

The Weekly Monitor.

WEDNESDAY, FEBRUARY 25, 1885. Renewal of "Notes on Annapolis History."

Our readers will learn with pleasure that on and after the 1st of March the interesting series of "Notes on Annapolis History," by W. A. Calne, Esq., will be resumed. We are promised at least three. Should any persons who are not subscribers desire to have the Monitor sent to their address while the "Notes" are being published, their names and addresses will be in stamps, which will probably cover the numbers in which the "Notes" will appear, should they be closed to us. People in the vicinity of Annapolis town can procure the Monitor at Messrs. Fred Synnott & Co's bookstore.

An important invention has been made by a man named Phelps, belonging to the United States, who has perfected a system of telegraphy by which messages may be transmitted between moving trains and stations on the same line of railroad. The principal novelty is what is known as electrical induction from the following example:—If two wires are extended parallel, but not touching each other, and an electric current is excited in the other wire, opposite in direction to that flowing from the first. This is the basis of Mr. Phelps' invention. He arranged a telegraph wire in a tube placed midway between the rails of the track, connects this wire with telegraph sounders in stations as desired, in such a way that the current in the same direction of the wire attached to the car, and this current works the sounder, thus delivering the message. It matters not how fast the train is moving, the electric current will be taken up by induction by the sounder and vice versa. A railway has been fitted up with Mr. Phelps' apparatus, and the most satisfactory results have been obtained. If the invention, on further trial, still proves its claims, Mr. Phelps will be recognized among the world's great benefactors.

It is a fact that the telegraph wire will be taken up by induction by the sounder and vice versa. A railway has been fitted up with Mr. Phelps' apparatus, and the most satisfactory results have been obtained. If the invention, on further trial, still proves its claims, Mr. Phelps will be recognized among the world's great benefactors.

It is a fact that the telegraph wire will be taken up by induction by the sounder and vice versa. A railway has been fitted up with Mr. Phelps' apparatus, and the most satisfactory results have been obtained. If the invention, on further trial, still proves its claims, Mr. Phelps will be recognized among the world's great benefactors.

Local and Other Matter.

Attention is called to the adv. of Anhor Line Steamer, in another column. The weather has moderated during the week, and is now very pleasant for the season. We have to hand the report of the Commission appointed to revise the statutes of the Dominion. Mr. Richard F. Lockett, of Berwick, trader, has assigned for the benefit of his creditors, a sum of \$10,000. The traveling is wretched, owing to the numerous bad patches in the main highway. It would be a good idea if the road commissioners would have all such places in the roads leveled. The next meeting of the Annapolis County Temperance Alliance will be held at Annapolis, on Thursday, 25th inst.

Dr. Rand, of Acadia college, Wolfville, has been invited to attend and address the meeting of the Intercolonial Congress of Education, to be held in connection with the New Orleans Convention on the 23rd to 28th inst. The Rev. J. Clark, of Wolfville, has been invited to deliver the lecture, entitled "Something about the Bible," in the school house at Toronto, on the evening of the 13th inst., at the request of the ladies of the church. The lecture was a good attendance. After supper showed that the lecture was highly appreciated.

Frederick, N. B., has suffered a \$30,000 fire. The fire started in the Broy House, which was totally consumed. E. Bigelow & Co. of Canby, extensive ship builders, are reported to have assets between \$50,000 and \$70,000. A race for the Championship of Annapolis County will take place in Bridgetown Skating Ring, on Saturday evening, 28th inst. Distance one mile. Prizes a gold medal, three silver medals, and a gold medal. Three entries have already been made. Music will be furnished by the Annapolis Band. Admission, 10c, one third of which goes to the band.

The Irish National convention at Paris has decided to establish a press for the purpose of printing manifestos to be sent to members of the English cabinet, threatening them with death in the event of a renewal of the Crimean war. The Rev. Wm. H. Warren, gave an able and interesting lecture at the Temperance Hall at Centerville, on Monday evening, last. Subject: "The War of the Nile." Mr. Warren illustrated the theme with maps and slides, and the lecture was well attended.

Thomas Cramp, eldest son of the late Rev. Dr. Cramp, of Wolfville, died at Montreal on Wednesday last, at the age of fifty-eight. He had been a prominent merchant of that city for a number of years, and was president of the board of trade at the time of his death. He was buried in Montreal on Friday last.

W. W. BECKWITH IS NOW GIVING GREAT BARGAINS IN REMNANTS. A barrel and a straight away race were held in the Bridgetown Skating Ring on Saturday night last. For the first time the race was held on the ice. The following entered, Collingwood Young, Frank Willis, Wm. Coates, Frank Beth, Wm. the latter, Price, a pocket knife. In the straight away race two prizes were given. The first prize, a pocket knife, was won by Frank Willis; the second, a pocket knife, was won by Wm. Coates.

We regret to learn that Henry Munroe, M. P. for this County has again had the misfortune to meet with a severe accident. On Wednesday last, just before he intended leaving for Halifax, he was attacked by a cross bar, which fractured two painful fingers in the fleshy part of his thumb—one of which he lost. He is now in bed, and is unable to do any work. A large party of the ladies of the church, and other friends, visited him on the 13th inst. The influence of the Sain upon the Stock and rice trade, by E. G. Smith, of Halifax, N. S., was the subject of a lecture given at the Temperance Hall at Centerville, on Monday evening, last. The lecture was well attended, and the speaker was highly appreciated.

The Furness Line Steamer, New Zealand City, sailed from Halifax on the 12th inst., bound for London, with 25,000 boxes of wheat, 5,000 barrels of apples, and other cargo, and 250 passengers. On the 13th inst., following, the steamer was encountered off Cape Breton, and 104 of the cattle were sacrificed. The loss was estimated at \$25,000. The steamer was damaged, and is now on her way to Halifax. A large party of the ladies of the church, and other friends, visited her on the 13th inst. The influence of the Sain upon the Stock and rice trade, by E. G. Smith, of Halifax, N. S., was the subject of a lecture given at the Temperance Hall at Centerville, on Monday evening, last. The lecture was well attended, and the speaker was highly appreciated.

Out South is very interesting. A grand fancy dress ball was given at the Annapolis Hotel on Saturday evening, 22nd inst. The proceeds of the ball will be used for the benefit of the Annapolis County Hospital. The ball was a great success, and was attended by a large number of people. The dancing was kept up until midnight.

The labor crisis in France is the cause of almost alarm. All efforts of the government seem to be futile. At present there are 300,000 workmen idle in Paris, and at least 1,000,000 in the provinces. The discontent subsequent upon this state of affairs is spreading, and apprehensions are expressed that, unless some relief can be devised, labor riots will probably break out in all sections.

We regret to learn that Dr. Molloy, M. P. for Kings County, P. E. I., was lately frozen in the late ice on the coast of Newfoundland. The other passengers and crew were rescued, but Dr. Molloy was not. He was found frozen to death on the 13th inst. The ship was bound for Halifax, and was carrying a large quantity of goods. The ship was rescued by the Annapolis County Steamer, and the crew were taken to Halifax.

Recent events lead special interest to the opening paper in the March Century on "The Land of the Future." By General E. E. Colston, formerly of the Egyptian General Staff, and leader of two expeditions in the Sudan. General Colston's article was written early in October, yet he seems to have anticipated the details with which the British expedition has had to contend, and the information he conveys throws much light on subsequent events. Numerous illustrations and careful maps add to the interest and value of the article. It is a most interesting and valuable contribution to our knowledge of the Sudan. It is a most interesting and valuable contribution to our knowledge of the Sudan.
