

CRASHED BETWEEN TWO CARS

Thomas Kenny, a G. T. R. Wheel Tester, Met a Shocking Death Last Night.

MR. S. G. TREBLE DROPS DEAD

One of Hamilton's Best Known Citizens Suddenly Succumbed to Heart Failure.

Hamilton, Aug. 22.—(Special)—Thomas Kenny, Catharine-street, north, a Grand Trunk wheel-tester at the Stuart-street station, met his death at 7.30 this evening.

Mr. S. G. Treble, one of Hamilton's best known citizens, passed away very suddenly this afternoon.

A sudden summons. S. G. Treble, one of Hamilton's best known citizens, passed away very suddenly this afternoon.

The big fire out in Beverley Township has already destroyed about 400 acres of good timber.

Notices were sent out to-day, calling a meeting of the Special Investigating Committee to be held to-morrow.

It is perfectly solvent—Deponents Can Decide.

Montreal, Aug. 22.—(Special)—The newly-appointed liquidators of the Banque Ville Marie have got to work.

The directors of the Banque Jacques Cartier are still working to secure the signatures of depositors who are willing to allow their deposits to remain in the bank for at least a year from the date on which the bank re-opens its doors.

Victor, Col., Aug. 22.—The total number of buildings destroyed by the fire which broke out here at 1.30 o'clock yesterday afternoon is estimated at 800.

JOHN CATTO & SON

King-street—opposite the Postoffice. YELLOW JACK AT PANAMA. Several Cases of the Dread Scourge at the Isthmian Town—People Greatly Agitated.

Colon, Colombia, Aug. 22.—Several cases of yellow fever have occurred at Panama, the disease, it is said, having been imported from Guayaquil, Ecuador. An urgent appeal was made to the local authorities to-day in regard to the necessity of the immediate construction of a lazaretto in Panama. It was pointed out that otherwise the recently increased traffic of the Isthmus with Pacific ports must suffer a decrease.

HIS GOVERNMENT IS DOOMED IT LOOKS RATHER BAD FOR YOUNG ANDERSON.

Hon. Joe Martin and Three Other Supporters Have Deserted Premier Semlin.

MAJORITY CHANGED TO MINORITY. The Ex-Attorney-General Says the Ministry is Bound to Fall on the First Vote.

Winnipeg, Aug. 22.—(Special).—Hon. Joseph Martin, R. McPherson, Hon. D. W. Higgins and Mr. Hegelson have declared themselves as no longer Government supporters. The Semlin Administration had a majority of four in the House. The Opposition have now four of a majority, but the Lieut.-Governor has not spoken.

Hon. Joseph Martin said to-day: "My desire is to see the Government defeated on the first day of its sitting, and this can be brought about easily now, as they are in a minority."

Hon. Alex Henderson, Attorney-General, has been elected by acclamation in New Westminster.

EXPORT TWO DEER PER MAN

This Will Be the Regulation That the Customs Department Will at Once Send Out.

BUT NUMBER THAT MAY BE SHOT

Will Still Be Fixed by the Provinces, Whose Restrictions Will Be Backed Up.

Ottawa, Aug. 22.—The Customs Department will at once proceed to the formation of regulations by which the export of deer from Canada is to be permitted. A statute of last session was designed to remove prohibition against the export of carcases of deer under conditions to be prescribed by the Minister of Customs. His ruling will be that not more than two deer per man shall be allowed to pass out of Canada within the same season. These may be within the same party. The law shall apply to parts of the deer, and the provisions will, of course, continue to regulate the number of deer which may be shot by a hunter, and this change will have nothing to do with other than game sent out of the country.

NOTES FROM VANCOUVER.

Crack Shots on the Way to Ottawa for the D. B. A. Meet—Nelson Bartender's Suicide.

Vanouver, B.C., Aug. 22.—The Archbishop of Rupert Land, Primate of all Canada, left for Banff yesterday, where he will spend a few days before returning to Edmonton.

Lieut. J. Reynolds Tite, Quarter-Master Sergeant Moscor and Sergeant McNeil, left for Ottawa by the Imperial Limited yesterday to complete the British Columbia tour, which will take part in the rifle matches at the Dominion meet, opening Monday.

William Woodruff, who was recently employed as bartender at the Hotel, Hotel, Spokane, by taking morphine, he is supposed to have relatives in Hamilton, Ont.

FATTEN CHICKENS FOR GAIN.

Prof. Robertson Will Go East and Establish Fattening Institutions as Object Lesson.

Ottawa, Aug. 22.—Prof. Robertson goes east in a few days, where he will undertake the establishing in the Maritime Provinces of some half-dozen stations for fattening chickens, and showing farmers what can be made from fattening fowls by the best foods and means. He will also attend to the restocking of small refrig. stations along the coast, in which bait may be kept over the season for use in Canada waters. This scarcity of bait has tended to cripple the Canadian fishing industry, and the fishing season should be just at its best.

GET OUT OF THE WAY OF THE BOLT.

Lightning in Manitoba Burns Barn, Kills Horses and Strikes a Man on Sunday.

Popular Point, Man., Aug. 22.—The severest thunderstorm which passed over here Saturday afternoon did considerable damage. Most of the low hay swamps are full of water and much hay will be damaged. Mr. Hugh Cunningham, who lives about three miles east of here, had a 20-ton stack of hay struck by lightning and burned to the ground. A team of his horses were also killed by lightning. Mr. Cunningham himself had a narrow escape, being knocked senseless by the same stroke that fired the stack and killed the team.

FOR THE LARGEST TELESCOPE.

Prof. Pickering of Harvard is in Jamaica Looking for a Suitable Site for the Instrument.

Kingsport, Jamaica, Aug. 22.—Prof. Edward Charles Pickering of the Harvard Observatory informed the correspondent of the Associated Press that he is here seeking a suitable location for the largest telescope in the world, which is being constructed at Cambridge especially for the purpose of observing the earth eighteen months hence. He is favorably impressed with Jamaica's advantages. Prof. Pickering established the Mt. Observatory of Peru.

THE TWO SIRS WILL SAIL.

