R. WILSON SMITH.

Vol. XXI. No. 44. MONTREAL, FRIDAY, NOVEMBER 1, 1901. SINGLE COPY - - .10 ANNUAL SUBSCRIPTION - \$2:00

Certain Iowa papers are urging Insurance. their subscribers to insure in a local Free Trade and company, even if it's rates are higher Protection. than those of a company whose headquarters are in another State or country. The plea is made that such a course is based on the principle of protection to native industries as opposed to Free Trade. The plea is, however, fallacious. Protection to native industries by a tariff on foreign imports is intended to shelter home enterprises from disastrous competition until they have grown strong enough to stand rivalry without artificial aid. As a matter of experience, tariff-protected goods on this continent are cheaper than some of those of the same class that are, or would be, imported. Protection does not call upon consumers of goods to buy homemade ones though dearer than imported; that policy is dictated by another principle. What Protection does, is to put imported goods under a handicap in the race so as to give home industries a better chance. Home insurance and outside insurance are produced under practically the same conditions. The risks of a home company, as such, are neither better nor worse than the risks of an outside company, therefore the costs of such insurance to a home company are not necessarily any greater than they are to the company of another State or country. The home company is at a disadvantage in comparison with a company on a broader basis, usually because it has not the strength of a large organization. This disadvantage is not to be compensated for by higher rates; it is too radical, too great to be so made up. A local conflagration has, in numbers of cases, swept away in a few hours not only the year's income, the reserve funds, but even the capital of a local fire insurance company, while the same conflagration has inflicted as large losses on an outside company without doing it any serious damage. In the former case, no excess of its rates over those of the outside company could possibly have put them on an equality. On business

principles a powerful company should be paid higher rates than a weak one, for what it provides is worth more as it is more reliable. No Protection by excessive rates can possibly develope such strength in a small local company as to place it in strength alongside a company with a broad basis and large resources. It is fallacious to seek to apply the principle of Protection as a plea for supporting a local company and paying it higher rates than outside ones.

The dangers of gasoline are so great Gasoline that the American National Board of Fire Devices. Underwriters has issued rules and regula-

tions for governing gasoline engines, gasoline vapor gas lighting machines, lamps and engines. Observance of these rules will reduce the danger of these risks, but, as the "U.S. Review" says, "The specially hazardous systems contain dangerous features that cannot be measured by any obtainable rate, and on this subject the reports say :

"Gasoline vapor gas-lighting machines or systems in which any of the following defects are inherent, or in which the hazardous conditions which they represent are likely to obtain, introduce especially dangerous features, which cannot be measured by any obtainable rate :

"I. Machines which have no automatic control over either the quantity or quality of the gas supplied.

"2. Systems in which it is possible to admit at one time more than one gallon of gasoline inside the building.

"3. Machines in which a flame is used to vaporize gasoline.

"4. Systems in which sheet metal piping is used to distribute gas.

"5. Machines or systems in which air is drawn into the open end of the service pipe, as in a Bunsen burner.

"6. Machines which require hand regulation as the number of burners in use is varied."

British Our American contemporaries are Steel publishing statements regarding the Production. iron and steel trade of Great Britain that give those who believe them the impression that these trades are on the wane in the old land. No statistics are given to support these views, and it is very easy to state in general terms whatever is desired regardless of facts. Some official figures have been given out by the British Iron Trade Association which tell quite a different story to the American reports. In the first half of this year there were 1,630,958 tons of steel ingots made by the open hearth process, which exceeds the production in any previous half-year. In the Sheffield and Leeds districts the advance was from 123,717 to 174,633 tons, a slight decline having occurred in North and South Wales and in Scotland. There was a falling off in the output of Bessemer steel ingots as compared with same period in 1900, but the production was 791,925 tons, while in second half of 1900 the output was only 706,735 tons. The production of Bessemer steel rails in first half of this year was 398,575 tons, which is 20,000 tons more than the half of the total output in 1900, and exceeds the half yearly average of past three years. Those who are decrying the industrial condition in Great Britain do well to avoid official figures. An English manufacturer, who visited this city a few days ago, said that British iron and steel works were never more active than they now are, nor general trade more prosperous.

### Life Assurance Terminations Exhibit.

The "Insurance Age "publishes a table showing the amount of life assurance issued and terminated from 1866 to 1000 the expression.

from 1866 to 1900, the companies referred to being those reporting to the New York Department. The table is a startling one. The gross amount of life assurance written in last 35 years was \$20,620,597,783, and the amount terminated, \$14,-044,628,909, the average percentage of terminations being 68.1. In 1900 the amount of policies issued by life companies authorized to transact business in New York State was \$816,741,691, and the terminations \$479,476,325, the ratio being 58.9 per cent. The amount terminated by lapse was \$216,380,389, and not taken, \$73,935,305, making together an amount equal to 35.5 per cent. of the total terminations. When those terminated by Surrender and by Change are included the ratio is raised to 44 per cent. Applying those percentages to the aggregate of life assurance issued as per our contemporary's table, we get this result; in the last 35 years there were policies terminated otherwise than " from the necessary and natural causes of death, maturity and

expiration" to the extent of \$9,073,063,024 ! Our contemporary considers that a large amount of new business done is due to the great sum of terminations, "the explanation of this riddle being that a considerable proportion of the business lost in individual companies is dropped by persons, who, being influenced by the wiles of agents, are induced to terminate their policies and try their fortunes with some other company. Thus, the same business is written and re-written year after year, the party 'revolving' from one company to another, until, it is feared, the individual finds himself without any insurance, and without the possibility of procuring it. But there would never be so many surrenders nor lapses, nor so many policies reported 'not taken' could the methods of the business be reformed and the evils of rebating and bonus be blotted out.' "

Mr. James McGowan, B.A., F.I.A., An Actuary on Cape Town, recently read a paper on Arithmetic. "Numbering and Counting" before the Insurance Institute of South Africa, in which he enunciated the following views in

regard to Arithmetic : "A certain dexterity in working out problems is very well in its way, but to have a clear grasp of general principles is to go several points better. As Chrystal says, there is too much time spent in schools in mere problem working. Most works on Arithmetic are loaded up, unfortunately, with special rules ; the principles are so clouded over with these rules as not to be easily seen. We usually find such headings as 'Practice,' Bills of Parcels,' 'Equa-tion of Payments,' 'Barter,' 'Profit and Loss,' Fellowship,' Alligation,' 'Position and Double Position,' and so on. As Professor Perry, in his little work, 'Practical Mathematics,' says : 'The average man who has worked through many rules in complex Arithmetic and Algebra and Engineering, very quickly forgets them all except the one or two that he constantly needs. It is only a teacher who remembers hundreds of rules. But if at the beginning a man knows that his rules are all one rule, all his separate rules are mere examples of one general principle ; he never can forget it, for every commonsense calculation that he makes only fixes the general principle more firmly in his mind."

He referred to "The Rule of Three," or Simple Proportion, as in many cases "only approximately true."

"Take a question like the following: If a certain number of men working so many hours a day, can build a house in, say, six weeks, how many men, working also the same number of hours per day, could build a house in three weeks ? The Rule of Three would say-double the number of men. This would be the text-book method of dealing with the question, but I wonder what a practical builder would say. The real test of a rule is to take an extreme case. Suppose it were required to build a house in half-anhour, the Rule of Three would certainly show the requisite number of men, but there would be so many that they would be tumbling over one another. It is, I believe, because builders, especially in this Colony, use the Rule of Three, without a sufficient appreciation of its limitations, that they nearly always go wrong in their estimate of the time within which they can finish a building."

In ordinary examples it is assumed that all the factors have equal value, which is often not the case. If so many men can do a certain amount of work in a given time it by ne means follows that double the number will do double the work, for the second set may be less skilful or less industrious, or weaker. The statement of Rule of Three problems usually omits this vital element. A phrase like "all other conditions being equal," is required in most Rule of Three problems to render them complete.

Colonial Office Ingnorance. It is annoying to have such displays of ignorance in regard to Canada as appear in the official journal of

the Colonial office. The recent official announcements are almost incredible. One reads :

"The King has been pleased to approve of Count Francesco Mazza as Consul-General of Italy at Montreal, with jurisdiction over Canada, Nova Scotia, New Brunwick and Prince Edward Island."

The genius who drew up that announcement for the press seems never to have heard of Confederation though he is engaged in the Colonial office. A second is equally startling; it reads:

"The Colonial office has received a message of congratulations on the accession of King Edward from the Legislative Council of Canada."

There is no such body as the "Legislative Council of Canada." It would seem desirable to start a night school for the staff in the Colonial office where elementary lessons could be given on modern geography and the political organizations of the colonies.

