262 contracted for in suits; and it is so stated in the account. It is also necessary to remark, that of a quality very inferior to the ancient pattern. 46

fall, perhaps far below the cost of production, as soon as supplies begin to be poured in by different merchants. Whatever, therefore, may be the success of those who originate a speculation, those who enter into it at an advanced period are almost sure to lose. To have been preceded by others ought not, in such matters, to inspire confidence; on the contrary, it ought, unless there be something special in the case, to induce every considerate person to decline interfering with it.

The maintenance of the freedom of intercourse between different countries, and the more general diffusion of sound instruction, seem to be the only means by which those miscalculations, that are often productive of great national as well as private loss, can be either obviated or mitigated. The effects consequent to such improvident speculations being always far more injurious to the parties engaged in them than to any other class, the presumption is that they will diminish, both in frequency and force, according as the true principles of commerce come to be better understood. But, whatever inconvenience may occasionally flow from them, it is abundantly plain, that instead of being lessened, it would be very much increased, were any restraints imposed on the freedom of adventure. When the attention of many individuals is directed to the same line of speculation; when they prosecute it as a business, and are responsible in their own private fortunes for any errors they may commit; they acquire a knowledge of the various circumstances influencing prices, and give by their combinations a steadiness to them, which it is easy to see could not be attained by any other means. It is material, too, to bear in mind, as was previously stated, that many, perhaps it might be said most, of those who press so eagerly into the market, when any new channel of commerce is opened, or when any considerable rise of price is anticipated, are not merchants, but persons engaged in other businesses, or living, perhaps, on fixed incomes, who speculate in the hope of suddenly increasing their fortune. This tendency to gambling seldom fails to break out upon such occasions; but, fortunately, these are only of comparatively rare occurrence; and in the ordinary course of affairs, mercantile speculations are left to be conducted by those who are familiar with business, and who, in exerting themselves to equalise the variations of price caused by variations of climate and of seasons, and to distribute the supply of produce proportionally to the effective demand, and with so much prudence that it may not at any time be wholly exhausted, perform functions that are in the highest degree important and beneficial. They are, it is true, actuated only by a desire to advance their own interests; but the results of their operations are not less advantageous than those of the agriculturist who gives greater fertility to the soil, or of the mechanist who invents new and more powerful machines.

7. *Tables of Prices.*—It is superfluous, perhaps, to observe, that the precious metals are liable to all the variations of value already alluded to. Not only, therefore, are prices, as was already remarked, affected by variations in the cost and supply of commodities, but they are also affected by changes in the cost and supply of gold and silver, whether arising from the exhaustion of old, or the discovery of new mines, improvements in the art of mining, changes of fashion, &c. Hence it is, that *Tables of the prices of commodities*, extending for a considerable period, communicate far less solid information than is generally supposed, and, unless the necessary allowances be made, may lead to the most unfounded conclusions. The real value of any commodity depends on the quantity of labour required for its production; but supposing that we were to set about inferring this real value, or the ultimate sacrifice required to obtain the commodity, from its price, it might happen, (had the quantity of labour required for its production declined, but in a less degree than the quantity required to produce gold and silver), that its value would appear to rise, when it had really been diminished. When, however, the rate of wages, as well as the prices of commodities is given upon authentic data, a *Table of prices* is valuable, inasmuch as it shows the extent of the command over the necessaries and conveniences of life enjoyed by the bulk of the community during the period through which it extends. The preceding Table (pp. 352, 353.) of the prices of various commodities, and of the wages paid to different descriptions of tradesmen, at Greenwich Hospital, for the last 100 years, is the most complete of the sort that has been published; and is one of the few that is founded upon data, the accuracy of which cannot be questioned. Unfortunately, it applies only to a small part of the country. But many important conclusions may, notwithstanding, be deduced from it. The reader will find, under the more important articles described in this work, pretty ample accounts of their prices. Sometimes, as in the case of corn, these accounts go back to a very distant period.

Those desirous of detailed information as to the prices of commodities in Great Britain, in remoter ages, may consult the elaborate *Tables* in the 3d volume of Sir F. M. Eden's work on the *Poor*; and the 4th volume of *Macpherson's Annals of Commerce*. *Arbuthnot's Tables of Ancient Coins, Weights, Measures, Prices, &c.*, are well known; but the statements are not much to be depended upon. The *Traité de Métrologie* of M. Ponce, 4to, Paris, 1780, is the best work on this curious and difficult subject.

Am. Ed.]

PRICE CURRENT; a list or enumeration of the various articles of merchandise, with their prices, the duties (if any) payable thereon when imported or exported, with the drawbacks occasionally allowed upon their exportation, &c. Lists of this description are published periodically, generally once or twice a week, in most great commercial cities and towns.—(For examples, see the articles CANTON, GENOA, HAVRE, SINGAPORE, &c. in this work.)

PRIMAGE, is a certain allowance paid by the shipper or consignee of goods to the mariners and master of a vessel, for loading the same. In some places it is 1/2. in the pound; in others 6d. for every pack or bale; or otherwise, according to the custom of the place.

PRINTS, impressions on paper, or some other substance, of engravings on copper, steel, wood, stone, &c., representing some particular subject or composition.

Prints, like paintings, embrace every variety of subject; and differ very widely in the manner in which they are engraved. Their prices vary according to the style of the engraving, the fineness of its execution, the goodness of the impression, its rarity, &c. The art seems to have taken its rise in the 15th century. But, as a dissertation on one of the most beautiful of the fine arts would be singularly out of place in a work of this sort, we have introduced it for the purpose merely of stating the law with respect to the copyright of prints.

This is laid down in the acts 8 Geo. 2. c. 13., 7 Geo. 3. c. 36., and 17 Geo. 3. c. 57. By these acts, the copyright of all sorts of prints, including maps and charts, is secured to the engraver, or author, for twenty-eight years. The last mentioned act declares that every individual who shall, within the said 28 years, engrave, etch, or work, or in any other manner copy in the whole or in part, by varying, adding to or diminishing from the main design; or shall print, reprint, or import for sale, or shall publish, sell, or otherwise dispose of any copy of any print whatever, which has been or shall be engraved, etched, drawn or designed in Great Britain, without the express consent of the proprietor thereof first obtained in writing, signed by him with his own hand, in the presence of, and attested by, two or more credible witnesses; then every such proprietor may, by a special action upon the case to be brought against the person so offending, recover such damages as a jury, on the trial of such action, or on the execution of a writ of inquiry thereon, shall give or assess, together with double costs of suit.

In questions as to the piracy of prints, the courts proceed upon the same principles that are followed in those with respect to the piracy of books.—(See BOOKS;) see also Mr. Godson's excellent work on the Law of Patents and Copyrights, pp. 287—301.)

Regulations as to Importation.—Where prints or maps are contained in, and form part of a book, and

Whether a ship taken be lawful prize, or not, shall be tried in the admiralty; and no ship or cargo, or part of a ship or part of a cargo, is to be sold, or disposed of in any way, till after judgment has been obtained.

If a ship with letters of marque accidentally meet with a prize at sea, though only one attack and take her, yet in amity with us, shall have an equal share of the prize, though he afforded no assistance in the capture; because his presence may be presumed to have struck terror into the enemy, and made him yield; which perhaps he would not have done, had his conqueror been single: so that all ships that are in sight, though they cannot come up to assist in the engagement, are entitled by the common law to a distribution of the spoil.—(Beaues, Lex Mercatoria, art. Privateers.)

If those to whom letters of marque are granted should, instead of taking the ship and goods appertaining to that nation against which the said letters are awarded, unlawfully take or spoil the goods of another nation in amity with us, this would amount to piracy; and the persons so offending would, for such faults, forfeit their vessel, and the penalties in which their securities are, according to custom, usually taking out such letters. But such penalties would not follow, unless the capture were made in a piratical manner. For if the circumstances incident to the captured vessel were such as to afford a strong presumption that she really belonged to the country against which the letters were granted, the captors would not be liable to punishment, though they might be to damages. "It be impossible," says Beaues, "always to determine an affair of this sort at sea, it is allowable to bring dubious captures into port, in order to more nice and just scrutiny and inspection; otherwise the goods of one enemy would often escape. However, to guard against unlawful seizures, the government have wisely directed sufficient caution to be given (as before-mentioned) for the due observance of the letters according to law, before they permit their issuing; and when there is a breach committed, the penalties are inflicted."—(Lex Mercatoria, art. Privateers.)

Regulations for the Government of Privateers, &c.—The following instructions to privateers were issued under an order in council, at the commencement of the last war with France, 16th of May, 1758:—

Art. I. Against sale, and where, Letters of Marque may not lawfully.—It shall be lawful for the commanders of ships authorized by letters of marque and reprisals for private men-of-war, in set upon by force of arms, and subject to the laws of the sea, and the laws of the French republic, arms, wares, and merchandise, belonging to the French republic, or any person being subjects to the French republic, or inhabitants within any of the territories or dependencies thereof, or any vessel or facility to be committed, nor prize attacked, seized, or taken within the harbours of ports or states in amity with us, or in their rivers or roads, within the sight of their coasts, unless by permission of such prince or states, or their commanders or governors in chief of such places.

Art. II. Captives to be brought into Port.—The commanders of ships authorized as aforesaid, shall bring into any port of Great Britain, or some other port of our dominions, as shall be most convenient for them, in order to be sold legally, sold by us, or our High Court of Admiralty of England, or before the Judge of any admiralty court, lawfully authorized, within our dominions.

Art. III. Conduct of the Captors after the Capture is brought into Port.—After such ships, vessels, and goods shall be taken and brought into any port, the taker, or one of his chief officers, or some other person present at the capture, shall be obliged to bring or send, as soon as possibly may be, 3 or 4 of the principal officers of the company (sworn the master, supercargo, mate, or boatswain, to be always if of any ship or vessel so brought into port, before the Judge of our High Court of Admiralty of England, or his surrogate, or before the Judge of such other admiralty court within our dominions, lawfully authorized as aforesaid, or such as shall be lawfully commissioned in that behalf, to be sworn and examined upon such interrogatories as shall tend to the discovery of the truth, concerning the interest or property of such ship or ships, vessel or vessels, and of the cargo, merchandise, and other effects found thereon; and the taker shall be further obliged, at the time he produces the company to be examined, and before any motion shall be issued, to bring in and deliver into the hands of the Judge of the High Court of Admiralty of England, his surrogate, or the Judge of such other admiralty court within our dominions, lawfully authorized, or others commissioned as aforesaid, all such papers, names, sea-briefs, charterparties, bills of lading, cook-books, letters, and other documents and writings, as shall be delivered up or found on board any ship; the taker, or one of his chief officers, or some other person who shall be present at the capture, and saw the said papers and writings delivered up, or otherwise found on board at the time of the capture, must bring with the said papers and writings are brought and delivered in as they are received and taken, without any fraud, addition, subtraction, or concealment whatever, or otherwise to account for the same upon oath, to the satisfaction of the court.

Art. IV. Not to break Bulk before Judgment.—The ships, vessels, goods, wares, merchandise, and effects, taken by virtue of letters of marque and reprisals as aforesaid, shall be kept and preserved and so out of them shall be sold, spoiled, wasted, or diminished, and the bulk thereof shall not be broken, before judgment be given in the High Court of Admiralty of England, or some other court of admiralty, lawfully authorized: in that behalf, that the ships, goods, or merchandise are lawful prizes.

Art. V. Prohibit Force on Ships in Distress.—If any ship or vessel belonging to us or our subjects, shall be found in distress by being in sight set upon or taken by the enemy, or by reason of any other cause, the commanders, officers, and company of such merchant ships or vessels as shall have letters of marque and reprisals as aforesaid, shall use their best endeavours to give aid and succour to all such ships and ships, and shall, to the utmost of their power, labour to rescue the same from the enemy's other distress.

Art. VI. Application to the Admiralty for Letters of Marque.—The commanders or owners of such ships and vessels, before the taking out letters of marque and reprisals, shall make application in writing, subscribed with their names, to our High Admiralty of Great Britain, or our commissioners for executing that office for the time being, or the lieutenant or judge of the said High Court of Admiralty, or his surrogate, to cause letters of marque and reprisals to be issued, and such description of the ship or vessel for which the letters of marque and reprisals is requested, specifying the burden of such ship or vessel, and the number and nature of the guns, and what other warlike furniture and ammunition are on board the same, to what place the ship belongs, and the name or names of the principal owner or owners of such ship or vessel, and the number of persons intended to be put on board the same, and for what time they are intended; also the names of the commanders and officers of such ship or vessel, and the names of the commanders and officers of any other ships and vessels having letters of marque and reprisals as aforesaid.

shall hold and keep, and are hereby enjoined to hold and keep, in correspondence, by all conveniences, and upon all occasions, with our High Admiralty of Great Britain, or our commissioners for executing that office for the time being, or their surrogate, to cause letters of marque and reprisals to be issued, and such description of the ship or vessel for which the letters of marque and reprisals is requested, specifying the burden of such ship or vessel, and the number and nature of the guns, and what other warlike furniture and ammunition are on board the same, to what place the ship belongs, and the name or names of the principal owner or owners of such ship or vessel, and the number of persons intended to be put on board the same, and for what time they are intended; also the names of the commanders and officers of such ship or vessel, and the names of the commanders and officers of any other ships and vessels having letters of marque and reprisals as aforesaid.

Art. VII. What Colours a Privateer is to wear.—No commander of any ship or vessel having letters of marque and reprisals as aforesaid, shall presume, as they will answer it at their peril, to wear any flag, pennant, or other sign or ensign usually borne by our ships; but, besides the colours usually borne by merchant ships, they shall wear a red jack, with the Union Jack described in the caution, at the upper corner thereof, near the stick.

Art. VIII. To ransom a Captive.—No commander of any ship or vessel, having a letter of marque and reprisals as aforesaid, shall ransom, or agree in ransom, or quit or set at liberty, any ship or vessel, or their cargoes, which shall be seized and taken.

Art. IX. To deliver their Prizes to the proper Commissioners.—All captains or commanding officers of ships having letters of marque and reprisals shall send an account of, and deliver over, what prisoners shall be taken on board any prizes, to the commissioners appointed, or to be appointed, for the exchange of prisoners of war, or the persons appointed in the several towns to take charge of prisoners; and such prisoners shall be subject only to the orders, regulations, and directions of the said commissioners; and no commander or other officer of any ship, having a letter of marque or reprisals as aforesaid, shall presume, upon any prizes whatsoever, to ransom any prisoner.

Art. X. Commission forfeited for acting contrary hereto.—In case the commander of any ship, having a letter of marque and reprisals as aforesaid, shall act contrary to these instructions, or any such further instructions of which he shall have due notice, he shall forfeit his commission in all intents and purposes, and shall, together with his hull, be proceeded against according to law, and be condemned in costs and damages.

Art. XI. Copies of Journals.—All commanders of ships and vessels having letters of marque and reprisals shall, by every opportunity, send exact copies of their journals to the secretary of the Admiralty, and preserve in the continuation of the prizes as soon as may be, and without delay.

Art. XII. To observe all Orders.—Commanders of ships and vessels having letters of marque and reprisals shall, upon due notice being given in them, observe all such other instructions and orders as we shall think fit to direct from time to time, for the better carrying on this service.

Art. XIII. Violating these Instructions.—All persons who shall violate these, or any other of our instructions, shall be severely punished, and also required to make full reparation to persons injured contrary to our instructions, for all damages they shall sustain by any capture, embargo, detention, or otherwise.

Art. XIV. Bond to be given.—Before any letter of marque or reprisals for the purposes aforesaid shall issue under seal, ball shall be given with sureties, before the lieutenant and Judge of our High Court of Admiralty of England, or his surrogate, in the sum of £100 sterling, if the ship carries above 100 men; and if a less number, in the sum of £50 sterling, which ball shall be to the effect and in the terms following:—

Which day and place, personally appeared _____ who, submitting themselves to the jurisdiction of the High Court of Admiralty of Great Britain, do hereby declare, that they, their heirs, executors, and administrators, unto our Sovereign Lord the King, in the sum of _____ pounds of lawful money of Great Britain, to this effect: that is to say, that they, their heirs, executors, and administrators, are duly authorized by letters of marque and reprisals, with the ship called the _____ tons, whereof he the said _____ is the master, by force of arms to attack, surprise, seize, and take, all ships and vessels, goods, wares, and merchandise, chattels, and effects, belonging to the French republic, or in any persons being subjects of the French republic.

inhabiting within any of the territories of the French republic; excepting only within the harbours or roads within shot of the cannon of prizes and afloat in any of the Majesty. And whereas he hath a copy of certain instructions, approved of and passed by his Majesty in council, as by the tenour of the said letters of marque and reprisals, and instructions thereto relating, more at large appears; if therefore nothing be done by the said or any of his officers, mariners, or company, contrary to the true meaning of the said instructions, and of all other instructions which may be issued in this manner hereafter, and whereof due notice shall be given him; but that such letters of marque and reprisals aforesaid, and the said instructions, shall in all particulars be well and duly observed and performed, as far as they shall the said ship, master, and company, any way concern; and if they shall give full satisfaction for any damage or injury which shall be done by these or any of them to any of his Majesty's subjects, or of foreign states in amity with his Majesty, and also shall duly and truly pay,

or come to be paid, to his Majesty, or the customers or others appointed to receive the same for his Majesty, the small custom for his Majesty, of and for all ships and goods as aforesaid taken and adjudged as prize; and moreover if the said shall not take any ship or vessel, or any goods or merchandises, belonging to the enemy, or otherwise liable to confiscation, through consent or default, or by collusion, by virtue, colour, or pretence of his said letters of marque and reprisals, that then the said shall be void and of none effect; and unless they shall do so, they do all hereby severally consent that execution may be taken against them, their heirs, executors, and administrators, and their estates, wheresoever they shall be found, to the value of the sum of in testimony of the truth thereof they have hereunto subscribed their names.

By his Majesty's command, (Signed) FELIX.

PROMISSORY NOTES. See BANKS AND BANKING.

PROTECTION, in mercantile navigation, a privilege granted to certain descriptions of seamen, by which they are protected from impressment.—(See IMPRESSMENT.)

PRUNES AND PRUNELLOES, a species of dried plums, of which there are many varieties. The finest are imported from France, in the south of which this fruit is very abundant. The best prunes are packed in hampers or baskets made of white osiers, weighing from 6 to 10 lbs. each; the second quality in quarters, and the third in punchons. The entries of prunes for home consumption, in 1831 and 1832, amounted, at an average, to 6,285 cwt. a year. The duty is 1*l.* 7*s.* 6*d.* a cwt., being more than 50 per cent. upon the price of the inferior qualities. There cannot be a doubt that it would be more productive were it reduced to 10*s.* or 12*s.*

Prunes, the produce of Europe, may not be imported for home consumption except in British ships, or ships of the country of which they are the produce, or from which they are exported, on penalty of the forfeiture thereof and of 100*l.* by the master of the ship.—(3 & 4 Will. 4. c. 32. § 2, 23.)

(PRUSSIA.—*Trade of England with Prussia.*—A superficial observer may be disposed to feel surprise that the intercourse between Great Britain and Prussia should be so very limited, as our Custom-house accounts represent it to be. In point of fact, however, these accounts apply only to that portion of our trade with Prussia which is directly carried on through her ports on the Baltic, and which is quite insignificant, compared with that which is indirectly carried on through the channels of the Elbe, the Weser, the Rhine, &c., or by way of Hamburg, Bremen, the Netherlands, &c. Corn, timber, linseed and linseed oil, iron, flax and hemp, bristles, and other raw and bulky products of the northern provinces of Prussia, are principally exported from Königsberg, Mersele, Dantzic, Stettin, and the other ports of the Baltic; but her more valuable products, as the linens of Silesia, the cloths and other manufactured products of Saxony and the Rhenish provinces, the wools sold at the Breslaw and Frankfort fairs, and so forth, are all, or mostly all, exported from Hamburg, Bremen, and the ports on the Rhine and the Scheldt; while the sugar, coffee, and other colonial products, the dye-woods, cotton stuffs and yarn, hardware, earthenware, &c. supplied to her by England, are mostly all imported through the ports in question; as is the raw cotton and other raw articles furnished to her by the United States, with the greater part of the wines supplied by France, &c. But neither Hamburg, Bremen, Rotterdam, nor the Scheldt, belongs to Prussia. All of them are independent of her; and hence it is that nine tenths of the trade which we carry on with the Prussian dominions is set down in our Custom-house accounts under the head of the trade with Germany, and with the Netherlands and Belgium. There are no means by which to determine the exact portion of the aggregate amount of the exports from England to the whole of the Germanic countries, including Holland and Belgium, that falls to the share of each; but we shall not be far wrong if we suppose that they are divided proportionately to the population of the countries among which they are distributed. On this hypothesis, and taking the entire population of Germany, exclusive of Austria*, but inclusive of the Netherlands and Belgium, at 36 millions, Prussia will have about 14 of this number; so that about $\frac{1}{3}$, or $\frac{1}{3}$, of all the trade we carry on with Germany, the Netherlands, &c. must be set down to the account of Prussia. Now, at an average of the six years ending with 1835, our exports to Germany, the Netherlands, Belgium, and Prussia, amounted to 7,410,133*l.* a year, of which, or 2,891,718*l.*, may be taken as the average amount of our exports to Prussia during that period!—(Ante, p. 23.) This statement shows the real value of the trade with this flourishing monarchy, and the importance of keeping up and extending our intercourse with her.

Prussian Commercial League.—Next to the efforts of the Prussian government to diffuse the blessings of education, their efforts to induce a free commercial system into Germany constitute their best claim to the gratitude and esteem of their own subjects, and of the world. Germany, as every one knows, is divided into a vast number of independent, and mostly petty, states. Until a very recent period, every one of these states had its own custom-houses, and its own tariff and revenue laws; which frequently

* We say exclusive of Austria, because almost all the English products made use of in the Austrian states are imported by way of Trieste. Switzerland is supplied through Genoa.

differed very widely, in consequence usually laid on the endeavoured either taxing or prohibiting officers and lines reciprocal and duties admitted in were admitted in much to the gro internal industry various parts of the other. Throughout the confines of the Ne

differed very widely indeed from those of its neighbours. The internal trade of the country was, in consequence, subjected to all those vexatious and ruinous restrictions that are usually laid on the intercourse between distant and independent states. Each petty state endeavoured either to procure a revenue for itself, or to advance its own industry, by taxing or prohibiting the productions of those by which it was surrounded; and customs' officers and lines of custom houses were spread all over the country! Instead of being reciprocal and dependent, every thing was separate, independent, and hostile: the commodities admitted into Hesse were prohibited in Baden, and those prohibited in Wirtemberg were admitted into Bavaria. It is admitted on all hands that nothing has contributed so much to the growth of industry and wealth in Great Britain, as the perfect freedom of internal industry we have so long enjoyed, and that intimate correspondences among the various parts of the empire, which has rendered each the best market for the products of the other. How different would have been our present condition had each county been an independent state, jealous of those around it, and anxious to exalt itself at their expense! But, until within these few years, this was the exact condition of Germany; and, considering the extraordinary obstacles such a state of things opposes to the progress of manufactures, commerce, and civilization, the wonder is, not that they are comparatively backward in that country, but that they should be so far advanced as they really are.

But, thanks to the intelligence and perseverance of Prussia, this selfish anti-social system has been well nigh suppressed; and the most perfect freedom of commerce is now established among the great bulk of the Germanic nations. The disadvantages of the old system has long been seen and deplored by well-informed men; but so many interests have grown up under its protection, and so many deep rooted prejudices were enlisted in its favour, that its overthrow seemed to be hopeless, or, at all events, exceedingly distant. The address and resolution of the Prussian government have, however, triumphed over every obstacle. Being fully impressed with a strong sense of the many advantages that would result to Prussia and Germany from the introduction of a free system of internal intercourse, they pursued the measures necessary to bring it about with an earnestness that produced conviction, and with a determination, *coute qui coute*, to carry their point.

The first treaties in furtherance of this object were negotiated by Prussia with the principalities of Schwarzburg Sondershausen and Schwarzburg Rudolstadt, in 1818 and 1819, on the principle that there should be a perfect freedom of commerce between these countries and Prussia; that the duties on importation, exportation, and transit, in Prussia and the principalities, should be identical; that these should be charged along the frontier of the dominions of the contracting parties; and that each should participate in the produce of such duties, in proportion to its population. All the treaties subsequently entered into have been founded on this fair and equitable principle; the only exceptions to the perfect freedom of trade in all the countries comprised within the league or tariff alliance being confined, 1st, to articles constituting state monopolies, as salt and cards, in Prussia; 2d, to articles of native produce, burdened with a different rate of duty on consumption in one state from what they pay in another; and, 3d, to articles produced under patents, conferring on the patentees certain privileges in the dominions of the states granting the patents. With these exceptions, which are not very important, and are daily decreasing, the most perfect freedom of commerce exists among the allied states.

Since 1818, when the foundations of the alliance were laid, it has progressively extended, till it now comprises more than three fourths of the Germanic states, exclusive of Austria. Ducal Hesse joined the alliance in 1828, and Electoral Hesse in 1831: the kingdoms of Bavaria, Saxony, and Wirtemberg, joined it afterwards, as have Baden, Nassau, and almost all the smaller states by which it had not been previously joined, with the exception of Mecklenburg Schwerin, Mecklenburg Strelitz, Oldenburg, and Brunswick. Hanover is not included within the league.

At the commencement of 1836, the tariff alliance comprised

	German sq. Miles.	Population.
Prussia, without Neufchatel, but inclusive of the small parcels of her territory surrounded by other states	5,157	13,500,126
Bavaria and her detached territories	1,477	4,252,813
Saxony (kingdom of)	272	1,595,668
Wirtemberg and Hohenzollern Sigmaringen	385	1,631,779
Hesse (Electoral)	182	700,327
Hesse (Duchy of) and Hamburg	179	769,091
The Thuringian States	233	908,478

Nassau	23	373,601
Frankfort	4	60,000
Totals	8,252	25,324,668

Throughout the whole extent of this immense country, from Aix-la-Chapelle, on the confines of the Netherlands, eastward to Tilsit, on the confines of Russia, and from Stettin

and Dantzic southward to Switzerland and Bohemia, there is nothing to interrupt the freedom of commerce. A commodity, whether for consumption or transit, that has once passed the frontier of the league, may be subsequently conveyed, without let or hindrance, throughout its whole extent. Instead of being confined within the narrow precincts of their own territories, the products of each separate country of the alliance may now be sent to every one else; each will, in consequence, apply itself, in preference, to those departments in which it has some natural or acquired advantage; and each will have to depend for its success, not on the miserable resource of customs' regulations, but on its skill and industry. The competition thence arising will be most salutary; and, should the peace of Europe be preserved, we run little risk in saying, that all sorts of industry will make more progress among the states comprised within the tariff alliance, during the next ten years, than they have done during the previous half century.

An assembly of representatives from the allied states meet annually, to hear complaints, adjust difficulties, and make such new enactments as may seem to be required. The Prussian tariff has been adopted, with certain modifications, and is now the only one in force. The duties are received into a common treasury, and are apportioned according to the population of each of the allied states. In addition to its other advantages, the new system has reduced the cost of collecting the duties to a mere trifle, compared with its former amount; and has enabled hundreds of custom-houses, and thousands of customs' officers, to be employed in the different departments of industry.

The existing discrepancy in the weights and measures used in different parts of Germany occasions considerable inconvenience; and we are glad to observe that the equalisation of weights and measures and their reduction to a common standard in all the allied states, is declared to be one of the objects of the league.

It is also expressly provided that the tolls, or other charges in lieu thereof, shall, in all cases, whether they belong to the public, or to private individuals, be limited to the sums required to keep the roads in a proper state of repair; and that the tolls existing in Prussia shall be considered as the highest that are to be levied, and shall not in any case be exceeded.

It was at first supposed by many persons in this country, and the opinion is not yet entirely abandoned, that the Prussian league was in some degree directed against us, and that, at all events, it threatened to be very injurious to our trade with Germany; we do not, however, believe that there is any foundation whatever for either of these opinions. The alliance was planned, and brought to its present advanced state, in the view, and with the intention, of putting down the galling and innumerable restraints by which the intercourse of the German states with each other was formerly interrupted; and not with the intention of throwing any obstacles in the way of the trade of the alliance with foreign countries: it is, indeed, quite absurd to suppose that it should have this effect. The freedom of internal commerce will do ten times more to promote the industry and prosperity of the allied states than any other measure, or system of measures, that their governments could have adopted; and, as population increases, and the inhabitants become more industrious and wealthy, there will, no doubt, be an augmented demand for foreign products. The league is now no new thing. It was formed several years since, and has been progressively augmented; but, hitherto, it has not had the slightest influence in diminishing our intercourse with Germany; our exports to it, including Holland and Belgium, being greater at present than at any other former period! (See *ante*, p. 23.) Generally speaking the duties on imports are reasonable; at least, on all the finer descriptions of goods. It never, in fact, can be the policy of the alliance to make them oppressive; for, though certain states might erroneously suppose that their interests would be promoted by such means, others would undoubtedly be of a different opinion, and would resist any attempt to carry them beyond a reasonable amount. It is a mistake to suppose that Prussia has an overwhelming influence in the assembly. She must conciliate the other states, and carry them along with her; and this can only be done by acting on liberal principles, and with a view to the common interest of the alliance.

Besides, if any of the existing duties be exorbitant, or if any of them, that are at present moderate, should be subsequently raised to an exorbitant pitch; does any one suppose that the over-taxed articles would not be immediately smuggled into all parts of the league? We, who occupy an island, and have revenue cruisers and coast guards on all the seas and shores most accessible to the smuggler, know from experience that it is not possible to hinder over-taxed commodities from making their way, in immense quantities, into our markets. But the facilities for smuggling into the territories of the league are incomparably greater. It has a land frontier of several thousand miles; and though the whole Prussian army were employed for that purpose, it would be found that it was utterly impotent to prevent the territories of the league from being deluged with such over-taxed commodities as were in demand by the inhabitants.

It must be admitted that we have done not a little to provoke Prussia, and that we had no reason to be surprised had she manifested symptoms of irritation. She has only three

great staple articles the last on any thing by a duty of no less than 10 per cent. The tariff of North America has been levelled but such is not reason to lower the oppressive influence to get the consent to moderate that Prussia will pay duties.

We are glad to see Prussian commercial work printed by order it is there said, "the which the smallest enlightened power by placing her interest league of Germany has been supposed, her treaties with whatever extent the ment of this community which the new Confederation of the Rhine costates as should every other branch which previously observed are now open to the with their officers an intercommunication own territories. To the finances of the league will grow out of collection, and from the prosperity so invariably

Prussian Duty on most interested, we amounts (see *post*) to respect to quality or dollar at 3s., it is elements obligingly furnished.

1st. That a quintal (100 lbs.) of wool costs 8l. 6s., and is at *valorem* duty of 90 per cent.

2d. That a quintal of raw cotton costs 17s. 7d., making the

3d. That a quintal of flax costs 12s., making the Prussian

4th. That a quintal of hops costs 9l. 15s., making the

It is plain, therefore, that Prussian or tariff alliance course goods is principally labour, being but little that we should export. No doubt, however, within the league, though assessed on an *ad valorem* basis should think that this

The subjoined table of March, 1833, is a point of view.

Customs' Treaty, concluded on the one part; and the Kingdom of Hanover, on the other part.

1. The existing customs of the German Confederation, limited by the Treaty of Commerce.

2. In this general re-union.

Vol. II.—2 H

great staple articles of export—corn, timber, and wool. Now, of these, we admit only the last on any thing like fair terms; in ordinary years we entirely exclude corn, and we levy a duty of no less than 55s. a load on Prussian timber, while we admit the inferior timber of North America on payment of a duty of 10s.! Had, therefore, the Prussian tariff been levelled against us, we should have had but slender grounds for complaint; but such is not really the case. It may, indeed, be fairly inferred that, by agreeing to lower the oppressive duties on timber and corn, we might prevail on Prussia to use her influence to get the alliance duties on cotton stuffs, hardware, &c. abated; but, till we consent to moderate our duties on the articles in question, it is not to be supposed that Prussia will pay much attention to the exceptions we may take to any of the duties.

We are glad to be able to strengthen our view of the influence and objects of the Prussian commercial league, by laying before the reader the following extract from a work printed by order of the House of Representatives of the American States. "Prussia," it is there said, "has evidently taken the lead in this wise and important measure, to which the smallest states have gradually acceded. The whole commercial policy of this enlightened power has been distinguished for its liberality, being founded on the desire of placing her intercourse with all nations on the basis of reciprocity. The commercial league of Germany is intended to carry out this principle, and not to be directed, as has been supposed, against any particular nation; as it is well known that Prussia, in her treaties with maritime powers, has invariably adopted the system of reciprocity, to whatever extent those with whom she negotiates are willing to carry it. The establishment of this community of commercial interest forms a part of the fundamental compact, by which the new Germanic confederation was created, after the dissolution of the Confederation of the Rhine; to be subsequently adopted, however, at the option of such of the states as should choose to accede to it. Its effects cannot fail to promote commerce, and every other branch of industry, as it removes all those vexatious and endless difficulties which previously obstructed the freedom of intercourse. Navigable rivers and highways are now open to the unfettered use of the German people; the customs' and toll houses, with their officers and barriers, have been withdrawn from the interior, and the whole intercommunication resembles that of the subjects of any one of the states within its own territories. To these benefits may be added the assured prospect of improvement in the finances of the great and smaller sovereignties composing the league. This advantage will grow out of the simplicity or unity of the new system, a saving in the cost of collection, and from the increased consumption which renovated industry and progressive prosperity so invariably cause."—(*Digest of Customs' Laws*, vol. iii. p. 227.)

Prussian Duty on Cottons.—The duty on cotton goods being that in which we are most interested, we have taken some pains to ascertain its real influence. This duty amounts (see *post*) to 50 six-dollars per Prussian quintal on all cotton goods, without respect to quality or price; and, taking the quintal at 113 lbs. avoirdupois, and the six-dollar at 3s., it is equal to 7l. 10s. per 113 lbs. Now, we have learned from statements obligingly furnished to us by a large wholesale house in the city,—

1st. That a quintal (113 lbs.) of *coarse shirting*, worth 4d. per yard, contains 467 yards; it consequently costs 5l. 6s., and the Prussian or tariff alliance duty of 7l. 10s. on it is, therefore, equivalent to an *ad valorem* duty of 90 per cent.

2d. That a quintal of *superior shirting*, worth 1s. a yard, contains 457-65 yards; it consequently costs 11l. 7s. 7d., making the Prussian duty on such goods 32½ per cent.

3d. That a quintal of *printed cottons*, worth 1s. 6d. a yard, contains 633 yards; it consequently costs 6l. 3s., making the Prussian duty on such goods 15½ per cent.

4th. That a quintal of *fine printed cottons*, worth 2s. 6d. a yard, contains 678 yards; it consequently costs 84l. 15s., making the Prussian duty on such goods 8½ per cent.

It is plain, therefore, that, except on the coarsest and cheapest species of goods, the Prussian or tariff alliance duty is very far from being oppressive; and, as the value of coarse goods is principally dependent on the cost of the raw cotton and the wages of labour, being but little influenced by superiority of machinery, it is not very probable that we should export them largely to Prussia, even were the duty materially reduced. No doubt, however, it would conduce greatly to the interests of the people comprised within the league, though we do not know that it would sensibly affect us, were the duty assessed on an *ad valorem* principle, and made 20 or 30 per cent. on all goods; and we should think that this might be done without any material difficulty.

The subjoined translation of the more important clauses of the customs' treaty of the 22d of March, 1833, sets the principles on which the alliance is founded in the clearest point of view.

Customs' Treaty, concluded the 22d March, 1833, between the Kings of Bavaria and Wirtemberg, on the one part; and the King of Prussia, the Prince Electoral Co-regent of Hesse, and the Grand Duke of Hesse, on the other part.

1. The existing customs' unions between the states above named shall henceforth constitute a general Union, united by a common system of customs and commerce, embracing all the countries comprised therein.

2. In this general re-union are also comprised the states which have already adhered, either for the

whole of their territory, or for a part, to the system of customs and commerce of one or other of the contracting states, having regard to their special relations, founded upon the conventions of adhesion concluded with the states which have intervened.

III. But there will remain excluded from the general re-union the parts separated from the countries of the contracting states which, because of their situation, are not yet included either in the union of the Bavarian or Württemberg customs, nor in those of Prussia and Hesse. Nevertheless, the regulations now in force to facilitate the commerce of these territories with the principal country will be maintained. Other favours of this kind cannot be accorded without the unanimous consent of the contracting states.

IV. In the contracting states there shall be established uniform laws for the duties of import, of export, and of transit, except such modifications as, without injury to the common object, result necessarily from the particular legislation of each contracting state, or from local interests.

Thus, exceptions and modifications to the common tariff may take place, as to rates of duties of entry, of export, and of transit, (according as the direction of the routes of commerce may require), established upon articles recognized as of minor consequence in extensive commerce; provided always, that these modifications be preferred by separate states, and that they shall not be disadvantageous to the general interests of the Association.

The administration of the duties of import, export, and transit, as well as the organization of the authorities which are engaged therein, in all the states of the Association, shall be established upon a uniform footing, having regard, however, to the particular relations existing in those countries. The laws and ordinances which, according to those principles, ought to be uniform in the contracting states, and which are to constitute the law of the tariff and the regulations of the customs, shall be considered as an integral part of the present treaty, and shall be published at the same time.

V. There can neither be alterations, or additions, or exceptions, to the acts above mentioned (Art. IV.), but by the unanimous consent of all the contracting parties, and in the form required for the making (*confectio*) of the laws.

The preceding applies equally to all the ordinances which would establish, for the administration of the customs, dispositions entirely different.

VI. Liberty of commerce, and community of the receipts of customs, as regulated by the following article, will commence simultaneously with the operation of the present treaty.

VII. Dating from this epoch, all duties of import, of export, and of transit shall cease on the common frontier of the Bavaro-Württemberg and Prusso-Hessian customs' re-unions. All articles of free commerce in one of those territories may be imported freely and without duty into all the others, except only as follows:

A. Articles monopolized by the states (playing cards and salt) conformably to Articles IX. and X. B. Indigenous articles, now subject in the interior of the contracting states to different duties, or exempted from all duty in one state, and imported into another, and which according to Article II. ought consequently to be subject to a duty of compensation.

Finally, C. Articles which, without prejudice to patent rights or conceded privileges in one of the contracting states, cannot be imported, and ought consequently to be excluded during the existence of the patents and privileges from importation into the state which has granted them.

VIII. Notwithstanding the freedom of commerce, and the exemption from duties, established by Article VII., the transport of articles of commerce, subject by the common tariff to duties of import or export on the frontiers of the Association, cannot take place between the states of Bavaria and Württemberg, and the states of Prussia, of Electoral Hesse, or of Grand Ducal Hesse, and reciprocally, except by the public roads, military routes, and navigable rivers. For this purpose there shall be established, on the interior frontiers, common *bureaus* of verification, to which the conductors of merchandise must, on exhibiting their licences, declare what are the articles which they are employed to transport from one territory to another.

This disposition will not be applicable to retail commerce in raw materials, nor to the petty commerce of the frontiers or the fairs, nor to the effects of travellers. Process for the verification of merchandise will go no farther than is required for security of the duties of compensation.—(See Art. VII. B.)

XIII. The contracting parties reciprocally renew their adhesion to the principle, that the tolls, or other charges in lieu thereof, shall only be sufficient to defray the expense of maintenance and repairs of the roads; whether the tax be for the state or for private rights. It was thus that has been approved the supplement to the duty of customs, created in Bavaria and Württemberg, to replace the duty of tolls, paving, causeways, bridges, and generally of all analogous taxes.

The tolls, &c., now existing in Prussia, according to the general tariff of 1828, shall be considered as the highest rates, and shall not be exceeded in any of the contracting states.

In accordance with the principle thus announced, the individual duty for closing the gates of cities shall be abolished; as also the duty of paving of causeways, where it still exists; and all paved roads will be considered as causeways of a description liable only to the duty on causeways established by the general tariff.

XIV. The contracting governments agree to unite their efforts to introduce into the states a uniform system of coins, weights, and measures; to commence immediately the requisite negotiations for this purpose; and, subsequently, to direct their efforts towards the adoption of uniform custom-house weights.

The contracting states, in the impossibility of establishing this uniformity before this treaty goes into operation, agree, for facilitating the forwarding of merchandise where it has not already been done, to revise their tariff as to weights and measures, assuming for a basis the tariffs of the other contracting states. They will cause such modifications to be published, for the government of the public and of their custom-house *bureaus*.

The common tariff (Art. IV.) shall be divided into two principal divisions, according to the system of weights, measures, and moines of Bavaria, and that of Prussia.

The declaration of the weights and measures of articles subject to duty shall, in Prussia, be according to Prussian weights and measures; in Bavaria and Württemberg, according to those of Bavaria; and in the two Hesses, according to the weights and measures there legally established.

In expediting custom-house acts, the quantity of merchandise must be expressed according to the two principal divisions of the common tariff.

Until the contracting states agree upon a system of common money, the payment of duties in each state shall be made in the same currency as is in use for payment of its other taxes.

But, from the present time, the gold and silver coins of all the contracting states, with the exception of small money (*schillingen*), shall be received in all the *bureaus* of receipt of the Association; and for this purpose, tables of value shall be published.

XV. The duties of navigation upon the rivers, comprising therein those which apply to reeds, shall always be mutually regulated according to the acts of the Congress of Vienna, or of special conventions, upon all the rivers to which these regulations apply, unless other determinations be adopted in this respect.

The contracting states agree to enter, without delay, into negotiations for that which particularly regards the navigation upon the Rhine and the neighbouring streams, in order to effect an arrange-

ment by which the line of navigation shall be, under the reserve of the advantages upon said stream. Upon the other side, the duties of navigation, which, nevertheless, be treated as a separate matter, shall be, in the territory, in the discharge of the regulations of the customs. XVII. No duties shall be established on the use of charges cannot be made, if the article XVIII. The contract industry by the adoption as possible, from the coming into trading or selling any import which objects who are only not simply patterned duty to pay in their domicile; When trading in heavy one of the states in all respects as subject XIX. The separate Union, on payments of states in the seaports with their advice and XX. To protect agreement of the duty of cartels, which shall be subject to the XXI. The common comprehend the production of Bavaria, and these countries which trading states. The following are the benefit of the respective 1. The imposta colle compensatory duties 2. The toll on rivers and special convention or weighing and storage 4. The fines and exact government thereof XXII. The products of the Association deduction, 1st, of the 2d, of the restoration tion. The population of one or other of the contributions, for the population of the There shall be made ration of the population thereof. XXIII. All restraints charged to the treasury Conventions, hereafter recorded. XXIV. In conformity natural commerce certain places in which be extended to those restricted and shalshalls heretofore favoured, can, on no account, be XXVII. There shall governments of the U authorized represent The plenipotentiary pre-eminence over the The first assembly At the close of each to the nature of those XXVIII. The assest-jects: A. To consider the containing the execution

ment by which the import, export, and transit of the productions of all the states of the Union upon said streams shall be, if not absolutely free, at least relieved as far as possible from duties of navigation, under the reserve of charges of reconnaissance.

All the advantages granted by one state of the Union to its subjects, in the exercise of the navigation upon said streams, shall extend equally to the navigation of the other associated states.

Upon the other streams to which neither the acts of the Congress of Vienna, nor any other treaties apply, the duties of navigation shall be according to the special regulations of the governments interested. Nevertheless, the subjects of the contracting states, their merchandise and vessels, shall, throughout, be treated on those streams with perfect equality.

XVI. Dating from the day on which the general custom-house regulations of the Union shall come into operation, the duties of public stores (*étapes*), and of trans-shipments (*umschlagrechte*), which still exist in the territories belonging to the Association, shall cease, no one shall be liable to forced delay, save to the discharging and storage of his merchandise, except in cases authorised by the common regulations of the customs or navigation.

XVII. No duties shall be claimed for canals, locks, bridges, ferries, cranes, weighing and storage; and the establishments destined to facilitate commerce shall not be allowed rent, except when actually used. Charges cannot be increased; and the subjects of the other contracting states shall be on a perfect equality with the subjects of the country having those establishments.

If the establishments for weighing, and cranes are only used by the custom-houses, no charge shall be made, if the articles have been previously weighed at a custom-house.

XVIII. The contracting states engage to continue their common efforts for the encouragement of industry by the adoption of uniform regulations, so that the subjects of each state may enjoy, as extensively as possible, the privilege of seeking work and occupation in every other state.

From the coming into operation of the present treaty, the subjects of any one of the contracting states, trading or seeking employ in the territory of any other of those states, shall not be subject to any impost which does not equally affect the native similarly employed. Manufacturers and merchants who are only making purchases for their trade, or travellers who have not goods with them, but simply patterns for the purpose of soliciting commissions, shall not, when thus employed, have any duty to pay in another state, if authorised to carry on such commerce in the state where they have their domicile; or if employed in the service of native manufacturers or merchants.

When trading in the markets and fairs, or when they are selling the produce of the soil and fabrics, in any one of the states of the Association, the subjects of the other contracting states shall be treated in all respects as subjects of the same state.

XIX. The seaports of Prussia shall be open for commerce to all the subjects of the states of the Union, on payments of the same duties as are paid by Prussian subjects, and the consuls of the several states in the seaports or places of the foreign commerce, shall be bound, in cases of need, to assist with their advice and support the subjects of the other contracting states.

XX. To protect against contraband their common custom-house system, and to insure the regular payment of the duty of consumption in the interior, the contracting states have concluded a reciprocal cartel, which shall be enforced as soon as possible, but, at the farthest, at the same time with the present treaty.

XXI. The community of receipts of the contracting states, stipulated by the present treaty, shall comprehend the product of duties of entry, of export, and of transit, in the Prussian states, the Kingdoms of Bavaria, and Württemberg, the Electorate, and the Grand Duchy of Hesse, comprising therein those countries which have down to the present time acceded to the custom-house system of the contracting states.

The following are excluded from the community of receipts, and remain preserved for the particular benefit of the respective governments:—

1. The imposts collected in the interior of each state on indigenous products, comprising therein the compensatory duties reserved in Article XI.

2. The toll on rivers, to which are applicable the regulations of the acts of the Congress of Vienna, or special conventions. (Article XV.)

3. Duties of paving, of causeways, of bridges, of ferries, of canals, of locks and ports, charges of weighing and storage, as well as similar receipts, whatever may be their name.

4. The fines and confiscations which, beyond the part allowed to informers, remain the property of each government throughout its territory.

XXII. The produce of the duties received into the common treasury shall be divided among the states of the Association, in proportion to the population which may be found in the Union, subject to deduction, first, of the expenses specified in Article XXX.; 2d, of the restitution of erroneous receipts; 3d, of the restoration of duties and diminutions made in consequence of special common conventions.

The population of every state which has entered or may enter into the Association, by treaty with one or other of the contracting states, under the engagement made by the latter, to make an annual contribution, for the participation of the former to the common revenue of the customs, shall be added to the population of the states which make this contribution.

There shall be made every three years, dating from a period to be hereafter fixed, an exact enumeration of the population of the associated states; the states shall reciprocally communicate the result thereof.

XXIII. All restitutions of duties not authorised by the legislation of the customs, shall remain charged to the treasury of the government which shall have granted it.

Conventions, hereafter to be concluded, will regulate in what cases similar restitutions may be accorded.

XXIV. In conformity with the object of this association of customs tending to facilitate a freer and more mutual commercial intercourse, the favours accorded for the payment of custom-house duties at certain places in which fairs are held, especially the privileges of *habus privilegii*, cannot be extended to those states of the Association where they do not exist; on the contrary, they shall be restricted and abolished as far as possible, regard being had to the means of subsistence of the places heretofore favoured, and to the commercial relations which they have with foreigners; but others can, on no account, be granted without the general consent of the contracting parties.

XXV. There shall every year, on the 1st day of June, be an assembly of plenipotentiaries of the governments of the Union empowered generally to deliberate; and each state may send thither a duly authorized representative.

The plenipotentiaries will choose from among themselves a president, who, however, shall have no pre-eminence over the other members.

The first assembly shall be held at Munich.

At the close of each annual assembly, the place of next meeting will be determined, having reference to the nature of those subjects which will then come under discussion.

XXVI. The assembly of plenipotentiaries will have under its consideration the following subjects:—

A. To consider the complaints which may have arisen in any of the states of the Association, concerning the execution of the general treaty, of special conventions, of the law, and of custom-house

ing 10l. with costs; and guilty of a *third offence* within 3 years, to forfeit not exceeding 50l. with costs; or the case in the last instance may be adjourned to the petty sessions, or the annual meeting, or the general quarter sessions; and if the offender is found guilty by a jury, he may be fined 100l. or adjudged to forfeit his licence, or both, and rendered incapable of selling any excisable liquor in any inn kept by him for 3 years.—§ 21.

Proceedings at the session in certain cases, may be directed by the justices to be carried on by the constable, and the expenses defrayed out of the county rates.—§ 22.

Witnesses refusing to attend without lawful excuse, may be fined not more than 10l.—§ 23.

Penalties against justices may be sued for in any court in Westminster; a moiety to the king, and a moiety to the party suing.—§ 24.

Penalties adjudged by justices may be recovered by distress, or the party imprisoned 1, 2, or 6 calendar months.—§ 25.

The next sections relate to the mode of prosecuting actions.

The last section of the act bears that the word "inn" shall include any inn, alehouse, or victualling house, in which is sold by retail any excisable liquor, to be drunk or consumed on the premises; and the words excisable liquor are to include all such fermented or spirituous liquors as may now or hereafter be charged with any custom or excise duty.—§ 27.

The act does not affect the two Universities, nor the privilege of the Vintners' Company, except those freemen who have obtained their freedom by redemption; and it does not alter the time of granting licences in the city of London.

Innkeepers are bound, by the tenor of their licence, to keep order in their houses, to prevent drunkenness and disorderly conduct, and gambling. If they fail in these respects, they forfeit their licence, and subject themselves to the penalties mentioned before. Allowing seditious or immoral books to be read in an inn, also forfeits the licence, and subjects to penalties.—(39 Geo. 3. c. 57. § 43.)

2. Duties of Innkeepers.—Innkeepers are bound by law to receive guests coming to their inns, and they are also bound to protect their property when there. They have no option to reject or refuse a guest, unless their house be already full, or they are able to assign some other reasonable and sufficient cause. Neither can they impose unreasonable terms on such as frequent their houses: if they do, they may be fined, and their inns indicted and suppressed. An innkeeper who has stables attached to his premises, may be compelled to receive a horse, although the owner does not reside in his house; but he cannot, under such circumstances, be compelled to receive a trunk or other dead thing. By the annual Mutiny Act, constables, or, in their default, justices of the peace, may quarter soldiers in inns, livery-stables, alehouses, &c., under the conditions and regulations set forth in the statute.

3. Responsibilities of Innkeepers.—An innkeeper is bound to keep safely whatever thing his guests deposit in his inn, or in his custody as innkeeper; and he is civilly liable for all losses, except those arising from *irresistible force*, or what is usually termed the act of God and the king's enemies. "It has long been holden," says Sir William Jones, "that an innkeeper is bound to restitution, if the trunks or parcels of his guests, committed to him either personally or through one of his agents, be damaged in his inn, or stolen out of it by any person whatever (except the servant or companion of the guest); nor shall he discharge himself of this responsibility by a refusal to take any care of the goods, because there are suspected persons in the house, for whose conduct he cannot be answerable; it is otherwise, indeed, if he refuse admission to a traveller because he really has no room for him, and the traveller, nevertheless, insist upon entering, and place his baggage in a chamber without the keeper's consent. Add to this, that if he fail to provide honest servants and honest inmates, according to the confidence reposed in him by the public, his negligence in that respect is highly culpable, and he ought to answer civilly for their acts, even if they should rob the guests that sleep in their chambers. Rigorous as this law may seem, and hard as it may actually be in one or two particular instances, it is founded on the great principle of public utility, to which all private considerations ought to yield; for travellers, who must be numerous in a rich and commercial country, are obliged to rely almost implicitly on the good faith of innholders, whose education and morals are usually none of the best, and who might have frequent opportunities of associating with ruffians or pilferers, while the injured guest could never obtain legal proof of such combinations, or even of their negligence, if no actual fraud had been committed by them. Hence the praetor declared, according to Pomponius, his desire of securing the public from the dishonesty of such men; and by his edict gave an action against them, if the goods of travellers or passengers were lost or hurt by any means except by inevitable accident (*damno facti*): and Ulpian intimates, that even this severity could not restrain them from knavish practices or suspicious neglect."—(*Essay on the Law of Bailments*, 2d ed. pp. 95, 96.)

Even if an innkeeper bid the guest take the key of his chamber and lock the door, telling him that he cannot undertake the charge of the goods, still, if they be stolen, he is held to be responsible. In all such cases it is not competent to the innkeeper to plead that he took ordinary care, or that the force which occasioned the loss was truly irresistible. A guest is not bound to deliver the goods in special custody to the innkeeper, nor, indeed, to acquaint him that he has any. If he have property with him, or about his person, the innkeeper must be responsible for it without communication. But the innkeeper may require that the property of his guest be delivered into his hands, in order that it may be put into a secure place: and if the guest refuse, the innkeeper is not liable for its safety. The guest exonerates the innkeeper from liability, when he takes upon himself the exclusive custody of the goods, so as to deprive the innkeeper of having any care over them.

that, if a guest demand and have exclusive possession of a room, for the purpose of a shop or warehouse, he exonerates the landlord from any loss he may sustain in the property which he keeps in that apartment; but it is otherwise if he have not the exclusive possession of the room. The innkeeper cannot oblige the guest to take charge of his own goods; for this, in effect, would be a refusal to admit them into the inn. And it is no excuse for an innkeeper to say that he delivered the key of the chamber whence the property was stolen to the guest, who left the door open. A case of this sort occurred very recently, at Brighton.—A lady having left the door of her bed-room, of which she had the key, open for a few minutes, 50*l.* were abstracted from her reticule. The innkeeper contended that the plaintiff, by selecting particular apartments, and taking the key, had exonerated him from his liability. The jury found for the plaintiff; and upon a motion for a new trial, Lord Tenterden said,—“By the common law of this country, and also by the civil law, the principle of the liabilities of innkeepers was founded on two reasons; first, to compel the landlord to take care that no improper company was admitted into his house; and, secondly, to prevent collusion.—The principle, as stated in the civil law, was this—‘*Ne quisquam pulet graviter hoc in eos constitutum esse; nam est in ipsorum arbitrio nequem recipiant; et nisi hoc esset statutum, materia daretur cum furibus, adversus eos quos recipiant, occundi: cum ne nunc quidem abstinere hujusmodi fraudibus.*’ It was true that in the present state of society, it was very difficult to prevent the intrusion of improper company into inns. But still the principle was such as he had stated it to be, and it would be dangerous to relax it; and he did not think that the taking rooms in this way was sufficient to discharge the landlord. Then, as to the objection that the cases did not extend to money, it was clear that money was as much within the principle as goods, and that no substantial distinction could be made. He was therefore of opinion that the verdict was right.”—Rule refused.

A landlord may exempt himself from liability, if he can show that the loss was occasioned by the misconduct of the guest; as, if his goods are stolen by his own servant or occupant.

It has been decided that a man is a guest at an inn, if he leave his horse at it, though he has not gone into it himself. If a man come to an inn, and make a contract for lodging for a set time, and do not eat or drink there, he is no guest, but a lodger, and, as such, not under the innkeeper's protection; but if he eat and drink, or pay for his diet there, it is otherwise. Any innkeeper or alehouse keeper, knowingly receiving and harbouring any person convicted of an offence against the revenue laws, for which he has been in prison, or for which he has fled, shall forfeit 100*l.* and have no licence for the future.

A Remedy of an Innkeeper against his Guest.—An Innkeeper may, without any agreement to that effect, detain the person of a guest who has eaten in his house, until payment; and he may do the same by the horses in his stable.

An innkeeper is not entitled to recover for spirits supplied to his guests, of the value of 20*s.* and upwards, unless applied or contracted for at one time.—(23 Geo. 2. c. 40.)

By the custom of London and Exeter, if a man commit a horse to an hostler, and the expense of his keep becomes equivalent to his price, the hostler may appropriate the horse to himself upon the appraisement of four of his neighbours, or may have him sold. But innkeepers in other parts of the country have no power to sell horses detained by them.

A horse committed to an innkeeper cannot be detained as a security for the board of his master. It is enacted by 11 & 12 Will. 3. c. 15. that innkeepers, alehouse keepers, &c. refusing to specify in an account the number of pints or quarts for which demand is made, or selling in unmarked measures, shall have no power to detain any goods or other things belonging to the person from whom demand is made, but shall be left to their action for recovery of the same.

[In the United States, the system of licensing public houses has been adopted by the several states. For the details of the system the reader may consult *Purdon's Digest of the Laws of Pennsylvania, the Revised Statutes of New York, &c.*—Am. Ed.]

PUMICE STONE (Ger. *Bimstein*; Fr. *Pierre ponce*; It. *Pietra pomice*; Sp. *Piedra pomez*; Lat. *Pumex*), a light, spongy, vitreous stone, found usually in the neighbourhood of volcanoes. It is used for polishing metals and unperle, and smoothing the surface of wood and pasteboard. It is said to form a good glaze for pottery. The lighter pumice stones swim on water, their specific gravity not exceeding .914. The island of Lipari, in the Mediterranean, is chiefly formed of pumice stone, and may be said to be the magazine whence all Europe is supplied with this useful article. There are several species of pumice stones; but those only that are light and spongy are exported. The price varies in the London market from 8*l.* to 10*l.* a ton.

PUTCHOCK. An article of this name is imported in considerable quantities from the north-west coast of India into China, and is regularly quoted in the Canton price currents. It is the root of a plant that grows abundantly in Sindh. When burned, it yields a fine smoke, and a grateful and diffusive smell. The Chinese beat it into a fine powder, which they burn as incense in the temples of their gods.—(*Hamilton's New Account of the East Indies*, vol. i. p. 126.)

the commerce of the country, than by constructing a proper quarantine establishment on the Thames.

Bills of Health.—The period of quarantine varies, as respects ships coming from the same place, according to the nature of their bills of health. These are documents, or certificates, signed by the consul or other competent authority in the place which the ship has left, describing its state of health at the time of her clearing out. A *clean* bill imports that, at the time of her sailing, no infectious disorder was known to exist. A *suspected*, or, as it is more commonly called, a *touched* bill, imports that rumours were afloat of an infectious disorder, but that it had not actually appeared. A *foul* bill, or the *absence of clean bills*, import that the place was infected when the vessel sailed.—(See *BILLS OF HEALTH*.) The duration of the quarantine is regulated by the nature of those instruments. They seem to have been first issued in the Mediterranean ports in 1665, and are obviously of great importance.

Quarantine Regulations.—The existing quarantine regulations are embodied in the act of Geo. 4. c. 78., and the different orders in council issued under its authority. These orders specify what vessels are liable to perform quarantine; the places at which it is to be performed; and the various formalities and regulations to be complied with. The publication in the *Gazette* of any order in council with respect to quarantine is deemed sufficient notice to all concerned; and no excuse of ignorance is admitted for any infringement of the regulations. To obviate, as far as possible, any foundation for such plea, it is ordered that vessels clearing out for any port or place with respect to which there shall be at the time any order in council subjecting vessels from it to quarantine, are to be furnished with an abstract of the quarantine regulations; and are to furnish themselves with quarantine signal flags and lanterns, and with materials and instruments for fumigating and immersing goods. The following are the clauses in the act as to signals:—

Every commander, master, or other person having the charge of any vessel liable to quarantine shall, at all times, when such vessel shall meet with any other vessel at sea, or shall be within two leagues of the coast of the United Kingdom, or the Islands of Guernsey, Jersey, Alderney, Sark, or Man, hoist a signal to denote that his vessel is liable to quarantine; which signal shall in the day time, if the vessel shall have a clean bill of health, be a large yellow flag, of 6 breadths of bunting, at the main topmast-head; and if such vessel shall not have a clean bill of health, then a like yellow flag with a circular mark or ball, entirely black, in the middle thereof, whose diameter shall be equal to the breadth of bunting; and in the night time, the signal shall in both cases be a large signal lantern with a light therein (such as is used on board his Majesty's ships of war), at the same mast-head: and every commander, master, or other person, shall keep such signals hoisted during such time as the said vessel shall continue within sight of such other vessels, or within 2 leagues of the said coast or islands and while so in sight, or within such distance, until such vessel so liable to quarantine shall have arrived at the port where it is to perform quarantine, and until it shall have been legally discharged from the performance thereof; on failure whereof, such commander, master, or other person, shall forfeit 100*l.*—*§* 8.

Every commander, master, or other person having the charge of any vessel on board whereof the plague or other infectious disease highly dangerous to the health of his Majesty's subjects shall actually be, shall at all times, when such vessel shall meet with any other vessel at sea, or shall be within two leagues of the coast of the United Kingdom, or the Islands of Guernsey, Jersey, Alderney, Sark, or Man, hoist a signal, to denote that a vessel has the plague or other infectious disease; which signal shall be in the day time a flag of yellow and black, borne quarterly, of 8 breadths of bunting, at the main topmast-head; and in the night time, the signal shall be 2 large signal lanterns, commonly used on board ships of war, one over the other, at the same mast-head: and such commander, master, or other person, shall keep such signal hoisted during such time as the said vessel shall continue within sight of such other vessel, or within 2 leagues of the coast or islands aforesaid, while so in sight, or within such distance, until such vessel shall have arrived at the port where it is to perform quarantine, and until it shall have been legally discharged from the performance thereof; on failure thereof, such commander, master, or other person, shall forfeit 100*l.*—*§* 9.

Any commander, master, or other person, knowing that the same is not liable to the performance of quarantine, shall hoist such signal, by day or night, such commander or other person shall forfeit 10*l.*—*§* 10.

But, instead of printing the act, and the various orders in council that have grown out of it, it will be sufficient to lay the following abstract of them before the reader. This abstract has been prepared by the Custom-house; and contains a distinct summary of the various rules and regulations to be complied with.

ABSTRACT OF QUARANTINE REGULATIONS.

It is the first place to be observed, that all persons are presumed to know, and are bound to take notice, not only of the quarantine regulations established by act of parliament (as they are of any other public act), but likewise of every order in council made for the performance of quarantine, and published in the *London Gazette*: and as it is easily in their power to inform themselves of such regulations, and particular care is taken by this and other means to promulgate such of them as apply to their respective situations, *previous to their being actually put under quarantine*, when they will receive directions for their guidance from the quarantine officers, no plea of ignorance will be admitted as an excuse for any neglect, breach, or violation thereof; but for the sake of example, and for the security of the public health, the pains, penalties, and punishments of the law will be enforced with the utmost severity.

Duty of Commanders and Masters of Vessels.

Upon arrival off the coast of the United Kingdom, or the Islands of Guernsey, Jersey, Alderney, Sark, or Man,

To deliver to the pilot who shall go on board, a written paper, containing a true account of the name of the place at which his ship loaded, and of all the places at which he touched on the homeward voyage. Neglecting or refusing to deliver such papers, or making any false representation or wilful omission therein, subjects him to a penalty of 500*l.*

Upon entering or attempting to enter any port, and being spoke by any quarantine officers, To give a true answer in writing or otherwise, and upon oath or not upon oath (according as he shall be required), to the preliminary questions put to him by such quarantine officers, for the purpose of ascertaining whether his vessel is or is not liable to quarantine. Neglecting or refusing to bring his vessel as soon as it can be done with safety, in obedience to the requisition of the quarantine officer, subjects him to the penalty of 300*l*.

Refusing to answer such questions, or giving any false answer thereto (if not upon oath), subjects him to the penalty of 200*l*.

If upon oath, to the punishment for wilful and corrupt perjury.

If any infectious disease shall appear on board, the master is to repair to such place as his Majesty shall direct, and make known his case to the officer of customs, and he is to remain at that place until directions are given by the Lords of the Privy Council. He is not to permit any of the crew or passengers on board to go on shore, and he, his crew, and passengers, are to obey such directions as shall be received from the Lords of the Privy Council.

Not acting in conformity to the regulations herein directed, or acting in disobedience to such directions as shall be received from the Privy Council, he incurs the penalty of 100*l*.

If informed by the pilot that his vessel has become liable to quarantine, by reason of any proclamation made subsequent to his departure, to hoist and keep hoisted a like signal, under the penalty of 100*l*.

To give to the pilot coming on board a written paper containing a true account of the different articles composing his cargo. Neglecting or refusing to do so, or making a false representation or omission, subjects him to a penalty of 50*l*.

Masters of vessels liable to quarantine, and other persons on board them or having communication with them, are to repair to the appointed quarantine station, and may be compelled to do so by force.

The master of any vessel having disease on board, on meeting with any other vessel at sea, or within 2 leagues of the coast of the United Kingdom, or the Islands of Guernsey, Jersey, Alderney, Sark, Man, is to hoist a signal to denote that his vessel has such disease on board, and is to keep such signal hoisted during such time as he shall continue within sight of such vessels, or within 5 leagues of the coast or islands aforesaid, while so in sight or within such distance, until the vessel shall arrive at the port where she is to perform quarantine, and until she shall be legally discharged from the performance thereof. Failing herein, the master incurs the penalty of 100*l*.

If he shall refuse or omit to disclose the circumstances of such infection prevailing either at any place at which he has been, or on board his vessel, in his answers to the preliminary questions put to him by the quarantine officer, or if he shall wilfully omit to hoist, and to keep hoisted, the proper quarantine signal to denote that his ship is liable to quarantine, he incurs the penalty of 100*l*.

Upon attempting to enter any port, which is not the port at which he ought to perform quarantine, he may be compelled to desist therefrom, in order that he may proceed to the proper quarantine port, by guns being fired upon the ship, or any other kind of force being used that may be necessary for the attainment of that object.

Quitting or knowingly suffering any seaman or passenger to quit his ship, by going on shore, or going on board any other vessel or boat, before discharged from quarantine, or

Not repairing to the proper quarantine station within a convenient time after due notice given, incurs a penalty of 100*l*.

To repair in all cases to the proper quarantine port, as herein-after stated in the Appendix, according as he shall or shall not be furnished with a clean bill of health, and according to the port or place to which he shall be bound, as herein stated.

But if through ignorance, or by stress of weather, damage, loss, or accidents of the sea, he shall have passed the proper quarantine port, he may (having a clean bill of health on board, and giving satisfactory proof thereof upon oath, and by the oath of the pilot, if any on board, and if the same was not wilfully or intentionally done or occasioned) be permitted to proceed to any other quarantine port, in the discretion of the quarantine officer, keeping the proper quarantine signal hoisted during the whole time.

Upon his arrival at the proper quarantine port, to give true answers upon oath to all the quarantine questions, and to make oath to the truth of his log-book, and the times at which the entries therein made: failing herein, he incurs the penalty of wilful and corrupt perjury.

He is also to repair to the particular station which shall be appointed by the quarantine officer to the said ship or vessel.

To deliver up to the quarantine officer his bill of health, manifest, log-book, and journal.

Wilfully refusing or neglecting so to do, subjects him to a penalty of 100*l*.

If not bound to any port of the United Kingdom, or the Islands aforesaid, and attempting to enter any port thereof (except to wait for orders, or in consequence of stress of weather or accidents of the sea), he shall give satisfactory proof thereof to the quarantine officers, and give true answers upon oath to the preliminary questions, and strictly conform to all such directions as he shall receive from the quarantine officer, touching his continuance at such port, or departure from thence, or repair to any other; and also with respect to all other quarantine regulations; in default of which, he shall be compelled to proceed to sea by any means or by any kind of force that shall be necessary for that purpose.

Having performed quarantine in any foreign lazaret, the vessel is to be put under quarantine in some of the ports herein-after appointed, until the master shall produce to the quarantine officer the proper documents in proof thereof; upon production whereof the said vessel shall not be obliged to perform quarantine, but shall remain at such station until released by order in council.

Unshipping, or moving in order to unship, any goods from on board any vessel liable to quarantine, subjects to a penalty of 500*l*.

Chastelinely conveying, or secreting or concealing for the purpose of conveying, any letter, paper, or other article, from any vessel actually performing quarantine, subjects to a penalty of 100*l*.

Note.—Every commander or master of any vessel clearing out or about to sail for any port or place in the Mediterranean, or in the West Barbary on the Atlantic Ocean, or for any port or place respecting which there shall at the time be any order of his Majesty in council in force, subjecting to quarantine coming from thence to quarantine, is to receive from the principal officer of the customs at such port or place, this printed Abstract of the Quarantine Regulations, which such commander or master is to cause to be affixed on some convenient and conspicuous part of his said vessel, and to remain so affixed until his return with his said vessel to some port or place in the United Kingdom or the Islands aforesaid.

And every such commander and master is likewise to provide and take on board at least one of the proper quarantine signal flags and lanterns, and likewise materials and instruments of sanitation, and immersion, and to keep the same on board, to be used upon his return to the United Kingdom or the Islands aforesaid.

Duty of Pilots.

Pilots are strictly to observe the following directions:—

foreign parts, of the places at which his vessel loaded, and at which he touched on his said home-ward voyage.

To give notice to such commander or master of any proclamation, or order in council, made after the departure of such vessel from the United Kingdom or the islands aforesaid, and then in force, by which vessels coming from any place mentioned in such account shall be liable to quarantine. Neglecting or omitting to give such notice subjects them to a penalty of 100*l*.

To give a like notice of any proclamation then in force, by which vessels having on board any of the articles mentioned in the master's account shall be liable to quarantine. Neglecting or omitting to give such notice subjects them to a penalty of 100*l*.

To remain on board in the same manner as any of the officers, crew, or passengers, and not to quit the said vessel before or after the arrival, either by going on shore, or by going on board any other vessel or boat with intent to go on shore, until she is regularly discharged from quarantine; and they may be compelled by any persons whatsoever, and by any kind of necessary force, to return on board the vessel. If they offend herein they incur a penalty of 300*l*, and 6 months' imprisonment.

To bring any such vessel into any port or place other than the port or place appointed for the reception of vessels so liable to quarantine, as stated in the Appendix, unless compelled by stress of weather, adverse winds, or accidents of the seas, of which the pilot, as well as the commander or master of the vessel, is to give satisfactory proof upon oath. If they offend herein they incur a penalty of 300*l*.

To bring the ship to, as soon as it can be done with safety in obedience to the requisition of the quarantine officer. Failing herein subjects them to a penalty of 100*l*.

Duty of other Persons.

When any infectious disease actually appears on board any vessel, all persons on board are to obey the direction of the privy council, under a penalty of 100*l*.

Not to quit such vessel, either by going on shore, or by going on board any other vessel or boat with intent to go on shore, until regularly discharged from quarantine; and if they quit the ship they may be compelled by any person whatsoever, and by any kind of necessary force, to return on board the vessel, and are also liable to a penalty of 300*l*, and 6 months' imprisonment.

Whether liable to quarantine, or admitted to perform quarantine, or having had any intercourse or communication with any such persons as are liable to or under quarantine, all persons are to obey all such orders as they shall receive from the quarantine officer, and to repair to the lazaret, vessel, or place appointed for the performance of quarantine. Willfully refusing or neglecting to repair forthwith, when required so to do by such officers, or escaping from or out of such lazaret, vessel, or place, may be compelled to repair or return thereto by any kind of necessary force, and are subject to a penalty of 300*l*.

Loading or unshipping, or moving in order to the landing or unshipping, of any goods, packets, packages, baggage, wearing apparel, books, letters, or any other articles whatever, from vessels liable to quarantine, are liable to a penalty of 500*l*.

Clandestinely conveying, or secreting or concealing for the purpose of conveying, any goods, letters, or other articles as aforesaid, from any vessel actually performing quarantine, or from the lazaret or other place where such goods or other articles shall be performing quarantine, are liable to a penalty of 500*l*.

Having quitted or come on shore from any vessel liable to or under quarantine, or having escaped from any lazaret or other place appointed in that behalf, may be seized and apprehended by any constable or other peace officer, or by any other person whatever, and carried before a Justice of the peace, who may grant his warrant for conveying such person to the vessel, lazaret, or other place from which he shall have escaped, or for confining him in any place of safe custody (not being a public gaol) until directions can be obtained from the privy council.

Knowingly and wilfully forging or counterfeiting, interlining, erasing, or altering, or procuring to be forged, &c., any certificate directed by any order in council touching quarantine, or publishing the same as true, or uttering any such certificate with intent to obtain the effect of a true certificate, knowing its contents to be false, are guilty of felony.

What Vessels are liable to Quarantines.

All vessels (as well ships of war as all others) with or without clean bills of health, coming—
From or having touched at any place in the Mediterranean, or the West Barbary on the Atlantic ocean.

From any other place from which his Majesty shall from time to time adjudge it probable (and shall so declare by proclamation or order in council) that the plague, or any other infectious disease or distemper highly dangerous to the health of his Majesty's subjects, may be brought.

Note.—They are considered as liable to quarantine from the time of their leaving any of the said places.

All vessels having communication with any of the before-mentioned ships or vessels, or receiving—
Any person whatever from or out of such vessel, whether such person shall have come from any of the said places, or shall have gone on board of such vessel, either in the course of her voyage, or upon her arrival off the coast of the United Kingdom, &c.—Or,

Any goods, wares, or merchandise, packets, packages, baggage, wearing apparel, goods, letters, or any other articles whatever, from or out of such ship or vessel.

Note.—They are liable to quarantine from the time of their receiving any such persons or goods.

All vessels coming from any port or place in Europe without the Straits of Gibraltar, or on the continent of America, and lying on board—

Any of the articles enumerated (a list of which articles see in the Appendix);

And not producing a declaration upon oath, made by the owner, proprietor, shipper, or consignee, stating either that such articles are not the growth, produce, or manufacture of Turkey, or of any place in Africa within the Straits of Gibraltar, or in the West Barbary on the Atlantic Ocean, or stating of what place they are the growth, produce, or manufacture.

Any vessels and boats receiving—

Any of the said goods, wares, or merchandise, or other articles enumerated.

Signals.

All vessels with the plague or other highly infectious disease actually on board—
In the day time—A flag of yellow and black, borne quarterly, of 8 breadths of bunting, at the main-topmast-head.

In the night time—Two large signal lanterns, with a light therein, such as are commonly used on board his Majesty's ships of war, one over the other, at the same mast-head.

All vessels with clean bills of health—

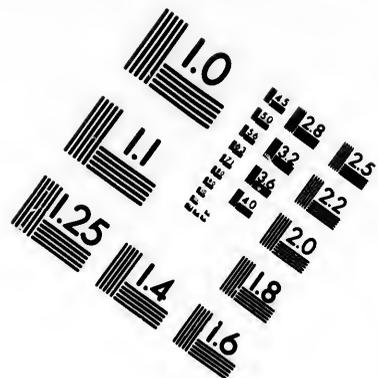

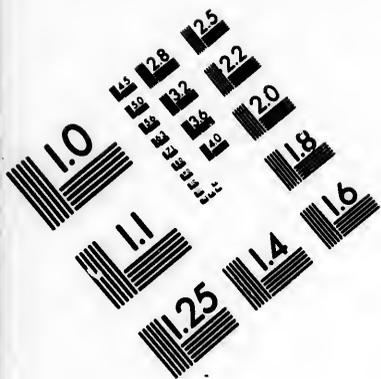

In the day time—A large yellow flag, of 6 breadths of bunting, at the main-topmast-head.

In the night time—A large signal lantern, with a light therein, such as is commonly used on board his Majesty's ships of war, at the same mast-head.

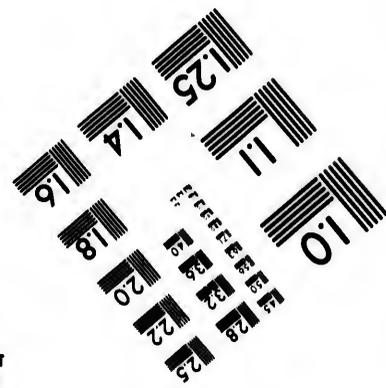

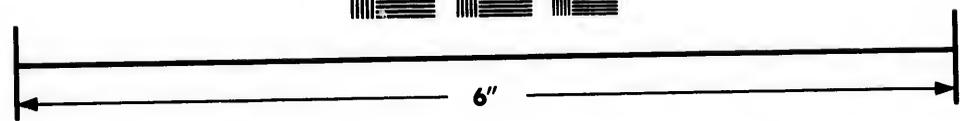

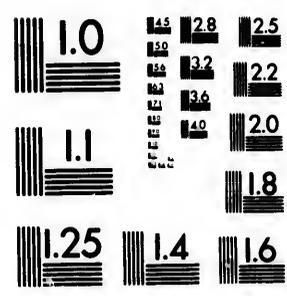

All vessels without clean bills of health—

In the day time—A large yellow flag, with a circular mark or ball, entirely black, in the middle thereof, whose diameter shall be equal to 3 breadths of bunting, at the main topmast head.
 In the night time—Same as for vessels with clean bills of health.
Note.—Every commander or master of a vessel about to sail for the Mediterranean, or for any place respecting which an order in council shall be in force, subjecting vessels coming thence to quarantine, to be provided with the quarantine signals above mentioned, and to keep the same on board, to be used on his return to the United Kingdom.
 Any commander or master hoisting either of the said quarantine signals, by day or night, knowing that his vessel is not liable to quarantine, incurs the penalty of 50l.

APPENDIX.—A List of Articles enumerated considered as most liable to Infection.