Charlotte, N.C., Aug. 22.—An interview here to-day Sir Louis H. Davies, Minister of Finance in the French cabinet, stated that he and Sir Wilfrid Laurier would sail in a short time for England.

IT NEVER TOUCHED HIM.

A King-street trolley car collided with James H. Walters' express wagon near the corner of Broad-street yesterday and threw him out. Walters was uninjured.

FRANCE REVIVES HER CLAIMS.

Shanghai, Aug. 22.—The Chinese authorities here say the French have revived their claim to the right of forming a settlement in the city, based upon the treaty of 1858.

IT LOOKS RATHER BAD FOR YOUNG ANDERSON.

Continued from Page 1.

Another plan on the back of the letter, and wanted to burn it, but I said: "No, I want the letter. It is supposed to have it, letter or no letter, so I gave him it. He burned it, and then told him, and I took the letter and put it in my pocket."

Davis Found the Place. I went out and found the place next night. I found the place within one hundred yards from where the money was hidden. I never looked for it. He had explained every particular, as soon as I was up, but still I was not sure of it. He said it was eight feet from the gate and near the first telegraph pole, and the telegraph post and on the east side and the left side of the gate. I did not make any search for the marks at that time. I did not see any marks, which had grass on it 2 1/2 feet high.

Anderson Was Waiting. Anderson was waiting and asked me if I had found the locality. I said: "Yes, I have found it. If you are prepared to leave town I will show you the place. I will show you the place where the money is, so that you can put your hand to it."

Anderson said: "I will show you the place where the money is, so that you can put your hand to it. I will show you the place where the money is, so that you can put your hand to it."

Anderson said: "I will show you the place where the money is, so that you can put your hand to it. I will show you the place where the money is, so that you can put your hand to it."

Anderson said: "I will show you the place where the money is, so that you can put your hand to it. I will show you the place where the money is, so that you can put your hand to it."

Anderson said: "I will show you the place where the money is, so that you can put your hand to it. I will show you the place where the money is, so that you can put your hand to it."

Anderson said: "I will show you the place where the money is, so that you can put your hand to it. I will show you the place where the money is, so that you can put your hand to it."

THE CROSS-EXAMINATION OF DAVID BY MR. METCALFE BEGAN.

Witness said: I laid the information against Anderson. I did not have any conversation with Chief Elliott prior to the arrest. I did not give him a letter addressed to the prisoner.

Asked to whom he had given the letter, and what it contained, witness explained that he had written a letter to Anderson, and given it to Mr. Whittier to give to the accused. He had written to tell Anderson to keep his mouth shut, because there were certain clues to look up, and he did not want Anderson to do it so that these clues could not be followed.

"What clues?" asked Mr. Metcalfe. Witness explained that he wanted to know where Anderson had got the horse and what he was doing with it. "And you thought if you kept Anderson's mouth shut he would tell you?"

The court laughed, and the witness said he had got a telegram from Toronto which told him to keep his mouth shut. "I did not see any marks, which had grass on it 2 1/2 feet high."

Anderson Was Waiting. Anderson was waiting and asked me if I had found the locality. I said: "Yes, I have found it. If you are prepared to leave town I will show you the place. I will show you the place where the money is, so that you can put your hand to it."

Anderson said: "I will show you the place where the money is, so that you can put your hand to it. I will show you the place where the money is, so that you can put your hand to it."

We Are Clothiers in the Fullest Sense of the Word. Whatever is wanted in the way of Clothing, Furnishings, Hats and Caps will be found here in ample variety always—and, quality considered, at lower prices than will be found elsewhere. Every garment shows the excellence of good material and good workmanship, as to styles and fit—none better. These prices speak for themselves.

Scotch Tweed Suits at \$8.50. Men's Fine Imported Scotch Tweed Suits, single-breasted ascot style, handsome brooch and dark brown, fast colours in plain patterns with faint red overplaid, good Farmers' suit linings and trimmings, elegantly tailored, sizes 36-44. Thursday..... 8.50

Men's Fine French Worsted Pants, fast black, with narrow satin finished and plain stripes, top and hip pockets, good strong trimmings. Regular 2.50 value. Thursday..... 2.00

Children's Blue Serge Blouse Suits, large sailor collar, trimmed with blue and old gold braid, pants lined, good pocket and lanyard and white, sizes 21-39. Special Thursday..... 1.00

Men's Silk Puff Ties for 25c, Were 50c. Men's Pure Silk Puff Ties in light, medium and dark shades, stripes, checks and brocades, the newest shapes for fall wear, silk and satin lined, extra well made. Regular price 50c. Thursday..... .25

Men's Pure Wool Sweaters, honeycomb stitch, roll collars, in navy, cardinal, brown, heather and black, fast colours, all men's sizes, good value at 1.00, Thursday..... .75

Men's Bicycle Hose in heather mixed, with fancy colored roll tops, with or without feet. In the regular way they sell at 50c. Thursday..... .35

\$2 American Straw Hats for \$1. Men's Fine American Straw Hats, with high full crown and neat rolling brims, very close and fine braid. Easy fitting, light in weight, also straight brims in fine chip, navy blue or black silk bands, Russian calf leather sweats. 2.00 hats reduced to..... 1.00

Children's Soft or Wire Crown Tam O'Shanter, soft crown, in fine navy blue cloth, with named bands and fancy ornaments; wire crowns, in navy, brown or cardinal colours, with plain or fancy crowns and bands. Special..... .25

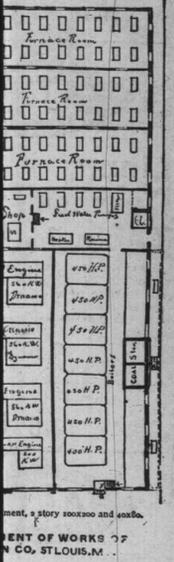

Boys' Large Fall Front Hoodlump Caps, in fancy check and stripes tweeds, or navy blue serge, also fancy colored baseball and cricket caps. Special..... .15

Refuses to Loan \$45,000. Ottawa, Aug. 22.—Mr. George T. Fulford of Brockville has declined to loan the Separate School Board the \$45,000 for the borrowing of which negotiations have for some time been going on. It was an almost settled thing that Mr. Fulford would give the loan, but now he declines to do so on the ground that he has received insufficient information as regards the security that the School Board could put up. While some of the trustees say that the Separate school security is gilt edged, they claim that full information about the security should have been sent Mr. Fulford from the proper source.