One of the Professors of Mc-Montreal's Health Gill College has privately given and Milk Supply. it as his opinion, that the average health of our citizens would

be materially benefitted and cases of sickness diminished were measures taken to improve the quality and freshness of the milk supply. From observations he has made he declares that nearly the whole of the) milk consumed in this city is objectionable from the health standpoint. The purest is watered, as he said, "unmercifully," and other supplies are kept far too long before delivery to consumers. Some, he found, was distributed after being kept many hours in the city exposed to contamination. Even the best houses in the city, in his judgment, have milk supplied that is not as fresh and pure and free from watering as it should be, and, as to that vended in the more congested districts, it is quite unfit for use, a large quantity of it having been exposed for hours to the foul air of a dirty shed or store. The reten-

tion of milk in a city store or depot many hours after being brought in from the country, as is quite common here, and the holding milk in a cattle shed all night, cows being milked at night to allow of the carts starting off to the city at daybreak, are practices that inevitably tend to make such milk unwholesome and to children dangerous.

New York Losing Grain Trade. Those of our New York contemporaries who have been belittling this port and crowing over what they regarded as

signs of its decadence have had their attention drawn to evidence regarding the port of New York itself, that shows a serious falling off in its grain trade. This evidence is furnished by the Interstate Commerce Commission. The lesson of that evidence is an agreeable one for this port. It shows that the situation of Montreal is better adapted for grain shipments than the port of New York. It is admitted by the New York "Commercial Bulletin" that, "wheat and flour reach the sea most easily by lines that run to the north of us," that is of New York. The main lines from the interior to the ocean, along which the grain of the West and North West travels to market, centre in this port and here, consequently, is the natural shipping place for the grain trade of the entire northern half of this continent.

# BRITISH FIRE OFFICE INCOMES AND DIVIDENDS.

The "Insurance Press" seems anxious about the Fire Insurance Offices in Great Britain. Our contemporary wishes to know what is the matter with them, and, after asking this sympathetic question, it proceeds to give statistics that are assumed to be quite a gloomy exhibit. There are some British offices not so flourishing as could be wished, but, taking the figures quoted, they afford no ground for such a question as, What is amiss ? The British Fire Offices in 1900 are shown to have had an income from interest, rents, etc., of \$6,419,000, and the dividends paid were \$9,700,000. On this the remark is made, this shows the extent to which British Fire Offices depend upon the profits on current underwriting to satisfy their stockholders. The proportion of dividends drawn from interest, rents, etc., is 67 per cent., leaving 33 per cent. to be provided by the profits on the business. A superficial view creates the impression that the business must be very unprofitable when it can only provide enough profits to pay one-third of the dividends. This, as we say, is very superficial, as an illustration will show. An enterprise may be paying dividends equal to 50 per cent. on its capital, of which two-thirds, or 67 per cent., is derived from a reserve

fund, and only one-third, or 33 per cent., from trading profits. Now, if the rate of the dividends is concealed, this would not be a favourable exhibit, but the revelation that the rate of dividend earned by trading is 16.66 per cent. on the capital, the appearance of the situation is entirely changed. The position of the British Offices is this : Their paid-up capital, as given by their critic, was \$40,104,600. The dividends paid in 1900 amounted to \$9,705,000, which equals 24.19 per cent. on the paid-up capital. The amount provided by interest, rents, etc., was \$6,419,400, which equalled 67 per cent. of the total dividend, that is, the interest income provided enough to pay dividends of 15.99 per cent., and the profits of the business found \$3.285,600, which would have paid dividends of 8.20 per cent. Now, a business that yields enough profits to pay 8.20 on the paid-up capital is not in such "a parlous case" as to suggest the question, "What's amiss ?" Especially is this question gratuitous when the business has an income over and above it's earnings sufficient to raise the dividends to 24.19 per cent. It must be understood that the amounts are as given in our New York contemporary, the sterling being

converted into currency for convenience. Our contemporary, by way of contrast, in disparagement of British fire companies, gives the dividends paid by eight of the American fire offices, which show that they only paid 16.17 per cent. on their capital last year, their dividends being drawn from interest and trade profits put together. The British fire offices, therefore, which are so commisserated, paid 8.02 per cent. more in dividends than the American companies, and the rate of dividend paid by the American companies out of profits and interest combined was only 0.18 per cent. higher than the provision made for dividends of the British companies out of their interest-income alone.

# INSPECTION OF THE HARBOUR.

The Harbour Commissioners of this port afforded, on the 26th ult., an opportunity to a number of our prominent citizens representing the shipping, financial and commercial interests of Montreal, to make an informal inspection of the works done in improving the Harbour, and enlarging its transportation facilities. Those directly engaged in shipping are familiar with the various classes of work that have been carried on, such as the construction of new piers, wharves, a new flood protection wall, an improved roadway and minor improvements. Each guest of the Harbour Commissioners on going aboard the steamer selected for the inspection trip, was presented with a description of the works carried on in the Harbour in recent years. These include four piers at Hochelaga, and one now in progress; the extension of the Windmill Point basin and wharf; the erection of the guard pier; the construction of three high level piers, 300 feet wide by 825 to 1,000 feet long; the widening of Commissioners and

Common streets to widths of 80 to 100 feet; and building of a stone, flood-protection wall extending "The expenditures on the harbour im-5.520. provement works comprised in Plan 12 A2, exclusive of the guard pier, are as follows : 1808, \$110.752: 1899, \$354,292; 1900, \$498,386. In 1901 the expenditure will be about \$575,000, of which about \$400,000 had been expended up to the end of September." The guests were entertained to luncheon, presided over by Hon. Robt. Mackay, President of the Commissioners, who, after the toast of "The King and Heir Apparent," was followed by the Hon. R. R. Dobell, M.P., who desired to see an independent marine underwriters' system in Canada. Mr. Monk, M.P., deprecated party spirit in dealing with this port, as unity was necessary to keep up competition with the ports of the States. He thought it would be a great pity if they were deprived of the assistance derived from the opinions and zeal of those who formed the Montreal Harbour Board. Those engaged in the active work of politics were not in such an advantageous position as were the business men of this city to bring to a favourable solution the problem of the St. Lawrence transportation. If we were to put up a powerful competition against the transportation war that was being waged against us by our American neighbours, we must re-model the manner in which transportation is being worked on our side of the line. He had advocated this in Parliament, but he believed that the members of the Government, however capable they might be, had not the time or opportunity to give sufficient consideration to the question. Mr. Monk considered it detrimental to the Harbour for so many authorities to be concerned in its affairs, whose ideas and interests were not always in harmony. "Consequently, in Montreal, that body which deservedly had so much the confidence of the community, was to a certain extent controlled in its action by a minister. It had been stated, Mr. Monk said, that the progress made with the Harbour improvements works had not been so rapid as could have been desired, but he thought that if there had been more cohesion in the management of the transportation question, more unity, probably the work would have gone on faster." He condemned the economy cry, as the Dominion "should spare no expense and no efforts to place our ports in a position of independence and enable them to compete favourably, and even triumphantly with the other great ports of the world." Mr. G. B. Reeve, General Manager of the Grand Trunk Railway, expressed much pleasure at the work done by the Harbour Commissioners, whom he urged to push ahead, as only by liberal expenditures could they hope to keep trade from deserting this port. Mr. Reeve said the Grand Trunk did not leave Montreal by choice; they had been driven away by lack of accommodation. The healths of Hon Mr. Tarte and of Mayor Prefontaine were drunk in their absence. The Ex-Mayor, Mr. Wilson Smith, responding to the latter toast, gave Mr. Tarte credit for show-

. .....

## NOVEMBER I, 1901

ing more interest in the Harbour than his predecessors. He dwelt upon the unrivalled position of Montreal, as the head alike of ocean and inland navigation, by which it enjoyed unique advantages that adapted it for a natural port, the development and equipment of which that were needed to secure the full benefits of the location were matters of national concern. He pointed out the lesson there was for Canada in the ports of Bristol and Liverpool. The former was much the older place; it was nearer the · ocean; it was on a safer channel; it was a more economical port; yet it had gone down to a third or fourth rate position owing to being outrivalled by Liverpool. Why? Bristol was at at a considerable distance from the great centres of consumption and production, while Liverpool was in touch with the great markets to which transatlantic cargoes were brought. and within easy reach of the vast industries of Lancashire and Yorkshire, whence outward bound cargoes were derived. Montreal held an analogous position in these respects, and were it properly equipped and the necessary improvements made to attract shipping, this port would be the Liverpool of Canada. Other toasts included, the Harbour Board, the Harbour-Master (Mr. Jas. McShane), the Press, to which suitable replies were made. The occasion was highly enjoyed, and all present were much impressed with the magnitude and value of the works accomplished by the Harbour Commissioners, and with the urgent necessity of those further improvements that are contemplated for equipping the Harbour with facilities equal to the present and future needs of shipping.

# GRAND TRUNK RAILWAY.

At the recent half-yearly meeting of the Grand Trunk Railway the President, Sir Chas. Rivers Wilson, moved the adoption of the report and payment of dividends, for the half-year ended 30th June last, of 2 per cent. in the 4 per cent. guaranteed stock, and of 21/2 per cent, on the first preference stock. The company had enjoyed a fair share of the prosperity that had prevailed in Canada and the States. They had done better as regarded revenue, and the directors were able to distribute a larger amount in dividends than had been paid in any June half year since 1884. Reviewing net result of the first six months' working in each year since the present directors took office, the President said that in the June half of 1896 there was a deficiency of \$410,000, in the following year a small surplus of \$13,900 was shown, in 1898 the surplus was \$533,200, in 1800 it was \$682.000, and in 1900 it was \$760,100, while in the past half year the surplus was \$971.420. He thought the proprietors would agree that these figures were fairly satisfactory, and that they might all congratulate themselves on the steady progress of the company's affairs.