Apparel of all kinds	Gold or silver on thread, cotton, hair, wool, or silk, or any other substance herein-before mentioned	Flattings of hat, cap, case, straw, or hair
Artificial flowers	Grass	Quills
Bast, or any articles made thereof	Grass	Shirts and all cloths
Beads, bracelets, or necklaces in strings	Hats, caps, or bonnets of straw, chip, case, or any other material	Silk, viz.—crapes and flannels, laces and silks, veils, shawls, and crapes
Beds and bed ticks	Hemp	Skins, hides, and furs, and parts or pieces of skin, hides, and furs, whether wet-dressed or in part or wholly tanned, tawed, or dressed
Books	Horns and horn tips	Stockings of all sorts
Brooms of all sorts	Flax of all sorts	Thread, raw, white, white, wool, washed raw or any way wrought
Brushes of all sorts	Leather	Yarns of all sorts
Burdets	Linen	And all other goods whatsoever, if they shall have arrived in or with packages containing wholly or in part of any of the said articles.
Canals	Late strings, bathings, or harp strings	
Canvases	Mattresses	
Carnicula wool	Mats and matting	
Carpets	Mobile yarn	
Coronals not tarred	Nets, saw or old	
Cotton wool	Paper	
Cotton yarn	Pack-thread	
Cotton thread	Parhamel	
All articles wholly made of or mixed with cotton, silk, wool, thread, or yarn	Peas	
Down		
Feathers		
Flax		
Furriers' waste		

QUARANTINE PORTS.—For Vessels liable to Quarantine not coming from any Place actually infected, or having any Infection actually on Board.

Without clean Bills of Health.
 All vessels, ships of war, &c. as herein-after specified, to perform quarantine at *Standgate Creek or Milford Haven.*
 Ships of war, transports, or other ships in the actual service of government, under the command of a commissioned officer in the service of his Majesty's navy, whithersoever bound, to perform quarantine at the *Motherbank, near Portsmouth*, at a place marked out with yellow buoy.

With clean Bills of Health.
 All ships and vessels bound to the following places, to perform quarantine at *Standgate Creek* :—
 London, Rochester, Faversham, or any creeks or places belonging to or within any of the above ports.
 All ships and vessels bound to the following places, to perform quarantine at *Witcham Wood, between Hull and Grimsby* :—

Leigh	Widnesch	St. Ives	Lisiansly
Maldoe	Boston	Padstow	Femina
Haverich	Grimsby	Bilford	Milford
Ipswich	Hull	Exmouth	Cardigan
Woodbridge	Bridlington	Hilcombe	Aberystwith
Aldbrough	Scarborough	Or any creeks or places belonging to or within any of the above ports.	
Southwell	Whitby		
Yarmouth	Stockton		
Blackney and Clay	Sunderland		
Walls	Newcastle		
Lynn	Berwick		

And any creeks or places belonging to or within any of the above ports.

All ships and vessels bound to the following places, to perform quarantine at *Barnbor' Pool, near Liverpool, or Milford Haven* :—
 Carlisle
 Whitehaven
 Lancaster
 Preston
 And any creeks or places belonging to or within any of the above ports.

All ships and vessels bound to the following places, to perform quarantine at the *Motherbank, near Portsmouth* :—
 Buxleich
 Deal
 Dover
 Rye
 Newhaven
 Shoreham
 And any creeks or places belonging to or within any of the above ports.

All ships and vessels bound to the following places, to perform quarantine at *St. Just's Pool, within the mouth of the harbour of Falmouth* :—
 Fowey
 Weymouth
 Lynne
 Exeter
 Dartmouth
 Plymouth
 Looe
 And any creeks or places belonging to or within any of the above ports.

All ships and vessels bound to the following places, to perform quarantine at *King Road and Portshute Pill* :—
 Bridgewater
 Minehead
 Bristol
 Gloucester
 And any creeks or places belonging to or within any of the above ports.

All ships and vessels bound to the following places, to perform quarantine at *Milford Haven* :—
 St. Ives
 Padstow
 Bilford
 Exmouth
 Hilcombe
 Or any creeks or places belonging to or within any of the above ports.

All ships and vessels bound to the following places, to perform quarantine at *Fowey, near Plymouth* :—
 Jersey
 Guernsey
 Or either of them, or any part of either of them.

All ships and vessels bound to the following places, to perform quarantine at *Fowey, near Plymouth* :—
 The eastern coast of Scotland, comprehending the ports of
 Leith
 Berwick
 Alloa
 Dunbar
 Kirkcaldy
 Or any member, creek, or other place belonging to or within any of the above ports.

All ships and vessels bound to the following places, to perform quarantine at *Holy Loch, in the Firth of Clyde* :—
 The western coast of Scotland, comprehending the ports of
 Glasgow
 Greenock
 Campobell Town
 Oban
 Or any member, creek, or other place belonging to or within any of the above ports.

All ships and vessels bound to the following places, to perform quarantine at *Strathclyde Bay* :—
 The northern ports of Scotland, comprehending the ports of
 Inverness
 Orkney
 Caithness
 Moray
 Or any member, creek, or other place belonging to or within any of the above ports.

All ships and vessels bound to the following places, to perform quarantine at *Holy Loch, in the Firth of Clyde* :—
 The south-west ports of Scotland, comprehending the ports of
 Dundee and Kirkcaldy, or any member, creek, or other place belonging to or within any of the above ports.
 Bound in any port of Ireland, but not in Mission Head and Valentia, to perform quarantine at the *Bay of Bantry*.
 Bound between Tynard and Rathlin, to perform quarantine at *Lough Larne and the Bay of Carrigrohilly, near Kilconnor Point, opposite to the town of Carrigrohilly*.
 Bound to Rathlin and Tory Island, to perform quarantine at *the Harbour of Killybegs*.
 Bound to Tory Island and Blackrock Bay, to perform quarantine at the *Harbour of Killybegs*.
 Bound to Loop Head and Nieveen Head, to perform quarantine at *Scattery Bay, in the river of Limerick*.
 Bound in any place on the coast of the United Kingdom, or within any of the ports or limits herein-before mentioned or specified, to perform quarantine at such places herein-before specified, or to perform quarantine, as shall be ordered in the port or ports which such vessels respectively shall be so bound.

Provisionary Questions.
 1. What is the name of the vessel, and the name of the commander or master?
 2. Are you the commander or master? Where does she belong?
 3. From whence do you come?
 4. To what place are you bound?

1. At what ports have you called on your passage?
 2. What time were you at each port?
 3. Did the place or any part of it appear to be infected with the disease?
 4. If so, what measures were taken?
 5. How many persons were on board?
 6. How many of them were sick?
 7. How many died?
 8. How many recovered?
 9. How many were discharged?
 10. How many were buried?
 11. How many were taken on board?
 12. How many were taken on board?
 13. How many were taken on board?
 14. How many were taken on board?
 15. How many were taken on board?
 16. How many were taken on board?
 17. How many were taken on board?
 18. How many were taken on board?
 19. How many were taken on board?
 20. How many were taken on board?

Immigrants.—The number of immigrants arrived at Quebec, in 1829, was 15,945; in 1830, 32,000; in 1831, 50,354; in 1832, 51,746; [in 1833, 22,002; in 1834, 30,917; in 1835, 30,017; in 1836, 27,513; in 1837, 21,835; in 1838, 9,950; and in 1839, 7,513.—*Am. Ed.*]

MONTREAL, the second town of Canada, is situated on the south side of an island of the same name, in the St. Lawrence, about 180 miles above Quebec, in lat. 45° 31' N., lon. 73° 35' W. Population 57,800. The harbour is not large, but it is safe and commodious; the facilities for navigation afforded by the noble river on which it is situated being such, that vessels of 600 tons burden may ascend thus far without difficulty. The North American fur trade principally centres in Montreal; which also enjoys the principal share of the commerce between Canada and the United States. It is increasing faster than Quebec, or than any city in British America. Imports and exports included in those of Quebec.

QUEBEC.—A comparative Statement, for the Seven Years ending with 1835, of the Tonnage and Seamen employed in the Export Trade of the Province of Canada, distinguishing the Proportions thereof cleared in each Year for the United Kingdom from those of other Ports; the Tonnage cleared for the United Kingdom with Wood and other Goods separately; together with the Value of the Exports under each Head.—(Customs' Returns.)

Note.—The Returns from Gaspe had only been received to the 5th July last, and from New Carlisle to the 10th of October, 1835.—(Sup)

QUERCITRON BARK, the bark of a species of oak growing in many parts of North America. It is used in dyeing yellow colours.—(See BARK.)

QUILLS (Fr. *Plumes à écrire*; Ger. *Posen*; It. *Penne da scrivere*; Rus. *Stilniki*; Sp. *Canones para escribir*), the hard and strong feathers of the wings of geese, ostriches, swans, turkeys, crows, &c. used in writing. They are classified according to the order in which they are fixed in the wing; the second and third quills being the best. Crow quills are chiefly used for drawing. The goodness of quills is judged partly by the size of the barrels, but more by the weight; hence the denomination of quills of 14, 15, &c. *solts*, per *mille*, each mille consisting of 1,200 quills. The duty on goose quills produced

in 1833, 4,002, the number of 33,688,000. Those from Rigas city paid, was 17 16 15 14 Hamburg quill

RAGS (Du. *Lampen*; It. *St.*) of (generally de estimation, rags especially in the mode in which statements apply. *Woolen Rags* continent of Europe in the curv are unravelled favourable to the wool is introduced in this process pulp for paper; them out into so Hamburg and the The total average 7l. per ton, duty 13s. to 15s. for description.

Linen Rags Ancona, Messina, Spain, and Portugal; worth, at Exclusive of the very recently, e some years been into the London time of the long preservative amount.—(See PAPER.)

The imported almost exclusive difference in quantity of the process has rendered for that purpose, of colour.

There is a general, those from the northern ports, whitened by ex does not much are chiefly collected in America.

Freights are, at 10s. 4d. Ancona selected and prices per cwt

in 1833, 4,202l. 11s.; which, as the duty is at the rate of 2s. 6d. the 1,000, shows that the number of quills entered for home consumption that year must have amounted to 33,868,000. Quills are principally imported from the Netherlands and Germany; but those from Riga are the finest. The price of Riga quills in London, in February, 1834, duty paid, was as under:—

Quills, goose, 17 loth per mille	£ s. d.	£ s. d.	Quills, goose, 13 loth per mille	£ s. d.	£ s. d.
16	2 15	0 to 3 0 0	12	0 13	0 to 0 14 9

			Pinions	0 5	0 to 0 6 0

Hamburgh quills are about 40 per cent. lower.

R.

RAGS (Du. *Lampen, Vodden*; Fr. *Chiffes, Chiffons, Drapeteux, Drilles*; Ger. *Lampen*; It. *Siracci, Strazze*; Rus. *Treppe*; Sp. *Tropos, Harapos*), shreds or fragments of (generally decayed) linen, woollen, or cotton cloth. Though commonly held in little estimation, rags are of great importance in the arts, being used for various purposes, but especially in the manufacture of paper, most of which is entirely prepared from them. As the mode in which British rags are collected must be well known to every one, the following statements apply only to the trade in foreign rags.

Woollen Rags.—Woollen and linen rags are imported in considerable quantities from the continent of Europe, and from Sicily. The woollen rags are chiefly used for manure, especially in the culture of hops; but rags of loose texture, and not too much worn or decayed, are unravelled and mixed up with fresh wool in the making of yarn; a practice more favourable to the cheapness than to the strength and durability of the fabrics into which this old wool is introduced. Woollen rags are also used for making flocks or stuffing for beds, &c.: this process is performed chiefly by the aid of the same kind of engines that prepare pulp for paper; these wash the rags thoroughly, at the same time that they grind and tear them out into separate threads and fibres. The chief importation of woollen rags is from Hamburgh and Bremen; and there are some got from Rostock, but the quantity is trifling. The total average importation varies from 300 to 500 tons, and the price ranges from 6l. to 7l. per ton, duty (7s. 6d.) and freight paid on such as are used for manure; and from 13l. to 15l. for coloured woollens of loose texture, and 18l. to 20l. for white of the same description.

Linen Rags are principally imported from Rostock, Bremen, Hamburgh, Leghorn, Ancona, Messina, Palermo, and Trieste. Their export from Holland, Belgium, France, Spain, and Portugal, is strictly prohibited. The imports usually amount to about 10,000 tons; worth, at an average, from 21l. to 22l. per ton, duty (5s.) and freight included. Exclusive of the very large quantity collected at home, all the rags imported were, until very recently, employed in the manufacture of paper; but the Americans, who have for some years been large importers from the Mediterranean and Hamburgh, have lately come into the London market, and purchased several cargoes: a circumstance sufficiently indicative of the languid state of the paper manufacture in this country, occasioned by the oppressive amount of the duties with which it is burdened, and of the duty on advertisements. —(See PAPER.)

The imported rags are coarser and inferior in appearance to the English; but, being almost exclusively linen, they are stronger, and bear a price disproportioned to the apparent difference in quality: this disproportion has been materially augmented since the introduction of the process of boiling the rags in ley, and afterwards bleaching them with chlorine, has rendered foreign rags fit for making fine paper, and, indeed, in some respects preferable for that purpose, by their affording greater strength of texture combined with equal whiteness of colour.

There is considerable variety in the appearance of rags from different ports; but, in general, those from the north of Europe are darker and stronger than those from the Mediterranean ports. The latter are chiefly the remains of outer garments, and have become whitened by exposure to the sun and air; but since the improvements in bleaching, this does not much enhance their value in the British market. The rags shipped from Trieste are chiefly collected in Hungary. It is only within these few years that we have brought rags from this port, which now furnishes us with considerable supplies. Most part of the rags collected in the Tuscan states, to the extent of 10,000 or 12,000 bags a year, goes to America.

Freights are, at an average, about—Hamburgh and Bremen, linen 20s. per ton, woollen, 25s.; Rostock, 40s.; Ancona and Leghorn, 38s. to 40s.; Trieste and Sicily, 45s. to 46s. Linen rags are almost all selected and assorted previously to their shipment from the foreign port. Their distinguishing marks and prices per cwt. in the London market, January, 1832, were as follow: viz.

and (From Montreal) and above Three M. one vint, M. one one rancy. 101. 12s. hours after they arrive at Quebec, ditto, for 1833.

RAIL-ROAD, TRAM or WAGON ROAD, a species of road having tracks or ways formed of iron, stone, or other solid material, on which the wheels of the carriages passing along it run. The object in constructing such roads is, by diminishing the friction, to make a less amount of power adequate either to impel a carriage with a greater velocity, or to urge forward a greater load.

Construction of Railroads.—The friction on a perfectly level rail-road, properly constructed, is estimated to amount to from $\frac{1}{10}$ th to $\frac{1}{4}$ th only of the friction on an ordinary level road; so that supposing the same force to be applied in both cases, it would move a weight from 10 to 7 times as great on the former as on the latter. But if there be a very moderate ascent, such as 1 foot in 50, which in an ordinary road would hardly be perceived, a great increase of power on the rail-road is required to overcome the resistance that is thus occasioned. The reason is, that the ordinary load on a level rail-road is about seven times as great as on a common turnpike road; so that when the force of gravity is brought into operation by an ascending plane, its opposing power, being proportioned to the load, is 7 times as great as on a common road. Hence the vast importance of having rail-roads either level, or as nearly so as possible.

It is also of great importance that rail-roads should be straight, or, at least, free from any abrupt curves. Carriages being kept on the road by *flanges* on the wheels, it is obvious, that where the curves are quick, the friction on the sides of the rails, and consequent retardation, must be very great. In the Manchester and Liverpool rail-road, the curves form segments of a circle which, if extended, would embrace a circumference of 15 miles.

Iron rail-roads, the kind now generally used, are of 2 descriptions. The *flat rail*, or *tram road*, consists of cast-iron plates about 3 feet long, 4 inches broad, and $\frac{1}{2}$ an inch or 1 inch thick, with a flaunch, or turned up edge, on the inside, to guide the wheels of the carriage. The plates rest at each end on stone *sleepers* of 3 or 4 cwt. sunk into the earth, and they are joined to each other so as to form a continuous horizontal pathway. They are, of course, double; and the distance between the opposite rails is from 3 to 44 feet, according to the breadth of the carriage or wagon to be employed. The *edge rail*, which is found to be superior to the tram rail, is made either of wrought or cast iron; if the latter be used, the rails are about 3 feet long, 3 or 4 inches broad, and from 1 to 2 inches thick, being joined at the ends by cast metal sockets attached to the sleepers. The upper edge of the rail is generally made with a convex surface, to which the wheel of the carriage is attached by a groove made somewhat wider. When wrought iron is used, which is in many respects preferable, the bars are made of a smaller size, of a wedge shape, and from 12 to 18 feet long; but they are supported by sleepers, at the distance of every 3 feet. In the Liverpool rail-road the bars are 15 feet long, and weigh 35 lbs. per lineal yard. The wagons in common use run upon 4 wheels of from 2 to 3 feet in diameter. Rail-roads are either made double; 1 for going and 1 for returning; or they are made with *sidings*, where the carriages may pass each other.—(See the able and original *Essays on Rail-roads*, by Charles Maclaren, Esq., in the *Scotsman* for 1824, Nos. 511, 512. and 514.; see also Mr. Booth's Pamphlet on the Liverpool and Manchester Rail-road.)

Speed of Carriages on Rail-roads, &c.—The effect of rail-roads in diminishing friction is familiar to every one; and they have long been used in various places of this and other countries, particularly in the vicinity of mines, for facilitating the transport of heavy loads. But it is only since the application of locomotive engines as a moving power, that they have begun to attract the public attention, and to be regarded as of the highest national importance. These engines were first brought into use on the Darlington and Stockton rail-road, opened on the 27th of December, 1825. But the rail-road between Liverpool and Manchester is by far the greatest undertaking of this sort that has hitherto been completed. This splendid work, which is executed in the most approved manner, cost between 800,000l. and 900,000l.; and, as far as speed is concerned, has completely verified, and, indeed, far surpassed, the most sanguine anticipations. The road has the advantage of being nearly level; for, with the exception of a short space at Rainhill, where it is inclined at the rate of 1 foot in 96, there is no greater inclination than in the ratio of 1 foot in 880. The length of the rail-road is 31 miles; and it is usual to perform this journey in handsome carriages attached to the locomotive engines, in an hour and a half, and sometimes less! So wonderful a result has gone far to strike space and time out of the calculations of the traveller: it has brought, in so far, at least, as respects the facility of passing from the one to the other, Liverpool as near to Manchester as the western part of London is to the eastern part!

The extraordinary speed of carriages on rail-roads depends on the fact, that the friction, which on a perfectly level rail-road is the only resistance to be overcome, is the same for all velocities; so that, abstracting from the resistance of the air, which is so trifling as not to require to be taken into account, we have merely, in order to double or treble the velocity, to double or treble the power. But in vessels at sea, or in canals, which have to make their way through a comparatively dense medium, the resistance to be overcome increases as the square of the velocity; so that, to double the speed, the power must be multiplied by 4, and to treble it, it must be multiplied by 9, and so on.

Comparative Advantages of Railroads and Canals.—Astonishing, however, as are the results of the performances on the Manchester and Liverpool rail-road, we doubt much whether there be many more situations in the kingdom where it would be prudent to establish one. That carriages with passengers may be safely impelled along a perfectly level rail-road at a speed of 20 or 30 miles an hour, is a fact that is now proved experimentally; but before deciding as to the expediency of opening such a mode of communication between any two places, it is necessary to look carefully into the expense attending the formation of a rail-road with a suitable establishment of carriages, at the expense of keeping it and them in repair, and at the probable returns. The outlay, judging from what has taken place between Liverpool and Manchester, is quite enormous; the wear and tear of the engines, which is great under all circumstances, is increased in an extraordinary degree with every considerable increase of speed. We do not, therefore, consider the success that has hitherto attended the Liverpool and Manchester rail-road as at all warranting the construction of similar roads in most other places. The great size of these two towns, and still more their intimate connection,—Liverpool being, in fact, the port of Manchester and of the entire cotton district—occasions a very great intercourse between them: the number of passengers and the quantity of goods that are always in the course of being conveyed from the one to the other, is far greater than between any two equally distant places in the empire. If a rail-road had not succeeded in such a situation, it would have been madness to attempt the formation of one, at least as a mercantile speculation, anywhere else: and the fact that the dividend upon this very road has never hitherto exceeded 8½ per cent., affords but a slender presumption in favour of the success of several of the rail-road projects now afoot.

No general estimate can be formed of the comparative cost of canals and rail-roads; as it must, in every given instance, depend on special circumstances. It is, however, certain, that the cost of rail-roads, and particularly of keeping up the locomotive engines, is far greater than it was supposed it would be a short time since. It is reasonable, indeed, inasmuch as these engines are only in their infancy, to suppose that they will be gradually improved, and that ultimately their expense will be materially reduced; but at present it is a heavy drawback from the other advantages of rail-roads.

In as far as respects the conveyance of heavy goods, we believe that, even between Manchester and Liverpool, canals are generally preferred. It is not very material whether a ton of lime, or coal, or of manure, be moved with a velocity of 3 to 10 miles an hour; at least, the advantage of superior speed would, in such a case, be effectually overbalanced by a small additional charge.

The wonderful performances of the engines between Liverpool and Manchester struck, in the first instance, every one with astonishment, and led to the most extravagant speculations. It was supposed that the whole country would be forthwith intersected by rail-roads; that locomotive engines would be as common as stage coaches; and that the only way in which the canal proprietors could escape ruin, would be by converting canals into rail-roads! Soberer and sounder views are now entertained. The price of canal stock has recovered from the depression which it suffered in 1826. And it seems to be admitted by every one not expecting to profit by the prosecution of some scheme, that rail-roads between distant places, at least where a canal has already been constructed, must depend for returns chiefly on the conveyance of passengers and light goods; and that it would not be prudent to undertake their construction, except between places that have a very extensive intercourse together.

Steam Carriages on Common Roads.—A late committee of the House of Commons collected a good deal of evidence as to the probability of advantageously using locomotive engines or steam carriages on common roads. Most of the witnesses seem to have been very sanguine in their expectations. Mr. Farey, a very eminent practical engineer, declares that "what has been done proves to his satisfaction the practicability of impelling stage coaches by steam on good common roads, in tolerably level parts of the country, without horses, at a speed of 8 or 10 miles an hour." Mr. Farey further states, that he believes "that steam coaches will, very soon after their first establishment, be run for one third of the cost of the present stage coaches." We suspect that the latter part of this statement is a good deal more problematical than the first; but since there is nothing better than conjecture on which to found an opinion, it would be useless to indulge in further speculations. We may, however, remark, that though 3 years have elapsed since this evidence was given,

(The railway from London to Birmingham, and from the latter to Manchester, which had only been commenced at the date of the publication of our last Supplement, is now completed. This is at once the longest and by far the most important railway in the empire. It has cost an immense sum; but the magnitude of the places which it connects, and the vast intercourse carried on between them, will no doubt render it one of the principal thoroughfares in the kingdom. Hence, notwithstanding the great outlay upon it, shares in both divisions of the road, but especially in that between London and Birmingham, are eagerly sought after, and bring a very high premium. The work is admirably executed, and does credit, not to the proprietors only, but to the nation.

Projects are now on foot for extending the London, Birmingham, and Manchester line as far as Glasgow. It has, in fact, been already carried to Preston; and, though the difficulties to be encountered in the more northerly part of the road are of a very formidable description, it seems most probable that it will be completed in its whole extent. Should this be accomplished, the journey from London to Glasgow will be performed in eighteen or twenty hours!

Besides this great line, railways have been projected, and are now (January 1840) nearly completed, between London and Bristol; London and Southampton; Carlisle and Newcastle, &c. Numbers have also been, or are in the course of being, made in other parts of the country. In 1834, 1835, and 1836, a vast number of acts for railways were passed, but it is doubtful whether several of them will ever be carried into effect. It would be premature to speculate as to the chances of their success; but the probability seems to be that, like canals, some of them will be exceedingly profitable; while others, and probably the greater number, will yield a very inadequate return. No doubt it may be fairly anticipated that great improvements will be made in the construction of railways, and especially of locomotive engines; and in consequence, even comparatively unfavourable lines may come, in the end, to yield large profits. But taking the chances as they now stand, and abstracting from future contingencies, railways promise to be, at the outset, quite as advantageous for the public as for their proprietors.

The most eligible lines for railways in Ireland have been surveyed, and an able report upon the subject drawn up by commissioners appointed by government. There seems, however, but little probability that any of these lines will be executed by private associations; and the proposal for executing them at the public expense, is of a very questionable description. It may perhaps be expedient, under the peculiar circumstances of Ireland, for government to co-operate in the formation of a few great lines of railway, somewhat on the plan that it has followed as respects the formation of roads in the Highlands; that is, by assisting individuals and companies; but we doubt whether government can go further without opening a door to all sorts of abuse.

Railway Legislation.—Our legislation as to railways, and most other descriptions of public works, appears to be as defective as can well be imagined. It is, it must be admitted, no easy matter to decide how far interference should be carried in such cases, and where it should stop. But still it seems sufficiently obvious, that in this case the public interests have been too little protected; or rather, that they have been sacrificed in a way not very creditable to parliament. At present the practice is for a railway act to authorize the company in whose favour it is granted to charge certain specified rates of toll on the passengers and goods to be conveyed by their road, not for 15, 20, or even 50 years, but in *all time* to

come! Now of the public railway line to this line will the latter a vi calculated to ing. But the by most lines past; and it of roads and the fair presu tive. * By Mr. Mc containing a l cases of this

come! Now, as it appears to us, this is a singularly injudicious arrangement on the part of the public. There is, between any two or more places that may be named, a certain railway line that is preferable to any other that can be pointed out. The probability is that this line will be the first to be selected; and the act that gives it up to a company confers on the latter a virtual and substantial monopoly. The rates of charge imposed by the act are calculated to remunerate the projectors, supposing every thing to remain on the present footing. But the probability is that manufactures and population, in the places communicating by most lines of railway, will continue to increase in time to come, as they have done in time past; and it is all but certain that great improvements will be effected in the construction of roads and engines. Whatever, therefore, may be the chances of success at the outset, the fair presumption is, that most great lines of road will in the end be exceedingly productive. But, if we continue to abide by the present system, the public will be effectually excluded from all participation in these prospective advantages; and a few private associations will be able to make enormous profits, by monopolising improvements, and keeping up the expense of transit at an exorbitantly high level. It is idle to trust to competition to remedy a grievance of this sort. There may only be one practicable line of railway between two places; and if so, no other can, of course, come into competition with it. But though this were not the case, a company in possession of the best line might, if an opposition were threatened, reduce its rates till the opposition was defeated, and then raise them to the old level. Supposing, however, that a second road is made, its managers would most likely come to an understanding with the first, so that the tolls, instead of being reduced by the instrumentality of the new road, may be raised; and, were it otherwise, the question is, was the second road really necessary? Could not the first road have sufficed for the whole traffic to be carried on by both lines? If this be the case, it is clear the second road has been merely resorted to as a device for reducing the tolls charged on the first; as a means, in fact, for doing that, by an outlay of some hundreds of thousands, or it may be millions, of pounds, which might have been quite as effectually done by limiting the duration of the act authorising the first road, or by inserting a clause in it providing for the periodical revision of the tolls.

We are clear, indeed, that no act, authorising a private association to construct a railway or canal, to lay down gas pipes, to convey water into a town, or for any such purpose, ought ever to be passed without reserving to parliament power periodically to revise the tolls granted under it. Such revision would secure to the public a participation in future improvements, not in the contemplation of the parties when the project was entered upon; and it would do this without in any degree clogging the spirit of enterprise. Undertakings of this sort are not engaged in because there is a vague expectation, or even a considerable probability, of their yielding 20 or 30 per cent. of profit some 30 or 40 years hence; but because it is believed that they will immediately, or in the course of a few years, yield a reasonable profit; that is, a return of 8, 10, or 12 per cent. The chances of realising more than this at the distance of 20 or 25 years are rarely taken into account, and are worth very little indeed. This, however, is all that would be taken away by the revision in question; and, while a reservation of this sort would not stand in the way of any legitimate enterprise, the history of some of our existing companies shows that it may come to be of essential service to the public. We are therefore glad to have to state that, though late, the question respecting the propriety of reserving power to make periodical revisions of tolls on railways has been submitted to the consideration of parliament.* Some of the inconveniences that may arise out of the existing system as to railways, have already been experienced in the arrangements as to the conveyance of mails, and parliament has been obliged to interfere. But if parliament be short-sighted enough to concede certain rights and privileges to individuals or associations, without qualification or reservation, it has no right, on discovering its error, to endeavour to repair it by enacting new regulations to the detriment of the interests it has created. Its act has established rights in certain parties, which cannot be taken away by any new act, so long, at least, as any respect is entertained for the law of property, without granting the parties full compensation. To this, they have an indisputable right; and should any disagreement take place, the question as to the amount of compensation should always be left to the decision of a jury.

Though we should be the last to propose throwing any obstacles in the way of new improvements or contrivances, still we do not see any good reason for promoting them by treating other parties unfairly. This, however, has been done to an enormous extent in the case of railways. We do not presume to say whether it is expedient that passengers and goods conveyed by railway should be subjected to any tax. But if one of the most desirable modes of conveyance be exempted from taxation, on what pretence do we justify the imposition of taxes on other modes? If passengers by mail or post coaches impelled by horses be obliged to pay a certain duty, why are passengers by mail or post coaches impelled by

* By Mr. Morrison, who brought it before the House of Commons in the course of 1836, in a speech containing a fulsome exposition of the principles which justify the interference of the legislature in cases of this sort.

with a cwt. on the cheapest sorts, and 10s. or 12s. on the dearest, we are well assured that they would be very largely consumed by the middle classes; and that they would not infrequently be used even by the lower. Nothing but the magnitude of the duties prevent them from becoming of very considerable importance as an article of food; and it is really quite monstrous, that the public should be debarred from the use of a desirable article, on the stale and stupid pretence of its being necessary, in order to keep up the revenue; that it should be loaded with an oppressive duty. We admit the importance of keeping up the revenue; but so far from exorbitant duties having such an effect, they contribute more than any thing else to its reduction. They either limit the consumption of the articles on which they are laid to the very richest classes, or they cause them to be clandestinely supplied; reducing the revenue as well as the consumption far below the level to which it would attain were the duties moderate. But it is needless to reason speculatively on such a point. Have we not seen the revenue derived from spirits increased, by reducing the duty from 3s. 6d. a gallon to 2s. 6d. 1 and the revenue derived from coffee increased, by reducing the duty from 1s. 7d. per lb. to 6d. 1 And, as neither of these would be more grossly overtaxed than raisins, have we not every reason to expect that a like effect would be produced by an adequate reduction of the duties by which they are burdened?

Exclusive of raisins, a considerable quantity of undried grapes is annually imported from Spain and Portugal, in jars, packed in sawdust. The duty on these grapes, which is 20 per cent. *ad valorem*, produced, in 1837, 1,720*l*.

Raisins, the produce of Europe, may not be imported for home consumption, except in British ships, or in ships of the country of which they are the produce, or from which they are imported, on forfeiture of the goods, and of 100*l*. by the captain of the ship.—(3 & 4 Will. 4. c. 54. §§ 3, 32.)

No abatement of duty is made on account of any damage received by raisins.—(3 & 4 Will. 4. c. 52. 13.)

(The duty on *all* raisins, without distinction of quality, brought from a foreign country, has been reduced to 15s. a cwt.; and to half that sum on those brought from a British possession.—(1 & 5 Will. 4. c. 89. § 15.) This measure will, no doubt, materially increase the consumption of raisins. The tax ought, however, to have varied with the quality. A duty of 15s. a cwt. is not too much on Malaga muscades; but, to be in proportion, the duty on Smyrna blacks should not exceed 5s. a cwt. For the quantities imported, exported, and cleared for consumption in 1836 and 1837, see *ante*, p. 33.—*Sup.*)

(Nearly a million of dollars worth of raisins was last year imported into the United States; chiefly from Malaga, and the other Mediterranean ports.—*Am. Ed.*)

RANGOON, a commercial port and town of the Burmese dominions, situated about 26 miles from the sea, on the left bank of the eastern branch of the river Irawaddy, in lat. 16° 47' N, lon. 96° 20' E. The town and suburbs extend lengthwise about 1 mile along the bank of the river, being about 3/4 of a mile in depth; but the houses are very unequally scattered over this area. The fort, or rather wooden stockade, which contains the town, properly so called, is a regular square about 14 feet high, composed of heavy beams of teak timber. It appears from a census, taken a short time previously to the commencement of the war in 1824, that the population was 18,000, which, probably, is not far from its present amount.

Rangoon is the chief, and, indeed, almost the only, port of foreign trade in the Burmese dominions, which extend from between the 15th and 16th, up to the 26th and 27th degrees of N. lat., and from the 90th to the 96th degree of E. lon., containing an area of about 184,000 square miles, with a population of about 4,000,000. Its situation is extremely convenient for commercial purposes, being situated so near the sea, and commanding the navigation of the Irawaddy, which extends to Ava, the capital, a distance of nearly 500 miles. Rangoon is accessible to ships of even 1,200 tons burden; the navigation, although somewhat intricate, being safe and practicable with the assistance of the ordinary native pilots.

The town has many advantages for ship building. At neaps the tide rises and falls about 18 feet; and at springs from 25 to 30 feet. The principal teak forests are, at the same time, at a comparatively short distance, and there is a water conveyance for the timber nearly the whole way. Ship-building has, in fact, been carried on at Rangoon since 1786, and in the 38 years which preceded our capture of it, there had been built 111 square-rigged vessels of European construction, the total burden of which amounted to above 35,000 tons. Several of these were of from 800 to 1,000 tons. Under the direction of European masters, the Burmese were found to make dexterous and laborious artisans; in this respect, greatly surpassing the natives of our Indian provinces.

There are 5 considerable markets, where the ordinary necessaries of life, according to Burmese usage, are cheap and abundant: these are rice, excellent fish, and poultry.

Money.—The Burmese currency consists, for small payments, of lead; for larger ones, of gold and silver, but chiefly of the latter. There are no coins. At every payment, the metal must be weighed, and very generally assayed,—a rude and very inconvenient state of things. The weights used in the weighing of money are the same as those used on ordinary occasions; the *kyat* or *taul*, and the *peikha* or *ta*, being by far the most frequent. Silver may be considered as the standard. Gold is generally held to be about 17 times more valuable than silver. The weighing and assaying of the metals, and as currency, gives employment to a class of persons as brokers, money changers, and assayers. Every new assay costs the owner, if the metal be silver, 2*l*. per cent.; 1*l*. per cent. being the established remuneration of the assayer, while 1 per cent. is lost, or supposed to be lost, in the operation. If it be repeated 40 times, it follows that the original amount is wholly absorbed—a fact which shows the enormous waste of metal arising out of this rude substitute for coin.

Weights.—The weights in use at Rangoon, and throughout the Burman dominions, are as follow:—

1 Small <i>Kwa</i> (red beans) = 1 Large <i>Swa</i> .	2 <i>Mus</i> = 1 <i>Ma</i> .
1 <i>Large Swa</i> = 1 <i>Bal</i> .	4 <i>Ma</i> 's = 1 <i>Kyat</i> , outgo <i>Tical</i> .
1 <i>Bal</i> = 1 <i>Ma</i> .	100 <i>Kyats</i> = 1 <i>Peikha</i> , outgo <i>Vin</i> , = 355 <i>lbs.</i> avoird.

Measures of capacity are as follow:—

1 <i>Loupa</i> = 1 <i>Lau</i> .	4 <i>Sala</i> = 1 <i>Pyt</i> .	2 <i>Sarots</i> = 1 <i>Sat</i> .
1 <i>Lau</i> = 1 <i>Sala</i> .	2 <i>Pys</i> = 1 <i>Sarot</i> .	4 <i>Sats</i> = 1 <i>Tun</i> .

The last measure is what is usually called by us "a basket," and ought to weigh 18 *lbs.* of clean rice; of 36*l*. *avoirdupois*: it has commonly been reckoned at 4 cwt. All grains, pulses, certain oils, nutmeg, salt, and lime, are bought and sold by measure; other commodities by weight.

Commercial Regulations.—The following commercial treaty, entered into between the governments of England and the Court of Ava, in 1826, regulates the intercourse between the two countries: Art. 1.—Peace being made, &c. &c.—when merchants with an English certified pass from the ocean

try of the English ruler, and merchants from the kingdom of Burma pass from one country to the other, selling and buying merchandise, the sentinels at the passes and entrances, the established gatekeepers of the country, shall make inquiry as usual, but without demanding any money; and all merchants coming truly for the purpose of trade, with merchandise, shall be suffered to pass without hindrance or molestation. The governments of both countries, also, shall permit ships with cargoes to enter ports and carry on trade, giving them the utmost protection and security. And in regard to duties, there shall none be taken beside the customary duties at the landing places.

Art. 2.—Ships, whose breadth of beam on the inside (opening of the hold) is royal Burman cubits, of 19½ inches each, and all ships of smaller size, whether merchants from the Burman dominions, entering an English port under the Burmese flag, or merchants from the English country, with an English stamped pass, entering a Burmese port under the English flag, shall be subject to no other demands beside the payment of duties, and 10 ticals, 25 per cent. (10 sicca rupees), for a passport on leaving. Nor shall pilotage be demanded, unless the captain voluntarily requires a pilot. However, when ships arrive, information shall be given to the officer stationed at the entrance of the sea. In regard to vessels, whose breadth of beam exceeds 8 royal cubits, they shall remain, according to the 9th article of the treaty of Yandabo, without unshipping their rudders or landing their guns, and be free from trouble and molestation as Burmese vessels in British ports. Besides the royal duties, no more duties shall be given or taken than such as are customary.

Art. 3.—Merchants belonging to one country, who go to the other country and remain there, shall, when they desire to return, go to whatever country and by whatever vessel they may desire, without hindrance. Property owned by merchants they shall be allowed to sell. And property not sold, and household furniture, they shall be allowed to take away, without hindrance, or incurring any expense.

Art. 4.—English and Burmese vessels meeting with contrary winds, or sustaining damage in navigation, rigging, &c., or suffering shipwrecks on the shore, shall, according to the laws of charity existing in both, assistance from the inhabitants of the towns and villages that may be near, the master of the wrecked ship paying to those that assist suitable salvage, according to the circumstances of the case; and whatever property may remain, in case of shipwreck, shall be restored to the owner.

Commerce.—A considerable intercourse is carried on between the Burmese and Chinese dominions by an annual caravan, of which the merchants are all Chinese. The imports from China consist of manufactured articles, the chief export from Burma being cotton wool. The trade with foreign countries seaward is carried on with the ports of Chittagong, Dacca, and Calcutta, in Bengal; Madras and Masulipatan, on the Coromandel coast; the Nicobar Islands, in the Bay of Bengal; Penang, in the Straits of Malacca; and occasionally with the Persian and Arabian Gulfs. The largest trade is with Calcutta, owing to the great consumption of teak timber in the latter, and the facility with which it supplies the demand of the Burmese for Indian and British cotton goods. At an average of the 3 years ending with 1822-23, being those which immediately preceded the war with the British, there entered inwards at Calcutta, from the Burmese dominions, 25 ships, of the burden of 3,401 tons; and in the 3 years ending with 1829-30, 33 ships, of the burden of 8,990 tons. No direct trade has yet been carried on between Burma and any European country. The ships and tonnage which entered inwards at Madras from Burma were, in the 3 years ending with 1822-23, 5 ships, of the burden of 683 tons; and in the 3 years ending with 1829-30, 8 ships, of the burden of 1,170 tons. The articles exported to foreign countries from Rangoon are the following:—Teak wood, terra Japonica, or catechu, stick lac, bees' wax, elephants' teeth, raw cotton, opium, commonly called in India hural, gold, silver, rubies, sapphires, and horses, or rather the small, hardy pony of the country, which is much esteemed, particularly at Madras. By far the most important of these commodities is teak timber; the quantity of this wood annually exported is said to be equal to 7,500 full-sized trees, which, for the most part, consist of what India ship-builders call *akhita*, which are planks hewn out of the log with the ends at an immense waste. The teak forests of Pegu are by far the most abundant in India. The teak is nowhere to be found in the low alluvial lands to which the tide reaches, but abounds in the high lands beyond its influence. It seems to be very generally disseminated throughout the Burmese dominions. In the territory ceded to the British in Martaban, there are some fine forests, the timber of which is cut down for exportation, and where it is believed that saw-mills have very recently been established by some European settlers. The most accessible and extensive forests of teak in the Burmese dominions are in the province of Sarawadi, about 150 miles to the north of Rangoon, with which there is a vast communication. The principal imports into Burma are cotton, piece goods from India and Britain, British woollens, iron, steel, quicksilver, copper, cordage, borax, sulphur, gunpowder, saltpetre, fine-ware, earthen porcelain, English glass ware, opium, tobacco, cocoa and areca nuts, sugar, and spirits. Of these, by far the most important is cotton piece goods. The Burmese have few cotton manufacturers of their own, and appear from very early times to have been furnished with the principal part of their supply from the Coromandel coast. To these were afterwards added the cheaper fabrics of Bengal; and both are now, in a great measure, superseded by British manufactures, the use of which has spread very rapidly since the opening of the trade in 1814. In 1826-27, the exports and imports of the port of Rangoon were estimated each at the rate of 300,000*l.*—(We are indebted for this valuable article to our esteemed friend, John Crawford, Esq., who ascertained the particulars on the spot.)

RAPE, a biennial plant of the turnip kind (*Brassica napus* Lin.), but with a woody fusiform root scarcely fit to be eaten. It is indigenous, flowers in May, and ripens its seed in July. It is cultivated in many parts of England, particularly in Lincoln and Cambridge; partly on account of its seed, which is crushed for oil, and partly for its leaves as food for sheep. The culture of rape for seed has been much objected to by some, on account of its supposed great exhaustion of the land; but Mr. Loudon says that, where the soil and preparation are suitable, the after-culture properly attended to, and the straw and offal, instead of being burnt, as is the common practice, converted to the purpose of feeding and littering cattle, it may, in many instances, be the most proper and advantageous crop that can be employed by the farmer. The produce, when the plant succeeds well, and the season is favourable for securing the seed, amounts to from 40 to 50 bushels an acre. The seed is sold by the last of 10 quarters; and is crushed in mills constructed for that purpose.—(*Loudon's Ency. of Agriculture.*)

In addition to the rape-seed raised at home, we import considerable quantities, principally from Denmark. In 1831, our imports amounted to 407,375 bushels; of which 290,368 were from Denmark, 57,910 from Germany, 41,061 from France, with smaller quantities from Prussia, the Netherlands, and Italy. At an average of 1831 and 1832, the duties on foreign rape-seed for home consumption amounted to 491,708 bushels a year, producing an annual revenue of 3,105*l.* The price of English rape-seed in December, 1833, varied from 28*l.* to 39*l.* per last; the duty on foreign rape-seed is 10*l.* a last.

Rape-seed, the produce of Europe, may not be imported for home consumption, except in British

ships, or in ships

ships, or in ships of the country of which it is the produce, or from which it is imported.—(3 & 4 Will. c. 34. s. 22.)

Rape-Cakes, is the adhering masses of the huks of rape-seed, after the oil has been expressed. They are reduced to powder by a malt mill or other machine; and are used either as a top dressing for crops of different kinds, or are drilled along with turpentine seed. Rape cakes were worth, in December, 1833, from 5s. to 6s. a ton; and rape oil from 12. 15s. to 11. 17s. a cwt. In 1830, we imported about 230,000 cwt. of rape and other oil cake. It is charged with a duty of 2s. a cwt.

RATTANS, or **CANES**, the long slender shoots of a prickly bush (*Calamus rotang* Lin.), one of the most useful plants of the Malay peninsula, and the Eastern islands. They are exported to Bengal, to Europe, and above all to China, where they are consumed in immense quantities. For cane work they should be chosen long, of a bright pale yellow colour, well glazed, and of a small size, not brittle, or subject to break. They are purchased by the bundle, which ought to contain 100 rattans, having their ends bent together, and tied in the middle. In China they are sold by the picul, which contains from 9 to 12 bundles. Such as are black or dark coloured, snap short, or from which the glazing flies off on their being bent, should be rejected. When stowed as dunnage, they are generally allowed to pass free of freight.—(*Milburn's Orient. Com., &c.*) The imports into this country are very considerable. In 1830, the number imported was 2,414,562; in 1831, 3,908,423; and in 1832, 3,922,955.—(*Parl. Paper*. No. 425. Sess. 1833.)

"The rattan," says Mr. Crawford, "is the spontaneous product of all the forests of the Archipelago; but exists in great perfection in those of the islands of Borneo, Sumatra, and of the Malay peninsula. The finest are produced in the country of the *Bataks* of Sumatra. The wood-cutter, who is intended to deal in this article, proceeds into the forest without any other instrument than his *parang* or cleave, and cuts as much as he is able to carry away. The mode of performing the operation is this:—He makes a notch in the tree at the root of which the rattan is growing, and cutting the latter, strips off a small portion of the outer bark, and inserts the part that is peeled into the notch. The rattan soon being pulled through as long as it continues of an equi size, is by this operation neatly and readily freed from its epidermis. When the wood-cutter has obtained by this means from 300 to 400 rattans,—being as many as an individual can conveniently carry in their moats and undried state,—he sits down, and ties them up in bundles of 100, each rattan being doubled before being thus tied up. After drying they are fit for the market without further preparation. From this account of the small labour expended in bringing them to market, they can be sold at a very cheap rate. The Chinese junk owners obtain them in Borneo at the low rate of 5 Spanish dollars per 100 bundles, or 5 cents for each 100 rattans, or 27 for 1d. The natives always vend them by tale; but the resident European residents, and the Chinese, by weight, counting by piculs. According to their quantity, and the relative state of supply and demand, the European merchants dispose of them at from 1½ to 2½ dollars the picul. In China, the price is usually about 2½ dollars per picul, or 75 per cent. above the average prime cost. In Bengal they are sold by tale, each bundle of about 100 rattans bringing about 30d."—(*Indies Archipelago*, vol. III. p. 423.)

REAL, in the Spanish monetary system, is of two sorts; viz. a *real of plate* and a *real vellon*. The former is a silver coin, varying in value from about 6½d. to 5d.—(See *Coin*.) A real vellon is a money of account, worth about 2½d.

REAM, a quantity of paper. The ream of writing paper consists of 20 quires, each of 24 sheets; but the ream of printing paper, or, as it is sometimes called, the *printers' ream*, extends to 21½ quires, or 516 sheets. Two reams of paper make a *bundle*.

RECEIPT, is an acknowledgment in writing of having received a sum of money, or of other valuable consideration. It is a voucher either of an obligation or debt discharged, or of one incurred.

The 35 Geo. 3. c. 55. enacts, that every note, memorandum, or writing whatever, given to any person on the payment of money, acknowledging such payment, on whatever account it be, and whether receipt or not, shall be considered a receipt, and liable to a stamp duty.

And every person who shall write, or cause to be written, any receipt for money on unstamp'd paper, (except in certain accepted cases hereafter enumerated), or on a lower stamp than the proper one, shall forfeit 10s. if for a sum under 100s.; if above, 20s.

Giving receipts for less than actually paid, writing off sums, or other fraudulent contrivances, penalty 50s.; but receipts may be stamped if brought within fourteen days after date, on payment of a penalty of 5s. over and above the duty; and if brought within one calendar month, on payment of a penalty of 10s. and the duty.

Any person refusing to give a receipt upon demand, or to pay the amount of the stamp, is liable to a penalty of 10l.

Book of Stamp Duties per 55 Geo. 3. c. 154.

And where any sum shall be therein expressed to be received in full of all demands for any debt or demand, therein specified, any note, memorandum, or writing whatever, given to any person for or upon the payment of money, whereby any sum of money, debt, or demand, or any part of any debt or demand, therein specified, and amounting to 5l. or upwards, shall be expressed to have been paid, settled, balanced, or otherwise discharged or satisfied, or which shall import or signify any such acknowledgment, and whether the same shall or shall not be signed with the name of any person, shall be deemed to be a receipt for a sum of money of equal amount with the sum so expressed to have been paid, settled, balanced, or otherwise discharged or satisfied, and shall be charged with a duty accordingly.

Previously to 1833 all receipts for sums of 5l. and under 5l. were charged with a stamp duty of 8d.; but the act 3 & 4 Will. 4. c. 23, exempts all receipts for sums under 5l. from the duty.

Exceptions—Receipts exempted from stamp duty by any act relating to the assessed taxes. Receipts given by the Treasurer of the Navy. Receipts on account of the pay of the army or militia. Receipts by any officer, seaman, marine, or soldier, or their representatives. Receipts for the consideration money for the purchase of any manumission stock or funds, and for any dividend paid on any shares of the said stocks or funds. Receipts on Exchequer Bills. Receipts given for money deposited in the Bank of England, or in the hands of any banker, to be accounted for on demand; provided the same be not expressed to be received of, or by the hands of, any other than the person to whom the same is to be accounted for. Receipts written upon promissory notes, bills of exchange, drafts, or orders for the payment of money. Receipts given upon bills or notes of the Bank of England. Letters by the general post acknowledging the safe arrival of any bills of exchange, promissory notes, or other securities. Receipts indorsed upon any bond, mortgage, or other security, or any conveyance whatever. Releases or discharges for money by deeds duly stamped. Receipts or discharges for drawbacks or bounties. Receipts or discharges for the return of duties of customs. Receipts indorsed upon navy bills. Receipts upon victualling and transport bills. Receipts given solely for the duty on insurances against fire.

In 1832, the nett produce of the receipt duty was as follows:—Great Britain, 184,501l. 10s.; Ireland, 17,083l. 7s. 6d.

And where any sum shall be therein expressed to be received in full of all demands for any debt or demand, therein specified, and amounting to 5l. or upwards, shall be expressed to have been paid, settled, balanced, or otherwise discharged or satisfied, or which shall import or signify any such acknowledgment, and whether the same shall or shall not be signed with the name of any person, shall be deemed to be a receipt for a sum of money of equal amount with the sum so expressed to have been paid, settled, balanced, or otherwise discharged or satisfied, and shall be charged with a duty accordingly.

Previously to 1833 all receipts for sums of 5l. and under 5l. were charged with a stamp duty of 8d.; but the act 3 & 4 Will. 4. c. 23, exempts all receipts for sums under 5l. from the duty.

Exceptions—Receipts exempted from stamp duty by any act relating to the assessed taxes. Receipts given by the Treasurer of the Navy. Receipts on account of the pay of the army or militia. Receipts by any officer, seaman, marine, or soldier, or their representatives. Receipts for the consideration money for the purchase of any manumission stock or funds, and for any dividend paid on any shares of the said stocks or funds. Receipts on Exchequer Bills. Receipts given for money deposited in the Bank of England, or in the hands of any banker, to be accounted for on demand; provided the same be not expressed to be received of, or by the hands of, any other than the person to whom the same is to be accounted for. Receipts written upon promissory notes, bills of exchange, drafts, or orders for the payment of money. Receipts given upon bills or notes of the Bank of England. Letters by the general post acknowledging the safe arrival of any bills of exchange, promissory notes, or other securities. Receipts indorsed upon any bond, mortgage, or other security, or any conveyance whatever. Releases or discharges for money by deeds duly stamped. Receipts or discharges for drawbacks or bounties. Receipts or discharges for the return of duties of customs. Receipts indorsed upon navy bills. Receipts upon victualling and transport bills. Receipts given solely for the duty on insurances against fire.

In 1832, the nett produce of the receipt duty was as follows:—Great Britain, 184,501l. 10s.; Ireland, 17,083l. 7s. 6d.

REGISTRY, in commercial navigation, the registration or enrolment of ships at the Custom-house, so as to entitle them to be classed among, and to enjoy the privileges of, British built ships.

The registry of ships appears to have been first introduced into this country by the

Navigation Act (12 Car. 2. c. 18. anno 1660). Several provisions were made with respect to it by the 7 & 8 Will. 3. c. 22.; and the whole was reduced into a system by the 37 Geo. 3. c. 19.

It may be laid down in general, that a vessel, in order to be admitted to registry, and consequently to enjoy the privileges and advantages that exclusively belong to a British ship, must be the property of his Majesty's subjects in the United Kingdom or some of its dependencies; and that it must have been built in the said United Kingdom, &c., or been a prize vessel legally condemned, or a vessel legally condemned for a breach of the slave laws.

The great, and, perhaps, the only original object of the registration of ships, was to facilitate the exclusion of foreign ships from those departments in which they were prohibited from engaging by the navigation laws, by affording a ready means of distinguishing such as were really British. It has also been considered advantageous to individuals, by preventing the fraudulent assignment of property in ships; but Lord Tenterden has observed, in reference to this supposed advantage, that "the instances in which fair and honest transactions are rendered unavailable through a negligent want of compliance with the forms directed by these and other statutes requiring a public register of conveyances, make the expediency of all such regulations, considered with reference to private benefit only, a matter of question and controversy."—(*Law of Shipping*, part. i. c. 2.)

The existing regulations as to the registry of ships are embodied in the act 3 & 4 Will. 4. c. 55., which, on account of its importance, is subjoined nearly entire.

ACT 3 & 4 WILL. 4. c. 55., FOR AMENDING OF BRITISH VESSELS.

Commencement of Act.—From 1st of September, 1833, except where any other commencement is herein-after particularly directed.

No Vessel to enjoy Privileges until registered.—No vessel shall be entitled to any of the privileges or advantages of a British registered ship unless the person or persons claiming property therein shall have caused the same to have been registered in virtue of the act 6 Geo. 4. c. 110., or of the act 4 Geo. 4. c. 41., or until such person or persons shall have caused the same to be registered in manner herein-after mentioned, and have obtained a certificate of such registry from the person or persons authorized to make such registry and grant such certificate as herein-after directed; the form of which certificate shall be as follows; viz.—

"This is to certify, that in pursuance of an act passed in the 4th year of the reign of King Will. 4. intituled, An Act *here insert the title of this act, the names, occupation, and residence of the subscribing owners*, having made and subscribed the declaration required by the said act, and having declared that [he or they] together with [names, occupations, and residences of non-subscribing owners] [is or are] sole owner or owners, in the proportions specified on the back hereof, of the ship or vessel called [the ship's name] of [place to which the vessel belongs], which is of the burden of [number of tons], and whereof [master's name] is master, and that the said ship or vessel was [taken and taken built, or condemned as prize, referring to builder's certificate, judge's certificate, or certificate of last registry, then delivered up to be cancelled], and [name and employment of surveying officer] having certified to us that the said ship or vessel has [number] decks and [number] masts, that her length from the fore part of the main stem to the after part of the stern post

is [number of feet and inches], her breadth at the broadest part [stating whether that be above or below the main mast] is [number of feet and inches], her height between decks of more than 1 deck, or depth in the hold if only 1 deck is [number of feet and inches], and that she is [how rigged] rigged with a [standing or running] bowermast, [a description of stern] sterns, [screw or double] sails, has [whether any or no] gallery, and [kind of head, if any] head; and the said subscribing owners being consented and agreed to the above description, and having caused sufficient security to be given as is required by the said act, the said ship or vessel called [the name] has been duly registered at the port of [name of port]. Locum sub tenore under our hands at the Custom-house in the said port of [name of port] this [date] day of [name of month] in the year [year of date].

And on the back of such certificate of registry there shall be an account of the parts or shares held by each of the owners mentioned and described in such certificate, in the form and manner following.

---	--	---------------------------------	---

Persons authorized to make Registry and grant Certificates.—The persons authorized and required to make such registry and grant such certificates shall be the several persons herein-after mentioned and described; (that is to say.)

- The collector and comptroller of customs in any port in the United Kingdom, and in the Isle of Man respectively, in respect of ships or vessels to be there registered;
- The principal officers of customs in the Island of Guernsey or Jersey, together with the governor, lieutenant-governor, or commander-in-chief of those islands respectively, in respect of ships or vessels to be there registered;
- The collector and comptroller of customs of any port in the British possessions in Asia, Africa, and America, or the collector of any such port at which no appointment of a comptroller has been made, in respect of ships or vessels to be there registered;
- The collector of duties at any port in the territories under the government of the East India Company, within the limits of the charter of the said company, or any other person of the rank in

- the said company's service of similar rank, or of a port equalling in the said service, being respectively appointed in or in the execution of this act by any of the governors of the said company, in respect of ships or vessels to be there registered;
- The collector of duties at any British possession within the said limits, and under the government of the said company, and at which a Custom-house is not established, together with the governor, lieutenant-governor, or commander-in-chief of such possession, in respect of ships or vessels to be there registered;
- The governor, lieutenant-governor, or commander-in-chief of Barbadoes, Gibraltar, Heligoland, and Cape of Good Hope respectively, in respect of ships or vessels to be there registered;

Provided that no ship or vessel to be registered at Heligoland, except such as is wholly of the hull of that place, and that ships or vessels, after having been registered at Malta, Gibraltar, or Heligoland, shall not be registered elsewhere; and that ships or vessels registered at Malta, Gibraltar, or Heligoland, shall not be entitled to the privileges and advantages of British ships in any trade between the said United Kingdom and any of the British possessions in America: provided also, that wherever in and by this act it is directed or provided that any act, matter, or thing shall and may be done or performed by, to, or with any collector and comptroller of his Majesty's customs, the same shall or may be done or performed by, to, or with the several persons respectively herein-before authorized and required to make registry, and to grant certificates of registry as aforesaid, and according as the same act, matter, or thing is to be done or performed at the said several and respective places, and within the jurisdiction of the said several persons respectively: provided also, that wherever in and by this act it is directed or provided that any act, matter, or thing shall or may be done or performed by, to, or with the commissioners of his Majesty's customs, the same shall or may be done or performed by,

to, or with the governor, lieutenant-governor, or commander-in-chief of any place where any ship or vessel may be registered under the authority of this act, so far as such act, matter, or thing can be applicable to the registering of any ship or vessel at such place.—§ 3.

Ships entitled to Privileges before Registry to be forfeited.—In case any ship or vessel not being duly registered, and having obtained such certificate of registry as aforesaid, shall exercise any of the privileges of a ship, the name shall be subject to forfeiture, and also all the guns, furniture, ammunition, &c. and apparel to the same ship or vessel belonging, and shall and may be seized by any officer of his Majesty's customs: provided always, that nothing in this act shall extend or be construed to extend to affect the privileges of any ship or vessel which shall, prior to the commencement of this act, have been registered by virtue of an act passed in the 6th year of the reign of the late Majesty George IV., intituled "An Act for the registering of British Vessels."—§ 4.

What Ships are entitled to be registered.—No ship or vessel shall be registered, or having been registered shall be deemed to be duly registered, by virtue of this act, except such as are wholly of the hull of the said United Kingdom, or of the Isle of Man, or of the islands of Guernsey or Jersey, or of some of the colonies, plantations, islands, or territories in Asia, Africa, or America, or of Malta, Gibraltar, or Heligoland, which belong to his Majesty, his heirs or successors, at the time of the building of such ships or vessels, or such ships or vessels as shall have been condemned in any court of admiralty as prize of war, or such ships or vessels as shall have been condemned in any competent court as forfeited for the breach of the laws made for the prevention of the slave trade, and which shall wholly belong and continue wholly to belong to his Majesty's subjects duly entitled to be owners of ships or vessels registered by virtue of this act.—§ 5.

Mediterranean Pass may be issued at Malta or Gibraltar for certain Ships only.—No Mediterranean pass shall be issued for the use of any ship, as being a ship belonging to Malta or Gibraltar, except such as be duly registered at those places respectively, or such as, not being entitled to be so registered, shall have wholly belonged, before the 10th day of October, 1827, and shall have continued wholly to, persons actually residing at those places respectively, as inhabitants thereof, and entitled to be owners of British ships there registered, or who, not being so entitled, shall have so resided upwards of 15 years prior to the said 10th day of October, 1827.—§ 6.

Foreign Repairs not to exceed 20s. per Ton.—No ship or vessel shall continue to enjoy the privileges of a British ship after the same shall have been repaired in a foreign country, if such repairs shall exceed the sum of 20s. for every ton of the burden of the said ship or vessel, unless such repairs shall have been necessary by reason of extraordinary damage sustained by such ship or vessel during her absence from his Majesty's dominions, to enable her to perform the voyage in which she shall have been engaged, and to return to some port or place in the said dominions; and whenever any ship or vessel which has been so repaired in a foreign country shall arrive at any port in his Majesty's dominions as a British registered ship or vessel, the master or other person having the command or charge of the same shall, upon the first entry thereof, report to the collector and comptroller of his Majesty's customs at such port that such ship or vessel has been so repaired, under penalty of 20s. for every ton of the burden of such ship or vessel, according to the admeasurement thereof; and if it shall be proved to the satisfaction of the commissioners of his Majesty's customs that such ship or vessel was seaworthy at the time when she last departed from any port or place in his Majesty's dominions, and that no greater quantity of such repairs have been done to the said vessel than was necessary as aforesaid, it shall be lawful for the said commissioners, upon a full consideration of all the circumstances, to direct the collector and comptroller of the port where such ship or vessel shall have arrived, or where she shall then be, to certify on the certificate of the registry of such ship or vessel that it has been proved to the satisfaction of the commissioners of his Majesty's customs that the privileges of the said ship or vessel have not been forfeited, notwithstanding the repairs which have been done to the same in a foreign country.—§ 7.

Ships declared unseaworthy to be deemed Ships lost or broken up.—If any ship or vessel registered under the authority of this or any other act, shall be deemed or declared to be stranded or unseaworthy, and incapable of being recovered or repaired to the advantage of the owners thereof, and shall for such reasons be sold by order or decree of any competent court for the benefit of the owners of such ship or vessel, or other persons interested therein, the same shall be taken and deemed to be a ship or vessel lost or broken up to all intents and purposes within the meaning of this act, and shall never again be entitled to the privileges of a British built ship for any purposes of trade or navigation.—§ 8.

British Ships captured not to be again entitled to Registry, &c.—No British ship or vessel which has been or shall hereafter be captured by and become prize to an enemy or sold to foreigners shall again be entitled to the privileges of a British ship; provided that nothing contained in this act shall extend to prevent the registering of any ship or vessel whatever which shall afterwards be condemned in any court of admiralty as prize of war, or in any competent court, for breach of laws made for the prevention of the slave trade.—§ 9.

Ships shall be registered at the port to which they belong.—No such registry shall hereafter be made, or certificate thereof granted, by any person or persons herein-before authorised to make such registry and grant such certificate, in any other port or place than the port or place to which such ship or vessel shall properly belong, except so far as relates to such ships or vessels as shall be condemned as prizes in any of the islands of Guernsey, Jersey, or Man, which ships or vessels shall be registered in manner herein-after directed; but that all and every registry and certificate made and granted in any port or place to which any such ship or vessel does not properly belong shall be utterly null and void to all intents and purposes, unless the officers aforesaid shall be specially authorised and empowered to make such registry and grant such certificate in any other port by an order in writing under the hands of the commissioners of his Majesty's customs, which order the said commissioners are hereby authorised and empowered to issue, if they shall see fit; and at every port where registry shall be made in pursuance of this act, a book shall be kept by the collector and comptroller, in which all the particulars contained in the form of the certificate of the registry herein-before directed to be used shall be duly entered; and every registry shall be numbered in progression, beginning such progressive numeration at the commencement of each and every year; and such collector and comptroller shall forthwith, within 1 month after the first day of January, transmit to the commissioners of his Majesty's customs a true and exact copy, together with the number, of every certificate which shall be by them so granted.—§ 10.

Port to which Vessels shall be deemed to belong.—Every ship or vessel shall be deemed to belong to some port or near to which some or one of the owners, who shall make and subscribe the declaration required by this act before registry be made, shall reside; and whenever such owner or owners shall have transferred all his or their share or shares in such ship or vessel, the same shall be registered at some other port, such ship or vessel shall sell or depart from the port to which she shall then belong, or from any other port which shall be in the same part of the United Kingdom, or the same colony, plantation, island, or territory as the said port shall be in; provided always, that if the owner or owners of such ship or vessel cannot in sufficient time comply with the requisites of this act, so that registry may be made before it shall be necessary for such ship or vessel to sail or depart upon another voyage, it shall be lawful for the collector and comptroller of the port where such ship or vessel

may then be certified upon the back of the existing certificate of registry of such ship or vessel, that the same is to remain in force for the voyage upon which the said ship or vessel is then about to sail or depart: provided also, that if any ship or vessel shall be built in any of the colonies, plantations, islands, or territories in Asia, Africa, or America, to his Majesty belonging, for owners residing in the United Kingdom, and the master of such ship or vessel, or the agent for the owner or owners thereof, shall have produced to the collector and comptroller of the port at or near to which such ship or vessel was built, the certificate of the builder required by this act, and shall have made and subscribed a declaration before such collector and comptroller of the names and descriptions of the principal owners of such ship or vessel, and that she is the identical ship or vessel mentioned in such certificate of the builder, and that no foreigner, to the best of his knowledge and belief, has any interest therein; the collector and comptroller of such port shall cause such ship or vessel to be surveyed and measured in like manner as is directed for the purpose of registering any ship or vessel, and shall give the master of such ship or vessel a certificate under their hands and seals, purporting to be under the authority of this act, and stating when and where and by whom such ship or vessel was built, the description, tonnage, and other particulars required on registry of any ship or vessel, and such certificate shall have all the force and virtue of a certificate of registry under this act, during the term of 2 years, unless such ship shall sooner arrive at some place in the United Kingdom; and such collector and comptroller shall transmit a copy of such certificate to the commissioners of his Majesty's customs.—[1.]

Persons residing in foreign Countries may not be Owners.—No person who has taken the oath of allegiance to any foreign state, except under the terms of some capitulation, unless he shall afterwards become a denizen or naturalised subject of the United Kingdom by his Majesty's letters patent by act of parliament, nor any person usually residing in any country not under the dominion of his Majesty, his heirs and successors, unless he be a member of some British factory, or agent for or partner in any house or copartnership actually carrying on trade in Great Britain or Ireland, shall be entitled to be the owner, in whole or in part, directly or indirectly, of any ship or vessel required and authorised to be registered by virtue of this act: save and except that it shall be lawful for any person who was a member of the company of merchants trading to the Levant seas at the time of its dissolution, and who was a resident at any of the factories of the said company, to continue to hold any share or shares in any British registered ship of which at the time of such residence he was an owner or part owner, although such person shall continue to reside at any of the places where such factories had existed prior to the dissolution of the said company.—[2.]

Declaration to be made by subscribing Owners previous to Registry.—No registry shall henceforth be made or certificate granted until the following declaration be made and subscribed, before the person or persons herein-before authorised to make such registry, and grant such certificate respectively, by the owner of such ship or vessel: if such ship or vessel is owned by 1 person only, or in case there shall be 2 joint owners, then by both of such joint owners if both shall be resident within 20 miles of the port or place where such registry is required, or by 1 of such owners if 1 or both of them shall be resident at a greater distance from such port or place; or if the number of such owners or proprietors shall exceed 2, then by the greater part of the number of such owners or proprietors if the greater number of them shall be resident within 20 miles of such port or place as aforesaid, not in any case exceeding 3 of such owners or proprietors, unless a greater number shall be desirous to join: in making and subscribing the said declaration, or by 1 of such owners if all, or all except 1, shall be resident at a greater distance:

"I, A. B. [of place of residence and occupation] do truly declare, that the ship or vessel [name] [of port or place], whose [master's name] is at present master, being [kind of vessel, burden, &c. as described in the certificate of the surveying officer], was [when and where built, or if prize or forfeited, captured and condemnation as such], and that I the said A. B. [and the other owners' names and occupations, if any, and where they respectively reside, was, town, place, or parish, and country, or if member of and resident in any factory in foreign parts, or in any foreign town or city, being an agent for or partner in any house or copartnership actually carrying on trade in Great Britain or Ireland, the name of such factory, foreign town, or city, and the nature of such house and copartnership] am [or are] sole owner [or owners] of the said vessel, and that no other person or persons whatever hath or have any right, title, interest, share or property therein as thereto; and that the said A. B. [and the said other owners, if any], am [or are] truly and lawfully a subject [or subjects] of Great Britain; and that I the said A. B. have not [nor have any of the other owners, to the best of my knowledge and belief] taken the oath of allegiance to any foreign state whatever [except under the terms of some capitulation, describing the particulars thereof], or that since my taking [or he or their taking] the oath of allegiance to [joining the first of them respectively] to which he or any of the said owners shall have taken the same I have [or he or they hath or have] become a denizen [or a citizen, or naturalised subject or subjects, as the case may be] of the United Kingdom of Great Britain and Ireland [by his Majesty's letters patent] or by an act of parliament [naming the time when made] or of denization [to be printed respectively, or the year or years in which such act or acts for naturalisation have passed respectively]; and that no foreigner, directly or indirectly, hath any share or part interest in the said ship or vessel."

Provided always, that if it shall become necessary to register any ship or vessel belonging to any corporate body in the United Kingdom, the following declaration, in lieu of the declaration herein-before directed, shall be taken and subscribed by the secretary, or other proper officer of such corporate body: (that is to say,)

"I, A. B. secretary or officer of [name of company or corporation] do truly declare, that the ship or vessel [name] [of port] whereof [master's name] is at present master, being [kind of vessel, burden, &c. as described in the certificate of the surveying officer],

was [when and where built, or if prize or forfeited, captured and condemnation as such], and that the same doth wholly truly belong to [name of company or corporation].—[Sec. 13.]

Addition to Declaration in case the required Number of Owners do not personally attend.—In case the required number of joint owners or proprietors of any ship or vessel shall not personally attend to make and subscribe the declaration herein-before directed to be made and subscribed, then and in such case such owner or owners, proprietor or proprietors, as shall personally attend and make and subscribe the declaration aforesaid, shall further declare that the part owner or part owners of such ship or vessel then absent is or are not resident within 20 miles of such port or place, and hath or have not, to the best of his or their knowledge or belief, wilfully absented himself or themselves in order to avoid the making the declaration herein-before directed to be made and subscribed, or is or are prevented by illness from attending to make and subscribe the said declaration.—[4.]

Vessels to be surveyed previous to Registry.—Previous to the registering or granting of any certificate of registry as aforesaid, some one or more person or persons appointed by the commissioners of customs (taking to his or their assistance, if he or they shall judge it necessary, one or more person or persons skilled in the building and admeasurement of ships) shall go on board of every such ship or vessel as is to be registered, and shall strictly and accurately examine and admeasure every such ship or vessel as to all and every particular contained in the form of the certificate herein-before directed, in the presence of the master, or of any other person who shall be appointed for that purpose on the part of the owner or owners, or in his or their absence by the said master; and shall deliver a true and just account in writing of all such particulars of the build, description, and admeasurement of every such ship or vessel as are specified in the form of the certificate above recited to the collector and comptroller authorised as aforesaid to make such registry and grant such certificate of registry; and the said master or other person attending on the part of the owner or owners is hereby required to sign his name also to the certificate of such surveying or examining officer, in testimony of the truth thereof, provided such master or other person shall consent and agree to the several particulars aforesaid and described therein.—[5.]

Mode of Admeasurement to ascertain Tonnage.—For the purpose of ascertaining the tonnage of ships or vessels, the rule for admeasurement shall be as follows; (that is to say,) the length shall be taken

suant to this act, who shall likewise make a memorandum of the same in the book of registry, which he hereby directed and required to be kept, and shall forthwith give notice thereof to the commissioners of his Majesty's customs: provided always, that before the name of such new master shall be indorsed on the certificate of registry he shall be required to give and shall give a bond in the like penalty and under the same conditions as are contained in the bond herein-before required to be given at the time of registry of any ship or vessel.—§ 31.

Bonds liable to same Duties or Stamps as Bonds for Customs.—All bonds required by this act shall be liable to the same duties of stamps as bonds given for or in respect of the duties of customs and shall be liable to under any act for the time being in force for granting duties of stamps.—§ 32.

Certificate of Registry to be given up by all Persons, as directed by the Bond.—If any person whatsoever shall at any time have possession of and willfully detain any certificate of registry granted under this or any other act, which ought to be delivered up to be cancelled according to any of the conditions of the bond herein-before required to be given upon the registry of any ship or vessel, such person is hereby required and enjoined to deliver up such certificate of registry in manner directed by the conditions of such bond in the respective cases and under the respective penalties therein provided.—§ 23.

Name of Vessel which has been registered never afterwards to be changed.—It shall not be lawful for any owner or owners of any ship or vessel to give any name to such ship or vessel other than that by which she was first registered in pursuance of this or any other act; and the owner or owners of all and every ship or vessel which shall be so registered shall, before such ship or vessel, after such registry, shall begin to take in any cargo, paint or cause to be painted, in white or yellow letters, of a length of not less than 4 inches, upon a black ground, on some conspicuous part of the stern, the name by which such ship or vessel shall have been registered pursuant to this act, and the port to which she belongs, in a distinct and legible manner, and shall so keep and preserve the same; and if such owner or owners or master or other person having or taking the charge or command of such ship or vessel shall permit such ship or vessel to begin to take in any cargo before the name of such ship or vessel has been so painted as aforesaid, or shall willfully alter, erase, obliterate, or in anywise hide, or conceal, or cause or procure or permit the same to be done (unless in the case of square-rigged vessels in time of war), or shall in any written or printed paper, or other document, describe such ship or vessel by any other name than that by which she was first registered pursuant to this act, or shall verbally describe, or cause or procure or permit such ship or vessel to be described, by any other name to any officer or officers of his Majesty's revenue in the due execution of his or their duty, then and in every such case such owner or owners or master or other person having or taking the charge or command of such ship or vessel shall forfeit the sum of 100*l*.—§ 34.

Builder's Certificate of Particulars of Ship.—All and every person and persons who shall apply for a certificate of the registry of any ship or vessel shall and they are hereby required to produce to the person or persons authorised to grant such certificate a true and full account, under the hand of the builder of such ship or vessel, of the proper denomination, and of the time when and the place where such ship or vessel was built, and also an exact account of the tonnage of such ship or vessel, together with the name of the first purchaser or purchasers thereof (which account such builder is hereby directed and required to give under his hand on the same being demanded by such person or persons so applying for a certificate as aforesaid), and shall also make and subscribe a declaration before the person or persons herein-before authorised to grant such certificate that the ship or vessel for which such certificate is required is the same with that which is so described by the builder as aforesaid.—§ 25.

Certificate of Registry lost or mislaid.—If the certificate of registry of any ship or vessel shall be lost or mislaid, so that the same cannot be found or obtained for the use of such ship or vessel when needful, and proof thereof shall be made to the satisfaction of the commissioners of his Majesty's customs, such commissioners shall and may permit such ship or vessel to be registered *de novo*, and a certificate thereof to be granted: provided always, that if such ship or vessel be absent and distant from the port to which she belongs, or by reason of the absence of the owner or owners, or of any other impediment, registry of the same cannot then be made in sufficient time, such commissioners shall and may grant a licence for the present use of such ship or vessel, which licence shall, for the time and to the extent specified therein, and no longer, be of the same force and virtue as a certificate of registry granted under this act: provided always, that before such registry *de novo* be made, the owner or owners and master shall give bond to the commissioners aforesaid, in such sum as to them shall seem fit, with a condition that if the certificate of registry shall at any time afterwards be found, the same shall be forthwith delivered to the proper officers of his Majesty's customs to be cancelled, and that no illegal use has been or shall be made thereof with his or their privy or knowledge; and further, that before any such licence shall be granted as aforesaid, the master of such ship or vessel shall also make and subscribe a declaration that the same has been registered as a British ship, naming the port where and the time when such registry was made, and all the particulars contained in the certificate thereof, to the best of his knowledge and belief; and shall also give such bond and with the same condition as is before mentioned: provided also, that before any such licence shall be granted, such ship or vessel shall be surveyed in like manner as if a registry *de novo* were about to be made thereof; and the certificate of such survey shall be preserved by the collector and comptroller of the port to which such ship or vessel shall belong; and in virtue thereof it shall be lawful for the said commissioners and they are hereby required to permit such ship or vessel to be registered after her departure, whenever the owner or owners shall personally attend to take and subscribe the declaration required by this act before registry be made, and shall also comply with all other requisites of this act, except so far as relates to the bond to be given by the master of such ship or vessel; which certificate of registry the said commissioners shall and may transmit to the collector and comptroller of any other port, to be by them given to the master of such ship or vessel, upon his giving such bond, and delivering up the licence which had been granted for the then present use of such ship or vessel.—§ 35.

