reports". The question there was the right of the province to alter the terms and conditions or to refuse renewal of a timber lease which had been issued by the dominion government prior to the transfer of the natural resources, and which, therefore, came within the purview of the Alberta resources agreement, under this section 2 to which we are referring. I quote from the judgment. Referring to the Alberta government's order in council, it says:

> The order in council of July 25, 1940, prohibiting renewal of timber licences for more than ten years after the date of sale affects or alters the plaintiffs' licences which are renewable while merchantable timber remains on the limits and is ultra vires as being contrary to section 2 of the natural resources agreement. I declare the said provision in the order in council to be invalid and ultra vires as against the plaintiffs.

That in turn is supported by no less an authority than the Supreme Court of Canada in the case of Spooner Oils Limited vs. The Turner Valley gas conservation board and the attorney general of Alberta, which is cited in the Supreme Court Reports for the year 1933. With the permission of the Chair I would like to read what I consider is pertinent to the subject under discussion as found in the judgment of the Chief Justice of Canada. Here you had an oil and gas lease similar to the ones which are being discussed and which are contemplated by this very bill. I quote:

> The lease declares, in express terms, that it is granted by the Minister of the Interior, pursuant to regulations made for the disposal of petroleum and natural gas rights, by orders in council dated respectively the 11th days of March, 1910 and 1911, "a copy of which regulations is hereby appended". The term is twenty-one years,—

You will notice the language here is exactly that quoted by the minister:

—and the lease is "renewable for a further term of twenty-one years provided the lessee furnishes evidence satisfactory to the Minister of the Interior to show that during the term of the lease he has complied fully with the conditions of such lease and with the provisions of the regulations under which it was granted".

Among the "provisos, conditions, restrictions and stipulations" of the lease there is this:

(2) That the lessee shall and will well, truly and faithfully observe, perform and abide by all the obligations, conditions, provisos and restrictions in or under the said regulations imposed upon lessees or upon the said lessee.

The regulations "appended" to the lease contain the following:

That is the same form of lease that is still being issued.

21. The lease shall be in such form as may be determined by the Minister of the Interior, in accordance with the provisions of these regulations.

It appears that the lease is framed upon the view that the rights of the parties inter se are to be ascertained from the provisions of the lease, from the regulations, a copy of which is appended thereto, and such further orders and regulations and directions as may be made from time to time during the currency of the lease under article 9 of the lease or sections 23 and 24 of the regulations. The last mentioned sections are in these words:

"23. No royalty shall be charged upon the sales of the petroleum acquired from the crown under the provisions of the regulations up to the 1st day of January, 1930, but provision shall be made in the leases issued for such rights that after the above date the petroleum products of the location shall be subject to whatever regulations in respect of the payment of royalty may then or thereafter be made."

Mr. HANSON (York-Sunbury:) That is, by the dominion.

Mr. EDWARDS: Yes, of course, it can only be, because this is the 1910-11 regulations.

"24. A royalty at such rate as may from time to time be specified by order in council may be levied and collected on the natural gas products of the leasehold."

Note this, "as may from time to time".

But, it is argued that, notwithstanding the form of the lease itself, the concluding words of s. 1 of the regulations of 1910 and 1911 have the effect of incorporating, as conditions of the lease, all subsequent regulations made during the currency of the term. The sentence in which these words occur is this:

"The term of the lease shall be twenty-one years, renewable for a further term of twenty-one years, provided the lessee can furnish evidence satisfactory to the minister to show that during the term of the lease he has complied fully with the conditions of such lease and with the provisions of the regulations in force from time to time during the currency of the lease."

"The regulations in force from time to time during the currency of the lease" should be read, it is argued, as embracing all subsequent regulations whether incorporated in the terms of the lease, by force of some provision of the lease or of the existing regulations, or not.

And here is what the Chief Justice of Canada said:

We cannot agree with this view of the effect of these words.

Mr. HANSON (York-Sunbury): Certainly it would be bad law.

Mr. EDWARDS: He states:

The view suggested involves the result that the terms of the contract may in every respect be altered (as regards rental, as regards royalties, as regards the obligations of the lessee in respect to the working of the mine); and by one party to the lease acting alone, without consultation with the other; and with the result (a result which, as we have seen, actually follows in this case from the acceptance of the respondent's contention) that a contract radically new, in its essential terms, may be substituted for that explicitly set forth in the document executed by the parties and the specific regulations that it incorporates.

It will be observed that the proviso, in express terms, affects only the right of renewal. On the supposition that the proviso relates to this right of renewal, and to that right alone, we arrive (on the construction advocated by the respondents) at the truly extraordinary result, that, even under the renewed lease, the lessee is not bound by s. 29; although his right of renewal is dependent upon compliance with that section prior to the completion of the original term. It is difficult, no doubt, to think it could have been intended that the lessee's right of renewal should be conditioned upon the performance, during the term antecedent to its renewal, of obligations which the lessee was not required to observe as contractual terms of the lease. But to us it seems clear that, if it had been intended to incorporate, as one of the terms of the lease, a stipulation that all future regulations touching the working of the property should become part of the lease as contractual stipulations, that intention would have been expressed, not inferentially, but in plain language.

That is the judgment of the Chief Justice of Canada. I submit, in the light of the reasoning in both these cases, that there is very great doubt as to whether even the federal government can by regulation change and alter the terms of one of these leases, I come back to the thought which was uppermost in my mind. God knows that I do not want to do anything which would militate against the maximum production of oil in Alberta. But my solicitude on this occasion is this, that the firms and institutions and individuals who gave this federal government their money and bought these leases years ago, and have paid the rentals year after year, and have gone ahead and drilled wells and spent hundreds of thousands of dollars, are going to be cut off so far as the rest of their leases is concerned. We in effect are

saying to them, "On any of these old federal leases that you have not developed up to this date, from now on you are going to have to pay an increased gross royalty of 2½ per cent to the government of Alberta". Anyone who knows will tell you that 2½ per cent gross royalty is equivalent almost to a 12 per cent net royalty, which is a serious matter.

To my way of thinking, this government ought to respect its obligations to those people who in good faith contracted with it. If what the Alberta government wishes to do is fair, just and equitable, then there is no occasion to come to this parliament. Section 2 makes it abundantly clear that the provincial government can do anything they like as long as they treat all alike, or the parties themselves agree. The minister has said that the majority have agreed. Perhaps they have; but an agreement on the part of the majority to get an advantage for themselves is no reason why we should abandon the minority, who get nothing out of it and who are really paying the price of this agreement. So far as stability is concerned, as I see it the only stability that arises from this whole agreement —and I am satisfied that it is the only reason why these operators or oil well owners have signed it—is that they have confidence that the federal government, as it has heretofore done, will see that their contracts are performed and that the conditions are observed. And these people have not the same confidence in the government of Alberta.

Why should we as a parliament be a party, particularly at the instigation of the provincial government, to what in my opion is something that the Alberta government cannot of itself do by legislation, and is not fair, just or equitable? They would not need to be here, they would not need to do it by legislation such as this were the objective not discriminatory. The only stability that can possibly emanate, from the passing of this legislation, to the people having leases in Alberta at the present time is that they will feel they can always go to the federal government and say, "You are a party to this agreement; we have your signature that our royalties will not be more than 15 per cent on these provincial leases." But why should we attempt to exercise any control over a piece of property or an intangible right or asset over which we never had, have not now and never in the future can have any control? Personally I think it is asking too much. I think it is unfair and inequitable. I have grave doubts whether this legislation is not being asked for now to get rid of that very section in the Alberta resources agreement which the Supreme Court of Canada and the Supreme Court of Alberta have pointed out must be respected. It would be a satisfaction, I dare say, to the provincial government to say, "All right; get rid of that legislation and then we shall have a free hand to do as we please."

Mr. HANSON (York-Sunbury): The hon. member for Calgary West (Mr. Edwards) is to be congratulated upon his industry in looking up the decisions affecting this matter. I am quite certain the minister himself was not aware of these decisions or he would not have consented to this legislation. I suggest to him that he withdraw the bill in the light of the declared law of the country, because his primary premise is based on a false theory. I did not dare go that far last night, because I had not given consideration to the question, but there is no doubt, from the language of the chief justice in the case referred to by my hon. friend, that there is a contractual arrangement which cannot be altered. What this bill is trying to do is to violate a legal decision and to do by the backdoor method that which cannot be done directly. I do not think the minister wants to put himself in that position. I would not if I were minister. I would therefore ask him to move that the committee rise and report progress so that he may review the whole position. That is the proper procedure for him to take. It is what I would do; it is what anybody would do who is seized of the gravity underlying the whole principle of this bill. I have no brief for anyone, but if I had known about those decisions—I am not familiar with decisions in the western courts, nor have I had time recently to read decisions of the Supreme Court of Canada — I would have put them on the record last night, and I think I would have been justified in doing so. Again I appeal to the minister to move that the committee rise so that he may have the whole position reviewed and obtain an opinion of the Department of Justice. In the light of the statement of the chief justice, in that oil case, in the light of the declaration of the supreme court of Alberta in the case regarding the timber land, the minister will agree that he ought not to proceed to violate by legislation, which no doubt he has agreed to do on the strength of certain erroneous suppositions, a position which should not be so violated. He should not do what could not be done in any other way. Legislating away the rights of other people is bad legislation. It is bad in principle, bad in law and bad in ethics. I do beg of the minister that he review the whole position. The session is not over yet. The question of stability is fixed by statute. They

cannot raise the rates. The question of stability is washed off the slate by reason of these decisions. I am quite sure the minister did not know of these legal decisions. I am certain he would not have brought the measure along if he had known of them. He would have said to the government of Alberta, "The courts of the country have spoken and we do not propose to legislate the rights of people away." Once again I beg of the minister that he adopt what I believe is the manly course, what I believe is just and equitable, with regard to this legislation.

Mr. CRERAR: Of course I am not in a position to make a legal argument against the hon. member for Calgary West (Mr. Edwards). I do not know the point upon which the case he cited turned, but I assume from a simple reading of the terms of the licence—and I was so advised—that the federal government, had those resources remained with it, had the power to vary the terms.

Mr. HANSON (York-Sunbury): The Supreme Court of Canada says no.

Mr. CRERAR: I do not know whether its decision turns on that point. I know that when the licences were first issued in 1911 they provided that no royalty should be paid until 1930; I know that in 1919 they were amended and royalties provided for.

Mr. HANSON (York-Sunbury): But no one contested it.

Mr. CRERAR: That may be, but the provisions of the lease appear to be explicit on that point.

Mr. HANSON (York-Sunbury): The minister puts his judgment against that of the chief justice.

Mr. CRERAR: I do not accept that statement, because as I say I do not know whether the particular case cited by the hon. member for Calgary West turned on that point.

Mr. HANSON (York-Sunbury): Why not get legal advice?

Mr. CRERAR: However, that is not the most material part. I have stated that this measure will conduce to stability in Alberta. I think it will assist in the financing of wells for the production of oil that is greatly needed at the present time. If this committee and the house want to take the responsibility of preventing this legislation from going through, and tying it up and continuing that instability, that is a serious responsibility to assume. Everyone knows that oil production is necessary for our war effort. Therefore notwithstanding the fervent appeal made by the leader of the opposition I am afraid I cannot accede to his request to withdraw the measure.

Mr. HANSON (York-Sunbury): I have not asked the minister to withdraw it. What I suggest the minister would be well-advised to do is to ask that the committee rise, and then review the whole position in the light of the two legal decisions. It is quite apparent to me, after hearing the decision as read by the hon. member for Calgary West, that the chief justice of this country has decided against a major premise on which the minister bases his argument.

Mr. CRERAR: My hon. friend is wrong. The major premise on which I based my argument was that it would produce stability.

Mr. HANSON (York-Sunbury): That is one major premise. We will say both are major. I will not quibble as to which was more important. But certainly one major premise was the right to increase the royalty. That is definitely out. As to stability, if that decision is right you have stability now at 10 per cent.

Mr. CRERAR: If that be the case, why are there so many idle drilling outfits in Alberta?

Mr. HANSON (York-Sunbury): The reason was given in Mr. Wilkinson's letter, that the base price of crude is too low. That should appeal to the minister as a business man.

I do not suggest withdrawing the measure or throwing it out, but I suggest that the committee rise now and that the minister review the general position in the light of these judicial decisions. That, I submit, is a wholly reasonable course. If the minister adopts a judicial attitude, if his mind is receptive, he will be guided largely by what the law officers of the crown tell him is the effect of these decisions; and, if I apprehend the situation correctly, I believe the law officers will tell him that the rates of royalty cannot be increased if the legislation stands as it is. If that is the result that flows from that decision of the Chief Justice of Canada, certainly the minister would not lend his powers and the powers of this parliament to violating a contract which in a parallel or analogous case the courts have said in effect cannot be done. This government would not put itself in that position; the minister would be the last man to want to do it. If the minister does not take the course I suggest, he will be taking a grave responsibility upon himself, because he will be open to the

charge of forcing through a measure which in effect violates a decision of the highest court of appeal in this country. Let him review the whole position, and if the legal effect of those decisions is as indicated, then I am sure he will never proceed with this measure.

Mr. COLDWELL: I do not want to intervene in a legal discussion, but it seems to me that the leader of the opposition is taking the ground that because there has been a court decision on another matter which may have some bearing on the subject under discussion, this parliament should not, in the light of new conditions that have arisen, legislate to do something which the court several years ago held ought not to be done. I do not think this parliament should accept the position that it is bound by judgments of courts from time to time and should not exercise the sovereign power that is vested in the parliament of Canada.

Here we have a sovereign power, the parliament of Canada, entering into an agreement with a province, which has powers of its own. In other words, the governing bodies in the province and the dominion are, according to the argument now advanced, curtailed of their sovereign right by a judgment of the courts. I cannot accept that position. This parliament must do what in its opinion is best for the people of this dominion in the light of conditions as they exist at the time.

Mr. BENCE: They should have all the information.

Mr. COLDWELL: The bill has now been debated; the two governments concerned have, I assume, discussed this matter at great length and naturally have examined the implications of the measure, and in the light of the information that has been given this committee by the minister in support of this bill I think this parliament is justified in adopting the measure. I cannot accept the view that judgments of the courts on legal points, given under economic and social conditions existing at a former time, should restrain this parliament from doing something which now seems to be in the interests of the country. I urge the minister to go forward with his bill.

Mr. BENCE: I want to associate myself with the remarks of the hon. member for Calgary East when he asked the minister, in view of the discussion that has arisen and of the circumstances and of the questions that have been asked, at least to put this matter over for a short time in order that we may obtain this other information which seems to me to be so important, before this committee can intelligently decide whether or not this is a proper measure to be passed by this house. I think the minister has rather unfairly endeavoured to put the onus on the members of this committee for blocking this legislation, when he is not in a position to give the information which we have requested since yesterday. In view of the remarks of the hon. member for Calgary West and his reference to legal decisions with respect to the point which I raised a short time ago and about which the minister has advised the committee he knows nothing, he should, I think, at least obtain the judgment of the law officers of the Department of Justice before asking us to pass this bill. Furthermore, surely we are to be given the right to examine the correspondence and representations made on behalf of the various parties involved.

And what about the information we should have had as to the number of leaseholders affected, who have not agreed to this change? That information should be given to the committee before we, as representatives of the people, are asked to pass anything like this, before we are asked to do something which might, and I think will, discriminate against minorities. We also should be given further information beyond the bald statement made by the minister yesterday that this meets with the approval of the oil controller. Surely there must have been reasons advanced by the oil controller. Did he examine the situation and come to any considered judgment with regard to it? I suggest that despite what the minister has said, we are not fully cognizant of the situation and of all the facts we should have before we pass such a drastic measure as this. We are taking a very grave responsibility on our shoulders if we do pass it, in view of the lack of information and evidence in our possession.

The CHAIRMAN: Shall section 1 carry?

Some hon. MEMBERS: Carried.

Some hon. MEMBERS: No.

Mr. HANSON (York-Sunbury): No, Mr. Chairman, I am not willing to have this bill carried, and I think the minister is taking an attitude which is not justified by the situation. I have asked the minister not to withdraw the bill but to give further consideration to the effect of the bill, having regard to the legal decisions which have been cited here to-day and which require study not only on his part and the part of his departmental officials but by the officials of the Department of Justice. If the effect of those decisions is, as I apprehend it to be, that the federal government itself, if it had not transferred the natural resources, could not have varied the terms of

the leases, in accordance with the understanding which apparently was in the mind of the minister; if that is the effect of the decision of the chief justice, then I suggest that one main reason for bringing in this legislation falls to the ground. Undoubtedly that is the position; and that is a matter which should be very carefully inquired into, and the bill should be laid over for further consideration until that position is determined.

There is no doubt that the minister did agree to bring down the correspondence, and he has not done so. I have not attributed any motive; I think it was a lapse of memory, but there may be something in that correspondence which would throw some light on this situation, and this committee is entitled to see the correspondence before the bill proceeds further. The minister might very well do what I suggest and, if he decides to go on with the bill, have it called again at a later date. In the meantime let us have the correspondence, and let us submit the whole legal position indicated during this debate, especially by the hon. member for Calgary West, to review by the law officers of the crown. They will give an opinion based on the decisions, as to one of the major premises of the minister. If their opinion is as I think it will be, then I venture to prophesy—and it is always dangerous to prophesy what any individual will do—that the minister will not proceed with this bill, because the royalties under the leases are fixed, and there is stability. That answers his other argument.

I think I am making a reasonable request of the minister. I am not asking him to throw the legislation out the window, to withdraw it or anything like that. I am asking him to review the position in the light of the new developments and the new facts that are now before this committee. I cannot acquiesce in the doctrine that if there is an established position qua the public domain and individuals, as the courts have said there is, the legislatures of this country may wipe that out without compensation. Certainly in the United States there is the doctrine known as eminent domain. We have the right of expropriation here. We can wipe out a vested interest; but there is a corresponding obligation on the part of the crown or the state, when it does that sort of thing, to place its citizens who are thereby affected in a position equally good. That is embodied in the constitution of the United States. That is embodied in the bill of rights there. That is one of the most sacred doctrines of this country; and we should not give adherence to a theory that rights conferred on the citizens of this country, confirmed by judicial opinion, may be wiped out over night, at the will or whim of a legislature, without the right of compensation. There is just one overriding provision. That is, if those rights were obtained by fraud, then of course it is a sound principle that fraud vitiates everything, and any rights based on fraud should not be respected by the courts.

Mr. COLDWELL: The leader of the opposition mentions the bill of rights and the law of eminent domain in the United States as having some bearing on this matter. We are not part of the United States. We are a country which operates under a constitution and a code of law, and where the Canadian code of law is silent we usually go back to British practice and precedence. What is the analogous constitutional position under the British constitution?

Mr. HANSON (York-Sunbury): Of course, Britain has no written constitution, which always has been a matter of congratulation there, because they can go on and make constitutional precedents from time to time as they desire. Here we have a written constitution, and there have been times when it has been difficult to have existing situations conform to the constitution, in the best public interest. But the universal practice in this country is that if the crown deprives a citizen of his property, the citizen has a right of compensation. It is a universally recognized principle in this country, especially in the federal arena, that if the crown takes away my rights, I may by petition to the crown ask for a fiat and have the whole matter tried in the courts; and the courts are delegated by certain statutes of this country not to give me my right back but to give me a money compensation in lieu of my rights. I do not think anyone would ever want to promote any other theory than that, because it would be against sound conscience.

I appeal to the minister to review the position. If the law officers of the crown say that the decisions are wholly inapplicable, then of course the minister is on pretty sound ground with regard to his second major premise, that they had the right to vary the terms if the transfer had not been made. I do not think that is true, and I listened very attentively to that decision. If the minister finds that the law officers of the crown say that the decisions are applicable, then certainly he should review the whole position and tell the province of Alberta that since we negotiated, the courts have passed on this very question. I think it was only in April of this year, which was only last month, that

the decision in the Anthony case was handed down. I am told that the decision was given in February and that it was reported in April. That is since this bill was introduced. That is now the law of Alberta. If the principles applicable to the Anthony case are at all analogous to the facts in this case, then I am sure the minister will not proceed with this legislation. It would be shocking if he did, because he would be putting the imprimatur of his approval on a position which is illegal. I am sure the minister does not intend to do anything of that kind; he would not be a party to it for a minute. Neither should the House of Commons be a party to that kind of legislation.

My suggestion, therefore, is that the minister ask the committee to rise, report progress, review the whole position and get the opinion of the law officers of the crown with respect to this particular situation. Let him get all the circumstances in connection with this legislation, and the facts upon which it is based, having regard to the judicial decisions put on record this afternoon by the hon. member for Calgary West. That is a reasonable request, and I suggest that the minister should have no hesitation whatsoever in accepting it. If he finds the position as I think he will find it, then I believe he will not proceed with the bill. If he finds the facts are not as I think they are, then there would be some justification for his proceeding, and he would probably have the bill put through.

I do not wish to take up the time of the committee in debating this question, no matter how important the principle is. The mere instance of the bill and the effect on some of these people are not worth spending much time upon. But there is a principle involved—

Mr. BLACKMORE: Would the hon. member permit a question.

Mr. HANSON (York-Sunbury): Yes.

Mr. BLACKMORE: He is using time quite generously. Would he mind letting someone put a brief question?

Mr. HANSON (York-Sunbury): That is the most nonsensical statement I have ever heard, and I do not propose to permit him until he has shown somewhat better respect. The hon. member was not even in the house when this bill was under debate on second reading.

Mr. BLACKMORE: I was in the house.

Mr. HANSON (York-Sunbury): I think not. I watched to see, but he did not intervene. The question was a foolish one, and I am not going to allow—

[Mr. R. B. Hanson.]

The CHAIRMAN: The statement of fact as to whether or not an hon. member was in the house is determined by the statement of the hon. member, and is not subject to discussion. If the hon. member says he was in the house, then that ends the discussion.

Mr. HANSON (York-Sunbury): I will say this, then, sir, that technically I think your ruling is correct. But I looked at the hon. member's seat, and he was not there. I looked around to see him, and I wondered why he was not there.

The CHAIRMAN: But it is not permissible to discuss the point—

Mr. HANSON (York-Sunbury): I understand that.

The CHAIRMAN: —because the leader of the opposition might not have seen the hon. member, and furthermore he might not have been in his seat.

Mr. BLACKMORE: I want to know whether the leader of the opposition will permit a question?

Mr. HANSON (York-Sunbury): If it is the type of question the hon. member just asked, the answer is no—and without any debate. I do not wish to take up the time of the committee, but there is a principle involved—

Mr. BLACKMORE: Obviously not!

Mr. HANSON (York-Sunbury): Order; I ask for order.

The CHAIRMAN: Order, please. It is not permissible—

Mr. COLDWELL: We know the rule.

The CHAIRMAN: —to repeat an argument over and over again. I have been listening to the leader of the opposition and I believe I gave him very reasonable latitude. But the point the leader of the opposition was developing just now, when he was interrupted, is one which has been made three or four times since I took the Chair at a quarter to five o'clock. Therefore I would point out to hon. members that the business of the house is a serious matter. It is not desirable that the discussion should be curtailed, but on the other hand I expect the cooperation of hon. members to offer serious arguments to the question before the Chair.

Mr. BLACKMORE: Mr. Chairman, it seems to me there are three or four matters involved in this question. The first one is this: Shall the province of Alberta have a right to her natural resources equivalent to the right each over her own natural resources

possessed by New Brunswick, or by Ontario, or by Prince Edward Island? This bill is designed merely to confer upon Alberta that right—and no more.

My second question is this: At the time the province of Alberta was formed had the dominion parliament the right to confer upon that province rights over her resources equivalent to the rights possessed and enjoyed by New Brunswick, Prince Edward Island and Ontario over theirs?

Third: If the dominion government did not possess that right, why not? If it did possess the right, then did it confer upon Alberta power over her resources equal to those possessed by New Brunswick? Then, if for any reason, through legal terminology or through any other deficiency whatsoever, the dominion government in making an endeavour to pass on to Alberta in 1930 rights equivalent to those possessed by New Brunswick, failed to do so —the dominion having the desire, but failing to carry out the intention—has the dominion government at the present time the right to remedy the defect, and to pass a measure which shall in effect transfer to Alberta sovereign rights over her resources, equivalent to those enjoyed by Prince Edward Island?

If these questions are answered in the affirmative, then there is no doubt at all about the power of this parliament to pass this measure and to make it effective.

May I for a moment or two turn to the two cases cited by the hon. member for Calgary West. In listening to them for the first time one obviously had some difficulty in assessing them accurately. However, listening to those cases as they were being read, I gathered that the first one was not analogous at all, and did not apply to this debate. The decision of the Alberta supreme court was on the question whether or not Alberta had the power to make an order in council affecting the leasing of timber rights in Alberta, transferred to that province in 1930 by an act which this bill is designed to supplement. There is no analogy whatsoever between that situation and the one which confronts this parliament. What we are now trying to determine is whether or not this parliament of Canada has the authority to confer upon Alberta complete control over her resources. The second case to which the hon. member for Calgary West referred had to do, perhaps with the question as to whether or not this parliament had the power to pass on to Alberta the necessary powers. It certainly has nothing to do with the power of this parliament to pass this measure. I say that the matter for us to decide is whether or not we shall pass this measure. If, after we shall have passed the bill, a court sees fit to rule that the legislation is invalid, then it will be the responsibility of the court. But as to the matter of passing the measure, and of endeavouring, in so far as in us lies the authority, to confer upon Alberta sovereign rights over her natural resources, I maintain that this dominion government unquestionably has that power to pass such an act, and should do so.

Mr. CRERAR: As every member of the committee is aware, I do not profess to be able to pass any opinion upon legal arguments. It is ten minutes to six o'clock and since it is quite obvious that we are not going to complete this measure this afternoon, I intend to move that the committee rise, report progress and ask leave to sit again. A short time ago the leader of the opposition was in a mood of sweet reasonableness. When my hon. friend who leads the opposition assumes that mood—and I think he does it sincerely; he has evidently cultivated it to some extent—he is almost irresistible. I am now, if I were not before, fully persuaded as to the qualities that have led my hon. friend so far along the path of success. There may be something in the point he has raised, but my own surmise is that the case referred to by the hon. member for Calgary West probably turns on a different point. At any rate, we shall endeavour to get that cleared up. Even though the hon. member for Calgary West and the leader of the opposition may be right in the point they have raised, I still think that the main reason for giving favourable consideration to this measure still stands. We shall all be probably a little wiser for thinking it over, and so I move that the committee rise, report progress and ask leave to sit again.

Progress reported.

BUSINESS OF THE HOUSE

Mr. HANSON (York-Sunbury): May I say to the minister with respect to the war appropriation resolution that the official opposition feels that it should be passed this week in order that the biggest item on the whole legislative programme may be out of the way. We will endeavour to facilitate progress. I would say that when the Minister of National War Services is finished we may possibly arrange or decide that any questions which may arise with respect to other ministers could be taken up at some other appropriate occasion. I do not think we should hold up the two important measures that are in the offing, Bill No. 80 and the budget. I urge this course because I do not contemplate sitting here all summer. I want to offer to the minister this notice that we wish to facilitate

the passing of this resolution with reasonable discussion with respect to national war services.

Mr. COLDWELL: We shall be glad to facilitate discussion, but it comes as rather a surprise to me to hear the leader of the opposition, who told us yesterday that the war appropriation resolution was the most important matter before the house and ought to be scrutinized, say that he is going to put through this important measure this week because there are other matters in the offing. If there was anything in what he said yesterday, we should not limit in any way the discussion of these large appropriations that are now before us.

Mr. HANSON (York-Sunbury): I think we have had a fairly ample discussion.

At six o'clock the house adjourned, without question put, pursuant to standing order.

Thursday, May 28, 1942

The house met at three o'clock.

THE ROYAL ASSENT

Mr. SPEAKER: I have the honour to inform the house that I have received the following communication:

Ottawa, May 28, 1942.

Sir:—I have the honour to inform you that the Hon. Thibaudeau Rinfret, acting as deputy of His Excellency the Governor General, will proceed to the Senate chamber on Thursday, May 28, at 5.45 p.m. for the purpose of giving the royal assent to certain bills.

I have the honour to be,
Sir,
Your obedient servant,
F. L. C. Pereira,
Assistant Secretary to the
Governor General.

INCOME AND CORPORATION TAX

AGREEMENT WITH PROVINCES—COMPENSATION FOR VACATING TAX FIELDS AND ARRANGEMENTS FOR SUBSIDIES

Hon. J. L. ILSLEY (Minister of Finance): I wish to lay on the table copies of the tax agreements between the dominion and the provinces. The agreement between the dominion and the province of Quebec has now been signed and I am in a position to table complete copies of all the agreements. This is really in compliance with a motion for a return made by the hon. member for Hastings South (Mr. Stokes) on April 22.

[Mr. R. B. Hanson.]

ALBERTA NATURAL RESOURCES

AMENDMENT OF TRANSFER AGREEMENT RESPECTING ROYALTIES ON OIL PRODUCTION—CORRESPONDENCE

Hon. R. B. HANSON (Leader of the Opposition): If it is in order may I ask the Minister of Mines and Resources if he will see that the correspondence with respect to the Alberta bill be tabled as soon as possible.

Hon. T. A. CRERAR (Minister of Mines and Resources): Yes. I directed this morning that inquiries be made of one or two other departments that may have correspondence relating to it. As soon as I have that information I see no reason why I should not bring it down.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

FREIGHT RATES—SCRAP METAL

Mr. JOHNSTON (Bow River):

What were the freight rates on scrap metal from Calgary and/or Edmonton, Alberta, to (a) eastern Canada, (b) Vancouver, during the years 1938, 1939, 1940, 1941 and to date in 1942, by (1) Canadian Pacific Railway, (2) Canadian National Railways?

Mr. HOWE: From Calgary to Vancouver, 45 cents per 100 pounds; from Edmonton to Vancouver, 50 cents per 100 pounds. Rates to eastern Canada vary according to destination. Using Hamilton as typical point of destination, rates from Calgary during the years 1938, 1939, 1940 and prior to August 11, 1941, 81½ cents, and subsequently 75 cents. From Edmonton during the years mentioned prior to June 9, 1941, 80½ cents, and subsequently 75 cents.

FEMALE WORKERS IN WAR FACTORIES

Mr. LaCROIX (Quebec-Montmorency):

1. Will the government take steps to prevent married women from working on night shifts in war factories? If so, when is it proposed to put this regulation into effect?

2. Will the government fix the maximum weight of loads which girls are compelled to carry or handle in war factories? If so, when is it proposed to do so?

Mr. MITCHELL: With respect to both these questions, the regulation of conditions of employment in industrial establishments is a matter for the provincial authorities except in respect to wages. I should say however that the Dominion Department of Labour continually supplies the respective provincial governments with the latest information from other countries and also our own with respect to the subject matter raised in these questions.

Mr. HANSON (York-Sunbury): That is hardly a correct statement. If it is in government-owned factories or federal public works we have jurisdiction over everything. Make no mistake about that.

USE OF CANADIAN CEREALS IN MANUFACTURE OF SYNTHETIC RUBBER

Mr. FAUTEUX:

1. Have scientific investigations been carried on by the Department of Agriculture or otherwise as to the possibility of utilizing Canadian grown cereals to produce butadiene which is used in manufacturing synthetic rubber?

2. Has the Department of Agriculture made scientific research into the possibility of producing alcohol, rubber, starch and other commodities from certain farm products?

3. If such research has been carried out, was a report made to the Department of Munitions and Supply thereof?

4. Has the attention of the Department of Agriculture been called to the possibility of converting certain Canadian grown cereals into products necessary in our war effort by (a) companies engaged in distributing petroleum and rubber in Canada, (b) the Department of Munitions and Supply, (c) the national research council?

Mr. GARDINER: May I suggest to the hon. member that this question in its present form be dropped and that the information be asked for from the Department of Trade and Commerce? The national research council would have any information that is available, and I think it would be better if it came direct from that department.

Question dropped.

OFFICE OF GOVERNOR GENERAL'S SECRETARY

Mr. FLEMING:

1. Has the governor general changed his office from the east block to Rideau Hall?

2. If so, who asked for this change?

3. Did the government suggest that the office he moved from the east block?

4. Was this done in the interest of economy?

Mr. CRERAR: The arrangements for moving the offices of the governor general's secretary from the east block to government house, which are now nearing completion, have been made by mutual agreement of the departments of government concerned. This rearrangement of offices is due partly to the wartime shortage of suitable office space, which is particularly acute in the east block, and partly to the desirability of bringing together the branches of the governor general's office.

QUESTIONS PASSED AS ORDERS FOR RETURNS

OLD AGE PENSIONS

Mr. REID:

1. Have representations been made to the dominion government by any of the provinces seeking amendments to the Old Age Pension Act, with a view to increasing the amount provided for in this act?

2. If so, by what provinces and of what nature were such representations?

PRICE CEILING—FRUITS AND FRUIT JUICES

Mr. BLACK (Cumberland):

1. What is the present rate of subsidy paid on the following, (a) grapefruit juice, (b) pineapple juice, (c) prunes (dried)?

2. What quantity of each has been imported to May 1, 1942, and on which subsidy has been paid, (a) grapefruit juice, (b) pineapple juice, (c) prunes (dried)?

3. What is the total amount of subsidy which has been paid to May 1, 1942, on (a) grapefruit juice, (b) pineapple juice, (c) prunes (dried)?

PRICE CEILING SUBSIDIES

Mr. DIEFENBAKER:

1. What is the total amount that has been disbursed for (a) domestic subsidies, (b) import subsidies since the commencement of price ceiling operations?

2. What is the total amount as yet unpaid now due or accruing due and for which the government is liable, (a) for domestic subsidies, (b) for import subsidies?

WAR APPROPRIATION (UNITED KINGDOM FINANCING) ACT

Mr. O'BRIEN:

1. What is the total amount which has been expended to date, under the provisions of the War Appropriation (United Kingdom Financing) Act, 1942?

2. What methods are adopted to segregate accounting under this act from accounting for other purchases of munitions and supplies?

3. Are records kept to indicate the total quantity and monetary value of each type of munitions and supplies purchased in Canada pursuant to the provisions of this act?

4. Have any regulations been made by the governor in council, pursuant to section 3 of the act?

5. Has the governor in council approved the form, terms and conditions of the obligation of the United Kingdom, pursuant to section 4 (2) of the act?

6. Has the governor in council approved any terms and conditions subject to which the minister may purchase Dominion of Canada securities and Canadian National Railway securities provided for in section 5 of the act?

AIRCRAFT INDUSTRY—MORALE-BUILDING CAMPAIGN

Mr. DIEFENBAKER:

1. What has been the total cost to date of the morale-building campaign in the aircraft industry conducted by E. G. Hirst?
2. Have any brochures, pamphlets, magazines, circulars, or other publications or material for use in connection with said campaign been issued? If so, what firm or firms did the printing? What was the total amount paid to each such firm therefor?
3. What has been the total expenditure for other printing in connection with this campaign, whether incurred by or under the direction of Mr. Hirst or otherwise?
4. What is the total amount which has been paid by Mr. Garratt to Mr. Hirst in connection with this campaign? On what dates were payments made, what was the amount of each payment and for what particular purpose was each payment made?
5. What persons have been employed and/or paid by the Department of Munitions and Supply to assist Mr. Hirst in his morale-building campaign? What are their names, and what salary and/or allowances does each receive?
6. Are any persons employed to assist Mr. Hirst in this campaign who are not paid by the Department of Munitions and Supply? If so, what are their names and what salary does each receive?
7. What is the total amount of contributions which have been received by Mr. Garratt from aircraft companies? What companies contributed and in what amounts?
8. Have any contributions been returned to the aircraft companies? If so, what companies and on what dates?

VALMORE BIENVENUE, K.C.

Mr. ROY:

1. Has Mr. Valmore Bienvenue, K.C., of Quebec, been employed by the dominion government or any government commission, during the years 1941 and 1942?
2. If so, (a) upon what dates, (b) for what services, (c) what has been paid him to date for expenses and fees?

CONSCRIPTION OF WEALTH

REFERENCE TO STATEMENT OF HON. MR. MACKENZIE IN WINNIPEG

On the orders of the day:

Hon. R. B. HANSON (Leader of the Opposition): I should like to ask the Minister of Pensions and National Health when he will be good enough to clarify the statement which he is reported to have made at Winnipeg recently and indicate what he means by "conscription of wealth".

Hon. IAN A. MACKENZIE (Minister of Pensions and National Health); When the appropriate debate takes place I shall be glad to discuss again what I have frequently discussed in the past.

[Mr. O'Brien.]

LABOUR CONDITIONS

DISMISSAL OF TRADE UNION MEMBERS IN MONTREAL

On the orders of the day:

Mr. M. J. COLDWELL (Rosetown-Biggar): I should like to direct a question to the Minister of Labour, of which I am sorry I had not opportunity to send him notice; the telegram has just come to my attention. I am informed that unrest is rapidly growing because of dismissal of members of trade unions in Montreal. This telegram is signed by E. E. Larose, secretary of the Montreal district council of carpenters. I shall not read the telegram because I assume it has been communicated to the minister.

Hon. HUMPHREY MITCHELL (Minister of Labour): I have not yet received the communication which my hon. friend mentions. I do not know what Mr. Larose is referring to, but I would say in connection with the last question asked—I think it was Dominion engineering works, Montreal—

Mr. COLDWELL: Last Friday.

Mr. MITCHELL: —that I have already appointed a commissioner to go there and make an investigation.

Mr. COLDWELL: I will send the telegram to the minister.

GASOLINE

REDUCTION IN VALUE OF RATION COUPONS IN MARITIME PROVINCES

On the orders of the day:

Mr. A. J. BROOKS (Royal): I should like to ask a question of the Minister of Munitions and Supply with reference to the cutting of the value of the gasoline coupon in the maritime provinces. I have here a telegram addressed to myself, as follows:

Obtain from Mr. Howe answers to the following questions:

If the gasoline coupon was cut from five to four gallons in Ontario and Quebec would this release tank cars which might then be available for use in the maritimes? Could our railways handle extra tank cars if they were given to them for shipment to the maritimes? Answers to the above questions imperative to preserve national unity and faith in the government's integrity.

Saint John Trades and Labour Council.
Lancaster Board of Trade.
New Brunswick Federation of Labour.
Saint John Branch Retail Merchants' Association.
Kiwanis Club of Saint John.
Gyro Club of Saint John.
Canadian Legion, Saint John Branch.
Hotel Association of New Brunswick.

Service Stations Section of Retail Merchants' Association.
Northend Improvement Association of Saint John.
Uptown Improvement Association of Saint John.
New Brunswick Automobile Association.
Canadian Manufacturers' Association, Maritime Branch.
Canadian Construction Association, Saint John Branch.
Saint John Junior Board of Trade.

Hon. C. D. HOWE (Minister of Munitions and Supply): I can only say what I have said before, that every gallon of petroleum products that can be shipped to the maritimes is being shipped. The situation in Ontario and Quebec is quite separate from the situation in the maritime provinces. As for national unity and faith in the government's integrity, my principal and paramount interest at the moment is to supply sufficient gasoline for the navy, the air force and the merchant marine.

Mr. BROOKS: The minister has not answered the questions asked in this telegram. The first question is: if the gasoline coupon was cut from five to four gallons in Ontario and Quebec, would this release tank cars which might then be available for use in the maritimes?

Mr. HOWE: The answer is no.

Mr. BROOKS: Well, that is definite.

THE MINISTER OF LABOUR

PRESS REPORT OF ADDRESS BEFORE CANADIAN FEDERATION OF MAYORS

On the orders of the day:

Hon. H. A. BRUCE (Parkdale): I wish to direct a question to the acting leader of the house (Mr. Crerar). Did the Minister of Labour express the views of the government when, speaking before the Canadian federation of mayors, he is reported to have said:

> The war is going to be won on the North American continent, and with the United States and Canada the only two countries that have mastered the technique of mass production.

Hon. T. A. CRERAR (Minister of Mines and Resources): In the first place the hon. member quotes from a newspaper report. I think it would be a fair question whether he vouches for the accuracy of the report. In the second place, this is the first intimation I have heard of it, and of course he would not expect me, deputizing for the moment for the Prime Minister, to answer a question of the kind.

Mr. BRUCE: I should just like to say that in my experience the press is usually accurate.

CANADIAN FORCES

INEQUALITIES IN RATES OF PAY AND ALLOWANCES

On the orders of the day:

Mr. T. L. CHURCH (Broadview): Now that hon. members have before them the rates of pay and allowances of the three branches of his majesty's forces I would ask the government, or the three ministers of defence, if they would consider the inequalities and injustices therein shown. I would suggest that the three ministers, together with the Minister of Pensions and National Health, have the pensions committee consider the subject, as was said when these matters were debated early in September, 1939. Probably the Minister of Pensions—

Some hon. MEMBERS: Order.

Mr. SPEAKER: Order. I am afraid that question cannot be answered to-day. If the hon. member would put it on the order paper it might be answered to-morrow.

Mr. CHURCH: You might as well put it in the wastepaper basket. I am going to challenge that ruling some day, Mr. Speaker.

WAR RISK INSURANCE

PROVISION FOR COMPENSATION FOR WAR DAMAGE TO PROPERTY

Hon. J. L. ILSLEY (Minister of Finance) moved that the house go into committee to consider Bill No. 56, to make provision with respect to insurance of property against war risks and the payment of compensation for war damage.

Motion agreed to and the house went into committee, Mr. Vien in the chair.

The CHAIRMAN: The bill has been reprinted as amended. Copies of the reprinted bill are on the table.

Section 1 agreed to.

On section 2—Interpretation.

Mr. NEILL: I want to ask a couple of questions of the minister in charge of this bill.

The CHAIRMAN: Are they applicable to the definitions?

Mr. NEILL: Yes. Are we dealing with the whole of section 2 or are we going to take it up by paragraphs?

The CHAIRMAN: We can take it up paragraph by paragraph.

Paragraphs (a) to (e) inclusive agreed to.

On section 2, paragraph (f)—Inland waters.

Mr. HANSON (York-Sunbury): I should like to congratulate the banking and commerce committee on having inserted this definition covering inland waters. I wonder if it meets with the approval of the administration, since it was not in the original bill. Canada being a country with large indentations on her coasts, I think this was a very desirable amendment. Is the minister in agreement?

Mr. ILSLEY: Yes; I am in agreement with the amendment.

Mr. NEILL: Should that not read "for the purposes of this act"? I believe inland waters are defined somewhere else, and this might be taken to be a subsequent ruling or alteration.

Mr. ILSLEY: The opening words of the section are, "In this act, or in any policy of insurance executed pursuant to this act, unless the context otherwise requires". Therefore the definition is subject to this limitation.

Mr. HANSON (York-Sunbury): It is limited to this act.

Mr. ILSLEY: Yes.

The CHAIRMAN: This clause was added by the banking and commerce committee.

Mr. HAZEN: I was under the impression that the word "rivers" was to be included in this paragraph, so that it would read, "Inland waters means all the lakes, rivers and other navigable fresh waters". Was that left out by inadvertence? Some rivers are not fresh water streams. I have in mind the Saint John river, in which the water is tidal for about eighty-four miles, and it is not fresh for some thirty or forty miles from its mouth. When the bill was before the committee I was under the impression that the word "rivers" was to remain in this subsection.

Mr. ILSLEY: I will check at once to see if that is a mistake. I think it is, personally. My recollection is the same as that of the hon. gentleman. Perhaps we could go on with the other paragraphs and let this matter stand, so that in the meantime it may be checked.

Mr. HANSON (York-Sunbury): What has been said applies to nearly all the rivers on the Atlantic coast. The Miramichi river is in exactly the same position as the Saint John river; so are the Restigouche and all the important rivers of New Brunswick. There are also tidal rivers, with the sea running in and out of what are really salt water lakes, although I do not think they are very important. I suggest that the word "rivers" be put in now and be done with it.

[The Chairman.]

Mr. ILSLEY: I want to keep it uniform with the definition in the Canada Shipping Act.

Mr. REID: Does this also take in salt water? It mentions fresh water rivers, but I am thinking of a place like the Queen Charlotte islands, out in the open sea, where there are harbours, ships and other property. I think the minister should make it clear whether or not this bill refers only to rivers and tidal and fresh waters. If it does, then the bill is very narrow.

Mr. ILSLEY: If I understand the hon. gentleman properly, he is under the impression that only property on inland waters may be insured. The property that may be insured is property in Canada, but not including ships other than vessels used solely in docks, ports, rivers or inland waters. The question is whether we have been too restrictive in our definition of inland waters. Perhaps the hon. gentleman will state his point again and tell us what he has in mind.

Mr. REID: I am thinking first of all of Juan de Fuca straits, where our fishing boats and other vessels go; and of the Queen Charlotte and other islands seventy or eighty miles out to sea, where there are harbours and ships and property of all kinds.

Mr. ILSLEY: They are excluded because they can be insured without regard to this act.

Mr. CRUICKSHANK: Would this cover Burrard inlet, which is part fresh and part salt water? That is where all our shipbuilding is, where all the ships load, and there the fresh water meets the salt water halfway up the inlet. As I understand this section, the act would not apply there.

Mr. ILSLEY: Ships are excluded other than vessels used solely in docks, ports, rivers or other inland waters. If the vessel is used solely in a port it is regarded as property in Canada, and insurable.

Mr. NEILL: Under what section?

Mr. ILSLEY: That is paragraph (j). I was to check to see if the word "rivers" had been intentionally omitted from paragraph (f). I would point out that the definition in the Canada Shipping Act includes the word "rivers". As it appears in line 21, page 2 of the bill, it would therefore be a repetition to include rivers in the definition of "inland

waters". The property that may be insured is property in Canada, other than ships—"other than vessels used solely in docks, ports, rivers, or inland waters." That permits insurance of the vessels used solely on the Saint John river, because they are used only on a river. It also permits vessels used solely in inland waters to be insured, and for the purposes of this measure it is useless to include in the definition of "inland waters" the word "rivers" over again.

Mr. HANSON (York-Sunbury): But it would not do any harm, would it?

Mr. ILSLEY: No, I do not think it would.

Mr. REID: Does the paragraph exclude ships? It says, "shall not include ships, other than vessels used solely in docks."

Mr. HANSON (York-Sunbury): Because they are now insurable; that is the theory.

Mr. ILSLEY: Yes.

Mr. ROSS (St. Paul's): Is it not the intention to include all other navigable waters? Could we not leave out the word "fresh"?

Mr. ILSLEY: The phrase in the shipping act is "navigable fresh waters".

Mr. CHURCH: I should like to ask what the word "insured" means, under section 2. The definition in paragraph (g) is,—

(g) "Insured" means any person with whom the minister enters into a contract of insurance.

This measure is one which insures property against war risk. Who takes more war risk than the soldier, who has been denied by the minister a national system of insurance? I say he should come under this section. The committee has ignored that point altogether, but the soldier is property, and he is taking the greatest risk in this war. There is no use in our having a law for property and no law for human life. The definition should have included a proper system of national insurance for soldiers and their dependents now and for three years after the war. I would ask the minister to explain what the term "insured" really means, and why soldiers who risk all are forgotten.

Mr. ILSLEY: If it is satisfactory to the committee, we might pass paragraph (f).

Paragraph (f) agreed to.

On section 2, paragraph (g)—"insured".

Mr. HANSON (York-Sunbury): The hon. member for Broadview has a question to ask on this paragraph.

Mr. ILSLEY: I understand that the hon. member has asked me to make a statement with regard to life insurance for returned soldiers. I submit that such a statement would not be in order on this bill.

Mr. CHURCH: Paragraph (i) defines "person". Is the minister prepared to make a statement to the effect that he will include in the word "person" a soldier in the armed forces? We must remember that the soldier is taking a greater risk than anyone else. His life, even death itself, and his property and family are at his country's service. Here we have a bill containing a number of definitions which, I submit, are purely academic, as is the whole act. I doubt if one dollar will ever be paid under this measure; in my opinion it is just like the black-outs.

The public has not been informed as to the meaning of this bill, nor have the members—all is secret, and the definitions will lead to untold litigation and relieve the insurance companies of their duty. It is not the function of parliament to deal with property and civil rights in the provinces; those are matters over which the federal parliament has no jurisdiction. Neither have we any right with respect to the law of contract or laws involving employers and employees. The committee will be wasting its time if we go any further with this measure this year, while refusing even to deal with the soldiers' insurance matter which has been on the order paper since the war began; they ignored it because the insurance companies opposed it. The standing committee which considered this measure, and accepted the definitions appearing in the bill, forgot all about the soldier who is bearing all the risk he does for the country, and gets only $1.30 a day for flying over Germany.

Mr. HANSON (York-Sunbury): This may be the appropriate place to discuss the question raised by the hon. member for Broadview.

The CHAIRMAN: We are on the definitions section; the principle of the bill is not yet involved.

Mr. HANSON (York-Sunbury): We are talking about what is covered by the term "insured", and I am suggesting that what has been said is relevant. We are considering a bill to insure persons and property against damage from war; in other words we are considering damage to material things. In this bill the government has failed to give any consideration to insuring the lives of the men who are fighting for us, and who are risking their all.

The CHAIRMAN: I do not believe that the point raised by the leader of the opposition properly comes under the definition of the

word "insured". The question now before the committee is as to what that word should mean. The definition suggested in the bill is:

(g) "Insured" means any person with whom the minister enters into a contract of insurance.

The point now before the committee is therefore what the word "person" should include for the purposes of this bill.

Mr. HANSON (York-Sunbury): Speaking to the point of order, I believe the chairman is technically correct. I am not questioning his decision. I could have made my observations on the preamble, but since the subject has been brought up by the hon. member for Broadview I thought this was the proper time to speak. If I am ruled out of order I shall reserve my right to speak on the preamble of the bill.

The CHAIRMAN: I am afraid it will be impossible to follow the rules of the house if any hon. member is permitted to discuss a subject which is not before the committee. Paragraph 2 of standing order 58 is very clear on that point. The Chairman, of course, is exclusively in the hands and at the service of the committee, but he must apply the rules. If hon. members do not strictly confine their remarks to the section before the committee, they violate a rule which it is the duty of the Chairman to enforce.

Mr. NEILL: I should like to speak to the point of order. We are discussing what shall be insurable under this bill, and the hon. member for Broadview wanted to include some other classes of person than those referred to in the paragraph.

Mr. ILSLEY: It is property that is insurable under this bill. The hon. member for Broadview was talking about life insurance, not property insurance.

Mr. NEILL: The paragraph reads:

"Insured" means any person with whom the minister enters into a contract of insurance.

The hon. member was discussing whether that would include Jones or Smith.

Mr. ILSLEY: This would cover every man in the forces who loses property which is insured under this measure.

Mr. HANSON (York-Sunbury): The hon. member was asking that you insure his life.

Paragraph (g) agreed to.

Paragraphs (h) and (i) agreed to.

On section 2, paragraph (j)—property.

Mr. NEILL: It may be my ignorance and I may have lost touch with the meaning of legal language, but I do not understand just what this covers and I should like to have some information from the minister. I think the drafting of this paragraph could be made clearer. It states that property shall include certain things but shall not include land, growing crops, plants and trees, as well as ships, other than vessels used solely in docks, ports, rivers, or inland waters. First, I should like to know whether "trees" would cover standing timber and timber that is lying down, what they refer to as fallen timber. If fallen timber and trees are not included, one of the greatest assets of British Columbia will not be insurable. This is one of the things that is most likely to be subject to damage by the enemy. All they would have to do is to send over some planes with these leaflets or inflammable packets and they would be able to do incalculable damage. It is estimated in British Columbia that there is always one billion feet board measure of timber fallen and cut into logs. It is this type of timber that would be likely to suffer the most damage, because fire might start in the logs when they are lying close together and the damage would be great.

My next question has to do with the paragraph referring to ships, other than vessels used solely in docks, ports, rivers, or inland waters. This definition would apply to shipping on the great lakes, but on the Pacific coast there is an investment, I believe of $800,000,000, in the canning industry and the shipping industry which is connected with it. A boat may leave Vancouver to go to the west coast to fish or to bring back a shipment of salmon and it would be liable to enemy action off the west coast. Apparently that boat is exempted from the provisions of this bill and it would not be possible to insure it. I understand that the insurance people will not insure against war risk in these waters.

Mr. ILSLEY: The hon. gentleman is not correct.

Mr. NEILL: Once the ship got outside the harbour it would not come under this bill. I may not have understood this paragraph correctly, and I hope I am wrong, but it would seem that the two largest interests in British Columbia have been forgotten.

Mr. ILSLEY: Standing timber and trees are not insurable under this bill.

Mr. HANSON (York-Sunbury): Or fallen timber?

Mr. ILSLEY: Anything severed from the soil such as logs and lumber is insurable under this bill. The practice under fire insurance is exactly the same. It would be almost impossible to ascertain the damage to standing

timber as well as the cause of the damage, and after consideration we decided that we should not go into the business of insuring standing timber when nobody else does.

Mr. NEILL: Is the minister sure that standing timber is not insurable?

Mr. ILSLEY: It is not insurable under this bill.

Mr. NEILL: But logs will be?

Mr. ILSLEY: Yes.

Mr. HANSON (York-Sunbury): I am glad to have the minister's assurance that fallen timber will be insurable. With respect to the insuring of standing timber, I have investigated this on many occasions. On the one occasion on which I was able to attend the banking committee this subject matter was under discussion, and I gave the committee briefly the benefit of my experience. Many attempts have been made to insure standing timber, but the estimate of risk and hazard is so indefinite that none of the insurance companies within recent years, so far as I can recall, have ever undertaken it. I am inclined to think that the government is wise in not undertaking this class of business. If they did, the premium would be prohibitive because you would be entering a new field of insurance. So far as I know even the lumber mutuals on the Atlantic coast have never attempted anything of the kind, and they give the cheapest insurance in the world. The committee is to be commended for not having included that. The public will be glad to be assured that severed timber, either manufactured, or unmanufactured, will be insurable under this bill. The risk and hazard can always be measured by the position of the insurable object, that is, its proximity to railways and other exposures.

Mr. NEILL: The brief of the Canadian Manufacturers association refers to the fact that standing timber is not insurable, but there is this point which the minister apparently overlooked, that timber and forest fire fighting expenses can and should be covered. That is to say, a man may expend $150,000 in putting out a fire, and this brief asks that that be included in the bill. There is a distinction; they do not ask that we should insure standing timber, but they ask that we insure the cost of fighting a fire.

Mr. HANSON (York-Sunbury): I wonder if that came before the committee?

Mr. ILSLEY: The brief was filed with the secretary of the committee and was available to the members. I do not know whether they read it.

Mr. HANSON (York-Sunbury): Members of the committee are present here; I should like to know if consideration was given to that matter. After all, it is an important factor. You can always insure fire fighting equipment, but this refers to the cost of fighting a fire. Would the minister give further consideration to that?

Mr. ILSLEY: As I understand it, what is referred to is an agreement by the insurance company to indemnify the insured against the expenses of fighting a fire. That would be out of line with the rest of the bill, which is to protect corporeal property and nothing else.

Mr. HANSON (York-Sunbury): It might be a loss arising directly out of the war.

Mr. NEILL: I am waiting for information about the boats.

Mr. ILSLEY: The hon. member for Comox-Alberni raised two questions, and I dealt with one only.

The second was the matter of ships. The information which the committee obtained was that all ships on the sea, that is ships outside of inland waters, are insurable. Confirmation was obtained of that. The hon. gentleman said that certain ships which he mentioned were not insurable, but I think he is wrong about that. That is the information I have. There was some telegram from a shipping insurance broker or agent in Montreal stating that these ships were insurable.

Mr. ROWE: I agree with the leader of the opposition as to the difficulties and complications that may be involved in attempting to insure standing timber and growing crops, but I find myself also in some agreement with the hon. member for Comox-Alberni. In view of the great fire hazards of modern warfare, careful consideration should be given to insuring against the cost of forest fire fighting at least, if standing timber itself is not to be insured. The greatest risk to which our natural resources are exposed in modern warfare is forest fires, especially in British Columbia. Modern warfare creates similar hazards for growing crops, which are also excluded from insurance under clause 2. This whole clause should be reconsidered and a further effort made to provide insurance against this fire risk, which is greater in this war than ever before. Fire risks in the last war and this war are not at all comparable, for reasons that are obvious.

Growing crops, especially in the vast areas of western Canada could be very seriously damaged by fire. In peace time we have hail insurance and crop insurance, and I see no reason why insurance should not be available

for the risks which are made so much greater by our modern warfare through aeroplanes carrying incendiary bombs, by means of which vast areas of ripened grain and standing timber could be destroyed. While I appreciate the difficulty of insuring standing timber, I do think that the costs of fire fighting should be considered under this clause, as well as the insurance of growing crops.

Mr. ROSS (St. Paul's): I do not see any reason why standing timber should not be included in this bill. Some arrangement might be made with the lumbermen's association by which every lumberman of British Columbia, for example, would insure his timber at a premium commensurate with the risk. There never has been insurance for standing timber, but the hazards from fire to-day are far greater than they have ever been before, and I certainly think that those who own these tracts of timber should be entitled to have insurance to protect them. Coupled with that, the lumbermen should be forced to take proper precautions to safeguard their timber interests. Something of that kind might be worked out through the lumbermen's association.

Mr. ST. LAURENT: Just a word which may not be a valuable contribution to this discussion but may be of interest to hon. members. Hon. members have said that there has been no insurance of standing timber, but I remember that in 1910 or 1911, when the firm of Price Brothers and Company made its first issue of bonds on the London market, the bond brokers insisted that insurance be placed on the standing timber, and an insurance policy was accordingly written by a group of Lloyds underwriters. Some time after that, a small fire occurred and a claim was asserted against the underwriters. The validity of the policy was contested on the ground that there had not been sufficient representations with reference to the thing insured. Action was instituted against one Mr. Heath as a test case against the various underwriters, and a commission was sent to Canada to take evidence as to the value of the property that had been destroyed by the fire. The commissioner was George H. Montgomery, K.C., of Montreal. The commission sat in Quebec, and I appeared before the commissioner to submit the evidence. I do not know that there ever was a judgment on the merits of the case. Sir William Jowitt represented Price Brothers in London, and when the case came up for trial he suggested, and I think the suggestion was accepted, that the court should first of all pronounce upon the value of the plea against the insurance policy. There was a decision that the insurance policy was a valid policy, and following that, I think the amount payable under the policy was adjusted. I know we were informed at that time that the underwriters of Lloyds would never again have anything to do with such a policy, and I do not think insurance has been placed on standing timber since that time.

[Mr. Rowe.]

Mr. HANSON (York-Sunbury): Thank you. I dare say that is correct.

Mr. GREEN: The definition of property would be sufficiently wide to cover fishing boats on both coasts were it not for the exception contained in paragraph (j) (iii). Under that definition fishing boats on the coasts cannot be insured although fishing boats on inland waters can. The main reason given in the committee for excluding coast fishing boats was that to insure them would be entering into the marine insurance business, which was pictured as a complicated business, and it was claimed that the government should not enter into such business at this time. Yet members of the committee will notice as I have said that ships on the great lakes or on other inland waters can be insured under the provisions of the bill because they are under the proviso in subparagraph (iii) of section 2 (j). I cannot speak for the eastern coast; I leave that to members representing the maritime provinces. But on the western coast our fishermen have to go out from different ports and also fish at the mouths of our rivers. Of course they are fishing in salt water, and under present war conditions they are fishing in very dangerous areas where, should there be a Japanese raid, these boats, or some of them at any rate, would be certain to suffer damage or be destroyed. The danger has been recognized by the government in that provision has been made for pensions to be payable to the fishermen, if they should be injured, or to their dependents should the fishermen lose their lives as a result of enemy action.

This fishing on the western coast is of great importance to the war effort of the united nations, because this year all the salmon and herring pack is to go to Great Britain to provide food for the British. An announcement was made in the press on March 3 of this year, quoting the Minister of Fisheries (Mr. Michaud) as saying that we are going to make available to the United Kingdom all the canned salmon and herring that can be put up in 1942. So that many of these west coast fishermen are going out fishing for food for Great Britain.

Another feature which should be considered is that to the ordinary fisherman his boat is his all. Everything he has is tied up in his boat and gear. Within the last few months, since Japan declared war, this government has arranged for the sale to white fishermen of 800 Japanese fishing boats. These Japanese boats are now being taken out by the white fishermen and will be used with the rest of the fleet in bringing in the catch this year.

It was explained in the banking and commerce committee that at the present time it is possible to get insurance on these fishing boats by obtaining it through San Francisco, but we were told that the rate to be paid as premium is either a dollar a hundred for a year, or a dollar a hundred for every three months or for thirty days. We were not given information as to which was correct, but in any event by contrast the premium under this measure was expected to be about 15 cents a hundred. So we have this position, that if no provision is made for them these fishermen will have to pay at least a dollar a hundred to get insurance through San Francisco, and the minute there is a Japanese attack the companies will probably stop issuing policies. At best therefore it is a very poor type of protection for them.

I submit to the committee that it is most unfair not to provide protection for these men. It may be that they should not be protected by this bill, though I think they should. The government should face the difficulties and provide that fishing boats can be covered under the bill. If that is not possible, I suggest that some other method must be adopted. Mr. D'Arcy Leonard, who drew this bill, and advised the banking and commerce committee throughout, made the following statement in his report to the Minister of Finance (Mr. Ilsley), contained in paragraph 19, referring to the question whether or not ships should be covered:

> I do think however that we should canvass the possibility of making an arrangement with either the maritime shipping commission of the United States or the British war risks insurance office to make sure that cover is available at reasonable rates to Canadian hulls and on cargoes in which Canadians are interested.

It may be that this method could be adopted; that the government could make some arrangement with either of the bodies mentioned by Mr. Leonard, in order that these fishermen might get coverage at reasonable rates. Another suggestion made in the committee was that they be covered by special order in council. It was suggested that the government pass an order in council which would provide for insurance for fishing boats. I am not insisting on one method or the other being followed, but I do submit to the minister that it is of the utmost importance that some arrangement be made to cover these fishermen, and that it be made now. We should not wait until after damage has been done to a hundred or two hundred of these boats, after they have been destroyed perhaps, to take steps to enable the fishermen to get protection. They are doing a real job not only for Canada, but also for Great Britain. They are running grave risks and are certainly entitled to protection.

Mr. PERLEY: I think the point made by the hon. member for Dufferin-Simcoe (Mr. Rowe) is well taken. In subparagraph 2 of paragraph (j) it is provided that "growing crops, plants and trees" shall not be included. As this war proceeds we shall find in western Canada, while the air training scheme is in operation, that some flyer is forced from time to time to land, and there is no better place in the world in which to land than a large field. In the fall of the year when there is a growing crop a fire might easily be started which would burn the whole crop. That applies too to the stook stage. The hon. member for Dufferin-Simcoe mentioned the fact that leaflets or incendiary bombs might be dropped. We may be attacked in that way later on. The enemy may send aeroplanes and drop these things, and they might easily set fire to growing crops. The farmer should have protection. Growing crops should not be excluded. It should be possible for these men to get insurance.

Mr. MacINNIS: I was not present at the last meeting of the committee when the matter of insurance on fishing boats was discussed; unfortunately I had to attend another committee meeting. However, I wish to associate myself with the hon. member for Vancouver South (Mr. Green), in the points he has raised. I do not know to what extent these fishing boats on the west coast are insured. I can see how an enormous amount of damage might be done to fishing boats through bombing or some such enemy action if it should come about at the time of year when fishing boats are in the harbour. Last fall while in Prince Rupert I saw how close together these boats were anchored when in the harbour. A bomb or two dropped among them would create terrible havoc. The express purpose of this insurance is the replacement of assets. In view of the importance of the fishing fleet in procuring food for ourselves and for Great Britain, if such destruction took place and the boats were not insured, the government would have to

spend money in the building of new boats in order that the fishing industry might be enabled to carry on. For these reasons I wish to associate myself with the hon. member for Vancouver South in the suggestions he has made and I hope the minister will give them consideration.

Mr. POTTIER: I was not privileged to be a member of the committee on this bill. I would associate myself with the hon. members for Vancouver South and Vancouver East in regard to insurance on fishing vessels. In the last war we lost I think twenty-seven ships on the Atlantic coast, the direct result of German submarine activity. The fishing fleet was practically wiped out. Compensation for that loss was paid through the German reparations commission that went around the country holding hearings in 1924 or 1925. As a result of that loss and delay certain individuals and companies went into bankruptcy. The fishing fleet on the Atlantic coast suffered severely, and the industry felt that loss for a number of years.

I am a little confused as to why there should be insurance on ships on inland waters but not on those on the high seas or coastal waters. Apparently under this bill some arrangement is made whereby fishing vessels on the great lakes are to be covered. Why the distinction? There might be complication in paying partial loss as against total loss, which is what would happen in 90 per cent of the cases. I think we would be wise to make provision for that. I am thinking particularly of what took place in the last war, the great toll of fishing vessels and the resulting damage to the industry. I urge upon the minister that he see to it that something is done, if not by this measure then by some other procedure, as suggested by the hon. member for Vancouver South.

Mr. HAZEN: I should like to see fishing boats included in this bill. We have along the shores of the bay of Fundy, in the counties of Charlotte, Saint John and Albert, many men who make their living—not a very lucrative living—by fishing. These men usually go out from their villages in what we used to call salmon boats, which are between twenty and thirty feet long. At present they are motor-powered and usually carry a crew of two. The boats are used for salmon and lobster fishing and for tending the sardine nets. It is quite impossible from a practical point of view for these men to take out insurance. The marine rate is very high. The boats, while of no high intrinsic value, are of great value to their owners. I am not speaking of ships now but of these smaller fishing boats. It seems to me they might well be included under section 2, subparagraph (j)(iii); after the word "ships", add the words "other than fishing boats". The size of the boats could be defined—"other than fishing boats of a certain size."

We were told in the committee that it was possible to take out marine insurance on vessels. But the rates are very high, consequently it is impossible for these small fishermen to take out insurance. They should be afforded protection.

Mr. FRASER (Peterborough West): In the committee "ships" were discussed many times, I think at nearly every sitting, and although that section was passed I do not think the members were satisfied with it. I believe these fishing boats should be covered, especially if they are registered and inspected by the government inspector.

Mr. POTTIER: Those over ten tons.

Mr. FRASER (Peterborough West): Yes, they should be inspected and if they are in first-class condition they should be covered. A large number will not pass inspection and therefore will not be registered. Those of course will have to be out, but those that can be registered should be in. The bill was thoroughly discussed in the committee, but this is one point on which the committee really was not satisfied.

Mr. NEILL: The minister in answer to a question asked by myself a few minutes ago said it was his definite understanding that these boats on the Pacific coast could be insured. I presume his information is correct, but I should like to emphasize that the expression was, insured now against war risk. We know there is insurance. The hon. member for Vancouver South placed information on the record which apparently had been submitted in committee, indicating that it is almost impossible now to obtain war risk insurance on the coast; it can be obtained only through San Francisco, which might at any moment withdraw the scheme. Also the cost is enormous.

The hon. member also brought out the fact that 800 Jap boats had been seized and sold to white people. He drew a picture of the need that there is for the protection of these boats. But that is only a portion; there is the white element too. The Jap proportion is something like 14 per cent, so that apparently there would be about 1,800 boats out in the Pacific. You can imagine how enormous the loss would be in the event of enemy action. There are hardly any boats

that do not go out in the open sea beyond the three-mile limit, where they are exposed to all kinds of enemy attack.

Mention has been made that fishing boats on the great lakes can be insured. That puts the minister or the government, or the committee if you like, in rather an awkward position. The committee after due consideration accepted and allowed the government to insure boats on the great lakes where they are safe from enemy attack, or at any rate where attack is unlikely, but they will not do it for fishermen on the sea, where it is most needed. The hon. member for Broadview used what I thought extravagant language a little while ago when he said this measure was of no use and that nothing would be paid under it, but I am beginning to wonder whether that charge cannot in some sense be sustained. We are making a gesture about giving insurance, but when it comes to the point the real fishermen will not be insured. The hon. member for Shelburne-Yarmouth-Clare spoke of making it apply only to registered boats, which means boats of over ten tons. That may be all right on the Atlantic, but on the Pacific coast many of our small fishing boats, although some are worth $2,500 and up, are under ten tons burden. I do not want to suggest that there is anything sinister about this thing at all; that was the last thought I had in mind, but I do find this very inconsistent. Some of those who were members of the committee have said frankly that they were not satisfied with the decision of the committee, so that it might be a matter for further consideration, to see if the words "fishing boats" could not be included. Otherwise I should like to know who gets the benefit of the act, if it is supposed to be brought in to protect the fishermen. It seems almost like the play of Hamlet with Hamlet left out.

Mr. CHURCH: I agree with the hon. member for Vancouver South, that the poor man out at sea fishing should be given some protection, with this war on. The definition of property does not even include those mentioned under the Farmers Creditors' Arrangement Act. It covers a dwelling up to the value of $3,000, but it does not cover a ship, except on the great lakes.

This and the preceding parliaments incorporated many insurance companies, through private bills—Canadian companies, Canadian-American companies, Anglo-Canadian and British companies—to perform the very functions covered by this act. Some of the larger companies have made fortunes out of the hundreds of millions of dollars paid in premiums on life insurance, automobile insurance, marine insurance and all the other kinds of insurance now in force. They have amassed large sums of money, and in my opinion should have been required to issue these policies and function and do this very work, though at the time the charters were issued there was some question as to whether some of the powers granted were within the jurisdiction of this parliament, since insurance is a matter of concurrent jurisdiction. But the companies will not take these risks, though they collect premiums for what I might describe as insurance against plague, pestilence, famine, battle, murder and sudden death. They even insure against certain contingencies of the weather; in the case of an exhibition or a sporting event they will insure against rain, and they do that in peace and war alike.

The trouble with this parliament is that the agents of these large insurance companies have too much influence with our committees and we forget all about soldiers and their risks. I have seen representatives of insurance companies appearing before committees to which I have belonged, submitting prepared briefs and all the rest of it. After all, this is only a small bill, limited in one respect to a total for the year of only $50,000 and in another to $3,000 for dwellings; but when you consider the work being done by these poor fishermen to whom the hon. member has referred, since the companies which should carry this insurance refuse to do so, those men should be protected by this bill. The collection or production of fish food is one of the basic industries of this country, the fisheries, in peace or war. So far as the working man is concerned, his burden is heavy enough already, with all the taxes which have been piled upon him by this government. I do not see where the minister is going to get all the money to finance this proposal, which I look upon as an improvident half-baked scheme. Within the last two years we have launched upon a large unemployment insurance scheme. Now they are trying to load up that fund, though when my leader Viscount Bennett was here they had a report that the fund was not solvent. Watch what will happen. This committee has no information before it at all. We are asked to go into something which might cost a fabulous sum of money and bankrupt the country, yet we do not know anything that took place before the committee, because their meetings were private. I do not see any reason for all the secrecy being maintained. I do not know why the questions and answers and information given to the committee could not be given to parlia-

ment. The British parliament gets all that information. That is the trouble here. We talk about secrecy, yet the enemy know everything we do. They have their agents and envoys right here at times in this city and have full details of every statute we pass. I hope the government will get rid of this secrecy business, because it is not secrecy at all.

As I have told the minister I believe this is a scheme by which the insurance companies are endeavouring to escape from the discharge of their duties and transfer the responsibility to the federal government on this form of insurance. Fortunately in another part of this building we have a body which knows a great deal about insurance, and which I hope will give careful attention to this matter and bill.

I believe we should consider the ability of the government to carry all this and the solvency not only of this scheme but also of the unemployment insurance scheme and other similar matters. Here we have the government saying what premiums shall be paid and what property may be insured. This is a second government insurance scheme, and why should these private companies, which have collected so much money both before and since the beginning of this war, unload their responsibility on the government? The insurance companies have the profits of peace, and as sportsmen they should be prepared to take some of the losses of war. I tell you the country cannot afford this expenditure at the present time. While I approve the principle of the bill, I believe it should be laid over until next year, and in the meantime the government should attempt to force all kinds of these companies to fulfil the functions for which they received their charters and collected hundreds of millions of dollars in premiums.

Mr. JACKMAN: In associating myself with the remarks of the hon. member for Vancouver South, I believe that those engaged in coastal fishing should be protected under this bill. In the first place the premiums to be set by the government probably will be somewhat lower than those exacted by commercial companies, and this is as much a war-time industry as any other in the country. Secondly, and more important, I should like to point out to the minister what the situation will be if losses occur among the people engaged in fishing off our coasts, if losses occur due to war risk. Their catch now I believe is subject to the price ceiling. If it is, then the cost to the government to export that catch abroad will not be commensurate with the risk involved. It seems to me that after all it is the government's risk, and it is better that the government should give those engaged in this industry the assurance that they will be covered at a reasonable premium, perhaps not one fully commensurate with the risk but nevertheless something above the rate of 15 cents per hundred which was mentioned as the general war risk premium which might be imposed. If the coastal fishermen feel they are going to have to bear all the risk themselves, that it is not to be shouldered proportionately by the people of Canada, then if their boats are sunk or other damage is occasioned by enemy action, certainly they will not go out to bring in the fish. It is not reasonable to expect them to do so. This should be the risk of all the people of Canada. It would be better to make some provision to bring these fishermen under the bill instead of waiting until a time when the government will have to take some other action to compensate them in order to give some assurance that they will not be left to bear the whole burden themselves.

Mr. CRUICKSHANK: I should like the minister to explain why inland boats are included while coastal boats are not. There must be some explanation for it. As was pointed out by the last speaker, it is the duty of the whole of Canada to absorb a part of this risk. For the last two or three years on the Pacific coast, and I presume it has been the same on the Atlantic coast, these fishing boats have been used for patrol purposes in watching for enemy activities. We expect them to go out in infested waters to protect us, yet we do not permit them to take advantage of this insurance. I do not know whether they are covered in any other way, but certainly they should be protected. They have been organized in the province of British Columbia, as I suppose they have been on the Atlantic coast, into voluntary patrols. There must be some explanation as to why we are going to insure boats in inland waters and not allow this insurance to apply to those who are actively engaged in both fishing and patrol work on the Atlantic and Pacific coasts.

Mr. NOSEWORTHY: How does the minister justify the discrimination involved in this paragraph? My objection to the paragraph is that it is definitely discriminatory legislation. We are giving to the people in the central part of Canada and to those adjoining inland waters certain privileges which we are withholding from those on the coasts. I fail to

see how any hon. member representing a constituency on either coast can support such a proposal. It would appear that we should either leave ships entirely out of the bill or include those operating on the coasts as well as on the lakes.

Mr. CRUICKSHANK: Or amend the bill.

Mr. STIRLING: I was not a member of the banking and commerce committee, so that I have heard only one side of the question. I presume that when he was before the committee the minister expressed his views as to the way in which this matter is to be handled. As I understand it the whole object of the bill is to spread over many shoulders the risk which may be incurred by Canadian citizens; and as the danger to those who live and have their being on the two coasts is so very much greater than to those who carry on their livelihood in the centre or other parts of the interior, I cannot see why those who navigate the coastal waters—I speak particularly of the Pacific coast—should be excluded. The men who occupy those boats and carry on the industry are the very men to whom the country has turned to form a part of the fishermen's patrol. Having heard the case put forth by the hon. member for Vancouver South it seems to me that there are being excluded from the operation of the bill one class of people who will be in greater jeopardy than some others who are included in it. I shall listen with great interest to the minister's subtantiation of this course.

Mr. ILSLEY: The whole scheme of the bill is to protect property within the Dominion of Canada against damage resulting from attack, or measures taken for counter-attack. As hon. members have said, the moment one gets out of Canada and operates on the high seas, he is in an area of greater risk. It is also an area in which property may be insured at the present time through commercial channels. Marine insurance applies there. To import this class of business into inland or internal schemes of insurance would, unless we were to run grave risk with respect to the solvency of the fund, mean a considerably higher rate. It is for that reason, or a reason very much like it, that we exclude one risk to which I have referred within the dominion, namely, the risk of damage to standing trees. If we were to undertake the uncertain, perhaps very great, and possibly unascertainable liability which would be incident to placing insurance upon standing timber, we would imperil the scheme.

Ships on inland waters are covered because the risk to those ships from war is the same, or practically the same, as the risk to buildings on the shore. In other words it is an internal risk. It is a risk which we are assuming to be equal throughout the country; that is the principle underlying the bill. It is also a risk, however, as to which a certain premium can be assigned, one which we believe would be fair for that class of risk. When we go outside, on the ocean, we are going into a most difficult and uncertain field. If we were to do that we would have to have two schemes, because in my judgment it would never do to lump ocean-going vessels, whether they were ferrying or trading vessels, with inland property. We are including property on the shores at the two ends of the dominion with property in the middle of the country. But we cannot bring too much into that class of insurance. I have repeatedly said that we do not aim to go into this business for the sake of making cheaper insurance available. If they can get insurance now, let them get it now. That is the general procedure we have followed.

A case can be made for the poor fisherman in his little boat. I do not know whether there is much likelihood of danger to that class of boat. But I do know very well that a great many of the vessels fishing on the seas are not owned by poor fishermen at all; they are owned by powerful and prosperous companies, who should be asked to take out insurance and pay for it, and who can get that insurance at the present time. If we put that class of craft into the bill we will make it much more risky for the government, and we will mix two classes of risk. Further, we will upset our principle, which is a sound one—that of not bringing in persons who can get insurance at the present time.

With regard to dealing with them separately, it is probably true that if there were any considerable or serious losses to fishermen the government would have to assume some responsibility. But we can do that by order in council at any time; we can do something appropriate under the circumstances. I do not know what we will do, because no case has been made. Nothing has been gone into in that regard, and it would have to be considered very carefully before we embarked upon a marine insurance scheme. I am prepared to give consideration to the point during the summer and see whether we should do anything in advance. We shall have to do something by order in council, in other lines, as I told the house when the bill was first introduced. We shall have to make some provision for compensation for personal injuries, and that would be done by order in council. On what basis action

will be taken I cannot say at the present time, although a great deal of consideration has been given to the matter. There have not been any personal injuries to civilians in Canada due to enemy action.

Mr. CRUICKSHANK: When that is being considered, will the soldiers overseas have some consideration?

Mr. ILSLEY: Is the hon. member talking about life insurance?

Mr. CRUICKSHANK: I thought the minister referred to injury to persons just now.

Mr. ILSLEY: Oh, well; The Pension Act makes most careful provision for soldiers. Any injury incurred during or attributable to service is pensionable. Widows' pensions and dependents' pensions are also provided, as the hon. member knows. That has been worked out over many years. Certainly if we do anything for civilians it will not surpass what we do for members of the armed forces, and probably will not be nearly as generous.

Mr. CRUICKSHANK: There is no reason why it should be.

Mr. ILSLEY: No; no one advocates that. The hon. member seemed to intimate that we would be doing something for civilians which we would not do for the soldiers.

Mr. CRUICKSHANK: I am sorry the minister misunderstood me.

Mr. MacINNIS: Usually I am impressed by the logic of the Minister of Finance's arguments. He may not be able to convince the hon. member for Fraser Valley, but he is nearly always able to convince me. However, he has not been able to do that this time. He said we could not include in this measure the fishing fleets on the east and west coasts because the risk would be too great. The fact is, however, that we are embarking on this whole scheme because the risk is too great for ordinary insurance.

Mr. ILSLEY: That is not too great for others to take on.

Mr. MacINNIS: I am not so sure of that. I am thinking particularly of the fisherman who owns his own boat. There are two classes of fishermen, the man who owns his own craft and the company that owns a great number of boats. These companies are usually able to insure. As I pointed out, this is not a case of boats on the high seas. These boats work in close to shore, sometimes in what is known as inland waters. Then for a considerable portion of the year they congregate, if that is the correct term to apply to boats, in the harbours where a bomb or two could do enormous damage. The minister referred to standing timber and stated that that should be excluded from the bill, but that argument does not apply to fishing boats. If he cannot include them in the present bill, he should give consideration to providing protection in some other way.

Mr. GREEN: I should like to bring out two points in connection with the minister's reply. He emphasized the fact that this war risk insurance bill was intended only to protect property within the Dominion of Canada. In connection with the insuring of boats, I think he has in mind those boats which go out from Nova Scotia to fish on the banks of Newfoundland. What we are referring to are the boats on the west coast which fish between the mainland and Vancouver island, or off the island, or in the mouths of the different rivers. Some of the larger boats may go out to the halibut banks, but the majority of the boats fish in Canadian waters and are therefore still within Canada. The men who own and operate them are entitled to the same protection as persons who have property on shore. I urge upon the minister that he go into this matter further, that he should not just ride roughshod over our submissions. This is a very serious situation. If these boats are not insured the result may be to cut down the amount of salmon that can be shipped overseas. A fisherman on lake Manitoba or on the great lakes can insure, and I cannot see the fairness in that position.