THE "HATTIE BELLE."

The World's Mining Commissioner Visits the Property.

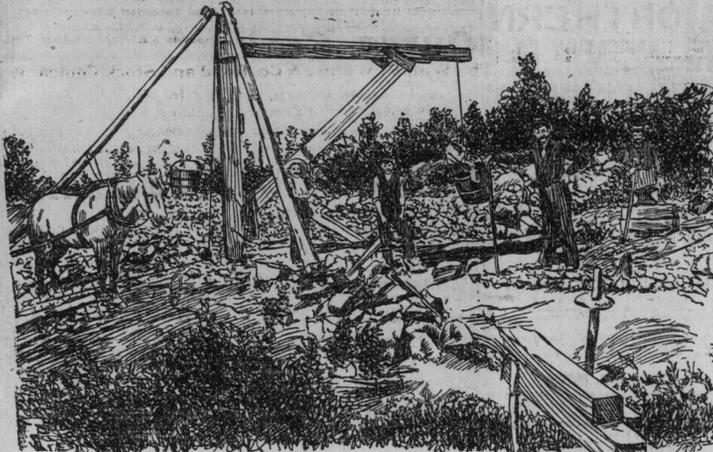

A Full and Exhaustive Description of These Celebrated Mines—Wonderful Prospects, Etc.

Parry Sound, Ont., Aug. 22.—(From The World's Special Correspondent on Tour)—The District of Parry Sound, with the town of the same name as its centre of life, continues to evidence the existence of an important mining boom. Many of the citizens are neglecting their vocations and avocations with the object of getting hold of properties which they think will be valuable if the several active companies in the district proceed with the operations which they have now under way. The dealers in dynamite are plying a good trade, and the farmers who have sold their erstwhile agricultural lands are still blowing in their money. As is usual in every young mining district, some new find of mineral is made every day which utterly eclipses anything ever before heard of in the country. Judge McCurry is reported to-day to have found within the town limits a vein of quartz carrying free gold in big values. In my previous letter I took up the properties of the Parry Sound and Imperial Copper Mining Companies, and in this contribution I will pay some attention to the locations belonging to the Hattie Belle Gold, Copper and Nickel Company of Parry Sound, Limited, which would be better off if it had a shorter name, but which appears to have valuable assets in the shape of locations carrying all three of the minerals named in this incorporation title.

The Hattie Belle Company's general manager, I visited the Lafex, which, though it lies within three miles in a straight line of the town of Parry Sound, is distant four miles by steam route along the shoreline of Georgian Bay. Landing on the rocky beach of an inlet, known as Five-Mile Bay, and walking inland about 500 yards through a narrow ravine, cut out by nature between two round-topped bluffs, we came upon the outcroppings of the mineral deposit which the owners look upon as their pet showing. Outcroppings of Ore. This outcrop appears to be about 25 feet wide. It discloses itself upon either side of the gully, seeming to have been rent asunder by some convulsion of nature, and thrown one-half this way and one-half that. This outcrop is only one of a series of surface showings existing within a belt about 200 feet wide, all sandwiched in between intervening strips of country rock. In other words, mineralized and mineralized zones alternate on the surface for a space of some 70 yards, and on either side stretches away the ordinary country rock, characteristic of this peculiar section of Ontario. As already stated, it is to the one 25-foot outcrop that the management is at present devoting its attention. Test pits and cross-sections have been made upon the deposit, which I followed for about one-third of a mile, and which, I am given to understand, can be traced much farther, and which, in fact, some say, intersects the famous McGowan belt, three miles to the northeast. Mineral Near the Surface. The Lafex surface indications are identical with those at the Wilcox property, described in my last letter from this district. As in the case of the Wilcox and other properties in the neighborhood, the mineral belt is marked by a very strongly stained iron capping. This reddish-brown toppling is present over the whole length of the belt,

cent. in copper, and nearly as high in nickel, and that at points in the shaft it will go from 5 to 15 per cent. in copper and from 1 to 3 per cent. in nickel. I have been shown copies of assay certificates made by Prof. Heys of Toronto. One sample near the surface is estimated to go about \$11 to the ton in copper; another from the dump west \$4 in copper; another \$10 in nickel and \$6 in cobalt; while another gave \$10.50 in copper, \$1.20 in nickel, and \$6.00 in cobalt; and still another ran about \$13 in gold and copper. It is to be remembered that the above tests were made upon ore very near the surface of the deposit, and at a time when

THE LAFEX LOCATION.

PERMANENT SHAFT ON LAFEX MINES, HOWING HORSE DERRICK AND ORE DUMP.

Summerfeldt, miller. Sutton West; John Park, M.D., Sanitfeldt; Charles B. Jackes, barrister, etc., Toronto. Solicitors, Jackes & Jackes, Toronto. Another favorable feature of the Company's organization is that its capitalization is remarkably low, the capital stock consisting of \$400,000, divided into 400,000 shares of a par value of \$1.00. Of these shares, 160,000 have been placed in the treasury to be used exclusively for development operations. The stock, no matter at what price purchased, is fully paid, and non-assessable. Company has Four Properties. The properties of the company are four in number, and include the Lafex and Sheard locations, carrying gold, copper and nickel; the Beckett deposit, carrying gold, silver and platinum; and, last, a mica property, boasting a vein of feldspar, in which are embedded mica crystals of commercial value. The first three named of these locations, I am given to understand, lie in what is known as the Wilcox mineral belt, which runs northeast from the Lafex property on the shores of the Georgian Bay. First on the Lafex, which lies four miles northeast of the Wilcox, and three miles southwest of the McGowan; second, comes the Sheard, located four and one-half miles northeast of the McGowan; and third, we have the Beckett, fully twelve miles north of the Sheard. The mica proposition lies off by itself in another direction. The Lafex Location. As already stated, the Lafex mine, which lies on the property upon which the Company has done the most development, is situated on the Wilcox mineral belt, some thing like midway between the McGowan and Wilcox properties, the former being located some three miles to the north-east, and the latter about four miles to the southwest. In company with Mr. James B. Mitchell,

