found to fail.

## MORNING AND EVENING PLANETS.

VENUS will be the evening star until March 2; after which it will be the morning star.

MARS will be the morning star until September 8; after which it will be the evening star.

JUPITER will be the evening star until May 13; after which it will be the morning star.

## EMBER DAYS.

March 4, 6, 7,  
June 3, 5, 6,

Sept. 16, 18, 19.  
Decr. 16, 18, 19.

Rogation Days,—May 18, 19, 20.

## ECLIPSES IN 1846.

There will be but two Eclipses this year, and both of the Sun.

I. April 25, an Annular Eclipse visible as follows:—

|                       | H. | M. |            |
|-----------------------|----|----|------------|
| Beginning - - -       | 11 | 10 | Morning.   |
| Middle of the Eclipse | 0  | 19 | Afternoon. |
| End - - - -           | 1  | 28 | "          |

But a small portion of the Sun's disk will be obscured, about  $2\frac{1}{2}$  digits. This Eclipse will be visible in the United States, Great Britain, Sweden, France, Italy, &c.

II. October 20, an Annular Eclipse 0h. 32m. morning, invisible in the British Provinces of North America, but central in the interior of Africa.

## WEATHER TABLE.

The following Table (ascribed to Dr. Herschel, and revised by Dr. Adam Clarke), constructed upon philosophical considerations of the attraction of the Sun and Moon, in their several positions respecting the Earth, and confirmed by experience of many years' actual observation, furnishes the observer, without further trouble, with the knowledge of what kind of weather there is the greatest probability of succeeding, and that so near the truth, that in very few instances will it be found to fail.

| <i>New and Full Moon.</i>  | <i>Summer.</i>   | <i>Winter.</i>  |
|--|--|---|
| If it be new or full Moon, or the Moon entering into the first or last quarter at 12 noon; or between 12 and 2 | Very rainy.....  | Snow and rain.  |
| 2 and 4 afternoon...   | Changeable.....  | Fair and mild.  |
| 4 and 6 evening....  | Fair.....  | Fair.   |
| 6 and 8.....   | { Fair, if wind at N.W.<br>Rainy, if wind at S.<br>or S. W. .... | { Fair and frosty, if wind<br>at N. or N. E.<br>Rain or snow, if S. or<br>S. W. |
| 8 and 10.....  | Ditto.....   | Ditto.  |
| 10 and 12 night....  | Fair.....  | Fair and frosty.  |
| 12 and 2 morning....   | Ditto.....   | { Hard frost, unless wind<br>S. or S. W.  |
| 2 and 4.....   | { Cold, with frequent<br>Showers.....                            | Snow and stormy.  |
| 4 and 6.....   | Rain.....  | Ditto.  |
| 6 and 8.....   | Wind and rain.....   | Stormy weather.   |
| 8 and 10.....  | Changeable.....  | { Cold rain, if wind be<br>W.—Snow, if E.                                       |
| 10 and 12  | Frequent showers....   | Cold with high wind.  |

*Explanation.*—It will be seen from the above, 1st. That the nearer the time of the Moon's change, First Quarter, Full, and Last Quarter, is to *Midnight*, the fairer will the weather be during the seven days following; the space for this calculation occupies from ten at night till two next morning.

2dly. That the nearer to *Midday*, or *Noon*, these phases of the Moon happen, the more foul or wet the weather may be expected during the next seven days; the space for this calculation occupies from ten in the forenoon, to two in the afternoon. These observations refer principally to summer, though they effect spring and autumn to a considerable extent.

3rdly. That the Moon's Change, First Quarter, Full, and Last Quarter, happening during the six afternoon hours, *i. e.* from four to ten, may be followed by fair weather; but this is mostly dependent on the *wind*, as it is noted in the Table.

Though the weather is more uncertain in the latter part of autumn, the whole of winter, and the beginning of spring; yet, in the main, the above observations will apply to those periods also.

The two following observations are from the ingenious Dr. Kirwan:

1846.