The minister has said that he will give consideration to this question through the summer and then perhaps an order in council will be brought down. That is not very satisfactory or helpful. Damage may occur at any minute; perhaps while we are debating the Japs may strike, and it is not fair that this matter should be shelved for months. If these men are to be helped in some other way, let there be no delay. I cannot emphasize too strongly the need for prompt action on the part of the government.

Mr. NEILL: I agree with the hon. member for Vancouver East when he says that he generally has great respect for the arguments of the Minister of Finance. I agree with him also when he says that he cannot now agree with the argument presented by the minister. It rather reminds me of the clever lawyer who was making the best he could of a bad case, but with not very great success. The judge finally said to him, "Mr. Smith, what are you here for?" The lawyer, realizing that

his case was hopeless, replied, "Thirty guineas and five, my Lord, and dirt cheap at the price," and sat down.

I also see in this something of what I would term the sinister evidence of officialdom. We see this so often. When a bill is being prepared the minister says he wants certain things, but when it is being drawn up by the officials they quite often have a strong view as to the ease of carrying it out. They consider whether it is going to cause them trouble in defining what this or that may mean, and when the bill is brought down it is found to be framed along the lines of convenience of administration rather than anything else.

There have been cases on the west coast where the government stepped in and took boats from fishermen because of war needs. These boats would be worth perhaps $12,000 to $18,000, and they were taken because they were needed for patrol purposes. If anything should happen to one of those boats the owner would be paid because they have been simply chartered. These other fishermen who own their own boats have their all invested in them. They live by and on the boats. The minister talks now in very vague terms of doing something later on by order in council, but we should remember that to-day is the day of our salvation, to-morrow is something else. A fisherman who has his all in a little boat will not go out if he knows that his whole livelihood is likely to be endangered. He is not going to be comforted by the vague suggestion that perhaps something will be done by order in council.

I noted particularly two sentences used by the minister. He said that it would be bringing in too much expensive machinery or causing too great an expense and that the system, if carried out, would be "difficult, complicated and uncertain." There you have the crux of the whole thing. A moment ago I referred to the official point of view. The war is difficult, complicated and uncertain, and it is up to us to give the fishermen, both on the east and west coasts, a chance. In order to bring things to a head, I am going to move that paragraph (j) of section 2 be amended by inserting after the word "than" in line 20 the words "boats used exclusively for fishing or packing fish and." With this amendment the reservations in section 2 would not apply to fishing boats used exclusively in fishing or packing fish. This would not open the door very widely. None of these terribly complicated, uncertain and difficult things are going to happen if we take in these boats on the Pacific and Atlantic coasts. How about the boats on the great lakes? I move this amendment in order to test the feeling of the committee, and I know there is a feeling on all sides in its favour.

The CHAIRMAN: The clause as proposed to be amended would read:

(iii) ships, other than boats used exclusively for fishing or packing fish and vessels used solely—

And so forth.

Mr. ILSLEY: That amendment, if accepted, would, in the event of loss, throw upon the fund supplied by the crown, being the property of the crown, an additional burden, and it is therefore, I submit, out of order. It is not merely technically out of order; it is really out of order. If amendments of this kind can be made at the instance of anybody but the government, we have abandoned our system of control of the public funds.

Mr. NEILL: Subsection 2 of section 3 empowers the minister to determine the terms and conditions of any contract of insurance entered into under this bill. He would fix a rate for this insurance that would carry itself, as all insurance does.

Mr. ILSLEY: There is a clause which gives a certain measure of free insurance.

Mr. NEILL: But subsection 2 of section 3 says:

The minister may, subject to the provisions of this act or of any regulation, determine the terms and conditions upon which he will enter into any contract of insurance.

He will fix the premium at such a rate that the insurance will carry itself. Therefore the crown will not be out of pocket by including these people among those who can take out insurance. An insurance company always fixes the rate high enough to protect itself. No insurance company ever loses money.

Mr. ILSLEY: It would be utterly impossible for the crown to arrange the matter with any certainty. All we know is that this puts us in a position in which we are empowered at least, although it does not lead to the crown assuming liability to cover a greatly extended field. I submit that since the amendment affects the public expenditure it is out of order.

Mr. HANSON (York-Sunbury): I am not going to speak on the point of order, but notwithstanding the position which the minister has taken I suggest that he give consideration to the merits of the appeal which has been made to him.

Mr. ILSLEY: Yes, I will do that.

Mr. HANSON (York-Sunbury): That is quite another thing. I think these hon. gentlemen from the coast have made out a case,

and I also can speak on behalf of the fishermen of the bay of Fundy, on the island of Grand Manan. There are no great fishing companies on the island. Every man owns his own boat and goes out into the turbulent waters of the bay of Fundy. The mouth of the bay of Fundy is the entrance of the channel to the city of Saint John, and submarines may be lurking there now. These fishermen go to their lobster traps extending miles and miles out into the deep sea. They are entitled to some protection. I am not going to extend the argument because the minister has heard it to the full on behalf of other localities. He understands the principle, and I hope he will give consideration to the merits of the case and include these boats in the bill. The fishermen would then feel that they would have some measure of protection while pursuing their calling.

Mr. ROSS (St. Paul's): On the point of order, Mr. Chairman, the words added by the hon. member for Comox-Alberni are simply enabling; they do not compel the government to do anything. They do not say that the government has to pay out any more money. The minister, as a matter of fact, would have the right of fixing a rate which is commensurate with the risk in connection with these boats. As the amendment is only enabling, I submit that it is not out of order.

Mr. NEILL: I would also point out that subsection 3 of section 3 reads as follows:

> The minister may, in his absolute discretion, refuse to enter into a contract of insurance with any person.

There is his protection. Did you ever hear of an insurance company that lost money? If the government by this amendment were forced to take additional people into the scheme which they have already formulated, they would not lose money by it, because the minister has power under subsection 2 to determine the terms and conditions under which he will enter into any contract of insurance. The crown cannot lose money by it, because the rate will be fixed so high that the insurance will carry itself, as all insurance does.

Mr. BLACKMORE: On what ground, Mr. Chairman, did the minister submit that the amendment was out of order?

The CHAIRMAN: The point of order is that by adding several other categories to paragraph (j) of section 2 the amendment would add to the charges on the public. That is the point of order, if I understood it correctly.

Mr. ILSLEY: That is correct.

[Mr. R. B. Hanson.]

The CHAIRMAN: If any other hon. gentleman wishes to speak to the point of order, now is the time.

Mr. BLACKMORE: If the proposed change had been made by the banking and commerce committee, would it have been considered out of order?

The CHAIRMAN: That is a hypothetical question on which I cannot make a ruling.

Mr. COLDWELL: May it not be just as well argued that if you include others within the insurance scheme, you collect from them premiums and therefore are increasing the revenues of the crown? When we are dealing with all kinds of insurance, and probably will be in the future, covering different classes of people who may come under various acts and receive various benefits, paying premiums or making contributions in order to secure the benefits, it seems to me that this is a ruling which ought to be well considered by the Chair before it is given. It can be just as well argued that we may increase the revenues of the crown by adding other persons or boats from which additional premiums will be collected.

Mr. HANSON (York-Sunbury): In addition to what has been said, may I call your attention, Mr. Chairman, to the fact that the committee amended the bill by the insertion in paragraph (j) (iv) of the words "property on board any ships, other than such vessels aforesaid." This has been accepted, I understand, by the minister, and the committee on banking and commerce thus added to the burden of the crown. So that there are two sides to the story. The proposed amendment may increase the obligation of the crown, but the minister does not have to accept this insurance. On the other hand it may add to the revenues of the crown.

The CHAIRMAN: On the point of order, hon. gentlemen have spoken on the point of order raised by the hon. minister and also, particularly the leader of the opposition, on the question of expediency. The Chairman can deal only with the point of order, namely, whether the addition of a category to the cases covered by the proposed insurance scheme adds a charge on the public. It has been argued that, since subsection 3 of section 2 provides that the minister may, in his absolute discretion, refuse to enter into a contract of insurance with any person, the amendment does not necessarily entail an expenditure of money. In my opinion, however, by adding a category to those enumerated in the bill, we provide a potential

expenditure of money and a possible charge on the public. The minister shall have the power to contract with persons not provided for in the scheme as submitted by the crown. I must therefore rule the amendment out of order.

Mr. NEILL: Let us take a plebiscite on it.

Mr. BLACKMORE: If this amendment is to be ruled out of order, I believe it pretty well becomes incumbent—

The CHAIRMAN: I repeat, however, that the question of expediency is still open for discussion.

Mr. BLACKMORE: It is the question of expediency to which I wish to speak. You have already ruled it out of order. I would urge on the minister that he consider the expediency of this measure. As the bill stands at the present time, it is a rich man's bill.

Mr. ILSLEY: My dear friend, do not talk that way.

Mr. BLACKMORE: From beginning to end the bill is so framed that the great majority of the really poor people who desperately need insurance in case anything goes wrong will not get it.

Mr. ILSLEY: The only people that get free coverage are poor people. There is free coverage for all people in Canada who own property up to a certain amount. They pay no premiums, nevertheless they get protection.

Mr. BLACKMORE: Not below $50.

Mr. ILSLEY: That is a small protection against a multiplicity of little claims. I cannot help thinking about what is going on in this war in various parts of the world—Russia, China and in other areas. I am sure that complete coverage against all the risks of war is impossible. Men are getting maimed and killed and all that sort of thing, and nothing in the world can make these things up to them. This highly meticulous attempt to protect every civilian down to the last cent is something which it is impossible to carry out. Do not let us lose our sense of proportion in this matter. This is a means by which, apart from a few dollars at the lower end of the scale, we protect all poor people without any premium, and I would ask my hon. friend not to embark upon these charges, that certain legislation is rich man's legislation, without giving more consideration to his words.

Mr. BLACKMORE: It is going to be necessary, if the bill remains as it is, for me to prefer that charge and to pursue it with considerable attention.

Mr. ILSLEY: Well.

Mr. BLACKMORE: I do not propose to raise the question of the $50 limit, which of course comes up under a later clause. Meanwhile I believe that this matter of insuring small fishing boats falls within a class analogous to that of small householders to whom a $50 damage may be a calamity. If that is the case, the minister should make some provision in this bill to protect people whose little all is bound up probably in a very small fishing boat or in a very small home; for there is no obvious provision in the bill for the protection of the many thousands of poor people who constitute so large a percentage of our population. I have characterized the bill as a rich man's bill—

Mr. ILSLEY: I will let that charge go now. I shall never convince my hon. friend. Anyone who understands the bill will not say that about it.

Mr. BLACKMORE: Except the poor man, one who has been a poor man. He will understand.

Mr. ILSLEY: The senate is waiting for certain amendments to be concurred in, and I shall have to move this bill out of committee. I move that the committee rise, report progress and ask leave to sit again this day.

Progress reported.

INCOME AND CORPORATION TAX

AGREEMENT WITH PROVINCES—COMPENSATION FOR VACATING TAX FIELDS AND ARRANGEMENTS FOR SUBSIDIES—CONCURRENCE IN SENATE AMENDMENTS

Hon. J. L. ILSLEY (Minister of Finance) moved the second reading of and concurrence in amendments made by the senate to Bill No. 16, to authorize the governor in council to enter into agreements with the governments of the provinces of Canada respecting the vacation by the provinces of the personal income and corporation tax fields for the duration of the war, and Bill No. 17, to provide for the payment of additional subsidies to the maritime provinces.

He said: These amendments do not change the substance in any way. They are merely verbal. They improve the language and in one case make slightly clearer the intention of everyone. I am prepared to accept them. The amendment to Bill 17, which is the bill relating to subsidies to the maritime provinces, is that on page 2, lines 16 and 17, for the

words "of the said provinces," we substitute the words "such province." The proviso will then read:

Provided the said subsidies shall not be payable to such province while an agreement under the provisions of the Dominion-Provincial Taxation Agreement Act, 1942, remains in force with respect to such province.

The senate amendment to Bill No. 16 is as follows:

On page 2, line 41, between the words "pay" and "to" insert the words "with respect to each year of the term of the agreement".

And on page 2, line 42, between the words "receipts" and "from" insert the words "during the said year".

This makes it clearer, that the amount payable under the gasoline guarantee will be an amount related to the deficiency in each year, year by year. Otherwise the section as originally drafted might have been interpreted as meaning that the guarantee related to a longer period than a year.

Mr. HANSON (York-Sunbury): This makes the gasoline guarantee more definite?

Mr. ILSLEY: Makes it more definite; simply carries out the intention.

Mr. CHURCH: Since the minister hinted on Monday or Tuesday about increasing the income tax, an impossibility, has that been considered in connection with Bill No. 17 and allowance made accordingly to the provinces?

Mr. ILSLEY: I did not say that the income tax was going to be increased, nor did I use any words intended to give the public that idea. That is a matter as to which I naturally wish to say nothing, have said nothing and will not say anything until the budget is brought down.

Motion agreed to, amendments read the second time and concurred in.

WAR RISK INSURANCE

PROVISION FOR COMPENSATION FOR WAR DAMAGE TO PROPERTY

The house resumed consideration in committee of Bill No. 56, to make provision with respect to insurance of property against war risks and the payment of compensation for war damage—Mr. Ilsley—Mr. Vien in the chair.

On section 2—paragraph (j).

Mr. NEILL: We hear a great deal these days about equality of sacrifice. Let us apply it to this bill. If our fishermen on the Atlantic and Pacific coasts are to go out and risk their lives and all they own and hope to make a living by, without compensation, for the sake of getting fish for our own and the British market, then let us go the whole hog and make it right across. I do not see any reason why this provision should not apply on the great lakes. I therefore move to strike out subparagraph (iii) of paragraph (j) of section 2, beginning at line 20 of the bill. Then we shall all be on a common footing.

The CHAIRMAN: I must give the same ruling on this amendment. Does any hon. member desire to speak on the point of order?

Mr. HANSON (York-Sunbury): No one has raised a point of order yet.

The CHAIRMAN: The point of order is raised by the Chair.

Mr. HANSON (York-Sunbury): Would the Chairman be good enough to state the point of order?

The CHAIRMAN: The point of order is that by striking out subparagraph (iii) of subsection (j) which excludes from the bill a whole category, the amendment includes them within the application in the bill. The result, therefore, is to make the bill cover a larger enumeration of insurable property.

Mr. NEILL: This is a good illustration of what I said earlier in the afternoon, that this bill has been very sloppily drawn. Many hon. members cannot understand what it means, and I venture to suggest that even the Chairman has misinterpreted it. He says that the amendment removes from the exemption a number of classes of insurable property. I wish he would mention what classes are exempted, because these other things are the very opposite. "Ships, other than vessels used solely in docks," are exempted now, and I want to leave out the exemption so that it will not apply to them. I am relieving the government of some expenditure.

The CHAIRMAN: Paragraph (j) reads:

"Property" . . . shall not include . . .

Mr. NEILL: But the Chairman has omitted the words "other than" which turns the whole thing roundabout: "shall not include vessels other than". You exclude certain things. It is restricting the insurability.

The CHAIRMAN: Ships are excluded, but there is an exception to the exception. Ships outside of those that are in the exception to subparagraph (iii), ships generally, were excluded from the bill. By dropping subparagraph (iii) you include all ships that were excluded.

Mr. NEILL: I hope I am amenable. If the Chairman takes that view I will withdraw

the amendment and move another: leave the word "ships" in and strike out the rest of the words. That puts us all, Jew and Gentile, maritimes, great lakes and British Columbia, on a common level of degradation.

The CHAIRMAN: Will the hon. gentleman give the wording of his amendment?

Mr. NEILL: To strike out all the words after the word "ships" in line 20 down to the end of the paragraph.

The CHAIRMAN: That subparagraph (iii) of paragraph (j) be amended by striking out all the words after the word "ships" in line 20, so that subparagraph (iii) will contain only the word "ships"?

Mr. NEILL: Yes. That is in order, is it not?

The CHAIRMAN: I think it is.

Mr. HAZEN: If all those words are struck out, a great many objects are not going to be insured that otherwise would come within the bill, and I do not think we want that to happen. I understand the minister to say that he would consider the first amendment suggested by the hon. member for Comox-Alberni.

Mr. ILSLEY: No.

Mr. HAZEN: If I might offer another suggestion it would be that the words "territorial waters" be inserted in line 21 of paragraph (j) (iii) together with the words "inland waters". Then the small fishing boats in which I am interested would be protected.

Mr. POTTIER: I rather agree with the last speaker. I do not think that just because you cannot get what you happen to want you should take anything away from anyone else. It seems to me that if there is any chance at all of fishing boats getting any protection it will be because somebody else has somewhat similar protection. If we take out of this bill the road leading half way to where we want to go we abolish our only chance, and there never will be any opportunity for fishing boats to be insured. I think we should leave it as it is now, at least covering boats in inland waters, and then ask for more. Apparently we cannot get any more to-day, but I am hoping that some day we shall get this provision extended.

Mr. NEILL: If I may ask a question, did Oliver Twist get any more by asking for it?

Mr. POTTIER: Well, if we are going to follow Oliver Twist in our procedure in this house, at least he took what they gave him. I am sincere about this; if we are going to abolish what is offered here, on the principle of equality of sacrifice and "if I can't get anything, you can't get it either," I think that is all wrong. I believe we ought to leave the bill as it is and come back another time with something which will extend what is provided here. So I hope this amendment does not pass.

Mr. HANSON (York-Sunbury): I really do not think the hon. member for Comox-Alberni wants this amendment to pass in the form he suggests. He moved it out of resentment, shall I say, at the inflexibility of the minister's mind toward what he wants to get into the bill. It may be that perhaps this is the proper tactic to pursue, but really I would not want to support the present amendment. I urge upon the minister, however, that before this bill is through committee he should give consideration to insuring fishermen's boats. It would not be a great risk to assume. The amount of capital involved cannot be very great, and he could protect himself by adequate premiums. Surely there must be some yardstick with which to measure. In this bill the government are giving some protection to people of limited means in other walks of life. Can they not do it for the fishermen? I beg the minister to do this. I do not agree with the hon. member for Lethbridge that this is a rich man's bill. It is a moderate attempt to do something for all classes who may be affected by war risk. In their study of this bill hon. gentlemen have discovered that fishermen are left out, and they are making a case for the fishermen. I think they have made a good case, and I do not believe the minister has yet dealt with the concrete proposal in an adequate way. It is true that he has made the general statement that this is an experimental piece of business, and all that sort of thing, but I suggest that he become a little more realistic and give effect to what has been asked by hon. members with respect to fishermen, who need this protection.

The fishermen at the mouth of the bay of Fundy need this protection. The fishermen of the constituency of the hon. member for Shelburne-Yarmouth-Clare need it. I know the fishermen in the bay of Fundy take their large boats and go away down the bay, miles away from land. These have to be good, staunch, sturdy boats. I have watched them on the inland waters of the Pacific coast. They are a pretty substantial investment. These fishing boats are not always paid for. They represent the whole stake of the fishermen. Give them a little protection. I plead with the minister that he do that, and I think he ought to do it.

Mr. JACKMAN: Is there not a sound ground for distinction between ocean-going shipping and these deep-sea fishing boats, inasmuch as ocean-going ships can set their freight rates according to the risk involved and according to the premiums they have to pay? In other words, ocean freights are not governed by the price-ceiling regulations of our country; and though I am not yet sure of the fact, I believe the catch of the coastal fishermen is subject to the price ceiling. If insurance rates for protection against war damage rise substantially, then it will become impossible for the fishermen to operate. If they do suffer loss and are unable to replace their boats or recoup themselves financially, they cannot be expected to go out and fish. The government want to see the greatest possible amount of fish caught by the deep-sea fishermen, because we have the canneries available and we are exporting as much of this fish as possible. Therefore the government will certainly find itself in the position of having to keep this industry going if it does suffer from enemy action. In other words, to use the vernacular, the baby is on the doorstep of the government, and the question is how they intend to provide for it. They can either bring the coastal fishermen under the bill or wait until some of them are blitzed. Then the government will have to take measures to replace the ships in order to get the raw material for our canneries and carry on our war effort.

Mr. STIRLING: I am interested in what the minister has to say to the suggestion of the hon. member for St. John-Albert that the words "territorial waters" be included. In the case of British Columbia I think I am right in saying that if you drew a line from the west coast of the Queen Charlotte islands outside Vancouver island to the mouth of the strait of Juan de Fuca, you would include therein practically all the commercial fishing that is done.

Mr. MAYHEW: I should like to add my voice in support of the arguments that have been advanced here on behalf of the fishermen. In presenting this bill the minister said that it was for the purpose of insuring those who were unable to get insurance at the present time. In the case of the fishermen, they can get insurance; but the rate is so high as to be practically prohibitive, running from 12 to 30 per cent a year. That is not insurance at all, and I think if it is at all possible they should be included, and included now. Some hon. members said a little while ago that this measure could be held over for the summer. We are in hopes that before the year is passed there will not be any necessity for any such insurance. It is very important that the fishermen go out now in as large numbers as possible, and with as little worry as possible about what is going to happen. On these men to a large extent depends the procuring of food for our own people and people overseas, and we should give these fishermen every encouragement. The matter should not be left dragging for months, just when we are in the real fishing season, particularly on the Pacific coast.

I urge the minister to consider what has been said, and to have an amendment brought in which would include the fishermen. Most of them do not go outside certain areas. Some of them go as far as Seattle, but they do not operate a general commercial business. They simply catch their haul of fish, bring it to the market, go out and get another haul and repeat the performance. There is not the same complication connected with the insuring of a fisherman's boat as there is with the insuring of a merchant vessel. I plead with the minister to give this matter his sympathetic and favourable consideration.

Mr. McGARRY: I should like to associate myself with the leader of the opposition in advocating the extension of this insurance scheme to the fishermen. As the last speaker has pointed out, the fisherman is one of our most important producers. In many instances the loss of a boat through enemy action means the loss of everything, as regards producing not only for the war effort but for the maintenance of the fisherman's own domestic needs. I would plead with the minister to give this matter serious consideration, and have this insurance scheme applied to the fishermen.

Mr. ILSLEY: If the committee is in great earnest about this matter we shall have practically to redraft the bill, because it is impossible to incorporate in it the suggestion which has been made. If it were done we would have only a very bad product. It seems to me that if the fishermen's boats were destroyed by enemy action, the normal procedure would be for the government to compensate them in some way. If we try to graft a scheme like this onto this bill, there will be some limited free coverage which may not be at all adequate. Certainly the bill has not been prepared in a manner which contemplates compensation of that kind. Payment for chattels has relation to chattels of a householder, and whether that could be made to apply to a boat, I cannot say. I do not think it would be applicable.

I do not believe hon. members have considered what would be involved in incorporating in this bill what has been suggested. If it is desired by hon. members to give the fisherman no compensation unless he pays a premium, the bill could be drafted along that line. But I do not think hon. members really realize what they are asking. On the ocean we find large and small ships, some of which are operated by prosperous shipping companies which carry insurance on those ships, and some of which are not. Before we enter into the insuring of ocean boats I think we had better depart to another measure, instead of following this one.

Hon. members may find that by amending this bill they will hurt rather than help the fishermen.

Mr. GREEN: The minister has spoken about free coverage. Does he mean the $200 referred to in section 8?

Mr. ILSLEY: Yes, and the $800 in the case of a householder.

Mr. GREEN: That would not cover a fishing boat, would it?

Mr. ILSLEY: I do not know. I thought hon. members wanted that scale to apply. It may not be applicable at all. It was not considered as being applicable because this is a scheme which is to apply to land. We cannot insure everybody under this measure. We cannot, for instance, insure the civilian against personal injury, and this scheme is adapted to a class of risk altogether different from marine risks.

The government must be trusted to a certain extent to assume its responsibilities in regard to these matters. This is a plan under which we hope to operate a solvent and successful insurance scheme, and it has been demanded by people throughout the dominion. We hope to receive premiums from persons in the interior, and we are spreading the risk over. But it is a scheme adapted and worked out to apply to property in Canada, not on the ocean—whether we refer to small or large boats.

Just to pour these fishing boats into the measure must not be done without first giving the matter a great deal of consideration, and I would ask the committee to leave it to the government to meet the situation in a different way.

Mr. HANSON (Skeena): I wish to associate myself with the hon. member for Victoria, British Columbia, who has suggested to the minister that some consideration be given to the fishermen.

Mr. HANSON (York-Sunbury): The hon. member is about two hours late; the suggestion was first made by the hon. member for Vancouver South.

Mr. HANSON (Skeena): What arrangements have been made in the United States with respect to their fishing fleet? We have been asked to produce food, and I learn from the press that the United States government has suggested that the halibut fishing fleet, which operates on the deep sea, should try to conduct its operations within a specified time, because of disruption on the Pacific coast.

I feel justified in asking for some consideration for our Canadian fishermen. I believe they should be allowed to insure against war risk, if they pay a premium. Before excluding the fishermen I suggest that the minister give the matter careful consideration. Our fishing fleet is absolutely necessary in the production of foodstuffs, and should be given consideration equal to those established inland.

Mr. HANSON (York-Sunbury): I do not appreciate the difficulty the minister has attempted to describe to the committee. We are insuring certain classes of ships in certain circumstances. All we now ask is that fishing boats in territorial waters be included. There is a principle involved, and to envelop that principle within the four walls of this measure would not seem to present any tremendous difficulty. If there are diffiiculties, then may I point out that the minister has plenty of competent help to do the work. Perhaps before the bill goes through committee he might refer it to his officials to see what can be done.

I do not believe the minister is actually opposing the principle involved in the application of this measure to fishermen. What he is trying to show is that it would complicate the mechanism of the measure. I should not think that that should stand in the way. Section 4 reads:

> The minister may, under this act, establish one or more schemes of insurance as he sees fit.

If that will complicate the drafting of the bill, could the minister not give an undertaking that he will set up a scheme for free insurance or some other type of insurance of fishermen's boats? The nation will be ready to bear the cost of anything like that.

Mr. ILSLEY: The Minister of Fisheries tells me that if one of these boats is sunk by enemy action, the owner would be compensated in full out of enemy property, to the extent that we may have enemy property in our hands.

Mr. HANSON (York-Sunbury): I do not know that that is true and I should like to have the citation. In the last war applications were made to the dominion for payments out of that fund, and these men might have to wait ten years before they would receive recompense. There was one celebrated case in the last war which I think is known to all, and hundreds of cases flash through one's mind. I know of one bona fide case which took years to get settled. The government of the day and the succeeding government of my right hon. friend, the Prime Minister, had a reparations officer working for years on these claims. If the fishermen are to have to wait for that, we may as well wipe the suggestion off the slate.

Mr. NOSEWORTHY: I cannot see the danger which the minister seems to see in including these fishermen's boats in this bill. I cannot see the difference between a boat that operates within the coastal waters in a Canadian port and a ferry operating within a harbour from point to point. I do not see why we could not accept this greater risk at the same premium. I take it that we are ready to insure factories in Halifax or Vancouver at the same rate as factories in the inland towns or villages, and it seems to me that we have just as much right to insure boats that operate in territorial waters from a Canadian port as we have to insure one that operates on lake Ontario or in the river St. Lawrence. I cannot see why we should discriminate or where, by including these fishing craft, we are throwing such a great burden upon the country. We will insure a ferry that operates between points in the harbour of Halifax or the harbour of Vancouver, but we will not insure a fisherman's boat that goes two miles off the coast. The fisherman may be running a greater risk, but he is doing that for all the people of Canada and all the people of the empire. The people of Canada and the people of the empire have a right to help bear the cost of that greater risk.

Mr. HANSON (Skeena): I should like to have an answer to my question about the insuring of deep-sea fishermen's boats.

Mr. ILSLEY: My information is that the scheme in that connection is not completed. It does not cover their fishing fleets so far, but whether it will eventually, I do not know.

Mr. HANSON (York-Sunbury): I am afraid my suggestion with respect to section 4 is not a good one. As I now understand that section the minister could not establish any scheme outside the powers conferred upon him by the bill. Consequently I shall have to withdraw my previous suggestion. I am going to ask the minister to give consideration to this matter. It is the will of the people as represented here. There has not been anyone who has said anything against it, and surely the minister ought to give effect to this if it is humanly possible.

Mr. GRAYDON: I come from central Canada and therefore have no direct connection with the industry under consideration, but I should like to refer to two matters which were emphasized by the minister. The first was the question of the solvency of this fund. I think it must be said in all fairness that it would be difficult to place the fund upon a definite actuarial basis, having in mind the fact, as was discussed during the second reading of the bill, that this is an experimental bill. We have never before had the need in Canada of a comprehensive scheme of this kind. When the minister talks about solvency I presume he means that the scheme must be actuarially sound in principle. I am quite certain that the inclusion of these fishermen could not be regarded as interfering with the general soundness of the principle from an actuarial point of view, and I think the minister's argument with respect to that falls to the ground.

If this war risk insurance is to be a plan whereby people are to be compensated when they cannot possibly get insurance through the ordinary channels, then surely the fishermen of the maritimes and the Pacific coast should be included. I was not impressed with the minister's argument with respect to reparations. To my knowledge there is no type of war damage that is not covered by reparations if you can get reparations. But it seems to me that by the time a claim was paid, the fisherman's estate would be collecting rather than the fisherman. Coming from central Canada I should like to add my voice to those which have been heard already with respect to this point.

Mr. CHURCH: The whole bill will make a good fishing story for some anglers' meeting.

Mr. McNEVIN: I believe the people of Canada are most anxious to give every possible protection to the fishermen and their boats, but an insurance expert who appeared before the banking and commerce committee made it abundantly clear that the provisions of this bill were not suitable to take care properly of the risks involved in insuring these fishermen's boats. For that reason I would hesitate to support the amendment because I believe that the gentleman who appeared before the committee knows more about the intricacies of insurance law and

the general set-up than perhaps any hon. member of this committee. I think we should be guided by his advice in the matter. If he has made it abundantly clear that this bill could not properly take care of the situation, that it should be taken care of in some other way, then it seems to me that that should settle the matter.

Mr. HAZEN: He did not make it abundantly clear to me. He did not deal with fishermen's boats at all; he dealt with ships that go out on the high seas. Those ships are run by the fishing companies, and I take exception to the statement of the hon. member that the insurance expert dealt with fishermen's boats.

Mr. McNEVIN: The whole matter was fully discussed in committee.

THE ROYAL ASSENT

A message was delivered by Major A. R. Thompson, Gentleman Usher of the Black Rod, as follows:

Mr. Speaker, His Honour, the deputy of His Excellency the Governor General, desires the immediate attendance of this honourable house in the chamber of the honourable the Senate.

Accordingly, the house went up to the Senate.

And having returned.

Mr. SPEAKER informed the house that the deputy of His Excellency the Governor-General had been pleased to give in His Majesty's name royal assent to the following bills:

An act to repeal the Petroleum and Naphtha Inspection Act.

An act respecting the appointment of auditors for national railways.

An act to authorize an agreement between His Majesty the King and the corporation of the city of Ottawa.

An act respecting the Toronto harbour commissioners.

An act to authorize the governor in council to enter into agreements with the governments of the provinces of Canada respecting the vacation by the provinces of personal income and corporation tax fields for the duration of the war.

An act to provide for the payment of additional subsidies to the maritime provinces.

An act for granting to His Majesty certain sums of money for the public service of the financial year ending the 31st March, 1943.

WAR RISK INSURANCE

PROVISION FOR COMPENSATION FOR WAR DAMAGE TO PROPERTY

The house resumed consideration in committee of Bill No. 56, to make provision with respect to insurance of property against war risks and the payment of compensation for war damage—Mr. Ilsley—Mr. Vien in the Chair.

Mr. ILSLEY: I shall have to move that the committee rise and report progress and ask leave to sit again. I shall not be able to go on again with this bill to-night.

Progress reported.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Thursday, May 21, consideration in committee of a resolution to provide sums not exceeding $2,000,000,000 for the year ending March 31, 1943, for granting to his majesty aid for national defence and security—Mr. Ilsley—Mr. Vien in the chair.

Hon. J. T. THORSON (Minister of National War Services): When I was before the committee last on May 18 I stated that I wished to deal with certain observations which the leader of the opposition had made with regard to the regulations, when he spoke on March 25. He voiced certain criticisms of the regulations, and at that time I indicated that any constructive suggestions would be cordially welcomed. A week ago Monday I indicated that I did not wish to deal, in the absence of the leader of the opposition, with the subjects that he had raised. There are one or two observations that I should like to make with regard to the criticisms which he made.

The first one with which I shall deal has to do with the reserve army. The first suggestion made by the leader of the opposition appears at the bottom of page 1638 of *Hansard*. He said:

That men of the trainee ages who were on the strength of a reserve unit on August 15, 1940, have not been made liable for service in Canada for the duration if they have been attending parades of their reserve units.

Then he went on to say:

I understand—the minister may correct me—that this position is still recognized; and if this excuse still obtains, the position should be changed. It is not good enough.

To a certain extent I agree with the leader of the opposition in the observations he has made. There are certain anomalies existing with regard to the particular regulation that is involved. The subject is dealt with by section 13 of the regulations. This section provides in effect that members in good standing of the reserve units who would otherwise be subject to the regulations are not called out by the divisional registrars unless or until the representative of the district officer com-

manding reports that they are not performing their training in a manner satisfactory to the military authorities. The section in the regulations was enacted with the knowledge and approval of the Department of National Defence, and it has been retained in the regulations in order to enable the Department of National War Services to call out for training and service for the duration of the war men who, although discharged from the air force or the navy because of higher medical standards, are medically fit for the army. Consideration is being given to the question of how best to deal with the men who are at present in the reserve army and therefore excused, while their training is satisfactory in the reserve army, from call under the regulations. It has been suggested that these men should be pooled with other men in the callable ages and made subject to call in the ordinary way. I assure my hon. friend that the subject is under review at the present time between the Department of National Defence and the Department of National War Services.

Mr. HANSON (York-Sunbury): The minister agrees that the position is unsatisfactory.

Mr. THORSON: I indicated that at the outset. There exist at present some anomalies and some inequities which I think are capable of adjustment.

The next subject to which the leader of the opposition referred is that of university and college students—section 17 of the regulations. This section also I think calls for revision. There are a number of subsections in section 17 which are no longer really applicable; that is, they are spent subsections, because they were enacted to meet a situation that no longer exists. Several of the subsections of section 17 relate to the state of affairs that was in existence when men were called up for only thirty days. May I say, however, with regard to section 17 generally that this section of the regulations was the result of a conference with the universities held on February 24, 1941, and there were also very full discussions with the Department of National Defence. The general basis for section 17 of the regulations is that there is a need for educated men. At present the government has found it necessary to make financial provision for certain kinds of students, namely, medical students. There is also a growing need of chemists and engineers both for army purposes and for war industries. With regard to students of that type it may become necessary to make some special provision, similar in principle to the arrangements that were made in respect of medical students.

The whole subject of students was discussed at the conference of chairmen and registrars of the various administrative divisions, held on April 23, 24, and 25, at which it was recognized that the regulations with regard to students should be revised. At that time it was suggested that the whole subject should be studied, and a further conference held with the universities and the departments having a special interest in students, which conference was held here in Ottawa on May 11. At that time it was indicated by the various departments, such as the Department of Labour, the national research council, the Department of Munitions and Supply and the departments of defence, army, navy and air, what their requirements likely would be in the matter of graduates from the universities. At this conference the universities were represented, together with the three defence departments,, the Department of Munitions and Supply, the Department of Labour, the bureau of wartime technical personnel, the national research council, and others. All had their representatives there. The director of national selective service was likewise in attendance. I think I may assure the committee that the regulations will be revised in the light of the existing situation.

Mr. HANSON (York-Sunbury): With respect to points 1 and 2 that I mentioned, what department takes the initiative? Is it my hon. friend's department, or the Department of National Defence?

Mr. THORSON: The chairman of the conference I mentioned was my associate deputy minister, Major-General LaFleche, and the Department of National War Services will take the initiative in the matter.

I indicated earlier in the course of my appearance before the committee that I intended to strike a departmental committee to revise the regulations from start to finish. I invited suggestions from members of the house as to how the regulations could be amended in order to make them more workable and better adapted to the purposes for which they were devised. I propose to set up this departmental committee immediately after this debate is concluded and place before it the observations made at the general conference of chairmen and registrars of the divisions; the representations made at the conference of university heads and departments which I mentioned a moment ago, and the various observations made by members of parliament during the course of this debate.

Mr. HANSON (York-Sunbury): Before the minister leaves that feature of it—

Mr. THORSON: I have not finished with it yet.

Mr. HANSON (York-Sunbury): —I should like to say a word on the revision of the regulations, if the minister will pardon me. When the Military Service Act of 1917 was brought down, the plan, the *modus operandi*, the method by which the draft was to take place, was submitted to parliament, where it underwent thorough revision by the representatives of the people. Does the minister not think that is the democratic way in which this should be done? I suggest to him that the methods by which men shall be drafted into the army under a compulsory system, such as is now in force in this country to a limited degree, could and should be brought into the House of Commons, where the representatives of the people could have something to say about these regulations; how they shall be prepared; how they shall be put into effect, and be given a chance to criticize their operation.

What happens now? A departmental committee, as the minister has indicated, drafts a regulation, which is adopted by order in council and becomes an accomplished fact before we know anything about it. Take this vexed question of farmers' sons. Under the regulations as adopted by order in council, until a comparatively recent date it was impossible to get anything in the way of exemption for a farmer's son.

Mr. THORSON: Oh, no.

Mr. HANSON (York-Sunbury): I used the word "exemption" advisedly. It was possible to get a postponement for a limited period of time, and perhaps several postponements, but anything in the nature of a complete exemption was impossible. I illustrate that by the case of a young man who was an only son, whose father had died, who was milking thirty cows, and who was called up in the draft. That was in the days of the thirty-day training period. He and his mother came to see me. I explained that he could get a postponement and probably a certain number of postponements, but that he could not get indefinite postponement. I advised him, if he could possibly hire anyone to do the work, to take his thirty-day training in the winter season rather than depend on getting further postponements later on. He took his training. I do not know whether he has been called up again, but that is the case of a boy who was producing food of high quality and value. If he had been called up under the present draft system, his mother would have had to simply fold up; she could not possibly carry on. That was one of the iniquities of a system adopted secretly by order in council, without the representatives of the people having a single word to say about it.

That system is wrong. Any regulations having to do with the drafting of men ought to be brought by the administration to parliament. Let parliament take the responsibility; let parliament pass upon such regulations. The whole theory of doing these things by order in council is wrong. I put myself in the judgment of members of this house if I am not right in that statement, and whether in their secret hearts they will not support me in that position. I am sure I am right about this. I am as anxious to see a complete, all-out war effort as any man in this house, and I have been consistent in that regard right along. But I realize that we cannot take every man for the army. Every man should go to his place, and his place is conditioned by circumstances. But to say that a group of officers or officials here in Ottawa can sit round a table and frame a system of regulations, and that we cannot do that here in this house—well, it is just common nonsense; that is all. More than that, there is a great principle at stake here. The drafting of men for military service is a very important operation, which ought not to be left in the hands of a group of officials who are not responsible to the people. That is a sound principle I am laying down. It must and should be done in a democratic country like Canada under a system whereby these regulations before they become law shall be drafted as the basis of discussion, and brought before parliament.

What happened in 1917? They were brought before parliament in that year; and if hon. members will look at *Hansard* for those days they will see that those regulations were debated and revised and improved, and that many valuable suggestions came from the membership of the House of Commons before the regulations were finally put into operation. That is the course I ask this government to pursue, not only in the revision of regulations, as they stand to-day, but in any future regulations which may be enacted as the result of legislation at present pending before this house.

I put it up to the House of Commons to-night, that this drafting of regulations for the conscription of man-power by the government of this country—and we have conscription by this government; not quite full yet, but that will come—should be done by a democratic body, like the House of Commons, and should not be done in the secrecy either

of a caucus or of cabinet council. I defy anybody successfully to combat that theory. So far as I am concerned I want these regulations, before they have the force of law, to be submitted to the House of Commons for discussion; and we will look into them, even if it takes the whole summer to do it. We will very soon see that something like justice is done to all classes in the community, and that there will be equality in service, so far as manpower is concerned. I do not think we can get the same measure of equality if this sort of thing is done secretly by order in council; and I object to such a method.

Mr. COLDWELL: I should like to support the leader of the opposition in what he has just said. The last time the minister was before the committee we had a very long discussion regarding the regulations, and an interpretation of the Prime Minister's remarks, I believe of March 24, and of the order in council of March 21. Since then I have gone over *Hansard* very carefully, and I must confess I am at a loss to understand exactly what the position is, and what these regulations mean.

I am more confused because the hon. member for Témiscouata (Mr. Pouliot) speaking in French in this chamber, and therefore not followed by some of us who have only a slight knowledge of the French language, stated that he had with him what he called a communique given by the minister on April 17; and at that time the hon. member quoted from the French text. The translation appears at page 2506 of *Hansard,* and I should like to place it on record. It is as follows:

> When the applicant has shown that he is a person wholly or mainly employed in agriculture within the meaning of the amended regulations, it is mandatory upon the board, subject to the exceptions hereinafter mentioned, to grant the postponement order. Furthermore, the postponement order is until further notice and it constitutes an allocation of the applicant to agriculture rather than to military service.

Mr. STIRLING: Who signed that?

Mr. COLDWELL: The hon. member for Témiscouata said that he was quoting from a communique issued by the minister on April 17.

Mr. MacNICOL: The Minister of National War Services?

Mr. COLDWELL: Yes. I shall ask the minister in a moment or two to put that communique in English on *Hansard.*

Mr. THORSON: It is on *Hansard,* in full.

Mr. COLDWELL: At what page, may I ask?

[Mr. R. B. Hanson.]

Mr. THORSON: The first day I appeared before the committee.

Mr. COLDWELL: I was not able to find it, and I read *Hansard* carefully.

Mr. THORSON: May 11.

Mr. HANSON (York-Sunbury): That was not the first day.

Mr. COLDWELL: In any event, it escaped my notice. I read *Hansard* fairly carefully, and I certainly read the debates of the day to which I have reference, May 18.

Mr. THORSON: I would refer the hon. member to page 2306.

Mr. COLDWELL: I shall look it up later. I say, however, that it is at variance with the practice which has been followed in other parts of Canada, particularly in Saskatchewan. I gave the minister the other day the facts concerning a case about which I knew nothing more than had been told to me—and which, if wrong, makes no difference to the argument. This was the case of a young man farming his own piece of land. His father was ill, and the young man was assisting his father to farm that land, with the stock thereon. He, like the young man the leader of the opposition advised, took his thirty days of training a year ago last January. He has been recalled, has applied for postponement, and has been refused. That, I suggest, is the practice that is being largely followed in Saskatchewan.

The view the minister gave the house the other afternoon certainly was that if a young man were wholly engaged in agriculture—like the young man to whom the leader of the opposition referred, and the one to whom I have just referred—it was mandatory that he be excused from military service. I think all hon. members in the chamber, with very few exceptions, agree that if we are going to have selective service—and I want selective service of more than man-power; I want selective service of industry and wealth as well—it should be on a basis which is just, fair and reasonable. As at present carried out it is none of these things.

I remember very well taking up cases of a different type during the winter with the minister, and hearing the deputy minister say during a discussion as to what seemed to be reasonable, "The military authorities won't allow this; they won't agree to it." I said to the minister at the time, "Who is governing this country, the elected government or the military authorities?" In war time we have to give the military authorities a great deal of power; they ought to have it—but not power of this sort. The decision as to

whether we are going to compel men to surrender their lives or their property in the interests of this dominion and of our war effort with the united nations is not the responsibility of the military authorities; it is the responsibility of this parliament. And I agree that under no circumstances should the government take unto itself powers that ought to lie in this chamber.

When we are dealing with the futures of the young men of this nation, this is the place where the decision should be taken, to the very last degree. I want to try, if I can, to understand exactly what these regulations are. If I may say so, in kindness to the minister, I wish he would give us a short and pithy statement. Let him tell us what he means, in a few words; because a long speech with all the "ands" and "ifs" and considerations—

Mr. MacNICOL: And the repetitions.

Mr. COLDWELL: Yes, the repetitions—is confusing.

Mr. HANSON (York-Sunbury): And the limitations.

Mr. COLDWELL: There is a difficulty I find sometimes in following the arguments of a man with a long legal training—

Mr. THORSON: And with a regard for precision.

Mr. COLDWELL: —and the minister is a lawyer with a high reputation. It has struck me sometimes that in the teaching of law it is perhaps necessary to give both aspects of a question to such an extent that in an endeavour to balance up the two sides the teacher cannot arrive at a decision as to what he really means himself. I ask the Minister of National War Services to depart from the position of teacher of law and to give us a clear and pithy statement as to exactly what these regulations mean in relation to the matters to which the leader of the opposition and I have referred.

Mr. THORSON: For three whole days I have endeavoured to make a brief statement about the regulations. I get up to a certain point, and then speeches, much longer than any I have made, are made on both sides of the chamber. The discussion wanders off—I say that with respect—into individual cases where only one person knows the facts. I do not know the facts, and therefore I am not able to deal with a particular case. As I have pointed out again and again, these individual cases must be dealt with in the light of all the facts relating to them.

Mr. COLDWELL: Treat them as hypothetical cases.

Mr. THORSON: There is no such thing as a hypothetical case.

Mr. COLDWELL: Coming from a lawyer that is interesting.

Mr. THORSON: It is all very well to speak of lawyers, but I have a regard for precision and I will not attempt to make a synopsis of lengthy regulations and condense them into one or two sentences, because it cannot be done. The cases that come before the boards are based on certain facts. We have set up a system of judicial boards, thirteen in number, each one of which is headed by a superior court judge or a judge of another court in the province where the major portion of the administrative division is located in order to deal with the facts of particular cases. They consider applications for postponement that are made and deal with the facts of particular cases. Without having a knowledge of the facts I am not going to attempt to set myself up in judgment against the boards. I think it is a great pity that so much of the time of the committee has been taken up with the discussion of individual cases where the only person who has any knowledge of the facts is the person putting forward the individual case. The facts in one case may be quite different from the facts in another and may result in a different determination by the judicial board which has been set up for the purpose of dealing with the facts of each case. I commenced this evening to attempt to deal with students, and I am entirely in the hands of the committee as to whether I shall go on with students or go back to farmers.

Mr. HANSON (York-Sunbury): I think we had better go on with students.

Mr. THORSON: I think we had better go on with students. I spent practically two whole days, Monday, May 11, and Monday, May 18, in dealing with persons who are wholly or mainly employed in agriculture. The press release to which my hon. friend has referred was set out in full in *Hansard* of Monday, May 11. I think it sets out with precision the policy of the government with regard to persons wholly or mainly employed in agriculture.

Mr. COLDWELL: I am sorry that I overlooked that. May I ask if it has been sent out to the boards?

Mr. THORSON: This was sent out to all members of parliament and to every administrative board. Furthermore, it was the subject of a full and complete discussion at the conference of chairmen and registrars of the various boards and administrative divisions.

Mr. COLDWELL: Is the minister sure that all the chairmen of the boards understood what it meant?

Mr. THORSON: How am I to answer that question?

Mr. NICHOLSON: Did it result in any change of policy in the different divisions?

Mr. THORSON: I think when the returns for the first and second calls, in respect of which the change in policy was applicable, are received, there will be a clear demonstration of that.

Mr. FLEMING: Would the minister permit a question?

Mr. THORSON: I intend to continue with the subject of students, the matter which I set out to deal with this evening. Some question was raised by the leader of the opposition as to whether students could escape from military training. A number of points have been dealt with by him, as will appear on page 1638 of *Hansard*. In order to come within the provisions of section 17 of the regulations a student must be a member in good standing of a Canadian officers training corps unit in his university, or be a member of an auxiliary training unit in the university. I may say that this arrangement which permits a student to be excused from military training has the approval of the Department of National Defence.

Mr. HANSON (York-Sunbury): Must they be full-time students?

Mr. THORSON: May I deal later on with the question of full-time students? That was the second point dealt with. The regulations dealing with the Canadian officers training corps are regulations of the Department of National Defence. The student should be a successful student. If he complies with the conditions he gets a postponement of his military training. May I deal briefly with the other point raised by the leader of the opposition?

Mr. STIRLING: Before leaving that point would the minister mind dealing with the last words of section 17?—because they seem to me to leave a possible loophole through which students who have lived up to the other conditions may still be called. This section provides that unless and until other men of the same age class who were called for and who carried out the period of thirty days training ordained in the same proclamation are called for such longer period, and so on. Many of these men have been called up and I should like to know if university students have been called up also.

[Mr. Thorson.]

Mr. THORSON: If they are in the same class as other thirty-day men. Not all the thirty-day men have been called yet.

Mr. STIRLING: Not all, but in certain classes they have been called.

Mr. THORSON: With regard to the thirty-day men, persons who did their thirty days training are called up in the name of the Department of National Defence, and for the Department of National Defence, because they are all members of the reserve army. We call them up only upon requisition by the Department of National Defence.

Mr. STIRLING: University students were called up by age classes, were they not?

Mr. THORSON: Yes; we are calling them up at present by age groups in the various divisions and in accordance with the requisition relating to the thirty-day men that comes to our department from the Department of National Defence.

Mr. HANSON (York-Sunbury): That is re-calling the thirty-day men?

Mr. THORSON: Yes.

Mr. HANSON (York-Sunbury): In other words, the minister would say that after they finished their thirty-day training they go to the reserve, and they are then within the jurisdiction of the Department of National Defence?

Mr. THORSON: Right.

Mr. HANSON (York-Sunbury): And the minister's department is merely an agent.

Mr. THORSON: Right, and the subject that is under discussion is whether that system should continue—

Mr. HANSON (York-Sunbury): There is the loophole.

Mr. THORSON: —or whether the thirty-day men should not be pooled with all the other men in the same age group and remain subject to our regulations *de novo*, disregarding their thirty-day period of training altogether. The whole subject is under consideration between the two departments.

Mr. HANSON (York-Sunbury): What is the minister's opinion?

Mr. THORSON: I think there is a good deal to be said for pooling the thirty-day men with all the other men in the same age group and subjecting them to call under the regulations whether they have done their thirty days training or not. That is my own view.

Mr. STIRLING: So presumably none of these thirty-day students have been called up?

Mr. THORSON: I cannot say whether any of the thirty-day students have been called up or not. Many of them, I have no doubt, have been called up, but I cannot answer that question specifically.

The leader of the opposition referred to another subject of importance, and that is those persons whom he described, I think, as part-time students.

Mr. HANSON (York-Sunbury): Partial or post-graduate students.

Mr. THORSON: Yes, or persons taking evening courses. That question is one which, in our opinion, requires a certain amount of revision, but there again may I point out that membership in the Canadian officers training corps is in accordance with national defence regulations, and it is a matter for the officer commanding the Canadian officers training corps pursuant to the regulations to indicate who may become members of the Canadian officers training corps. It would, therefore, be a matter to be discussed with the Department of National Defence whether any post-graduate students should be allowed to be members of the Canadian officers training corps and therefore, under the provisions of section 17 of the regulations, be excused from compulsory military training. It would also be necessary to deal with the subject of part-time students on the same basis. I would not wish to say categorically that no post-graduate student should be allowed to be a member of a Canadian officers training corps unit in his university, nor would I be willing to say categorically that no part-time student should be allowed to become a member of the Canadian officers training corps. I think it should be possible to have regulations of such a nature that no one could use them for the purpose of evading a call for military training.

Mr. HANSON (York-Sunbury): That is exactly the point.

Mr. THORSON: I thought that was what the leader of the opposition had in mind, and in that I am entirely at one with him. I think that out of the conferences I have mentioned we shall be able to deal with this subject, which is by no means easy, in a manner which will commend itself generally to members of the house and to the country.

Mr. HANSON (York-Sunbury): Does the minister not think that the dual position has operated to bring about this situation where there may have been evasions? It appears to me that these men are under two authorities. Men in the Canadian officers training corps, whether they be partial or full undergraduates, once they are taken on the strength come under the Department of National Defence and cannot be called up. I will not say that they shield themselves, because I do not mean to intimate anything improper, but once they are taken into the Canadian officers training corps they cannot be called up, and therefore they evade the military service which other young men who are not students have to go through.

Mr. THORSON: The point is this. I indicated at the very outset what the relationship of the Department of National War Services was to the Department of National Defence. We are an agent for the purpose of filling the requisition that comes to us from the Department of National Defence. If the Department of National Defence is satisfied with the military training these men are getting and is satisfied with the establishment of the Canadian officers training corps and with the conditions under which a unit of that corps is operating in any particular case, I would assume that the Department of National Defence is the proper department to determine that particular fact. Periodically these matters come up for review by reason of changing situations and changing circumstances. That has happened in the case of students. Some of the subsections of section 17 of the regulations are now spent; they have no value or use at all at the present time. I think I have now dealt in a general way with the subject of students to which the leader of the opposition referred.

There was one other reference which my hon. friend made. As reported at page 1639 of *Hansard* of March 25 last, he said:

> My fourth question is in reference to the interpretation section, or that part having to do with key men, training period and war industry. I have often wondered how a man between the ages of twenty to twenty-five years could be considered a key man in industry. He may be a key man on the farm, but I doubt very much if any twenty-year-old man can be a key man in any industry.

There again the question is one of fact relating to the particular case involved, and the principle is not exclusively whether a man is a key man but whether he is essential to war industry. That general situation is provided for in section 14 of the regulations, where the board is required, when it deals with an application for postponement from persons in certain classes of occupations, to look at the whole situation from the point of view of the national interest and the supply of labour that is available in that particular locality. That is the governing principle in the granting of postponement, and there may be many young men in the age class of twenty-one to twenty-five who may be making a far greater contribution to the effectiveness of the

war effort by remaining with war industry than by being called up for basic training. In each case it depends upon the facts of the particular situation, and I do not think it is possible to generalize with regard to the matter.

There are a great many other things that I could say with reference to the regulations. I could deal with the subject of conscientious objectors, and make a detailed report with respect to the work that they have been doing, and I could deal also with related subjects in that regard, such as conscientious objectors and their activities. I could also discuss other subjects over which the mobilization division of my department has charge, such as the recruiting of Canadian fire-fighters for Great Britain. I am quite sure that members of the committee will be glad to learn that the first group of officers of that organization has arrived safely in Great Britain.

Mr. GREEN: Will the minister tell us something of the plan?

Mr. THORSON: I could speak on the subject for whatever length of time my hon. friend would like me to.

Mr. COLDWELL: We want to know all about it in the shortest possible space of time.

Mr. THORSON: The idea of raising Canadian fire-fighters for service in the United Kingdom arose after the visit of the Prime Minister and the Minister of National Defence for Air to Great Britain. There was some discussion as to whether it should be a military organization or whether it should be an organization of a civilian nature. It was finally decided that it should be of a civilian nature.

Mr. MacNICOL: They are all volunteers?

Mr. THORSON: Yes, like all others who are making their most useful contribution to the war effort. It was decided that the raising of these men should be assigned to the Department of National War Services. The organization took some time, but it is now, I think, in a very satisfactory form. The purpose of the corps, the initial strength of which is to consist of 400 officers and men, is to assist the national fire service in Great Britain in the extinction of fires, in the protection of life and property in case of fire in Great Britain, Northern Ireland and the Isle of Man, in the extinction of fires and the protection of property in ships and vessels at sea, and in rescue or salvage work, for which its appliances are suitable, in Great Britain, Northern Ireland and the Isle of Man. The fire chiefs throughout the dominion are giving great assistance in the recruiting of these men, without any expense to the public. All clothing and equipment are being purchased through the Department of Munitions and Supply. The men are put on the same rates of pay and are generally subject to the same conditions as members of the active army overseas. They have the benefit of the pension arrangements, and allowances and the like. The idea is that we shall send these men over to Britain in detachments of twenty-five or fifty, and they will then become associated with fire-fighting services there. The present indications are that we shall have no difficulty in raising the corps of 400 men that we set out to raise. That is a brief statement of the activity, which is likewise in the mobilization division of my department.

Mr. MacNICOL: With regard to the officers of the fire-fighting units that are being sent over, are there commissioned officers and so forth?

Mr. THORSON: Yes. We follow very much the same kind of set-up as in the army. There are officers of various ranks and men of various ranks. A draft is ready to go overseas almost at any time.

Mr. PERLEY: I have listened to one of the minister's brief statements explaining these regulations. He has dealt with conscientious objectors and fire-fighters, and one hypothetical case was brought to his attention. Yesterday we listened all day to an argument between lawyers, and lawyers are butting into this discussion pretty often.

At the outset this evening the minister said that he would welcome constructive suggestions. He said that some members of the committee had been making long speeches, much longer than he himself had made. I do not think he can accuse me of doing so, as far as this resolution is concerned, because on only two occasions, I think, have I said anything other than to ask a few questions. But to-night I am going to bring to his attention what I think is an important matter, because it deals with the provision of labour to take off the coming harvest. Some hon. members may think it is a little early to talk of this, but I do so because it is quite evident that it takes the minister's department and certain departments of the government quite a long time to get organized to do anything efficiently and in proper season. May I say also that this matter is brought to my attention through having received recently a number of letters similar to that mentioned by

the hon. member for Rosetown-Biggar a while ago. I have a number in my desk, I am not going to take time to read them, but one or two I shall refer to briefly.

Farmers have completed their seeding operations in spite of difficulties as far as labour is concerned. Great credit is due them that they have done as well as they have in getting a crop in. The seeding is pretty well all done in western Canada, the season has been favourable so far, and the outlook is for an average crop. But there is going to be a critical situation in harvest time. An order in council that has been discussed at considerable length on different occasions in the last three or four weeks was tabled, I think, on March 25. It is P.C. 2251, and one clause of it was for the purpose of freezing employment in agriculture. Prior to that date the records show that enlistments in western Canada—and I am going to deal more particularly with the three prairie provinces—were very great; that is, very favourable compared with the rest of Canada, especially among the farmers. Also industry in eastern Canada had taken quite a toll of farm labour and farmers' sons. Many of them came east and got employment in industry, where they receive good wages. There has been considerable discussion of that order in council, and suggestions have been made that possibly another order should be passed, to all intents and purposes making that order retroactive at least eight months. However, that is a matter for the government to decide. I make the suggestion now that something of that kind might be done.

However, prior to that order being passed, many men had come from western Canada and secured positions in industry. Girls and women have also enlisted and come from the west, particularly the prairie provinces, in great numbers. Here in Ottawa many girls from the west are in offices. Their brothers have enlisted; they have a patriotic spirit; they come here and get a position or enlist. It may be of interest to hon. members to learn that women and girls can play a very important part in harvesting operations. Harvesting this year will be somewhat different from that in other years. The farmers have met the suggestions and regulations put out by the Department of Agriculture, they have complied with what the Minister of Agriculture asked them to do in increasing their seeding of coarse grains and flax. These crops cannot be harvested like wheat; they require more labour. Wheat now is generally "combined", and one man can do a great deal, taking the place of a dozen or more in harvesting. But that cannot be done with respect to coarse grains, they have to be cut with the binder, stooked and so on. In the last few years girls and women have played a very important part in harvesting operations, but now many of them have enlisted or left the farms for other positions.

The question of university students was mentioned. I have here a note from one of the western papers which states that since January last a great many students have been leaving school to get employment before they should be barred from restricted occupations. Quite a number of farmers' sons of seventeen years of age and under have left school on that account and now are not available to help in the harvest. I know that representations have already been made to the Minister of Agriculture asking him to cooperate with the minister now before the committee to see that regulations are formulated to deal with this matter. There should have been regulations similar to order in council P.C. 2251 freezing farm employment a year ago. We should now have some understanding and a statement from the minister, before this resolution passes, as to what he proposes to do. His department is, I believe, conducting a national registration of unemployed between the ages of sixteen and seventy—

Mr. THORSON: The hon. member has not read it with precision. That is not so.

Mr. PERLEY: Well, I have it here. I will read the information put out by the public information bureau. It says:

> Compulsory registration of all men between 17 and 69 has been ordered by the head of Canada's national selective service. This is part of the programme to mobilize the country's man-power resources to meet the demand of the armed services and war industry.

Mr. THORSON: That is an indication of the need for precision. The hon. member will see that the matter does not come within my department at all.

Mr. PERLEY: I was just going to say that this order should have applied to agriculture. It says mobilization for the armed services and war industry. It should have included the agricultural industry, which is just as much a war industry as any other. All we want is fair consideration.

I have here a statement made by the Minister of National Defence when he was before the committee the first three days. He said they expected that there would be 15,000 women enlisted between the ages of eighteen and forty-five. Then he gave the number of men called up for military training under the National Resources Mobilization Act in each province and accepted at national defence army basic training centres from October 9,

1940, to March 12, 1942. All I want to use this table for is to show in what numbers the three prairie provinces in particular have given their men, and the postponements asked under this regulation when they were called up are here listed. This is the table:

	Number called up	Applications for postponement	Applications granted
Saskatchewan ..	9,424	2,874	1,803
Manitoba	8,331	3,231	2,442
Alberta	9,024	2,534	2,334
Quebec	38,433	37,163	22,174

Applications were granted in Quebec almost in the ratio of one to one and a half, while in Saskatchewan—

Mr. THORSON: The lowest percentage was in Quebec.

Mr. PERLEY: There were 22,000 postponements granted out of 37,000 asked for and 38,000 called up. They nearly all asked for postponements, according to the table placed on record by the minister when he was first before the committee.

Mr. THORSON: Unfortunately my hon. friend is falling into the same error that the editorial writer of the *Citizen* fell into. I spent fifteen or twenty minutes in explaining that error. It is not a case of 37,000 of the 38,000 having applied for postponement. The 38,000 were accepted for training; they all went into the army and none had a postponement granted.

Mr. PERLEY: The table is taken from *Hansard*.

Mr. THORSON: Read it again, and read it with precision.

Mr. PERLEY: The column is headed:

Number of men called up for military training under the National Resources Mobilization Act in each of the provinces, and accepted at national defence (army) basic training centres, since October 9, 1940, up to March 12, 1942.

Mr. THORSON: That means that all those men were called up and went into uniform. The next column has nothing to do with that.

Mr. PERLEY: There were practically as many secured postponements as went into training.

Mr. THORSON: Not at all; read it again.

Mr. PERLEY: Well, it is in the table. I took it from *Hansard*. Take the minister's own statement and add one and two together. Is that right?

Mr. THORSON: No.

[Mr. Perley.]

Mr. PERLEY: Yes. There were 38,000 who went into training, and in addition there were another 22,000 who secured postponements; is that right?

Mr. THORSON: Yes.

Mr. PERLEY: Then one of every two and a half got a postponement?

Mr. THORSON: Make your own arithmetical calculations.

Mr. PERLEY: Perhaps the minister is a mathematician; he may be able to figure it out. I am giving him an I.Q. test now. If you take Saskatchewan on the same basis, there was only one out of every eleven, and the ratio is about the same for Manitoba and Alberta. The point I want to make is that fewer postponements were granted in the three prairie provinces than in any other province, on a comparative basis, which means that more men have gone from the farms. In addition, there have been many enlistments of farmers and farmers' sons; their showing has been very creditable. As a result there is a dearth of labour available to take off the harvest. The Minister of National Defence also said definitely that harvest leave would not be granted to those in the active service forces in Canada. We have no objection at all to that, but it is evident that there will be no leave granted for harvest leave. So I want the minister, now that he is registering the unemployed between sixteen and seventy, to use those figures to mobilize the man-power and woman-power of Canada so that sufficient may be available to the west to assist in taking off the harvest.

I bring this matter to the attention of the minister now. He may smile, but his record for action does not warrant any smiling. This is an important matter, and we are going to have an acute situation in the west with respect to labour. It is a serious matter now, and I bring it to the attention of the minister only because I want action. According to the letters I have received, the farmers are very much concerned about how they are going to get along. Take a case like that mentioned by the hon. member for Rosetown-Biggar, a farmer left alone, with no son and no hired help, with eight or nine hundred acres in crop and no prospect of getting anyone to help him take it off. Why, I have one case in which the farmer's daughter has donned the uniform and enlisted, and he is left all alone to take off his crop. This is just as important war work as anything else, and I should like a statement from the minister as to what he proposes to do with these figures he is getting in regard to unemployment.

Mr. THORSON: I have pointed out already that I am not getting any figures with regard to unemployment, that it does not come under my department.

Mr. CRUICKSHANK: I come from a real farming country, where there is a real shortage of labour, in particular for dairy farms. I cannot quite appreciate any shortage on the prairies, because I understood we in this house were arranging to have all the prairie farms summer-fallowed, or something like that. Where I come from this shortage is very serious; but before I go on with that I want to take up my controversial subject.

I am very much interested in learning what the minister intends to do with regard to conscientious objectors in British Columbia. Any explanation the minister has given me so far in answer to my questions along this line certainly has not been satisfactory either to me or to my constituents or, I think, to the people of British Columbia as a whole. In my province the people who presumably were to be called up by the minister's department have all gone into the shipyards or other highly paid employment—and for the benefit of any hon. member who might question me I do not say too highly paid, nevertheless highly paid positions. These men obtain, in many cases, the benefits of a high rate of wages; 98 cents an hour, to be accurate. They happen to be exempt by law from military service; they do not have to carry out the duty of any ordinary citizen, that of defending his own country. They are exempted by law from having to do so.

Mr. THORSON: The hon. member should be more careful in his statements. They are postponed in respect of their military training if they show that they are Mennonites or Doukhobors within the meaning of section 18 of the regulations, or conscientious objectors within the meaning of section 19. That arises only when they have been called up under the regulations. Then, if their claim is recognized, as a Mennonite or Doukhobor or conscientious objector, they are held for alternative service in work camps; and when they are directed to that alternative service, which may now be for the duration of the war, they receive 50 cents a day.

Mr. HANSON (York-Sunbury): But how many are there?

Mr. CRUICKSHANK: With all due deference to the minister I must say that he is not correct in his assumption. I presume he has been ill advised by his department. That is not correct in British Columbia, whatever may be the situation in the rest of Canada. This is the original call that came—I deliberately avoided using names; but since the minister has put them on record, I will say they were conscientious objectors. I will now tell the minister how they were exempted from service—and this is a very serious matter. The minister may think it is not serious, but certainly it is serious to the mothers of the boys in England to-day, or of those who may not come back. It is a very serious matter to them.

Under our so-called mobilization act I think the age was twenty-one to twenty-four; is that not correct? They were called up from twenty-one to twenty-four years; but the minister apparently never heard of twenty-five years of age.

Mr. THORSON: It was set at thirty.

Mr. CRUICKSHANK: Pardon me; you are speaking of the present time. I will leave it to the committee as to whether the minister was correct or not. Sometimes it pays to wait until all the facts are put before one, and then attempt to answer them; not to jump in ahead of time. The original measure called for men from twenty-one to twenty-four. A boy twenty-four years and two days old could go into a shipyard at 98 cents an hour. He did not have to apply for exemption; he did not go to an army camp at 50 cents a day—and I defy the minister to contradict that. Mark that; I do not say he is incorrect—certainly not. I do not say that, but I will put it that he is ill advised. However, it is not an assumption that should be put as stated by the minister; the age was not originally thirty years. They were not called up; they were not called into these army camps—I am referring to the boys who happened to be twenty-four years and one day old.

They went into the shipyards. Then what happened? Because this act did not function as some of us in the rump suggested a year ago it should act—that is, it did not bring in national selective service at the proper time—these men went into the shipyards and other highly paid war industries, with the result that they are now classed as essential war workers, skilled workmen, carpenters and shipbuilders. Some of them never saw a ship in their lives, unless it was in a movie. But now they are classed as skilled workmen because they are working in those shipyards. I could give the minister the names of plenty of them in war industry who have not had to get exemption. I do not think it is a proper practice, and the minister has yet to show me any excuse for it.

I would be interested in hearing the minister's—I will not call it an excuse; possibly I should say I would be interested in hearing him try to explain to me that they are exempted only through postponement. Then we go on to those men thirty years and one day old. By an act of parliament these conscientious objectors are given exemptions from defending their country. I am not blaming the present minister, the present government or possibly the past government. I believe it was pointed out that the provision was made in 1873. But I must urge the seriousness of the situation, a seriousness which unfortunately the minister has not yet grasped. I should like to make myself particularly clear to the hon. member for Vancouver East. Let hon. members bear in mind that I am not quarrelling with the unions, either. I have a great respect for the unions, because I believe in collective bargaining. The labouring man would have a terrible time to-day if he did not have his union to protect his interests.

These conscientious objectors are allowed to avoid military service to defend their country. However, they go into a shipyard and automatically they must join unions. Any man who applies for any position must join one of the unions. I have no quarrel with the unions, or with the principle of collective bargaining which I strongly endorse; but I do say that once these men are in the shipyard unions, they can tie up the most essential war industry we have in Canada or in the British empire, namely that of shipbuilding. Surely, if a man has the right to strike and to tie up a war industry, he should not have the right to exemption from service to his country. I should be interested to hear the minister's explanation of that.

I have a question in mind which I could direct to the hon. member for Parkdale. He might think I do not know anything about this matter. Frankly I do not know much about it, but I have noticed that a number of members talk about many things concerning which their knowledge is limited. I should like to know how young doctors from twenty-one to thirty years of age are treated, so far as their calls for military service are concerned. I have information from certain medical men in British Columbia that there is a need, estimated by the Department of National Defence, for some 600 medical men in the current year. I am also told that medical authorities in that department say that at the present time there is an urgent need for 200. I presume those figures are correct.

I should like it to be understood that I am not criticizing the medical profession or the minister's department. I am asking for information. The information which comes to me has given me certain figures, and I am also advised that in British Columbia there is an advisory council of medical men and, I believe, a central advisory council for Canada, whose duty it is to advise so that doctors will not enlist and leave any part of Canada without proper medical service. That is my information.

I cannot see why young doctors under thirty years of age should be in a position to avoid the call, stay at home and take the practices of many doctors, particularly in the city of Vancouver, who have wonderful practices built up by themselves, but who have answered the call and gone away. I see no reason why these young men under thirty years of age should be allowed to stay at home and walk into those practices, while the original practitioners are serving overseas. I am speaking from information given to me by practical medical men of my province.

Mr. HANSON (York-Sunbury): A lawyer would say that the hon. member is acting on instructions.

Mr. CRUICKSHANK: I am glad lawyers have been mentioned, because I shall have a word to say about them in a moment or two. May I repeat that I am not criticizing the medical profession, but I do say that these men under thirty years of age should be subject to call. The advisory council in the province should say whether a certain doctor can or cannot be spared. I believe the hon. member for Parkdale will understand that situation better than I do. It seems reasonable to me that older doctors—and I could give their names; the hon. member for Parkdale would know many of them from British Columbia—should not be deprived of their practices when they answer the call to go to war. I see no reason why the young, single, medical men under thirty years of age should stay at home and step into those practices. It is only a reasonable assumption that these young medical men should be as liable to call as any other men, with the proviso that the advisory council should make a decision as to whether they can be spared from the province.

A question has been raised with respect to lawyers. Recently I received a letter from a young lawyer in Nova Scotia asking if I could advise him as to how he could stay out of the army. I would be pleased to show the letter to the leader of the opposition, and I would very much like to show the two-page letter I wrote advising this young lawyer to get into the army, and not stay out of it.

Mr. MACDONALD (Brantford City): Lawyers have done very well in the army.

Mr. CRUICKSHANK: Of course, but not half as well as farmers.

Mr. HANSON (York-Sunbury): There are more farmers.

Mr. MACDONALD (Brantford City): There is a high percentage of lawyers in the army.

Mr. CRUICKSHANK: That is a good job; I admit that.

Mr. MACDONALD (Brantford City): As fighting soldiers.

Mr. CRUICKSHANK: I am not depreciating the fact, and I may say that the hon. member for Brantford City was one of the best fighting soldiers we had overseas in the last war. However, this young student attending Dalhousie university put it up to me, on the assumption that he could avoid service because of his attendance at university. I am willing to concede that medical men, and men engaged in many other lines, are essential, and should be permitted to complete their university courses and branch out into our war effort. The sooner those men are graduated, the better. But by no stretch of the imagination can I see the need for any more lawyers in Canada for the war effort, or any other effort.

Mr. THORSON: I shall try to deal briefly with the two questions put by the hon. member for Fraser Valley. The first one which relates to doctors I think can be answered in just a sentence or two. All doctors within the callable ages, which are now twenty-one to thirty years, are subject to call in the same way as anyone else. Any young doctor so called has a right to apply for postponement of his military training. His case would come before a divisional board which would either grant or refuse the application. I have no doubt that before a board arrives at any decision in the matter it would consult the competent medical authority, the advisory council or whatever it is in the particular province.

Mr. FRASER (Peterborough West): How about dentists? I understand they are needed also.

Mr. THORSON: They would be dealt with in the same way. The hon. member for Fraser Valley referred also to conscientious objectors. Persons who are not within the callable ages may work at any employment that they may be able to get. We started off by calling persons in the age group from twenty-one to twenty-four years, and only those persons who were covered by the proclamation were subject to call. Recently we extended the age group subject to call by the issue of another proclamation which calls upon persons in the age group from twenty-one to thirty years. Persons who are beyond that age are free to work in any employment that they may obtain. The question as to whether such a person is or is not a conscientious objector does not arise.

Mr. TUSTIN: I understand that the minister's department issues a requisition for a certain number of men in a certain district. Under what plan does the registrar call up the number required? Are they called alphabetically or how?

Mr. THORSON: The registrar calls his men by age groups, taking the lowest age group first. I think I described it last fall as calling men by juniority. This call is spread over the whole division as equitably as possible.

Mr. HANSON (York-Sunbury): Geographically?

Mr. THORSON: Each division is comprised of a certain number of electoral districts, and the registrar is asked to distribute the quota he must fill as equitably as possible over his whole division and call men according to juniority.

To come back to conscientious objectors, the question as to whether a man is or is not a conscientious objector does not arise for anybody to determine in respect of persons who are not in the callable age group. My hon. friend is quite right when he says that persons of, say thirty-one years of age might be employed in a shipyard. No one will have determined whether such a man is a conscientious objector because he has not applied for postponement of his military training. There is no automatic postponement in respect of any class of persons. In each case there is an individual decision made by the board in respect of an application for postponement of military training on the grounds of conscientious objection.

In our attitude toward conscientious objection we are taking exactly the same attitude as that taken by every civilized country in the world, and we intend to continue to take that civilized attitude. I doubt if there is a single man in this house who can understand in himself the point of view of a conscientious objector; nevertheless we think we are all determined that we should adopt an attitude toward conscientious objection similar to that adopted by other civilized countries. I have yet to learn of an employer in this country

asking any person as a condition precedent to his employment what his attitude is toward the bearing of arms. The question of conscientious objection does not arise.

These men are as good workers as any other men. Hundreds of so-called Mennonites have enlisted for active service anywhere in the world. A great number have indicated their desire to undertake the most dangerous service possible, notwithstanding the fact that they have conscientious objection to the bearing of arms or the taking of human life. The situation which my hon. friend brings to my attention is one that we cannot criticize. These men are good workmen, and they are not subject to call for the time being any more than anyone else in the same age group. But when we move the age group up—

Mr. CRUICKSHANK: If.

Mr. THORSON: Not if, when. We will probably move up the age group very soon. We are now calling the age group of from twenty-one to thirty years, and I would not be at all surprised if we moved that forward to thirty-five years within a very short time. Then the persons to whom the hon. member for Fraser Valley refers, those who are now thirty-one years of age, will be called up. If they claim postponement on conscientious objection grounds and that claim is granted, then they will be held for alternative service.

Mr. CRUICKSHANK: The minister has stated that we have no way of knowing who are conscientious objectors, but did we not take a registration some time ago?

Mr. THORSON: No one gets postponement until he applies personally for postponement on the ground of being either a Mennonite or a Doukhobor within the meaning of section 18 of the regulations, or a conscientious objector within the meaning of section 19.

Mr. CRUICKSHANK: That is not answering my question. The minister has said that we have no way of knowing.

Mr. THORSON: That is correct.

Mr. CRUICKSHANK: If the minister will go to his own files and look at the back of one of these registration cards, he will see what a man signs. I understand that some 2,000 Doukhobors are conscientious objectors when they would not even register.

Mr. THORSON: Many so-called Mennonites have enlisted.

Mr. CRUICKSHANK: I am talking about Doukhobors. Let us finish with the Doukhobors first. Have all Doukhobors registered?

Mr. THORSON: No.

[Mr. Thorson.]

Mr. CRUICKSHANK: Why have they not registered if they are not conscientious objectors?

Mr. THORSON: I have said about all I think I can say on the subject of Doukhobors; that is, the British Columbia variety known as the Sons of Freedom. I do not know that we need to go into that to any greater extent at the present time because I have covered the matter twice at great length. There is really nothing I can add to what I have said already.

Mr. NICHOLSON: It seems to me that one of the functions of this department is to take into consideration the total man-power and other resources of the dominion and then to work out plans that will result in the most effective war effort. I can understand that the Minister of National Defence quite rightly thinks that the most important department in the war effort is national defence, and the same thing applies to the minister for air and the minister for naval services. The Minister of Munitions and Supply has also a tremendous programme, and the Minister of Agriculture is naturally concerned about producing food for Canadians and for the people of Great Britain. It therefore seems to me that the Department of National War Services should be the one department able to view the entire field and to work out the most effective plans. I have been puzzled as to why national plans have not been worked out more effectively. Reference has been made to the orders in council and to the minister's memorandum in connection with the man-power policy as it applies to agriculture. But still I do not think we have a department here that is planning the most effective things that can be done. In the memorandum which the Minister of National War Services placed on the record, it is stated, as reported on page 2307 of *Hansard:*

> When the applicant has shown that he is a person wholly or mainly employed in agriculture within the meaning of the amended regulations, it is mandatory upon the board, subject to the exceptions hereinafter mentioned, to grant the postponement order.

But when you come to the exceptions you find this:

> The board is not required to grant a postponement order until further notice to an applicant if it is established to the satisfaction of the board, either (1) that the applicant is not an essential worker in agriculture, or (2) that the applicant has at any time subsequent to March 23 ceased to be actually employed or engaged in agriculture or in a primary industry.

In other words, the memorandum says that postponement will be granted, but it also says that the boards may decide that the applicant

is not an essential worker in agriculture. I realize that the minister has not time to study all the individual cases, but members of parliament here in Ottawa are in the position that we cannot discuss principles without reference to specific cases that come to our attention.

Mr. HANSON (York-Sunbury): And which illustrate the principle.

Mr. NICHOLSON: Yes. I had occasion to discuss with the chairman of the board in Saskatchewan, the case of a married man and his wife alone on a farm. The married man received a call to report in January last. The chairman of the board in Saskatchewan said, when I appeared on this man's behalf, "This man's wife would be in a better position if he were in the army and she were getting an allowance," and he reminded me that there was a war on. I resented the attitude he took of assuming that because I had been appealed to, I was not as fully aware as he was that there was a war on. I cannot understand why the board in Regina should be the final authority to decide what the agricultural policy of Canada shall be or what the agricultural policy for Saskatchewan shall be.

Yesterday I received an airmail letter in connection with a young man who had just turned twenty-one last December. He and his father are on a 320-acre farm. This lad received his medical call on April 21. He applied for postponement and on May 17 received a letter stating that his postponement was refused. On May 20 he received his ticket and a notice to be in Prince Albert on May 21, less than twenty-four hours after he had received his ticket. His family had read in the Winnipeg *Free Press* that we are not calling any more farm boys who are engaged in agriculture. I am not familiar with that farm or with the family, but according to the letter I have received, the father cannot, without help, carry on operations on that farm with ten horses and two outfits. The young man has been called, and now that he is in the army he goes into another category. The army authorities, I suppose, are not kindly disposed toward granting him any postponement for any extended period. So that in spite of the announced policy of this government regarding the necessity of keeping men on the farm to carry on our agriculture production programme, it would appear to me that the board in Saskatchewan can, as matters now stand, ignore this statement of policy of the government. The board does not have to prove to any particular applicant that the applicant, to use the exact words of the memorandum, "is not an essential worker in agriculture." If the board in Regina with the evidence before them say that this man is not essential in agriculture, that closes the subject and the man is called. If I am to judge by the remarks which the chairman of the board made to me last January, his opinion is that every able-bodied man should be in the army.

I think some responsible department of the government should decide the maximum number we require in the army. I am not suggesting that we have that maximum number now; but sooner or later some responsible department will have to make that decision, and when we do reach the maximum number required for the army we should retain on the farms a sufficient number of men to carry on the farming industry to supply the needs of the army and of civilian life in this country and our needs overseas. I wish the minister would announce a policy which could be carried out all across Canada with respect to retaining on the farm however many men are needed there. I should like to support what the leader of the opposition and the hon. member for Qu'Appelle have said. Apparently we have no regulations that are carried out uniformly across the country. Can the minister make any further statement in that connection?