as far as I went, though at times it is more or less covered by an overflow of the surrounding rock. As at the Wilcox, the mineral lies very near the surface, and only two or three shots are required to follow the capping and show up the yellow stuff which the miners are after. Two or three feet down, what in other countries would be called the vein matter, but what is not called such here, because geologists say that this district has no real vein, is highly impregnated with copper and nickel, evidences of which are apparent. I am given to understand that the rock also contains good gold values. The ore appears to be a mixture of gneiss, diorite and quartz, the quartz matter in the deposit carrying gold. Down the Main Shaft. At the present time the management are sinking what they propose to make their permanent shaft. It is a vertical, eight-by-ten-foot working, and is being put down about 40 feet to the southeast of the main outcrop. The purpose of this will be seen when it is remembered that the belt strikes northeast and southwest, and dips very strongly to the southeast. The company's purpose is to reach a good depth, incidentally cutting through the main deposit, and later to cross-cut and intersect the numerous parallel zones, of which there are good surface indications. Thirty-three feet below the surface of the ground the shaft enters the ore, and on the 60-foot level it is still in the ore body. On descending the shaft in a bucket, I found on the bottom of the working to be more heavily charged with the copper and nickel than at any point near the surface. Plant and Buildings. The progress in sinking is being made at the rate of six inches per day, one shift of men being employed. The company is doing its work with hand drills, and, as a hoisting apparatus, uses an old-fashioned horse derrick. In order that the mining operations may

be continued during the coming winter unimpeded, the management will likely erect permanent camps near the shore of Five-Mile Bay before the snow dies the coming autumn. The copper occurs chiefly in the character of chalcopryite, but there are indications at the surface, and also lower down, of the borate which distinguishes the McGowan. Ore Values. Mr. Mitchell estimates that near the surface the ore runs from one to two per cent. in copper, and nearly as high in nickel, and that at points in the shaft it will go from 5 to 15 per cent. in copper and from 1 to 3 per cent. in nickel. I have been shown copies of assay certificates made by Prof. Heys of Toronto. One sample near the surface is estimated to go about \$11 to the ton in copper; another from the dump west \$4 in copper; another \$10 in nickel and \$6 in cobalt; while another gave \$10.50 in copper, \$1.20 in nickel, and \$6.00 in cobalt; and still another ran about \$13 in gold and copper. It is to be remembered that the above tests were made upon ore very near the surface of the deposit, and at a time when

derrick, bucket, and horse windlass, which are used in hoisting the ore to the surface, are also shown. At the Sheard. The second property of the Hattie Belle Company is known as the Sheard location. It lies on lot 8, concession 4, in the township of McDougall, about four and one-half miles northeast of the McGowan mine, and seven miles by the McDougall road from the town of Parry Sound. As indicated in my previous remarks, the Sheard, according to information furnished me, lies in the

Gold, per ton, \$38.86; silver, \$1.15; platinum, \$11.50. At present the company is not doing any work upon this property. Hattie Belle's Mica Property. Last in the list of the company's properties comes a mica claim, formerly owned by a farmer by the name of Land, and called after him. This location is situated on lot 12, concession 12, in the township of McDougall, and is distant 6 miles by the North Road from the town of Parry Sound. This property is not connected in any way with either the McGowan or the Wil-

The development work being done by the Hattie Belle Company is being pushed with a view of opening up its properties and securing a sufficient ore supply to warrant the erection of reduction works to treat its nickel-copper ores and of placing mica upon the market. Geology of the District. In view of the fact that some geologists have asserted that the Parry Sound district does not contain a rock formation which is likely to carry valuable mineral deposits, I may before closing this communication quote a statement regarding the geology of this section which has before appeared in the columns of The World. The following is the dissertation in question, which was prepared by a mineralogist who has given considerable study to the district: "The rocks of this district consist mainly of ancient gneisses. It varies well-defined belts of limestone and diorite can be traced for miles through the country. It is impossible to state at the present time to what age these rocks belong. From the appearance of the rocks they might be classed either as the Laurentian or the lower Huronian. To determine which one of these formations is represented here it will be necessary to follow these rocks to some point where they come in contact with typical parts of previously described strata. The original structure of the rocks has been destroyed, except in a few doubtful cases. The gneiss, schistose and sheeted structures which are so prominent in this region are usually regarded as secondary, and have in most cases nothing to do with the original condition of the rock. The present existing structures show a great contortion and bending of the rocks. Near Parry Sound there are many folds representing a series of synclines and anticlines. The dip varies from vertical to horizontal, and also turns toward every direction of the compass. Either side of a belt, probably 5 or 6 miles wide, the structure becomes more uniform and the formation, as it is popularly called, may be traced for miles without a break. "In this district there are no true fissure veins which bear minerals of economic importance. The mineral deposits thus far discovered are included under lenticular veins, faultlands and igneous dikes. The most common occurrence of mineral is in faultlands, frequently having many characteristics of lenticular veins. These consist of zones of rock varying from 20 to 400 feet in width and sometimes several miles in length, highly impregnated with chalcopryite, borate and calcopryite, and usually carrying more or less gold. The McGowan, Wilcox, McMillan, Cornfield and Lafex properties are good illustrations of this. "All of the faultlands in this region run parallel with the formation, or the present rock structures. This is the case with nearly all mineral deposits of this nature. The basic dykes, which carry chalcopryite and nickeliferous minerals, sometimes cut across the formation and then in other instances run parallel with it. The Loring and Parry Island locations seem to be of this nature. "So far as I have seen, there are no pockets in the region, using this term as it is used in the old mining camps. The position of the mineral deposits thus far discovered convinces me that they will continue to a considerable depth, and it is also reasonably certain that large quantities of copper ore occur in some of these deposits. There may be not over a dozen paying mines developed out of the hundreds of locations, but some of these will rank with many of the older mines in richness. Considering the nature of the mineral deposits, the surface indications of many are excellent and should warrant extensive explorations. As to the probable tonnage of the district, the developments are insufficient to state accurate figures. It is but fair to state that it promises to be very large. These Deposits Near Toronto. As before noted a unique feature of the mineral belt of Parry Sound is its accessibility to old Ontario. Two or three hours' ride by train from Toronto to Parry Sound and five or six hours' sail among the islands of Georgian Bay brings one right into the midst of the copper-nickel zone which is now attracting all the attention. P. D. L. S. Cucumbers and melons are "forbidden fruit" to many persons so constituted that the least indication is followed by attacks of cholera, dysentery, griping, etc. Those persons are not aware that they can indulge in their hearts' content if they have on hand a bottle of Dr. J. D. Kellogg's Dysentery Cordia. This medicine will give immediate relief and is a sure cure for the worst cases. ad Nearly \$2000 in Cash. Mr. H. D. Gamble on behalf of Sarah McLeod, Martha Reid and Mary Jane Barr, has made application for the administration of the estate of Margaret Reid, who died in the General Hospital December 22, 1898. The estate is valued at \$1,920 and consists of cash in banks.