The company carried 204,027 more passengers

than in first half of 1900, and the receipts were larger by \$125,800. The quantity of freight and live stock conveyed showed an increase of 306,452 tons, with an advance in the receipts from freight of \$621,200. The average rate per ton was 3-4d more than in the first half of 1900. The total revenue receipts for the six months were \$11,438,800, showing an increase over those of the corresponding period of the previous year of \$740,500, and the working expenses, excluding taxes, were \$7,651,000, or \$507,000 more. The maintenance of way expenditure had been greater by \$102,090, including an extra amount of \$50,000 charged in the past half year for renewal of bridges, and it was hoped that the special account opened in 1808 for bridge renewals might be entirely disposed of during the current half year.

On June 30 last the sums of \$183,800 and \$160,040 were at the credit of the engine and the car renewal funds, respectively. The net revenue charges last half year were in excess of those of the corresponding period of the previous year by \$60,450, and the net revenue credits were less by \$105,000, but, on the other hand, the payments to controlled lines were reduced by \$146,420, an dthere were other compensations which neutralized these net revenue differences. For instance, the increase of \$70,600 in the charges for interest on the company's 4 per cent. debenture stock was offset by \$53.350, the decreased amount of interest payable for the half year on bonds acquired since June, 1900, by debenture stock. There were still over \$20,000,000 of terminable bonds which could be acquired by the issue of the company's 4 per cent. debenture stock. Some of these bonds carried 6 per cent., but the major portion bore 5 per cent.; and as they were exchanged for Grand Trunk 4 per cent, debenture stock, or as they were paid off, there would be a material diminution in the interest charges. Next year alone \$3,500,000 of these bonds, carrying 5 per cent. interest, would mature, thus saving at least \$35,000 a year.

With reference to capital account, the expenditure in the half year was \$271.490, and the receipts were \$2.490,000. In addition to the outlay on capital account, loans amounting to \$1,180,000 outstanding on December 31 had been paid off, and \$1,048,000 had been absorbed by the acquisition of Grand Trunk Junction bonds, bearing 5 per cent. interest, which matured on January 1 last. Considerable satisfaction was expressed at the report and prospects of the company under Mr. Reeves' management.

THE ENGLISH CORRESPONDENTS who accompanied the royal party, visited Buffalo and Niagara Falls, N. Y. In their descriptive letters to the London papers they speak of Buffalo and its exhibition in very disparaging terms, they were evidently more impressed by this city and Toronto. At the same time one of them said things about the dirty streets of Montreal that were hot enough to dry them on a wet day.

# BANK CAPITAL AND CIRCULATION.

In this issue we present a table showing the amount of the paid-up capital of each of the chartered banks in September, 1891 and 1901, the extent of their note issues and the margin each bank has left for increase of circulation. The amount of a bank's paid-up capital is the legal limit of its note issues. The situation is one that will demand some action by the banks in the near future. The actual margin of all the banks at end of September was \$11,400,000, that is, their aggregate paid-up capital exceeded their total circulation by that amount. But not more than half that amount was really available for increasing note issues, as each issuing bank must keep a stock of its own notes in the till or treasury. The schedule shows that a large number of prominent banks

have already reached the legal maximum of note issues, thirteen banks having a circulation exceeding 98 per cent. of the limit, and seven others over 90 per cent. The ten banks whose head offices are in Ontario have a paid-up capital of \$23,478,870, and note issues \$21,919.292, which is over 93.60 per cent. of the limit. The banks having offices in the Province of Quebec have note issues for \$26,618,195, and capital paid-up, \$35.714.534, the percentage of circulation being 74.5. The Nova Scotia and New Brunswick banks have paid-up capital of \$7,993270, and note issues, \$7.240,163, the percentage being 90.6. The only banks, therefore, that have any margin for increase of circulation are those whose head offices are in this Province. Already one of these banks circulates a considerable amount of the notes of one of its neighbours, as its own limit is constantly reached. The extent of a bank's circulation is largely influenced by the nature of its customers' business. One bank may be doing double the business of a smaller institution yet may not have a demand for its notes equal to the lesser bank. The produce trade calls for a large amount of notes, and a bank having a large connection of that class is able to put out its notes on a larger scale than banks whose business is of a different class.

The position the banks are in affords a most impressive illustration of the services rendered to the business of this country by the privilege given to the banks to issue notes to the extent of their paid-up capital. Had they been deprived of this, as they were sought to be some years ago, to which course a number of bank presidents and some managers had resigned themselves, there would have been a very serious diminution of the capital available for developing the trade of Canada. At a meeting held in Toronto of bank presidents and managers it was decided to submit to the deprivation of their circulation, as they despaired of changing the proposed policy of the Government. One general manager staunchly opposed this course; he was supported in his opposition by several other bankers; a movement was organized to bring pressure to bear on the Government adverse to their policy; this movement became so powerful that it succeeded in changing the policy of the Government; and as a result the banks retained their note issues that have been of such enormous service to the country. There will need to be an extension made of the note issuing power of the banks at an early date.

# PUBLIC REVENUE ; DEBT ; NOTE ISSUES ; DEPOSITS AND BANK DEPOSITS.

The public revenue from 30th June to 30th September this year from all sources was \$13,548,519, as compared with \$12,758,082 last year. Of this increase of \$790,437 Customs contributed \$537,511, Excise \$252,124. The Dominion notes in circulation on 30th September were \$29,359.714, of which \$17,646,500 was in notes of \$500 to \$5,000, that are held by banks, leaving only \$11,713,214 of Government notes in hands of the public, of which \$10,534,439 were for \$1 and \$2. The Government held specie against these notes to extent of \$16,266,047 and guaranteed sterling debentures, \$1,946,666, making together \$18,-212,714 which is \$3,853,000 in excess of legal require-Besides these there were unguaranteed dements. bentures held in excess of legal requirements to extent of \$2,250,000; this sum being added to \$3,853,000 makes \$6,103,000 as the total amount of gold and debentures held by the Government in excess of what the statutes require. The public net debt on 30th September last was \$266,361,263, against

\$261,734,982 at same date 1900, the increase being \$4,626,281.

The balance at credit of depositors in Post Office Savings Banks on 30th September was \$40,359,510. In the Dominion Government Savings Banks there were deposits on 1st July last amounting to \$16,101,146, which is \$459,880 in excess of amount held 1st July, 1900. The Montreal City and District Savings Bank on 30th September had deposits to extent of \$12,837,582, and the Caisse d'Economie de Quebec, \$6,559,611, together \$19,397,194. The deposits of the Canadian people stood at latest date of returns as follows:

**	Post Office Savings Banks	40,359,510
	Government Savings Banks	16,101,146

- " other Savings Banks ..... 19,397,194
- " Loan Companies ...... 18,924.500

Grand total of Deposits ...... \$116,902,407

As the census, as last revised, gives the popula<sup>•</sup> tion of Canada as 5.500,000, the average amount of deposit per head is, \$75.80, or, an average of \$379.oo for each family in the Dominion.

# FIRE AT MESSRS, COLIN MCARTHUR AND CO.'S FACTORY.

On Monday night last a disastrous fire broke out in the wall-paper factory of Messrs. Colin McArthur & Co., situated in the east end of this city. The location is well-known as being only a stone's throw from Sohmer Park, and close to Molson's brewery- The premises were amongst the oldest in the city. The fire at one stage seemed certain to destroy St. Thomas' church, which was saved by the fire brigade, as were other adjacent buildings, and a portion of the factory where the printing presses and rollers were fixed. The insurance on the stock, machinery and printing rolls of Messrs. Colin McArthur & Co. is reported to be \$97,500, as follows :--

Atlas

The large stock of new goods in the warehouse was not damaged, so the operations of the firm will be at once resumed, and orders filled as in ordinary course.