Mr. THORSON: The hon. member for Qu'Appelle and the hon. member for Mackenzie are raising again this evening a matter that was very ably presented by the hon. member for Haldimand on May 25. There has been a full discussion of his point of view and a full discussion of the reasons governing the agricultural policy that was based on order in council P.C. 2252. I do not think I can usefully add anything to what I said on that occasion. The case for agriculture was ably presented by the hon. member for Haldimand, and I attempted to give the reasons for the agricultural policy which resulted in the adoption of the stabilization of employment and agriculture regulations of 1942 which are set out in order in council P.C. 2251 and the adoption of order in council P.C. 2252, relating to the calling up of persons under the national war services regulations. I cannot usefully add anything to what I said then.

Mr. COLDWELL: The minister will have noticed that most of these cases are being presented by members who represent constituencies in Saskatchewan.

Mr. THORSON: That is right.

Mr. COLDWELL: The hon. member for Qu'Appelle in the Conservative party and we in the Cooperative Commonwealth Federation have presented cases from Saskatchewan, and

Saskatchewan members in the Liberal party on the other side of the house have done the same thing. I suggest to the minister that this should indicate to him that there is probably something in the province of Saskatchewan that needs investigation.

Mr. THORSON: It may indicate something quite different.

Mr. COLDWELL: It may indicate something quite different, but I suggest that there is something in the province of Saskatchewan that needs looking into. It was stated earlier in this debate that the board in Saskatchewan consisted of responsible men of very high standing. I am not going to gainsay that, but I am going to say this, that I think the chairman of the board in particular is a gentleman who has only one point of view, and that is the point of view as expressed to the hon. member for Mackenzie (Mr. Nicholson), that every able-bodied man ought to be in uniform. Another member of the board holds pretty much the same view.

Mr. THORSON: Name the third member of the board.

Mr. COLDWELL: I have named two. Mr. Justice Embury is the chairman, a man with a military mind and as irascible as some elderly generals are.

Mr. MacNICOL: Is he a general?

Mr. COLDWELL: A brigadier.

Mr. GREEN: And a fine one too.

Mr. COLDWELL: But fine generals towards the latter years of their life sometimes become a little bit irascible; I use that word.

Mr. FLEMING: Senile decay.

Mr. BROOKS: There are not many suffering from that.

Mr. COLDWELL: The second member of the board is Mr. Carl Stewart. Saskatchewan Liberals know him, and probably Saskatchewan Conservatives know him to their sorrow. The third member of the board is Mr. George Bickerton.

Mr. THORSON: Who is he?

Mr. COLDWELL: President of the United Farmers of Canada.

Mr. THORSON: Saskatchewan section.

Mr. COLDWELL: Yes. The minister knows from numerous letters that he has received that there is dissatisfaction here and there; and while I hold no brief for conscientious objectors, like the minister I cannot see that under present circumstances, in the present kind of war, conscientious objection is as it might have been had this war been of a different type. There are people who do not believe that under any circumstances it is right to take human life, and the minister knows that there are young men, conscientious objectors, who have offered, as he said, to do the most dangerous kind of work. I know of young men who have offered to learn to drive ambulances and to go into the firing line, young men who have offered to learn to fight fires and to go into the burning cities of Great Britain; and I know that such young men have been sent to work camps, there to do manual labour for which they were not fitted or trained.

Mr. THORSON: And did it very well.

Mr. COLDWELL: Yes, at 50 cents a day. I was in England last autumn and, while there, I learned something of the treatment of conscientious objectors. There, in that country at war, liberty of conscience is respected, and the man who has a conscientious objection is respected and is allowed to do some useful work in connection with the war effort or in connection with some great social project. I know of one young man, the son of one of the greatest figures in the British war effort at the present time, who is teaching a group of refugee children in a school which he maintains himself. That is looked upon as a worthwhile project. But Canadian authorities have taken the view that if any man has a conscientious objection to bearing arms, there is nothing for him to do but go into the work camp.

Mr. THORSON: Alternative service.

Mr. COLDWELL: That is what they call it.

Mr. THORSON: It may take a variety of forms before it is over.

Mr. COLDWELL: Before it is over; but at the present time young men in Saskatchewan are taken right out of—

An hon. MEMBER: Off the farm.

Mr. COLDWELL: Yes, and they are taken out of university or school and made to use pick and shovel in a work camp. That is called justice. That is not alternative service; it is punishment and it is wrong. That is what those of us who represent Saskatchewan constituencies are complaining about. I say that no man should be given any authority or opportunity to exercise sadistic propensities in this time of war. We are going to reap the whirlwind if we sow this wind of cruelty in the present war. If we do this, wherein do we differ from Hitler or the nazi regime? Liberty

of conscience, I take it, is what we are fighting for—liberty of conscience and freedom of speech, the freedom of men to choose their own destiny. That is what we are fighting for, and it is the antithesis of all of which we complain. That is probably the reason why the minister is getting so much discussion from members from Saskatchewan.

Mr. THORSON: That is not all of it.

Mr. COLDWELL: Having said that, may I ask him some questions about another case? We have said from time to time that we have been gravely suspicious that compulsory military training may result in some persons using it to crush labour organizations. I came to Ottawa on the train from Montreal the other evening, and I met a young man about whom the member for Vancouver East (Mr. MacInnis) asked a question on April 23. He asked a question about some complaints made by Allan C. Wright, who was organizer at Vancouver for the steel workers of Canada. Mr. Wright complained of the intimidation of workers. He was a young man of about thirty, a resident of the city of Toronto. His home was there. He was out at the Pacific coast doing a job for the organization with which he was associated, and right in the midst of that job he was called to the colours at Vancouver. Notice was sent to call him out of his work as a labour organizer. He happened to be in Toronto when the call came to him on his return to that city.

Mr. THORSON: That is not true.

Mr. COLDWELL: That is what I understood from him. Perhaps I am mistaken but in any event the minister can tell the story if he knows it.

Mr. THORSON: I will.

Mr. COLDWELL: The suspicion I have is that the mobilization act was used to prevent this young man from going on with the work of organizing labour on the Pacific coast. That is the only construction which could be placed on the action that was taken. He was improperly called out of his own district, called in the city of Vancouver when he was there doing his duty for a legitimate labour union.

Mr. HANSON (York-Sunbury): That is a charge.

Mr. COLDWELL: It is not a charge.

Mr. THORSON: I shall answer it.

Mr. COLDWELL: It is a statement made to me, and I am repeating it on the floor of the house so that it can be looked into.

Mr. THORSON: I have dealt with it. The case to which the hon. member for Rosetown-Biggar has referred, was brought to my attention by the hon. member for Vancouver East on May 11, I believe it was. The young man to whom the hon. member for Vancouver East referred, after he had got his notice to report for military training to Vernon, British Columbia, flew to Ottawa. The hon. member for Vancouver East asked me whether I would see this young man, and I told him I would.

Mr. MacNICOL: That you would not?

Mr. THORSON: Why would I say I would not? I said I would.

Mr. MacNICOL: I did not catch what the minister said.

Mr. THORSON: I saw the young man, and I got from him his statement of the facts. I caused an inquiry to be made with regard to the whole situation. The facts that were brought to my attention were of such a nature that it might be inferred that the man's registration card had been ordered to be transferred from Toronto to Vancouver otherwise than in due course.

Mr. COLDWELL: Who ordered that?

Mr. THORSON: That was a requisition from my department to the registrar at Toronto, and was at the request of the chairman of the board at Vancouver. The board at Vancouver would have no jurisdiction to deal with the man in Vancouver without the registration card. I have stated on a number of occasions that I was determined that there must be the utmost integrity in the administration of the regulations, that they are to be used for the purpose for which they were devised, namely, the filling of requisitions that come from the Department of National Defence. The regulations are part of the mobilization law of this country. I am also of opinion that under no circumstances may the regulations be used for any other purpose. It does not matter a particle to me from the point of view of the administration of the regulations whether the man is a labour agitator or what he is. His activities may be undesirable activities, but the national war service regulations must not be used except for the purpose for which they are devised.

I came to the view that there was some doubt as to the regularity of the transfer of the card from Toronto to Vancouver. There is an argument both ways. It is a matter of interpretation of the term "change of address"; a matter of interpretation of one of the regulations.

Mr. HANSON (York-Sunbury): Is it address or residence?

Mr. THORSON: The jurisdiction to call a man is based on the residence of the man.

Mr. COLDWELL: This man's residence was Toronto.

Mr. THORSON: This man stated that his residence was in Toronto, and when he was asked for his registration card his card showed this Toronto address. Regulation 26 reads:

> If, at any time, while a man is liable to be called out, any change occurs in his address or in his matrimonial status, he shall forthwith notify such change to the divisional registrar of the administrative division in which such man resided immediately before such change occurred . . .

At the coast there are a great many "floaters"; that is, they have not any real residence, and when the good weather comes they go out to the coast. In the ordinary course of events those men are checked periodically and their registration cards looked at. Those men really for the purpose of the regulations have changed their residence. But I do not think that could be said of this labour agitator.

Mr. COLDWELL: He is not an agitator.

Mr. THORSON: I do not think there is any doubt about his being an agitator.

Mr. NICHOLSON: What is the minister's definition of an agitator?

Mr. COLDWELL: He is a duly appointed officer of a legitimate labour organization, with his residence and headquarters in Toronto.

Mr. THORSON: Whether he was or was not an agitator is beside the point.

Mr. COLDWELL: It is a word that had better be left out of this debate.

Mr. THORSON: Even if he were an agitator, of which I personally have no doubt—

Mr. COLDWELL: And which I am certain he is not.

Mr. THORSON: Even if he were an agitator and engaged in activities as an agitator, he is not to be removed from those activities through the agency of the regulations under my charge.

Mr. HANSON (York-Sunbury): Illegally.

Mr. THORSON: Irregularly. It seemed to me from a review of all the facts that there was some doubt as to the regularity of the transfer of that man's card from Toronto to Vancouver. Without the card the divisional board at Vancouver would have no jurisdiction over the man. There was also some doubt in my mind as to the regularity of the man's call in Vancouver in due course. So at two o'clock in the morning of May 21 I sent directions to the chairman and registrar of the board directing the transfer of the man's registration card back to Toronto, with effect as from April 27, the date it was sent from Toronto to Vancouver. I directed also the cancellation of the man's notice to report for military training, because I am determined that under no circumstances may these regulations, that is the regulations which are entrusted to my charge, be used for any purpose other than that for which they are designed, namely mobilization, not regulations under which the maximum number of postponements can be granted. It seems to me that there is almost a competition in the course of this debate among some Saskatchewan members, some of whom are still to speak, for postponements.

Mr. COLDWELL: That is not true.

Mr. THORSON: The board is composed as the hon. member for Rosetown-Biggar has indicated—

Mr. HANSON (York-Sunbury): Will the minister permit a question? First, did he, under the statute or the regulations passed under the statute, have authority to take the steps which he did take? I would not assume that the minister would take that step unless he felt certain he had jurisdiction, but I ask the question for greater certainty.

Second, and more important, was there any evidence of sabotage on the part of anybody with respect to this individual, to get him out of the way by this method, or was it done in good faith on the part of those administering the law? Because so far that has been the indication underlying the theory of the hon. member's suggestion—"suspicion" is the word he used. Was there any evidence of sabotage against this man on the part of, say employers who wanted to get rid of him?

Mr. THORSON: I do not think there was any evidence of sabotage. I think the board at Vancouver was actuated by motives that commended themselves to the board. I think they acted out of, shall I say excess of zeal.

Mr. COLDWELL: Zeal for what?

Mr. THORSON: There was no evidence of any sabotage.

Mr. HANSON (York-Sunbury): What about the question of jurisdiction?

Mr. THORSON: I came to the conclusion that I had power to issue directions of the kind I did issue, under the provisions of section 22 of the regulations.

Mr. BROOKS: Now that we have disposed of this one man case that has taken up so much time, I must say that I was pleased indeed to hear the minister say a few days ago that this was a mobilization act, not a demobilization act. One sitting in this house and listening to a great many of the remarks made would almost think we were more interested in keeping men out of the army than in getting them into it. We have shown a great deal of sympathy for conscientious objectors. I am proud to say that in my own province we have very few of these people. Out of some six thousand men whom I have had at my military camp, we have had less than half a dozen conscientious objectors. It seems to me that a great deal of sympathy has been expressed in this house for people of this class, one might almost say maudlin sympathy, indeed more than has been expressed for the men who are really trying to do their duty and carry on the work that is necessary.

We have little complaint in New Brunswick, where we have an efficient registrar and an efficient board, of which Chief Justice Baxter is chairman. There is a question I should like to ask, however, in connection with farm labour, following what has been said by the hon. member for Qu'Appelle and some other hon. gentlemen. My question is with regard to the distribution of farm labour. There are certain sections of my province—and I am satisfied that the same thing is true all over Canada—where the farms have been almost depleted of men. I believe that is particularly so in the Kennebecasis valley, in my own constituency, and up the St. John river in the other part of the province. Those sections have been drained of practically all the young men who were on the farms, and I may add that these are the best farming sections in the province. In my constituency we have large dairy farms with practically no help. Up the St. John river there are the large potato farms, also with practically no help. But then we have other sections where there are smaller farms, perhaps 100 or 120 acres, and it is from these sections that most of the applications for postponement are coming. On some of these farms there are five or six men, yet they are asking for exemption and getting it. On the one hand, in certain sections we have small farms with numbers of men on them and, on the other hand, large farms with practically no men.

My question to the minister is this. How is he going to distribute this labour? The same thing applies to labour in the west. The hon. member for Qu'Appelle has said that in certain sections the farms have been practically depleted of men. Is labour to be taken from one section of Canada and placed in another? Is it to be distributed evenly over a province? After all, there is no use in saying that we are going to hold so many men on the farms if on one farm there is no labour at all and on another, a smaller farm, there are more men than are really required. As I understand it, these men must be engaged in farm labour. I believe this is a problem which the Minister of Agriculture and the Minister of National War Services will have to take into consideration. Something will have to be done in order to have a proper distribution of the farm labour which has been frozen on the land.

Mr. CLAXTON: I wonder if I might bring up a new subject before the committee.

Mr. BROOKS: Perhaps I might get an answer to the question I asked the minister.

Mr. THORSON: I beg my hon. friend's pardon; I was not aware of the fact that he had asked me a question.

Mr. BROOKS: I asked if the minister had any idea of how the distribution of this farm labour will be carried out. They have been frozen on the farms of the country. How are you going to distribute them?

Mr. THORSON: That is not going to be the easiest problem to deal with; indeed it is an exceedingly difficult one. It is part of the problem of utilizing man-power to the fullest possible extent, where questions of the mobility or immobility of man-power are involved. It is undoubtedly true that in some areas of Canada the supply of agricultural labour has been so much depleted that the situation is very serious, while in other parts of Canada the situation is not quite so bad. The departments vitally concerned are the Department of Agriculture, the Department of Labour and my own department to the extent that the calling up of men may make inroads upon the supply of agricultural labour. We tried by the adoption of the agricultural policy that underlies order in council P.C. 2252 to prevent any further drain upon agricultural labour, in the hope that if we could prevent the agricultural situation across Canada from getting any worse we could get by—not any more than that—with our agricultural commitments that are part of our war effort. For that reason we decided that we would stabilize employment in agriculture, as far as possible, of persons who are wholly or mainly employed in agriculture and, subject to certain exemptions, prevent them from leaving agriculture. In other words, using language that perhaps is not exact, we were freezing them in agriculture. I will admit that this does not fully meet the

situation in the areas which have been too greatly depleted, but that is a situation which will demand our very best attention.

Mr. HANSON (York-Sunbury): The minister is merely reaffirming the position taken by the hon. member for Royal. What does the minister propose to do about it? That is the practical question. How is he going to distribute this labour? I have an illustration that I can give to the minister. In one county a call was sent out for twenty men to do some work at a camp. Three hundred turned up. There is a plethora of men in that community, while in the county of Kings you cannot hire a man to milk a cow to save your soul. This situation must be dealt with.

Mr. THORSON: The situation is uneven, and in so far as labour can be moved from one area to another, every effort will be made to move it. But I made reference to the subject of mobility and immobility of labour.

Mr. HANSON (York-Sunbury): But the minister did not tell us that the government had any policy.

Mr. THORSON: It is encouraging the movement of men from one part of Canada to another, where labour is required. That is the essential purpose of the labour employment offices established by the Department of Labour.

Mr. HANSON (York-Sunbury): Oh, that is for industry; we are talking about agriculture.

Mr. THORSON: I beg my hon. friend's pardon. In many years the largest supply of agricultural labour, in so far as the west is concerned, has been found by the labour employment offices; they are a very important agency for finding the agricultural requirements in respect of labour.

Mr. FLEMING: I wish to ask merely one or two questions. First of all, were two sets of instructions issued, the one that appears on *Hansard* and another one?

Mr. THORSON: The answer to that is no.

Mr. FLEMING: All right.

A few days ago there was a discussion in the house with respect to lawyers, and whether a young man could employ a solicitor to conduct his case for him. I hold in my hand a leter from Mr. A. C. Stewart, a member of the board in Saskatchewan, in which he says:

> Our board is being criticized in the house for being influenced by the efforts of solicitors, who are suspected of making money through the efforts they put forward to have men postponed. We intend from now on to pay no attention to any communications from solicitors received on the subject.

Did the minister issue instructions to that board that solicitors were not to send in representations with respect to these men's cases?

Mr. THORSON: No; the regulations are the only directions on the subject; no directions have been issued from the department.

Mr. FLEMING: I am told that there was another set of regulations.

Mr. FRASER (Peterborough West): I should like to speak concerning a different subject entirely. What is the minister going to do in regard to the Canadian women's voluntary services? This organization was formed in June, 1941, and was registered under the War Charities Act in September of that year. Since that time these women have done a wonderful work, and are continuing to do it to-day. Now, however, the government seems to disregard them entirely, and wants to take over what the women have been doing. Instead of its being on a voluntary basis, the government has now engaged a Mrs. West as director at a salary of $4,000 a year, and has appointed an assistant at a yearly salary of $3,000.

Mr. HANSON (York-Sunbury): The salary of the former is $4,800.

Mr. FRASER (Peterborough West): Plus expenses. These C.W.V.S. women have carried on their work, especially across Ontario, at no expense whatsoever to the government. They have given their time, service and everything else.

In his letter of April 27, 1942, to the president of the Canadian women's voluntary services at Toronto the minister says:

> It was finally decided to establish a division of the Department of National War Services to be known as the division of women's voluntary services. This division was established by order in council P.C. 8488, dated October 31, 1941.

That was only a month after the Canadian women's voluntary services had been registered under the act. However, the government did not tell the women about it at that time, and they have been carrying on ever since. They are now wondering what is going to happen to them. Another part of the minister's letter states:

> I have therefore approved of the organization and development of the division of women's voluntary services as outlined in the attached memorandum. A study of this memorandum will indicate that the approach of your organization to coordination of women's voluntary effort is the exact opposite to that of our division. In the past ten days Mrs. West and Miss Held have been visiting many of the Ontario communities and find there is a great deal of confusion because of the similarity in name of the two organizations.

I am therefore waiting to advise you that much as I regret to take this action, it will be necessary for my department to terminate the registration of your organization under the War Charities Act under its present name—"Canadian women's voluntary services".

We would, however, be pleased to consult with you as to methods of cooperation from your organization, under some other name, in furthering the objects of the women's voluntary services division of the Department of National War Services.

This letter is signed by J. T. Thorson. The government stepped in, after these women had organized and done all the spade work. The government step in and say, "Your name is out; we will take it over."

The next letter is from the president of the Ontario association. I shall not read that letter, but shall proceed to the next one sent by the minister. This letter is dated May 4, 1942, and states:

First, I pointed out that the similarity in name between the "division of women's voluntary services" in the Department of National War Services and that under which you have been operating—"Canadian women's voluntary services, (Ontario division)"—is leading to confusion.

There would not have been any confusion if the government had just checked back over their files and found out that the women had registered a month before.

Mr. MacNICOL: A year before.

Mr. FRASER (Peterborough West): No, a month before. This came into being in October, 1941, and the women's association was registered in September, 1941. The letter continues:

I wished to indicate, well in advance of the expiration in September of your registration under the War Charities Act, that it will not be possible for you to continue to be registered under your present name. I did not say, nor did I wish to convey the idea that, under some other appropriate name, your organization will be refused registration under that act.

The organization in Ontario is composed of these different organizations:

British Empire Ex-Service Women's Association
Canadian Auxiliary Territorial Services
Canadian Business and Professional Women's Club
Canadian Federation of University Women
Canadian Mothercraft Society
Canadian Women's Service Force
Children's Aid Society
Church of Christ Disciples
Community Welfare Council of Ontario Inc.
Coronation Unit of Ex-Service Women
Eastern Canada Region, International Association of Soroptimist Clubs
East York Women's Service Corps
English Speaking Union
Federated Women's Institutes of Ontario
Federation of Women Teachers Association of Ontario
Grand Camp, Daughters of Scotland in Canada
Overseas Nursing Sisters Association for Ontario
Grand Lodge, Daughters of England Benevolent Society
Hadassah Organization
Ladies' Auxiliaries to the Order of Scottish Clans
Ladies' Orange Benevolent Association
Ontario Dental Nurses and Assistants
Ontario Provincial Command Ladies' Auxiliary, Canadian Legion
Ontario Provincial Council, Canadian Daughters League
Order of the Eastern Star
Protestant Women's Federation of Canada
Provincial Branch, Canadian Ladies' Golf Union
Provincial Chapter of Ontario, Imperial Order Daughters of the Empire
Queen's University Alumnae
Registered Nurses' Association of Ontario
St. John's Ambulance Society
Silver Cross Women of the British Empire
The Baptist Women's War Services Auxiliary
The Canadian Girl Guides Association
The Canadian Jewish Congress
The Catholic Women's League of Canada
The Council of Jewish Women
The Girls' Friendly Society
The Inner Wheel
The Lyceum Club and Women's Art Association of Canada
The Maccabees
The Ontario Federation of Home and School Associations
The Ontario Women's Liberal Association
The Rebekah Assembly of Ontario
The Salvation Army
The Women's Missionary Society of the Church of England
The Women's Missionary Society of the Presbyterian Church in Canada
The Women's Missionary Society of the United Church of Canada
Toronto Dietetic Association
Women's Central Conservative Association of Toronto
Women's Christian Temperance Union
Women's Committee of the Navy League
Women's Land Brigade Auxiliary
Women's Law Association of Ontario
Zonta Clubs of Canada
Provincial Council of Women
The Polish Group

All voluntary services. Mrs. Roberts, chairman of Canadian women's voluntary services for Ontario, wrote a letter to the Minister of National War Services, and this is part of what she said:

Your department says "perhaps it would be a good idea to have some courses for emergencies set up and when the emergencies arise give the courses of training." This programme of preparedness which we have adopted is what your department regards as "overstimulation of volunteer effort."

A consideration of these differences has shown us that there seems no way of avoiding the conclusion which you had come to as stated in both your letters to me, of April 27 and May 4, that the approach of our organization in the coordination of women's volunteer effort is the exact opposite to yours.

Miss Margaret Hyndman, K.C., and Mrs. Murdoch MacKenzie came to Ottawa and saw Mrs. West and Miss Held, and this is part of their report:

(1) That the government's plan is to have women's war work done in communities by social agencies;

(2) That no war work should be undertaken in a community until these social agencies who have their "ear to the ground" as to the needs, give the word "go";

(3) That women should not be trained for emergencies now, nor their free time utilized for war work except such "unspectacular" (as she called them)—

That would be Mrs. West.

—and relatively unimportant jobs as salvage and price control enforcement. Nor should they be encouraged to organize their lives to have free time which can be so utilized.

Mr. THORSON: Whose report is that?

Mr. FRASER (Peterborough West): That is the report of Miss Hyndman, K.C. That is what Mrs. West told them when they were here in Ottawa. Further on she says:

To use Mrs. West's words it "overstimulates the will of the volunteer to serve."

These women have carried on, as I said before, absolutely without any charge on the government. I do not know much about what Toronto has done, but in Peterborough sixty-one typists gave 1,244 hours of service in connection with the mobilization of the Prince of Wales regiment. Our women volunteered to supervise the extra children that have been thrust upon the Children's Aid Society; they have atended classes in home nursing; they are driving cars; they go to the training centre in Peterborough three evenings a week; they do playground supervision work and welfare department work; they take part in the Red Cross and community fund drives, and many other activities. I should like to know from the minister just why he decided to do away with this association after it was formed, and why he did not tell the ladies at that time.

Mr. THORSON: The question put by the hon. member for Peterborough West cannot be answered in a few minutes.

Mr. FRASER (Peterborough West): I do not care how long the minister takes as long as he gives these ladies a clear and proper explanation of why this was done.

Mr. THORSON: I shall do my best. It is most unfortunate that this controversy has arisen. One of the functions of the Department of National War Services as set out in the governing act of the department is the coordination of voluntary assistance. It was felt desirable to recognize in a special way the splendid work that the women of Canada are doing in their communities. Since the women of Canada are making an important contribution to the war effort in a field which only the women can fill effectively, it was thought desirable to promote the coordination of the voluntary assistance being given by these women in different parts of Canada.

We were faced with two alternative courses of action. One course that was suggested was that we should ask all the national organizations such as the Imperial Order of the Daughters of the Empire, the Canadian Red Cross Society, the National Council of Women, the Catholic women's organization and other representative women's organizations to send representatives to Ottawa to attend a national conference to discuss the advisability of establishing a national organization for the promotion of the coordination of women's voluntary services throughout Canada. After a discussion with leading women in different parts of the country that course was abandoned on the ground that the various national women's organizations across Canada were doing their work excellently in their own respective fields and that there was no need of an additional women's organization of a national nature.

Mr. HANSON (York-Sunbury): Who made that decision?

Mr. THORSON: I made it.

Mr. LOCKHART: What organizations did the minister consult?

Mr. THORSON: I discussed the matter with a great many women in Canada upon whose judgment I relied. I did not discuss it with the national organizations.

Mr. HANSON (York-Sunbury): With individuals?

Mr. THORSON: With individual people whose judgment I valued. There was practically no dissenting opinion on the subject. The view that was suggested and the view that was ultimately adopted was that if we were going to promote the coordination of women's voluntary services in an effective manner, we would have to do so on a community basis in the communities where the women would actually do the work. Therefore, as the basis for the coordination of women's voluntary services in this country, we adopted the principle of community solidarity. We decided that whatever we would do in promoting the coordination of women's voluntary services would be on a community basis.

Mr. FRASER (Peterborough West): Is it not on a community basis now?

Mr. THORSON: I did not interrupt my hon. friend. I shall be glad to answer any questions if he will just allow me to continue.

We came to the view also that the leadership among women is actually in the community, that the effective work that women can do is the work that they can do in their own community, and that is the general view. So we adopted as the basis of our whole organization the basis of community solidarity. It was thought at one time that we would merely divide our division of voluntary services and create a subdivision of it for the promotion of women's voluntary services coordination, but the view prevailed that the activities of the women of Canada in the community field deserved special recognition, and we set up an independent division of my department known as the women's voluntary services division. The purposes of that division are set out in the order in council which created the division. They are as follows:

To promote the coordination of the voluntary efforts of the women of Canada and to encourage the organization of women's voluntary services on a community basis with a view to their best utilization for the needs of their community, the maintenance of national morale and the furtherance of the welfare of the nation.

That is the purpose of the women's voluntary services division.

Mr. MacNICOL: It is too bad you have not given it some other name.

Mr. THORSON: The hon. member for Peterborough has stressed the unfortunate matter of the name. That is unfortunate, I am prepared to admit, but I am not prepared to admit that it is not a good name for the division of my department. As a matter of fact, the decision with regard to the name had really been taken long before the actual order in council went through. If the name is an appropriate name for the division which, after all, is concerned with the promotion of the coordination of women's activities across Canada, it is more important that the name should be allocated to that division than to an organization which at the present time is purely provincial.

Mr. MacNICOL: But their name is "Canadian".

Mr. THORSON: Yes, and it is confusing because they are not Canadian in their operations.

Mr. HANSON (York-Sunbury): They attempted to make it national, did they not?

Mr. THORSON: It is a provincial organization, and it is the view of the department that there is no need for an additional organization of either a national or provincial nature.

Mr. MacNICOL: Then why did you start one? They were there first.

Mr. THORSON: The dispute is really over the matter of registration under the War Charities Act, which enables them to raise money.

Mr. HANSON (York-Sunbury): That is the legal aspect.

Mr. THORSON: That is all that is cancelled, their registration under the War Charities Act.

Mr. HANSON (York-Sunbury): Have you not told them that they cannot use this name?

Mr. THORSON: Not under the War Charities Act. It is unfortunate that this has arisen but their objectives are contrary to the objectives that have generally been accepted by the department and by a great many others across Canada.

Mr. HANSON (York-Sunbury): Why does the minister say that? I do not understand that that is correct.

Mr. THORSON: I do not think there is much doubt about it.

Mr. MacNICOL: The very organization you are putting out is by far the most important voluntary organization all across Canada.

Mr. THORSON: The view that was taken in the department was that if we were to get the most out of women's voluntary services, the wisest thing to do would be to promote the organization of these women's organizations in the community.

Mr. LOCKHART: On a paid basis.

Mr. MacNICOL: You are paying salaries. That is not voluntary.

Mr. THORSON: So that all the organizations in the community will become, so far as possible, part and parcel of that community solidarity, for it is in the community that the women will actually do their work. One of the ideas was that we would promote in the larger centres where there was not one already in existence a central volunteer bureau.

Mr. LOCKHART: Paying anyone anything?

Mr. THORSON: Many of them pay salaries to some of their officers.

Mr. MacNICOL: Does the particular organization we are speaking of pay salaries?

Mr. LOCKHART: It does not.

Mr. THORSON: I know a good number of central volunteer bureaux where some persons do get some remuneration.

Mr. HANSON (York-Sunbury): In the Canadian women's voluntary services?

Mr. THORSON: No. It is not organized on a community basis at all.

Mr. HANSON (York-Sunbury): That is just quibbling.

Mr. MacNICOL: It covers not only Toronto but six or seven territories outside, in Ontario.

Mr. THORSON: It is not organized on a community basis at all. The community activity has to take into account, if it is really to be a community enterprise, all the important community organizations, and it must of necessity include the charitable and social welfare agencies because they are the core of the community activities; it is necessary so far as possible to bring those agencies together in the community. One objective was to promote the establishment of a central volunteer bureau where all the women in the community could register their willingness to engage in some kind of voluntary effort. That central volunteer bureau will become a pool or reservoir of voluntary aid, so that any organization in the community that wishes to do so can go to the central volunteer bureau and say that it needs additional assistance for this or that activity, which might be a social welfare or a social agency activity of one kind or another. It might be a war loan campaign or a salvage campaign. It might take one of twenty or thirty different forms; but there would be that reservoir of voluntary women of the community, effective not only for the purposes of the war, but also for the purposes of the post-war period. We felt that was much sounder than to establish another provincial or national organization.

Mr. HANSON (York-Sunbury): But they were in the field.

Mr. THORSON: They were not really active.

Mr. HANSON (York-Sunbury): Yes. They had a licence before the order in council was passed.

Mr. THORSON: They were registered under the War Charities Act, which allowed them to raise money.

Mr. HANSON (York-Sunbury): Surely, but they were in the field first.

[Mr. MacNicol.]

Mr. THORSON: And it is that registration, under the War Charities Act, under that name, which will be cancelled.

Mr. MacNICOL: Had they not arranged with subsidiary organizations in the case of the bombing of cities, particularly Toronto, to take children from Toronto?

Mr. THORSON: They can take on that activity; there is nothing to bar them from doing so. There are a number of fields of useful work in which they can engage. The name, however, is confusing.

Mr. HANSON (York-Sunbury): Not confusing. You are taking it away from them.

Mr. THORSON: We are taking away a name that is appropriate to the activities which our department is seeking to promote.

Mr. HANSON (York-Sunbury): At a salary to the director of $400 a month and expenses.

Mr. THORSON: We combed the whole country; and you can ask almost any woman you like who understands working in communities, and you will find the most wholehearted approval of the appointment of Mrs. West and Miss Held.

Mr. LOCKHART: What is the assistant paid?

Mr. THORSON: I believe it is $3,000.

Mr. MacNICOL, And expenses.

Mr. THORSON: Travelling expenses.

Mr. MacNICOL: How much?

Mr. THORSON: Actual out-of-pocket expenses.

Mr. MacNICOL: I do not see how you can expect the ladies to work under a couple of paid officials like these.

Mr. THORSON: They are not going to work under these officials.

Mr. HANSON (York-Sunbury): These officials will direct them.

Mr. THORSON: They will not direct them either; they will give guidance and encouragement. The whole basis of the community solidarity set-up of women's voluntary services is that it shall spring from women in the community.

Mr. MacNICOL: It had already sprung from them.

Mr. THORSON: No. This particular organization which my hon. friend mentions is not using the organizations that are in the

community. It rejects a number of them and does not want to have anything to do with some of them.

Mr. LOCKHART: Which ones?

Mr. THORSON: The social agencies and the social welfare organizations are the heart of the community, and you cannot have a community organized on the basis of community solidarity if you exclude the persons who are interested and concerned in that part of the community which is in need of social aid. They are an essential part of any community solidarity set-up. The reason is that you cannot have a sound community development, you cannot have integrity of the community, without looking after all the people in the community and seeing that those in need of assistance get it in times of war as well as in times of peace.

Mr. FRASER (Peterborough West): And that is exactly what this organization has done.

Mr. THORSON: This organization is not interested in the social welfare agencies. It is working apart from them, and our view of community solidarity is that all organizations in the community must be taken into account. The social agencies are not approved by this organization, and that is one of the reasons why I am of opinion that the views of this organization are opposite to the views that actuate the division of my department.

Mr. MacNICOL: The division of your department; that is another thing altogether.

Mr. THORSON: That is one of the reasons for that statement. I do not know that there is more to add to what I have said. There is a field for this organization, and we welcome all organizations; but there is no need for an additional national organization, or a provincial organization which will become national. Effective work will be done in the community. I move that the committee rise, report progress and ask leave to sit again.

Mr. HANSON (York-Sunbury): The minister has occupied all the time until 11 o'clock, but there is another side to the story and it is too late now to put it on the record. These ladies were in the field before the minister and his department ever took any action in the matter. It goes back to 1939 when Miss Hyndman and Senator Fallis—

The CHAIRMAN: There is a motion before the chair which is not debatable.

Mr. HANSON (York-Sunbury): We will hear about it to-morrow.

44561—182½

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Friday, May 29, 1942

The house met at three o'clock.

UNEMPLOYMENT INSURANCE

AGREEMENT BETWEEN CANADA AND THE UNITED STATES FOR COORDINATION OF CONTRIBUTIONS AND PAYMENTS

Hon. HUMPHREY MITCHELL (Minister of Labour): For the information of hon. members I table copies in English and French of an exchange of notes between Canada and the United States as to an agreement respecting Unemployment Insurance. The object of the agreement is to ensure that application of Canada's unemployment insurance law and similar laws in the various states of the United States shall be coordinated so that duplication of contributions in respect to the same services and duplication of insurance payments with respect to the same period of unemployment may be avoided. The agreement became effective on April 12 last.

CANADIAN FORCES

INEQUALITIES IN RATES OF PAY AND ALLOWANCES

On the orders of the day:

Hon. IAN A. MACKENZIE (Minister of Pensions and National Health): Yesterday the hon. member for Broadview (Mr. Church) referred to myself in connection with a question dealing with the inequalities of pay and allowances of the three branches of his majesty's forces. Obviously that has nothing to do with my department, but I shall be very glad to direct the attention of the three ministers concerned to the question.

THE MINISTER OF JUSTICE

PRESS REPORT AS TO LETTER TO SECRETARY OF QUEBEC EAST LIBERAL CLUB

On the orders of the day:

Hon. R. B. HANSON (Leader of the Opposition): I should like to ask the Minister of Justice whether the letter appearing in to-day's press and reported to have been written by the minister to M. Harvey, secretary of the Quebec East Liberal Association, was in fact written by him. If so, may I ask him if he was reflecting government policy when he stated:

There is no intention for the time being to bring in conscription for overseas service.

May I also ask him to explain what he meant by the statement that he—"would be true to Mr. King as long as he was true to himself and to his record."

Hon. L. S. ST. LAURENT (Minister of Justice): I did not write any letter to Mr. Harvey, but I did write to one Mr. Hawey, secretary of the Liberal club in the constituency of Quebec East. I have not seen it in the press. However, the phrases read by the hon. leader of the opposition sound like a correct translation of what I wrote. I expressed to the secretary of this club my own opinion as to what the situation was.

Mr. HANSON (York-Sunbury): That is not an answer to the question. I asked, was that a reflection of government policy, and what did the minister mean by the second statement?

Mr. ST. LAURENT: I stated to the secretary of this club my opinion of the situation and of the purport of the bill before this house.

DISTILLING INDUSTRY

CONVERSION TO PRODUCTION OF ESSENTIAL WAR MATERIALS

On the orders of the day:

Mr. G. T. FULFORD (Leeds): I should like to inquire whether the government has considered the advisability of converting the entire distilling industry from liquor to alcohol for the production of butadiene rubber or other essential war materials?

WHEAT

AGREEMENT WITH WHEAT BOARD FOR FURTHER PURCHASES BY GREAT BRITAIN

On the orders of the day:

Hon. J. A. MacKINNON (Minister of Trade and Commerce): I wish to make a brief announcement. The Ministry of Food of the United Kingdom has entered into another agreement with the Canadian wheat board to purchase Canadian wheat. The new contract, like the last one in November 1941, is for 120,000,000 bushels. A similar announcement is being made at this time in the British parliament.

Mr. HANSON (York-Sunbury): What is the price?

Mr. MacKINNON (Edmonton West): I wish to add a brief comment. This purchase is on the basis of futures, October and December. We have renewed our request to the British Ministry of Food that we be authorized to make the actual price figure available to the house. To this request we have had a cable to the effect that consideration is being given to the matter, and we will be advised.

I should like to add that the outward movement of Canadian wheat and flour from August 1, 1941, to April 30, 1942, was 168,500,000 bushels, which is 28,250,000 bushels, or 20 per cent, above the 1940-41 figures for the same period. With a continuation of the present rate of disposition for the remainder of the crop year, there is every likelihood of a reduction of about 100,000,000 bushels in the Canadian wheat carryover at July 31, 1942, as compared with July 31, 1941.

Mr. COLDWELL: Now that the former contract has been completed and a new one negotiated, could the minister tell the house what was the price under the former contract?

Mr. MacKINNON (Edmonton West): In our request to the British Ministry of Food to be allowed to announce the price under the new contract, we also asked that we be allowed to announce prices under preceding contracts.

POSSIBLE EFFECT OF OUTWARD MOVEMENT ON QUOTAS ACCEPTED FROM FARMERS

On the orders of the day:

Mr. J. H. BLACKMORE (Lethbridge): May I ask the minister whether or not, if the present movement of Canadian wheat across the water continues at the rate at which it has proceeded during the past few months, that will make any difference in the quotas of wheat that will be accepted from the farmers this year?

Mr. MacKINNON (Edmonton West): That will depend entirely upon crop conditions as they become apparent a little later. It is impossible to estimate the crop exactly, or to forecast what the quotas may be, until we see the nature of the crop and the distribution of growth throughout western Canada.

INCOME AND CORPORATION TAX

INQUIRY AS TO PROCEDURE FOR APPROVAL OF CONVENTION AND PROTOCOL WITH UNITED STATES

On the orders of the day:

Hon. R. B. HANSON (Leader of the Opposition): I wish to direct a question to the Minister of National Revenue arising out of a notice of motion which appears in the *Votes and Proceedings* of to-day, in which he proposes to move that parliament approve the convention and protocol entered into by Canada with the United States concerning

rates of income tax upon non-resident individuals and corporations, and related matters.

First, have the convention and protocol been approved by the congress of the United States? Second, have the convention and protocol been printed and distributed to hon. members so that they may have the benefit of studying them in advance of any discussion that may arise on the resolution? I recall that just one copy was laid on the table; I understand it was not printed, I think it should be printed and distributed. It is not long, and the cost would not be great.

Hon. C. W. G. GIBSON (Minister of National Revenue): I understand the agreement is coming up before the senate of the United States, probably to-day. It was expected to come up yesterday, but it was not reached. The agreement has been printed in both English and French, and it will be available to hon. members.

Mr. HANSON (York-Sunbury): It should be sent to hon. members.

PRIVATE BILLS

PROCEDURE IN DIVORCE LEGISLATION

On the order for second reading of senate bills:

Mr. SPEAKER: By arrangement it was agreed that private bills should be taken first to-day. A large number of divorce bills appear on pages 16, 17, 18, 19 and 20 of the order paper. Two of the bills on the list are not divorce bills. If it is the pleasure of the house I will call all the divorce bills together.

Mr. M. J. COLDWELL (Rosetown-Biggar): I am going to repeat the protest we have made each year when this procedure has been followed. If this were not a time of war we would insist that these bills be read and adopted separately, not because we are opposed to divorce but because we are opposed to this method of dealing with divorce cases. The thing is both a tragedy and a farce. Here we have a long list of bills to be considered and given second reading together, and I suppose very few members of the house know anything whatever about them. It is true that a small committee of this house gives these bills a cursory examination after a senate committee has looked into them. It is a blot upon the entire institution of parliament and the alleged progressiveness of a civilized country such as this that we should deal in this way with the dissolution of marriage. It is a grave responsibility for members of this house to assume. We undertake it lightly, and it becomes simply a formality. I want to protest against it as strongly as I can, and to reassert our belief that this is a matter which ought to be decided by the courts after proper inquiry into the grounds submitted for the dissolution of the marriage. If the present laws are inadequate, with regard to grounds and other matters, then the laws should be amended in order to modernize our whole procedure in this very grave matter.

I just want to add that if I am here when peace returns, I shall feel it my duty to see to it that each of these bills is read separately and every item of the bills discussed on the floor of the house. The sooner we get some agreement with the provinces concerned with regard to the granting of divorces, the better it will be for the good name of this parliament and of this country.

Hon. R. B. HANSON (Leader of the Opposition): Mr. Speaker, there is a good deal to commend in certain portions of the remarks of the hon. member for Rosetown-Biggar (Mr. Coldwell). To lump these bills together and pass them en bloc is, of course, just a vacation of the functions of parliament. At the same time we are endeavouring to conserve time, and perhaps no great harm is being done.

The whole thing comes back to the underlying procedure. These bills should not be here at all. Parliament has gone part way; we have arranged to set up divorce courts in certain jurisdictions in this country where there were no divorce courts in days gone by. In other jurisdictions there were divorce courts; we never had divorce bills from my own province, for instance. But parliament should go the whole way. I do not see how anyone could object to the establishment of divorce courts in certain jurisdictions in this country, instead of continuing the present system, under which these bills go through as a matter of course and, in my view, in many instances without being properly considered. Certainly no attention is given to them in this house, and I doubt very much if attention is given to them in the private bills committee. I have not been a member of that committee for many years, but if any attention is given to them at all I think it must be just a matter of form. Occasionally a fight develops in connection with some particular case, where interested parties come, meet the members and put forth their points of view. Under such circumstances a fight will sometimes develop.

But this principle, this whole system, is wrong. The time of parliament should not be

taken up with the consideration of bills of this kind. We delegate many matters to the courts. We delegate questions of contested elections to the courts. We have gone part way in respect to jurisdiction concerning divorce. Parliament should go the whole way, and the government should step in and give a lead in that policy.

Hon. H. A. BRUCE (Parkdale): Mr. Speaker, I wish to join my leader in expressing my strong disapproval of disposing of these bills in this way, and of dealing at all in the House of Commons with divorce cases, either singly or in bulk. I understand there are divorce courts in most of the provinces—in fact, in all of them except two. Surely divorce courts might now be set up in those provinces, and thus remove a blot upon the functions of this parliament.

To-day we have this situation: A number of public bills have been passed over for several sessions of parliament. There stands on the order paper in my name, a bill which was introduced in 1940. It has appeared on the order paper at each session, and has been laid aside. Yet that bill is one of great public importance, because it has to do with the health of the people of this country. The domestic difficulties of individuals which result in divorces are not matters of any concern to the rest of the people of Canada. It is their own business. Let them go to the usual places, namely the courts of law, and there settle their differences. I must object most strenuously to the setting aside of bills of great importance to the people of Canada while we rush through the passage of a large number of divorce bills.

Mr. DANIEL McIVOR (Fort William): Mr. Speaker, it is our own fault if we are looking into these cases. In the committee we have a pile of divorce bills a foot high, and when you have read one you do not want to read any more. But we should not open the door wider for those who wish to get out of marriage wedlock, unless we narrow the door through which they come. If a young couple have a cigarette lighter, a little car and a rented suite, I suppose the leader of the opposition would say they have a perfect right to get married.

I would like to see the upper house take the whole marriage question into consideration. It should discuss how, when and under what conditions young folks may be married, so as to build up a stable and Christian home. They should have something to build on. But if we open the door and let them out easy, then we let them in easy as well. The whole matter should be discussed and legislation introduced. Not only should the divorce question be thought out and laws enacted, but there should be reconsideration of the marriage law as well. Get married in a hurry, love for a little while and away they go. That is not the way to build up a Christian home in this Canada of ours, because the Christian home is the bulwark of Canadian citizenship and of civilization generally.

Mr. E. G. HANSELL (Macleod): Mr. Speaker, on several occasions hon. members in this corner of the house have voiced sentiments which seem to be in perfect harmony with expressions of opinion this afternoon by hon. members who have spoken. I was somewhat alarmed when it was announced by Mr. Speaker that by special arrangement these bills were to be placed before us this afternoon, and that they are to go through all together. I was not aware of that arrangement having been made, but perhaps that is my fault. I suggest, however, that we should have some little notice when such action is to be taken, because in the minds of some there may be the necessity of discussing one or more of these bills.

In my short experience in attending six regular sessions of parliament I have not yet heard a discussion of one of these divorce bills, taken by itself. I suppose the reason is that we have reached a point in parliament where divorce bills are just ground out from the mill. A certain procedure, which has become more or less stereotyped, has been followed. One reads the evidence of one case, and he has the facts of almost all of them, because they are all about the same.

Nevertheless, having read the evidence in some of these cases, I am a little disturbed at the almost exactly similar way with which each is dealt. It is disturbing to me, because I cannot help thinking that people are commencing to know the way to get a divorce, if they want one. I protest against that.

I do not know if I should say anything respecting the difference between the senate divorce committee and courts of law. I do not know personally the gentlemen comprising that committee. Perhaps some of them are lawyers, but I do feel that a court judge, with his knowledge of court procedure and his examination of evidence, is more competent and more fully qualified to deal with divorce.

I agree with other hon. members in the view that we have reached the point in our history where, in my opinion, the province of Quebec should take the lead in the matter of referring its divorce bills to a proper court of law. What is to be the procedure with respect to these fifty-one divorce bills? Are they to go through now, all together?

Mr. MACKENZIE (Vancouver Centre): No.

Mr. HANSELL: Do I understand we are to go into committee, and that each one will be placed before the committee?

Mr. SPEAKER: They will be referred to the committee on private bills. Is it the pleasure of the house to adopt the motion?

Mr. LaCROIX (Quebec-Montmorency): On division.

Mr. J. SASSEVILLE ROY (Gaspé) (Translation): Mr. Speaker, I cannot let this entire series of divorce bills be carried through without voicing my opposition to so reprehensible a practice. Like the hon. member for Parkdale (Mr. Bruce), I believe that parliament is not qualified to pass judgment in such matters of private interest. They should be referred to the courts of those provinces who wish to legislate on the dissolution of marriage. At any event, as Catholics, we are absolutely opposed to divorce because it is contrary to the fundamental principle of Christian ethics. The fact that parliament is called upon to decide in these divorce cases places us in a very false position, as everyone understands. For us, therefore, the principle of divorce is reprehensible, and that under which the House of Commons is called upon to pass a whole series of divorce bills without knowing any of the reasons brought forth to substantiate these petitions, is an even more reprehensible practice and one to which I must voice my opposition.

Mr. LIGUORI LACOMBE (Laval-Two Mountains) (Translation): Mr. Speaker, I fully share the views expressed by the hon. member for Gaspé (Mr. Roy), and I myself cannot refrain from protesting vigorously against the wholesale carrying of these divorce bills. Divorce is reprehensible in its very essence. On behalf of my electors and in the name of the great majority of the citizens of my province, I wish to protest once more against the carrying of these bills.

Mr. ALPHONSE FOURNIER (Hull) (Translation): Mr. Speaker, I listened attentively to the remarks just made on this divorce question by the two French-speaking members who preceded me. Briefly, here is the procedure followed in the matter: A petition is addressed to the senate with a view to obtaining a bill of divorce. Witnesses are called before the senate divorce committee. The two parties can be represented by counsel and have their witnesses testify. The senators decide whether or not there are sufficient grounds or evidence of adultery, and they grant or refuse the divorce. These bills then come before the House of Commons, where they are read a first and second time. They are then referred to the private bills committee for consideration, one by one. Returning once again to the house, they are read and considered in committee of the whole, section by section. There is no limit set to their discussion. Then, after a third reading, these bills become law.

In the province of Quebec, almost everyone is opposed to divorce. All Catholics oppose it without exception. The procedure followed in Quebec is one that makes it extremely difficult for the citizens of that province to obtain a divorce; indeed, our legislators believed that the biggest obstacle to divorce they could find was to require the passing of a special act by the dominion parliament. If my hon. friend from Gaspé (Mr. Roy) will only consult the religious authorities in his riding, he will be informed that the clergy of the province of Quebec is opposed to the establishing of divorce courts there. At least that is the opinion of those to whom I have broached the matter.

A divorce case is dealt with by a court like any other case. Divorces are sometimes granted in other provinces in the brief space of fifteen minutes. If the case is ex parte, the judge only hears one side of the story, sometimes only one witness, before granting the divorce at the same sitting. In the province of Quebec, we believe that we can never make the securing of divorces difficult enough, because we do not recognize the principle on which divorce is based, and rightly so to our way of thinking. I should be very astonished to learn that members from other provinces intended to impose in the province of Quebec, which desires only to maintain the status quo, a system of divorce courts such as they have in their own.

I did not intend to speak on this matter to-day, otherwise I might have brought with me quotations to establish that, in the past, the attitude I have taken has always been that of Catholic representatives of the province of Quebec. And I hold the conviction that we must, as Catholics, insist on the maintenance of the present procedure for obtaining a divorce. We are being asked to allow the second reading of these bills as a whole, but it is not on second reading that their consideration in detail may be undertaken. We are discussing the principle of these bills, but it remains for the private bills committee and the committee of the whole to discuss each case on its merits. I am irrevocably opposed

to divorce and as long as I retain a seat in this house, I shall do my best to make the securing of them as difficult as possible.

SECOND READINGS

Bill No. 20, for the relief of Eleanor Adele Rea Barrett.—Mr. Bercovitch.

Bill No. 21, for the relief of Eleanor Edith McKechnie Barlow.—Mr. Whitman.

Bill No. 22, for the relief of Dorothy Agnes Henrietta Russell Cantlie.—Mr. Whitman.

Bill No. 23, for the relief of Irene Coadic Murphy.—Mr. Hill.

Bill No. 24, for the relief of Lester Lewis Catchpaw.—Mr. Davidson.

Bill No. 25, for the relief of Annie Ruth Fisher Allen.—Mr. Hill.

Bill No. 26, for the relief of Alice Adelia LaFleur Johnston.—Mr. Bercovitch.

Bill No. 27, for the relief of George Webb.—Mr. Boucher.

Bill No. 28, for the relief of Edith Morgan Black.—Mr. McIlraith.

Bill No. 29, for the relief of Betty Leah Bregman Beloff.—Mr. Whitman.

Bill No. 30, for the relief of Malca Levitt, otherwise known as Atty Malcy Levitt.—Mr. Bercovitch.

Bill No. 31, for the relief of Jack Simon.—Mr. Bercovitch.

Bill No. 32, for the relief of Marie Louise McCarthy Smyth.—Mr. Boucher.

Bill No. 33, for the relief of Marie Glenna Grace Thomas Reynolds.—Mr. Hill.

Bill No. 34, for the relief of Isabel Jessica Black Jolley.—Mr. Abbott.

Bill No. 35, for the relief of Margaretha Elisabeth Buck Peereboom.—Mr. Bercovitch.

Bill No. 36, for the relief of Ethel May Marshall James.—Mr. Bercovitch.

Bill No. 37, for the relief of Anastasia Tkaczuk Wojtkowycz.—Mr. McIlraith.

Bill No. 38, for the relief of Phyllis Wilda Valentine Park Evans.—Mr. Abbott.

Bill No. 39, for the relief of Louise Mehliss Jackson.—Mr. Bercovitch.

Bill No. 40, for the relief of Bertha Beatrix Berlind Ripstein.—Mr. Boucher.

Bill No. 41, for the relief of Lola McIntosh.—Mr. Macdonald (Brantford City.)

Bill No. 46, for the relief of Stella Kathleen Marguerite Winnall Barwick.—Mr. Hazen.

Bill No. 47, for the relief of Joyce Elizabeth Blackburn Gordon.—Mr. Hanson (Skeena).

Bill No. 48, for the relief of Kate Elizabeth Laidlaw McNiven.—Mr. Abbott.

Bill No. 49, for the relief of Margaret Livingstone Turnbull Woodard.—Mr. Boucher.

Bill No. 50, for the relief of Dorothy Sunsheine Steirman Cooke.—Mr. Bercovitch.

[Mr. A. Fournier.]

Bill No. 51, for the relief of Doris Golt Rosner.—Mr. Bercovitch.

Bill No. 52, for the relief of Anna Pohopoluck Yacobchak.—Mr. Hazen.

Bill No. 53, for the relief of Myer Levine.—Mr. Hazen.

Bill No. 54, for the relief of George Sutherland Cameron, junior.—Mr. Bercovitch.

Bill No. 55, for the relief of Fred Catlow.—Mr. Hill.

Bill No. 57, for the relief of Mary Celina Broadhurst LaRose.—Mr. Macdonald (Brantford City).

Bill No. 58, for the relief of Elsie Epstein Cohen.—Mr. Casselman (Grenville-Dundas).

Bill No. 59, for the relief of Gertrude Pelletier Patenaude.—Mr. Boucher.

Bill No. 60, for the relief of Marieatt Venditello Diano.—Mr. Gray.

Bill No. 61, for the relief of Edna Annie Heazle Constable.—Mr. Boucher.

Bill No. 62, for the relief of Dorothy Reed Cushing.—Mr. Boucher.

Bill No. 63, for the relief of Sarto Desnoyers.—Mr. Bercovitch.

Bill No. 70, for the relief of William Milroy Davidson.—Mr. Bercovitch.

Bill No. 71, for the relief of Audrey Meredith Mann Harrison.—Mr. Bercovitch.

Bill No. 72, for the relief of François Henri Drack.—Mr. Bercovitch.

Bill No. 73, for the relief of Gladys Irene Dale Weston.—Mr. Hazen.

Bill No. 74, for the relief of Ruth Ufland Fishman.—Mr. McIlraith.

Bill No. 75, for the relief of Norma Brown Stevenson.—Mr. Claxton.

Bill No. 76, for the relief of Mary Cummings Bullock.—Mr. Whitman.

Bill No. 77, for the relief of Elizabeth Gertrude De Serre Gould.—Mr. Bercovitch.

Bill No. 78, for the relief of John Clifford Stanley Darbyson.—Mr. Bercovitch.

Bill No. 79, for the relief of Celia Reynolds Schellenberg.—Mr. McIlraith.

FIDELITY LIFE ASSURANCE COMPANY

Mr. D. A. McNIVEN (Regina City) moved the second reading of Bill No. 69, to change the name of the Saskatchewan Life Insurance Company to Fidelity Life Assurance Company.

Hon. R. B. HANSON (Leader of the Opposition): I think we ought to have some statement from the sponsor as to why this company is discarding its name. Is there anything significant in the change? I have no objection to their changing their name, since "a rose by any other name would smell as sweet". Is there any other "Fidelity" insurance company? There is a fire insurance

company known as the Fidelity-Phoenix, but I do not suppose there would be any danger of confusion on that account. What is the real reason for the change?

Mr. CRUICKSHANK: To keep track of the wheat board.

Mr. HANSON (York-Sunbury): Is this a pool organization?

Mr. McNIVEN: The Saskatchewan Life Insurance company was incorporated by this parliament some fifteen or eighteen years ago and has been carrying on a life insurance business since that time, largely in Saskatchewan. They have now branched out and are going into some of the other provinces and may subsequently go into other countries. Therefore the management of the company felt that it would be wise to have a name of wider application than the name of one of the provinces. In making this change the officers and directors of the company have no intention or desire—nor would they if they could—to reflect in any degree upon the fair name of the province of Saskatchewan. In fact the management of the company has so conducted its business, and will continue to conduct its business in the future, in such a way as to be a credit to Saskatchewan.

The leader of the opposition (Mr. Hanson) has made reference to a possible conflict between the name chosen and the names of other companies. I am given to understand that prior to selecting this name the management submitted five names to the superintendent of insurance, who selected from the five the name "Fidelity" as being best applicable to the purposes and objects and scope of business contemplated by this company. So far as I know there is no company carrying on a life insurance business that uses the name "Fidelity". I believe there was a company incorporated some twenty odd years ago by this parliament for the purposes of carrying on the business of fire insurance, but up to the present time it has not carried on business. Then of course there is a company incorporated as the Fidelity and Casualty Company of New York. But with a full knowledge of all these matters and of all the possibilities that have been indicated by the leader of the opposition, the superintendent of insurance approved this name, and gave evidence to that effect before one of the committees of the other house, where the matter was fully debated.

Motion agreed to and bill read the second time.

CANADIAN DENTAL ASSOCIATION

Mr. G. J. McILRAITH (Ottawa West) moved the second reading of Bill No. 42, to incorporate the Canadian Dental Association.

Some hon. MEMBERS: Explain.

Mr. McILRAITH: The Canadian Dental Association has been in existence as an unincorporated association since 1902. At the present time it has a membership of about 4,000. The dental profession is incorporated in each of the provinces, and each of the provincial incorporated associations has knowledge of the bill now before the house. The objects of the association are set out in section 2 of the bill. They are as follows:

(a) To cultivate and promote the art and science of dentistry and all its collateral branches, and to maintain the honour and interests of the dental profession;

(b) To conduct, direct, encourage, support or provide for exhaustive dental and oral research;

(c) To elevate and sustain the professional character and education of dentists;

(d) To promote mutual improvement, social intercourse and goodwill among members of the profession;

(e) To enlighten and direct public opinion in relation to oral hygiene, dental prophylaxis, oral health and advanced scientific dental service;

(f) To disseminate knowledge of dentistry and dental discoveries;

(g) To have cognizance of and safeguard the common interests of the members of the dental profession;

(h) To publish dental journals, reports and treatises;

(i) To do all further or other lawful acts and things as are incidental or conducive to the attainment of the above objects.

Actual licensing and control of qualifications for the practice of the profession are, of course, left with the provincial associations. The bill is modeled after the act incorporating the Canadian Medical Association, which is chapter 62 of the statutes 8-9 Edward VII. The bill before us follows the scheme of that act very closely In case any members are interested in checking the matter, I might add that the Canadian Bar Association Act, chapter 79, 11-12 George V, follows substantially the same scheme.

Motion agreed to, and bill read the second time.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Thursday, May 28, consideration in committee of a resolution to provide sums not exceeding $2,000,000,000 for the year ending March 31, 1943, for granting

to his majesty aid for national defence and security—Mr. Ilsley—Mr. Fournier (Hull) in the chair.

Mr. CLAXTON: Mr. Chairman, this committee has spent some time in a discussion of man-power and allied questions. I propose to raise a question of the greatest possible importance in the war effort. I refer to another branch of the minister's department, the bureau of information, and the work it carries on.

It is perfectly obvious that our enemies have taught us a great deal about the power of propaganda and the power of information. They have used it as one of the weapons of war, and although we have a better cause and better institutions we have been slow to make the utmost use of this weapon. It is clear that men buy bonds, make munitions, enlist, fight bravely, bear misfortune, have faith in victory, and give the last ounce that is in them because of their ideas and feelings, but it is particularly true of a country like Canada that it requires an effort of the imagination for the people to understand that this is our war, and an effort of the imagination and knowledge and understanding to appreciate that the best place to defend Canada may be ten thousand miles from our shores, and that the defence of Canada is not the same thing as defence in Canada.

This subject can be considered from three points of view. First, there is the operation of enemy propaganda and counter-propaganda on the enemy and to encourage the people in the occupied countries. Canada can only contribute to the counter-propaganda against the enemy in conjunction with the others of the united nations. Second, there is the use of information to inspire our own people to greater efforts, and I think this committee and this house might quite properly spend some time considering how that can best be done. I propose to limit my present remarks to a third aspect of propaganda, and that is the aspect of our relations with the United States, with our friendly allies, and to discuss how these relations can be improved.

This question has been raised in the house once or twice before, but so far as I am aware it has never been discussed at length. I bring it up now because I have a large number of American friends whom I have seen very frequently since the outbreak of war in the United States and Canada, and I hear them say, with others who have had a similar experience, that we should do more to make our story known in the United States. I think I express the view of every member of this house and of the great majority of the people of Canada who know anything about it when I say that we should be doing more to make our story known in the United States and to cultivate the best possible relations with her, in the belief that our relations are founded on understanding, and that understanding is founded on knowledge. Persons in the United States say to me when this matter comes up: "Why on earth do you not do more to make the magnificent record of Canada known over here? Why aren't you doing something about it?"

We started the war with every possible advantage. Canada and the United States were the most friendly nations on the face of the earth. The relations between Canada and the United States were closer than those of any other two nations, they were more cordial than those of any other nations. We did not regard the Americans as foreigners, and they did not regard us as foreigners. The relations between Canada and the United States were, as Bruce Hutchison has said, founded on "nature, history, geography, necessity and men's hearts".

It is not too much to say that the whole structure of British-American and allied cooperation was begun in the declarations of President Roosevelt and Mr. King at Woodbridge and Kingston in 1938, continued through the Ogdensburg declaration of 1940 and the Hyde Park agreement of 1941, and it is no detraction from the magnificent work of President Roosevelt and Prime Minister King to say that the basis for those agreements and for that whole structure of cooperation was the friendly relations of individuals in the United States and in Canada.

This relationship between the United States and Canada has enabled the two countries to cooperate more closely than any two nations have ever done before. We know that in the President of the United States we have a great friend; we know that with the members of his administration Canadians have the closest possible relationship and cooperation. But with President Roosevelt we want to have as friends also the 130,000,000 people who will elect President Roosevelt's successor.

This question is important; it is particularly important now, when we are partners in the greatest adventure the two nations have ever undertaken, and it will continue to be important because the two nations must go down the years together. The future of Canada is bound up in the future of the United States, since we both occupy this north American continent together. Never before has it been more necessary, never before has it been more important, that Canada and Canada's position, work and achievements should be properly

understood in the United States. Yet at the present time the ordinary contacts of United States and Canadian citizens are being curtailed by the necessities of war. Last year 14,000,000 United States citizens visited Canada. In ordinary years many hundreds of thousands of Canadians visit the United States. But these exchanges of visits, which produced closer personal relations than have existed between two peoples, are being curtailed because of exchange restrictions, passport and visa requirements, exit permits, and now travel restrictions with regard to gas and rubber. I suggest that we need to watch the undefended boundary line to make sure it does not become a frontier. We need to set a guard not on the border but on our actions to see that measures which may be considered necessary for some immediate purpose do not do far more harm than good in the long run to the friendly relations of the two countries.

Another reason why this matter is pressing now is that the United States itself is, naturally, becoming concentrated on its own war effort, and it will become interested in our work and achievements only in so far as they are news and in so far as that news is promptly presented to the United States.

A third reason is that we know that the enemy is seeking to divide the united nations everywhere he can. I could show you, if I took the time, clippings from United States newspapers indicating a close relationship, much closer than could be accounted for by mere coincidence, between enemy shortwave broadcasts, and the line taken in them, and the line taken in some papers published on this continent. If we do not do enough we shall leave a vacuum into which lies and rumours flow. Where our story is not told there is fertile soil for misunderstanding and rumours. We have seen instances of this. Last year, you will remember when there was a debate in the United States Congress on lease-lend, it was suggested that the Canadian people got cash on the barrel-head for everything they gave to Britain. That story was started and it has been difficult to catch up with. When our friends in the United States learn the extent of Canada's contribution of men—150,000—overseas, and when they think of the United States equivalent, they are amazed. When they hear the full extent of what we have done, I have found that there is a feeling almost of resentment at their not having been told the full story.

I do not suggest that our government should undertake anything in the nature of propaganda or high-powered publicity service. What I do suggest is that we should provide machinery for supplying news, because facts burn up rumours and prejudice as the sun burns up fog. I suggest that there is need of that shown even to-day. In the New York *Herald-Tribune,* a newspaper friendly to Canada, in a recent number following the plebiscite, two United States senators were quoted. One said he was disappointed that "so many people in Canada do not realize the seriousness of this war." Another said he was "glad to see that Canadians had voted to get into the war as we are." I do not suggest that these honourable gentlemen are representative of their people in their lack of knowledge, but it indicates a serious situation when two senators have such a small knowledge of what we are doing as to make statements of this kind. I may tell the committee that in this article those statements are used as a peg on which to hang an exceedingly complimentary and favourable story of what we are doing in the war.

This question has received a good deal more attention in the press of Canada than it has in this house. I suggest that if anyone should know what the true position is, and what the importance of the question is, it is the press of Canada, because they see the United States papers; they clip articles from them; they have contact with the United States press; they know what can be done, and they have a very strong feeling as to what should be done.

I hold in my hand a large number of clippings from Canadian papers expressing their view of this question. The Ottawa *Journal* says:

> There can be little doubt that Canada has suffered considerably in the United States through lack of any coordinated effort on our part to let the American people know what we are doing.

The Toronto *Globe and Mail* says:

> The lack of knowledge in the United States concerning Canada's effort has been exploited by the isolationists with substantial effectiveness.

The Saint John *Telegraph-Journal:*

> We have still a long way to go before our system of information, especially to our American cousins, is satisfactory.

The *Family Herald and Weekly Star:*

> Canada continues to receive a bad press in the United States, and it is high time something was done to tell the American people our story.

In an address delivered before the Canadian club of Montreal, Sir Willmott H. Lewis, Washington correspondent for the London *Times,* said:

> There is not enough Canadian publicity in the United States or in the other American nations. . . .

The Montreal *Standard* says:

Most people in the United States at the present time have no conception of the part Canada is playing in this war.

And again:

Canada is falling dangerously in the esteem of the American people because of the poor impression they have of our war accomplishments.

From the Montreal *Star:*

We have on several occasions advocated an organized campaign to make the details of Canada's war effort more widely known throughout the United States than they are.

From the San Francisco *Chronicle:*

The result—

That is, of our failure to give information.

—is that a great and vital story, as vital to us and our way of life as to Canada's goes untold.

It continues:

That is why we wish our Canadian friends were not so gun shy about propaganda. There should be official, recognized agencies of information, telling us at least as much about what the people next door are doing in their war, and our war, as we know from overseas.

From the Minneapolis *Star-Journal:*

Doubtless Canada has been reluctant to carry on in the United States any thorough and systematic effort to make Americans better acquainted with her, lest she be suspected of propaganda for some ulterior purpose.

But it would be a service to Americans if she would do so. It would help to end misconceptions, and to make honest differences of opinion debatable as between friends, not strangers.

The United States and Canada are going to be more and more important to each other, whatever happens in the world. The better they know each other, the more harmoniously they can work together for the good of both.

Then from the *Daily Star,* Windsor, Ontario:

The American people are actually anxious to hear about Canada's war effort. This is a fact that we have been stressing for some time. It has taken certain persons in authority much too long to realize its truth.

The result has been that, because of timidity about spreading propaganda, Canada has suffered a volume of unjustified criticism.

From the Vancouver *Sun:*

Canada has been so diffident or incompetent about giving Americans the facts that the Minneapolis *Star-Journal* finds its readers pitifully ignorant about the whole Canadian situation. Some of them, says the *Star-Journal,* think that Canada is a dependency of Britain, paying taxes to the British treasury.

The Winnipeg *Free Press,* commenting on this, says:

The need for an alert, full-time Canadian information bureau in the United States has been apparent for a long time.

And they refer to these United States editorials.

What I suggest is that we should tell our story. No one else is going to do it for us. If I may make a constructive proposal it would be that we should have an office in New York. Hon. members may ask, why New York? New York is the centre of publicity, of writers, publications, the publishing business, columnists and radio. It is the place where the people who give the news get the news. This office should be staffed by a small number of people, exceedingly good people, including, in particular, one who would be by experience and qualification well able to meet with Americans and deal with United States publicity agencies. We all know the importance of personal contacts; that there is no field in which personal contacts are more important than this field of public relations. This individual should be a person who knows how public opinion is formed; he should be a Canadian who is in some way representative of the young people of Canada who are fighting overseas.

Mr. REID: What would be the hon. member's view as to choosing from the press of Canada a body of men to handle our news, men who have had life experience in publicity?

Mr. CLAXTON: We have in Canada an able group of pressmen, and I would think that if one or more of them could be attached to this work in the United States it would be very useful. The person whom I have in mind to head the office in New York would not necessarily be a pressman, although he might be one who had had journalistic experience. He would have to be one who is alert to the needs of the modern press. He would have to have the kind of flair that good journalists have for news and how to get it across. What is needed is not an institution, it is a person. He should be the kind of person to whom Americans who make the news will naturally look for assistance and guidance. He should not try to influence public opinion in the United States directly, that would be fatal; he should try to be useful to the people who make public opinion there. He should see that news about Canada gets to the people who can give it to the American people. It would probably be a mistake to have this office attached to the Department of External Affairs, because our diplomatic representatives are used to a slower and more formal manner of conducting business. They have not the instantaneous quickness on the trigger that is necessary to deal with news on the north American continent. By the time anything gets through the diplomatic channels and the Department of External Affairs to the bureau of public information here, the value of the story would be lost; the front pages would have

moved on to something else. So I suggest that this individual or this office should be attached to the bureau of public information.

Another suggestion is that the minister in Ottawa could work in cooperation with this individual to encourage Canadians who have normal contacts with the United States—and there is a great number of them—to think, when they are making those contacts, of Canada's story and the possibilities of getting it over to the United States. In fact, every hon. member must be a member of some association, medical association, bar association, trades union, having close associations and affiliations with United States associations of the same kind. All of us can use our natural contacts through these associations to bring home to our United States friends nothing but the facts.

Then, referring to the suggestion of the hon. member for New Westminster, it might also be possible to use Canadian journalists who have friendly associations with journalists in the United States. They might visit them from time to time; a man placed in the middle west might visit his opposite number in the United States middle west and maintain friendly associations with him so that when Canadian news comes to him through the ordinary news channels he would interpret it sympathetically and know the kind of slant to put on it.

I also suggest that this development requires a new attitude in Canada, an attitude whereby we recognize the real importance of this subject and do things in a way to make news. The one really first-class news development which has taken place in Canada, and which has had a continuously good press in the United States, is the work of the wartime prices and trade board. This shows what can be done through the use of good publicity and good publicity men. The fact that we have a price ceiling has from the beginning to date been a matter of news and interest and admiration in the United States.

We need better agencies for getting the news from the places where it is made, that is the fighting fronts, or places in Canada where there are news stories, into the hands of United States agencies. As I said to the house some nights ago, there are magnificent stories of Canadian heroism which have not even been told in Canada yet, and which would be just as useful in cheering our United States friends as in cheering our own hearts. We have reached a stage in the war where deeds count much more than words; where propaganda, stories of action, heroism and achievement, count much more than any speech, and our publicity and information service must be geared to the task of getting stories from the places where they are made to the places where they are going to do some good. What I suggest is not a loud-speaker in the United States. What I suggest is a pick-up, if I may use a radio term, at the front where the news is made, and a connecting service through to the loud-speaker, which will be the ordinary United States agency which will use the news, if it is news, in the way that agency sees fit.

This, if I may say so, requires a new attitude on the part of our censors. I believe that ever since the beginning of the war stories that might have thrilled our hearts have been left cooling on the desks of censors, and I suggest that the censorship rules should be overhauled and coordinated, to see what can be let through. If it can be let through, send it through quickly, so that it reaches us while the story is still hot. There are stories to be found and to be told of the work of Canadian soldiers, sailors, airmen, the merchant marine and war industries. They are there to be found by people who have a nose for news. They are there to be written by men who can write in an attractive way, and sent back through improved agencies to Canada and thence to our friends in the United States. It is plain enough from stories like those of Larry Robillard and others that brave men are writing tales of heroism with their lives. The records are there; all that is needed is that the records be given a chance to speak for themselves.

I believe the minister himself, if one may gather from rumours abroad some time ago in the public press, is sympathetically inclined toward this idea. I have made these suggestions in the hope of fortifying his inclination, and I want to express my pleasure at the appointment of Mr. Charles Vining to go to the United States to look into this whole question. He is eminently fitted to do so. He has had journalistic experience; he knows the United States, where he has close connections, and I am sure he can make a report on this subject which will be very useful to the government. Whatever that report may be, I cannot help but express my strong conviction that we must do more to tell our story, or see that our story is told, in the United States. We have friends there who want to help us. We have 130,000,000 friends who want to help us. They want to be given the facts; they ask for them. They believe in us; they want to be given the facts to justify their belief. In the long run, relations between countries depend upon relations between individuals, and our relations with the United States will depend upon the relations between individual Americans and individual Cana-

dians. Out of the last war and our achievements in it Canada achieved a new status and a new standing. I want to see that the exploits of our men in this war stand to Canada's credit also. As Churchill said in 1930, speaking of Canada:

> No state, no country, no band of men can more truly be described as the linch-pin of peace and world progress.

I believe that statement may be made true, but it will not be true unless Canada earns and keeps the respect of other countries; and other countries, particularly our United States friends, will have respect for us if they know that we are pulling our full weight in this joint effort.

There is one other aspect of the matter; that is the effect on our own morale. If we continuously read in United States newspapers and in publications such as *Life*, of the achievements of United States airmen, and we do not see anywhere stories of the achievements of Canadian airmen, then we shall begin to feel that there is something wrong with us. There is nothing wrong with us, but if that continues to happen there will be something wrong with our publicity service. Morale is the most valuable thing in the world, and the least expensive. What more is to be done lies in the hands of the minister and the government, but I have no doubt that the wish of members of this house and of the people of Canada is that something more should be done.

Mr. HANSON (York-Sunbury): I have no intention of following the remarks of the hon. member who has just spoken, because in my view the debate on this resolution should be concluded. But I am wondering why he did not give any expression to the feeling of bewilderment that is very evident in the minds of the people of the United States, as expressed in the public press of that country and by individuals of prominence, owing to the fact that this country, which is professing—and I believe in most ways is endeavouring—to carry out a total war effort, as a matter of fact in one particular feature does not have a total war effort. They just wonder over there, and I have seen expression given to this view on many occasions in many United States publications, how in the world this country can have a total war effort if it does not practise tctal war. There is no doubt that there is a feeling of frustration in the United States with respect to our war effort. They know that our industry is in production; they know that we have a good army overseas and a good army in training in Canada. Yet they know, from their own experience and their own example, that according to their standard Canada has fallen down in one particular feature. There is no doubt about it.

Mr. GOLDING: Do they think that of Australia?

Mr. HANSON (York-Sunbury): Never mind Australia. The United States is our neighbour. They know what we are doing and what we are not doing. In the United States press the plebiscite was greeted as an overwhelming manifestation on the part of the Canadian electors in favour of total war; and when they find that it does not mean total war there is a feeling of bewilderment, to which they have given expression. They will never truly appraise our effort in this war until that position is cleared up.

Mr. THORSON: The leader of the opposition has referred to a view that is widely held in the United States and frequently expressed by the people of that country. I wonder if it is expressed as frequently in the United States as it is expressed by certain persons in Canada. I would suggest to the leader of the opposition that he write to the authorities in Washington and ask them for the results of their draft system, in the number of men actually added to the forces since the draft system for compulsory service has been in effect. Get those figures, and then compare them with the number of men we have added to the strength of our armed forces, and my hon. friend will see the comparison.

Mr. HANSON (York-Sunbury): That is just begging the question.

Mr. THORSON: It is not begging the question at all.

Mr. JACKMAN: Give us the figures.

Mr. THORSON: I am prepared to say we are raising more men proportionately for our armed forces—

Mr. MacNICOL: By coercion.

Mr. THORSON: —by our voluntary system, than the United States is raising at present by its draft system.

Mr. HANSON (York-Sunbury): By the back-door method.

Mr. THORSON: No; by a voluntary method. I do not know why it is that so many people in this country are seeking to decry the value of the voluntary effort.

Mr. HANSON (York-Sunbury): Because of the back-door method.

Mr. THORSON: It is not at all back-door.

Mr. HANSON (York-Sunbury): Certainly it is.

An hon. MEMBER: What was the plebiscite for?

Mr. THORSON: This, however, is perhaps not the debate in which to discuss that particular question.

Mr. HANSON (York-Sunbury): The minister, however, does admit that the condition I have indicated prevails in the United States?

Mr. THORSON: Yes, and prevails from a mistaken view of the facts.

Mr. HANSON (York-Sunbury): Maybe not.

Mr. THORSON: Much of that mistake is brought about by people in Canada who are decrying everything that is of a voluntary nature—

Mr. MacNICOL: But it is not voluntary; you bludgeon them into enlisting.

Mr. THORSON: —and thereby, if I may say so, doing real harm to the effectiveness of our war effort.

I had not intended making any reference to that point. I expect this whole subject will be fully covered in the debate which will take place within the next few days; and in the course of that debate, in as cool a manner as possible, we can deal with the merits or demerits of compulsory service overseas. I think a strong case can be made for the maintenance of the present system, from the point of view of the effectiveness of the war effort of this country. After all, many of us are concerned with an objective, namely the maximum total aid this country can give in the cause of humanity. We are concerned with the effectiveness of the war effort more than with anything else. I think we shall wish to use that method which will make the greatest contribution to the effectiveness of the war effort, from the point of view of reality, and not from that of theory. I believe the debate which will take place, commencing, I hope, next week, will prove a useful forum for getting down to realities in connection with this subject, and go a long way toward dispelling the heat and frenzy that have grown up in many quarters, in some instances fomented and in other cases as opinions honestly held. We can deal with that question on its merits or demerits.

It was not I who introduced this question directly, but—

Mr. HANSON (York-Sunbury): Before the minister leaves the matter of public information, might I ask, what are the functions of Mr. Paul Reading at Washington.

Mr. THORSON: Mr. Paul Reading is attached to the office of the legation which, in turn, is under the jurisdiction of the department of the Secretary of State for External Affairs. I believe his official title is that of press attaché to the legation at Washington.

Mr. HANSON (York-Sunbury): But he is publicity man, is he not?

Mr. THORSON: No; I do not believe that would be the correct description of his status; I believe it is that of press attaché. That, however, may have an indefinite meaning.

I should like to extend my sincere compliments and cordial thanks to the hon. member for St. Lawrence-St. George for the thoughtful contribution he has made to the debate. I agree that the information which exists in the United States with regard to the extent and nature of the Canadian war effort is not satisfactory.

Mr. HANSON (York-Sunbury): And never has been.

Mr. THORSON: And has never been satisfactory. At one time, prior to the entry of our great and good neighbour into this conflict, I think the isolationist press in the United States went out of its way to minimize the extent of the Canadian war effort, because the fact that we in Canada had, of our own free will, entered into the war, was the strongest argument against their own position—because we were both north American countries.

Mr. MacNICOL: But we were a British country.

Mr. THORSON: We were both free to participate in the war, or not to participate in it. We were the first of the north American countries to see the issues that were at stake.

Mr. HANSON (York-Sunbury): Oh, well, brush that aside. Did we not enter because this was a British country, and not because we were a north American country?

Mr. THORSON: We entered this war as a principal and on our own account.

Mr. HANSON (York-Sunbury): Yes, and because we were afraid that if the British navy failed, the enemy would be camping on the banks of the St. Lawrence; of course we did.

Mr. McGREGOR: Is there any reason why we should not?

Mr. THORSON: Not at all. I was one of the strongest advocates of our participation

in the war by the side of Great Britain, and on our own account, urging that this country must give its maximum aid in the cause. In that debate I spoke as a Canadian with undivided loyalty to Canada, and I held that attitude.

May I go back to the situation in the United States. Here we were, two north American countries. We recognized the issues involved. We were both isolationist countries.

Mr. MacNICOL: We were no such thing.

Mr. HANSON (York-Sunbury): Let the minister speak for himself.

Mr. MacNICOL: The minister may be.

Mr. THORSON: The majority of the people in Canada, prior to 1939, were strongly of an isolationist view.

Mr. MacNICOL: No, no.

Mr. HANSON (York-Sunbury): No.

Mr. McGREGOR: Speak for yourself.

Mr. JOHNSTON (Bow River): Yes, speak for yourself.