Persons detaining Certificate of Registry to forfeit 100*l*.—In case any person who shall have received or obtained by any means, or for any person whatever, the certificate of the registry of any ship or vessel (whether such person shall claim to be the master or to be the owner or one of the owners of such ship or vessel, or not), shall willfully detain and refuse to deliver up the same to the proper officers of customs, for the purposes of such ship or vessel, as occasion shall require, or to the person or persons having the actual command, possession, and management of such ship or vessel as the ostensible and reputed master, or as the ostensible and reputed owner or owners thereof, it may and shall be lawful to and for any such last-mentioned person to make complaint on oath of such detainer and refusal to any justice of the peace residing near to the place where such detainer and refusal shall be, in Great Britain or Ireland, or to any member of the supreme court of justice or any justice of the peace in the islands of Jersey, Guernsey, or Man, or in any colony, plantation, island, or territory to which his Majesty's laws belong in Asia, Africa, or America, or in Malta, Gibraltar, or Hellgoland, where such detainer and refusal shall be in any of the places last mentioned; and on such complaint the said justice or other magistrate shall and is hereby required, by warrant under his hand and seal, to cause the person so complained against to be brought before him to be examined touching such detainer and refusal; and if it shall appear to the said justice or other magistrate, on examination of such person or otherwise, that the

and certificate of registry is not lost or mislaid, but is wilfully detained by the said person, such person shall be thereon convicted, and shall forfeit and pay the sum of 100*l.*, and on failure of payment thereof he shall be committed to the common gaol, there to remain without bail or mainprize for such time as the said justice or other magistrate shall in his discretion deem proper, not being less than 3 months nor more than 12 months; and the said justice or other magistrate shall and he is hereby required to certify the aforesaid detainer, refusal, and conviction to the person or persons who granted such certificate of registry for such ship or vessel, who shall, on the terms and conditions of law being complied with, make registry of such ship or vessel *de novo*, and grant a certificate thereof conformably to the provisions of this act; and if the person who shall have detained and refused to deliver up such certificate of registry do so; and if the person who shall have detained the same, shall have absconded, so that the said justice or other magistrate cannot be executed upon him, and proof thereof shall be made to the satisfaction of the commissioners of his Majesty's customs, it shall be lawful for the said commissioners to permit such ship or vessel to be registered *de novo*, or otherwise, in their discretion, to grant a licence for the present use of such ship or vessel in like manner as is herein-before provided in the case wherein the certificate of registry is not lost or mislaid.—*27.*

Ship altered in certain matters to be registered de novo.—If any ship or vessel, after she shall have been registered pursuant to the directions of this act, shall in any manner whatever be altered so as not to correspond with all the particulars contained in the certificate of her registry, in such case such ship or vessel shall be registered *de novo*, in manner herein-before required, as soon as she returns to the port to which she belongs, or to any other port which shall be in the same part of the United Kingdom, or in the same colony, plantation, island, or territory as the said port shall be in, on failure whereof such ship or vessel shall, to all intents and purposes, be considered and deemed and taken to be a ship or vessel not duly registered.—*28.*

Vessels condemned as Prize, &c.—The owners or owners of all such ships and vessels as shall be taken by any of his Majesty's ships or vessels of war, or by any private or other ship or vessel, and condemned as lawful prize in any court of admiralty, or of such ships or vessels as shall be condemned as competent court as forfeited for breach of the laws for the prevention of the slave trade, shall, for the purpose of registering any such ship or vessel, produce to the collector and comptroller of customs a certificate of the condemnation of such ship or vessel, under the hand and seal of the judge of the court in which such ship or vessel shall have been condemned (which certificate such judge is hereby authorized and required to grant), and also a true and exact account in writing of all the particulars contained in the certificate herein-before set forth, to be made and subscribed by one or more skilful persons or persons to be appointed by the court then and there to survey such ship or vessel, and shall also make and subscribe a declaration before the collector and comptroller that such ship or vessel is the same vessel which is mentioned in the certificate of the judge aforesaid.—*29.*

Prize Vessels not to be registered at Guernsey, Jersey, or Man.—No ship or vessel which shall be taken and condemned as prize or forfeiture as aforesaid shall be registered in the islands of Guernsey, Jersey, or Man, although belonging to his Majesty's subjects residing in those islands, or in some one or other of them; but the same shall be registered either at Southampton, Weymouth, Exeter, Plymouth, Falmouth, Liverpool, or Whitehaven, by the collector and comptroller, at such ports respectively, who are hereby authorized and required to register such ship or vessel, and to grant a certificate thereof in the form and under the regulations and restrictions in this act contained.—*30.*

Transfers of Interest to be made by Bill of Sale.—When and as often as the property in any ship or vessel, or any part thereof, belonging to any of his Majesty's subjects, shall, after registry thereof, be sold to any other or others of his Majesty's subjects, the same shall be transferred by bill of sale or other instrument in writing, containing a recital of the certificate of registry of such ship or vessel, or the principal contents thereof, otherwise such transfer shall not be valid or effectual for any purpose whatever, either in law or in equity: provided always, that no bill of sale shall be deemed void by reason of any error in such recital, or by the recital of any former certificate of registry instead of the ailing certificate, provided the identity of the ship or vessel intended in the recital be effectually proved thereby.—*31.*

Property in Ships to be divided into Sixty-four Parts or Shares.—The property in every ship or vessel of which there are more than one owner shall be taken and considered to be divided into 64 equal parts or shares, and the proportion held by each owner shall be described in the registry as being a certain number of 64th parts or shares; and no person shall be entitled to be registered as an owner of any ship or vessel in respect of any proportion of such ship or vessel which shall not be an integral 64th part or share of the same; and upon the first registry of any ship or vessel, the owner or owners who shall take and subscribe the declaration required by this act, before registry be made, shall also declare the number of such parts or shares then held by each owner, and the same shall be so registered accordingly: provided always, that if it shall at any time happen that the property of any owner or owners in any ship or vessel cannot be reduced by division into any number of integral 64th parts or shares, it shall and may be lawful for the owner or owners of such fractional parts as shall be over and above such number of integral 64th parts or shares into which such property in any ship or vessel can be reduced by division to transfer the same one to another, or jointly to any new owner, by memorandum upon their respective bills of sale, or by fresh bill of sale, without such transfer being liable in any stamp duty: provided also, that the right of any owner or owners to any such fractional parts shall not be affected by reason of the same not having been registered: provided also, that it shall be lawful for any number of such owners, named and described in such registry, being partners in any joint or copartnership actually existing at the time of his Majesty's dominions, to hold any ship or vessel, or any share or shares of any ship or vessel, in the name of such house or copartnership, as joint owners thereof, without distinguishing the proportionate interest of each of such owners, and that such ship or vessel, or the share or shares thereof so held in copartnership, shall be deemed and taken to be partnership property to all intents and purposes, and shall be governed by the same rules, both in law and equity, as relate to and govern all other partnership property in any other goods, chattels, and effects whatsoever.—*32.*

Only Thirty-two Persons to be Owners of any Ship at One Time.—No greater number than 32 persons shall be entitled to be legal owners at one and the same time of any ship or vessel, as tenants in common, or to be registered as such: provided always, that nothing herein contained shall affect the equitable title of minors, heirs, legatees, creditors, or others, exceeding that number, duly represented by or bidding from any of the persons within the said number, registered as legal owners of any share or shares of such ship or vessel: provided also, that if it shall be proved to the satisfaction of the commissioners of customs that any number of persons have associated themselves as a joint stock company, for the purpose of owning any ship or vessel, or any number of ships or vessels, as the joint property of such company, and that such company have duly elected or appointed any number, not less than 3, of the members of the same to be trustees of the property in such ship or vessel or ships or vessels so owned by such company, it shall be lawful for such trustees or any 3 of them, with the permission of such commissioners, to make and subscribe the declaration required by this act before registry be made, except that, instead of stating therein the names and descriptions of the other

to indorse the certificate of registry, and the collector and comptroller of the port to which such ship or vessel belongs shall thereupon send information to the collector and comptroller of such other port, whether any and what other bill or bills of sale have been recorded in the book of the registry of such ship or vessel; and the collector and comptroller of such other port, having such information, shall proceed in a manner directed by this act in all respects to the indorsing of the certificate of registry, which would do if such port were the port to which such vessel belonged.—§ 37.

When Registry de novo any Bill of Sale shall not have been recorded, the same shall then be produced.—If it shall become necessary to register any ship or vessel de novo, and any share or shares of such ship or vessel shall have been sold since she was last registered, and the transfer of such share or shares shall not have been recorded and indorsed in manner herein-before directed, the bill of sale of such share or shares shall be produced to the collector and comptroller of his Majesty's customs, who are to make registry of such ship or vessel, otherwise such sale shall not be noticed in such registry de novo, except as herein-after excepted: provided always, that upon the future production of such bill of sale, and of the existing certificate of registry, such transfer shall and may be recorded and indorsed as well in such registry de novo as before.—§ 38.

Upon Change of Property, Registry de novo may be granted.—If upon any change of property in any ship or vessel, the owner or owners shall desire to have the same registered de novo, although not required by this act, and the owner or proper number of owners shall attend at the Custom-house at the port to which such ship or vessel belongs for that purpose, it shall be lawful for the collector and comptroller of his Majesty's customs at such port to make registry de novo of such ship or vessel at the same port, and to grant a certificate thereof, the several requisites herein-before in this act mentioned, and directed being first duly observed and complied with.—§ 39.

Of Declarations, &c. and of Extracts from Books of Registry admitted in Evidence.—The collector and comptroller of customs at any port or place, and the person or persons acting for them, respectively, shall upon every reasonable request by any person or persons whomsoever, produce and exhibit for his, her, or their inspection and examination any oath or declaration sworn or made by any such owner or owners, proprietor or proprietors, and also any register or entry in any book or books of registry required by this act to be made or kept relative to any ship or vessel, and shall, upon every reasonable request by any person or persons whomsoever, permit him, her, or them to take a copy or copies, or an extract or extracts thereof respectively; and the copy and copies of any such oath or declaration, register or entry, shall, upon being proved to be a true copy or copies thereof respectively, be allowed and received as evidence upon every trial at law, without the production of the original or originals, and without the testimony or attendance of any collector or comptroller, or other person or persons acting for them respectively, in all cases, as fully and to all intents and purposes as such original or originals, if produced by any collector or collectors, comptroller or comptrollers, or other person or persons acting for them, could or might legally be admitted or received in evidence.—§ 40.

Wills or Shares sold in the Absence of Owners without Formal Powers.—If the ship or vessel, or the share or shares of any owner thereof who may be out of the kingdom, shall be sold in his absence by his agent or correspondent, under his directions either expressed or implied, and acting for his interest in that behalf, and such agent or correspondent who shall have executed a bill of sale to the purchaser of the whole of such ship or vessel, or of any share or shares thereof, shall not have received a legal power to execute the same, it shall be lawful for the commissioners of his Majesty's customs, upon application made to them, and proof to their satisfaction of the fair dealing of the parties, to permit such transfer to be registered, if registry de novo be necessary, or to be recorded and indorsed, as the case may be, in manner directed by this act, as if such legal power had been produced; and also, if it shall happen that any bill of sale cannot be produced, or if, by reason of distance, or the absence or death of parties concerned, it cannot be proved that a bill of sale for any share or shares in any ship or vessel had been executed, and registry de novo of such ship or vessel shall become necessary, it shall be lawful for the commissioners of his Majesty's customs, upon proof to their satisfaction of the fair dealing of the parties, to permit such ship or vessel to be registered de novo in like manner as if a bill of sale for the transfer of such share or shares had been produced: provided always, that in any of the cases herein mentioned, good and sufficient security shall be given to produce a legal power or bill of sale within a reasonable time, or to abide the future claims of the true owner, his heirs and successors, as the case may be; and at the future request of the party whose property has been so transferred, without the production of a bill of sale from him or from his lawful attorney, such bond shall be available for the protection of his interest, in addition to any power or rights which he may have in law or equity against the ship or vessel, or against the parties concerned, until he shall have received full indemnity for any loss or injury sustained by him.—§ 41.

Transfer by way of Mortgage.—When any transfer of any ship or vessel, or of any share or shares thereof, shall be made only as a security for the payment of a debt or debts, either by way of mortgage, or of assignment to a trustee or trustees for the purpose of selling the same for the payment of any debt or debts, then and in every such case the collector and comptroller of the port where the ship or vessel is registered shall, in the entry in the book of registry, and also in the indorsement on the certificate of registry, in manner herein-before directed, state and express that such transfer was made only as a security for the payment of a debt or debts, or by way of mortgage, or to that effect; and the person or persons to whom such transfer shall be made, or any other person or persons claiming under him or them as a mortgagee or mortgagees, or a trustee or trustees only, shall not by reason thereof be deemed to be the owner or owners of such ship or vessel, share or shares thereof, nor shall the person or persons making such transfer be deemed by reason thereof to have ceased to be an owner or owners of such ship or vessel, any more than if no such transfer had been made, except so far as may be necessary for the purpose of rendering the ship or vessel, share or shares, so transferred available by sale or otherwise for the payment of the debt or debts for securing the payment of which such transfer shall have been made.—§ 42.

Transfers of Ships for Security.—When any transfer of any ship or vessel, or of any share or shares thereof, shall have been made as a security for the payment of any debt or debts, either by way of mortgage or of assignment as aforesaid, and such transfer shall have been duly registered according to the provisions of this act, the right or interest of the mortgagee or other assignee as aforesaid shall not be in any manner affected by any act or acts of bankruptcy committed by such mortgagor or assignor, mortgagees or assignors, after the time when such mortgage or assignment shall have been so registered as aforesaid, notwithstanding such mortgagor or assignor, mortgagees or assignors, at the time as aforesaid, or at any time thereafter, shall become bankrupt as aforesaid, shall have in his or their possession, order, and disposition, and shall be the reputed owner or owners of the said ship or vessel, or the share or shares thereof, so by him or them mortgaged or assigned as aforesaid, but such mortgage or assignment shall take place and be preferred to any right, claim, or interest which may belong to the assignee or assignees of such bankrupt or bankrupts in such ship or vessel, share or shares thereof, any law or statute to the contrary thereof notwithstanding.—§ 43.

Governors of Colonies, &c. may cause Proceedings in Suit to be stayed.—It shall and may be lawful for any governor, lieutenant-governor, or commander-in-chief of any of his Majesty's colonies, plantations, islands, or territories, and they are hereby respectively authorized and required, if any suit, information, libel, or other prosecution or proceeding of any nature or kind whatever shall have been

up to the collector, who
shall be subscribed by

the party making the same; and upon such oath or affirmation being made, and the other require-
ments of this act, in order to the registry of ships or vessels, being complied with, it shall be lawful for
the collector of the district, before whom such oath or affirmation is made, to grant a new register, in-
stead of that which the same is issued in the room of the one lost or destroyed. But in all cases where
a register shall be granted, in lieu of the one lost or destroyed, by any other than the collector of the
district to which the ship or vessel actually belongs, such register shall, within ten days after her first
arrival within the district to which she belongs, be delivered up to the collector of said district, who
thereupon, grant a new register in lieu thereof. And in case the master or commander shall
refuse to deliver up such register, within the time aforesaid, he shall forfeit one hundred dollars; and
the former register shall become null and void.

17. That when any ship or vessel, which shall have been registered pursuant to this act, or the
act hereby, in part, repealed, still, in whole or in part, be sold, or transferred to a citizen or citizens
of the United States, or shall be altered in form, or burthen, by being lengthened, or built upon, or
have the denomination to another, by the mode or method of rigging or fitting, in every such case the
said ship or vessel shall be registered anew, by her former name, according to the directions herein-
before contained, (otherwise she shall cease to be deemed a ship or vessel of the United States,) and
her former certificate of registry shall be delivered up to the collector to whom application for such
new registry shall be made, at the time that the same shall be made, to be by him transmitted to the
register of the treasury, who shall cause the same to be cancelled. And in every such case of sale or
transfer, there shall be some instrument of writing, in the nature of a bill of sale, which shall recite, at
least, the said certificate, otherwise the said ship or vessel shall be incapable of being so registered
anew. And in every case, in which a ship or vessel is hereby required to be registered anew, if she
shall not be so registered anew, she shall not be entitled to any of the privileges or benefits of a ship or
vessel of the United States. And further, if her said former certificate of registry shall not be deliv-
ered up, as aforesaid, except where the same may have been destroyed, lost, or unintentionally mislaid,
and an oath or affirmation thereof shall have been made, as aforesaid, the owner or owners of such
ship or vessel shall forfeit and pay the sum of five hundred dollars, to be recovered, with costs of suit.

18. That when the master, or person having the charge or command of a ship or vessel, registered
pursuant to this act, or the act hereby in part repealed, shall be changed, the owner, or one of the
owners, or the new master of such ship or vessel, shall report such change to the collector of the dis-
trict where the same shall happen, or where the said ship or vessel shall first be, after the same shall
have happened, and shall produce to him the certificate of registry of such ship or vessel, and shall
make oath or affirmation, showing that such new master is a citizen of the United States, and the
master in which, or means whereby, he is so a citizen; whereupon the said collector shall endorse
upon the said certificate of registry a memorandum of such change, specifying the name of such new
master, and shall subscribe the said memorandum with his name; and, if other than the collector of
the district by whom the said certificate of registry shall have been granted, shall transmit a copy of
the said memorandum to him, with notice of the particular ship or vessel to which it shall relate; and
the collector of the district by whom the said certificate shall have been granted, shall make a like
memorandum of such change in his book of registers, and shall transmit a copy thereof to the register
of the treasury. And if the said change shall not be reported, or if the said oath or affirmation shall
not be taken, as above directed, the registry of such ship or vessel shall be void, and the said master,
or person having the charge or command of her, shall forfeit and pay the sum of one hundred dollars.

19. That if any ship or vessel heretofore registered, or which shall hereafter be registered, as a
ship or vessel of the United States, shall be sold or transferred, in whole or in part, by way of trust,
pledge, or otherwise, to a subject or citizen of any foreign prince or state, and such sale or trans-
fer shall not be made known, in manner hereinbefore directed, such ship or vessel, together with
her tackle, apparel, and furniture, shall be forfeited: Provided, That if such ship or vessel shall be
owned in part only, and it shall be made appear to the jury, before whom the trial for such forfeiture
shall be had, that any other owner of such ship or vessel, being a citizen of the United States, was
wholly ignorant of the sale or transfer to, or ownership of, such foreign subject or citizen, the share
or interest of such citizen of the United States shall not be subject to such forfeiture; and the residue
only shall be a forfeiture.

Act of the 18th of February, 1793.—§ 1. That ships or vessels, enrolled by virtue of "An act for regis-
tering and clearing vessels, regulating the coasting trade, and for other purposes," and those of twenty
tons and upwards, which shall be enrolled, after the last day of May next, in pursuance of this act,
and having a license in force, or, if less than twenty tons, not being enrolled, shall have a license in
force, as is hereinafter required, and no others shall be deemed ships or vessels of the United States,
entitled to the privileges of ships or vessels employed in the coasting trade or fisheries.

2. That from and after the last day of May next, in order for the enrolment of any ship or vessel,
she shall possess the same qualifications, and the same requisites, in all respects, shall be complied
with, as are made necessary for registering ships or vessels by the act, entitled "An act concerning
the registering and recording of ships or vessels," and the same duties and authorities are hereby
given and imposed on all officers, respectively, in relation to such enrolments, and the same proceed-
ures shall be had, in similar cases, touching such enrolments; and the ships or vessels so enrolled,
with the master, or owner or owners thereof, shall be subject to the same requisites as are, in those
respects, provided for vessels registered by virtue of the aforesaid act; the record of which enrolment
shall be made, and an abstract or copy thereof granted, as nearly as may be, in the form following:

Enrolment, in conformity to an act of the congress of the United States of America, entitled "An
act for enrolling and licensing ships or vessels, to be employed in the coasting trade and fisheries, and
for regulating the same." [Inserting here the name of the person, with his occupation and place of
abode, by whom the oath or affirmation is to be made,] having taken and subscribed the oath (or
affirmation) required by this act, and having sworn (or affirmed) that he (or she, and, if more than
one owner, adding the words "together with," and the name or names, occupation or occupations,
place or places, of abode, of the owner or owners) is, (or are) a citizen (or citizens) of the United
States, and not owner (or owners) of the ship or vessel, called the [inserting here, her name] of [in-
serting here, the name of the port to which she may belong] whereof [inserting here, the name of the
master] is at present master, and is a citizen of the United States, and that the said ship or vessel
was [inserting here, when and where built] and [inserting here, the name and office, if any, of the
person by whom she shall have been surveyed, or admeasured] having certified that the said ship or
vessel has [inserting here, the number of decks] and [inserting here, the number of masts] and that
her length is [inserting here, the number of feet] her breadth [inserting here, the number of feet] her
depth [inserting here, the number of feet] and that she measures [inserting here, her number of tons]
that she is [describing here, the particular kind of vessel, whether ship, brigantine, snow, schooner,
sloop, or whatever else, together with her built, and specifying whether she has any or no gallery
or head] and the said [naming the owner, or the master, or other person acting in behalf of the
owner or owners, by whom the certificate of admeasurement shall have been countersigned] having
sworn to the description and admeasurement above specified, and sufficient security having been
given, according to the said act, the said ship or vessel has been duly enrolled, at the port of [naming
the port where enrolled.] Given under my hand and seal, at [naming the said port] this [inserting

the particular day] day of [naming the month] in the year [specifying the number of the year, in words at length].

§ 3. That it shall and may be lawful for the collectors of the several districts, to enrol and license any ship or vessel that may be registered, upon such registry being given up, or to register any ship or vessel that may be enrolled, and license and license being given up. And when any ship or vessel shall be in any other district than the one to which she belongs, the collector of such district, upon the application of the master or commander thereof, and upon his taking a collector of such district, that, according to his best knowledge and belief, the property remains as expressed in the certificate of enrolment proposed to be given up, and upon his giving the bonds required for granting registry or enrolment and license aforesaid; but in every such case, the collector, to whom the register or enrolment and license, may be given up, shall transmit the same to the register of the treasury; and the register, or enrolment and license, granted in lieu thereof, shall within ten days after the arrival of the ship or vessel within the district to which she belongs, be delivered to the collector of the said district, and be by him cancelled. And if the said master or commander shall neglect to deliver the said register, or enrolment and license, within the time aforesaid, he shall forfeit one hundred dollars.

§ 4. That, in order to the licensing of any ship or vessel for carrying on the coasting trade or fisheries, the husband, or managing owner, together with the master thereof, with one or more sureties, to the satisfaction of the collector granting the same, shall become bound to pay to the United States, if such ship or vessel be of the burthen of five tons and less than twenty tons, the sum of one hundred dollars; and if twenty tons and not exceeding thirty tons, the sum of two hundred dollars; and if above thirty tons and not exceeding sixty tons, the sum of five hundred dollars; and if above sixty tons, the sum of one thousand dollars, in case it shall appear, within two years from the date of the said bond, that such ship or vessel has been employed in any trade, whereby the revenue of the United States has been defrauded during the time the license granted to such ship or vessel, remains in force; and the master of such ship or vessel shall also swear or affirm, that he is a citizen of the United States, and that such license shall not be used for any other vessel, or any other employment, than that for which it is specially granted, or in any trade or business whereby the revenue of the United States may be defrauded; and if such ship or vessel be less than twenty tons burthen, the husband or managing owner shall swear or affirm, that she is wholly the property of a citizen or citizens of the United States; whereupon it shall be the duty of the collector of the district, comprehending the port wherein such ship or vessel may belong, (the duty of six cents per ton being first paid,) to grant a license, in the form following: "License for carrying on the [here insert, coasting trade, whale fishery, or cod fishery, as the case may be.]

"In pursuance of an act of the congress of the United States of America, entitled "An act for enrolling and licensing ships or vessels to be employed in the coasting trade and fisheries, and for regulating the same," [inserting here, the name of the husband or managing owner, with his occupation and place of abode, and the name of the master, with the place of his abode] having given bond that the [insert here, the description of the vessel, whether ship, brigantine, snow, schooner, sloop, or whatever else she may be] called the [insert here, the vessel's name] whereof the said [name of the master] is master, burthen [insert here the number of tons, in words] tons, as appears by her enrolment, dated at [naming the district, day, month, and year, in words at length] (but, if she be less than twenty tons, insert, instead thereof) proof being had of her admeasurements, shall not be employed in any trade, while this license shall continue in force, whereby the revenue of the United States shall be defrauded, and having also sworn (or affirmed) that this license shall not be used for any other vessel, or for any other employment, than is herein specified, license is hereby granted for the said [inserting here, the description of the vessel] called the [insert here, the vessel's name] to be employed in carrying on the [inserting here, coasting trade, whale fishery, or cod fishery, as the case may be] for one year from the date hereof, and no longer: Given under my hand and seal, at [naming the said district] this [inserting the particular day] day of [naming the month] in the year [specifying the number of the year, in words at length]."

§ 5. That after the last day of May next, every ship or vessel of twenty tons or upwards, (other than such as are registered,) found trading between district and district, or between different places in the same district, or carrying on the fishery, without being enrolled and licensed, or, if less than twenty tons, and not less than five tons, without a license, in manner as is provided by this act, such ship or vessel, if laden with goods the growth or manufacture of the United States only, (distilled spirits only excepted) or in ballast, shall pay the same fees and tonnage in every port of the United States at which she may arrive, as ships or vessels not belonging to a citizen or citizens of the United States; and if she have on board any articles of foreign growth or manufacture, or distilled spirits, other than sea stores, the ship or vessel, together with her tackle, apparel, and furniture, and the lading found on board, shall be forfeited: *Provided*, however, if such ship or vessel be at sea at the expiration of the time for which the license was given, and the master of such ship or vessel shall swear or affirm that such was the case, and shall, also, within forty-eight hours after his arrival, deliver to the collector of the district in which he shall first arrive the license which shall have expired, the forfeiture aforesaid shall not be incurred, nor shall the ship or vessel be liable to pay the fees and tonnage aforesaid.

§ 7. That the collector of each district shall progressively number the licenses by him granted, beginning anew at the commencement of each year, and shall make a record thereof, in a book to be by him kept for that purpose, and shall, once in three months, transmit to the register of the treasury, copies of the licenses which shall have been granted by him; and also, of such licenses as shall have been given up or returned to him, respectively, in pursuance of this act. And where any ship or vessel shall be licensed or enrolled anew, or being licensed or enrolled, shall afterwards be required, or being registered, shall afterwards be enrolled or licensed, she shall, in every such case, be enrolled, licensed, or registered, by her former name.

§ 8. That if any ship or vessel, enrolled or licensed as aforesaid, shall proceed on a foreign voyage, without first giving up her enrolment and license to the collector of the district comprehending the port from which she is about to proceed on such foreign voyage, and being duly registered by such collector, every such ship or vessel, together with her tackle, apparel, and furniture, and the goods, wares, and merchandises, so imported therein, shall be liable to seizure and forfeiture: *Provided*, however, if the port from which such ship or vessel is about to proceed on such foreign voyage, be not within the district where such ship or vessel is enrolled, the collector of such district shall give to the master of such ship or vessel a certificate, specifying that the enrolment and license of such ship or vessel is received by him, and the time when it was so received; which certificate shall afterwards be delivered by the said master to the collector who may have granted such enrolment and license.

Act of the 1st of June, 1790.—§ 2. That every ship and vessel of the United States, going to any foreign country, shall, before she departs from the United States, at the request of the master, be furnished, by the collector for the district where such ship or vessel may be, with a passport of the form prescribed and established, pursuant to the foregoing section; for which passport the master of such ship or vessel shall pay to the said collector ten dollars, to be accounted for by him; and, in order to be entitled to such passport, the master of every such ship or vessel shall be bound with sufficient sureties, to the treasurer of the United States, in the penalty of two thousand dollars, conditioned, that the said

passport shall not be in the name; and the said, within three miles take place with more than the cap Act of the 27th of June, 1790, any law of or foreigners, shall, notwithstanding any ship and vessels a Act of the 2d of March, 1800, Med any such Mediterranean not exceeding five miles, in any court thereunder be rendered United States.

§ 2. That it shall be the duty of the register of registry, to make known only to the collector of the district, and shall be issued, except in case of the United States, of the respective day of December, first of the year, and to the

§ 3. That when an act of the United States, or transferred, on her first arrival, the registry of ships, or vessel, charge or command afterwards, as aforesaid, one thousand dollars on imports at which such ship or vessel or any other charge or cost contained shall be the amount of any former

§ 4. That when an act of the United States, or transferred, on her first arrival, the registry of ships, or vessel, charge or command afterwards, as aforesaid, one thousand dollars on imports at which such ship or vessel or any other charge or cost contained shall be the amount of any former

§ 5. That when an act of the United States, or transferred, on her first arrival, the registry of ships, or vessel, charge or command afterwards, as aforesaid, one thousand dollars on imports at which such ship or vessel or any other charge or cost contained shall be the amount of any former

§ 6. That when an act of the United States, or transferred, on her first arrival, the registry of ships, or vessel, charge or command afterwards, as aforesaid, one thousand dollars on imports at which such ship or vessel or any other charge or cost contained shall be the amount of any former

REPORT, in consequence of the account of the cargo, REPRISALS, property belonging to the United States, to indemnify the Admiralty.—(See RESPONDED TO REVENUE A short, we believe a following complete in 1836, 1837, or supplementary papers, motion of Mr. P. memorial of their pa

passport shall not be applied to the use or protection of any other ship or vessel than the one described in the same; and that, in case of the loss or sale of any ship or vessel having such passport, the same shall, within three months, be delivered up to the collector from whom it was received, if the loss or sale take place within the United States; or within six months, if the same shall happen at any place nearer than the cape of Good Hope; and within eighteen months, if at a more distant place.

Act of the 27th of June, 1797.—§ 1. That no ship or vessel which has been, or shall be registered pursuant to any law of the United States, and which hereafter shall be seized, or captured and condemned, under the authority of any foreign power, or that shall, by sale, become the property of a foreigner or foreigners, shall, after the passing of this act, be entitled to, or capable of receiving a new register, or passport; and such ship or vessel should afterwards become American property; but that all such ships and vessels shall be taken and considered, to all intents and purposes, as foreign vessels: *Provided*, That nothing in this act contained shall extend to, or be construed to affect, the person or persons owning any ship or vessel, at the time of the seizure, or capture of the same, or shall prevent such owner, in case he regain a property in such ship or vessel, so condemned, by purchase or otherwise, from claiming and receiving a new register for the same, as he might or could have done if this act had not been passed.

Act of the 2d of March, 1803.—§ 1. That if any person shall knowingly make, utter, or publish, any false scutcheon, Mediterranean passport, or certificate of registry, or shall knowingly avail himself of any such Mediterranean passport, scutcheon, or certificate of registry, he shall forfeit and pay a sum not exceeding five thousand dollars, to be recovered by action of debt, in the name of the United States, in any court of competent jurisdiction; and, if an officer of the United States, he shall forever thereafter be rendered incapable of holding any office of trust or profit under the authority of the United States.

§ 2. That it shall be the duty of the comptroller of the treasury to cause to be provided blank certificates of registry, with such water and other secret marks as he may direct, which marks shall be made known only to the collectors and their deputies, and to the consuls or commercial agents of the United States; and from and after the thirty-first day of December next, no certificate of registry shall be issued, except such as shall have been provided and marked as aforesaid; and the ships or vessels of the United States, which shall have been duly registered as such, shall be entitled to new certificates of registry (gratis) in exchange for their old certificates of registry: And it shall be the duty of the respective collectors, on the departure of any such ship or vessel, after the said thirty-first day of December, from the district to which such ship or vessel shall belong, to issue a new certificate accordingly, and to retain and deface the former certificate.

§ 3. That when any ship or vessel, which has been, or which shall be, registered pursuant to any law of the United States, shall, whilst such ship or vessel is without the limits of the United States, be sold or transferred, in whole or in part, to a citizen or citizens of the United States, such ship or vessel, on her first arrival in the United States thereafter, shall be entitled to all the privileges and benefits of a ship or vessel of the United States: *Provided*, That all the requisites of law, in order to the registry of ships or vessels, shall be complied with, and a new certificate of registry obtained for such ship or vessel, within three days from the time at which the master or other person having the charge or command of such ship or vessel, is required to make his final report upon her first arrival afterwards, as aforesaid, agreeably to the thirtieth section of the act, passed on the second day of March, one thousand seven hundred and ninety-nine, entitled "An act to regulate the collection of duties on imports and tonnage." And it shall be lawful to pay to the collector of the district within which such ship or vessel may arrive, as aforesaid, the duties imposed by law on the tonnage of such ship or vessel at any time within three days from the time at which the master, or other person having the charge or command of such ship or vessel, is required to make his final report, as aforesaid, any thing to the contrary in any former law notwithstanding: *Provided*, always, That nothing herein contained shall be construed to repeal, or in any wise change the provisions, restrictions, or limitations, of any former act or acts, excepting so far as the same shall be repugnant to the provisions of this act.

Act of the 26th of March, 1810.—§ 1. That, from and after the thirtieth of June next, no scutcheon, or other document, certifying or proving any ship or vessel to be the property of a citizen or citizens of the United States, shall be issued, except to ships or vessels duly registered, or enrolled and licensed, as ships or vessels of the United States, or to vessels which, at that time, shall be wholly owned by citizens of the United States, and furnished with, or entitled to, scutcheons or other customhouse documents; any law or laws, heretofore passed, to the contrary notwithstanding: *Provided*, nevertheless, That no scutcheon shall be issued to any vessel which shall not at that time be furnished or entitled to a scutcheon, unless such vessel shall return to some port or place in the United States, or territories thereof, on or before the said thirtieth day of June next: *Provided*, nevertheless, That no scutcheon or other document, certifying or proving any ship or vessel to be the property of a citizen or citizens of the United States, shall be issued to any vessel now abroad, which shall not, at this time, be furnished or entitled to a scutcheon, unless such vessel shall arrive at some port or place in the United States, or territories thereof, on or before the said thirtieth day of June next: *And provided*, That nothing herein contained shall be construed to operate against any such vessel or vessels that now are, or may be prior to the said thirtieth of June, detained abroad by the authority of any foreign power.

See farther *Gordon's Digest of the Laws of the United States*, Book 9th, Chapter 2d, and *Kent's Commentaries on American Law*, Lecture 45th.—*Am. Ed.*]

REPORT, in commercial navigation, a paper delivered by the masters of all ships arriving from parts beyond seas to the Custom-house, and attested upon oath, containing an account of the cargo on board, &c.—(See *antè* p. 4.)

REPRISALS. Where the people of one nation have unlawfully seized and detained property belonging to another state, the subjects of the latter are authorised, by the law of nations, to indemnify themselves, by seizing the property of the subjects of the state aggressor. This is termed making reprisals; and commissions to this effect are issued from the Admiralty.—(See **PRIVATEERS**.)

RESPONDENTIA. See **BOTTOMRY AND RESPONDENTIA**.

REVENUE AND EXPENDITURE. Though not properly belonging to a work of this sort, we believe we shall do an acceptable service to our readers by laying before them the following comprehensive Table of the revenue and the expenditure of the United Kingdom in 1830, 1837, and 1838. It contains more information in a brief space than most parliamentary papers. It was originally framed according to the suggestion, and printed upon the motion of Mr. Pusey; and there are not very many members who have left so useful a memorial of their parliamentary career.

		Available balance remaining,	\$3,868,322-36

Revenue and Means for 1839, exclusive of Trusts and the Post-office.

The balance in the Treasury on the 1st of January, 1839, which could be considered available for general purposes, was \$3,466,961-96

The receipts from customs, the first three quarters, as appearing on the Register's books, are 18,226,710-30

This includes about two millions and three-fourths collected last year in Treasury notes, but not carried on his books till 1839. From this cause, the actual receipts in this year will, to that extent, appear larger than they ought.

Receipts from Lands the first three quarters, including also some collected last year in Treasury notes - 5,417,282-31

Miscellaneous receipts - 123,297-73

Estimated receipts for the fourth quarter from all those sources - 5,700,000-00

Receipts on some of the debts against banks not available, on 1st January, 1839, but since paid - 1,322,698-90

From the third issue of Treasury notes under the act of March 2d, 1839 - 3,837,270-11

Aggregate means, \$37,217,812-73

Expenditures for 1839, exclusive of the Post-office and Trusts.

Civil, foreign, and miscellaneous for the first three quarters - \$3,619,502-03

Military, for the first three quarters - 10,791,729-21

Naval, for the first three quarters - 4,713,701-37

Estimate for all during the fourth quarter - 5,600,000-00

Funded debt for the year - 14,628-98

Redemption of Treasury notes in the first three quarters, interest as well as principal - 34,769,667-39

This includes two millions and three-fourths paid in for duties and lands last year, but not carried on the Register's books till 1839. From this cause, the expenditures on that account will appear larger by that amount than they actually have been within those quarters.

Estimated amount of notes redeemed in the fourth quarter, - 1,000,000-00

Aggregate payments - 55,601,626-73

Leaving an available balance of money in the Treasury, on the 31st of December, 1839, of - 1,556,285-93

\$37,217,812-73

Statement of the Annual Expenditures, exclusive of the Public Debt, from the commencement of the Government to the 31st of December, 1837: as reported by the Secretary of the Treasury.

 river. It has 2 li

RHUBARB (Du. *Rhubarber*; Fr. *Rhubarbe, Rubarbe*; It. *Rabarbaro, Reo-barbaro*; Sp. *Rubarbo*; Rus. *Reven*; Arab. *Rawend*; Chin. *Ta-hwang*), the root of a plant, a native of China and Tartary. Three varieties of rhubarb are known in the shops; viz. Russian, Turkey, and East Indian or Chinese rhubarb. The first two resemble each other in every respect. They are, in fact, the same article, being both derived from Tartary. The portion destined for the Petersburg market being selected and sorted at Kiachta, acquires the name of Russian rhubarb; while the portion that is sent from Tartary to Smyrna and other places in Turkey, is called Turkey rhubarb. The best pieces only are sent to Petersburg; and according to the contract with the government, on whose account it is bought, all that is rejected must be burnt; and that which is approved undergoes a second cleaning before being finally packed up for Petersburg. The best pieces of Russian and Turkey rhubarb are roundish and perforated with a large hole, of a reddish or yellow colour on the outside, and when cut or broken exhibit a mottled texture, and alternate streaks of red and grey. Its odour is peculiar; and its taste nauseous, bitter, and astringent. It should not be porous, but rather compact and heavy. East Indian or Chinese rhubarb is in oblong flat pieces, seldom perforated; has a stronger odour, and is more nauseous to the taste than the other; it is heavier, more compact, breaks smoother, and affords a powder of a redder shade.—(*Thomson's Dispensatory; Ainslie's Mat. Indica, &c.*)

The total quantity of rhubarb imported in 1831 amounted to 140,395 lbs.; of which 6,901 lbs. came from Russia, and 133,494 from the East Indies. Of the quantity imported, 40,124 lbs. were retained for home consumption. The price of rhubarb in bond varies from 2s. per lb. for the inferior East Indian, to 6s. for the best Russian.

RICE (Fr. *Riz*; It. *Riso*; Arab. *Aruz*; Hind. *Chawl*), one of the most valuable of the cereal grasses, the *Oryza sativa* of botanists. It is raised in immense quantities in India, China, and most eastern countries; in the West Indies, Central America, and the United States; and in some of the southern countries of Europe. It, in fact, occupies the same place in most intertropical regions as wheat in the warmer parts of Europe, and oats and rye in those more to the north. Forming, as it does, the principal part of the food of the most civilized and populous Eastern nations, it is more extensively consumed than any other species of grain. It is light and wholesome, but is said to contain less of the nutritive principle than wheat. When rough, or in its natural state in the husk, it is called *paddy*. There is an immense variety in the qualities of rice. That which is principally exported from Bengal has received the name of *cargo rice*. It is of a coarse reddish cast, but is sweet and large grained, and is preferred by the natives to every other sort. It is not kiln-dried, but is parched in earthen pots or caldrons, partly to destroy the vegetative principle, so that it may keep better, and partly to facilitate the process of husking. Patna rice is more esteemed in Europe than any other sort of rice imported from the East. It is small grained, rather long and wiry, and remarkably white. But the rice raised on the low marshy grounds of Carolina is unquestionably very superior to any brought from any part of India.

The produce of lands naturally or artificially irrigated is, as far as rice is concerned, from 5 to 10 times greater than that of dry land having no command of water; and hence the vast importance of irrigation in all countries where this grain is cultivated. But it is worthy of remark, that owing to the not unfrequent occurrence of severe droughts, there is a greater variation in the crops of rice than in those of any other species of grain. Those who, like the Hindoos, depend almost entirely on it for subsistence, are, consequently, placed in a very precarious situation. There can be no doubt that famines are at once more frequent and severe in Hindoostan than in any other quarter.

A few years ago England was principally supplied with cleaned rice from Carolina. Lately, however, the imports of Carolina rice have been much reduced. An improved method of separating the husk, which throws out the grain clean and unbroken, has recently been practised in this country; and as the grain, when in the husk, is found to preserve its flavour and sweetness better during a long voyage than when shelled, large quantities are now imported rough from Bengal and the United States. Unquestionably, however, the oppressive discriminating duty of 14s. a cwt. on American and other foreign cleaned rice has done more than any thing else to increase the imports of rough grain; and the fact of the duty on paddy from Bengal being only 1d. per quarter, while that on paddy from Carolina is 2s. 6d. a bushel, sufficiently accounts for the increased imports from the former.

The consumption of rice increased rapidly after the reduction of the duty on the cleaned and rough grain from India in 1828. In 1830, the entries for home consumption amounted to 153,652 cwt. of cleaned, and 189,849 cwt. of rough grain. But, contrary to our anticipations in the former edition of this work, the consumption has since materially fallen off. The entries for home consumption in 1832 amounted to only 111,461 cwt. of clean, and 170,627 cwt. of rough grain, or paddy; and, during last year (1833), there was a still further decline. Mr. Cook ascribes this diminution to the reduction that has taken place in the price of wheat, which has fallen from 64s. 3d. in 1830 to 52s. 11d. in 1833. Mr. C. further mentions that, in bad seasons, when grain is soft and damp, the millers consider it advantageous to grind a certain proportion of rice with it.—(*Milburn's Orient. Com.; Ainslie's Mat. Ind., Cook's Com. of Great Britain in 1833; and private information.*)

The price of rice in bond in the London market, in January, 1834, was as under:—

Rice, Carolina, new, per cwt.	L. s. d.	L. s. d.	Duty on paddy, the produce of, and imported from
East India, Bora, Patna, do.	0 17 0	10 1 1	0
Bengal, white, do.	0 13 6	0 16 0	0
Comp. and ordinary	0 9 0	0 12 0	0

From America and other foreign places, 2s. 6d. per bushel.
Duty on American and other foreign pieces of growth, 16s. per cwt.
—Bengal, and other sorts, 1s. per cwt.

RIGA, a city of European Russia, the capital of Livonia, situated on the Duna, about 9 miles from the sea, in lat. 56° 50' 5" N., lon. 24° 0' 4" E. Population about 47,000.

Harbour.—A light-house has been erected on Fort Comet, on the western side of the mouth of the river. It has 2 lights; the first, elevated about 101 feet (English) above the level of the sea, may b

RIO DE JANEIRO, the capital of Brazil, situated in lat. 22° 54' 15" S., lon. 43° 15' 50" W. Population about 160,000. The harbour of Rio is one of the finest in the world, both as respects capaciousness and security for all sorts of vessels. In coming from the N. E. it is usual to make Cape Frio, in lat. 23° 1' 18" S., lon. 42° 3' 19" W., being about 4 leagues nearly E. of Rio. The entrance to the harbour is marked by a remarkable hill in the form of a sugar loaf, 900 feet high, close to its west side; while on the east, or opposite side of the bay, at the distance of about 1½ mile, is the fort of Santa Cruz. But the woodcut in the next page, taken from a chart published by order of the Brazilian authorities, gives a much better idea of this noble harbour than could be obtained from any description.

Entrance to the Harbour.—Vessels bound for Rio, coming from the N., should, after rounding Cape Frio, steer due W., keeping about 3 leagues from the coast, until they come within 5 or 6 miles of the Du Izal, or Flat Island, lying almost due S. from the mouth of the harbour, at the distance of about 3 leagues. A light-house, the lantern of which is said to be elevated nearly 300 feet above the level of the sea was erected on this island in 1829. The light is a revolving one, finishing its revolution in 3 minutes, and exhibiting alternately a white and a red light. There is also a light-house in the fort of Santa Cruz, the light of which is fixed and elevated about 50 feet above the level of the sea.—(Consult *Les Phares*, 3d ed.) Having got within 5 or 6 miles of the Ilha Reza, ships may enter by day or by night, the dotted line in the cut marking the fairway into the harbour. There are no pilots to be put with; and, as there are no hidden dangers of any kind, their services are not wanted. On entering, vessels must pass within half of Fort Santa Cruz, to be ready to answer any questions that may be put to them. They then proceed to Fort Vilganhon, below or opposite to which they must bring to, or come to anchor, allowing no boats to come alongside, but those of the government, until they have received *pratique*, when they will be permitted to proceed to the usual place of anchorage for the merchant shipping.

The sea breeze generally sets in about 11 A. M., and lasts till about sun-set. It is strong enough to enable ships to overcome the ebb. High water at full and change at 2 in the afternoon.

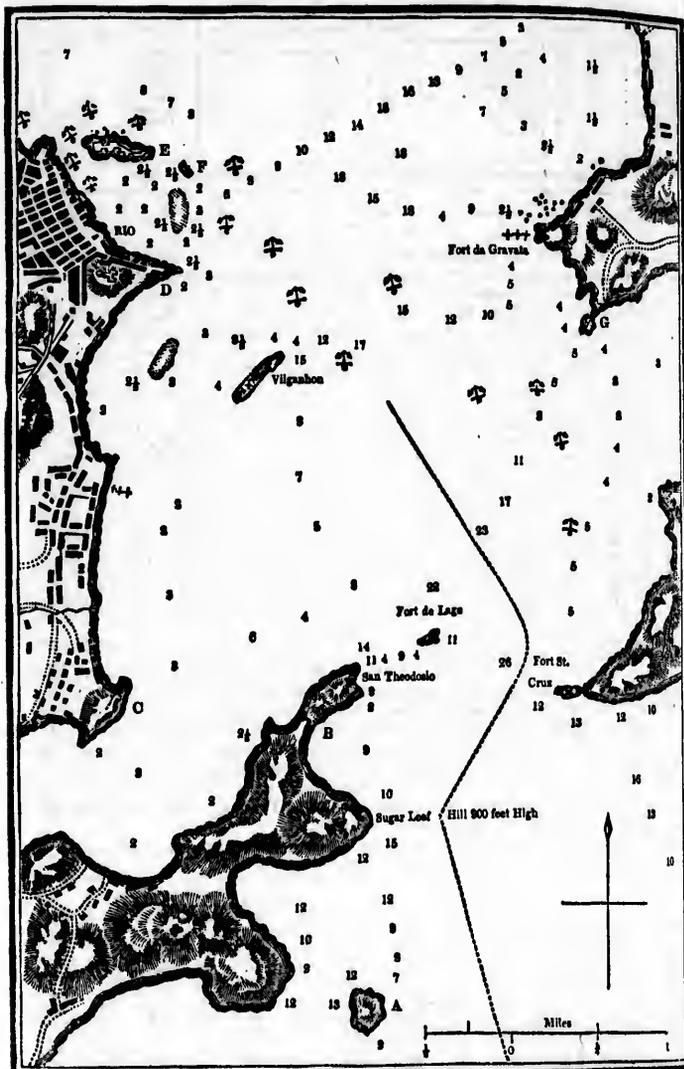

Trade.—The trade of Rio is extensive, and has increased rapidly of late years. The principal articles of export are coffee, sugar, cotton, hides, rum, tallow, indigo, coarse cotton cloths, gold, diamonds, precious stones, tobacco, cabinet and dye woods, rice, &c. The imports consist principally of cottons, hardware, flour, dried fish, linens, woollens, soap and candles, wines, oils, &c. Until 1830, slaves formed one of the principal articles of import into Rio and other Brazilian ports; so many as 45,000 having been imported in one year, of which Rio received the greater proportion. But, according to a convention entered into with this country, this infamous traffic should have ceased in February, 1830: whether it has really done so is more than we can undertake to affirm.

The increase in the exports of sugar and coffee from Brazil during the last 10 years has been quite unprecedented. In 1822, the total export of sugar from the empire was only 40,000 tons, whereas it now amounts to about 75,000 tons. In 1821, the quantity of coffee exported from Rio did not exceed 7,500 tons; but in 1833 it amounted to more than 4 times that quantity, or to about 35,000 tons! The exports of cotton have also increased, but not so rapidly. The imports of cotton from Brazil to England in 1831, were 31,695,761 lbs., being between a 7th and an 8th of the total quantity we imported that year. In 1832, the imports declined to 20,100,560 lbs.

Vol. II.—2 M

A considerable part of the extraordinarily rapid increase of the sugar and coffee cultivation in Brazil must be ascribed to the facility with which slaves have recently been imported; and it is possible that the cessation of their importation, supposing the convention to that effect to be executed, may check, for a while, the extension of cultivation in Brazil.

We have derived the following statements, as to the trade of Brazil, from the highest authority. Of their accuracy there can be no more question than of their interest and importance. Unfortunately, the government of Brazil does not publish any official statements of the trade of the different ports, not even of the amount of exports or imports, so that information on these points can only be drawn from private sources.

* The imports are chiefly from Great Britain, consisting principally of our cotton, linen, woollen, hardware, and other manufactures, amounting annually to about 4,000,000*l.* The remainder of the imports consist of wines, brandies, &c. from Portugal and the Mediterranean; flour from the United States; cod fish from ditto and Newfoundland; with a comparatively small amount of French, German, Swiss, and Indian manufactures, and tea; the latter chiefly through the United States.

† The duties on all imports, without exception, are 15 per cent. on the tariff value, which averages about 20 per cent. on the real value of British goods; those on exports vary at the different ports, and on every description of produce. On coffee they amount to about 10 per cent.; on sugar, 12 per cent. (1 being paid by the planter). The export duty on cotton has lately been reduced from 20 to about 3 per cent.

‡ There are no commercial or discount banks in any part of Brazil; but at Rio there is one of issue, the whole of its transactions being with the government.

§ The usual mode of selling goods in Brazil is on an open credit of 4 to 8 months, and sometimes even 12 months, the parties paying by weekly or monthly instalments, as they effect sales, generally exceeding the stipulated credit, by 2, 3, and even 6 months, according to the state of the markets, without allowing any charge for interest. On the other hand, all produce is bought by the foreign merchants for cash down, or, if any credit be given, the usual extra charge is 1 per cent. per month; in fact, the whole commerce of the country is on British capital.

¶ The usual commissions are, 5 per cent. on the sale of goods; 2½ ditto for guarantee; with 2½ per cent. for the purchase and shipment of produce in return; 5 per cent. when purchased by credits on London; the unenca being 60 days after sight.

‡ The currency of Brazil is chiefly paper and copper, of a very depreciated and base kind, and varying in almost every province. The par of exchange, when the silver currency was maintained, was 5*l.* and the current rate always above it, say from 7*l.* to 7*l.* 2*s.*; but now, owing to the introduction of paper and copper, the exchange has fallen at Rio, to 3*l.*, Bahia 3*l.* 2*s.*, Pernambuco 3*l.*, and Maranhão 4*l.*; and, at one period, the exchange at Rio fell as low as 2*l.*, owing to the extensive issue of paper by the bank.

§ The great difficulties under which our trade with Brazil labours are,—1st, The prohibitory duties charged on sugar and coffee, the chief productions of the country; which admit to consumption

year. In 1833, the

only coltons and hides, the latter not being wanted; so that, with an export of nearly 4,000,000*l.*, we have no direct means of return for 1-1/2th the amount, the other 3-1/2ths being forced into the hands of the Americans, Germans, Swedes, &c. who thus get employment for their shipping, and carry on an extensive commerce, entirely on British capital, whilst the British merchant is compelled to transfer his property into their hands for 5 or 6 months, as the only means of getting payment for the manufactures he has exported; at the same time that the British consumer at home is compelled to pay, exclusive of the heavy duties, a decidedly higher price for sugar and coffee than is paid by the consumers of any other European state.

"The 2d grievance is the wretched state of the currency in Brazil, which occasions fluctuations in the exchange of from 10 to 30 per cent. in 2 or 3 months, and even 50 per cent. in the course of the year; so that the actual proceeds, in sterling, of any goods sold on credit can never be pursued until the money is received; there being no discount banks or means of realisation, till the expiration of the credit.

"The Brazilian Regency have at length recommended their currency to the immediate attention of the Assembly; but it may be doubted whether they have either courage or honesty to take any effectual means to eradicate the evil; this can only be done by a return to a gold and silver standard, and a new coinage, calling in the old, one-half of which is debased."—(13th of August, 1833.)

The number of ships which arrived at Rio in 1826, were—

From Great Britain	62	From slave settlements	53 Portuguese & 81 Brazilian.
France	18	South America	81
Spain	4 Spanish, 15 foreign.	Total	440
Portugal	51 Portuguese, 10 British.		
Holland	14 Dutch, 6 foreign.		
Hanse Towns	15		
United States	59 American, 6 foreign.		
North of Europe	27		
Cape of Good Hope, and Cape Verd Islands	12 British, 3 French.		

In 1822, there arrived at Rio 531 vessels; and in 1828, 22. Of the arrivals during the last-mentioned year, 24 were English, including packets, and 161 American. Perhaps not more than 136 of the 526 ships would load at Rio; many calling in quest of freights and for orders, stores, &c. The returns do not include the same coasting vessels.

In order still better to illustrate the trade of Brazil, we take leave to subjoin the following details from *Mr. Calcutt's Travels in South America*. They are neither, however, so recent, nor of such authority, as those already laid before the reader:—"The colonial system, which was strictly preserved until the arrival of the court, kept the country in a state of ignorance of many of those beautiful articles of English manufacture, now so greedily purchased by all. The Brazil trade may be considered as entirely in the hands of the British, as if an exclusive monopoly existed in their favour. Brazil takes from us every thing she requires, excepting wine from Portugal; and the importation of this trade to England may be well conceived, when it is mentioned that, after the East and West Indies and the United States, it forms the greatest mart for our fabrics, and one that is most rapidly increasing.

"In 1820, the imports of British manufactures amounted to 1,860,000*l.*; in 1831, to 2,230,000*l.* The exports of 1820 were 350,000*l.*; in 1831, 1,300,000*l.*; showing a great and progressive increase.

"Of the amount of imports, about three fifths are brought to the capital, owing to the greater consumption, and from its being in communication with the mines, the most inhabited districts of the interior.

"The other nations trading to Brazil exhibit a poor figure after Great Britain. By far the most active of them—the United States—exported to Brazil only to the amount of 320,000*l.*, chiefly in beef, fish, and minor articles. It is impossible to say what may happen, but at present it does not appear that England has much to fear in this quarter. The immense compound of capital which our merchants possess strikes all foreigners with astonishment, and forces them to abandon all idea of competition. The trade carried on by the rest of the world amounts, in the aggregate, to little of that

France being chief from seasonally.

"The trade exported to Brazil, in fact, almost in amount; but of course to say, part when it is imagined. When it is considered that the life to be landed, appears prodigious.

"Many years ago was extremely common and the southern forms another of the other trade country; its dependence on the maritime nations.

"The internal trade of Brazil, by means of Minas Geraes, are numerous mines; a recently prevailed 4,000 octavas of some years, the course, many of the quantity is enough the very, owing to the way as done as the

1828	438,083	22,584	

Port Regulations.—The other part of Brazil, is to be inclosed with in the anchorage ground, contrary view, or any other regulations, and should be taken care to be observed; pay a fine of 100*l.* if a government vessel is not immediately to be sent; the shall not suffice and

being chiefly confined to articles of dress and fashion; and of Sweden, to a few ship loads of iron ore.

The trade is expressly confined to Brazilian vessels in the coasting and African. The latter traffic is well known, is now restricted, by treaty, to that part of Africa south of the line, which comprehends, in fact, almost the whole of the Portuguese possessions. The importation of negroes varies in amount; but of late years it cannot be estimated, on an average, at less than 21,000 into Rio de Janeiro only. It affords too great a return of gain to be easily abandoned; more especially when, strange to say, patriotic feelings are considered, in this instance, to go hand in hand with profit; and when it is imagined, that the moment the trade is prohibited, the prosperity of the country must decay. When it is considered that this number is annually received into the capital, and that there are other ports trading to the same extent, and that scarcely $\frac{1}{3}$ of the negroes taken from the coast are to be landed, the number of negroes carried away by this outlet only in the course of the year appears prodigious.

Many years since, a considerable capital was employed in the whale fishery. The black whale was extremely common near the mouth of the harbour; but an increasing traffic has driven this animal to the southward, and the only establishments at present are in the province of St. Catharine's. It forms another of the royal monopolies; and, in 1820, was farmed by some Frenchmen.

The other trade carried on in Brazilian bottoms is very much confined to that with the mother country; its dependencies, as Madeira; and its possessions in Africa and the East. The traffic with China is still continued, but no longer in that way which made Portugal at one time the envy of all maritime nations.

The internal trade is very much confined to the products of the district of the mines; and is carried on by means of large troops of mules, some of which, from the western provinces of Goias and Mato Grosso, are 4 months on the journey. It is not easy to learn with accuracy the produce of the diamond mines; as they are worked by government, and strictly monopolized: much smuggling consequently prevails. In some years, the quantity recovered by government has amounted to as much as 4,000 octavas of 16 carats; but these are years of rare occurrence: taking the average, however, of some years, the number of octavas would come to near 1,200. In this quantity there would be, of course, many of large size, adding immensely to their value. It is calculated that about the same quantity is smuggled; and there are strong reasons to suppose, that if no difficulties were thrown in the way, owing to the facility with which they are obtained, the produce of Brazil diamonds, in every way as fine as the Oriental, would have considerable effect on the demand.

With respect to the quantity of gold which comes from the mines, it is immersed in a certain degree of obscurity. The 1-5th due to government is the principal cause that I could never ascertain, in any mine which I visited, its exact produce. I shall have another opportunity of saying more on this head, and explaining why the produce of gold mines is on the decrease, which I certainly conceive to be the case.

No silver is produced in Brazil. As there is lead, it would be too much to affirm that none exists; but probably the quantity would be trifling. The silver coin is mainly Spanish dollars, re-stamped into 2-peso pieces, by which a considerable profit is obtained on each.

The quantity of precious stones shipped is now very considerable. In most cases they are sent to a foreign market; being, in fact, more valuable in Brazil than in London or Paris. Aquamarines—(see Brazil)—of a very large size have been found. In January, 1811, one was found in the Ribeira das Americanas, near the diamond district, which weighed 15 lbs.; and in the same place, in the October following, one was discovered weighing $\frac{1}{2}$ lb. Topazes of fine quality, but seldom large, amethysts, and chrysolites, are also articles of exportation; and at times some fine specimens of these gems are to be met with in the jewellers' shops.

Correctly speaking, there are no trading companies in Rio de Janeiro: there is a society for effecting maritime insurances, but no other.

The Bank of Brazil has had very extensive concessions made in its favour, and ought to be in a flourishing state. It has the power of issuing notes; and all disputed monies and property of the deceased and absent (*mortes e ausentes*) must be placed in its hands, and 2 per cent. per annum charged for the care and trouble. This, in addition to the interest which might be obtained for the deposit, would alone, in an active mercantile country, form no inconsiderable revenue. Specie is prohibited from being carried coastwise; merchants who wish to deposit cash in one of the northern ports, where the largest purchases are made, are therefore forced to take hand bills, and pay a premium for them, varying from 3 to 5 per cent.

Some enormous capitals have been amassed; but generally the speculations of the native merchants are conducted on a very limited scale.

The legal rate of interest is 6 per cent.; but money can seldom be obtained under 12.—(Caldwell's Travels in South America, vol. 1. pp. 53—59.)

Population of Brazil.—The magnitude of the population of Brazil is involved in great uncertainty. One of the latest estimates is as follows:—Portuguese and creoles, 900,000; free mestizos, 600,000; enslaved mestizos, 250,000; free negroes, 180,000; enslaved negroes, 2,900,000; Indians, 450,000; making in all, 5,880,000.—(Peltzer Almanac, for 1832.) But we incline to think that this estimate is rather beyond the mark.

Port Regulations.—The captain of every ship entering Rio, or other port of Brazil, is ordered,—

1. To go directly with his vessel from the entrance of the harbour to the anchorage ground in Prayauxa; and if, on account of the contrary wind, or any other just cause, he should be compelled to lie to anchor, and shall remain anchored for twelve hours after the anchorage is removed (except in case of being quarantined), he shall pay a fine of 100,000 reis, and shall be compelled, by the fort, to a government vessel of war, (whichever may be nearest,) to receive on board the French anchorage ground.

2. He shall not suffer any kind of vessel to board him, nor any per-

son to come on board, or to leave his vessel, before he has been visited from the custom-house, excepting only the pilot, health officer, the head officer at the entrance, when there is one, and in the case of a shipwreck, or for the saving of lives.

3. Even after the custom-house visit on arrival, and until the vessel is discharged, he shall allow no person to come on board without a written permission from the inspector of the customs; and this permission shall only be given in the following cases, viz. —

A. To allow the buyers of goods to go on board to examine the cargo they wish to purchase, when sufficient specimens cannot be seen on shore.

3. To workmen or labourers necessary to put the cargo in order, taking care to have them examined when they go on board and return. In case of the infraction of the above regulations, a fine shall be imposed on him of 100,000, 200,000, or 300,000 reis, according to the amount allowed to board him, and of 500,000 for each person who shall enter or leave his vessel without licence, unless he be a passenger, or belonging to the crew; and every other person who goes on board or leaves the vessel, shall pay 10,000 reis fine, and be liable in custody until payment is made. The one third part of these fines shall be divided amongst the watchmen or military who shall have taken up the offenders.

4. He shall deliver to the *guarda-mor* (chief customs-officer), when he makes his visit on arrival, his passport and cargo book.

5. He shall deliver to the commander of the guard-house without the port, if he be there, or at the *Franquia*, if he be there, the manifest as described below.

6. He shall enter at the custom-house, within 24 hours after the *guarda-mor* has been on board, not counting the days on which the custom-house is shut, and present himself to the inspector, and swear, or affirm, that he has not on board of his vessel any merchandise other than what is described in the manifest he has delivered, and that he has no further declaration to make; and if he do not enter within the 24 hours, he shall pay 100,000 reis for each day's delay additional.

7. If he shall detain the vessel at either of the anchorage more than 24 hours, when he shall be directed by the *guarda-mor*, or his representative, to remove thence, he shall pay 100,000 reis for every day he delays.

8. He shall discharge no part of his cargo but by an order in writing from the inspector; and if he land any without such order, he shall pay 100,000 reis for each package so landed except the discharge of the vessel, as soon as his cargo is discharged, that he has nothing remaining on board. If he omit to do this on the same day, so that the vessel may be immediately examined, he shall be fined 100,000 reis.

9. The master of every vessel going with a cargo to any part of the empire, must have two manifests of the cargo, exact copies of each other, exhibiting the cargo, class, quantity, of the manifest of the captain, whose signature must follow the date; the name of the port where the articles stated in the manifest were taken on board; the name of the port or ports to which the cargo is destined; the marks or counter-marks and numbers of the packages, and their description, as bales, cases, pipes, half-pipes, barrels, &c.; a declaration of the quantity and quality of the merchandise of each package, or several similar ones of the same mark, and also of what is on board in bulk; the names of the consignees, or to order; all to be written at length, except the numbers of the packages.

10. When the vessel has taken in her cargo at more than one port, there must be two manifests from each port.

11. At the end of the manifest, the captain shall declare the number of passengers, whether cabin or steerage, and the baggage for their use of cash, and in addition any declaration necessary for his security; and in good faith he shall declare whether he has any package to sell to the manifest, or whether any are deficient, with the cause of, as on after declaration will relieve him from responsibility, for he will not be exempted upon the vague declarations frequently made, which do not account for deficiencies or surpluses.

12. The captain of any vessel bound to Brazil, when he has completed his cargo in the port or ports from which he is to sail, and made the manifests, as required in the 8th article, shall present his documents to the Brazilian consul residing in the port, who shall examine them, and if agreeable to these regulations, certify them.

13. In those ports where there is no Brazilian consul or substitute, the manifests shall be certified by two Brazilian resident merchants; or if there be none, by two merchants of the place; in either case, the signatures to be authenticated by legal authority.

14. Should any greater quantity of goods be found on board than are stated in the manifest or the declaration of the captain, the surplus shall be seized and divided amongst those who seize them, after paying the duties, and the captain shall pay a fine of half the value of the goods.

15. If there are any goods missing of those stated in the manifest or declaration of the captain, they shall be reputed to be concealed or smuggled, and he shall pay the value thereof to those who have discovered the deficiency, and half the value to the national treasury. These conventions shall take place on the simple fact of there being an overplus or deficiency of goods, without further proof being required.

17. For each difference in the quality or mark of the package, the captain shall pay 2,000 reis, although in every other respect the goods discharged may agree with the manifest.

[The commerce of the United States with Brazil is important; nearly one-third of the coffee, and a large portion of the sugar and hides, of foreign importations, are from Brazil. Our exports of flour, provisions, and the various articles of domestic manufactures, amounted last year, (1838,) to \$2,094,957. To show the importance of our commerce, we subjoin the imports and exports of a few leading articles for the last five years; and therein attach an article from a Rio Circular, which we think will be found useful to some of our commercial men who have a direct intercourse with the Brazilian provinces, and particularly with Rio Janeiro.]

The Imports into the United States from Brazil for the five preceding years, ending 20th September, were as follow:

Year.	Am. vessels.	For. vessels.	Total Im.
1834	D. 4,547,119	D. 18,284,689	22,831,808
1835	5,547,919	26,517,468	32,065,387
1836	6,585,186	30,004,000	36,589,186
1837	8,040,068	32,093,983	40,134,051
1838	3,116,843	74,285	3,191,128

Of the above, besides the value of the hides imported each year, the following shows the value of the coffee for each consecutive year, which was D. 2,419,038; D. 3,024,047; D. 4,862,995; D. 2,334,354; D. 2,723,205; and of the brown sugar in like manner: D. 236,985; D. 305,053; D. 1,579,086; D. 199,387; D. 429,853.

Year.	Coffee.	Brown sugar.	Hides in val.
1834	Lta. 26,571,369	Lta. 6,418,156	1,093,181
1835	35,774,878	7,969,883	1,150,891
1836	48,640,319	27,849,038	1,209,854
1837	53,946,348	3,287,401	947,189
1838	27,411,946	7,885,067	124,730

Exports from the United States to Brazil within the above specified time, of foreign and domestic articles, the following amount:

Year.	For. export.	Dom. export.	Total exp.
1834	D. 473,214	D. 1,586,097	D. 2,059,311
1835	787,945	1,910,791	2,698,736
1836	1,763,191	1,732,111	3,495,302
1837	441,092	1,312,217	1,753,309
1838	662,237	2,094,957	2,657,194

18. The captain whose manifests are not conformable to these regulations, shall be fined from 100,000 to 300,000 reis, according to the extent of the infraction, and shall be liable to appeal, and to be examined until the fine is paid.

19. In case the captain brings on board any goods which are not to be discharged, by paying 6 per cent. on the value of the cargo, in addition to the duties.

Franquia.—Vessels proceeding to Brazil, and when it is wished to dispose of their cargoes at different ports, may clear at "Bahia" and other ports, or for "Paranambuco, Bahia, Rio de Janeiro, and other ports," and they are entitled to the privilege of *franquia*, and may land a part of their cargoes at one port, paying duties on the goods so landed, and proceed with the remainder to another port. But if they clear out for one port only, they are compelled to make a complete entry, and discharge the whole of the cargo.

In proceeding from one Brazil port to another, it is necessary that a bill of lading should be taken from the local authorities at each port; and where any part of the cargo is unloaded, the same shall be noted on the original manifest by the customs officer of the port.

Anchorage.—Foreign vessels pay, in all parts of the empire, 100 reis per day, from the 6th day after their arrival.

Light-house.—The light-house duty, 100 reis per ton, for all over 40 tons departing from ports where there is a light-house, and 18,800 reis of two masts, 9,500 reis; and of one mast, 6,000 reis.

Port-duty.—On all vessels not crossing the bar at the harbour of Rio de Janeiro, the following charges are levied, viz. of 100,000 reis, 18,800 reis; of two masts, 9,500 reis; and of one mast, 6,000 reis.

Boat.—The duty is 40 reis for every boat.

Health.—Visit of the physician is fixed at 2,000 reis; but in the vessel is made to perform quarantine, then another one of 1,000 reis is payable on the admission of the vessel to the port.

Hospitals.—A vessel of three masts pays 6,000 reis for hospital, and yachts, 4,000; pinnaces, 2,500; boats, 1,500.

Each one of the ship's company of vessels sailing from Brazil pays 400 reis.

Customs of Merchants.—It is customary that the arrears of duties and shipping charges be paid by the vessel, and the contract is stipulated in the bills of lading, in which it is provided that when the Spanish dollars are bargained for, in contracts of freight, they should be so expressed in the instrument of contract, to prevent dispute.

Purchases of produce are paid for in cash, and bills are made to stipulated credits, but annually for cash.

It bills on account of the purchase of produce in which the bill, the credit must have the confirmation of the London house.

Rates of Commission charged at Rio.

- 5 per cent. on sales of merchandise.
- 1 1/2 per cent. on purchase of merchandises, with funds in hand.
- 2 1/2 per cent. guaranty on amount of sales on credit.
- 1 1/2 per cent. for drawing or indorsing, and negotiating bill.
- 1 1/2 per cent. on purchase on bill of remittance by private contract.
- 5 per cent. on amount of remittance contracted by survey.
- 1 1/2 per cent. for procuring or collecting freights.
- 1 1/2 per cent. on disbursements of vessels in common case, when in hand.
- 5 per cent. on disbursements of vessels when funds are advanced, in case of condemnation, or in vessels carrying for repair only.
- 1 per cent. on receiving or forwarding goods on deposit or responsibility.
- 1 1/2 per cent. on amount of responsibilities incurred through.
- 1 per cent. on receiving and paying money on which no other commission is derived.
- 1 1/2 per cent. on purchase or sale of specie.
- 1 1/2 per cent. for effecting marine insurance on the amount insured; and when the premium exceeds 10 per cent., 5 per cent. on the amount of premium.
- 1 1/2 per cent. on remittances on bills not indorsed.
- On consignments of merchandise withdrawn or reshipped, full commission be charged to the extent of duties and responsibilities incurred, and half commission on the residue of the value.
- 1 per cent. per month on all cash advanced.
- No interest allowed on money on deposit.
- 1 per cent. storage on all dry goods.
- 1 1/2 per cent. on charging and recharging the cargoes of vessels at wharves, on the invoice amount, 2 1/2 per cent.
- 1 1/2 per cent. or half the commission charged on sales of cargoes, will be returned to supercargoes, but nothing in London or other business.—(Sup.)

Of the domestic exports noticed above, the following will show how far Flour and Bread, Cotton-Manufactures, &c. from Rio de Janeiro, contributed to make up the list. To say nothing of general oil, iron, caples, household furniture, and other manufactures of the United States.

Year.	Flour and bread.	Cotton manuf.	Spice.
1833	D. 285,440	D. 234,721	D. 258
1835	991,269	268,918	610
1836	864,128	300,000	1,171
1837	618,859	303,772	1,870
1838	1,086,033	650,513	1246

The Exports from Rio Janeiro for the month of June 1838, compared with those in the same period of the two preceding years, were as follow:

Year.	Coffee.	Sugar.	Hides.
In 1839	52,198	1,563	17,019
1836	60,603	1,514	6,114
1837	42,234	2,438	30,777

The Export of Sugar during the first six months of 1838 was as follow:

Year.	Total exp.
1836	2,698,736
1837	3,495,302
1838	2,657,194

The exports from Santos, 1838-1839, were 400,000 worth against 654,000 in 1837-1838.

The stock of Hides on hand at Rio Janeiro, at the close of the last year, was about 20,000, nearly all heavy weights.

Report in the first 6 months of 1838 was as follow:

are not comparable to those of 1890... the degree of productivity that will be obtained...

Summary of the principal articles imported from Foreign Ports during June, 1898.

Table with 2 columns: Article Name and Value. Includes items like Iron, Steel, Cotton, and various oils.

Articles on the Import and Export Duties, Port charges, &c. in Brazil.

Goods made with foreign countries is only permitted in such part of the empire of Brazil, where there are custom-house stations...

Foreign goods are subject to an import duty of 10 per cent, except iron, which pays 20 per cent, and gunpowder...

Goods of agricultural origin, such as coffee, sugar, and cotton, are subject to a duty of 10 per cent...

ROADS, pathways formed through the country with more or less art and care, for facilitating the transit of individuals, carriages, &c. between different places.

The laying out of improved roads, and their construction, forms an important part of what is denominated the science of civil engineering.

Importance and Utility of Improved Roads.—Next to the introduction of money, and weights and measures, the formation of good roads and bridges gives the greatest facility to commerce...

Wherever the means of internal communication are deficient in a country, the inhabitants must unavoidably disperse themselves over the surface.

month) articles that come under the denomination of Estrangeiros, are allowed to remain for the space of one month, and then pay 1-4 per cent. per month storage rent.

Exports.—Prior to the first of July, coffee from the serras-abaisco (lower) paid 11 per cent, and from the serras-abaisco (upper country) 10 per cent.

Precious metals in coin or bars, and gold dust, whether foreign or national, are subject to an export duty of 2 per cent ad valorem.

Customs House Taxes and Allowances.—On goods imported in packages and cleared by weight, the real tare are allowed...

Reception and Transshipment.—Goods re-exported or transhipped pay 2 per cent, and when for the coast of Africa, 13 per cent.

Manifatura.—Every commander of a vessel is required to bring a very exact manifest of her cargo in duplicate, signed by the Brazilian resident at the loading port.

Port Charges.—All foreign vessels, as also national vessels trading with foreign parts, pay 30 reis per diem anchorage...

Scale of Freight.—A duty of 5 per cent ad valorem is payable on the sale of all vessels, whether foreign or national...

scale on which business is here conducted presents facilities that cannot be elsewhere afforded for making a fortune; and the extent to which the subdivision of employments is carried opens a field for the exercise of all sorts of talent; at the same time that it improves and perfects all sorts of arts, whether subservient to industrious or scientific pursuits, or to those of pleasure and dissipation. It is this that attracts the aspiring, the industrious, the gay, and the profligate, to cities,—that fills them with the best and the worst part of the species. The competition that takes place in a great town,—the excitement that is constantly kept up, the collision of so many minds brought into immediate contact, and all endeavouring to outstrip each other in their respective departments,—develops all the resources of the human mind, and renders a great city a perpetually radiating focus of intelligence and invention. There are, however, considerable clogs upon the continued increase of cities. The food and fuel made use of by the inhabitants, and the raw products on which their industry is to be exerted, must all be brought from the country; and according as the size of the city increases, the distances from which its supplies must be brought become so much the greater, that ultimately the cost of their conveyance may be so great as to balance or more the peculiar advantages resulting from a residence in town. Hence the impossibility of a large or even a considerable city existing any where without possessing extensive means of communication either with the surrounding country, or with other countries; and hence, too, the explanation of the apparently singular fact, of almost all large cities having been founded on or near the sea, or a navigable river. Had London been an inland town, 50 miles from the shore, it is abundantly certain that she could not have attained to one third her present size; but the facilities afforded, by her admirable situation on the Thames, for the importation of all sorts of produce from abroad, as well as from other parts of England, will enable her, should her commerce continue to prosper, to add to her colossal magnitude for centuries to come.

But all towns cannot be founded on the sea coast, or the banks of navigable rivers; and the growth of those in inland situations must, in all cases, depend on their means of communicating with the surrounding country. Without our improved roads, the great inland manufacturing towns with which England is studded, such as Manchester, Leeds, Birmingham, Sheffield, Bolton, Preston, &c., could not exist. They enable the inhabitants to obtain the rude products of the soil and the mines almost as cheap as if they lived in country villages. There is thus nothing, or next to nothing, to detract from the advantages which the inventive and enterprising artisan may expect to realise from resorting to these great hives of industry. And, owing to the gigantic scale on which all sorts of industry are conducted in them, the scope afforded for the employment of the most powerful machines, and the appropriation of particular sets of workmen to every separate process, however minute, manufacturing industry is carried to a degree of perfection that almost exceeds belief.

The influence that the growth of a large town has upon agriculture is great and striking. "In the neighbourhood," says Dr. Paley, "of trading towns, and in those districts which carry on a communication with the markets of trading towns, the husbandmen are busy and skilful, the peasantry laborious: the land is managed to the best advantage, and double the quantity of corn or herbage (articles which are ultimately converted into human provision) raised from it, of what the same soil yields in remoter and more neglected parts of the country. Wherever a thriving manufactory finds means to establish itself, a new vegetation springs up around it. I believe it is true, that agriculture never arrives at any considerable, much less at its highest, degree of perfection, when it is not connected with trade; that is, when the demand for the produce is not increased by the consumption of trading cities."—(*Moral Philosophy*, book vi. c. 11.)

But the fact of their being mainly conducive to the growth of cities, is not the only advantage which improved roads confer upon agriculture. Without their aid it would be impossible to carry to distant places sufficient supplies of such bulky and heavy articles as lime, marl, shells, and other manures, necessary to give luxuriance to the crops of rich soils, and to render those that are poor productive. Not only, too, would inferior roads lessen the market for farm produce, and consequently the quantity raised, but a larger proportional number of horses or other cattle would be required to convey the diminished produce to market. It is plain, therefore, that good roads are both directly and indirectly a prime source of agricultural improvement;—directly, by increasing the quantity and reducing the cost of manure, and by increasing the quantity and reducing the cost of conveying farm produce to market; and indirectly, by providing for the growth and indefinite extension of cities and towns, that is, of the markets for agricultural produce.

Increased speed of conveyance is one of the principal advantages that have resulted from the formation of good roads, the invention of steam packets, &c. Suppose that it takes 3 days to travel by an uneven ill-made road between any 2 places; and that, by improving the road, the journey may be accomplished in 1 day: the effect is the same as if the distance were reduced $\frac{2}{3}$; and there is not only a great saving of time to travellers, but also a great saving of cost from the more speedy conveyance of commodities. This latter is a point of much more importance than is commonly supposed. It is not possible to form any correct estimate of the value of the products that are constantly in the act of being carried from place to place

in Great Britain and Ireland. It is certain, however, that it is very great, and every additional facility of conveyance, by bringing such products more rapidly to their destination, and enabling them to be sooner applied to the purposes for which they are intended, renders large quantities of capital available for industrious purposes, that would otherwise be locked up.

Mode of defraying Costs of Roads.—Roads of one sort or other must, of course, exist in every country emerged from barbarism,—but in England, the statute of the 28th of Philip and Mary, which is still in force, is the first legislative enactment in which a regular provision was made for the repair of the roads. The preamble to this statute declares, that the roads were tedious and noisome to travel on, and dangerous to passengers and carriages; and, therefore, it enacts, that in every parish 2 surveyors of the highways shall be annually chosen, and the inhabitants of all parishes obliged, according to their respective ability, to provide labourers, carriages, tools, &c. for four days each year, to work upon the roads, under the direction of the surveyors. This system, though in many respects extremely defective, was at the time justly considered a great improvement, and answered pretty well till the reign of Charles II., when, owing to the increase of carriages, particularly about London, it became necessary to adopt more efficient measures for the formation and repair of roads; and the plan of imposing tolls upon those who made use of them began then to be adopted. But this system was not carried into full effect, and placed upon a solid footing, till about 1767, when it was extended to the great roads to all parts of the country; the contributions of labour under the act of Philip and Mary being then appropriated entirely to the cross or country roads. A money payment is also very frequently made instead of a contribution in labour.