# IS UNDERWRITING A PROFESSION, OR WHAT ?

Insurance occupies a position much akin to the fabled coffin of Mahomet, that is said to be suspended between beaven and earth. By the Courts of one American State insurance has been pronounced not to be a form of commerce; an Attorney-General has declared it not to be a commodity; another authority assures us that it is not an art; a fourth repudiates it as a science; and a fifth says it is not a profession. On the other hand, authorities of good standing speak respectively of the business, the art, the science, the profession of insurance, and, "commodity" though it is denied to be, it is continually spoken of as being bought and sold, and its prime cost and selling price are occasionally discussed by insurance journals and at insurance conventions. Whether insurance is a commodity or not depends upon what is meant by the word "commodity." Dr. Johnson gave the meaning of this word as, "interest; advantage; profit." Webster's definitions are, " convenience; accommodation; profit; interest; that which affords convenience or advantage, especially in commerce, including movables." These terms are specially and directly applicable to insurance, for it is of "interest," "advantage," as well as a "convenience" and "accommodation" to commerce, to which also it is a source of "profit." Here, then, we have something which is bought and sold; which is a "commodity." according to Johnson and Webster, consequently it is a form of commerce. for commerce includes all manner of dealings based upon the exchange of value for value. That insurance is an "art," is proven by the meaning of the word. which is, "the application of knowledge to practical purposes," or, the power of doing something not taught by nature and instinct, or, as Shakespeare uses the word, art means skill and dexterity. That insurance is the application of knowledge to practical purposes, that it is not taught by nature, that it involves the exercise of skill, cannot be rationally questioned. Underwriting is, therefore, manifestly an "art." As to fire insurance being a "science" there may be some doubts, but that life assurance has a scientific basis is demonstrable. It seems, however, rather to be an art by its illustrating "the application of knowledge to practical purposes," the knowledge in life assurance being scientific. One of the ablest writers on insurance denies its claim to be either a science or an art, which suggests the prudence of not being dogmatic, or very positive over these questions. He said, long years ago: "Insurance, analytically considered, possesses none of the attributes or essential characteristics of a science. Science is defined as 'knowledge reduced to a system,' also, 'knowledge depending on speculative principles rather than on practice.' Neither of these definitions will apply to insurance, as there is no knowledge reduced to a system in the business." We do not know where the writer we refer to got his definitions, but they are very crude, shallow, and one of them very unsound,

for science is certainly not "knowledge depending on speculative principles." The discussion is too wide for these columns.

Now comes the knotty question : Is insurance a profession ? Mr. James H. Hyde, Vice-President of the Equitable Life, contributed an address on this topic to the National Association of Life Underwriters' Convention. He contends that the insurance occupation, or calling, is now "an important and highly respected profession." He looks forward to the time when "the profession of life assurance will take its proper place and be classed with that of the ministry, of medicine and of law." There is no reason other than general usage why the term "profession" should be confined to theology, law, medicine and the military. The word simply means the calling or employment in which a person is engaged, which he professes to follow. Professors of Chiropody, Tonsorial Professors, Professors of Dancing, have orthographical authority for their titles, though they have a touch of bumptious absurdity. The Professors of the University of Michigan have dropped the title of "Professor" because it is so commonly used by barbers, corn doctors, and other quacks. But common usage is an obstinate force, and the day is far distant when the present range of callings, clerical, medical and legal, will cease to have their distinctive eminence as professions. It is not desirable for such honourable distinctions to be obliterated. The higher the social dignity accorded to these professions the more ambitious will be the ablest of our young men to attain the coveted rank, the greater will be the incentive to shine in these elevated positions, and the more valuable will be their professional services to the community. There is no reason why underwriting should not be styled a profession, but the claim that it ranks with the three learned professions, law, theology, medicine, will not be conceded. Insurance in its very nature is nothing more or less than a business. though, like many others, it has scientific aspects, and no little art is invoked in some of its proceedings.

# THE ETHICS OF LIFE ASSURANCE.

PAPER BY

THOMAS HILLIARD.

MANAGING DIRECTOR DOMINION LIFE ASSURANCE CO.

READ AT THE OPENING MEETING OF THE INSURANCE INSTITUTE OF TORONIO, OCTOBER 18111, 1901.

Ethics is the science of morals, that is of right and wrong in relation to human actions and affections.

In whatever relation of life men may meet, whether as individuals or in those collective forms we call corporations, which are in reality merely artificial individuals, duties and responsibilities, rights and possible wrongs must exist, and, therefore, ETHICS, the study of right and wrong, finds its scope as broad as the whole area of human action and inter-act on.

Life Assurance is a system or institution by which the calamity of death, which is inevitable to all, but the most uncertain of events to each in respect to the time of its occurence, is, from a financial standpoint, subject to the law of average. By joining themselves together in a life assurance company, each in-lividual member receives the financial benefit he would possess if he exchanged the utter uncertainty of his personal life for the approximately certain average longevity of the whole company of his associates. It follows that

a relation so intimate and inter-dependent must involve ethical considerations of a somewhat intricate character. We may consider them as existing : 1. Between the company and the individual member.

2. Between one company and another.

3. Between the company and its agents.

4. Between the institution of Life Assurance and the State. I cannot pre end to discuss any of these themes in an exhaustive or thorough sense, but must content myself with noting a few obvious points, leaving their elaboration to the intelligence and wisdom of an audience exceptionally strong in this respect.

#### I .-- THE COMPANY AND THE POLICYHOLDER.

The first duty of the company is to provide in all respects the most absolute security for the execution of its own contracts. It has the requisite means to do this and the requisite knowledge also of what the condition requires, knowledge usually hidden and mysterious to the policyholder, but plain and clear to the company. To this end the company is clearly bound to fix an adequate premium for the benefit offered, and to stand by it. And the benefit offered should be described in clear and unmistakeable terms, if such can be found, so that no delusive, clap trap or catch penny schemes should ever be associated with the honourable name of legitimate life assurance. There is no room for the bargain counter in this business. We can no more cheapen life assurance than we could buy gold dollars at a discount. The only way in which it can apparently be accom-plished is by selling life assurance to those who die early at too low cost with the result that others get nothing when their turn comes. There is no reason or excuse for error on this point for the information is just as accessible to Dr. Cronhyatokha, for instance, as to the actuaties of the regular companies. The absolute certainty that all assessment a sociations, conducted as those of America are, must eventually fail, bringing blasted hopes, cruel disappointment and in some cases utter ruin to thousands of their credulous dupes, justifies me in condemning these institutions in the strongest terms. There is no excuse for their promoters and no reason for their existence

But in order to the proper discharge of its duty to its policyholders but in order to the proper discharge of its duty to its policyholders the company must not only secure the necessary premiums to provide for its own permanency and the fulfilment of all its contracts, but must faithfully lay by that portion of its income needed as its reserve, and duly improve the same. This implies that first, its securities shall be of undoubted quality, and secondly, that its expenditure shall be limited and guarded with scrupulous care. I betray no State secret when I affirm that the controlling of expenditure is to every insurance manager who has his company's real interest at heart, a far more worrying problem than anything connected with his investment department. We have fallen upon a time of reckless extravagance in the matter of expenditure. Some manager's ambition for BIGNESS at any price, have set a terrific pace, and the rest have felt obliged to go further than their own judgement would approve in the same direction. I take leave to doubt whether a manager or a board has a right even under this peculiar temptation, to deal so with their policyholders' money. Even if the right were clear, may it not be possible that the company which plods along in a careful way, making slow but steady growth with comparatively light expense and increasing its surplus and profit distribution from time to time by means of satisfied policyholders, will win out in the end. I admit that the public is slow to discern between merit and pretence in life assurance. It is inclined to follow a fakir with a brass band quite a distance, but uncle Abe used to say "you can't fool all the peeple all the time." Merit will tell in the end. I would suggest that after a company is fairly on its feet its expenses should be kept pretty close to the loading on its premium income. The saving from suspended mortality cannot be safely drawn upon for expense, and surely the gain in interest received over the assumed rate ought to go to surplus and contingent account.

As the great majority of policies exist at present with profit plans, the company is bound to exercise reasonable care to apportion to each his equitable share of the surplus. How this can best be done is an actuarial question into which I do not propose to enter. It has been hinted that such a thing as the apportionment of exceptionally large profits to a selected list of policyholders, whose wonderful results were duly blasoned forth in advertisements, is not unknown on this continent. If so, I trust the practice went out with the late century and that nothing so grossly unjust will ever appear in the twentieth century.

A dangerous tendency has recently appeared in the form of the offer by some companies of perilously large Cash Surrender Values. Perhaps I may be set down as a crank or a benighted person, if I rankly say that I am opposed to placing cash surrender values on policies at all. I see no good reason for making these doors that open outward, so very alluring, and to enter into sharp competition with each other as to who can offer the biggest bribe to our customers to leave us. This does not strike me as a very clear mark of wisdom, seeing we have just been at infinite pains and very great expense to get them in. The Cash Surrender Value is the lever which the policy twister finds most totent in his nefarious work, and is the cause of a heavy proportion of the lapsing we all deplore. But if we will attach

cash surrender values what is the sense of guaranteeing profits also, by placing the guarantee higher than the reserve? That is surely a piece of reckleseness that bodes ill for the future of the business. Is the persistent policyholder, necessary as he is to the very existence of the company, entitled to no consideration at all? Why should his interests be imperiled for the benefit of the retiring member ?

#### II.-BETWEEN COMPANIES.

Ethical relations subsist between companies because points of con-Rivalry and competition there must be, particularly in a tact exist. narrow field like the Canadian, with eighteen home companies competing for a limited business, besides formidable rivals from Great Britain and the neighbouring Republic.

It may be ssumed in general that any company licensed by the Dominion Government is respectable enough and secure enough to deserve decent treatment at the hands of every other. If this be so, we are safe in naming the following offences against insurance ethics that ought not to occur :-

I. Circulating defamatory circulars or letters in the puplic press to the damage of another Company.

2. Circulating invidious comparisons between Company "A" or " B" and our Company.

Offering inducements to the agents of Company "A" to resign take service with ours.