Mr. THORSON: I do not think there was much doubt about that. I am perfectly free to say I was one of those who believed it might be possible for north America to hold itself aloof from the quarrels of Europe.

Mr. MacNICOL: And let the empire go to the dogs!

Mr. THORSON: That view is one that cannot now be held by any thinking person.

Mr. JOHNSTON (Bow River): It never could, not by any thinking person.

Mr. THORSON: It was a view that I had abandoned completely before I took part in the debate on Canada's participation in the war. I saw that no free nation could stand alone in this conflict, that all free nations must unite. During the course of that debate I expressed the view that it would not be long before our great neighbour to the south, in whom the traditions of liberty are deeply ingrained, would enter this conflict. I believe the isolationists thought that Canada's entry into the war was the strongest argument that could be made against their case. If isolationists in Canada could see the light, why should not others who were formerly isolationists also see the light? What the isolationist press in the United States tried to do was to belittle the effort of Canada, and in so doing they received great aid from many Canadian newspapers.

Mr. JOHNSTON (Bow River): What is an isolationist?

Mr. THORSON: I do not think I should begin a course of education for the hon. member for Bow River.

Mr. JOHNSTON (Bow River): It would be interesting to hear your interpretation.

Mr. THORSON: I doubt whether my embarking upon such a course of education for him would have any effect.

Mr. JOHNSTON (Bow River): I doubt it.

Mr. THORSON: We in Canada have been very careful indeed about our relations with the United States. We have treasured our relations with that country and have desired that they should be as cordial as possible. Our two countries are interdependent upon one another; we share similar traditions and our whole lives are based upon institutions inherited in common from Great Britain. We have been very careful not to indulge in propaganda in the United States. I was greatly impressed by one of the statements made by the hon. member for St. Lawrence-St. George (Mr. Claxton), that we in Canada should not try to influence United States opinion, that that would be fatal. With that thought in mind, we never, prior to the entry of the United States into the war of her own free will, sought to promote propaganda in the United States. Those who have attempted propaganda in the United States have not increased the cordiality of the relations between that country and the countries of those who engaged in the propaganda.

There is a difference between engaging in propaganda and giving public information as to facts. I am in agreement with much that the hon. member for St. Lawrence-St. George has said. Now that we in the northern part of north America are united with our neighbours to the south in a great north American partnership, a new situation is brought about in which it is desirable that they should know as much of our activities as we know of theirs. I was very glad indeed that the Prime Minister was able to announce definitely yesterday that Mr. Charles Vining had been requested to make a survey of the whole situation in the United States, to find out what the attitude of the people there would be in the matter of public information, and make a report on the whole situation. The matter will then be reviewed in the light of the real knowledge that will be brought back, and I am hopeful then that we shall be able to embark upon a policy of public relations and public information as between Canada and the United States that will serve the purpose of enlightening the peoples of the two countries as to the activities of the other without in any way giving offence to either of them.

I do not know that I can add very much to what I have said on this subject of our relations with the United States in the matter of public information.

Mr. HARRIS (Danforth): Madam Chairman, after waiting twenty years it is my extreme pleasure to address for the first time a gracious lady in the chair of this committee. I wish her many long years of happiness and service in this hon. chamber.

Madam Chairman, it is a rather sad day when a minister of the crown rises in his place at this time of war and attempts to make the people of this country think about isolation and the position of isolationists and how many isolationists there were in Canada a few years ago. No doubt some of them are still here.

Mr. THORSON: Not at all.

Mr. HARRIS (Danforth): That was one thing that should not have been raised in this hon. chamber at this time. We have had a sense of frustration, but now another wet blanket has been thrown over us this afternoon. It is not fair to the hon. members of this chamber, it is not fair to you, Madam Chairman, it is not fair to the hon. members who served in the last war and who now surround the Minister of National War Services. I know that many of them will feel rather badly when they pick up the press to-morrow and find that the minister has raised in this chamber at this time the question of isolationism in Canada. That is all I shall say about it.

Mr. THORSON: Nonsense.

Mr. HARRIS (Danforth): I do not want to hear another word about isolationism. I want to get on with this war. I want the minister to appreciate the realities and the realism he is talking about. Let us have more positive direction; let us have something with some merit so that we can get on with our war effort. That is the real problem before us. Why should the hon. gentleman rise in his place and make a speech to pave the way for an appointment which apparently was made a day or two ago? That is not reality or realism.

Some of the realities were faced by the minister last night, but he tried to dismiss them in the last paragraph of his speech before he moved that the committee rise, report progress and ask leave to sit again. He said that the government of this country could not do anything about the matter then under discussion, and he threw a wet blanket over the energetic efforts and enthusiasm of some 25,000 women in Canada who are trying to help the war effort. I refer to the Canadian women's voluntary services, which was under discussion last night. I am going to make a plea to the minister now, not to close the gate to the energy and efforts of these women who are giving voluntary service. Try to find some way out of the tangle you have let yourself into in following along behind this organization with a paid organization with the same name—the tangle you have got into by order in council—and, I would not say, usurping the name, but taking away the name which you had previously given to this organization in September, 1941, and by order in council using practically the same name. The name in the order in council to my mind is a misnomer. The order in council says that there shall be a body formed known as the Women's Voluntary Services Division. And the first thing you do is to engage paid help. The first thing you do is to spoil the name "voluntary" entirely by putting on the staff two persons who are paid from the treasury of Canada to do the work which this group of Canadian women have tried to do voluntarily, none of whom—and I ask the minister to mark this carefully—are being paid from funds received by the organization or from the government.

The minister says that the approach of the Canadian women's voluntary services organization is not the approach that he would like to have. Indeed, he says it is the opposite to the approach he wants to have. The minister wants his approach to this problem to come through the present social welfare organizations in Canada. Let us take a broad view of this situation and ask ourselves, who are the social welfare organizations? They are municipal, provincial and dominion bodies doing a good job, and earning their pay as such. But have the women who are at the heads of these social welfare agencies contact with the women of Canada who are giving their voluntary services in this war? Have they the kind of contact with them which will stir women's energies and arouse their patriotism in the form of war work? Some of these women in the difficult times from 1930 to 1940 found it necessary to appeal to the social welfare agencies for help. Not many of them did it, because they did not like to approach the welfare organizations, but a few women through no fault of their own found it necessary during the depression to appeal for assistance to these organizations, and they did so with a sense of humiliation hanging like a cloud around them, and with a sense of defeatism. But they were well treated by the minister's organizations which he now desires to dominate this whole picture. A

very large body of women in Canada at that time had a perfect right to appeal to the social welfare organizations for help, but they refrained from doing it. They preferred to suffer in silence and do the best they could. Another very large group of women in Canada, representing probably all the women's organizations that we read about, the council of women, the daughters of the empire, and so forth, rather refrained from going to the social welfare agencies to get leadership in the type of work they would like to do for the war effort. Of course, they will cooperate with the Red Cross and carry out any rules and regulations; but for the minister to say that the approach made by the Canadian women's voluntary services is the direct opposite to the approach he wants to have, his approach being through the welfare organizations, is to put a wet blanket on the enthusiasm and effort of the women to whom I have referred.

What do these women do? They do very much like Lady Reading's organization does in England and similar organizations in the United States and South Africa. They train for home nursing under the Red Cross, learn creche and child management, act as mother-craft minders, train themselves for home management, take courses in preparedness, learn how to deal with emergencies in war under the direction of the Red Cross, study nutrition. There have been 2,045 classes given, and 2,980 women have completed or are taking these training courses. There have been 200 meetings addressed; 5,000 women have been enrolled and contacts made with 25,000. There are organized disciplined groups of women in each community who are prepared to act in war-time emergencies.

As the hon. member for Peterborough West so well said last night, these women are keen to go on working in a voluntary way. I shall not traverse the ground already covered by the hon. member for Peterborough West and by the hon. member for Lincoln. My plea with the minister is this: Do not stiffen your back on this thing and turn down the representations that are being made by the Canadian women's voluntary services. Let them continue in existence and give some real service to Canada. It is a simple matter for the minister's organization, which comes along afterwards, to say to these women: The government will drop this word "voluntary." Let the minister call his organization by another name, just as he gave names by order in council, dated October 31, to several divisions in his department—the national registration division, the mobilization division, the public information division, the war charities division, the salvage division. Do not use the words "women's voluntary services division." Call your organization the women's services division, if you will. Nothing is so hard on anyone, particularly on our womenfolk, as to find that the work they do in their homes and organizations, the knitting they do in every spare hour and late at night, the learning how to be of service in this war cannot go on as it has been going on hitherto, and that a paid staff is to be employed to direct their activities. They do not like the idea of having paid women in these organizations which are called voluntary organizations.

I suggest to the minister that he give very serious consideration to dropping the word "voluntary" which is used in the order in council, and that he encourage the Canadian women's voluntary services to stay in existence. I also urge upon him that he retract the suggestion that the approach of this organization is the opposite to that of the department. Let the view of his department be a little more elastic. Let him encourage the women to continue in existence and carry on the useful work they are doing. By no means discourage them, because in them you have a strong unit of workers, and it will make for a good deal of difficulty if they are washed out, as it were, so far as this particular job is concerned. Mr. Vining has been appointed to do a job in Washington; a woman is the selective service head in Vancouver. Women grow up to responsible paid positions through the social service organizations, and when they come up that way, let us be frank about it, Madam Chairman, and admit that they were nurtured in the cradle of politics right along before they attained to leadership in these different services.

Consider the history of these services. The minister knows it well, although he may be reluctant to cite it for the enlightment of the committee. He will admit that those who are at the heads of these social service organizations have maintained their positions in these organizations through actions which of necessity were political, and which got them into these organizations. That very thought is going to destroy the very idea which we should encourage and foster.

Mr. THORSON: I deeply regret the controversy which has arisen over this matter, and I assure the hon. member for Danforth that I do not wish to close the gate to the activities of any organization. I hope nothing I have said indicates any such desire.

Mr. HANSON (York-Sunbury): It is what the minister has done more than what he has said.

Mr. THORSON: In that respect I differ from the hon. gentleman.

Mr. LOCKHART: Will the minister permit a question? Did not his director say, "We have to be you or you have to be us"?

Mr. THORSON: Yes, there was some such phrase used. Will the committee bear with me if I try to deal with this matter in a way which will be helpful to all concerned?

Mr. JACKMAN: It is a very important matter.

Mr. THORSON: I appreciate very much the concern which the hon. member for Danforth has shown about the work which is being done by this organization. May I deal with his first argument, that the employment of Mrs. West and Miss Held on a salary basis is contrary to the idea of voluntary service.

Mr. MacNICOL: Are there no dollar-a-year women who would do the job?

Mr. THORSON: Well, in a very careful search which I made over the whole field I was not able to find any dollar-a-year women with the background which was generally regarded as desirable for work of this kind.

Mr. COLDWELL: Few women draw big salaries from corporations, so that there could not be dollar-a-year women.

Mr. THORSON: I am making an effort to deal with a question which has caused a great deal of controversy. Mrs. West was selected to head this division of a department of the government. It is the first occasion in our history when any woman has been appointed to head a division of a department of the government of Canada. The division was set up by way of recognition of the splendid work which is being done by the women of Canada in their communities, a work in which there is no glamour and much dullness, but in which tasks are performed which are absolutely essential to the maintenance of the integrity of the community. This division was set up for the promotion of that kind of activity, so that the communities of Canada might be fully organized within themselves, where leaders of community activity exist, on a basis of community solidarity.

The salaries paid to Mrs. West and to her assistant, Miss Held, are not enormous. I should like to make reference to the organization to which the hon. member for Danforth has alluded. I have before me the application of this organization for registration under the War Charities Act.

Mr. MacNICOL: What organization?

Mr. THORSON: The organization of which we have been speaking.

Mr. MacNICOL: Well, but what is the name?

Mr. THORSON: The Canadian women's voluntary services, Ontario division, fund. It is the registration of a fund. The registration shows the personnel of the committee in charge: Mrs. Stella F. Mackenzie, Mrs. Verna R. Conant, Muriel Gladman—

Mr. MacNICOL: Is that the Mrs. Conant who is the wife of the attorney general?

Mr. THORSON: The wife of the Attorney General of Ontario. They asked for registration of this fund under the War Charities Act of 1939. On page 2 of the standard form they indicate that no branches are established yet and probably there will be no branches for the purpose of raising funds. Then they indicate the donations which have been given or which they expect to collect. The total amount of money expected to be collected by the fund is $10,000. Let me direct the attention of the committee to the principal objects upon which expenditures from the fund are to be made. The amounts expected to be expended in each case are as follow:

1. Specific services (itemize fully), $10,000.

And this follows:

Part of the funds will be donated specifically to pay expenses of a woman who will thus be enabled to give her services as organizer. The rest will be used to pay office expenses such as postage, printing, et cetera, and travelling expenses of the organizer.

Mr. HANSON (York-Sunbury): That is just out-of-pocket expenses.

Mr. JACKMAN: No salary, though.

Mr. THORSON: "To pay expenses of a woman who will thus be enabled to give her services as organizer".

Mr. HANSON (York-Sunbury): Yes: no salary, but out-of-pocket expenses?

Mr. THORSON: No, no.

Mr. HANSON (York-Sunbury): Yes.

Mr. THORSON: —"and travelling expenses".

Mr. HANSON (York-Sunbury): Out-of-pocket expenses.

Mr. HARRIS (Danforth): And it has not been acted on.

Mr. THORSON: Oh, yes; the organizer has received money from the organization.

Mr. HARRIS (Danforth): No—a private donation.

Mr. THORSON: I beg the hon. gentleman's pardon. So that there is nothing in that particular contention. Mrs. West and Miss Held are officers of the department, respectively head and assistant head of the division of women's voluntary services, engaged in the promotion of the activities which I indicated.

I should like to spend a few more minutes on this in order to clear up what I think are misunderstandings. The hon. member for Peterborough West stated that Miss Margaret Hyndman, K.C. and Mrs. Murdoch Mackenzie came to Ottawa and saw Mrs. West and Miss Held, and that this was part of their report.

Mr. MacNICOL: To whom, may I ask?

Mr. THORSON: This report, I gather, is made to the advisory council of Canadian women's voluntary services, Ontario division, at a meeting on Tuesday, May 19, of this year. Now, three statements were made in this report, according to the hon. member for Peterborough West. I believe that a good deal of the misunderstanding as to the objectives of the various parties arises out of an inaccurate statement as to what took place.

Mr. MacNICOL: Who says it is inaccurate?

Mr. THORSON: I say it is inaccurate.

Mr. MacNICOL: Miss Hyndman is a capable woman.

Mr. THORSON: Fortunately I do not have to ask my hon. friend to take my word for it, because it is in print. I should like to put the three statements that are attributed to Miss Hyndman side by side with the statements that Mrs. West actually made at the press conference to which Miss Hyndman refers, which was reported in the *Globe and Mail* of May 12. This statement is made by Miss Hyndman:

1. That the government's plan is to have women's work done in communities by social agencies.

That is not correct. What Mrs. West did say is this:

Mrs. West said that the function of her department is "to unite volunteer war work and civilian services in such a way that the whole volunteer movement marches forward in a coordinated whole on a community basis."

She further explained that the department recommends that in communities having welfare councils, volunteer bureau, or citizens' committees, close cooperation be developed and overlapping, duplication of work, prevented. She also said:

"I am happy to say that Toronto has these facilities already in existence and that the welfare council has already established a bureau on the lines recommended by the department and has made worth-while contributions toward meeting a number of community needs arising out of the war effort. My department will be anxious to assist in its further development and coordination. In a war it is difficult to draw the line between war and home-front services. Peace-time agencies have many war-time duties and give much advice to soldiers' dependents. It is important in the development of volunteer services to note that there is such a body as the welfare council and council of social agencies in existence, because such an organization has an intimate knowledge of community needs and resources and can direct volunteer efforts in the channels in which they are most needed. If it works closely with groups engaged in war work, overlapping and duplication will be prevented. It also creates a volunteer structure that will continue as a nation passes from war to peace."

May I say this of the situation in Toronto, that I spent some time there meeting with various organizations, the citizens' committee and then another organization in the afternoon which is deeply concerned with the coordination of the voluntary effort of the citizens of Toronto. I should like to pay tribute to the splendid manner in which the various organizations in Toronto have cooperated with one another in the matter of putting that city on the basis of community solidarity. If a city such as Toronto can do that, with the splendid results that have followed the activities of the organizations in Toronto, then that can be done in other large cities. So that there is a misconception in Miss Hyndman's report of what Mrs. West actually said.

With regard to the second statement attributed to Miss Hyndman and referred to by the hon. member for Peterborough West:

That no war work should be undertaken in a community until these social agencies who have their "ear to the ground as to the needs" give the word "go".

This is what Mrs. West said:

We do not want to stimulate volunteer effort beyond our ability to use it.

Then she went on to say:

There is a danger of making women feel that they are not contributing to the war effort unless they are outside their own homes doing something in a spectacular way. We want people to feel that there is an organization in every community that has its ear to the ground and is prepared to meet emergencies as they arise.

It is not only the women who are wearing uniforms or who are working in a munitions plant or in a war industry who are making contributions to the war effort of Canada. Many of the women who are working in the activities of the community, where there is no glamour, no publicity, no uniform, but only hard work and drudgery, are in my opinion performing at this time a war service of inestimable value. In performing the tasks of the community they are keeping the heart of the community sound.

Mr. MacNICOL: They have been doing it for years.

Mr. THORSON: That is what is being attempted by these central volunteer bureaux and by people in the communities who are seeking to coordinate all the existing community organizations and activities. I want to emphasize that you cannot put a com-

munity on what I have termed a basis of community solidarity unless you include in your organizations that are being brought together in a cooperative way those organizations that are concerned with social welfare and social need; for I repeat, they are the core of the community. I am not suggesting for a moment that war activity should originate with the social agencies; that was never suggested by Mrs. West; it has never been suggested by me. But I have recognized that you cannot have the community organized on the basis of community solidarity if you exclude from your list of organizations those that are concerned with social welfare and social need.

Mr. MacNICOL: Were any excluded?

Mr. THORSON: The very statements made by the hon. member for Danforth today and by this organization indicate that they have not associated themselves with the social welfare organizations in the city of Toronto.

Mr. FRASER (Peterborough West): They got the children's aid society and the welfare council.

Mr. THORSON: One of them, yes, but I do not think the officers of the organization in which my hon. friends are interested would dispute what I have said.

Mr. FRASER (Peterborough West): They are disputing it.

Mr. THORSON: The third statement that is made, referred to by the hon. member for Peterborough West and likewise attributed to Miss Hyndman is this:

> That women should not be trained for emergencies now, nor their free time utilized for war work except such "unspectacular" (as she called them) and relatively unimportant jobs as salvage and price control enforcement. Nor should they be encouraged to organize their lives to have free time which can be so utilized.

What Mrs. West actually did say, as reported in the press, is this:

> We do feel that until the job is there to be done women can best serve by looking after their community, keeping a quiet home for a harassed husband to come into at the end of a trying day, helping with the salvage project, and price ceiling, and keeping in touch with the boys in the services here and overseas. There is need in this country to make the seemingly uninteresting jobs seem important to our women. There are only a very few jobs in Canada where there is any glamour! The vast majority of women will have to serve in the war effort in an unobstrusive way.

In so serving, the women of Canada, not concerned with glamour, not concerned with publicity, make a contribution to the effectiveness of the war effort which only they can make; it is a contribution of inestimable value to this country, because if you do not keep the communities of Canada sound you cannot keep the nation sound. I say this. We have pledged our country to an all-out war effort. There cannot be an all-out war effort unless certain things are done in the communities of Canada. There are many things that must be done in the communities of Canada which can be done only by the men and women of Canada, working voluntarily. There are many things in the communities of Canada which must be done and which no government can do; only the men and the women of the community can do those tasks. If they do not do them, and do them voluntarily, there is not an all-out community effort.

Mr. LOCKHART: Is there any intention of having regional paid officers?

Mr. THORSON: No.

Mr. LOCKHART: Positively no other paid officials?

Mr. THORSON: There is not the slightest intention of setting up a large organization for this purpose.

Mr. LOCKHART: Are there to be any other paid officials?

Mr. THORSON: No; I have not in contemplation the employment of any other officials.

Mr. LOCKHART: No other paid officials?

Mr. THORSON: I cannot say what may possibly develop. It may be necessary to employ another assistant, but there is no thought of setting up a large and extensive organization. Nor is there any thought of this division seeking to regiment or direct the activities of a community. Rather it is intended to give guidance to a community, so that the organization may rise within the community.

Mrs. NIELSEN: I do not want to take time to go into this matter any further, but I should like to impress upon the minister that the opinion has been expressed to me from certain quarters in this country that this department under Mrs. West is not giving a sufficient lead. I do not want to elaborate on that too much. I have met personally Mrs. West and her assistant, and I believe they are capable women. I am, however, well aware of the fact that they cannot go any further than the minister himself or his policy will permit them to go. They have held these positions for a comparatively short time, but I believe it would clear up a great deal of misunderstanding if the minister would give the committee a

short account of the actual work that has been done by Mrs. West and her assistant, and some details as to what they intend to do in the coming months, so that we may have a better understanding of the intentions of this division.

Mr. THORSON: I should like very much to do that, if members of the committee would not keep on saying that my speeches are too long.

Mr. JACKMAN: I do not think the minister realizes the importance of this matter.

Mr. THORSON: It is definitely important.

Mr. FRASER (Peterborough West): Just before the minister goes on with that, would he mind telling us what official or what branch of his department gave out the press release from which he read?

Mr. THORSON: The press release to which I referred was given by Mrs. West herself at a conference between Mrs. West and the officers of the central volunteer bureau in Toronto.

Mr. MacNICOL: And Miss Hyndman would be present too, would she?

Mr. THORSON: No, not at that conference. The press report is from the *Globe and Mail* of May 12, 1942.

Mr. COLDWELL: What does it say?

Mr. THORSON: I have just been quoting it. I can quote it again, if my hon. friend wishes.

Mr. COLDWELL: Was there more than that in the press report?

Mr. THORSON: I have taken the three statements that are attributed to Miss Hyndman, and I have given what Mrs. West actually said. I have done that for the purpose of trying to indicate that there was a lack of understanding on the part of some people as to what really was being undertaken by the various organizations growing up in different parts of the country.

Mr. MacNICOL: In the beginning I gathered that the statement read was a rehearsal of the statement that was given to the press, and that the statement actually was given by Mrs. West while Miss Hyndman was present. Now I am told that this is the statement which was issued by Mrs. West. Has the minister a statement issued by Miss Hyndman?

Mr. THORSON: No; it is the other way round. Mrs. West had this press conference with officers of the central volunteer bureau in Toronto.

[Mrs Nielsen.]

Mr. MacNICOL: And who were present then?

Mr. THORSON: The press and the central volunteer bureau.

Mr. MacNICOL: And Miss Hyndman was not present?

Mr. THORSON: No; she was not. That release was given to the press and was reported in the *Globe and Mail* of May 12. Then the statements attributed to Miss Hyndman are said to be statements which she made on May 19 to the advisory council meeting of the Canadian women's voluntary services, Ontario division. We are trying to utilize the services of all organizations. The question of name, in the opinion of the organization itself, is not the most important consideration. In my view the name Canadian women's voluntary services—

Mr. MacNICOL: Is it "voluntary" or "volunteer"?

Mr. THORSON: It is "voluntary services". In my view that name is not altogether appropriate to the activities of this organization, because it is all-embracing. There are a number of activities in which this organization could engage. Likewise I do not think it should be permitted to grow into a national organization when there are many existing national organizations doing their tasks effectively. In my opinion the name is not accurately descriptive of the organization. I am quite prepared to grant registration of any fund for which such registration is applied—but under some other name. I am not putting this organization out of business, or even seeking to do so.

Mr. MacNICOL: Would it not be better if they cooperated all round?

Mr. THORSON: I think that is the solution. May I say that early in September I met the ladies actively engaged in this organization—Mrs. MacKenzie, Mrs. Conant and Mrs. Bryce—and indicated to them at that time, in Toronto, what the aims of our department were. I pointed out that I did not think they were proceeding in the way which would be most helpful to those aims. They were also advised to the same effect somewhat earlier. The organization sought the blessing of Lady Reading, but Lady Reading would not give it to them. The organization in Great Britain is nation-wide, and the situation there is not the same as it is here.

I assure hon. members that we gave this subject the most careful thought and consulted many people, and that the opinion was almost unanimous that we ought to embark

upon a scheme having as its basis the idea of community solidarity. We ought not to try to regiment anyone, but should give guidance and direction, so that the leaders in the community might get together, cooperate with each other, and build their organization on a basis of community solidarity for peace-time social welfare and war-time activities. It was felt that on that basis they could serve the purposes of the community and the nation, and make their utmost contribution to the war effort.

I believe we can find work for these women.

Mr. FULFORD: Mr. Chairman, at the outset I wish to associate myself with the observations and suggestions of the hon. member for St. Lawrence-St. George with respect to lack of publicity in the United States respecting Canada and her war effort. I could go back to a time two years ago when I was particularly opposed to the principle of the foreign exchange control board, to that of restricting Canadian travel to the United States, and to the imposition by the United States of passport regulations respecting Canadian citizens. However, that is now water under the bridge.

I have no doubt, however, that those circumstances were the beginning of the rift which has been developing between personal friendships—and I do not mean national friendships—concerning Canadians and citizens of the United States. To counteract that condition it is most necessary that we give our United States friends as much publicity as possible with respect to what Canada has done and is doing in this war.

It has been said that citizens of the United States do not appreciate what we are doing because we have not conscription. I do not intend to discuss that point more than to say that when I addressed a meeting in Watertown, New York, about a month ago, and they heard how many men we have in uniform who are willing to serve the cause of democracy in any part of the world, they were astounded. After the meeting, one after another came to me and said that that was the most gratifying and pleasant news they had heard. They had no idea the condition was such—and Watertown is only twenty-eight miles from the international boundary line.

One peculiar feature in connection with the advertising of an internationally known product is that often an advertisement which will have tremendous appeal in the United States will have none in Canada. The reverse is also true. On many occasions something which will have appeal in Canada will have none in the United States. It has occurred to me that one of the reasons why we are not putting the story of our war effort across in the United States is that we are not giving it the right appeal. For that reason I agree with the suggestion of the hon. member for St. Lawrence-St. George that we open a publicity bureau in New York city, and have it headed by the best man who can be chosen from this country. He need not necessarily be a publicity or newspaperman, although I should think a newspaperman would be an excellent choice. But when this office is opened I would suggest the retaining of the services of a first-class United States publicity or advertising agency.

I happen to be associated with a business which does advertising in both Canada and the United States. In Canada we do our advertising through a Canadian agency, but in the United States we use a United States agency because it understands the mass buying psychology of the citizens of that country. I know that United States citizens prefer to have their advertising in forms different from those we have in Canada. They respond more readily to newsreel publicity, and to pictures appearing in newspapers. Are we giving them enough of the kind of advertising they prefer?

May I at this time compliment the Canadian Broadcasting corporation upon the excellence of the international hook-ups carried by the big United States chains. I believe they have done a splendid job.

Mr. HANSON (York-Sunbury): Do you mean Sister Susan and the like of that? I think that is the most awful stuff I have ever listened to.

Mr. FULFORD: We will leave "Sis" out of it. The point is that we are not going about this thing in the right way. It is vitally necessary that we do this because Canada forms an indivisible bond that links the British empire to the United States of America, and that bond must be stronger to-day than it ever was before. No doubt we are linked closer together because of our common effort in this war of survival than we have ever been before. Living as I do on the international border I realize, however, perhaps more than some who do not live on the border, that as individuals we are growing apart. Nothing in the last year or so has given me greater concern than that.

I hope the few suggestions I have made will be considered and that every effort will be made to publicize from one end of the United States of America to the other just what we are doing over here, what our soldiers, our sailors and our airmen are doing;

we should let that country know that our armed forces are prepared to fight in any part of the world. Our airmen to-day are taking part in practically every major battle that occurs. It is an inspiring story, and if properly handled it can be put over in a big way.

Mr. HANSON (York-Sunbury): Would the hon. member include in that story the present situation as to national unity in Canada?

Mr. FULFORD: I think that is a most inopportune statement to make at this time. I do not think that remark should have been made by the leader of the opposition. It is remarks of this kind that make the world believe we are not united.

Mr. HANSON (York-Sunbury): We certainly have not national unity in this country and never have had. We never will have it under party government.

Mr. FULFORD: All I can say is that we hope we are successful in putting over this publicity in a right and proper way.

Mr. GILLIS: Prior to coming into this house I worked for a living. I moved in circles where people were doing things. One of my great disillusionments has been to see the way in which serious business is conducted at this time.

Mr. MacNICOL: In the House of Commons.

An hon. MEMBER: You are wasting time yourself.

Mr. GILLIS: I am not wasting time, and I shall prove it before I get through. A good deal of time has been wasted this afternoon. The hon. member for St. Lawrence-St. George and the last speaker referred to publicity in the United States. I think we are getting too much; there are a lot of things that we have no cause to broadcast or placard across the country. For the past two weeks I have sat here listening to the Minister of National War Services. In my opinion the majority of members of this house have no idea of the functions of that department, and I sometimes doubt whether the minister has. I say that quite frankly. I think I have some idea of the ramifications of the department under the minister's control. I have made some attempt to analyse its activities. When the Prime Minister tabled on March 24 the thirteen orders in council that set up the national selective service organization in this country, the status of this department changed completely.

Mr. THORSON: Oh, no.

Mr. GILLIS: That is my opinion and I am going to endeavour to prove it. During this debate the minister has stood in his place and tried to answer questions which belonged rightly to three or four other departments.

Mr. THORSON: No.

Mr. GILLIS: The Prime Minister's statement is set out on page 1563 of *Hansard*, and I am going to put that statement on the record again in order that we may discuss the functions of this department as they are related, not only to the calling of men for military service but to the mobilization of the manpower of this country. During the course of the discussion the minister has gone into matters that belonged rightly to the Department of Labour, the Department of Pensions and National Health, and several other departments. These matters will come before the house again at some time in the future and the discussion will be repeated. The Prime Minister said:

> The primary responsibility for the extended scheme of national selective service has been placed upon the Minister of Labour. Under the Minister of Labour, the administrative responsibility for the direction and coordination of the policy has been vested in a director of national selective service and an associate director. Mr. Elliott M. Little has been appointed the director of national selective service, and Mr. Paul Goulet, the associate director.
>
> The responsibility for increasing the total man-power available for war service has been largely centred in the Department of Labour.

The administrative responsibility for allocating man-power, for placing men and women in the most useful forms of service and for the direction of the women's organizations of this country, has been placed upon the Minister of Labour. The Minister of National War Services has been dealing this afternoon with the women's organizations. The minister took up much time and went to much trouble to analyse a problem that really belongs to another department. The Prime Minister continued:

> The other departments of government which share in greater or less degree in the tasks of making man-power available for war service and in the allocation of the available man-power are the departments of National War Services, Pensions and National Health, Munitions and Supply, Agriculture,—

The responsibility of dealing with men who may be exempt because they are engaged in the agricultural industry is the responsibility of the Minister of Agriculture.

Mr. THORSON: Not at all.

Mr. GILLIS: When the national selective service regulations were brought down there was a change in the status of the calling up of men for military service. Prior to national selective service being adopted the Minister

of National War Services called up the proper age groups on the basis of their necessity for military service. When national selective service was set up the emphasis was no longer upon whether a man was eligible for military service, it was upon whether he was essential to a certain war industry.

Mr. THORSON: The national war services regulations are still in my department.

Mr. GILLIS: That is quite true, but an entire administrative organization has been set up.

Mr. THORSON: Not a new one.

Mr. GILLIS: Mr. Elliott M. Little.

Mr. THORSON: Not for the enforcement of these regulations.

Mr. GILLIS: He has to do with the mobilization of the man-power of the country.

Mr. THORSON: Except the compulsory part.

Mr. GILLIS: Your boards have changed.

Mr. THORSON: They are all the same.

Mr. GILLIS: You may still have the same boards but the national selective service officers sit in on those boards.

Mr. THORSON: No.

Mr. GILLIS: The minister stated a few days ago that they do.

Mr. THORSON: Representatives of the director of national selective service have a right to appear before the boards and make representations, but they are not members of the boards.

Mr. GILLIS: That makes the regulations crazier than ever. I had some confidence in the national selective service set-up which was to make plans for distributing our available man-power where it was required in relation to the needs of war production, after I had read some of the speeches that Mr. Little made since his appointment to the head of national selective service. I felt that it was in the hands of a man who was qualified both technically and practically for the job he had to do. I thought he showed a real grasp of the problem; and if Mr. Little were given latitude to organize things in the way he set out in his statements to the press and in his addresses to service clubs, I think he would do well in his position. But it is a different matter entirely if he is to be under the thumb of the Department of Agriculture, the Department of National War Services, the Department of Pensions and National Health and the Department of Labour, and if the complete mobilization of the man and woman-power of this country is still in the hands of a judge and a representative of agriculture. That is the board that is sitting now. I do not know who appointed the representative of agriculture.

Mr. THORSON: The hon. member is all mixed up.

Mr. GILLIS: I listened as carefully as I could to the answers which the minister gave to questions as to the exemption of workers employed in agriculture, and he said that the exemption boards consisted of a judge and two other persons, one of whom was a farmer in the particular case.

Mr. THORSON: That was in Saskatchewan. One of the members of the board happens to be president of the United Farmers of Canada, Saskatchewan section.

Mr. GILLIS: Does the same thing apply right across the country?

Mr. THORSON: Not necessarily. In this case Mr. Bickerton is a member of the board.

Mr. GILLIS: The government's national selective service organization does not mean a thing, for this reason. In the west the board still has a judge and a farmer on it. I do not know who sits on the board in the east, but we have had no trouble on that score in Nova Scotia.

Mr. THORSON: Not the slightest.

Mr. GILLIS: There has been absolutely no trouble with our board. It will be realized as we go along that national selective service is definitely related to the calling up of men for military service; and if Mr. Little is going to function properly, national selective service has to have some representation on the board. As I have said before, the emphasis is no longer upon whether a man is eligible for military service but whether he is essential to war industry, and who is going to decide whether a man is essential to an industry if there is not a national selective service officer on the boards in the different provinces? These boards sit in judgment on a question of life and death, deciding who is to be called up for military service. The national selective service officer in the different provinces is the head of the unemployment insurance office, and ninety-nine out of one hundred of the unemployment insurance officials in every section of Canada have been appointed because of political patronage.

Mr. THORSON: He does not decide whether a man is to be called for military training.

Mr. GILLIS: Who decides?

Mr. THORSON: The divisional boards.

Mr. GILLIS: And the national selective service organization does not come into the picture at all?

Mr. THORSON: They do not make that decision.

Mr. GILLIS: Here is something that happened this week, and I point it out to show why it is necessary for the national selective service officers to have the major say in who is to be called and who is not to be called.

Mr. THORSON: I understood the hon. member to say that he did not want them to have the say.

Mr. GILLIS: I do. I say that the board is not in a position to segregate men into industry and the army and decide who is required for military service, without doing a serious injury to the industries of this country which are necessary to our war production. I have said all along and I repeat it now, that Canada's greatest war effort will be made along the production lines, and not in the field.

Here is a specific case that I wish to bring to the minister's attention. We know that aeroplanes are absolutely necessary on every front, that planes are needed and needed badly. Here is what happened at the de Havilland plant. On the 14th of this month some 400 employees of that plant were called up for military service. Nine of these men were expert tool makers who are essential to the industry and could not be replaced at a moment's notice. None of the men taken from this plant can be replaced inside of sixty days, by men equally efficient. As I say, 400 of these men were called up on the 14th of this month. One of these men, a tool maker, was ordered to go before his own private physician, where he had his blood pressure taken and his heart examined and he was declared A1. He was given a ticket and sent to Ottawa to report at Connaught ranges. He was given forty-eight hours to do that job in.

Mr. MacNICOL: Was he a first-class tool maker?

Mr. MITCHELL: How old was he?

Mr. GILLIS: Twenty-six. He tried to get a week's extension from the examining board in Toronto so that he could straighten up his affairs, but they had no authority to grant him an extension. These 400 men are being sent to the different camps across Canada. Some of them came to Ottawa. The man to whom I was talking spent a week at Connaught ranges, and then he was reexamined and declared permanently medically unfit. He has been idle from the 14th to the 29th of this month.

Mr. MacNICOL: Is he back at the de Havilland plant?

Mr. GILLIS: He was here in Ottawa to-day and is on his way back to de Havilland.

I say that to take these 400 men out of a very necessary war plant in this country and send them into the armed forces is doing a disservice to this country. Think how serious it is for an aeroplane factory to lose 400 men with experience.

I have three of Mr. Little's speeches here, and I can agree with every word of them. I do not think what I have described would have happened in Toronto if Mr. Little, with the ideas he has expressed, had sat in with that board. I think these 400 men were contributing more to the country's war effort in producing planes for our boys who are out in the field than they could do in pounding a parade ground somewhere in Canada. Armaments and munitions are what we need. That is why I emphasize that if the government had sufficient confidence in Mr. Little, who has a fairly good grasp of what is necessary in the mobilization of workers and of how to relate our man-power needs in industry to our war effort, then instead of involving national selective service with three or four other departments, they would allow Mr. Little and his organization to say who is essential to industry, and his organization should not only be given representation on the board which will handle the call-ups from now on but be given the major say. I would judge from what happened in this case that there is competition; the army wants more men and wants them in a hurry, and perhaps wants them before national selective service gets operating as it should operate and, I believe, as it will operate in the future. As I see it now, the whole question is handled by different departments, and there is nobody with supreme responsibility, nobody in a position to give direction.

Mr. HANSON (York-Sunbury): There is no coordination.

Mr. GILLIS: Somebody has to take hold of the thing and organize it, and I thought that that was Little's job.

Mr. MITCHELL: I may say to my hon. friend that it will be done—make no mistake about it.

Mr. GILLIS: There is an aeroplane plant disrupted right now in Toronto. Take four hundred men out of a plant and it does not do it any good.

Mr. MITCHELL: After all is said and done, the facts are not here. A toolmaker is a highly-skilled mechanic. The mere fact that a man says he is a toolmaker does not make him one.

Mr. CASTLEDEN: But he has been employed for three years.

Mr. MITCHELL: That may be. We have passed through the stage of the establishment of the regulations, and after some difficulties in Montreal we sent a representative of the national labour supply council as an adviser on the board there. As my hon. friend admitted this afternoon, the boards in his province have been very fair. Whether you and I like it or not we have got to put the women into industry and the young men into the fighting forces. It is not a question of what you want to do, it is a question of what you have got to do. I want first to see the evidence that this man is a toolmaker. I will agree that while it is comparatively easy to get numbers of majors and colonels, and captains in the navy—I say this with no disrespect to them—it is very difficult to get highly trained toolmakers.

Mr. CASTLEDEN: Then why are you taking them out of industry?

Mr. MITCHELL: My hon. friend asks why am I taking them out. I have just pointed out to my hon. friend that first you have to have the evidence; the mere fact that a man tells me that he is a toolmaker does not make him one.

Mr. CASTLEDEN: He was employed for three years.

Mr. MITCHELL: That is all right. You show me his card and I will tell you whether he is a toolmaker. I know what a toolmaker is. When the war broke out there were—on paper—only 6,300 toolmakers in the whole dominion—I mean persons who said they were toolmakers. I agree that if this man is a toolmaker it is criminal that he should be in the fighting forces. The national labour board has a representative and adviser on the board in Toronto of which this man spoke, and I am doubtful, when the thing comes to be analysed, and the man's card is examined, if it will be shown that the man is a toolmaker.

Mr. HANSON (York-Sunbury): It is a question of fact.

Mr. MITCHELL: Of course it is.

Mr. GILLIS: I hope the minister is right. But four hundred men were taken out of a shell plant, nine of them being toolmakers and one a charge hand. If there is a national selective service man on that board in Toronto Mr. Little should take him to task, because certainly he is not acting in accordance with the opinions expressed by Mr. Little in many of these press statements.

The minister says we must put the women into industry. I agree that that should be done when there are no longer any unemployed men in that section who could be used; women should then be trained to take their places in industry in order to fill the places of those who are going into the forces. Those who are charged with the responsibility of organizing this service must see to it that women are not brought into industry for the purpose of reducing wages. I have a letter from Hamilton, signed by the president and the secretary of a union, which says:

> Specific cases at present show that male employees at an hourly earning of 80 cents per hour are being replaced by female workers at 33 cents per hour. These male workers are placed on other jobs at rates of 50 cents per hour and a few cases of 57½ cents per hour.
>
> We believe these conditions were only to be brought about in case of male employees being called for military purposes.

They thought, as the minister stated a moment ago, it was only when men were called for military service that they would be replaced, and then that the wages should not be reduced. If women are taken in the plant and do the same work which has been done by men, the same wages should be paid. That is a specific case from a Hamilton plant. I hope the minister will see that the matter is checked up.

With respect to the setting up of these boards and the question of exemption and the essentiality of the men to industry, the boards as constituted at the present time are in my opinion not competent to sit in and judge impartially in cases of the kind. Previously they were. It was a straight matter of calling men for military service.

Mr. MITCHELL: The question raised by the hon. member was just as important before national selective service as it is to-day.

Mr. GILLIS: You have had the odd case. To-day you are going to get dozens.

Mr. MITCHELL: I admit that some will squeeze through the barrier. That happens in all big undertakings such as this.

Mr. CASTLEDEN: Four hundred of them?

Mr. MITCHELL: My hon. friend says four hundred, but he does not know what he is talking about. Perhaps he will let me finish my statement and we can get along. It was just as essential before selective service that

key men in essential industries should not be called up as it is to-day. The conditions then were just the same as they are now. I say that just to put the matter fairly before the committee.

Mr. GILLIS: The minister is right to a certain extent, but from another point of view he is not. Many industries have been organized in this country during the past year. Practically all the available man-power of the country is either in the armed services or employed in industry; and as the age groups are advanced, when the call goes out for military service most of these people will be coming from either the essential or the non-essential industries. I have letters from several of the steel-workers' organizations. In that industry most of the men are trained for a specific job.

Progress reported.

On motion of Mr. Crerar the house adjourned at six p.m.

Monday, June 1, 1942

The house met at three o'clock.

ROYAL CANADIAN AIR FORCE

MESSAGE FROM THE PRIME MINISTER TO AIR OFFICER IN CHIEF OVERSEAS

Hon. T. A. CRERAR (Minister of Mines and Resources): Mr. Speaker, the Prime Minister (Mr. Mackenzie King) has been unable to come to the house to-day. In his absence I believe hon. members would wish me to read the text of the message which the Prime Minister sent this morning to the Air Officer in Chief, Royal Canadian Air Force overseas:

Air Officer in Chief,
R.C.A.F. Overseas,
London.

The growing strength of the Royal Canadian Air Force overseas and the reports of its increasing share in actual combat with the enemy have filled Canada with pride. The hearts of the Canadian people have been particularly stirred by the news of the important and considerable part which Canadian airmen had in the raid on Cologne with its far-reaching effects.

On behalf of the government, I would ask you kindly to convey to the officers and airmen of the Royal Canadian Air Force under your command, and, through the appropriate channels, to the Canadian officers and airmen serving with the Royal Air Force, an expression of the pride of all Canada in their great and growing achievements. Please extend as well our best of wishes for every success in future aerial combat. The Canadian people will ever gratefully remember what the gallant young airmen of Canada are doing to defend the security of their homeland and to preserve freedom by engaging and occupying the enemy in the skies over Europe, and in other parts of the world.

W. L. Mackenzie King,
Prime Minister.

REPORTS AND PAPERS

NATIONAL FILM BOARD—EMPLOYMENT OF STAFF

Hon. J. L. ILSLEY (Minister of Finance): I desire to lay on the table copy of the treasury board ruling regarding the National Film Board Act, of November 15, 1940, which is tabled at the request of the leader of the opposition (Mr. Hanson). This will mean that when the motion standing in the name of the hon. member for Hastings South (Mr. Stokes) is reached, it will be dropped.

Hon. R. B. HANSON (Leader of the Opposition): The document now tabled covers the motion?

Mr. ILSLEY: Yes. I wish to do it in this way, rather than to create a precedent by having the house pass resolutions or motions for the production of treasury board rulings, which are privileged documents.

Hon. J. T. THORSON (Minister of National War Services): I desire to lay on the table the opinion of the Department of Justice referred to in sessional paper 211A, so that when the motion now standing in the name of the hon. member for Saskatoon City (Mr. Bence) is reached it may be dealt with in the same way as the motion in the name of the hon. member for Hastings South. The opinion of the Department of Justice is tabled without prejudice to the usual rule with regard to opinions of the Department of Justice.

Hon. R. B. HANSON (Leader of the Opposition): I should like to make this observation, that we accept the information contained in these documents now tabled, but without prejudice to our right to apply for them in the regular way. I do not feel bound by the statement of policy made by the two ministers.

PRIVATE BILLS

FIRST READINGS—SENATE BILLS

Bill No. 82, for the relief of Annie Miriam Scott.—Mr. Bercovitch.

Bill No. 83, for the relief of Marguerite Elsie Ramsay Murdoch.—Mr. Claxton.

Bill No. 84, for the relief of Elizabeth Molnar Schneider.—Mr. McIlraith.

Bill No. 85, for the relief of Max Kaback.—Mr. Bercovitch.

Bill No. 86, for the relief of George McDonald Joseph Carew.—Mr. Bercovitch.

Bill No. 87, for the relief of Wandless Joseph Henry Verdon.—Mr. Abbott.

Bill No. 88, for the relief of Mary Eileen Scott Warrington.—Mr. McIlraith.

Bill No. 89, for the relief of Joseph Bergman. —Mr. Whitman.

Bill No. 90, for the relief of Marie Martha Hermine Browne Peters.—Mr. Bercovitch.

Bill No. 91, for the relief of Ethel Gerson Kalmanovitch.—Mr. Abbott.

Bill No. 92, for the relief of Freda Sweet Simon.—Mr. Gray.

Bill No. 93, for the relief of Phyllis Mary Alice Verrinder Horrell.—Mr. McIlraith.

Bill No. 94, for the relief of James McKinna Wood.—Mr. Bercovitch.

Motion for first readings en bloc agreed to on division.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

MILK SUBSIDY TO DAIRY FARMERS

Mr. BRUCE:

1. Has the government discontinued the milk subsidy to the Canadian dairy farmers?
2. If so, for what reason?

Mr. ILSLEY:

1. Yes.

2. Beginning December 22nd, 1941, and ending April 30th, 1942, a milk subsidy was paid to certain dairy farmers for the purpose of maintaining production of essential supplies during the winter. The subsidy was discontinued on May 1st, because effective on that date the board established a new scale of maximum milk prices and made provision for other adjustments in milk distribution practices, so that adequate prices may be paid to producers to enable them to continue production.

JOHN INGLIS COMPANY

Mr. NICHOLSON:

1. What amounts have been paid to the John Inglis Company since October 31, 1940, on, (a) capital expenditure contract, (b) production contract?

2. What is the total amount which has been paid to Major Hahn of the John Inglis Company, since October 31, 1940 as (a) salary, (b) other allowances?

Mr. HOWE:

1. (a) $17,035,061.51 from November 1, 1940 to April 30, 1942; (b) $18,695,000 from November 1, 1940 to April 30, 1942.

2. (a) None. The terms of the contract dated October 31, 1940, state that the salaries of the president, vice-president, general manager, secretary and treasurer and any amounts paid to any director shall not be allowed as a cost against the contract. The John Inglis Company Limited is a privately owned company to which capital assistance has been granted and which is operating on a management-fee basis. Salaries paid to the officials mentioned above, are paid by the company from that management fee.

(b) $423.46—Expenses to Washington, New York and Ottawa on government business during the period November 1, 1940 to April 30, 1942.

KING'S COUNTY, N.S., AIR FIELD

Mr. BLACK (Cumberland):

1. Were lands purchased at or near Kingston and Greenwood, King's county, Nova Scotia, for an airfield?

2. If so, (a) from whom were such lands purchased, (b) acreage of each purchase, (c) amount asked by each owner and the amount paid?

Mr. HOWE:

1. Yes.
2. Greenwood.

Vendor	Area acres	Consideration
M. C. Spinney....	80·23	$4,412 65
L. Woodbury	39·76	2,681 80
J. C. Griffin	125·42	6,750 00
H. E. Armstrong ..	100·62	6,765 00
Est. H. Keddy ...	39·8	3,030 00
Est. E. J. McKenna	26·8	1,340 00
A. S. Marshall ...	39·47	1,973 50
Est. F. M. Munro..	30·5	1,720 00
Est. F. Woodbury..	15·5	2,830 00
W. Baker	45·64	3,672 50
G. G. Power	32·02	3,635 00
H. Keddy	5·0	350 00
S. H. Griffin	55·85	4,061 00
Mrs. L. Neiley	36·3	2,000 00

We have no information as to the amount asked by each owner.

PROFITS OF CHARTERED BANKS

Mr. QUELCH:

1. What were the profits of each of the chartered banks for the year 1941 in Canada?
2. What percentage of paid-up capital are such profits in each case?

Mr. ILSLEY:

NET PROFITS OF EACH OF THE CHARTERED BANKS OF CANADA FOR FISCAL YEARS ENDED IN 1941

(Cents omitted)

Name of bank	I Net profits after published provision for dominion taxes shown in column II but before appropriations for bank premises, pension funds, etc., shown in column III	II Published provision for dominion taxes	III Appropriations for bank premises, pension funds or other published allocations	IV Per cent of net profits (column I) to capital paid up	V Per cent of net profits (column I) after allowance for appropriations, etc., (column III) to capital paid up	VI Per cent of net profits (column I) to total shareholders' money, viz., capital paid up, reserve and undivided profits	VII Per cent of net profits (column I) after allowance for appropriations, etc. (column III) to total shareholders' money, viz., capital paid up, reserve and undivided profits
Montreal (Oct. 31)	$ 3,437,026	$2,242,905	$ 500,000	9·55	8·16	4·52	3·86
Nova Scotia (Dec. 31)	1,935,602	1,061,949	455,000	16·13	12·34	5·20	3·98
Toronto (Nov. 30)	1,521,556	902,944	400,000	25·36	18·69	8·47	6·24
Provincial (Nov. 30)	291,434	149,209	50,000	7·29	6·04	5·59	4·63
Commerce (Oct. 31)	3,013,152	1,665,987	603,994	10·04	8·03	5·93	4·74
Royal (Nov. 30)	3,535,928	1,892,224	725,000	10·10	8·03	6·08	4·83
Dominion (Oct. 31)	939,322	449,004	235,000	13·42	10·06	6·32	4·74
*Canadienne Nationale (Nov. 30)	746,351	376,628	185,000	10·66	8·02	6·09	4·58
Imperial (Oct. 31)	978,102	504,532	255,911	13·97	10·32	6·24	4·61
Barclays (Sept. 30)	4,296	....	....	·29	....	·19	....
	$16,402,769	$9,245,382	$3,409,905	11·27	8·93	5·65	4·47

* Net profits shown in this case are after provision for provincial as well as dominion taxes and also after deduction of $125,000 statutory annual payment to the Province of Quebec—provincial statute 14, Geo. V, Ch. 3.

Date following each bank's name denotes end of its fiscal year.

If the purpose of question No. 1 is to ascertain the profits of each of the chartered banks earned in Canada the answer is that the banks are not required by the Bank Act or otherwise to publish or report separately the results of their Canadian business as distinguished from their external or over-all operations. The net profits of each of the chartered banks for the fiscal years ended in 1941 are shown in the attached statement.

While the figures submitted are compiled from the regular annual profit and loss statements of the banks, it should be pointed out that all banks do not publish such statements in precisely the same form, not being required to do so by the general terms of section 53 (8) of the Bank Act. Moreover, to arrive at true net profits on a uniform basis the figures shown in column I should properly be reduced by the respective amounts shown in column III, since appropriations to write down the cost of premises, as well as contributions to pension funds, etc., are definitely provided out of earnings, and consequently decrease the amount finally available to shareholders.

Although the percentages of profits to paid up capital only are asked for, additional calculations have been made as indicated by the statement, particular attention being drawn to the percentage realtionship of net profits (column VII) to the total of shareholders' money invested, namely, capital paid up, reserve and undivided profits. It is the percentages shown in this column which reflect for all practical purposes the real relationship of final net profits to total shareholders' investment. The percentage of profits to capital paid up alone is necessarily a nominal or arbitrary one only (although sometimes incorrectly used as a measure of earnings) as other shareholders' funds also go to constitute the entire capital owned and at risk by shareholders.

*FEMALE WORKERS IN WAR FACTORIES

Mr. LaCROIX (Quebec-Montmorency):

1. Will the government eliminate the practice of two shifts a day for female workers in war factories of Quebec, and substitute therefor three shifts of eight hours each as is generally the case in Ontario?

2. If so, when is it proposed to make this change?

Mr. HOWE: I believe I may answer this question verbally. It is the policy of the government to institute three eight-hour shifts wherever production can be improved by so doing. There are cases however where it is not possible to do so, on account of lack of management or lack of personnel, or the time required to adjust machinery.

PLEBISCITE—ADJUTOR SAVARD

Mr. FRASER (Peterborough West):

1. Did Adjutor Savard do any work in connection with the plebiscite?

2. If so, what work?

3. How much money did he receive for this work as (a) salary, (b) living allowance, (c) travelling expenses?

Mr. McLARTY:

1. No.

2 and 3, answered by No. 1.

NEW BRUNSWICK NATIONAL SALVAGE CAMPAIGN ORGANIZER

Mr. STOKES:

1. Has Lemuel F. Sewell been appointed director of salvage for the province of New Brunswick?

2. If so, on what date?

3. What salary and/or allowances does he receive?

4. What are the duties of this position?

5. What are his qualifications for this work?

6. By whom was he appointed to this position?

7. By whom was he recommended?

8. Was this position publicly advertised and were others of equal or superior qualifications given an opportunity to apply?

Mr. THORSON:

1. Yes; Lemuel F. Sewell is organizer, national salvage campaign, for the province of New Brunswick.

2. April 30, 1942.

3. Salary, $2,100 per annum; out-of-pocket travelling expenses incurred while on departmental business.

4. To promote the organization and direction of voluntary salvage committees in the area under his supervision. To promote salvage of materials and direct the flow of salvage to the market. Generally to encourage salvage of materials needed in war industry.

5. Knowledge of the immediate area in which he works and ability to carry out the policies laid down by the national salvage office.

6. By order in council.

7. Minister of National War Services.

8. (a) No; (b) See answer to 8 (a).

HOUSING

Mr. LOCKHART:

1. What has been (a) the total expenditure made, (b) the total administrative cost, in connection with the Dominion Housing Act and the National Housing Act, from inception to date?

2. What is the total number of houses which have been erected or are now in process of erection, pursuant to these acts?

3. What is the total amount of the loans made under the said acts?

4. What is the total loss incurred by the dominion treasury by reason of default of borrowers under these acts?

Mr. ILSLEY:

1. (a) To May 28, 1942—$18,831,320 (Includes loans disbursed to date, administrative and other expenses.) (b) to May 28, 1942—$373,719. (Includes expenditures under the Dominion Housing Act and parts I, II, and III of the National Housing Act, less an estimated $30,000 allocated to home improvement loans expenses.)

2. 23,156.

3. $76,884,292.

4. $721.87.

HOME IMPROVEMENT PLAN

Mr. LOCKHART:

1. What was the total administrative cost of the Home Improvement Loans Guarantee Act?

2. What was the total value of the improvements made pursuant to the above named act?

3. What was the total loss incurred by the dominion treasury by reason of default under this act?

Mr. ILSLEY:

1. Estimated at $30,000.

2. $49,959,055.31.

3. Total loss claims paid.....$285,159.33
Less amounts recovered by government 11,947.46

Net loss claims paid.....$273,211.87

ARMY WEEK

Mrs. NIELSEN:

1. Has the national executive committee for army week been appointed yet?

2. If so, who are the members of such committee?

3. When are further plans for army week likely to be made known to the public?

Mr. MACDONALD (Kingston City):

1. Yes; a small group whose duties are to coordinate public effort in this regard and to disseminate information to local committees.

2. Joseph W. G. Clark, Director of Public Relations, Army and Air Force, Chairman; Major-General H. F. Letson, Adjutant-General; Lt-Col. James Mess, Captain R. H. Dayton, Captain W. A. Robinson, Captain William Mills, R. S. White, Adjutant-General's Branch; Captain R. A. Diespecker, Public Relations, Army; W. B. Herbert, Department of Public Information; R. S. Jones, General Foods Limited, Toronto; W. C. Stannard, J. Walter Thomson Co. Ltd., Montreal; Claude Melancon, Department of Public Information; Albert Cloutier, Department of Public Information; Peter Aylen, Canadian Broadcasting Corporation; Ross McLean, National Film Board.

3. In the near future by a broadside newspaper "Army Week", published by the Association of Canadian Advertisers at no expense to the public, and by statements made by the national executive committee and local army week committees all across Canada.

PRISONERS OF WAR—JAPAN

Mr. CHURCH:

1. Is the government yet in a position to make a further statement regarding the treatment of military prisoners and civilians by the Japanese army at Hong Kong, after the capitulation?

2. Has Japan been notified that the Japanese government and the military commander in charge there will be held directly responsible and to account for the inhuman and brutal treatment of Canadians?

3. Who is now Canada's protecting power in place of Argentine, and what has been done to protect the interests of Canadian prisoners of war?

4. Has the government or any private organization been able to deliver any food, medical supplies, clothing or other aid to our soldiers there?

Mr. CRERAR:

1. The government is not in a position to make a further statement regarding the treatment of military prisoners and civilians by the Japanese army at Hong Kong, beyond stating that it has been learned from reliable but unofficial sources that there has been some improvement in rations and living conditions.

2. Any action along the lines suggested would not be taken independently by the Canadian government. The Canadian government is in close contact with the other governments concerned as to the appropriate action to be taken in this connection, and the time at which it should be taken.

3. Switzerland is the protecting power for Canadian interests in Japan and Japanese occupied territories. All possible action is being taken to protect Canadian prisoners of war in enemy hands.

4. Some relief has been afforded to prisoners of war and civilian internees from supplies which were within the Hong Kong area, but it has not yet been possible to send in any assistance.

NATIONAL SALVAGE CAMPAIGN

Mr. FLEMING:

1. Does the national salvage campaign cover the industrial salvage field?

2. Have there been any special workers appointed by the department to stimulate industrial salvage?

3. If so, who are they?
4. What are their qualifications?
5. What are their salaries?
6. Who recommended them?
7. What area or areas does each appointee represent?
8. Have these men any special instructions or suggestions for industrial salvage?
9. Does the Minister think the field is being adequately covered?

Mr. THORSON:

1. Yes.

2. Yes; one.

3. F. C. B. Henstridge.

4. Many years' experience in industry and ability to carry out the policies as laid down by the national salvage office.

5. $3,300 per annum.

6. The Minister of National War Services.

7. No specific area, but generally all areas of concentration of industrial activity.

8. Yes. On January 8, 1942, a conference was convened at Ottawa of the various industrial associations in Canada for the purpose of discussing development of industrial salvage. It was agreed thereat that each association would create a salvage organization within itself, and through such organization arrange for active salvage operations in the various individual industries affiliated with the respective industrial organizations. The industrial salvage organizer has been instructed to keep in contact with these industrial associations to see that the work undertaken by them is done and he is also charged with the general responsibility of promoting salvage in individual industries.

9. The matter is under survey by the new director.

WOMEN'S VOLUNTARY SERVICES—DIRECTOR AND ASSISTANT DIRECTOR

Mr. FLEMING:

1. When was Mrs. W. E. West appointed director of the women's voluntary services?
2. What position did she hold before her appointment?
3. Who recommended her?
4. What salary is she receiving now?
5. When was Mrs. West's assistant, Miss Frieda Held, appointed?
6. What position did she hold before her appointment?
7. Who recommended her?
8. What salary is she receiving now?
9. Has the minister been informed as to the activities of these two appointees?

Mr. THORSON:

1. March 1, 1942.

2. Education: School of Social Service Administration, University of Chicago, Ph.B.; London School of Economics. 1924-26: Teacher and Social Welfare Worker, Winnipeg. 1926-30: Superintendent, Social Service Work, Windsor. 1931-33: Director of Emergency Relief, St. Catharines. 1934: Chief Supervisor, Hamilton Public Welfare Department. 1934-37: Asistant Deputy Minister, Public Welfare Department, Province of Ontario. 1937-40: Superintendent, Ontario Training School for Girls, Galt. 1940 to date of appointment: Housewife.

3. The Minister of National War Services.

4. $4,800 per annum.

5. March 1, 1942.

6. Education: School of Social Work, University of Toronto. 1920-35: On the staff of the Neighbourhood Workers' Association of Toronto. 1935-40: Supervisor of Field Services under Hon. David Croll, Minister of Public Welfare, Province of Ontario. Subsequently, assistant to the Deputy Minister of Public Welfare. February, 1940: Appointed Director of Welfare Council of Toronto, which position resigned in April 1940 on account of ill health. Since August, 1940, to date of appointment: Temporarily Supervisor of the War Guest Department of the Children's Aid Society of Toronto.

7. The Minister of National War Services.

8. $3,000 per annum.

9. Yes.

ARMY SERVICE RATIONS

Mr. STIRLING:

1. Are the following fruit juices included in the service rations, (a) grapefruit juice, (b) tomato juice?
2. Has the wartime prices and trade board, or any instrument thereof been instructed to purchase, (a) grapefruit juice, (b) tomato juice, for that purpose?
3. If so, in what quantities and at what prices?

Mr. HOWE:

1. (a) Yes.

(b) No.

2. (a) No. The Department of Munitions and Supply have received requisitions from the Department of National Defence to purchase grapefruit juice.

(b) No.

3. Contracts for grapefruit juice are being let for the month of June at competitive prices, but governed by the wartime prices and trade board ceilings. Estimated quantity required—approximately 30,000 cases per month.

PRICE CEILING SUBSIDIES—CANNED CITRUS FRUITS

Mr. CRUICKSHANK:

1. What amount has been paid to date as subsidy for canned citrus fruits?

2. What amount has been paid to date as subsidy for citrus fruit juices?

Mr. ILSLEY:

1. Nil.

2. $107,897.25 to May 29, 1942. The entire sum was paid on grapefruit juice which has now been declared ineligible for subsidy as of May 11, 1942.

WARDEN, QUE., WAR INDUSTRIES

Mr. LECLERC:

1. Has the government any interests in the International Flare & Signal Company, and MacDonald Chemicals Limited, of Warden, Quebec?

2. Is the government familiar with the scale of wages and salaries paid by these war industries?

3. Will a scale of wages and salaries be paid there equal to that paid in other war industries in the province of Quebec?

Mr. HOWE:

1. The International Flare and Signal Company, Waterloo, Quebec, is a privately-owned company to which war contracts have been awarded.

The MacDonald Chemicals Limited, Waterloo, Quebec, is a government-owned plant operated by the MacDonald Chemicals Limited, Waterloo, Quebec, on a management fee basis.

2. The government has knowledge of the schedules of wages being paid to workers in plants where war orders are being executed. These schedules are often established by agreement between employers and employees. Where no such agreements exist, the following labour condition with respect to wages is attached to each government contract:—

"All workmen, labourers or other persons who perform labour in or upon the work to be performed by the contractor shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rate in such district, then a fair and reasonable rate."

Where workers receive salaries, the amounts in each case are fixed by mutual agreement between employer and employee.

3. Answered by 2.

[Mr. Howe.]

AID TO COASTAL MUNICIPALITIES FOR PROTECTION AGAINST ENEMY ATTACKS

Mr. ROY:

1. Has the government, through the medium of any of its branches, granted or does it propose to grant, aid to municipal bodies on the Atlantic coast to protect their municipalities from enemy attacks?

2. If so, what is the nature of such assistance, and upon what conditions has it been granted?

3. What municipalities to date, have profited by the arrangement and what further aid has been promised?

Mr. MACKENZIE (Vancouver Centre):

1. No; aid is extended to provinces for distribution to municipalities.

2. Equipment and instructional material, to be used in air raid precautions.

3. Answered by No. 1.

*GASOLINE RATIONING—MARITIME PROVINCES

Mr. HATFIELD:

1. If the gasoline coupons were cut from five gallons to four in Ontario and Quebec, would this release tank cars which might then be available to bring the coupon in the maritime provinces up to four gallons?

2. Could our railways handle extra tank cars if they were given to them for shipment to the maritime provinces?

3. Is the government giving consideration to any further plan that would bring the supply of gasoline in the maritime provinces up to par with the provinces of Ontario and Quebec?

Mr. HOWE: I have already answered these questions in the house. The answer to No. 1 is no. The answer to No. 2 is yes, if extra tank cars are available—which they are not. As to question No. 3, for the past several months the government has given continuous consideration to increasing supplies of petroleum for the maritime provinces.

Mr. HANSON (York-Sunbury): Is any crude oil reaching the refineries of the maritime provinces?

Mr. HOWE: Yes.

CANADIAN FORCES—WOMEN'S SECTIONS—INCOME TAX

Mrs. NIELSEN:

1. Are the officers of the women's sections of the fighting forces subject to income tax?

2. If so, will the government consider allowing exemption from income tax to such officers?

Mr. THORSON: To the extent the women's sections of the fighting forces are recognized as being part of the Canadian active service forces by the Department of National Defence the provisions of the Income War Tax Act for exempting the service pay and allow-

ances of officers and men of the Canadian active service forces will apply to the women's sections.

It is understood that the Canadian Women's Army Corps and R.C.A.F. women's division are already recognized as part of the Canadian active service forces.

Accordingly sections 4 (t) and 91 (4) of the Income War Tax Act will operate to exempt the service pay and allowances of these taxpayers from income and national defence taxes as therein provided. The exempting sections read as follows:

sec. 4 (t) "The following incomes shall not be liable to taxation hereunder:

(t) The service pay and allowances of—

(i) warrant officers, non-commissioned officers and men of the Canadian naval, military and air forces while in the Canadian active service forces, and

(ii) commissioned officers of the said forces while on active service beyond Canada, or on active service in Canada, whose duties are of such a character as are required normally to be performed afloat or in aircraft."

QUESTIONS PASSED AS ORDERS FOR RETURNS

PRICE CEILING—INCREASES IN BASIC RETAIL SELLING PRICES

Mr. BENCE:

1. With respect to how many articles has the wartime prices and trade board permitted the retail price ceiling to be broken?
2. Give a list of such articles, the basic retail selling price and the amount by which the board has permitted such basic retail selling prices to be increased?

Mr. ILSLEY: Return tabled.

OIL PROSPECTING IN QUEBEC PROVINCE

Mr. ROY:

1. Has the government given or offered concessions to any companies to encourage prospecting for oil in the province of Quebec?
2. If so, (a) what is the nature and value of these concessions; (b) who are the interested companies?
3. Has the government taken any steps to promote oil prospecting in Quebec?
4. If so, what has been done?

OIL TANK CARS

Mr. O'BRIEN:

1. How many tank cars, that is, railway cars suitable for the transportation of petroleum products, are, (a) owned by the Canadian National Railways; (b) owned by the other Canadian railway companies; (c) owned by Canadian oil companies; (d) owned by Canadian chemical companies; (e) owned by other Canadian companies or persons; (f) leased by any of the aforementioned companies or persons; (g) owned or leased by United States companies but used in Canada?

2. What is the total gallonage of all such tank cars which are presently in use for the transportation of petroleum products?
3. What products other than petroleum products are transported in tank cars?
4. What is the total gallonage of all tank cars presently in use for the transportation of products other than petroleum products?
5. What is the total gallonage of all tank cars which are not presently in use for the transportation of petroleum products but which could be diverted to such use?
6. For the periods April 22 to May 22, 1941, and 1942, or the nearest monthly period for which statistics are available, how many tank cars and with what total gallonage were engaged in transporting petroleum products for use in, (a) Prince Edward Island, (b) Nova Scotia, (c) New Brunswick, (d) Quebec, (e) Ontario, (f) Manitoba, (g) Saskatchewan, (h) Alberta, (i) British Columbia?
7. During these periods, how many tank cars, and with what total gallonage, were engaged within each such province transporting petroleum products from base points within the province to other points within the province?

DIGBY COUNTY, N.S., NAVAL BOAT CONSTRUCTION

Mr. BLACK (Cumberland):

1. How many minesweepers or other naval boats have been built at Meteghan river or at other points in Digby county, Nova Scotia?
2. Were these boats let by lump sum contract and to whom, and by whom were such boats built?
3. What were the contract prices for each such boat?
4. How many of these boats have been launched, stating dates of launching?
5. Have deliveries been made to and accepted by buyers?
6. If not, what were reasons for refusal or failure to accept deliveries?
7. What sums have been paid on account of each such boat?
8. What further sums are payable on each such boat?

TAXATION—INCOME, CORPORATION AND NATIONAL DEFENCE

Mr. O'BRIEN:

1. What are the boundaries of each of the income tax districts?
2. What was the total amount of, (a) personal income tax, (b) corporation income tax collected in each of the income tax districts for the fiscal years ending March 31, 1939, 1940, 1941 and 1942?
3. What was the total amount of national defence tax collected in each of the income tax districts for the fiscal years ending March 31, 1941 and 1942?

TAXATION—GASOLINE, SUCCESSION DUTY, ENTERTAINMENT AND EXCISE

Mr. O'BRIEN:

1. What is the total revenue, tabulated by provinces, which has been received from the federal gasoline tax since its imposition?
2. What is the total revenue, tabulated by provinces or income tax districts, which has been received under the Dominion Succession Duties Act since its coming into force?

3. What is the total revenue, tabulated by provinces, which has been received from the tax on entertainment since its imposition?

4. What was the total revenue, tabulated by provinces, which has been received from the excise tax on railway, steamship, motor-bus and aeroplane fares since its imposition?

HAMILTON TRADE SCHOOL

Mr. WHITE:

1. What was the total acreage purchased for the erection of the trade school at Hamilton?

2. From whom was the land purchased?

3. What was the purchase price of the land?

4. Was any agent employed in connection with the purchase of this land?

5. If so, what was the name of such agent?

6. What was the total amount of commission paid to him?

7. What is the name of the lawyer who acted for the government in the completion of this purchase?

8. What is the total amount of legal fees paid in connection therewith?

9. Did this property require to be filled?

10. If so, how many cubic yards of filling were required?

11. To whom was the contract for filling this property awarded?

12. Were tenders called, and if so, was the lowest tender accepted?

13. What was the total amount paid to the contractor for filling this property?

14. What is the grand total of the cost of this site?

15. To whom was the contract for the erection of the buildings awarded?

16. Were tenders called, and, if so, what were the names of the tenderers and the amount of each tender?

17. Was contract awarded to lowest tenderer?

18. What is the total cost of the buildings erected to date?

RESERVE ARMY—GOVERNMENT EMPLOYEES AT TRAINING CAMPS

Mr. HAZEN:

1. Do government employees in the reserve army, who go to summer camp for two weeks training, have to forfeit their civil pay during that period?

2. Do government employees, who attend these summer camps, forfeit part or all of their annual holidays?

3. What pay do government employees, who are privates in the reserve army, receive while attending camp with their reserve unit?

4. Is the pay sufficient for married men to support their wives and children?

5. Is any provision made to enable temporary government employees, known as prevailing rates men, who receive no holidays, to attend camp with reserve army units?

NATIONAL SALVAGE CAMPAIGN

Mr. FLEMING:

1. How many provincial field men or organizers are there in connection with the national salvage campaign?

2. Who appointed them?

[Mr. O'Brien.]

3. Upon whose recommendation?

4. What are their present salaries?

5. What do they do?

6. What did they do immediately prior to their present appointment?

7. What are their qualifications for salvage work?

8. Are the present appointees the only incumbents of these offices, or were there other appointees?

9. If so, why were their services dispensed with?

MILITARY SERVICE—LEAVE TO FISHERMEN DURING FISHING SEASON

Mr. ROY:

1. Has British Department of Food requested the shipment of fresh cod fillets or other fresh fish from Atlantic coast fishers for the current year?

2. If so, what quantity of each variety of fish?

3. Are there enough fishermen or labourers available to make this supply?

4. If not, what action is the government taking in order to release fishermen from military service during the fishing season?

5. Will the government grant leave for the duration of the fishing season to the fishermen of Gaspé and the Magdalen islands, who are now on military service?

6. If not, what other steps will the government take to permit fishing syndicates and other firms engaged in commercial fishing to fill their orders for fillets of fresh cod and other fish received from the British Ministry of Food?

HOUSING

Mr. CHURCH:

1. Will the present Housing Act be continued?

2. What representations have been made in favour of this policy?

3. What amount has been spent to date, (a) under the Housing Act; (b) by Wartime Housing Limited?

USE OF ALCOHOL IN PRODUCTION OF SYNTHETIC RUBBER

Mr. FULFORD:

1. What, in tons, was the production of spirituous liquors in Canada last year?

2. How many tons of commercial ethyl alcohol could have been recovered from this?

3. By present methods, how many tons of Buna-S synthetic rubber could thereby be produced?

4. Should the government adopt the policy of converting the distilling industry from liquor to alcohol, approximately how many bushels of wheat could be utilized by this one industry in the production of Buna-S rubber?

MOTIONS FOR PAPERS

NATIONAL FILM BOARD—EMPLOYMENT OF STAFF

Mr. STOKES:

For a copy of all rulings made by treasury board since November 1, 1940, on the question whether the National Film Board Act gives authority for employment of staff without prior

approval of the establishment by treasury board and also on the question whether the National Film Board Act should be interpreted as applying to persons employed casually for the duration of individual projects and not to any person continuously employed.

Mr. SPEAKER: Motion dropped.

Mr. BENCE:

For a copy of the opinion of the Department of Justice, referred to in sessional paper 211A, with respect to the application of order in council P.C. 4759, to persons employed under the provisions of the National Film Act.

Mr. SPEAKER: Motion dropped.

AIRCRAFT INDUSTRY—MORALE BUILDING CAMPAIGN

Mr. DIEFENBAKER:

For a copy of all letters, telegrams, reports, memoranda or other documents in the possession of the Minister of Munitions and Supply, the Minister of Finance, the director-general of aircraft production, the comptroller of the treasury, or of any official of said departments in any way referring to the morale-building campaign by E. G. Hirst, or with regard to any alteration in the terms of his appointment or the method of remuneration or reimbursement, and in particular granting to or refusing the aircraft companies concerned the right to charge any contribution made by them for the use of the said Hirst to overhead.

HAMILTON TRADE SCHOOL

Mr. WHITE:

For a copy of all letters, telegrams, reports, memoranda, contracts and other documents in possession of any department of the government with reference to the purchase of the property for the trade school at Hamilton and also with reference to the erection of the buildings on these premises.

CARGO VESSELS—VICTORIA MACHINERY DEPOT COMPANY LIMITED

Mr. WRIGHT:

For a copy of all contracts by and between the Department of Munitions and Supply and the Victoria Machinery Depot Company Limited, covering construction of cargo vessels by the said company.

Mr. HOWE: Return tabled.

LEASE OF TORONTO EXHIBITION PARK AND BUILDINGS

Mr. CHURCH:

For a copy of the agreement between the government and the city of Toronto and the Canadian national exhibition with reference to the lease of exhibition park and buildings thereon by the government for the duration of the war.

MILITARY SERVICE—ALAN C. WRIGHT

Mr. MacINNIS:

For a copy of all letters, telegrams, reports, memoranda and other documents in the possession of any department of the government with reference to the transfer of the registration card of Alan C. Wright, 61 Albany street, Toronto, to Vancouver, on or about April 27, 1942, and the order made on the said Alan C. Wright to report for military service under the National Resources Mobilization Act, 1940, and the return of the registration card of the said Alan C. Wright to Toronto and the cancellation of his service call.

Mr. THORSON: The passing of this motion should be made subject to all proper reservations with respect to privileged and confidential communciations.

HOUSING

FURTHER INQUIRY AS TO OPERATIONS UNDER EXISTING ACT

On the orders of the day:

Hon. R. B. HANSON (Leader of the Opposition): I wish to direct the attention of the Minister of Finance to the fact that on April 30, in reply to a question from the hon. member for Broadview (Mr. Church) the minister stated he expected within a week to be in a position to make a statement with regard to the housing situation. In view of the representations made by the conference of the Canadian association of mayors of municipalities last week, will the minister expedite the promise he made, and at the same time deal with other aspects of the policy to be adopted in respect of the housing problem?

Hon. J. L. ILSLEY (Minister of Finance): I really expected a question of this kind, because there has been a long delay since I promised to make a statement, if possible, within a week. A subcommittee of the war expenditures committee is taking some evidence in the matter, but my statement does not necessarily have to wait for the report of that subcommittee. I have been working on the matter whenever I had a minute to spare, and I certainly will comply with the request of the leader of the opposition to expedite the matter as much as possible.

MAGNETITE

INVESTIGATION OF GLENCOE, N.S., MAGNETIC IRON DEPOSITS

On the orders of the day:

Mr. M. E. McGARRY (Inverness-Richmond): Mr. Speaker, I should like to ask a question of the Minister of Munitions and Supply (Mr. Howe). Has he received a report following the investigation he authorized with respect to magnetic iron deposits at Glencoe, Inverness County?

Hon. C. D. HOWE (Minister of Munitions and Supply): The report has not reached me

and I doubt if my officers have had the time to make the necessary investigation. I shall be glad to make inquiries about it.

MILITARY SERVICE

CALLING OF MEN TO AGE THIRTY-FIVE—SELECTION BY LOT

On the orders of the day:

Hon. R. B. HANSON (Leader of the Opposition): Speaking in the house on Thursday, May 28, as reported on page 2872 of *Hansard,* the Minister of National War Services indicated that he would not be surprised if the age limit for men to be called up should be moved forward to thirty-five years within a very short time. The announcement that the age limit for compulsory service would be raised from twenty-four to thirty years was made by the Prime Minister (Mr. Mackenzie King) on March 24, as reported on page 1566 of *Hansard.* At that time the Prime Minister stated:

> It has also been decided to select the men to be called up for service by drawing lots over the whole field of those who are subject to the proclamation. As soon as the necessary administrative arrangements have been worked out for this plan of selection by lot, a detailed announcement will be made by the Minister of National War Services.

I now ask the minister, first, have the available single men between twenty-four and thirty years been practically exhausted? Second, has the minister abandoned the plan of selecting men by drawing lots, or is it intended to advance the age limit and to select the men within the given ages by lot? Third, if it is still intended to use the lottery method, when will the minister make the detailed statement announced by the Prime Minister?

Mr. POULIOT: Before the minister answers that question, I have a question to ask along the same line. Would the minister be kind enough to tell the house if the callable age will be advanced to eighty-five years for married men in order to include the leader of the opposition (Mr. Hanson)?

Hon. J. T. THORSON (Minister of National War Services): Mr. Speaker, with regard to the first question put by the leader of the opposition, the age groups from twenty-four to thirty years are not yet exhausted—

Mr. HANSON (York-Sunbury): Practically exhausted.

Mr. THORSON:—in their entirety, but the limit of exhaustion is quite close at hand in at least one division, and will be close at hand in perhaps two other divisions in about a month. With regard to the second question, I would say that the proposed plan of selecting men by lot from all the age groups that are subject to the proclamation has not been abandoned.

Mr. HANSON (York-Sunbury): It has not been announced.

Mr. THORSON: The administrative details, which are fairly intricate, have not been worked out.

Mr. HANSON (York-Sunbury): May I ask one additional question? In what military districts have the groups between the ages first mentioned been exhausted?

Mr. THORSON: In division C, the Kingston division.

WHEAT

AGREEMENT WITH WHEAT BOARD FOR FURTHER PURCHASES BY GREAT BRITAIN

On the orders of the day:

Mr. E. E. PERLEY (Qu'Appelle): I should like to ask the Minister of Trade and Commerce (Mr. MacKinnon) two questions based upon the announcement which he made in this house on Friday last to the effect that a sale of 120,000,000 bushels of wheat to the British Ministry of Food had been consummated. The minister stated that this sale is on the basis of futures, October and December. He stated also that he had requested the British Ministry of Food to authorize him to make available the selling price. First, how could a sale have been made on the basis of October and December futures when they have not been opened yet on the Winnipeg exchange? Second, will the minister read to the house the cables which have passed between his department or the Canadian wheat board and the British Ministry of Food with respect to the request that he be authorized to announce the price, even if the price is not mentioned?

Hon. J. A. MacKINNON (Minister of Trade and Commerce): I could not quite follow the second part of the question asked by the hon. member for Qu'Appelle. I shall take note of it and answer it again.

Mr. PERLEY: What about the first one?

Mr. MacKINNON (Edmonton West): I shall answer them together.

Mr. CRERAR: I might say—

Mr. HANSON (York-Sunbury): Now we are going to get the real low-down.

Mr. CRERAR: I am not surprised that the leader of the opposition (Mr. Hanson) slumps down in his seat.