1. When there has been no particular storm about the time of the Spring equinox (March 21), if a storm arise in the East on or before that day, or if a storm from any point of the compass arise near a week after the equinox, then, in either of these cases, the succeeding summer is generally *dry*, four times in five.

2. But if a storm arise from the S. W. or W. S. W. on or just before the Spring equinox, then the summer following is generally *wet*, five times in six.

### EXPLANATION OF THE CALENDAR PAGES.

#### LEFT HAND PAGE.

COLUMN, 1st and 2d, contain the days of the month and of the week. 3d and 4th. The rising and setting in mean time, of the highest point, or of the *upper limb* of the sun, corrected for refraction.

5th. Days length in hours and minutes.

6th. The Equation of Time (or quantity by which the Sun is *slow* or *fast* of the clock) at noon, *apparent* time (not mean) at Greenwich.

7th. The Sun's declination, for the same as the Equation, 6th column.

8th. The rising or setting of the Moon. The setting being given from the New Moon to Full, and her rising from Full to New Moon.

9th. The place of the Moon in the Ecliptic.

10th. The time of the Moon's southing, or passing the meridian.

11th. Days increase or decrease in hours and minutes.

The top of the columns of each month shows the moon's phases, or the times of new and full moon, and of the first and last quarters, or two quadratures with the sun.

The FARMER'S CALENDAR is placed at the foot of the columns of each month.

#### RIGHT HAND PAGE.

1. Contains the days of the month.

2. Sundays, Phenomena, Anniversaries, &c.

3. Time of High Water at Halifax, Nova Scotia.

4. .... Annapolis, Nova Scotia.

5. .... Charlotte Town, P. E. Island.

6. .... Windsor, N. S. and St. John, N. B.

of that tide which immediately precedes the southing of the moon. These four columns being computed on the supposition, that the time of High Water on the days of New and Full Moon (L'etablissement du port) is at Halifax, 7h. 15m.—at Annapolis, 10h. 45m.—at Charlotte Town, 10h. 15m.—and at Windsor, and St. John, N. B. 11h. 45m. All the calculations in this Calendar are made to *mean* solar time, a mode of computation now in general use, and which will very soon supercede the old mode of reckoning. *Mean* time can be converted into *apparent* time, by subtracting the quantity in the sixth column of the left hand calendar pages, when the Sun is *slow* of clock, and adding it when *fast*.

Land and labour are the legitimate sources of public wealth. The first to be productive, must be cultivated; and the labour of doing this is abridged by the culture of the mind, which is to guide its operations. But labour not only procures wealth, and the comforts and elegancies of life, but it induces, when aided by an intelligent mind, sober moral habits, and begets independence of mind as well as of fortune. Idleness, not industry, is the parent of vice and of riot. This seeks to bring merit down to its own level. Industry looks for fortune in the profits of its labour; and for the enjoyment of it in the peace and quiet of society,

and tends by its example, to elevate and reform. Neither an intelligent individual, nor a well informed industrious community, are prone to mingle in the vices and tumults of the day. Hence, the more intelligence we infuse into labour, the more abundant will be its products—the more honorable its calling, the more numerous its subjects, and the sounder the condition of public morals. Knowledge and industry combined, if not synonymous with virtue, are at least a pretty good indication of worth and usefulness. We would press upon the consideration of every farmer the importance of agricultural publications, as the cheapest and most certain means of improving in the practice and profits of his business. These bring to his notice constantly the improvements and discoveries that are going on in the business of agriculture, and they detail the practice of the best farmers.

1846.

FEBRUARY begins on SUNDAY.

- ☽ First Quarter, 3rd d. 0h. 57m. morning, under the horizon.
- ☾ Full Moon, 11th d. 4h. 58m. morning, bearing W. N. W.
- ☾ Last Quarter, 19th d. 0h. 29m. morning, bearing W. S. W.
- ☾ New Moon, 25th d. 3h. 17m. evening, bearing S. S. W.