MOUTH OF TUNNEL ON SHEARD PROPERTY.

Wilcox belt, which runs through the Lafex, crosses the McGowan and still farther northeast shows up as it does upon the Wilcox and the Lafex. In it are found a series of mineralized belts covered with iron cappings, with strips of country rock intervening. A deposit has been traced about one-half way across the property, and has been found on adjoining locations. Within a distance of 400 yards four test pits have been put down to depths of from 4 to 12 feet, and in each case when the capping has been blown off by a few shots, the usual nickel-copper impregnation has been found. As far as tested, the assay values run similar to those at the Lafex already quoted above. The values of the ore secured from the test pits said to run from \$10 to \$14 per ton in gold, copper, nickel and cobalt. At one point on the property occurs a quartz vein which gave gold values of \$9.02 per ton. The second cut appearing with this letter shows a view of the mouth of a tunnel, which is being run into one of the Sheard deposits. On the Beckett. The third property included in the Hattie Belle Company's assets is locally known as the Beckett location, having originally belonged to a man of that name. It was purchased by the company after an expert examination of it had been secured. It lies on lot 23 in the first concession of the township of Hagerman, some 12 miles north of the Sheard, 15 1/2 north of the McGowan, and 19 1/2 north of the Lafex, being the most northerly of the company's properties on the Wilcox belt. It is on what is called the North Road, leading from Parry Sound to Burk's Falls. The Beckett is 20 miles from the former town, the location consisting of 50 acres. The location boasts a quartz vein three feet wide at the surface and six feet wide at a depth of seven feet. On the property adjoining the Beckett occurs the nickel and copper deposit, which is claimed by those interested to be a continuation of the Sheard zone, but the values in the Beckett vein consist chiefly of gold, silver and platinum. This, at least, is the conclusion arrived at by an assayer, who gave the following values:

coz mineral belt, lying, in fact, some miles from both, nearer the shores of Georgian Bay. The deposit upon this property consists of a vein of feldspar, mingled with quartz, and carrying mica. According to Mr. Heys of Toronto, the vein is of a contact character, being enclosed between gneiss on the one side and granite on the other, the hanging wall being of gneiss and the foot wall of granite. Mica in Feldspar. The deposit, which has been traced across the lot and over on to the next property is about 8 feet wide on the surface. It has been tested by the sinking of a 10-by-12-foot shaft or test pit, which is down to a depth of 24 feet, at which level the ore body has widened out to 16 feet. Impbedded in the feldspar and quartz occur the crystals of mica. These crystals vary a great deal in size. Near the surface they are about one foot square and six inches thick, and weigh about 25 pounds, but at the bottom of the opening made, one crystal, fully six feet in length, three feet in width and three feet in thickness, and weighing over a ton, has been taken out. A number of huge crystals are now showing in the bottom of the shaft. These crystals are cross-checked to some extent, but perfect sheets of mica, varying in size from 4 to 8 by 10 inches, are ordinarily procured. The mica is of a somewhat dark color, and is generally free from cleavage. It is non-magnetic, and would be suitable for electrical purposes, but because of its stained character, it would hardly be what is wanted for stoves. Equipped With a Plant. Mr. Heys gives it as his opinion that, with depth, a fine deposit of mica will be found, and Mr. Mitchell thinks that at the 60-foot level the clear white material in large crystals should be discovered. The plant on the property consists of a steam shovel, a steam boiler, all housed in good buildings. It may be added that a shipment of mica, 500 pounds in weight, has been made from the property, the price of 44 cents per pound being refused for it. View of the Mica Deposit. An accompanying cut of the mica property shows the feldspar outcrop, which is so clear and distinct as it runs across the country that it can be seen for a half mile away as one approaches it. The dump on the property, consisting of parti-colored feldspar and glittering mica, makes an attractive landmark.

cent. in copper, and nearly as high in nickel, and that at points in the shaft it will go from 5 to 15 per cent. in copper and from 1 to 3 per cent. in nickel. Near the surface they are about one foot square and six inches thick, and weigh about 25 pounds, but at the bottom of the opening made, one crystal, fully six feet in length, three feet in width and three feet in thickness, and weighing over a ton, has been taken out. A number of huge crystals are now showing in the bottom of the shaft. These crystals are cross-checked to some extent, but perfect sheets of mica, varying in size from 4 to 8 by 10 inches, are ordinarily procured. The mica is of a somewhat dark color, and is generally free from cleavage. It is non-magnetic, and would be suitable for electrical purposes, but because of its stained character, it would hardly be what is wanted for stoves. Equipped With a Plant. Mr. Heys gives it as his opinion that, with depth, a fine deposit of mica will be found, and Mr. Mitchell thinks that at the 60-foot level the clear white material in large crystals should be discovered. The plant on the property consists of a steam shovel, a steam boiler, all housed in good buildings. It may be added that a shipment of mica, 500 pounds in weight, has been made from the property, the price of 44 cents per pound being refused for it. View of the Mica Deposit. An accompanying cut of the mica property shows the feldspar outcrop, which is so clear and distinct as it runs across the country that it can be seen for a half mile away as one approaches it. The dump on the property, consisting of parti-colored feldspar and glittering mica, makes an attractive landmark.