When the plan for extending turnpike roads from the metropolis to distant parts of the country was in agitation, the counties in the neighbourhood of London petitioned parliament against it, alleging that the remoter counties would be able, from the comparative cheapness of labour in them, to sell their produce in London at a lower rate than they could do; and that their rents would be reduced, and cultivation ruined, by the measure! Luckily this interested opposition proved ineffectual; and instead of being injurious to the counties adjoining the metropolis, the improvement of the roads has been quite as beneficial to them as to those at a distance, inasmuch as, by providing for the indefinite extension of the city, it has rendered it a far better market for their peculiar productions, than it would have been had its growth been checked, which must have been the case long ago, had the improvements in question not been made.

The plan of making and repairing roads by contributions of labour is not peculiar to England, but was at one period general all over Europe. By an act of the Scotch parliament, passed in 1689, all persons engaged in husbandry were obliged to labour 6 days each year, before or after harvest, upon the public roads; the farmers and landlords being, at the same time, obliged to furnish horses, carts, &c. according to the extent of land occupied by them. The inconveniences of such a system are many and obvious. Those who get no pay for their work, and who perform it against their will, waste their time and industry; and there is, besides, a great loss incurred by the interruption of the regular pursuits of the labourer. A sense of these disadvantages led, in the early part of the reign of George III., to a commutation of the labour contribution for a money tax on land, rated according to its valuation in the cess books. This measure has been productive of the best effects. Previously to its taking place, the roads, even in the best cultivated districts of Scotland, were in the worst possible state; now, however, they are about the very best in Europe.

A similar system has been followed on the Continent. When Turgot entered on his administration, he sent a circular letter to the road surveyors and engineers of the different provinces of France, desiring them to transmit estimates, framed on the most liberal scale, of the sums of money for which the usual repairs might be made on the old roads, and the ordinary extent of new ones constructed. The average of the estimates showed that a money contribution of about 10,000,000 livres a year would suffice for these objects; whereas Turgot showed, that the execution of these repairs and constructions, by contributions of forced labour, or *corvées*, cost not less than 40,000,000 livres!—(Art. *Taxation*, *Sup. to Ency. Brit.*)

There is still, however, a great deal of labour performed on the cross and country roads of England, under the system established by the act of Philip and Mary. Its continuance is most probably to be ascribed to the want of any ready means for its commutation.

It is the duty of government to furnish assistance towards the formation of roads and bridges in parts of the country where they are necessary, and where the funds required for their formation cannot otherwise be obtained. But it is in such cases extremely desirable, in order to prevent government from being deceived by interested representations, that those more immediately concerned in the undertaking should be bound to contribute a considerable portion of its expense. This has been done in the case of the Highland roads. Down to a very recent period, large tracts in the Highlands were quite inaccessible, and were, consequently, in a great measure shut out from all improvement; while the rugged nature of the country and the poverty of the inhabitants rendered any attempt to construct improved roads an undertaking beyond their means. Under these circumstances, government came forward and engaged to advance $\frac{1}{2}$ the expense of making roads and bridges in certain districts,

formed; and, in summer, not unfrequently consisted of the bottoms of rivulets. Down to the middle of the last century, most of the goods conveyed from place to place in Scotland, at least where the distances were not very great, were carried, not by carts or wagons, but on horseback. Oatmeal, coals, turf, and even straw and hay were conveyed in this way! At this period, and for long previous, there was a set of single-horse traffickers (cadgers), that regularly plied between different places, supplying the inhabitants with such articles as were then most in demand, as salt, fish, poultry, eggs, earthenware, &c.; these were usually conveyed in sacks or baskets, suspended one on each side the horse. But in carrying goods between distant places, it was necessary to employ a cart, as all that a horse could carry on his back was not sufficient to defray the cost of a long journey. The time that the carriers (for such was the name given to those that used carts) usually required to perform their journeys, seems now almost incredible. The common carrier from Selkirk to Edinburgh, thirty-eight miles distant, required a fortnight for his journey between the two places going and returning! The road originally was among the most perilous in the whole country; a considerable extent of it lay in the bottom of that district called Gala-water, from the name of the principal stream, the channel of the water being, when not flooded, the track chosen as the most level, and easiest to travel in.

Even between the largest cities, the means of travelling were but little superior. In 1678, an agreement was made to run a coach between Edinburgh and Glasgow,—a distance of 44 miles,—which was to be drawn by six horses, and to perform the journey from Glasgow to Edinburgh and back again in six days. Even so late as the middle of last century, it took 14 day for the stage coach to travel from Edinburgh to Glasgow,—a journey which is now accomplished in 4½ or 5 hours.

So late as 1763, there was but one stage coach from Edinburgh to London, and it set out only once a month, taking from 12 to 14 days to perform the journey. At present, notwithstanding the immense intercourse between the two cities by means of steam packets, arnacks &c., 6 or 7 coaches set out each day from the one for the other, performing the journey in from 45 to 48 hours.—(*Robertson's Rural Recol.* pp. 39—44.)

The effects of this extraordinary improvement in the means of travelling have been as striking on the manners as on the industry of all classes. The remark of Dr. Smith that "man is the least transportable species of luggage," is no longer true as applied to Great Britain. During spring, the metropolis is crowded with visitors of all ranks and orders from the remotest provinces; and during summer and autumn vast numbers of the citizens are spread over the country. Hence it is, that manners as well as prices are reduced nearly to the same standard. A respectable family in Penzance or Inverness live very much in the same way as a respectable family in London. Peculiarities of all sorts have disappeared; every thing is, as it were, brought to a level; the fashions and opinions of the metropolis are immediately diffused over every part of the country, while those that originate in the latter powerfully influence the former.

(These details have been partly borrowed from the treatise on *Commerce*, published by the Society for the Diffusion of Useful Knowledge, contributed by the author of this work.)

[The roads of the United States have been improved and multiplied exceedingly within a few years past; and the extension of the system of *internal improvement*—meaning thereby the introduction of easier and more rapid communications between the different points of their territory, has been latterly urged forward with a zeal that seemed nearly regardless of the amount of present expenditure. Turnpike roads have been carried through the country, especially the eastern and middle portions of it, in almost every direction. But it is by their canals and railroads, as much as by any other circumstance connected with their progress, that the United States have rendered themselves conspicuous among the nations of the earth. This will be apparent from the following condensed summary of the canals and railroads in the United States, with their lengths and terminating points, drawn up by Mr. H. S. Tanner, which we have been kindly permitted to copy, with his latest corrections.]

is more valuable, than diamonds of equal weight. The finest ruby in England, or, perhaps, in Europe, is in the collection of the late Mr. Hopo, author of "Anastasiaus."

There are two other species of ruby, the *Spinelle* and *Balaïs*. When perfect, the Spinelle is a gem of great value and scarcity. Its colour is a fine full carmine or rose red, but it never presents that rich mellow tinge that attends the Oriental ruby. It is also inferior to the latter in hardness and specific gravity. Stones of 3 carats and upwards are very rare and valuable.

The *Balaïs Ruby* is a pale variety of the spinelle. It varies in colour from light red to yellowish red. Though not so rare as the spinelle, it is by no means common. It is much admired for its agreeable tinge of colour; and, when pure and perfect, fetches a very high price; though considerably less than the other varieties.

Rubies are not found in any considerable quantity except in Ava.—(See *SARRAZIN*).—(Mawe on Diamonds, 2d ed. pp. 90, 101.; Thomson's Chemistry.)

RUM, a well known and highly esteemed spirituous liquor, imported from the West Indies, of which it forms one of the staple products. It is obtained, by means of fermentation and distillation, from molasses, the refuse of the cane juice, and portions of the cane, when the sugar has been extracted. The flavour and taste peculiar to rum are derived from the essential oils carried over in distillation. When the distillation has been carelessly performed, the spirit contains so large a quantity of the grosser and less volatile part of the oil as to be unfit for use till it has attained a considerable age. When it is well rectified, it mellows much sooner. Rum of a brownish transparent colour, smooth oily taste, strong body and consistence, good age, and well kept, is the best. That of a clear, limpid colour, and hot pungent taste, is either too new, or mixed with other spirits. Jamaica rum is the first in point of quality; the Leeward Island rum, as it is called, being always inferior to it, both in flavour, strength, and value. The price of the latter is usually 20 per cent. below that of the former. We import all our rum in puncheons, containing from 84 to 90 gallons each. It is customary, in some of the West India islands, to put sliced pine-apples in puncheons of rum: this gives the spirit the flavour of the fruit; and hence the designation, *pine-apple rum*.

Rum is said to be much adulterated by the retail dealers in England, sometimes with corn spirit; but if done with molasses spirit, the tastes of both are so nearly allied, that the cheat is not easily discovered.

Consumption of, and Duties upon, Rum, &c.—The following Tables show the quantity of rum consumed in Great Britain and Ireland since 1800, the rates of duty charged upon it, and the produce of the duties; the quantities derived from our different colonies last year, and the countries to which the excess of imports has been again exported, &c.

L. Account, stated in Imperial Proof Gallons, of the Rum annually entered for Home Consumption in the United Kingdom, from 1800 to 1832, both inclusive, distinguishing England, Ireland, and Scotland; the Rates of Duty payable respectively thereon; and the Produce of the Duties; and the Price of Rum in Bond since 1814. (This account has been prepared partly from published, and partly from unpublished official documents. The column of prices has been supplied principally by Mr. Cook.)

Though rum has not been so much over-taxed as brandy, geneva, and wine, still it seems pretty clear that even, in its case, taxation has been carried far beyond its proper limits. During the 3 years ending with 1802, when the duty in Great Britain was about 9s. a gallon, and in Ireland 6s. 8½d., the consumption of the United Kingdom amounted to 3,150,000 gallons a year; while, notwithstanding the great increase of population, during the 3 years ending with 1823, when the duty in Great Britain was 13s. 11½d. a gallon, and in Ireland 12s. 8½d., the annual consumption amounted to only 2,307,000 gallons! The reduction of the duty in 1826 to 8s. 6d. increased the consumption from about 2,500,000 to above 3,600,000 gallons in 1830. But 6d. having been added to the duty in 1830, the consumption, influenced no doubt partly by this, but probably also by other circumstances, has since declined. The great demand for rum from 1811 to 1815 was occasioned chiefly by the high price and inferior quality of the British spirits that were then manufactured. The decrease in the consumption of rum in Ireland is most striking. Unfortunately,

in England, or, per Anastasius." perfect, the Spinelle be of rose red, but it is also inferior to upwards are very rare from light red to common. It is much, fetches a very high (See **SERRAVALLE**.) d from the West means of fermentation of the cane, after the derived from the essentially performed, of the oil as to be un- rectified, it mellow- ate, strong body and mpid colour, and the ca rum is the best inferior to it, both in er cent. below that of 84 to 90 gallons each - applies in pineapple designation, **pine-apple** , sometimes with corn allied, that the cheap- ible show the quantity duty charged upon it, ent colonies last year, ted, &c. however, this is not the only instance the sister kingdom affords of the destructive effects of oppressive taxes. The excessive additions made to the duties on brandy, wine, sugar, &c. since 1805, have had similar effects; the quantity of these articles consumed in Ireland being decidedly less now than it was 30 years ago!—(See BRANDY, SUGAR, &c.) Exorbitant taxes have gone far to deprive the Irish of every comfort; and, consequently, to take from them some of the most powerful incentives to industry and good conduct. The poverty of the people has set at nought the calculations of our finance ministers; every increase of taxation in Ireland having produced a diminution of revenue and an increase of crime! Surely it is high time to abandon so odious a system; particularly after the experience of the beneficial effects that have resulted from the diminution of the spirit duties. As a means of raising revenue, the taxation of Ireland is utterly ineffective; but the wit of man never contrived any thing better fitted to produce barbarism and disaffection.

Rum, the produce of the British possessions in America, is not liable to the duty charged on sweetened spirits, unless the actual strength exceed the strength denoted by Sykes's hydrometer by more than 10 degrees per cent.; and in lieu of such duty there shall be charged upon every degree per cent. more than 3 degrees, and not more than 10 degrees, by which the actual strength shall exceed the strength denoted by Sykes's hydrometer, a duty of 9s. 6d.; provided, that if the importer cannot make a perfect entry thereof for payment of duty on the actual strength, he may demand in writing, upon the entry, that trial be made of the actual strength (the paying the expenses of such trial), instead of entering such rum for the payment of duty upon any stated number of such excessive degrees of strength; provided also, that all trials of actual strength of such rum shall be made by some skilful person appointed by the commissioners of customs for such purpose.—(7 Geo. 4, c. 48, § 31.)

Rum, the produce of the British plantations, must be imported in casks containing not less than 30 gallons.—(3 & 4 Will. 4, c. 52.) But rum in casks capable of containing 30 gallons, may be imported on the officer being satisfied that the deficiency has been wholly occasioned by absorption or leakage, and not by abstraction.—(Customs Min. 24th of March, 1831.)

Rum in bonded warehouses may be drawn off into casks containing not less than 30 gallons each, as for ships, and may be delivered into the charge of the searcher, to be shipped as stores for any such ships respectively.—(3 & 4 Will. 4, c. 57.)

Rum of the British plantations in bonded warehouses may also be drawn off into reputed quart or repated pint bottles, for the purpose of being exported from the warehouses.—(3 & 4 Will. 4, c. 57.)

On applications referring to a former order allowing the admixture of rums of different strengths for exportation, and praying that the rum remaining in the vats after the operation of racking might be admitted for home consumption, the Board were of opinion that the request might be complied with, to the extent of an allowance of 20 gallons, the legal quantity allowed to be exported, and that the duty should be paid, according to the strength, at the time of delivery of the said rum.—(Min. Com. Cas. 27th of Sept. 1837.)

Before any rum shall be entered as being the produce of any British possession in America, or of the Mauritius, the master of the ship importing the same must deliver a certificate of origin to the collector or comptroller, and subscribe a declaration that the goods are the produce of such place.—(3 & 4 Will. 4, c. 52, § 37; see ante, 8.)

RUSSIA COMPANY, a regulated company for conducting the trade with Russia. It was first incorporated by charter of Philip and Mary, sanctioned by act of parliament in 1566. The statute 10 & 11 Will. 3, c. 6, enacts, that every British subject desiring admission into the Russia Company shall be admitted on paying 5*l.*; and every individual admitted into the Company conducts his business entirely as a private adventurer, or as he would do were the Company abolished.

The consumption of sago has been about trebled during the last dozen years; having amounted to 1,200 cwt. a year at an average of the 3 years ending with 1822, and to 3,859 cwt. a year at an average of the years ending with 1832. This large increase is wholly ascribable to the reduction in the amount of the oppressive duties by which the article was formerly loaded.—(*Papers published by the Board of Trade.*) The price of common sago in bond varies from 12s. to 11s.; while pearl sago fetches from 15s. to 11. 15s. a cwt.; but the price is liable to great fluctuation.

SAIL, a coarse linen or canvass sheet attached to the masts and yards of ships, the sides of windmills, &c., to intercept the wind and occasion their movement.

Foreign sails, when imported by, and fit and necessary for, and in the actual use of any British ship, are exempted from duty; but when otherwise disposed of, they pay a duty of 20 per cent. *ad valorem*.—(9 Geo. 4. c. 78. § 12.)

Sails and cordage of British manufacture, exported from Great Britain to the colonies, and afterwards imported into the United Kingdom, are in all cases, other than those in which they are imported by bill of lading, to be deemed foreign; and such sails and cordage, although not liable to duty so long as the vessel continues to belong to the colony, become subject to the duties in question as soon as the vessel becomes the property of persons residing in this country.—(*Treasury Order*, 20th of Jan., 1824.)

SALPEP, a species of powder prepared from the dried roots of a plant of the orchid kind (*Orchis mascula* Lin.). That which is imported from India is in white oval pieces, hard, clear, and pellucid, without smell, and tasting like tragacanth. As an article of diet, it is said to be light, bland, and nutritious. The plant thrives in England, but it is not cultivated to any extent; and very little is imported.—*Ainslie's Mat. Medica; Milburn's Orient. Com.*

SALMON (Ger. *Lachs*, *Salm*; Fr. *Saumon*; It. *Sermone*, *Salamone*; Sp. *Salmon*; Bas. *Lemga*). This capital fish is too well known to require any description. It is found only in northern seas, being unknown in the Mediterranean and other warm regions. In this country it is an article of much value and importance. It is exceedingly abundant in Japan and Kamtschatka.

"Salmon fisheries," Marshall observes, "are copious and constant sources of human food; they teach next to agriculture. They have, indeed, one advantage over every other internal produce,—their increase does not lessen other articles of human subsistence. The salmon does not prey on the produce of the soil, nor does it owe its size and nutritive qualities to the destruction of its compatriot tribes. It leaves its native river at an early state of growth; and going, even naturalists know not where, returns of ample size, and rich in human nourishment; exposing itself in the narrowest streams, as if nature intended it as a special boon to man. In every stage of savageness and civilization, the salmon must have been considered as a valuable benefaction to this country."

Being rarely caught, except in estuaries or rivers, the salmon may be considered in a great degree as a private property. The London market, where the consumption is immense, is principally supplied from the Scotch rivers. The Tweed fishery is the first in point of magnitude of any in the kingdom; the take is sometimes quite astonishing, several hundreds having been frequently taken by a single sweep of the net. Salmon are despatched in fast sailing vessels from the Spey, the Tay, the Tweed, and other Scotch rivers, for London, packed in ice, by which means they are preserved quite fresh. When the season is at its height, and the catch greater than can be taken off fresh, it is salted, pickled, or dried for winter consumption at home, and for foreign markets. Formerly, such parts of the Scotch salmon as was not consumed at home, was pickled and kitted after being boiled, and was in this state sent up to London under the name of Newcastle salmon; but the present method of disposing of the fish has so raised its value, as to have nearly deprived all but the richer inhabitants in the environs of the fishery of the use of salmon. Within the memory of many now living, salted salmon formed a material article of household economy in all the farm-houses in the vale of the Tweed; inasmuch, that the door servants used to stipulate that they should not be obliged to take more than two weekly meals of salmon. Its ordinary price was then 2s. a stone of 19 lbs.; but it is now never below 12s., often 16s., and sometimes 42s. a stone. This rise in the price of the fish has produced a corresponding rise in the value of the salmon fisheries, some of which yield very large rents. The total value of the salmon caught in the Scotch rivers has been estimated at 150,000*l.* a year. There are considerable fisheries in some of the Irish and English rivers; but inferior to those of Scotland.—(*London's Encyc. of Agriculture; General Report of Scotland*, vol. iii. p. 327.)

Decrease of the Supply of Salmon, Peaching, &c.—The decrease of salmon in the English and Scotch rivers, particularly of late years, is a fact as to which there can be no manner of doubt. Much unsatisfactory discussion has taken place as to its causes, which are, probably, of a very diversified character. A good deal has been ascribed to the increase of water machinery on the banks of the different rivers; but we hardly think that this could have much influence, except, perhaps, in the case of the smaller class of rivers. *Wairs*, or salmon traps, have also been much objected to; though, as we have seen, with all less reason. On the whole, we are inclined to think that the falling off in the supply of this valuable fish is principally to be ascribed to the temptation to over-fish the rivers, caused by the extraordinary rise in the price of salmon; to the prevalence of poaching; and, more than all, to the too limited duration of the *close times*. In 1823, after a great deal of discussion and inquiry, an act was passed (9 Geo. 4. c. 39.), which has done a good deal to remedy these defects—in so far, at least, as respects the Scotch fisheries. The rivers are to be shut from the 14th of September to the 1st of February; and every person catching or attempting to catch fish during that period is to forfeit not more than 1*l.* and not more than 10*l.* for every offence, besides the fish, if he have caught any, and such boats, nets, or other implements, as he may have made use of. Pecuniary penalties are also inflicted upon poachers and trespassers; and provision is made for the watching of the rivers. We understand that this act has had a very good effect; though it is believed that it would be better were the *close time* extended from the 1st of September to the middle of February.

It is enacted by stat. 1 Geo. 1. at. 2. c. 18, that no salmon shall be sent to any fishmonger or fish-seller in England, of less than 6 lbs. weight, under a penalty of 5*l.* The 58 Geo. 3. c. 43. authorises the Justices at quarter sessions to appoint conservators of rivers, and to fix the beginning and termination of the *close time*. The penalty upon poaching and taking fish in *close times* is by the same act fixed at not more than 10*l.* and not less than 5*l.*, with forfeiture of fish, boats, nets, &c.

SALONICA, a large city and sea-port of European Turkey, at the north-east extremity of the gulf of the same name, in lat. 40° 38' 47" N., lon. 22° 57' 13" E. Population estimated at 70,000. There is no port at Salonica, but there is excellent

anchorage in the roads opposite to the town. The access to them is by no means difficult. Pilots, however, are, for the most part, employed; and of these, some are always on the look-out. During that period of the late war when the anti-commercial system of Napoleon was at its height, Salonica became a great *depôt* for British goods; whence they were conveyed to Germany, Russia, and other parts of Europe. At all times, however, Salonica has a considerable trade. The exports principally consist of wheat, barley, Indian corn, timber, raw cotton, wool, raw silk, wax, and tobacco. The average exportation of cotton is said to be about 100,000 bales; of tobacco about 30,000 bales; each bale containing about 275 lbs. The export of wool is said to amount to about 1,000,000 lbs. The imports are sugar, coffee, dye woods, indigo, muslins, printed calicoes, iron, lead, tin, watches, &c.

Arrivals.—In 1831, there arrived at Salonica 535 vessels, of the burden of 31,205 tons.

Money, Weights, and Measures.—Accounts are kept in piastres of 40 paras, or 120 aspers. The coins are those of Constantinople; which see.

The weights and measures are the same as those of Smyrna, except that the kistoz, kellow, or common measure of Salonica, = 376 kistoz of Smyrna.

SALT (*Ger. Salz; Du. Zout; Fr. Sel; It. Sale; Sp. Sal; Rus. Sol; Lat. Sals; Arab. Melh; Chin. Yen; Hind. Nimuck; Per. Nun*), the *chloride of sodium* of modern chemists, has been known and in common use as a seasoner and preserver of food from the earliest ages. Immense masses of it are found in this and many other countries which require only to be dug out and reduced to powder. In that state it is called rock-salt. The water of the ocean also contains a great deal of salt; to which, indeed, it owes its taste, and the power which it possesses of resisting freezing till cooled down to 28°5'. When this water is sufficiently evaporated, the salt precipitates in crystals. This is the common process by which it is obtained in many countries. There are various processes by which it may be obtained quite pure. Common salt usually crystallises in cubes. Its taste is universally known, and is what is strictly denominated salt. Its specific gravity is 2.125. It is soluble in 2.82 times its weight of cold water and in 2.76 times its weight of boiling water.—(*Thomson's Chemistry*.)

Besides its vast utility in seasoning food, and preserving meat both for domestic consumption and during the longest voyages, and in furnishing muriatic acid and soda, salt forms a glaze for coarse pottery, by being thrown into the oven where it is baked; it improves the whiteness and clearness of glass; it gives hardness to soap; in melting metals, it preserves their surface from calcination, by defending them from the air, and is employed with advantage in some assays; it is used as a mordant, and for imparting certain colours; and enters more or less into many other processes of the arts. Many contradictory statements have been made as to the use of salt as a manure. Probably it may be advantageous in some situations, and not in others.

Salt Mines, Springs, &c.—The principal salt mines are at Wielitka in Poland, Catalonia in Spain, Altemonte in Calabria, Loowur in Hungary, in many places in Asia and Africa, and in Chester in this country. The mines at Wielitka are upon a very large scale; but the statements that have frequently been published of their containing villages, inhabited by colonies of miners who never saw the light, are altogether without foundation. These mines have been wrought for more than 600 years.—(*Cox's Travels in the North of Europe*, vol. i. p. 149, 8vo. ed.)

The salt mines in the neighbourhood of Northwich in Cheshire are very extensive. They have been wrought since 1670; and the quantity of salt obtained from them is greater, probably, than is obtained from any other salt mines in the world. In its solid form, when dug from the mine, Cheshire salt is not sufficiently pure for use. To purify it, it is dissolved in sea water, from which it is afterwards separated by evaporation and crystallisation. The greater part of this salt is exported.

Salt springs are met with in several countries. Those in Cheshire and Worcestershire furnish a large proportion of the salt made use of in Great Britain. The brine, being pumped up from very deep wells, is evaporated in wrought iron pans from 20 to 30 feet square and 10 or 12 inches deep, placed over a furnace.

Most of the salt used in Scotland previously to the repeal of the duty, was obtained by the evaporation of sea water nearly in the way now mentioned; but several of the Scotch salt works have since been relinquished.

In warm countries, salt is obtained by the evaporation of sea water by the heat of the sun; and the crystals of salt made in this way are more perfect, and purer, from the greater slowness of the process. French salt is manufactured in this mode, and it has always been in considerable demand in this and other countries; but the principal imports of foreign salt into Great Britain at present are from Portugal. They amount, at an average, to from 300,000 to 350,000 bushels a year.

Consumption of Salt.—The consumption of salt in this country is immense. Necker estimated the consumption in those provinces of France which had purchased an exemption from the *gabelle* (the *francs r dimees*) at about 194 lbs. (Eng.) for each individual.—(*Administration des Finances*, tome 1. p. 12.) From all that we have been able to learn on the subject, we believe that the consumption of the people of this country may be estimated a little higher, or at 22 lbs.; the difference in our food and habits, as compared with the French, fully accounting for this increased allowance. On this supposition, and taking the population at 16,500,000, the entire consumption will amount to 353,000,000 lbs. or 161,000 tons.

Exclusive of this immense home consumption, we annually export about 10,000,000 bushels, which, at 56 lbs. a bushel, are equivalent to 560,000 tons. The Americans are the largest consumers of British salt; the exports to the United States in 1831 having amounted to 3,130,250 bushels. During the same year we exported to the Netherlands, 1,031,601 bushels; to the British North America colonies, 1,550,680 do.; to Russia, 1,191,806 do.; to Prussia, 624,100 do., &c.

The cheapness of this important necessary of life is not less remarkable than its diffusion. Its present cost may be estimated, at a medium, at from 1s. to 10s. a ton.

Duties on Salt.—In ancient Rome, salt was subjected to a duty (*vectigal salinarum*; see *Strabo*,

* Act passed after Lake Erie, or Can

Decretum de Pectigilibus Pap. Rom. c. 6.); and it has been heavily taxed in most modern states. The *gabelle*, or code of salt laws, formerly established in France, was most oppressive. From 4,000 to 5,000 persons are calculated to have been sent annually to prison and the galleys for offences committed under these laws, the severity of which had no inconsiderable share in bringing about the Revolution.—(*Journal de Trévise in France*, vol. 1. p. 594.) In this country, duties upon salt were imposed in the reign of William III. In 1793, they amounted to 5s. a bushel; but were subsequently increased to 15s. a bushel, or about forty times the cost of the salt! So exorbitant a duty was productive of the worst effects; and occasioned, by its magnitude, and the regulations for allowing salt, duty free, to the fisheries, a vast deal of smuggling. The opinion of the public and of the House of Commons having been strongly pronounced against the tax, it was finally repealed in 1825. That the repeal of a large revenue must be raised, we question whether government acted wisely in totally relinquishing the tax. Had the duty been reduced to 2s. or 2s. 6d. a bushel, and no duty free salt allowed for the fisheries, but a drawback given on the fish exported, a revenue of 1,000,000l. a year might have been derived from this source with but little injury. It was not the nature of the salt tax, but the absurd extent to which it had been carried, that rendered it justly odious. When at the highest, it produced about 1,500,000l. a year.

(For the quantity and value of the salt which is annually imported into the United States see article **IMPORTS AND EXPORTS**. A great quantity of salt is, however, produced in the region beyond the Alleghanias, and at Salina and elsewhere in the state of New York. The following extract from a Report made to the legislature of this state, in January, 1839, exhibits the condition of its salt-works.

Some new manufactories have been erected, and a few manufacturers have enlarged their cisterns. The legislature appropriated in 1838 \$8,000 for the purpose of sinking a shaft or well 600 feet in depth, in the village of Salina, and a well has been sunk to the depth of 550 feet, which will cost about \$2,000, including \$500 for a set of drill poles.

From some causes unknown, the brine obtained at one of the wells in the village of Geddes, during the present season, has been from three to seven per cent. weaker than that usual in other villages. The principal well is now 130 feet deep and 3½ inches in diameter; it is proposed to increase the depth to 100 or 180 feet, and the diameter to 6½ inches, and to tube it so as to include the surface water—to cost about \$450.

A well has been opened in Salina, and one in Syracuse. That at Salina was sunk 100 feet, and brine of strong quality was found, but so limited in quantity as to be useless—it has been abandoned. The well at Syracuse is 150 feet deep, and brine of good quality is obtained.

The quantity of salt manufactured in 1838 exceeds that of 1837 by 413,745 bushels; and of 1836 by 428,173 bushels. The net revenue of 1838 amounts to \$23,860-88 more than in 1837, and is \$25,366-60 more than in 1836.

The annual increase since 1826, with the exception of 1836 and 1837, appears to be about equal to a ratio doubling the quantity in nine years, and trebling in twelve. At the same rate for the next twelve years the quantity would be little less than eight millions of bushels, yielding a revenue, at six cents per bushel, of about half a million of dollars.

Statement of the Revenue accruing from the Onondaga Salt Springs, from the year 1817 to 1825.

The net revenue from the duties on salt, as appears by the books in the Comptrolr's office, was

SALTPETRE, or **NITRATE** or **POTASH** (Ger. *Salpeter*; Fr. *Nitre, Salpêtre*; It. *Nitro, Salnitro*; Sp. *Nitro, Salitre*; Rus. *Senitra*; Lat. *Nitrum*; Arab. *Ubkir*; Hind. *Shorah*), a salt well known in commerce, and of very great importance. It may be regarded both as a natural and an artificial production; being found on the surface of the soil in many parts of India, Egypt, Italy, &c.; but in these and other places all that is known in commerce is obtained by an artificial process, or by lixiviating earth that has been formed into *nitre* beds. The saltpetre consumed in England is brought from Bengal in an impure state, but crystallised, in bags, each containing 164 lbs. Saltpetre forms the principal ingredient in the manufacture of gunpowder; and is used in various arts. It is also of great utility in the commerce of India, from its furnishing a large amount of dead weight for the shipping engaged in it. Saltpetre possesses considerable antiseptic power. That which is of the best quality and well refined, is in long transparent crystals; its taste is sharp, bitterish, and cooling; it flames much when thrown upon burning coals; it is very brittle; its specific gravity is 1.933. It is not altered by exposure to the air.

Beckmann contends, in a long and elaborate dissertation (*Hist. of Insect.* vol. iv. pp. 525—586. Eng

* Act passed allowing a bounty of three cents per measured bushel on coarse salt sent to the Hudson, Lake Erie, or Canada.

ed), that the ancients were unacquainted with saltpetre, and that their *nitrum* was really an hallucinatory salt. But, as saltpetre is produced naturally in considerable quantities in Egypt, it is difficult to suppose that they could be entirely ignorant of it; though it would appear that they had not confounded it with other things. It has been known in the East from a very early period. Beckmann, however, is of opinion with those who believe that gunpowder was invented in India, and brought by the Saracens from Africa to the Europeans; who improved its manufacture, and made it available for warlike purposes.—(Vol. iv. p. 571.)

The consumption of saltpetre during periods of war is very great. Its price is consequently liable to extreme fluctuation. In remarking on the varieties in the price of saltpetre, Mr. Tooke observes, "It reached its greatest height in 1798, viz., 170s. a cwt.; in 1799, it fell at one time to 45s. and rose again to 96s. It seems to have been affected considerably by the series of hostilities on the Continent. But in consequence of the discoveries in chemistry, by which the French were enabled to dispense with a foreign supply, and by the increased importation from India to this country, by which we were enabled to supply the rest of the Continent at a reduced cost, the price declined permanently after 1798-9, when it had reached 145s.; and never after was so high as 100s.; except during the short interval of speculation in exports during the peace of 1814, and again upon the breaking out of the war terminated by the battle of Waterloo." The price of saltpetre in the London market varies at the present moment (January, 1834) from 32s. to 40s. a cwt.

We are indebted for the following comprehensive statement of the importation, consumption, &c. of East Indian saltpetre to Mr. Cook's *State of the Commerce of Great Britain in 1833*.

Within the last 3 years, a new species of saltpetre, under the denomination of *nitrate of soda*, has been received from South America. The imports of it have increased from 70 tons in 1831, to 1,467 tons in 1833. Though not applicable to all the purposes for which East India saltpetre is used, it is preferred by vitriol makers, and by some other classes of manufacturers. The deliveries of this description for home consumption have been in 1831, 70 tons; in 1832, 690 do.; and in 1833, 1,310.—(in loc. cit.)

SALVAGE, as the term is now understood, is an allowance or compensation made to those by whose exertions ships or goods have been saved from the dangers of the sea, fire, pirates, or enemies.

The propriety and justice of making such an allowance must be obvious to every one. It was allowed by the laws of Rhodes, Oleron, and Wisby; and in this respect they have been followed by all modern maritime states. At common law, the party who has saved the goods of another from loss or any imminent peril has a *lien* upon them, and may retain them in his possession till payment of a reasonable salvage.

1. *Salvage upon Losses by Perils of the Sea.*—If the salvage be performed at sea, or within high or low water mark, the Court of Admiralty has jurisdiction over the subject, and will fix the sum to be paid, and adjust the proportions, and take care of the property pending the suit; or, if a sale be necessary, direct it to be made; and divide the proceeds between the salvors and the proprietors according to equity and reason. And in fixing the rate of salvage, the court usually has regard not only to the labour and peril incurred by the salvors, but also to the situation in which they may happen to stand in respect of the property saved, to the promptitude and alacrity manifested by them, and to the value of the ship and cargo, as well as the degree of danger from which they were rescued. Sometimes the court has allowed as large a proportion as a *half* of the property saved as salvage; and in others, not more than a *tenth*.

The crew of a ship are not entitled to salvage, or any unusual remuneration for the extraordinary efforts they may have made in saving her; it being their duty as well as interest to contribute their utmost upon such occasions, the whole of their possible service being pledged to the master and owners. Neither are passengers entitled to claim any thing for the *ordinary assistance* they may have been able to afford to a vessel in distress. But a passenger is not bound to remain on board a ship in the hour of danger, provided he can leave her; and if he perform any *extraordinary services*, he is entitled to a proportional recompence.

In the case of valuable property, and of numerous proprietors and salvors, the jurisdiction and proceedings of the Court of Admiralty are well adapted to further the purposes of justice. But, as the delay and expense necessarily incident to the proceedings of a court sitting at a distance from the subject will often be very burdensome upon the

cular description of

in cases where the property saved is not, perhaps, very considerable, the legislature has endeavoured to introduce a more expeditious and less expensive method of proceeding.

The first act for this purpose is the 12 Ann. stat. 2. c. 18. It appears from the preamble, that the inhuman practices, once so common, of plundering ships driven on shore, and seizing whatever could be laid hold of as lawful property—(see WARREN),—had not been wholly abandoned; or that, if the property was restored to the owners, the demand for salvage was so exorbitant, that the inevitable result was the immediate consequence. To remedy those mischiefs in future, it was enacted, "that if a ship was in danger of being stranded, or being run ashore, the sheriffs, justices, mayors, constables, or officers of the customs, nearest the place of danger, should, upon application made to them, summon and call together as many men as should be thought necessary to the assistance, and for the preservation of such ship in distress, and her cargo; and that if any ship, man-of-war, or merchantman, should be riding at anchor near the place of danger, the constables and officers of the customs might demand of the superior officers of such ship the assistance of her boats, and such hands as would be spared; and that, if the superior officer should refuse to grant such assistance, he should forfeit 100*l*."

Then follows the section respecting salvage. It enacts, "that all persons employed in preserving ships or vessels in distress, or their cargoes, shall, within 30 days after the service is performed, be paid a reasonable reward for the same, by the commander, master, or other superior officer, mariners, or owners, of the ship or vessel so in distress, or by any merchant whose vessel or goods shall be so saved; and, in default thereof, the said ship or vessel so saved shall remain in the custody of the officers of the customs until all charges are paid, and until the officers of the customs, and the master or other officers of the ship or vessel, and all others employed in the preservation of the ship, shall be reasonably gratified for their assistance and trouble, or good security given for that purpose: and if any disagreement shall take place between the persons whose ships or goods have been saved, and the officer of the customs, touching the monies deserv'd by any of the persons so employed, it shall be lawful for the commander of the ship or vessel so saved, or the owner of the goods, or the merchant interested therein, and also for the officer of the customs, or his deputy, to nominate 3 of the neighbouring justices of the peace, who shall thereupon adjust the quantum of the monies or gratuity to be paid to the several persons acting or being employed in the salvage of the said ship, vessel, or goods; and such adjustment shall be binding upon all parties, and shall be recoverable in an action at law; and in case it shall so happen that no person shall appear to make his claim to all or any of the goods that may be saved, that then the chief officer of the customs of the nearest port to the place where the said ship or vessel was so in distress shall apply to 3 of the nearest justices of the peace, who shall put in him or some other responsible person in possession of the said goods, such justices taking an account in writing of the said goods, to be signed by the said officer of the customs; and if the said goods shall not be legally claimed within the space of 12 months next ensuing, by the rightful owner thereof, then public sale shall be made thereof; and, if perishable goods, forthwith to be sold, and, after all charges deducted, the residue of the monies arising from such sale, with a fair and just account of the whole, shall be transmitted to her Majesty's exchequer, there to remain for the benefit of the rightful owner, when appearing; who, upon affidavit, or other proof made of his or their right or property, thereto, to the satisfaction of one of the barons of the court of the exchequer, shall, upon his order, receive the same out of the exchequer.

By a subsequent statute, 26 Geo. 2. c. 10, it is enacted, "that in case any person or persons, not employed by the master, mariners, or owners, or other person lawfully authorised, in the salvage of any vessel, or the cargo or provision thereof, shall, in the absence of the person so employed and authorised, take any such vessel, goods, or effects, and cause the same to be carried, for the benefit of the owners or proprietors, into port, or to any near adjoining Custom-house, or other place of safe custody, immediately giving notice thereof to some justice of the peace, magistrate, or Custom-house or excise officer, or shall discover to such magistrate or officer where any such goods or effects are wrongfully bought, sold, or concealed, then such person or persons shall be entitled to a reasonable reward for such services, to be paid by the masters or owners of such vessels or goods, and to be adjudged, in case of disagreement about the quantum, in like manner as the salvage is to be adjusted and paid by Sir A. Aene, or else as follows:—

"And be it further enacted, that, for the better ascertaining the salvage to be paid in pursuance of the present act and the act before-mentioned, and for the more effectually putting the said acts into execution, the justice of the peace, mayor, bailiff, collector of the customs, or chief constable, who shall be nearest to the place where any ship, goods, or effects shall be stranded or cast away, shall forthwith give public notice for a meeting to be held as soon as possible, of the sheriff or his deputy, the justice of the peace, mayors, or other chief magistrates of towns corporate, coroners, or commissioners of the land tax, or any 5 or more of them, who are hereby empowered and required to give aid in the execution of this and the said former act, and to employ proper persons for the saving ships in distress, and such ships, vessels, and effects, as shall be stranded or cast away; and also to examine persons upon oath, touching the same, or the salvage thereof, and to adjust the quantum of such salvage, and distribute the same among the persons concerned in such salvage, in case of disagreement among the parties or the said persons; and that every such magistrate, &c. attending and acting at such meeting, shall be paid 4*l*. a day for his expenses in such attendance, out of the goods and effects saved by their care or direction.

"Provided always, that if the charges and rewards for salvage directed to be paid by the former statute and by this act, shall not be fully paid, or sufficient security given for the same, within 40 days next after the said services performed, then it shall be lawful for the officer of the customs concerned in such salvage to borrow or raise so much money as shall be sufficient to satisfy and pay such charges and rewards, or any part thereof then remaining unpaid, or not secured as aforesaid, by or upon one or more bill or bills of sale, under his hand and seal of the ship or vessel, or cargo saved, or such part thereof as shall be sufficient, redeemable upon payment of the principal sum borrowed, and interest upon the same at the rate of 4*l*. per cent. per annum."

An act of the 53 Geo. 3. c. 57, continued and extended by the 1 & 2 Geo. 4. c. 76, contains some regulations supplying defects in former statutes. They enact, that goods of a perishable nature, or so much damaged that they cannot be kept, may, at the request of any person interested or concerned in the same, or in saving thereof, be sold with the consent of a justice, the money being deposited in the hands of the lord of the manor, and an account of the sale transmitted to the deputy vice-admiral. They also authorise the passage of horses, carts, carriages, &c. to the part of the sea coast where a vessel may be wrecked, over the adjoining lands, if there be no road leading so conveniently thereto, and under penalty of 100*l*. the damages to be settled by two justices in the event of the parties not agreeing—(1 & 2 Geo. 4. c. 57, 30.)

It is ordered by the same statute, that no lord of the manor, or other person claiming to be entitled to wreck or goods, shall appropriate or dispose of the same until he shall have caused to be given in writing to the deputy vice-admiral of that part of the coast, or to his agents if they reside within 50 miles, if not, then to the corporation of the Trinity House, a report containing an accurate and particular description of the wreck or goods found, and of the place where and time when found, and of

Recently, however, Mowee, on the island of that name, has been preferred by many as a place for fitting. In 1831, there belonged to the Sandwich Islands, 24 ships, of the burden of 2,620 tons; of these 10 ships, burden 765 tons, were the property of natives, and the remainder of foreigners established on the islands. The following table was drawn up by a gentleman long resident at Honoruru:—

Account of the Number of Ships that touched at Woahoo, one of the Sandwich Islands, during the Eight Years ending with 1831, distinguishing between English and American, and between Whaling and Merchant Ships.

The decrease in the amount of American ships at Woahoo is accounted for by the fact of many of them now touching in preference at Mowee.—(We have these details entirely from private sources.)

SAPAN WOOD is obtained from a species of the same tree that yields the Bann wood (*Cesalpinia Sapan* Lin.). It is a middle-sized forest tree, indigenous to Sumatra, Pegu, the Philippine Islands, &c. It has been employed for dyeing in the greater part of Asia for many centuries. It found its way into Europe some time before the discovery of America; but very little is now imported. Its colouring matter differs but little from that of Brazil wood, but the best sapan wood does not yield more than half the quantity that may be obtained from an equal weight of Brazil wood, and the colour is not quite so bright.—(*Bancroft on Colours*, vol. ii. p. 329.) Its price in the London market varies from 8*l.* to 14*l.* a ton.

SAPPHIRE (Ger. *Sapfir*; Du. *Saffiersteen*; Fr. *Saphir*; It. *Zaffiro*; Sp. *Sapfir*; Rus. *Jachant*; Lat. *Sapphirus*), a precious stone in very high estimation. Colours blue and red; also gray, white, green, and yellow. It occurs in blunt-edged pieces, rounded pebbles, and crystallised. Varies from transparent to translucent. Refracts double. Harder than diamond, it is the hardest substance in nature. The blue variety, or sapphire, is harder than the ruby, or red variety. Brittle. Specific gravity 4 to 4.2.

It is found in Bohemia, Saxony, France, &c.; but the red sapphire, or Oriental ruby, is not found in any considerable quantity anywhere except in Ava. Next to diamond, sapphire is the most valuable of the gems. The white and pale blue varieties, by exposure to heat, become snow white, and, when cut, exhibit so high a degree of lustre, that they are used in place of diamond. The most highly valued varieties are the crimson and carmine red; these are the Oriental ruby of the jeweller; the next sapphire; and last, the yellow or Oriental topaz. The asterias, or star-stone, is a very beautiful variety, in which the colour is generally of a reddish violet, and the form a rhomboid, with transparent angles, which exhibit an opalescent lustre.—(See *RUBY*.)

Mr. Crawford gives the following details with respect to the sapphire and ruby mines of Ava:—"The precious stones ascertained to exist in the Burmese territory are chiefly those of the sapphire family, and the spinelle ruby. They are found at 2 places, not very distant from each other, at Mogant and Kyatpéan, about 5 days' journey from the capital, in an E. S. E. direction. From what I could learn, the gems are not obtained by any regular mining operations, but by digging and washing the gravel in the beds of rivulets or small brooks. All the varieties of the sapphire, as well as the spinelle, are found together, and together with them large quantities of corundum. The varieties ascertained to exist, are the Oriental sapphire; the Oriental ruby, or red stone; the opalescent ruby, or cat's eye ruby; the star ruby; the green; the yellow and the white sapphires; and the Oriental amethyst. The common sapphire is by far the most frequent, but, in comparison with the ruby, very little prized by the Burmese, in which they agree with other nations. I brought home with me to England a perfect specimen, both as to colour and freedom from flaws, weighing 22 carats. The sapphire and ruby mines are considered the property of the king; at least he lays claim to all stones that exceed in value a viss of silver, or 100 ticals. The miners, it appears, endeavour to evade the law by breaking the large stones into fragments. In the royal treasury, there are, notwithstanding many fine stones of both descriptions. The year before our visit, the king received from the mines ruby weighing 124 grains; and the year preceding that 8 good ones, but of smaller size. No stranger is permitted to visit the mines; even the Chinese and Mohammedans residing at Ava are excluded."—(*Journal of an Embassy to the Court of Ava*.—p. 412.)

SARCOCOLLA, a subviscid, sweetish, and somewhat nauseous gum-resin. It is brought from Arabia and Persia in small grains of a pale yellow colour; the whiter, as being the freshest, is preferred. It is but seldom imported.—(*Milburn's Orient. Com.*)

SARDINES, or **SARDINIANS** (Ger. *Sardellen*; Fr. *Sardines*; It. *Sardine*; Sp. *Sardinas*), a species of fish of the herring tribe, but smaller. They are taken in considerable quantities on our coasts, and are exceedingly plentiful on the coasts of Algiers, Portugal, Andalusia and Granada in Spain, and along the shores of Italy. The sardines, caught on the coast of Provence, in France, are esteemed the best. From June to 1,200 fishing smacks are engaged in catching these fish on the coast of France from June to the middle of October. The French frequently cure them in red wine.

* Professor Jameson says, in his *Mineralogy*, that some peculiarly beautiful sapphires are found in the Capelan mountains, in Pegu. But we do not believe that there are any such mountains in any part of the world; and, in point of fact, there are no mountains in Pegu, nor have any precious stones been ever found in it.

when thus preserved in vessels perfectly fresh, save their flavour.

SARDONYX.

The ancients are very particular in the quality of the tools used in the manufacture of diamonds.

elliptical, on wh

when thus prepared, designate them *anchoisetes*, or *anchovied sardines*. These are packed in vessels previously employed for holding wine, and exported to the Levant. When perfectly fresh, sardines are accounted excellent fish; but if kept for any time, they entirely lose their flavour, and become quite insipid.

SARDONYX, a precious stone, a variety of chalcedony.

The ancients selected this substance to engrave upon, no doubt from its possessing two peculiar and necessary qualities, viz. hardness and tenacity, by which it is capable of receiving the finest touch or stroke of the tool without chipping, and showing the art of the engraver to the highest perfection.—(*Heaven Diamonds*, 2d ed. p. 121.)

SARSAPARILLA (Ger. *Sarsaparille*; Fr. *Salsepareille*; It. *Salsapariglia*; Sp. *Sarsaparilla*), the root of the *Smilax Sarsaparilla*, a plant growing in South America and the West Indies. It is imported in bales. It is known in the London market by the names of Lisbon, Honduras, and Vera Cruz, but it is also brought from Jamaica. The Lisbon root, which is the produce of Brazil, has a reddish or dark brown cuticle, is internally farinaceous, and more free from fibre than the other kinds: the Honduras has a dirty brown, and sometimes whitish, cuticle; it is more fibrous, and has more ligneous matter than the Lisbon and Vera Cruz. It is in long, slender twigs, covered with a variegated brown cuticle, and has a small woody heart. The Jamaica differs from the others, in having a deep reddish-brown close texture; and the red colour partially diffused through the ligneous part. The root is inodorous, and has a mucilaginous, very slightly bitter taste: the bark is the only useful part of the plant; the ligneous part being tasteless, inert, woody fibre.—(*Thomson's Dispensatory*.) The quantity imported in 1831 amounted to 176,854 lbs., of which 107,410 lbs. were retained for home consumption. The duty, which formerly varied, according as it was brought from a foreign country or a British possession, from 1s. 3d. to 1s. per lb., was reduced, in 1832, to 6d. per lb.

SASSAFRAS (Ger. and Fr. *Sassafras*; It. *Sassafrasso*; Sp. *Sasafras*), a species of laurel (*Laurus Sassafras*, Lin.), a native of the southern parts of North America, Cochinchina, and several of the Indian islands. Sassafras wood, root, and bark, have a fragrant odour, and a sweetish aromatic taste. The wood is of a brownish white colour; and the bark ferruginous within, spongy, and divisible into layers. Their sensible qualities and virtues depend on an essential oil, which may be obtained separate by distilling the chips or the bark with water. It is very fragrant, hot, and penetrating to the taste, of a pale yellow colour, and heavier than water. It is used only in the *materia medica*. Very little is imported.—(*Thomson's Dispensatory*.)

SAUNDERS (RED) (Arab. *Sundal-ahmer*; Hind. *Ruckut-chundum*), the wood of a holy tree (*Pterocarpus santalinus*) indigenous to various parts of India, Ceylon, Timor, &c. The wood is brought to Europe in billets, which are very heavy and sink in water. It is extremely hard, of a fine grain, and a bright garnet red colour, which brightens on exposure to the air. It is employed to dye lasting reddish brown colours on wood. It yields its colouring matter to ether and alcohol, but not to water. The quantity imported is but inconsiderable. The price in bond varies at this moment (February, 1834) from 13l. to 14l. a ton.—(*Thomson's Dispensatory*; *Bancroft on Colours*, vol. ii. p. 236.)

SCAMMONY (Ger. *Skammonien*; Fr. *Scammonée*; It. *Scammonea*; Sp. *Escamonea*), a gum-resin, the produce of a species of convolvulus, or creeper plant, which grows abundantly in Syria. When an incision is made into the roots, they yield a milky juice, which, being kept, grows hard, and is the scammony of the shops. It is imported from Aleppo in what are called drums, weighing from 75 to 125 lbs. each; and from Smyrna in cakes like wax, packed in chests. The former is light and friable, and is considered the best; that from Smyrna is more compact and ponderous, less friable, and fuller of impurities. It has a peculiar heavy odour, not unlike that of old cheese; and a bitterish, slightly acid taste. The colour is blackish or bluish grey, changing to dirty white, or lathering when the surface is rubbed with a wet finger. Its specific gravity is 1.235. It is very liable to be adulterated; and when of a dark colour, heavy, and splintery, it ought to be rejected. It is used only in medicine.—(*Thomson's Dispensatory*.) The duty on scammony, which was formerly as high as 6s. 4d. per lb., was reduced in 1832 to 2s. 6d.

SCULPTURES, figures cut in stone, metal, or other solid substance, representing or describing some real or imaginary object. The art of the sculptor, or statuary, was carried to the highest pitch of excellence in ancient Greece. Fortunately, several of the works of the Grecian sculptors have been preserved; and serve at once to stimulate and direct the genius of modern artists.

Models, are casts or representations of sculptures.

The act 54 Geo. 3. c. 56, vests the property of sculptures, models, copies, and casts, in the proprietor 14 years; provided he cause his name, with the date, to be put on them before they are published; and the same term in addition, if he should be living at the end of the first period. In actions for piracy, double costs to be given. The act 6 Geo. 4. c. 107, prohibits the importation, on pain of forfeiture, of any sculptures, models, casts, &c. first made in the United Kingdom.

SEAL (Lat. *Stigillum*), a stone, piece of metal, or other solid substance, generally round or elliptical, on which is engraved the arms, crest, name, device, &c. of some state, prince,

public body, or private individual. It is employed as a stamp to make an impression on sealing wax, thereby authenticating public acts, deeds, &c., or to close letters or packets. Seals were very early invented, and much learning has been employed in tracing their history, and explaining the figures upon them.—(See particularly the work of *Hopkins, De Sigillorum Prisco et Novo Jure*, 4to, 1842.) They are now very generally used.

The best are usually formed of precious stones, on which the crest or the initials of the person's name are engraved, set in gold. But immense numbers are formed of stained glass, and set in gilt copper. They are manufactured at London, Birmingham, &c., and are extensively exported.

SEAL FISHERY. The seal, an amphibious animal, of which there are many varieties, is found in vast numbers in the seas round Spitzbergen, and on the coasts of Labrador and Newfoundland. As it frequents the British shores, it is well known, and has been repeatedly described. Seals are principally hunted for their oil and skins. When taken in the spring of the year,—at which time they are fattest,—a full grown seal will yield from 8 to 12 gallons of oil, and a small one from 4 to 5 gallons. The oil, when extracted before putrefaction has commenced, is beautifully transparent, free from smell, and not unpleasant in its taste. The skin, when tanned, is extensively employed in the making of shoes; and when dressed with the hair on, serves for the covering of trunks, &c.

"To the Esquimaux the seal is of as much importance as bread to a European. Its flesh forms their most usual food; the fat is partly dressed for eating, and partly consumed in their lamps, the liver, when fried, is esteemed, even among sailors, as an agreeable dish. The skin, which the Esquimaux dress by processes peculiar to themselves, is made water proof. With the hair off, it is used as coverings, instead of planks, for their boats, and as outer garments for themselves; shielded with which, they can invert themselves and canoe in the water, without wetting their bodies wet. It serves also for coverings for their tents, and for various other purposes. The jackets and trousers made of seal-skin by the Esquimaux are in great request among the whale fishers for preserving them from cold and wet."—(*Searesby's Arctic Regions*, vol. i. p. 510.)

Seals in fine weather prefer the ice to the water, and vast herds of them are frequently found lying on the field ice; the places where they are met with being thence called "seal meadows." The seal hunters endeavour to surprise them while sleeping, and to intercept their retreat to the water. They strike them with muskets and bludgeons, but principally the latter, they being easily despatched by a blow on the nose.

The seal fishery has long been prosecuted to a considerable extent in the northern seas by ships from the Elbe and the Weser; but very few ships have been sent out for sealing since from England, though occasionally some of the whale ships have taken large quantities of seals. Latterly, however, the seal fishery has been prosecuted on a large scale, and with extraordinary success, by vessels of from 60 to 120 tons each, having crews of from 10 to 30 men, fitted out from the ports of Newfoundland, Nova Scotia, &c. The business is attended with a good deal of risk, and instances frequently occur of the vessels being crushed to pieces by the collision of the fields of ice. We borrow the following details from Mr. Bliss's late tract on the *Trade, Statistics, &c. of Canada and our North American Possessions*.

"There is another department of the colonial fishery which has originated within no distant period, and is now becoming of great extent and importance. The large fields of ice which, in the months of March and April, drift southward from the Polar seas, are accompanied by many herds of seals: these are found sleeping in what are called the seal meadows of the ice, and are there attacked and slaughtered in vast numbers. For this purpose the fishers of Newfoundland, from which island these voyages are principally made, without waiting till the return of spring shall have opened their harbours, saw channels through the ice for their vessels, and set sail in quest of those drifting fields, through the openings of which they work a passage, attended with great difficulties and dangers, till they encounter their prey on the seal meadows. This bold and hazardous enterprise seems well compensated by its success. The number of seals thus taken is almost incredible, and is greatly on the increase. They were captured by the Newfoundland fishermen, in 1829, 280,013 seals; in 1830, 553,435; and in 1831, 710,735; making a total catch during these 3 years, of no fewer than 1,582,783 seals! The number of vessels employed in the fishery from Newfoundland, in 1831, was 115; and in 1832, 159; being an increase of about 3,400 tons."—(p. 70.)

Subjoined is a statement of the prices of the different sorts of fish oil in London, in January, 1834.

Fish oils, cod, Newfoundland, per tun (Imp.)	L. s.	d.	Fish oils, southern fishery, pale, per tun (Imp.)	L. s.	d.

" " " " " "	21	10	22	0	0

Undressed seal skins are worth from 1s. to 1s. 6d. each.

See also *Mr. Gregor's British America*, 2d edit. vol. i. p. 197. &c. There is a good account of the whaling in *Laing's Voyages to Spitzbergen*.

SEALING WAX (Ger. *Siegellack*; Fr. *Cire d'Espagne*, *Cire à cacheter*; It. *Cera Lacca*, *Cera di Spagna*; Sp. *Lacre*; Rus. *Surgutsch*), the wax used for sealing letters and legal instruments, &c. It is a composition of gum lac, melted and incorporated with resin, and afterwards coloured with some pigment, as vermilion, verditer, ivory black, &c.

SEAMEN, the individuals engaged in navigating ships, barges, &c. upon the high seas. Those employed for this purpose upon rivers, lakes, or canals, are denominated watermen.

A *British Seaman* must be a natural born subject of his Majesty; or be naturalized by act of parliament; or made a denizen by letters of denization; or have become a British subject by the conquest or cession of some newly acquired territory; or (being a foreigner) have served on board his Majesty's ships of war, in time of war, for the space of 3 years—(3 & 4 Will. 4. c. 54. § 16.) But his Majesty may, by proclamation during war, declare that foreigners who have served two years in the royal navy, during such war, shall be deemed British seamen.—(§ 17.)

Various regulations have been enacted with respect to the hiring of seamen, their con-

while on board countries; but arise between a due obedience voyage, by mail

1. Hiring of proper proof of merchant ships; any master or any seaman or where he or the crew, without first their wages; wages each seaman long time as he or contract the wages under a penalty forfeited by the by each mariner when signed, provisions have been in the coasting trade

The following c. 73.) to be West India trade still continues to

It is hereby agreed

for the port of the month of they severally shall agree with and hire pursuant to the law and oblige themselves and ship or boats in places where the anchors for the present day or night; nor a pretence whatsoever first obtained of the freely agree to be liable of King George the Seamen in the Merc the Third, intituled, trading to his Majesty parties to these present such seamen; that each of for the effectual gov completed with, wages or hire, to get further agreed, that sealed to his wages port of discharge, as in the delivery; and whatever apparel, food and other necessaries for their refreshment or may happen, to the and seamen, on the to go on shore each agreed by the said port to such indulgence by the said as the maintenance of the above; and entered into lighted, agreed, by these present will take charge of deliver his charge to the beam; and, in other, exclusive of the said case he is entitled and mariner, who shall be no plunderer) shall be entitled; that, for the acknowledgment of any thing used, the to their respective

202

while on board, and the payment of their wages. These regulations differ in different countries; but, in all, they have been intended to obviate any disputes that might otherwise arise between the master and seamen as to the terms of the contract between them, to secure due obedience to the master's orders, and to interest the seamen in the completion of the voyage, by making their earnings depend on its successful termination.

1. *Hiring of Seamen.*—To prevent the mischiefs that frequently arose from the want of proper proof of the precise terms upon which seamen engaged to perform their service in merchant ships, it is enacted by statute (2 Geo. 2. c. 36.), "that it shall not be lawful for any master or commander of any ship or vessel bound to parts beyond the seas, to carry any seaman or mariner, except his apprentice or apprentices, to sea from any port or place where he or they were entered or shipped, to proceed on any voyage to parts beyond the seas, without first coming to an agreement or contract with such seamen or mariners for their wages; which agreement or agreements shall be made in writing, declaring what wages each seaman or mariner is to have respectively, during the whole voyage, or for so long time as he or they shall ship themselves for; and also to express in the said agreement or contract the voyage for which such seaman or mariner was shipped to perform the same;" under a penalty of 5*l.* for each mariner carried to sea without such agreement, to be forfeited by the master to the use of Greenwich Hospital. This agreement is to be signed by each mariner within 3 days after he shall have entered himself on board the ship; and is, when signed, conclusive and binding upon all parties. By a subsequent statute, these provisions have been extended to vessels of the burden of 100 tons and upwards, employed in the *coasting trade.*—(31 Geo. 3. c. 39.)

The following is the form of the articles of agreement required by statute (37 Geo. 3. c. 73.) to be entered into between the masters and mariners of ships engaged in the West India trade. It is substantially the same with that which previously was, and still continues to be, in common use for all ships employed in foreign trade.

Ship

It is hereby agreed between the master, seamen, and mariners of the ship _____ now bound for the port of _____ and the master or commander of the said ship, That, in consideration of the monthly or other wages against each respective seaman or mariner's name hereunto set, they severally shall and will perform the above-mentioned voyage: and the said master doth hereby agree with and hire the seamen and mariners for the said voyage at such monthly wages, to be paid pursuant to the laws of Great Britain; and they, the said seamen and mariners, do hereby promise and oblige themselves to do their duty, and obey the lawful commands of their officers on board the said ship or boats thereunto belonging, as becometh good and faithful seamen and mariners, and at all places where the said ship shall put in or anchor during the said ship's voyage, to do their best endeavours for the preservation of the said ship and cargo, and not to neglect or refuse doing their duty by day or night; nor shall go out of the said ship on board any other vessel, or be on shore under any pretence whatsoever, till the voyage is ended, and the ship discharged of her cargo, without leave first obtained of the master, captain, or commanding officer on board: and, in default thereof, they freely agree to be liable to the penalties mentioned in the act of parliament made in the 24 year of the reign of King George the Second, intituled "An Act for the better Regulation and Government of Seamen in the Merchants' Service;" and the act made in the 37th year of the reign of King George the Third, intituled, "An Act for preventing the Desertion of Seamen from British Merchant Ships trading to his Majesty's Colonies and Plantations in the West India;" and it is further agreed by the parties to these presents, that 24 hours' absence without leave shall be deemed a total desertion, and render such seamen and mariners liable to the forfeitures and penalties contained in the acts above recited; that each and every lawful command which the said master shall think necessary to issue for the effectual government of the said vessel, suppressing immorality and vice of all kinds, be strictly complied with, under the penalty of the person or persons disobeying forfeiting his or their whole wages on hire, together with every thing belonging to him or them on board the said vessel: and it is further agreed, that no officer or seaman, or person belonging to the said ship, shall demand or be entitled to his wages, or any part thereof, until the arrival of the said ship at the above-mentioned port of discharge, and her cargo delivered, nor less than 20 days, in case the seaman is not employed in the delivery; and it is hereby further agreed between the masters and officers of the said ship, that whatever apparel, furniture, and stores, each of them may receive into their charge, belonging to the said ship, shall be accounted for on her return; and in case any thing shall be lost or damaged through their carelessness or insufficiency, it shall be made good by such officer or seaman, by whose means it may happen, to the master and owner of the said ship: and whereas it is customary for the officers and seamen, on the ship's return home in the river, and during the time their cargoes are delivering, to go on shore each night to sleep, greatly to the prejudice of such ship and freighters; be it further agreed by the said parties, that neither officer nor seaman shall, on any pretence whatsoever, be entitled to such indulgence, but shall do their duty by day in discharge of the cargo, and keep such watch by night as the master or commander of the said ship shall think necessary, in order for the preservation of the above; and whereas it often happens that part of the cargo is embezzled after being delivered in the lighters; and, as such losses are made good by the owners of the ships, be it therefore agreed by these presents, that whoever officer or seaman the master shall think proper to appoint, shall take charge of the cargo in the lighters, and go with the same to the lawful quay, and there deliver his charge to the ship's husband, or his representative, or see the same safely weighed at the King's beam; and, in consequence of their true fidelity, such seamen shall be entitled to 2*s.* 6*d.* each night, exclusive of their monthly pay; and should it so happen that lighters are detained any considerable time at the quay before they can be unloaded, such officer and seaman so appointed shall in that case be entitled to 2*s.* 6*d.* for every 24 hours, exclusive of their monthly pay; that each seaman and mariner, who shall well and truly perform the above-mentioned voyage, (provided always, that there be no disorders, embezzlement, or other unlawful acts, committed on the vessel's cargo or crew,) shall be entitled to their wages or hire that may become due to him pursuant to this agreement; that, for the due performance of each and every the above-mentioned articles and agreements, and acknowledgment of their being voluntary and without compulsion, or any other clandestine means being used, the said parties have hereunto subscribed their names, the day and month set opposite to their respective names.

merchant has a right to claim satisfaction from the master and owners, they may; by the provision of merchants, deduct the value thereof from the wages of the seamen by whose misconduct the injury has taken place. And the last proviso introduced into the usual agreement signed by the seamen, is calculated to enforce this rule in the case of embezzlement of the cargo or of the ship's stores. This proviso, however, is to be construed indistinctly, as affecting only the particular persons guilty of the embezzlement, and not the whole crew. Nor is any innocent person liable to contribute a portion of his wages to make good the loss occasioned by the misconduct of others.

The offences of running away with the ship, or voluntarily yielding her up to an enemy, or making a revolt, are punishable by death. The statute 11 & 12 Will. 3. c. 7. enacts,

"That if any commander or master of any ship, or any seaman or mariner, shall in any place, where the judicial hath jurisdiction, betray his trust and turn pirate, enemy, or rebel, and practically and feloniously run away with his or their ship or ships, or any barge, boat, ordnance, ammunition, goods, or merchandise, or yield them up voluntarily to any pirate, or shall bring any seducing messages from any pirate, enemy, or rebel, or consult, combine, or confederate with, or attempt or endeavour to corrupt any commander, master, officer, or mariner, to yield up or run away with any ship, goods, or merchandise, or to hinder him from fighting in defence of his ship and goods committed to his trust, or that shall receive his master, or make or endeavour to make a revolt in the ship; shall be adjudged, deemed, and taken to be a *pirate, felon, and robber*, and being convicted thereof according to the directions of this act, shall have and suffer pain of death, loss of lands, goods, and chattels, as *pirates, felons, and robbers* upon the seas ought to have and suffer.

The wilful destruction or loss of the ship is, in all countries, punishable by death. But doubts having been entertained whether the destruction of a ship that had been insured came within the scope of the previously existing statutes, they were repealed by the 43 Geo. 3. c. 113, and the following provision substituted in their stead:—

"That if any person or persons shall, from and after the sixteenth day of July, 1803, wilfully cast any ship, boat, or otherwise destroy, any ship or vessel, or in any wise counsel, direct, or procure the same to be done, and the same be accordingly done, with intent or design thereby wilfully and maliciously to prejudice any owner or owners of such ship or vessel, or any owner or owners of any goods laden on board the same, or any person or persons, body politic or corporate, that hath or have underwritten or shall underwrite any policy or policies of insurance upon such ship or vessel, or on the freight thereof, or upon any goods laden on board the same, the person or persons offending therein, being thereof lawfully convicted, shall be deemed and adjudged a principal felon or felons, and shall suffer death as in cases of felony, without benefit of clergy."

3. *Payment of Seamen's wages, &c.*—In order to stimulate the zeal and attention of seamen, it has been the policy of all maritime states to make the payment of their wages depend on the successful termination of the voyage. "*Freight is the mother of wages; the safety of the ship the mother of freight.*" When, therefore, by any disaster happening in the course of the voyage, such as the loss or capture of the ship, the owners lose their freight, the seamen also lose their wages.

If a ship destined on a voyage out and home has delivered her outward bound cargo, but perishes in the homeward voyage, the freight for the outward voyage is due; so in the same case the seamen are entitled to receive their wages for the time employed in the outward voyage and the unloading of the cargo, unless by the terms of their contract the outward and homeward voyages are consubstantiated into one. If a ship sail to several places, wages are payable to the time of the delivery of the last cargo. Upon the same principle, where money had been advanced to the owners in part of the freight outwards, and the ship perished before her arrival at the port of delivery, it was held that the seamen were entitled to wages in proportion to the money advanced.

If, after seamen have been hired, the owners of a ship do not think proper to send her on the intended voyage, the seamen are to be paid for the time during which they may have been employed on board the ship; and in the event of their sustaining any special damage by breaking off the contract, it is but reasonable that they should be indemnified.

In the case of shipwreck, it is the duty of the seamen to exert themselves to the utmost to save as much as possible of the vessel and cargo. If the cargo be saved, and a proportion of the freight paid by the merchant in respect thereof, it seems, upon principle, that the seamen are also entitled to a proportion of their wages. And for their labour in saving the cargo, or the remains of the ship, they, as well as other persons, may be entitled to a recompence by way of *salvage*. The laws of Oleron rule, that if, in case of shipwreck, "the seamen preserve a part of the ship and lading, the master shall allow them a reasonable consideration to carry them home to their own country; and in case they save enough to enable the master to do this, he may lawfully pledge to some honest persons such part thereof as may be sufficient for the occasion."

By the laws of Wisby, "the mariners are bound to save and preserve the merchandise to the utmost of their power, and whilst they do so (*ce-faisant*, according to the *French* translation), ought to be paid their wages, otherwise not." By the Hanseatic Ordinance, if a ship happens to be cast away, the mariners are obliged to save as much as in them lies, and the master ought to requito them for their pains to their content, and convey them at his own charge to their dwelling places; but if the mariners refuse to assist their master, in such case they shall have neither reward nor wages paid them." It is not quite clear, from the lan-

guage of these ancient ordinances whether the payment directed to be made to seamen on those melancholy occasions, is to be a reward only for their labour in the salvage, or a recompence for their former services in the ship, for which, according to general principles, they are entitled to no payment, if no freight is earned. But Cleirac, in his *Commentary on the Laws of Oleron*, says, that by an ordinance of Philip II. of Spain, made in the year 1563, it is ordained, that the seamen shall save as much as they can from shipwreck; and, in that case, the master is bound to pay them their wages, and to give them a further reward for their labour out of the goods. And the Hanseatic Ordinance of the year 1614 expressly directs, that if so much of the ship be saved as equals the value of the wages of the seamen, they shall be paid their whole wages. In like manner, the Ordinance of Rotterdam and the French Ordinance also expressly direct the payment of wages out of the relics and materials of the ship.—(*Abbott on the Law of Shipping*, part iv. c. 2.)

"I have not been able," says Lord Tenterden, "to find any decision of an English court on the point, and the legislature has made no provision relating to it. As an inducement to the mariners to exert themselves in the hour of danger, it may not be unfit to hold out to them the prospect of obtaining their wages, if they save so much of the ship as shall be sufficient to pay them; but their claim upon the ship seems not to extend to a case, wherein, according to the principles of the law upon which their claim is founded, no wages are payable to them."—(Part iv. c. 2.)

The laws of Oleron, Wisby, and the Hanse towns, direct, that if a seaman die during the voyage, wages shall be paid to his heirs; but it is not clear whether the sum thus directed to be paid is to be understood as meaning a payment proportioned to the time of his service, or the whole sum that he would have earned had he lived till the conclusion of the voyage. This question has not been judicially decided in England; but by the act 37 Geo. 3. c. 73. it is ordered, that the wages due to any seaman, who has died on board any ship trading to the West Indies, shall be paid, within 3 months of the arrival of such ship in Great Britain, to the receiver of the sixpenny duty for Greenwich Hospital, for the use of the seaman's executor or administrator. All masters neglecting or refusing to pay the same, incur a penalty of 50*l.*, and pay double wages for each offence.

A seaman impressed from a merchant ship into the royal service, is entitled to receive the proportion of his wages due to him at the time of impressment, provided the merchant ship arrive in safety at the port of her discharge.

Policy requires that the wages of seamen should not be paid to them in foreign countries, as well to prevent desertion, as to preserve, for the benefit of their families, what might otherwise be spent in riot and debauchery. Conformably to this principle it has been enacted,

"That no master or owner of any merchant ship or vessel shall pay or advance, or cause to be paid or advanced, to any seaman or mariner, during the time he shall be in parts beyond the seas, any money or effects upon account of wages, exceeding one moiety of the wages which shall be due at the time of such payment, until such ship or vessel shall return to Great Britain or Ireland, or the plantations, or to some other of his Majesty's dominions, whereto they belong, and from whence they were first fitted out; and if such master or owner of such merchant ship or vessel shall pay or advance, or cause to be paid or advanced, any wages to any seaman or mariner above the said moiety, such master or owner shall forfeit and pay double the money he shall so pay or advance, to be recovered in the High Court of Admiralty by any person who shall first discover and inform of the same."—(8 Geo. 1. c. 24.)

The time when wages should be paid has also been made the subject of parliamentary enactments. Thus, as to ships engaged in *foreign voyages*, it is ordered, that upon the arrival of any ship in Great Britain from parts beyond the seas, the master or commander shall be obliged to pay the seamen thereto belonging their wages, if demanded, in *thirty days* after the ship's entry at the Custom-house, except in cases where a covenant shall be entered into to the contrary; or at the time the seamen shall be discharged, which shall first happen, if demanded; deducting the penalties and forfeitures imposed by the act, "under the penalty of paying to each seaman or mariner that shall be unpaid, contrary to the intent and meaning of this act, *twenty shillings* over and above the wages that shall be due to each person, to be recovered by the same means and methods as the wages may be recovered; and such payment of wages aforesaid shall be good and valid in law, notwithstanding any action, bill of sale, attachment, or incumbrance whatsoever."—(2 Geo. 2. c. 36.)

And as to ships employed in the *coasting trade* in the manner before mentioned, it is enacted, that the master, commander, or person having charge of the ship, shall be obliged to pay the seamen their wages, if demanded, within *five days* after the ship shall be entered at the Custom-house, or the cargo be delivered, or at the time the seamen shall be discharged, which shall first happen, unless an agreement shall have been made to the contrary; in which case the wages shall be paid according to such agreement, deducting in every case the penalties imposed by this act, under the like forfeiture of *twenty shillings*, to be recovered in the same manner as with regard to ships coming from abroad; and such payment shall be good in law, "notwithstanding any action, bill of sale, attachment, or incumbrance whatsoever."—(31 Geo. 3. c. 39.)

Seamen have a threefold remedy for the recovery of wages; viz. against the ship, the owner, and the master; and they may proceed either in the admiralty courts or those of common law in the former case all may join, and payment may be obtained out of the value

of the ship. The

of the ship. The contract remains in the custody of the master or owner, but they are bound to produce it when required, and it is conclusive evidence of the contract between the parties. By the act 59 Geo. 3. c. 58. justices of the peace are authorised summarily to decide upon the complaint of any seaman as to the nonpayment of wages not exceeding 20*l.*; and if they find the claim well founded, may, in the event of its not being paid within 2 days, issue their warrant for the levy of the same by distress: parties dissatisfied may appeal to the admiralty.

4. Payment to Greenwich Hospital.—During the reign of George II. an establishment attached to Greenwich Hospital was erected (20 Geo. 2. c. 38.) "for the relief and support of maimed and disabled seamen, and the widows and children of such as shall be killed, slain, or drowned, in the merchant service. To provide a fund for this charitable institution, every person serving in any merchant ship, or other private ship or vessel, belonging to any of his Majesty's subjects in England, (except apprentices under the age of 18, persons employed in boats upon the coasts in taking fish which are brought fresh on shore, or in boats within rivers, or upon boats upon the coast, and pilots (except persons employed in the service of the East India Company, and who are not entitled to the benefit of this institution, being provided for by a fund established by the Company);) pays sixpence per month, which is deducted out of his wages by the master, and by him paid over to the persons appointed under the authority of the act at the port to which the ship belongs, before she shall be allowed to clear inwards. For the management and distribution of this fund, a corporation was created, composed chiefly of eminent merchants, with power to purchase land and erect a hospital, and to provide for seamen rendered incapable of service by sickness, wounds, or other accidental misfortunes, and decrepit and worn out by age, either by receiving them into the hospital, or by pensions; and also to relieve the widows and children of seamen killed or drowned in the merchant service, provided the children are not of the age of 14 years; or, if of that age and upwards, are incapable of getting a livelihood by reason of lameness, blindness, or other infirmity, and are proper objects of charity; and to make reasonable allowances to those who shall lose an eye or limb, or be otherwise hurt or maimed, in fighting, defending or working their ships, or doing any other duty in their service, in proportion to their hurt; so far forth as the income and revenues of the charity will extend for those purposes. But no person is to be provided for as a worn-out seaman, who has not been employed in the merchant service five years, and paid the contribution. And in providing for this class, a preference is given to such as have served longest and contributed most.

5. Account of the Money deducted out of the Wages of Seamen employed in the Merchant Service of the Country, for the Years 1828 and 1829; showing the Gross Amount collected, the Nett Money paid to Greenwich Hospital, and the Amount and Rate per Cent. paid for collecting the same in each Year, and for what Purposes employed.

The monies paid to Greenwich Hospital are applied to the general purposes of the institution.

The total expense of collecting amounted in the year 1828 to 22 per cent., and in 1829 to 18 per cent. on the gross receipts; but arrangements are now ordered to be carried into effect, by which the whole expense will be reduced to about 10 per cent.

Royal Hospital, Greenwich, 10th of May, 1830.

W. H. HOOPER, Secretary.

II. Account of Merchant Seamen now in the Royal Hospital for Seamen at Greenwich, with the Comparative Amount of Service in the Navy and in the Merchants' Employ.

Number of Men who have served in the Navy.	Number of Men who have served in the Merchants' Service.	Total Number of Years served by them in the King's Service.	Total Number of Years served by them in the Merchants' Service.	Average Number of Years served by each Man in the Navy.	Average Number of Years served by each Man in the Merchants' Service.

any ship or vessel belonging to any subject of the U. K. trading to parts beyond seas, or of any British registered ship of the burden of 80 tons or upwards employed in the fisheries of the U. K., or in trading to or from any port or place, or otherwise, to carry to sea, from this kingdom or any other place, any seaman or other person as one of his crew or complement (apprentices excepted), without first entering into an agreement in writing with every such seaman, specifying what monthly or other wages such seaman is to receive, the capacity in which he is to act, and the nature of the voyage in which the ship is intended to be employed, so that the seaman may have some means of judging of the probable period for which he is likely to be engaged; and the said agreement shall contain the day of the month and year in which the same shall be made, and shall be signed by the master in the first instance, and by the seaman respectively at the port or place where such seaman shall be respectively shipped; and the master shall cause the same to be, by or in presence of the party who is to attest their respective signatures thereon, truly and distinctly read over to every such seaman before he shall be required to sign the same, in order that he may be enabled to understand the purport and meaning of the engagement he enters into and the terms to which he is bound.—§ 2.