Manure is the wealth of the farmer. This proposition cannot be too often repeated and enforced, for on its full belief, and a corresponding practice, the success of a farmer mainly depends. Manure, wherever it may be found on the farm, is beneficial, but it never does all the good it might, unless it is properly and judiciously applied. Most farmers are content if they are able to empty their yards once in two or three years of the accumulated piles of straw and cattle manure, at a loss of nearly one half its efficient qualities. Compost, or a mixture of earth with common manure, kept in a pile until the union and decomposition is perfect is undoubtedly the best application that can be made to land. The efficient power is also greatly increased, as the earths employed in making the pile absorb the gases produced by the decomposition of the vegetable and animal matter, and becomes

nearly of equal value. The mud which accumulates in swamps and low lands, where it lies useless and unproductive, may in this manner be converted into one of the most active restorers of exhausted soils. The yarding of cattle is to be preferred where practicable, to suffering them to run at large, and the additional quantity of manure made by stabling will, independent of the saving in fodder, nearly pay the expense of erecting stables for their accommodation. Common sense would teach a farmer that the sooner manure, when applied to the soil, can be put under the surface, the better the effect will be, and the less of its fertilizing qualities will be lost. Spread over the surface it certainly does good, but in a much less degree than when put under the surface. *Root Culture* is one of the best gifts which modern improvement has bestowed upon husbandry. It gives the most animal food with the least labour; it is, under good management the most certain in its returns; it gives the most manure; it best ameliorates the soil, and fits it for dry crops; and it affords an important link in the chain of alternation.

1846.

The Hog is one of our most valuable domestic animals, and when well managed, contributes essentially to the profits of the farm. He devours, and turns to profit, the refuse of all eatable things. But the hog differs, in the return which he makes in flesh for the food he consumes, as much as the ox or the sheep. The great point in all is to produce the most marketable flesh from a given quantity of food. A good pig is judged therefore by the same criterion as neat stock. In proportion as the animal is capacious in the loin and breast, will be generally the vigour of his constitution; his legs will be thence properly

extended, and he will have a bold and firm footing on the ground to which however, it is further necessary, that his claws be upright, even and sound. The pig is kept well in Summer upon clover pasture, with the swill from the kitchen and dairy; and the fattening process may be completed, almost wholly, with the apples, pumpkins, small potatoes, soft corn and bran of the farm properly prepared. In regard to the diseases of hogs, we may remark, that the prevention of disease is much easier than the cure; as relief can seldom be effected after the animal ceases to eat. As preventives, carbonaceous matters, as charcoal, rottenwood, and even permission to root in the earth, sulphur, antimony and madder, are recommended.

1846.

APRIL begins on WEDNESDAY.

- ☽ First Quarter, 3rd d. 8h. 57m. morning, under the horizon.
- ☾ Full Moon, 11th d. 1h. 40m. afternoon, under the horizon.
- ☾ Last Quarter, 18th d. 4h. 10m. afternoon, bearing S. S. E.
- New Moon, 25th d. 0h. 34m. afternoon, bearing S. by W.

The profits of crops, as well as of cattle, depend mainly upon the return they make for the food and labour bestowed upon them. The man who grows a hundred bushels of corn, or makes a hundred pounds of meat, with the same means and labour that his neighbour expends to obtain fifty bushels, or fifty pounds, has a manifest advantage; and while the latter merely lives, the former, if prudent, must grow rich. He gains the entire value of the fifty bushels or fifty pounds. This disparity in the profits of agricultural labour and expenditure is not a visionary speculation, it is a matter of fact which is seen verified in many parts of the country. We see one farmer raise 80 bushels of corn on an acre of land, with the same labour, but with more foresight in keeping

his land in good tilth, and feeding better his crop, than his neighbour employs upon an acre, and who does not get 40 or even 30 bushels. This difference results from the manner of feeding and tending the crop. Dung is the basis of all good husbandry. *Dung feeds the crops; crops feed the cattle; cattle make dung.* This is truly the farmer's endless chain—not a link of it should be broken, or be suffered to corrode, by indolence or want of use—once broken, and the power it imparts is lost—preserved, and kept bright by use, it becomes changed into gold. The man who wastes the means of perpetuating fertility in his soil, may be likened to the unfortunate sons of opulence, who waste, in habits of indolence and dissipation, the hard earned patrimony of their fathers. Put in early farm crops, as Barley, Oats and Spring Wheat; a few days delay sometimes makes a loss equal to all the nett profits.