Mr. HANSON (York-Sunbury): I am not afraid of the minister, any time, anywhere.

Mr. CRERAR: I resent the imputation in the remarks of the leader of the opposition, and if he does what I expect him to do, he will withdraw them.

Mr. HANSON (York-Sunbury): I have nothing to withdraw.

Mr. CRERAR: When the leader of the opposition makes the comment, "Now we are going to get the real low-down," all I can say to him is that he does not increase his stature in this house by making a remark of that kind.

Mr. HANSON (York-Sunbury): Now I assume we will get the truth.

Mr. CRERAR: That remark is just as objectionable, but I am not going to get into an altercation with the leader of the opposition. The hon. member for Qu'Appelle asked how it was possible for the wheat board to make a sale for future delivery in the months of October and December when those months have not yet been quoted on the exchange. If my hon. friend will reflect, he will realize that that has nothing whatever to do with it. There is nothing to prevent the wheat board from making a sale of wheat for delivery in October, November, December, next May, or a year from now. That is all that is involved in the transaction.

Mr. PERLEY: Did they use futures, and was the trade cleared through Winnipeg?

Mr. ROSS (Moose Jaw): The hon. gentleman has never got it straight in his mind.

Mr. PERLEY: I should like to ask the Minister of Mines and Resources if any brokers were used in this transaction of futures?

Mr. CRERAR: I am quite sure that there were no brokers. This transaction was made direct by the wheat board with the cereals import committee.

Mr. PERLEY: It was never cleared through the clearing house? There is no record there.

Mr. SPEAKER: Order.

CIVIL SERVICE

INQUIRY AS TO ISSUANCE OF ORDER AFFECTING EMPLOYMENT DURING WAR PERIOD

On the orders of the day:

Mr. ROBERT FAIR (Battle River): May I ask the government or the appropriate minister whether any order has been issued freezing civil servants in their present positions until the end of the war? If such an order has not been passed, does the government contemplate taking this action?

Mr. SPEAKER: That question should be placed upon the order paper.

Hon. HUMPHREY MITCHELL (Minister of Labour): The answer is no.

ORDERS IN COUNCIL

EXPEDITING OF PUBLICATION OF ORDERS SUBSEQUENT TO DECEMBER 31, 1941

On the orders of the day:

Hon. GROTE STIRLING (Yale): May I ask the government if it would not be possible to hasten the publication of the orders in council relating to the war? The last volume I have is No. 5, which brings us only to December 31. Surely in five months' time we ought to have additional volumes.

Hon. IAN A. MACKENZIE (Minister of Pensions and National Health): Volume No. 6 is now in course of preparation and will be available within the next few days. It is intended to have these issued more frequently in the future than they have been in the past.

BUSINESS OF THE HOUSE

WAR APPROPRIATION BILL—THE MINISTER OF AGRICULTURE

On the orders of the day:

Mr. G. A. CRUICKSHANK (Fraser Valley): In connection with the two billion dollar war appropriation resolution, will the Minister of Agriculture come before the committee?

Hon. J. L. ILSLEY (Minister of Finance): If the house desires it, yes.

Mr. CRUICKSHANK: British Columbia certainly desires it, but I do not know whether that would be considered part of the house.

Mr. ROSS (Souris): So does Manitoba.

CANADIAN FORCES

PERSONNEL LISTED IN DEFENCE TELEPHONE DIRECTORY

On the orders of the day:

Mr. JEAN FRANÇOIS POULIOT (Témiscouata): I should like to ask the Minister of National Defence for Naval Services (Mr. Macdonald) for some information with regard to the telephone directory of the naval and army departments.

On May 27, at page 2806 of *Hansard*, the minister for naval services was kind enough to give the information requested in regard to

about one-third of those having their names in the telephone book, and he stated how many of them had resided in Canada for the past five years, how many had not, and how many were bilingual. Referring to my original question at page 2292 of *Hansard* I would ask the minister when I shall be given the information with respect to all the other officers listed in the telephone directory.

Hon. ANGUS L. MACDONALD (Minister of National Defence for Naval Services): Mr. Speaker, I think my hon. friend will have to direct that question to the ministers of the other two war departments, because I could not undertake to answer a question relating exclusively to the army or the air force. I would not have the information.

Mr. POULIOT: I thank the minister, but would he be kind enough to tell me when his colleague the Minister of National Defence (Mr. Ralston) will be here?

Mr. MACDONALD (Kingston City): The Minister of National Defence is on an inspection tour in western Canada and expects to be back in the city to-morrow afternoon or evening. I am sure that he will be in the house on Wednesday.

Mr. POULIOT: What time? Then we can go to the station.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Friday, May 29, consideration in committee of a resolution to provide sums not exceeding $2,000,000,000 for the year ending March 31, 1943, for granting to his majesty aid for national defence and security—Mr. Ilsley—Mr. Bradette in the chair.

FINANCE

Mr. POULIOT: Mr. Chairman, I would first ask the Minister of National War Services to be kind enough to table a list of the personnel of the information bureau, with their occupations.

Mr. ILSLEY: If the hon. gentleman will permit me, it is proposed to-day to take up finance. The request was made that I place on *Hansard* a break-down of the amounts required for the various departments of government other than the defence departments and the Department of Munitions and Supply. On March 17 I placed on *Hansard* a statement of the amounts required for those departments, $146,000,000, in round figures. I shall now with the consent of the house hand a break-down of that amount to *Hansard* for insertion in the record.

Mr. HANSON (York-Sunbury): Is it very long?

Mr. ILSLEY: Fairly long.

Mr. HANSON (York-Sunbury): Then I shall not ask the minister to read it.

Mr. ILSLEY: The hon. member for Lethbridge (Mr. Blackmore) requested that finance be taken up at an early day, and it was thought this would perhaps be an appropriate day. I will hand the statement to *Hansard:*

WAR APPROPRIATION, 1942-43

Amounts Submitted by Departments

Agriculture—			
Agricultural Supplies Board—			
Board Administration	$ 34,502		
Flax Fibre Administrator	22,780		
Fertilizer and Pesticides Administrator	20,397		
Seeds Administrator	9,498		
Flour and Feeds Administrator	55,000		
Programmes to encourage the Production of Essential War Supplies	230,000		
Purchase, Storage and Distribution of Agricultural Supplies	1,405,583		
Assistance in the Disposal of Agricultural Products rendered surplus by the War	3,700,000		
		$ 5,477,760	
Bacon Board—Administration		71,300	
Dairy Products Board		1,514,950	
Special Products Board		978,271	
Freight Assistance on Western Feed Grain		2,000,000	
Fertilizer Assistance		1,000,000	
			$11,042,281
Auditor General's Office—			
Auditing and Checking War Accounts			196,000
Civil Service Commission—			
Supply of Personnel for War Services			301,625

External Affairs—			
Administration and Passport Office		$ 265,000	
Representation Abroad		100,000	
Consular Services		5,500	
Evacuation of Staff from Abroad		5,000	
Evacuation of Offices Abroad		22,500	
Canada-United States Permanent Joint Board on Defence		5,000	
Canadian Section of the Joint Economic Committees		53,000	
			456,000
Finance—			
Comptroller of the Treasury, Dependents' Allowance Office and Outside Establishments		$ 4,979,617	
Royal Canadian Mint		116,289	
Premium for the Purchase of Dominion of Canada Registered Stock		725,000	
Wartime Prices and Trade Board—			
Administration	$ 3,380,000		
Subsidies under the Price Ceiling Order	50,000,000		
		53,380,000	
			59,200,906
Fisheries—			
Wartime Fisheries Advisory Committee			3,000
Justice—			
Expenses in connection with Prize Court		$ 50,000	
Expenses in connection with Administration of the Defence of Canada Regulations		50,000	
Salaries of staff appointed under War Measures Act		4,668	104,668
Labour—			
To provide for unpaid accounts 1941-42—			
Assistance to Necessitous Dependents of persons detained under the Defence of Canada Regulations	$ 8,150		
Payments in connection with the training of individuals for skilled or semi-skilled occupations connected with war work	303,500		
Payments in connection with the training of men for R.C.A.F. ground crews and for other aircraft trades	180,500		
Occupational History for each member of Canada's Armed Forces	2,500		
Vocational Training for members discharged from Canada's Armed Forces	1,300		
		$ 495,950	
Assistance to necessitous dependents of persons detained under Defence of Canada Regulations		77,000	
Assistance to the Province of Ontario in recruiting, transporting and placing labourers upon farms in the Province		60,000	
Administration Expenses connected with War Emergency Programme		38,300	
Interdepartmental Committee on Labour Coordination		22,340	
National Labour Supply Council		21,240	
National War Labour Board		351,310	
Occupational History for each Member of Canada's Armed Forces		4,500	
Payments in connection with training of individuals for skilled or semi-skilled occupations connected with war work		4,850,000	
Programme to train young men for aircraft manufacturing and as ground mechanics for the R.C.A.F., including pre-enlistment education for aircrew personnel		3,850,000	
Specialized Training for Aircraft Manufacturing		100,000	
Vocational Training for discharged members of Canada's Armed Forces		300,000	
Wartime Bureau of Technical Personnel		128,450	
			$10,299,090

Mr. REID: I want to lodge a protest with the Minister of Finance against the present method of handling the agricultural affairs of this country, if the wartime prices and trade board is under the minister's control, which I believe it is. I think it is time that the attention of the house and the country was drawn to the fact that the wartime prices and trade board is dealing with agriculture, fisheries, and many other matters, and I am going to protest as loudly as I can against the present drift. The farmers are suffering from the low prices established on agricultural products. When you go to the Department of Agriculture they say: "We have nothing to do with it; you had better go to the Department of Finance." I protest strongly on behalf of the people of this country, and particularly the farmers, who are working like slaves below the cost of production. Things are getting so involved that you do not know what department to go to. When you want to deal with fisheries matters, you are told: "Under the wartime prices and trade board." When you want to deal with agricultural prices, you are told: "Under the wartime prices and trade board." When you want to deal with any matter almost, you are told: "Under the wartime prices and trade board."

[Mr. Ilsley.]

I have an advertisement here—I do not know who is advising the wartime prices and trade board—telling how much sugar children should have, and it says: "Children need sugar because it helps to build energy for active little bodies." Have they a doctor in the wartime prices and trade board who is advising them on matters of this kind? I warn this house and the country that there is a dangerous drift right now, and it is time to protest and to ask the minister where we are going.

Mr. HANSON (York-Sunbury): I think the protest by the hon. member for New Westminster is well founded. We have refrained from raising this question of controls because it is said to be unpatriotic to do so. That is the whole reason why this question has not been aired in parliament before now. The minister will have to say something in defence of this body that he has set up. I wish I had my files here. I could read what the minister said in this house on November 21, 1940, about price ceilings. I do not want to delay the committee, and I am not going to make a speech, but I suggest that hon. members read what the minister said in the debate on the address on November 21, 1940. I should like to quote what he said on that occasion. He

condemned price control out of hand. Then, after a long time, after somebody had sold him this idea; we had a complete reversal of attitude by the minister. The people of this country are bewildered.

I am in favour of control in war time to prevent inflation, if it can be done by any kind of decent method. I think the objective is good. I am not going to condemn it. But the whole difficulty is that they froze prices in this country on an uneven structure. There is the whole story. And they did it in an effort to do two things, to prevent the cost-of-living index from rising, and to prevent wages from rising. And who is the sufferer? The primary producer is the sufferer—absolutely. The wartime prices and trade board had thought for only certain factors in this body politic. They have had thought for the consumer; and of course he is entitled to consideration. But there are other people in this country besides the consumer. There is the wage earner, and above all there is the impoverished producer.

I am looking at the hon. member for Yarmouth. Go down into his community and see how the fishermen have been suffering because of the low prices of their commodities. Go into my community and see how the potato grower has been suffering, until this very year. Three years out of four he has operated at a loss, and in the fourth year, when he has a chance to recoup himself for the losses which he sustained in the three preceding years, a ceiling is placed on his product and he is told, "No; now that the opportunity is come for you to recoup yourself for the last three years you just cannot do it; you must shoulder your losses and pay them out of your capital."

This sort of thing has gone a long way, and I think it would be highly desirable to have a good wide-open discussion on it. I use a classic illustration, the question of hay. Hay is a prosaic commodity, but in the days gone by, in the Saint John valley and all across the river valleys of eastern Canada, it was a fine commodity and it sustained many a farmer. In the days of the automobile down to a comparatively recent period hay was a drug on the market. Last year it began to look up. Last year we had a good crop. What happened? When the farmers had just about completed the baling of their hay, at the period when hay is at its very lowest level of the whole year, between the 15th of September and the 11th of October, the price of baled hay was frozen. The trend of the market has always been upwards from October 1, to near the time when the new crop is in. Farmers in the Saint John river valley had the price of one of their principal commodities frozen, and it is unjust and unfair to these producers. I raise a protest on behalf of the hay farmers of the Saint John river and of the eastern townships and every other part of Canada.

Mr. CASTLEDEN: Right across Canada.

Mr. HANSON (York-Sunbury): Yes, you can see the same thing right across Canada. Here is something right under my nose, something which comes directly to my attention. It is something which many farmers are demanding to know. They are willing to make sacrifices for the war effort, but they see the huge prices which are being paid in the industrial areas; they see that 85 per cent of the increased national revenue is going to the wage earners, the consumers—and how much do these producers get? Nothing.

I think the hon. member for New Westminster deserves thanks for having raised this question. I am not going to carry it on now because I know that the minister is anxious to meet the wishes of the hon. member for Lethbridge, but this pot has been boiling a long time and somebody has to have the courage to deal with it. The whole subject has been dealt with without any plan at all; it is hit or miss, hit and run, trial and error, and the primary producer is the sufferer.

Mr. POULIOT: I wish to say just a word following the remarks of the hon. member for New Westminster (Mr. Reid) and the leader of the opposition (Mr. Hanson). It is to ask the minister to postpone this discussion until each member has had an opportunity of reading what the minister has produced. He is the only one who knows what is contained in the few sheets of paper he has handed to *Hansard;* therefore I think it would be unfair to all of us to insist that we continue the discussion now. The least that can be asked is that every hon. member should have the opportunity to read it in *Hansard,* and then the discussion should be much smoother; moreover, it will be orderly. At the present time, since we do not know what is before us, it is very hard for anyone to speak to the point. I hope the minister will be kind enough to appreciate this circumstance, and take up something else.

Mr. COLDWELL: I should like to support the leader of the opposition in some of his remarks.

Mr. HANSON (York-Sunbury): Hear, hear. A new convert!

Mr. COLDWELL: No, not a new convert at all, because as a matter of fact I suppose

the only group in this chamber which over a period of years has urged an intelligently planned economic structure is the group with which I am associated.

Mr. HANSON (York-Sunbury): Well, well, well.

Mr. COLDWELL: That is absolutely correct. But, you cannot have economic planning simply by imposing something in an arbitrary manner, and that is precisely the defect in connection with the control of prices. I am not complaining that the government did attempt to control prices. I think it was the proper thing to do under the existing circumstances. But the unfortunate feature of the whole thing was that they adopted arbitrarily the price level of a certain period, with the result that prices and wages which were out of line were frozen at those levels.

Those of us who come from the prairies remember that within the last few months we have had a long debate regarding a price level for wheat, and the price level for wheat was raised, I believe largely because of the pressure which was brought to bear by the western farm delegations and by various discussions in this house. But although the price of wheat was raised to a degree, it still was not brought up to a parity level. While we welcome the increases which were made, nevertheless we know perfectly well that there are other producers—the fishermen were mentioned a few moments ago; the producers of hay, the producers of other commodities, and then of course you have in some instances wages entirely out of line with those which are paid in other fields of endeavour. There are still people in this country who are getting less than 35 cents an hour and whose wages are more or less frozen at that level.

I believe it would be well if parliament would consider the matter of price control in a much wider and broader manner than it has been considered hitherto. When people look around and see some of the great manufacturing concerns engaged in war work increasing their net profits by very large amounts they naturally wonder just how that can be reconciled with the fact that producers of essential commodities are compelled to accept figures which are below the cost of production. We cannot solve this problem piecemeal; we cannot solve it by arbitrarily selecting a period and imposing an arbitrary price which is thereafter to prevail. What we should do is to endeavour to arrive at a fair basis of parity prices for at least primary and essential commodities, and then relate to that the wage levels and so on, so that there may be a measure of justice in the imposition of a price ceiling.

I do not propose to say more at this time, but when the budget is before the house I hope the minister will make a complete statement on the price ceiling and the policy in regard to it, and that at that time we may discuss the matter with more information at our disposal, so that we may be able to arrive at a better understanding of just what is being done. I am going to state, in fairness to the minister and those who advise him, that this is an attempt at least to prevent the price level from running away with itself, thereby bringing about a chaotic inflationary situation in this country.

Mr. ROSS (Souris): Following the remarks already made on this subject and the request of the hon. member for Fraser Valley (Mr. Cruickshank), I think the Minister of Agriculture should take some part in the discussion of this resolution. I know I have some questions I should like to ask with regard to the marketing of eggs, poultry and other agricultural products. There are some rather embarrassing matters connected with the marketing of these products which I think should be dealt with by the Minister of Agriculture under this measure.

I should like to say a word about the matter of controllers. I am satisfied that some of these controllers are given too much authority, and that they do not extend the proper cooperation to others in authority. A week or so ago I received some telegrams from my own community asking if permission could be obtained for the use of trucks to take people to certain school field days, which are held under the authority of the provincial department of education. In one of these telegrams it was pointed out that it would take ten or twelve automobiles and drivers to transport these children, while one truck and driver might be able to take them just as easily. You will realize the wastage of man-power and gasoline which could be avoided in that way. A government member from my province received a wire stating that some twenty automobiles and drivers would be required for this purpose, whereas the same number of people could be transported in one large truck. I spent most of the day with the officials concerned with this matter; I telephoned the controller in Toronto, but he refused to grant permission. The minister will realize that in the provinces we have public utility boards which have detailed information as to the operation of trucks, automobiles, buses, and so on. I suggest that the minister ask the controllers who have to do with

these matters to call a meeting of representatives of these utility boards in order to get the benefit of their experience, which extends over the last ten or fifteen years. In one day they would be able to obtain a great deal of useful advice, which might be of guidance to them when they consider issuing these drastic orders. If this is not done in the very near future the minister may not receive the cooperation on the part of the public which he and the government have been receiving up to this point.

I had the privilege of returning home last week and I was amazed at the number of agricultural producers who, irrespective of politics, are thoroughly disgusted with the manner in which these orders are being issued by the various controllers. These people are willing to sacrifice everything they have to buy bonds and war savings stamps; they will do everything possible to help win the war, but they do not like the way these orders are issued. Why, farmers who do not even attempt to operate cars but who own trucks are told that they cannot use those trucks to take their families to town to do the marketing. They are told they may not use their trucks to take their families to church on Sunday, which to me seems absurd. Then recently they were told that they may write to some divisional registrar and get a permit to use their trucks in this way if their application is approved. This system of controls and controllers needs looking into. It is creating an impossible situation in this country, which may develop into a very great hindrance to the war effort. I trust the minister will take this matter into consideration and see that some check is made.

Mr. BLACKMORE: Well, Mr. Chairman, I am a little at a loss to know where we are at to-day. I understood that the Minister of Finance was going to make a statement.

Mr. ILSLEY: No.

Mr. BLACKMORE: Perhaps I was misinformed; but the reason I asked that the Minister of Finance should come on and make a statement was that I realized that in addition to the problems which hon. members have brought forward thus far there are many other problems affecting the whole economy of Canada which have to do directly or indirectly with the Department of Finance. The hon. member for New Westminster put his finger upon a very sore spot, the cause of which simply must be removed; and in my opinion that matter should be discussed under this two billion dollar war appropriation. To the extent to which the Minister of Finance has in any way neglected to manage the economic affairs of Canada as they should be managed in the best interests of Canada, to that extent he is answerable to this house for the way in which he has administered his department. Therefore he should be brought to attention, shall I say, or called to account under this war appropriation.

I am particularly surprised to find that the leader of the opposition, who was so supinely willing to give up the discussion of this whole matter, apparently having concluded that it had been discussed sufficiently, should be so full of things to say even before he was in order. Now, however, all I want to do is find out whether or not the Minister of Finance is going to make a statement before we have any general discussion. I had concluded that he would, and I think it is the right way to proceed. Let the minister make his statement, as the other ministers have done already. Then let hon. members discuss, in an orderly fashion, the various aspects of that statement.

Mr. ILSLEY: I agree that at the moment the discussion is adrift. A request has been made that time be given hon. members to examine the statement which I placed on *Hansard* this afternoon. That is a reasonable request, and one which of course I cannot deny. It means that there will be days of discussion, but I have long since ceased to hope that this can be avoided, so that I think we will just have to reconcile ourselves to the inevitable. What I propose is that instead of going on with the finance part of these estimates this afternoon, we revert to national war services, which was opened up the other day, and that I come back on a later day, after hon. members have had an opportunity of examining the statement which I placed on record.

With regard to the proposal that I make a statement such as the defence ministers made, I want to avoid that if possible. I think it would be just a waste of time. I could make a review of the activities of the Department of Finance since I last presented a review of those activities to the House of Commons, but I seriously question whether that would be advisable, just on the eve of the budget. One of these days I am coming on with a budget speech; and we must have some little regard to the passage of time, otherwise we will be here until next September or October. I have placed a statement on record, including a break-down of the proposed expenditures covering the Department of Finance and the other departments. Hon. members want to look at that statement. As I have said, it seems to me a reasonable request; hon. members do not want to go on until they

have had a look at the figures. In connection with the Department of National War Services that is not necessary. That department has been before the committee for some time, so that perhaps we can go on and see if that department cannot be completed. That is the best I can do in connection with the problem of steering this discussion. With regard to what has been said this afternoon, I shall make no reply at the moment. I shall have to be in readiness to make a reply later with regard to the price ceiling policy, and so on.

Mr. BLACKMORE: Do I understand that the minister has already placed a statement on *Hansard*?

Mr. ILSLEY: Yes, this afternoon—merely a break-down of the proposed expenditures.

NATIONAL WAR SERVICES

Mr. POULIOT: I thank the Minister of Finance for acceding to the request for the postponement of any discussion on financial matters. Now here we are on national war services. In the first place I would ask the minister—

Mr. COLDWELL: I am sure the hon. member will not misunderstand me if I raise a point of order. On Friday afternoon the hon. member for Cape Breton South (Mr. Gillis) had almost completed his argument at six o'clock, and he would like to conclude his statement now, if the hon. member for Témiscouata does not mind.

Mr. POULIOT: I shall gladly agree to the suggestion of the hon. member. According to the rules I have the right to speak now, but just to show my spirit of fraternity I am delighted to give the hon. member for Cape Breton South an opportunity to conclude his remarks.

Mr. GILLIS: I want to thank the hon. member for Témiscouata for his cooperation; it is good to get a little from that side occasionally.

At the time of adjournment on Friday afternoon, I was endeavouring to point out that the boards now functioning for the purpose of calling men for military service would have to be reorganized if they are to do the job that has to be done. I think we gave the minister concrete evidence of that in the situation which arose in Toronto, where an important aeroplane plant was disrupted by having some four hundred of its trained men called for military service, some of whom had been declared medically unfit only a short time before. I was endeavouring, not for the purpose of criticizing but with the desire to help, to point out that I have considerable confidence in the people who are handling the national selective service, and I suggested that if the industries which are all-important to the war effort are to be protected in future, national selective service will have to have some considerable say on the boards that are calling up men for military service.

My conception of the whole situation now is that most of the men who will be called for military service in the different age groups in the future will come from industry, perhaps from industries that are essential. In view of the definite regulations laid down to be administered by the national selective service authorities, they will have to be given some representation on these boards, and some say, because the emphasis now is not on whether a man is eligible for service but rather on how essential he may be in industry. In that connection I am wondering whether national selective service has any latitude with respect to men who may be taken from industry. When we adjourned on Friday I was pointing out that there is considerable apprehension on the part of employees in the steel industry. For example, I had a letter from the secretary of lodge No. 1064, of the steel workers' union, at Sydney, Nova Scotia, where in one plant there are some 4,000 or 5,000 employees who are members of this union. In this letter it was pointed out that at that time, May 6, it was rumoured that instructions recently had been issued to all employers to prepare to release all men between the ages of twenty-one and thirty, and in this letter the fear was expressed that if the matter were left solely to the employers it could be done in a discriminatory manner, that a company policy of favoritism could be imposed. There is every justification for that expression of fear on the part of the members of the union. It is pleasant to be charitable, to think along charitable lines and to presuppose that the other fellow is as honest and patriotic as you are. Unfortunately the experience of these unions in the past does not give them much confidence in what the companies may do. The employer now has the right to go before the board—

Mr. MITCHELL: It is the employee who has the right to make the application.

Mr. GILLIS: But the employer has the right to appear before the board, and he makes the decision as to whether or not the employee is essential. In an organized plant you have men who are active in the union and who consistently work toward the raising of the standard of living of the employees. As a rule men of that calibre are not very well liked by the employers; so that

if one of them should be called for military service, regardless of how essential he may be to the industry it would be an easy matter for the employer to decide that he was not so essential, and to shift him out. I do not think it is asking too much on behalf of the working people to ask that labour be given representation on these boards. It must be done if they are to function properly, particularly when you have as chairman a judge who is impartial but who in most cases has not had much experience with the problems of the common people or the essentiality of men in industry.

In the west the farmers are represented on the boards. That is all to the good, since agriculture is the industry directly affected there. In the industrial sections, where the employer has an opportunity to be called in, labour should be represented. After all we must remember that it is the employee who is being regimented. His are the liberties that are being taken away. He is not making any great protest against that; all he asks is that the government give him equal representation on the board which decides whether or not he is most essential to industry or to the armed forces. I do not think that is asking too much. The miners, the farmers, the steel workers and all other organized workers already have demonstrated in many ways that they are deeply concerned in winning the war. I do not think any group in Canada is more cognizant of the necessity of winning the war than the organized workers of this country; for they know something of nazism and what it stands for and what they may expect in the future if we lose. I submit therefore that arrangements should be made to have the officials of the unions sit in with the board. These call-ups will not be made so very often. A board does not have to sit continuously. If it is necessary to take 400 or a 1,000 men from a given industry, I do not think it is too much to ask that the organized workers sit in with that board and decide whether a man is more essential here, turning out aeroplanes, tanks or other equipment vital to the war effort, or whether he is more essential to the army. That is all they are asking. I leave that thought with the minister for his consideration.

Before this discussion is concluded I should be glad if the minister would give us some information as to the latitude allowed in connection with national selective service. We have set up a national organization. From what I have gathered, that organization is in the hands of a very capable man. Has he sufficient latitude in administering the regulations, in connection with the particular angle of calling men for military service? Has he the latitude to administer that organization as he sees fit, under the regulations, or is he subject to direction and control by national war services, agriculture, pensions and national health, and labour? The ramifications of these regulations reach into all these departments.

In addition I should like to ask the minister whether any consideration has been given to this aspect of the matter: Canada has not unlimited man-power. To a large extent she will be the arsenal of the British empire. Upon his recent visit to Canada General McNaughton stated that so far as Canada was concerned emphasis would have to be placed on war production. What proportion of the man-power of Canada is to be placed in the armed forces? After consultation with representatives of other allied nations has the government reached any understanding as to what is necessary for Canada by way of man-power, recognizing of course that at the same time, for the duration of the war, we shall have to maintain industrial production in Canada to an extent undreamed of in the past?

Mr. THORSON: Mr. Chairman, the hon. member for Cape Breton South has raised questions of prime importance, which will require careful consideration not only by hon. members but by the people of Canada generally.

Before dealing specifically with the points raised by the hon. member toward the conclusion of his address, I should like to attempt to clear up some misunderstanding which may be in his mind. If he will read the statement made by the Prime Minister on March 24 he will see that in the main the national selective service system is placed under the jurisdiction of the Department of Labour, but he will also see that the administration of the compulsory features of the national selective service system, in so far as it relates to the calling of men for military training, and subsequently for service in the army for the duration of the war, is in the Department of National War Services.

On a number of occasions I have pointed out the composition of the divisional boards, of which there are thirteen. Each board consists of three members, headed by a judge of a superior court or some other court of the province in which the major portion of the division is located. Then there are four persons who have the right to appear before and make representations to the board. They

are not members of the board, but have the right to appear before it and make whatever representations they deem fit.

Mr. GILLIS: Who are these people?

Mr. THORSON: One of them is a representative of the Department of National Defence. He is usually a serving officer of that department, and is assigned by it to that particular duty. The second representative is from the national war labour board, and is appointed by and representative of that body. The third representative is from agriculture. Then there is also the representative of the director of national selective service, who has the right to appear before and make representations to the board.

The idea behind the scheme is that the representatives of the Department of National Defence, the national war labour board and agriculture are present to see that the interests, if I may use that expression, of those three groups, and the war objectives I mentioned some time ago, are safeguarded. I pointed out earlier that there were three war objectives, namely the raising of armed forces, the production of munitions of war and other war materials, and the supplying of food for shipment overseas. Let us look upon these as our three war objectives. These representatives when appearing before the board are, in a sense, guardians of those three objectives.

Mr. GILLIS: My point is that at present there is no one in authority to safeguard the production end of the matter.

Mr. THORSON: Oh, yes; I do not think the hon. member and I are very far apart, in reality. For example, the purpose of having a representative from the national war labour board is to see that the needs of essential industry are safeguarded. It would be his duty to indicate to the board his opinion as to whether a man should be called for military training, or whether his call should be postponed on the ground of his being essential to war industry or being attached to some other necessary activities.

Mr. GILLIS: What is the function of the national selective service representative?

Mr. THORSON: We recently added to the list of representatives the representative of the director of national selective service. He is there to see that so far as possible the best disposition of individual cases is made. So that in reality those persons with whom my hon. friend is chiefly concerned have two guardians, namely, the representative of the national war labour board and that of the director of national selective service.

[Mr. Thorson.]

Mr. MacINNIS: That depends on who the representative of the national war labour board would be.

Mr. THORSON: In all these matters the personal factor must enter; but the purpose of having these representatives appear before the board and make their representations to it is that of effecting a safeguard with respect to the various aspects and objectives of the war effort.

Mr. CASTLEDEN: Do the boards consider these cases before the men are called, or do they function in the manner indicated after applications for postponements have been made?

Mr. THORSON: The general practice is that the divisional registrar will send out a notice to report for medical examination. He will not know the position of any particular individual. If a man is rated category A-1, and does not make any application for postponement, the notice to report for military training at a certain training centre goes out to him in due course.

Mr. CASTLEDEN: What opportunity would he have of knowing in what category he was placed, if his own family physician did not tell him? Then, what opportunity would he have to ask for postponement?

Mr. THORSON: When he gets the notice to report for medical examination, at the same time, through a memorandum of instructions he receives, he is advised as to his right to apply for postponement.

Mr. FLEMING: How would he know in what category he was?

Mr. THORSON: I should like to reply to the hon. member for Cape Breton South, if I may. In a sense the board is really operating in respect of persons who have received notices to report for medical examination and have applied for the postponement of their military training—the board is operating a selective service system based upon the consideration of each individual case.

A man makes application for postponement, let us say on the ground that he is essential to war industry. The facts with regard to that man are on his card, but there may be other facts available. The representative of the Department of National Defence has a chance to make his representations. The representative of the national war labour board has the right to make his representations. There is also present a representative of the director of national selective service. Furthermore, the employer has a right to give evidence before the board as to the nature

of the man's work, whether or not he can support the employee's application for postponement upon the ground that he is essential to war industry. The board attempts to ascertain whether the considerations are such that the man should go to military training, or whether his military training should be postponed. They consider each individual case from the point of view of all the facts. They hear whatever evidence is forthcoming with regard to the man's case. The various representatives make their representations. I think it may fairly be said that the board is operating a national selective service system when considering all the facts in a particular individual's case. After hearing the evidence in support of a man's application for postponement and the representations made on his behalf, the board makes its decision in the matter, which is final. In making this decision it is really operating a national selective service system on an individual basis.

Mr. NOSEWORTHY: Is it not true that the onus for the selective service rests upon the indivdual? Suppose a tool-maker were called up; whether he remains in industry or goes into the army will depend upon whether he asks for exemption.

Mr. THORSON: Asks for postponement, yes.

Mr. NOSEWORTHY: Whether a man stays in industry or goes into the army depends upon whether he asks for postponement. That is what governs, not that Mr. Little or anyone else makes the decision. The final decision rests with the man who is called.

Mr. THORSON: In respect of the man who is quite willing to go into military training when he is called. The system does not entirely end there, because there is an arrangement with national defence under which a man may be brought out of the army under certain circumstances if he is considered a key man in war industry. Under the present system he cannot be brought out against his own will. We have not yet reached the point where a man can be pulled out of the army and put back into industry against his own will.

Mr. NOSEWORTHY: Can he be taken from one industry and placed in another against his own will?

Mr. THORSON: We have not reached that stage either. I do not want to be guilty of the charge laid against me by the hon. member for Cape Breton South that I am answering for other departments. However, I think I have stuck to my own department to a far greater extent than the hon. member for Cape Breton South has indicated. The boards try to arrive at a disposition of these cases according to certain principles, which are set out in the main in section 14 of the regulations. The board must consider certain classes of application from the point of view of the national interest and of all the surrounding circumstances. A study of the figures that have been given will indicate that the boards across Canada have looked with great care at these applications for postponement, and that the representatives of the various interests that I have mentioned have in the main done their duty and have safeguarded these various purposes in relation to the war effort.

Mr. HANSON (York-Sunbury): Is there any uniformity in the decisions across the country? Is it not a fact that in some places they construe them quite narrowly while in others wide latitude is given?

Mr. THORSON: The figures which I placed on *Hansard* some time ago indicate that there is a certain spread.

Mr. HANSON (York-Sunbury): In Quebec it is very wide and in Saskatchewan it is quite low.

Mr. THORSON: No, that is absolutely not right.

Mr. HANSON (York-Sunbury): That is the deduction I make from the figures.

Mr. THORSON: I am sure my hon. friend does not want to be unfair to any portion of Canada in connection with the granting of applications for postponement. The figures and percentages were placed on *Hansard* on May 11 and May 18.

Mr. COLDWELL: I am trying to get this straight in my own mind because I am receiving a number of letters from people in western Canada. The minister said that the initiative in the application for postponement must come from the individual.

Mr. THORSON: That is right.

Mr. COLDWELL: Look at the Prime Minister's speech of March 24, at page 1566 of *Hansard*, where he said:

> The liability to compulsory military service will continue to be general for the age categories affected. The burden of demonstrating the case for postponements is unchanged, except in the case of persons wholly or mainly employed in agriculture on March 23, 1942, as defined in the amended national war services regulations.

Mr. THORSON: Will the hon. gentleman read the next sentence?

Mr. COLDWELL: He goes on:

One of the man-power problems with which the country is faced is the growing shortage of agricultural labour. Means, accordingly, have had to be devised to ensure that the supply of farm labour it not depleted. To that end, regulations have been enacted to stabilize employment in agriculture.

Mr. THORSON: Keep on reading, please. The next sentence is the one.

Mr. COLDWELL: He goes on:

With three exceptions, the regulations provide that no male person wholly or mainly employed in agriculture on March 23, 1942, as defined by the regulations shall enter into any employment outside agriculture unless he has obtained written permission from the national selective service officer to enter such employment. They also provide that no person shall take into employment outside agriculture, any male person wholly or mainly employed in agriculture unless such male person has obtained such permission.

Mr. THORSON: Then a statement follows to the effect that persons wholly or mainly employed in agriculture will not normally be called up for military training.

Mr. COLDWELL: I will read the next sentence:

The three exceptions provided for are active service in the armed forces by voluntary enlistment, seasonal employment in a primary industry, and compulsory military training if it is established that the person concerned is not an essential worker in agriculture.

But it has to be established that the man is not an essential worker in agriculture. That is the whole point. It is the interpretation of this speech and of the regulations in different parts of Canada that is causing all the difficulty.

Mr. THORSON: My hon. friend has made a great deal out of that point of view. We have already covered in detail the application of the regulations relating to persons wholly or mainly employed in agriculture, on May 11 and again on May 18, and several times since then. I think it is perfectly clear, both from the Prime Minister's speech in the house and from my official press release of April 17, what the government's policy is. It was also fully dealt with by the conference of chairmen and registrars of the administrative divisions and I do not think I can usefully add anything to what has been already said.

With regard to the point of view put forward by the leader of the opposition, there is, I agree, a certain amount of apparent lack of uniformity in dealing with applications for postponement. Before one can conclude whether that apparent lack of uniformity is real or only apparent he must have possession of all the facts and of the differences of situations in the various provinces. But that there is some variation is unquestioned; I do not see how you can get away from some variation when you have the personal factor and, what is more important than anything else, when you have each decision made upon the facts of that particular situation.

Let me now come to some of the specific points raised by the hon. member for Cape Breton South. He spoke of organized workers and their willingness to cooperate to the fullest extent in the war effort. I should like to pay my tribute to the manner in which workers in every part of Canada have answered the call when it was made to them.

The board must find the facts as to whether it is in the national interest that a man should receive postponement from military training if, for example, he is in a war industry. They must find that as a question of fact. They hear representations and take evidence. Furthermore all the boards, I think in all parts of Canada, where there are large centres or where there is a considerable concentration of war industry in their divisions, have visited those industries and know pretty well their whole set-up. In a number of the divisions at any rate the whole situation relating to war industry has been worked out. The board knows pretty well who are the essential indispensable key men, who are the highly skilled men and who are the semi-skilled men; they know who are the beginners and learners. This system of working out plans for dealing with war industry in the large centres has been highly satisfactory.

When my hon. friend says that the boards need not sit continuously, I may say to him that to deal with individuals in the way that I have indicated becomes increasingly difficult and takes an increasing amount of time as the number of persons who come before the boards for review grows.

The director of national service has not the deciding say in the matter of compulsory calling of men for military training and subsequent service in the Canadian army for the duration of the war. That is not a function of the director of national selective service. The director has a great many other functions, but this function is not one of them. It is a function that is performed by the Department of National War Services through the thirteen administrative boards I have mentioned and operating in the way I have indicated.

I agree with my hon. friend that Canada has not unlimited man-power. and it therefore becomes a matter of the utmost importance to utilize such man-power as exists in the best possible way and in such a manner as will

make for the greatest effectiveness in the war effort of our country. It may be difficult at any one stage to say which of the three objectives I have mentioned is the most important at any one time. The Minister of National Defence has indicated what our objective in the matter of the armed forces is so far as man-power requirements are concerned. Roughly it is that we should have by the end of March, 1943, something over 600,000 enlisted men in our armed forces—that is, in the army, in the air force and in the navy—he has given a breakdown of that. He indicated also what the strength of the armed forces was at the time he made that statement. Similarly, the Minister of Munitions and Supply indicated the man-power requirements for his programme: that we have 600,000 persons engaged in war industry production, and that it was expected that another 100,000 would be employed therein by the end of March, 1943, and that a large part of the additional personnel would be women.

That is the programme which has been set, and it is believed that there is sufficient man-power to carry it out. That is the programme relating to the armed forces which was laid down by the Minister of National Defence, and the programme with regard to munitions production which was laid down by the Minister of Munitions and Supply, at the same time holding for agriculture the persons who are allocated to agriculture as a result of recent regulations relating to it. When we reach the objective of that particular programme we shall have to consider, of course, where we go from there. At this particular stage I do not see how it would be possible to indicate too far in advance what the respective objectives in the matter of man-power requirements should be. At the present time we are trying to attain all the objectives which I have mentioned as we have set them. In other words we are marching abreast towards the fulfilment of the programme which I have outlined. So far as the call-up for military training is concerned, in some divisions of Canada we are almost at the stage of exhaustion of the men in the age groups that we have called up thus far, and in other parts of Canada we are getting very close to that stage. As I indicated earlier, the reserves of man-power available for call for military training and subsequent service in the army vary in different parts of the country, as a result of many different causes.

Mr. DIEFENBAKER: Would the minister allow a question at this point? Apparently a survey has been made to ascertain how many men within the various age limits are still available for service. Is the minister in a position to say that the point of exhaustion is being approached in certain military districts? Will he give the committee the figures showing the numbers in the different districts between ages 21 and 24 and 24 to 30 who are still available for war service?

Mr. THORSON: That may not be so easy to do. I indicated at one stage that when we had the figures showing, for example, the impact of recent agricultural regulations on the man-power situation we would be in a better position to readjust the break-down of the requisitions that come from the Department of National Defence to the Department of National War Services.

Mr. HANSON (York-Sunbury): They only ask you for so many men.

Mr. THORSON: We will then be very close to the information which the hon. member for Lake Centre has in mind.

Mr. DIEFENBAKER: The information must be available, on the basis of national registration, which will show exactly the number of young men in the various age classes and the records of the numbers who have been called up.

Mr. THORSON: Oh, yes.

Mr. DIEFENBAKER: Then we would necessarily have, by a simple subtraction, the numbers that are available, both medically fit and unfit.

Mr. THORSON: I think I put on *Hansard* last November figures showing the numbers of men in each age group straight across Canada, by administrative divisions, and I think by provinces as well.

Mr. DIEFENBAKER: Then it is necessary to get enlistments, too, and calls.

Mr. THORSON: If you deduct from that the number of enlistments and the number of calls you would have still a great many deductions to make. You have the large deduction of persons who are below category A-1 at the present time. I think I could name quite a number of deductions which would have to be made, in respect of persons who are engaged in essential occupations—war industry, agriculture and other occupations which are in the national interest.

Mr. DIEFENBAKER: Mr. Chairman, there is only one way in which the minister can possibly say that the point of exhaustion is being arrived at, and that this committee may know just whether selective service is needed to-day, and that is to have the statistics of the pool of men who, if they would

enlist, would be available for service. I cannot understand the answer of the minister this afternoon when he stated that, after the expiration of two months, the government is still not in a position to advise this committee and the country when the system of calling men by lot is to be brought into effect, and what the nature of the system will be.

Mr. POULIOT: Just before the minister answers, I do not think the hon. member for Lake Centre (Mr. Diefenbaker) is fair to the minister. There is not a minister who has been more extensive in his remarks and in his answers—

Mr. THORSON: That is another way of putting it!

Mr. POULIOT: —than the Minister of National War Services. The hon. member for Lake Centre is asking for a tabulation. I wonder if he himself could recite a page of logarithms and give all sorts of figures of the kind. I know he understands my point, because he is a bright lawyer and an experienced debater, and he cannot expect the minister to give him off the bat such a number of figures. I am sure the minister will give him the information as soon as he has had time to tabulate it. Ministers may come here with their officials, but no one comes here with an adding machine and a typewriter to give information in this cafeteria for statistics. My hon. friend knows better than that.

If I am permitted I will tell the minister what my understanding is of the working of the department in getting men. It seems to me that the three defence departments, army, navy and air, are using the Department of National War Services for gathering men just the same as they apply to the Department of Munitions and Supply for munitions and supplies. The Department of National War Services, in that respect, is acting pretty much the same as the Department of Munitions and Supply and is helping the Department of National Defence. The requisitions for men come naturally through the Department of National Defence—from the three defence departments.

Mr. THORSON: From one.

Mr. POULIOT: They come to the Department of National War Services. According to a news item that appeared not long ago, on May 16, in the press, draftees can now switch to the navy or the air force, but they must enlist either in the air force or in the navy before they are called by the Department of National War Services for training. It is a new step towards disguised conscription, and I do not appreciate that method of dealing with trainees, because sometimes some of them have been waiting for a considerable period to get an answer from the board and they have to enlist at once either in the navy or in the air force, if they have inclinations towards those branches of the service, if they want to be accepted; otherwise they have not that choice any longer.

The change mentioned by the Prime Minister in his statement of March 24 indicated that the *onus probandi*, the weight of evidence, had been altered. First, it was the draftee, the trainee or the conscript who had to prove that his training should be delayed for one reason or another, and then it was up to the board to decide whether the evidence was enough to justify such a delay. Now when a trainee states that he is indispensable to the farm and asks for a delay it is the duty of the board or of someone else connected with the board to show that such is not the case, that the man is not indispensable to the farm.

Mr. HANSON (York-Sunbury): The law is the other way. The young man who applies must prove his case.

Mr. POULIOT: I am coming to that. All that was required according to the regulations was that the draftee when he was called had to undergo his medical examination, something he always had to do, and then write to the registrar informing him of the reasons why it was impossible for him to go. That was the former practice. But now, although it is said that the statement of the draftee that he is indispensable to farming is prima facie evidence, and although that has been broadcast in the press, the practice is altogether different from that indicated in the statements that have been given to the press. The young man has to give a sworn statement to the effect that he is a bona fide farmer, that his presence on the farm is indispensable, and then the board does not require contrary evidence to refuse his request. But the board takes upon itself to accept or reject such evidence, which seems contrary to the statement made by the Prime Minister, and contrary to what the Minister of National War Services has just said.

If we take the request of the young men in the army who have to get leave to help their parents on the farm, the procedure is much more complicated. There must be a sworn request giving all data and sworn to by the draftee himself; and in the second place there must be two other sworn statements of persons who are not related to him. How can it be said afterwards that the weight of

evidence has been transferred from the private individual to the state when the private individual is required to bring forth so much, and especially when the board many times pays no attention to that evidence and decides just the same as if there were weightier contrary evidence when there is none? Take the case of a particular farmer. Let us call him A. He is a young man whose father and mother are dead and he is the only support of his younger brothers and sisters. The condition of his health is not very good and he earns enough money in civil life to provide support for the whole family. That young man is in the position of a married man with a family, and if he brings his case, supported by the mayor and by the parish priest and proves that it is a cruel hardship, the board can come to this decision: No; we will pay no attention to that evidence; go to your training. And then if a young man who is already in the army submits his request to his commanding officer, the commanding officer is supposed to transmit that request to the board. But it is optional with him. He can refuse. He may grant certain leave, but on the other hand he may say, "No, I will simply keep that request on my desk".

I have here the case of a young man, E-615935, a soldier at Valcartier, who on April 27 submitted his request for leave to his commanding officer and up to May 27 had heard nothing about it. It is very embarrassing to leave people under a false impression. Of course I believe that everything that has been said about it has been said in good faith; but when boys who were on the farms saw in the press that on March 23 all those who were then on the farm were frozen on the farm, they said: "What is the use of reporting? We are already exempt; at last we have that exemption that we had during the last war." Moreover, the newspapers gave a good deal of publicity to the matter and those boys who were in good faith found to their surprise afterwards that they were deserters because they stayed on the farm and worked there on the very day when all those who were doing so were supposed to be exempt. I want hon. members to understand the situation.

An hon. MEMBER: Nobody can understand it.

Mr. POULIOT: I am trying to explain what happened, and I admit it is a cobweb. But what I want hon. members to understand is that these young men are acting in good faith and they have been deceived by statements made in good faith. But not only that. The situation looks complicated, but it is really much worse. There is a distinction between those who had one month of training and those who had four months. It is a subtle distinction that must have originated in the mind of that eminent counsel who before the war was lobbyist de luxe for John de Kuyper's concoction.

An hon. MEMBER: You don't like John de Kuyper?

Mr. POULIOT: It is not that, but I do not see how anyone can describe as eminent counsel one who was a lobbyist de luxe for John de Kuyper's concoction.

An hon. MEMBER: Who was he?

Mr. POULIOT: That will come out in due course. Here is the case of E-615608. I have a sworn statement which I will summarize. It is the case of a young farmer. He said that on December 22 he was on temporary leave and visited his family and did not return to the camp and they told him he was a deserter. He stayed with his father to help him with his work on the farm. The father needed him. He said his father's farm consisted of 200 acres, of which 135 were cultivated, and that on the farm there were five horses, twelve cows, four calves, twelve hogs; sheep, hens and chickens. He was the only son who could help his father in the work. That was why he could not return to the camp. This letter is dated May 2, but this young man was on the farm on March 23 and notwithstanding that, he is supposed to be a deserter.

Here is the case of F-13800, another farmer's son, whose father is very ill. There is a certificate from the hospital stating that the father has been in hospital and that he cannot work on the farm. The farm is a large one. There is a certificate from the mayor who is also warden of the county, and it is impossible for that young man to get an answer from the board.

Here is another case, that of a son of a baker who was sick and could not work. This is the case of F-67322. The father could not work and was replaced by his eldest son who did the work in the bakery. The boy went to his training and was replaced by his younger brother. The younger brother is needed at home because he is the support of the family during his father's illness. The case has been submitted to the board but there has been no answer yet.

I have received very many letters. I will only read two that have come to me, one from the county of Bonaventure and the other

from St. Valérien, Rimouski county. I will send a copy to the minister. He is a linguist and knows both languages very well. I quote:

(Translation)

St-Charles Caplan, May 28, 1942.

Sir,

Although I am not a resident of your constituency, I beg leave to submit my case to you. I am a farmer and the only son I have who might be of assistance to me is undergoing military training. I have tried in vain to have him released for the summer in order that I might have the help I need on my farms, and the steps I have taken are as follows.

I wrote to Mr. Henri Paul Drouin (reg.), and to Capt. Laniel, of Rimouski. I was referred to Colonel Chaloult, of Quebec. My son was sent to Three Rivers; I wrote to Colonel Forbes, forwarding under the same cover a letter from the parish priest, signed by the mayor, asking that an investigation be made on the spot, if necessary, following which I mailed two other communications. You may appreciate success of my endeavours when I tell you that all I have received, since March 31 last, was a reply stating that my request had been referred to the Department of National Defence.

I own three farms, three hundred chickens, one hundred hens, twenty-three head of cattle, four horses, one tractor and twelve hogs. I have a family of seventeen children to look after, the eldest of whom are girls. My only helpers are a cripple who spent five years in a hospital and is unable to work hard, and a grandson of thirteen who still attends Sunday school. You will easily see that I cannot get along without additional assistance. Although I do my best, I must perforce neglect a great many things. The authorities encourage agricultural production and at the same time deprive me of the only valuable assistance I had. Is this fair? I am already exhausted, and the work is far from done. I hope, Mr. Member, that you will not remain indifferent to my appeal, for otherwise I do not know to whom I should turn in order to obtain a modicum of justice.

You may be sure that I shall be very grateful for anything you do on my behalf.

Yours faithfully,

That is one. The other one is from Rimouski, and is as follows:

St-Valérien, May 27, 1942.

Dear Sir,

You may find it strange to receive a letter from a resident of another constituency, especially on this subject, but a friend in Rimouski advised me to write to you.

Here is my problem: I have a son who entered the army on Dec. 4; he is a farmer's son and we absolutely need him on the land. I requested that he be allowed to return home during seed-time and to help me build a barn. However, no leave was granted to him. I have lost the only helper I could really count on, and I have six acres of land by forty in length. . . .

He says his farm is one of 240 acres. It continues:

. . . I have a youngster with me, but he is not accustomed to handling farm machinery.

My son underwent two months' training in Three Rivers and Rimouski, was then sent to Sherbrooke and from there to Sussex, N.B. He again applied for leave in Sussex, and they seem to be taking this under consideration. If you were able to assist us in the matter, I think we could succeed. We did not object to his undergoing four months' training, but we would like to have had him on the farm at seed-time and until after the harvest. It is too bad to see him penned in down there when he loves the land so much. During his three days' leave, he took time out to plough a field.

In conclusion, I trust that you will be able to help us. I shall need his services badly when I start to build my barn in June.

(Text) This is another case with respect to a young man, a farmer, who took advantage of his three days of leave to do some ploughing.

Mr. HANSON (York-Sunbury): Did he overstay?

Mr. POULIOT: No; he went back to his regiment. We complain of the shortness of the delay in making the call; the young men have no time to present their cases to the board. I have in mind the case of F-21457. This was a young man who had been sick at home, and who was notified that if he did not go at once for his medical examination the mounted police would be sent after him. This happened during the winter when there were enormous snowbanks on the ground, and it was very cold. This young man had to leave his bed to go for medical examination.

This sort of thing has happened not only in Quebec; the same has happened at Cornwall. A returned man, who is working in the House of Commons, came to me to complain about the way in which his son had been treated at Cornwall. The boy had been home, and while home had developed pleurisy. However, the military authorities wanted him at once in Cornwall, and they brought him back in a truck.

Mr. FLEMING: Who did?

Mr. POULIOT: The army military police. Then I have in mind another case with respect to a young man who was placed in category A.

Mr. POTTIER: How many cases has the hon. member?

Mr. POULIOT: If my hon. friend has some cases in his constituency, he will be free to bring them to the attention of the committee. If he is not interested, he may go back behind the curtain and smoke a cigarette. I am working for my electors, and no power will prevent me from defending them. Besides that, I am not affected by jeers or ridicule; they leave me entirely indifferent. If my hon. friend wants to know how many cases I have, he has only to listen to me and count on his fingers, to save time. I do not wish to be offensive; I

like the hon. member for Shelburne-Yarmouth-Clare; he is a friend of mine, but I will not stand for any interruptions when I am defending the case of a farmer in this country.

Mr. FLEMING: And the hon. member is making a good job of it.

Mr. POULIOT: I do not know whether it is good or bad, but I do my duty to the best of my ability. I am sorry I have not the eloquence of some hon. members. This is not funny work; my files are open to all, and it will be seen that I look after my people. Moreover, I have an office at Rivière du Loup just to look after farmers' sons; that is the only work my secretary is doing there. There is also the tremendous amount of correspondence I have here. I attend to that seriously; it is not a joke. Anyone can call me this or that; I do not care. But when it comes to the defence of my electors, I am behind them, because I know they stand by me when I need them.

Not only have I cases from my constituency; I have some from Ottawa. For instance, here is the case of Mr. James O'Meara, of 67 Redpath street, Ottawa, who speaks for his son. This is a general complaint about the way in which things are being done. I do not blame the minister, but I wish him to understand what is happening. I am willing to cooperate with him, and I am also ready to help him redress the wrong. Wrongs must be redressed.

If we must have conscription, then let us see that we have conscription, and we shall know where we stand. But when we are hearing about a voluntary system, and people having no opportunity to defend themselves, I find it unjust and unfair. That is why I fight for my people. I believe we have a voluntary system, and I believe in the law; this is a matter of law. But if we are to have conscription, then let us say, "there is conscription for overseas. We do not want to bother about the defence of this country. We are thinking about the defence of other lands." If we hear that, then we shall know where we stand and what to say. But as long as we have the so-called voluntary system, and as long as the voluntary system is not working well, it is the duty of each member of parliament to defend his electors. He should explain the cases having to do with farmers. We are not yet eating soya beans, but I hear that experiments have been made. If soya beans are used, the farmers will be even more useful. We need the farmers; they are essential and vital to our war effort. They are just as vital as the soldiers, because if there were no farmers the soldiers would not be fed.

I hold in my hand a certificate dated August 16, 1941, from the record office of the Ottawa General hospital, which states:

This is to certify that Harold O'Meara was a patient in the Ottawa General hospital from April 17, to August 6, 1933. He was treated for a traumatic cataract.

Then, I have a letter from C. E. Ruddy, addressed to Mr. James O'Meara as follows:

Your letter in reference to your son, Pte. Harold O'Meara, has been received.

Your representations regarding your son's disability, are not consistent with the findings of the medical examiners. On enlistment his eyes were given the usual rigid test and he was rated category A. He was re-examined a few days ago as to both physical condition and eyesight and his category confirmed. Therefore he is definitely fit for active service.

The following letter dated September 12, 1941, is from Miss O. J. Waters, private secretary to the Minister of National Defence (Mr. Ralston):

Mr. Ralston has asked me to acknowledge receipt of your letter of 11th September, in which you advise that your son Harold O'Meara, who is serving with the Ordnance Corps at Camp Borden, has an eye disability.

I am at once bringing your letter to the attention of the appropriate officers of the department in order that they may know of this condition.

I now quote the following letter between the same parties:

I have for acknowledgment your letter of October 9th, in which you make further enquiries regarding your son, C.38005, Private Harold O'Meara.

Your previous letter was referred to the appropriate officers of the department in order that your son's eye condition might be investigated. I shall be glad to refer your further enquiry to the officers concerned, with the request that they forward you the latest information regarding your son's physical condition.

Yours very truly,

O. J. Waters,

Private Secretary.

Then on November 11 there is a letter from the acting deputy minister to Mr. James O'Meara, which reads:

With further reference to your letters of 11th September and 9th October, addressed to the Minister of National Defence, I wish to advise you that your complaint regarding your son's eyesight was referred to the appropriate military authorities and advice has been received that Pte. O'Meara was medically examined and found to be in category A by a medical board, immediately prior to his departure overseas.

However, a letter has now been written to Canadian military headquarters overseas advising of the eye operation performed on your son in 1933, and requesting that his eyesight be examined and report forwarded to national defence headquarters.

When this information has been received you will be further advised.

There is another letter to Mr. O'Meara from the acting deputy minister dated February 4, that reads:

I acknowledge receipt of your letter of the 29th January, 1942, which was forwarded to me by the Department of National War Services. A cable has been sent to Canadian military headquarters, England, asking for a statement as to your son's condition, and you will be further informed as soon as a reply has been received.

The next letter on the file is from Captain R. Fraser, for Colonel L. P. Sherwood, Ottawa area command, and it reads:

Your letter of March 14, 1942, addressed to Captain Williams, R.C.O.C., Lansdowne park, has been passed to this H.Q. for attention.

Upon investigating this case it has been found that a Harold O'Meara, giving his address of 67 Redpath street, presented himself for enlistment in the first Canadian ordnance field park, R.C.O.C., and was medically categorized E for high blood pressure. He was declared unfit for military service at the time, July 3, 1941.

Joseph O'Meara came in for medical examination from the recruiting office, 93 Sparks street, and was medically categorized B2, defective vision of right eye.

Would you supply this H.Q. with more specific information regarding your son Harold as record here indicates that he was turned down on account of failing to meet physical standard required.

Your son Joseph was taken on strength No. 3 district depot in March 14 order. His present age would appear to be over eighteen years and is eligible for general service. He cannot be sent overseas until he is nineteen years of age.

For your information, please.

It is quite extraordinary to read in this letter that the Department of National Defence must ask a father to give evidence as to whether his son is sick. The next letter has reference to the information received from England. In England they came to an entirely different conclusion. This man was first placed in category E; then a month later he was placed in category A and later in England he was placed in another category. The letter reads:

Cable advice has been received to the effect that your son, Pte. H. W. O'Meara, C38005, has been medically boarded in England and placed in category C1.

Ordinarily category C1 means that a soldier is fit for service in Canada only. However, permission has been granted to retain category C1 men in England if their services are required there.

I am unable, therefore, to advise you as to whether or not your son will be returned to Canada because he has been lowered in category.

That is just one case. There is no excuse for such things happening. We should try to have a reform. There are some fellow members who are medical practitioners, such as the hon. member for Humboldt (Mr. Fleming) and the hon. member for Parkdale (Mr. Bruce) who is the dean of his profession, and I think they will agree with me that these medical examinations should be carried out with greater care. When the older Mr. O'Meara wrote to the Department of National Defence he was sent from pillar to post, and his son had to cross the Atlantic in order to get a grading more in conformity with the facts. Is this not absurd? I ask my colleagues to help me in getting this reform. It will be for the good of all. It is a bad thing when a man who is not medically fit is taken into the army just to satisfy the pride of the officer in charge of enlistments.

I realize that the minister is busy; I know he has one of the most ungrateful tasks in the whole government. He can rely upon me to help him, but we should not try to help him by agreeing with everything that is done. It is up to us to point out the bad spots so that he can use all the means at his disposal to bring about reform for the improvement of his department and the improvement of the army. I have many other cases to which I could refer. We cannot discuss these matters theoretically; we must bring up concrete cases.

The O'Meara case is a scandal, and I have other similar cases which occurred in my constituency. However, there has been an improvement in my district simply because I have fought hard over certain cases. I do not want to have to take charge of Kingston district, but when a man comes in and shows me correspondence like that it is my duty to place it on *Hansard*. I do not wish to have much to do with the Minister of National Defence because he is like Fabius, who used to temporize. It takes just as long to get an answer from the minister as it does to get results from squeezing a stone. If the Minister of National Defence cannot understand the arguments put forward by members of parliament, his colleagues may. It is with that hope that I make this argument. I expect to have some support, even inside the cabinet, in the reform of the wrongdoings in the Department of National Defence.

We see what is going on, and we want to improve the welfare of the soldier. We want to see that his sons and daughters are kept healthy. We want our soldiers to be well looked after and receive the proper treatment, not only when they are undergoing medical examination but when they are on sick parade. I know my hon. friends who are medical practitioners will be scandalized when I tell them that at the citadel at Quebec a soldier appeared on sick parade. The captain, the so-called doctor, asked him, "What is the matter with

you?" He said, "I have a rupture." Do hon. members know what the answer of that doctor was? He said, "Get a good rub for the rupture." The man who was to give the rub was a lumberjack, with hands just as long as poles and as rough as sandpaper. He was to give a rubbing for a rupture. My medical colleague, the hon. member for Humboldt smiles, but it is true. I have the actual file. Sometimes men who have been declared physically fit and classed in category A have come to my office and I have started my medical examination. Without pursuing it too far, I discovered that one man was suffering from a rupture—he was rejected and put in category E—another man had chronic appendicitis, and there was also a case of goitre. I just asked them questions, and I found that the fault was just as much the local doctor's as the army doctor's. All of the doctors seem to want to send men, whether fit or not, into the army. The more the better seems to be their policy, without taking into consideration the actual state of health of the man. All these practices must stop.

Now that I have had my turn I will give way so that other hon. members may bring before the committee all their complaints.

Mr. GREEN: There are three suggestions I should like to bring before the minister, each one of them having to do with the mobilization division of his Department of National War Services. That division, by the way, is a very important division and becoming more important every month as more and more men are called up for service.

My first suggestion has to do with the groups of young Canadians who are to be called up for military training and the order in which they are to be called. Last Thursday the minister made an announcement which was of the greatest importance, even though the announcement came out in the wash, so to speak, in the midst of questioning. It will be found at page 2872 of *Hansard,* where the minister is reported to have said:

> But when we move the age group up—
>
> Mr. Cruickshank: If.
>
> Mr. Thorson: Not if, when. We will probably move up the age group very soon. We are now calling the age group of from twenty-one to thirty years, and I would not be at all surprised if we moved that forward to thirty-five years within a very short time.

I repeat, that was a very important announcement. For me it signified that there is uncertainty in the ministry as to the order in which these young Canadians are to be called up. There is also great uncertainty in this house; not one of us here can tell his constituents what men are to be called up next. There is also uncertainty in the press. The result of the minister's announcement on Thursday night was that the press published such headlines as this, in the Montreal *Star* of Friday, May 30:

> Pool of single men for draft running low. Extension of plans to 1907 class leads to married men.

From the Ottawa *Journal* of the same date I read this heading:

> Married men may be called to the army. Start with those who were twenty-one in July, 1940.

The first paragraph of the article, which I think appeared in most of the large Canadian dailies, reads thus:

> With mobilization authorities apparently scraping near the bottom of the pool of available single men of prime military age, the time draws nearer when married men may be called up for compulsory military service.

The result will be that there will be even greater uncertainty in the minds of the Canadian people. Let the minister picture the position of the men who may be called up to serve: for example, single men and widowers without children in the age group from thirty-one to thirty-five, the same classes of men in the age group from thirty-six to forty-five, the single men of nineteen and twenty, and the younger married men. All of these Canadians are wondering when they are to be called or whether they are to be called or not, and there is the greatest confusion.

It seems to me that the lack of a clear-cut policy is neither sound nor fair. Our people are entitled to know, and to know well in advance, what groups are to be called up next. Indeed they are entitled to know in what order the groups are to be called, so that men can adjust their lives accordingly; and not only that the men can adjust their lives, but that their families and the firms for which they work and other people with whom they are connected can also make the necessary arrangements. There is at present too much mystery about the whole matter. The ministry should decide without delay upon a policy as to the groups to be called next, the order in which they are to be called, and approximately when these groups will be called for service. Not only should they decide upon such a policy, but they should most carefully explain it to the Canadian people. It affects the lives of hundreds of thousands of Canadians, and there will be no success in the working out of the policy unless it is most carefully explained to our people. That is my first suggestion.

The second is that the selection of men by lot from the groups called should be started now, without further delay. The switchover to this lottery system seems to be bound up tightly in red tape. Some of us advocated selection by lot many, many months ago. That system has been used in the United States from the start, where even before the war they called up men in the age group from twenty-one to thirty-five—I think those were the ages—by lot. This selection by lot is admittedly the fairer way. The minister himself said so. I quote his remarks at page 2312 of *Hansard:*

> . . . we intend to change that method of calling men, and to make the call applicable to all the men in all the age groups covered by the proclamation. That is to be done by a system of drawing by lot. Back of that is the view—

Here are the important words:

> Back of that is the view that that would be a more equitable manner of making the call. At present all men up to thirty years of age are covered by the proclamation, and are liable to call. It is now proposed to call these men by lot, and all the men in all the age groups subject to the proclamation will take their chances in the draw.

That was promised over two months ago by the Prime Minister, when he spoke in this house on March 24, and said, as reported at page 1566 of *Hansard:*

> It has also been decided to select the men to be called up for service by drawing lots over the whole field of those who are subject to the proclamation.

When the minister himself spoke on May 11 he said that as soon as they could work out the administrative difficulties the call-up would be by lot, but as yet the government is selecting these men by juniority, as the minister said the other night. I think he was inventing a word, but it described the process very well, which is that the system so far has been to take the youngest age group and to go through that group before going into the next one.

The picture, as I understand it, is this. First of all, practically all of our men from twenty-two to twenty-six inclusive have already been taken in previous calls.

Mr. THORSON: Not in all parts of Canada.

Mr. GREEN: The great majority of men of these ages have been taken, have they not?

Mr. THORSON: It varies in different parts of Canada.

Mr. GREEN: The call on March 24 was for those who would be twenty-one this year and for men who would be twenty-seven, twenty-eight, twenty-nine and thirty during the present year. The minister on November 12 last placed on *Hansard,* page 4303, the figures of the single men in Canada as found by the national registration. I will not give the figures of each of these age groups that are now subject to call, but they total 291,838. Of that number, almost one-half, it is to be assumed, are unfit, so that approximately 150,000 men would be available. There have, however, been thousands upon thousands of enlistments from these groups, and if I am informed correctly the government has no accurate record of how many from these or any other groups have enlisted since national registration.

Mr. HANSON (York-Sunbury): They must have.

Mr. GREEN: No; they have no accurate record of the number who have enlisted. For example, we find in this morning's Ottawa *Citizen* a dispatch from Brockville district:

> District man overseas receives his call-up.
> Although he has been overseas for almost a year, Mrs. Maurice Grigsby, Hubbell street, received a registered letter from national defence headquarters, for her husband, Lieutenant M. G. Grigsby, notifying him of his call-up for a medical examination previous to entering a basic training centre for compulsory military training. Lieutenant Grigsby, who enlisted here more than a year ago, and who was the first Brockville boy to graduate from the officers' training centre, is with the R.C.A.S.C. He was recently made adjutant of his unit overseas.

Another case, which came to my attention two weeks ago, was that of a lad from Vancouver who received a call for service while home on his embarkation leave—having been in the army for nearly two years and won his commission.

An hon. MEMBER: Some of them are dead.

Mr. GREEN: So I repeat that the government has no accurate record of how many young men have enlisted; to that extent it is working in the dark. Then, the figure of 150,000 would be further reduced by the numbers of farmers, farm labourers, and others who are exempted—for example, men in war industry. We have this picture, that the groups which were called on March 24 are now used up in some of the districts and nearly used up in others, so that there is little chance of many of these men being selected by lot. For them a call-up by lot is a farce; it is, I repeat, a farce as far as these men are concerned. In the group to which the minister referred the other night, single men and widowers from thirty-one to thirty-five inclusive, without children, there will be probably

much the same situation. They, according to the national registration, numbered 140,944, and from that one would have to deduct about half as unfit.

Mr. THORSON: More than that.

Mr. GREEN: They are older men, and the percentage of unfit will accordingly be larger. Many of them, too, have enlisted. So that there is not a great number of men in that group.

Mr. THORSON: No.

Mr. GREEN: I repeat that there should be no delay in beginning this selection by lot. Let the administrative staff shear through the red tape and get this new system started.

The third suggestion is that there should be no further delay in extending the liability for military service to all residents of Canada, whether citizens or not. The Prime Minister said on March 24, as reported in *Hansard* at page 1566:

> Liability for compulsory military service is, at present, confined to citizens of Canada. It has been decided to extend this liability to all residents of Canada, whether citizens or not, as far as may be expedient in the light of all the circumstances.

Yet none of these non-citizens have been called up. When will they be called? This house and the Canadian people are entitled to know. I would remind the Minister of National War Services of his speech the other evening on equality of sacrifice, a speech which I thought was excellent. Yet here we have this situation: thousands and thousands of Canadian citizens have been called up, and in thousands of these cases their jobs have been taken over by young men of the same age who are not Canadian citizens and, in some instances, are enemy aliens but not interned. The Canadian people cannot be convinced that there is equality of sacrifice as long as that condition continues. It is unfair and dangerous that there should be such a long delay in calling up these non-citizens. I suggest that young men who are citizens of countries which are allies or are neutral should be called just as though they were Canadian citizens and should be put into the forces, and that enemy aliens who are not interned should be called for labour work; let them be put in a civilian construction corps. The government announced some months ago that that was to be done with some of the men of Japanese origin, but as far as I know the plan has never been worked out. I warn the government that this condition must be remedied. We must not leave these non-citizens free to take the jobs of young Canadians who are being called up.

Those are the suggestions which I have for the minister. May I add something which, to a degree, is in his defence. I think one reason for the lack of a clear-cut policy on the calling up of men, for the delay in calling up by lot and for the delay in calling non-citizens is that, while the responsibility for getting men remains with the Department of National War Services, the power has been shifted to the Department of Labour.

Mr. THORSON: No, no.

Mr. GREEN: On March 24, selective service plans were announced. The orders in council then filed included one which transferred national registration, the records thereof and everything having to do with that registration to the Department of Labour. Therefore, when the Department of National War Services wants to call men, it must go to the Department of Labour, if you please, to get information.

Mr. THORSON: Not at all. We have all the cards for the single men up to forty-five in the divisions.

Mr. GREEN: Well, if the minister's department wants to get further information on any men, it must go to the Department of Labour.

Mr. THORSON: No; we have all the cards relating to all men up to forty-five in the divisions.

Mr. GREEN: I am trying to help the minister out, and he would be wise to keep still and let me fight his case for him. Another handicap is that under the same orders in council the director of national selective service has been put under the Deparment of Labour, not under the Department of National War Services. In other words, the emphasis has been placed on men for war industries rather than on men for the armed forces, and the result has been and will be confusion, and fewer men for the services. The Department of National War Services should have the last word on all those men in the age groups that have been called or are eventually to be called. This department is of vital importance, and, as I said in the beginning, is becoming more and more important all the time as more men are called. It can do more than any other department to bring about equality of sacrifice in the war effort and to keep high the morale of the Canadian people. But neither of these great

objectives will be reached if there are indecision and delay—which exist at the present time unfortunately—in connection with phases of the work of the department such as the three that I have mentioned: what groups are to be called and in what order; selection by lot; and the calling up of non-citizens.

Mr. THORSON: The hon. member for Vancouver South (Mr. Green) has raised a number of questions which are really related to certain questions which the hon. member for Lake Centre (Mr. Diefenbaker) put a little earlier. I have been waiting for the first opportunity to deal with some of the questions put by the hon. member for Lake Centre. The question of how many men are available for military training and subsequent service in the army for the duration of the war is not an easy one to determine, for this reason. We know how many persons have received notices to report for medical examination. Those go out in the ordinary course. Then we know the number of men who have been rejected as being below category A1; and as we go into the higher age groups and deal with persons whose physical condition is not as good as the condition of those of earlier years, we run into an increasingly high percentage of persons who are found not medically fit for service in the armed forces. Then we have postponements on various grounds that have been mentioned. These postponements, in the opinion of the boards, at any rate, are made on the ground of national interest. If they are made on that basis and there are no more persons in the divisions to whom to send notices, except of course that there is always the continuing number of persons who become twenty-one, we can say—it is only relative, I will admit—that we have reached the point of exhaustion of our man-power reserve if we continue the men postponed in occupations which thus far have been deemed to be essential. That man-power pool or reserve for the purposes of the armed forces can be enlarged in these cases—

Mr. DIEFENBAKER: In the future.

Mr. THORSON: —but only if we strip war industry or agriculture or other essential occupations of their man-power requirements. Whether it would be wise to do that depends upon the state of affairs at any one time; it depends upon the importance of any particular aspect or objective of the war effort at any one time. That, I think, was stressed by the hon. member for Cape Breton South (Mr. Gillis), who expressed great concern for the steel workers in connection with the war effort. At one stage of the war it may be absolutely essential to the successful prosecution of our effort that men should not be taken out of war industry; yet who can tell what situation may develop, depending upon emergencies? It is hard to say, therefore, just what is the absolute limit of our man-power reserve, and I do not think we can make a purely statistical approach to the question of man-power reserve by reason of the many deductions that have to be made from statistical figures.

Mr. HANSON (York-Sunbury): But does that not depend upon the objective—the number of men that the government proposes to have in the army, and the number of reinforcements that are necessary to keep them going (a) in war time and (b), which is much more important, during the time when casualties begin to roll in?

Mr. THORSON: Quite so.

Mr. GREEN: And does it not depend upon how hard it is to beat the Germans and the Japs?

Mr. THORSON: Of course, that is the important thing, and it may be that man-power for purposes of the armed forces may be the most imperative need above all other needs. All I suggest is that we cannot be arbitrary in stating the priorities at any one time. I think the programme of our armed forces is based on an increase in the capital strength of the armed forces, and it is also based, as I understood the Minister of National Defence (Mr. Ralston), on two reserves of reinforcements. The one is the usual wastage reserve, which is fairly well known, month by month, and the other is the battle casualty reserve, which of course is a matter of estimate. There were a number of other points raised by the hon. member for Vancouver South, but it is now six o'clock.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. THORSON: I was about to deal with some of the matters raised by the hon. member for Vancouver South. I appreciate what he said about the uncertainty in the minds of many men in this country as to the time when they will be called for military training and service for the duration of the war. But while I appreciate that uncertainty, I should also say that if we are to make the utmost use of our man-power reserve, and if we are to march toward the attainment of

our various war objectives concurrently, we cannot avoid the feeling of uncertainty to which my hon. friend made reference; for war itself is a matter of uncertainty.

Mr. GREEN: But why could the government not say which groups are to be called next; in other words, give the order of the groups?

Mr. THORSON: Thus far we have been calling men by age groups, dealing with the lowest age group first, then marching into the next age group above that, and so on. I think it well when we reach, or come close to, the exhaustion of a set of age groups subject to proclamation, that we should indicate that fact in plenty of time, so that young men may be able to put their affairs in order. I think it is fairer to young men to make the announcement some time in advance of the time when they will be subject to call.

I agree with the hon. member for Vancouver South in his expression of hope that the system of selecting men by lot may be put into effect as soon as possible. I think it is a fairer system than that in force at present, of exhausting a complete age group before going into a subsequent group. I think the system of selection by lot is very much fairer. Then everybody takes his chance by the lot. I can assure my hon. friend that the administrative matters which must be attended to before that system can be put into effect take some time to complete.

Mr. GREEN: When will the lot system be put into effect?

Mr. THORSON: I would not like to say. I should like to see the system in operation for the July call; but whether or not the administrative details can be worked out in order to make the system applicable to the July call, I cannot say at the moment. I can only assure my hon. friend that the matter is being worked on intensively.

My hon. friend made reference to one other matter, namely that notices to report for medical examination are sometimes sent out to persons who have already enlisted. In some instances that is absolutely inevitable, because the man who has enlisted does not notify anyone of his enlistment. He may enlist in one part of Canada while the address on his registration card is in another part of Canada, and it takes some time for those facts to reach the various registration divisions.

Mr. GREEN: Does the Department of National Defence not notify the Department of National War Services?

Mr. THORSON: The Department of National Defence does its best to keep the Department of National War Services continuously informed as to enlistments.

Mr. GREEN: How long have they been doing that?

Mr. THORSON: Oh, for some time. The situation is better now than it was previously.

Mr. GREEN: They did not originally, did they?

Mr. THORSON: Well, they were not too good about it. But that situation is improving, though of course that notification is not instantaneous. It cannot be, by its very nature.

Mr. GREEN: It seems to take a couple of years in some instances.

Mr. THORSON: Well, I would not go so far as to say that, and I am sure my hon. friend does not mean it either. Then, too, there may be a number of other reasons why notices may be sent to persons who are no longer available. They may have moved; perhaps in some instances they have died. Sometimes that likewise is quite inevitable; but we are endeavouring as far as possible to eliminate all those persons to whom notices to report for medical examination should not be sent. That takes a little time. Then the cards have to be dealt with, and there are many thousands of them. My hon. friend quoted from a return the number of single men in the age groups from twenty-one to forty-five. They extend into the hundreds of thousands. I assure my hon. friend that it is not an easy matter to work into this system, which I think is fairer than the present one; but we are making as much headway as possible with the administrative arrangements, and just as soon as the administrative details have been worked out I shall make the announcement to which the Prime Minister referred.

The third suggestion which my hon. friend made is that all residents of Canada, whatever their citizenship may be, should as far as possible be made subject to the national war services regulations.

Mr. GREEN: I did not advocate that enemy aliens should be called for military service.

Mr. THORSON: Of course there would be some qualification in the matter of enemy aliens.

Mr. GREEN: I recommended that they be put on labouring work.

Mr. THORSON: Yes; but even enemy aliens, while not made subject to the national war service regulations, from the point of view

of their being included in the armed forces, might become subject to the regulations for some kind of alternative service, just as we make the Mennonites, Doukhobors and conscientious objectors, whose cases are postponed as far as their military training is concerned, subject to alternative service.

The Prime Minister made the announcement that it was the policy of the government to make all residents of Canada subject to the regulations. The matter of policy is settled, but there are arrangements to be made in connection with the various classes and categories of aliens. There are a number of categories of aliens which would have to be considered in the matter. There are those who are citizens of allied countries. They can be dealt with by an interchange of regulations. We have gone a very great distance in that respect, as far as our relations with the United States are concerned. Then there are the aliens who are citizens of neutral countries. They are in a somewhat different category, but arrangements can be and are being worked out with regard to them.

Mr. GREEN: When will they be subject to call?

Mr. THORSON: The amendments relating to aliens will be announced in the near future. I do not believe I can go any further than that.

Mr. HANSON (York-Sunbury): Have they been drafted?

Mr. THORSON: There have been several drafts.

Mr. STIRLING: They are amendments to what?

Mr. THORSON: Amendments to the national war services regulations, making the regulations applicable to persons resident in Canada, regardless of their nationality.

Mr. GREEN: Does the minister mean that the aliens have been drafted, or the regulations?

Mr. THORSON: The regulations are being drafted. Then, there are the citizens of enemy alien countries. Further, there are various aliens who are stateless persons. In addition, there are British subjects who are nationals of the various British dominions, and who are not ordinarily resident in Canada, but are here for the time being.

Mr. GREEN: Are they subject to call?

Mr. THORSON: Not as yet, under the regulations as they stand to-day. The present regulations are applicable only to every male British subject who is or who has been at any time subsequent to September 1, 1939, ordinarily resident in Canada.

The dominion has given authority to certain of our allies to recruit their nationals in Canada. That authority has been given with respect to Netherlanders, Belgians, Norwegians, Poles and Czechs; but we have not yet given any of our allies the power to conscript their own nationals.

Mr. GREEN: It is all on a voluntary basis?

Mr. THORSON: Yes. We have worked out certain draft conventions with the United States relating to draft evaders and deserters.

Mr. HANSON (York-Sunbury): I notice we are opening recruiting offices in the United States. Can the minister tell us anything about that?

Mr. THORSON: No; I know no more about that than the leader of the opposition has seen in the press. The matter of working out the necessary amendments to the regulations is intricate, but in some instances reciprocal arrangements are being worked out. In others it is desirable to communicate with representatives of the countries involved, so that they will deal with our nationals in the same way as we deal with theirs, and not otherwise.

The number of aliens in Canada is surprisingly small. Last fall I placed on *Hansard* a table showing the number of aliens in Canada, and I was very much surprised by the smallness of the number.

Mr. GREEN: That ought to make it all the easier to get action in the matter.

Mr. THORSON: Yes, it makes it easier. I do not anticipate any real difficulty at all, when we have worked out the necessary amendments. When those amendments have been decided upon they will be enacted, and then residents of Canada who are not now subject to the regulations will become subject to them, and called up in due course.

Mr. GREEN: Will they cover young enemy aliens also?