coz mineral belt, lying, in fact, some miles from both, nearer the shores of Georgian Bay. The deposit upon this property consists of a vein of feldspar, mingled with quartz, and carrying mica. According to Mr. Heys of Toronto, the vein is of a contact character, being enclosed between gneiss on the one side and granite on the other, the hanging wall being of gneiss and the foot wall of granite. Mica in Feldspar. The deposit, which has been traced across the lot and over on to the next property is about 8 feet wide on the surface. It has been tested by the sinking of a 10-by-12-foot shaft or test pit, which is down to a depth of 24 feet, at which level the ore body has widened out to 16 feet. Impbedded in the feldspar and quartz occur the crystals of mica. These crystals vary a great deal in size. Near the surface they are about one foot square and six inches thick, and weigh about 25 pounds, but at the bottom of the opening made, one crystal, fully six feet in length, three feet in width and three feet in thickness, and weighing over a ton, has been taken out. MICA VEIN ON LAND LOCATION.

The development work being done by the Hattie Belle Company is being pushed with a view of opening up its properties and securing a sufficient ore supply to warrant the erection of reduction works to treat its nickel-copper ores and of placing mica upon the market. Geology of the District. In view of the fact that some geologists have asserted that the Parry Sound district does not contain a rock formation which is likely to carry valuable mineral deposits, I may before closing this communication quote a statement regarding the geology of this section which has before appeared in the columns of The World. The following is the dissertation in question, which was prepared by a mineralogist who has given considerable study to the district: "The rocks of this district consist mainly of ancient gneisses. It varies well-defined belts of limestone and diorite can be traced for miles through the country. It is impossible to state at the present time to what age these rocks belong. From the appearance of the rocks they might be classed either as the Laurentian or the lower Huronian. To determine which one of these formations is represented here it will be necessary to follow these rocks to some point where they come in contact with typical parts of previously described strata. The original structure of the rocks has been destroyed, except in a few doubtful cases. The gneiss, schistose and sheeted structures which are so prominent in this region are usually regarded as secondary, and have in most cases nothing to do with the original condition of the rock. The present existing structures show a great contortion and bending of the rocks. Near Parry Sound there are many folds representing a series of synclines and anticlines. The dip varies from vertical to horizontal, and also turns toward every direction of the compass. Either side of a belt, probably 5 or 6 miles wide, the structure becomes more uniform and the formation, as it is popularly called, may be traced for miles without a break. "In this district there are no true fissure veins which bear minerals of economic importance. The mineral deposits thus far discovered are included under lenticular veins, faultlands and igneous dikes. The most common occurrence of mineral is in faultlands, frequently having many characteristics of lenticular veins. These consist of zones of rock varying from 20 to 400 feet in width and sometimes several miles in length, highly impregnated with chalcopryite, borate and calcopryite, and usually carrying more or less gold. The McGowan, Wilcox, McMillan, Cornfield and Lafex properties are good illustrations of this. "All of the faultlands in this region run parallel with the formation, or the present rock structures. This is the case with nearly all mineral deposits of this nature. The basic dykes, which carry chalcopryite and nickeliferous minerals, sometimes cut across the formation and then in other instances run parallel with it. The Loring and Parry Island locations seem to be of this nature. "So far as I have seen, there are no pockets in the region, using this term as it is used in the old mining camps. The position of the mineral deposits thus far discovered convinces me that they will continue to a considerable depth, and it is also reasonably certain that large quantities of copper ore occur in some of these deposits. There may be not over a dozen paying mines developed out of the hundreds of locations, but some of these will rank with many of the older mines in richness. Considering the nature of the mineral deposits, the surface indications of many are excellent and should warrant extensive explorations. As to the probable tonnage of the district, the developments are insufficient to state accurate figures. It is but fair to state that it promises to be very large. These Deposits Near Toronto. As before noted a unique feature of the mineral belt of Parry Sound is its accessibility to old Ontario. Two or three hours' ride by train from Toronto to Parry Sound and five or six hours' sail among the islands of Georgian Bay brings one right into the midst of the copper-nickel zone which is now attracting all the attention. P. D. L. S. Cucumbers and melons are "forbidden fruit" to many persons so constituted that the least indication is followed by attacks of cholera, dysentery, griping, etc. Those persons are not aware that they can indulge in their hearts' content if they have on hand a bottle of Dr. J. D. Kellogg's Dysentery Cordia. This medicine will give immediate relief and is a sure cure for the worst cases. ad Nearly \$2000 in Cash. Mr. H. D. Gamble on behalf of Sarah McLeod, Martha Reid and Mary Jane Barr, has made application for the administration of the estate of Margaret Reid,

A COURSE IN TECHNOLOGY

It has a Commercial as well as an Industrial Side That Needs Attention.

COMMITTEE'S PROPOSALS IN FULL

It Should Follow an Elementary Education, and the Entering Student Should be Fourteen.

The Committee on Technical Education appointed by the principal Boards of Trade has reported.

The report sets forth the need of a commercial education, which will teach the change, banking transactions, bankruptcy, maritime law, etc.

Technical education should follow an elementary training, when the student is 14 years of age.

The report proposes the introduction of elementary technical training in the Public Schools as soon as possible.

The school should be governed by three representatives of the Board of Trade, appointed by the Minister of Education and three named by the Municipal Council.

The subjects taught in the technical department should include the following, and the teaching should be as practical as possible.

Chemistry—Textile fabrics, dyeing and the art of coloring, tanning and dressing of skins, mixing of cement and mortars.

Mathematics, including Euclid, trigonometry, algebra.

Regular art courses—Antique, freehand and perspective, sketching, color, anatomy, life portrait, composition, history of art, china painting.