These offences, particularly the first and second, are damaging to the business itself as well as injurious to the companies involved in the strife. Common prudence should dictate the wisdom of keeping out of the public press all quarrels or diff culties that may arise between companies, and I am sometimes amazed to see able and clever gentlemen so far forgetting the true interests of their profession as to allow their testy tempers to draw them into newspaper controversy on such points. Of course, nothing I have said is to be understood as condemning the exposure of delusive or fake schemes wearing the mask of insurance for the purposes of fraud.

#### III .- BETWEEN COMPANY AND AGENT

The Agency staff is the builder of every company's business. Insurance is hardly ever sold over the counter. It is sold by the hustler, and the man who can hustle effectively is in such demand that he can almost dictate his terms. In fact there are hardly any conceivable terms a field man could not get, provided he can do business enough to earn them.

So I need hardly attempt to lay down rules to guide the company in doing the right thing with its field men. They are in a position to maintain their rights. On the other hand their duties may be worth a moment's consideration. Obviously it is the duty of the agent to satisfy himself that the man he writes is, as far as he can judge, a good and acceptable risk, and one who will be likely to meet his first premium and keep up his policy. No company wants people who will only pay their first premium. It is equally clear that an agent, especially one on salary, is simply dishonest, if, to keep up an appearance, he writ s business on straw men, taking notes that he ought to know will never he paid. The agent who does this kind of thing usually makes the round of half a dozen companies in as many years, and is then retired from the business, but not on a competency. Ambitious superintendents and managers of young companies usually get their slare of experience with this type of agents.

If it be unrighteous and also unw se for companies to abuse each other, it is equally so for agents to indulge in controversy. It pays best and is best for every agent to treat every other as a gentleman until he has the most conclusive proof to the contrary. The abuse of until he has the most conclusive proof to the contrary. another hardly ever gains a risk—it often loses one.

If an agent finds a man insured in another regular company he should never allow himself to breathe a word against it. He should admit at once, if it be true, that the policy is a good one and in a good company. That will do him no harm. The tendency will be to convince his hearer that he is fair and honest and so far confidence is won, which may be half the battle. If he can carry more insurance such an agent can probably write him. In any event he has no business to worry him by causing him dissatisfaction with a good policy because it is in another company.

The question of when an agent ought to quit the field of competition with others for a particular risk, frequently arises in practice, and while no hard and fast rules can be laid down, it is safe to say that when a man has actually signed an application with one agent, the others should drop the contest at that point. All attempts to dislodge the risk aster the application is written, and still worse, after the applicant has been examined, are to be condemned. Cases have occurred where a man has been coaxed to repudiate his first premium, by a rival agent in order to re-capture the risk. Such an agent ought to be advised to spend his time searching for another application. There must be finality to every contest of this sort, and it seems to us, the best point at which to close the contest is at the completion of the application.

#### IV. -- COMPANIES AND THE STATE.

The relations of insurance companies with the State involve some duties both ways.

Because life assurance is the greatest anti-poverty institution known

to modern civilization, and because its proper working involves the custody and management of enormous sums of money, it is right that the State should surround these companies with ample safe guards to prevent malfeasance, breach of trust, insecurity of contracts or gross inequity in any respect.

This has been largely recognized by Parliaments and Governments, except in two respects. Insurance is allowed to be conducted on two principles, one of which has teen demonstrated to be absolutely sourd and equitable, while the other has been demonstrated both theoretically and practically to be the reverse.

The Government should not permit fake in urance to be ca ried on under any pretence.

There is no of jection to frate nal insurance under the same conditions, terms, and stipulations as are properly imposed on the companies, but the transparent humbuge now operating throughout the country for the benefit of the Great High Supreme Chief's should be summarily stopped. I do not think they will however. The dupes summarily stopped. I do not think they will however. have votes, and will have to get their lesson in all the bitterness of personal experience.

There is another respect in which the State is apt to treat legitinate insurance unfairly. There is a growing disposition to compel life insurance companies to be tax gatherers for the Provincial or Municipal coffers. Now a disquisition on taxation might be lengthy and tiresome, but I want to make a remark or two on it, nevertheless I freely admit the right of the State under circumstances of peculiar stress, as for the preservation of its own existence, to command every dollar, and every man, too, within its bounds. But this extreme exercise of power is only justified by extreme necessity. Ordinarily, the taxing power of the State is supposed to be exercised with due regard to equity and to these three principles : (1) Taxes may be fairly levied as equivalent for services rendered, as for water rates or police protection or school expenses in a municipality, or for more general purposes, in proportion to men's ability to pay. (2) The same property of funds should not be taked twice by using different names or by any other subterfuge (3) Productive property as far as pos-sible should bear the burden of taxation.

Now on none of these principles can the taxation of life assurance be justified. The tax is levied on a selected part of the people for the benefit of the whole people, the principle of selection being that the taxed are the se only who have protected their families from the tisk of becoming a charge upon the State, while those who neglect tais duty or accept protection from fake schemes are allowed to go free

The Province of On'ario renders no service for the tax it imposes. It interferes with contracts made long before its tax law was passed, reducing very materially the ability of one of the paries to fulfil its agreement with the other. This is particularly the case with respect to non participating policies. It is a double tax, since it is imposed on a man after he has j aid all taxes that could be legitimately claimed in respect to his income or his prorenty. It is peculiarly indefensible, having regard to the third principle because it is a tax not on a profit but on misfortune and loss. All in-urance funds are loss funds, and every impost on them only adds to the barden

Unfortunately, in the present state of public opinion there is little hope of relief, but it is a shame and disgrace to the British name that the fair Province of Ontario should enter the Twentieth Century with this odious legislation on its Statute Books. It is decidely un British, an evil weed imported from the wild Western States.

Instead, therefore, of regarding the funds of insurance companies as reservoirs to be tapped whenever a Government or its friends want money, governments and legislators generally should regard the institution of life assurance with the utmost benevolence. Life assurance is it deed, in a financial sense, the very top stone of the magnificent edifice of modern civilization. It is benevolence without paugensm; it yields the fruit of fraternity based not on mere sentiment, but on equity and scientific principles. It is only possible when law and order and security of property are firmly embedded in the structure of society, and its enormous growth in the Nineteenth Century is tut the

bud and promise of a far greater triumph in the Twentieth. That all concerned in it and with it should endeavour to keep life assurance in all its relations, up to the highest even the ideal ethical standa d is surely a " consummation devoutly to be wished."

AT THE TELIGRAPHERS' ASSOCIATION CONVEN-TION, held here in September, one of the oldest officials said : " I think it is fair to all the telegraphers with whom I have been connected, having passed under my supervision millions of telegrams within the last 51 years, and I have never known one single instance where the trust in a telegrapher has ever been betrayed. There has not been a single instance in all my life where I have had the least knowledge or suspicion of a message having been wilfully drealged."

# PROMINENT TOPICS.

The Council of the Board of Trade has decided to take vigorous action in regard to the fire protection of the city, which, from an insurance standpoint as well as in the general interests of the city, demands improvement. Some time ago there were representations made to the City Council that it was urgently necessary for at least \$300,000 to be devoted to improving the city's fire protection service. It was stated, on reliable authority, that this sum barely represented the extra amount paid each year by the citizens for fire insurance over and above what would be called for were the fire brigade more adequately equipped. So moderate an outlay as \$300,000, that would be saved yearly in the cost of fire insurance, was, however, deemed by the City Council too large a sum to be asked authority to spend by a By-law to be submitted to the citizens. A By-law was, therefore, submitted for \$100,000, which was defeated partly owing to the apathy of those most interested in fire protection, and partly to a conviction prevailing that such a sum was wholly inadequate and would merely serve sectional purposes. No efforts were made to secure votes in favour of the By-law, so an adverse vote went by default. Since then the question has been allowed to drop, until attention was again roused by several fires. The Council of the Board of Trade will now endeavour to so arouse public interest in this highly important matter as to induce the City Council to take the steps necessary for raising our fire protection service to greater efficiency by enlarging and equipping the fire brigade with more adequate fire-fighting apparatus. When another By-law is about to be submitted it will be necessary to organize a movement for bringing out the voters in favour of the fire brigade being made worthy of this city. The wastefulness and the danger of the present situation are manifest.

If necessary there should be no hesitation in appealing to the Provincial Legislature, Quebec, for the legislation required to enable the city to secure a more adequate fire protection service. The matter is one of urgent and vital interest to the whole community.

A municipal question of much importance is the system of exempting from taxation all properties owned by the Government, irrespective of the purposes for which they are used. There is no question that the exemption of such properties was intended to cover only those actually used by the Government for public service, that is, Government offices. It has, however, come about that certain buildings once used by a Government are no longer so occupied, but are leased by the Government to private tenants. The Municipal Union of Ontario recently passed a resolution protesting against this grievance, and inviting "all municipalities to unite in resisting, and, if necessary, in testing the subject in the Courts of law." The pri-

×.

# INSURANCE & FINANCE CHRONICLE.

vilege of exemption is based upon Clause 125 in the British North America Act, but it is contended that the wording of the clause in question does not cover the case of a Government property leased to a private tenant, but only such property as is used and occupied for Government purposes. The point is a very interesting as well as a highly important one to this and several other cities, as the leasing of Government properties to private tenants deprives them of a considerable amount of revenue which those properties would yield were they owned by private persons.