Mr. THORSON: I think we could work out regulations dealing with enemy aliens, just as we are working on a number of other amendments to the regulations for the purpose of using certain persons who are below category A-1, and therefore not fit for those services in the armed forces which require men of a high category, for other purposes. We may be able to use such men for some other activity that may be in the national interest. The regulations are capable of expansion in a variety

of ways. I have no doubt that we can work out regulations that will deal satisfactorily with enemy aliens.

Mr. GREEN: After single men and widowers without children between the ages of twenty-one and thirty-five years have been called, what age groups will then be called?

Mr. THORSON: I do not think I can make any statement at this stage with regard to that. As I pointed out a moment ago, the regulations are applicable to "every male British subject who is or who has been at any time subsequent to the first day of September, 1939, ordinarily resident in Canada, while he is of the ages of twenty-one years to forty-five years inclusive and who was on the fifteenth day of July, 1940, unmarried or a widower without child or children." The regulations apply to such persons, but the only persons who are subject to call are those in the age groups specified in the proclamation issued pursuant to these regulations.

Mr. ROSS (Souris): Where a man enlists in the air force for air crew and becomes washed up and is discharged, will he be liable to call for training in the army?

Mr. THORSON: Technically he is subject to call. Under section 13, I think it is, we can recall such men. I am not sure that we have not done so in some instances. A person may be rejected for certain reasons by the air force and still be perfectly fit according to army standards. He may fail in some quality essential to air force standards but have all the qualities required by army standards.

Mr. ROSS (Souris): I have been told that in some districts this is rather prevalent. It is quite easy to become washed up and discharged, but I understand that in some places they are not then being called up for the army.

Mr. THORSON: They may get notice to report for medical examination under our regulations.

Mr. CASTLEDEN: Are there many cases where the physician making the preliminary examination passes a man, and then later on he is reexamined and put in category E as permanently unfit? A man is permitted to visit his family physician for examination, but he is not told in what category he is placed. He receives his call, and perhaps after a week or so of training he is examined by the medical authorities and found to be in category E.

Mr. THORSON: There have been cases where not only the original physician but the medical revision board have marked a man as category A1, and then after he has reported to the training centre and has submitted himself for examination by an army medical board, he is rejected. The full extent of these rejections can be seen from the tables I placed on *Hansard*. One table shows the number of persons requisitioned by the Department of National Defence. Another table shows the number of men who have been ordered to report to training centres. All these men would be graded category A. Then a third table shows the number of persons actually accepted at the training centres as being fit. A comparison of the third and second tables will show the percentage of rejections by army medical boards of men who have been passed category A either by the doctor of their choice in the first instance or by our revision boards.

Mr. CASTLEDEN: What time elapses between a man going to his own physician for a preliminary examination and the time he is told to report? There was brought to my attention last week the case of a man who received a notice to report. On Friday this man had his examination, but not knowing in what category he was placed he did not make an application for postponement on the ground of being engaged in an essential war industry, that is, an aircraft plant. On a week from the following Monday he received a notice to report at the Connaught ranges in Ottawa. The notice was received on Monday evening at 6.30 o'clock, and he was to report on Thursday morning. He had no opportunity to place his case before a board because the time between the receipt of his first notice to report to a doctor and the time he was supposed to report for training was only eight days. Is that the usual length of time granted these people?

Mr. THORSON: As I pointed out this afternoon, a man receives two documents, one entitled, "notice—medical examination", and the other, "instructions". The document of instructions notifies him of his right to apply for postponement.

Mr. CASTLEDEN: Within what length of time?

Mr. THORSON: Under the regulations he is required to apply for postponement within eight clear days of the date of the notice.

Mr. CASTLEDEN: He received notice to report within six days.

Mr. CHURCH: The minister has given us an explanation about the various classes which have been called up. The other night we heard about conscientious objectors, and to-night we have been hearing about enemy aliens. A great deal of money has been spent by this

department in connection with mobilization since the start of the war. The army under the control of the minister has a different system. I do not wish to be unfair. I have described this department as an omnibus department, and I do not think it can be described in any other way. However, in connection with mobilizing men for the army the department has been a flat failure right from the start.

We have had recruiting on again, off again and on again. Aliens and conscientious objectors who are called up seem to be received into the army with kid gloves. The treatment they receive is different from that given to those trainees who were called up two weeks ago. I saw some of them in the union station at Toronto and other places on their way to camps. In one camp in the Toronto district, before the trainees had been in camp twenty-four hours, they were told by coercion that unless they enlisted for active service overseas they would be moved out very shortly to another place. Is there to be one law for the British-born in this country and another for the alien from continental Europe? If these people come to this country and accept the freedom, liberty, rights and privileges of Canada, then when the enemy is at the front door, the side door, the back door and all the other doors of this country, these people should be compelled to do their duty to the land of their adoption. That is the first duty of any citizen since any country has been a country.

I may not be very good at arithmetic. I may be something like the editor of the Ottawa *Citizen* who was referred to the other night by an hon. member. The hon. member for Qu'Appelle got into an argument with the minister on the call-ups in Quebec and Ontario, and on arithmetical and geometrical progression and harmonical progressive mathematics over the way in which these particular people were called up. There were 38,000 called up, and 37,000 asked to be excused in one province. It seems to me that the more that are called, the fewer get into the army. There are so many varieties of calls that about the only call I have not heard of being sent out to these men to enlist is a call to the bar. Many are called but few are chosen under the minister's department. The system is an impossible one. How can we win this war and Canada do its duty under the present system, or secure a total war effort? We are now in the sixth month of this year, and not a thing has yet been done to get men into the army. Men are willing voluntarily to go into the air force or the navy, both of which have a large waiting list, but there are so many riders, restrictions, exceptions and provisos that the army has been hampered from the start in getting men.

The mother country is wondering what is the matter with Canada. Canada was represented at the imperial conference in 1937 and knew the great danger for our empire there was on both the Atlantic and the Pacific and to the province of Quebec and the maritimes. All the cards were on the table, and Canada knew what was going to happen. Yet we cut down our expenditures until we had no fleet and no air force at all. What did Canada say at that 1937 conference? She held aloof, refused to cooperate with Britain, and said: "We have no commitments. Parliament must decide". The Minister of National War Services himself was one of the main supporters of this policy of neutrality.

Mr. THORSON: That is not true.

Mr. CHURCH: A bill standing in his name was on the order paper six months before the war, declaring that if war came, Canada was bound to be neutral. The bill declaring for isolation came up for second reading on March 31, 1939, and I talked it out. I will read the preamble:

> Whereas it is expedient that the status of Canada in time of war should be made clear and declared by the parliament of Canada: Therefore His Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:
>
> (1) Canada shall not assume the status of a belligerent.

This bill was discussed in the House of Commons, and it was or seemed to be the policy of the government of the day; there is no doubt about that. Why, the Prime Minister himself visited Hitler in 1937 and had a conference with him. I asked what the conference was about, but he was not prepared to say in detail.

The minister the other night said that the North American continent, Canada and the United States, was isolationist. He was and always was. Are we, the British-born, going to sit here in this house and listen to such remarks as were made here last Friday, at a time like this when Great Britain is grappling with the foe and was left to bear the whole brunt of the war for two years and four months alone? After Dunkirk we thought Britain would be invaded and the British empire would be gone; but as Mr. Churchill said, speaking in this house, Britain then had "some neck". We have been sending emissaries and wasting money in publicity all over the United States for the past ten or

fifteen years; we have established an embassy at Washington, all tending to separatism and isolationism. Then we sent deputies to Hollywood, by aeroplane, spending from $40,000 to $60,000 on pictures according to Hollywood to convert the United States to war. Last session congress carried the president's army bill by only one vote; the neutrality law was repealed by only fourteen votes in the senate, and that country was until Pearl Harbour isolationist. Canada is not and never was isolationist or for separation. The government was before the war.

If we do not wake up we shall have a Pearl Harbour in the St. Lawrence, while we sit here talking about raising a few men for the army. If it took as long to get twelve men for a jury as it takes under this cumbersome system to get twelve soldiers, there would be very few cases tried by jury in this country.

I can tell you that Canada is not going to be talked out of the British empire. Canada will have to be fought out of the British empire. I tell the government of the day: You cannot ride two horses regarding the army any longer. You must line up with the mother country and help Canada get her an army now before it is too late next summer. Every sixty seconds to the minute, every sixty minutes to the hour, every twenty-four hours in the day we are approaching the midsummer climax which will decide the fate of the British empire, of the world and of this country and of civilization forever and the fate of religion, freedom and liberty. Yet here we sit day after day since January devising riders, restrictions, provisos and exemptions for this class and that, which make it almost impossible for the minister himself to do his duty of getting men for the army. I think he would like to do it if he could. He was wrong before the war. Handicapped as he is I believe he has done the best he can. But he is hedged about with doubts, provisos and all that kind of thing.

Like the editor of the Ottawa *Citizen* on the 38,000 called up and 37,000 wanting a stay, I may not understand arithmetic; that is what was said of him here, or of one of the staff of that paper. My hon. friend the member for Qu'Appelle does arithmetic every day, as I see when I go to his office, and he said the other night that he knew something about arithmetic when he had a debate on arithmetic with the minister. I have said before that the House of Commons never wants to be told that two and two make four but would rather be told that two and two do not make five. What is the position with respect to these figures? Thirty-eight thousand in Quebec were called up, received notice to report to the registrar, and 37,000 of these gentlemen wanted to be postponed and 23,000 of these were allowed a stay. For two years and eight months the war has gone on, and all these gentlemen ask for a postponement. If the war lasted for fifty years there would still be a majority of them wanting postponement. We will never get an army to defend Canada or overseas. If all the arithmetic in the figures tabled is wrong and the headlines in the newspapers are wrong, the information and publicity bureau should be abolished altogether. The information bureau was established before the minister took over his office, I know, but I say that the publicity that has been turned out from the information bureau marks it as the most mischievous institution in this country. That publicity published in *Hansard* of Friday last leads Britain to believe that the whole north American continent, Canada and the United States before the war, was against her when Britain was bearing the whole brunt of the war for over two years alone. Canada was not for isolation. Last year Britain bore the brunt of the war, and in 1942 Russia is bearing the brunt. Russia, with 2,000,000 men, and what aid she is getting from the allies, a comparatively small amount of equipment, with some help from the Royal Air Force, is attacked by Germany, and Germany now has 3,000,000 German soldiers and 14,000 German tanks. What aid are we giving? Britain is doing well in aiding her with production and an air force.

Are we doing our duty at this fateful hour in the empire's history? What have we done? We had a proposal of mine four years before the war for a national selective registry, but nothing came of it. Then in 1940 we had the registry taken by the minister's department, although he was not in office then. It was a registry taken all over Canada at huge cost. Information was collected showing the number of men of military age. Very little was done about that and the tabulation took too long. Then we had a census, again at a huge cost to this country. Then we had a plebiscite with a lot of information and six weeks of talk, and a stay, and now we have some more registers of the ministry of labour which no doubt will also be committed to the archives with the new selective register—earth to earth, ashes to ashes, dust to dust, in the sure and certain hope that they will never be resurrected again as far as this government is concerned. Mr. Churchill said the other month in the British House of Commons that humbug plays a large part in our democratic bodies. Well, I think he must have been in this chamber and had a look round; he would have found considerable evidence to prove the correctness of his aphorism.

Mr. THORSON: He might have found an example in the person who is speaking.

Mr. CHURCH: Never were there so many who knew so little about so much, especially as it applies to the army and to the minister and his isolation policy of 1939. This proposal to establish a publicity bureau in the United States reminds me that the government had a great advocate of publicity sent in an expeditionary force to the United States, in Mr. L. W. Brockington; that gentleman went up and down the United States, Washington-minded telling them, "King George did not declare war for us; we declared war for him." That is the kind of separatist and isolationist talk for which we are invited to pay under this minister with the Atlantic situation as it is to-day, and radio talk and propaganda. The people voted for a total war to beat Hitler.

The Minister of Finance said the other night that there is something wrong with the House of Commons. What is wrong with the house is that the government of the day want us to be nothing more than a lot of yes-men and nodders. They have removed control by the high court of parliament over expenditures and any control by the auditor general. Yet we are responsible for how all this money is being spent, much of it on publicity and information bureaux, on the plebiscite, and so forth. Not one dollar of the estimates has been passed yet this year on the seventy-sixth day of our sittings.

The government is not taking the right way to get an army. The manner in which the quotas are established and enforced is very unfair to Ontario. I had a return tabled, and it shows that Ontario is contributing a larger part of the army, navy and air force than is any other province.

Mr. POTTIER: That is not so.

Mr. CHURCH: The people of this country want the government to get on with the war and a total war effort. The yes vote showed the unanimous desire of the great majority of the people to cooperate to the last man and the last dollar with the mother country. When all is said and done, everything we in this country have to-day of freedom, civilization and liberty we owe to the mother country, and the United States is in the same position. Were it not for the heroic stand of the British people after Dunkirk the war was lost and the United States, on this continent, would long ago have had to make peace with the axis powers, who by then might have been in Washington. But we can take one leaf out of the book of the United States, by learning how she enforces the draft against all, and deals with aliens and those who disobey the draft laws. There is not one law there for the rich and another for the poor. All must obey it. Moreover, in the United States everybody is expected to salute the flag, and there is only one flag and one anthem. There is only one flag in this country, the union jack; there is only one anthem, the national anthem. Our United States friends require every citizen, young and old, to salute the stars and stripes and their anthem, and to give prompt obedience to their draft laws, while we in this country sit here putting in provisos, exceptions, exemptions, and all that kind of thing.

I do not know that I can say anything further. I am sorry to have detained the committee so long; it was not my intention to have spoken, but I feel I should state that in my belief what was said last Friday in this chamber disheartens the people of the motherland at the darkest hour of the war. That Canada, the senior dominion, takes the position expressed by her official spokesmen of the cabinet in the House of Commons causes us to be compared with countries which were isolationist and separatist before the war. I doubt whether we would have had war if this dominion had done its duty at the last imperial conference, instead of urging disarmament.

In my opinion this department has outlived its usefulness. What has this information and publicity branch accomplished for all the money that has been spent? After all, the worst informed people are the people of Canada. Quite a number of Canadian newspapers do not report the proceedings of this house. We cannot blame them. Some of them think the proceedings are not worth reporting; that is a matter for them to decide; but I will say that if the mint of money which has gone to the publicity branch and the information bureau had been spent on the press in getting proper information to the public through the press, the results would have been quite different. Our newspapers are interesting and entertaining; they have fulfilled a fine function in this war mostly at their own expense, and without cost to the government. The work which one Toronto newspaper did for British victims, in educating the people of Ontario and all Canada, was one of the most cheering things which has greeted the mother country since the war began, and shows that the heart of Canada, at least, is sound and is with Britain to the end. If we had publicity of that kind in this country and in the United States I would not object to it, because in America they owe a great debt of gratitude to Britain for the fleet which has protected their shores, and but for which they would have been subjected to blockade and blackouts, and have suffered the ravages of Hitlerism two years ago.

Mr. NICHOLSON: The Prime Minister, speaking in the house on July 12, 1940, in moving the second reading of the bill setting up the Department of National War Services, outlined the general scope of this department. He said, as reported at page 1571 of *Hansard* of that year:

The department will also undertake the initiation and promotion of voluntary effort in new directions, in immediate furtherance of our war effort and to enable Canada to make in the most effective and efficient manner the necessary economic and social adjustments to meet domestic problems arising out of the war.

I know that the minister in charge of this department has to do with things of the mind which might not appear to be as spectacular as the building of ships, aerodromes, tanks and the other commodities necessary in connection with the prosecution of the war. Nevertheless a very important role must be filled by the minister if the Canadian people are to understand clearly the issues which are at stake and are to be persuaded to do whatever is necessary to carry this war through to a successful conclusion.

To-night I should like to discuss one field of activity where, to date, I feel that the government has been lax. In connection with the consumption of liquor in Canada the government has failed to do the necessary work in informing our people of the tremendous losses in production which go hand in hand with the increasing manufacture and consumption of liquor.

Mr. E. P. Taylor, one of the dollar-a-year men associated with the government, and president of Canadian Breweries Limited, was interviewed by the Toronto *Globe and Mail* after he returned from the old country about a year ago, and he is reported as saying:

A lot of the non-essential industrial activities (in Canada) of different kinds will gradually have to be curtailed as fast as we can obtain machinery to produce war materials.

He thought that Canadians were not taking the war seriously enough and urged that they must forgo luxuries for guns and tanks and aeroplanes.

That was in February, 1941. In February, 1942, Toronto *Saturday Night* devoted a full page to telling just exactly what Mr. Taylor's firm is doing to carry out the objective that he outlined while speaking to the *Globe and Mail*. The annual report, which is signed by E. P. Taylor as president, boasts of this fact:

Your company has for several months been carrying on an extensive export business to the British forces in the theatres of war.

Another paragraph:

After providing for depreciation and other charges, including income and excess profits taxes, the net profit for the year amounts to $570,570.11, in comparison with $525,032.78, in the previous year. Dividends were paid on the preference shares at the full rate of $3 per share. . . .

Further extensive improvements were made to several of the company's plants.

Another paragraph mentions:

Your directors are now putting forward a proposal for the elimination of the arrears of dividends on the preference shares, which is embodied in a by-law to be submitted to the holders of preference shares and the shareholders as a whole at separate meetings as indicated in the accompanying notice.

I wonder if anyone ever heard of men in industry who were unemployed for several years being able to take advantage of present situation to secure the arrears of wages which they did not receive. Yet Mr. Taylor indicates that his company plans to pay now the dividends that were not paid during the depression.

In the *Brewers Magazine* of May, 1941, there appears this amazing statement:

One of the finest things that could have happened to the brewing industry was the insistence of high ranking officers to make beer available at army camps. . . . The opportunity presented to the brewing industry by this measure is so obvious that it is superfluous to go into it in detail. Here is a chance for brewers to cultivate a taste for beer in millions of young men who will eventually constitute the largest beer consuming section of our population.

Apparently, with companies like Canadian Breweries Limited and their subsidiaries and the *Brewers Magazine* carrying on such vicious propaganda, it can scarcely be left to the good intentions of private individuals to see that the necessary restrictions are carried into effect.

In July, 1940, representatives of nearly all the churches in Canada and the temperance organizations waited on the government and made four concrete proposals:

1. That the sale of alcoholic beverages in taverns, beer rooms, wine shops, etc., be discontinued and that sale of such beverages be confined entirely to government-owned liquor stores.

2. That sale from government liquor stores be permitted only between the hours of 3 o'clock in the afternoon and 8 o'clock in the evening and on week days only.

3. That all advertising of liquor in Canada be forbidden except in the place of sale.

4. That when the request in item 1 is implemented, an order issue from the Department of Defence closing all wet canteens in military establishments.

Seven months after this delegation waited on the government and made their proposals I asked in the House of Commons on February 19, 1941, as reported at page 826 of *Hansard* of that year:

Has the government adopted any change in policy in connection with the manufacture and sale of liquor under the War Measures Act?

The minister who was in charge at that time replied no. Then I find that the present minister, on January 31 of this year, stated in a letter to the Canadian Temperance Federation:

It is now settled beyond dispute by a long series of judicial decisions that the regulation and sale of intoxicating liquors is within the exclusive jurisdiction of the provinces.

I understand that the minister was a professor of law, and I am certain that if we were in peace time very few would have taken exception to the contention that the federal government should not interfere with problems that might fall within the jurisdiction of the provinces or municipalities; but now we have entered into every phase of the life of the people, and it is nonsense for the minister to say that entry into this field is something that should not be undertaken by the federal government. The Canadian temperance delegation pointed out in reply to the minister that it had been recognized in the recent judgment of the Supreme Court of Ontario that the Canada Temperance Act was valid—and it is a dominion statute. The Canada Temperance Act is more restrictive than the present liquor control law of Ontario.

The minister further stated:

Such examination of the facts as the government has been able to make after careful consideration does not indicate that there is actually any case of national necessity.

I am surprised to find the minister making such a statement in a situation such as this. I have just received the latest information from the bureau of statistics giving the amount of gross sales by various liquor control boards in the different provinces and the net profits made by these different governments, with the increase in the sales last year compared with the previous year. The table is as follows:

	Sales, 1940	Sales, 1941	Per cent increase	Total net revenue in 1941
Nova Scotia	$ 8,458,175	$11,449,300	35	$ 3,358,235
New Brunswick	5,209,122	6,627,025	27	2,220,308
Quebec	17,991,145	19,583,890	8·9	7,270,810
Ontario	22,820,689	26,847,956	18	12,294,175
Plus sales of beer	28,435,819	34,599,089		
Manitoba	6,653,342	7,886,905	19	1,874,954
Saskatchewan	7,273,941	8,509,226	17	1,941,185
Alberta	9,365,551	10,753,378	15	3,207,627
British Columbia	14,960,234	17,590,253	18	4,841,482

I am ashamed to observe that the gross liquor sales in my province of Saskatchewan were more than the total amount which the Minister of Finance asked the people of the province to raise in connection with the recent victory loan.

As the leader of the opposition rightly said the other day, it is a serious reflection on the Canadian people when such a large proportion of the revenue of the various provinces is derived from this traffic. It has been estimated that our liquor bill last year would have fully equipped 800,000 soldiers or would maintain 100,000 soldiers in Canada for eight months, or in Great Britain for six months, or would have paid for 250,000 Bren guns or 26,000 Bren gun carriers, or 100,000 anti-aircraft guns or 2,700 fighter planes, or 850 Bolingbroke bombers, or 1,700 "ram" tanks or 222 corvettes or 34 destroyers.

In an article in *Liberty* of March 21 there was a statement to the effect that within the past three months more than 400,000 cases of beer had been shipped to the various battle fronts by one company alone. I am informed that the amount of beer which has been shipped to the troops overseas since the beginning of the war would fill fifty miles of boxcars, 90 per cent of which would be water, and it seems unfortunate that at this particular time we should be finding space to move fifty miles of boxcars loaded with beer. When it was necessary to send materials to Hong Kong, the best that could be found were boats travelling at eight knots an hour, boats that did not reach Hong Kong with those essential materials in time for them to be used by the brave defenders of that strategic point. Hon. members may be interested to learn that the president of a company that has done a large export liquor business, Mr. E. P. Taylor, is one of our dollar-a-year men. In the most recent issue of the *New World* his picture appears in connection with an interesting article on the "Head Office of the United Nations." Here we have a picture of the British supply council; we see Sir Arthur Salter, Mr. Morris Wilson, Lord Beaverbrook, Mr. E. P. Taylor and Mr. Jean Monnet. The article states that in some respects the

British supply council acts as a coordinating body for the allies as well as for the British empire. Listen to this:

> Whether it is an apple or a flying fortress, the British supply organizations endeavour to get these goods to the places most in need of assistance.

I understand that is Mr. Taylor's job, to see that whether it is an apple or a flying fortress—

Mr. MacINNIS: Or a barrel of beer.

Mr. NICHOLSON: —or a barrel of beer, these commodities will be sent as quickly as possible to the places most in need of assistance. But apparently Mr. Taylor was not successful in getting the needed equipment to Hong Kong in time to be of any use to our defenders there. He was able, according to this article, to see that 400,000 cases of Canadian beer were shipped to the various battle fronts. I might say something about the job the minister should be undertaking, as I see it I see the minister smiling over there. I wish to tell him that this is no laughing matter.

Mr. THORSON: I was not smiling at the hon. member.

Mr. NICHOLSON: Then I think the minister might pay attention when this subject is being discussed in the house for the first time, in view of the fact that religious and temperance organizations all over Canada have been appealed to again and again to dig down and subscribe to victory loans, to buy war savings certificates, to engage in salvage campaigns and so on. I think the minister might show some courtesy when this matter is being brought to his attention in the house.

Mr. THORSON: The hon. member might read the other parts of the letter, too.

Mr. NICHOLSON: Which letter?

Mr. THORSON: The one I wrote.

Mr. NICHOLSON: I shall be glad to have the minister read that letter, and I am sure hon. members will listen to him with interest. I am saying that the minister has failed to take the action necessary to deal with this question, and has failed to give the necessary leadership.

Take the question of advertising. I hold in my hand the latest issue of the *New World,* which is published by Mr. E. P. Taylor. According to the laws of Ontario a magazine of this sort could not be published in this province, because of its liquor advertisements. I do not know whether hon. members are familiar with this magazine, but it presents a subtle type of propaganda. It is an extremely attractive magazine. Mr. Taylor has secured a capable editor, who has obtained from contributors articles of interest, and many interesting pictures are displayed. On the last page of the magazine we find an attractive advertisement telling what Sir John Carling's Red Cap ale will do for you. Turning to the next page we find a large advertisement in connection with Booth's gin. On another page there is an advertisement for Dewar's Scotch whisky, and on the next page an advertisement for Four Roses, a Canadian whisky. Then we see, "Have a Guinness To-Day!" Apparently they are able to find space to bring this choice beverage across from the other side, and it is apparently one of the popular drinks in Canada. On the next page there is an advertisement for Vat 69; I do not know what that is. The next advertisement is for Seagram's V.O., which is called the perfect whisky. Turning the page we find an attractive half-page advertisement for Three Castles whisky and London Club gin, and on the very next page another attractive half-page advertisement for Sir Robert Burnett's London dry gin. Hon. members will see from the attractive colouring of this advertisement that it has been prepared by one of our best artists. So we see that large sums of money are spent in order to encourage our people to consume these liquors. Another advertisement is for Gilbey's gin; and then covering two pages, is an advertisement for White Label ale. Again the minister smiles, but I submit that with Canada at war it is unfair to allow advertisements of this type to appear in a hundred thousand copies of this magazine which are on the news stands every month, in order to encourage our young people to consume liquor.

I understand the procedure is that the editorial offices and circulation department are in Toronto, in the Concourse building, 100 Adelaide street west; all correspondence regarding advertising is directed to be sent to this address. I understand that most of the printing is done in Toronto by two well-known publishers; then the material is shipped to Montreal, and the complete magazine is mailed from Montreal back to the news stands. In this way it is possible to see that advertisements of this kind go into the homes of our Canadian people, so that the increase in the consumption of these liquors may continue.

I have heard criticism as a result of churches in Canada being asked to cooperate with various government departments, and then when they desired paid advertisements for their papers they have not been very successful. But I find the government has been quite generous to the *New World.* There are several advertisements inserted in this issue

by the government. I have here a few of the newspapers published by some of the churches of Canada: *The Presbyterian Record; The Canadian Churchman,* published by the Church of England; *The Canadian Baptist,* published by the Baptist church; *The Canada Lutheran,* published by the Lutheran church; *The War Cry,* published by the Salvation Army, *The United Church Observer,* and *The Catholic Record.* In all these papers I could find only two advertisements inserted by the government, though it can find profitable advertisements to be inserted in a magazine whose apparent purpose is to increase the sale of liquor.

I mentioned that Mr. Taylor was concerned about conserving shipping space. In last week's Wadena *News,* I notice an advertisement inserted by the wartime prices and trade board which reads:

> To bring tea from Ceylon and India, to bring coffee from South America, ships must cross oceans infested with submarines. To-day those ships and their naval escorts are required for more essential services. Every ship, every foot of cargo space, is needed to carry war materials, and to bring essential goods to Canada.

Then there is another advertisement in connection with sugar:

> Since sugar rationing was first introduced, the shipping situation has become more serious. The danger to ships and lives has increased. Consequently it has now become necessary to reduce the sugar ration from ¾ lb. to ½ lb. per week per person.

The Canadian people are not objecting to cutting down their sugar, tea and coffee. They realize that one of the most valuable services being performed is that of the men who go out to the sea to risk their lives in order to keep open the channels of commerce. But I think it disgraceful that we should be able to find shipping space for unlimited quantities of liquor while we have to restrict our consumption of coffee, tea and sugar, and that so far no attempt has been made to get the Canadian people to restrict their consumption of liquor.

In view of the situation I have outlined; in view of the alarming increase in the consumption of liquor in every province of Canada, I wonder if the minister would not give further consideration to this matter. I wonder if he will not admit that this now has become a national problem and that, regardless of what he may have said or what may have been done in the past, some steps should be taken, in the first place to see that advertisements of this type will be discontinued for the duration of the war and, in the second place, that our people will be encouraged to reduce their consumption of liquor.

[Mr. Nicholson.]

Mr. POULIOT: I am exceedingly sorry that the Minister of National Defence is not in his seat to-night. He spoke in Winnipeg with the Minister of Pensions and National Health, and that minister has been back in the house this week. However, we have not seen the Minister of National Defence. His place is here, when we are discussing these estimates—because I am sure the Minister of National War Services is very often labouring because of requisitions made upon him by the Minister of National Defence.

Mr. THORSON: Not at all.

Mr. POULIOT: I am glad he is not; he has plenty of fortitude. But whether he is or is not—and I accept what he says—I say that while the committee of the whole is sitting and the estimates of the Minister of National Defence are under discussion, that minister should be here. There is no excuse for his going away.

Some hon. MEMBERS: Oh, oh.

Mr. POULIOT: I will ask the hon. member for Fraser Valley to keep quiet; otherwise I will say something more unpleasant to him. And I will ask you, Mr. Chairman, to keep order. At times the hon. member for Fraser Valley speaks seriously; but I do not know what happens to him, because at other times he does not speak so well. His thoughts seem to be in limbo. I wonder why the hon. member for Fraser Valley laughs when I complain that the Minister of National Defence is not here, because I say his place is here, now, when this discussion is in progress. He should be here.

Mrs. CASSELMAN: According to a press dispatch I have before me the Minister of National Defence is in the city of Edmonton, conferring with military officials there.

Mr. POULIOT: I should like to answer my hon. friend the member for Edmonton East with flowers. But whether he is in her constituency or in any other constituency, he has plenty of time to go, outside of the time when we are discussing the expenditures of his department. The expenditures we are now discussing are as much those of the Department of National Defence as of the Department of National War Services. In fact, the Department of National War Services is just the anteroom of the Department of National Defence. I want the picture complete—not because I am afraid to say anything when the Minister of National Defence is here. Hon. members will recall that last year I told him to stop using his

pencil on a piece of paper, and to look me in the eye when I was saying something to him.

I have something more to say. I complained about this disguised conscription. Who is responsible for it? It is not the Minister of National War Services; it is precisely the Minister of National Defence. We saw in the newspapers as early as February that the reserve army was closed to men between nineteen and thirty-five years of age, and that position was repeated by the Minister of National War Services not long ago. In the meantime the Minister of National Defence has worked out his little scheme to close one more door to men who desire to enlist in the reserve army.

The Montreal *Gazette* of April 17 contains the following Charlottetown dispatch:

> Ralston warns defence alone is not enough.
> No vote surest way to bring war to Canada, court defeat asks record verdict.
> Defence Minister, State Secretary McLarty appeal for plebiscite approval.

That was what was said at Charlottetown. But when the Minister of National Defence spoke in Montreal, according to a French newspaper of that city he praised the voluntary system. I shall reserve to another occasion anything further I have to say with respect to the development of national defence.

I should like to follow what was said by the hon. member who has just spoken, and refer particularly to two branches under the Department of National War Services. May I tell the minister that I have always had a deep respect for him. I believe he is in earnest, takes care of his department and in some branches has able assistants. I pay special tribute to Mr. Justice Davis and to General LaFleche. My colleagues in the house know the feelings I have for General LaFleche; I have great admiration for him. Then, in my humble view Major Benoit is also an able man.

Whatever anyone else may think of the importance of the Department of National War Services, in my opinion that department is equal in importance to any of the war departments. This is my reason for making that statement: The government has at its disposal some wonderful agencies under the supervision of that department. I have in mind particularly the Canadian Broadcasting Corporation, which is under the control of the minister to as great an extent as any semi-independent corporation could be. It lives upon the taxes paid by owners of radio sets.

I wonder if the best use is made of that agency, both within and without the country. Inside our boundaries the Canadian Broadcasting Corporation could do excellent work not only for what is called national unity, but also for the union of all Canadians of goodwill, especially in times like these. Of course good men are required to operate the corporation.

Then there is a further branch of the department which at times has to operate with the Canadian Broadcasting Corporation and also with the bureau of information. I refer to the censors branch, which has been centralized under the minister. In addition to the minister's function of calling men under the National Resources Mobilization Act, he has a duty so important and so great as to consume the whole of his time.

Is the information bureau operating properly? The minister is not responsible for its organization, because it was in operation when he became head of the department. He had to take it as it was. I ask the minister now to place on *Hansard* an up-to-date list of the staff of the information bureau, showing the occupation and salary of each member of the personnel. That is the first step. I complain that the cooperation between the information bureau and the censors is not close enough. Of course in times past the censors were not all under the minister. A reorganization was made not long ago, and now the two agencies are under the same minister. But that is not enough. They must work together. The information bureau must give a lead, and the check must be by the censors.

I have heard a good deal about the present head of the censors. It is said that he is an able man, and I give him the benefit of the doubt. I have no reason to complain about him, but his functions are of the utmost importance. He should proceed, not only with scissors in hand but by way of giving a lead to the newspapers and to Canadians who speak inside and outside the country. An effort should be made to make the bureau of the greatest possible help.

What should be done by the bureau? It is a Canadian bureau, and charity begins at home. It should serve the Canadian people first by giving us some idea of what orders in council of a legislative nature are passed by the government by virtue of the War Measures Act. Where is the member of parliament who can read, analyse, check and note all the orders in council of a legislative nature passed daily by the government? It is impossible. This information bureau should show its usefulness by keeping members informed on this legislation of a special nature which we cannot analyse from a study of the

Canada Gazette. This afternoon an hon. member asked about the publication of these orders in council in book form. Already we have had five of these books, but some orders in council are amended and others are repealed. Part of the work of this information bureau should be done by jurists, and these orders in council should be issued in loose-leaf form.

The bureau of information should not be a clearing house for just the publicity of one department, the Department of Munitions and Supply. It should be a clearing house for all departments. It should give information to the people so that they may know what they have to do in order to live up to these governmental regulations. That would be easy to do provided the minister selects competent men to head the branch. The branch will justify its existence if the work is properly done, and I think hon. members will be grateful to the minister if such a change is made. A number of orders in council were published as an appendix to the *Votes and Proceedings* of March 24. No one knew the tenor of those orders until after eleven o'clock in the morning, and yet they had been in effect from the previous Monday. No one outside the members of the government knew what they were, and yet they affected the lives of the population of Canada. One will answer that that is the practice; but whether it is or not, I think it is an abuse.

Years ago the Department of National Revenue used to publish a monthly account of exports and imports as between the United Kingdom and Canada and as between Canada and foreign countries. This has been stopped under the pretext of economy, but we now receive certain information from the information bureau. The information put out in French is simply silly. It means nothing at all; it is just childishness and is of no use to us. All that we in the province of Quebec ask is that we be served in the same way as our fellow citizens who speak the English language. Why should we be given this sort of information that is of no use?

The information bureau could give advice over the radio about health, diet and so on. This could be given by experts, other than those who belong to the medical profession. I am sure that this will satisfy my hon. friend who made some apt remarks about what has been done. The information bureau should not give false ideas to other departments. Here is an example of the silly things that are put out. This is entitled "A Call to Arms," and is put out on the most expensive paper and signed by the Minister of National Defence. I say this is silly because of what happened when it was published. Several men in my county wanted to enlist, and I went with them to the armoury where the man in charge of enlistments was supposed to be. The very room in which this poster was displayed was locked. These boys with me wanted to enlist, but the door was well locked and nobody could get in.

Mr. REID: No shortage of paper there.

Mr. POULIOT: This was asking boys to enlist, but the door was closed. Then there was something else. I refer to the totem pole that was carried across Canada, that thing called a victory torch which was sent to England with the first money that was obtained in the victory loan campaign last year. The money was used for the expenses of a trip in a bomber to carry that totem pole. Mr. Churchill looked astounded when he received it at No. 10 Downing street. Things like that are no good. We have a call to arms, a call to enlist, and when boys go to enlist they find no one there and the door locked against them. The first money obtained from the savings of the Canadian people is used to transport that totem pole from British Columbia to Halifax and then across the Atlantic by bomber. I do not blame the minister, I blame the man who had that silly idea. I am sure it came from the information bureau. It appeared to me like a bit of idolatry.

Mr. HANSON (York-Sunbury): The idea originated in British Columbia.

Mr. MACKENZIE (Vancouver Centre): No; it did not. It came from the victory loan committee.

Mr. POULIOT: I do not want to hurt my hon. friend because I am in full sympathy with him. I shed tears when I thought of that.

There is something else, and here is where there should be intervention by the censorship bureau. It should tell important military men who are in charge of the districts of Quebec and Montreal to shut up and not enter into any competition in eloquence as they do, only, as we say in French, to "Mettre les pieds dans les plats"—"put their feet in dishes."

Another thing should be done by the censor. Here is another kind of foolish propaganda that came from the national plebiscite committee. It is signed by Florian Fortin. I have already complained about it. It was printed and widely distributed during the plebiscite campaign:

> What shall we think of persons who vote "no" under the pretext that they do not love England.

It is silly. Why put such ideas in the heads of Canadian people?

Another thing that the censors should do is to forbid government agencies from sending out copies of articles from a stinky paper in Montreal called *Le Jour.*

Mr. MacNICOL: I did not hear what the hon. gentleman called the paper.

Mr. POULIOT: Stinky—malodorous. All that sort of thing works not only on the mind of my good friend the leader of the opposition but on the minds of some journalists. For instance, I received not long ago an article published in a Woodstock paper, the editor of which is at present on leave, working for the wartime prices and trade board. Underneath the article is this note:

Suggest you get all your "no" voters out in rowboats to locate the U-boats.

Very witty! It also works on the editorial staff of our dear local paper, the Ottawa *Citizen,* which says:

Since Jean-François Pouliot and other members from the Lower St. Lawrence don't fancy going abroad to defend their country, wasn't it accommodating of the sub to come all the way over and make faces at them on their own door-step!

Is it not very clever? That is the consequence of such propaganda.

But it works on somebody else. It works on one who cannot sing, "Yes, we have no bananas," because he is the Orange leader of Ontario, the Ontario Grand Master, Mr. J. W. Carson. The headline says:

Quebec stand deplored by Orange leader—"Unbelievable" Ontario Grand Master tells gathering.

The article goes on to say:

The grand master repeated "our long-standing protest" against the "persistent and insistent" attempts to elevate the French language to a parity with English "and more particularly against the practice of the federal government in circulating, indiscriminately throughout the dominion, publications and forms printed in both languages."

I never knew that, but I am indulgent to the head of the Orangemen just on account of the silliness of the propaganda that was put out by the information bureau, because I understand he was deceived by it.

There is one of our colleagues who said once that those who did not agree with him were inspired by Hitler or something like that. I want to be indulgent to him for the same reason.

Another of our lady colleagues spoke of Quebec Quislings. I understand that she also was led into error by the same sort of propaganda.

I do not care what is said about me. For instance, an Ottawa paper called me a noxious pest. I am quite indifferent to that. Another paper, this one from western Ontario, said:

By far the worst offence was that of Mr. Jean-François Pouliot, who since 1924 has been creating scenes of disturbance in the house, mainly by launching virulent attacks against men who, not being members, have no means of defending themselves. He followed his old tactics again in his latest outburst.

I do not care about that.

Another Toronto paper dedicated an editorial to myself, headed "Buffoonery in parliament." I do not care at all about that. Another weekly Ontario paper said something else, just to frighten me, referring to something I had said regarding the Minister of National Defence. He said he would stop what I was doing. I do not know whether these articles were inspired or not. This one is from a weekly, printed on shiny paper. It says:

Mr. Pouliot is at the same time too much of an egoist and too much of a comedian to be a reliable colleague in any ministry.

I am indifferent to all that, and I know the censor should not intervene in such cases because it is simply the expression of one individual's opinion.

But this sort of propaganda has a bad effect. It turns the minds of some people. I will give one example. It dates back to a year ago. It is a very bad letter that I received. I made a speech here on February 21, 1941. Mr. Lapointe spoke on February 24, and then on February 26 a letter was sent to me from Toronto. Mr. Lapointe told me in front of one of my colleagues that this letter should be read. I have already given a copy of it to the Prime Minister, also to Mr. Godbout, Premier of Quebec, and to Mr. Duplessis. The letter shows the turn of mind of some people, and I am sure that there is not a member of the house who will not be scandalized by what is said in it. We hear about national unity. Of course, that must work on both sides. I have already said that in any country where there is a minority the minority has always to suffer from the greed of the majority to govern, and that characteristic goes back to the far-away ages. As we say in French, *"Diviser un petit peuple"*—"Divide to rule." That was said about twenty centuries ago, and it is still true. This is deplorable. The following letter was addressed to J. F. Pouliot, M.P., Ottawa, Parliament buildings, and mailed at Toronto, February 27, 1941, 9.30 p.m. Here it is, and I will lay the original on the table:

715 Palmerston Avenue,
Toronto, February 26, 1941.

Dear Half-Breed:

You were right when you told Mr. Ralston the other day that you have been here for a

long time. It is a long time since the priest chased and raped the squaw and you were the result, also Lapointe, Duplessis, Godbout, how you half-breeds like to blow.

You should hang your head in shame and never tell anybody that you belong to the French cattle.

Look at those dirty French traitors in France; it is a laugh to hear you dogs talking about culture. They sold out to the Germans thinking they were going to save their own dirty necks, but you see what traitors get. But they cannot help being traitors. It is born in them just like you dogs in Quebec. What we need in Canada is a nice little war to clean out all you cattle along with the arch louse and traitor, Mackenzie King. The war is not over yet but I would sooner fight you half-breeds than I would the Germans.

Yours,

Joe Smith.

I find by the 1940 Toronto city directory that the two persons who are indicated as residing at the above address, 715 Palmerston Avenue, are Jack Woulter and Frank Schicht. That is not helpful.

At a time when our publicity was not going well in the United States, we have here the sort of uncensored publicity which was published in the Montreal *Gazette:*

We must have victory. You must vote "Yes!" This publicity is sponsored by plebiscite committees of the province of Quebec.

I wonder if that was paid for by the government. It is not the way to have national unity in this country. Here is another advertisement which was published on April 25, and was not censored:

How would Hitler vote?

Pause for a moment and ask yourself this question: If Hitler had a vote on the plebiscite, how would he mark his ballot? Your good sense tells you he would say "no". If you vote "no" or if you don't vote at all, you are helping Hitler.

We hear that we have a bad name in the United States. That is not surprising when one reflects upon what is said about those who do not agree with the government on this question. I have one other exhibit; it is from *Time,* a Luce publication, of May 11, 1942, and on page 30 it reproduces a photograph of a sign:

Hitler voterait non sur le plébiscite.
Comment voterez-vous?

"Hitler would vote no on the plebiscite. How will you vote?" It is headed, "Quebec Posters. The little one says, 'If you would avoid conscription, vote no.'" This is the kind of publicity we have in the United States. It is just a continuation of the publicity we have had in this country. I have never understood why the censor did not stop it. It is important to preserve national unity in this country. We hear fine speeches about national unity. Speeches do not count; it is acts that count, and the necessary act should be to stop such publications, especially of an official nature.

As an example of the kind of publicity which we should have in the United States, I will refer to a publication which I hold in my hand, and which is widely circulated on this continent and even, at least formerly, in Europe. There was a French edition of *Vogue* published in Paris and an English edition published in London. It is a ladies' magazine, and it is read throughout the world. I do not know whether even now they have not a Spanish edition for south America. Here is what is written in the May issue by a distinguished and brilliant member of our own press gallery, who has international fame, and who, especially since the publication of his last book on this country, is nearly as well and favourably known in the United States as in Canada. I refer to Mr. Bruce Hutchison of Vancouver, who has written a story, "While I was in Quebec." It is a story of a young man who becomes a member of parliament.

The CHAIRMAN: Order, please. I should like to draw to the attention of the hon. member that when he refers to a publication relating to the expenditure of $1,500,000,000 by the government there may be some relevancy in his remarks, but I cannot see the connection of the matter before the committee now with an article written by a gentleman in the magazine *Vogue* which has nothing to do with the expenditure by the government of the amount of money which is now sought to be obtained.

Mr. POULIOT: Well, sir, we were just speaking of the information bureau.

The CHAIRMAN: Yes, but exactly on that point, anything which is published by the department and is directly or indirectly connected with the expenditure of the moneys voted by parliament would be in order. But we cannot enter, on a discussion of a resolution of this kind, into an analysis or a criticism of an article published by somebody else in *Vogue.*

Mr. POULIOT: Well, sir, I will explain what my purpose is in mentioning that. I was complaining that the information bureau was not doing useful work in this country and outside. I was complaining of propaganda which was going on outside which was not checked by the censor, and I was showing how the Americans could be favourably impressed with Canada by able and worthy propaganda. I am well aware that *Vogue* is a woman's magazine, but it has incorporated *Vanity Fair,* which was a magazine for both

men and women, and contained serious articles, and this article contains a few remarks which are an antidote to the poison that was published in *Life*. That is why I want to show that a censoring and an information bureau should take advantage of what is published by Mr. Hutchison in *Vogue* to follow that example. My quotation is not long, just a few lines.

The CHAIRMAN: Very well.

Mr. POULIOT: It reads:

This, though no one here realized it, was the symbol of a strange fact in the life of America and a basic fact in Canada. This was the French race, a third of the Canadian nation, making its will felt with the majority by skill, by persistence, by a hard common sense hidden under a smile and the shrug of a shoulder. This was the emergence, out of the rich Quebec soil, of another leader, whence so many had come since Champlain's time. And in Lucien's marriage to this blond girl, who spoke no French, one could see the hope that some day the two great races would unite, creating a race still greater.

This is the kind of thing which should go from Canada to the United States, and Mr. Hutchison rendered a valuable service to all Canada by writing in that way in a United States magazine with such a wide circulation.

Of course, no French Canadian will contend that we have all perfection and all virtue. We do not pretend that we are any better than our English-speaking fellow citizens, but it is merely a legitimate pride to contend that we are just as good, and what we want is to have the opportunity to show to the majority of the Canadian people that the province of Quebec is not behind any province in the war effort. I claim that for the people of my province; I insist upon that for them. I hope, according to the news I have received, that in the near future I shall be able to give that information to the English-speaking population of this country. I am sure that my fellow-citizens of a different origin are open-minded enough to take it objectively, without prejudice, and to judge as they deserve those who are responsible for the kind of propaganda which has given them such a false impression of good citizens who are just as anxious as they are to see this country prosper and to win the war.

Mr. COLDWELL: I should like to say a few words in connection with the information department under the minister. I believe that the situation which we now face in Canada and the grave domestic condition with which we are confronted are in no small measure due to the failure of the government's information service. Since the war broke out there has been, I believe, an opportunity for the information service to place the issues of this war in a manner which would have won a larger measure of support from all the people of Canada, had those issues been properly presented. I do not propose to go into details; but I sometimes think, after having read the translations of some of the talks, for example, that have been put over the French network in this country, that a great deal better could have been done. I have wondered why the ordinary common masses of the people could not have talked to the ordinary common masses of the people overseas, and vice versa. I believe that probably one of the ways in which the people of English-speaking Canada have been brought to an understanding of the issues of this war is through the talks we have had from fishermen, miners, farm labourers, and ordinary housewives in Great Britain, over the radio, in newsreels and by means of other broadcasts of that description which we have had from overseas.

I believe that we have suffered a great loss in Canada because we ourselves have not had the means of exchanging with the people across the seas our ideas for theirs. I have regretted ever since the war broke out, yes, before the war broke out, that we have not had a short-wave transmitter which would have enabled us and our compatriots of all national origins to speak directly to similar peoples across the seas. We have in this country Germans who are as much opposed to Hitler as we are, and with more reason. We have Czechs happily settled in this country free to follow their own ways of life. We have a Canadian population speaking the French language who still maintain many of the attributes of old France, and I am of opinion that the French-Canadian farmer speaking directly to the peasant of France would be better understood than almost any other medium we have. Broadcasts that are coming from Vichy and from Paris at the present time under German control, directed to our Canadian compatriots who speak the French language, say of course that the condition in France is far better than we know it to be, and misrepresent the intentions of the majority of the people of this country, the English-speaking majority, to our Canadian friends who speak the French language. If you follow, as I have followed, some of the broadcasts—not in French, for I do not understand the language sufficiently well; but I have read the English translations—you will realize the degree of difficulty that we encounter because our people cannot speak directly to the people across the seas and tell them of the actual conditions of democratic freedom that exist in Canada. The same

applies to the people who speak Polish and other languages—Norwegian, Dutch, Danish and so on, the languages of the peoples of oppressed Europe.

I believe that one of the finest things we could have done in the prosecution of the war from the point of view of the Canadian citizen, the unity of our people and the interpretation of Canadian, north American and British ideals, would have been done through properly organized short-wave programmes. Though we have a radio committee sitting and I am a member of that committee, I realize at the moment that we are discussing the appropriation of funds for this department; but by the time the radio committee rises, the budget debate will in all probability have been concluded and there will have been no opportunity to press for the establishment of a powerful short-wave transmitter for this dominion. If Great Britain were invaded —and of course it is not improbable that some attempt may still be made by parachutists to invade and seek to control a part of Great Britain—if any part of Britain were taken even temporarily by the enemy, if the British Broadcasting Corporation's transmitter at Daventry were put out of operation, there would be no powerful station within the British commonwealth that could speak to the rest of the world.

The parliamentary committee in 1938 recommended something of the sort. It said:

> Your committee was impressed with the importance of the establishment at an early date of a high-power short-wave broadcasting station. Such a station your committee believes would be a great utility in interpreting and advertising Canada abroad and in facilitating an exchange of programmes between Canada and other broadcasting systems. Canada, your committee has been informed, is the only major training nation without such facilities, and it is submitted that this should be financed as a national project operated and controlled by the Canadian Broadcasting Corporation. It should be a public utility and free from partisan control.

So that in 1938 the committee which sat at that time was strongly of opinion that we should have a short-wave broadcasting station for this dominion.

Mr. HANSON (York-Sunbury): Was that ever concurred in by the House of Commons?

Mr. COLDWELL: The report was presented but, as usual with our reports, I do not think it was formally adopted.

Mr. HANSON (York-Sunbury): If it were, it would be a command.

Mr. COLDWELL: I do not think it was ever formally adopted.

Mr. HANSON (York-Sunbury): The government allowed it to die.

Mr. COLDWELL: Nothing was done about it, and in 1939 this was a recommendation of another committee:

> The committee of last year emphasized the importance of establishing, at as early a date as possible, a high-power short-wave broadcasting station, financed as a national undertaking but operated and controlled by the Canadian Broadcasting Corporation as an integral part of its system.

There you have a reaffirmation of the belief that this should be done.

Mr. HANSON (York-Sunbury): But that was only a committee of parliament. Why was parliament not asked to pass upon it?

Mr. COLDWELL: I think the leader of the opposition knows quite well that reports are presented here and then more or less forgotten. Unless the government brings forward the necessary appropriation, nothing is done about the matter. To-day when we send a minister of the crown, as we sent the Minister of Trade and Commerce and members of his department, to South America on a good-will tour to promote trade and good feeling between ourselves and the South American countries, all that effort is lost if we are unable to follow up what he has done. A short-wave broadcasting station in Canada could convey to our South American friends the atmosphere of this country. It could tell them what this country was doing, both in peace and in war. I venture to suggest that to some extent the British have been a little suspect in South America, because they were looked upon as being imperialistic, financially, in their aims. The American, the Yankee trader if you will, has been suspect in South America because he has been looked upon as an even sharper trader and perhaps a greater potential imperialist than even the Britisher. But we in Canada have had no such reputation. We are a small nation, with no designs on anyone. We do not seek to dominate any part of the globe, either the isles of the sea or in South America. I believe we could have done much to bring the countries of South America a little nearer to us in this time of stress and difficulty if we had been able to speak directly from Canada to the peoples of South America.

To put it on a more prosaic ground, we have the matter of trade and commerce. With the way in which the world is disorganized to-day, even after the war is over Canada may find it difficult to obtain the raw materials she needs and to dispose of many of the commodities which she produces. The good-will of consuming nations in South America may be of very great value to us. Let us not

forget also that ever since the war broke out South America has been under a barrage of propaganda from the axis nations. I have a fairly powerful short-wave set myself, and often when I get home at night I tune in on the short-wave stations. I am amazed at the number of wave-lengths carrying programmes in Portuguese to Brazil and in Spanish to the other countries of South America, from Berlin, Rome and recently from Paris. We have had nothing to counteract that propaganda except the British stations, which sometimes have difficulty in being heard across the seas, and United States stations. As I said before, unforunately from time to time United States interests in South America have not been regarded in altogether the friendly way in which our own interests have been regarded there.

So I am suggesting that even at this late date the government should consider making the necessary appropriation, or authorizing the broadcasting corporation to make the necessary appropriation out of any surplus it may have, to construct a short-wave station at the earliest possible date. I have learned that it is not impossible, even now, to set up a short-wave radio transmitting station. I understand that there is still at least one transmitter available. Incidentally I have also been told—and the minister may correct me if my information is wrong—that as recently as last autumn the government or the corporation was negotiating with regard to such a transmitter. I believe that one of the great companies has offered to assemble and have in operation within a year a short-wave transmitter, at a cost of some $500,000. That seems a great deal of money, but when we consider that we are appropriating $2,000,000,000 for various war expenditures $500,000 is not a relatively large amount. Indeed, we can easily spend $500,000 on pamphlets, leaflets and literature of other kinds, and lose the advantage from it in a very short space of time, whereas a powerful short-wave transmitter would be a permanent asset to this country both in time of war and in time of peace. Even if it cost, as I understand it would, in the neighbourhood of $150,000 a year to operate—

Mr. THORSON: About $500,000 a year.

Mr. COLDWELL: I understand $150,000 would be much nearer the figure. I have heard the other figure mentioned also, but my information is that it would cost much less than $500,000. But supposing it did cost the government of this country $500,000 a year to convey to the rest of the world information with regard to Canada; to convey Canada, as it were, to the rest of the world. That would not be a very large sum of money. The value of the good-will resulting would be immeasurably greater than the amount that would be spent. So I am urging upon the government to-night that this matter be considered this year, and that Canada be given a voice across the world. Australia has a short-wave transmitter. It is not very powerful, but Australia is fortunate in having even a 25,000-watt transmitter at this time, for we are privileged occasionally to hear the voices of her statesmen speaking to the United States and the rest of the world. Britain, as I said before, has two transmitters, one of 100,000 watts and the other of 50,000 watts. If anything should happen to those transmitters, Britain would have no voice sufficiently powerful to talk to the rest of the world on behalf of the British commonwealth. It is true that Canadians have been able to broadcast good-will and other messages from time to time through station WRUL at Boston, the world radio university station, but that happens only infrequently. If we had a transmitter, not only could our own people speak to our allies across the sea but some of the outstanding figures from other countries who are now exiles in Canada could speak to their people as well. For example, teaching in the university of Montreal to-day is a great scientist from France, a man who was at one time a member of one of the French governments, serving as under-secretary of state. He was a radical socialist in politics. Lest anyone might misunderstand, may I explain that a radical socialist, before the fall of France—although the name may sound rather forbidding—was a very moderate sort of Liberal. He was just a little to the left of the Republican party.

Mr. HANSON (York-Sunbury): Not like these Liberals?

Mr. COLDWELL: Oh, no, not a bit like these Liberals—

Mr. MacNICOL: Possibly these are radical socialists.

Mr. COLDWELL: —because they are not very much less Conservative than the Conservative party.

Mr. THORSON: Do not spoil an otherwise good speech by being trapped into anything like that.

Mr. COLDWELL: Well, the temptation was almost irresistible.

We could use men of this description; and I am therefore urging upon the government that this should be done.

There is one other point I should like to mention before taking my seat, and that is one I raised in the house a short time ago. I do not believe in the suppression of free discussion. I do not believe the press should be interfered with, even in war time, except, of course, that it should not be allowed to publish information which would be of value to the enemy. In Canada I think we may all be proud of the fact that, without a great deal of censorship our own press has voluntarily looked after that angle of its news and of the war effort.

The other afternoon, however, I had occasion to refer to a publication being published in this country by an alien of enemy nationality. It will be noticed that I have not said he is an enemy alien—because I do not believe he is. I describe him as an alien of enemy nationality. I am referring, of course, to the publication of what is known as the "Voice of Austria". A day or two after I made the reference in the house, a bitter attack was lodged by Doctor Franz Klein, editor of the "Voice of Austria" in this country. I went to some trouble in trying to find out if there was any basis for the attack on Doctor Redler, and I have something I should like to place on record, just to keep the record straight, from the Austrian national committee. May I say that the Austrian national committee in New York consists of exiled Austrians of all shades of opinion, right from the monarchists through to the social democrats and the socialists of old Austria.

The Austrian national committee comprises forty of these outstanding Austrians, among whom are two former federal ministers, one former under-secretary of state for foreign affairs, a number of university professors now teaching in the United States and world-famous Austrians like Franz Werfel and Bruno Walter, the great conductor. I have before me a resolution passed by a special meeting of this organization and adopted unanimously on May 16 at their plenary meeting in New York. I should like to quote it:

> The plenary assembly entrusts the executive board to take all the necessary steps in order to make it perfectly clear that:
>
> 1. The Austrian national committee has nothing whatsoever to do with the attacks published in the "Voice of Austria" against statesmen of allied nations;
>
> 2. The Austrian national committee most energetically rejects the attacks published by the editor of this magazine against one of the members of the Austrian national committee.

That is Doctor Redler.

> Furthermore, it was agreed that the executive board should bring the resolution concerning the "Voice of Austria" to the attention of all the interested foreign authorities, in particular, the British and Czechoslovak.

I place that on record because of the injury which might have been done to Doctor Redler who is, I believe, in every way a man with a very fine record in the Austrian democratic movement, and who is living in exile in this country. I would suggest this, that when we are carefully supervising papers issued even by our own citizens, as we are in some instances, most careful supervision ought to be given to a publication published by one who is not only not a citizen of this country, but who is of origin the same as that of our enemies. The publication to which I have referred is published in New York, and for some reason Doctor Klein transfers himself to Canada with the result that just lately the paper has been published here. I wanted to place that matter on record because of other things which have been said recently.

It was my wish to bring these several points to the attention of the committee while the minister was before us, and I should like to hear him say to-night if consideration can be given to the establishment of a powerful short-wave station in this country. If consideration is given, I should hope that we may obtain the remaining transmitter which, I am told, is available, and use it for the present and future benefit of Canada and for the immediate war effort of the united nations.

Mr. THORSON: I should like to express my appreciation of the able manner in which the hon. member for Rosetown-Biggar has urged the erection of a short-wave broadcasting station.

Mr. MacNICOL: You will never get through your department this way.

Mr. THORSON: The subject has been and still is under consideration by the government. There is not complete agreement on the subject of a short-wave station, but I may say personally to the hon. member that I was very glad indeed to hear his advocacy of something which I think would be of great value to this country, not only at this time but in the post-war period, when Canada should be one of the great nations of the world.

Censorship is another matter which comes under my charge. It operates in a variety of ways, and in respect of various things. It has never been the policy in Canada, in Great Britain or in the United States to discuss the manner in which censorship operates. Generally speaking, the purpose of censorship is twofold. First, its purpose is to prevent information which might be useful to the enemy

reaching the enemy and, second, its purpose is to acquire information from the enemy or other sources that might be useful to our own cause. It is no part of censorship to suppress free speech or free criticism of persons or of the government; in no sense is that a function of censorship. I should not want to see any steps taken under the guise of censorship for the purpose of suppressing free criticism. Even during times of war there is real value in criticism.

I should like to advert to one unpleasant incident this evening, the quotation by the hon. member for Témiscouata (Mr. Pouliot) of a letter which he had received from someone and which had been written in another part of the country. I think it is much to be regretted that letters of that sort should be even referred to in the House of Commons. That sort of discussion cannot possibly do any good to anyone here in Canada, particularly at this time when there is the utmost need for the people in one part of the country to be as moderate as they possibly can in their references to the people in another part of the country.

I should like to advert also to a statement made by the hon. member for Broadview (Mr. Church). Sometimes I feel that I am not as free as a minister of the crown as I was when I was a private member. As a private member I could state that I would pay no attention to the hon. member for Broadview, but as a minister I cannot take that attitude. I must pay some attention to him because of the fact that he represents a constituency. But time and time again he has sought to make a differentiation between Canadians of British origin and Canadians who are not of British origin. That differentiation ought not to be made by anyone at this time. We are all Canadians regardless of our origin, regardless of whether it is British, or French or neither British nor French. We are all in this war. We have earned rights in this country which carry with them corresponding duties. This is a conflict which touches every individual in this country, and it is not the time for differentiation between Canadians of various racial origins. We are all united in our devotion to Canada and in our devotion to the cause for which all Canadians fight. That cause can best be described as the cause of humanity.

Mr. MacNICOL: Are we not devoted to the empire?

Mr. THORSON: We are deeply attached to our association with Great Britain and our sister dominions. The fact that we entered this war of our own accord does not lessen our attachment to Great Britain from which we inherit the traditions and institutions that are so dear to every Canadian regardless of his origin. I take second place to no man in this country in my devotion to British institutions and British traditions. I plead with everyone in Canada that at this time there should be the utmost moderation in thought and speech and the greatest respect paid by one part of the country to all other parts of the country.

Mr. MacNICOL: During the recent plebiscite the returning officers were appointed under authority of the minister, and I am sure that some of them must have notified the department of what happened in connection with the registration cards. Mr. Frank Saxon of Toronto writes me that perhaps twenty or thirty per cent of those presenting themselves to vote presented cards bearing addresses which were different from those at which the persons lived, they having moved since they first registered. Earlier in the afternoon the minister referred to the fact that in many instances it was found that men called up had moved from the addresses under which they had first registered. Mr. Saxon suggests that this difficulty would be overcome if these people could obtain new registration cards at local post offices. The new card could be of a different colour, and the original card would be returned to the department. The department would then have a complete and up-to-date record of the addresses of those who were registered. Has the minister had any report from his returning officers as to the effect of these people moving from their former addresses?

Mr. THORSON: I think there have been a million and a half address changes. I have not had brought to my attention the facts that the hon. member for Davenport now brings to the attention of the committee, and I shall be glad to bring his observations to the attention of the appropriate officers who are in charge of the national registration records.

Mr. BOUCHER: This afternoon the minister stated that the age limit for call had been raised from thirty to thirty-five years.

Mr. THORSON: No.

Mr. BOUCHER: That it was intended to raise it shortly in some places.

Mr. THORSON: I indicated that I would not be surprised if that step were taken in the near future.

Mr. BOUCHER: At the same time the minister indicated that one reason for doing that was that in certain military districts the

number of men within the age limits had been practically exhausted, and he referred particularly to military district No. 3 which is located at Kingston, Ontario. This strikes me as being a peculiar situation. The Department of National War Services is calling men within certain age limits, and I cannot understand why one particular military district should have its man-power within those age limits exhausted so that the government may have to raise the classification in order to get the necessary quota of men from that district. I wonder if it is a case of all available men within that age class who can be taken from industry having been taken. If that is so, how does it come that in military district No. 3—

Mr. THORSON: Administrative division C.

Mr. BOUCHER: In administrative division "C", which is military district No. 3, the age has been raised from twenty-eight to thirty, which would indicate, at first sight at all events, that a heavier drain has been made on the available man-power in that area than in other areas in Canada.

Mr. THORSON: Not necessarily.

Mr. HANSON (York-Sunbury): Per se.

Mr. BOUCHER: Not necessarily, the minister says, but I would ask how he can set aside that conclusion. In a particular area more men might possibly be drawn from non-essential war industries into essential war industries or into military service than in another area, but in that particular area we have the classification raised, or contemplated to be raised in order to get more men to fill the army quota—and that before even the lottery system has been embarked upon. Certainly it has every appearance of discrimination, if not in reality. It might very well be pointed out that enlistments in that particular area had so depleted the available man-power that a sufficient number of men were not available and that the government, in order to get more men, increased the age limit. I should like to hear an explanation from the minister.

Mr. THORSON: It would not be possible, for a multiplicity of causes, for the reserves of man-power to be the same in all administrative divisions across Canada. I have not any doubt that part of the situation that exists in administrative division "C" is due to a very heavy volume of enlistments of a voluntary nature in that division. That was its record in the last war, and I think it is its record in this war. But that is only one cause.

Mr. HANSON (York-Sunbury): Is that not the major cause?

Mr. THORSON: Similarly the man-power reserve available for call in another area may be reduced by reason of the concentration of essential war industries in that area and the fact that a large number of postponements of military training have been granted to men essential to war industry. When I made the statement about administrative division "C", I indicated that we were coming close to exhaustion in that administrative division. I also indicated that we would within a very short time be coming close to exhaustion in a number of other divisions. I also indicated that we would be in a better position to know what the reserves of man-power were in other administrative divisions after we had seen the full impact of, let us say, the agricultural regulations and the man-power reserve in the various administrative divisions. As we move up into the higher age groups, the number of men who can be brought into the armed forces becomes smaller and smaller. I do not think I can go further at the moment.

One of the reasons for the situation in administrative division "C" has been enlistments. Another reason has been postponements of military training for one reason or another. There may be other reasons that do not occur to me at the moment.

Mr. HANSON (York-Sunbury): I want to call the minister's attention to the fact that a serious attack was made here this evening by one of his own supporters on a division of his department, the bureau of public information. I hold no brief for the director of that division. I recognize in him one of the ablest publicity men in Canada.

Mr. THORSON: I did not understand that an attack was made on the director.

Mr. HANSON (York-Sunbury): No, but on the department, and it has not brought any response or any defence from the minister. That, of course, is his business.

I wonder if the members of the house understand exactly what the position is. I have received from time to time, as I have no doubt every member of the house has, letters protesting against the character of some of the press releases and information that is being given out, particularly with respect to the length of time that has elapsed between the times of preparation and distribution of the material. I took this question up with Mr. Lash, and we had some interesting correspondence. I was surprised to learn that this was the position: There are about fifteen or sixteen or seventeen publicity men attached to various departments of government all more or less related to war work, not to speak of peace-time propagandists attached to

various departments; this material prepared by this large number of press men, I learned, is sent in to the division of public information merely for, shall I say, distribution purposes, and the director has no authority to edit or alter one word of these releases. In other words, he is merely a conduit through which this information is distributed to the public. That is my understanding, and if that be so, I think the position ought to be reviewed.

A man of the experience of Mr. Lash as a publicist, with a flair for news, I suppose, equal if not superior to that of any of the young pressmen attached to the various government departments, should have some authority to put the "can" on some of the material that is going out or to alter or refer it back. That is a constructive suggestion I make to the minister. If my understanding of the position is correct—and I speak, of course, subject to correction—the present position ought to be reviewed. The bureau is working very hard, and I do not think at enormous expense. I had the figures once; I think they have been given to the house once or twice, and it is not an enormous expenditure. But through a misunderstanding I believe that the bureau of information is called upon to take some of the odium that properly belongs to the departments from whose officials the information emanates. I understand that the director of public information has no authority to refer back or even to edit the articles that are sent in to him. He must of necessity be just a distribution centre. I note that Mr. Lash has made some excellent radio broadcasts himself; I listen to them whenever the opportunity offers, which is not as often as I should like. He is an experienced man; that is why he is there. I have no doubt he was loaned to the government by the national railways because of his capability, and I do not think it is fair that the attack made on the bureau to-night should go unanswered. I do not like to see that type of incident happen, and I think the minister ought to do something with regard to it.

I rose merely because I had that thought, not to make a speech but to call attention to what developed here this evening, to give the committee my understanding of what the true position is, and to ask the minister to review the functions of this bureau with respect to the flow of material which must come to it from all these different sources. There are, I think, too many pressmen in the employ of the government. I have the idea that the newspapers of this country, if given a free hand, could do a much better job with respect to public information than all these liaison officers in the departments. That is something which is worthy of consideration. I know that there are newspaper men in Canada who hold that view. The government thinks it necessary to have all these men putting out miles and miles of propaganda, but the public know it is propaganda, and they discount a lot of it. It is not objective enough. It savours of propaganda, and the people do not believe all they read.

Mr. THORSON: The leader of the opposition has suggested that I should reply to the attack made on the bureau of public information by the hon. member for Témiscouata. I do not know whether I should reply to everything the hon. member said.

Mr. HANSON (York-Sunbury): Oh, I did not say that.

Mr. THORSON: I had sent in to me just a little while ago a memorandum reading as follows: "Long distance competition in patience: first place, Thorson; honourable mention, Job".

Mr. HANSON (York-Sunbury): What about the members of this committee who have had to listen to it?

Mr. THORSON: I have been waiting for someone to ask me for information with regard to the division of public information, which is one of the divisions under my charge. Most of the time that I have been before the committee the discussion has been on the division of mobilization, and has dealt with only one aspect of the mobilization division.

Mr. FRASER (Peterborough West): You have too many divisions.

Mr. THORSON: I do not think so.

Mr. FRASER (Peterborough West): I do think so. The minister should have mobilization only.

Mr. THORSON: Everyone is, of course, entitled to his own opinion.

Mr. FRASER (Peterborough West): Well, that is enough for him.

Mr. THORSON: I am delighted with the opportunity of indicating what the functions of the bureau of public information are, what its objectives are, and the manner in which it functions, but it would take some time. It cannot be done in just a few moments.

Mr. MacNICOL: We want to get through this summer some time.

Mr. THORSON: There is a great misunderstanding as to the particular function of the bureau of public information to which the

leader of the opposition has made reference. The bureau is not in competition with the daily press of Canada. It is not a function of that bureau to prepare official news announcements for the use of the daily press; not at all. All the daily newspapers of Canada have their news-gathering organizations; they have their representatives in the press gallery; they have their parliamentary correspondents in Ottawa; they are members of either the Canadian Press or the British United Press, and these news-gathering organizations send news to their member newspapers. The various news-gathering organizations get the news direct from the government departments. The spot news, as it is called, goes direct from the departments to the press gallery, to the Canadian Press, and to the British United Press. The bureau of public information, in so far as spot news is concerned, has very little to do with the daily newspapers. There are, however, a great many other functions which it has to perform and may quite properly perform. While the association between the bureau of public information and the daily newspapers is of comparatively small importance, the association between the bureau and the weekly newspapers is, on the other hand, much closer. The service which the bureau of public information can render to the weekly newspapers at their request is very much greater than it attempts to render to the daily newspapers, who have their own individual news-gathering organizations and set-ups.

The leader of the opposition referred to the fact that a great many men are engaged in publicity work of one kind or another, or public relations work of various kinds, in the departments. One of the purposes of the Department of National War Services was said to be, in the order in council which assigned that function to it, the coordination of existing sources of public information. There were in existence already publicity set-ups in the three departments of national defence; there were also publicity and public relations branches in the Department of Munitions and Supply and in a number of other departments of government. It has never been considered either possible or desirable that all agencies of either publicity, public relations or public information should come together exclusively in one department under one administration.

It was thought that greater success could be achieved in coordinating public relations and public information by a policy of cooperation than by an attempt to have everything go through one funnel. The manner in which the division of the bureau of public information has operated almost since the commencement, and certainly after I came into the department, was to follow that policy of coordination by cooperation rather than by regimentation. We established in a formal way last July an interdepartmental committee, which had operated in a more or less informal way previously. That interdepartmental committee is presided over by the Hon. T. C. Davis, one of my associate deputy ministers. It meets weekly with the representatives of publicity and of the various press organizations of the war departments and various other organizations. The following departments and organizations of government have representatives on this interdepartmental committee: the three departments of national defence; Department of Munitions and Supply; Department of Labour; wartime prices and trade board; national war finance committee; foreign exchange control board; Department of External Affairs; Canadian Broadcasting Corporation; national film board, and bureau of public information. I know exactly what will be said if I start to give a description of the bureau of public information; but I am handicapped again, as I have been previously, in that I have a request to explain the operations of a division of the department and then am told that I should do so in one or two words.

Mr. HANSON (York-Sunbury): I did not invite the minister to cover the whole field. All I was bringing to his attention was a situation which I think at present exists and which needs correction. That is all I want him to talk about.

Mr. THORSON: This interdepartmental committee has served a useful purpose in coordinating public information.

Mr. POTTIER: I rise to refute a statement made by the hon. member for Broadview (Mr. Church). While speaking in a general way he indicated that Ontario was No. 1 in enlistment in the army, navy and air force. I have here the best figures I have been able to obtain. They first appeared in a Toronto paper, and I am sure they would have been at least fair with Ontario. In these figures Ontario appears to be the sixth province down the line. I will give the number by provinces up to that point. These are per 10,000 of population. Nova Scotia and Prince Edward Island, taken together, give 495 persons as having joined the army, air force and navy—and I am talking about the active service. Manitoba is next with 490 persons; British Columbia third with 483; New Brunswick fourth with 428; Alberta fifth with 444; and Ontario not first, but sixth, with 426 persons

for every 10,000 of population. I wish to correct the hon. member for Broadview in that regard.

Mr. MacNICOL: The hon. member meant in numbers.

Mr. STIRLING: What are the figures for the rest of the provinces?

Mr. POTTIER: Saskatchewan, 326; and Quebec, 204.

Mr. GILLIS: I have no desire to prolong the discussion, because I realize that the minister has been patient and long-suffering. Members of the committee could walk out at any time, but the minister could not. He has my sympathy. In the course of my remarks this afternoon I referred to representation on the boards. I still contend there is a necessity for a rearrangement of the personnel of the boards. My contention is that in the past they served a purpose. The board in Nova Scotia, with which we have had no quarrel in the past, consists at present of the Hon. Mr. Justice Doull of the supreme court, His Honour N. R. McArthur and His Honour K. L. Crowell, three judges. As I visualize the functions of these boards in the future it will require considerable moving around, because in my opinion most of the men who will be called for service in the future will come from the industries, and while the employer has the right to sit in and protect his interests—

The CHAIRMAN: It is eleven o'clock.

Mr. THORSON: May we not allow the hon. member to finish?

Mr. GILLIS: I shall be only a minute; I want the minister to answer a simple question. In the United States, in connection with the national selective service there, as outlined recently by the man in charge, there are community boards.

Mr. THORSON: There are about 6,500.

Mr. GILLIS: Yes; and in the community there is no difficulty in making decisions. There is a large call-up from the industrial section now, and it is necessary for the board to sit. I visualize considerable difficulty in that connection, and I am wondering if the minister would not consider allowing on the boards representation from the labour unions. In the New Brunswick set-up the secretary of the federation of labour for New Brunswick sits on the board. Could that not be done in the other provinces? I think labour is entitled to a representative on the board. The employer has the right to go there; all the others sit in judgment on whether or not a man is essential, except the man who is going to be taken. I do not say that each and every union should be represented, but I believe the provincial organizations, the federations and so on, should be entitled to representation on that board, as is the case in New Brunswick. I think before we go much further with this business of taking men from industries we are going to have to adopt the United States set-up if we want to have the system function properly. They are serving without remuneration; there is no cost; in my opinion the procedure is much quicker and the decisions much more practical, because the decisions are made by men who live right in the community and who know the conditions that exist. I think we shall have to consider adopting that system. Will the minister give consideration to the possibility of giving the working men representation on these boards?

Mr. THORSON: That may well be given consideration, particularly in those districts or divisions in which there are large concentrations of war industries. I shall be very glad indeed to give further consideration to the suggestion of my hon. friend.

Progress reported.

It being five minutes after eleven o'clock, the house adjourned, without question put, pursuant to standing order.

Tuesday, June 2, 1942

The house met at three o'clock.

RAILWAYS AND SHIPPING

Third report of standing committee on railways and shipping owned, operated and controlled by the government.—Mr. Howden.

WAR PRODUCTION

PRESS REPORT AS TO ESTABLISHMENT OF COUNCIL TO UTILIZE FULLY UNITED NATIONS FACILITIES

On the orders of the day:

Mr. H. C. GREEN (Vancouver South): Mr. Speaker, I should like to ask a question of the Minister of Munitions and Supply arising out of a press dispatch from Washington appearing in this morning's paper. The dispatch states:

A production council to utilize to the limit the manufacturing facilities of Canada, Britain and the United States in fabricating the weapons required for the united nations on all fronts, will be set up here this week.

That is, in Washington. Would the minister tell the house whether or not that report is accurate. It then goes on to say:

Canada will not be represented directly on the production board, but its interests will be handled by Nelson.

That is Mr. Donald M. Nelson of the United States. Is this report accurate; and if so, why is it that Canada is not being represented?

Hon. C. D. HOWE (Minister of Munitions and Supply): I understand that discussions will take place this week in the matter of forming a production council. I expect to join in the discussions myself. What will be done in any particular is a matter for those discussions to determine. I know only that the discussions are taking place.

Mr. GREEN: The report says:

Canada will not be represented directly on the production board, but its interests will be handled by Nelson.

Is that correct, or is it a misstatement?

Mr. HOWE: I cannot say. So far as I know, there is no production council at the moment. The matter for discussion is as to whether or not one will be formed, and it is a little difficult to say who will be represented on it.

Mr. CHURCH: You are away behind in your contributions to Britain and Russia, and Washington is behind so far in production promised Britain and Russia for 1942.

BUSINESS OF THE HOUSE

CONDUCT OF DEBATE ON WAR APPROPRIATION BILL

On the orders of the day:

Mr. J. K. BLAIR (Wellington North): Mr. Speaker, I would like to lodge a protest against the foolish speaking that is going on in this house day after day.

Some hon. MEMBERS: Order.

Mr. SPEAKER: The hon. member may not make a speech at this time. There will be opportunities later in the day.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Monday, June 1, consideration in committee of a resolution to provide sums not exceeding $2,000,000,000 for the year ending March 31, 1943, for granting to his majesty aid for national defence and security—Mr. Ilsley—Mr. Vien in the chair.

Mr. BLAIR: Mr. Chairman, I regret I was a little previous.

Mr. MACKENZIE (Vancouver Centre): And you may be yet.

Mr. BLAIR: My attitude has been suppressed for a long time, but the foolish speaking in the house is a disgrace to the house.

Mr. MacNICOL: Hear, hear.

Some hon. MEMBERS: Order.

The CHAIRMAN: In the first place, the hon. member's expression is not in order and, in the second place, we cannot discuss in committee the procedure that is followed in the house. The hon. gentleman is now suggesting that a procedure which is followed when the house is sitting should be followed now. The proper time to discuss that is when the house is sitting. The matter before the committee is a resolution for $1,500,000,000 to be granted to his majesty with respect to war expenditures.

Mr. BLAIR: We are wasting a great deal of money here day after day which could be put in the proper channels to aid the war expenditures. When we look at the galleries we see that the people there are disgusted with the house.

The CHAIRMAN: Order. It is not permissible in a speech to make reference to the people in the gallery. I am sorry to have to call my hon. friend to order, but he is making a reflection upon the house which is not permissible under the rules.

Mr. BLAIR: If this is to keep up I suggest to the government that they impose closure. That was done before by Right Hon. R. B. Bennett when the circumstances were not quite the same. I urge upon the government that it adopt some means of removing this bane of democracy. Talking incessantly is one of the things that destroys democracy. Some toleration should be extended; we all believe in freedom of speech, but this excessive speech-making takes up the time of the house and wastes the money of the country. I am sure it is the opinion of 90 per cent of the members of this house that this action should be taken.

While I am on my feet I should like to suggest to the committee one way by which some of this money might be obtained. The federal government should suggest to the provincial governments that they do away with the traffic in liquor. Two hundred million dollars in the form of planes and guns for the front would do more good than it does the way it is spent now, especially in the beer parlours for the ladies. I know this is not under your jurisdiction, but if the provinces are not ready to abolish this traffic, the federal government has it in its power to abolish liquor completely.

NATIONAL WAR SERVICES

Mr. DIEFENBAKER: Yesterday I asked the Minister of National War Services (Mr. Thorson) for some information which should now be available. This has to do with a matter that concerns not only this house but the country as a whole—the results of the survey made by the government of the number of men available in the various age groups. As was mentioned last evening by the hon. member for Carleton (Mr. Boucher), the position to-day is that in certain districts men between the ages of twenty and twenty-four years are being called up, whereas in other districts the call has been extended up to the thirty-year-old group. The minister stated that so far as certain age groups are concerned, the point of exhaustion is being approached.

What I asked for yesterday—it was no fault of the minister that he did not then give an answer—was the number of men in the different districts between twenty-one and twenty-four years of age and between twenty-four and thirty years of age who are still available for war service. This information is in the possession of the government; for the minister was able to say that the number of men within certain groups is about exhausted, and also he admitted yesterday that the information is available on the basis of the national registration. I said as reported on page 2933 of *Hansard:*

> The information must be available, on the basis of national registration, which will show exactly the number of young men in the various age classes and the records of the numbers who have been called up.

To which the minister replied, "Oh, yes." The country must have the information I am asking for in order to know the present position of our voluntary system of recruiting and the possibility of being able to secure the necessary men by the continuance of the voluntary system. We would then be able to come to a conclusion as to whether or not the time has come to extend the age class beyond thirty years, possibly to thirty-five or thirty-eight for single men, as well as including married men. What was the nature of the survey made by the government? What has that survey shown? What pool of man-power is available for labour, as shown by the recent census? How many men are still available for service within the age groups twenty to twenty-four years and twenty-four to thirty years, according to divisions?