Design—Freehand drawing, ornaments, color, history of art, composition, decorative and applied design, woodwork, metalwork, clay modeling and wood carving—Ornament, antique design in the round, modeling from life, history of art, freehand and instrumental drawing.

Architecture—Freehand and instrumental drawing, color, history of architecture, theory and practice of architecture.

Domestic science—Money and the following subjects: Cookery, dressmaking, plain sewing, fancy needle work, physical culture.

A Commercial Course. A commercial course should embrace the following subjects:

Commerce and bookkeeping—Under this heading should be included purchases and sales, documents relating to same, modes of effecting payment, means of transport, customs and excise, bonded warehouses, banking, exchange, insurance, syndicates, general idea of trade and industry, mental arithmetic, interest, discount and commissions, current accounts, various systems of weights, measures and classification of accounts, operations at exchanges, selling out, quotations, drafts, balancing of accounts, inventories and balance sheets, organization of accounts, commercial accounts, including the following:

Modern languages—English, French, German and Spanish.

Commercial arithmetic—Calculations relating to simple interest, discount, precious metals and monetary systems, marks, exchange operations, exchange, compound interest, industrial stock, issuing of stock by large banking companies, operations of insurance companies.

Study of merchandise—Including precious stones, combustibles, chemical products, vegetable and animal products used in industries, including foodstuffs, and other valuable products of medicinal value, mineral products, animal products and vegetable products.

Commercial geography—Considering each country in the light of its geographical configuration, population, languages, political institutions, climate, agricultural products, mineral wealth, industrial resources, means of communication, foreign trade, imports and exports, customs administration, commercial treaties, national customs and character.

Study of means of transport—Establishment, maintenance and administration of means of communication; special study of railway tariffs.

Commercial law—Including general summary, documents, merchants, companies, in-

terminaries employed by merchants, sales, transport contracts, notes and bills of exchange, banking transactions, bankruptcy, maritime law, etc.

Political economy—Production, interchange of commodities, division of property, consumption, population, civic government.

Fiscal and customs legislation—Commercial statistics, commercial policy and customs, tariffs of principal countries.

Commercial apparatus—Elementary notions of mechanics, telegraphy, telephony, electric light, electricity as a motive power, railways, internal waterways, seaports, warehouses, correspondence, composition, penmanship, stenography and typewriting.

MOBS CHASING NEGROES. A Saturday of Crime in the South—Blacks Continue Their Assaults on Women.

Louisville, Ky., Aug. 22.—Mobs are chasing negroes in Kentucky, Tennessee and Georgia for assaulting women.

At Paducah, Ky., a mob, headed by Matt McFall, a negro, attempted to assault Lillian Clapp, aged 4 years.

A well-known case of mob violence in Sullivan County, Tenn., is close to the trial of an unknown negro, who has been followed near the hamlet of Pine Flats to a point in the mountains near the Kentucky line.

The negro attempted an assault on a small girl, named Smiling, the father, is leading the mob.

At Shelbyville, Okla. (colored) has been arrested charged with assaulting Mary Hays. He was guarded there all night at the jail by a posse of officers.

The sheriff slipped him out yesterday morning, and he is going towards Lewisburg, and a mob is following.

Lenora Olden, aged 15, was assaulted Sunday night on one of the principal streets of Chattanooga, by Tom Downs, a white man, who is recovering in a hospital.

At Shelbyville, Okla. (colored) has been arrested charged with assaulting Mary Hays. He was guarded there all night at the jail by a posse of officers.

The sheriff slipped him out yesterday morning, and he is going towards Lewisburg, and a mob is following.

Lenora Olden, aged 15, was assaulted Sunday night on one of the principal streets of Chattanooga, by Tom Downs, a white man, who is recovering in a hospital.

At Shelbyville, Okla. (colored) has been arrested charged with assaulting Mary Hays. He was guarded there all night at the jail by a posse of officers.

The sheriff slipped him out yesterday morning, and he is going towards Lewisburg, and a mob is following.

The lease of this corner is sold, and we are under compulsion to remove completely by Sept. 10. It is a case where we've got to get out, whether we will or no. Under no other conditions could you buy fine made-to-order clothing at the prices that we will tell you of from day to day for the next twenty days.

BICYCLE

This Wednesday the special of this sensational removal sale will be bicycle bloomers, made from a variety of materials—about 50 ends. Made to your own measure in best style, with strap and buckle, or otherwise as your taste may suggest; thoroughly well tailored bloomers that would cost you in the regular way \$4.00. Wednesday's sensational \$2.65

BLOOMERS

The Hobberlin Bros. Co., Limited, Men and Women Tailors, CORNER YONGE AND RICHMOND STS., TORONTO.

JAMES BUCHANAN & CO. BY APPOINTMENT PURVEYORS TO H.M. THE QUEEN AND H.R.H. THE PRINCE OF WALES. SCOTCH WHISKY DISTILLERS & BLENDEES. GLASGOW, LEITH AND LONDON. DISTILLERS, GLENTAUCHERS, GLENLIVET.

LAWRENCE A. WILSON, Sole Agents for Canada, Montreal.

A. O. F. COURT IN SESSION

H. C. R. Major Srellegrove Delivers His Annual Report, Showing Much Progress Made.

COMMITTEES WERE APPOINTED.

A Civic Welcome Extended to the Delegates Who Will Be Here For Four Days.

The A.O.F. Subdividing High Court opened its session yesterday morning at 10 o'clock in Victoria Hall.

Major Shaw, J. J. Coy, C.M.L.A., and Aid. Graham gave them a civic welcome.

E. F. Clarke, the chairman, replied, delegates on behalf of the city lodges.

A. Fitch seconded E. F. Clarke's sentiments, which will last four or five days, and will set on 9 till 12 a.m. and from 2 to 6 p.m.

Committee Appointed. Finance: James Field, Montreal; A. O. Dunville, S. H. Bradford, Toronto; D. A. Blidwell, Hamilton.

Printing and Forms: F. J. Forster, Calgary; W. L. Smith, Hamilton; J. S. Williams, Toronto; H. Chick, Toronto, and B. State of the Order: Dr. Buck, Toronto; Boyd, Portage la Prairie; R. H. Ward, Jex, Cobourg.