1846.

MAY begins on FRIDAY.

The theory of agriculture is built upon the following fundamental principles; and with one or other of them every part of rural practice is more or less connected. *First*, that the soil ought to be kept dry; or, in other words, free of all superfluous moisture. *Secondly*, that it ought to be kept clean; or, in other words, free of noxious weeds. *Thirdly*, that it ought to be kept rich; or in other words, that every particle of manure, which can be collected, ought to be applied, so that the soil may be kept in a state capable of yielding good crops. Every person, possessed of a sufficient capital stock, may act according

to the first and second principles; but it is only where local circumstances are favorable, that the last can be carried completely into effect. No more, however, being required of the farmer, than that he shall make the most of his situation, the principle applies equally to all; and, in like manner, is equally correct and beneficial in all situations and circumstances. These three fundamental principles hang or fall together, but when they are all acted upon; when the land is kept dry, clean, and in good heart, the farmer may expect a suitable reward for the trouble and expense bestowed upon its cultivation. Draw out all your manure; Corn will bear plenty of it, and it will bear plenty of Corn—every load will tell.

1846.

JUNE begins on MONDAY.

Universal experience has proved, that to sow wheat a second time upon the same land, without an intermediate crop, is exhausting the soil, and if pursued for any length of time, eventually unprofitable to the farmer. Clover has been called the "Mother of Wheat," and the ley is justly a favorite preparation of the crop; but it ought not to be repeated more than once in eight years, and it should only be sown when the ground is in such a state of cleanness, and so well manured (upon a previous crop) as to ensure the production of an abundant sward of grass; for, if this be not obtained, the wheat will invariably be found proportionably deficient. On good lands, which do not

require a second year in grass, it will also be found most advisable to break it up after the first year's crops have been taken off; in which case the wheat may be sown upon a single ploughing, and thus a very considerable expense will be saved in the tillage of the ground. The tilled crops which ought to precede wheat, and which should receive the long manure, are Indian Corn, Peas, Potatoes, and all other root crops, and, upon a manured old grass ley, it may follow Oats, or Oats and Peas. It should be preceded by no other small grain. The culture of spring wheat in Lower Canada, &c. has almost superseded winter wheat upon fresh cleared lands. Although it gives ordinarily a less product than winter varieties, and though the grain be somewhat inferior, yet the crop is more certain. More seed is required of spring wheat, than of wheat sown in the autumn.

1846.

JULY begins on WEDNESDAY.

In whatever state, country, or age, we direct our attention, we find the condition of agriculture, and the consequent substantial prosperity of the population, in a great measure graduated, by the amount of protection and patronage which is extended to its labours by the government, where it is nurtured and respected, as it should be, as constituting the source of national wealth and independence—and as the great moral conservator of a community—we find the great body of the people industrious, frugal, and prosperous. But where agriculture is degraded as a menial em-

ployment, and neglected by the government, we find commerce and manufactures at a corresponding low ebb, and the population ignorant, indolent and vicious. In Great Britain, agriculture has received the fostering care of the government, in her agricultural surveys, premiums, and protecting duties; and she is indebted to this branch of her industry more, probably, than to her commerce or manufactures singly, for her unprecedented state of prosperity. No country has made greater strides in agricultural improvement during the last fifty years, than Scotland, under the stimulating influence of her agricultural societies, and the thousands of pounds she has annually distributed in premiums. Contrast with that of England, the social and pecuniary condition of Spain, where agriculture has received no encouragement from the government.