. . . . . .

The city is to have an addition to its market buildings by the Grand Trunk Railway erecting a Fruit Exchange on Mountain Street to cost \$21,000. The building will have cold storage compartments, and be equipped with every convenience for this ex tensive trade of which Montreal is a leading centre.

It is reported in English papers that the income tax officials in Great Britain refuse to make the same allowance for life premiums to those who have a policy in a Canadian company as they do to those who are insured in an English life company. The law allows a rebate in estimating a person's income on account of the premium on his life policy, but if life insurance in Canadian companies is not recognized as a claim for rebate it will be injurious to those now operating in Great Britain. It is high time these narrow ideas and regulations became extinct and were abolished. Imperial sentiment ought to be powerful enough to sweep them away.

The Minister of the Interior has just issued an Atlas of Western Canada, showing maps of Manitoba, the Northwest Districts, British Columbia, Ontario, Quebec, the Maritime Provinces, the St. John District, and of Great Britain and Ireland. The Atlas is embellished profusely with pictures of scenes in Canada illustrative of its farm houses, barns, products, cattle, and industrial life, also of the elevators in various places, the schools and other public buildings in several cities. A series of views is given of the "Evolution of Settler's Homes," showing how, from a rough barn like place, the settlers' house gradually develops into a substantial dwelling. These are not fancy pictures but photographs of the actual scenes. Full information is given of the opportunities offered to settlers to acquire land and what they require to bring with them. This publication should be distributed by tens of thousands throughout the old land, and every effort made to draw attention to it through the Brit - interests in Canada,

ish newspapers. After so much has been done to spread information as to the geography, the social conditions, the resources, the climate, the productions, the government of this Dominion, it is amazing how much ignorance still exists in the old country about Canada.

## PERSONALS.

MR GOLDWIN FOSTER, Imperial Bank, in this City has our best wishes on his marriage.

MR. W. S. FONALD, of Toronto, has been appointed to a position with the Mutual Life of Canada, at Winnipeg.

MR. W. MACDONALD, Accountant of the Imperial Bank, Edmonton, has been appointed manager of the branch at Ferguson, B. C.

MR, S. BURPE, Manager of the Bank of British North America, Dawson City, has been transferred to Vancouver.

MR. GORDON STRATHY has been elected a member of the Governing Committee of the Montreal Stock Exchange.

THE DEATH OF MR. W. E. H. MASSEY, of the Massey Harris Co., Toronto, deprives that city of a most estimable and valuable citizen. Mr. Massey was in the prime of life, and leaves a widow and young family who have our sincere condolences.

MR. J. CASSIE HATTON, K.C., has retired from the practice of his profession in order to enjoy a richly deserved rest. Mr. Hatton is, and for many years has been, one of the best known and most highly respected members of the Bar of this Province. Amongst his clients were several banks and insurance companies, amongst the latter being, the British Empire, Atlas, National and Canada Accident. Mr. Hatton has left Montreal to the regret of a very extensive circle of friends. He will take up residence in the Isle of Guernsey, where, we trust, he will for many years enjoy all that a retired life has to offer. His successors will be Messrs. McLennan and Howard, who have for some time been associated with Mr. Hatton.

MR. JOSEPH POWELL has been appointed General Manager of Union Assurance Society of London. Consequent upon the death of Mr. W. G. Wilkins, late Fire Manager of the Union Assurance Society of London, rumour has been rife as to the possible outcome, and amalgamation with another staunch London Fire office has been mooted. The Canadian Management is now authorized to announce the appointment of Mr. Joseph Powell, presently London Manager of the London & Lancashire Fire Insurance Company, and to give an auth intative denial to all such rumours as mentioned. No amalgamation is pending or contemplated. The Union which was established A.D. 1714, is one of the oldest English Fire Offices, and has large

THE PRUDENTIAL, OF LONDON, up to September 12th had paid 3,199 claims, amounting to \$594,500, as a result of the South African War.

THE GUARDIAN FIRE AND LIFE has taken over the Goldsmiths' and General Burglary Insurance Association.

CZOLGOSZ, the assassin, was electrocuted on 29th Oct. The U.S. authorities deserve to be commended for their praiseworthy determination to keep the murderer away from sensation mongers. He died like a brute without any sign of remorse.

THE NORTH AMERICAN LIFE ASSURANCE COM PANY has our best thanks for a portrait of His Roya Highness, Prince George, Duke of Cornwall and York. The portrait is a good likeness.

THE STEAMERS PRETORIAN AND ROSARIAN came up the river on Sunday night and entered the harbour early Monday morning. This is the first time such large vessels have been navigated in the night time between Quebec and this port. This proves that with proper lights and buoys the ocean steamers need not be delayed by night coming on when nearing this port.

THE SUN LIFE OF CANADA carries on business in the following countries, besides its own and the United States: Belgium, Bermuda, British Honduras, open ports of China, Chilli, Costa Rica, Egypt, France, Great Britain and Ireland, British and Dutch Guiana, Hawaiian Island, Holland, India, Japan, Java, Newfoundland, Philippines, Straits Settlement, and the West India Islands.

AN ENGINEER OF THE CANADIAN MARINE DIFARIMINT recently visited Care Race and made investigations as to the cause of the many wrecks. He discovered that the light on Cape Race is fifty-five feet lower than advertised in the charts, and that, therefore, the horizon is two miles inside of estimates based upon the maps. This may have caused some wrecks, but the current that sets in strongly upon the rocks of Cape Race is probably the main cause of the troubles there. The Canadian Government cannot alter the character of navigation at the mouth of the St. Lawrence river, but it can improve its lighthouse and fog signal service; and until it does this the underwriters will have grounds for the imposition of stiff insurance rates.—*Evening Wis. consin, Milwaukee.* 

A RATHER CURIOUS CASE UNDER THE WORK. MEN'S COMPENSATION ACT came before Judge Addi. son, K.C., at the Southwark County Court the other day, reported in the "Insurance Spectator." It appeared from the evidence that Philip Cheek, a labourer, sought to recover compensation under the Workmen's Compensation Act from Messrs. Harmsworth Bros., Limited, for injury which had incapacitated him from following his employment. The applicant's duty was to wash out ink-cans with a strong solution of caustic soda, and india-rubber gloves were supplied to protect his hands from the soda. These wore out, and though he applied for another pair they were not forthcoming, with the result that he suffered from dermatitis, and his hands became so inflamed that he was unable to continue at work. The Court saw nothing accidental in the man's injuries and gave a verdict for defendants.

AN IMPORTANT INSURANCE CASE WAS DECIDED in the Supreme Court, Washington, on 28th ult. As reported in the "New York Commercial Bulletin," it was the case of Fred. A. McMasters, administrator of F. E. McMasters, formerly a resident of the State of Iowa. The case involved the question as to whether an insurance policy goes into effect on the date of the application for it or when the policy is delivered. In this instance the application was made on December 12, 1893, and the policy was delivered December 26, 1893, when the premium was paid. Provision was made for grace of a month in the matter of the payment of the second policy. McMasters died January 18, 1895, six days after the expiration of the month of grace, if it was to be computed from December 12, or eight days before its expiration computing it from the 26th of December, the anniversary of the delivery of the premium.

The Supreme Court decided that the grace began one year after the delivery of the premium, thus holding the policy to be good. The opinion of the Circuit Court of Appeals for the Eighth Circuit was reversed.

THE WORKING OF ONE OF THE NEWER FORMS of life assurance is illustrated by the following case, reported in The " Insurance World :" On a payment of \$5,000 the family of John R. Thomas, architect and builder, gets \$200,000 from the Equitable Life. Assurance Society. The family has decided to take \$5 000 a year for twenty years and then \$100,000, rather than \$1,0,0 o in a lump sum now. Mr. Thomas died on August 27th. Twelve years ago he took out a \$25,000 policy in the Equitable. Last year he took \$ 100,000 more in the shape of a 5 per cent. gold bond on which he had to pay \$5,000 premium. The society offered the family \$130,000 cash in gold, or the \$50,000 a year and \$100,000 additional at the end of twenty years. The family chose the latter option.

A WRITER IN THE "AMERICAN MILLER" SAVS: "The exhaust fan should be employed in every mill and in every part of it, or at least a powerful exhaust fan should be connected with every apartment of the mill for the purpose of exhausting the air. This precaution is not altogether for the preservation of the health of the employes, but as a measure of safety—a protection against fires. By exhausting the air of the mill quite frequently, it never becomes laden with invisible or any other sort of dust. It would also prevent it from becoming hydro-carburetted and thus prevent explosions and destructive fires.

"The mill should be a breathing apparatus and breathe with about the same regularity as the lungs and for the same purpose—to take in pure air and throw out impure air, whether loaded with hydrocarbon or dust, or both.