Regulations respecting Forms of Agreements.—In the cases of ships bound to parts beyond seas, except as herein-after provided, every agreement shall be in the form and shall contain true entries (except as herein-after provided) of the several particulars set forth in the schedule marked (A.) at the end of this act, so far as the same can be ascertained; and the owners and the master of every such ship, or one of them, shall, on reporting his ship's arrival at her port of destination in the U. K., deposit with the collector or comptroller of customs at such port a true copy of such agreement, attested by the signatures of the master, that every person interested in such agreement may at all times know the terms and conditions thereof; and in the cases of ships employed in fishing on the coasts of the U. K., and of ships regularly trading from one part of the U. K. to another, and of ships regularly trading or making regular voyages to any of the islands of Jersey, Guernsey, Alderney, Sark, and Guernsey, or to any port on the continent of Europe between the River Rhine inclusive and Brest, the agreements to be entered into as aforesaid shall be in the form and shall contain due entries under their respective heads of the particulars set forth in the schedule (B.) at the end of this act, so far as the same can be ascertained; and the owner or one of the owners of every such ship employed in fishing or in trading in any of the cases last mentioned shall, within ten days next after the expiration of every 6 months ending the 30th of June and the 31st of December each year, deposit with the collector or comptroller of the customs of the port to which the ship belongs a true copy of every agreement entered into with any person composing part of the crew within the preceding 6 months, attested by the signature of such owner; and all copies of agreements required to be deposited as aforesaid shall, when the same have been deposited, and be required to be produced in evidence on the part of any seaman, be received and taken as legal proof of the contents of the agreement.—§ 3.

Penalty for Default.—If any master of any ship as aforesaid carry out to sea any seaman (apprentices excepted) without having first entered into the agreement hereby required, he shall for every such offence forfeit and pay the sum of 10*l.* in respect of each and every seaman carried out contrary to this act; and if any master neglect to cause the agreement to be distinctly read over to each seaman, as enjoined above, he shall for every such neglect forfeit and pay the sum of 5*l.*; and if any master neglects to deposit a copy of the agreement with the collector or comptroller of the customs as is hereby required, or shall wilfully deposit a false copy of such agreement, he shall for every such neglect or offence forfeit and pay the sum of 50*l.*—§ 4.

Seamen not to be deprived of legal Remedies, &c.—No seaman, by entering into or signing such agreement as aforesaid, shall forfeit his lien upon the ship, nor be deprived of any remedy for the recovery of his wages which seamen are now lawfully entitled to against either the ship, the master, or the owners thereof; nor shall any agreement made contrary to or inconsistent with the provisions of this act, or any clause whereby a seaman shall consent to forego the right which the maritime law gives him in wages in the case of freight earned by ships subsequently lost, or containing any words to that effect, be valid or binding on any seaman signing the same; and in cases in which it may be necessary that the agreement should be produced to sustain a claim on the part of a seaman, no obligation shall lie upon the seaman to produce the same, nor shall any seaman fall in any suit or proceeding for the recovery of his wages for want of the production of such agreement, or of any deposited copy thereof as aforesaid, or for the want of any notice to produce the same; any law or usage to the contrary notwithstanding.—§ 5.

Seamen refusing to join or to proceed in the Ship, &c. may be committed to Gaol.—In case a seaman shall, after having signed an agreement as before-mentioned, neglect or refuse to join the ship on board of which he has engaged to serve, or refuse to proceed to sea in her, or absent himself therefrom without leave, it shall be lawful for any justice of the peace, at home or abroad, near the place, upon complaint of the fact made upon oath by the master, mate, or owner thereof, and such justice is required, by his warrant, to cause such seaman to be apprehended and brought before him; and in case such seaman shall not give a reason to the satisfaction of such justice for his neglect, refusal, or absence, upon due proof thereof it shall be lawful for such justice to commit such seaman to the house of correction, to be kept to hard labour for a period not exceeding 30 days; provided that in case such seaman, on being brought before said justice, shall consent to join the ship and proceed on the voyage for which he has agreed, it shall be lawful for said justice, at the request of the master, instead of committing such seaman, to cause him to be conveyed on board the said ship, or be delivered to the master, for the purpose of proceeding on the voyage, and also to award to the master such costs as shall seem reasonable, not exceeding in any case the sum of 40*s.*, which shall be chargeable against and may be deducted from the wages to grow due to such seaman.—§ 6.

Penalty for temporary Absence from Duty.—If any seaman, after having signed the aforesaid agreement, or after the ship on board of which he has agreed to serve has left her first port of clearance, and before the period for which he has agreed to serve be completed, shall wilfully and without leave absent himself from the ship, or from his duty, he shall (in all cases not of absolute desertion, or not treated as such by the master) forfeit out of his wages to the master or owner of such ship the amount of 2*d.* per day for every 24 hours of such absence, and in a like proportion for any less period of time, or, at the option of the said master, the amount of such expenses as have been necessarily incurred in hiring a substitute to perform his work; and in case any seaman while he belongs to the ship shall without sufficient cause neglect to perform such and his reasonable duties as is required of him by the master or other person in command, he shall be subject to a like forfeiture in respect of every such offence, and of every 24 hours' continuance thereof; and in case a seaman, after signing such agreement, or after the ship's arrival at her port of delivery, and before her cargo be discharged, shall quit the ship without a previous discharge or leave from the master, he shall forfeit 1 month's pay out of his wages, but no such forfeitures shall be incurred unless the fact of the seaman's temporary absence, neglect of duty, or quitting the ship be duly entered in the ship's log-book, which entry shall specify truly the day of the day at which the same shall have occurred, and the period during which the seaman was absent or neglected his duty, the name of the vessel, the name of the owner or master thereof, in all cases of default, substantiated by the evidence of the mate or some other credible witness.—§ 7.

The Amount of Forfeitures in ascertained when Seamen contract for the Voyage.—In all cases when the seaman has contracted for wages by the voyage or by the run, and not by the month or other rate

period of time, the amount of forfeitures incurred under this act shall be ascertained as follows: viz., if the whole time spent in the voyage agreed upon shall exceed 1 calendar month, the forfeiture of 1 month's pay, expressed in this act, shall be taken to be a forfeiture of a sum of money bearing the same proportion to the whole wages as a calendar month shall bear to the whole time spent in the voyage, and in like manner a forfeiture of 2 days' pay or less shall be accounted and taken to be a forfeiture of a sum bearing the same proportion to the whole wages as the same period of time shall bear to the whole time spent in the voyage; and if the whole time spent in the voyage shall not exceed 1 calendar month, the forfeiture of 1 month's pay shall be taken to be a forfeiture of the whole wages contracted for; and if such time shall not exceed 2 days, the forfeiture of 2 days' pay shall be accounted and taken to be a forfeiture of the whole wages contracted for; and the master is authorised to state the amount of all such forfeitures enacted out of the wages of any seaman incurring the same.—13.

Forfeiture for Desertion.—Every seaman who absolutely deserts the ship to which he belongs shall forfeit to the owner or master all his clothes and effects left on board, and all wages and emoluments to which he might otherwise be entitled, provided the circumstances attending such desertion be entered in the log-book at the time, and certified by the signature of the master and mate or other credible witness; and an absence of a seaman from the ship for any time within the space of 24 hours immediately preceding the sailing of the ship without permission from the master, or for any period however short under circumstances plainly showing that it was his intention not to return, shall be deemed an absolute desertion; and in case any such desertion take place in parts beyond seas, and the master be under the necessity of engaging a substitute for the deserter at a higher rate of wages than that stipulated in the agreement to be paid to the seaman deserting, the owner or master shall be entitled to recover from the deserter by summary proceeding, in the same manner as wages are hereby made recoverable, any excess of wages which he shall pay to such substitute beyond the amount payable to the deserter had he duly performed his service pursuant to agreement.—14.

Penalty for harbouring Deserters.—If any person shall, on shipboard or on shore, harbour or secrete a seaman who has signed an agreement to proceed on a voyage to parts beyond seas, and has deserted or absented himself without leave from his ship, knowing or having reason to believe him to be a deserter, or to be absent without leave, he shall for every seaman so harboured or secrete forfeit 100*l.* and no debt exceeding 5*l.*, incurred by any seaman after he has signed any agreement as aforesaid, shall be recoverable until the voyage agreed for has been concluded; nor shall it be lawful for any keeper of a public-house, or of a lodging-house for seamen, to withhold or detain any cheer, bed or bedding, clothes, tools, or other effects of any seaman, for any debt alleged to have been contracted by such seaman; and in case any chest, bed, &c., or other effects as aforesaid, be withheld contrary to this act, it shall be lawful for any justice of the peace in any part of H. M.'s dominions, upon complaint upon oath made by such seaman or on his behalf, to inquire into the matter, and if he see fit to cause such property or effects so withheld or detained to be seized and delivered over to the seaman.—15.

The Period within which Wages are to be paid.—The master or owner of every ship is hereby required to pay to every seaman entered as aforesaid his wages, if the same be demanded, within the periods following: viz., if the ship be employed in trading coastwise, the wages shall be paid within 2 days after the termination of the agreement, or at the time when such seaman is discharged, whichever shall first happen; if the ship be employed in trading otherwise than coastwise, then the wages shall be paid, at the latest, within 3 days after the cargo is delivered, or within 10 days after the seaman's discharge, whichever shall first happen; in either of which last-mentioned cases of payment being delayed, the seaman at the time of his discharge is entitled to be paid on account a sum equal to one fourth part of the estimated balance due to him; and in case any master or owner neglect or refuse to make such payment, he shall for every such neglect or refusal forfeit and pay to the seaman the amount of 2 days' pay for each day, not exceeding 10 days, during which payment shall without adequate cause be delayed beyond the period at which such wages or part wages are hereby required to be paid; for recovery of which forfeiture the seaman has the same remedies as he is entitled to for recovery of his wages: provided that nothing in this clause contained shall extend to the cases of ships employed in the southern whale fishery, or on voyages for which seamen by the terms of their agreement are compensated by shares in the profits of the adventure.—11.

Payment of Wages to be valid notwithstanding Bill of Sale, &c.—Every such payment of wages to a seaman shall be valid and effectual in law, notwithstanding any bill of sale or assignment made by any seaman of such wages, or of any attachment or incumbrance thereon; and no assignment or sale of wages made prior to the earning thereof, nor any power of attorney expressed to be irrevocable for the receipt of such wages, shall be valid or binding upon the party making the same.—12.

Orders to give Seamen Certificates on Discharge.—Upon the discharge of a seaman from ship, he shall be entitled to receive from the master a certificate, signed by him, of his service and discharge, specifying the period of service and the time and place of his discharge; and any master refusing to give such certificate, without reasonable cause, shall for every such offence forfeit and pay such seaman the sum of 5*l.*—13.

For obtaining immediate Payment of Wages of Seamen in certain Cases.—If after a seaman has been discharged from any ship or vessel 3 days he shall be desirous of proceeding to sea on another voyage, and in order thereto requires immediate payment of the wages due to him, any justice of the peace in any part of H. M.'s dominions may, on application from such seaman, and on satisfactory proof that he would be prevented from employment by delay, summon the master or owner of such ship or vessel before him, and require cause to be shown why immediate payment of such wages shall not be made; and if it appear to the satisfaction of such justice that there is no reasonable cause for delay, he shall order payment to be made forthwith, and in default of compliance with such order such master or owner shall forfeit and pay the sum of 5*l.*—14.

Summary Mode of recovering Wages not exceeding 20*l.*—And whereas seamen, in cases of dispute, may be exposed to great inconvenience, expense, and delay in obtaining payment of their wages; to remedy thereof it is enacted, in all cases of wages not exceeding 20*l.*, which are due and payable to a seaman for service in any ship, it shall be lawful for any justice of the peace in any part of H. M.'s dominions, residing near the place where the ship has endeavoured to receive, cleared or discharged her cargo, or near the place where the master or owner upon whom the claim is made shall be or reside, upon complaint on oath made to such justice by any seaman, or on his behalf, to summon such master or owner to appear before him to answer such complaint, and upon his appearance, or in default thereof, on proof of his having been summoned, such justice is empowered to examine upon the oath of the parties and their witnesses (if there be any) touching the complaint and the amount of wages due, and to make such order for payment as shall appear reasonable and just; and in case such order be not obeyed within 2 days after making thereof, it shall be lawful for such justice to issue his warrant to levy the amount of the wages awarded as due, by distress and sale of the goods and chattels of the party on whom such order for payment shall be made, rendering to such party the surplus of any shall remain of the produce of the sale) after deducting thereout all charges and expenses incurred by the seaman in making and hearing the complaint, as well as those incurred by the distress and levy and in the enforcement of the justice's order; and in case sufficient distress cannot be found it shall be lawful for the said justice to cause the amount of the said wages and expenses to be levied on the ship in respect of the service on board which the wages are claimed, or the tackle and apparel

thereof: and if an appeal be taken of the court of appeal of all costs shall be final and—15.

In what Case a Seaman's Wages may or in any Voyage may be Compelled by the Judge to be Paid to the Plaintiff.—If any ship whatever is sold at any port or more British vessel (charged) to heretofore agreement, either home or abroad, which they were taking them with any reasonable excuse or neglect except in cases of and expended on any such expenses the public notice.

Supply of Mates. the same shall be done and discharged in case any of the vessel the necessary shall stand in need of the owner and master from the seaman.

Sections 19 and general register of the admiralty registers, to go to the Master of Ships, &c. (see post, p. 445) ships; and where made to the registers of every shall not only be arrival at their ports such port an account have belonged to return under the schedule marked.

Masters of Ships. the 31st of December on the coats of ship regularly transport on the collector or comptroller of customs London, an account engaged during the names of the any time during return, under the end of the

Returns to be made from the U. K., cut up to the port thereof, or by or shall be able to sale of the ship.

Lists to be certified or confirmed or master of a required, shall be

Disposal of the then on board a J. M.'s counsel dispose of the entitled to the death of such so in the assets of arise to the pre and disabled sea the merchant vessel provided board; a ship within 1 month then the master with the proceeds with respect to

Part II. Vol. II.—2

thereof; and if such ship be not within the jurisdiction of such justice, then he is empowered to apprehend and commit the party upon whom the order for payment shall be made to the common goal of the county, court, or in any court of record in H. M.'s dominions, and it shall be the duty of all costs and expenses attending their recovery; and the award and decision of such justice shall be final and conclusive as well on every seaman as on the owner and master of the ship.

In what Case Costs of Suit for Recovery of Wages not to be allowed.—If any suit for the recovery of a seaman's wages be instituted against the ship, or the master or owner thereof, in the court of admiralty or in any vice-admiralty court, or in any court of record in H. M.'s dominions, and it shall appear to the justice that the plaintiff might have had an effectual remedy for the recovery of his wages by complaint to a justice of the peace as herein-before provided, then and in every such case such justice is hereby required to certify to that effect, and thereupon no costs of suit shall be awarded to the plaintiff.—§ 15.

If Ship is sold at a Foreign Port, Crew to be sent Home at the Expense of the Master or Owners.—When any ship whatever belonging to any subject of the U. K., except in cases of wreck or condemnation, is sold at any port out of H. M.'s dominions, the master in all such cases (unless the crew in the presence of the British consul or vice-consul, or if there be none such, then in the presence of one or more British resident merchants at such port, shall signify their consent in writing to be there discharged) is hereby required, besides paying them the wages to which they shall be entitled under the agreement, either to provide them with adequate employment on board some other British vessel bound, or to furnish the means of sending them back to the port in H. M.'s dominions at which they were originally shipped, or to some port in the U. K., as shall be agreed upon, by providing them with a passage home, or depositing with the consul or vice-consul such money as he shall deem reasonably sufficient to defray the expenses of their subsistence and passage; and if the master refuse or neglect to do so, such expenses shall be a charge upon the owner whose ship is so sold, except in cases of barratry, wreck, or condemnation, and may be recovered as so much money paid and expended on his account, together with full costs, at the suit of the consul or other person defraying such expenses, or of the attorney-general, in case the same has been allowed to the consul out of the public monies.—§ 17.

Supply of Medicines to be kept on Board, &c.—Every ship sailing from the U. K. to any place out of the same shall have and keep constantly on board a sufficient supply of medicines, suitable to accidents and diseases arising on voyages; and in case any default be made in providing such medicines, or in case any of the seamen receive any hurt or injury in the service of the ship, the expense of providing the necessary surgical and medical advice, and attendance and medicines, which the seaman shall stand in need of until he be cured or brought back to the U. K., shall be borne and defrayed by the owner and master of the ship, or one of them, without any deduction whatever on that account from his seaman's wages.—§ 18.

Sections 19 and 20 provide for the establishment of an office at the Custom-house, London, for the general register of merchant seamen, consisting of a registrar, &c., under the direction of the lords of the admiralty; and authorise letters and packets, on the business of the office, addressed to the registrar, to go free of postage.

Masters of Ships to deliver Lists of their Crew on their Return.—Whereas by the act 4 & 5 W. 4. c. 24 (see post, p. 220), a certain book by way of muster-roll is required to be kept on board merchant ships; and whereas it is expedient for the better effecting the objects of this act that a return should be made to the registrar of merchant seamen of every of the said particulars, it is enacted, that the masters of every British ship bound to parts beyond seas, except in the cases herein-after provided, shall not only keep the book required by the said recited act, but shall, on reporting his ship on her arrival at her port of destination in the U. K., deliver to the collector or comptroller of customs at such port an account, signed by himself, of all the seamen and others (including apprentices) who have belonged to the ship at any time during the absence from the U. K., containing a true and correct return under their respective heads of the several particulars expressed in the form set forth in the schedule marked (C.) at the end of this act.—§ 21.

Masters of Ships in the Home Trade to return like Lists.—Within 21 days after the 30th of June and the 31st of December in each year, the owner or one of the owners of every ship engaged in trading on the coasts of the U. K., or in regularly trading from one part of the U. K. to another, and of every ship regularly trading to any of the islands of Jersey, Guernsey, Alderney, Sark, and Man, or to any port on the continent of Europe between the river Elbe inclusive and Brest, shall deposit with the collector or comptroller of the customs of the port to which the ship belongs, or with the registrar in London, an account, signed by the owner, or master, of the voyages in which such ship has been engaged during the half year ending on the days above mentioned, and setting forth the Christian and surnames of the several persons (including the master and apprentices) who belonged to the ship at any time during such periods, which account shall be in the form and shall contain a true and correct return, under their respective heads, of the several particulars expressed in the schedule marked (D.) at the end of this act.—§ 22.

Return to be made in case of Ship lost or sold Abroad.—In case any ship be lost or sold while absent from the U. K., then an account containing a similar return as in the cases before mentioned, made out up to the period of such loss or sale, by the persons who were at that time owner and master thereof, or by one of them, shall be transmitted to the registrar in the port of London so soon as he shall be able to make such return after the loss, and within 12 calendar months at furthest after the sale of the ship.—§ 23.

Lists to be certified, &c.—The said accounts and returns required by this act to be delivered to the collector or comptroller of customs, shall be transmitted by them to the registrar; and every owner or master of a ship who shall refuse or wilfully neglect to deliver such list or account as is hereby required, shall for every such refusal or neglect forfeit and pay the sum of 25s.—§ 24.

Disposal of the Effects of Seamen dying Abroad.—Whenever a British seaman abroad dies elsewhere than on board a British ship, leaving any money or effects within the limits of any British consulate, H. M.'s consul there is hereby required to claim and take charge of such money and effects, and to dispose of the effects for the benefit of the next of kin of the deceased or other person who may be entitled to the same; and in case no claim be made to the same within 3 calendar months after the death of such seaman, the consul shall, after abating the amount of any expenses incurred in getting in the assets of the deceased, remit the balance of such monies as either have arisen or shall hereafter arise to the president and governors of the corporation "for the relief and support of sick, maimed, and disabled seamen, and of the widows and children of such as shall be killed, slain, or drowned in the merchant service," to be by them paid over and disposed of in the manner and under the regulations provided by the act 4 & 5 W. 4. c. 22; and in case any seaman dying as last mentioned leave on board any ship to which he belonged any monies, clothes, or other effects, and the same he not claimed within 1 month after the ship's return to the U. K. by the executor or administrator of the deceased, then the master of the ship is hereby required to deposit the same or the proceeds arising therefrom with the president and governors aforesaid, to be disposed of in the manner provided by the said act with respect to the wages of deceased seamen.—§ 25.

Parish Rates may be put on Apprentices in the Sea Service.—Overseers of the poor or other competent

persons are hereby empowered to bind by indenture and put out any boy having attained the age of 17 years, and of sufficient health and strength, who or whose parent or parents is or are maintained by any parish or township, or who shall beg for alms therein, with his consent, but not otherwise, an apprentice in the sea service to any of H. M.'s subjects being master or owner of any ship registered in any port of the U. K., for so long time and until such boys shall respectively attain the age of 21 years, which binding shall be as effectual as if such boy had been bound by virtue of any statute now in force respecting the binding of parish apprentices, or as if such boy were of full age and had bound himself an apprentice, and notwithstanding the residence of the master or owner to whom he may be bound be more than 40 miles distant from such parish or place: provided that every such binding shall be made in the presence of 2 justices acting for the county, riding, borough, or place within which such parish or township is situate, which justices shall execute the indenture in testimony of their being satisfied that such boy hath attained the age and is of sufficient health and strength as required by this act; and that the period when the service under such indenture shall expire may the more certainly appear, the age of every such boy shall be inserted in his indenture, the same being truly taken from the entry of his baptism in the register book of the parish in which he was born (where the same can be obtained), a copy of which shall be given and attested by the officiating minister of such parish without fee or reward; and where no such entry of baptism can be found, the justices shall inform themselves as fully as they can of the boy's age, and from such information shall insert the same in his indenture, and the age of every such boy so inserted therein shall (in relation to the continuance of his service) be taken to be his true age without any further proof thereof. —*§ 26.*

Parish Apprentices may be turned over to the Sea Service.—It shall be lawful for any person to whom any parish apprentice is bound to a service on shore according to the statutes already in force relating to such apprentices, or for the executor or administrators, or, there being none such, for the widow of any such deceased person, with the concurrence of two or more justices residing in or near to the place where such poor boy shall be bound apprentice, to assign and turn over such boy, with his consent, but not otherwise, apprentice to any master or owner of any ship not having her complement of apprentices as herein required, to be employed by such master or owner in the sea service during the unexpired period of his apprenticeship. —*§ 27.*

Indentures may be assigned on the Death of the Master.—In the event of the death of the master of any parish apprentice to the sea service, it shall be lawful for the widow, executor, or administrator of such deceased master to assign his indenture for the residue of the unexpired term to any master or owner of any ship not having the complement of apprentices herein required; all which assignments, if executed within the port of London, shall be attested by the registrar or one of his assistants or clerks, and if at any other port by the collector or comptroller of the customs thereof. —*§ 28.*

Parish Officers to prepare Indentures.—Such overseers, &c. shall cause the indentures of apprenticeship to be prepared and transmitted in duplicate, if the master or owner of the ship to whom such apprentice is bound be or reside within the limits of the port of London, to the registrar, and if at any other port to the collector or comptroller of the customs at such port; and the said overseers or other persons shall cause each poor boy to be conducted and conveyed to such port or place by the constable and at the expense of the parish or township sending him thither, and shall also, upon the execution by the master of the counterpart of the indenture, cause to be paid down to the master the sum of 5*l.*, to be expended in providing such boy with necessary sea clothing and bedding; which sum, with the other expenses, are to be allowed in their accounts in relation to the poor. —*§ 29.*

How Counterparts of Indentures to be Attested.—The counterparts of all indentures shall, if the master be or reside within the limits of the port of London, be executed in the presence of and attested by the registrar or one of his assistants or clerks, and if at any other port by the collector or comptroller of the customs at such port, and also in both cases by the constable or other officer who shall convey such apprentices thither, and such indentures shall bear date respectively on the days on which they are executed; and the constable or his return shall deliver such counterpart to the overseers or other competent persons to be registered and preserved. —*§ 30.*

Every Ship to have Apprentices according to her Tonnage.—The master of every ship belonging to any subject of the U. K., and of the burden of 50 tons and upwards, shall have on board, at the time of clearing out from any port of the U. K., 1 apprentice or more, in the following proportions to the ship's admeasurement, according to the certificate of registry: viz., every ship of 50 tons and under 200 tons shall have 1 apprentice at the least, every ship of 200 tons and under 400 tons shall have 2 apprentices at the least, every ship of 400 tons and under 500 tons shall have 3 apprentices at the least, every ship of 500 tons and under 700 tons shall have 4 apprentices at the least, and every ship of 700 tons and upwards shall have 5 apprentices at the least, all of whom at the period of their being bound shall have been under 17 years of age, and shall have been duly bound for the term of 4 years at the least; and if any master neglect to have on board his ship the number of apprentices hereby required, he shall for every such offence forfeit and pay the sum of 10*l.* in respect of each apprentice so deficient. —*§ 31.*

Apprentices exempt from Contributions.—No apprentice bound or assigned pursuant to this act, nor any master or owner in respect of any such apprentice, shall be liable for the payment of any contribution for the support of any hospital or institution. —*§ 32.*

Indentures and Assignments to be registered.—The registrar in London, and the collector and comptroller of customs at each other port, shall, in a book to be kept for that purpose, enter all indentures and assignments of parish apprentices, specifying the dates thereof, the names and ages of the apprentices, the parishes or places from whence sent, the names and residences of the masters to whom bound or assigned, and the names, ports, and burden of the respective ships to which such masters belong, and shall make and subscribe on each indenture or assignment an indorsement purporting that the same hath been duly registered pursuant to this act; and every collector and comptroller shall also at the end of each quarter of the year transmit a list of the indentures and assignments registered by him within the preceding quarter, containing all the particulars aforesaid, to the registrar in London. —*§ 33.*

Indentures of Apprentices to be registered.—In every case of a person voluntarily binding himself apprentice to the sea service, the indentures to be executed on such occasions shall be registered in a book to be kept for that purpose by the registrar in London, and by the collector and comptroller of customs at each other port at which the indenture shall be executed, in which books shall be expressed the dates of the several indentures, the names and ages of the apprentices, the names and residences of their masters, and (if known) the names, ports, and burden of the several ships on board which they are to serve; and such registrar or collector and comptroller shall indorse and subscribe upon each indenture a certificate purporting that the same hath been duly registered pursuant to this act; and the said collector and comptroller shall also at the end of each quarter of the year transmit a list of the indentures so registered by them within the preceding quarter, containing all the particulars aforesaid, to the said registrar, for the purposes of this act; and it shall be lawful for the master, or his executor or administrator, with the consent of the apprentice if of the age of 17 years or upwards, and if under that age with the consent of his parent or guardian, to assign or transfer his indenture to any other master or owner of any registered ship; and all such voluntary apprentices may, during the term for which they are bound, be employed in any ship of which the master of any apprentice is

master or owner; provided that every such assignment be registered and indorsed by the said registrar or by the collector or comptroller of customs at the port where the master is resident, or to which his ship belongs, in which latter case the said collector or comptroller shall notify the same to the registrar, as is provided with regard to the indenture of such apprentice.—§ 34.

No Steam duty on Agreements.—Agreements with the crew of a ship made in conformity with this act, and all indentures of parish and voluntary apprentices to the sea service, and all counterparts and assignments of such indentures executed after the passing of this act, shall be wholly exempt from stamp duty.—§ 35.

Penalty on Masters neglecting to register Indentures, &c.—If any master to whom any apprentice mentioned in this act shall be bound or assigned neglect to cause the indenture or the assignment thereof (as the case may be) to be registered as required by this act, or shall, after the ship has cleared outwards on the voyage upon which such ship may be bound, suffer his apprentice to quit his service (not entering into that of H. M.), except in case of death, desertion, sickness, or other unavoidable cause, to be certified in the log-book of the ship, every such master shall for every such offence forfeit and pay the sum of 10*l.*—§ 36.

Justices to determine Complaints.—Two or more justices, residing at or near to any port at which any ship having on board any sea apprentice shall at any time arrive, shall have full power and authority to inquire into and examine, hear, and determine all claims of apprentices upon their masters under their indentures, and all complaints of hard or ill usage exercised by their masters towards their apprentices, or of misbehaviour on the part of any apprentice, and to make such orders therein as they are empowered to do in other cases between masters and apprentices.—§ 37.

Common Assaults may be summarily punished by 2 Justices.—In case of any assault or battery which shall, after the commencement of this act, be committed on board any British merchant ship in any place at sea, or out of H. M.'s dominions, it shall be lawful for any 2 justices in any part of H. M.'s dominions, upon complaint of the party aggrieved, to hear and determine any such complaint, and to proceed and make such adjudication thereon as any 2 justices are empowered to do by the act 9 Geo. 4, c. 31, subject however to such provisos and limitations as are contained in the said act with respect to the cases of assault and battery therein mentioned; and the fine or forfeiture to be imposed in such case shall be payable to the merchant seaman's hospital or institution at or nearest to the port at place where such adjudication is made.—§ 38.

Masters entitled to receive the Wages of Apprentices entering into the Navy.—No parish or voluntary apprentice to the sea service shall be at liberty to enter into H. M.'s naval service during his apprenticeship without the consent of his master; but if nevertheless he voluntarily enter on board any of H. M.'s ships of war, and be allowed by his master to continue therein, such master, in case he give notice to the secretary of the admiralty of his consent to his apprentice remaining in H. M.'s service during the residue of his apprenticeship, shall upon the production of his indenture, be entitled, at the time of paying off the ship, to receive to his own use any balance of wages that may be then due and payable to such apprentice up to the period of expiration of his indenture.—§ 39.

Driving on shore, &c. any Person belonging to the Crew a Misdemeanor.—If any master of a British ship on shore and leave behind, or shall otherwise wilfully and wrongfully leave behind on shore or at sea, in any place in or out of H. M.'s dominions, any person belonging to his crew, before the arrival of such ship in the U. K., or before the completion of the voyage or voyages for which such person was engaged, whether such person have formed part of the original crew or not, every person so offending shall be deemed guilty of a misdemeanor, and shall suffer such punishment by fine and imprisonment, or both, as to the court before which he is convicted shall seem meet; and the said offence may be prosecuted by information at the suit of the attorney-general, or by indictment or other proceeding in any court of criminal jurisdiction in H. M.'s dominions, at home or abroad, where such master or other person shall happen to be, although the place where the offence may have been committed be out of the ordinary local jurisdiction of such court; and such court is hereby authorised to issue a commission for the examination of any witnesses absent or out of its jurisdiction; and at the trial the depositions so taken, if such witnesses be then absent, shall be received in evidence.—§ 40.

Seamen not to be discharged Abroad without Sanction.—No master shall discharge any individual person of his crew, whether British subject or foreigner at any of H. M.'s colonies or plantations, without the previous sanction in writing of the governor, lieutenant-governor, secretary, or other officer appointed in that behalf by the government there, or in the absence of all such authorities at or near the port or place at which the ship is then lying, then of the chief officer of customs resident at or near to such port or place; nor shall he discharge any person at any other place abroad without the like previous sanction in writing of H. M.'s minister, consul, or vice-consul there, or in the absence of any such functionary, then of two respectable merchants resident there; all which functionaries are hereby required, and all which merchants are hereby authorised, in a summary way to inquire into the grounds of such proposed discharge by examination on oath, and to grant or refuse such sanction according to their discretion, having regard to the objects of this act.—§ 41.

Not to be left Abroad on the Plea of Incapacity to proceed.—No master shall be at liberty to leave behind abroad, either on shore or at sea, any person of his crew, on the plea of such person not being in a condition to proceed on the voyage, or having deserted from the ship, or otherwise disappeared, unless upon a previous certificate in writing of one of such functionaries or merchants as aforesaid, if there be any such at or within a reasonable distance from the place where the ship shall then be, if there be time to procure the same, certifying that such person is not in such condition, or has deserted or disappeared, and cannot be brought back; and all such functionaries are hereby required, on the application of any such master, to inquire by examination on oath into the circumstances, and to give or refuse such certificate according to the result of such examination.—§ 42.

If any of the Crew are left behind, the Proof of Sanction shall be on the Master.—If any master shall leave behind any one of his crew contrary to this act, in any indictment or proceeding the proof of his having obtained the sanction or certificate aforesaid shall be upon him, it being the intention hereof that, except in the case of entering into H. M.'s naval service, no person of the crew shall be discharged, either with or without his consent, in any place abroad where such functionary can be found, unless he have given his sanction thereto.—§ 43.

Seamen when allowed to be left behind to be paid their Wages.—Every master who shall leave any person of his crew on shore at any place abroad, under certificate of his not being in a condition to proceed on the voyage, shall deliver to one of the said functionaries, or if there be none such to any two respectable merchants there, or if there be but one thereof to such one merchant, a just and true account of the wages due to such person, and pay the same to the seaman, either in money or by a bill drawn upon the owner of his ship; and if by bill, then such functionary or merchant is hereby required by certificate indorsed on such bill to testify that the same is drawn according to this act for money due on account of wages of a seaman, or to that effect; and any master who shall deliver a false account, or refuse or neglect to deliver a just and true account of the wages due to such person, and to pay the amount in money or by bill as aforesaid, shall for every such offence forfeit and pay, in addition to the wages due, the penal sum of 25*l.*—§ 44.

Not to prevent Seamen from entering into the Navy.—Nothing in this act or in any agreement shall

prevent any seaman or person belonging to any merchant ship whatever from entering or being received into H. M.'s naval service, nor shall any such entry be deemed a desertion from the merchant ship, nor incur any penalty or forfeiture whatever, either of wages, clothes, or effects, or other matter or thing, notwithstanding any agreement made to the contrary; and all masters and owners of ships are strictly prohibited from introducing into any ship's articles or agreement with the crew any clause or matter by which any penalty or forfeiture of any kind is agreed to be incurred by a seaman upon his entry into H. M.'s service.—§ 45.

Seamen entering into the Navy from Merchant Ships entitled to the immediate Delivery of Clothes, &c.—When any seaman quits a merchant ship in order to enter into H. M.'s naval service, and is actually received into such service, not having previously committed any act amounting to and treated by the master as a total desertion, he shall be entitled immediately upon entry to the delivery up of all his clothes and effects on board such merchant ship, and (in case the ship shall have earned freight) to receive from the master the proportionate amount of his wages up to the period of such entry, in money, or by a bill on the owner; all which clothes, effects, money, and bill such master is required to deliver up to him accordingly, under a penalty of 25*l.* for any refusal or neglect; to be recovered with full costs of suit by such seaman: provided, that if no freight have been earned at the time of such entry, then the master shall be required to give the seaman on entering a bill upon the owner for his wages to the period of such entry, payable on the ship's safe arrival at her destined port; but in case the master shall have no means of ascertaining the balance justly due, he shall make out and deliver to such seaman a certificate of the period of his services and the rate of wages he is entitled to, producing at the same time to the commanding officer of H. M.'s ship the agreement entered into with the seaman for the voyage; and every master, upon the delivery up of such clothes and effects, and the settlement, as now directed, of such wages, shall be entitled to receive from the officer in command of H. M.'s ship into which such seaman has entered, a certificate signed by the officer, which he is hereby required to give upon the request of the master, testifying that such seaman has entered into H. M.'s ship to serve, as proof that the master had not parted with the seaman contrary to the provisions of this act.—§ 46.

Power to H. M. to sue for the Amount advanced for Seamen left abroad.—In all cases where any master has forced on shore or left behind any person against the provisions of this act, and any such person shall become distressed and be relieved under the provisions of the act 11 Geo. 4. c. 20, or under any act hereafter to be passed, then, in addition to the wages due from and the penalties imposed on such master, H. M. shall be entitled to sue him or the owner of the ship, at the option of the lords of the admiralty, for all charges and expenses incurred on the subsistence, necessary clothing, and conveyance home of such person, as so much money paid and expended to the use of the delinquent, which, together with full costs of suit, may be recovered in the same manner as other debts due to H. M. are recoverable; and in any proceeding for that purpose proof of the account furnished to the said commissioners by any one of such functionaries, or by such two merchants or one merchant, according to the case, as provided by the said act of the 11 Geo. 4. c. 20, shall, together with proof of payment by the said lords or by the treasurer of the navy, of the charges incurred on account of such person, be sufficient evidence that he was relieved and conveyed home at H. M.'s expense; and the court in which any proceeding for the recovery of the said money is instituted is authorised to issue a commission for the examination of witnesses abroad, and the depositions so taken shall be received as evidence.—§ 47.

Ship's Agreement on Arrival at a Foreign Port to be deposited with the Consul.—Every master of a British ship, on his arrival at any foreign port where there is a British consul or vice-consul, shall deliver to such functionary the agreement with his ship's crew, to be preserved by him during the ship's stay there, and to be returned to the master before his leaving the port, without any fee or charge for the same; and if any master refuse or neglect to deliver such agreement to the consul or vice-consul, as is hereby required, he shall for every such offence forfeit and pay the sum of 2*l.*—§ 48.

No Seaman to be shipped at a Foreign Port without the Privity of the Consul.—During the ship's stay at any foreign port no seaman shall be shipped by any master except with the privity of the consul or vice-consul, indorsed or certified on the agreement, under a penalty of 25*l.* for every seaman shipped in breach of this act.—§ 49.

Masters to produce Agreements to Officers of King's Ships.—The master of every British ship is hereby required to produce and show to the master of the ship, and the agreement with his crew, to the captain, commander, or other commissioned officer of any of H. M.'s ships requiring a production and sight thereof; and it shall be lawful for any such officer in H. M.'s naval service, if he think it necessary, to muster the crew and passengers (if any) of any British ship, in order to be satisfied that the provisions of this act, and the laws relating to navigation with respect to the crews of merchant ships have been duly complied with; and if any master shall, upon being required by any such officer, neglect or refuse to produce the muster-roll or agreement, or obstruct any officer in mustering the said crew or passengers, or produce any false muster-roll, he shall for every such offence forfeit and pay the sum of 25*l.*—§ 50.

Registrar and Officers of Customs empowered to require Production of the Agreement, &c.—For the better carrying into effect the purposes of this act it shall be lawful for the registrar and his assistants, and also for the collectors or other chief officers of customs, at the several ports of the U. K. and of the British possessions abroad, to demand from the master of every ship required to enter into an agreement with his crew, the production of the muster-roll of the ship, and also of such agreement with liberty to take a copy of either or both, and to muster the crew and apprentices of such ship, for the purpose of ascertaining whether the provisions of this act, and of the laws relating to navigation have been complied with; and if any master, on such demand being made, refuse or neglect to produce such muster-roll or agreement, or refuse to allow a copy of either document to be taken, or refuse to permit, or prevent his crew and apprentices from being mustered, he shall for every such neglect, refusal, offence, forfeit and pay the sum of 50*l.*—§ 51.

Definition of the Terms Master, Seaman, Ship and Owner.—Every person having the charge or command of any British ship shall, within the meaning and for the purposes of this act, be deemed and taken to be the master of such ship; and every person (apprentices excepted) employed or engaged to serve in any capacity on board the same, shall be deemed and taken to be a seaman within the meaning and for the purposes of this act; and the term "ship," as used in this act, shall be taken and understood to comprehend every description of vessel navigating on the sea; and the term "owner," as applied to a ship, shall be understood to comprehend all persons, if more than one, of whom the ship belongs; and all steam and other vessels employed in carrying passengers or goods shall be deemed trading ships within the meaning and for the purposes of this act.—§ 52.

Recovery of Penalties.—All penalties and forfeitures imposed by this act, for the recovery whereof no specific mode is herein provided, shall be recovered, with costs of suit, in manner following: (that is to say), all penalties and forfeitures not exceeding 20*l.* shall be recoverable at the suit of any person by information and summary proceeding before any one or more justices or justices in any part of H. M.'s dominions, residing near to the place where the offence shall be committed, or where the offender shall be, which justices or justices shall have full power to levy the amount of any such penalty or forfeiture and costs by distress and sale of the offender's goods, or by commitment of the offender to

... payment of the amount; and all penalties and forfeitures exceeding 20l. shall and may be recovered, with costs of suit, in any of H. M.'s courts of record at Westminster, Edinburgh, or Dublin, as in the colonies, at the suit of H. M.'s attorney-general or other chief-law officer of the crown in any part of H. M.'s dominions other than in Scotland, and if there at the suit of the lord advocate; and that all penalties and forfeitures mentioned in this act for which no specific application is before made shall, when recovered, be paid and applied as follows; viz. one moiety of every such penalty provided shall be paid to the informer or person upon whose discovery or information the same has been recovered, and the residue shall be divided between Greenwich Hospital and the merchant seamen's hospital at institution at the port to which the ship shall belong, and if there be none such at said port, then the whole of the said residue shall be paid to Greenwich Hospital: provided, that it shall be lawful for the court before which or the justice or justices before whom any proceedings are instituted for the recovery of any pecuniary penalty imposed by this act to mitigate or reduce such penalty as to them shall appear just and reasonable, in such manner, however, that no penalty shall be reduced below half the original amount: and provided also, that all proceedings so to be instituted be commenced within 4 years after the commission of the offence, if the same have been committed at or beyond the Cape of Good Hope or Cape Horn, or within a year if committed on the European side of those limits, or within 6 calendar months after the return of the offender or complaining party to the U. K.—23.

As to Ships belonging to any British Colony having a Legislature.—This act shall not extend or apply to any ship registered in or belonging to any British colony having a legislative assembly, or to the crew of any such ship, while such ship is within the precincts of such colony; any thing herein contained to the contrary in anywise notwithstanding.—§ 54.

Schedules referred to in the preceding Act.

SCHEDULE (A.)

is Agreement made pursuant to the Directions of an Act of Parliament passed in the Sixth Year of the Reign of His Majesty King William the Fourth, between _____ the Master of the Ship _____ of the Port of _____ and of the Burden of _____ Tons, and the several Persons whose names are subscribed hereto.

It is agreed by and on the part of the said persons, and they severally hereby engage, to serve on board the said ship in the several voyages expressed, on a voyage from _____ to _____ [here the intended voyage is to be described as nearly as can be done, and the places at which it is intended the ship shall touch, or if that cannot be done, the nature of the voyage in which she is to be employed], and back to _____ and the said crew further engage to conduct themselves in an orderly, faithful, honest, careful, and sober manner, and to be at all times diligent in their respective duties and stations, and to be obedient to the lawful commands of the master

in every thing relating to the said ship, and the materials, stores, and cargo thereof, whether on board such ship, in boats, or on shore [here may be inserted any other clauses which the parties may think proper to be introduced into the agreement, provided that the same be not contrary to or inconsistent with the provisions and spirit of this act]. In consideration of which services, to be duly, honestly, carefully, and faithfully performed, the said master doth hereby promise and agree to pay in the said crew, by way of compensation or wages, the amount against their names respectively expressed. In witness whereof the said parties have herein subscribed their names on the days against their respective signatures mentioned.

Place and Time of Entry.			Men's Names.	Age.	Place of Birth.	Quality.	Amount of Wages per Calendar Month, Share, or Voyage.	Witness to Signature.	Name of Ship in which the Seaman last served.
Day.	Month.	Year.							

Note.—Any embezzlement or wilful or negligent loss or destruction of any part of the ship's cargo or stores may be made good to the owner on the wages (so far as they will extend) of the seaman guilty of the same; and if any seaman shall enter himself as qualified for a duty to which he shall prove to be not competent, he will be subject to a reduction of the rate of wages hereby agreed for in proportion to his incompetency.

Note.—Any embezzlement or wilful or negligent loss or destruction of any part of the ship's cargo or stores may be made good to the owner on the wages (so far as they will extend) of the seaman guilty of the same; and if any seaman shall enter himself as qualified for a duty to which he shall prove to be not competent, he will be subject to a reduction of the rate of wages hereby agreed for in proportion to his incompetency.

SCHEDULE (B.)

is Agreement made, pursuant to the Directions of an Act of Parliament passed in the Sixth Year of the Reign of His Majesty King William the Fourth, between _____ the Master of the Ship _____ of the Port of _____ and of the Burden of _____ Tons, and the several Persons whose Names are subscribed hereto.

It is agreed by and on the part of the said persons, and they severally hereby engage, to serve on board the said ship in the said several voyages against their respective names expressed, which ship is to be employed in [here the nature of the ship's employment is to be described, whether in the fisheries, on the coast, or in trading from one part of the United Kingdom to another, or to any of the islands of the West, the Indies, the East, the South Sea, or to any part of the continent of Europe (but not the river Elbe inclusive and there)]; and the said crew further engage to conduct themselves in an orderly, faithful, honest, careful, and sober manner, and to be at all times diligent in their respective duties and stations, and to be obedient to the lawful commands of the master in every thing relating to the said ship and the materials, stores, and cargo thereof, whether on board

such ship, in boats, or on shore [here may be inserted any other clauses which the parties may think proper to be introduced into the agreement, provided that the same be not contrary to or inconsistent with the provisions and spirit of this act]. In consideration of which services, to be duly, honestly, carefully, and faithfully performed, the said master doth hereby promise to pay to the said crew, by way of compensation or wages, the amount against their names respectively expressed: provided always, and it is hereby declared, that no seaman shall be entitled to his discharge from the ship during any voyage to which she may be engaged, nor at any other than a port in the United Kingdom. In witness whereof the said parties have herein subscribed their names on the days against their respective signatures mentioned.

Place and Time of Entry.			Men's Names.	Age.	Place of Birth.	Quality.	Amount of Wages per Calendar Month, Share, or Voyage.	Witness to Signature.	Name of Ship in which the Seaman last served.
Day.	Month.	Year.							

Note.—Any embezzlement or wilful or negligent loss or destruction of any part of the ship's cargo or stores may be made good to the owner on the wages (so far as they will extend) of the seaman guilty of the same; and if any seaman shall enter himself as qualified for a duty to which he shall prove to be not competent, he will be subject to a reduction of the rate of wages hereby agreed for in proportion to his incompetency.

Note.—Any embezzlement or wilful or negligent loss or destruction of any part of the ship's cargo or stores may be made good to the owner on the wages (so far as they will extend) of the seaman guilty of the same; and if any seaman shall enter himself as qualified for a duty to which he shall prove to be not competent, he will be subject to a reduction of the rate of wages hereby agreed for in proportion to his incompetency.

age or upwards, not capable of getting a livelihood by reason of lameness, blindness, or other infirmity, and are proper objects of charity; and also to relieve the widows and children (such children being proper objects of charity) of such seamen as at the time of their death shall have been receiving or been entitled to pensions, under and by virtue of this act, from the fund hereby to be created, as decrepit or worn-out seamen, provided that no widow shall be entitled to any benefit under this act who shall not have been the wife of such seaman or pensioner before he became entitled to relief under his provisions: provided nevertheless, that no seaman shall be entitled to any provision or benefit of this act, on account of any hurt or damage received on board any ship or vessel, unless he produces, or cause to be produced, a certificate of the said hurt or damage from the master, mate, boatswain, and surgeon, or so many of them as were in the vessel to which he belonged at the time of his receiving such hurt or damage, or of the master and 2 of the seamen, if there be no other officer, or in case the master shall die, or be killed or drowned, then of the person who shall take upon him the care of the ship or vessel, and 2 of the seamen on board the same under their hands and seals, thereby signifying how and in what manner such seaman received such hurt or damage, whether in fighting, defending, working, loading, or unloading the said ship or vessel, where and when he entered, and how long he had served on board the same; and the parties so signing and sealing such certificate are hereby required to make oath to the truth thereof before some justice of the peace, if given in Great Britain or Ireland, or the chief officer of the customs of the port or place where there is no justice of the peace, or before the British consul or resident in any foreign country where such certificate is executed (who are respectively authorised and required to administer the same without fee or reward) and in case of sickness, whereby such seaman shall be rendered incapable of service, a certificate, signed, sealed, and authenticated in like manner, signifying that he was healthy when he entered on board such ship or vessel, and that such sickness was contracted on board the same, or on shore in doing his duty in the service of the ship, and not otherwise, and expressing the time and place he entered on board such ship or vessel, and how long he had served therein; and that no widow, child, or children of any seaman killed, slain, or drowned in the said service, shall be relieved or entitled to any allowance by virtue of this act unless she or they, or some person on her or their behalf, shall produce a certificate, signed, sealed, and authenticated in like manner, signifying how and in what manner such seaman lost his life in the service of the said ship or vessel, the time and place he entered on board, and how long he had served therein; and that no widow, child, or children of any seaman in the said service shall be entitled to any relief by virtue of this act, unless she or they shall produce, or cause to be produced, a certificate under the hands and seals of the minister and churchwardens and overseers of the poor of the parish, township, or place, or any 2 of them, or under the hands and seals of the minister and overseers of the poor of the parish, township, or place, or any 2 of them, where there are no churchwardens, or if in Scotland, by the minister and elders, or if in Ireland, by a justice of the peace for the parish, township, or place where such widow, &c. shall at the time reside, and if such widow, &c. are some of the people called Quakers, then by any 2 reputable persons of that persuasion of the parish, township, or place where such widow, &c. have a legal settlement, or do inhabit and reside, to be attested by 2 or more credible witnesses that such widow was the lawful wife and real widow, and that such child or children was or were the lawful child or children of such deceased seaman as aforesaid, and that such child or children is or are under the age of 15 years, or if of that age or upwards, not capable of getting a livelihood by reason of lameness, blindness, or other infirmities, and is or are proper objects of charity; and that no seaman shall be provided for a pension or otherwise, as decrepit or worn out, unless he have served in the merchant service for the space of five years, and have during that time paid the monthly duty out of his wages, imposed by the act 20 Geo. 2. c. 38., or by this act required to be henceforward paid at: deducted, as the case may happen, for the uses and purposes herein provided.—2 2.

Forgery of Certificate.—Forged certificates to be null and void; and those knowingly using them to be liable to the punishment of an incorrigible rogue.—2 3.

Court.—The president and assistants to make a court, who are to meet weekly. The court may apply the monies of the corporation, and appoint the officers and their salaries, and do all other matters and things necessary.—2 4.

All Masters and Owners of Merchant Ships or Vessels, &c. to pay 2s. per Month.—For effecting the ends and purposes aforesaid, every master of any merchant ship or vessel belonging to any British subject, and every owner, being a British subject, navigating or working his own ship or vessel, whether the said ship or vessel be employed on the high sea, or coasts of Great Britain or Ireland, or in any port, bay, or creek of the same, shall, from and after the 31st day of December, 1834, pay 2s. per month, and proportionally for a lesser time, during the time he or they shall be employed in such merchant ship or vessel, for the uses and purposes aforesaid: provided always, that such masters or owners, or their widows, and children under 14 years of age, or being objects of charity as aforesaid, shall be entitled to a proportionate increase of the pension or allowance by this act provided, according to the difference between the amount of the monthly duty paid by other seamen, mariners, and pilots, in the case such master or owner shall have paid the 2s. per month for a period of 5 years or 60 months before any application to the said president and governors for relief under this act; but in case any such master or owner be killed or drowned, or become decrepit, maimed, or disabled, before he or they shall have paid such increased rate of 2s. per month for the full period of 5 years or 60 months as aforesaid, then such masters or owners, or their widows and children, shall be entitled to such smaller pension or allowance as the said president and governors, or the trustees to be appointed, shall think fit.—2 5.

All Seamen, or other Persons serving on board such Ships or Vessels, to pay 1s. per Month.—Every seaman or other person whatsoever who shall serve or be employed in any merchant ship, or other private ship or vessel, belonging to any British subject, whether employed on the high sea, or coasts of Great Britain or Ireland, or in any port, bay, or creek of the same, and every pilot employed on board any such ship or vessel, from and after the 31st day of December, 1834, pay 1s. per month, and proportionally for a lesser time, during the time he or they shall be employed on or before the said ship or vessel, for the uses and purposes aforesaid: provided that this act shall not be construed to extend to any person employed in taking fish in any boat upon any of the coasts of Great Britain or Ireland, or the islands of Guernsey, Jersey, Alderney, Sark, and Man, nor to any person employed on board or vessels that trade only from place to place within any river of Great Britain or Ireland.—2 6.

Masters of Ships to keep in their Hands 1s. per Month out of Seamen's Pay.—The master, owner, or wages, shares, or other profits payable to seamen or other persons employed on board such ship or vessel other than those hereby excepted, the said monthly duty, and shall pay the same, together with the amount of the duty owing from himself, to such officer or officers as shall be lawfully appointed at any of the out-ports for collecting the said duty of 1s. per month, if such seamen or other persons be entitled in any such wages, shares, or profits.—2 7.

Appointments of Receivers.—President and governors, with the concurrence of commissioners of customs, to appoint such persons to receive the monthly duties at the out-ports as they may think fit, making them a reasonable allowance for their trouble, which is not, however, in any case, to exceed 5 per cent. on the gross sum collected.—2 8.

SEAMEN (ESTABLISHMENT FOR).

Master Roll.—Every master is to keep a true and faithful muster roll of the crew of his ship, specifying in writing the name of every one of the crew, including apprentices, with the various particulars as to the place of each person's birth, the place and time of his entry to the ship, the place and time of his discharge from or leaving the same, and if he be discharged or left, with the other particulars specified in the subjoined formula, in the event of his being hurt, killed, &c. :—

A List and Account of the Crew (including the Master and Apprentices) of the Ship _____ of the _____, whereof _____ is the Master, at the Period of her Departure from the Port of _____ in the United Kingdom, and on her Return to the Port of _____ in the United Kingdom, and also of those who have joined the ship at any time during the Voyage.

Man's Name.	Place of Birth.	Place and Time of Entry.			Place and Time of Discharge, or leaving the Ship.			When and how certified hurt or damaged.	When or how discharged or died at sea.	When Discharged or Died at Sea.	L. s. d.	Remarks.
		Day.	Month.	Year.	Day.	Month.	Year.					

Duplicates of this account are to be delivered to the collectors of the duties at the port where the vessel discharges; and any master or commander neglecting to keep such muster roll, and neglecting or refusing to deliver it to the collectors of the duties, shall forfeit for every such offence the sum of 5*l*. The collectors are to transmit to the president and governors the duplicates received from such vessels as do not belong to the port of discharge; and the latter are to transmit them to the same. Collectors neglecting to transmit such duplicates incur a penalty of 5*l*.—*§ 9*.

Masters to deduct Penalties from Wages.—The master of every ship coming within the provisions of this act shall deduct out of the wages of the seamen thereof the amount of all forfeitures incurred by any such seamen, and every master is hereby required truly to enter the same in a book to be kept by him for that purpose, which shall be signed by the master and the person next in command, both of them certifying that it contains all the forfeitures which have been incurred by the seamen of the ship during the voyage, to the truth whereof the master shall make oath when required before the officers of the president and governors in London, or before their collectors at the out-ports; and the said book, or a true copy thereof signed and certified as aforesaid, shall, within 1 calendar month after the ship's return from her voyage, be delivered to the said officer by the master, together with extracts from the log-book of the entries therein of the causes of the several forfeitures; and every master who shall refuse or neglect to deliver such account shall forfeit and pay the sum of 20*l*.—*§ 10*.

Examination of Masters, &c.—Collectors may summon masters of vessels, and examine them upon oath as to the truth of the muster-rolls; masters refusing to appear or to answer, to forfeit 12*l*.—*§ 11*.

Regulations as to Government Ships.—Secretaries, &c. of public government offices to give in a list of ships and vessels employed in their service, and of the seamen or other persons employed in such ships or vessels; and the treasurers, &c. of such offices are to pay no wages or freight to any master, &c. until he produce an acquittance signed by receiver of duties.—*§ 12*.

Payment of Duties.—The said monthly duties are to be paid at the port where the ship or vessel anchors her cargo, before she be cleared inwards; and all officers are interdicted from granting any tickets, transits, &c., or permitting any vessel to go out of any port, unless it appear by the acquittances of the collectors of the said duties that they are not more than 3 months in arrears of the same; every officer acting contrary to this regulation to forfeit 10*l*. But masters or owners may agree with the trustees and collectors for half-yearly payments.—*§ 13*.

Prevention of delay.—To prevent unnecessary delay, it is enacted, that if masters fail to produce proper acquittances or certificate of agreement, tidewriters to be continued on board at their expense.—*§ 14*.

Penalties by this act recoverable before a magistrate.—*§ 15*.

Appointment of Trustees, &c.—From and after the 1st day of October, 1834, it shall be lawful for the owners, masters, and commanders employed on board ships and vessels belonging to any of the out-ports to assemble and meet at any time and place within the same that shall be appointed by any 3 or more of them by giving 10 days' previous notice, to be fixed at the custom-house, wharf, quay, or other public place; and such persons, or the greater part of them, being so assembled, are authorized from time to time to nominate and appoint, by an instrument in writing under their hands and seals, 15 persons to be trustees for such out-port, for receiving, collecting, and applying the said duties, which trustees shall continue to act until the 30th day of December, 1835, and until new trustees are nominated and confirmed; and that within 10 days after the 30th day of December in each succeeding year, the owners, masters, &c. at such out-ports shall have power to meet and choose 15 persons to be trustees for the year ensuing, by an instrument in writing under their hands and seals, or the majority of them so assembled, having given previous notice in the manner before directed; which said respective trustees shall continue from time to time until new trustees are nominated, &c. as aforesaid; and the said instrument shall be sent, free of expense, to the president and assistant committees of the said corporation, who are required to confirm the same under the common seal of the corporation, without fee or reward, within 15 days after the receipt thereof; which trustees when so confirmed (and whereof five shall be a quorum) shall have the same powers and authorities as by-law, and to revoke or alter the same, and to receive and apply any sums of money which shall be contributed, devised, or bequeathed by any well-disposed persons for the purposes aforesaid, and to appoint receivers and other officers, and to collect, receive, pay, and apply the said duties of 1*l*. per month and 1*s*. per month so to be allowed and paid by the seamen or other persons serving on board any ship or vessel belonging to such persons, at such out-ports, according to such rules, orders, and regulations as are or shall be established by virtue and in pursuance of this act, or have been established and continued under the provisions of the act 20 Geo. 2. c. 38, so far as the same are not inconsistent with or repealed or varied by the provisions of this act; and the said receivers and other officers shall have the same powers and authorities as the other receivers and officers appointed in pursuance of this act, and shall be liable to the same penalties and forfeitures: provided always, that if the instrument of trust be not sent to the president and assistant or committees within 30 days after every appointment of trustees, the trust thereby created shall be considered void, and the trustees appointed under it as discharged from the same; and that the president and governors shall have power to appoint a receiver or receivers for the port or place from which such instrument of trust has not been sent, for collecting the forementioned duties and allowances payable at such port or place aforesaid; and the said president and governors shall have power to demand from the outgoing trustees of such port or place an account in writing of the former management of such void trust, and also to demand payment from such trustees of any balance which may at the time of such default be in their hands, who are hereby required to pay the same to such receiver appointed as aforesaid, together with the books of account and other books belonging to such trustees relative to such trust.—*§ 16*

Appointments on Default.—These are not to be revocable within 5 years.—§ 17.
Former Trustees.—Trustees previously appointed at the several out-ports to be subject to the provisions of this act.—§ 18.
Trustees in Bristol.—The corporation of the Merchants Venturers of Bristol are appointed trustees for the duties, &c. received there; and empowered to hold lands, &c. for the purpose of this act.—§ 19.
Full Trustees.—The guild of the Trinity-house of Kingston-upon-Hull appointed trustees for the duties, &c. received there.—§ 20.
Glasgow and Glasgow, &c.—The ports of Glasgow, Greenock, and Port Glasgow, &c. to be deemed an united port, and masters of ships belonging thereto to elect trustees for collecting duties, &c.—§ 21.

Transmission of Accounts.—Trustees of out-ports to transmit accounts of the yearly receipts and expenditure to president and governors.—§ 22.
Transmitters of Muster Rolls.—Collectors appointed by trustees or corporations aforesaid are exempted from sending duplicate of muster rolls to the president and assistants.—§ 23.

Sections 23 and 25, enact that no seaman shall be entitled to the benefit of this act unless he pays the duty; and that those seamen who have served longest shall be first provided for.
Disabled Seamen to be provided for at the port where the accident happens.—§ 26.

Disabled Seamen having served and paid 5 years, to be provided for where they have contributed most.—§ 27.

Seamen shipwrecked, or made Prisoners by the Enemy, may be relieved.—§ 28.
More regular Certificates cannot be obtained, *others may be admitted.*—In all cases where the certificate as directed to be produced by this act for the purpose of entitling parties to relief and support cannot be obtained, such other certificates as shall be satisfactory to the president and governors or trustees respectively shall be received and allowed, so as to entitle the party producing the same to the pensions or other relief provided by this act.—§ 29.

Rights of deceased Seamen to be paid to the Trustees.—All sums of money due for wages to any seaman, mariner, or other person engaged on board any British merchant ship in any port or ports in Great Britain and Ireland, who shall have died on board during the voyage, shall, within 3 months after the arrival of such ship in any port of Great Britain and Ireland, be paid to the trustees of the said port appointed in pursuance of this act, or to the receiver or collector or other authorized agent of the said president and governors, where there are no such trustees, to and for the use of the executors or administrators of the seaman or other person so dying; and in case no claim shall be made on the said trustees by such executors or administrators on account of such wages, within 1 year after the same have been paid over, then the said trustees shall remit the same to the collector or receiver or other their authorized agent of the president and governors at the port of London, in such manner and times as the said president, &c. shall direct, to and for the use of the executors or administrators of the seaman or other person so dying; and in case no claim shall be made on the said president, &c. by the executors, &c. of such seaman on account of such wages within 1 year after the same shall have been first paid over to their collector, then it shall be lawful for them to direct such wages to be paid over (but without interest for the same) to the widow, or if there be no widow claiming, then to the lawful issue respectively, or such persons as by virtue of the statutes of distribution of intestate effects shall be entitled to the same; and if any master or commander of any merchant ship neglect or refuse to pay over to the said trustees, or the receiver or collector at the port aforesaid, all such sums of money within the time before limited, he shall forfeit for every such offence double the amount of the sums of money due to any seaman or other person for wages.—§ 30.

Wages, if not demanded in 3 Years by representatives, to go to the use of the president and governors as the trustees of the respective ports.—§ 31.

Payment to Seamen's Hospital in London.—President and governors to pay 5 per cent. out of duties received by them from seamen in the port of London to the Seamen's Hospital Society in that port.—§ 32.

Deductions from Gross Amount.—It shall be lawful for the receiver or collector or other authorized agent of the president and governors at the port of London, and he is hereby authorized, to deduct, and receive from the gross amount of such sums of money as shall be derived from the unclaimed wages of deceased seamen, received by him in respect of such wages, 5 per cent. in satisfaction of all expenses and trouble he may be put to in the receipt, collection, or transmission thereof.

The contributions to the new fund will, most likely, amount to about 50,000*l.* a year; so that, if it be discreetly and economically managed, it will afford the means of suitably providing for a large number of disabled merchant seamen, as well as for the wives and children of those who have lost their lives in that service. The distressing consequences of those accidents and casualties to which seamen are so peculiarly liable, will thus be materially reduced; so that the service will, in fact, be rendered less hazardous, and more respectable.

(Sup.)

[SEAMEN (AMERICAN).

We subjoin the principal statutory regulations for the protection and government of seamen in the United States.

Act of Congress of the 20th of July, 1790.—§ 1. That from and after the first day of December next, every master or commander of any ship or vessel bound from a port in the United States to any foreign port, or of any ship or vessel of the burthen of fifty tons or upwards, bound from a port in one state to a port in any other than an adjoining state, shall, before he proceed on such voyage, make an agreement in writing or in print, with every seaman or mariner on board such ship or vessel (except such as shall be apprentices or servant to himself or owners) declaring the voyage or voyages, term or terms of time, for which such seaman or mariner shall be shipped. And if any master or commander of such ship or vessel, shall carry out any seaman or mariner (except apprentices or servants as aforesaid) without such contract or agreement being first made and signed by the seaman and mariners, such master or commander shall pay to every such seaman or mariner, the highest price or wages which shall have been given at the port or place where such seaman or mariner shall have been shipped, for a similar voyage, within three months next before the time of such shipping: *Provided* such seaman or mariner shall perform such voyage: or if not, then for such time as he shall continue to do duty on board such ship or vessel; and shall, moreover, forfeit twenty dollars for every such seaman or mariner, one half to the use of the person prosecuting for the same, the other half to the use of the United States; and such seaman or mariner, not having signed such contract, shall not be bound by the regulations, nor subject to the penalties and forfeitures, contained in this act.

§ 2. That at the foot of every such contract, there shall be a memorandum in writing, of the day and the hour on which such seaman or mariner, who shall so ship and subscribe, shall render themselves on board, to begin the voyage agreed upon. And if any such seaman or mariner shall neglect

to render himself on board the ship or vessel, for which he has shipped, at the time mentioned in such memorandum, and if the master, commander, or other officer of the ship or vessel, shall, on the day on which such neglect happened, make an entry in the logbook of such ship or vessel, of the name of such seaman or mariner, and shall, in like manner, at the time that he so neglected to render himself, (after the time appointed), every such seaman or mariner shall forfeit, for every hour which he shall so neglect to render himself, one day's pay, according to the rate of wages agreed upon, to be deducted out of his wages. And if any such seaman or mariner shall wholly neglect to render himself on board of such ship or vessel, or having rendered himself on board, shall afterwards desert and escape, so that the ship or vessel proceed to sea without him, every such seaman or mariner shall forfeit and pay to the master, owner, or consignee, of the said ship or vessel, a sum equal to that which shall have been paid to him by advance at the time of signing the contract, over and besides the sum so advanced, both which sums shall be recoverable in any court, or before any justice or justices of any state, city, town, or county, within the United States, which, by the laws thereof, have cognizance of debts of equal value, against such seaman or mariner, or his surety or sureties, in case he shall have given surety to proceed the voyage.

§ 3. That if the mate or first officer under the master, and a majority of the crew of any ship or vessel, bound on a voyage to any foreign port, shall, after the voyage is begun (and before the ship or vessel shall have left the land) discover that the said ship or vessel is too leaky, or is otherwise unfit in her crew, body, tackle, apparel, furniture, provisions, or stores, to proceed on the intended voyage, and shall require such unfitness to be enquired into, the master or commander shall, upon the request of the said mate (or other officer) and such majority, forthwith proceed to or stop at the nearest or most convenient port or place where such enquiry can be made, and shall there apply to the judge of the district court, if he shall there reside, or if not, to some justice of the peace of the city, town, or place, taking with him two or more of the said crew, who shall have made such request; and thereupon such judge or justice is hereby authorized and required to issue his precept, directed to three persons in the neighborhood, the most skillful in maritime affairs, that can be procured, requiring them to repair on board such ship or vessel, and to examine the same, in respect to the defects and insufficiency complained of, and to make report to him, the said judge or justice, in writing, under their hands, or the hands of two of them, whether in any, or in what, respect the said ship or vessel is unfit to proceed on the intended voyage, and what addition of man, provisions, or stores, or what repairs or alterations in the body, tackle, or apparel, will be necessary; and upon such report, the said judge or justice shall adjudge and determine, and shall endorse on the said report his judgment, whether the said ship or vessel is fit to proceed on the intended voyage; and if not, whether such repairs can be made, or deficiencies supplied, where the ship or vessel then lays, or whether it be necessary for the said ship or vessel to return to the port from whence she first sailed, to be there refitted; and the master and crew shall in all things conform to the said judgment; and the master or commander shall, in the first instance, pay the costs of such view, report, and judgment, to be taxed and allowed on a fair copy thereof, certified by the said judge or justice. But if the complaint of the said crew shall appear, upon the said report and judgment, to have been without foundation, then the said master, or the owner or consignee of such ship or vessel, shall deduct the amount thereof, and of reasonable damages for the detention (to be ascertained by the said judge or justice) out of the wages growing due to the complaining seamen or mariners. And if, after such judgment, such ship or vessel is fit to proceed on her intended voyage, or after procuring such man, provisions, stores, repairs, or alterations, as may be directed, the said seamen or mariners, or either of them, shall refuse to proceed on the voyage, it shall and may be lawful for any justice of the peace to commit, by warrant under his hand and seal every such seaman or mariner (who shall so refuse) in the common goal of the county, there to remain without bail or mainprize, until he shall have paid double the sum advanced to him at the time of subscribing the contract for the voyage, together with such reasonable costs as shall be allowed by the said justice, and inserted in the said warrant, and the surety or sureties of such seaman or mariner (in case he or they shall have given any) shall remain liable for such payment; nor shall any such seaman or mariner be discharged upon any writ of habeas corpus, or otherwise, until such sum be paid by him or them, or his or their surety or sureties, for want of any form of commitment, or other previous proceedings. *Provided*, That sufficient matter shall be made to appear, upon the return of such habeas corpus and an examination then to be had, to detain him for the causes thereinbefore assigned.

§ 4. That if any person shall harbor, or secrete, any seaman or mariner, belonging to any ship or vessel, knowing them to belong thereto, every such person, on conviction thereof, before any court in the city, town or county, where he, she, or they, may reside, shall forfeit and pay ten dollars for every day which he, she, or they, shall continue so to harbor or secrete such seaman or mariner, one half to the use of the person prosecuting for the same, the other half to the use of the United States; and no sum exceeding one dollar, shall be recoverable from any seaman or mariner by any one person, for any debts contracted during the time such seaman or mariner shall actually belong to any ship or vessel, until the voyage, for which such seaman or mariner engaged, shall be ended.

§ 5. That if any seaman or mariner who shall have subscribed such contract as is hereinbefore described, shall absent himself from on board the ship or vessel, in which he shall so have shipped, without leave of the master or officer commanding on board; and the mate, or other officer having charge of the logbook, shall make an entry therein of the name of such seaman or mariner, on the day on which he shall so absent himself, and if such seaman or mariner shall return to his duty within forty-eight hours, such seaman or mariner shall forfeit three days' pay for every day which he shall so absent himself, to be deducted out of his wages; but if any seaman or mariner shall absent himself for more than forty-eight hours at one time, he shall forfeit all the wages due to him, and all his goods and chattels which were on board the said ship or vessel, or in any store where they may have been lodged at the time of his desertion, to the use of the owners of the ship or vessel, and moreover shall be liable to pay to him or them, all damages which he or they may sustain by being obliged to hire other seamen or mariners in his or their place; and such damages shall be recovered with costs, in any court, or before any justice or justices, having jurisdiction of the recovery of debts to the value of ten dollars, or upwards.

§ 6. That every seaman or mariner shall be entitled to demand and receive, from the master or commander of the ship or vessel to which they belong, one-third part of the wages which shall be due to him, at every port where such ship or vessel shall unlade and deliver her cargo before the voyage be ended, unless the contrary be expressly stipulated in the contract; and as soon as the voyage is ended, and the cargo or ballast be fully discharged at the last port of delivery, every seaman or mariner shall be entitled to the wages which shall be then due according to his contract: and if such wages shall not be paid within ten days after such discharge, or if any dispute shall arise between the master and seaman or mariner, touching the said wages, it shall be lawful for the judge of the district where the said ship or vessel shall be, or in case his residence be more than three miles from the place, or of his absence from the place of his residence, then, for any judge or justice of the peace, to annul the contract of such ship or vessel to appear before him, to show cause why process should not issue against such ship or vessel, her tackle, furniture, and apparel, according to the course of admiralty courts, to answer for the said wages; and if the master shall neglect to appear, or appearing, shall not show

that the wages are paid, or otherwise satisfied or forfeited, and if the matter in dispute shall not be forthwith settled, in such case the judge or justice shall certify to the clerk of the court of the district, that there is sufficient cause of complaint whereon to found admiralty process, and thereupon the clerk of such court shall issue process against the said ship or vessel, and the suit shall be proceeded on in said court, and final judgment be given according to the course of admiralty courts in such cases and in such suit all the seamen or mariners (having cause of complaint of the like kind against the same ship or vessel) shall be joined as complainants; and it shall be incumbent on the master or commander to produce the contract and logbook, if required, to ascertain any matters in dispute; and otherwise the complainants shall be permitted to state the contents thereof, and the proof of the contract shall lie on the master or commander; but nothing herein contained shall prevent any seaman from proceeding from having or maintaining any action at common law, for the recovery of his wages, or from immediately process out of any court having admiralty jurisdiction, wherever any ship or vessel may be found, in case she shall have left the port of delivery where her voyage ended before payment of the wages, or in case she shall be about to proceed to sea before the end of the ten days next after the delivery of her cargo or ballast.

7. That if any seaman or mariner, who shall have signed a contract to perform a voyage, shall, at any port or place, desert, or shall absent himself from such ship or vessel, without leave of the master, or officer commanding in the absence of the master, it shall be lawful for any justice of the peace within the United States (upon the complaint of the master) to issue his warrant to apprehend such seaman, and bring him before such justice; and if it shall then appear, by due proof, that he has deserted a contract within the intent and meaning of this act, and that the voyage agreed for is not fulfilled, altered, or the contract otherwise dissolved, and that such seaman or mariner has deserted the ship or vessel, or absented himself without leave, the said justice shall commit him to the house of correction, or common goal of the city, town, or place, there to remain until the said ship or vessel shall be ready to proceed on her voyage, or till the master shall require his discharge, and then to be delivered to the said master, he paying all the cost of such commitment, and deducting the same out of the wages due to such seaman or mariner.

8. That every ship or vessel, belonging to a citizen or citizens of the United States, of the burthen of one hundred and fifty tons or upwards, navigated by ten or more persons in the whole, and bound on a voyage without the limits of the United States, shall be provided with a chest of medicines, put up by some apothecary of known reputation, and accompanied by directions for administering the same; and the said medicines shall be examined by the same or some other apothecary, once, at least, in every year, and supplied with fresh medicines in the place of such as shall have been used or spoiled; and in default of having such medicine chest so provided, and kept fit for use, the master or commander of such ship or vessel shall provide and pay for all such advice, medicine, or attendance of physicians, as any of the crew shall stand in need of in case of sickness, at every port or place where the ship or vessel may touch or trade at during the voyage, without any deduction from the wages of such sick seaman or mariner.

9. That every ship or vessel, belonging as aforesaid, bound on a voyage across the Atlantic ocean, shall, at the time of leaving the last port from whence she sails, have on board, well secured under deck, at least sixty gallons of water, one hundred pounds of salted fresh meat, and one hundred pounds of wholesome shipbread, for every person on board such ship or vessel, over and besides such other provisions, stores, and live stock, as shall, by the master or passengers, be put on board, and in like proportion for shorter or longer voyages; and in case the crew of any ship or vessel, which shall not have been so provided, shall be put upon short allowance in water, flesh, or bread, during the voyage, the master or owner of such ship or vessel shall pay, to each of the crew, one day's wages beyond the wages agreed on, for every day they shall be so put to short allowance, to be recovered in the same manner as their stipulated wages.

The provisions of the 8th section of this act, relating to a chest of medicines, have since been extended to all merchant vessels, of 75 tons or upwards, bound to the West Indies.

Act of the 10th of July, 1795.—§ 1. That from and after the first day of September next, the master or owner of every ship or vessel of the United States, arriving from a foreign port into any port of the United States, shall, before such ship or vessel shall be admitted to an entry, render to the collector a true account of the number of seamen that shall have been employed on board such vessel since she was last entered at any port in the United States, and shall pay, to the said collector, at the rate of twenty cents per month for every seaman so employed; which sum he is hereby authorized to retain out of the wages of such seamen.

2. That from and after the first day of September next, no collector shall grant to any ship or vessel whose enrolment or license for carrying on the coasting trade has expired, a new enrolment or license, before the master of such ship or vessel shall first render a true account to the collector, of the number of seamen, and the time they have severally been employed on board such ship or vessel, during the continuance of the license which has so expired, and pay to such collector twenty cents per month for every month such seamen have been severally employed as aforesaid; which sum the said master is hereby authorized to retain out of the wages of such seamen. And if any such master shall render a false account of the number of men, and the length of time they have severally been employed, as is herein required, he shall forfeit and pay one hundred dollars.

3. That it shall be the duty of the several collectors to make a quarterly return of the sums collected by them, respectively, by virtue of this act, to the secretary of the treasury; and the president of the United States is hereby authorized, out of the same, to provide for the temporary relief and maintenance of sick or disabled seamen, in the hospitals or other proper institutions now established in the several ports of the United States, or in ports where no such institutions exist, then in such other manner as he shall direct. Provided, That the moneys collected in any one district, shall be expended within the same.

4. That if any surplus shall remain of the moneys to be collected by virtue of this act, after defraying the expense of such temporary relief and support, that the same, together with such private donations as may be made for that purpose, (which the president is hereby authorized to receive,) shall be interest in the stock of the United States, under the direction of the President; and when, in his opinion, a sufficient fund shall be accumulated, he is hereby authorized to purchase or receive cessions or donations of ground or buildings, in the name of the United States, and to cause buildings, when necessary, to be erected as hospitals for the accommodation of sick and disabled seamen.

5. That the president of the United States be, and he is hereby authorized to nominate and appoint, in such ports of the United States as he may think proper, one or more persons, to be called directors of the marine hospital of the United States, whose duty it shall be to direct the expenditure of the fund assigned for their respective ports, according to the 3d section of this act; to provide for the accommodation of sick and disabled seamen, under such general instructions as shall be given by the president of the United States for that purpose, and also, subject to the like general instructions to direct and govern such hospitals, as the president may direct to be built in the respective ports; and that the said directors shall hold their offices during the pleasure of the president, who is authorized to fill up all vacancies that may be occasioned by the death or removal of any of the persons so to be appointed, and the said directors shall render an account of the moneys received and expended by them, once in

every quarter of a year, to the secretary of the treasury, or such other person as the president shall direct; but no other allowance or compensation shall be made to the said directors, except the payment of such expenses as they may incur in the actual discharge of the duties required by this act.

Act of the 3d of March, 1799.—§ 1. That the president of the United States shall be, and he hereby is, authorized to direct the expenditure of any moneys which have been, or shall be, collected by virtue of an act, entitled "An act for the relief of sick and disabled seamen," to be made within the states wherein the same shall have been collected, or within the states next adjoining thereto, excepting what may be collected in the states of New Hampshire, Massachusetts, Rhode Island, and Connecticut; any thing in the said act contained, to the contrary thereof notwithstanding.