Sheep are much like birds, requiring a clear air for respiration, much exercise, frequent change of place, dry, clean lodging, and nutritious aromatic feed. Sheep in good weather uniformly select the driest and most elevated bed for nightly repose; severe winds greatly annoy them, and drive them into the placid valley—sheep shut up in a pen soon die. The pasture for sheep should be high, dry, warm land, the more disposed to the production of aromatic plants, the better—some high lands are springy and wet, which is deadly and ruinous to sheep. Sheep when confined in common pastures, are continually roving and traversing it, which

soon renders the unconsumed grass foul, and impedes its growth, from their social habits, having selected their lodging, they are exceeding tenacious of their resting place, which soon becomes offensive and unhealthy; they should therefore always be changed from one enclosure to another, as often as once a week, or at most once a fortnight, that the grass may be washed by rains and dews, and the sheep be furnished with clean lodging—in the interim the grass can grow undisturbed and is fresh, sheep should be fed at regular periods in the winter, and likewise have regular gentle exercise to circulate the blood, invigorate the system, so as to enable them to resist the cold. It gives them an appetite, and facilitates the digestion of the food—being a ruminating animal, they should be allowed quiet for this office. Lambs should be separated from the old sheep, feeble and old sheep separated from the rugged.

1846.

September is the month in which the great staple crop is put in the ground. Experience has shown, that unless in extraordinary cases, wheat sown in this month succeeds better than in any other. August is generally too hot—the ground is dry, the dews which aid the young wheat so materially, fall sparingly, and the germination and first growth is imperfect and comparatively feeble. If sown much later, unless very late, it does not get rooted sufficiently to endure the winter well, and frequently suffers much from freezing out. Where it is intended to sow wheat after corn, this crop should be cut up and removed from the ground as early as its maturity will admit. If the ground is well manured for the corn, as it always should be, and well cultivated, a crop of wheat

may properly follow corn, and but comparatively little labour in ploughing is required to get in the seed. The quantity of seed on such land should be about a bushel and a half per acre, and it should be well harrowed in; do not fear harrowing too much after the seed is sown, and a heavy harrow is better than a light one, unless the soil itself is very light. Passing the roller over the new sown grain is an improvement, as it ensures germination, and leaves the surface in a suitable state for gathering the grain. Prepare your seed by liming and brining it—you may not fear smut, but the young plant will be sufficiently benefitted by the process, to reward the trouble; above all things use clean seed. Trust no man's word that his seed is perfectly clean, unless a few hands full spread on the table and examined thoroughly, show that it is free from every thing but pure wheat.

1846.

OCTOBER begins on THURSDAY.

- Full Moon, 4th d. 5h. 52m. afternoon, under the horizon.
- ☾ Last Quarter, 11th d. 11h. 53m. afternoon, bearing W. by N.
- ☾ New Moon, 20th d. 3h. 29m. morning, under the horizon.
- ☽ First Quarter, 27th d. 10h. 55m. morning, bearing E. by S.

Farm tools and implements should be substantially made, of good pattern, kept in good order for use, and when not in use, protected from the weather—a slight made implement is likely to break, and occasion a loss of time in getting it repaired—a bad pattern is always dearer in the end, whatever be its price, than a good one. "It will do well enough for the present," should never satisfy you. The loss in putting implements in order, at the moment they are wanted, often causes serious delay, besides they can be put in order at leisure times or during stormy weather. Exposure to the weather soon impairs the value of the best tools,

It is better to spend ten minutes to carry a tool to its place, than to spend an hour, as is often the case, in looking for it when it is out of its place. There is nothing more vexing than to have to send through a neighbourhood for one's tools when we are in immediate want of them. A good farmer will seldom borrow—a bad one will seldom buy, as long as he can borrow. Of the tools not in common use on a farm, we commend to you particularly to the hay or straw cutter—it will enable you to save one quarter of your fodder. The cultivator will soon save its cost in the economy of labour it effects, in drilled or hoed crops, and in most cases, is a better implement in this culture than the plough. A revolving horse-rake will earn its cost in a season; and a roller is indispensable in good farming. The drill-barrow, the corn sheller, and the potatoe hook are also useful and economical.

1846.