Thomas; C. R. Coy, St. Catharines; M. Gray, Winnipeg; John Hardy, Dundas; S. Committee on Appeals: A. Richards, London; A. Ferguson, Galt; G. Roberts, Ingersoll; H. A. Higgins, Woodstock; A. Young, Hamilton.

Committee on Beneficiary: A. Dynes, Hamilton; J. McQuinn, Montreal; Dr. Cockburn, London; Chatley, Owen Sound, and A. Pinkham, Bradford.

The H.C.R.'s report states that the members of subordinate courts are 12,000, branches 2041, members of juvenile 1551, total 16,462.

In regard to finances, during the past term the sick benefits paid out amounted to \$88,871.26, a decrease of \$10,900. Of branches paid \$81,247.50, and the High Court the balance. This is equivalent to 180,000 days' sickness and average of 5.13 days' sickness per member.

The amount of money to the credit of the order in Canada is \$103,003, divided as follows: High Court, \$40,544; subordinate courts, \$184,053; juvenile branches, \$10,080, and Companions of the Forest, \$382.

Territorial Representation. In the afternoon the idea of representation by territorial districts was referred to a committee.

Aid. Steiner welcomed the delegates on behalf of the German residents of Toronto. The delegates enjoyed a moonlight on the Chippewa at night. About 500 took it in.

BELLEVILLE BRIEFS. Farmer Couthan at the Point of Death, the Result of a Runaway—Aged Man Dead.

Belleville, Aug. 22.—Michael Couthan, a Tyndinaga farmer, who was seriously hurt in a runaway last week, is at the point of death.

Visitors to the gathering of the clans were arriving by train. James Stewart, aged 81, died at his home in Thurlow on Sunday; he was buried yesterday at Stanwixville.

Prominent Belleville Man Dead. Ing died in the hospital here this evening after a brief illness. Deceased was 59 years of age and has been in the business here for about 35 years. The cause of death was heart failure.

Long Branch Hotel

Now open for the season. Finest summer resort in Canada. Americans visiting Toronto should pay a visit to this famous summer resort. Street cars to the door. Success fine. Open on Sundays for bicyclists. E. J. Burrows, proprietor.

ALMA LADIES' COLLEGE

Opens for nineteenth year September 7th.

Parents are reminded that the best condition for the mental, moral and social training of their daughters are to be found in a residential school like Alma College.

For full information, address REV. R. I. WARNER, M.A., Principal, ST. THOMAS, ONT. 3

UPPER CANADA COLLEGE

DEER PARK, TORONTO. G. R. PARKIN, C.M.G., LL.D., Principal. The college re-opens for the AUTUMN TERM on TUESDAY, SEPTEMBER 12th.

Calendar and application papers may be obtained from the Bursar.

During July and August, master will be at the college from 2 to 4.30 p.m. on THURSDAYS to enter pupils and give information. Correspondence forwarded to the Principal.

HOROLOGICAL INSTITUTE

115 to 121 King St. E., Toronto, Ont. H. R. PLAYTNER, - DIRECTOR. Established 1890.

A practical and technical school for teaching watchmaking in all its branches. Previous experience not necessary. Prizes in previous Toronto Industrial Exhibition.

New term begins 1st September. 38

KILLED BY A TRAIN.

A Thameville Farmer Bound For Manitoba Meets Death on the Track. Thameville, Ont., Aug. 22.—An accident happened early this morning at the C.P.R. track north of Thameville, whereby John Corlett, 21 years of age, lost his life.

He was one of the many farm hands bound to Manitoba on the Harvesters' excursion, which left here last night, and was supposed to have been walking down the track to the station when the 12 o'clock west-bound express struck and instantly killed him.

Steed was further mangled by the same excursion found the remains shortly afterwards on the track. His purse was found on the front of the engine when it reached the station. Coroner Frazar was at once notified, and will hold an inquest.

Walked in His Sleep. George Lamport, a highly respected farmer on the River-road, met with a painful accident at his home late last night. He got up in his sleep, and walked through the floor from his bedroom, and received other injuries.

Cumerford-Strand. Yesterday afternoon, at 181 Avenue-road, Miss Henrietta Strand was married to Mr. C. W. Cumerford of Buffalo. Miss Martha Strand was bridesmaid. Mr. J. B. Strand was best man. Rev. Mr. Hincks officiated. The happy couple will reside in Buffalo.

NORTHERN NAVIGATION CO.

OF ONTARIO, LIMITED. MACKINAC ISLAND JULY AND AUGUST EXCURSIONS LAKE SUPERIOR DIVISION

S.S. Majestic for Port Arthur, Port William and Duluth will leave Collingwood at 2.30 p.m., Thursday, Aug. 24th, and City of Collingwood, Monday, Aug. 28th, making connection at above ports for all points in Manitoba, the Northwest, Kootenai, Pacific Coast points and British Columbia. Steamers will call at Mackinac Island and Owen Sound on all the above days.

S. S. MARIE DIVISION. Steamers City of Midland, City of Parry Sound, S.S. Germanic (new) and S.S. Atlantic will sail from Collingwood, 2.30 p.m., Tuesday, Thursday, Friday and Saturday, respectively for all intermediate ports to Bull's Bay, Marie and Mackinac Island; 11.30 a.m. train from Toronto connects at Collingwood on Tuesdays, Thursdays and Saturdays and 8.30 a.m. train on Fridays; 5.30 p.m. train connects at Owen Sound on all the above days.

FRENCH RIVER DIVISION. Steamer will leave Collingwood at 10.30 p.m. every Monday and Thursday, for Parry Sound, Byre Inlet and French River and Killarney, connecting there with liners for Soo and Mackinac.

PARRY SOUND DIVISION. Steamer will leave Midland, 4.25 p.m., and Penatungushene, 2.30 p.m. daily (Sundays excepted), on arrival of Special Steamers, leaving Toronto at 11.30 a.m. For Saus Sauze, Rose Point and Parry Sound, see above days.