§ 2. That the secretary of the navy shall be, and he hereby is, authorized and directed to detain, after the first day of September next, from the pay thereafter to become due, of the officers, seamen, and marines, of the navy of the United States, at the rate of twenty cents per month, for every such officer, seaman, and marine, and to pay the same, quarterly annually, to the secretary of the treasury, to be applied to the same purposes as the money collected by virtue of the above mentioned act is appropriated.

§ 3. That the officers, seamen, and marines, of the navy of the United States, shall be entitled to receive the same benefits and advantages, as, by the act abovementioned, are provided for the relief of the sick and disabled seamen of the merchant vessels of the United States.

Act of the 3d of May, 1802.—§ 1. That the moneys heretofore collected in pursuance of the several acts "for the relief of sick and disabled seamen," and at present unexpended, together with the moneys hereafter to be collected by authority of the beforementioned acts, shall constitute a general fund, which the president of the United States shall use and employ, as circumstances shall require, for the benefit and convenience of sick and disabled American seamen: *Provided*, That the sum of fifteen thousand dollars be, and the same is hereby, appropriated for the erection of a hospital in the district of Massachusetts.

§ 2. That it shall be lawful for the president of the United States to cause such measures to be taken as, in his opinion, may be expedient for providing convenient accommodations, medical assistance, necessary attendance, and supplies, for the relief of sick or disabled seamen of the United States, who may be at or near the port of New Orleans, in case the same can be done with the assent of the government having jurisdiction over the port; and for this purpose, to establish such regulations, and to authorize the employment of such persons, as he may judge proper; and that, for defraying the expense thereof, a sum, not exceeding three thousand dollars, be paid out of any moneys arising from the said fund, not otherwise appropriated.

§ 3. That, from and after the thirtieth day of June next, the master of every boat, raft, or flat, belonging to any citizen of the United States, which shall go down the Mississippi, with intention to proceed to New Orleans, shall, on his arrival at fort Adams, render to the collector or naval officer thereof, a true account of the number of persons employed on board such boat, raft, or flat, and the time that each person has been so employed, and shall pay, to the said collector or naval officer, at the rate of twenty cents per month, for every person so employed; which sum he is hereby authorized to retain out of the wages of such person; and the said collector or naval officer shall not give a clearance for such boat, raft, or flat, to proceed on her voyage to New Orleans, until an account be rendered to him of the number of persons employed on board such boat, raft, or flat, and the money paid to him by the master or owner thereof; and if any such master shall render a false account of the number of persons, and the length of time they have severally been employed, as is herein required, he shall forfeit and pay fifty dollars, which shall be applied to, and shall make a part of, of the said general fund, for the purposes of this act: *Provided*, That all persons employed in navigating any such boat, raft, or flat, shall be considered as seamen of the United States, and entitled to the relief extended by law to sick and disabled seamen.

§ 5. That each and every director of the marine hospitals within the United States, shall, if it can with convenience be done, admit into the hospital of which he is director, sick foreign seamen, on the application of the master or commander of any foreign vessel to which such sick seaman may belong; and such seaman so admitted shall be subject to a charge of seventy-five cents per day for each day he may remain in the hospital, the payment of which the master or commander of such foreign vessel shall make to the collector of the district in which such hospital is situated; and the collector shall not grant a clearance to any foreign vessel, until the money due from such master or commander, in manner and form aforesaid, shall be paid; and the director of each hospital is hereby directed, under the penalty of fifty dollars, to make out the accounts against each foreign seaman that may be placed in the hospital, under his direction, and render the same to the collector.

Act of the 25th of February, 1803.—§ 3. That whenever a ship or vessel, belonging to a citizen of the United States, shall be sold in a foreign country, and her company discharged, or when a seaman or mariner, a citizen of the United States, shall, with his own consent, be discharged in a foreign country, it shall be the duty of the master or commander to produce in the consul, or vice consul, commercial agent, or vice commercial agent, the list of his ship's company, certified as aforesaid, and to pay to such consul, vice consul, commercial agent, or vice commercial agent, for every seaman or mariner so discharged, being designated on such list as a citizen of the United States, three months' pay, over and above the wages which may then be due to such mariner or seaman, two thirds thereof to be paid by such consul or commercial agent, to each seaman or mariner so discharged, upon his engagement on board of any vessel to return to the United States, and the other remaining third to be retained for the purpose of creating a fund for the payment of the passage of seamen or mariners, citizens of the United States, who may be desirous of returning to the United States, and for the maintenance of American seamen who may be destitute, and may be in such foreign port; and the several sums retained for such fund shall be accounted for with the treasury every six months, by the persons receiving the same.

§ 4. That it shall be the duty of the consuls, vice consuls, commercial agents, vice commercial agents of the United States, from time to time, to provide for the mariners and seamen of the United States, who may be found destitute within their districts, respectively, sufficient subsistence and passages to some port in the United States, in the most reasonable manner, at the expense of the United States, subject to such instructions as the secretary of state shall give; and that all masters and commanders of vessels belonging to citizens of the United States, and bound to some port of the same, are hereby required and enjoined to take such mariners or seamen on board of their ships or vessels, at the request of the said consuls, vice consuls, commercial agents, or vice commercial agents, respectively, and to transport them to the port in the United States to which such ships or vessels may be bound, on such terms, not exceeding ten dollars for each person, as may be agreed between the said master and consul, or commercial agent. And the said mariners or seamen shall, if able, be bound to do duty on board such ships or vessels, according to their several abilities: *Provided*, That no master or captain of any ship or vessel shall be obliged to take a greater number than two men to every one hundred tons burthen of the said ship or vessel, on any one voyage; and if any such captain or master shall refuse to do so, on the request or order of the consul, vice consul, commercial agent, or vice commercial agent, such captain or master shall forfeit and pay the sum of one hundred dollars for each mariner or seaman so refused, to be recovered, for the benefit of the United States, in any court of competent jurisdiction. And the certificate of any such consul or commercial agent, given under his hand and

official seal, shall be the recovery of the

The reader may also be referred to *Kent's Commentaries on American Law* for a comprehensive and excellent statement of the law relating to seamen.—*Am. Ed.*]

SEAWORTHY, a term applied to a ship, indicating that she is in every respect fit for her voyage.

It is provided in all charterparties, that the vessel chartered shall be "tight, staunch, and strong, well apparelled, furnished with an adequate number of men and mariners, tackle, provisions, &c." If the ship be insufficient in any of these particulars, the owners, though ignorant of the circumstance, will be liable for whatever damage may, in consequence, be done to the goods of the merchant; and if an insurance has been effected upon her, it will be void.

But whether the condition of seaworthiness be expressed in the charterparty or not, it is always implied. "In every contract," said Lord Ellenborough, "between a person holding himself forth as the owner of a lighter or vessel ready to carry goods for hire, and the person putting goods on board, or employing his vessel or lighter for that purpose, it is a term of the contract on the part of the lighterman or carrier implied by law, that his vessel is tight, and fit for the purpose for which he offers and holds it forth to the public: it is the immediate foundation and substratum of the contract that it is so: the law presumes a promise to that effect on the part of the carrier, without any actual proof; and every reason of sound policy and public convenience requires that it should be so."

Not only must the ship and furniture be sufficient for the voyage, but she must also be furnished with a sufficient number of persons of competent skill and ability to navigate her. And for sailing down rivers, out of harbours, or through roads, &c., where either by usage or the laws of the country a pilot is required, a pilot must be taken on board. But no owner or master of a ship shall be answerable for any loss or damage by reason of no pilot being on board, unless it shall be proved that the want of a pilot shall have arisen from any refusal to take a pilot on board; or from the negligence of the master in not heaving to, for the purpose of taking on board any pilot who shall be ready and offer to take charge of the ship.—(46 Geo. 3. c. 164.)

A ship is not seaworthy unless she be provided with all the documents or papers necessary for the manifestation of the ship and cargo. Neither is she seaworthy, if, during war, she be not supplied with the sails required to facilitate her escape from an enemy.

It is only necessary, to guarantee the owners from loss, that the ship should be seaworthy at the time of her departure. She may cease to be so in a few hours, and yet they may not be liable. The question to be decided in such cases always is, whether the ship's disability arose from any defect existing in her before her departure, or from a cause which occasioned it afterwards. But if a ship, within a day or two of her departure, become leaky or foundered at sea, or be obliged to put back, without any visible or adequate cause to produce such an effect—such as the starting of a plank or other accident to which the best ships are liable, and which no human prudence can prevent—the fair presumption is that she was not seaworthy when she sailed; and it will be incumbent on the owners to show that she was seaworthy at that time. They are liable for damage occasioned by every injury arising from any original defect in the ship, or from bad stowage; but they are not liable for any injury arising from the act of God, the king's enemies, or the perils of the sea.

It is further to be observed, that how perfect soever a ship may be, yet, if from the nature of her construction, or any other causes, she be incapable of performing the proposed voyage, with the proposed cargo on board, she is not seaworthy. *She must be, in all respects, fit for the trade in which she is meant to be employed.* And it is a wholesome rule that the owners should be held to a pretty strict proof of this.

It has been already observed, that any defect in point of seaworthiness invalidates an insurance upon a ship. There is not only an express but an implied warranty in every policy, that the ship shall be "tight, staunch, and strong, &c.," and the reason of this is plain. The insurer undertakes to indemnify the insured against the extraordinary and unforeseen perils of the sea; and it would be absurd to suppose that any man would insure against those perils, but in the confidence that the ship is in a condition to encounter the ordinary perils to which every ship must be exposed in the usual course of the proposed voyage.

By the old law of France it was directed, that every merchant ship, before her departure from the place of her outfit, should be surveyed by certain sea officers appointed for that purpose, and reported to be seaworthy, "*en bon état de navigation*;" and that previous to her return, before she took her homeward cargo on board, she should be again surveyed. Valin has shown—(Tit. *Fret*, art. 12.) that very little confidence could be placed in these surveys, which, he tells us, were only made upon the external parts, for the ship was not unsheathed; and, therefore, her internal and hidden defects could not be disclosed. This practice seems now to be abandoned by the French; at least, there is no allusion to it in the *Code de Commerce*. It is, one should think, much better to leave the question as to the seaworthiness of the ship to be ascertained, as in England, after a loss has happened, by an investigation of the true cause of such loss, than to permit so important a question to be decided upon the

report of officers without any motive to inquire carefully into her actual condition. A ship may, to all appearance, be perfectly capable of performing a voyage; and it is only after a loss has happened, that her latent defects can be discovered, and her true state at the time of her departure rendered manifest. Indeed, the survey made by the French was not deemed a conclusive proof that the ship was, at her departure, really seaworthy: it merely raised a presumption that such was the case; but it was still open to the freighter or the insurer to show the contrary.

For further information upon this point, the reader is referred to the able and excellent works of *Chief Justice Abbott (Lord Tenterden)* on the *Law of Shipping*, part iii. c. 2., and of *Mr. Serjeant Marshall* on *Insurance*, book i. c. 5. § 1.

SEEDS, in commerce, the grains of several species of gramina. Those of most importance are clover seed, flax or linseed, hemp seed, mustard seed, rape seed, tares, &c.; for which, see the respective articles.

SEGARS, or CIGARS. See **TOBACCO.**

SENA (Fr. *Sene*; Ger. *Sennablater*; It. *Senna*; Sp. *Sen*; Lat. *Cassia Senna*; Arab. *Suna*). The plant (*Cassia Senna*) which yields the leaves known in commerce and the *materia medica* by the name of senna, is an annual, a native of Upper Egypt, and Bernou in Central Africa. The senna after being collected in Upper Egypt, is packed up in bales, and sent to Boullae, where it is mixed with other leaves, some of which are nearly equally good, while others are very inferior. After being mixed, it is repacked in bales at Alexandria, and sent to Europe. A great deal of senna is imported from Calcutta and Bombay, under the name of East India senna; but it is originally brought to them from Arabia.—(*Thomson's Dispensatory*.) Senna is very extensively used in medicine. The total quantity imported in 1831 amounted to 250,296 lbs. of which 130,222 lbs. were retained for home consumption. Of the imports, 42,519 lbs. came directly from Egypt; 200,990 lbs. from the East Indies; and a small quantity at second hand from Italy and other places. The imports of senna from India in 1832 amounted to 4,1917 lbs. The duty was reduced, in 1832, from 1s. 3d. to 6d. per lb.

SHAGREEN (Ger. *Schagrin*; It. *Chagrin*; Rus. *Schagrim*, *Schugren*), a kind of grained leather, used for various purposes in the arts. It is extensively manufactured at Astrakhan in Russia.—(See *Tyoko's Russia*, vol. iii. p. 403.)

SHAMMY, or CHAMOIS LEATHER (Ger. *Sämischleder*; Fr. *Chamois*; It. *Camoscio*; Rus. *Samshunil*, *Koshi*), a kind of leather dressed in oil, or tanned, and much esteemed for its softness, pliancy, and capability of bearing soap without hurt. The real shammy is prepared of the skin of the chamois goat. But leather prepared from the skins of the common goat, kid, and sheep, is frequently substituted in its stead.

(SHARES IN JOINT STOCK COMPANIES (PRICES OF, &c.))—The following Table may, we hope, be useful to such of our readers as have not ready access to the lists regularly published in London. It embraces the various companies of which shares are usually on sale in the London market, exhibiting the number of shares in each, the sum paid up on account of such shares, the price which they brought on the 3d of April, 1840, the then dividend on account of each share, and the periods when the dividends are payable. It is taken from Wettenhall's List, the most authentic record of such matters. It can hardly, we think, fail to be interesting; for, though some of the particulars embodied in it will soon become obsolete, others will not easily change, and it will be always valuable as a standard of comparison.

Increase of Companies.—The extraordinary increase of joint-stock companies, for the construction of railways, the formation of banks, insurance offices, &c., is not one of the least interesting phenomena of the present times. This increase makes it peculiarly desirable that the law as to these associations, both as respects the engagements between them and the public, and the rights and obligations of the partners in reference to each other, should be clearly defined and laid down; and we have heard that it is intended to introduce a measure in furtherance of these objects. The subject, however, is one of considerable difficulty, and should be approached with great caution. But whatever may be done in this matter, we trust that no attempt will be made, directly or indirectly, to lessen the indefinite responsibility of every partner in such concerns for their debts and engagements. We look upon this unlimited individual responsibility as by far the best, or rather the only, security that is worth a straw for their honest and prudent management. The introduction of partnerships *en commandite*, or of partnerships with limited responsibility, would be both unnecessary and mischievous: unnecessary, because there is no disinclination on the part of individuals to embark, as the law now stands, in any undertaking, how hazardous soever, that affords a reasonable prospect of even a moderate return; and mischievous, because partnerships with limited responsibility may be, and in fact frequently are, converted into engines for deceiving and defrauding the public. Some companies have endeavoured to defeat this indefinite liability by inserting clauses to that effect among the conditions on which they profess to do business. But it is believed that these stipulations are illegal; of their inexpediency there can be no doubt: and as they may entrap the unwary, and give rise to litigation, their prohibition by an act of the legislature would seem to be a prudent measure.

N. B.—When the amount of a share only is mentioned, it is to be presumed that it is entirely paid up.—(Sup.)

[See sup., article STOCKS. *Ann. Ed.*]

SHARKS' FINS form a regular article of trade to China; and are collected for this purpose in every country from the eastern shore of Africa to New Guinea. In the Canton Price Currents they are as regularly quoted as tea or opium; and the price of late years has been, according to quality, from 15 to 18 dollars per picul, equal to from 50s. to 60s. per cwt. **SHAWLS** (Ger. *Schalen*; Fr. *Chals*, *Chales*; It. *Shavali*; Sp. *Schawalos*), articles of fine wool, silk, or wool and silk, manufactured after the fashion of a large handkerchief, used in female dress. The finest shawls are imported from India, where they are highly esteemed and cost from 60 to 300 guineas. But the British shawls manufactured at Norwich, Paisley, and particularly Edinburgh, have recently been very much improved; and though still inferior, in point of quality, to the finest specimens brought from the East, they look well, and are much cheaper. The native shawl manufacture is of very considerable value and importance.

Cashmere Shawls.—The shawl manufacture is believed to have originated in the valley of Cashmere, the ancient Caspura, situated in the north-west of India, between the 34th and 35th degrees of N. latitude, and the 73d and 74th degrees of E. longitude. Though not so flourishing as it once was, its manufacture is still prosecuted in this province to a very considerable extent. The shawls are the very best that are made, possessing unequalled fineness, delicacy, and warmth. They are formed of the inner hair of a variety of the common goat (*capra hircus*), reared on the cold, dry table land of Thibet, elevated from 14,000 to 16,000 feet above the level of the sea. The goat thrives sufficiently well in many other countries; but in the alpine plains of Hindostan it has hardly more hair than a greyhound; and though in higher latitudes the hair is more abundant, it is for the most part shaggy and coarse. It is only in the intensely cold and dry climate of Thibet that it yields the peculiarly soft woolly hair that constitutes the material of the Indian shawl. We do not, therefore, suppose that the efforts to naturalise the shawl-goat in Franca will turn out well. On the contrary, we believe the chances of success would be about equal were an attempt made to breed beavers in a hot country, without water, or camels in a moist country, free from heat and drought.

The inner or fine wool is covered over and protected by a quantity of long shaggy hair, which is, of course, carefully separated from it before it is manufactured. The genuine shawl-wool has been imported into this country; and the finest Edinburgh and Paisley shawls have been produced from it. But it must be admitted that shawls have nowhere been made that can come, as respects quality, into successful competition with those of Cashmere. The manufacture has been established at Delhi and Lahore for some years; but notwithstanding it is carried on by native Cashmerians, and though the material employed be quite the same, the fabrics are said to want the fineness of those made in Cashmere, and to have a degenerated, coarse appearance. It is difficult to account for this superiority. It has been ascribed to some peculiar quality of the water in the valley of Cashmere; but it is most probably owing to a variety of circumstances, which, though each may appear of little importance, collectively give a character to the manufacture.

The following details as to the manufacture of Cashmere shawls are extracted from a recent number of an English paper published at Delhi:—
“The great mart for the wool of which shawls are made, is at Kilmeth, which is said to be a dependency of Ladak, and situated 20 days' journey from the northern boundaries of Cashmere. There are 2 kinds of it: that which can be readily dyed is white; the other sort is of an ashy colour, which being with difficulty changed, or, at least, improved by art, is generally woven of its natural hue. About 1/2 lb. of either are obtained from a single goat once a year. After the down has been carefully separated from the hairs, it is repeatedly washed with rice-starch. This process is reckoned important; and it is to the quality of the water of their valley that the Cashmerians attribute the peculiar and un-

SHERRY. See WINE.

SHIPS. Nautical men apply the term ship to distinguish a vessel having 3 masts, each consisting of a lower mast, a topmast, and top-gallant-mast, with their appropriate rigging. In familiar language, it is usually employed to distinguish any large vessel, however rigged; but it is also frequently used as a general designation for all vessels navigated with sails; and it is in this sense that we now employ it.

Merchant Ships.—It is hardly possible to divide merchant ships into classes, at least with any degree of precision. Their size, shape, the mode of their rigging, &c. depend not merely on the particular trade for which they are destined, but on the varying tastes and fancies of their owners. The ships employed in the China trade, by the East India Company, are the largest merchantmen belonging to this country; the private traders to the East and West Indies rank next; then follow the whale ships, those engaged in the trade to the Baltic and Canada, the Mediterranean, and a host of others of every variety of burden and shape.

The reader will find, in the articles NAVIGATION LAWS, and REGISTER, an account of the peculiar privileges enjoyed by British ships, of the conditions and formalities necessary to be observed in order to acquire and preserve these privileges, of the mode of transferring property in ships, &c. And in the articles CHARTERPARTY, FREIGHT, MASTERS, OWNERS, SEAMEN, &c., the law with respect to ships and ship-owners, in their capacity of carriers or public servants, and the reciprocal duties and obligations of the masters and crews, is pretty fully expounded. In this place, therefore, we shall content ourselves with laying before the reader some official statements exhibiting the progress and present magnitude of the mercantile navy of Great Britain.

Increase of Shipping in England.—It would be to no purpose, even if our limits permitted, to enter into any details with respect to the shipping of England previously to the Revolution. Those who wish to examine the subject, will find most of the scattered notices of contemporary writers collected by Anderson in his "Chronological History of Commerce." The mercantile navy of England first became considerable in the reign of Elizabeth; and gradually increased under her successors, James I. and Charles I. At the Restoration, the British shipping cleared outwards amounted to 95,266 tons; but such was the increase of navigation during the reigns of Charles II. and James II., that at the Revolution, the British ships cleared outwards amounted to 190,533 tons. The war terminated by the treaty of Utrecht, in 1697, checked this progress. But commerce and navigation have steadily advanced, with the exception of 2 short periods during the war of 1739, and the American war, from the beginning of last century down to the present day.

The first really authentic account of the magnitude of the commercial navy of England was obtained in 1701—2, from returns to circular letters of the commissioners of customs, issued in January of that year. From these it appears that there belonged, at the period in question, to all the ports of England and Wales, 3,291 vessels, measuring (or rather estimated to measure) 261,222 tons, and carrying 27,196 men and 5,660 guns. Of these there belonged to

	Vessels.	Tons.	Men.		Vessels.	Tons.	Men.
London	560	84,852	10,065	Hull	115	7,564	167
Bristol	165	17,338	2,359	Whitby	110	8,292	571
Yarmouth	143	9,914	668	Liverpool	102	8,519	1,101
Exeter	191	7,107	978	Scarborough	100	6,860	666

None of the other ports had 100 vessels; and there is some mistake in the returns as to the tonnage assigned to Newcastle and Ipswich. Of the Hull vessels, 50 were at the time laid up, which accounts for the small number of men in that port.—(Macpherson's Annals of Commerce, anno 1701.)

I. Table of Ships cleared Outwards from 1663 to 1811.

Year.	English.	Foreign.	Total.	Year.	British.	Foreign.	Total.	Year.	British.	Foreign.	Total.

Prussia	1,531,138	696,760	2,227,898
Denmark	1,624,274	1,138,577	2,762,851
Sweden	1,507,353	696,222	2,203,575

The preceding Table of the British and foreign shipping cleared outwards from 1863 to 1811, both inclusive, is taken from the last edition of *Mr. Chadwera's Comparative Estimate*. It gives a very complete view of the progress of the navigation of the country; and from the attention paid by the author to every subject, and the facilities which his situation in the Board of Trade gave him for acquiring authentic information, its accuracy may be depended on.

II. Account of the Total Number of Vessels engaged in the Foreign and Colonial Trade of the United Kingdom, with the Amount of their Tonnage, and the Number of Men and Boys employed in navigating the same, that entered Inwards from all Parts of the World, in the several Years from 1814 to 1835, both inclusive; and distinguishing British from Foreign.

Year.	British and Irish Vessels.			Foreign Vessels.		
	Vessels.	Tons.	Men.	Vessels.	Tons.	Men.
1814	8,975	1,909,448	88,798	5,398	899,289	87,878
1815	8,389	1,372,103	86,390	5,411	794,869	84,000

N. B.—The falling off in the number of ships in 1827 is apparent only. The numbers returned in the previous years were those that appeared on the registers. But a ship, when once placed on them, remained till evidence was produced of her having been sold to a foreigner, lost, or otherwise destroyed; so that a good many ships were at all times on the register, which, in fact, did not exist. The Registry Office passed in 1836 collected all owners of ships to register them as new; when, of course, the names of those that had ceased to exist disappeared from the books.

VI. An Account of the Number of Ships or Vessels belonging to the different Ports of the British Empire on the 31st of December, 1835, stated in succession, agreeably to the Amount of Tonnage belonging to each; and specifying also the Number of the Crews. (Obtained from the Customs House.)

would give to the shipping of England the same superiority, in point of cheapness, that is now enjoyed by our cottons; and would do more than any thing else to consolidate and strengthen the foundations of our maritime ascendancy. It is entirely owing to the operation of the duties that so many ships are now built in the colonies. They are very inferior to those built in England; and were the latter built in bond, or were the duties on the articles used in their construction drawn back, they would also be the cheapest of the two.

It may be worth mentioning, as illustrative of the singular anomalies that have been allowed to insinuate themselves into our commercial system, that timber may be imported into the Isle of Man, and into any other British possession, without regard to its origin, on payment of an ad valorem duty of 10 per cent. It is remarkable that advantage was not earlier taken of this anomaly, to build ships for the Isle of Man. Latterly, however, several vessels have been built in it; and it is clear that, unless they are placed on the same footing as the other parts of the empire, it will become the grand seat of the shipbuilding business. We hope, however, that the equalisation will be made, not by extending our timber laws to the Isle of Man, but by giving to Britain and Ireland the same advantages as it enjoys. There cannot be a doubt that the equalisation of the timber duties would be one of the greatest improvements which it is possible to make in our commercial system.

Mercantile Navy of France.—We have elsewhere given (see vol. i. pp. 752, 753.) very full details with respect to the navigation and shipping of France; but the subjoined classified account of the shipping belonging to that kingdom on the 1st of January, 1830, 1831, and 1832, may not be unacceptable to our readers.

Account of the Mercantile Marine of France on the 1st of January of each of the Three Years ending with 1832.

(Archives du Commerce, tome iv. p. 124.)

(SHIPS (CLASSIFICATION, QUALIFICATIONS OF MASTERS OF, &c.).—There is in the Art. WRECK, an account of the annual average number of shipwrecks from 1793 to 1830, with a classified account of those in the last year. Since then, the number of these calamities has in no degree diminished. The following account, compiled from Lloyd's books, shows the amount of shipwreck, in so far as it can be ascertained, from the 1st of January, 1833, to the 30th of June, 1836.

Statement of the Number of the Vessels lost, abandoned, broken up, &c.

	British.		Foreign.		Total.	
	No. of Ships.	Average Tonnage.	No. of Ships.	Average Tonnage.	No. of Ships.	Average Tonnage.
In 1832, actual losses, &c. from Lloyd's books	315	unknown	139	unknown	454	unknown
In 1833, actual losses, &c. from Lloyd's books	626	ditto	183	ditto	811	ditto
In 1834, losses, &c. 1st of January to 31st of December, from office book, Lloyd's list, and other sources, surveyors, &c.	423	113,184	158	41,390	581	154,574
In 1835, losses, &c. 1st of January to 31st of December, from office book, Lloyd's list, and other sources, surveyors, &c.	504	131,770	158	32,300	662	164,070
In 1836, losses, &c. 1st January to 31st of June, from Lloyd's list, and other sources	264	50,206	115	20,355	379	70,561

This account must not, however, be taken as fairly representing the total loss from shipwreck. The return as to foreign losses is too defective to be of the least value; and even respects British shipping, such losses only are taken into account as are entered upon Lloyd's books, whereas it is well known that very many vessels are annually lost that are not entered in these books, and of which, consequently, no account is kept.

But, such as it is, the above account shows, estimating the value of the wrecked ships and cargoes at the moderate rate of 18*l.* a ton, that the pecuniary loss arising from the shipwreck of British vessels, in 1835, amounted to the immense sum of 2,191,850*l.* (121,770 × 18). But the loss of property is less afflicting than the loss of life. In 1833, the crews of 39 ships were entirely drowned, while those of very many more partially shared the same fate. But, owing to the extent to which emigration has of late years been carried, and especially to the numbers of poor emigrants ready to embark in any ship, provided they get a cheap passage, the loss of crews is no criterion of the loss of life occasioned by shipwreck. Thus, in 1834, no fewer than 731 emigrants, bound for Canada, lost their lives by shipwreck, principally in the gulph and river of St. Lawrence (see vol. i. art. EMIGRANTS); and within the last few years there has been a still more lamentable waste of life, in consequence of the loss of convict ships bound for Australia. The frequency and amount of shipwreck is, indeed, quite appalling; and has at length begun forcibly to attract the public attention.

It may be thought, perhaps, that these disasters are wholly ascribable to the perils incident to navigation, and that they are not really greater than might be expected to occur to a mercantile navy so extensive as that of England, whose flag is displayed on every sea, however remote or dangerous, but such is not really the case. If we suppose that a third part of the

which have taken place of late years have been occasioned by the dangers of the sea, we believe we shall not be within, but beyond the mark. The other *two thirds*, or more, have originated in artificial causes, of which the principal have been the erroneous system adopted by the underwriters in the classification of ships, and the incompetency of the masters.

1. *Old System for classifying Ships.*—To insure a ship on right principles, or in such a way that the premium shall be the fair equivalent of the risk, is no easy matter. The risk depends partly on the condition of the ship and the capacity of the master and crew; partly on the nature of the cargo she is to take on board; and partly on the voyage she has to perform. The last two circumstances disclose themselves, and their influence may be appreciated at least with sufficient accuracy for practical purposes, without any difficulty; but it is far otherwise with the condition of the ship, and the capacity of the master and crew. It is essential to the adjusting of an insurance on fair terms, that these should be known; and it is, at the same time, exceedingly difficult to acquire any accurate information with respect to them.

It is plain that there is but one mode in which any thing satisfactory can be learnt with respect to the condition of ships, and that is, by the inspection and examination of persons of competent information as to such matters. To acquire a just character at first, a ship should be repeatedly surveyed while she is being built; and to learn her condition at any subsequent period, some of the planks should be taken off, and her hull and rigging subjected to a thorough examination. This is the only method to be followed if we wish to arrive at results that may be safely depended on. The age of a ship should not be altogether overlooked in estimating her condition; but it is not a criterion that, taken by itself, is worth almost any thing. There is the greatest possible difference in the materials of which different ships are built, in the way in which they are built, and in the wear and tear to which they are exposed. Some have been so very bad, that they have actually gone to pieces on their first voyage; others, with difficulty, last for 3, 4, or 7 years; and others, again, run for 10, 15, and even 20 years, and upwards, with but little repair. It may be presumed that the condition of ships built of similar materials, on the same plan, and employed in the same departments of trade, will depend materially on their ages; but a thousand circumstances conspire to defeat this presumption; and it would be ludicrous to suppose that it should apply at all in the case of ships constructed of different materials, and engaged in different lines.

But notwithstanding the criterion of age is thus really worth less than nothing as a rule by which to judge of a ship's condition, it is almost the only one that has been referred to in this country. From about the year 1760, or perhaps earlier, down to 1834, ships were arranged, by the underwriters at Lloyd's, in classes marked by the letters A, E, I, and O, and the figures 1, 2, and 3; the former referring to the hull of the ship, and the latter to the rigging. A ship marked A 1. was in the highest class; that is, her hull and rigging were both declared to be in the best condition; ships marked E 1. were in the next class; those marked I 1. were in the lowest available class, or that formed of such as were fit only for carrying coals, or other goods not liable to sea damage along the coast; ships marked O were unworthy. But to get into the highest class, no examination of the ship, or none worthy of the name, was required. Unless some very flagrant defect were obvious in their construction, all ships were entitled, when new, to be marked in the highest class; and they were entitled, whatever might be their real condition, to stand in it for a certain number of years, varying from 6 to 12, according to the *port* in which they happened to be built! It is not easy to imagine that any thing can be more absurd than such a classification; but the whole extent of the injury arising from it is not immediately obvious. The great majority of merchants and underwriters have not, and could not be expected to have, any personal knowledge of different ships, and have nothing to trust to but the classified accounts. Suppose, now, that two ships were built at the same time in London or any other port; that one was constructed of the best materials, and in the best way, while the other was constructed of the worst materials, and in the most defective manner: these two ships were placed side by side in the class A 1.; the underwriters, seeing them there, were ready, without further inquiry, to insure them at the *same premium*, and the merchants were, for the same reason, quite as willing to employ the one as the other! A bounty was thus given on the construction of what have been called *slop-built* ships, or ships of an inferior class. For a half, or at most, two thirds, of what would be required to construct a good and really sufficient ship, the shipowner got an inferior vessel of an equal burthen sent to sea; and, owing to the matchless absurdity of the system of classification, the inferior was placed in the same rank with the superior ship; enjoyed all the advantages such distinction could give; and was, in the public estimation, deemed quite as good and as deserving of employment as the other. This has been a more copious source of shipwreck than all the currents, rocks, and fogs that infest our seas; but it was not the only one. At the end of a certain number of years, depending (as already stated) on the port where the ship was built, both the vessels referred to above were degraded to the class E; and yet it might happen, that the superior ship was, when so degraded, better entitled to continue in the class A than the inferior ship was ever to be in it. But even this does not exhaust the whole absurdity of this preposterous scheme, for

supposing that the superior ship had been so thoroughly repaired as to be as good as the day she came off the stocks, and that the inferior ship had got no repair at all, still they were both placed, side by side, in the class E1. All the annals of all the maritime nations of the world, from the Phœnicians downwards, furnish no example of a more perverse, contradictory, and absurd regulation. That it should have existed amongst us for the greater part of a century, strikingly exemplifies the power of habit to procure toleration for the most destructive practices and errors.

It may be said, perhaps, that, whatever system of classification is adopted, there must be great numbers of inferior vessels; for, though we did not, foreigners would build them; and being consequently able to sail them cheaper, would drive us totally out of all trades in which they could come fairly into competition with us. This is true; but no one ever thought of proscribing inferior ships, or of dictating to the shipowner what sort of ships he should build, or to the merchant what sort he should employ. We do not object to inferior ships, but we do object to the *same character* being given to them that is given to superior ships. This is practising a gross fraud upon the public; and gives an unfair and unjust advantage to the owners of inferior vessels. The interests of navigation and of humanity imperatively require that ships should be correctly classified; that those that are not seaworthy should not be classed with those that are, but that the *real state* of each should be distinctly set forth in the register, and be made known to every one. If this be done, the merchant and the underwriter may be safely left to deal with them as they think fit.

In consequence mainly of the laudable exertions of Mr. Marshall, the attention of the principal merchants, shipowners, underwriters, &c. of the metropolis was some years ago directed to this subject; and in 1824 a committee, consisting of representatives from these different bodies, was appointed to inquire into and report on it. The committee collected a great deal of valuable evidence; and laid an able report before a general meeting of merchants, shipowners, &c., on the 1st of June, 1826. We subjoin an extract from this report, which more than bears out all that we have stated:—

"From the absence of all control on the original construction of ships while building, and the impossibility of ascertaining by any inspection, after completion, their real quality, it appears to be indisputably proved, by an almost uniform concurrence of testimony, that the first character, or A, indiscriminately extended to ships differing widely in strength, durability of materials, and all the qualities on which character ought to be dependent; that many ships to which the first class is assigned are decidedly inferior to others which are placed, from lapse of time alone, in a lower class; and that many become totally unfit for the conveyance of dry cargoes, long before the expiration of the period during which they are entitled, according to the present system, to remain on the first letter, in which they are notwithstanding continued; that instances are on record of first class ships which have derived benefit from their origin for the conveyance of dry cargoes; and some are declared to have been hardly fit, when new, to proceed to sea with safety. One case is even adduced, in which, from ill construction and insufficiency of fastening a new ship, her insecurity was predicted, and she actually foundered on her first voyage; and yet this identical vessel was ranked, according to the indiscriminate system pursued, in the first class.

"Such, as respects new ships, appears by the evidence to be the practical result of a system which, assuming to designate by marks their intrinsic quality, provides no means of actually ascertaining that quality; but offers, in effect, a premium for the building of inferior and insufficient ships, by the inducement it holds forth to fraudulent construction, and by the equality of character it indiscriminately extends to the best and the worst ships built at the same port.

"Nor, your committee regret to have to report, is the evidence of the errors, inconsistencies, and evils arising from the existing system, as applied to old ships, by any means less conclusive. By the refusal to restore character, in consequence of repairs, however extensive, the inducement to maintain ships in an efficient state is removed; whilst, from the absence of all regular provision for stated or periodical examination, their efficiency or inefficiency is rendered dependent upon the varying views, the caprices, or the interests of the proprietors. Hence, though the second character, or B, is declared by the rules of the system to be the designation of ships which, having lost the first character from age, are kept in perfect repair, and appear, on survey, to have no defects, and to be completely calculated to carry dry cargoes with safety, the whole body of evidence distinctly proves that character to be, in very numerous instances, assigned to ships which, from original defect or want of requisite repairs, are utterly unfit and unsafe for dry cargoes; while others, which, from sound constitution or efficient repairs, are found to be pronouncedly superior to many new ships, are indiscriminately classed with the actually worthless and unworthy. Hence, too, the employment of ships, whose salacious standard of classification, becomes uncertain, injured; the shipper and underwriter misled; the building of superior ships, capable of long service, is discouraged; and direct inducement is held out to the construction of those of an inferior description; the general character of our mercantile marine is degraded; and it is to be feared that, could the system be traced to its ultimate results, it would be productive of a lamentable loss of property and life."

It may have seemed surprising that, despite the continued complaints of the lowness of freights, and the want of employment for shipping, so many new ships should be annually built. But this was, to a considerable extent at least, occasioned by the system of classification now described. Hitherto, instead of building a really good and durable ship, the principal object has been to construct one that should, at farthest, be, as the phrase is, *not off her legs* in about ten years or thereby. The reason is, that, whatever might be a ship's condition, she was then degraded from the class A 1., and that it was hardly possible, in most departments of trade, to find a merchant to employ, on any thing like reasonable terms, a ship to which these symbols of imaginary excellence were not attached. Hence, the shipowner, instead of repairing his 10-years-old ship, sold her for what she would fetch, and built a new one. But the person who purchased the ship degraded to E 1. forced her,

though at an expense in the field; which only one good ship requires to be purchased, and that once. "If the real efficiency of the system, in numerous instances, is not at present effectually repaired, improvement in and a corresponding consequence. The conclusion that might have been drawn from the evidence for some years past, and we are glad to see that the writers have at last classified accounts, and participation provided, who have done more than to lessen the dissemination and superintended in 1834. and dismiss the subject annually published in the register, voluntary source of commerce and navigation for their objects, the for carrying their

After announcing that the following: That a society of British mercantile marine officers would follow in the footsteps of the Register of British Shipping, and be established for their mutual benefit. That the price of insurance was raised in consequence of the regulations. That the regulations, for the correction of the additional and irregularities, but for which the superintendence of a committee of merchants, shipowners, and underwriters, managing the office, shall, ex officio, be the duty of six of the members by rotation. The regulations of the committee for managing the office. The secretary, shall be appointed by the committee. The committee may appoint, at special meetings, or any 3 members. All elections of the committee they may deem the society is established, without

though at an enormous reduction, into business; so that there were two bad or inferior ships in the field; whereas, under a reasonable system of classification, there would have been only one good ship. The injury that this has done to the shipping interest is too obvious to require to be pointed out. It has been infinitely more hostile to it than all those reciprocity treaties, and that foreign competition, about which there has been so much unfounded clamour. "If the system of classification were founded on the principle of *intrinsic merit*, if the real efficiency of the ship formed the basis on which character was given, the consequence, in numerous instances, would be, that, instead of supplying the place of those ships that at present lapse from age only into the second class with new ones, the owners would effectually repair the existing ships; so that there would speedily be not only a material improvement in the construction of ships, but a material increase in the amount of tonnage, and a corresponding increase in the rate of freight.—(*Marshall's Statements*, p. 19.)

The conclusive report and exposition referred to above, did not produce the consequences that might have been anticipated. Government seems, for reasons known only to itself, to have concluded that this was not a subject with which it should interfere; and it was laid aside for some years more. But the still-increasing amount of shipwreck, and the frightful loss of life and property consequent thereon, again roused the public attention to the subject: and we are glad to have to announce, that the principal merchants, shipowners, and underwriters have at last succeeded in setting on foot machinery by which it is believed that a classified account of shipping will be obtained, founded on correct principles. Should this anticipation prove well founded, the public will owe much to the able and intelligent individuals who have imposed on themselves this difficult and important task. They will have done more than any other set of men to improve the character of our mercantile marine, and to lessen the disasters incident to a seafaring life.

2. New system of Classification.—This new classification is conducted under the direction and superintendence of a committee of merchants, shipowners, and underwriters established in 1834. The committee establish rules for classifying ships, and appoint, control, and dismiss the surveyors by whom they are inspected and examined. A classified register is annually published, which will be gradually made more and more complete; and the expenses attending the institution are defrayed, partly by the fees charged on making an entry in the register, partly by the profits on the sale of the register or book, and partly from voluntary sources. But, as the subject is of the utmost importance to every one interested in commerce and navigation, we think we shall do an acceptable service to our readers, by laying before them the statement prefixed by the society to their register. It fully explains their objects, the principles on which they are proceeding, and the means they have adopted for carrying their views into effect.

CLASSIFICATION OF SHIPS.

After announcing the formation of the committee, the official statement goes on to say, that the following resolutions, rules, and regulations, have been adopted; viz:—

That a society has been established for obtaining a faithful and accurate classification of the mercantile marine of the United Kingdom, and of the foreign vessels trading thereto, for whose government the following rules and by-laws have been adopted:—

That a book containing a register of such classification be annually printed, to be called *Lloyd's Register of British and Foreign Shipping*; and that all persons subscribing the sum of three guineas annually (or such other sum as may be fixed by the committee), shall be members of the Society, and entitled (for their own use) to a copy of the register book.

That the price at which the register book be issued to public establishments, not being marine insurance companies, be 10*l.* 10*s.*

That the register book shall be periodically posted throughout the year.

That, for the convenience of members not resident in London, a monthly supplement, containing the additions and corrections to the register book, be printed in such convenient form as will admit of its transmission by post, that those parties may be furnished with the latest and most correct information; but for which an additional charge of 1*l.* is, per annum will be made.

Superintendence of the Society.—That the superintendence of the affairs of this society be under the direction of a committee in London, composed of 24 members, consisting of an equal proportion of merchants, shipowners, and underwriters; and that, in addition, the chairman of the committee for managing the affairs of Lloyd's, and the chairman of the General Ship Owners' Society for the time being, shall, *ex officio*, be members of the committee.

Six of the members, namely, 3 of each of the constituent parts of the committee, shall go out annually by rotation, but be eligible to be re-elected.

The vacancies arising shall be filled up by the election of 2 shipowners and 1 merchant, by the committee of the General Shipowners' Society; and 3 underwriters and 1 merchant by the committee for managing the affairs of Lloyd's.

The committee shall appoint from their own body, annually, a chairman and deputy chairman. The secretary, clerks, and servants of the society, and the surveyors for London and the outports, shall be appointed by and be under the direction of the committee.

The committee shall meet for the despatch of business every Thursday or on such other day as they may appoint, at 11 o'clock precisely, and 5 members of the committee shall be a quorum.

Special meetings of the committee may be convened by order of the chairman, the deputy chairman, or any 3 members.

All elections and appointments whatever shall be made by ballot.

The committee are empowered to make such by-laws for their own government and proceedings as they may deem requisite, not being inconsistent with the original rules and regulations under which the society is established; but no new rule or by-law shall be introduced, nor any rule or by-law altered, without special notice being given for that purpose at the meeting of the committee next pre-

of the ceiling, between the lower deck and the bilge, unwrought, to admit of an examination of the lower surface of the plank of the bottom.

Third—when completed, and, if possible, before the plank be painted or payed.

A full statement, agreeably to a schedule prepared for the purpose, of the dimensions, scantlings, and of all new ships, verified by the builder, shall be transmitted by the surveyor, and will be kept as a record in the office of the society.

In building ships, to entitle them to be ranked in the longest period of this class, the following rules are to be observed:—

Timbering.—The whole of the timbering to be of English, African, or live oak, or teak, of good quality; the stem, stern-post, beams, transoms, aprons, knight heads, hawse timbers, and keelson, to be entirely free from all defects; the frame to be well squared from first foothook heads upwards, and the beams to be also well squared unless the timber is proportionably larger than the scantling hereafter described; every alternate set of timbers to be framed and bolted together to the gunwale. The butts of the timbers to be close, and not to be less in thickness than one third of the entire moulding at that point, and to be well chocked, with a butt at each end of the chock.

The scantlings to be as follows:—

Scantling for ships	Tons. 150	Tons. 500
	Inches.	Inches.
Beam and space to be	30	30
From side, if square, and free from caps, to be	8	11
at the bottom then	7	11
But timbers, solid, if square, at four heads	8	11
But timbers, solid, if square, at the heads	8 1/2	10
But timbers, solid, and top timbers, if square	6	9
But timbers, solid, and top timbers, if square	8	13
the beams to be moulded at keelson	7	11
the beams to be moulded at four heads	4	5
the beams to be moulded at their heads at the		
heads		

The intermediate dimensions for the scantling of timbers between the four heads and the gunwale to be regulated in proportion to the distance from the two points. Should the room and space be increased, the sizing of the timbers to be increased in proportion.

Mid beam —	Tons. 150	Tons. 500
For ships	Inches.	Inches.
It is moulded in the middle (not less than)	7	9
It is moulded at the ends (not less than)	5	8 1/2
It is solid	7	10

Mid beam —	Tons. 150	Tons. 500
For ships	Inches.	Inches.
It is moulded in the middle (not less than)	8	13
It is moulded at the ends (not less than)	7	10
It is solid	9	13

Mid and extreme —	Tons. 150	Tons. 500
For ships	Inches.	Inches.
Mid beam	8	13
It is moulded below the ribs (not less than)	7	10
It is moulded at the ends	10	14
It is solid	10	14

The middle of the ribs, where only 1 beam, to be 6 ft. 7 in. For ships over 200 tons, are added, then they may be 4 1/2 ft. 6 in. The ribs of timber in ships of 200 tons, and upwards, to be not less than 1 1/2 in. of the main breadth; and in ships under 200 tons, to be not less than 1 1/4 in. of the main breadth.

Timbers.—The outside planks, above the light-water mark, to be of English or African oak, East Indian teak, or red cedar.

The planks below the light-water mark to be good white oak, or oak well, but the stem or keel not to be wrought higher than 1 1/2 in. but oak bands; or if wrought higher, then 1 year will be deducted from the period that would otherwise be assigned.

The clamps, spiritings, shelf-pieces, and ceiling, to be of English or African oak, or teak.

The whole plank to be clear of all defects; the inside to be free of all dry, or decayed planks, and the whole to be properly siled and battened. No bolts to be nearer than 5 feet to each other, nor have a strike wrought between them, and then a distance

of 4 feet may be allowed; and no bolt to be on the same timber, unless there be three strikes between.

Thickness of plank to be as under:—	For ships	Outside.	Tons. 150	Tons. 500
			Inches.	Inches.
Bilge to walrus not less than			2 1/2	3
Short hoods			2 1/2	3
Bilge planks			2	3
Bilge to keel			2 1/2	3
White (average)			2	3
Top sides			2	3
Shear strake			2 1/2	3
Plank sheer			2 1/2	3
Keel			2	3
Ceiling below the bold beams			2 1/2	3
Clamps and bilge planks			2 1/2	3
Upper deck clamps and spiritings			2 1/2	3
Twist deck ceiling			2 1/2	3
For ships			150	500
Upper deck			2 1/2	3
Water ways			2	3

Fastenings.—The treenails to be all of good English or African oak, locust, or other hard wood; but in no case Baltic or American oak to be used; and all planks above 3 inches in width are to be treenailed double and single, except bolts intersecting and if below that width, then to be treenailed single, and at least one half of the treenails used are required to go through the ceiling. All slips of this description of the first class are required to be copper fastened below their wales.

Size of Bolts —	Tons. 150	Tons. 500
For ships	Inches.	Inches.
Keel, knee, and dead wood shaft	1 1/2	1 1/2
Scarp of the keel	1 1/2	1 1/2
Keelson bolts, one through each floor	0 7/8ths	1 1/8ths
Bolts through the bilge and foot walling	0 5/8ths	0 7/8ths
Butt-bolts	0 5/8ths	0 3/4ths
Hold beam bolts	0 7/8ths	1 1/8ths
Deck beam bolts	0 3/4ths	0 7/8ths
Hooks forward at throat	0 7/8ths	1 1/8ths
Hooks forward at arms	0 3/4ths	1 1/8ths
Transoms	0 7/8ths	1 1/8ths
The lower plate of the rudder	2 1/2	3 1/2

The beams to be sufficient in number, and securely fastened at the sides, with either iron or wood knees, or both, or with stiff pieces and knees; the same to be well and sufficiently bolted; and if required that 1 bolt in each butt below the wales, and the bolts in the bilges, shall be through and clenched.

In all cases where the butt and bilge bolts are not through and clenched, 1 year will be deducted from the period that would otherwise be assigned in the classification or the vessel; but this rule shall not be applied to ships built previously to the promulgation of the regulations of this society, although the rule will be rigidly enforced in the case of all vessels built since that period.

General Remarks.—The scantlings and dimensions of all intermediate-sized vessels to be proportionately regulated agreeably to a scale adopted by the society, a copy of which is in the hands of each of the surveyors; and it is to be clearly understood, that smaller dimensions will not entitle the ship to be placed in the longest period of this class.

All ships so constructed, and having the whole of the workmanship generally performed in the best manner, will be marked in the book thus, "12 A"; thereby denoting that they are ships of the first quality, and will remain in the first description of the first class 12 years, provided they be kept in a state of efficient repair.

Ships surveyed while building, as before mentioned, in which while some of the requisites for a 15 years' ship may have been fulfilled, others have been omitted; but in which all the requisites for a 10 years' ship shall have been complied with, will be marked in the book thus, "11 A"; denoting that they are to remain in the first description of the first class 11 years, provided they be kept in a state of efficient repair.

Ships surveyed while building, as before mentioned, the scantling of timber, thickness of plank, and size of fastenings of which shall be in no respect less than those in the foregoing specifications, but which may not be framed, nor chocked, nor the timbers so well squared, as in the manner before described, or in which live oak and red cedar alternately may have been used in the framing, or in which good foreign white oak may have been used for ceiling, shelf-pieces, and clamps, will be marked in the book thus, "10 A"; denoting that they are to remain in the first description of the first class 10 years, provided they be kept in a state of efficient repair.

Ships surveyed while building as before mentioned, but in the frame of which foreign oak timber shall be used for keelsons or for floors and first foothooks only, or in which good white Dunzic oak plank shall be used below the wales outside, whilst in other respects they are constructed in the manner set forth in the preceding descriptions, will be marked in the book thus, "9 A"; denoting that they are to remain in the first description of the first class 9 years, provided they be kept in a state of efficient repair.

Ships surveyed while building, as before mentioned and framed, fastened, and constructed in the

RESTORATION OF SHIPS TO THE FIRST DESCRIPTION OF THE FIRST CLASS.

At any time, before the expiration of one half of the number of years beyond the period for which ships are to remain in the first description of the first class, an owner be desirous to have his ship continued in, or restored to that description, such restoration (on his consenting to the special survey hereafter described, and performing the repairs therein found requisite) will be granted for a further period, not exceeding two thirds of the time originally assigned for her remaining in the first description of the first class; the same to be calculated from the date of such repairs.

Requisites for Restoration.—All the bolts in the range of each deck to be driven out, and the planks taken out; the upper deck water-ways, and plank shears, and spirketting, and the strake next the water-ways on the lower deck in the midships, to be also taken out; the sheathing to be entirely stripped off the bottom; a strake in the upper course of the bottom between the wales and the lightest mark, fore and aft, and a plank in the ceiling at the floor heads, to be taken out; the timbers to be cleared, and the books forward to be exposed; and in that state the ship to be submitted to special survey and examination, at which the attention of the surveyors to this society is to be particularly directed to the state of the decks, the remaining plank of the topsides, the wales, upper courses, and trenails, and other fastenings; also to the state of the frame, hawse timbers, and knight heads, keelson, floor, footboards, ceiling, and breast hooks, the rudder in all its parts and hangings; and if, after such examination, the owner should consent to take out all planks, timbers, beams, knees, water-ways, fastenings, and other parts that may be found defective, and objected to, and replace them with materials of the same species, or of equal quality, as those of which the ship was originally constructed, such ship to be entitled to restoration to the first description of the first class for a further period proportionate to their real condition and the extent of the repairs performed, and provided that they be at all times thereafter kept in a state of efficient repair.

Additional Rules.—But if, at any age, the whole of the outside plank of a vessel should be taken off so low as the second foothook heads, the remainder of the planking, either outside or inside, together with all the decks, be removed, so as to expose the timbers of the frame entirely to view, and in that state the ship be submitted to a special survey and examination by the surveyors to this society; and if, after such examination, all timbers, beams, knees, keelsons, transoms, breast-hooks, remaining plank, inside or outside, or other parts to be found defective, be replaced with materials of the same species, or of equal quality, with those of which the ship was originally constructed, and all the iron-work driven out and renewed; such a ship may be returned to the first description of the first class, for so long a period as may be deemed expedient by the committee, not exceeding in any case the term of six years, as provided by the seventh general rule for ships, in the construction of which second-hand timber has been used.

For Ships which comprise the existing Tonnage.—All ships comprising the existing tonnage are to undergo a very careful survey by the surveyors to this society, prior to registration, and will be classed in the register book agreeably to the descriptions herein-before laid down for the building of new ships, unless on such survey there be found sufficient cause to assign them a less period.

On the proposed survey, especial attention is required to the following points; namely, to an examination of the state of the upper deck fastenings, water-ways, spirketting, plank shears, topsides, and upper decks, with its appendages; also, the lower deck fastenings, wales, and counter, and the plank and trenails outside the water's edge; the state of the rudder, windlass, and capstan (if the latter be used for purchasing the anchors).

And if on an examination of any ship she shall be found to be so defective as to render her unfit to continue on the first description of the first class for the remainder of the term of years assigned to her in accordance with these rules and regulations, a notice of the intention to make such a reduction at the expiration of thirty days, shall be given in writing by the surveyors to this society in the master, owner, or agent, intimating that, if the alteration be objected to, the committee will direct a special survey, on the said master, owner, or agent agreeing to pay the expenses attending the same, should it be found that the proposed reduction was justifiable.

SHIPS' ANCHORS, CABLES, AND STORES.

All vessels are required to have their masts, spars, and standing rigging in good order, and the principal sails in sufficient number and good condition; and every ship is to be supplied with a good heaper stream cable, or hawser, of sufficient size and length, and with at least one good warp; and all vessels are required to be provided with anchors of proper weight, and cables of approved quality, in number and length according to the undermentioned scales.

Anchors.—All vessels under 200 tons to have at least two bower anchors; and all vessels above that tonnage to be provided with at least three bower anchors.

Tons.	Fathoms.	Tons.	Fathoms.
All vessels under 100 to have at least 150 lb chain.	—	All vessels from 200 to 400 to have at least 300 lb chain.	—
— 100 to 150 —	150 —	400 — 600 —	320 —
— 150 — 200 —	170 —	600 — 800 —	340 —
— 200 — 300 —	180 —	800 — 1000 —	360 —

But in all cases where heaper cables are used, their one sixth part in length will be required.

Boats.—All vessels under 150 tons to be provided with one good boat; and every vessel above that tonnage to be provided with at least two good boats.

For Ships navigated by Steam.

All sea-going vessels navigated by steam shall be required to be surveyed twice in each year, when a character will be assigned to them according to the report of survey as regards the classification of the hull and materials of the vessel.

That with respect to the boilers and machinery, the owners are required to produce to the surveyors to this society, at the above-directed surveys, a certificate from some competent master engineer, describing their state and condition at those periods; and to which certificate it is desirable there should be added a description of the particulars of the same as far as may be practicable, in the manner and form annexed; to be appended to the report of survey, and delivered to the committee, who will thereupon insert in the register book the letters "M. C.," denoting that the boilers and machinery have been inspected, and certified to be in good order and safe working condition; but if no certificate of their condition be furnished by the owner or master, then no character can be assigned for the machinery.

Hull.—The surveyors to this society are directed to examine and report the scantling of timbers, plank, and fastenings, where built, and by whom, in the same manner as directed for sailing vessels.

Scantlings.—The scantlings are to be deemed sufficient for a steam vessel under 300 tons register, if equal to those required by the scales prescribed in the rules for this society for a sailing vessel of two thirds of the registered tonnage of such steam vessel; but for a steam vessel above 300 tons register, then the scantlings are to be equal to those required by the scale for a sailing vessel of three fourths of the registered tonnage of such steam vessel.

Floors.—Where the vessel is not fitted in solid to the floor heads in the engine room, an exception will be specially made against any reduction of the scantling of the floors, which, in such cases, will not be permitted to be upon the reduced scale of two thirds or three fourths of the dimensions for the scantlings of sailing vessels as before stated; but the floors will then be required to be equal to the dimensions set forth in the rules for ships of the actual registered tonnage of the steam vessel.

The surveyors are required to report the number, size, length, fastenings, and mode of arrangement of the engine and boiler sleepers, and the description of timber of which they are composed, and whether diagonally trussed with wood or iron, and to what extent; the length, size, and fastenings of shelf-pieces and paddle beams; and whether the vessel be constructed with spoolings, and how they are formed; and to give the general length and shifting of the plank outside and inside.

Masts and Stays.—The surveyors are to examine and report the number and description of the masts, stays, anchors, cables, hawsers, warps, and boats, as directed to be done for sailing vessels; but the anchors and cables will not be required to exceed in number, weight, and length those of a sailing vessel of two thirds of the registered tonnage of the steam vessel.

The surveyors are to be particular in examining and reporting the condition of the boats of all vessels employed in carrying passengers.

FORM OF CERTIFICATE FOR VESSELS NAVIGATED BY STEAM.

Lloyd's Register of British and Foreign Shipping.—Certificates for Vessels navigated by Steam.

(Place and date) 185
do certify that the whole of the boiler and machinery of the steam vessel, belonging to, is masterly and that the same to be at this time in good order and safe working condition.

Witness head, Master Engineer.

The following is a true account of the particulars of the machinery of the steam vessel, herein named—

Number	Engines	Whether iron or copper	Boiler
Estimated power	Do. at the end	Working pressure	Do. round the chimney
Length of paddles	Do. round the chimney	If it can be increased at pleasure	Number of feed pumps
Breadth of paddles	Do. round the chimney	If any and what means of changing the water without extinguishing the fire and blowing off	How attached
If upon the first or second motion	Do. round the chimney	Number of head pumps	State of the boilers
Number of revolutions per minute	Do. round the chimney	If any attached to engine, their purpose and power	What clear space upon the top side of the boiler
Size and condition of the holding-down bolts	Do. round the chimney	Number of foot pumps, with a branch and form of sufficient length to reach to every part of the vessel	Do. at the end
Where stowed	Do. round the chimney	Master Engineer	Do. round the chimney
If in contact with boiler	Do. round the chimney	The rules herein set forth may at all times be altered by the consulting committee, and especially to meet any acknowledged improvement which may be made in naval architecture, or in the materials used in ship-building.	Do. round the chimney
For what quantity room is provided	Do. round the chimney		Do. round the chimney
If liable to get wet	Do. round the chimney		Do. round the chimney

No one can question the advantages that will result from carrying a plan of this sort completely into execution. We confess, however, that we doubt much whether this can be done without the co-operation of government. It is invidious to impose on one set of merchants and ship-owners the task of deciding upon the condition of the ships or other property belonging to others; and, though we have every confidence in the integrity of the gentlemen composing the committee, the most honourable men are liable to be influenced by an *esprit du corps*, and by insensible biases. We, therefore, cannot help thinking that the scheme would have a much better chance of success, and that the classification would be more likely to be correct, were it managed by individuals more wisely connected with business. The surveyors, on whose capacity and honesty the whole scheme principally depends, ought to be quite independent of the good or ill will of those on whose property they have to report. But can that be said to be the case at present? and can it be fairly presumed that merchants or shipowners will deal by the property of their friends and neighbours as it might be dealt with by officers appointed by, and responsible only to, government? We apprehend that both those questions must be answered in the negative; and hence our conviction that this is a matter in which government should interfere. No one can doubt that it is bound to do every thing in its power to promote the safety of navigation, and to preserve the lives of our seamen. In this view it erects lighthouses, and prescribes regulations as to pilotage, &c. But, how indispensable soever, these are not more essential to the interests of navigation than a proper classification of ships; and, if other means should fail to effect this desirable purpose, government will certainly neglect a most important duty if it do not interpose.—(For a further discussion of this important question, see the article on the Frequency of Shipwrecks in the 122d number of the *Edinburgh Review*; see also the *Report of the Commercial Committee of 1836*, on Shipwreck.)

3. Incapacity of Masters.—Means by which it might be obviated.—But government will not do its duty if it do not go further than this. An erroneous classification of shipping has been a great, but not the only, cause of shipwreck. The ignorance and incapacity of the masters and officers is another, and hardly a less copious, source of disaster. Officers of the navy have to go through a course of discipline, and are obliged to submit to certain examinations as to their proficiency in seamanship. This, also, was the case with the officers of the East India Company's ships, which were exceedingly well navigated. Indeed, the Company trusted entirely for protection to the goodness of their ships, and the skill of their officers and men; it not being their practice ever to insure. But the masters and officers of ordinary merchant ships are not subjected to any specific training, or any regular examination. Every thing is left to mere individual investigation and selection; and this, as every one knows, depends almost wholly on accident; or, which is nearly equivalent to it, on the skill, industry, liberality, &c. of the shipowner. Every one must be satisfied that masters so chosen cannot fail of being, in many instances, very ill qualified for their business. Few, however, have any notion of the extent of the mischief thence arising; but we have been assured by gentlemen of undoubted information, and extensively connected with the business of insurance, that

nearly half the losses at sea may be ascribed to the ignorance, incapacity, and carelessness of the masters and crews. Perhaps, there may be some exaggeration in this; but, supposing that only a third part, or that about 200 out of the 826 vessels wrecked in 1833, were lost through the circumstances referred to, is not that enough, not merely to justify government interfering to avert so great an evil, but to make such interference a positive duty?

The interposition of government in a case of this sort, is not only absolutely just and necessary, but it is conformable to the highest authority. The famous French ordinance of 1801 has the following article:—"Aucun ne pourra ci-après être reçu capitaine, maître, ou patron de navire, qu'il n'ait navigué pendant cinq ans, et n'ait été examiné publiquement sur le fait de la navigation, et trouvé capable par deux anciens maîtres, en présence des officiers de l'Amirauté et du Professeur de l'Hydrographie, s'il y en a dans le lieu." (Liv. ii. tit. 1. § 1.) A similar article has been inserted in the Code de Commerce; and, in 1825, the French government issued an ordinance specifying, in detail, the qualifications that are necessary before any one can obtain a certificate of his fitness to command a ship, either on a foreign or coasting voyage; the persons who are to examine candidates; and the rules that are to be observed in the examination. Some similar ordeal should certainly be established in this country. The authority of the master is so very great, and the trust reposed in him, including not merely the ship and goods of his employers, but the lives of the crew and passengers, so very extensive, that it is the bounden duty of the public to provide that it be not committed to ignorant or incapable hands.

Perhaps it would, at first, be enough to enact, that no ship, which cleared out for an *oversea* voyage, should be deemed a British ship, unless the master and the second in command had received a certificate of fitness from the proper authorities. This would leave it to the owners to take whom they pleased as masters of coasting vessels; but we believe that the better way would be to enact that all masters of vessels, above a specified tonnage, should be selected from among certificated persons. We do hope that the next time we may have to notice this subject will be to announce that the measure now suggested, or one of a like import, has been carried into effect.—(Edinburgh Review, *loc. cit.*)

4. *Disorderly Conduct of the Crews.*—Means by which it might be obviated.—Nothing, we are well assured, would do so much to obviate the disorderly bad conduct so frequently complained of, on the part of seamen, as the enforcing of sobriety on board ships. However disagreeable, there can be no doubt of the fact, that some very bad cases of shipwreck have been mainly occasioned by the drunkenness of the crew. The Americans have seen the advantage that would arise from a reform in this particular; and large numbers of American ships, especially those engaged in long voyages, are now sent to sea, in which the use of spirits is strictly prohibited, unless when prescribed by the surgeon as a cordial or medicine. In these ships the conditions of agreement, signed by the men, have at their head the words "No GROG ALLOWED," printed in large capitals. Instead of it, the seamen are liberally supplied with coffee, cocoa, &c.; and it is said that the crews of the ships fitted out on this plan are not only more orderly, but that they are more vigorous, and able to endure greater fatigue. But, to establish the superiority of this practice, it is enough to mention that the American insurance offices have, for some time past, insured "temperance ships" at a decidedly *lower premium* than others! We are convinced that nothing would do half so much to improve the character of our common seamen, as the introduction of a similar system into our merchant-service. And, notwithstanding the prejudices against it, we are glad to have it to state, that some ships, fitted out on this plan, have sailed from London and Liverpool, and that (even in this incipient stage) it has been found to answer exceedingly well.

5. *Improper Built of Ships.*—We have elsewhere noticed (Supplement, article TOXIC) the act 5 and 6 Will. 4. c. 56., passed in 1835, for ascertaining the tonnage of ships. In the old system, the tonnage was determined by reference only to a ship's length and breadth; which led to vessels being built of a disproportionate depth, in order that their registered tonnage, and, consequently, the charges depending on it, might be diminished as much as possible. The faulty construction of ships thence arising has, no doubt, contributed, in some degree, to occasion losses; but the act referred to, by making the tonnage be fairly determined according to the capacity of the ship, whatever the form may be, will completely obviate this source of defective construction and loss.

(Am. Ed.)

SHIPS' PAPERS, the papers or documents required for the manifestation of the property of the ship and cargo, &c. They are of 2 sorts; viz. 1st, those required by the law of a particular country—as the certificate of registry, licence, charterparty, bills of lading, bill of health, &c.—(see those titles)—required by the law of England to be on board British ships; and, 2dly, those required by the law of nations to be on board neutral ships, to vindicate their title to that character. Mr. Serjeant Marshall, following M. Hubner (*De la Saisie des Bâtimens Neutres*, tom. i. pp. 241—252.), has given the following description of the latter class of documents:

1. *The Passport, Sea Brief, or Sea Letter.*—This is a permission from the neutral state to the captain or master of the ship, to proceed on the voyage proposed, and usually contains the name and residence; the name, property, description, tonnage, and destination of the ship; the nature and quantity of the cargo, the place whence it comes, and its destination; and such other matters as the practice of the place requires. This document is indispensably necessary for the safety of every neutral ship. Hubner says, that it is the only paper rigorously insisted on by the Barbary corsairs; by the production of which alone their friends are protected from insult.

2. *The Proofs of Property.*—These ought to show that the ship really belongs to the subjects of a neutral state. If she appear to either belligerent to have been built in the enemy's country, proof is generally required that she was purchased by the neutral before, or captured and legally condemned and sold to the neutral after, the declaration of war; and in the latter case the *bill of sale*, properly authenticated, ought to be produced. M. Hubner admits that such proofs are so essential to every neutral vessel, for the prevention of frauds, that such as without them have no reason to complain if they be interrupted in their voyages, and their neutrality disputed.

3. *The Muster Roll.*—This, which the French call *rôle d'équipage*, contains the names, ages, quality, place of residence, and, above all, the *place of birth*, of every person of the ship's company. The document is of great use in ascertaining a ship's neutrality. It must naturally excite a strong suspicion, if the majority of the crew be found to consist of foreigners; still more, if they be natives of the enemy's country.—(See SEAMEN.)

4. *The Charterparty.*—Where the ship is chartered, this instrument serves to authenticate the facts on which the truth of her neutrality must rest, and should therefore be produced on board chartered ships.

5. *The Bills of Lading.*—By these the captain acknowledges the receipt of the goods shipped therein, and promises to deliver them to the consignee or his order. Of these there are usually several duplicates; one of which is kept by the captain, one by the shipper of the goods, and one transmitted to the consignee. This instrument, being only the evidence of a private transaction between the owner of the goods and the captain, does not carry with it the degree of authenticity as the charterparty.

6. *The Invoices.*—These contain the particulars and prices of each parcel of goods, with the amount of the freight, duties, and other charges thereon, which are usually transmitted from the shippers to their factors or consignees. These invoices prove by whom the goods were shipped, and to whom consigned. They carry with them, however, but little authenticity, being easily fabricated where fraud is intended.

Climate of Sierra Leone.—The soil in the vicinity of Sierra Leone seems to be but of indifferent fertility, and the climate is about the most destructive that can be imagined. The mortality among the Africans sent to it seems unusually great; and amongst the whites it is quite excessive. Much as we desire the improvement of the blacks, we protest against its being attempted by sending our countrymen to certain destruction in this most pestiferous of all pestiferous places. It would seem, too, that it is quite unnecessary, and that instructed blacks may be advantageously employed to fill the official situations in the colony. But if otherwise, it ought to be unconditionally abandoned.

Commerce of Sierra Leone, and the West Coast of Africa.—Commercially considered, Sierra Leone appears to quite as little advantage as in other points of view. We import from it teak wood, camwood, ivory, palm oil, hides, gums, and a few other articles; but their value is inconsiderable, amounting to not more than from 40,000*l.* to 60,000*l.* a year. The great article of import from the coast of Africa is palm oil, and of this more than fifty times as much is imported from the coast to the south of the Rio Volta, several hundred miles from Sierra Leone, as from the latter. We doubt, indeed, whether the commerce with the western coast of Africa will ever be of much importance. The condition of the natives would require to be very much changed before they can become considerable consumers of European manufactures. It is singular, that speculative persons in this country should be so much bent on prosecuting, without regard to expense, a trade with barbarous uncivilised peoples, while they contribute to the neglect or oppression of the incomparably more extensive and beneficial intercourse we might carry on with the opulent and civilised nations in our immediate vicinity. The equalisation of the duties on Canadian and Baltic timber, and the abolition of the existing restraints on the trade with France, would do 10 times more to extend our commerce, than the discovery of 50 navigable rivers, and the possession of as many ports on the African coast. If, however, an establishment be really required for the advantageous prosecution of the trade to Western Africa, it is abundantly obvious that it should be placed much further to the south than Sierra Leone. The island of Fernando Po has been suggested for this purpose; but after the dear-bought experience we have already had, it is to be hoped that nothing will be done with respect to it without mature consideration.

Imports into the United Kingdom in 1829 from the Western Coast of Africa, distinguishing their Quantities and Values.

Exclusive of the above, we exported, in 1829, to the western coast of Africa, 161,431 worth of foreign and colonial merchandise; of this amount, 43,550*l.* worth went to the coast south of the Rio Volta.

Expenses incurred on account of Sierra Leone.—The pecuniary expense occasioned by this colony, and our unsuccessful efforts to suppress the foreign slave trade, have been altogether enormous. Mr. Keith Douglas is reported to have stated, in his place in the House of Commons, in July, 1831, that “down to the year 1824, the *civil* expenses of Sierra Leone amounted to 2,268,000*l.*; and that the same expenses had amounted, from 1824 to 1830, to 1,082,000*l.* The naval expenses, from 1807 to 1824, had been 1,630,000*l.* The payments to Spain and Portugal, to induce them to relinquish the slave trade, amounted to 2,330,000*l.* The expenses on account of captured slaves were 533,092*l.* The expenses incurred on account of the mixed commission courts were 198,000*l.* Altogether, this establishment has cost the country nearly 8,000,000*l.*

The prodigality of this expenditure is unmatched, except by its uselessness. It is doubtful whether it has prevented a single African from being dragged into slavery, or conferred the smallest real advantage on Africa. The kings of Spain and Portugal have certainly turned their spurious humanity to pretty good account. We hope there is now, at least, an end of all attempts to bribe such monarchs to respect the rights of humanity, or the trade into which they have entered.

For further deaths with respect to Sierra Leone, and the trade of Western Africa, see the *Report of the Select Committee of the House of Commons*, No. 661. Sess. 1830.

SILK (Lat. *Sericum*, from *Seres*, the supposed ancient name of the Chinese), a fine glassy thread or filament spun by various species of caterpillars or larvae of the *phalæna* genus. Of these, the *Phalæna atlas* produces the greatest quantity: but the *Phalæna bombyx* is the commonly employed for this purpose in Europe. The silkworm, in its caterpillar state, which may be considered as the first stage of its existence, after acquiring its full growth (about inches in length), proceeds to enclose itself in an oval-shaped hull, or cocoon, which is formed by an exceedingly slender and long filament of fine yellow silk, omitted from the stomach of the insect preparatory to its assuming the shape of the chrysalis or moth. In this last stage, after emancipating itself from its silken prison, it seeks its mate, which has undergone a similar transformation; and in 2 or 3 days afterwards, the female having deposited her eggs (from 300 to 500 in number), both insects terminate their existence. According to Reaumur, the *phalæna* is not the only insect that affords this material,—several species of *Aranea*, or spider, enclose their eggs in very fine silk.

Raw Silk is produced by the operation of winding off, at the same time, several of the

balls or cocoons (usually) on a common axis from the ends of the threads, in order to enable it to be converted into single (a collection of these threads) to give it strength.

It is formed in weaving, as the *Thrown Silk* is twisted together in the same way. This is an operation of throwing which gives it its strength gained from the several threads united into a cord to be very

of cocoons (which are immersed in hot water, to soften the natural gum on the fila-
ment) on a common reel, thereby forming one smooth even thread. When the skein is dry,
it is taken from the reel and made up into hanks; but before it is fit for weaving, and in
order to enable it to undergo the process of dyeing, without furring up or separating the fibres,
it is converted into one of three forms; viz. *singles*, *tram*, or *organzine*.

Singles (a collective noun) is formed of one of the reeled threads, being twisted, in order
to give it strength and firmness.

Tram is formed of 2 or more threads twisted together. In this state it is commonly used
in weaving, as the *shoot* or *welt*.

Thrown Silk is formed of 2, 3, or more singles, according to the substance required, being
twisted together in a *contrary* direction to that in which the singles of which it is composed
are twisted. This process is termed *organzining*; and the silk so twisted, *organzine*. The
art of throwing was originally confined to Italy, where it was kept a secret for a long period.

It was first known in this country since the 5th of Queen Elizabeth, "when it was
brought from the strangers;" and in that year (1562), the silk throwsters of the metropolis
were united into a fellowship. They were incorporated in the year 1629; but the art con-
sidered to be very imperfect in England until 1719.—(See *post*.)

1. *Historical Sketch of the Manufacture*.—The art of rearing silkworms, of unravelling
the threads spun by them, and manufacturing the latter into articles of dress and ornament,
seems to have been first practised by the Chinese. Virgil is the earliest of the Roman
writers who has been supposed to allude to the production of silk in China, and the terms he
employs show how little was then known at Rome as to the real nature of the article:—

Veteraque ut follie depectant tenuia Seres.—(Georg. book ii. lin. 121.)

But it may be doubted whether Virgil does not, in this line, refer to cotton rather than silk,
Pliny, however, has distinctly described the formation of silk by the *bombyx*.—(Hist. Nat.
lib. ii. c. 17.) It is uncertain when it first began to be introduced at Rome: but it was most
probably in the age of Pompey and Julius Cæsar; the latter of whom displayed a profusion
of silks in some of the magnificent theatrical spectacles with which he sought at once to con-
ciliate and amuse the people. Owing principally, no doubt, to the great distance of China
from Rome, and to the difficulties in the way of the intercourse with that country, which was
carried on by land in caravans whose route lay through the Persian empire, and partly, per-
haps, to the high price of silk in China, its cost, when it arrived at Rome, was very great;

so much so, that a given weight of silk was sometimes sold for an equal weight of gold! At
first it was only used by a few ladies eminent for their rank and opulence. In the beginning
of the reign of Tiberius, a law was passed, *ne vestis serica viros fœdaret*—that no man
should disgrace himself by wearing a silken garment.—(Tacit. Annal. lib. ii. c. 33.) But
the profligate Helio-gabalus despised this law, and was the first of the Roman emperors who
wore a dress composed wholly of silk (*holosericum*). The example once set, the custom of
wearing silk soon became general among the wealthy citizens of Rome, and throughout the
provinces. According as the demand for the article increased, efforts were made to import
larger quantities; and the price seems to have progressively declined from the reign of Aure-
lian. That this must have been the case, is obvious from the statement of Ammianus Marcel-
linus, that silk was, in his time (anno 370), very generally worn, even by the lowest classes.

Sericum ad usum antehac nobilium, nunc etiam infirmorum sine ulla discretione proficiens.

—(Lib. xviii. c. 6.)

China continued to draw considerable sums from the Roman empire in return for silk, now
become indispensable to the Western World, till the 6th century. About the year 550, two
Persian monks, who had long resided in China, and made themselves acquainted with the
mode of rearing the silkworm, encouraged by the gifts and promises of Justinian, succeeded
in carrying the eggs of the insect to Constantinople. Under their direction they were hatched
and fed; they lived and laboured in a foreign climate; a sufficient number of butterflies was
bred to propagate the race, and mulberry trees were planted to afford nourishment to the
rising generations. A new and important branch of industry was thus established in Europe.

Experience and reflection gradually corrected the errors of a new attempt; and the Sogdiano
ambassadors acknowledged, in the succeeding reign, that the Romans were not inferior to
the natives of China in the education of the insects, and the manufacture of silk.—(Gibbon, De-
cline and Fall, vol. vii. p. 99.)

Greece, particularly the Peloponnesus, was early distinguished by the rearing of silkworms,
and by the skill and success with which the inhabitants of Thebes, Corinth, and Argos carried
on the manufacture. Until the 12th century, Greece continued to be the only European
country in which these arts were practised: but the forces of Roger, king of Sicily, having,
in 1147, sacked Corinth, Athens, and Thebes, carried off large numbers of the inhabitants to
Palermo; who introduced the culture of the worm, and the manufacture of silk, into Sicily.

From this island the arts spread into Italy; and Venice, Milan, Florence, Lucca, &c. were
soon after distinguished for their success in raising silkworms, and for the extent and beauty
of their manufactures of silk.—(Gibbon, vol. x. p. 110.; Biographie Universelle, art
Roger II.)

The silk manufacture was introduced into France in 1480; Louis XI. having invited workmen from Italy, who established themselves at Tours. The manufacture was not begun at Lyons till about 1520; when Francis I., having got possession of Milan, prevailed on some artisans of the latter city to establish themselves, under his protection, in the former. Nearly at the same period the rearing of silkworms began to be successfully prosecuted in Provence, and other provinces of the south of France. Henry IV. rewarded such of the early manufacturers as had supported and pursued the trade for 12 years, with patents of nobility.