No branch of public improvement is of more importance to the farmer, nor indeed to the community at large, than the bettering of our common roads, particularly those which constitute the main avenues to market. These are the great arteries which transmit life and vigour, and health, to every part of the business community. Roads, like the objects of most other expenditure, are cheapest when well made, and the cost to the farmer to transport his produce to navigable waters, or to market, would be diminished more than three-fourths upon a good road as he could quadruple his load upon a good road and there would not only be a saving in animal power, and other expences, but there would

be a further saving in the wear and tear of waggons and carts, and in delays and accidents incident to bad roads. The business of road making has attracted very little of the public attention. Although the construction of roads is as much an art as common trades and as much of a science as other branches of civil engineering where good roads are the order of the day; yet with us the superintendance of their construction and repair is entrusted to all professions—to farmers, mechanics, lawyers, &c. who seldom understand much of the art, and know nothing of the science; and who are too often guided by self interest, or caprice, and often rather mar than mend the work of their predecessors. Look out for fire wood; frost seasons wood rapidly. and if you cut and split it now, the trouble of drawing tons of water to your wood-house may be avoided. Nothing can justify scolding in a woman, but a smoking house, and a fire of green wood.

1846.

DECEMBER begins on TUESDAY.

- Full Moon, 2d d. 6h. 32m. afternoon, bearing E. N. E.

Things a farmer should not do. I. A farmer should never undertake to cultivate more land than he can do thoroughly; half tilled land is growing poorer: well tilled land is constantly improving. 2. The farmer should never be so immersed in political matters as to forget to sow his wheat, dig his potatoes, and bank up his cellar. 3. A farmer should never be ashamed of his calling; no man can be entirely independent, yet the farmer should remember, that if any one is said to possess that enviable distinction, he is the man. 4. A farmer should never allow his wood house to be emptied of wood during the summer

Tuesday the 1<sup>st</sup> day of December

A Calm has succeeded the Storm  
very mild & moderate. — Still much  
like Winter

---

Wednesday 2<sup>nd</sup> day. Moderate  
very doubtful whether or not this  
is Winter — the Snow that  
fell was wet & heavy, consequently  
no drifts —

---

Thursday, 3<sup>rd</sup> Wind S. some snow  
falling. — which turns to Rain  
a very wet evening —

---

Friday 4<sup>th</sup> Wind changed to W  
but still mild, clear, soft under foot,  
snow remains considerably. —  
Frost at night

---

Saturday, 5<sup>th</sup> Wind N. W. rather cold

Sunday, 6<sup>th</sup> cold —

December Continues

Sunday 20<sup>th</sup> Weather continues  
very moderate, fog a little the  
previous night.

Monday 21<sup>st</sup> Colder than yesterday  
Wind N. - delightful travelling.

Tuesday 22<sup>nd</sup> Cold, but very fine  
Clear Weather, Thermom: this morning  
above 0. - Went up to Hunter's  
River, to take a drive in Tom's Stables  
& gave a deal of Ice made last night.

Wednesday 23<sup>rd</sup> a very fine morning  
becoming dark & foggy like a change  
of excellent travelling - & a splendid market

Thursday 24<sup>th</sup> A fine day -  
a very fine day. Splendid travelling  
and a most excellent market - a great  
quantity of provisions in store to day

Friday 25<sup>th</sup> Christmas day  
a dark, heavy day, but mild. Wind about N.  
2 Schooners arrive

season; if he does, when winter comes, in addition to cold fingers, he must expect to encounter the chilling looks of his wife, and perhaps be compelled, in a series of (Caudle) lectures, to learn that the man who burns green wood has not mastered the A. B. C. of domestic economy. 5. A farmer should shun the doors of a bank as he would the approach of the plague or cholera; banks are for traders and speculators, and theirs is a business with which farmers have little to do. 6. A farmer should never allow a window to be filled with red cloaks, tattered coats, and old hats; if he does he will most assuredly acquire the reputation of a man who carries long at the tavern, leaving his wife and children to starve at home. 7. The farmer should always have one of the "Prince Edward Island Calendar," and "The Cultivator" Newspaper in his house.