The calls being made to-day are made in a spasmodic, slipshod and unscientific manner. We are going into one part of the country and calling up men to the age of thirty years, while in another part of the country we are calling up men only to the age of twenty-four years. Surely the time has come when there should be equality in the calls. Unless we have this information, the debate on the necessity for changing our voluntary system to compulsory selective service will be based merely on individual impression. All we will have will be one man's against another man's opinion, neither of them based on statistical information.

Only yesterday we saw an example of the difference of opinion that can exist. The adjutant general gave certain figures which appeared in the press, in regard to the proportion of men called up as R recruits who ultimately find their way into the active army. At the same time and in the same paper there appeared a statement by the deputy minister of national war services which indicated different percentages. Surely the minister is in position to furnish the house and the country with the information I have asked for. Without this information each member will have to substitute his own opinion for facts based on statistics.

Mr. THORSON: Mr. Chairman, I have already covered the ground in respect to which the hon. member for Lake Centre is asking for information in so far as it is possible to cover it. I indicated that in one of the administrative divisions, Kingston, the point of exhaustion of the present age groups up to thirty was very close at hand in so far as the calling of men for military training and subsequent service in the army for the duration of the war is concerned. It is fairly easy to determine that that state of affairs exists because there will be no more men forthcoming in that area.

With regard to the other administrative divisions I indicated likewise that there were

at least two divisions where we would soon be in that situation. With regard to other divisions I indicated that we would not know the real extent of the man-power reserve that still exists until we had felt the full impact of the agricultural and other regulations.

In each division we know the number of single men there are by age groups. We likewise know the number of men we have called. We know the number of men to whom we have sent notices to report for medical examination. But I could not give the figures at the moment by age groups of the number of men who have enlisted. That would involve a review of attestation papers, because, so far as I am aware, enlistments are not recorded by age groups. That information could be obtained but it would require a great deal of work.

Mr. DIEFENBAKER: Does the minister say there is no record kept showing by age groups the number of men who have voluntarily enlisted?

Mr. THORSON: The number of men who have enlisted is certainly available.

Mr. HANSON (York-Sunbury): Yes, and their ages.

Mr. THORSON: I do not know that there is a record kept by the Department of National Defence of enlistments by individual ages. I do not see what advantage there would be in having such a record.

Mr. HANSON (York-Sunbury): They do not take them under eighteen or over a certain age, so that they must have knowledge of their ages.

Mr. THORSON: They have the ages on the attestation papers.

Mr. HANSON (York-Sunbury): And that is available to the minister.

Mr. THORSON: I have no doubt that that information could be obtained, but I imagine it would take a good deal of work and time to get it. I doubt very much whether the enlistments are recorded by individual ages.

Mr. BOUCHER: Then how can the minister know that the numbers in a certain age group are almost exhausted? The minister knows the number of available men in the different age groups through the national registration; how can he say that the numbers in any age group are nearing exhaustion if he does not know the number in that age group who have enlisted?

Mr. THORSON: It is easy to see the situation when there are no more men available.

Some hon. MEMBERS: How?

[Mr. Thorson.]

Mr. THORSON: Because there are no more men to receive notices. It is one thing to know when the state of exhaustion has been arrived at in a particular division, but it is quite another thing to know how many men are still available in another division—quite a different thing. In respect of the divisions where there are still men available the information as to how many are available in those divisions cannot be given without an immense amount of work. Some divisions must reach a state of exhaustion of the man-power reserve before others. The divisions cannot all go forward at exactly the same pace. You may reach the stage of exhaustion in one division before you do in another.

Mr. BOUCHER: How does the minister arrive at the conclusion that the numbers of men within a certain age group in a certain district have almost reached the point of exhaustion?

Mr. THORSON: Because there are no more cards and no more persons to send notices to.

Mr. BLACK (Cumberland): What are the two divisions that are practically exhausted?

Mr. HANSON (York-Sunbury): And the other two which are approaching that position?

Mr. THORSON: The other one that is very close to exhaustion is administrative division F, Quebec. Another one that is very close to exhaustion is administrative division K, Vancouver.

Mr. HANSON (York-Sunbury): And the other two?

Mr. THORSON: I mentioned only three. I have named administrative division C, and the other two I have in mind are administrative division F, Quebec, and administrative division K, Vancouver.

Mr. HANSON (York-Sunbury): I understood the minister to refer to two other administrative divisions.

Mr. THORSON: No.

Mr. HANSON (York-Sunbury): Then I misapprehended. The information asked for this afternoon is of extreme importance. The minister has stated in reply to the hon. member for Carleton that by counting the cards it is easy enough to arrive at the situation in divisions which are near exhaustion. If I appreciate the machinery correctly, there is, to start off with, a given number of cards in a given administrative district, and they are divided into age groups. That is possibly the only visible result of the national registration

of which the country is aware. The call for volunteers comes and certain numbers in those different age groups volunteer. That information filters through and their cards are eliminated from the records in the minister's department. Certain names are eliminated, and there are so many left. Surely by the process of eliminating those who have gone through the volunteer stage it is simple enough to count the number of cards left and determine the number of men available, by exactly the same process as that by which the minister arrives at the conclusion that in a certain administrative division, C, the reserve is near exhaustion.

We cannot accept the minister's answer. It does not make sense. It is an evasion of responsibility on the part of the administration to withhold this information from us. We shall insist on having it between now and the time of the debate on the mobilization act. It is our right to have the information. It is possible to get it, and we shall insist on having it. None of the difficulties to which the minister has referred is of any great importance.

Mr. ROSS (Souris): It was stated last night that to-day we might discuss the war appropriation bill under different departments which are indicated in *Hansard,* and the Minister of Agriculture said that he would be prepared to answer questions. I should like to ask him two or three questions regarding agriculture.

Mr. ILSLEY: I wonder if we cannot by mutual consent organize this discussion to some extent. If agriculture is to be taken up now with the consent of the committee, and if the committee will stick to agriculture until it is through, I do not think there will be any objection.

Mr. ROSS (Souris): It is the first item there.

Mr. HANSON (York-Sunbury): That is a perfectly proper proposal; start on one and finish it.

Mr. ROSS (Souris): I was simply starting out in accordance with the procedure suggested by the minister last night at the adjournment.

The CHAIRMAN: The committee may make any suggestions as regards the procedure it will follow, but, as suggested by the Minister of Finance, it will make for greater clarity of the record if one department is finished with before another department is taken up. If that is the pleasure of the committee we will follow that rule.

Mr. ILSLEY: It is obvious that we cannot take a vote as to which department we will go on with. It is the responsibility of the government, and the decision is that agriculture be proceeded with now.

Mr. HANSON (York-Sunbury): That is settled?

Mr. ILSLEY: Yes.

AGRICULTURE

Mr. ROSS (Souris): The production of poultry and eggs affects more farmers than that of any other agricultural commodity in Canada at the present time. I believe the minister realizes that a great deal has been done to encourage the development and expansion of these products. It has been pointed out to me, by people who I think should know, that in the near future there may be difficulty in selling these products to Great Britain. They claim they have been told that the food ministry of Great Britain can procure these articles through the lease-lend law of the United States much more easily than they can get them from Canada. I think the minister should tell us what provision was made, respecting the billion-dollar gift to Great Britain, for the supply of agricultural products —not merely those I have named, but others as well—in order that the producers may have some idea as to what the marketing possibilities of these products will be.

On page 2921 of *Hansard* there is an item, under wartime prices and trade board, of administration, $3,380,000, and another item, subsidies under price ceiling order, $50,000,000. The minister might explain the break-down under those two heads.

It may be a little out of order, but I do not think it is premature to ask the minister if he has any thought of making provision under the price ceiling regulations for harvest wages this fall. We had some serious difficulties last fall in the harvesting of our crop. There were people going through the country who were not eager to work and were demanding rates of pay some of which were ridiculous. It has been pointed out here that when this price ceiling was set on agricultural products, many items were fixed at far below the cost of production. If agriculture must produce on that basis, surely the government should take steps to regulate wages in the production of those necessary articles. The people who are going to work on the farms this fall should receive fair remuneration, but the government should step in and set a scale of wages covering the services which these men will give in the harvesting of the crops.

Mr. GARDINER: I do not know whether I can keep in mind all the questions which were raised by the hon. member, but if I miss any of them he can ask them again.

I believe the first suggestion was that I explain to the committee just what is the position in relation to eggs and poultry. It will be recalled by hon. members that at the beginning of the war we set up the agricultural supplies board, which is composed of six of the officials of the department—the four heads of the different divisions, and the assistant deputy as well as the executive assistant. This committee has working under it special boards which deal with different products. We have the bacon board, which deals with pork products; the dairy board, which deals with dairy products, and a special products board, which divides its activities into two sections, the poultry products section and the fruit and vegetables section. They enter into negotiations with the British government with regard to the production and the marketing of the different products in Great Britain.

So far as poultry is concerned arrangements have been made for the marketing of eggs. Since the poultry section was created in April, 1941, the board has entered into contracts with the British Ministry of Food for supplies of Canadian eggs and has handled all shipments of eggs to the United Kingdom. Contracts and shipments of eggs are as follows:

In 1941 the contract was for 460,000 cases, and we supplied 457,451 cases.

In 1942 the contract was for 1,500,000 cases, and there have been supplied, of shelled eggs, 367,608 cases. On February 6, 1942, instructions were received from Britain to forward the remaining quantity, that is the remaining part of the larger order of last year, the 1942 crop, as dried eggs. Shipments in shell to that date totalled 137,630 cases, leaving 1,362,370 cases to be dried. We have three egg-drying plants, one at Toronto, one at Winnipeg, and one at Saskatoon. These were brought into immediate operation to dry eggs for the board. Milk-drying plants at Ottawa, Gananoque, and Belmont, in Ontario, were converted into egg-drying plants, and additional drying plants are being constructed under private auspices at Toronto, Winnipeg, Calgary and Edmonton. The plant at Saskatoon is being enlarged. These plants are being constructed under agreement with the Canadian government. Their period of usefulness is expected to end at the close of the war. Certain assistance therefore has been given in connection with the setting up of those plants.

[Mr. J. A. Ross.]

I think that is all that it is necessary to say with regard to the egg contracts. They have resulted in all the surplus eggs being taken from the Canadian market and sent to Great Britain.

Mr. SENN: Are the returns from the dried eggs to the farmer as great as they were when the eggs were sold in the shell?

Mr. GARDINER: My understanding is that they will be. The prices remain as they were arranged for in the contract.

Mr. SENN: The minister did not state the selling price of the eggs to the British board. Has he that information available?

Mr. GARDINER: The original agreement was for eggs at 28 cents during the high production season and at 32 cents at another period—I have not the exact months before me. Later we arranged to add 3 cents to that price, the amount being taken out of the treasury of Canada, to make it up to 31 and 35 cents.

Mr. CHURCH: Would the minister care to make a statement on the beef situation in Toronto under this agriculture item, on the wartime prices and trade board—

Mr. ROSS (Souris): Could we have a little sequence to this? The minister has only started to answer the questions I asked.

Mr. GARDINER: What was the next item mentioned by the hon. member?

Mr. ROSS (Souris): I asked if the minister could give us an idea as to the different types and amounts of agricultural products that have been or will be included under the billion dollar gift to Britain.

Mr. GARDINER: The question is whether I can give the committee the different amounts of the farm products which will be supplied to Britain under the billion dollar gift. It would be difficult, because of the nature of the agreements themselves, even to make an estimate of what proportion will be taken care of under the billion dollar gift. For example, under the agreements in connection with bacon we enter into an arrangement with Britain as to what price she is prepared to pay for bacon, and then we proceed to supply bacon at that figure. A financial arrangement has been entered into between the Department of Finance and the treasury in Britain, with regard to the division of the billion dollar amount which is a gift by Canada to Great Britain. I am not in possession of the facts, and I doubt very much if the Minister of Finance would be able to say just what proportion of the amount which will be

required to take care of the total payments for bacon will be charged up to the British treasury, and what proportion eventually will be charged to the government of Canada. I think a near approach to the position can be found by examining past agreements.

Our agreement of last year provided for payment on the basis of 80 shillings. I think if we leave out for the moment places at which payment was to be made, we can get our proportions a little more clearly. The agreement this year calls for a payment of 100 shillings. If we were to say that Britain is not prepared to pay more this year than she paid last year, then it would be obvious that about 25 per cent of the amount paid last year per hundredweight would be expected to come out of the financial arrangements with Canada for this year. But I am not at all certain that it can be stated in such definite terms. Britain was prepared to pay us and did pay at the end of last season 85 shillings, although she contracted to pay only 80 shillings; and there has been an increase therefore from 85 to 100 as compared with the end of last season. But the government here have agreed to advance a billion dollars to Britain which is to be expended for war materials, including food, and some agreement will be made as to the division of the amount as time goes on.

Mr. ROSS (Souris): Would wheat be included in that?

Mr. GARDINER: It has not been, up to date, and I am not sure whether it will.

Mr. ROSS (Souris): There was another question—whether the harvest wages will be taken care of under the price ceiling structure.

Mr. GARDINER: I can only say that the prices board is under the control of the Department of Finance, and the labour situation is under the control of the Labour department. All we do in connection with agriculture is to make representations to them from time to time as to what the labour situation is in agriculture, and make any suggestions we can as to how it might be dealt with. I think this matter would be better discussed when one of the ministers is before the committee.

Mr. ROSS (Souris): Then there is the $50,000,000 subsidy under the price ceiling order. How is it divided? What products does it cover, and to whom are the different amounts paid?

Mr. GARDINER: That comes not under my department but under the Department of Finance.

Mr. HANSON (York-Sunbury): How much is going to agriculture? Does the minister not know?

Mr. GARDINER: The amount was stated in *Hansard* yesterday at page 2920. It is $11,042,281.

Mr. HANSON (York-Sunbury): On the same page there is an item under the head of Finance, "Subsidies under the price ceiling order, $50,000,000." What proportion is to go to agriculture?

Mr. GARDINER: Where does that appear?

Mr. HANSON (York-Sunbury): Near the bottom of the page.

Mr. GARDINER: That is under the Department of Finance. I have no knowledge as to what these subsidies are apart from what we have seen from time to time as applied to certain products. There were subsidies in connection with milk and certain juices and things of that sort. That is entirely under the war prices board and comes under finance.

Mr. DOUGLAS (Weyburn): Then there is an amount of $3,700,000 in connection with disposal of agricultural products.

Mr. GARDINER: That has no connection with the other.

Mr. DOUGLAS (Weyburn): Assistance given in disposing of surplus agricultural products.

Mr. ROSS (Souris): I wish to urge upon the minister that heed be given to the suggestions which have been thrown out with regard to the harvest months this fall. The farmers are very much interested in this matter.

Mr. ILSLEY: I will pass them on to the Minister of Labour.

Mr. SENN: I suggest that the minister should take each of these items separately and give an explanation. There are eight or ten items amounting to $11,000,000 and it would be better if, instead of his being asked a separate question under each item, he would make a general statement giving us an idea as to how the money is to be expended under the various items.

Mr. HANSON (York-Sunbury): I agree with that; it is an orderly way to proceed. I should like the minister to give a statement with respect to the $3,700,000 for the disposal of agricultural products rendered surplus by the war. There is still, I assume, an apple situation in Nova Scotia. This is a distressed industry owing to the fact that we cannot find bottoms to ship Nova Scotia apples to the

other side. It would be interesting to know whether the government is subsidizing farmers in the Annapolis valley to-day in a class of work which good apple husbandry requires them to do themselves. I am told that the farmers in the Annapolis valley are receiving a subsidy to take out the old mature dying and dead trees in their orchards. That is something they should do as a matter of course, but with respect to assistance in the disposal of surplus crop, this government has assumed an obligation and should continue to carry it until some other disposition of the crop is made. How far are we carrying this agricultural assistance? Members from the east would like to know.

There is a further question on the million dollars for fertilizers. I should like to know what is being done in that regard. I am told that not one dollar of it is going to the potato farmers; it is going among other farmers. Why the discrimination against potato farmers in New Brunswick and Prince Edward Island? These are pertinent questions on which we should have some information.

Mr. REID: I do not think there are any potato farmers getting a subsidy.

Mr. HANSON (York-Sunbury): I understand that is so; but why?

Mr. ILSLEY: There is an explanation.

Mr. HANSON (York-Sunbury): There may be, but let us have the reason for it. There may be a good reason, but the farmers do not understand it. They think it is rank discrimination against them. I do not say it is, and I am prepared to wait until we hear the explanation before passing judgment.

I should like to ask the minister a question with reference to potato production in this country. According to a Canadian Press dispatch dated Ottawa June 1, entitled "Canada raises potato output for U.S.A.," it is announced that:

> Joint Canadian-United States action to increase the Canadian potato production for sale in the United States and to step up Canadian output of hog products was announced to-day by the agriculture department.
>
> The plans, which have received formal approval of the Canadian government, follow recommendations of the joint economic committee of Canada and the United States.

I am more particularly interested in the potato part, which follows:

> The potato arrangement provides that steps will be taken to increase Canadian potato production, for sale as table stock in the United States in the event of a short crop in that country or for manufacture into starch for lease-lend shipment if United States production meets table needs.
>
> The United States has undertaken to purchase up to five million bushels of Canadian potatoes for conversion to starch. These will be purchased at the prevailing United States prices for starch potatoes in the area of processing.

That of course will be a low price.

> Under the announced price programme the floor price for United States No. 1 potatoes at Aroostook, Me., is $1.25 a hundredweight sacked and loaded f.o.b. cars.
>
> Present indications are that production in Canada and the United States will be below the domestic requirements of north America for seed and current needs, including starch.
>
> Existing trade agreements provide that if the United States production goes below 350,000,000 bushels, the Canadian quota admissible to the United States at a reduced rate of duty is increased automatically by the amount which the United States crop is below the 350,000,000.
>
> Agriculture officials at Washington report it is likely that under this agreement between 9,000,000 and 10,000,000 bushels may be added to the Canadian quota this year.

That is very substantial. But this is the second day of June; this announcement is just out. Have our potato growers in Canada been apprised in advance in order that they may make preparation for this increase in production? I understand that the acreage in potatoes in New Brunswick has been substantially reduced and that no preparations are being made to meet this immense increase in our quota to the United States. I welcome it, make no mistake about that; for a long time we have wanted to get that market. We have always met resistance from the Aroostook farmers. They have been strong enough with their great fruit and vegetable growers' organization to keep our product out, whereas, *per contra,* their influence with their government has been strong enough to prevent Canada from imposing an exchange duty against their products. Hence we have no exchange duty against early vegetables coming to this country, and have been limited to a more or less miserable quota for good table potato stock going to the United States.

I welcome this reported arrangement. It is a fine demonstration of how people can come together during war time. Besides asking whether this report is true, as I assume it is, I should like to know whether the potato farmers of Prince Edward Island and New Brunswick have been notified in time to enable them to take advantage of what looks like a good opportunity for increased production. Have the agricultural supply boards been informing the farmers? I am afraid it is too late if the word has not already gone out. I read the local papers from my province every day and I have not seen in them a word about this. It is

now the second day of June, and if the farmers have not the seed and fertilizer and the ground ready, it is a month too late.

Mr. ROWE: And this year's crop is all sold.

Mr. GARDINER: The trade agreement between Canada and the United States, which has been discussed in this house, sets up the conditions under which we trade with them in potatoes among other things. The recommendations of the international economic committee which was set up to consider matters of this kind were made about a month ago. That was first considered here; then it had to go to Washington and be considered there, and there was no possibility of making an announcement earlier than yesterday. It will be realized that there is no possibility of either the United States government or the Canadian government determining at this time whether more potatoes will be required in the United States, for the very reason indicated a moment ago. We have just passed or are just at the seeding season for potatoes in many parts of the continent.

Mr. HANSON (York-Sunbury): The acreage is one indication.

Mr. GARDINER: Yes, and the weather is another. For the last two or three years, probably in any year, our potato acreage has been sufficient to supply our own market plus any other markets we could find. Our difficulty has been a surplus; it is not a matter of acreage. The United States people came to us with the suggestion that this year there is a possibility of an acreage shortage, or that even if they have as high an acreage as usual this was probably not going to be a particularly good potato year in certain parts of the United States, and they asked if this country would make whatever provision we could, without running ourselves into serious difficulties, to provide for the situation. We made a careful survey of the situation in Canada and we think the acreage being put into potatoes will take care of any possible demands, provided we have an average or better than average crop.

Mr. HANSON (York-Sunbury): Will the minister indicate what that survey reveals? Is there a reduction in acreage? My understanding is that there is a definite reduction in New Brunswick.

Mr. GARDINER: Possibly there is in New Brunswick. I am not certain whether there is a reduction across Canada. I do not think anyone can say definitely, because in certain parts of Canada we are just about at planting time; around May 24 is planting time for potatoes. At any rate it was thought the acreage was going to be at a level which would produce the potatoes that might be required in the United States. I think the leader of the opposition will agree that it would put the Canadian farmer in as serious a position to have a production larger than the market could take care of, as it would to have the acreage a little below the average.

Mr. HANSON (York-Sunbury): Well, he is used to that.

Mr. GARDINER: You might run into more difficulty with the one result than the other. The opinion of officials, for what it is worth—and they are dealing with the problem all the time—is that we shall have sufficient acreage, if we have an average crop or better, to take care of the possible requirements indicated by the United States. They have not yet said they will require them, and it would not be good policy to start boosting acreage in Canada on the assumption that there may be a poor crop in the United States. But we welcome the suggestion of the United States authorities that if that does happen they will look first to Canada for their additional supplies.

Mr. HANSON (York-Sunbury): They have no other place to look. I am not raising this question in any querulous spirit. I am just suggesting that if they are looking for increased production in Canada we are too late, having taken a month to consider the position. The information I have is that the acreage is being reduced. The hon. member for Victoria-Carleton (Mr. Hatfield) who is probably one of the biggest growers of potatoes in New Brunswick, has reduced his acreage this year by nearly 50 per cent. I understand from him that that is symptomatic of the whole position. If that be so, we will have just about enough potatoes for our own market, which of course is the position I have advocated for years. Until we have a better entry into the United States market we had better not have a surplus. The minister is on solid ground in suggesting that. But if it is probable that the United States will take more of our production, then the point I am endeavouring to make is that we are late in notifying the Canadian grower.

Would the minister mind saying a word with respect to fertilizers? There is some disappointment and misunderstanding in the country on that point.

Mr. GARDINER: I wonder if the leader of the opposition would allow me to proceed in the manner he suggested at the beginning of his remarks.

Mr. HANSON (York-Sunbury): All right.

Mr. GARDINER: He suggested that I follow right through the different items; then if there are any questions to ask we can have them.

Mr. HANSON (York-Sunbury): I have finished, so far as I am concerned.

Mr. GARDINER: If that is the desire of the committee I shall deal with the different items. The first is one of $34,502 for administration, made up of salaries, $18,000; cost of living bonus, $502; printing and stationery, $4,000; telephone and telegraph, $1,000; travelling expenses, $9,000, and miscellaneous, $2,000.

The first item following administration stands in the name of the flax fibre administrator.

Mr. DOUGLAS (Weyburn): With respect to the salaries under the administration item, are those additional salaries?

Mr. GARDINER: Yes, those are additional.

Mr. DOUGLAS (Weyburn): Salaries paid to personnel engaged by the board?

Mr. GARDINER: Yes, those are in addition to the salaries paid to the regular staff. The members of the board itself are not paid any salary over and above what they get from the department.

Mr. FRASER (Peterborough West): What is the beef situation to-day? Is there any chance of relief? I ask the question because in Peterborough and adjacent towns last Saturday there was no beef or lamb to be had. Not only the storekeepers but the people generally are affected.

Mr. GARDINER: I again appeal to the committee to permit me to follow the suggestion made a few minutes ago, that I take this up item by item. I believe if that is done we can go through the list in a short time.

It will be recalled that at the beginning of the war we were asked to provide additional fibre flax in Canada. In order to avoid a difficulty experienced during the last war, when the seed went up to a very high price, we took possession of the seed and set up a fibre flax administrator under the war supplies board. That official makes provision for its distribution to increase our acreage in Canada. The remainder of it is supplied to Great Britain, to increase fibre flax supplies in the old country.

Mr. SENN: Do these administrators come under the agricultural supplies board?

Mr. GARDINER: Yes.

Mr. DOUGLAS (Weyburn): Who is the administrator?

[Mr. R. B. Hanson.]

Mr. GARDINER: The head of it is Dean Shaw. Administration costs in connection with fibre flax are placed at $22,780.

Mr. STIRLING: Does this deal with the disposal of the flax?

Mr. GARDINER: It deals largely with the disposal of the seed, and it makes arrangements under which the fibre flax itself will go to the proper places. Under this item salaries stand at $11,980; senior flax inspector, $2,400; five regional flax inspectors, $7,500; one stenographer, $1,080; cost of living bonus $1,000; printing and stationery, $500; telephone and telegraph $300; travelling expenses, $9,500, and miscellaneous, $500.

The next item is for fertilizer and pesticides.

Mr. QUELCH: What steps are being taken to utilize the straw of the flax being grown in the west? I understand it is too short to be used as fibre, but has great value as tow.

Mr. GARDINER: I am not just certain as to the value of the flax grown in the west, so far as its use for fibre is concerned. Hon. members from Saskatchewan and probably from some other parts of Canada will remember that for a long time in Saskatchewan we experimented with flax straw. A gentleman who was proficient in making a kind of twine and other materials from flax straw was engaged by the Saskatchewan government. The difficulty was that we were never able to produce it at commercial values; therefore we did not accomplish very much by way of giving assistance in the production of flax products. I do not know that the condition is different even yet. Flax in western Canada is grown in a dry climate, with the result that the fibre breaks into short lengths when handled. Those short lengths are not nearly as valuable for the making of linens or twines as are the long fibres of the fibre flax.

Mr. QUELCH: Does that apply to the irrigated areas?

Mr. GARDINER: Yes; I think the climate is the important factor, rather than that the water is made available at the roots. At least that is my information, so far as my experience goes.

Mr. SANDERSON: Flax grown in the west is not used at all in the manufacture of linens, because it is not suitable for that purpose. An entirely different seed is sown in Ontario and Quebec, where flax fibres are produced. There is no flax fibre in the west, and never was.

Mr. REID: It is being grown in the Fraser valley to make linens.

Mr. SANDERSON: I am speaking of the prairie provinces.

Mr. ROSS (Souris): It is grown in Manitoba, at Portage la Prairie.

The CHAIRMAN: Order. It has been agreed that the minister would be allowed to make his statement, and that questions would then be put, if he has not already covered the ground. I believe if we adhere to that agreement, arrived at by unanimous consent and therefore made a rule in this debate, we will make more progress.

Mr. DOUGLAS (Weyburn): No ruling has been made.

The CHAIRMAN: Yes, there was an agreement, by unanimous consent of the committee; and when there is unanimous consent of the committee it becomes a rule of the committee. It has been proposed, and no one has dissented, that the minister be allowed to make a statement, and that after that questions may be put if the minister has left any ground uncovered.

Mr. DOUGLAS (Weyburn): I suggest to the minister that if he goes over all the ground once, and then hon. members proceed to ask questions, it will take twice as long.

The CHAIRMAN: I am sorry, but that is not in order; that is my ruling. If the committee desires to appeal from my ruling, that is another matter.

Mr. COLDWELL: Mr. Chairman, no one wishes to appeal from your ruling, but I submit there was not unanimous consent.

The CHAIRMAN: There was, because no hon. member objected to the suggestion, and if no one objects it becomes unanimous consent. Therefore by unanimous consent the rule in this debate is that the minister shall have the privilege of making his statement, and will then answer questions as they arise.

Mr. DOUGLAS (Weyburn): I suggest to the minister that if he goes right through and then we begin to ask questions, it will take a long time. If at the end of each item he would pause and answer the questions, and then proceed to the next item, he would not have to come back. It could be done more expeditiously in this way than by having a general debate all over again.

Mr. GARDINER: This was not my suggestion. It came from two different quarters on the opposition side, and I proceeded in conformity with that suggestion. I am quite prepared to proceed by any method, so long as I am permitted to proceed. When I was interrupted by the hon. member for Perth I was pointing out something which I believe he expressed in better terms than I used. I was stating that the western climate is not suited to the growing of fibre flax. The farmers in different parts of Canada grow the things that they find they can grow. Because of our dry climate in western Canada we are unable to grow fibre flax. They do grow it in the eastern part of Canada, and I have no doubt that they can grow it on the Pacific coast where the climate is even moister than it is in the east.

But I had finished with fibre flax for the time being and was going on to deal with fertilizers and pesticides. We have an administration in connection with fertilizers and pesticides the cost of which is $20,397, made up as follows:

Salaries	$7,277
Printing and stationery	3,500
Telephones and telegraphs	600
Travelling expenses	8,000
Miscellaneous	1,020

The order in council appointing the administrator and setting up his organization was P.C. 398 of January 20, 1942. The administrator appointed is the chief of the inspection service of the plants products division, and his salary is paid from the estimates of that division and not out of the sum of money voted here. Only the money necessary for carrying on the actual work associated with war activities is taken out of this vote. The remainder of the cost will be found in the regular estimates of the department.

A few moments ago the leader of the opposition asked what provisions had been made for the encouragement of the use of fertilizers during the present season. We are not providing fertilizers for potatoes, for orchards or for the growing of fruits of any kind. This is part of a programme to speed up the production in Canada this year of fats and oils. We gave assistance to the planting of flax by setting a price for that product and by paying $2 per acre for land in western Canada taken out of wheat and put into flax for the purpose of getting more vegetable oils. We gave assistance in connection with the shipment of coarse grains from western to eastern Canada in order to assist in the production of live stock which would provide more animal fats. As another means of obtaining more animal fats we made provision to assist in the distribution of fertilizers in eastern Canada from Ontario east, and in British Columbia. We wanted to obtain a greater production of coarse grains in eastern

Canada and in British Columbia in order that we might have a greater production of meats and fats and dairy products.

It was not thought wise to provide assistance in connection with commodities of which we have a surplus already. For example, since the war started we have been paying out money year after year to take care of our apple crop. A year ago we had trouble in carying our potato crop, but we did not have so much difficulty this past year because there was a poor crop. However, we are not expecting to have poor crops every year. In other words, it has not been necessary to increase our production of potatoes or our production of apples or our production of most vegetables in order to get the supplies that are required in connection with our war effort. So that no assistance is being given in that direction; the assistance is being given to get coarse grains, and the fertilizers provided for must be applied to lands on which coarse grains are being grown.

Since the beginning of the war we have had a seeds administration, which costs $9,498, made up as follows:

Salaries	$4,598
Printing and stationery	600
Telephones and telegraphs	600
Travelling expenses	3,000
Miscellaneous	700

An order in council passed on January 16, 1942, authorized the appointment of a seeds administrator to regulate the distribution of field crop and garden vegetable seeds to meet present and potential needs. It will be recalled that before the war we were getting many of our garden seeds from European countries. Immediately the war started there was a blockade and it was impossible for us to obtain seeds from that source. This organization was set up to encourage the production of garden seeds in Canada, and we have experienced no difficulty in getting sufficient garden seeds to be able to carry on down to the present time.

Then we have a flour and feeds administration, at a cost of $55,000, made up as follows:

Salaries	$25,000
Printing and stationery	14,000
Travelling expenses	6,000
Miscellaneous, including telephones and telegraphs	10,000

The greater part of the activities of the feeds administrator has to do with the shipment of feed grain from the prairie west into the eastern part of Canada, and from the prairie west into British Columbia. I think hon. members are fairly familiar with the provisions of the agreement. In 1940 provision was made for the payment of a proportionate cost to those provinces which undertook to apply the policy and pay the remaining part of the cost. Ontario was the only province that undertook that policy. In 1942 we agreed to pay the entire freight from Fort William east and from Calgary and Edmonton west on feed grain shipped from the prairie provinces into other sections of Canada. Under that system all provinces have been importing feed grain from western Canada down to the present time. We have under consideration at the moment—and I say this because it is something which is of interest to farmers, particularly in eastern Canada and British Columbia—the question whether this arrangement will be renewed on the present basis. The present agreement terminates on June 30, and it will be necessary to inform business men in different parts of Canada whether or not it is expected to terminate it at the end of June. I hope to have a final decision on the question within a week, and to be able to announce what position we will be taking for the coming year with regard to the shipment of feed grains.

The next item is programmes to encourage the production of essential war supplies. It is estimated that these programmes will cost $230,000 this year. The first item is advertising, and the first item under advertising is the crop production programme for the prairie provinces for 1942. The purpose of that programme is to acquaint the prairie farmer with the government's crop production programme for 1942, which was framed according to the requirements of war conditions. This has been announced already and it was discussed quite thoroughly in the early part of the session. This advertising was put out in March and April, 1942, and the media used were the daily and weekly newspapers and the farm press circulating in western Canada, as well as posters and leaflets outlining the crop programme. The cost of that was $15,000.

Item number two is the bacon and hog programme. The purpose of this is to encourage and assist in the production of quality hogs in sufficient quantity to supply the hog products required by Britain. There was one advertisement each month, and the media were the farm papers of Canada and certain foreign news weeklies. The cost is approximately $6,000 per month. We were successful in each of the preceding years in obtaining for Britain all the bacon and ham we contracted to supply. During this present year we have contracted to supply Britain with 600 million pounds. The last reports I have indicate that we have secured—and I say secured, because it is not possible to keep shipments up with deliveries in view of conditions prevailing on the

Atlantic—we have secured for shipment to Britain in the first twenty-five weeks of the present year 52 per cent of the total required to supply that 600 million pounds. The year began with the first of October last. It has just been suggested to me by my colleague that the agreement is not limited to 600 million pounds, but is not less than 600 million pounds, and we are well on the way towards the delivery of that amount during this coming year. We are hopeful that we shall be able to deliver the amount required to fill the minimum of that contract.

Then there is the farm women's campaign. We noticed that during the first year of the war and well on into the second year we had been paying much attention to activities on the part of the men who are providing labour for farms, but not so much to acknowledge and urge greater accomplishments by women who are providing labour on the farm. Every member of the house is aware of the fact that much of the work on every farm, particularly where it is a mixed—dairy or fruit—farming operation, is carried on by women. That always has been and probably always will be so, because of their activities not only in the home itself but outside the home in carrying on some kind of dairy operations, and often poultry and other operations. We have adopted a plan to encourage and assist farm women in carrying out their task in the war, particularly in the production of food. Advertisements commenced in the late May papers, and in the June issues. Six advertisements in the series are to be released at the rate of one a month. Selected farm publications having editors of women's sections are being used. The cost of this series is estimated at $30,000 for the present year.

In December, 1941, the agricultural supplies board secured authority under order in council to place in five Canadian plants already engaged in dehydration work—one in British Columbia, two in Ontario and two in Nova Scotia—the extra equipment required in experimental processing to the new specifications, and to have those plants purchase and process for government account, under supervision of the board's representative, certain quantities of vegetables of 1941 production. Our reason for doing that was this. The British government sent an agent to Canada and to the United States in the year 1940 to inquire into the possibilities of receiving more food products in dehydrated form, the reason being obvious —that you can ship much more in a given space of dehydrated fruits and vegetables than of fruits and vegetables in their natural state. If I remember correctly, dehydrated eggs, for example, take about one-seventh the space required for shell eggs. The advantages of the dehydrated plan will be obvious in view of the shortage of shipping space caused by war conditions.

When the British agent was here first we had not developed processes which were satisfactory. The British agent went back to Britain and obtained from the records the processes that were being followed in Britain. He brought them back to this country and discussed the matter fully with the officials of the Department of Agriculture and the Department of Trade and Commerce. We developed in cooperation with them a process for dehydrating vegetables and fruits which was satisfactory to Britain, and that process is being applied now in plants across Canada. We have given assistance to the plants in putting in the kind of equipment required for this new process, and they are now operating under the plan which was evolved.

Mr. STIRLING: But you have not any orders?

Mr. GARDINER: We are sending over the commodity regularly. Under this project approximately 170 tons of beets were processed, sixty-nine tons of turnips, thirty-one tons of carrots and thirteen tons of cabbage. Considerable quantities of these dried products were placed with the Canadian defence forces for use as emergency rations, particularly in connection with coastal defence work, and as the fiscal year ended attempts were being made to interest British officials in the products. As the member for Yale suggested, British orders are not available up to the moment, but there are not sufficient products available to make shipments in shipload lots possible in view of what we are using in Canada. It is estimated that approximately $225,000 will be expended to complete this work in 1941-42, most of which should be recovered by the sale of the products made. Of the $225,000 estimated to be expended, approximately $22,000 was used to purchase for the plants special equipment, which is owned by the government.

Mr. DOUGLAS (Weyburn): What is the arrangement in that regard? Do the plants pay for it? Does the government take it over after the war?

Mr. GARDINER: The arrangement is contained in an agreement I have here, the terms of which I can read if desired. The proposal is to write off the amount at 20 per cent per year, which would mean a five-year arrangement. It is thought that some of this additional equipment will be useful later on.

The programme for 1942-43 is outlined in the order in council of May 18, 1942, for an

expenditure of $500,000. It is expected that the programme will follow the same course as in 1941-42, the output being increased by reason of the increased plant equipment.

The purchase, storage and distribution of agricultural supplies is the next item—$1,405,583. Special measures were taken to insure supplies of certain field root and garden vegetable seeds. I explained, when I was dealing with the appointment of the administrator, the plan under which that was done. Provincial seed production committees were formed in Prince Edward Island, Nova Scotia, New Brunswick, Ontario, Manitoba, and British Columbia, and the dominion and provincial governments concerned agreed to accept all seed grown on the acreage under contract of a quality equal to registered or certified seed grain. Under this arrangement more than 470 acres of various root and vegetable crops were contracted for, for seed purposes, in 1940. These measures were continued in 1941, and we propose to continue them further in 1942. Under these measures we have produced bean seed, also seed for potato, cabbage, cauliflower, cucumber, lettuce, onion, tomato, mangel and other vegetables.

Among the other potential amounts required is the sum of $1,000,000 under the heading of purchase, storage and distribution of agricultural supplies, to provide for unseen contingencies in the field of agricultural supplies. An example of what might be needed was the necessity during 1939, 1940 and 1941 of purchasing and distributing fibre flax seed surplus to growers' immediate needs.

That, I think, takes us down to assistance in the disposal of agricultural products rendered surplus by the war—the item specially mentioned, I believe, by the hon. member for Weyburn as well as by the leader of the opposition.

The first item mentioned by the leader of the opposition was assistance in apple marketing. In explanation of what has happened in the maritime provinces, in British Columbia, and to some extent in Ontario, I should say that the 1941 apple crop was smaller than that of 1940. It will be recalled that I stated here last session that in the first year of the war the British government were not desirous of taking any apples from Canada. Up to that time they had been taking 50 per cent of our crop. That required 80 per cent of the maritime province crop, about 50 per cent of the crop from British Columbia, but very little of the crop of Ontario, with the result that about 50 per cent of the apple crop was going to the British market. When war was declared Britain said that she did not wish to have any apples, because they took up too much shipping space and had little food value compared with other foodstuffs. Finally however they agreed to take half the quantity of the preceding year. They did not desire to take any of the 1940 crop. Fortunately we did not have in that year as large a crop, and our difficulties in disposing of it were not quite as great. In 1941 again we entered into an arrangement under which the British government took part of the crop from Canada, and we had to take care of the remainder of it in this country. The 1941 apple crop was smaller than that of 1940, but since, early in the season, there was no indication that Britain would take fresh apples, arrangements were made to assist in the marketing of the Nova Scotia and British Columbia crop. In September, 1941, the British Ministry of Food decided to take 1,200,000 boxes and 110,000 barrels of Canadian apples in the fresh state. Owing to the export of these apples from British Columbia, Nova Scotia and to a lesser extent from Ontario, Ontario apple growers did not require any dominion assistance. They sold their apples at, as has been said, good prices in the central part of Canada. We had agreements with British Columbia. I do not know that the committee will want me to go into the details of those agreements. In 1941 we had no agreement with Ontario, but we did have an agreement with Nova Scotia. The agreement with New Brunswick involved 4,600,000 boxes; in Nova Scotia it involved 1,500,000 barrels. The total expenditures during the year ended March 31, 1942, were as follows: In relation to British Columbia apples, further expenditures under the 1940-41 agreement were $181,810.04; under the 1941-42 agreement, $311,230.68. In Ontario the expenditure for 1940-41 was very small, only $3,819.10. In Nova Scotia, further expenditures under the 1940-41 agreement which had to be made in the succeeding year were $124,961.24; under the 1941-42 agreement, $1,649,160.92. Further expenditures under this latter agreement will have to be made.

An agreement has already been concluded with Nova Scotia somewhat along the lines of the previous agreements for the crop of 1942. We shall have negotiations with Ontario with regard to their position. An agreement is under discussion with British Columbia but has not yet been made.

Mr. SENN: Were these net figures of expenditures on apples?

Mr. GARDINER: Yes. These are the net figures which have been paid out under the similar vote in the preceding years, and this vote which is set up now will be applied to similar purposes.

Mr. SENN: After the evaporated fruit and other products have been disposed of?

Mr. GARDINER: Yes. I think that is correct, but I will make sure.

Mr. CRUICKSHANK: I do not know whether I am in order. Am I to understand that I must follow through the board administration, and so on down the line, and ask the minister any questions in that order?

Mr. GARDINER: I do not think it is necessary to follow through item by item. That completes everything down to assistance in the disposal of agricultural products rendered surplus by the war. I think it would be just as well if we stopped there and had any questions which hon. members may wish to ask. The items below that are: bacon board, dairy products board, special products board, freight assistance on western feed grain, and fertilizer assistance. These are special items which I think we can discuss by themselves, and it might be better to deal with each of them separately rather than try to give an outline of them all.

Mr. CRUICKSHANK: That is the reason I am asking the question. Naturally, coming from a British Columbia rural district, I am more particularly interested in the dairy products board, but I do not know whether I am in order in asking any questions at this time. There have been so many rulings.

Mr. GARDINER: I suggest that we take the last five items one by one, and if there are any questions on what I have been discussing, they can be asked now. We will take the bacon board next, and then the dairy board, and have questions on each one.

Mr. SENN: Under this item of assistance in the disposal of agricultural products, the minister mentioned only one article, and that was apples. It does not seem possible that all this money would be taken up with the disposal of the surplus apple crop. Are there not some other items for which assistance is needed as well?

Mr. GARDINER: That is the product which has had practically all the assistance that has been given in the way of amounts paid out of this sum this year. The amount which will be required for dealing with the situation during this coming year will not, of course, total the full amount of this sum, which is $3,700,000. In round figures the amount which we have used in connection with apples during the last number of years has been about $2,000,000. The figures which I have given, it will be noted, are not complete. The sums paid out during the last financial year partly had to do with the preceding financial year, and partly related to the last financial year, but the figures are not complete as at the end of the last financial year. Speaking from memory, the total amount spent on apples has been a little over $2,000,000.

Mr. STIRLING: With regard to this assistance which has been given, I think, the way it is put, it surely means that the government early realized that that was a war casualty.

Mr. GARDINER: Yes.

Mr. STIRLING: That was the reason. The export was suddenly cut off; the producers of apples in the three provinces mentioned were without a very considerable slice of their market; it had to be replaced, and the dominion government recognized that fact. I have a question to ask with regard to the preceding item, having to do with assistance in dehydration to try to meet the British demand. I think I am right in saying that in the last war Great Britain had a pretty disappointing experience with the quality of the dehydrated products.

In order to overcome that difficulty the government established certain experimental works in five factories for the purpose of endeavouring to reach the high standard of dehydration which Great Britain demanded. Some of these experiments were carried on in my neighbourhood and I know how successful the result has been as far as it has gone; and the assistance given by the department has been I think very greatly appreciated by the industry. But the difficulty comes in with regard to what happens next. Two months ago the manager of that industry was in touch with me in an endeavour to find out what prospect there would be of marketing if he went ahead and grew vegetables himself and advised those who usually deal with him to grow vegetables, for the purpose of marketing the stuff under the agreement with Great Britain. I was not able to obtain any information with regard to the prospect of that marketing. Can the minister say anything about the difficulty which lies ahead? Obviously dehydration plants will not proceed to induce farmers to grow if they do not see ahead to the marketing of the product. For war purposes these dehydration products are wanted for the supply of Britain for the forces, and for our Canadian forces as well, and world markets are not open to them.

Mr. GARDINER: The objective of the department so far has been merely to conduct this as an experimental undertaking.

Mr. STIRLING: To demonstrate that it can be done.

Mr. GARDINER: To demonstrate the usefulness of the process by which dehydration is to be carried out. The hon. member is correct in stating that the experiences of the last war are still in the minds of the British government and of the Canadian government. An effort is being made to evolve a process that will satisfactorily dehydrate fruit and vegetables and place them over in Britain in proper shape. I think both the British government and the dominion government are well satisfied with the experiments that have been carried on this year, and as the hon. member has stated, those in his area are well satisfied. We think it will be a success. The amount of money provided this year is about double what was provided last year, but we do not intend to increase the output beyond what we have the means of disposing of at the moment. We can of course dispose of as much, with the Canadian forces, as we did last year and probably considerably more, but on the other hand if it is required in Great Britain, if the whole quantity is needed there, we can ship it and use fresh vegetables on this side. So that whatever happens in connection with it, I do not think there is much possibility of anyone taking a loss from the experiment. The experiment is worth carrying out in war time because of its usefulness at all times.

Mr. HATFIELD: In accordance with the order in council of May 18, $50,000 was set aside for equipment assistance in dehydration plants. Will that be used to place equipment in new plants? Potatoes are the chief commodity, 75 per cent being dehydrated, and there are no plants in the surplus producing counties at the present time. I should like to know whether any of this money will be used to assist new plants in the potato producing provinces such as Prince Edward Island and New Brunswick.

Mr. GARDINER: The intention is of course to make the fullest possible use of the plants that have already been provided with special equipment, and it is hoped that we may be able to extend the activities this year to take in some other areas not covered by the plants last year. But I should not like to go on record with regard to the places at which they will be established, though I am quite sure they will be established to meet areas that have not already been provided with plants, at any time that new plants are put in.

Mr. HATFIELD: It is not feasible to dehydrate potatoes in plants which are not located in potato producing centres, because you are only shipping 90 per cent water to the plants.

[Mr. Stirling.]

Mr. NOSEWORTHY: Where are Prince Edward Island potatoes to be dehydrated?

Mr. GARDINER: The only plant that is being operated at the moment to which they would likely be shipped is in Nova Scotia, but that is because there was a plant there to which equipment has been added.

Mr. BLAIR: I should like to know something in regard to the evaporating of eggs. Have we any hope of getting an export freight rate for crates going to the evaporating plants? We get an export freight rate from the plant to seaboard, but we pay domestic freight rates from our towns to the evaporating plants. On the American side they have an export freight rate from the towns to the evaporating plants—in some of the states, not all. I thought perhaps we might be able to secure that in Canada. We have our plants a considerable distance from egg centres and it costs 52 cents to ship the crate, 11 cents to return the crate, and a charge of 3 cents for the revamping of the crate. What price is given to the evaporated eggs when they are dried? I should like to know what assistance is given to the evaporating plants, such as Swifts of Toronto.

Mr. GARDINER: I have not the agreement with me. It has been finally drafted within the last few days and I am not in a position at the moment to give the details of it.

Mr. BLAIR: Perhaps at another time.

Mr. GARDINER: The only agreement which so far has been finally drawn is the agreement with the plant that is being enlarged at Winnipeg, and that is to be made the basis of other agreements that are entered into with other plants across Canada. I regret however that I have not the details with me. With regard to freight rates, there is quite a difference between freight arrangements in the United States and those in Canada. As every hon. member knows, our rates are pretty much under the control of the transport board and have to be referred to them from time to time as changes are requested. I cannot give any information in that regard.

Mr. REID: I should like to ask the minister a question regarding the freight assistance to the western and eastern provinces. The minister pointed out that he was considering, or some board was, the advisability of continuing that policy. If the freight assistance is discontinued it will greatly affect farmers in the Fraser valley. There is no doubt that the assistance given on mill feeds and

grains has enabled them to carry on, and I strongly urge upon the minister that he continue that policy.

I am not sure whether the price of butter and cheese comes under the minister's department—perhaps it is under the Minister of Finance; that is one of those confusing things. But the price of thirty-five cents set for butter and fifty cents for cheese has reacted on the price of milk and is driving the farmers of the Fraser valley out of business. I am not going to deal with that now because it will come later—

Mr. HANSON (York-Sunbury): There is no set price of fifty cents on cheese.

Mr. REID: For butter it has been set at thirty-five cents, and fifty cents is the equivalent for cheese. That has brought about a situation in Canada under which, according to the figures I have, this year we are already short something like 5,000,000 pounds of butter. In 1941 the consumption was 369,413,809 pounds. From January to April this year we produced 48,803,071 pounds. At the end of April we are 4,485,990 pounds short as compared with 1941. The minister of agriculture for British Columbia, speaking at a meeting a short time ago, said it was unfair that the dairymen should be required to carry such a load of sacrifice as they were carrying at present under shrinking incomes and rising costs. That I think bears out what I was saying a moment ago, that if freight assistance is not continued and no subsidy is given to the farmers, and the price of butter is kept at thirty-five cents, it will mean that the farmers will very largely go out of business, except those who are fairly well established or have considerable bank accounts.

I want to ask the minister what assistance has been given regarding flax. He mentioned five regional officers. I should like to know if one has been appointed for British Columbia, and what assistance is being given. British Columbia this year has contributed $3,000 to a cooperative organization of farmers who are endeavouring to produce a crop of flax. I am not giving it as my opinion, but it is the opinion of experts that they can grow excellent flax for linen in the Fraser valley.

I noticed the other day that Great Britain is sending one of her outstanding agricultural experts to this country, to be attached to the office of the high commissioner. It was stated that his duties in Canada would be to promote the growing of food crops required by the people of Great Britain. I am not questioning his coming here; that is Great Britain's policy, but I am wondering where he will fit into the Department of Agriculture if his purpose is to promote among Canadian farmers the growing of crops for feeding Great Britain.

I ask the minister not to drop the freight assistance given the farmers of British Columbia on mill feeds and grain.

Mr. GARDINER: I am sorry I have not the names of the inspectors under the flax provisions, nor have I their addresses. I shall have that here when my regular estimates are under consideration, and if the hon. member will be satisfied to ask his question then I shall be glad to give it.

Mr. PERLEY: Will the minister state the regions?

Mr. GARDINER: There is one senior inspector and five regional inspectors. I am not in a position to give the exact regions at the moment.

Mr. REID: Is there one for British Columbia?

Mr. GARDINER: I imagine one will be there from time to time.

Mr. PERLEY: Will the regions correspond with the provinces?

Mr. GARDINER: It is unlikely that there would be a fibre flax man in the prairie provinces, because we do not grow fibre flax there. I presume they will be chiefly in eastern Canada and British Columbia.

As to the British representative, I may say that Doctor A. Scott Watson—I presume it is he who is referred to—arrived in Halifax from Britain two or three days ago. He did not go first to Washington but came direct to Ottawa and spent part of the day before yesterday and yesterday here. He may be in Ottawa still. When he arrived he naturally came to the Department of Agriculture. I take it his mission in Canada and the United States is to make known in these countries what Britain finds it possible to produce and how much of the different products that she requires during the war period we in Canada and the United States will be able to supply. I do not think there will be any difficulty in coordinating the work of the British representative with the departments of agriculture in Canada and the United States. It is simply a matter of getting first-hand knowledge of British conditions, placing that information before us and finding out what we can do in order to make up the shortage in Britain of those different products. He will of course acquaint his government with the facts, and if the total is not made up they may adjust

their agriculture in Britain to try to produce more of certain things and less of others in order to fit in with our situation. I think that is the real object of his visit.

With regard to butter I think all who are familiar with dairy production in Canada agree that if we desire to increase production over that of last year the present price will not bring about that increase. There is some doubt in the minds of some whether the present price will produce even the quantity we had last year. The difference of opinion is based on certain facts. We have been in the habit in Canada of thinking that the greater part of the butter we produce, I think about five-sixths, must be produced in the summer months. During all the years we have been producing butter, we have been producing a very considerable part of it in the summer months, and we have had the idea that we can produce butter to good advantage only in the summer months. The result has been that a very considerable storage from the months of May and June is carried over into the winter months in order to keep up our supplies in those winter months.

Last year we had an experience which some people argue disproves our experience of the past. Last summer we had a price for cheese of 16 cents a pound, plus the premium paid by the federal government and subsidies paid by the provincial governments. That brought the price up to between 19 and 20 cents a pound. Under that plan we secured enough cheese to supply the British contract during the summer months, but we had nothing left for the home market. I think members of the committee who are familiar with the facts will agree that it was always thought to be more difficult in the winter months to produce cheese than to produce butter. Last summer cheese was selling on the market at, I believe, about 37 cents a pound. When the wartime prices and trade board established their ceiling prices last fall, that price was not acknowledged as the ceiling price, although cheese sold as high as about 37 cents a pound. The reason given for its not being acknowledged was that that was cured cheese, carried over from a preceding year, and sold at a very high price because of the shortage on this market brought about by the taking of all the cheese off the Canadian market last summer.

The point I wish to emphasize is that, with the facts before us last fall, after discussions between the prices board and the Department of Agriculture it was arranged to set a ceiling price on cheese of 25 cents a pound for the winter months, and our cheese production in Canada increased by leaps and bounds during the winter months. I have not the exact figures before me, but I shall have them later, when we are discussing the regular estimates. I should have had them this afternoon. However, there has been a remarkable increase in cheese production during the winter months. It goes without saying that the cheese will probably be not quite as good as the cheese produced in the summer months, off the grass. Nevertheless it is a very acceptable food product.

With that experience behind us some people are inclined to argue that we can have a ceiling price on butter of 35 cents during the summer months. I should like to say at this point that that is not a declining price. It is scarcely correct to say that we have had a declining return from farm products, and an increased cost; because, after all, the floor price for butter last year was 29½ cents in May, 30 cents in June, and I believe in October it was 32 cents. While the price did not drop down to the floor, it was not quite as high as it has been during the early summer months of this year. The price has been hovering round 34 or 35 cents in May of this year, and I presume it will continue at about that level throughout the month of June. The argument of some is that we should start our increase in prices this year along about the month of September or October, and continuing on through the winter. It is suggested that instead of carrying so much butter in storage from the summer months until the winter, we might go into production of butter during the winter months, which would take care of our needs next winter. There are some agricultural experts who do not agree that we will get that result to the extent we hope to get it. But I am repeating to the committee the strongest argument I have heard from those who take the opposite position. The price as set at the moment is set by the wartime prices and trade board, and the Department of Agriculture is cooperating as far as possible to keep production as high as we can during the summer months. We are hopeful that if no change is made we can go on during the winter months and get greater production in the winter time. That again is an experiment with respect to which no one can exactly foretell the results.

If the argument put forth by the representatives of the prices board does not materialize, then we shall know that we have been wrong in taking that particular position this year in connection with butter, and probably will have to evolve some different plan for a

succeeding year. We may find as we go along that some other action has to be taken even this year in order to make sure of our supplies —some action which will give further returns. At the moment, however, those who are arguing for the policy being followed take the position that they do not believe that will be necessary, and that we can take care of the situation.

Mr. RICKARD: Before the minister leaves this subject may I say, with respect to the apple industry, that I am sure the growers appreciate what the government has done for them in the past two or three years. I understood the minister to say that there was only one dehydration plant in Canada, and that it was situated in Nova Scotia.

Mr. GARDINER: No, I thought I said we had five; but I believe the only one available to Prince Edward Island is in Nova Scotia.

Mr. RICKARD: In the counties of Northumberland and Durham, I believe there are as many good apples grown as in any other part of Ontario. We are anxious to have a plant established in that district; and if it would be possible for the minister to consider that matter, it would be greatly appreciated. I do not believe there is one within a reasonable distance in that part of the province.

Mr. ROWE: Mr. Chairman, listening to the minister say that what has been done may be wrong, and that we are more or less trying an experiment, it occurs to me that the agricultural war policy of the government has been pretty much one of experiment, trial and error since the war began. That has been the condition from the time we endeavoured to fix the price on bacon. There have been the fixing of winter prices in summer time, the fixing of summer prices in winter time, and a terrific effort to keep prices down.

I recognize the merit in the general principle the government is endeavouring to follow in connection with the price-ceiling policy, but it appears to me that it is almost impossible to carry it out properly. I believe it will prove to be merely an experiment to fix prices on agricultural products, without fixing farmers' costs. The farmer to-day is paying 50 per cent; yes, in many districts he is paying 100 per cent more wages than he paid prior to the war. I suggest there is within sound of my voice no hon. member representing an agricultural constituency who does not know that that is the condition. There have also been great increases in feed costs.

It is true that the government is experimenting with a price-ceiling policy to avoid inflation in general industry. But those who are associated with industry know very well that wages were fixed. I say in all fairness to the labouring man that some effort should be made to keep his living costs at as low a point as possible. It will be remembered, however, that there is a cost of living bonus, and that wages were frozen and a cost of living bonus added in proportion to the change in the quarterly index. No such situation prevails with respect to agriculture. No wonder it has been said so often that the farmer is the forgotten man of this country. I do not blame the Minister of Agriculture alone for the somewhat economic tanglefoot in which he finds himself, because no doubt he is simply trying to coordinate his policies and efforts with the government's general policy to which I am taking exception at this point.

If we are going to increase agricultural production all along the line, the production of those products that require the most man hours of toil, such as foodstuffs, animal fats, butter, dairy products, meats and so forth, the products which cannot be handled by mass production methods, with the use of heavy machinery, but products which require constant attention in the winter months as well as in the summer months, we must leave some of the old element of chance for a reasonable period to the farmer. He has been living by chance almost since confederation as far as his prices are concerned. Hon. members know that a farmer must be something of a gambler. He must risk weather conditions, whether it will be too wet as it has been the last few days or whether it will be too dry, whether the prices he receives for the products he hopes to produce will pay for the seed, whether he will get less for the one or two offsprings of an animal than he has paid for the breeding animal. He has been forced to take these chances. For ten years the farmers, especially those who produce mixed farm products, have borne the brunt of our economic depression. In depression they were not protected by a floor, in prosperity they are hindered by a ceiling.

These men have not received much in the way of subsidy. For ten years they received only about fifty per cent of what they received in the more normal past for their products. They found it almost impossible to carry on. When war broke out they were appealed to by all of us to produce more. At one time the Minister of Agriculture told them that we did not need more bacon, that the price would be fixed at $9 per 100 pounds in order to keep the price down. When the war started, wages paid to the labouring men in industry were

fixed, or frozen if you like, but in addition they are paid a cost of living bonus. One result of these higher wages has been that the boy who was working on the farm went to the factory. To-day the farmer must pay practically double the wages he paid in 1939, and there is no cost of living bonus.

Farmers are finding it almost impossible to get help and equally impossible to hold the help once they get it. There is nothing to hinder a neighbour from climbing the line fence and saying to a farm labourer—I know of instances of this—"You are doing a good job ploughing; how much are you getting?" The man might reply, "$55 and my board." "All right, come down the line and I will give you $60; my credit is a little better; where are you from?" "Saskatchewan." "The last man was from there and I understand he did not get his money." That is what happens. The man goes down to the next place, and the man on the next farm does the same thing.

Mr. DOUGLAS (Weyburn): They are used to not getting their money in Saskatchewan.

Mr. ROWE: I do not want to reflect upon Saskatchewan. Many healthy fellows come from there. I have given much thought as has every person who has had anything to do with agriculture, to this matter of farm labour. Whether it be popular or unpopular I want to say that I do not believe in this price freezing of farm products, in setting price ceilings. I do not think it can be applied to agricultural production with success, even as a war time measure.

We are freezing the wages paid to our labouring men and giving them a cost of living bonus as well. Why are we paying a cost of living bonus? We are paying this to protect the labouring men against a rise in the cost of primary products, against rise in the cost of foodstuffs. When the Minister of Agriculture is fixing the price of butter at thirty seven cents a pound he does not know whether I shall have to pay $5 a day for labour, or whether the hon. member for Haldimand (Mr. Senn) will have to pay $6 a day because he happens to be nearer to a factory. When men are able to go home and still work in a factory, the factory offers strong competition for farm labour. The farmer is not only unable to get sufficient help, but must pay a wage rate twice what it was in 1939.

I am not for one moment claiming that these men are getting more than they should. Even now they are not getting as much as the man with similar ability and initiative is being paid in industry. I have always felt that we shall never have a well organized prosperity in this country until the farm labourer is placed on an equality with the industrial labourer. The farm labourer is entitled to a fair price for his toil. He should not be asked to work longer hours for shorter pay. I hope the day is coming when the farmer will receive the same for eight hours labour on the farm as is paid to the industrial worker for eight hours labour in the factory. The farm labourer has not reached that point even though he may be receiving twice as much as he received before the government tried in the summer time to fix the winter-time prices of the commodities produced by the farmer.

It is all very well to tell the farmer that he is a great fellow, that he is the backbone of the country, that what he does is just as important as what the soldier in the front line is doing. I know however, that the boy on the farm cannot satisfy his own conscience and feel that he is writing as much on the pages of history when he is standing behind a plough as his brother behind a machine gun. I cannot convince myself that the boy on the farm is as proud and as satisfied with the service he is giving, even though he may be keeping a widowed mother. He feels that service overseas, while more dangerous, is more glorious.

If we are to produce to the limit from the great agricultural resources of this dominion, this government must stop, look and listen. It must realize what is happening. Thousands of acres in western Ontario, thousands of acres in Simcoe county, thousands of acres in Dufferin county, thousands of acres in the county of the Postmaster General, York county, are idle to-day. They are idle because of the uncertainty as to what is to be paid for the products which can be raised on the farm. Ceilings are being placed upon what the farmer has to sell, and floors are being placed on what he has to buy. That is not sound economy. It will retard the production that we should be developing.

It is all very well to read a bulletin and say that we have produced much more this year than we did last year; it is all very well to say that we are getting higher prices, but I do not hear anyone say that the farmer is forced to pay twice as much in wages. I do not hear the Minister of Labour assuring us that these wages will be fixed for next year and that a cost of living bonus will be provided. I cannot hear anyone assuring me as to what I shall have to pay for harvest labour.

I am doubtful about the whole price-ceiling scheme and its effect upon our economic picture. The old law of supply and demand should

be given more freedom, and it must be given more freedom if we are to meet the demand by an accelerated supply. The farmer is the forgotten man and has been placed in a most ridiculous position. The government praises him for his loyalty and coaxes him to produce for less; it tells him that his products are as important as bullets, and at the same time it tells him that it is going to put a ceiling on what he has to sell and a floor on what he has to buy. The government will not tell him what he will get next year for his products, but it gives him soya beans to sow and tells him that he will not get more than $1.95 a bushel.

Mr. GARDINER: We guarantee him $1.95.

Mr. ROWE: It is all very well to talk about where prices went in the last war. I am of opinion that the rise in prices which occurred in the last war had more to do with keeping our troops from starving than any other single thing. Not only the soldiers but the whole of Europe will be pleading for foodstuffs. I realize, of course, the shortage of shipping, but after the war, all of Europe will be needing our foodstuffs.

At the present time we are giving the farmer only about 20 to 25 per cent more for his butter than he received when he was paying 100 per cent less in wages, and yet when he goes into town he is told he had better eat one piece of butter instead of two. The same is true of agricultural prices all down the line.

With reference to bacon production—let me say incidentally that I have not eaten a pound of bacon in the last two months, thinking it was loyal to refrain—I am to-day producing bacon for only about 25 per cent more than I got when I was paying 100 per cent less in wages. In this connection I would urge the minister to raise the weight of hogs fifty pounds each. Let the farmers produce, not a 185-pound hog, but a 225-pound hog as we did in the last war.

Mr. GARDINER: That is what they are now, 185 pounds dressed, 225 pounds on foot.

Mr. ROWE: Make it 225 pounds dressed. May I say that I was docked one dollar the other day because my hogs were one pound overweight. These long, stream-lined, white Yorkshire hogs that we were urged to raise so that our bacon could compete on the British breakfast table with the lean bacon from Denmark, so that the girl who was tripping off to her office and wanted to keep her girlish figure would not have to eat too much fat, is not the size of hog we should be raising to-day. What we want now is more fats and more oils and more bulk. These long, thin hogs can carry fifty pounds more weight, and the boys overseas and the starving people over there would rather have their bacon with a little fat on it than half as much pork with no fat at all. It is true that Denmark is now out of the picture. We might have to revert to the better grades to meet post-war competition, but what is wanted to-day is foodstuffs for an emergency, fats for a crisis, not stream-lined bacon for the woman who is working only a few hours a day.

Mr. HANSON (York-Sunbury): And who is thinking of a fashionable figure.

Mr. ROWE: Exactly. I urge the minister to set aside for the time being these restrictive regulations which have only proved unprofitable and confusing to the farmer, and let him produce a hog weighing fifty more pounds. That would increase our production by hundreds of millions of pounds.

I urge the minister and his government to give consideration to the position in which agriculture in this country finds itself to-day. It has never been so confusing to the farmer. Never has there been so much uncertainty ahead of him, and never has he had a more important task to perform. Particularly do I urge this upon the minister now that the farmer has to pay 100 per cent more in wages and there is a ceiling on his products. What we should be doing is to put a floor on his products. Try giving him a fair price rather than a fixed price. I am not suggesting that our farmers want bacon to go up to $26 per 100 pounds or butter to 90 cents a pound or eggs to $1 a dozen. I know that within two miles of my home a farmer sold 100 good laying hens last winter because he would not produce eggs in winter at summer-time prices. He started in the business with the intention of having 2,000 or 3,000 hens, and he sold when he had 800 hens. Another neighbour with 300 hens sold all but fifty for the same reason. I said to one of these men, "Why don't you wait? The government is struggling with price ceilings, and there will be a demand for eggs. They are needed for war purposes." But he replied, "It is all too uncertain. If the government is going to fix a price where there is practically no profit in it for us, and adopt that as a policy, when we do not know what we shall have to pay in wages for help which I shall have to hire because our boys are gone to the war, I am better off without the hens." That is the position of agriculture all along the line. The government has no agricultural policy. I realize that they are confused, that they are trying to get out of a crisis, that they are trying to coordinate agricultural production with this novel price-ceiling policy. I realize the difficulties involved; but

I would say, in conclusion, that you cannot fix a price ceiling on what an industry has to sell and a floor price only on what it has to buy.

Mr. CRUICKSHANK: I want to congratulate the previous speaker. It is the first time I have really agreed with him in this house. I do not think that is an unfair remark. We are on opposite sides of politics, but his was a good speech all round.

Mr. MacNICOL: You are fair.

Mr. CRUICKSHANK: I try to be, and I try to pick up information as I go along. I have often wondered what the streamlined type was, but after hearing the hon. member for Dufferin-Simcoe, I know now that it is a hog from Toronto.

The Minister of Agriculture said some time ago that farm labour came under the Minister of Labour and that the wartime prices and trade board came under the Minister of Finance. I want to quote what the Minister of Finance said as reported at page 2909 of *Hansard*. Among other things he said:

> The subsidy was discontinued on May 1st, because effective on that date the board established a new scale of maximum milk prices and made provision for other adjustments in milk production practices, so that adequate prices may be paid to producers to enable them to continue production.

The Minister of Agriculture says that we must go to the Minister of Labour in connection with hours of labour, and that we must go to the Minister of Finance in connection with the wartime prices and trade board. I do not know how we can approach this question except through our Minister of Agriculture. We who come from agricultural ridings look to the Minister of Agriculture to do that very thing for us. I am inclined to agree with the last speaker; I have no more desire than anybody else to see inflation, but I think it is obvious that the last man to be hurt in Canada or in any other country by inflation is the farmer.

I consider it to be the duty of the Minister of Agriculture, on behalf of and representing a rural riding, to see that it is brought home to the Minister of Labour and the Minister of Finance that we simply cannot continue to exist under the present financial and labour set-up. In British Columbia for the past two months dairy cattle have been disposed of at the average rate of a sale and a half a day. These dairy cattle, the finest we have in Canada, are being slaughtered for beef purposes because we cannot get milkers and other labour. I am not contending that farm labourers receive too much. Nor can one blame any farmer's son or other working men for taking advantage of the high rates of wages in war industries. To my way of thinking, however, the Department of Agriculture should formulate some scheme, either of bonusing farm labour or seeing to it that the wartime prices and trade board allows us a sufficient price for farm produce to permit of our paying adequate wages to keep the men on the farms. It is not at all to the credit of one of the greatest agricultural countries in the world that our dairy cattle are being slaughtered for beef at the present time, and I think it is a condition which could easily be overcome—though here my hon. friends to the left will probably claim all the credit for the suggestion—by a little planned economy. Surely we can plan ahead a little bit. If we had adopted some system of planning our labour supply a few years ago, we would not have the condition that is existing on the farms to-day.

However, I am not quarrelling about that, but I am definitely objecting to what in my opinion has happened as regards setting the price of milk. It has been set on a cheese basis. I do not know the reason for that, but I venture the statement that no practical dairyman, unless he is also in the cheese business, is sitting on any of the wartime prices boards. It is obvious that if it is made so much more advantageous to produce cheese, there is going to be a reduction in our other dairy products. In the Fraser valley, where I come from 75 per cent of our milk is marketed throughout the largest cooperative dairy association in Canada. I am not exaggerating; the minister knows it is true. He may not know that there are only two larger dairy cooperatives on the north American continent. It is a very large organization. We sell on consignment 75 per cent of the milk produced in the Fraser valley, which practically means it is the milkshed of British Columbia. Of that, only 25 per cent goes on to the fluid market. Anyone who knows anything about dairying knows that his money comes from the fluid market. The wartime prices and trade board were going to permit us in Vancouver to increase the retail price of our milk one cent, on the 1st of May. Our settling rate was fifty cents a pound butterfat. If we took advantage of that, the price would be approximately sixty cents a pound butterfat; but if you follow it through, although we handle 75 per cent of the milk, only 25 per cent of it is fluid milk. We stand to gain two cents a pound butterfat as regards the 75 per cent of total production; but our competitors, who market 75 per cent of their

25 per cent on the fluid market, will gain seven and a half cents. I do not think the minister's department intended anything like that.

In my opinion, the sooner agriculture gets back under the Department of Agriculture and away from some of these wartime boards, the better for agriculture. I believe the minister will be fair enough to admit that he has not any more control over agriculture in the Dominion of Canada to-day than I, as a private member, have. Some dollar-a-year man or some such other unnecessary "critter" on these boards controls the price the farmer is to get. The minister cannot deny that.

Mr. GARDINER: Not while the hon. member is speaking.

Mr. CRUICKSHANK: I am not depreciating the minister's value, because I can say—and this is one way to say it safely and keep the friendship of my friends,—that there is only one other man in the House of Commons who I believe is capable of filling his shoes, and I am not going to say who that is.

Mr. DOUGLAS (Weyburn): The hon. member is too modest.

Mr. CRUICKSHANK: There will be plenty of applications; I know that. I am not going any further into the labour problem, but I believe the fact has been overlooked that everything the farmer uses and must use in his normal production has increased in price to a great extent, in some instances by 100 per cent. Take one so-called tool of the farmer, with the use of which some of these legal-minded farmers are probably not very familiar, at any rate since their youth—the manure fork. At the beginning of the war it cost $1.15; now it costs $1.95. But the price of milk and other products has not risen correspondingly. Potatoes rotted in the pits in British Columbia this year. I know it is very easy to criticize and to declare what the minister should do and what he should not do. But there is one suggestion I might make as far as my own province is concerned, and I think it affects parts of Ontario, certainly the city of Ottawa. On any street here where there is an apartment building you will find ten or fifteen or sometimes twenty milk trucks or carts delivering milk and cream to that building. There is one place that the minister might act, if he has any control over this agricultural set-up. At least he could write a letter to one of these boards and tell them to do something. They could dispense with many of these trucks by some system of consolidation of deliveries.

Mr. JACKMAN: Some of the dollar-a-year men are doing that now.

Mr. CRUICKSHANK: Well, as usual, and as I have heard from my hon. friends on the left, they are doing it at the rate at which we are accused of carrying on the war effort; they are extremely slow about it. There is no question about that. I am afraid that the hon. member who has just spoken is never up early enough in the morning, unless he is going home, to know what is going on. If he would come around to-morrow morning I could show him places in the city of Ottawa where there are ten trucks delivering at one apartment building. That could be avoided by a system of consolidated deliveries of milk and other products.

There is another way in which I think we could assist the dairyman; it was touched on briefly by the hon. member for New Westminster. I am glad to hear the minister say that it is under consideration, and I am going to take it for granted that it is as good as accomplished, because when the minister puts his mind to anything he generally gets his own way.

Mr. HANSON (York-Sunbury): He is having an awful struggle now with Mr. Gordon.

Mr. CRUICKSHANK: To continue this freight rate system will assist the dairymen considerably. It would also assist us in connection with our dairy production if the minister would see to it that the rural ridings get a fair deal on this system of gasoline rationing. I know it is not his branch, but as a rural member I deem it my duty to look to my Minister of Agriculture. He is the king-pin in the agricultural industry in so far as this parliament is concerned, and it should be his privilege as well as his duty to represent us in every way. As regards gasoline, the first man the wartime prices and trade board picked on was the farmer. They allowed the brewery salesman to go round with category C, but the farmer, whether handling dairy products or nursery stock or any other line, gets only category A. Probably hon. members do not know that. I think a considerable saving could be effected along that line.

Mr. HANSON (York-Sunbury): The brewery industry has a dollar-a-year representative here.

Mr. CRUICKSHANK: I think he comes from the maritimes too.

Mr. HANSON (York-Sunbury): Oh, no!

Mr. CRUICKSHANK: There is another matter I would bring to the attention of the minister because I have received a letter in connection with it. I think the minister will admit that it must be hard on the farmer in the Fraser valley, working from five o'clock in the morning to half-past eight at night, to obtain, as this particular man did last month, 100 pounds of 4 per cent milk. A good many members here will say, "I was brought up on a farm and I love the land." Yes, but as soon as they get an opportunity to move away from the land they take advantage of it. I wonder how many members know how much milking one has to do to get 100 pounds of 4 per cent milk, and then he gets exactly $1.66 net for it on the farm. Is it any wonder that these people write to me or even borrow the money to pay for a telegram. In these days of speedy travel they can get newspaper pictures out west very quickly. Four days ago there appeared in the newspapers the picture of a handsome young man. He was really a fine looking fellow; indeed, I thought he was a moving-picture actor. As I say, he was young too. Well, to my surprise he was not overseas, under the splendid selective draft system which we have. No; he was an artist. Will anyone tell me, when there is a war on, and farmers are getting $1.66 for 100 pounds of 4 per cent milk, what on earth we need an artist for in the department? It does not make sense. I suggest this is one direction in which economy could be effected. Why do we want an artist working in connection with entomology; we have enough bugs without this man. If it is the intention of the department to let the dairy industry in the Fraser valley fall by the wayside, very well; they are proceeding in the right way. If, however, they want to maintain the dairy industry, then I suggest that they adopt a different attitude. There is no question about that. When auction sales are taking place continually in an area eighty miles long by thirty miles wide, an average of one and a half sales a day, at which the finest dairy cattle in Canada are disposed of, it will be realized that we are not doing anything to save the dairy industry. There are men who have been in that industry for fifty and sixty years, born and brought up in it, and yet they are selling every one of their cattle. In the face of such a situation, neither the department nor the government nor this parliament has anything to be proud of in the manner in which dairy farming has been handled in Canada.

Mr. BLACKMORE: Is that taking place now?

[Mr. R. B. Hanson.]

Mr. CRUICKSHANK: Absolutely; there is no doubt about it. All one has to do is look up the local papers in British Columbia and see the list of advertisements or go through the valley himself and see what is taking place. I am not suggesting that the farm labourer is getting too much money. In my riding they are receiving, in some instances, from $80 to $125 a month and board for milking. Well, one cannot pay such wages at the price of dairy products. Last month when they were getting $1.66 per 100 pounds of four per cent milk, day labour was receiving $3.60—and I am not quarrelling over the fact that the day labourer receives that amount. Probably they should get more. At any rate, they were getting $3.60; and if the farmer produced 200 pounds of milk and had a man working for him, he lost twenty-eight cents on the operation. That sort of thing cannot continue, and yet no effort is being made to alleviate the situation.

I suggest that the government should do something in regard to farmers' sons.

An hon. MEMBER: Order.

Mr. CRUICKSHANK: Some hon. gentlemen call me to order when I interrupt the member for Témiscouata, but they do not call anyone to order for interrupting me. In British Columbia, at least as far as my riding is concerned, we have never applied for exemptions for farmers' sons. I have never recommended a solitary one, because I do not believe in that sort of thing. I do not believe it is the prerogative of a member of parliament to do so. At the same time I submit that more consideration should be given to any bona fide farmer's son so as to allow him to stay on the farm. Here may I pay a little tribute to the hon. member for Lethbridge (Mr. Blackmore). I suggest that sometimes, if we paid a little more attention to what he says, we might gain a little knowledge. I am not referring to his monetary system, because I understand neither his system nor the old one; but if we had given more attention to him we as a parliament—since I have been here at any rate—might have learned enough to wake up to a realization of the sugar beet situation. What is happening now? We are rationed on sugar because we were not longsighted enough to go in for the production of sugar beets.

The story has already been told by previous speakers with regard to labour, but it is the duty of the minister to impress upon the wartime prices and trade board the importance of this question. If he were free to tell us what he thinks of the board, he and I might agree. At any rate, we cannot continue

production in British Columbia if conditions remain as they are. I do not profess to be speaking with full authority for my constituents, but I am certainly expressing my own opinion when I say that it is doubtful whether the price ceiling is of any material benefit to agriculture. I doubt very much if it is. I think it is a detriment.

Mr. HANSON (York-Sunbury): It is a detriment.

Mr. CRUICKSHANK: In my opinion it is. We are being penalized; the forgotten man is being penalized for the benefit of the rest of Canada as a whole. If we are to be penalized—possibly it may be for the good of the country in the long run—surely we should receive something to compensate us in that regard, so that the farmer may be allowed to carry on. There should be an ample subsidy, or he should be given a guaranteed price for his product. The manufacturer is guaranteed a profit on what he produces. I do not say he should not have that guarantee, but there is not a shell manufactured or any other manufactured article produced in Canada on which the manufacturer does not know in advance what his profit will be. On the other hand, there is not a solitary article produced by the farmer of which this can be said. The farmer does not know, before he produces it, what profit he will get on anything he produces. I am not saying that there are not certain articles produced by farmers on which a profit is made, but the producer does not know that beforehand, as the minister admitted in connection with poultry and potatoes. The producer does not know until after he has produced the commodity. How many tanks or planes should we get produced at a loss if we said, "produce for victory, for patriotic purposes?" We would not get a wheelbarrow produced by that gang in Quebec and Toronto if we asked them to produce for patriotic purposes. We must be realistic; the farmers must be guaranteed a fair return for the energy and money invested.

Mr. BLACKMORE: I was not quite sure whether the hon. member said most of those dairy herds were being sold for slaughter.

Mr. CRUICKSHANK: I would not say most of them. We found that there were auction sales at the rate of one and a half a day. We checked on one sale of splendid dairy cattle and found that within forty-eight hours 98 per cent of two herds were slaughtered in Vancouver.

Mr. FULFORD: It is not my intention to argue the pros and cons regarding the wartime prices and trade board, nor do I wish to suggest that the price of cheese has been set too high. What I do say is that when the price of cheese was set the price of other dairy products was set too low. In other words, the butter price was set too low. One product of the dairy industry which I have not heard mentioned is condensed milk. At one time the constituency which I have the honour to represent was the greatest cheese-producing county in Canada. To-day we are one of the large cheese-producing counties. A great deal of the milk that formerly went into the production of cheese is now going into condensed and evaporated milk. In fact the farmers have become largely dependent on that outlet for the sale of their milk.

As matters now stand, the price for condensed milk has been set so low that the companies cannot meet the price paid by the cheese factories. Although I understand the minister's hands are tied by the wartime prices and trade board I should like to inquire whether there is any possibility of having the condensed milk business bonused as are a great many other industries. It is a very grave question with us. Even if the farmers should decide to stop selling to the condenseries, I am afraid they would be out of luck inasmuch as a great many cheese factories have gone out of business; some have been burnt; some have fallen into disrepair; others have actually had their machinery sold. As yet the condenseries are meeting almost the prices paid by the cheese factories; but this cannot go on, and in justice to our farmers some system must be worked out whereby it will be as profitable to sell milk to a condensery as to sell it either as fluid milk to a dairy or to a cheese factory. Even at the present cheese price the farmer is not getting what he should for his milk, although it is far better than it was. I cannot understand the prices quoted by the hon. member for Fraser Valley. Fortunately milk prices in eastern Canada are considerably higher than that, even if a bonus has to be paid in certain instances. One assurance that must be given—and I was glad to hear the Minister of Agriculture saying that consideration is now being given to the matter of freight rates on coarse grains to the Pacific coast and the east—the farmers must be guaranteed a continuation of reasonably stable prices on feeds. Otherwise I can visualize a condition in this section of Canada such as seems to prevail in the Fraser valley. We are losing a great many of our high-grade registered cattle, not for slaughter purposes I am happy to say, but buyers from the United

States are coming into Canada in large numbers and buying the very choicest cattle in our herds.