THE VALUE OF A REPUTATION FOR TRUTHFUL-NESS is dilated upon by The "Commercial World": "The most successful agents we have met with are just those who have armed themselves with a reputation of this kind. Coming into contact with all sorts and conditions of men and women and realizing that what would appeal to one section with a considerable degree of forcefulness would have little or no effect upon another, these agents, while necessarily having to vary their statements to meet different requirements have ever made a point of neither concealing defects nor unduly elborating conspicuously attractive features; or to put it another way, in their relations with clients they have been consistently truthful and have not indulged in that suppression which is not far removed from downright lying or ventured on the no less unworthy course of telling the truth and 'a little more.' And the reward is plainly visible in the respect with which those following the better practice are unusually held by all with whom they come into contact, to say nothing of that clear conscience which, in the words of an ancient writer, 'enables a man to enjoy all things, and what is more, himself; for that he must do before he can enjoy anything else.""

SCHEDULE RATING IN FIRE INSURANCE is now conceded to be a necessity of the business, says the " Insurance Herald," which has the following remarks thereon : "It is also generally conceded that the schedule used should be based on the ascertained experience of the companies, by which a proper classification of risks may be made. Good students of underwriting differ as to how the combined experience of the companies may be best obtained, but that a knowledge of that experience is essential to approximately scientific underwriting robody doubts. Whether, as Mr. Dean in his latest book on scientific rating believes, a schedule of arbitrary rates should be made and then adjusted in its application by credits or debits for the risk, considered according to ascertained experience in a state or locality ; or whether, as most underwriters hold, the schedule as at first promulgated should fix the rate called for by the combined experience for the various classes, the result reached really is determined by the same factors. In the production of any schedule, however, simplicity and directness are or should be the prime

e

0

Ö

consideration. It is comparatively easy for an expert or a committee of experts to figure out a schedule which in theory is, to them, exceptionally familiar, as they are, with the intricacies of the business, comparatively perfect ; but the understanding and application of the schedule by the average local board or local agent is quite another matter. What is wanted is a "workable" schedule, one that does not require a professional interpreter for every town and city. Undoubtedly, the old Mercantile schedule, as finally promulgated, was theoretically perfect, according to then existing conditions, but it was shelved largely because to understand and apply it successfully required attainments only possible to experts, after long study. And now comes the new Mercantile schedule of the Union, and complaint comes from numerous places that its application will be difficult and expensive and that the schedules in use are quite as good anyhow. If the schedule is practical let us have it; if it is simply academic, put it on the shelf."

MESSRS. FETHERSTONHAUGH & CO., PATENT SOLICITORS, Canada Life building, furnish uswith the following weekly list of patents granted to Canadians in the following countries. Canadian Patents .- J. A. Smith and W. Revell, water filters ; N. Guindon and O. Goyette, cloth roller tension device for looms ; E. Stone, cutting apparatus for mowers and harvesters ; D. Conboy, carriages top; N. Prince, voting machine; S. B. Lordly, beds; R. S. Anderson, tape or tip printing machines ; K. McDonald, centrifugal separators ; A. Merner, chaff blowing attachments to grain threshers; W. N. Le Page, drying apparatus; J. T. Warren, elevator locks ; V. Brosseau, butter and lard packages; J. G. Paint, cigars; M. A. Brown, crushing seeds in dried fruits; J. Montgomery, grain car doors; H. W. Smith and M. F. Smith, pneumatic straw stackers; J. Bennet and E. J. Collins, washing machines : D. Fialcofsky, furnace grates; F. McLean, ale lifter for running off and improving ale; F. O'Neil, machine for manufacturing glassware ; P. Couture, sewing machines. American Patents .- G. P. Clapp, nail machine; S. L. Earle, compound air inspirator; W. T. Gibbs, electric furnace; W. T. Gibbs, electric method of fusion; J. Marshall, matress; J. S. McGinn, gas holder ; T. P. Theriault, cattle guard ; E. J. Wasbrood, caster socket ; P. J. M. Waslyng, safety-envelope.

# LONDON LETTER. FINANCE.

Oct. 17, 1901.

The great De Beers diamond producing monopoly of South Africa is of world-wide fame. The great men behind the scenes are Messrs. Rhodes, Wernher and Beit. Cecil Rhodes needs no introduction Wernher and Beit form a firm of unrivalled influence in South African land, gold, diamond and political interests. Beit owns a beautiful palace in Park Lane, London, just beyond the equally beautiful house built by the ill-fated millionaire-suicide Barney Barnato, and now occupied by Sir Edward Sassour, banker, politician and advocate of the all-British cable. But, returning to the De Beers Company, a little game in share-splitting has been in progress. The old capital of \$19,750,000 in \$25 shares (each share having a market value of close upon \$200) has now given place to a capital of \$22,500,000 in shares of \$12.50. Messrs. Wernher, Beit and Rhodes have been entitled to special profits during their lives owing to an old agreement, and these special privileges are now parted with by the said gentlemen upon receipt of 160,000 \$12.50 shares between them. As a boom is coming along the palpable chance is that these shares will be unloaded on the public at an average price of \$100 each. It is a scheme worthy of the best traditions of Johannesburg and Kimberley market and share manipu lation.

London is full of "mining engineers" just now, and a bright constellation they are. Three gentlemen in particular who now pose as "eminent mining experts," and who sign eulogistic reports in recent West African prospectuses, have careers of peculiar interest. One gentleman first appeared in Johanneslurg some years before the war as advance agent for Kennedy, a well-known touring mesmerist. Then he turned up at Beira, East Africa, as a conjuror engaged to amuse the melancholy whites building the railway there. Some more such experiences were his, and at last he appeared in Lordon at Earl's Court Exhibition as manager of Frank Fillis' "Savage South Africa" spectacle. Now he is the "eminent mining engineer." Another gentleman was formerly engaged to stretch the telegraph wire along the Cope Colony-Transvaal railway, whilst a third was, until a year or so ago, a war correspondent for Boer papers, and loudly proclaimed he had found explosive bullets on British soldiers. It was afterwards found out that he had carried the builets round and plarted them ready for the discovery. Another fellow, who signs West African reports without ever seeing the properties, was formerly a butterfly hunter; another, the dismissed clerk of a West African trading firm, and yet another was a West Australian storekeeper. Can any one wonder that the Jungle market has had all the bottom knocked out of it.

Now that the promoting season is starting a most alarming series of what must be characterized as doubtfuls are being offered to the British public. Take only one, for example. For unblushing impertinence, "St. Jacob's Oil, Limited," takes the "cake." Anyhow, although the business is supposed to have had a lucrative half. century's experience, the only profit shown is that for the recent eight months only. Even then the heavy advertising account has been charged up. The vendor warts a purchase price of \$275,000 for this, besides the post of managing director for five years at \$7,500 per annum and \$5.000 for promotion expenses. The question is now : "Will the British investor buy expensive wastepaper ?"

### INSURANCE.

We now know the complete facts of the transfer of the Universal Lif: Assurance Society to the North British and Mercantile Company. The transfer is to take effect as from May 8 last, and, when the North British undertakes all the liabilities of the Universal under its assurance and annuity contracts, the Universal has to provide its absorber with a sum equal to the amount of its assurances and annuity contracts due \$50,000 besides. This it will be well able to do, and even then there will b: a balance for division amongst the Universal people amounting to \$750,000. Considerable regret is felt at this termination to the independent existence of the Universal, but undoubtedly the shareholders do very well out of the transfer.

### . . .

Another amalgamation ! An absolute fever of these things appears to have set in. A prominent burglary insurance office is the Goldsmiths' and General. It is to be handed over lock, stock and barrel to the Guardian Assurance. It may be remembered by some of my feaders that the Goldsmiths' and General was the office founded ten years ago by the Buchanan who recently made such a miserable failure of the Empress Fire Company. The Guardian has so far con. fined itself to writing fire, life and accident risks, and has done so very successfully. Its shares upon which about \$45 each is paid up or added out of profits sell for \$50 or \$55.

#### . . .

The war experiences of the offices continues to be unsatisfactory, for whilst the number of deaths is smaller, the premiums have also been lowered all the way round. Some companies, however, like the

Prudential are making money out of their losses by diligently ad. vertising what they have paid away to soldiers' relatives. So far 3,220 industrial war claims have been settled for \$590,000. . . .

. ...

-

One of the directors of the Royal has died in the person of amiable James D. Hill. He was a director of several important companies, but not one of them was so important as the Royal, to which he de. voted his best energies.

## NEW YORK STOCK LETTER.

Office of Cummings & Co., 20 Broad Street, New York City. New York, Oct. 30th, 1901.