## Royal Family of Great Britain:

*Souris Farming Club*—Established 1840.—Alexander Leslie, President; John Macgowan, Secretary and Treasurer.

**EXTRAORDINARY CURE**  
BY  
**Holloway's Pills & Ointment!**  
OF A CASE IN  
**PRINCE EDWARD ISLAND.**

Extraordinary case of the efficacy of the use of the above Medicines:—

HUGH McDONALD, of Lot 55, in King's County, hereby certifies, that a most wonderful preservation of his life has been effected by the use of HOLLOWAY'S PILLS AND OINTMENT. I was very much afflicted with ulcerous sores in my face and leg; so severe was my complaint, that the greater part of my nose and the roof of my mouth was eaten away, and my leg had three large ulcers on it. I applied to several Medical gentlemen, who prescribed to me, but I found no relief. My strength was rapidly failing every day and the malady on the increase; when I was induced to try Holloway's Medicines. After taking two or three boxes, I experienced so much relief, and found the progress of the disease was so much arrested, that I was enabled to resume my ordinary labours in the field. The sores which were so disagreeable and repulsive to behold are now nearly all healed. Having received such truly beneficial aid, I feel myself bound to express my gratitude to the person by whose means I have thus been restored from the pitiable and miserable state I was in; and for the sake of humanity make known my case, that others similarly situated might be relieved.

This declaration made before me, at Bay Fortune the 3d day of September, 1845.

HUGH McDONALD.

JOSEPH COFFIN, J. P.

The above case of Hugh McDonald of Lot 55, came personally under my observation, and when he first applied to me to get some of the Medicines, I thought his case utterly hopeless, and told him that his malady had got such hold that it was only throwing his money away to use them. He however, persisted in trying them, and to my astonishment, I find what he has aforesaid stated to be perfectly correct; and consider the case to be a most wonderful cure.

WILLIAM UNDERHAY.

## EXTRAORDINARY CURES

### BY **Holloway's Pills & Ointment.**

#### **Cancered Breast.—A Wonderful Circumstance.**

*Copy of a Letter from Richard Bull, Bootmaker, Tatton, near Southampton. February 9th, 1845.*

TO PROFESSOR HOLLOWAY.

SIR—The Lord has permitted to be wrought a wonderful cure of Cancers or Abscesses, of twelve years' standing, in my wife's breast. In the latter part of the time, eleven wounds were open at once. The Faculty declared the case as past cure, several pieces of bone had come away, and I expected that my poor wife would soon have been taken from me. It was then that a friend recommended the use of your Pills and Ointment, which, to our utter astonishment, in the space of about three months, healed up the breast as soundly as ever it was in her life.

I shall ever remain,

Your most grateful and obedient servant,

(Signed) RICHARD BULL.

#### **Wheezing on the Chest and Shortness of Breath.**

*Copy of a Letter from Mr. Jeremiah Casey, No. 1, Compton-place, Compton-street, Brunswick-square, London, April 25th, 1845.*

TO PROFESSOR HOLLOWAY.

SIR—I beg to inform you that I believe I had been, for more than three years, one of the greatest sufferers in the world, with Chronic Asthma. For weeks together my breath was frequently so short that I was afraid every moment of being choked with phlegm. I never went into a bed; very often, indeed, I have been obliged to pass the night without being able to recline sufficiently to lay my head on a table, lest I should be suffocated. No one thought I should live over the winter, nor did I expect it myself; but I am happy to say that I am now able to work from morning to night, and that I sleep as well as ever I did in my life: and this miracle (I may say) was effected by rubbing your invaluable Ointment twice a day into my chest, and taking ten of your Pills at bed-time, and ten again in the morning, for about three months.

Time should not be lost in taking this remedy for any of these Diseases :—

|                        |                        |                  |                               |
|------------------------|------------------------|------------------|-------------------------------|
| Ague                   | Debility               | Indigestion      | Scrofula or King's            |
| Asthmas                | Dropsy                 | Inflammation     | Evil                          |
| Bilious Com-plaints    | Dysentery              | Jaundice         | Stone and Gravel              |