Silk Manufacture of England.—The manufacture seems to have been introduced into England in the 15th century. Silk had, however, been used by persons of distinction two centuries previously. The manufacture does not appear to have made much progress till the age of Elizabeth; the tranquillity of whose long reign, and the influx of Flemings occasioned by the disturbances in the Low Countries, gave a powerful stimulus to the manufactures of England. The silk throwsters of the metropolis were united, as already observed, in a fellowship, in 1562; and were incorporated in 1629. Though retarded by the civil wars, the manufacture continued gradually to advance; and so flourishing had it become, that it is stated in a preamble to a statute passed in 1666 (13 & 14 Cha. 2. c. 15.), that there were at that time no fewer than 40,000 individuals engaged in the trade! And it is of importance to observe, that though the importation of French and other foreign silks was occasionally prohibited during the reigns of James I. and Charles I., the Protectorate, and the reign of Charles II., the prohibition was not strictly enforced; and, generally speaking, their importation was quite free.

A considerable stimulus, though not nearly so great as has been commonly supposed, was given to the English silk manufacture by the revocation of the edict of Nantes, in 1685. Louis XIV. drove, by that disgraceful measure, several hundreds of thousands of his most industrious subjects to seek an asylum in foreign countries; of whom it is supposed about 50,000 came to England. Such of these refugees as had been engaged in the silk manufacture established themselves in Spitalfields, where they introduced several new branches of the art. When the refugees fled to England, foreign silks were freely admitted; and it appears from the Custom-house returns, that from 600,000*l.* to 700,000*l.* worth were annually imported in the period from 1685 to 1692, being the very period during which the British silk manufacture made the most rapid advances. But the manufacture was not long permitted to continue on this footing. In 1692, the refugees, who seem to have been quite as conversant with the arts of monopoly as with those either of spinning or weaving, obtained a patent, giving them an exclusive right to manufacture lustrings and *a-la-modes*,—the silks then in greatest demand. This, however, was not enough to satisfy them; for, in 1697, Parliament passed an act, in compliance with their solicitations, prohibiting the importation of all French and other European silk goods; and, in 1701, the prohibition was extended to the silk goods of India and China.

These facts show the utter fallacy of the opinion so generally entertained, that we owe the introduction and establishment of the silk manufacture to the prohibitive system. So far from this being the case, it is proved, by statements in numerous acts of parliament, and other authentic documents, that the silk manufacture had overcome all the difficulties incident to its first establishment, had been firmly rooted, and had become of great value and importance, long before it was subjected to the trammels of monopoly; that is, before the manufacturers were taught to trust more to fiscal regulations, and the exertions of Custom-house officers, than to their skill and ingenuity, for the sale of their goods.

The year 1719 is an important epoch in the history of the British silk manufacture; a patent being then granted to Mr. (afterwards Sir Thomas) Lombe and his brother, for the exclusive property of the famous silk mill erected by them at Derby, for throwing silk, from models they had clandestinely obtained in Italy. At the expiration of the patent, Parliament refused the prayer of a petition of Sir Thomas Lombe for its renewal; but granted him 14,000*l.* in consideration of the services he had rendered the country, in erecting a machine which, it was supposed, would very soon enable us to dispense wholly with the supplies of thrown silk we had previously been in the habit of importing from Italy: but instead of being of any advantage, it is most certainly true that the establishment of throwing mills in England has proved one of the most formidable obstacles to the extension of the manufacture amongst us. These mills could not have been constructed unless oppressive duties had been laid on thrown or organzine silk; and the circumstance of their having been erected, and a large amount of capital vested in them, was successfully urged for more than a century, as a conclusive reason for continuing the high duties!

From this period down to 1824 the history of the silk manufacture presents little more than complaints, on the part of the manufacturers, of the importation of foreign silks; impotent efforts on the part of parliament to exclude them; and combinations and outrages on the part of the workmen. Of the multitude of acts that have been passed in reference to this manufacture, from 1697 to the era of Mr. Huskisson, we believe it would be exceedingly difficult to point out one that is bottomed on any thing like a sound principle, or that was productive of any but mischievous consequences. exportation of silks from France to England, during the period from 1688 to 1741, at about 14,500,000 francs, or 500,000*l.* a year! In 1763, attempts were made to check the prevalence of smuggling; and the silk mercers of the metropolis, to show their anxiety to forward the scheme, are said to have recalled their orders for foreign goods! It would seem, however, either that their patriotic ardour had very soon cooled, or that they had been supplanted by others not quite so scrupulous; for it appears from a report of a committee of the privy council, appointed, in 1766, to inquire into the subject, that smuggling was then carried on to greater extent than ever, and that 7,072 looms were out of employment. The same committee reported, that though the French were decidedly superior to us in some branches of the trade, we were quite equal, and even superior to them in others; but instead of proposing, consistently with their report, to admit French silks on a reasonable duty,—a measure which would have proved very advantageous to those branches of the manufacture in which we were superior, or nearly equal, to the French, without doing any material injury to the others, which were already in the most depressed condition,—they recommended the continuance of the old system; substituting absolute prohibitions in the place of the prohibitory duties that formerly existed! Whatever immediate advantages the manufacturers might have reaped from this measure, the ultimate tendency of which could not fall of being most injurious, were effectually counteracted by the turbulent proceedings of the workmen, who succeeded, in 1773, in obtaining from the legislature an act which, by itself, was quite sufficient to have destroyed even a prosperous trade. This, which has been commonly called the Spitalfields Act, entitled the weavers of Middlesex to demand a fixed price for their labour, which should be settled by the magistrates; and while both masters and men were restricted from giving or receiving more or less than the fixed price, the manufacturers were liable in heavy penalties if they employed weavers out of the district! The monopoly which the manufacturers had hitherto enjoyed, though incomplete, had had sufficient influence to render inventions and discoveries of comparatively rare occurrence in the silk trade; but the Spitalfields Act extinguished every germ of improvement. Parliament, in its wisdom, having seen fit to enact that a manufacturer should be obliged to pay as much for work done by the best machinery as if it were done by hand, it would have been folly to have thought of attempting any thing new! It is not, however, to be denied that Macclesfield, Manchester, Norwich, Paisley, &c. are under obligations to this act. Had it extended to the whole kingdom, it would have totally extirpated the manufacture; but being confined to Middlesex, it gradually drove the most valuable branches from Spitalfields to places where the rate of wages was determined by the competition of the parties, on the principle of mutual interest and compromised advantage. After having done incalculable mischief, the act was repealed in 1824. Had it continued down to the present day, it would not have left employment in the metropolis for a single silk weaver.

But, as the effects of this act did not immediately manifest themselves, it was at first exceedingly popular. About 1785, however, the substitution of cottons in the place of silk gave a severe check to the manufacture, and the weavers then began to discover the real nature of the Spitalfields Act. Being interdicted from working at reduced wages, they were totally thrown out of employment; so that, in 1793, upwards of 4,000 Spitalfield looms were quite idle. In 1798, the trade began to revive; and continued to extend slowly till 1815 and 1816, when the Spitalfields weavers were again involved in sufferings far more extensive and severe than at any former period.

It appears from this brief sketch of the progress of the English silk trade, that from the year 1695, down to our own times, it has been exposed to the most appalling vicissitudes. The reason is obvious. The monopoly enjoyed by the manufacturers, and the Spitalfields Act, effectually put a stop to all improvement; so that the manufacture continued stationary in England, while on the Continent it was rapidly advancing. Whenever, therefore, the markets were, either from the miscalculation of the manufacturers, or a change of fashion, over-loaded with silks, there were no means of disposing of the surplus profitably abroad, and the distress became extreme. Notwithstanding the unparalleled advances we had made in other departments of manufacturing industry, it was affirmed, in 1826, by the member for Coventry (Mr. Ellice), in his place in the House of Commons, "that there were in that city 9,700 looms; 7,500 of which were in the hands of operative weavers, who applied their manual labour, as well as their machinery, to the manufacture of ribands. These looms were, for the most part, of the *worst possible construction*; and it would scarcely be believed that the improved loom in France would, in a given time, produce 5 times as much riband as the common loom in England with the same manual labour! He could also state that there existed an improved manufacture in Germany, by which one man could make *forty-eight times as much velvet as could be made in an equal time by an English machine*. What chance was there that the English manufacturer could maintain such a competition?"

Perhaps these statements may be somewhat exaggerated; but there can be no doubt that they are substantially well founded. Surely, however, no one believes that the inferiority of the machinery used by the English manufacturers is to be ascribed to any thing except that the protection they enjoyed had made them indifferent to improvements. No one believes

that the French or Germans are superior to the English in the construction of machines; on the contrary, their inferiority is admitted by themselves, and by everybody else. That their spirit of invention, which has effected such astonishing results in the cotton manufacture, should have been wholly unknown in that of silk, is entirely to be ascribed to the fact of the former never having been the object of legislative protection. The cotton manufacturers were not bribed into the adoption of a routine system; they could not rest satisfied with mediocrity; but being compelled to put forth all their powers—to avail themselves of every resource of science and of art—they have, in a few years, raised the British cotton manufacture from a subordinate and trifling, to the very first place amongst the manufactures, not of this country only, but of the world!

Change, in 1826, of the Monopoly System.—At length, however, the impolicy of the system by which the silk manufacture had been so long depressed, became obvious to every intelligent individual. The principal manufacturers in and about London subscribed, in 1824, a petition to the House of Commons, in which they stated that “this important manufacture, through recently considerably extended, is still depressed below its natural level, by laws which prevent it from attaining that degree of prosperity which, under more favourable circumstances, it would acquire.” Fortified by this authority, by the experience of 130 years, during which the prohibitive system had been allowed to paralysed the energies of the manufacturers, and by the sanction of parliamentary committees, Mr. Huskisson moved, on the 8th of March, 1824, that the prohibition of foreign silks should cease on the 5th of July, 1826, and that they should then be admitted for importation on payment of a duty of 30 per cent. *ad valorem*. On this occasion Mr. H. observed—“The monopoly had produced, what monopoly was always sure to produce, an indifference with regard to improvement. That useful zeal which gives life to industry, which fosters ingenuity, and which in manufactures occasions unceasing efforts to produce the article in the most economical form, had been comparatively extinguished. To the prohibitive system it was to be ascribed, that in silk only, in the whole range of manufactures, we were left behind our neighbours! We have here a proof of that chilling and benumbing effect which is sure to be produced when no genius is called into action, and when we are rendered indifferent to exertion by the indolent security derived from restrictive regulations. I have not the slightest doubt, that if the same system had been continued with respect to the cotton manufacture, it would have been at this moment as subordinate in amount to the woollen as it is junior in its introduction into the country.”—(*Speeches*, vol. ii. p. 249.)

We have already alluded to the enormous duties imposed, in 1719, when Sir Thomas Lombe erected his throwing mill at Derby, on foreign organzine silk. These, though subsequently reduced, amounted, in 1824, to no less than 14s. 7½d. per lb. There was also, at the same time, a duty of 4s. per lb. on raw silk imported from Bengal, and of 5s. 7½d. per lb. on that imported from other places. Even had the manufacture been otherwise in a flourishing condition, such exorbitant duties on the raw material were enough to have destroyed it. Mr. Huskisson, therefore, proposed, by way of preparing the manufacturers for the approaching change of system, that the duty on foreign thrown silk should be immediately reduced to 7s. 6d. (it was further reduced to 5s. in 1826), and the duty on raw silk to 3d. per lb. These proposals were all agreed to; and considerable reductions were at the same time effected in the duties charged on most of the dye stuffs used in the manufacture.

It is to be regretted that Mr. Huskisson did not propose that the reduction of the duties on raw and thrown silk, and the legalised importation of foreign silks, should be simultaneous and immediate. During the interval that was allowed our manufacturers to make preparations for the change, the French had been accumulating a large stock of goods to pour into our markets. To quiet the alarm occasioned by this circumstance, a singular device was fallen upon.—The French had long been accustomed to manufacture their goods of a certain length: and, in the view of rendering their accumulated stock unfit for our markets, a law was passed in 1826, prohibiting the importation of any silks except such as were of entirely different lengths from those commonly manufactured by the French! No one can regret that this wretched trick, for it deserves no better name, entirely failed of its object. The French manufacturers immediately commenced, with redoubled zeal, the preparation of goods of the legitimate length: and the others having become unsaleable at any thing like fair prices, were purchased up by the smugglers, and imported, almost entirely, into this country.

But no permanent injury arose from this circumstance; and, on the whole, the effect of the opening of the trade has been such as to justify all the anticipations which the advocates of the measure had formed of its success.

Effects of the Change of 1826.—We do not exaggerate, we only state the plain matter of fact, when we affirm that the silk manufacture has made a more rapid progress during the last 8 years, or since the abolition of the prohibitive system in 1826, than it did during the preceding century. So unprecedented has been its advance, that “the once existing disparity in quality between goods of French and English make has, with some very unimportant exceptions, not merely disappeared, but actually ranged itself on the side of the British artisan.” Some of our readers will, probably, be not a little surprised to learn, that

the real or declared value of the silk goods of British manufacture exported to France, in 1832, amounted to 75,187*l*.

Most of the machines and processes known on the Continent have been introduced amongst us, and many of them have been materially improved. Nor, after what has taken place, can the least doubt remain in the mind of any one, that had the same freedom been given to the silk manufacture 50 years ago, that was given to it in 1828, it would now have ranked among the most important and valuable businesses in the kingdom, and would have had nothing whatever to fear from the admission of foreign silks, free of duty. It is the opinion of the most intelligent persons in the trade, that the existing duty of 30 per cent. on foreign silks ought to be reduced to 20 per cent.; and that it should be further reduced 1 per cent. per annum till brought to 12 or 15 per cent., at which it might be allowed to continue stationary, not as a protecting duty, but as a duty imposed for the sake of revenue. A measure of this sort, by increasing *fair* competition, would continue the impulse already given to the manufacture, and excite to new efforts of invention. Under such a system, we are well assured that, in a very few years, perhaps not more than 5 or 6, our superiority over France in some important departments of the silk manufacture would be little less decided than in that of cotton.

"I maintain," said Mr. Poulett Thomson, in his excellent speech on the state of the silk trade (14th of April, 1829),—a speech equally distinguished for soundness of principle and beauty of illustration,—“I maintain, without fear of contradiction, that the very essence of commercial and manufacturing industry is freedom from legislative interference and legislative protection. Attempt to assist its course by legislative enactments, by fostering care, you arrest its progress, you destroy its vigour. Unbind the shackles in which your unwise tenderness has confined it—permit it to take unrestrained its own course—expose it to the wholesome breezes of competition,—you give it new life, you restore its former vigour. Industry has been well likened to the hardy Alpine plant; self-sown on the mountain side, exposed to the inclemency of the season, it gathers strength in its struggles for existence—it shoots forth in vigour and in beauty. Transplanted to the rich soil of the parterre, tended by the fostering hand of the gardener, nursed in the artificial atmosphere of the forcing-glass, it grows sickly and enervated, its shoots are vigourless, its flowers inodorous. In one single word lies the soul of industry—competition. The answer of the statesman and the economist to his sovereign inquiring what he could do to assist the industry of his kingdom was, ‘Let it take its own way.’ Such is my prayer. Relieve us from the chains in which your indolent tenderness has shackled us; remove your oppressive protection; give us the fair field we ask; and we demand no more. The talent, the genius, the enterprise, the capital, the industry of this great people will do the rest; and England will not only retain her present position, but she will take a yet more forward place in the race of competition for wealth and improvement which, by the nature of things, she is destined to run amongst the nations of the world. Place us in that condition, not by any violent change, but by slow and easy transition. Here we shall find security for our enterprise, and reward for our labours.

“*Hic patet ingens campus; certusque merenti
Sint favor; ornatur propriis industria donis.*”

It was not, however, to be supposed, that all departments of the silk manufacture would be equally benefited by the change of system that has taken place.—*Non omnium possumus.* The probability is, that the trade will in future be divided between the English and French. In point of substantial excellence, the plain silk goods manufactured in England are superior to those of France; and the difference in favour of the latter in point of *finish* is every day becoming less perceptible; while in all mixed manufactures, of silk and wool, silk and cotton, silk and linen, &c., our ascendancy is admitted by the French themselves. On the other hand, the ribands, figured gauzes, and light fancy goods, manufactured in France, are superior to those of this country. Even in this department we have made a very great progress; and fancy goods are now produced at Spitalfields, Coventry, and other places, contrasting most advantageously, in point of taste and beauty, with those produced previously to the introduction of the new system. Still, however, we are not sanguine in our expectations of our countrymen being able to maintain a successful competition with our neighbours in the manufacture of this class of articles. The greater attention paid to the art of designing in Lyons, the consequent better taste of the artists, and the superior brightness and lustre of their colours, give them advantages with which it will be very difficult to contend.

But, supposing that the trade is partitioned between the two countries in the way now stated, it is easy to see that the best share will belong to us, and that that share will be incomparably more valuable than the whole manufacture formerly was. The proofs of the accuracy of this statement are at hand. Notwithstanding the decline of the trade at Coventry and a few other places, the manufacture, taken as a whole, is rapidly increasing. During 1822 and 1823, when the restrictive system was in its vigour, the entries for consumption of all sorts of raw and thrown silk amounted at an average to 2,454,842 lbs. a year. But, in despite of all the sinister predictions indulged in with respect to the ruin of the manufacture, the entries amounted, at an average of 1832 and 1833, to 4,565,850 lbs.; being an increase of nearly 100 per cent. upon the quantity entered during the monopoly!

The increase in the exports of wrought silks affords, if possible, a still more decisive proof of the extraordinary improvement and extension of the manufacture. Instead of having any thing to fear from the competition of the French at home, we are actually underselling them in the heavier and more important species of goods, in every foreign market equally accessible to both parties. The exports of silks from France have been declining, while those from England have been increasing beyond all precedent. The declared value of our exports of silk goods, in 1823, amounted to 351,409*l.*, whereas in 1833 it amounted to 740,294*l.*, being an advance of more than cent. per cent.! Not only, therefore, are the statements as to the ruin of the silk manufacture proved to be wholly without even the shadow of a foundation, but the expectations of those who contended that the repeal of the restrictive system would be the commencement of a new era of invention and improvement, have been realised to the fullest extent.

What has now been stated renders it obvious, that though the manufacturers of fancy goods may be obliged to change their employment, a new, and at the same time a more extensive and fruitful, field is opened for their exertions. We lament the hardships incident to the transition even from one department of the same business to another, but the suffering thence arising will speedily disappear; and when the change has been effected, the manufacturers will enter with fresh vigour on a new career of prosperity.

It is to be regretted, that it is not possible either to abandon a routine system, or to introduce new and improved methods of production, without injury to individuals. But because such is the fact—because the bridge cannot be built without displacing watermen, nor the plough introduced without superseding the spade, nor wine brought from abroad without diminishing the demand for ale and beer—is that any reason for proscribing inventions, and denying ourselves gratifications within our reach? To maintain the affirmative, would be evidently absurd,—it would be equivalent to maintaining that the interests of society are best promoted by perpetuating poverty, ignorance, and barbarism! The injury occasioned by the adoption of an improved method of production, or the opening of new markets whence cheaper supplies of any article may be obtained, is temporary only, and affects but a very small portion of the community; while the advantage is permanent, and benefits every individual, even those whom it may, in the first instance, have forced to resort to other businesses.

Those unacquainted with the history of the silk trade, who may have looked into the pamphlets and speeches of those opposed to the late alterations, will probably be disposed to think that, though more limited in point of numbers, the condition of the workmen engaged in the trade was better previously to 1825 than it has been since. But those who have looked, however cursorily, into the history of the trade, must know that such is not the fact; and that, speaking generally, the situation of those engaged in it has been materially improved since 1825. We have already adverted to the state of the trade in 1793 and 1816. At the last mentioned period, 7 years before any relaxation of the monopoly had been so much as thought of, the distress in the silk trade was infinitely more severe than it has ever been since the introduction of the new system. In proof of this, we may mention that, at a public meeting held for the relief of the Spitalfields weavers, at the Mansion-house, on the 26th of November, 1816, the secretary stated, that *two-thirds* of them were without employment, and without the means of support; "that some had deserted their houses in despair, unable to endure the sight of their starving families; and many pined under languishing diseases brought on by the want of food and clothing." And Mr. Fowell Buxton, M. P., stated, at the same meeting, that the distress among the silk manufacturers was so intense, that "*if partook of the nature of a pestilence, which spreads its contagion around, and devastates an entire district.*" Such was the state of the workmen under that monopoly system that has been the worthless theme of so much recent eulogy. But such, we are glad to say, is not their state at present. The trade, being now mostly diverted into those branches in which we have a superiority, is comparatively secure against revulsions; and it would be an absurdity to imagine, that measures that have about doubled the manufacture, should have reduced the rate of wages, or been otherwise than advantageous to the workmen.

We have already noticed the smuggling of foreign silks carried on in the early part and towards the middle of last century. The evil was not afterwards abated. The vigilance of the Custom-house officer was no match for the ingenuity of the smuggler; and at the very moment when the most strenuous efforts were made to exclude them, the silks of France and Hindostan were openly displayed in the drawing-rooms of St. James's, and in the House of Commons, in mockery of the impotent legislation which sought to exclude them. We doubt, indeed, whether the substitution of the *ad valorem* duty of 30 per cent., in place of the old system of prohibition, has been productive of any materially increased importation of foreign silks. "I have lately," said Mr. Huskisson, in his famous speech in vindication of his policy as to the silk trade, "taken some pains to ascertain the quantity of smuggled silks that has been seized inland throughout the kingdom during the last 10 years: and I find that the whole does not exceed 5,000*l.* a year. I have endeavoured, on the other hand, to get an account of the quantity of silk goods actually smuggled into this country. Any estimate

of this quantity must be very vague; but I have been given to understand that the value of such goods as are regularly entered at the Custom-houses of France, for exportation to this country, is from 100,000*l.* to 150,000*l.* a year; and this, of course, is exclusive of the *far greater supply* which is poured in throughout all the channels of smuggling, without being subjected to any entry. In fact, to such an extent is this illicit trade carried, that there is scarcely a haberdasher's shop in the smallest village of the United Kingdom, in which prohibited silks are not sold; and that in the face of duty, and to a very considerable extent.

The honourable member for Coventry (Mr. Ellice) has mentioned the silk goods from India as those against which any thing but prohibition would prove an unavailing protection. Now, in my opinion, it is scarcely possible to conceive a stronger case than those very silks furnish against the honourable member's own argument. I believe it is universally known that a large quantity of Bandana handkerchiefs are sold every year, for exportation, by the East India Company. But does any gentleman suppose that these Bandanas are sent to the continent for the purpose of remaining there? No such thing! They are sold at the Company's sales, to the number of about 800,000 or 1,000,000 a year, at about 4*s.* each; they are immediately shipped off for Hamburg, Antwerp, Rotterdam, Ostend, or Guernsey, and from thence they nearly all illicitly find their way back to this country.

Mark, then, the effect of this beautiful system.—These Bandanas, which had previously been sold for exportation at 4*s.*, are finally distributed in retail to the people of England at about 8*s.* each; and the result of this prohibition is to levy upon the consumer a tax, and to give those who live by evading your law a bounty of 4*s.*, upon each handkerchief sold in this country!—(Speeches, vol. ii. p. 510.)

Indeed, one of the principal objections to the present duty of 30 per cent. on foreign silks is, that it is high enough to enable a considerable smuggling trade to be still carried on; the facility for smuggling being increased by means of the legalised importation. A duty of 12 or 15 per cent. would not, however, be so high as to balance the risks run in smuggling; and would, therefore, really afford the manufacturer a more efficient protection than he derives from the existing duty, at the same time that it would place all classes of dealers on the same footing; whereas the advantage is at present on the side of those who engage in fraudulent schemes.

Regulations as to the Importation of Silks.—Silk manufacturera are not to be imported in any vessel under 70 tons burden, except by licence from the commissioners of the customs to vessels belonging to Dover, to import such manufactures direct from Calais, though such vessels may not exceed 60 tons burden. Silk goods, the manufacture of Europe, not to be imported except into the port of London or the port of Dublin direct from Bordeaux, or the port of Dover direct from Calais.—(3 & 4 Will. 4. c. 2, § 5; and, p. 11.)

When the shoot or the warp only is of silk, the article is to be considered as composed of *not more* than one half part of silk, and subject to the *ad valorem* duty of 30 per cent.; but if the shoot or the warp be entirely of silk, and a portion of the other be of silk also, the article is to be considered to be composed of more than one half part of silk, and subject to the rated duties at per lb., or to the *ad valorem* duties, at the option of the officers.—(Mfn. Com. Cas. 14th of August, 1829.) But in all cases where the duties charged by weight upon mixed articles would manifestly exceed 30 per cent., by reason of the weight of the wool, or other ingredient thereof besides silk, the article is to be admitted to entry at value.—(Mfn. Com. Cas. 19th of December, 1831.)

For the regulations as to the smuggling of silks, see **SMUGGLING**.

I. Account, illustrative of the Progress of the Silk Manufacture, showing the Quantities of Raw, Waste, and Thrown Silk imported at different Periods.—(Report of 1832 on Silk Trade, p. 10, and Parl. Paper, No. 9. Sess. 1834.)

	Average Imports.				Raw.	Waste.	Thrown.	Total.
	Lbs.	Lbs.	Lbs.	Lbs.

The United States is our best customer for silk goods. Of the total quantity exported in 1831, they took nearly 1-3, or to the amount of \$37,385, of real value. During the same year, the exports to the British North American colonies, were \$3,012, 1/2; to the British West Indies, \$7,508, 1/2; to France, \$4,462, 1/2; to Spain, \$4,833, 1/2, &c.

Sources of the Supply of Silk.—The following Table shows the sources whence we directly derive our supplies of raw and of foreign thrown silk, and the quantities brought from each in 1831 and 1832.

Countries.	1831.		1832.		Countries.	1831.		1832.

Turkey -			701	701					

It is necessary, however, to observe that this account does not exhibit the countries which really furnish us with silk, and the quantities we import from them. It merely exhibits the sources whence we immediately derive our supplies, without tracing them to their source. Hence it makes the imports of silk from China and Italy appear very much less than they really are, and those from India and France much larger. With respect to China, it would appear from this account that only 5,374 lbs. were imported from it in 1831; whereas it appears from another parliamentary paper, that the imports of Chinese silk in that year really amounted to 468,692 lbs., and even this last is, we believe, underrated—(see vol. i. p. 304.). The reason is, that by far the largest portion of the Chinese silk imported into England is carried, in the first instance, to Singapore, or to some port in India, and is thence imported under the name of Indian silk. During the year 1831-32, there were exported from Canton, in British ships, 8,451 piculs, or 1,126,800 lbs., of silk, costing at the port of shipment (Canton) 2,654,063 dollars; and of this, by far the largest portion came to England.—(See vol. i. p. 301.) The silk exported from Canton consists of two leading varieties, known in commerce by the names of Canton and Ningking. The first which is raised principally in the province of Canton, is divided into 5 sorts. At an average, the picul of Canton silk brought at Canton, in 1831-32, 138 dollars. The Ningking silk produced in the province of Kiangnan, is divided into 2 sorts, known in commerce by the names of Taitsee and Teyenmin. It is very superior to the other, and usually fetches more than double its price. It cost at Canton, in 1831-32, 369 dollars a picul. We have no doubt, now that the trade to China is thrown

over, that the export of great commerce has introduced the quality of the art according to the taste and in 1832, the quality of the art is specified in the by way of Taitsee and Teyenmin. By far the great of that country, in Bureaux, where official accounts and Foreign raw and the portion which is the trade will be in 1832, and authentic state of the stocks on 1

...to the present time.— see Table F.)

...the exports of Chinese silk will be materially increased; and that it will become an article of great commercial importance.

East India native silk comes wholly from Bengal. About the year 1760, the East India Company introduced the Italian mode of reeling silk, which was productive of a very great improvement in the quality of the article; but we are not aware that any subsequent improvement has been effected.

According to the *Parliamentary Paper*, No. 425. Sess. 1833, the imports of raw silk from all places to the westward of the Cape of Good Hope, except China, were, in 1830, 1,736,531 lbs.; in 1831, 1,725,550 lbs.; and in 1832, 1,814,819 lbs. But, notwithstanding this exception, we believe that a very considerable quantity of the silk so imported was the produce of China; being brought to us partly from Simsbury, and partly from the Indian prairies. Some of it was also the produce of Persia, shipped, in the first instance, from Bushire for Bombay. The silk goods brought from India are not only inferior, in point of quality, to those of Europe, but also to those of China. The quantity imported of late years is specified in the Table, No. III.

A good deal of the silk brought from Turkey is supplied by Persia. Some considerable part of the Persian silk that used to be exported from Bushire and other ports on the Persian Gulf, is now exported by way of Trebizond; which promises to become an important emporium for Persian and Turkish silk.

(See *Transactions*.)

By far the greatest part of the raw and thrown silk that comes to us from France, is not the growth of that country, but of Italy; being principally conveyed by the canal of Languedoc and the Garonne to Bordeaux, whence it is shipped for England. So much is this the case, that it appears from the official accounts published by the French government, that while the aggregate value of the French and foreign raw and thrown silk exported from France in 1831 amounted to 43,103,054 fr., the value of the portion which was of French origin was only 2,092,776 fr. (*Administration des Douanes*, for 1831, p. 263.)

The reader will find, under the article VENICE, an account of the exports of silk from the Venetian provinces in 1829, 1830, and 1831. Since the article NAPLES was printed, we have obtained the following authentic statement of the exports of silk from that city during the 6 years ending with 1833, and of the stocks on hand:—

Years.	Exports.					Stocks on the 31st of December.

[The following account of the silk culture in the United States, from the third report of the Agricultural Society of Massachusetts, will be interesting to the American reader.

The production of silk in this country has been repeatedly brought before the public; and presented in various forms as a subject of general interest to the agricultural community. When the state of Georgia was settled, silk and wine were recommended as particular objects of culture. In Virginia, measures were taken as early as 1663 to encourage the general production of silk; and the failure to plant mulberry trees at the rate of ten for every hundred acres, was made by the laws a penal offence. In 1760, the society in London for the encouragement of arts, manufactures, and commerce, offered liberal premiums for the production of silk in Georgia, Pennsylvania, and Connecticut. The society propose to give for every pound weight of cocoons produced in the Province of Connecticut in the year 1786, of an hard, weighty, and good substance, wherein one worm only has spun, three pence; for every pound weight of cocoons of a weaker, lighter, spotted, or bruised quality, though only one worm has spun in them, two pence; for every pound of cocoons, produced in the same year, wherein two worms are interwoven, one penny. These premiums will be paid on condition that a public flature be established in Connecticut, and that each person bring his or her balls to such public flature." This invitation, says Jared Eliot, in his remarkable essays on Field Husbandry in New England, is not to a business to which we are wholly strangers; it is not to an empty, airy, and untiled project; for there has been something of this manufactory carried on for sundry years, and by a number of our people in divers of our towns, by which we are assured that it is practicable. As early as 1757, the governor of Connecticut, Mr. Law, wore the first coat and stockings made of New England silk; and in 1750, his daughter wore the first silk gown of domestic production.

In an Almanac of Nathaniel Ames, for the year 1769, it seems the subject had been matter of much public discussion, and "a gentleman, whom posterity will bless, deposited one hundred dollars in the hands of the selectmen of Boston; forty dollars to be given to the person who, in the year 1771, shall have raised the greatest quantity of mulberry trees; thirty dollars to him that shall have the next greatest number; twenty to the next; and ten to the next; certificates being produced from a justice of the peace of the number, and that they belong to Massachusetts Bay."

It is further stated by Eliot, in 1702, "that by a late account from Georgia, it appears that the silk manufactory is in a flourishing way. In the year 1757, the weight of silk balls received at the flature, was only 1,059; last year produced 7,010, and this year already about 10,000; and it is very remarkable that the raw silk exported from Georgia, sells at London from two to three shillings a pound more than that from any other part of the world." It is stated by president Stiles, that in 1762 Georgia exported to London 15,000 lbs. cocoons, deemed sufficient to make 1500 lbs. of silk.

Other remarks of Eliot, considering the time when he wrote, are particularly deserving of attention. He recommends especially the cultivation of silk to the northern colonies, "who are destitute of any article commodiously by which they could make an immediate and direct return to England, for such goods as we want, and must always want, more abundantly than we have means at present by which we can afford. This seems to be the state of Georgia, Pennsylvania, and Connecticut." The cultivation of the great staple of cotton was not pursued then to any extent in the southern states.

He goes on to say that, "those among us, who raise silk, say, that it is more profitable than other ordinary business. Some years past, I asked a man of good faith and credit, who had then made the most silk of any among us, what profit might be made of it. His reply was, that he could make a yard of silk as cheap as he could make a yard of linen cloth of eight run to the pound. A woman of experience in this business told me, that, in the short time of feeding the worm and winding the silk balls, she could earn enough to hire a good spinner the whole year. I have not the least scruple of the informant's veracity, but how far their capacity might serve for an exact calculation, I know not." *

* Two lbs. avoirdupois are equal to about 2 7/9 libri Napolitani.

In 1772, as appears from the manuscript journal of President Stiles of Yale College, his family engaged, to some extent, in the culture of silk, and their production was sent to England to be manufactured, a sample of which cloth, presenting a singularly beautiful fabric, together with the journal itself, is now in my possession.

About the year 1770, a filature was established in Philadelphia, and it is a remarkable fact, from the 25th of June to the 15th of August 1771, 2,300 pounds of cocoons were brought to the filature to be reeled, or were bought by the managers. These came from Pennsylvania, New Jersey, and Delaware.

About the year 1760, the culture of silk was introduced into Mansfield, Conn., and some of the neighbouring towns. It has been pursued ever since that time, to a small extent, in several other places in New England; but it cannot be said to have maintained its foothold in any other situation than in Mansfield. In other places, where it planted itself with every favourable prospect of success, it presently expired. In Mansfield, Conn., it has continued to be pursued to the present time. The largest amount of raw reeled silk reported to have been produced in any one year in Mansfield, as was stated to me in that town, has been about seven thousand pounds. In general, however, it has not exceeded three thousand pounds per year. The inhabitants of Mansfield have been wholly dependent upon the white mulberry for feed for their worms; and a large proportion of these were destroyed by the severe winter of 1834-5.

The silk culture became again strongly the subject of public attention in 1826. Congress encouraged it, by the publication and distribution of large editions of manuals and treatises, prepared with great care and fulness, and giving all the directions and details necessary to the prosecution of the business, from the raising of the trees, to the preparation of the article for use. The vast amounts of money annually sent abroad for the purchase of this article of universal use and almost not necessary, the increasing use of the article among all classes of people, and to an extent probably not known in any other country; and, at the same time, the acknowledged capacity of the country to produce silk, and of the best quality, gave new prominence to the subject in the community, and drew the public attention to it with an intense interest; but with no greater interest than in an economical view, in the opinion of many intelligent men, its national importance may justly claim.

In 1830, the introduction of a new plant into the country, (the Perottet mulberry, or morus multicaulis), which promised, from its extraordinary capacity of rapid multiplication, and its productiveness of foliage, to furnish an earlier advantage for the prosecution of the silk culture, gave a new impulse to the cause, and aroused public enthusiasm to a high degree of fervour. The disappointment occasioned by the almost universal destruction of these plants by the frosts, produced a revolution in public feeling; and the progress of the silk culture was again arrested and set back in a strong abate.

It does not fall within my province to detail more particularly the history of events in relation to this subject. The introduction of this extraordinary variety of the mulberry, the morus multicaulis, or many stalked mulberry, or, as I think it should be called after the name of the spirited individual who brought it into Europe, the Perottet mulberry, led to the introduction of other valuable varieties. About this time the erection of a cocoonery at Northampton, in Massachusetts, of extraordinary dimensions and expense, and the reiterated and extravagant calculations of profit, which were to follow from the culture of silk, continually given to the public in the most imposing forms, and the establishment of societies in all parts of the country, with large capitals for this object, kept the curiosity and interest of the public constantly upon the stretch. The announced introduction of varieties of the mulberry, of such hardihood as to brave the severity of our climate, and especially the adoption of a plan for taking up the tender varieties and reesting them, or laying them down in the spring; and the practicableness in this way of obtaining in the same season from trees thus managed, an ample supply of food for the worms, seemed to give strong assurance that the bright hopes which had been indulged on this subject, were, at least in some degree, on the point of being realized.

In the year 1838, a new chapter in the history of the silk culture was to be unfolded. There is little reason to doubt, that, at this time, a conspiracy or combination of some principal individuals, deeply interested in the multicaulis in the United States, was formed, in order to force the sale of this tree at high prices. By every species of finesse, and by the grossest imposition, the public pulse was quickened to a rapidity and intensity of circulation almost unparalleled in the history of the excitements of the human mind. The selling of spurious seed, the disposal of trees under false names, the selling for multicaulis that which did not even belong to the species of the mulberry, and especially the villainy, for it deserves no milder name, and should shut out its perpetrators from all community with honest men, of getting up extensive auction sales of multicaulis trees, which were purely fictitious, and this with no other view than that of fraudulent wholesale imposition upon the public, present facts in the history of our community equally remarkable and disgraceful. They are instructive monuments to mark the extremes to which, under the influence of an unbridled avarice, the cunning of some men will proceed, and the credulity of others may be led. In these circumstances the public attention was directed exclusively to the growing of trees. The production of silk did not enter into the calculation. Thousands and thousands of acres were planted with the Perottet mulberry; and immense importations of these trees have been made from foreign countries.

By the caprices and fluctuations incident to all human affairs, and by no means unexpected in a case of such violent and extravagant speculation, as that of which I have been speaking, it has happened that the ebb has gone down in proportion to the elevation of the flood. This speculation is at an end; and though all the growers and speculators in morus multicaulis from Florida to Maine should pump their heads together, they are much more likely to blow out the last embers that remain in the hearth, than to fan them into a flame. It is feared that in too many cases the exposure of the speculation, as it was termed, would present only humiliating examples of fraud and credulity; and it would be an invidious and ungrateful task to rake open the ashes for the sake of seeing the burnt bones and carcases of those who have perished in the flames. The multicaulis is no longer in quick demand, and may be purchased at a price far below its actual and intrinsic value. The tree having ceased to be an object of speculation, it is now hoped that public attention will be directed to the production of silk. The best trees of the best descriptions being obtainable, even by persons of the most limited means, it becomes matter of important inquiry, whether, to what extent, and under what circumstances, the silk culture may be conducted and encouraged as a profitable branch of agriculture.—Am. Ed.]

SILVER (Ger. *Silber*; Du. *Zilver*; Da. *Sølv*; Sw. *Silfver*; Fr. *Argent*; It. *Argento*; Sp. *Plata*; Port. *Prata*; Rus. *Serebro*; Pol. *Srebro*; Lat. *Argentum*; Gr. *ἄργυρος*; Arab. *Fazzeh*), a metal of a fine white colour, without either taste or smell; being in point of brilliancy inferior to none of the metallic bodies, if we except polished steel. It is softer than copper, but harder than gold. When melted, its specific gravity is 10.474; when hammered, 10.51. In malleability, it is inferior to none of the metals, if we except gold. It may be beaten out into leaves only $\frac{1}{100000}$ of an inch thick. Its ductility is equally remarkable: it may be drawn out into wire much finer than a human hair; so fine, indeed,

that a single grain of a wire of an inch diameter will support a weight of 100 lbs. The proportion of oxygen to silver is as 100 to 1. The most pure silver is also silver in its nature.—(See *Platina*.) Besides being used in the arts, silver is also used in the manufacture of the British mint, and in SINGAPORE.

The island of Malacca is the greatest breadth of the desert islets, Singapore is situated throughout, and of European origin. The island is a chain of islands, nothing is known of the course of the current, and most convenient approach close to the river, or rather in the roads, leading to their draw always in readiness to be discharged at once.

The climate is 89° in a part of the season short, and not very hot. The settlement is the property, in the time with the whom it belongs about 8 years before the year 1838, it had no inhabitants, and was taken on the last of the inhabitants.

The principal occupations, &c. of the natives are as follows:—

European	•
Malay	•
Native Christians	•
Arabs	•
Jews	•
Hindus	•
Chinese	•
Native of the Coast	•
Moslems	•

The principal occupations, &c. of the natives are as follows:—

that a single grain of silver may be extended about 400 feet in length. Its tenacity is such, that a wire of silver 0.078 inch in diameter is capable of supporting a weight of 137.13 lbs. without breaking. Silver is easily alloyed with copper by fusion. The alloy is harder and more sonorous than silver, and retains its white colour even when the proportion of copper exceeds $\frac{1}{3}$. The hardness is at a maximum when the copper amounts to one fifth of the silver. The standard or sterling silver of Britain, of which coin is made, is a compound of 12 $\frac{1}{2}$ parts silver and 1 copper. Its specific gravity is 10.2. The specific gravity of Paris standard silver, composed of 137 parts silver and 7 copper, is 10.175. The French silver coin during the old government was not nearly so fine, being composed of 261 parts silver and 27 copper, or 9 $\frac{3}{4}$ parts silver to 1 part copper. The Austrian silver coin contains 11 of copper. The silver coin of the ancients was nearly pure, and appears not to have been mixed with alloy.—(Thomson's Chemistry.)

The most productive silver mines are in America, particularly in Mexico and Peru. There are also silver mines in Hungary, Saxony, and other parts of Europe, and in Asiatic Russia.—(See PRECIOUS METALS.)

Besides being used as coin, or money, silver is extensively employed in the arts. The value of the silver plate annually manufactured is very considerable. Large quantities are also used in plating.—(See PLATE.) For an account of the quantity of silver coined at the British mint, since 1790, see vol. i. p. 389.

SINGAPORE, an island and recent British settlement at the eastern extremity of the Straits of Malacca. The town is in lat. 1° 17' 22" N., lon. 103° 51' 45" E:

The island is of an elliptical form, about 27 miles in its greatest length, and 15 in its greatest breadth, containing an estimated area of 270 square miles. The whole British settlement, however, embraces a circumference of about 100 miles; in which is included about 40 desert islets, and the seas and straits within 10 miles of the coast of the principal island. Singapore is separated from the main land by a strait of the same name, of small breadth throughout, and scarcely, indeed, $\frac{1}{2}$ of a mile wide in its narrowest part. In the early period of European navigation, this channel was the thoroughfare between India and China. Fronting the island, on its southern side, and at the distance of about 9 miles, is an extensive chain of islands, all desert, or at least inhabited only by a few wild races, of which nothing is known but their mere existence. The intervening channel is now the grand route of the commerce between the eastern and western portions of maritime Asia; the safest and most convenient track being so near to Singapore, that ships in passing and repassing approach close to the roads. The town is on the south side of the island, and is situated on a river, or rather salt creek, navigable by lighters for about $\frac{1}{2}$ of a mile from the sea. Ships lie in the roads, or open harbour, at the distance of from 1 mile to 2 miles from town, according to their draught of water. The assistance of a number of convenient lighters, which are always in readiness, enables ships to load or unload, with scarcely any interruption, throughout the year. The river or creek is accessible to the lighters, and the goods are taken in and discharged at convenient quays, at the doors of the principal warehouses.

The climate of Singapore is hot, but healthy. Fahrenheit's thermometer ranges from 71° to 89°. In a place only about 80 miles from the equator there is, of course, very little variety in the seasons. There is neither summer nor winter; and even the periodical rains are short, and not very well marked—moderate showers of rain falling for about 150 days each year. The settlement of Singapore was formed in February, 1819, and its sovereignty and property, in their present extent, confirmed to the British government in 1825, by a convention with the king of the Netherlands, and a treaty with the Malay princes of Johore, to whom it belonged. When taken possession of by the English, it had been inhabited for about 8 years by a colony of Malays, half fishermen and half pirates. When the first census of the population was taken, in January, 1824, it was found to amount to 10,683. In 1838, it had increased to 15,834: in both cases, exclusive of troops, camp followers, Indian coolies, and a floating population of about 3,000. The following statement of the census taken on the 1st of January, 1832, and on the 1st of January, 1833, shows the different classes of inhabitants, and their proportions to each other:—

Currency, Weights, Languages, &c.—The currency and weights are simple and convenient. Merchants' accounts are kept in Spanish dollars, divided into 100 parts, represented either by Dutch guilders or by English copper coins of the same value. The weights in use (and almost every thing by weight, as in China) are the Chinese picul of 100 catties, or 133 lbs. avoirdupois. Rice (the produce of Siam and the Archipelago) and salt are sold by the coyan of 40 piculs. Gold dust is sold by a Malay weight called the bungkal, which weighs two Spanish dollars, or 833 grains Troy. Bengal rice, wheat and pulses of the same country, are sold by the bag, containing 3 Bengal maunds, or 161 lbs. avoirdupois. Piece goods, &c. are sold by the corg or score. English weights and measures are frequently used in reference to European commodities. The mode of transacting business among the European merchants is simple and efficient. Instead of trusting their affairs to native agents, as in other parts of India, they transact them in person, with the occasional assistance of a Chinese creole, as an interpreter and broker. The European merchants transact business on their own account; but a great deal of their employment consists in acting as agents for houses in London, Liverpool, Glasgow, Amsterdam, Antwerp, Calcutta, Bombay, Madras, Canton, and Batavia. They are also agents for various insurance offices at Calcutta and elsewhere, and policies of insurance to any extent may be effected without difficulty. The language of commercial intercourse, where any of the natives of the East are concerned, is universally Malay—a simple and easy dialect, of which all the resident merchants have a sufficient acquaintance for transacting of ordinary business. A newspaper, the *Singapore Chronicle*, is published once a week, and contains a price current, an account of arrivals and departures of shipping, and an official detail of all the exports and imports of the preceding week. The administration of justice is entirely English, there being a recorder's court for the settlement, in common with the two neighbouring ones of Penang and Malacca.

so universally used, and affords our principal supply of sago, which has now become an article of commerce at Singapore.

The names of the petty places on the west side of the Malay Peninsula, opposite the Sumatra shore, between this and Penang, are—Bata Pahat, Benook, Beladong, Dogyang, Brocos, Meer, Padang, Pootlan, and Penghe; while the principal ports, besides Malacca and her dependencies, are—Parak, Salengoro, Lingin, and Lookoot. From the former very few articles, and those only of trifling value, are brought here, consisting chiefly of fowls, cocoa nuts, paddy, fruit, &c.; but the other ports all furnish in large quantities, besides several other articles of less importance. The whole of this coast, however, bears a bad name for piracy. The number of prahus arriving here from all the places above named amounts to about 100 every year.

Of the neighbouring islands, RATO is the one with which we carry on the most extensive and constant trade; the number of boats or rather trips of a regular set of Chinese boats, called *seapoo boats*, employed in the trade, being about 300 every year. They bring chiefly pepper and gambier, the produce of Bintaang. From LIXON, or LIXOA, also, we have upwards of 70 or 80 boats arriving annually, bringing a great variety of useful produce, but principally pepper, tin, ratans, &c. BILLATON sends about 25 boats yearly, which bring biche de mer, seaweed, tortoise-shell, wax, &c.

BUXOANAN (or Great Natunas) and SAKRAW (or N. Anambas) are the next in importance, from which 30 or 40 vessels trade with this settlement. The other islands are—Pulo Awore, Bonaweng, Condore, Carlmons, Jamaja, (or S. Anambas), Pulo Laut, Laboo, Leboc, Meppar, Nongsa, Sarassan, Siakip, Sooble, Tajam, Timblan, Timiang, Tingbi, Trong, Carimata, Ungaran, and some others.

Piracy in the Eastern Seas.—We regret to have to state that piracy has been of late exceedingly frequent in the seas to the eastward of the Straits of Malacca, and even in the Straits themselves. It has always, it is true, prevailed to a less or greater extent in the Eastern Seas; but latterly the number of pirates has rapidly increased, and they have prosecuted their depredations with a boldness and success that require immediate attention. In so far as we can judge from the statements in the Singapore and Canton papers, we seem, to say the least of it, to have manifested the most singular indifference to the spread of this great and growing evil. In 1824, we bound ourselves by treaty with the Dutch to co-operate with them for the suppression of piracy in the Eastern Seas. It is affirmed that, until very recently, we did little or nothing towards the fulfilment of this engagement, though we are far more interested in the suppression of piracy than any other people. Hitherto the trade of Singapore has chiefly suffered from piratical attacks; but, besides waylaying the smaller junks and ships of the Chinese, Siamese, &c., the pirates, emboldened by impunity, have recently attacked some British ships in the Straits of Malacca, and have actually captured some ships in the seas more to the eastward, inflicting the most horrid barbarities on the unhappy passengers and crews. The Andromache ship of war destroyed in June, 1836, a nest of pirates; but, until the naval force in the seas in question be considerably strengthened, and, especially, till some armed steamboats be sent to the assistance of the other vessels, the nuisance will not be materially diminished, much less suppressed. It would really seem, from the little attention that the subject has attracted in this country, as if it were imagined that the trade of the Eastern Seas is of little or no value. But we are within the mark when we affirm, that from ten to twelve millions' worth of British property (including the trade between India and Canton) is annually conveyed through the Straits of Malacca, and the other Eastern Seas infested by pirates. The trade from England to China, already of vast importance, and increasing more rapidly perhaps, than any other department of our commerce, is wholly carried on through the channels referred to; and, as we do not hesitate to send powerful squadrons to secure far less valuable interests in other quarters, it is not easy to see why we should not send some half-dozen steamers to protect this great and growing trade, as well as that which we carry on with the Philippine Islands, New South Wales, &c., from the depredations of a piratical banditti. Nothing but the employment of steamers will be able effectually to abate the evil of piracy. The infinite number of small islands in the Eastern Seas, the difficulty of their navigation, and our little acquaintance with any but the principal lines of intercourse, afford the greatest facilities for the escape of pirates from ordinary cruisers. But steam ships could follow them into their haunts; and the pirates would not be able to escape from them, as they frequently do from sailing vessels, by taking to their oars while their pursuers are becalmed. Except when defending our own shores, the navy is never so legitimately employed as in the defence and extension of commerce. Its protection is one of the most important duties which government has to discharge; and, considering the immense naval force at our disposal, it may well excite astonishment that piracy in the Eastern Seas—one of the great highways by which commerce is carried on—should have been allowed to attain to such a magnitude, and that the reiterated complaints of the merchants and others, who have suffered by its prevalence, should have been so little attended to. A very little outlay on the part of government might make, in so far at least as piracy is concerned, the navigation of the Eastern Seas quite as safe as that of the Channel; and the advantages thence resulting to our trade would, in a very short period, far more than counterbalance the little sacrifice required at the outset.

Besides putting down piracy in the Eastern Seas, government should take the necessary measures for obtaining accurate information with respect to them, and the ports and countries to which they afford access. We know very little indeed of many, or rather, we should say, of most, of the islands to the east of Malacca; and yet several of them are of great extent, and they all abound in valuable products; and might, it is probable, were we better acquainted with their ports and capabilities, furnish the means of carrying on an extensive and

advantageous commerce of New Guinea, whence of many.

The following table shows what has been the value of the goods employed in the principal British trade in 1833 was 11,440,000, and the total of goods and exports to this port was 4,200,000 dollars.

Hambourg, Danzig, &c. in 1833 was 517, and the value of the two from Java in 1833

While such is the case more than 10,000 of the British Navigation are the property of the nations for use from the Cape of Good Hope to the East Indies, and the nations have a right to the sea of the Eastern Seas in the destruction of piracy, and the nations contiguous were it not the ten destroy, so deduct put down lawless highway of nations

The following paragraph, taken from the *Canton Repository* for March, 1836, corroborates what has been now stated:—

"The value of the trade which annually passes through the Chinese Sea, and the number of persons employed in it, present a striking contrast to the paucity of the means of protection afforded us from our father-lands. The number of British vessels that arrived in China during 1834 was 136. The value of British trade for the year 1833-34, opium included, was about 46,833,500 dollars; and that for 1834-35 was still greater. The number of American vessels which arrived in China during 1833-34 was 204, and the total of the trade is estimated at 19,775,003 dollars; the number of vessels, and total of Imports and exports for 1834-35, were nearly the same amount. The number of Dutch vessels that come to this port we cannot state; but the total of the Netherlands trade with China, in 1830-30, was 1,002,713 dollars. Besides these, there is also a considerable amount of Portuguese, Spanish, French, Danburgh, Danish, and Swedish trade annually. The trade of Manila, already amounting in several millions, is on the increase. The number of square-rigged vessels that imported to Singapore during 1830-35 was 317, which exceeded any former year; that of native craft was 1481, which is less than in either of the two preceding years. The number of Dutch, foreign, and native vessels which cleared from Java in 1833 was 1720, with a tonnage of 199,193 tons.

"While such is the annual amount of trade carried on in these seas, employing in the foreign vessels more than 10,000 seamen, what care have our governments shown for its protection? Not one of the British Majesty's ships is stationed in the Chinese Sea; not one is yet stationed even at Singapore, except an occasional visitor makes a sweep among the pirates. The Americans have done nothing here since the bloody affair of Quailah Bato; it is said, however, that these seas are henceforth to be one of the stations for the American navy. A wide range, indeed, will two or three small men-of-war sweep from the Cape of Good Hope to Japan! The Portuguese here, we understand, have in naval equipment whatever. It is long since a French man-of-war has visited these seas. The Spaniards at Manila have a number of small craft called pontines, for the destruction of the piratical Malays who infest the sea to the southward of Luconia. These are characterised by a writer in a late number of the *Canton Free Press* as particularly successful in the capture of shells and turtles, but most inefficient in the destruction of the pirates. The Dutch alone have done anything effectual towards the suppression, and their activity in this respect is worthy of all praise. In Java, and generally in all places contiguous to their possessions, they have either suppressed or greatly checked piracy, and, were it not the tendency of their severe and restricted government to make as many outlaws, as they destroy, no deduction need be made from their praise. They alone have systematically attempted to put down lawless misrule in these seas, and make them, what the Creator designed them to be, the highway of nations."—*Sup.*)

Trade of Java.—Since the article BATAVIA was printed, we have received a number of the *Singapore Chronicle*, containing the following account of the quantities of the principal articles exported from Java in 1830, 1831, and 1832. It shows a very rapid progress. There wants nothing but good management to render Java by far the most valuable of all the Eastern possessions belonging to any European power.

(See *Journal of an Embassy to Siam and Cochin China*, by John Crawford, Esq., chap. xix.; *Return of the Population of British India*, in Report of the Select Committee of the Commons, 1831; *Report of the Select Committee of the Commons*, for 1830; and *Singapore Chronicle*, passim.)

SINOPE, a town of Asia Minor, on the S. coast of the Black Sea, lat. 42° 2' 30" N., lon. 35° 9' 45" E. Population uncertain, probably from 8,000 to 10,000. Sinope is situated on a low narrow isthmus, connecting the high rocky promontory of Ada with the main land. Its port, which is the best on this coast, on the south side of the town, is protected from the N. and N. E. gales by the isthmus and promontory already mentioned. Ships anchor within 3 miles of the town, in from 13 to 17 fathoms; or nearer to it, in from 5 to 7 fathoms. There is a roadstead on the north side of the isthmus, but it is open and exposed. Sinope is one of the principal stations of the Turkish fleet; and there are docks and arsenals for its accommodation and outfit. Its exports are inconsiderable, the principal being timber, salt, cordage, fish oil, &c.

In ancient times, Sinope was a city of great wealth, magnitude, and importance. It was the birth-place of Diogenes, the Cynic; and Mithridates made it the capital of his dominions. After its conquest by the Romans under Lucullus, it became the seat of a colony; and continued for a lengthened period to enjoy a good deal of consideration.

Should civilization and the arts once more revive in the ancient Pontus, and the other countries to the south of the Black Sea, the excellence of its port could not fail to restore to Sinope some portion of its former grandeur. Even now a considerable intercourse is beginning to take place with the countries E. and S. of Sinope. Diarbeker, on the Tigris, in lat. 37° 54' N., lon. 39° 53' 45" E., is one of the principal seats of Eastern commerce; and caravans set out regularly from it for Aleppo, Smyrna, and Constantinople; but any one who consults a map of Asia Minor, and of the contiguous countries, will see at once that Trebisond and the neighbouring parts on the S. E. coast of the Black Sea are the natural channels through which Armenia, Khoristan, and the north-western parts of Persia may best maintain an intercourse with Europe. We shall afterwards show that the danger to vessels by the roads of Trebisond has been very much exaggerated.—(See TREBISOND.) In the event, however, of the commerce with the countries referred to becoming of any considerable importance, Sinope would be an advantageous entrepôt to which goods might be brought, and whence they might be conveyed in proper vessels, and at proper times, to the other ports. At all events, it is of material importance

that a direct intercourse with the southern coast of the Black Sea should be established, and that the trade with it should not be carried on, as hitherto, through Odessa.—(For further particulars as to Si-
 nona, see *Thurnesfort, Voyages du Levant*, tom. II. pp. 202-212; and *Norie's Sailing Directions for the
 Black Sea*. See also the article *Tavernosa*, in this work.)

SKINS. The term is applied in commercial language to the skins of those animals, as
 calves, deer, goats, lambs, &c., which, when prepared, are used in the lighter works of book-
 binding, the manufacture of gloves, parchments, &c.; while the term *hides* is applied to the
 skins of the ox, horse, &c., which, when tanned, are used in the manufacture of shoes, har-
 ness, and other heavy and strong articles. Lamb and kid skins are principally used in the
 glove manufacture; 120 skins being supposed to produce, at an average, 18 dozen pairs
 of gloves.

SLATE (ROOF), Ger. *Schiefer*; Fr. *Ardoise*; It. *Lavagna, Lastra*; Sp. *Pizarra*, a fossil or compact stone (*argillaceous schistus*), that may be readily split into even, smooth, thin laminae. There are several varieties of this valuable mineral, the prevailing colours being grey, blue, and brown. But the tints are very various; and slates are often marked with streaks of a different colour from the ground. Slate is principally used in the covering of houses, for which purpose it is infinitely superior to thatch or tiles, and is far less expensive than lead. Good roofing slate should not absorb water; and it should be so compact as not to be decomposed by the action of the atmosphere. When properly selected, roof slates are of almost perpetual duration; but those which are spongy and imbibe moisture speedily get covered with moss, and require, at no very distant period, to be renewed.

The use of slates in the covering of houses is entirely European. From the Hellespont to China inclusive there is not a single slated house; and this does not arise from any want of slate, which is as abundant in Asia as in Europe.

Slates carried by land have never been subjected to any duty; but those carried coastwise were, until 1831, charged with duties varying according to their size and species. The injustice of this distinction, and the impolicy of laying any duty on an article of this sort, are obvious. The revenue it produced was quite inconsiderable, not exceeding 35,000*l.* a year. It was repealed at the same time as the duty on coal carried coastwise.

Since the repeal of the duty, the consumption of slate has been materially increased; and it is now

the Hellespont to China
want of slate, which is
carried coastwise west,
The injustice of this dis-
pobious. The revenue is
epeated at the same time

increased; and it is now

extensively employed for various purposes to which it was not formerly made applicable, such as the
flooring of warehouses and vaults, the paving of streets, the formation of cisterns, the covering of
ruins or decayed floors, and of the walls of houses in exposed situations, &c. The slate used for these
purpose is cut by the circular saw into pieces of from $\frac{1}{4}$ an inch to 2 inches thick. Many hundred tons
have been used in the course of the last 2 years in paving, flooring, &c. at the London Docks; and, we
know, with much advantage to the company. Large deposits of slates are now formed in London
and other great towns.

The principal slate quarries in Great Britain are in Caernarvonshire. Those belonging to Mr. Pen-
man (formerly Lord Penrhyn's), near Bangor, employ about 1,500 men and boys, and are the most
productive and valuable in the empire. The other quarries in the same county employ about 1,500 men
and boys; and there are some in other parts of Wales. There are also extensive quarries at Ulver-
ston, in Lancashire; and others, of inferior magnitude, in various parts of Westmoreland and Cum-
berland.

The principal slate quarries in Scotland are at Easdale and Dalachulish, in Argyleshire. Speaking
generally, the Scotch quarries do not afford slates of the size and smoothness of those obtained from
the Welsh quarries; and the wood-work of the roofs covered with them requires to be stronger.
Roofing slates are of different sizes, and are denominated Imperials, Queens, Princesses, &c. Their
prices, appraising their quality to be in other respects equal, depends partly on their size and partly on
their weight. The subjoined account explains the mode in which it is determined.

Account of the Prices of the different Sorts of Slate on Shipboard at Bangor, in January, 1838.

Sort of Slate	Price	Sort of Slate	Price
Imperial's, 20, 24, 27, and 30 inches long, and square breadth	80 0 per ton.	Slate, s.w.n. per ton of 147 ft. superficial, 1 in. thick,	60 per ton.
Queen's, 17, 20, 23, and 26 inches long, and pro- portional breadth, assorted	41 0 -	Do. if under 2 feet long, or 1 ft. 6 in. wide	70 -
Princess, 20 and 25 inches	43 0 -	Grave stones, not less than 6 ft. by 3 ft. 3 in. thick,	45 -
Queen's, 24 by 14 inches	41 0 -	Endel blocks or slabs, sawn at the ends only	55 -
Imperial's, 24 by 14 inches	43 0 -	Unassorted do.	45 -

		Do. do. 1 1/2 in. thick, 2s. 2d.	

The subjoined account shows a very material increase in the quantity of slates exported.
An Account of the Quantities of Slate exported from England to Foreign Parts in each of the Five
Years ending with 1832.

Year	Slate or Slates, rough.		Slates in Frames.		Year	Slate or Slates, rough.		Slates in Frames.	
	Tons.	Number.	Number.			Tons.	Number.	Number.	
1828	2,741	3,250,920	37,034	1831	4,799	4,257,494	18,373		
1829	3,925	4,768,953	32,106	1832	6,001	1,559,263	15,420		
1830	5,536	3,999,594	35,160						

(Slate and chalk laden on board any ship or vessel bound for foreign parts shall be deemed
ballast; and all such ships or vessels having on board only slate, or slate and chalk, shall
be deemed to be departing in ballast; and if, on the return of any such ship or vessel, any
slates or chalk be remaining on board, they shall be deemed to be her ballast.—(4 & 5 Will.
& c. 89, § 3.)

New Uses of Slate.—Slate is now generally used in framing the tops of billiard tables. The size of
each slate is 6 feet $\frac{1}{4}$ inch by 3 feet, and 1 inch thick; 4 of these make a table top, 12 feet by 6 feet
over the cushions. The first slate billiard table was made in 1834, and 500 have been made in Lon-
don down to December, 1836, many of which have been exported to the East Indies and America: it is the
price of each table top is about 13l.

Slate is likely to be largely consumed in the shape of blocks for railways; a piece of slate 2 $\frac{1}{2}$ inches
thick being found to be as strong as a piece of stone 1 foot thick. A piece of slate 2 feet 6 inches by 2
feet and 2 inches thick, bore the pressure of 20 tons, and broke with 25 tons; and a piece of the same
length and breadth, but 2 $\frac{1}{2}$ inches thick, bore 35 tons, and broke with 40 tons. The experiments were
made by placing the slate blocks against a bearing of 3 inches at each end, leaving a clear hollow
space of 2 feet between the bearings, and applying the piston of a hydrostatic press, 9 $\frac{1}{2}$ inches diameter,
to the centre.—*Sup.*)

SLAVES AND SLAVE TRADE. A slave, in the ordinary sense of the term, is an in-
dividual at the absolute disposal of another, who has a right to employ and treat him as he
pleases. But the state of slavery is susceptible of innumerable modifications; and it has
been usual, in most countries where it has been long established, to limit in various ways
the power of the master over the slave. The *slave trade* is, of course, the business of those
who deal in slaves.

Origin of Slavery.—A great deal of learning has been employed in tracing the history
of slavery, though the subject is still far from being exhausted. It seems most probable that
it originally grew out of a state of war. In rude uncivilised communities, where the pas-
sion of revenge acquires a strength unknown in more advanced states of society, captives
taken in war are adjudged to belong to the victors, who may either put them to the sword,
or reduce them to a state of servitude. In antiquity the ideas of war and slavery were in-
separable. Probably, in very remote ages, prisoners were most commonly put to death; but
the selfish gradually predominated over the more passionate feelings, and for many ages it
was usual to reduce them to the condition of slaves; being either sold by their captors to
others, or employed by them as they might think fit. "*Jure gentium*," says Justinian.
"*veri nostri sunt, qui ab hostibus capiuntur.*"—(Instil. lib. 1. 5.)
Vol. II.—2 U 64

The practice of reducing men to a state of slavery, having once begun, was extended in various ways. The progeny of slaves, or of women in a state of slavery, were slaves; men born free might sell themselves as slaves; and parents had authority, in Judea and Rome, to dispose of their children for the same purpose.—(*Michaelis on the Laws of Moses*, vol. ii. p. 163. Eng. ed.) It was the law of Rome, and of most other ancient states, that the persons of debtors who had contracted obligations which they could not discharge, should become the property of their creditors.

Treatment of Slaves.—The treatment of slaves in antiquity, as in more modern times, differed very widely in different countries and periods, and among different classes of slaves in the same country and at the same time. A great deal also depended on the character of particular masters. Slaves bred up in the house or family of the masters were uniformly treated with greater indulgence than others, and became entitled, by custom, to several important privileges. At Athens, slaves appear to have been better treated than in any other ancient state; and Demosthenes mentions, in his second Philippic, that "a slave was better off at Athens than a free citizen in many other countries." In republican Rome, the masters had the power of life and death over their slaves, who were often treated with the most detestable barbarity. It was not an uncommon practice to expose old, useless, or sick slaves to starve in an island in the Tiber! We may, as Mr. Hume has justly remarked, "imagine what others would practise, when it was the professed maxim of the elder Cato, to sell his superannuated slaves at any price, rather than maintain what he esteemed a useless burden."—(*Plutarch, in Vita Catonis.*) *Ergastula*, or dungeons, where slaves were confined and chained at night, and where they were sometimes made to work in the day, were common all over Italy. Columella advises that they be always built under ground—(lib. i. c. 6.); and remains of them are still seen in the lower stories of ancient buildings in Italy and Sicily. Hundreds of slaves were sometimes put to death for the crime of one only; and they were exposed, when they committed any petty fault, to all the violence of the most capricious and unrestrained despotism.

It was not uncommon in the barbarous ages to immolate captives on the tomb of such chiefs as had fallen in battle; and magnificent games were celebrated on these occasions. The gladiatorial exhibitions, so common at Rome after the Punic wars, seem to have grown out of this practice. These were contests between slaves, denominated gladiators, trained to fight in public for the amusement of a ferocious populace, who took the greatest delight in their sanguinary combats. Thousands of unfortunate wretches were annually sacrificed in this inhuman sport. After his triumph over the Dacians, Trajan exhibited spectacles, in which no fewer than 11,000 wild beasts of different kinds were killed, and 10,000 gladiators fought!—(*Adam's Roman Antiquities*, p. 317.)

The cruelties inflicted on the slaves occasioned frequent revolts, attended by the most dreadful excesses. Spartacus, a Thracian captive, destined for the profession of a gladiator, headed a rebellion of gladiators and slaves, which continued for 3 years, and required all the force of the republic to suppress. When finally defeated by Crassus, about 6,000 of his followers were nailed to the cross, in double rows, that extended almost from Capua to Rome.—(*Ferguson, Rom. Republic*, c. 16.) No one acquainted with the manners of the Romans can be surprised at the atrocities of so many of the emperors. The worst of them treated the citizens better than the latter treated the slaves. Humanity could not be looked for in the rulers of a state in which human life was held in contempt, and human suffering made the subject of popular sport.

In consequence partly of their ill usage, and partly of its being accounted cheaper to buy than to breed slaves, vast numbers were annually imported into Italy. Thrace, and the countries round the Black Sea furnished large supplies of the best slaves; and numbers were obtained from Egypt, Syria, Cappadocia, and other places. Delus in Cilicia was the greatest slave market of antiquity; as many as 10,000 slaves have been sold there in a single day.—(*Strabo*, lib. xiv.)

Besides its brutalising influence on the manners of the people, the institution of slavery was in other respects productive of the worst effects. The best Roman writers bear testimony to the negligence, waste, and bad conduct of slaves.—(*Columella*, lib. i. § 8.; *Plin Hist. Nat.* lib. xvii. § 3.) The inferiority of the ancients in most of the useful arts is principally to be ascribed to the prevalence of slavery, which not only extinguished all emulation and invention on the part of most of those engaged in industrious employments, but made the employments be considered in some measure disgraceful. In the ancient world agriculture and arms were the only occupations that were reckoned worthy of a freeman. The mechanical arts were carried on either wholly by slaves, or by the very dregs of the people; and remained for ages in the same stationary state.

The establishment of Christianity contributed more, perhaps, than any thing else, first to mitigate, and finally to suppress the abomination of slavery. But within no very long period after its abolition had been completely effected in every part of Europe, its horrors began to be inflicted on America.

* Achilles sacrificed 12 Trojan captives on the tomb of Patroclus.—(*Iliad*, lib. 22.)

African Slave Trade.—The trade, however early, in consequence of the discovery of St. Domingo, and of African islands, and the concurrence of the bishop of Chiapa, and the Africans. The former. But it was nothing new of another.—(*Roberts*) The importation of slaves increased, until John Hawkins, with which our country imported 200,000 slaves before the Africans were imported into the colonies from Africa was 600,000. The importation was very great.

It is not easy to see how the former it has produced have been due to the European trade. Many, however, of the most of crime known to the inhabitants of Africa. In the West Indies, its effect was to increase the disorders, of which slavery as it exists in the volume entitled "Ergastula," published in 1781.

It would be to no purpose to attempt an opinion upon the question, as that the statements made by the negroes in the infamous cruelties because he happened to be a slave.

Abolition of the Slave Trade.—The abolition of the slave trade, and the supineness of the individuals, in this respect, is, perhaps, the most extensive circulation of power contributed to the abolition of the slave trade. The Quakers early in the 18th century were always the first to bear testimony to the subject was the history of the abolition of the slave trade in proof of the country, and a number of witnesses were, on the 12th of August, 1793, they were supported by Fox. But, notwithstanding the friends of the abolition, contrived to be done. In the United States, but without any effect, and consummated in 1808.

African Slave Trade.—This infamous traffic was commenced by the Portuguese, in 1442. The trade, however, was but of trifling extent till the commencement of the sixteenth century. In consequence, however, of the rapid destruction of the Indians employed in the mines of St. Domingo or Hayti, Charles V. authorised, in 1517, the introduction into the island, of African slaves from the establishments of the Portuguese on the coast of Guinea. The concurrence of the emperor was obtained by the intercession of the celebrated Las Casas, bishop of Chiapa, who, contradictorily enough, laboured to protect the Indians by enslaving the Africans. The latter were certainly more vigorous and capable of bearing fatigue than the former. But this circumstance affords no real justification of the measure, which, at best, was nothing more than the substitution of one species of crime and misery in the place of another.—(*Robertson's Hist. America*, book iii.)

The importation of negroes into the West Indies and America, having once begun, gradually increased, until the extent and importance of the traffic rivalled its cruelty and guilt. Sir John Hawkins was the first Englishman who engaged in it: and such was the ardour with which our countrymen followed his example, that they exported from Africa more than 200,000 slaves between the years 1680 and 1700; and between 1700 and 1786, 610,000 Africans were imported into Jamaica only; to which adding the imports into the other islands and the continental colonies, and those who died on their passage, the number carried from Africa will appear immense.—(*Bryan Edwards, Hist. West Indies*, vol. ii. p. 64.) The importations by other nations, particularly the French and Portuguese, were also very great.

It is not easy to say whether this traffic has been more injurious to Africa or America. In the former it has perpetuated and multiplied every sort of enormity and abuse. The petty princes have been tempted to make war on each other, that they might obtain captives to sell to the European traders; and when these could not be found, have seized and sold their own subjects. Many, too, have been kidnaped by the crews of the slave ships, nor is there any sort of crime known among pirates and banditti, which, for more than 3 centuries, the civilized inhabitants of Europe have not perpetrated upon the unoffending natives of Central Africa. In the West Indies, and those parts of America into which slaves have been largely imported, its effect has been equally disastrous. It has led to the most violent antipathy between the whites and the blacks; and been the fruitful source of crimes, convulsions, and disorders, of which it is difficult to see the termination.—(There are some good remarks on slavery as it exists in America, and on the multiplied evils of which it is productive, in a volume entitled "Excursion of an English Gentleman through the United States and Canada," published in 1824.)

It would be to no purpose to enter into any examination of the sophisms by which it was formerly attempted to justify the slave trade. We shall not undertake to pronounce any opinion upon the question as to the inferiority of the blacks; though it does not appear to us that the statements of Mr. Jefferson on this subject, in his "Notes on Virginia," and similar statements made by others, have received any sufficient answer. But supposing the inferiority of the negroes were established beyond all question, that would be no justification of the infamous cruelties inflicted upon them. Did any one ever think of vindicating a robber, because he happened to be stronger or cleverer than his victim?

Abolition of the Slave Trade.—Notwithstanding the sanction it received from parliament, and the supineness of the public, the slave trade was frequently denounced by distinguished individuals, in this and other countries, as essentially cruel and unjust. Of these, Montesquieu is, perhaps, the most conspicuous. He successfully exposed the futility of the different pleas put forth by the advocates of slavery.—(*Esprit des Loix*, liv. xv.) and the extensive circulation of his great work, and the deference paid to the doctrines advanced in it, contributed powerfully to awaken the public to a just sense of the iniquity of the traffic. The Quakers early distinguished themselves by their hostility to the trade; of which they were always the consistent and uncompromising enemies.

The first motion on the subject in parliament was made in 1776; but without success. The subject was not taken up systematically till 1787, when a committee was formed, of which Mr. Granville Sharp and Mr. Clarkson, whose names are imperishably associated with the history of the abolition of the slave trade, were members. This committee collected evidence in proof of the enormities produced by the trade, procured its circulation throughout the country, and succeeded in making a very great impression on the public mind. After a number of witnesses on both sides had been examined before the privy council, Mr. Wilberforce, on the 12th of May, 1789, moved a series of resolutions condemnatory of the traffic. They were supported by Mr. Burke in one of his best speeches; and by Mr. Pitt and Mr. Fox. But, notwithstanding the resolutions were carried, nothing was done to give them effect. The friends of the trade having obtained leave to produce evidence at the bar of the house, contrived to interpose so many delays that the action passed off without any thing being done. In the following sessions the great struggle was continued with various success, but without any definite result. At length the triumph of humanity and justice was finally consummated in 1807; a bill for the total and immediate abolition of the slave trade, having

been carried in both houses by immense majorities, received the royal assent on the 25th of March, being the last act of the administration of Mr. Fox and Lord Grenville. "Thus ended," says Mr. Clarke, "one of the most glorious contests, after a continuance of 20 years, of any ever carried on in any age or country: a contest, not of brutal violence, but of reason; a contest between those who felt deeply for the happiness and the honour of their fellow creatures, and those who, through vicious custom, and the impulse of avarice, had trampled under foot the sacred rights of their nature, and had even attempted to efface all title of the divine image from their minds."

America abolished the slave trade at the same time as England. But notwithstanding what had been done, further measures were soon discovered to be necessary. The Spaniards and the Portuguese continued to carry on the trade to a greater extent than ever; and British subjects did not hesitate, under cover of their flags, to become partners in their adventures. An effectual stop was put to this practice in 1811, by the enactment of a law introduced by Mr. (now Lord) Brougham, that made trading in slaves punishable by transportation for 14 years, or by confinement to hard labour for a term of not more than 5 years nor less than 3 years.

The British laws relative to the slave trade were consolidated by the act 5 Gen. 4. c. 113. But, as the greater part of this act has been superseded by the late statute for the extinction of slavery (3 & 4 Will. 4. c. 73.), we shall merely lay before our readers the clauses still in force relating to the dealing in slaves.

Dealing in Slaves in the High Seas, &c. to be deemed Piracy.—And if any subject or subjects of his Majesty, or any person or persons residing or being within any of the dominions, forts, settlements, factories, or territories, now or hereafter belonging to his Majesty, or being in his Majesty's occupation or possession, or under the government of the United Company of Merchants of England trading to the East Indies, shall, except in such cases as are by this act permitted, after the 1st day of January, 1825, upon the high seas, or in any haven, river, creek, or place, where the admiral has jurisdiction, knowingly and wilfully carry away, convey, or remove, or aid or assist in carrying away, conveying or removing, any person or persons as a slave or slaves, or for the purpose of his, her, or their being imported or brought as a slave or slaves into any island, colony, country, territory, or place whatsoever, or for the purpose of his, her, or their being sold, transferred, used or dealt with as a slave or slaves; or shall, after the said 1st day of January, 1825, except in such cases as are by this act permitted, upon the high seas, or within the jurisdiction aforesaid, knowingly and wilfully ship, embark, receive, detain, or confine, or assist in shipping, embarking, receiving, detaining, or confining, on board any ship, vessel, or boat, any person or persons for the purpose of his, her, or their being carried away, conveyed, or removed as a slave or slaves, or for the purpose of his, her, or their being imported, or brought as a slave or slaves into any island, colony, country, territory, or place whatsoever, or for the purpose of his, her, or their being sold, transferred, used, or dealt with as a slave or slaves; then, and in every such case the persons so offending shall be deemed and adjudged guilty of piracy, felony and robbery, and being convicted thereof shall suffer death without benefit of clergy, and loss of lands, goods, and chattels, as pirates, felons, and robbers upon the sea ought to suffer.—14.

