PERSONAL.

We understand that Mr. J. Haynes, C. E. and registered architect, is one of the applicants for the position of sanuary engineer of Montreal. Mr. Haynes has our best wishes for his success.

H. Robt. Falbord, architect, has removed his office from No. 536 Amherst street to No. 7 Place d'armes Square, (Jacques Cartier Bank's Building), Montreal.

In the cemetery of Jefferson City, Mo., is a horizontal slab of white limestone, supported near the ends, that has sagged nearly 14 inch in twenty five years. The slab is 6 feet long, 3 feet wide, and 2 inches thick, and Arthur Winslow calculates that under the same stress for the same time a long 2-inch slab of the limestone, or marble, would be bent into a circle less than 80 feet in diameter.

MUNICIPAL DEPARTMENT.

DEFECTS IN MUNICIPAL GOV-ERNMENT.

In his remarks before the Committee of Fifty, on Wednesday evening, on the defects of municipal government, Mr. Seth Lowaddressed himself almost wholly to the economic side of the question. In his judgment the four cardinal defects in our municipal systems, speaking generally, may be thus set forth categorically: (1) Direct loss by stealing; (2) indirect losses through short-sightedness in dealing with public franchises; (3) inefficiency extravagance in current administrations; and (4) moral loss from lowideals. Conceining the accuracy of this diagnosis there will scarcely be two opinions. It might be possible to push this branch of the enquiry still further, but for all practical purposes Mr. Low's classification is sufficiently definite; and its correctness will be freely recognized in this city, which has suffered be willy from each and all of the defects specified.

It cannot be said that Mr. Low is any less philosophical in prescribing a course of treatment. In brief, he recommends that party lines be dropped in choosing men for municipal offices. After the right man has been selected keep him in office. These suggestions will command general assent in all our communities; but between a passive sentimental acquiescence and the practical application of Mr. Low's theories there stretches a wide chasm. When that shall have been bridged a safe, sure pathway will have been opened to remedies for the existing ills that afflict our municipal systems. Mr. Low has done good work on the foundations. It will take long and faithful work by many hands in order to complete the structure. —Record Philadelphia.

CLEANING OF STREETS.

On this subject Louis H. Gibson writes to Paving and Municipal Engineering as follows: "A good street neglected soon becomes a bad street, and a bad street properly cased for soon becomes a good one. It is not so much a ques-tion of what kind of a street as it is the care of them. A city which has an organization for caring for streets will, in the nature of things, soon find itself possessed of all facts necessary to decide which is the best kind of street for par-ticular purposes. One of the first things connected with this development is the cleaning of streets. We may not know how good a street is if we do not clean it. We certainly may not know how bad it is, we certainly may not know how bad it is, inherently, if it is entirely neglected. It is not always possible to tell what kind of a street one is travelling over by looking at it. In many cities, there are brick streets, asphalt, wood, macadam, and others which are not to be distinguished by external appearances. We are told that a certain street is of brick. Looking at it is not ocular proof. This is not It does not do justice to the man who built the street, nor again to the citizens who pay for it. There are in every city in America streets of this kind. There are also these which have passed into a state of apparent decay, which, if cleaned, relieved of superflous mud and cared for persistently, for a short time would soon become good. Any one who cares to investigate this subject in his own city, or town, will notice streets muddy or dirty, those with ruts in them, and particularly so in the case of gravel or macadam, if neglected. The removal of the dust or mud from these streets shows exactly where the fault lies. The application of broken store or gravel, hammered down into the low spots will soon bring this street to a condition which will yield good service and great comfort, and all without great expense. These results are only derived econeconomically by street cleaning. Street cleaning should come before street building. Certainly street cleaning

MUNICIPAL ENGINEERS, CONTRACTORS, AND MATERIALS.

should come before street sprinkling. Many a good street has been torn up and replaced merely because it showed bad in spots. The cleaning of that street would have shown the particular spots, the inherent weakness, and at the same time the absolutely good qualities. No one knows how absolutely bad, or how absolutely bad. lutely good, a street covering is unless it is clean. To a certain extent the dut covers the bad and the good. It covers certain faults and exaggerates in some places the weakness."

GOOD IDEAS ON BRICK-PAVED ROAD-WAYS AND LAYING PIPES.

Speaking of putting in sewers and paving streets, a gentleman who has been connected with the municipal government of Des Moines, Iowa, in one department of Des Moines, Iowa, in one department or other, for years, remarked as follows. "We are through with cedar block pavement, and during the past year have laid large stretches of brick. We have a rule in regard to paving that we never violate. We lay no pavement except on streets where the water-pipes and sewers have been down for two years. This allows the dirt in the trenches to settle sufficiently, so that the earth foundation for the pavement is solid, and no unevenness in it is caused by its settling after it is laid. No, we do not have any trouble with soft brick because we have good inspectors. We expect also to adopt a rule that is now in force in Cedar Rapids, to prohibit the laying of water-pipes, sewers, etc., on the streets. We will make them put these pipes down in the alleys, and then when a pavement is down it is there to stay. cess. We have tried it long enough to know."

LEGAL DECISIONS AFFECTING MUNICIPALITIES.

INTERPRETATION OF CONTRACT AND BOND FOR CONSTRUCTION OF WATER WORKS.—A city passed an ordinance authorizing a certain tirm to construct water-works for it upon terms fully set out. This was accepted by the firm and a memorandum of the acceptance was attached to a copy of the ordinance and signed in behalf of the city by the mayor and clerk thereof, under its corporate scal, and by the firm and each member thereof under their individual seals, this binding the contract. The firm gave a bond which after reciting that the same was required of them by the city "for the faithful per-formance of their contract," expressed the condition to be that they should faithfully perform their contract "during the construction of said works." The latter words did not restrict the scope of the bond to the period of actual construction, but, on the contrary, a failure to begin the work at all constituted a breach. The amount of damages was at least equal to the difference between the contract price and the compensation provided for in a new contract made in pursuance of a bid, secured by a subsequent advertisement of the Jame work. - City of Goldsboro v. Mossilte, V. S. Circ. Ct., N. C., 49 Fed. Rep. 13.

MEASURES TO PREVENT WASTE OF WATER.-When the franchise of a water company provides the maximum charge for a specific service, and also provides that the company may make all needful rules and regulations in connection with supplying water to consumers, and for shutting off of water for non-payment of rate or waste, and where the company adopts a rule to the effect that it may introduce a meter to ascertain the quanity of water being used when waste is suspected, the company may charge its schedule meter rates for all water used in excess of a fair amount for the purpose in question and may shut off the water in case of non-payment.—Geo, and H. B. McI-miel v Springfield Water Works Co., Supreme Court of Mo., decision Feb. 16, 1892.

A new system of builders scattolds is said to have been invested by a Duluth. Minn., man, who claims that his desice will see at least 20 per cent. of the cost of laying brick walls by the use of the present system of lumber scanolding. The new scaffold is made of aluminum and steel, is light, strong and durable and is moved upward by a set of simple levers, as the wait progresses upward, always keeling the brickliver's material directly in front of him.

Established 1841.

THOROLD CEMENT

WAS USED

IN 1890. KINGSTON GRA-VING DOCK, 1200 BARRELS; 1890-91, EDISON GENERAL ELECTRIC COMPANY BUILDINGS, PETERBORO'. 1600 BARRELS: 1891, SEWERS IN TOWN OF PETROLEA, 2000 BARRELS.