There has been nothing of special interest during the past week. the Stock Market, except in special instances, has vibrated within narrow limits, the more far sighted dealers picking up stocks on declines and only disposing of a portion of them when a slight profit was shown, that they might be in good condition to take back suc. sales on moderate reactions. There are a number of conflicting forces which are exerting their influence upon, the market at the present time. If one looks abroad the conditions in France, Germany and England are decidedly pessimistic and were they not off-set by conditions in other quarters would undoubtedly have a decidedly adverse influence upon our market. France is about to issue a loan of some 265,000,000 francs, and large amounts of funds will be required to finance this loan, while from Germany come reports from all quarters of the dismissal of workmen and the restriction of production and railway traffic. With such existing conditions it is not surprising that drafts for the precious metal should be made upon the market best able to supply it which at this time is this country. Here, on the other hand, all indications and reports make for a continuance of a large business in all departments. As mentioned in last week's letter, the present equipment of the railroads is inadequate for the requirements of the business, consequently earnings continue in large volume, with no present prospect of material decrease. One very important point to be considered in this connection is that not a few of the roads have been practically rebuilt within the past two or three years and, having been b ought up to a high standard of excellence, will not require nearly so much for maintenance of road and equipment as they did when in an inferior condition, consequently, there should be a larger amount of earnings applicable to dividends than has been the case heretofore. But with all the favourable factors in this in a number of cases should furnish a basis for an increased distribution at dividend periods. Rumours are already current that the earnings of Missouri Pacific are more than sufficient to warrant a dividend of 21/2 per cent. this fall, thus putting that stock on a full five per cent. basis. It will be remembered that at the time of the declaration of the last dividend it was stated that it was a semi annual distribution. The Northern Pacific Great Northern situation still commands attention, but it is generally believed that progress is being made towards a settlement of the various questions involved; until, however, such a point is reached we fail to see how there can be any extended stock movement. The Vanderbilt group continue to excite comment. Michigan Central non-assenting in particular with its rapid advance from about 1 to on the 28th to 140 on yesterday. In this connection it may be said, however, that wide fluctuations in stocks like this which are held principally for investment need not astonish anyone.

The Copper situation continues to be very much mixed, one day rumour states that the trust has matters well in hand and will maintain the price of the metal and the next equally authentic rumours are in circulation that a heavy cut is to be made in the price ; on the former the stock advances and on the latter it naturally declines. In this matter one fact stands out prominently and that is that parties with limited margins had better deal in something else. The return of exports of Copper to all markets show that for the nine months of 1901, there has been a decrease of nearly 125,485,493 pounds for a corresponding period of last year.

It is not unlikely that there may be some interesting developments regarding the Mohawk and Malone property, in the near future it is generally understood that comprehensive plans have been formed for the development of this property.

At the close of the market to day it displayed considerable more activity than has been witnessed in some days with a rising tendency for the Coal Stock<sup>2</sup>, Reading in particular showing heavy trading. This property is certainly in a position to warrant a material advance in the price of its securities, especially if the second preferred stock should be retired as it is believed that it will be; bat-when-this will be done is a question that a great many would like to have answered, but that it will be in time is quite certain.

## STOCK EXCHANGE NOTES.

# Wednesday, p.m., Oct. 30, 1901.

The sccurities of the Dominion Iron and Steel Company were prominent in this week's trading, and sales were male at a considerable advance over last week's figures. Dominion Coal Common is also stronger and was fairly active. This week's trading as a whole shows a falling off in volume, although prices in a number of instances are higher. Montreal Power advanced in price, and although not heavily traded in, a more general demand was apparent. Toronto R ilway was a decidedly strong spot and made a good advance, while Twin City, on moderate transactions, was inclined to be easier. The trading in C. P. R. was small, but the stock remained remarkably steady and the possibility of better prices is apparent. Dominion Cotton has had several ups and downs during the week, and the closing sales to-day were considerably under last week's figures. The exact position of the stock is a mystery, and until the decision of the directors regarding the next dividend is known, an unsettled condition is probable, with a tendency to lower figures. Bets have been made during the week that the next dividend will be passed altogether, but the opinion that a reduction to 4 p.c. will be made, is also in evidence. On a 4 p.c. basis the stock should be cheap.

It is rumoured in New York to-day that the Northern Pacific affair has been amicably arranged, and upward prices are predicted on the strength of this rumour. The general tone of the market there was inclined to be better this afternoon. The trading continues inactive, however, and the money situation is still a serious uncertainty. Gold exports are now assured.

In London a fair market was maintained during the week, and the prices for American well up to New York farity. Home securities were steady though dull.

The quotation for call money in New York today is  $3\frac{1}{2}$  p.c., and the London rate is given as  $1\frac{1}{2}$  p.c. to  $1\frac{3}{2}$  p.c. In Montreal the loaning rate continues to keep up to 5 p.c.

The quotations for money at continental points as follows :--

	Market.	Bank.
Paris	3	3
Berlin	234	4
Hamburg	31/8	4
Frankfort	21/	4
Amsterdam	23/	3
Vienna	4	4
Brussels	236	3
St. Petersburg	7 1/2	5%

The last sile of C. P. R. to-day was made at

I. .....

110¼ and the stock closed with 110 bid, a loss of  $\frac{1}{4}$  point on quotation for the week. The trading this week was limited, and involved 994 shares. The stock was quoted in London to-day at 113. The increase in earnings for the third week of October amounted to \$211,000.

The Grand Trund Railway Company's earnings for the third week of October show an increase of \$21,830. The stock quotations as compared with a week ago are as follows:—

	A week ago.	To-day.
First Preference	99	97 34
Second Preference	86	84 1/4
Third Preference,	34 7/8	3378
aliteration of the second second		

Montreal Street Railway, after selling up to 274, reacted, and the last sales were mide at  $271\frac{1}{4}$ , the stock closing with 271 bid, a net loss of 1 point for the week. The trading was about up to the average, and totalled 2,172 shares. The earnings for the week ending 26th inst. show an increase of \$1,098.38 as follows:—

		Increase.
Sunday	\$4,522.97	*\$190.15

Toronto Railway was decidedly one of the strongest stocks in the week's trading, and advanced 2 points to 117. Opinion seems to point to higher figures for this security, and the demand from the West is considerable. The trading this week was much larger than the recent volume, and some 2,465 shares changed hands. The earnings for the week ending 26th inst. show an increase of \$257.30 as follows:—

		Increase.	
Sunday	\$2,250.53	* \$125.22

•Decrease.			

Twin City was traded in to the extent of 1,090 shares, and remained very steady around par until to day when sales were made as low as  $98\frac{3}{4}$ , but only 75 shares were traded in at this price. The rest of the sales to day were made at 99, and 900 shares changed hands at this figure.  $99\frac{1}{4}$  was bid

at the close, a loss of 34 of a point for the week. The earnings for the third week of October show an increase of \$8,894.25.

Montreal Power was in more general demand this week and on sales of 1,631 shares advanced to 98, but cased off again and closed with 97 1/ bid, an advance for the week of 11/2 points.

Richelieu and Ontario was inactive and only 125 shares were traded in. The closing bid was 110, a loss of a full point for the week.

Dominion Steel Common was in good demand and 1,805 shares changed hands, the highest price realized being 2934, and the stock closed with 291% bid, an advance of 41% points for the week. Sales as high as 30 were made in Boston to-day. In the Preferred some 1,604 shares changed hands, the highest price obtained being 82, the closing bid being 81, an advance of 4 points for the week. The Bonds also enhanced in value, the last sales taking place at 8034 and some \$106,000 changed hands during the week. The closing bid was 80, which is an advance of 11/2 points from last week's quotation.

Dominion Coal Common continued active although the trading did not equal the volume of recent weeks, the total sales being 2,080 shares. The stock touched 48 to-day, but reacted to 47 1/2, an advance of 15% points for the week. The Preferred was bid 118, which is equivalent to last week's closing quotation, and 73 shares were traded in, the last sales being made at 119.

Dominion Cotton was traded in to the extent of 3,341 shares and shows a decline of 434 points for the week, closing with 49 bid. The lowest touched during the week was 48 and the highest 54, and the stock has zig-zagged up and down.

# MINING MATTERS.

The closing prices of the listed stocks and sales for the week were as follows :-

A	week ago.	To-day.	Sales.
War Eagle	121/2	10	
Payne	15	14	1,000
Republic			
Montreal-London			
Virtue	19	17	1,500
North Star			2,000

The total sales of the mining stocks for the week amounted to 4,500 shares.

Virtue has become inactive again, the sales this week being only 1,500 shares, 1,000 of which changed hands at 19 and 500 at 181/2. The closing bid was 17, a loss of 2 points on quotation for the week.

In North Star the trading involved 2,000 shares at 30. The stock was not bid for at the close.

Payne was traded in to the extent of 1,000 shares at 16 and the closing bid was 14, a loss of 1 point on quotation for the week.

# Thursday, p.m., Oct. 31st, 1901.

To-day's market was without particular interest apart from the continued strength shown in the Steel securities, more particularly in the Common Stock which sold up to 30 1-2. Coal Common also advanced and was in good demand at 48 this afternoon, some 700 shares changing hands at this price. Dominion Cotton eased off again to 48 at which price the last sales took place. The feature of the tradng was the rapid recovery in Montreal Cotton from yesterday's low figures. Under a slight pressure yesterday and in the absence of purchasing orders the stock sold at 110, but the total transactions at this price were only 101 shares, and the last sales to-day were made at 120, a recovery of 10 points from yesterday. Good buying orders were induced and the recovery was rapid although the trading was quite small. Toronto Railway remained at about yesterday's price on small transactions, the last sales being made at 117. Montreal Power sold X. D. to day, the next dividend being payable on 15th November. The last sales were made at 96 1-8. Twin City sold at 99 in the morning, but was not offered under 991/4 in the afternoon and there was good bidding for the stock at 99. The market generally was steady though dull.