An hon. MEMBER: At high prices.

Mr. BLACKMORE: A dangerous situation.

Mr. FULFORD: It is. The prices are high but not too high. I am not arguing that point. I am glad that for once the farmers are receiving something, but to me it is a serious matter that the very cream of our herds is being exported to the United States. Something must be done to keep these fine cattle in Canada. If they are not kept we shall be left with the stragglers, the poorest type. Before the war it was possible to import stock from Guernsey, Jersey, Schleswig-Holstein, but we do not know what the Germans have done to those cattle. We must keep our stock up to the highest possible level, and the only way I can see to do it is for the government to formulate a definite policy, bonusing the farmers if you will, to keep their herds at the highest possible level of quality.

I sincerely hope that the Minister of Agriculture can persuade the wartime prices and trade board either to raise the prices of butter and condensed milk or to pay a bonus so that the dairy industry will be once more equalized and not in a state of constant flux as it is to-day.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. ROSS (Souris): Why is there a disparity between cheese and butter prices? This afternoon the hon. member for New Westminster said that cheese products were in the ratio of fifty, as compared with thirty-five for butter. Throughout the country people who are in a position to deliver their milk products to cheese factories claim they are making better money than those who make deliveries to creameries. In my province and, I suppose throughout the prairie provinces generally, we have scarcely any cheese factories. Indeed, under the system of priorities it would be difficult to have cheese factories constructed in that area. I am wondering if the dairy products board could not guarantee to the dairy producers the same price for their butter fat, whether it is used for cheese or butter or whole milk. In my view the present position is discriminatory and I suggest that the minister should give some concrete explanation for this condition. I suggest that the board should be instructed to pay these producers on a basis of equality for butter fat. Would the minister suggest that the board might do that?

Mr. GARDINER: I did give a partial explanation this afternoon. The explanation is provided not so much by the Department of Agriculture as on behalf of those who are establishing ceiling prices in Canada. The suggestion is that we can increase butter production by having a higher price during the winter months, rather than in the summer. That is one suggestion. The real reason for any disparity between prices of cheese and butter since the beginning of the war is that Britain desires cheese. Year after year she has been urging us to produce the greatest possible quantity of Canadian cheddar cheese to be shipped to Great Britain. Last year we suggested that all we thought we would be able to get under the conditions then existing was about 112,000,000 pounds. We just managed to get that amount by refusing to permit the sale of any Canadian cheese in Canada. Cheese made between May 26 and October 1 of last year was all shipped to Great Britain; none of it was allowed to be sold in Canada. During the winter months we allowed a higher price, and did get a very considerable production of cheese in those months. It is argued that by the plan which is now being followed of having a thirty-five-cent ceiling in the summer months and a higher ceiling in the winter months we can get a considerable production of butter in the winter months of the coming year.

I said this afternoon I was not at all sure as to whether the results would be what are expected. Nevertheless that is being tried out for the time being, and we are cooperating in every possible way to bring about a favourable result. The suggestion was made this afternoon that a price of fifty cents for butter would compare favourably with the present price of cheese. But one would have to include with the price of cheese the subsidies paid by provincial governments and the premium paid by the federal government in order to raise the comparable butter price to that level.

The price paid for cheese exported to Great Britain is twenty cents a pound. We have always considered that two cents for butter to one for cheese would be about the proper relationship. Based on the actual price that would mean about forty cents a pound for butter. There has been a demand made to keep the price as nearly as possible at proportionate levels. The argument is put forth at the present that we may get all the

butter production we require, and at the same time encourage a greater production of cheese for Great Britain by having the present disparity in prices.

Mr. ROSS (Souris): There is no great surplus of butter, is there? I read that there may be a shortage of butter. If there is no great surplus, I should think the argument should prevail that there should be as nearly as possible a parity on all dairy products.

Mr. GARDINER: I think one hon. member this afternoon used the correct figure when he said that storages were down about 5,000,000 pounds at the beginning of last month, as compared with a year ago. If nothing else is taken into consideration, this indicates that there might be a shortage of butter at the end of this season. We have been accustomed to expect our peak production in May and June, the production then tapering off in July, and still further in August and September. This year it is hoped we shall have increased production next winter, with the higher prices, in order to make up for anything which drops off during the factory cheese producing months this summer.

I should add that we are hopeful at this time of being able to get the 125,000,000 pounds of cheese we have agreed to send to Britain; but we are not yet in a position to state with any assurance that we shall have the full amount of butter which will be required for consumption in Canada.

Mr. LECLERC: I was interested this afternoon to hear the Minister of Agriculture talking about butter and cheese. I have been in that business for about forty years and, although I am not an expert, I believe I know something about the industry. It would seem that the minister and his advisers are a little worried that we may run short of butter this year. The fiscal year, if I may so describe it, for cheese and butter, is from the first of May to the last of April in the following year. Last year we received 85,000 boxes of butter as compared with 50,000 boxes received this year. On the other hand, we received this year 150,000 boxes of cheese as compared with 50,000 boxes last year. There is no necessity for an expert to see at once that we are going to run short of butter before the year is over. Unless we can import some butter I would urge the minister to give serious consideration to the situation and not to wait until the first of October before he revises his plans. I know that after the first of October very little milk is produced, and unless a very high price is paid for butter, he will not get it at all.

I do not make this suggestion to embarrass the minister, because I always pity ministers when they are being grilled with respect to their estimates—although I know that the passage of estimates is almost a holiday for the present Minister of Agriculture. I do not believe any more milk will be produced this year than last because there is a scarcity of labour. Farmers' sons have been enlisting, and others have been drafted. Many farmers are reducing their herds. They cannot hire help; that is out of the question. The result is that for many reasons we shall be short of butter, because at this time there is a better market for whole milk, condensed milk and cheese. Consequently, if the production of milk is the same as it was last year we cannot expect any increased production. Last fall we had about 8,000,000 pounds of butter that we did not know what to do with, but the purchasing power of our people increased to such an extent that that butter disappeared during the winter and was practically all gone on May 1. This year we should have a greater production because we have the market for it.

I do not know that the minister can do much about this matter because we have the wartime prices and trade board. I wonder if that board knows anything about cattle. I wonder if it knows which end of a cow should be milked. I think the government whenever possible should take the advice of those who know something about this business. The other night the hon. member for Renfrew South (Mr. McCann) complained about not being appointed to committees where his advice on medical matters might be of value. I urge the minister to consider these suggestions carefully. I know he is a good listener. About a week ago I wrote him to urge that the butter fat content of ice cream be cut down in order to conserve butter fat. Before I received an answer an order in council was passed reducing the butter fat content to where I wanted it. I compliment the minister upon that action.

Mr. TUSTIN: This afternoon the hon. member for Fraser Valley (Mr. Cruickshank) wanted to know why the price of milk was always tied up to the price of cheese. The reason is that that is usually the lowest price paid for milk. At the present time a controversy is going on with regard to condensed or powdered milk manufactured in this country. The milk board of Ontario has set the price at $1.95 per 100 pounds for 3·5 per cent milk. That is 25 cents per 100 pounds above what the basic price had been for some time. In April the cheese factories paid $1.50 per 100 pounds or 47 cents a pound butter

fat for 3·2 per cent milk. How can a farmer who must sell his milk to the butter factory continue in business when he receives only 35 cents a pound butter fat? There is a difference of 12 cents a pound between the price paid for milk to be manufactured into cheese, and that paid for milk to be manufactured into butter. There is a greater discrimination in connection with milk going to the condenser or powdered milk plants.

It is necessary that a great part of our milk should go into the production of cheese because we must produce 125,000,000 pounds during this year if we are to fulfil our agreement with Great Britain. I have no doubt that this will be done; in fact, our production may be greater than that if there is some coordination and control over the milk industry. The Minister of Finance is in his place, and I understand that the payment of subsidies comes under his department. I should like to draw something to his attention as well as to the attention of the Minister of Agriculture. Last December the farmer was selling his milk to the cheese factory when cheese at 25 cents a pound had the advantage, but the farmer who was sending milk to the condenser or powdered milk plant suffered to the extent of at least 40 cents per 100 pounds of milk, as at that time the ceiling on cheese allowed a price higher than the price being paid by the condenseries.

In April last the cheese factories were paying at the rate of $1.50 per 100 pounds for 3·2 per cent milk, or 47 cents a pound butter fat. At this time the basic price at the condenser for 3·5 per cent milk was $1.70 per 100 pounds. There was 40 cents per 100 pounds subsidy paid by the federal government, which brought this amount up to $2.10 per 100 pounds. I have a suggestion to make which might help to overcome the discrimination in favour of the man sending milk to the condenser or powdered milk plant. There should be coordination and control by the dairy products board so that each farmer will get approximately the same return for his milk. The flow of milk will always be to the point at which the highest price is paid, but this board should be given power to control and allot milk to the cheese factories in sufficient quantity to produce the 125,000,000 pounds of cheese required by the British government. Then the remainder could be allotted to the condensers and powdered milk plants. I understand there is a considerable demand overseas for condensed milk. The rest of the milk production could be allowed to go into butter channels. By the exercise of this control each and every farmer would get approximately the same return for his labour.

[Mr. Tustin.]

It looked as though the Minister of Agriculture had made a good bargain with the British government when he was able to get 20 cents a pound for our cheese. In April last, however, there was not much cheese shipped to Great Britain out of the make priced at $1.50 per 100 pounds for 3·2 per cent milk. That includes the premium paid by the federal government as well as the 2 cents a pound paid by Ontario. That did not give a large return to the farmer especially when one takes into account—this has been referred to so many times—his extra cost of labour and the extra cost of those commodities he must purchase. It is not in any way a parity price. I believe a great service could be rendered by the government of Canada by empowering the dairy products board to coordinate the supply of milk going into manufacturing purposes of all kinds.

Mr. DAVIDSON: I should like to support what has been said by the hon. member for Shefford. The outlook is not very promising for an increase in the production of butter. I do not think it is wise to wait until October to make this experiment, as the minister suggested to-day. I would ask the minister whether he does not think a slight increase in the price of butter fat would improve the situation. Over the week-end I talked with people who manufacture butter and cheese in my constituency, and I find that they are paying thirty-eight cents a pound for butter fat which is used in the manufacture of butter, and fifty cents a pound for butter fat used in the manufacture of cheese. A five-cent increase in the price would bring the price of butter fat for making butter to forty-one or forty-two cents a pound. There are a great many farmers who consider that the skim-milk which is left is an asset that is worth something to them, and so in my opinion if that slight increase of five cents a pound for butter fat used in the manufacture of butter were made, it would divert to the butter factory some of the milk that is now going to the cheese factory. If, however, we wait until next October before we do anything, conditions are not going to improve.

In the break-down which was put on *Hansard* by the Minister of Finance I noticed an item of $1,514,950 for the dairy products board. I can recall when this butter and cheese question was up two years ago and the suggestion was made that there should be a dairy products board to regulate the production of butter and cheese, to keep the two commodities on an even keel, so that it would not be necessary to divert the butter fat from one product to the other. But now we are right back to

where we were; only the picture is the reverse. We have plenty of cheese now, and not enough butter.

I would think the dairy products board could control to a certain extent the production of these two commodities, butter and cheese, and keep them on an even keel, and I believe the speaker who preceded me had the same thought in mind, so that it would not be necessary to be continually diverting butter fat from one product to the other. I should like to hear from the minister whether he thinks an increase in the price of butter fat would make some improvement at the present time.

Mr. WRIGHT: I agree with the two speakers who have preceded me. I think the suggestion of the hon. member for Prince Edward-Lennox is very good with regard to stabilizing the price of dairy products right across the dominion. We in western Canada have been trying for the last several years to get away from straight wheat farming into mixed farming. There has been a greater percentage of increase in the quantity of dairy products produced in the west in the last few years than anywhere else in the dominion; and yet to-day we are receiving in my home town only thirty-three cents a pound for butter fat, whereas producers in other parts of the dominion are receiving approximately fifty cents a pound. That is too great a spread, and the result will be to discourage dairying in western Canada, where I believe it should be increased.

The marketing board should take under consideration the advisability of adjusting the price of dairy products across the dominion. Prices could not be exactly alike all over; there would probably be a differential between different districts, but there is no justification for that great spread of from thirty-five to forty per cent between the price paid to-day in western Canada and that paid in other parts of the dominion. Producers of butter fat in other parts of the dominion are receiving a certain adjustment with regard to freight rates on feed grain, and I believe that is all to the good. That is a very good policy and it should be continued. At the same time there should be greater equality in the price of dairy products as between different parts of this dominion and different types of production, and that is particularly necessary at this time if we are to have increased production.

Mr. GRAYDON: I was very much interested in the remarks of the hon. member for Stanstead (Mr. Davidson) who, if the facts were known to all members of the house, is, next to the breeders in the county of Peel, one of the largest Jersey breeders we have in eastern Canada. I know he will not think I am reflecting on him when I place those in the county of Peel a little ahead.

A discussion of agriculture under this war appropriation measure, and in its relation to our general war effort, is very much to be desired at this time, because it is impossible, as I see it, to visualize the broad scheme of the nation's war effort without bringing into the picture very solidly, firmly and in a conspicuous position agriculture's share in the supplying of food.

The position of agriculture in Canada upon the outbreak of hostilities left a good deal to be desired. Even during the period of the war agriculture has felt, and justifiably so, I think, that its position in relation to that of other industries more closely related to the war effort and to others not as closely related has not reached parity; in other words, agriculture has not been getting a fair return or its fair share of the national income. Those views have been advanced on a great many occasions, and I have no desire to-night to do more than simply reemphasize what has been so well said on previous occasions.

During the last few weeks, in addition to the great delegation which came from western Canada to Ottawa asking, not for concessions because they would not call them that, but that the rightful position of agriculture in the general economy and in relation to the war effort should be recognized, another important group made representations to the government of Canada, and many of us who represent rural constituencies in Ontario were privileged to sit in at that gathering. That was when the agricultural council of Ontario came, representing, as hon. members who are familiar with its activities know, many of those who are prominent in the agricultural and municipal life of the province. They presented several resolutions to the government, and I think members of parliament could very well take a leaf out of the book of these farmers for the brevity and clarity and orderly way in which they marshalled their arguments from beginning to end. I believe the Minister of Agriculture and the Minister of Finance will agree with me when I say that within the short space of an hour and a quarter the whole argument on the five resolutions had been well and truly presented to the government by the agricultural council, and they were highly complimented upon their presentation.

I have no intention to-night of dealing with all the resolutions they presented, but I should like to touch on one or two which have particular merit with respect to the present situation. One was this; and while the Minister of Agriculture may be able to say that this is a matter not completely within the scope and sphere of his department, I believe he has a wide influence in the cabinet, and I hope, indeed I know, that he will use it to have this rectified and remedied. Many farmers during this war-time period have had to change in many respects their style of operation. The fact is that, as most rural members realize, farm help is not only a matter of wages; you cannot get experienced help in a good many areas no matter what you pay. That being so, the farmer has had to turn, where he could, to an increased use of machinery. In my own county a considerable number of milking machines have been installed since the war began. The reeve of one of the municipalities in my constituency, speaking on behalf of the agricultural council when they met here two or three weeks ago, stated that he had increased his flow of whole milk for the Toronto market some 30 per cent by installing milking machines and using less farm labour.

That being so, the supply of electrical equipment and power comes in a very important manner into the picture. In many instances the farmer, in attempting to put in a milking machine, a cooler, or some other modern machinery or equipment so essential in these days to the whole milk trade in that particular area, finds that, even where a hydroelectric line passes right by his gate and it is only a matter of bringing the power in from the gate to his stable or other buildings, one of the government boards which are so popular with the hon. member for Fraser Valley, in exercising its authority with regard to steel and power control, will not make the necessary power available. So the farmer, even though help is so scarce, has this obstacle, though perhaps inadvertently, placed in his way at a time when he requires extra machinery to carry on; all this by virtue of the regulation of some board which, I quite believe, has not one farmer on it. The orders of the power controller are affecting very many farmers in Ontario. Perhaps I should not mention figures, but there are dozens of farmers in the area from which I come who have been trying for a considerable time to obtain permission from the controller to get electric current just from the roadway into their barns. Some of them have even the equipment but cannot connect up with the current. I am not suggesting that the Minister of Agriculture is responsible, because he is not, but I would like to see him take, in this connection, the aggressive stand which he does on many other matters, and see that some concession is made to the farmer who is attempting to substitute farm machinery for the human help he cannot get at this time. It is not impossible, I am told, for those in residential sections in urban centres to get some types of installation, even to-day; and since this equipment is part of the tools of the farmer in his business, he ought in fairness to be able to install power machinery which means so much to the operation of his farm.

I have said on a previous occasion, but I want to stress the point again, that before we go much further in this war effort I believe we are going to suffer a grave and acute shortage of agricultural supplies. The minister and the government have been somewhat remiss in not exercising the foresight to plan for agricultural supplies in the same manner as they have planned for other types of wartime production and activity. I know it is not always easy to foresee future trends as regards farm products; but even to the average layman it must be abundantly clear that, if farm help continues to be hard to get, if as many farmers are holding sales as we were told this afternoon are being held in the Fraser valley, and if so many are going into other types of industry as we have been told repeatedly in this chamber is a fact, only one result can follow, having regard to the fact that there is more demand for agricultural products than there was when we had a greater number of farmers and more help to man the farms. I would therefore suggest to the minister that this government should at once give deep and serious consideration to planning its agricultural policy with a view of avoiding and averting what I think will otherwise be a grave shortage of farm products and farm supplies within the next year, if this war continues at its present tempo.

Some reference has been made to the whole milk industry. Perhaps it does not cover as wide a territory geographically as that of some other lines of dairy production which have been mentioned here to-day, but it is a tremendous industry and, with respect to the metropolitan area of Toronto has been—

Mr. GARDINER: I wonder if hon. members would agree with me if I were to say that since the dinner recess we have been discussing the dairy products board and its activities, which we had agreed before the dinner recess we would leave until we were dealing with the last five items. Could we not clear up the general remarks with regard to agriculture which were to come in on the

above items? Up to the moment the hon. member has been dealing with the general items, but it appears that now he is going into the matter of the dairy products board. Perhaps he would confine the discussion to the upper items, and we can deal with the other items when we come to them.

Mr. GRAYDON: Yes. Unfortunately I was not in the chamber when the arrangement was made, and I apologize to the minister. I should like to continue my remarks when we come to the dairy products board item, because there are one or two observations I wish to make.

Mr. NOSEWORTHY: I notice in the war appropriation estimates before us an item of $230,000 for "programmes to encourage the production of essential war supplies." In view of the foresight which the Minister of Agriculture has shown and is showing, it is quite possible that what I am about to say may be like carrying coals to Newcastle. But I wonder whether the minister has, in collaboration with his colleagues, canvassed the extent to which agriculture can contribute to the production of rubber, which to-day is an essential war product.

A few nights ago the hon. member for Parry Sound gave us some facts regarding the production of rubber from grain alcohol. I believe it is a well-known fact to-day that much of Russia's rubber supply comes from potato alcohol. I was surprised this afternoon to hear the minister express fears that we in this country may have a surplus of potatoes in the fall. There is abundant evidence to show that grain alcohol can be used for the production of rubber in half the time and apparently at approximately half the cost of synthetic rubber made from petroleum. A report of the United States senate committee on agriculture gives figures from which I deduce that our present carryover of wheat is sufficient to provide all the rubber that is necessary to supply the military needs of both the United States and Canada. These figures are given by a committee of the United States senate exploring ways and means of assisting agriculture. Furthermore, it is a well known fact that there are at least four commercial plants operating in the United States to-day making synthetic rubber from milkweed. There are at Akron three commercial plants actually producing rubber and supplying it to the United States military forces—rubber that is made from the latex produced by milkweed. There is also, I understand, a factory in California. There is also available at the present time a fairly large supply of milkweed seeds and plants for the production and growing of milkweed on a commercial basis. What heretofore has been known as a weed can now be grown in about five or six months on arid land where there are two or three inches of soil. It can be grown very cheaply, and rubber can be produced from that plant at a price much lower than that of the product obtained from either petroleum or the para tree. Has the minister investigated the possibility of opening up a new source of revenue for our agriculturists, giving us an industry that, when the war is over, will keep the production of synthetic rubber out of the hands of the great oil monopolies which exist at the present time?

Mr. QUELCH: This afternoon the hon. member for Fraser Valley (Mr. Cruickshank) and the hon. member for Leeds (Mr. Fulford) stressed the fact that in their districts a number of sales were being held at which valuable dairy stock were being disposed of, and a large percentage of that stock was finding its way into the slaughter houses and being exported. I think the majority of western members can duplicate that statement. Last year I attended many sales at which valuable stock was sold and dragged away to the slaughter houses. I believe, as one member stated, that this could be very largely overcome if a higher price were paid for butterfat. The same applies to poultry. We are given to understand that there is an urgent need for a greater production of eggs, and yet I received word the other day that the price received for eggs was around 10 cents a dozen on the average. We cannot expect the farmer to be enthusiastic about keeping poultry in the month of March when he gets only 10 cents a dozen for his eggs. Last fall I saw pullets and yearlings being shipped to the packing plants. The hon. member for Fraser Valley emphasized the fact that the Minister of Agriculture (Mr. Gardiner) was not to blame for the present standard of agricultural prices. The hon. member blamed the wartime prices and trade board, and I shall discuss this matter at greater length when the Minister of Finance (Mr. Ilsley) is before the committee. The question I wish to ask the Minister of Agriculture is this. Surely when the wartime prices and trade board set a ceiling on agricultural prices they consulted the minister and his department, or are we to understand that the wartime prices and trade board set this level of prices against the recommendation of the Department of Agriculture? In other words, is the Minister of Agriculture himself opposed to the price of agricultural products being held to the present level?

Mr. GARDINER: Before the dinner recess one or two questions were asked me with regard to flax in relation to British Columbia, and before going on to deal with the general questions put within the last few minutes, I should like to answer the questions that were asked at that time. The question was asked whether one of the seven inspectors was assigned to British Columbia, and a further question was asked as to what assistance was given in British Columbia in connection with the production of fibre flax. The answer to the first question is that there is no inspector assigned to British Columbia. There are no flax mills in that province. Inspectors are appointed to go to the flax mills and grade the product there. Any inspection there is of a field crop nature is done by the regular field men of the department. When we started the flax production programme in cooperation with the provinces, British Columbia asked us for 500 bushels of seed. We supplied them with 500 bushels, but they used only 135 bushels, and we had to ship the rest back east where there was a demand for it. I think it will be agreed, therefore, that the government went as far as they could be expected to go when they shipped all the seed west that was requested by that government, and then had to ship part of it back where it could be utilized by farmers in other parts of Canada. Only thirty-five or forty farmers undertook to grow flax in British Columbia. There is no flax mill there, and they are producing only seed now, although a cooperative is being formed, and it is the intention to erect a mill in that province.

Mr. REID: I understand they are doing that now.

Mr. GARDINER: There are 200 acres in flax in British Columbia this year. The inspectors referred to in this vote are fibre inspectors, and they work only at the mills. There are thirty-three mills in Canada located in Quebec and Ontario, and these men divide their time between those mills. They are each responsible for about six mills, and their work is to grade the fibre. This can be done only at the mills. That answers pretty well in full the question with regard to British Columbia.

The general question with regard to agricultural policy was discussed at some length before the dinner recess, more particularly by the hon. member for Dufferin-Simcoe (Mr. Rowe), and has been referred to by others since then. All I wish to say at this moment is that earlier in the session we had a lengthy discussion regarding the matter while certain bills were before the house. We also had quite a discussion with regard to it a year ago when we were considering the estimates of the department. I thought I had been fairly successful in convincing the house, and if not the house those outside the house, that the government has had a policy, not beginning with the day war was declared as was the case in connection with some other activities in Canada, but beginning a considerable time before war was declared. The result was that we were producing very much more of most farm products in the last year before the war than had been produced in the immediately preceding years. We had considerable surpluses of farm products in Canada for which we were having some trouble to find markets because of conditions then existing in the world. It will also be remembered that during the first year of the war we had an unprecedented increase in the production of products such as bacon, ham, and dairy products of different kinds, necessary for the feeding of the British population under conditions then existing. This increase was a direct result of the policies carried out in the months immediately preceding the war to encourage greater production in agricultural lines.

That policy, I repeat, was carried out in years when there was a lessening of the market for the products of many sections of Canada. Prophecies were made from all sides of this house that markets outside Canada for agricultural products would be smaller and smaller rather than greater and greater. We made that effort largely because we were keeping in touch with authorities in Britain as to what was being done there in order to make sure that if difficulties did arise, food products would be available. I need hardly say that Britain did not begin in the year that war was declared to produce food supplies. One has only to go back and check the records to know that for five or six years before the war Britain was proceeding as though, while they hoped there would be peace, they rather expected they would be involved in difficulty on the European continent. In all their activities in relation to agriculture they were carrying out a policy based on that idea. We were not without information gathered from Britain in regard to the matter. I myself and other ministers of the government went to Britain in 1936 and discussed the whole matter, and from the time we returned we set up the present organization of the department to promote not only the production but the marketing of farm products. It is not necessary to say that the government expected war in order to give reasons for following a policy of that kind. If there had been no war, it would have meant the establishment of confidence among the

nations which would have restored that degree of international trade which would have given a market for at least the amount of commodities which we produce from our agricultural land in normal times.

It has been interesting to listen to hon. members saying that there have been auction sales. I would be very much surprised if there had not been auction sales. There are 70,000 farms in Canada operated by men and women over sixty-five years of age, who have no families to assist them. I venture to say that at least 75 per cent of those men and women have been waiting for a time to arrive when they could sell their land to younger people who could operate it not only to their own satisfaction but to the advantage of this country. Better returns are making sales possible. Of course sales are being held. I know also that not all the sales being held are of farms operated by old people. Many of those sales are of farms of individuals who have been looking for an opportunity to leave agriculture, either because they feel they are not suited to it, or because they have made preparations for doing something else.

An hon. member said to me this afternoon, "You and I could go out into certain sections of Ontario to-day and buy farms at $3,500 to $4,500, which men and women have spent whole lifetimes in building into comfortable homes." No doubt that is true. But I know also that if a person who really likes agriculture, who is in it because he wants to make of the farm a home, can buy a good farm in Ontario at $3,500 to $4,500, he is making about as good an investment as any he could make in Canada at the present time. More particularly is that true if he can pay cash for the farm. Farming in Canada, as in any other country where it is made an individual enterprise, is best carried on with land that is actually paid for. It is a most difficult thing for a person with only a family-sized farm to carry on that farm with a huge debt upon it, equal to, say three-quarters of its actual value, and try to build a home and maintain a family and carry on as people would like to in any home no matter where they may establish it. But people who inherit farms paid for, or who are able to pay for the farm when they take it over, and who are suited to life on the land, are able to make comfortable homes on farms in Canada even when conditions are not as good as they are at the present time. When I use the term "good" there, I hope I shall not be misunderstood. Any peace conditions are better than present conditions, no matter what the price level may be. Present conditions, no matter what the returns from the land may be, as such as to make people dissatisfied, looking at the past and looking into the future.

Having said that, let me say that, in spite of the fact that there are sales and that hon. members have been saying that there are farms here and there across Canada that have gone out of production, the remarkable thing is that the net returns from farms in Canada to-day, when you take the total returns, are about as good for a twelve-month period as they have been at any time. That is due to two causes. The first is that there is a market for everything that can be produced in certain well-defined lines, the staple products of the farms of this country. We can market at the present time every hog we can raise of a certain standard, every beef animal, every pound of cheese and every pound of butter that we can produce.

Mr. CRUICKSHANK: At what price?

Mr. GARDINER: We can market every pound of whole milk that we can produce. My hon. friend asks, at what price? I will tell him, at a better price than he could have got at any other time since 1930—and that covers quite a period of time.

Mr. HANSON (York-Sunbury): In a very abnormal period.

Mr. ROWE: That would be expected.

Mr. GARDINER: Yes; that would be expected. The price is not high enough from the farmers' point of view, but the higher return is brought about by a combination of a price which is being paid for farm products, and a greater market available than farmers have had at any time since 1929. Those two factors combined have brought back better returns in dollars and cents for the farmers, with the result, as I said a few moments ago—and the statistics bear me out—that the actual total net returns across Canada from farm lands compare favourably with what they were in the average year from 1926 to 1929, which is looked upon as the best period in agriculture over a long period of years.

Mr. ROWE: What about their proportion to national income in the same year?

Mr. GARDINER: The hon. member for Dufferin-Simcoe asks about the proportion to national income. I would much rather leave the discussion of that question until the time when the general estimates of my department are before the committee, at which time I shall have the information before me. But I would say this at the moment, that I find it difficult to follow the argument of hon. members who come from the Fraser valley if you like, or from areas surrounding Toronto,

or from areas surrounding Hamilton, or from any other of the industrial areas in the dominion. Whether they intend it to give this meaning or not, when they say that the men who lived on the farms in those communities should not have gone into the industrial—

Mr. ROWE: I did not say that.

Mr. GARDINER: It could have only that meaning.

Mr. ROWE: No; I never said any such thing.

Mr. CRUICKSHANK: And I never said that.

Mr. GARDINER: Well, put it this way: We should get a return for the farm production which would keep the men on the farms.

Mr. CRUICKSHANK: Absolutely.

Mr. GARDINER: Well, how can they be in the plants and on the farms too?

Mr. CRUICKSHANK: That is a different thing altogether.

Mr. GARDINER: It is the same point. I quite understand it is a rather difficult point to have nailed.

Mr. ROWE: I do not propose to permit the minister to nail on to me what is not true. I do not mind a reference to what I have said, but not to what I have not said. I did not imply this afternoon that I censured any farmer or any hired man for leaving a farm and going to a factory; I only pointed out the difference in the wages received.

Mr. GARDINER: Well, the argument has been brought out all through the discussion, before the Easter recess, and even during the last session that men have gone off these farms and gone into the factories, with the result that the farms are not occupied as they might be.

Mr. CRUICKSHANK: That is right.

Mr. GARDINER: In other words, that you ought to have a man on his farm, and producing more on his farm.

Mr. CRUICKSHANK: Certainly.

Mr. GARDINER: All I wish to say with regard to that is this: If those boys had not been in the plants, and if the women from those farming areas had not been in the plants, it would not have been possible for a thousand men to be over Essen last night with aeroplanes; nor would it have been possible for 1,250 men to be over Cologne two nights earlier.

[Mr. Gardiner.]

Mr. ROWE: That is beside the point altogether.

Mr. CRUICKSHANK: That is not correct.

Mr. GARDINER: My hon. friend says, "that is not correct."

Mr. ROWE: It is beside the question.

Mr. GARDINER: It is not beside the question, either.

Mr. ROWE: The minister is skating well.

Mr. GARDINER: It is a well known fact that the armies of the empire, including Canada, were unequipped when the war began. It is a well known fact that one thing which had to be done, if there was going to be equipment, was to have as many men as possible, as soon as possible, in every plant in this country, to increase the sizes of the plants, and to man them with men and women who could produce the necessities of war.

That has been done. Might I add this, that in the years immediately preceding the war we were listed as having over a million men unemployed in Canada, and even yet we are sometimes told that they are not quite all employed. However, many of them are. Well, if we take the size of our armed forces in the navy, the air force and the army, and take, in addition to that, the men who have gone into our plants across Canada, we have a figure which is not very far removed from the number who were unemployed before the war started. When we add to that this further fact, that we are to-day turning out twice as many hogs from our farms as we did in the last year before the war; that we are turning out possibly this year 40 per cent to 50 per cent more cheese; that we produced 20,000,000 pounds more butter last year than we did the year before; that we are producing more wheat than we know what to do with, and that we have, as a matter of fact, increased our farm production all along the line, I find it difficult to understand how these cows could be slaughtered, those sows sent to market and those sheep driven off the ranges when we are increasing the production of every farm product in Canada by leaps and bounds, and have been, ever since the war started.

Of course there will be a time when we shall have to say that we must balance our agriculture—

Mr. CRUICKSHANK: When?

Mr. GARDINER: —against our production of munitions and armed forces. My hon. friend asks, when? He had better read the record.

Mr. CRUICKSHANK: It does not read very well.

Mr. GARDINER: If he reads he will find that it is much better balanced now than it has been at any other time in the agricultural history of Canada, since the years immediately following the last war.

Mr. ROWE: That is not right.

Mr. CRUICKSHANK: Not in British Columbia.

Mr. GARDINER: Let me go back to the point with which the hon. member for Fraser Valley disagreed a few moments ago. He still holds that men in British Columbia should be on the farms, rather than in the shipyards or in any other industrial operation being carried on near the city of Vancouver. After all, the agricultural area in that section of Canada is not so big that it cannot be covered by the hon. member's seat, and one or two others. There is not a great area. I can quite understand that when you take so many people away from the Fraser river valley it will affect the agriculture in that particular section of Canada. But when you are fighting a world war, and when you take the province of Alberta along with the Fraser river valley—and realize that the Fraser river area never did produce enough food to feed the people of Vancouver—

Mr. CRUICKSHANK: Oh, just a minute.

Mr. GARDINER: "Just a minute," you say. It is an absolute fact that in order to get enough pork, enough butter, and enough beef to feed the people of Vancouver they have to import from Alberta. When we as a national government are dealing with agriculture we are dealing with it right across this country. When we are dealing with it in war time we are interested in getting the highest possible production in order to send to Great Britain all the products she requires. The areas around Vancouver are not producing surplus products to go outside Canada. Apart from fruit, milk and eggs they are consuming some of the surpluses being produced in other sections of Canada.

Mr. CRUICKSHANK: Does the minister mean to say that we are not shipping surpluses of milk, butter and eggs to Great Britain?

Mr. GARDINER: For a long period Vancouver has been importing a great part of her food supplies from the area over the mountains. What we are concerned about is getting our production across Canada up, and we have that production up. Our hog production is double what it was before the war. Some hon. members have been saying to-night that we are going to get 125,000,000 pounds of cheese this year to be sent to Great Britain. During the year I became a minister in this government, we sent 54,000,000 pounds, and we are told that this year we shall be able to send 125,000,000 pounds. These figures indicate that there has been an increase in the production of that commodity which is needed greatly overseas.

Mr. ROWE: Was it not that much thirty years ago?

Mr. GARDINER: We used to send far more than that forty years ago, but, as a result of some of the policies carried out by my hon. friend's friends toward the end of the last war, we lost our market.

Mr. ROWE: It was the minister's government that lost the market.

Mr. GARDINER: We are attempting at this time to win them back by giving service.

Mr. PERLEY: What did Mr. Dunning say in his May day budget about British markets?

The CHAIRMAN: The minister has the floor.

Mr. PERLEY: He should not make political speeches.

Mr. GARDINER: Two or three political speeches have been made, and I ought to be allowed to make one.

Mr. ROWE: Then the minister should not mind a little interruption.

Mr. GARDINER: I do not mind interruptions; I rather enjoy them.

Mr. HANSON (York-Sunbury): Will the minister discuss with the committee the question of the net return to the farmer at the present time, and how much of the national income the farmer gets? It is what is left that counts.

Mr. GARDINER: I put the figures on *Hansard* before the Easter holidays, and I expect to put them on again when I am discussing my estimates. I do not think I should be required to put them on the third time, particularly when I have not the actual figures in front of me. When I put them on the record I want them to be correct.

Mr. ROWE: Nobody knows them better than the minister does.

Mr. GARDINER: I think I have a fair idea of what they are, but I do not think this is the occasion to put them on *Hansard*.

Mr. ROWE: They do not fit this occasion.

Mr. GARDINER: There is one other point upon which I think I should touch in view of the discussion that has taken place this afternoon and evening. I refer to the matter of prices established by the prices board and their relationship to farm products.

Mr. HANSON (York-Sunbury): Would the minister tell us about his struggle with the board?

Mr. GARDINER: I think it was the hon. member for Fraser Valley who said that I should put forward the cause of agriculture in the government and elsewhere. Not all the members of the government are here this evening, but I think those who are will agree with me when I say that there were not many opportunities for putting forward the case of agriculture of which I have not taken advantage. That is evidenced by the fact that right from the beginning of this war we have had something that no other government in Canada ever had before—we have had floors under farm prices. A floor under the price of hogs was established by the British agreement in the fall of 1939 when war was declared. That floor under the price of hogs kept hogs in Canada from three to five cents a pound higher throughout that year than they were in the United States. Our farmers reaped the advantage of that agreement.

Mr. WRIGHT: Was not that floor placed under the price of bacon?

Mr. GARDINER: The price of hogs to the farmer was from three to five cents a pound higher in Canada than it was in the United States. That is the price for hogs, not bacon.

Mr. WRIGHT: Nevertheless the floor was not under the price of hogs, but under the price of bacon.

Mr. GARDINER: The people eat the bacon and other pork products, and the prices were set under those.

Mr. HANSON (York-Sunbury): The packer had the floor, not the farmer.

Mr. GARDINER: I think the hon. gentlemen who are making remarks have had more friends among the packers than I throughout the years.

[Mr. Gardiner.]

Mr. ROWE: The minister has not offended them very much.

Mr. GARDINER: The position in connection with prices is that in the fall of 1939 we established a floor under the price of hogs. In the spring of 1940 a floor was established under the price of cheese. That floor has been raised year by year, until at the present time it is twenty cents a pound. When hon. members recall that we started at ten cents a pound in the year before the war, even at the time war was declared, I think they will agree that to have raised it to twenty cents a pound plus the premium and plus the subsidies is not doing so badly.

Mr. ROWE: Who raised the floor under beef?

Mr. GARDINER: The floor under beef was established by the trade agreement made with the United States, and that trade agreement had not many friends among my hon. friend's friends. That floor was so high this year that people in Toronto found themselves a little short of beef because it was going to the market that paid the best prices. People in Montreal found themselves a little short of beef, but one did not hear any farmer kicking about the price of beef in the United States. The farmers were quite prepared to send their cattle where they could get the best price, provided we were not prepared to pay a similar price for the same product in this country.

When any one of these products was up for discussion, the Department of Agriculture and the Minister of Agriculture put forward the position of the farm population of this country. I did succeed in having an agreement entered into, and agreed to by both the Department of Agriculture and the prices board, which raised the selling price of beef across Canada and which made certain arrangements for the regulation of the shipment of cattle into the United States. At the same time it maintained the United States price for the full quota allowed under the arrangement, and maintained the ceiling price for all other cattle sold in Canada after the United States quota was filled. That arrangement established a floor under beef prices. It is true that a ceiling was also established, but to date the price of cattle has been above even what anyone would attempt to figure out as being the ceiling which would be allowed based on the beef prices that were set last fall.

As I say, floors have been placed under the prices of hogs, beef and butter. We have had a floor under wheat, but I shall not discuss

that to-night. It is higher now than it was at the beginning of the war, and more satisfactory. Who put the first floor under butter? We had a floor under butter prices in the summer of 1939 before there was any prices board.

An hon. MEMBER: Who put the skids under butter?

Mr. GARDINER: If hon. members want to know who put the skids under butter, I would ask them to go back to about 1932. They not only put the skids under butter; they greased the skids with butter. It could scarcely be given away in 1932. At the present time butter is at least 35 cents a pound in Montreal. In the year before the war and in the first year of the war it was down to 20 cents a pound. So that something has been done by somebody to increase the price to its present level. One of the things done was to establish a floor under the price of butter last year, which maintained the price above 30 cents all last summer.

That covers most of the products of which we have been speaking. When my hon. friends say that they are not satisfied because butter is not up to the same level as cheese and whole milk, I can only say to them that it is not the fault of those who represent agriculture in this house, whether it be the minister or others, that the price is not higher. I do not think a single man has risen in his place in this house since this debate started and discussed ceiling prices without prefacing his remarks with the statement: I want it to be fully understood that I am in agreement with the policy.

Mr. ROWE: No, no.

Mr. HANSON (York-Sunbury): With the objective, not with the policy.

Mr. GARDINER: Then they are in agreement with the objective, which is to prevent inflation, which is to keep down prices.

Mr. HANSON (York-Sunbury): We are opposed to the method.

Mr. ROWE: I rise to a question of privilege, Mr. Chairman.

The CHAIRMAN: What is the point of privilege?

Mr. ROWE: Perhaps I should say a point of order. The minister has stated that no one has risen in his place and said that he was against the policy of price fixing. Just before the dinner recess I doubted the government's policy and referred to it as this policy of price fixing.

Mr. GARDINER: The hon. gentleman before the dinner recess was doubting the policy of the agriculture department. This is the policy of the prices board.

Mr. ROWE: I doubted that too, and still doubt it.

Mr. GARDINER: Possibly as applied to farm products, but I think most of those who have taken part in the discussion either to-day or yesterday with regard to the prices board have prefaced their remarks with the suggestion that they did not want to be understood as criticizing the attempts that are being made by the prices board to control inflation.

Mr. HANSON (York-Sunbury): Nobody said that. That is the minister's interpretation.

Mr. ROWE: We agree with the objective but not with the method.

Mr. GARDINER: They are not particularly methods of mine.

Mr. ROWE: The minister is none too proud of them.

Mr. GARDINER: On each occasion when the setting of the ceiling prices has interfered with the returns which the farmers could obtain from the floors which have been set under the prices, the Department of Agriculture has taken issue with those who desired to set ceiling prices and has usually succeeded in having them rearranged to meet the situation created by the fact that we have floor prices. I state that only to indicate that the one set of products in the Dominion of Canada that did have a floor put under them before 1941 was agricultural products. While I agree that prior to 1941 those floors were not high enough, I call the attention of the committee and this country to the fact that those floors have been raised from year to year under the pressure of those representing agriculture in this house, on all sides of the house, I might say. They have been increased from year to year and are to-day at a level which, while not entirely satisfactory, is fairly satisfactory. I am quite sure that to compare the attitude which was taken in farm meetings and farm gatherings anywhere and by hon. members on the floor of this house prior to the last session with the attitude at present existing in Canada and in this house would convince any hon. member that something has been done in relation to farm prices which has made them more satisfactory than they were two years ago.

Mr. ROWE: There has been a war since then.

Mr. GARDINER: We were in a war even before that.

Mr. HANSON (York-Sunbury): Not much before.

Mr. GARDINER: Not much before, my hon. friend says. I am sorry if there is anyone in this house who thinks we have not been pretty much in a war since the fall of 1939.

Mr. HANSON (York-Sunbury): The minister said in March, 1940, that we would take the middle-road course.

Mr. GARDINER: I did not say that but I will discuss that with my hon. friend when he leads his party in the next election.

Mr. ROWE: The minister discussed it during the last election.

Mr. GARDINER: But not from the point of view my hon. friends think.

Mr. ROWE: From the minister's point of view.

Mr. GARDINER: The position of agriculture is pretty well understood. If we could pass these estimates, taking up the item of $5,400,000 which we began to discuss this afternoon and then go on to the different boards that have been set up under the agricultural supplies board, we might make some progress.

Mr. ROSS (Souris): I take it that when the minister was telling us the policies of the department as a part of the war effort he was not one of those whom the Minister of National War Services classed on Friday as isolationists. The minister skated very nicely round the question that was asked him by the hon. member for Acadia. I am very much interested in hearing the answer to that question, because, this afternoon, when the Minister of Labour was not in his place, I tried to deal with the question of farm wages, especially for harvest time, and the Minister of Agriculture said that that came under the Minister of Labour. The Minister of Agriculture did not say whether he was in sympathy with the government doing something to stabilize farm wages, especially harvest wages. When he was asked about ceiling-price control, he stated that that came under the jurisdiction of the Minister of Finance, not under his department.

The hon. member for Acadia asked the Minister of Agriculture the direct question whether price-ceiling controls were put into effect in opposition to the minister's stand, whether the minister was consulted on the matter and, if so, what was his stand pertaining to agriculture. I am very much interested in hearing the minister's answer. I think the minister should give us some lead at this time. It is only two months to harvest, when we shall be faced with a serious labour problem in western Canada, and we are entitled to some statement from the Minister of Agriculture. He has made a fine statement on the problems of agriculture. But we have not yet national selective service in operation for agriculture, and we have not parity prices for farm products in the third year of the war.

Mr. GARDINER: I do not want to be led away from answering the question and to be diverted into a discussion of parity prices, because that already fills two or three pages of *Hansard* of our earlier debate. To answer the question asked—I did not avoid answering it intentionally but did so inadvertently—the position last fall when ceiling prices were established was that prices of most farm products, in the form in which ceiling prices were set upon them, were considerably higher than they had been for some time previously. As a matter of fact, they bore a much closer relationship to the prices for the period from 1926 to 1929 than has been admitted to-night. The reason for stretching the basic period over a month was in order to take in agricultural products which were at some date in the period at the highest price levels they had been over a considerable period of time. It was quite understood then, and was so stated by the Prime Minister in announcing the policy, that certain farm products were affected by seasonal conditions; that others were affected by other conditions, and that further consideration would have to be given to them. Some of them have had further consideration. Further consideration was given to wheat during the early part of this year. Further consideration was given to beef during the last two or three weeks. Further consideration has been given to cheese since the time of the setting of that price. Consideration is still being given to butter. Wheat and other farm products including butter had not in that period reached parity levels, that is parity as it is understood by farm organizations across Canada. Further consideration has been given to those different farm products since that time.

I would say in answer to the question asked, that in so far as I am concerned personally I accepted the policy—I would not be in the government if I had not—with the understanding that these commodities would be further discussed, and they have been. With regard to some of them satisfactory arrangements have been reached. With regard to others, more discussion and considerations are still required and will certainly be given

to them by the prices board. In this, like everything else, there is no complete agreement on anything so vast as a price policy. You cannot get any two men to sit down and agree on the price of every commodity, and more particularly you cannot get farmers to sit down and agree as to what the ceilings ought to be under existing conditions. The thing has happened which always happens. We have discussed the question. If we could not agree on the first discussion, we discussed the matter a second or third or fourth time, and finally a plan has been worked out which as nearly as possible suits all the conditions. That has been done in connection with price levels on farm products, and it is still being done.

Mr. HANSON (York-Sunbury): The minister will agree, will he not with this theory, that when the price level was frozen it was frozen on an uneven basis qua primary products generally? That is really the accepted fact, is it not? The minister himself has spoken many times along that line and I am glad to hear that the government has some flexibility in this matter.

Mr. ROWE: Not much solidarity.

Mr. HANSON (York-Sunbury): Well, I am not trying to make a political speech. I just want to point out that when the price ceiling structure was set up, for some reason or another it had to be frozen from a definite period of time. That was in the fall of the year, and the new crops were coming on. With respect to certain products in my province, when the price was at its lowest point in the whole twelve months those products were frozen. That, I think, has been generally true all along. It is not quite a fair statement for the minister to make that we never objected to the policy. I have always felt that we could not allow the price structure to get out of hand, but I do object to the method that is being adopted. I say this further to the minister, that in order to maintain this structure all the way through, there is one complementary feature which will have to be adopted if he wants to have this thing rationalized, and that is a complete system of rationing. It cannot be complete without it.

Mr. GARDINER: I think that is a discussion which can much better take place when the minister to whom the board is responsible is here. I simply wanted to make clear the position as far as agriculture is concerned in relation to the board.

To answer the question which was put by the hon. member for York South (Mr. Noseworthy), I can only say that we have been following very closely the investigations which are being made in the United States with regard to the making of rubber from wheat and from other plants that may be grown on farms. I believe it will be within the memory of every member of this committee that prior to the war an international bureau was set up on which all countries were represented, so that countries like ours which are not carrying on investigations in connection with certain matters should have available at all times the information that is gathered in other countries. While this bureau cannot operate with the same freedom during the war as it did before, perhaps there is a greater exchange of information as between two countries like Canada and the United States than there was through the bureau before the war. We are getting whatever information is available in the United States from time to time. We have not yet gone to the expense of duplicating the experimental work which is being carried on there. I have not any doubt that if the development in the United States comes to the point that they use a considerable quantity of surplus wheat, a very considerable quantity of the wheat in this country will be required as well.

While I may not have all the information, I have not understood that it has as yet been definitely decided in the United States to proceed with a method of developing rubber from wheat. My understanding is that those who claim that they have developed a plan, and have placed that plan in general terms before a committee of the United States congress, have not yet demonstrated the feasibility of the plan in its entirety, and it is not yet being put into effect even in the United States as a practical method of producing rubber. But I think I can say this, that if it does become a means of producing rubber, and if conditions remain as they are in the world to-day, the people of the United States will be the first to want Canada to turn a very considerable part of her wheat into rubber. There is no commodity which is running short faster on this continent as a result of war activities than rubber, and any method which can be found in either Canada or the United States to produce more rubber on this continent will certainly be utilized by the governments of the two countries at the very earliest possible moment.

Mr. ROSS (Souris): I asked the minister if he as Minister of Agriculture would express an opinion as to the matter of agricultural or

farm wages being included under the price ceiling. While realizing that this is a function of the Minister of Labour, I think the Minister of Agriculture might give us some lead in this respect if he cares to do so.

Mr. GARDINER: I can only say this, that up to date no government anywhere in Canada has undertaken to control farm wages. I am not at all sure as to what this or any other government will do in the future, but I know there are extreme difficulties associated with setting wage levels for farmers, particularly at a time when, of necessity, there must be bidding for men in other places. I quite realize, of course, that if you want to go into planned, selective distribution of employees and tell everyone where he is to go, you can overcome that to a certain extent. But I have always wondered just how you will make a man hoe turnips on a farm if he does not want to hoe turnips. You may assign him to a farm and send him to a field, but there are some difficulties about directing men to jobs like farming and saying, "You must go there and farm", jobs that are not associated with the operation of a plant, where all men are working side by side at machines.

Mr. HANSON (York-Sunbury): I think there is a good deal of common sense in that. You cannot make a man work if he does not want to work.

Mr. ROSS (Souris): They are controlled for industry, are they not? Organized labour is controlled.

Mr. WOOD: I should like to make one or two observations. This debate has been going on for some time, and I have noticed that not all the men who have been participating are farmers, although they seem to have a very wordy knowledge of the industry.

Mr. GRAYDON: Do not criticize the minister in that way.

An hon. MEMBER: It is the lawyers he is thinking of.

Mr. GRAYDON: And the schoolteachers.

Mr. WOOD: I listened with interest to the observations of the hon. member for Dufferin-Simcoe, who seemed to be really concerned about the national income.

Mr. MacNICOL: He is a real farmer.

Mr. WOOD: Yes, he is a real farmer, and I like to talk to a man who understands my language. He was waxing eloquent about the national income of the farmers. If he will go back to 1492, in which the same figures are used as in 1942, so there may be some relation, he will find that the total national income was almost purely an agricultural income. The party to which the hon. member belongs has always waxed eloquent on what a tariff would do to develop secondary industry. There has been a great development of secondary industries in this country and naturally, in consequence of that, agricultural income will not be as high as it was in relation to the national income. It is not many years ago that the total production of our mines was only $100,000,000. To-day it is $600,000,000. Take pulp; this industry to-day represents $250,000,000 of our income. The same thing is true of other industries. Possibly when the hon. member for Dufferin-Simcoe was a beardless youth in knickerbocker trousers the total national income of Canada was much less in these secondary lines, and therefore I do not think the argument we have heard is a sound one. If agriculture has been able to maintain its income, we must remember that there is only one-third of the population of the dominion engaged in that industry, and therefore the national income derived from agriculture is divided among only one-third of the population whereas formerly it had to be divided among two-thirds. Therefore I am still inclined to the view that the average income of our farmers to-day is higher than it has been in the past ten or twelve years. I used to read *Hansard* when I was back on the farm, and I cannot recall that the hon. member for Dufferin-Simcoe was ever in the least concerned in 1932 when I sold my eggs at 8 cents, wheat at 42 cents, hogs at $3.25 and butter at 14 cents. He was not concerned then about the national income from the point of view of agriculture.

Mr. ROWE: The hon. member did not read *Hansard* closely.

Mr. WOOD: The hon. gentleman ought to be fair enough at least to say that we have gone a long way forward in the last ten years.

I was interested in the remarks of some hon. member with regard to farm sales. I am inclined to think that when a number of farm sales are taking place it shows a generally healthy condition in the community.

Mr. ROWE: Not if you close the farm.

Mr. WOOD: In the last ten years there were few farm sales, for the reason that any man with anything at stake had not sufficient courage to call a sale, because he did not know whether he would get enough buyers. I am of opinion that it is a fairly healthy condition.

Mr. CRUICKSHANK: I was the one who brought up the question of sales. What would the hon. gentleman suggest doing with a dairy cow if one could not get a milker to milk that cow? Would he sell it, or what would he do with it?

Mr. WOOD: I would get a milking machine.

Mr. CRUICKSHANK: Where would you get one, with priorities?

Mr. WOOD: There are still some for sale. At any rate, I would sell it to somebody else who had enough ambition to milk the cow. If there have been as many sales as my hon. friend has indicated, why is it that we have been able to increase production all along the line? Why is it that in the last year our marketings of beef cattle have been 20 per cent higher than they were a year ago and that the production of our creameries and cheese factories has increased? Processed-milk factories are also increasing production. As the minister so ably put it, the facts do not bear out the criticism that has been made. I think it is a wonderful achievement that, notwithstanding the fact that the farmers have contributed their sons to industry, we have been able to maintain production in Canada as we have done. I consider that the minister has had a reasonable amount of sympathy with agriculture, when one stops to realize that in the last year there have been subsidies to the industry from the taxpayers of Canada amounting to nearly $100,000,000.

Mr. CRUICKSHANK: To the dairy farmer?

Mr. WOOD: A fair amount has gone to the dairy farmer.

Mr. CRUICKSHANK: For summer-fallowing.

Mr. WOOD: That might be a good thing, too. I repeat, this government has had a reasonable amount of sympathy with agriculture when we realize that it has assigned, of the taxpayers' money, about $100,000,000 to 728,000 farmers, which means over $100 for every farmer. I still think there is something that can be done, and I rather approve what the hon. member for Stanstead said. The butter price is too low. But if the argument is that the price of milk for producing butter, the price of processed milk and the price of city milk should all be on the same basis, then I do not agree.

Mr. CRUICKSHANK: Who said that?

Mr. WOOD: Some members have done so.

Mr. TUSTIN: I made the statement, but I said "manufactured milk."

Mr. WOOD: Well, I use the words "processed milk" and the hon. member says "manufactured milk." I would say that if there is a difference of fifty cents between processed milk and city milk, and fifty cents still less for milk on the basis of butter, keeping the skimmed milk at home, that is somewhat on a parity. In the supply of milk to the city trade a great deal of expense is involved in the production for this trade. I have had experience of it. I know it takes more to maintain the standards for the city trade and it is worth practically fifty cents per 100 pounds and more. But I think the price of butter at thirty-five cents is lower than it should be, and I believe the consumer should pay the farmer for that product. It should not come out of the taxpayer, and my view is that we should eliminate subsidies as far as possible and see that the consumer pays for the products of the farm.

Another matter that was mentioned this afternoon is the fact that so much of our breeding stock leaves Canada and goes to the United States. We farmers in Canada are rather too modest, and possibly one of the difficulties from which our own industry is suffering is the fact that the man engaged in farming is too ready to damn his own profession, so that if there is any reason why he cannot sell his farm it is that he has advertised to the whole world that there is no money in farming. That may be the reason for lower prices of farms. As regards selling our breeding stock, I think that is a splendid market to have, for this reason. The average Canadian farmer is a better live stock man than the average United States farmer. That is because the Canadian farmer has more of the old British blood in his veins. The fact is that we compete with our United States neighbours in the large shows and bring back the red ribbons, and we can do so because we have superior cattle. We Canadians have built up a reputation for good stock. In spite of the fact that the United States is an immense agricultural country, they have never produced one breed of cattle there. The British breeder has produced about twenty breeds; we in Canada have produced one, which is not too bad.

Mr. MacNICOL: What breed is that?

Mr. WOOD: One in Quebec, the Canadian; it is one with purely Canadian characteristics at least.

Mr. CRUICKSHANK: What is the name of that breed?

Mr. WOOD: I say the Canadian. I believe they have a herd book; it is a distinct breed in Quebec.

We ship stock to the United States continuously, and that is a market we have a right to guard jealously. They pay us good prices. There is in my community a breeder of shorthorns, who sold over forty head to the United States at a price averaging over $560 each, which is an indication of the quality of the stock many of our farmers in this country breed.

We should not overlook the good things the minister has done in directing the policy of agriculture in this country. No matter how much we have we always want more, but I should not like to think the solution of our great problem to-day of winning this war can be achieved only by having high prices for our products. I believe every effort should be made—and I think this government has been reasonable in trying to safeguard the interests of the people in this matter—that we should not have our prosperity in time of war. Let us postpone that until peace time, and let us all share alike in the difficulties of the boys at the front. They are not asking for increased wages.

Mr. CRUICKSHANK: Are the manufacturers?

Mr. WOOD: If we can maintain a condition of affairs during war time that will not create the disasters that happened through the wild inflation which took place after the last war, then I believe our interests will be better protected and there will be less suffering while the war is on.

Mr. SENN: I have listened with a good deal of interest not only to the Minister of Agriculture but to the hon. member for Brant, whose home is close to mine. Hon. members on the other side of the house always like to refer to the times of depression in the thirties. They would lay all the blame for low prices on the government in power between 1930 and 1935. The minister to-night has patted himself on the back and blown his own horn to quite an extent in regard to present farm prices. It is a peculiar thing how, if the present administration is trying to raise prices and give the farmer a better deal, there was any need to impose a price ceiling. The minister has talked pretty well around that question; he has taken credit on the one hand for better prices received by the farmer—we all admit he is getting better prices than prior to the war—and at the same time he tries to justify the imposition of a price ceiling in order to keep prices down. I do not see how he can have it both ways. Then he spoke about the floor that the present administration had put under farm prices. If I might venture a suggestion, I would say that it is always the history in war time, as it was in the last war, that as soon as war is well under way, prices of farm products, as well as other products, rise to very high levels. I go further; I speak for myself only when I say that I have always doubted whether it was really necessary to impose the price ceiling at all. Looking back over the last war—and I lived through it; I was on the farm all that time—I have yet to learn where the rise in prices at that time did any particular harm. I know that to the farmers it did a great deal of good, because many farmers at that time laid by sufficient funds to carry them through the period of depression, without which funds they would have been in a grave state indeed.

Something was said about the national income. I am sure the hon. member for Brant will not say that while the farmers comprise some 35 per cent of the population of this country, they are entitled to only 10 or 12 or 14 per cent of the national income. Yet that is the situation as it exists and has existed for some time past.

Mr. WOOD: Is the hon. member prepared to say that all the income the farmer gets is from agriculture, that he may not get part of the income from other industries?

Mr. SENN: I say that looking over the figures given in the Sirois report for many years past, when a farmer on 100 acres of land gets only $400 to $600 actual annual income from his farm he is not getting sufficient to keep him and his family. It is not a fair balance between agriculture and other sections of the community.

I have no wish to carry on the debate, but I think the minister should not have taken quite so much credit for the higher prices which exist, because they would have existed in any event. I am certain that if there had been no price ceiling on farm products, there would be closer parity to-day between prices of farm products and prices of other commodities that the farmer has to buy.

There is no doubt that the labour situation on the farms to-day is serious. Recently a survey was made in my own county by the federation of agriculture assisted by officials of the provincial government. I have just received a second report which shows that out of 1,207 farms in the county, averaging 130 acres each, there was only an average of 1·2 male adults on each. That is a mixed farming community, and I say without fear of

contradiction that with practically one man to a farm it cannot be operated successfully to get the largest production that we should be getting in war time.

Moreover, the average age of those males was fifty-three years, showing, as the minister mentioned, that there is a large number of farms where the sole operator is between sixty and seventy years of age. In times of peace it may be that we have kept up production through having implements and mechanized farming and have been able to increase production along certain lines; yet that cannot continue indefinitely. The harvest is coming, and it is going to be very hard indeed under conditions as they are to-day. The minister and the government will be well advised to give careful consideration to means to remedy the labour situation at least during the period of harvest. After all, we are all anxious to see that production is carried on. We do not want to have it fall down, particularly in war time. I am afraid, however, there will be a good deal of waste on the farms in Canada this summer, and particularly in harvest time, unless the labour situation is remedied in some way or another.

Mr. SLAGHT: Would the hon. member permit a very friendly question? I sympathize with a good deal of what he has said. What would he suggest as a remedy for the shortage of labour on the farm?

Mr. SENN: I am not prepared to say just what that remedy should be. Perhaps the time has to some extent gone by when the remedy should have been applied. I do not agree with the minister's statement, made a little while ago, that if there had been selective service at an earlier stage, men could not have been induced to stay on the farms to carry on operations there. I know a great many of them would be more useful on the farms than they would be in any other place they could be put.

Farming has become an industry where skilled labour is needed, just as much as it is in the factory or anywhere else. One skilled labourer on the farm can do more work by far, and do it more efficiently than two or three unskilled men can do. I do not wish to go back to discussions which have taken place earlier, but it seems to me that while perhaps the voluntary system of enlistment has not fallen down in getting men to enter the active service, it has fallen down very badly in taking men out of more industries than agriculture—although I may be speaking of agriculture particularly at the moment. It has taken men out of those industries who would be more useful in industries than they are to-day in the active service.

Mr. McNEVIN: With respect to the matter of boards, which includes the dairy products board—

Mr. GARDINER: The hon. member suggests that we are now dealing with boards. Is it understood that we are now to proceed to the five boards, one by one? I agreed this afternoon that we would deal first with the item of $5,477,760 contained in the upper items, and that when we had completed those we would proceed to the others.

Mr. SANDERSON: This afternoon I asked one or two questions in connection with flax. At that time the chairman thought my questions were not in order. I should like to put them now. The minister stated that there were twenty-five or thirty flax mills in the combined provinces of Ontario and Quebec; is that correct?

Mr. GARDINER: That was my statement.

Mr. SANDERSON: Has the minister the number for each province?

Mr. GARDINER: No; I have not.

Mr. SANDERSON: Would he get that information for me, and communicate it to me by letter?

Mr. GARDINER: I will do that.

Mr. SANDERSON: Is there any price set for flax seed?

Mr. GARDINER: Yes; there has been since the beginning of the war. I cannot say exactly what it is, but it is around $5 and up, depending upon the grade.

Mr. SANDERSON: I understand that some arrangement has been made to finance those who own flax mills so that they may purchase modern machinery and equipment; is my information correct?

Mr. GARDINER: The facts are that we did assist two or three persons or companies —one in Quebec, I believe, and two in Ontario—before the war, to get certain equipment for their plants. But since the war started we have taken a machine, of which I believe there was only one in the country, dismantled it and made drawings of the parts. The Frost and Wood company are now making those machines for us, at a cost of about $10,000 each. Ten of them have been made up and are in use, and five others are to be put into use. We have about fifteen at the present time. The government has the machines made, and they are sold to the companies desiring to use them.

Mr. REID: Are they pulling machines?

Mr. GARDINER: No; scutching machines.

Mr. SANDERSON: Is the department registering a claim against those scutching machines?

Mr. GARDINER: Where possible, the machine is being sold outright, and in other places it is sold on terms.

Mr. SANDERSON: Are there any flax companies or individuals operating flax mills, and owning this modern equipment, which have been financed by the minister's department?

Mr. GARDINER: I should think some of the machines in use by certain companies have been perhaps partly financed by the department, but I am not in a position to give full information to-night. I can get that information. If the hon. member would put a question on the order paper, I would be pleased to answer it.

Mr. SANDERSON: I would be satisfied if the minister would be good enough to write me a letter setting out the information.

Mr. GARDINER: Very well.

Mr. BOUCHER: Before turning to a discussion of boards under the Department of Agriculture may I draw to the attention of the committee one or two points which occurred to me while the minister was speaking this evening. If I understood the minister correctly, he stated this evening that those who could fully pay for a farm, or those who inherited one free of debt, could maintain an honest living, but that those who were obliged to pay off a substantial debt on their farms were in an entirely different position. I should not want the feeling to be created outside the house that such was the view of hon. members, or that we believed that the farmer must have a big capital investment, with his stock and machinery all paid for before he can make a subsistence, or live on the farm. I consider that the farmer to-day, and particularly the farmer in eastern Ontario, has been handicapped in a very great way in the past ten or fifteen years by virtue of the falling down of the net revenues on his farm and of the increasing of the debt.

The mere subsistence of the farmer in Canada is not good enough at this time. Only yesterday the Minister of National War Services stated that in eastern Ontario his department had had to raise the quota because the supply of available men between twenty-one and twenty-eight, and even up to thirty years of age, had been just about exhausted.

The hon. member for Parry Sound (Mr. Slaght) inquired about a cure for the shortage of farm help. I believe his question was partly answered by the hon. member for Haldimand (Mr. Senn), when he pointed out that to-day the farm helper is not an inexperienced or unskilled labourer, but that he is one who to a very great extent must be an expert in his own occupation. He must be accustomed to agricultural work and agricultural management.

Throughout eastern Ontario and most definitely in my own constituency the drawing of men into the army and the volunteering of men to serve in the army have left an acute shortage of labour. As a matter of fact, many of the auction sales in my constituency are on the properties of people of mature age whose young sons have gone into the army, whose daughters are active in war services and who are left with their herds of dairy cattle, beef cattle, hogs or flocks of poultry without sufficient help to carry on. If that situation continues for any length of time, it will prove a serious detriment to the whole agricultural industry. I believe the minister has the interests of the farmer at heart, and he should put forth greater efforts to keep on the farm those who will be the farmers of to-morrow. He has said that we could sell more bacon, more eggs, more cheese, more butter and more beef if we could produce these commodities. Is that not proof that conditions of agriculture are not such as to induce our young people to stay on the farm and produce in the quantities required?

I should like to refer briefly to the price-ceiling policy. These price ceilings were set in the fall of the year, at a time when the farmers had disposed of large portions of their bacon, of the bulk of their production of eggs and almost all of their production of cheese and a great percentage of their production of butter and beef. There could hardly have been a less advantageous time at which to set prices than immediately after the farmer had sold his commodities and before the middleman, the wholesaler, the retailer and the broker had disposed of theirs. I think more will have to be done to reconcile the farmers of this country to the advantages of the price ceiling.

More attention should be given to the possibility of advancing agricultural pursuits so that we can live up to the requirements of quality which are required for the export markets. We should strive to hold the markets that we may obtain by reason of the war, and one way of doing that is to maintain the quality and quantity of our production at the highest possible level.

Mr. PERLEY: I believe we might say that this has been a field day for the farmer. As the hon. member for Haldimand (Mr. Senn) has said, this afternoon and evening we have heard some interesting discussions as well as the statements made by the minister. Some constructive suggestions have been made. Reference has been made to the sale of farms, and in this connection I agree with what the minister has said. I am one of those who believe that a good farm—500 acres or three-quarters of a section in the west or two or three hundred acres in the east—will prove to be one of the best investments a man could have after the war, should the war continue for another two or three years. Much will be expected of our farmers in the reconstruction period. The minister gave some interesting figures which go to show that the industry will be in position to meet its obligations at that time.

We have been discussing that portion of the $2,000,000,000 appropriation which is to be devoted to agriculture. The greater part of this amount of $11,042,281 is to be used to encourage diversified farming in Canada. We must encourage that type of farming, even in western Canada. Our climatic and soil conditions vary, and this type of farming could be made successful. Other suggestions have been made with reference to the stabilization of the prices of dairy and other products. This is a splendid principle to apply to the prices of all farm products in order that the producer may know where he gets off at, so to speak, and have some assurance that he will get a fair return for his labour. It is agreed that agriculture is as much a war industry as any other industry. We have been asked to increase our production to meet the demands of Great Britain. The minister has a most difficult task, and I have no doubt that he must face some difficulties even in the cabinet. This setting of war-time prices has aggravated the situation and no doubt has increased his difficulties.

There has been a considerable amount of repetition in the discussion to-day. When the billion dollar gift was before the house questions were asked of the minister, and to-day many of those questions have been repeated. I have no doubt that when the minister's estimates are before the committee there will be further repetition. I do not think that $11,042,281 out of a total appropriation of $2,000,000,000 is too much for agriculture. There are only three or four of these items that need much explanation, and the minister has explained them. The amounts required to carry on the different administrations are, I think, a little out of proportion. The minister's department is so organized, with experts at the head of the different branches, that this work could have been done in the department, perhaps with some increased office staff. The minister gave a most interesting statement in trying to justify these expenditures.

Another item is to provide for a programme to encourage the production of essential war supplies. The minister referred specially to the amount used in advertising in order to encourage production. This advertising was done in the daily and weekly newspapers, but in my opinion the best medium of advertising to encourage production is the price obtained for the product. If you have a parity price, production will be increased. But I believe we can leave that problem to the minister to overcome.

Commodity costs to the domestic producer are too high to-day, and labour is out of line. I am not saying that labour should not have just treatment and a fair price, but I have figures here published by the Searle Grain company showing that labour costs are altogether out of line with the price the farmer is receiving for his products, and some adjustment must be made. Wheat at ninety cents is 30 per cent below the parity price, while labour is 42 per cent higher, taking the year 1913-14 as the period for index prices, so it is obvious that some adjustment must be made.

We are taking a register of the unemployed between the ages of sixteen and seventy, and when these figures are compiled as at May 31 I trust that the minister will make use of them to organize labour to take care of the harvest requirements this fall, so that the farmer will no longer be worried over a possible shortage of labour. The minister this afternoon referred to the encouragement that has been given to farm women's organizations to carry on their work, and the other day in the house I discussed the part that women and girls are playing in farm production and the greater part they could play. But to-night I want to stress the importance of the minister working in close cooperation with the Department of National War Services, so that when the unemployed register has been completed, the man- and woman-power that is available and not required in the production of essential munitions of war will be organized in order that there will be no shortage of labour in harvesting this year's crop. I am getting letters daily, and I know the farmers are beginning to worry over labour, particularly for harvesting. It may be a difficult matter to deal with, but I know the minister will take

it in hand, and I trust he will give the farmers assurance that there will be no shortage of farm labour this fall.

I have a great many questions to ask but, as the ground has been pretty well covered this afternoon, I shall postpone them until we come to the other items.

Mr. BLACKMORE: Just a word or two before we close the night's work. After the minister finishes giving one of his fine outbursts, everything looks so rosy that one might believe that the situation in respect to agriculture in this dominion was perfect. But it is far from perfect. I think the minister himself recognizes that.

There were two or three thoughts which came to my mind while the minister was speaking. The first was this. Does the minister and do those who are around him have any conception of how much agricultural production they really want in Canada? Have they any idea how many hogs they would like to see Canada produce, and how many cows, and how much butter and cheese? Have they any idea of the limit of Britain's potential consumption, and whether or not Canada could fill the needs of Britain if she set herself about it, in addition to what Canada would herself need? Have they any idea how much Canada would be short of her maximum production after supplying all potential British needs and all potential Canadian needs?

I know this question is not easy to answer, but it does seem to me that with the number of skilful experts who are at our disposal we ought to be able to come somewhere near to forming an estimate of Canada's potential capacity, considering the law of averages. Of course we do not know whether we are going to have a wet year, for instance, which will destroy a large part of our production, or perhaps a dry year which will destroy much of our production, but there must be a law of averages covering a period of ten or fifteen years, by reference to which it ought to be possible to estimate with some measure of accuracy the potential capacity of Canada to produce. If it is found that Canada's capacity to produce wheat, after we have allowed for the production of all the oats, barley, flax, rye, and all the other things we need exceeds what Canada requires to supply the British market, the Canadian market and any other markets that may be available, considering the question from the point of view of resources and man-power, has the minister taken any steps whatsoever to decide how many men he could spare off the farm?

Word coming to me from my constituency and other parts of western Canada alarms me because of the number of men who are being taken off their farms, men who are A-1 producers. Right now I am working on five distinct cases, in each one of which the production of probably a 300-acre farm is in jeopardy this year, and probably will continue to be so for two or three years. Five cases do not sound very much, but I presume that is only one-tenth of what is actually going on in my constituency.

If that is going on generally, and if what the member for Fraser Valley said with respect to the slaughtering of cattle and what the hon. member for Leeds pointed out applies to many other parts of Canada, there is going on over this country a destruction of our capacity to produce which is alarming. We cannot allow a good dairy cow to be slaughtered and recover from the effects of that slaughter perhaps during this war. I laid it down as a principle two years ago that the government should be seeing to it that there is no further slaughter of female breeding stock, and that should apply not only to cattle but to hogs and sheep unless we are sure that we have a greater productive capacity than we need. It is a very, very serious matter when a herd of dairy cows are sent to the slaughter and destroyed when we are in danger of a shortage of butter, for we cannot replace them in three years, and probably never. If there is a large number of farms that are going into semi-production; if good men are being taken off the farm who know how to run a farm and love the farm and are trained to it, men who cannot be replaced, and if we are losing by the destruction of a good deal of our live stock here and there, then it is a very serious matter. If demands should be made upon us, by reason of intensified submarine warfare in the Atlantic or from some other cause, to increase our production within two years, it would then be just too bad.

All the wringing of foolish hands would not do a bit of good. We have enough to wring foolish hands about in this country already. As the hon. member for Fraser Valley pointed out, with almost unbelievable stupidity we have neglected the development of our sugar production, with the result that, in one of the best sugar-producing areas on earth, we have had to ration sugar. That is to the credit of this government and its wonderful foresightedness. The government can very easily run into a good many other shortages because of the lack of foresight to look ahead. I am alarmed at things like that occurring.

The hon. member for Dufferin-Simcoe mentioned chickens. I cannot understand, if the

need of eggs were as great as I was led to believe it was, how we can afford to have a single pullet in this country not producing.

Mr. GARDINER: How would you get the eggs over?

Mr. BLACKMORE: In the first place, you have to have the eggs. It is certain you cannot get them over if you do not have them.

Mr. GARDINER: We can get the eggs.

Mr. BLACKMORE: Can you get all that are required?

Mr. GARDINER: We are getting them, and at prices which most farmers do not think are high enough, simply because there has been at times a surplus.

Mr. BLACKMORE: I am afraid the price is not high enough. There may be a surplus one year, and the next year there may be a shortage. Our whole method of approach with respect to agriculture at the present time seems to be hit or miss. As the hon. member for Fraser Valley or some other hon. member pointed out this afternoon, no man knows where he stands.

Mr. GARDINER: We are sending forty-five times as many eggs to Britain as we did in the year before the war.

Mr. BLACKMORE: That is not the question. The question is, are we sending as many eggs to Britain as Britain needs?

Mr. GARDINER: We may not send as many as she needs, but we are sending as many as we can arrange to ship.

Mr. BLACKMORE: If we do not have them, is it not time that we got them?

Mr. GARDINER: If you cannot send them over, or consume them here, why waste your time in producing something that cannot be sent over there?

Mr. BLACKMORE: How do you know that you will not be able to send them over in a month or two?

Mr. GARDINER: We know by experience.

Mr. BLACKMORE: Surely we do not expect to have this Atlantic war remain static, do we?

Mr. GARDINER: No.

Mr. BLACKMORE: While I do not wish to be too critical, I think we are drifting too much in agriculture, and I am in close contact with a good deal of agriculture in my own constituency.

44561—190½

Mr. GARDINER: We have drifted very close to that top line the hon. member was talking about a few moments ago.

Mr. BLACKMORE: There is a great shortage of eggs in Britain.

Mr. GARDINER: Of course. There is a shortage of wheat in Ireland, too.

Mr. BLACKMORE: I do not think the minister needs to worry about sending the eggs over. If I conceive the minister's task aright, it is to get the eggs, and leave it to somebody else to send them over. If they have not the ships to take the eggs over, that is somebody else's worry. While we are discussing eggs, it is our worry to see that we get the eggs, and then to see that we have the means of processing the eggs, so that they can send them across. Have we that? If we have that, all right; then probably, as far as we are concerned, our egg worry is over.

As I say, I believe that we are drifting too much. There is too much uncertainty. I think it was a year ago that I argued that the price of eggs should be fixed at a figure which would be remunerative to the farmer and that he should be guaranteed that price for two years. Someone will ask "Where is the money coming from to pay for that?" Well, that is another matter, but the important thing for us is to get the eggs, to be sure we are going to get the eggs, plenty of them, not only for Britain but for ourselves. We will take care of the rest of it after that.

From the remarks the minister made I was a little uncertain as to whether he had an idea of how many eggs and how much butter and how much cheese and how much of various other things he really wanted.

Mr. GARDINER: I gave the figures this afternoon.

Mr. BLACKMORE: You really wanted them?

Mr. GARDINER: We want 1,500,000 cases of eggs for England this year.

Mr. BLACKMORE: But you are not sure that you are going to get them?

Mr. GARDINER: We are pretty certain we can get them, yes. Britain cannot ship them as shelled eggs; we have to dry them.

Mr. BLACKMORE: If you wanted a third more, could you get them?

Mr. GARDINER: Britain has not said that she wants a third more.

Mr. BLACKMORE: I got a statement from the minister; it is difficult in a long speech like that to recall all he said, but

he gave me the idea that he could sell all we could produce of a number of commodities. I believe he named about seven, including eggs, cheese, butter—

Mr. GARDINER: Not butter. We are not selling any butter in Great Britain.

Mr. BLACKMORE: The minister named a number of commodities of which, he said, we could sell all we could get. That is fine. If we can sell all we can get, let us get all we can sell—which is an entirely different matter, and I say that we are falling down in the matter of getting all that we can sell.

Mr. GARDINER: Will you produce all that you can sell without putting any men in the army or any men in the munitions plants?

Mr. BLACKMORE: Well, now, the minister's question has raised the matter I started talking about at the beginning. The very first thing for us to know is, taking eggs for instance, how many eggs do you want in Canada?

Mr. GARDINER: One million five hundred thousand cases.

Mr. BLACKMORE: Will you be content to stop right there and produce no more than that for next year?

Mr. GARDINER: We do not expect to ship any more this year.

Mr. BLACKMORE: But if you can get more next year, you will take them?

Mr. GARDINER: We will find that out when dealing with next year.

Mr BLACKMORE: You see it is all uncertain. As long as you do not know how many eggs you want, how do you know how many people should get to work producing eggs? The same is true with respect to selling butter and cheese. How do you know how many men you can spare from the farms; and if you do not know how many you can spare, how do you know when you have taken the limit?

As I have sat here and listened to the discussion on the statements of the Minister of National War Services, the Minister of Munitions and Supply, the Minister of National Defence, and various other ministers, I have been impressed with the fact that nobody seems to have any idea definitely where we are going. We seem to be getting the whole set of ministerial departments interlocked and dovetailed with each other until there is just a sort of run-around and nobody knows where he stands. That is bad business. I think something ought to be done before very long, or we are going to suffer. We do not know how many farmers we can support.

As I said a minute ago, I am alarmed at the number of first-class farmers who have gone out of my constituency, men who cannot be replaced in ten years. If they are needed in the army more than they are needed on the farms; if they are needed in the munitions plants more than they are needed on the farms, all right; it is good business to put them there in the army or in the munitions plants. If that is not the case, it is bad business to put them there. If no one is at work determining how many can be spared for these purposes and how many are needed on the farms, the whole country is adrift with respect to its economy. That is just the impression I have of our agricultural situation in Canada to-day. It is adrift. We do not know where we stand.

The minister says that we are getting much more production, but one thing he did not allow for, in his fine speech—and he gave a very fine speech—is the tremendous amount of production the farmers are bringing forth for patriotic reasons.

Mr. GARDINER: Well, I have said that many times.

Mr. BLACKMORE: But there is no way of telling how long that patriotism will last.

Mr. GARDINER: I have answered all these questions, too, twice this session.

Mr. BLACKMORE: Yes, and probably we shall ask them a great many more times, because we are far enough from a satisfactory answer yet. The amount of suffering which is going on in various parts of this country in agriculture is much more than there ought to be. The fact mentioned by the hon. member for Acadia, that ten cents a dozen is the price of eggs, first-class eggs, in many parts of Alberta, in a country which is at war, and needs food, is almost unbelievable. I have a statement from Saskatchewan to the effect that in many rural areas in that province the price to the producer at this time is ten cents. What conceivable encouragement is there for a man to raise chickens? We are adrift with regard to eggs. I am not sure about butter, but it seems to me the price is altogether too low. I have not been following in detail the prices, but from what was said this afternoon, there must be grave discontent in the matter of butter; all too soon it will take the form of a lack of butter production. That is the danger. Farmers will have to quit producing butter.