Persons dealing in Slaves, or exporting or importing Slaves, &c. guilty of Felony.—And (except in such special cases as are by this act permitted) if any persons shall deal or trade in, purchase, sell, barter, or transfer, or contract for the dealing or trading in, purchase, sale, barter, or transfer of slaves, or persons intended to be dealt with as slaves; or shall, otherwise than as aforesaid, carry away or remove, or contract for the carrying away or removing of slaves or other persons, as or in order to their being dealt with as slaves; or shall import or bring, or contract for the importing or bringing into any place whatsoever, slaves, or other persons, as or in order to their being dealt with as slaves; or shall, otherwise than as aforesaid, ship, tranship, embark, receive, detain, or confine on board, or contract for the shipping, transshipping, embarking, receiving, detaining, or confining on board of any ship, vessel, or boat, slaves or other persons, for the purpose of their being carried away or removed, as or in order to their being dealt with as slaves; or shall ship, tranship, embark, receive, detain, or confine on board, or contract for the shipping, transshipping, embarking, receiving, detaining, or confining on board of any ship, vessel, or boat, slaves or other persons, for the purpose of their being imported or brought into any place whatsoever, as or in order to their being dealt with as slaves; or shall fit out, man, navigate, equip, despatch, use, employ, let or take to freight or on hire, or contract for the fitting out, manning, navigating, equipping, despatching, using, employing, letting, or taking to freight or on hire, any ship, vessel, or boat, in order to accomplish any of the objects, or the contracts in relation to the objects, which objects and contracts have herein-before been declared unlawful; or shall knowingly and wilfully lend or advance, or become security for the loan or advance, or contract for the lending or advancing, or becoming security for the loan or advance of money, goods, or effects, employed or to be employed in accomplishing any of the objects, or the contracts in relation to the objects, which objects and contracts have herein-before been declared unlawful; or shall knowingly and wilfully become guarantee or security, or contract for the becoming guarantee or security, for agents employed or to be employed in accomplishing any of the objects, or the contracts in relation to the objects, which objects and contracts have herein-before been declared unlawful, or in any other manner to engage, or contract to engage, directly or indirectly therein, as a partner, agent, or otherwise; or shall knowingly and wilfully ship, tranship, lade, or receive or put on board, or contract for the shipping, transshipping, lading, receiving, or putting on board of any ship, vessel, or boat, money, goods or effects, to be employed in accomplishing any of the objects, or the contracts in relation to the objects, which objects and contracts have herein-before been declared unlawful; or shall take the charge or command, or navigate, or enter and embark on board, or contract for the taking the charge or command, or fit the navigating or entering and embarking on board of any ship, vessel, or boat, as captain, master, mate, surgeon, or supercargo, knowing that such ship, vessel, or boat, is actually employed, or to be in the same voyage, or upon the same occasion, in respect of which they shall so take the charge or command, or navigate, or enter and embark, or contract so to do as aforesaid, intended to be employed in accomplishing any of the objects, or the contracts in relation to the objects, which objects and contracts have herein-before been declared unlawful; or shall knowingly and wilfully insure, or contract for the insuring of any slaves, or any property of other subject matter engaged or employed in accomplishing any of the objects, or the contracts in relation to the objects, which objects and contracts have herein-before been declared unlawful; or shall wilfully and fraudulently forge or counterfeit any certificate, certificate of valuation, sentence, or decree of condemnation or restitution, copy of sentence or decree of condemnation or restitution, or any receipt (such receipts being required by this act, or any part of such certificate, certificate of valuation, sentence or decree of condemnation or restitution

any sentence or decree of condemnation or restitution, or receipt as aforesaid; or shall knowingly and wilfully utter or publish the same, knowing it to be forged or counterfeited, with intent to defraud His Majesty, or any other person or persons whatsoever, or any body politic or corporate; then, and in every such case the persons so offending, and their procurers, counsellors, aiders, and abettors, shall be liable, and shall be liable to be imprisoned for a term not exceeding 14 years, or shall be confined and kept to hard labour for a term not exceeding 5 nor less than 3 years, at the discretion of the court before whom such offenders shall be tried.—§ 10.

Officers, &c. serving on Board such Ships guilty of Misdemeanour.—And (except in such special cases, and for such special purposes as are by this act permitted) if any persons shall enter and embark on board, or contract for the entering and embarking on board of any ship, vessel, or boat, as petty officer, seaman, marine, or seaman, or in any other capacity not herein-before specifically mentioned, knowing that such ship, vessel, or boat is actually employed, or is in the same voyage, or upon the same occasion, in respect of which they shall so enter and embark on board, or contract so to do as aforesaid, intended to be employed in accomplishing any of the objects, or the contracts in relation to the objects, which objects and contracts have herein-before been declared unlawful; then, and in every such case, the persons so offending, and their procurers, counsellors, aiders, and abettors, shall be guilty of a misdemeanour only, and shall be punished by imprisonment for a term not exceeding 2 years.—§ 11.

Abolition of Slavery.—We have already alluded (vol. i. p. 413.) to the ever memorable act of 1833, for the ANNIHILATION OF SLAVERY throughout the British colonies. In enacting this celebrated statute, parliament endeavoured, and, we think, successfully, to reconcile the apparently conflicting claims of humanity and justice, by providing for the emancipation of the slaves, without prejudice to the just rights and claims of their proprietors. This was effected by assigning to the latter the sum of twenty millions sterling, which is to be distributed amongst them on their complying with the provisions of the act. This is the greatest sacrifice ever voluntarily made by any nation in vindication of the right of property. But it was not too great for the object in view; for had that right been violated in this instance, a precedent would have been set for its violation in others, and the consequences would have been most disastrous. The measure, in fact, reflects quite as much credit on the wisdom and honesty, as on the generosity, of the British nation.

See subjoin a full abstract of such parts of this important statute as seem to be of general interest. See 1 & 4 WILL. 4. c. 73, FOR THE ABOLITION OF SLAVERY THROUGHOUT THE BRITISH COLONIES; for promoting the Industry of the manumitted Slaves; and for compensating the Persons hitherto entitled to the Services of such Slaves.

Slaves to become apprenticed Labourers from 1st of August, 1834.—After reciting, that it is expedient that the slaves in the British colonies should be manumitted and set free on compensation being made to those entitled to their services, the act goes on to declare, that from and after the 1st day of August, 1834, all persons who, in conformity with the laws now in force in the said colonies, shall, on or before the 1st day of August, 1834, have been duly registered as slaves in any such colony, and who, on the said 1st day of August, 1834, shall be actually within any such colony, and who shall by such registries appear to be, on the said 1st day of August, 1834, of the full age of 6 years or upwards, shall by force and virtue of this act, and without the previous execution of any indenture of apprenticeship, or other deed or instrument for that purpose, become and be apprenticed labourers; provided that, for the purposes aforesaid, every slave engaged in his ordinary occupation on the seas shall be deemed and taken to be within the colony to which such slave shall belong.—§ 1.

Who entitled to Services of the Slave.—During the continuance of the apprenticeship of any such labourer, such person or persons shall be entitled to the services of such labourer as would for the time being have been entitled to his or her services as a slave if this act had not been made.—§ 2.

All Slaves brought into U. K. with Consent of Possessors, free.—All slaves who may at any time previous to the passing of this act have been brought with the consent of their possessors, and all apprenticed labourers who may hereafter with the like consent be brought, into any part of the United Kingdom, shall from and after the passing of this act be absolutely and entirely free to all intents and purposes whatsoever.—§ 3.

Apprenticed Labourers to be divided into predial attached, predial unattached, and non-predial.—And whereas it is expedient that such apprenticed labourers should, for the purposes herein-after mentioned, be divided into 3 distinct classes; the first consisting of predial apprenticed labourers attached to the soil, and comprising all persons who in their state of slavery were usually employed in agriculture, or in the manufacture of colonial produce or otherwise, upon lands belonging to their owners; the second consisting of predial apprenticed labourers not attached to the soil, and comprising all persons who in their state of slavery were usually employed in agriculture, or in the manufacture of colonial produce or otherwise, upon lands not belonging to their owners; and the third consisting of non-predial apprenticed labourers, and comprising all apprenticed labourers not included within either of the 2 preceding classes; be it therefore enacted, that such division shall be carried into effect in such manner and form, and subject to such rules and regulations, as shall for that purpose be established by such acts of assembly, ordinances, or orders in council as are herein-after mentioned; provided always, that no person of the age of 12 years and upwards shall be included in either of the said 3 classes of predial apprenticed labourers, unless such person shall for 12 calendar months at the least next before the passing of this act have been habitually employed in agriculture or in the manufacture of colonial produce.—§ 4.

Apprenticeship of the predial Labourers limited.—No person who, by virtue of this act, or of any act of assembly, ordinance, or order in council, shall become a predial apprenticed labourer, whether attached or not to the soil, shall continue in such apprenticeship beyond the 1st day of August, 1840; and during such apprenticeship, no such predial apprenticed labourer shall be bound or liable to perform any labour in the service of his or her employer or employers for more than 45 hours in one week.—§ 5.

Apprenticeship of the non-predial Labourers.—No person who, by virtue of this act, or of any act of assembly, ordinance, or order in council, shall become a non-predial apprenticed labourer, shall continue in such apprenticeship beyond the 1st day of August, 1838.—§ 6.

Labourer may be discharged by his Employer.—If before such apprenticeship shall have expired, the person or persons entitled during the remainder of any such term in the services of such apprenticed labourer shall be desirous to discharge him or her from such apprenticeship, it shall be lawful for such person or persons so to do by deed or instrument; which deed or instrument shall be in such form, and shall be executed and recorded in such manner, and with such solemnities, as shall be prescribed under authority; provided that, if any person so discharged from apprenticeship by voluntary act as

proper rules and regulations should be established for ascertaining, with reference to each appren-
ticed labourer, to what class he or she belongs, and for determining the manner in and the solemnities
with which the voluntary discharge of any apprenticed labourer may be effected, and for prescribing
the manner in and the solemnities with which the purchase by any apprenticed labourer of his or her
freedom from such apprenticeship, without, or in opposition, if necessary, to, the consent of those
entitled to his or her services, shall be effected, and how the necessary apprenticeship of the future
of such services shall be made, and how and to whom the amount of such apprenticeship shall
be paid, and applied, and in what manner and by whom the discharge shall be given, executed, and
recorded; and it is also necessary, for the preservation of peace throughout the said colonies, that
proper regulations should be established for the maintenance of order and good discipline amongst
the said apprenticed labourers, and for insuring the punctual discharge of the services due by them
to their employers, and for the prevention and punishment of indolence, or the neglect or improper
performance of work by any apprenticed labourer, and for enforcing the due performance by such
labourer of any contract into which he or she may voluntarily enter for any hired service during the
time in which he or she may not be bound to labour for his or her employer, and for the prevention and
punishment of indolence and insubordination on the part of such apprenticed labourers towards
their employers, and for the prevention and punishment of vagrancy, or of any conduct on the part of
any such apprenticed labourers injuring or tending to the injury of the property of any employer, and
for the suppression and punishment of any riot or combined resistance of the laws on the part of such
apprenticed labourers, and for preventing the escape of such apprenticed labourers, during their term
of apprenticeship, from the colonies to which they may belong; and whereas it will also be necessary
for the protection of such apprenticed labourers, that various regulations should be framed and esta-
blished in the said colonies for securing punctuality and method in supplying them with food, clothing,
bedding, medicines, medical attendance, and such other maintenance and allowances as they are enti-
tled to receive, and for regulating the amount and quality of all such articles in cases where the laws
at present existing may not have made any regulation or any adequate regulation for that purpose; and
it is also necessary that proper rules should be established for the prevention and punishment of any
fraud which might be practised, or of any omissions or neglects which might occur, respecting the
quantity or the quality of the supplies so to be furnished, or respecting the periods for the delivery of
the same; and whereas it is necessary, in those cases in which the food of any such predial appren-
ticed labourers as aforesaid may either wholly or in part be raised by themselves by the cultivation of
ground set apart and allotted for that purpose, that proper regulations should be made and established
as to the extent of such grounds, and as to the distance at which such grounds may be so allotted from
the ordinary place of abode of such predial apprenticed labourers, and respecting the deductions to be
made from the cultivation of such grounds from the annual time during which such predial appren-
ticed labourers are declared liable to labour; and whereas it may also be necessary, by such regula-
tions, to secure to apprenticed labourers the enjoyment for their own benefit of that portion of their
time during which they are not required to labour in the service of their respective employers, and for
preventing excesses in the computation of the time during which such labourers are required to labour
in the service of their employers; and it is also necessary that provision should be made for prevent-
ing the imposition of task-work on any apprenticed labourer without his or her free consent to under-
take the same; but it may be necessary by such regulations in certain cases to require and provide for
the acquiescence of the minority of the predial apprenticed labourers attached to any plantation or
estate in the distribution and apportionment amongst their whole body of any task-work which the
majority of them shall be willing and desirous collectively to undertake; and it is also necessary that
regulations should be made respecting any voluntary contracts into which any apprenticed labourers
may enter with their respective employers or with any other person for hired service for any future
period, and for limiting the greatest period of time to which such voluntary contract may extend, and
for enforcing the punctual performance of such contracts on the part both of such labourers and of
those engaging for their employment and hire; and it is also necessary that regulations should be made
for the prevention or punishment of any cruelty, injustice, or other wrong or injury done to or inflicted
upon any such apprenticed labourers by those entitled to their services; and it is also necessary that
proper regulations should be made respecting the manner and form in which indentures of appren-
ticeship shall be made on behalf of children, and respecting the registering and preservation of such inden-
tures; and whereas it is also necessary that provision should be made for insuring promptitude and
despatch, and for preventing unnecessary expense, in the discharge by the justices of the peace of the
jurisdiction and authorities committed to them, and for enabling such justices to decide in a summary
way such questions as may be brought before them in that capacity, and for the division of the colonies
into districts for the purposes of such jurisdiction, and for the frequent and punctual visitation
by such justices of the apprenticed labourers within their respective districts; and it is also necessary
that regulations should be made for indemnifying and protecting such justices of the peace in the up-
right execution and discharge of their duties; and whereas such regulations could not without great
inconvenience be made except by the respective governors, councils, and assemblies, or other local
regulations of the said respective colonies, or by his Majesty, with the advice of his privy council, in
reference to those colonies to which the legislative authority of his Majesty in council extends; he it
therefore enacted and declared, that nothing in this act contained extends or shall be construed to
intend to prevent the enactment by the respective governors, councils, and assemblies, or by such
other local legislatures as aforesaid, or by his Majesty, with the advice of his privy council, of any
such acts of general assembly, or ordinances, or orders in council as may be requisite for making
and establishing such rules and regulations, or for carrying the same into full and complete effect;
provided nevertheless, that it shall not be lawful for any such governor, council, and assembly, or
for any local legislature, or for his Majesty in council, to make or establish any enactment, regulation,
provision, rule, or order in anywise repugnant or contradictory to this present act, but that every such
enactment, regulation, &c. shall be and is declared to be absolutely null and void.—§ 16.

Such Colonial Acts may not authorize the Whipping or Punishment of the Labourer.—It shall not be
lawful for any such governor, &c., or other colonial legislature, or for his Majesty in council, by any
such act, ordinance, &c., to authorize any one entitled to the services of any apprenticed labourer, or
any person or persons other than justices of the peace holding special commissions as aforesaid, to
punish any apprenticed labourer for any offence committed or alleged to have been committed, by the
whipping, beating, or imprisonment of his or her person, or by any other personal correction or pun-
ishment whatsoever, or by any addition to the hours of labour herein-before limited; nor to authorize
any court, judge, or justice to punish any apprenticed labourer, being a female, for any offence by her
committed, by whipping or beating her person; and that every enactment, regulation, &c. for any
such purpose shall be hereby declared to be absolutely null and of no effect; provided always, that nothing
in this act contained doth or shall extend to exempt any apprenticed labourer from the operation of
any law or police regulation in force for the prevention or punishment of any offence, such law or
police regulation being in force against and applicable to all persons of free condition.—§ 17.

The next 3 sections provide that none but special justices, holding commissions as aforesaid, shall
act in execution of this act, or interfere between apprenticed labourers and their employers; but re-
serving to the supreme courts such powers in relation hereto as may now be vested in them.

It shall appear that any
s have been registered and

held in slavery in any colony mentioned in this act contrary to law, in every such case the commis-
sioners shall deduct from the sum to be appropriated as compensation to the proprietors in such colony,
such sums as shall correspond with the estimated value and number of the persons so illegally regis-
tered and held in slavery; and all such sum or sums which may be deducted as herein-before provided
shall be applied towards defraying the general expenses of the commission: provided always, that for
the purpose of ascertaining in what cases such deductions shall be made, every question arising in any
particular respecting the servile condition of any persons registered as slaves shall be inquired of and
determined by the commissioners to be appointed under this act, according to such rules of legal pre-
sumption and evidence as are or shall be established by any law in force or which shall be in force in
any such colony.— 45.

Commissioners to institute Inquiries, &c.—It shall be the duty of said commissioners, and they are
hereby required, to institute a full and exact inquiry into all the circumstances connected with each of
the said several colonies which in their judgment ought, in justice and equity, to regulate or affect the
apportionment within the same of that part of the general compensation fund which shall be assigned
to each of the said colonies; and especially such commissioners shall have regard to the relative value
of special slaves and of unattached slaves in every such colony; and they shall distinguish such slaves,
whether predaial or unattached, into as many distinct classes as, regard being had to the circumstances
of each colony, shall appear just; and such commissioners shall, with all practicable precision, ascer-
tain and fix the average value of a slave in each of the classes into which the slaves in any such colony
shall be divided; and the commissioners shall also inquire and consider of the principles according to
which the compensation to be allotted in respect to any slave or body of slaves ought, according to the
rules of law and equity, to be distributed amongst persons who, as owners or creditors, legatees or
assignees, may have any joint or common interest in any such slave or slaves, or may be entitled to
an interest in such slave or slaves, either in possession, remainder, reversion, or expectancy; and
the commissioners shall also inquire and consider of the principles and manner in which provision might
be most effectually made for the protection of any interest in any such compensation money which may
belong to or be vested in any married women, infants, lunatics, or persons of insane or unsound mind,
or persons beyond the seas, or labouring under any other legal or natural disability or incapacity, and
according to what rules, and in what manner, and under what authority, trustees should, when neces-
sary, be appointed for the safe custody, for the benefit of any person or persons, of such compensation
fund, and of any part thereof, and for regulating the duties of such trustees, and providing them with a
fair and reasonable indemnity; and the commissioners shall also inquire and consider upon what
principles, according to the established rules of law and equity in similar cases, the accession to such
funds should be regulated upon the death of any person entitled thereto who may die intestate; and
the commissioners are also required to consider of any other question which it may be necessary to
investigate in order to establish just and equitable rules for the apportionment of such compensation
money amongst the persons seized of, or entitled to, or having any mortgage, charge, incumbrance,
or lien upon, or any claim to, or right or interest in, any slave or slaves to be manumitted
aforesaid, at the time of such their manumission; and having made all such inquiries, and having
taken into all such matters and things as aforesaid into their consideration, the said commissioners shall
draw up and frame such general rules, regard being had to the laws and usages in force in each colony
respectively, as to them may seem best adapted in each colony for securing the just and equitable dis-
tribution of the said funds amongst or for the benefit of the several persons aforesaid, and for the pro-
tection of such funds, and for the appointment and indemnification of such trustees as aforesaid; and
such general rules, when framed, and agreed upon by the commissioners, shall be subscribed with
their respective hands and seals, and transmitted to the president of council, to be laid before his Ma-
jesty; and so from time to time as often as any further general rules should be so framed and agreed
to for the purposes aforesaid, or any of them.— 47.

Acts to be published in the London Gazette.—The general rules to be transmitted as aforesaid to the
said Lord President shall be forthwith published in the London Gazette on 2 several occasions at least,
together with a notice that all persons interested in or affected by them may, by a time to be in such
notice limited, appeal against any such rules to his Majesty in council; and it shall be lawful for the
 Lords of his Majesty's privy council, or for any 3 or more of them, by any further notice or notices
 published in the London Gazette, to postpone at the time for receiving any such appeal.— 48.

Section 48. enacts that his Majesty in council may hear such appeals, and thereupon confirm or dis-
allow any general rule so appealed against.

Section 50. enacts that, in a absence of appeal, his Majesty in council may confirm, rescind, or amend
such rules.

The remaining sections respect the enrolment of rules, and the proceedings under appeal to his Ma-
jesty in council; the mode in which sums awarded by the commissioners are to be paid, &c.

Foreign Slave Trade.—At the congress of Vienna, in 1814, the plenipotentiaries of the
great powers agreed to a declaration that the slave trade was "repugnant to the principles
of humanity and of universal morality; and that it was the earnest desire of their sovereigns
to put an end to a scourge which had so long desolated Africa, degraded Europe, and afflicted
humanity."

But notwithstanding this memorable declaration, the immediate abolition of the trade was
not agreed to. France was allowed to continue it for five years. It is, besides, abundantly
certain that, though the trade nominally ceased in 1819, it has since been clandestinely car-
ried on to a great extent in French ships, if not with the connivance, at least without much
opposition, on the part of the late government of France. There is now, however, reason to
hope that it will be effectually suppressed; for according to a recent arrangement (Nov. 30,
1831) made with his Majesty Louis-Philippe, the right of search is reciprocally conceded,
within certain limits, by the French and English; so that French ships suspected of being
engaged in the trade may be stopped by British cruisers.

Considering the efforts Great Britain made in behalf of Spain and Portugal, and the influ-
ence she might have been supposed to have acquired with the restored monarchs of those
countries, it may well excite astonishment that our negotiators (whether from the intract-
ability of those with whom they had to deal, or from want of address and firmness on their
parts, we leave it to others to decide) were unable to prevail on these powers to renounce
the trade till after the lapse of a considerable period. They succeeded, indeed, in inducing
them to exempt that portion of the African coast north of the Equator from their piratical
attacks; and for this concession, and damages alleged to have been sustained by their slave

ships from our cruisers, Great Britain has paid them no less than 1,230,000*l.*—(See *SISMA LORNE.*)

The Spanish slave trade was to have finally ceased, according to the stipulations in the treaty between Spain and this country of the 5th of July and 28th of August, 1814, in 1820. But within these 2 years, and, perhaps, at this very moment, slave ships have been publicly fitted out from Cuba, and immense numbers of slaves have been imported into that island, with the open connivance of authorities. A mixed commission court, consisting of British and Spanish commissioners, has been established at Havannah, for the condemnation of vessels proved to have been engaged in the slave trade. But we are officially informed by Mr. Macleay, one of the commissioners, that since the establishment of the court no seizure of a slave vessel has ever taken place, but on the interference and denunciation of the British commissioners; and even then *such seizure has only been made, to be instantly followed by a perfect acquittal in the Spanish tribunals!*"—(Parl. Paper, No. 120. Sess. 1831, p. 53.)

Slaves were freely imported in immense numbers into Brazil, till February, 1830, when the trade was to cease, conformably to the convention entered into with this country on the 23d of June, 1826.—(See *RIO DE JANEIRO.*) But whether the clandestine and illegal, as well as the open and legitimate importation of slaves, be at an end, is more than we can undertake to say.

On the whole, we are afraid that nothing short of a declaration by the great powers, making the slave trade piracy, will be sufficient entirely to rid humanity of its guilt and horrors.

(*Distribution of Slave Compensation.*—The Commissioners for the apportionment of the sum of 20,000,000*l.* granted by parliament as compensation to slave owners, under the act 3 & 4 Will. 4. cap. 73, have issued the following table. It shows the average value of a slave in each colony; the number of slaves in each by the last registration; the total value of the slaves, supposing the annual value of each were realized; and the proportion of the 20,000,000*l.* to which each colony is entitled.

Colony.	Average Value of a Slave from 1825 to 1830.			Number of Slaves by the last Registration in this Country.	Relative Value of the Slaves.			Proportion of the 20,000,000 <i>l.</i> to which each Colony is entitled.

It was by an act of Congress, passed on the 2d of March, 1807, that the importation of slaves into the United States was prohibited, under severe penalties, after the 1st of January, 1808, this being the earliest day on which the prohibition was allowed, by the constitution of the general government, to take effect. By the act of the 20th of April, 1818, those penalties were increased, and the citizens of the United States were prohibited from being in any way concerned in the slave trade. On the 3d of March, 1819, the president was authorized to employ the armed vessels of the United States to enforce the acts of Congress prohibiting the slave trade; and all vessels unlawfully engaged in the transportation of negroes, mulattoes, or persons of colour, were rendered liable to seizures. At length, by the act of May 15th, 1820, entitled "An act to continue in force 'An act to protect the commerce of the United States and punish the crime of piracy,'" it was enacted,

"That if any citizen of the United States, being of the crew or ship's company of any foreign ship or vessel engaged in the slave trade, or any person whatever, being of the crew or ship's company of any ship or vessel, owned in whole or in part, or navigated for, or in behalf of, any citizen or citizens of the United States, shall land, from any such ship or vessel, and, on any foreign shore, seize any negro or mulatto, not held to service or labour by the laws of either of the states or territories of the United States, with intent to make such negro or mulatto a slave, or shall decoy, or forcibly bring on board, or shall receive, such negro or mulatto on board any such ship or vessel, with intent as aforesaid, such citizen or person shall be adjudged a pirate; and, on conviction thereof, before the circuit court of the United States for the district wherein he may be brought or found, shall suffer death.

And also,

"That if any citizen of the United States, being of the crew or ship's company of any foreign ship or vessel engaged in the slave trade, or any person whatever, being of the crew or ship's company of any ship or vessel, owned wholly or in part, or navigated for, or in behalf of, any citizen or citizens of the United States, shall forcibly confine or detain, or aid and abet in forcibly confining or detaining, on board such ship or vessel, any negro or mulatto not held to service by the laws of either of the states or territories of the United States, with intent to make such negro or mulatto a slave, or shall, on board any such ship or vessel, offer or attempt to sell, as a slave, any negro or mulatto not held to service as aforesaid, or shall, on the high seas, or any where on tide water, transfer or deliver over,

SMALTZ, or **SMALT** (Ger. *Schmalz*; Du. *Smalt*; Fr. *Small*; It. *Smalto azzurro*, *Cosentino*; Sp. *Esmalte*, *Azul azur*; Rus. *Lasor*), an oxide of cobalt, melted with siliceous earth and potash. It is a sort of glass, of a beautiful deep blue colour; and being ground very fine, is known by the name of powder blue. The colour of smaltz is not affected by fire; and it is consequently in great demand in the painting of earthenware. It is also employed in the colouring of paper, and for other purposes in the arts. Beckmann has proved that the process used in the preparation of smaltz was invented about the end of the 15th or the beginning of the 16th century; and that the blue glass of the ancients owes its colour, not to the presence of cobalt or of smaltz, but to that of iron.—(*Hist. of Inventions*, vol. ii. art. *Cobalt*.)

Smaltz is principally manufactured in Germany and Norway. Of 391,523 lbs. imported into Great Britain in 1831, 206,840 lbs. came from Norway, 160,705 from Germany, and 23,958 from the Netherlands. At an average of 1831 and 1832, the entries of smaltz for home consumption amounted to 24,098 lbs. a year. The duty on smaltz has recently been reduced from 6d. to 4d. per lb.

SMUGGLING, the offence of defrauding the revenue by the introduction of articles into consumption, without paying the duties chargeable upon them. It may be committed indifferently either upon the excise or customs revenue.

Origin and Prevention of Smuggling.—This crime, which occupies so prominent a place in the criminal legislation of all modern states, is wholly the result of vicious commercial and financial legislation. It is the fruit either of prohibitions of importation, or of oppressively high duties. It does not originate in any depravity inherent in man; but in the folly and ignorance of legislators. A prohibition against importing a commodity does not take away the taste for it; and the imposition of a high duty on any article occasions a universal desire to escape or evade its payment. Hence the rise and occupation of the smuggler. The risk of being detected in the clandestine introduction of commodities under any system of fiscal regulations may always be valued at a certain average rate; and wherever the duties exceed this rate, smuggling immediately takes place. Now, there are plainly but two ways of checking this practice,—either the temptation to smuggle must be diminished by lowering the duties, or the difficulties in the way of smuggling must be increased. The first is obviously the more natural and efficient method of effecting the object in view; but the second has been most generally resorted to, even in cases where the duties were quite excessive. Governments have uniformly almost consulted the persons employed in the collection of the revenue with respect to the best mode of rendering taxes effectual; though it is clear that the interests, prejudices, and peculiar habits of such persons utterly disqualify them from forming a sound opinion on such a subject. They cannot recommend a reduction of duties as a means of repressing smuggling and increasing revenue, without acknowledging their own incapacity to detect and defeat illicit practices; and the result has been, that, instead of ascribing the prevalence of smuggling to its true causes, the officers of customs and excise have almost universally ascribed it to some defect in the laws, or in the mode of administering them, and have proposed repressing it by new regulations, and by increasing the number and severity of the penalties affecting the smuggler. As might have been expected, these attempts have, in the great majority of cases, proved signally unsuccessful. And it has been invariably found, that no vigilance on the part of the revenue officers, and no severity of punishment, can prevent the smuggling of such commodities as are either prohibited or loaded with oppressive duties. The smuggler is generally a popular character; and whatever the law may declare on the subject, it is quite ludicrous to expect that the bulk of society will ever be brought to think that those who furnish them with cheap brandy, Geneva, tobacco, &c. are guilty of any very heinous offence.

"To pretend," says Dr. Smith, "to have any scruple about buying smuggled goods, though a manifest encouragement to the violation of the revenue laws, and to the perjury which almost always attends it, would, in most countries, be regarded as one of those pedantic pieces of hypocrisy, which, instead of gaining credit with any body, seems only to expose the person who affects to practise them to the suspicion of being a greater knave than most of his neighbours. By this indulgence of the public, the smuggler is often encouraged to continue a trade, which he is thus taught to consider as, in some measure, innocent; and when the severity of the revenue laws is ready to fall upon him, he is frequently disposed to defend with violence what he has been accustomed to regard as his just property; and from being at first rather imprudent than criminal, he, at last, too often becomes one of the most determined violators of the laws of society."—(*Wealth of Nations*, vol. iii. p. 491.)

To create by means of high duties an overwhelming temptation to indulge in crime, and then to punish men for indulging in it, is a proceeding completely subversive of every prin-

Importation of slaves into January, 1805; this being of the general government, increased, and the citizens the slave trade. On the 3d of the United States is co- lawfully engaged in the able to seizure. At length, to protect the commerce of provision for punishing

any of any foreign ship or or ship's company of any any citizen or citizen of ign shore, seize any negro or territories of the United or forcibly bring or carry, with intent to convert the of, before the circuit court shall suffer death.

any of any foreign ship or crew or ship's company of of, any citizen or citizen ofly confining or detaining, the laws of either of the of mulatto in a slave, or ship, negro or mulatto not held to, transfer or deliver over,

principle of justice. It revolts the natural feelings of the people; and teaches them to feel an interest in the worst characters—for such smugglers generally are—to espouse their cause and avenge their wrongs. A punishment which is not proportioned to the offence, which does not carry the sanction of public opinion along with it, can never be productive of any good effect. The true way to put down smuggling is to render it unprofitable; to diminish the temptation to engage in it; and this is not to be done by surrounding the coasts with cordons of troops, by the multiplication of oaths and penalties, and making the country the theatre of ferocious and bloody contests in the field, and of perjury and chicanery in the courts of law; but by repealing prohibitions, and reducing duties, so that their collection may be enforced with a moderate degree of vigilance; and that the forfeiture of the article may be a sufficient penalty upon the smuggler. It is in this, and in this only, that we must seek for an effectual check to illicit trafficking. Whenever the profits of the fair trade become nearly equal to those of the smuggler, the latter is forced to abandon his hazardous profession. But so long as prohibitions or oppressively high duties are kept up, or, which is in fact, the same thing, so long as *high bounties* are held out to encourage the adventuresome, the needy, and the profligate, to enter on this career, we may be assured that armies of soldiers and custom-house officers, backed by the utmost severity of the revenue laws, will be insufficient to hinder them.

Smuggling in France and England.—The recently printed *Report of Messrs. Villiers and Bowring*, on the commercial relations between France and Great Britain, contains some very curious and instructive details as to the smuggling carried on between them. They afford the most satisfactory and convincing proofs of the incapacity of restrictions and prohibitions to secure a real monopoly of any extensive market; and show that their principal effect is to promote illicit traffic; and to make that ingenuity and invention be exerted in devising means to defeat and elude the law, which, under a more liberal system, would be exerted to improve the methods of production. The introduction of prohibited goods is more easily effected by land than by sea; and smuggling into France is, in consequence, carried on principally through her north and east frontiers. Considerable quantities of prohibited or overtaxed goods are, however, introduced by sea. A regular tariff of risks is established; and persons of undoubted solidity contract, for certain premiums, which for the most part are abundantly moderate, to deliver any prohibited article in any part of France.

Owing to the system of *colrois*, or of the collection of duties at the gates of large towns, where an inspection of the goods may also be made, the cost of smuggling into Paris and other populous places is considerably greater than that of smuggling into villages. On an average, however, most foreign goods may be delivered in Paris at a charge of from 25 to 30 per cent. *ad valorem* on their real value.

Notwithstanding the advantage of a sea frontier, a coast guard, and a most efficient Custom-house establishment, the facts embodied by Messrs. Villiers and Bowring in their *Report* show that smuggling is in quite as flourishing a condition on the shores of England as on the land frontier of France. The premium on the illicit introduction amongst us of prohibited or overtaxed goods varies from 15 to 40 per cent. *ad valorem*, according to the description of the article. The parties employing the smugglers run no risk. The latter, or their agents, attend regularly upon 'Change; and "it is their constant practice to deposit the value of the goods confided to their care in a banker's acceptance, as a security to the owner!"—(*Report*, p. 54.) It could hardly, indeed, have been otherwise. Brandy, which is the favourite article for smuggling speculations, may be bought for shipment in France at from 3s. 6d. to 5s. a gallon. It is highly popular amongst us; but instead of admitting it to consumption under a moderate duty, or even under the high duty of 8s. or 10s., we load it with the oppressive and exorbitant duty of 22s. 6d.; that is, with a duty varying from 450 to 650 per cent. *ad valorem*! Had those, who originally imposed this duty, and those by whom it has been kept up, been deeply interested in smuggling adventures, their conduct would have been intelligible; but, as no such excuse can be made for them, it has been in the last degree irrational and absurd. The temptation to the illicit introduction of brandy, occasioned by the exorbitancy of the duty, has roused all the energies of the smuggler, who has defeated the utmost vigilance of the revenue officers, and eluded or defied the multiplied pains and penalties of the customs laws! Messrs. Villiers and Bowring estimate, from a comparison of the shipments of different articles from France for England with the imports into the latter, and other authentic data, that the total amount of duties evaded by the fraudulent importation of overtaxed French articles (exclusive of tobacco, whole cargoes of which are sometimes introduced into Ireland) into this country amounts to about 800,000*l.* a year.—(p. 54.) Of this sum, the loss on brandy makes by far the largest item; and is said to be "*considerably more than 500,000*l.**"—(p. 57.) It is plain, therefore, that, as a means of raising revenue, this system is signally unsuccessful; but it is so in a far greater degree than appears even from the above statements: for, in addition to the vast quantity of overtaxed articles clandestinely introduced, and on which a reasonable duty would be paid, it occasions the overloading of the market with spurious, counterfeit articles, by which the public health as well as the revenue is materially injured. Nor is this all. In

Vol. II.—

to render oppressive duties productive of any revenue, it is necessary to organise and keep constantly on foot a very numerous and costly customs establishment. It is abundantly certain that we lose, by the clandestine importation of brandy, geneva, and tobacco, from France, Belgium, and Holland, above 1,500,000*l.* a year of revenue; and it is admitted, on all hands, that, but for the oppressive duties on these articles, a saving of 500,000*l.* a year might be effected in the customs department. Nothing, therefore, can be more futile than to attempt vindicating exorbitant duties on the pretence of their being required to keep up the revenue. In point of fact, such duties are about the most inefficient engines that can be devised for its reduction. The revenue derived from coffee has been trebled by reducing the duty from 1*l.* 7*d.* to 6*d.* per lb.—(see *COFFEE*); the revenue derived from British spirits was materially increased by reducing the duty from 5*s.* 6*d.* to 2*s.* 6*d.* the wine gallon—(see *STARRS*); and Mr. Pitt increased the duty derived from brandy, geneva, &c. in 1786, not by adding to, but by taking 50 per cent. from, the duties with which they had previously been burdened! There cannot, indeed, be the shadow of a doubt that the revenue derived from brandy and geneva would be very largely increased by reducing the duties to 8*s.* or 10*s.* a gallon. A measure of this sort, coupled as it ought to be with a reduction of the duties on tobacco—(see *TOSACCO*)—would do what neither coast guards, preventive services, revenue cruisers, or customs acts will ever do,—it would go far to annihilate smuggling; and would enable the services of a large number of revenue officers to be dispensed with.

But the demoralising influence of an extensive smuggling system is the worst consequence of oppressive duties and prohibitions. They make the smuggler be regarded as a public benefactor, and procure for him the sympathy of all classes, and the strenuous support of those in the lower walks of life. No one acquainted with the state of the peasantry in extensive districts of Kent and Sussex, will believe that it is easy to exaggerate the evils that spring from this source. The whole body of labourers may be said to be in combination with the smugglers; and numbers of them are every now and then withdrawn from their usual employments to assist in their desperate adventures. Lawless, predatory, and ferocious habits are thus widely diffused; and thousands, who, but for this moral contamination, would have been sober and industrious, are trained to despise and trample on the law, and to regard its functionaries as enemies whom it is meritorious to waylay and assault.

Such being the operation and result of those oppressive duties and absolute prohibitions to which smuggling owes its origin, it is not surely too much to hope that the former may be modified, and the latter repealed. When this has been done, smuggling will cease; but not at the same moment sooner. Till then it will continue, in despite of all the impotent efforts that may be made for its suppression, to scatter its seeds, and spread its roots on all sides; impoverishing the fair and enriching the illicit dealer—emptying the public treasury of the state, and filling its goals with criminals!

Smuggling by Dogs.—The following extract from the *Report of Messrs. Villiers and Bowring* develops one of those ingenious devices by which mischievous customs laws are now to be defeated.

"The director of the Custom-house made, on the 30th of July, 1831, some very curious statements to the minister of finance on the subject of the fraudulent introduction of articles by means of dogs. He says, that since the suppression of smuggling by horses, in 1825, dogs have been employed; that the first attempts were made in the neighbourhood of Valenciennes, and that it afterwards spread to Dunkirk and Charleville; that it has since extended to Thionville and Strasburgh; and, last of all, in 1828, to Besançon.

"In 1823, it was estimated that 100,000 kilogrammes of goods were thus introduced into France; in 1825, 187,315; and in 1826, 2,100,000 kilogrammes; all these estimates being reported as rather under the mark: the calculation has been made at 2½ kilogrammes 'pro rata' per dog. The dogs sometimes carry 10 kilogrammes, and sometimes even 13. The above estimate supposes that 1 dog in 10 in certain districts, and in others 1 in 20, is killed; but these calculations must necessarily be very vague. In the opinion of many of the Custom-house officers, not more than 1 dog in 75 is destroyed, even when notice has been given, and the dogs are expected.

"Tobacco and colonial produce are generally the objects of this illicit trade; sometimes cotton twist and manufactures. In the neighbourhood of Dunkirk dogs have been taken with burdens of the value of 600, or 800, and even 1,200 francs. Publications hostile to the government have not unfrequently been so introduced.

"The dogs which are trained to these 'dishonest habits' are conducted in packs to the foreign frontiers; they are kept without food for many hours; they are then beaten and laden, and at the beginning of the night started on their travels. They reach the abodes of their masters, which are generally situated 2 or 3 leagues from the frontiers, as speedily as they can, where they are sure to be well treated and provided with a quantity of food. It is said they do much mischief by the destruction of agricultural property, inasmuch as they usually take the most direct course across the country. They are dogs of a large size for the most part.

"The *Report* states, that these carrier dogs, being so tormented by fatigue, hunger, and ill usage, and hunted by the Custom-house officers in all directions, are exceedingly subject to madness, and frequently bite the officers, one of whom died in consequence in 1829. They have also been trained to attack the Custom-house officers in case of interference."—(p. 47.)

Various efforts have been made to suppress this species of smuggling, but hitherto without success. It is ludicrous, indeed, to suppose, seeing the vast extent of the land frontier of France, that any means should ever be adopted capable of excluding cheap foreign products in extensive demand. Nothing short of surrounding the country by Bishop Berkley's wall of brass could accomplish such an object. The director general of the French customs says,

that smuggling is carried on to an extent that is *vraisment effrayante*; and he may truly say so, when it is estimated that English bobbinet, though prohibited, is introduced into France to the extent of 10,000,000 fr., or 400,000*l.* a year; cotton twill, and various other prohibited articles of British produce and manufacture, are also everywhere met with.

Thus it is that the two greatest and most civilised nations of Europe, by upholding vicious and destructive systems of commercial and financial legislation, mutually injure each other. Franco and England, by their proximity, and the difference and variety of their productions, are fitted to carry on a far more extensive and beneficial commerce than is carried on by any other two nations. But owing to their jealousy of each other's advancement, and the prevalence of unfounded theories as to the causes of national wealth, their intercourse has been subjected to the most oppressive fetters, and confined within the narrowest limits; most part too, of what is actually carried on, has been diverted into illegitimate channels; so that what would, if left to itself, have been the most prolific source of wealth, and the most powerful incentive to genius and invention, has been made principally productive of crime and demoralisation. This conduct is as much opposed to their duty as to their interest. *Hominum hominum causâ sunt generati, ut ipsi inter se aliis prodesse possint. . . Sed ut magna utilitatis adipiscimur conspiratione hominum ac consensu, sic nulla tam detestabilis peccati est, quæ non homini ab homine nascatur.*—(Cic. De Officiis, lib. ii. c. 5.)

Law as to Smuggling in England.—The penalties imposed on illicit dealing in commodities subject to duties of excise have been specified in the articles on such commodities. The following formidable statute, with its multiplied provisions and penalties, refers entirely to customs duties. The importance of the subject has induced us to give it nearly entire.

ACT 3 & 4 WILL. 4. c. 53., FOR THE PREVENTION OF SMUGGLING.

VESSELS AND BOATS.

Commencement of the Act.—First of September, 1833.—§ 1.

Certain Vessels found within certain Distances of the U. K. to be forfeited.—If any vessel not being square-rigged, or any boat, belonging in the whole or in part to his Majesty's subjects, or having in the persons on board subjects of his Majesty, shall be found or discovered to have been within 100 leagues of the coast of the United Kingdom; or if any vessel belonging in the whole or in part to his Majesty's subjects, or having in the persons on board subjects of his Majesty, or any foreign vessel not being square-rigged, or any foreign boat, in which there shall be 1 or more subjects of his Majesty, shall be found or discovered to have been within 4 leagues of that part of the United Kingdom which lies between the North Foreland on the coast of Kent, and Beachy Head on the coast of Sussex, or within 1 league of any other part of the coast of the United Kingdom; or if any foreign vessel or boat shall be found or discovered to have been within 1 league of the coast of the United Kingdom; or if any vessel or boat shall be found or discovered to have been within 1 league of the islands of Guernsey, Jersey, Alderney, Sark, or Man respectively, or within any bay, harbour, river, or creek, or of belonging to any one of the said islands; any such vessel or boat so found or discovered, having on board or in any manner attached thereto, or having had on board or in any manner attached thereto, or conveying or having conveyed in any manner, any spirits not being in a cask or package containing 40 gallons at the least, or any tea exceeding 6 lbs. weight in the whole, or any tobacco or snuff not being in a cask or package containing 450 lbs. weight at least, or being packed separately in any manner within any cask or package, or any cordage or other articles adapted and prepared for slinging or sinking small casks, or any casks or other vessels whatsoever of less size or content than 40 gallons, of the description used for the smuggling of spirits, then and in every such case the said spirits, tea, tobacco, or snuff, together with the casks or packages containing the same, and the cordage or other articles, casks, and other vessels of the description aforesaid, and also the vessel or boat, shall be forfeited.—§ 2.

Any Vessel or Boat arriving within any Port of the U. K. having prohibited Goods on board, forfeited, unless there was no Want of Care in the Master or Owner.—If any vessel or boat whatever shall arrive or shall be found or discovered to have been within any port, harbour, river, or creek of the United Kingdom, not being driven thereto by stress of weather or other unavoidable accident, having on board or in any manner attached thereto, or having had on board or in any manner attached thereto, or conveying or having conveyed in any manner, within any such port, harbour, river, or creek, any spirits not being in a cask or package containing 40 gallons at the least, or any tobacco or snuff not being in a cask or package containing 450 lbs. weight at least, or being packed separately in any manner within any cask or package, every such vessel or boat, together with such spirits or tobacco or snuff, shall be forfeited: provided always, that if it shall be made appear to the satisfaction of the commissioners of his Majesty's customs that the said spirits, tobacco, or snuff were on board without the knowledge or privity of the owner or master of such vessel or boat, and without any wilful neglect or want of reasonable care on their or either of their behalves, that then and in such case the said commissioners shall and they are hereby authorised and required to deliver up the said vessel or boat to the owner or master of the same.—§ 3.

Certain Cases in which Vessels shall not be forfeited.—Nothing herein contained shall extend to render any vessel liable to forfeiture on account of any tobacco or snuff from the East Indies being in packages of 100 lbs. weight each at least, or on account of any cigars being in packages of 100 lbs. weight each at least, or on account of any tobacco made up in rolls, being the produce of and imported from the State of Colombia, and in packages containing 320 lbs. weight each at least, or on account of any tobacco of the dominions of the Turkish empire which may be separated or divided in any manner within the outward package, provided such package be a hogshhead, cask, chest, or case containing 450 lbs. weight nett at least, or on account of any rum of and from the British plantations in cases containing 30 gallons at the least, or on account of any spirits, tea, or tobacco ready intended for the consumption of the seamen and passengers on board during their voyage, and not being more in quantity than is necessary for that purpose, or to render any square-rigged vessel liable to forfeiture on account of any tea, or of any spirits in glass bottles, being really part of the cargo of such ship, and included in the manifest of such ship, or to render any vessel liable to forfeiture if really bound from one foreign port to another foreign port, and pursuing such voyage, wind and weather permitting.—§ 4.

Vessels belonging to his Majesty's Subjects, &c. throwing overboard any Goods during their Voyage.—When any vessel or boat belonging in the whole or in part to his Majesty's subjects, or having in the persons on board subjects of his Majesty, shall be found within 100 leagues of the coast of the United Kingdom, and shall not bring to upon signal made by any vessel or boat in his Majesty's service, or a

SMUGGLING.

—If any vessel not being 's subjects, or having ite been within 100 leagues or in part to his Majesty's foreign vessels not being t of his Majesty, shall be ed Kingdom where it is be- east of Sussex, or within en vessel or boat shall be Kingdom; or if any vesse- and of Guernsey, Jersey creek of or belonging to red, having on board or in ched thereto, or conveying ge containing 40 gallons of ruff not being in a cask In any manner within any or slinging or sinking any 40 gallons, of the descrip- id spirits, tea, tobacco, or cordage or other articles, ed separately in any man- Goods on board, forfeit, boat whatever shall arrive er, or creek of the United iddable accident, having o- namer attached thereto, rbour, river, or creek, any r any tobacco or snuff not ed separately in any man- such spirits or tobacco or to the satisfaction of the ff were on board without without any willful neglect and in such case the said up the said vessel or boat

ained shall extend to res- the East Indies being in packages of 100 lbs. weight use of and imported from enat, or on account of tor or divided in any number chest, or case containing rish plantations in rock too really intended for the, and not being more is vessel liable to forfeiture the cargo of such ship, and ture if really bound from and weather permitting.

ds during Coast, forfeit- 's subjects, or having it of engines of the coast of his Majesty's service, in

the service of the revenue, hoisting the proper pendant and ensign, in order to bring such vessel or boat on board, and thereupon chase shall be given, if any person or persons on board such vessel or boat so chased shall, during the chase or before such vessel or boat shall bring to, throw overboard any part of the lading of such vessel or boat, or shall stave or destroy any part of such lading, to prevent seizure thereof, then and in such case the said vessel or boat shall be forfeited; and all persons escaping from such vessel or boats, or from any foreign vessel or boat, during any chase made thereof by any vessel or boat in his Majesty's service or in the service of the revenue, shall be deemed and taken to be subjects of his Majesty, unless it shall be proved to the contrary.—§ 5.

Vessels in Port with a Cargo, and afterwards found in Ballast, and Cargo unaccounted for, forfeited.—Any vessel or boat whatever shall be found within the limits of any port of the United Kingdom without a cargo on board, and such vessel or boat shall afterwards be found light or in ballast, and the master is liable to give a due account of the port or place within the United Kingdom where such vessel or boat shall have legally discharged her cargo, such vessel or boat shall be forfeited.—§ 6.

Regulations as to Vessels sailing from Guernsey, Jersey, &c.—No vessel or boat belonging wholly or in part to his Majesty's subjects shall sail from Guernsey, Jersey, Alderney, Sark, or Man, without a clearance, whether in ballast or having a cargo; and if with a cargo, the master shall give bond to his Majesty, in double the value of the vessel or boat and of the cargo, for duly clearing the same at the port for which the vessel clears; and every such vessel or boat not having such clearance, or which, having a clearance for a cargo, shall be found light or with any part of the cargo discharged before delivery thereof at the port specified in the clearance (unless through necessity or for preservation of the vessel or boat, to be proved to the satisfaction of the commissioners of his Majesty's customs), shall be forfeited.—§ 7.

Vessels to bring to on being chased by Vessels or Boats of the Navy or in Preventive Service.—In case any vessel or boat is liable to seizure or examination under any act or law for the prevention of smuggling shall not bring to on being required so to do, on being chased by any vessel or boat in H. M. navy having the proper pendant and ensign of H. M. ships hoisted, or by any vessel or boat duly employed for the prevention of smuggling, having a proper pendant and ensign hoisted, it shall be lawful for the captain, master, or other person having charge or command of such vessel or boat in H. M. navy, or employed as aforesaid, (first causing a gun to be fired as a signal,) to fire at or into such vessel or boat; and such captain, master, or other person acting in his aid or assistance, or by his direction, shall be indemnified and discharged from any indictment, penalty, action, or other proceeding for so doing.—§ 8.

Vessels belonging to his Majesty's Subjects not to hoist any Pendant, Ensign, or Colours usually worn by his Majesty's Ships.—If any person or persons shall, from and after the passing of this act, wear, carry, or hoist in or on board any vessel or boat whatever belonging to any of his Majesty's subjects, whether the same be merchant or otherwise, without particular warrant for so doing from his Majesty, or the High Admiral of Great Britain, or the commissioners for executing the office of High Admiral of Great Britain, H. M. Jack, commonly called the Union Jack, or any pendant, ensign, or colour usually worn by H. M. ships, or any flag, jack, pendant, ensign, or colour resembling those of his Majesty, or those used on board H. M. ships, or any other ensign or colours than the ensign or colour by any proclamation of his Majesty now in force or hereafter to be issued prescribed to be worn, then and in every such case the master or other person having the charge or command thereof, or the owner or owners on board the same, and every other person so offending, shall forfeit and pay the sum of 50*l.*; and it shall be lawful for any officer or officers of H. M. navy on full pay, or for any officer or officers of customs or excise, to enter on board any such vessel or boat, and to seize any such flag, jack, pendant, ensign, or colours, and the same shall thereupon be forfeited.—§ 9.

Vessels and Boats used in Removal of raw Goods to be forfeited.—All vessels and boats made use of in the removal, carriage, or conveyance of any goods liable to forfeiture under this or any other act relating to the revenue of customs, shall be forfeited.—§ 10.

Boats of Vessels to have thereon the Name of Vessel, Port, and Master.—The owner of every vessel belonging in the whole or in part to any of his Majesty's subjects shall paint or cause to be painted upon the outside of the stern of every boat belonging to such vessel, the name of such vessel, and the port or place to which she belongs, and the master's name withinside the transom, in white or yellow Roman letters, not less than 2 inches in length, on a black ground, on pain of the forfeiture of such boat so marked, wherever the same shall be found.—§ 11.

Boats not belonging to Ships to have Name of Owner, &c. thereon.—The owner of every boat not belonging to any vessel shall paint or cause to be painted upon the stern of such boat, in white or yellow Roman letters of 2 inches in length, on a black ground, the name of the owner or owners of the boat, and the port or place to which she belongs, on pain of the forfeiture of such boat not so marked, wherever the same shall be found.—§ 12.

Vessels and Boats used in piloting or fishing to be painted Black.—The owner or owners of every vessel or boat employed on the coast of the United Kingdom in piloting or fishing shall paint or cause to be painted on the outside of the stern of every such vessel or boat, or cause the same to be painted or tarred, entirely black, except the name or other description now required by law to be painted on such vessel or boat; and every such vessel or boat not so painted or tarred, and every boat so painted as to resemble any boat usually employed for the pretence of smuggling or in any other employment in H. M. service, shall be forfeited: provided always, that nothing herein contained shall extend to prevent any distinguishing mark being placed on any vessel or boat, or to be otherwise painted, if the commissioners of customs think proper to allow the same, expressing it to be in the licence of said vessel or boat.—§ 13.

British Vessels having secret Places, &c. forfeited.—All vessels and boats belonging in the whole or in part to H. M. subjects, having false bulkheads, false bows, double sides or bottoms, or any secret or divided place whatsoever in the construction of the said vessel or boat adapted for the purpose of concealing goods, or having any hole, pipe, or other device in or about the vessel or boat adapted for the purpose of running goods, shall be forfeited, with all the guns, furniture, ammunition, tackle, and apparel belonging to such vessel or boat; and all foreign vessels or boats, not being square-rigged, coming to any port of the United Kingdom, having on board any goods liable to the payment of duties, or prohibited to be imported, concealed in false bulkheads, false bows, double sides or bottoms, or any secret or disguised place in said vessel or boat, shall be forfeited.—§ 14.

Goods concealed on board forfeited, and all Goods packed thereon.—If any goods which are subject to any duty or restriction in respect of importation, or which are prohibited to be imported into the United Kingdom, shall be found concealed in any manner on board any vessel, or shall be found, either before or after landing, to have been concealed in any manner, in such case all such goods, and all other goods packed with them, shall be forfeited.—§ 15.

Licences.—N. B. The clauses of this act, with respect to the licensing of ships, from § 16. to § 27. both inclusive, are given under the word LICENCES.

VESSELS AND GOODS.

Goods whilpped without Payment of Duty, and prohibited Goods, liable to forfeiture.—If any goods liable to the payment of duties be unshipped from any vessel or boat in the United Kingdom or the Isle of Man, customs or other duties not being first paid or secured, or if any prohibited goods whatsoever

be imported into any part of the United Kingdom or of the Isle of Man, or if any goods warehoused or otherwise secured in the United Kingdom, for home consumption or exportation be clandestinely or illegally removed from any warehouse or place of security, then and in every such case all such goods shall be forfeited, together with all horses and other animals, and all carriages and other things, made use of in the removal of such goods.—§ 28.

Spirits and Tobacco found without a Permit to be deemed run.—All spirits or tobacco which shall be found removing without a legal permit for the same shall be deemed to be spirits or tobacco liable to and unshipped without payment of duty, unless the party in whose possession the same be found or seized prove to the contrary.—§ 29.

Restricted Goods to be deemed run.—All goods the importation of which is in any way restricted, which are of a description admissible to duty, and which shall be found and seized in the United Kingdom under any law relating to the customs or excise, shall, for the purpose of proceeding for the forfeiture of them, or for any penalty incurred in respect of them, be described in any information exhibited on account of such forfeiture or penalty as goods liable to and unshipped without payment of duties.—§ 30.

Prohibited Goods shipped or waterborne, with intent to be exported, &c. forfeited, &c.—If any goods prohibited to be exported be put on board any vessel or boat with intent to be laden or shipped for exportation, or be brought to any quay, wharf, or other place in the United Kingdom to be put on board any vessel or boat for the purpose of being exported, or if any goods prohibited to be exported, be found in any package produced to the officer or officers of the customs or excise containing goods not so prohibited, then and in every such case, not only all such prohibited goods, but also all other goods packed therewith, shall be forfeited.—§ 31.

Vessels, Boats, and Goods may be seized by Officers and Persons herein mentioned, &c.—All vessels and boats, and all goods whatsoever, liable to forfeiture under this or any other act relating in the revenue of customs, may be seized in any place, either upon land or water, by any officer or officers of the army, navy, or marines, duly employed for the prevention of smuggling, and on full pay, or by any officer or officers of customs or excise, or by any person having authority to seize from the commissioners of customs or excise; and all vessels, boats, and goods so seized shall, as soon as conveniently may be, be delivered into the care of the proper officer appointed to receive the same.—§ 32.

Penalty on Officers, &c. making collusive Seizures or taking Bribes, and on Persons offering them.—If any officer or officers of the customs or excise, or of the army, navy, or marines, employed for the prevention of smuggling, and on full pay, or any other person or persons whatsoever duly employed for the prevention of smuggling, make any collusive seizure, or deliver up, or make any agreement to deliver up or not to seize, any vessel or boat or any goods liable to forfeiture, or take any bribe, gratuity, recompense, or reward for the neglect or non-performance of his duty, every such officer or other person shall forfeit for every such offence 500*l.* and be rendered incapable of serving his Majesty in any office whatever, either civil or military; and every person who shall give or offer, or promise to give or procure to be given, any bribe, recompense, or reward to, or shall make any collusive agreement with, any such officer or person as aforesaid, to induce him in any way to neglect his duty, or to do, conceal, or connive at any act whereby any of the provisions of any act of parliament relating to the revenue of customs may be evaded, shall forfeit the sum of 200*l.*—§ 33.

Vessels and Persons may be searched within the Limits of the Ports.—It shall and may be lawful for any officer or officers of the army, navy, or marines, duly employed for the prevention of smuggling, and on full pay, or for any officer or officers of customs, producing his or their warrant or deputation (if required), to go on board any vessel within the limits of any of the ports of this kingdom, and to rummage and search the cabin and all other parts of such vessel for prohibited and uncustomed goods, and to remain on board such vessel during the whole time that the same shall continue within the limits of such port, and also to search any person or persons either on board or who shall have landed from any vessel, provided such officer or officers have good reason to suppose that such person or persons hath or have any uncustomed or prohibited goods secreted about his, her, or their person or persons; and if any person obstruct any officer or officers in going or remaining on board, or in entering or searching such vessel or person, every such person shall forfeit and lose the sum of 100*l.*—§ 34.

Before Persons are searched, they may require to be taken before a Justice, &c.—Before any person shall be searched by any such officer or officers, it shall be lawful for such person to require the officer or officers to take him or her before a justice of the peace, or before the collector, comptroller, or other superior officer of the customs, who shall determine whether there is reasonable ground to suppose that such person has any uncustomed or prohibited goods about his or her person; and if it appear to such justice, collector, &c. that there is reasonable ground to suppose that such person has any uncustomed or prohibited goods about his or her person, such justice, collector, comptroller, or other superior officer of customs shall direct such person to be searched in such manner as he shall think fit; but if it shall appear to such justice, collector, comptroller, &c. that there is not reasonable ground to suppose that such person has any uncustomed or prohibited goods about his or her person, then such justice, collector, &c. shall forthwith discharge such person, who shall not in such case be liable to be searched; and every such officer or officers is and are authorized and required to take such person, upon demand, before any justice, collector, &c. detaining him or her in the meantime: provided always, that no person, being a female shall be searched except by a female duty authorised by the commissioners of customs.—§ 35.

Penalty on Officers for Misconduct with respect to Search.—If any such officer or officers shall not take such person with reasonable despatch before such justice, collector, comptroller, or other superior officer of customs, when so required, or shall require any person to be searched by him, not having reasonable grounds to suppose that such person has any uncustomed or prohibited goods about his or her person, such officer shall forfeit and pay the sum of 10*l.*—§ 36.

Penalty on Persons denying having Foreign Goods about them.—If any passenger or other person on board any vessel or boat shall, upon being questioned by any officer of customs, whether he or she has any foreign goods upon his or her person, or in his or her possession, deny the same, and any such goods shall, after such denial, be discovered upon his or her person, or in his or her possession, such goods shall be forfeited, and such person shall forfeit treble the value of such goods.—§ 37.

Officers, authorised by Writ of Assistance, may search Houses for prohibited Goods, &c.—It shall and may be lawful for any officer or officers of customs, or person acting under the direction of the commissioners of customs, having a writ of assistance under the seal of the Court of Exchequer, to take a constable, headborough, or other public officer inhabiting near the place, and in the daytime to enter into and search any house, shop, cellar, warehouse, room, or other place, and in case of resistance to break open doors, chests, trunks, and other packages, there to seize and from thence to bring any uncustomed or prohibited goods, and to put and secure the same in the Custom-house warehouse in the port next to the place whence such goods shall be taken: provided always, that for the purpose of this act any such constable, headborough, or other public officer, duly sworn as such, may act as well without the limits of any parish, ville, or other place for which he shall be so sworn as within such limits.—§ 38.

Duration of Writs.—All writs of assistance so issued from the Court of Exchequer shall continue

and be in force during the whole of the reign in which such writs have been granted, and for 6 months thereafter.—§ 30.

Officers may, on probable Cause, stop Carts, &c., and search for Goods.—It shall be lawful for any officer of customs or excise, or other person acting in his or their aid or assistance, or duly employed for the prevention of smuggling, upon reasonable suspicion, to stop and examine any cart, wagon, or other means of conveyance, for the purpose of ascertaining whether any smuggled goods are contained therein; and if no such goods be found, the officer or other person stopping and examining such cart, wagon, &c. having had probable cause to suspect that smuggled goods were contained therein, shall not, on account of such stoppage and search, be liable to any action at law on account thereof; and all persons driving or conducting such cart, wagon, &c. refusing to stop when required so to do in the lawful manner, shall forfeit 100*l.*—§ 40.

Police Officers seizing Goods to carry them to Warehouse.—If any goods subject or liable to forfeiture under this or any other act relating to the customs be stopped or taken by any police officer or other person acting by virtue of any act of parliament, or otherwise duly authorised, such goods shall be carried to the Custom-house warehouse next to the place where the goods were stopped or taken, and there delivered to the proper officer appointed to receive the same, within 48 hours after the said goods were stopped and taken.—§ 41.

Goods stopped by Police Officers may be retained until Trial of Persons charged with stealing them.—If any goods be stopped or taken by a police officer on suspicion that the same have been feloniously stolen, it shall be lawful for the said officer to carry the same to the police office to which the offender is taken, there to remain to be produced at the trial of said offender; and in such case the officer is required to give notice in writing to the commissioners of customs of his having so detained the goods, with the particulars of the same; and immediately after the trial all such goods are to be deposited in the Custom-house warehouse, to be proceeded against according to law; and in case any police officer making detention of any such goods neglect to convey the same to such warehouse, or to give notice of having stopped the same as before described, he shall forfeit 50*l.*—§ 42.

Commissioners of Treasury, &c. may restore Seizures.—It shall and may be lawful for the commissioners of the treasury, or any 3 or more of them, or for the commissioners of customs or excise, by an order for that purpose, to direct any vessel, boat, goods, or commodities seized under this or any act relating to the customs or excise, or to the trade or navigation of the United Kingdom, or to any of his Majesty's possessions abroad, to be delivered to the proprietor or proprietors, whether condemnations have taken place or not, upon such terms and conditions as they may deem expedient, and which shall be mentioned in the said order: and it shall be also lawful for the said commissioners of the treasury, and of the customs and excise, to mitigate or remit any penalty or fine which shall have been incurred, or any part of such penalty or fine incurred under any such act: provided always, that no person shall be entitled to the benefit of any order for delivery or mitigation unless the terms and conditions expressed in the said order are fully and affectually complied with.—§ 43.

PENALTIES.

*Persons unshipping, &c. any prohibited or uncustomed Goods, to forfeit Treble the Value, or 100*l.**—Every person who shall, either in the U. K. or the Isle of Man, assist or be concerned in the unshipping of any goods prohibited to be imported into the U. K. or into the Isle of Man, or the duties for which have not been paid or secured, or who shall knowingly harbour, keep, or conceal, or knowingly permit or suffer to be barboared, kept, or concealed, any goods which have been illegally unshipped without payment of duties, or which have been illegally removed, without payment of the same, from any warehouse or place of security in which they may have been deposited, or any goods prohibited to be imported, or to be used or consumed in the U. K. or in the Isle of Man, and every person, either in the U. K. or the Isle of Man, to whose possession any such uncustomed or prohibited goods shall knowingly come, or who shall assist or be in anywise concerned in the illegal removal of any goods from any warehouse or place of security in which they have been deposited, shall forfeit either the treble value thereof, or the penalty of 100*l.*, at the election of the commissioners of customs.—§ 44.

How Value to be ascertained.—In all cases where any penalty, the amount of which is to be determined by the value of any goods, is directed to be sued for under any law now in force or to be made for the prevention of smuggling, or relating to the revenue of customs or excise, such value shall be taken to be according to the rate and price which goods of the like sort or denomination and of the best quality bear at such time, and upon which the duties due upon importation have been paid.—§ 45.

*Persons insuring the Delivery of prohibited or uncustomed Goods to forfeit 500*l.**—Every person who by way of insurance or otherwise shall undertake or agree to deliver any goods to be imported from beyond the seas into any port or place in the U. K. without paying the duties due on such importation, or any prohibited goods, or who in pursuance of such insurance shall deliver or cause to be delivered any uncustomed or prohibited goods, and every aider or abettor of such person, shall for every such offence forfeit 500*l.* over and above any other penalty to which he may be liable; and every person who shall agree to pay any money for the insurance or conveyance of such goods, or shall receive or take them into his custody or possession, or suffer them to be so received or taken, shall also forfeit 500*l.* over and above any penalty to which he may be liable on account of such goods.—§ 46.

Penalty on Persons selling Goods for Sale under Pretence of being run or prohibited.—If any person or persons offer for sale any goods under pretence that the same are prohibited, or have been unshipped and run on shore without payment of duties, in such case all such goods (although not liable to any duties or prohibited) shall be forfeited, and the person or persons, and every of them, offering the same for sale, shall forfeit the treble value of such goods, or the penalty of 100*l.*, at the election of the commissioners of customs.—§ 47.

*Persons found to have been on board Vessels liable to Forfeiture subject to a Penalty of 100*l.**—Every person, being a subject of his Majesty, who shall be found or discovered to have been on board any vessel or boat liable to forfeiture under this or any other act relating to the customs for being found or discovered to have been within any of the distances, ports, or places in this act mentioned, from or in the United Kingdom, or from or in the Isle of Man, having on board or in any manner attached thereto, or having had on board or in any manner attached thereto, or conveying or having conveyed in any manner, such goods or things as subject such vessel or boat to forfeiture, or who shall be found or discovered to have been, within any such distance as aforesaid, on board any vessel or boat from which any part of the cargo or lading of such vessel or boat shall have been thrown overboard, or staved or destroyed, to prevent seizure, shall forfeit 100*l.*; and every person, not being a subject of his Majesty, who shall have been on board any vessel or boat liable to forfeiture for any of the causes aforesaid, within 1 league of the coast of the United Kingdom or of the Isle of Man, or within any bay, harbour, river, or creek of the said island, shall forfeit for such offence 100*l.*; and it shall be lawful for any officer or officers of the army, navy, or marines, being duly employed for the prevention of smuggling, and on full pay, or any officer or officers of customs or excise, or other person acting in his or their aid or assistance, or duly employed for the prevention of smuggling, and he and they is and are hereby authorised, empowered, and required, to detain and to carry and convey every such person before any justice of the peace, to be dealt with as herein-after directed: provided always, that any such person

proving, to the satisfaction of any justice or justices before whom he may be brought, that he was only a passenger in such vessel or boat, and had no interest whatever either in the vessel or boat, or in the cargo or goods on board the same, shall be forthwith discharged by such justice. — § 48.

Persons unshipping, &c. Spirits or Tobacco, to forfeit 100*l.* &c.—Every person whatsoever who shall unship, or be aiding or concerned in the unshipping, of any spirits or tobacco liable to forfeiture under this or any other act relating to the customs or excise, in the U. K. or the Isle of Man, or who shall carry, convey, or conceal, or be aiding, assisting, or concerned in the carrying, conveying, or concealing of any such spirits or tobacco, shall forfeit for such offence 100*l.*; and every such person may be detained by any officer of the army, navy, or marines duly employed for the prevention of smuggling, and on full pay, or by any officer or officers of customs or excise, or other person acting in his or their aid or assistance, or duly employed for the prevention of smuggling, and taken before any justice of the peace, to be dealt with as herein-after directed. — § 49.

Persons carrying, &c. Tea or manufactured Silk to forfeit Treble the Value, &c.—Every person who shall unship, or be aiding, assisting, or otherwise concerned in the unshipping, of any tea or foreign manufactured silk of the value of 20*l.*, liable to forfeiture under any act relating to the customs or excise, or who shall carry, convey, or conceal, or be aiding, assisting, or concerned in the carrying, conveying, or concealing of such tea or silk, shall forfeit for every such offence treble the value thereof; and every such person shall and may be detained by any officer of the army, navy, or marines, duly employed for the prevention of smuggling, and on full pay, or by any officer of customs or excise, or by any other person acting in his aid or assistance, or duly employed for the prevention of smuggling, and taken before any justice of the peace, to be dealt with as herein directed: provided always, that if it shall be lawful for such detained person to give security in treble the amount of the goods seized, to the satisfaction of such justice, to appear at a time and place appointed; and that no such person shall be liable to serve his Majesty in his naval service. — § 50.

A Justice may order Persons taken before him for Offences relating to the Customs to be detained a reasonable Time.—Where any person or persons shall have been detained by any officer of the army, navy, or marines, employed for the prevention of smuggling, and on full pay, or by any officer of customs or excise, or any person or persons acting in his or their aid or assistance, or duly employed for the prevention of smuggling, for any offence under this or any other act relating to the customs, and shall have been taken and carried before any justice of the peace, if it shall appear to such justice that there is reasonable cause to detain such person or persons, he may and he is authorized and required to order such person or persons to be detained a reasonable time, and at the expiration of such time to be brought before any 2 justices, who are authorized and required finally to hear and determine the matter. — § 51.

Any Person liable to Arrest making his Escape may be detained by any Officer of Customs.—If any person or persons liable to be detained under the provisions of this or any other act relating to the customs shall not be detained at the time of so committing the offence, or after detention shall make his or their escape, it shall be lawful for any officer or officers of the army, navy, or marines, employed for the prevention of smuggling, and on full pay, or for any officer of customs or excise, or any other person acting in his or their aid or assistance, or duly employed for the prevention of smuggling, to detain such person at any time afterwards, and to carry him before any justice of the peace, to be dealt with as if detained at the time of committing the said offence. — § 52.

Persons making Signals to Smuggling Vessels at Sea, on Conviction to forfeit 100*l.* &c.—No person shall, after sunset and before sunrise between the 21st day of September and the 1st day of April, or after the hour of 8 in the evening and before the hour of 6 in the morning at any other time in the year, make, aid or assist in making, any signal in or on board or from any vessel or boat, or on or from any part of the coast or shore of the United Kingdom, or within 6 miles of any part of such coasts or shores, for the purpose of giving any notice to any person on board any smuggling vessel or boat, whether any person so on board such vessel or boat be or be not within distance to notice such signal; and if any person, contrary to the intent and meaning of this act, make or cause to be made, or aid or assist in making, any such signal, such person shall be guilty of a misdemeanour; and it shall be lawful for any person to stop, arrest, and detain the person or persons who shall so offend, and to carry and convey such person or persons before any 1 or more justices of the peace residing near the place where such offence shall be committed, who, if he sees cause, shall commit the offender to the next county gaol, there to remain until the next court of oyer or terminer, great session, or goal delivery, or until such person or persons shall be delivered by due course of law; and it shall not be necessary to prove on any indictment or information that any vessel or boat was actually on the coast; and the offender or offenders being duly convicted thereof shall, by order of the court before whom they are convicted, either forfeit and pay the penalty of 100*l.*, or, at the discretion of such court, be committed to the common gaol or house of correction, there to be kept to hard labour for any term not exceeding 1 year. — § 53.

Proof of a Signal not being intended, to lie on the Defendant.—In case any person be charged with or indicted for having made or caused to be made, or been aiding or assisting in making, any such signal, the burden of proof that such signal so charged as having been made with intent and for the purpose of giving such notice as aforesaid was not made with such intent and for such purpose shall be upon the defendant. — § 54.

Any Persons may prevent Signals.—It shall be lawful for any person whatsoever to prevent any signal as aforesaid being made, and to enter upon any lands for that purpose, without being liable to any indictment, suit, or action for the same. — § 55.

Persons resisting Officers, or rescuing or destroying Goods to prevent Seizure, forfeit 100*l.*—If any person whatsoever shall obstruct any officer or officers of the army, navy, or marines, employed for the prevention of smuggling, and on full pay, or any officer or officers of customs or excise, or any person acting in his or their aid or assistance, or duly employed for the prevention of smuggling, in the execution of his or their duty, or in the due seizing of any goods liable to forfeiture, or shall rescue or cause to be rescued any goods which have been seized, or shall attempt or endeavour to do so, or shall help or aid or after any seizure, take, break, or otherwise destroy any goods, to prevent the seizure thereof or the securing the same, then and in such case the party or parties offending shall forfeit for every such offence 100*l.* — § 56.

Penalty on Persons procuring others to assist in unshipping prohibited Goods.—Any person or persons who shall by any means procure or hire any person or persons, who shall depote, authorize, or direct any person or persons to procure or hire any person or persons, to assemble for the purpose of being concerned in the landing or unshipping or carrying or conveying any goods prohibited to be imported, or the duties for which have not been paid or secured, shall for every person so procured or hired forfeit 100*l.* — § 57.

FELONIES.

Three or more armed Persons assembled to assist in the illegal Landing of Goods, &c. deemed guilty of Felony.—If any persons to the number of 3 or more, armed with fire-arms or other offensive weapons, shall, within the U. K., or within any port, harbour, or creek, thereof, be assembled in order to aid and assist in the illegal landing, running, or carrying away of any prohibited goods, or any goods liable to

any duties which have not been paid or secured, or in rescuing or taking away any goods, after seizure, from the officer of the customs or other officer authorised to seize the same, or from any pursuer or person employed by or assisting them, or from the place where the same have been lodged by them, or in rescuing any person who shall have been apprehended for any of the offences made felony by this or any act relating to the customs, or in the preventing the apprehension of any person guilty of such offence, or in case any persons to the number of 3 or more, so armed, shall, within the U. K., or within any port, harbour, or creek thereof, be so aiding or assisting, every person so offending, and every person aiding, abetting, or assisting therein, shall, being thereof convicted, be adjudged guilty of felony, and suffer death as a felon.—258.

Persons shooting at any Boat belonging to the Navy, &c. deemed guilty of Felony.—If any person shall maliciously shoot at any vessel or boat belonging to H. M. navy, or in the service of the revenue, within 100 leagues of any part of the coast of the U. K., or shall maliciously shoot at, maim, or dangerously wound any officer of the army, navy, or marines, employed for the prevention of smuggling, on full pay, or any officer of customs or excise, or any person acting in his aid, or assistance, or employed for the prevention of smuggling, in the due execution of his office or duty, every person so offending, and every person aiding, abetting, or assisting therein, shall, being lawfully convicted, be adjudged guilty of felony, and suffer death as a felon.—259.

Any Person in company with 4 others having prohibited Goods, or with 1 other armed or disguised, guilty of Felony.—If any person being in company with more than 4 other persons be found with any goods liable to forfeiture, or in company with 1 other person, within 5 miles of the sea coast or of any navigable river leading therefrom, with such goods, and carrying offensive arms or weapons, or disguised in any way, every such person shall be adjudged guilty of felony, and shall, on conviction of such offence, be transported as a felon for the space of 7 years.—260.

OFFICERS.

Persons assaulting Officers by Force or Violence may be transported.—If any person shall by force or violence assault, resist, oppose, molest, hinder, or obstruct any officer of the army, navy, or marines, employed for the prevention of smuggling, and on full pay, or any officer of customs or excise, or other person acting in his or their aid or assistance, or duly employed for the prevention of smuggling, in the due execution of his or their office or duty, such person, being thereof convicted, shall be transported for 7 years, or sentenced to be imprisoned in any house of correction or common goal, and kept in hard labour, for any term not exceeding 3 years, at the discretion of the court before whom the offender shall be tried and convicted as aforesaid.—261.

Commanding Officers of Vessels in the Service may haul their Vessels on Shore without being liable to any Action for so doing.—It shall be lawful for the commanding officer of any vessel or boat employed for the prevention of smuggling to haul any such vessel or boat upon any part of the coast of the United Kingdom, or the shores, banks, or beaches of any river, creek, or inlet of the same (not being a garden or pleasure ground, or place ordinarily used for any bathing machine or machine), which shall be deemed most convenient for that purpose, and to moor any such vessel or boat on such part of the aforesaid coasts, shores, &c. below high water mark, and over which the tide flows on ordinary ebb-tide, and to continue such vessel or boat so moored for such time as said commanding officer shall deem proper; and such officer, or person or persons acting under his direction, shall not be liable to any indictment, action, or suit for so doing, any law, statute, custom, or usage to the contrary notwithstanding.—262.

Officers, if wounded in the Service of the Customs, to be provided for, &c.—In all cases where any officer or seaman employed in the service of the customs or excise shall be killed, maimed, wounded, or in any way injured in the due execution of his office, or if any person acting in his aid, or duly employed for the prevention of smuggling, shall be so killed, maimed, wounded, or in any way injured while so acting such officer or seaman, or so employed, it shall be lawful for the commissioners of customs and excise to make such provision for the officer or person, so maimed, wounded, or injured as aforesaid, or for the widows and families of such as shall be killed, as they shall be authorised and empowered to do by warrant from the Lord High Treasurer or commissioners of the treasury.—263.

Taxes and Goods seized to be disposed of as the Commissioners direct.—All vessels and boats, and all goods whatsoever, seized and condemned for breach of any law relating to the customs, shall be disposed of as soon as conveniently may be after the condemnation thereof, in such manner as the commissioners of customs shall direct.—264.

REWARDS.

Rewards to Officers for detaining Smugglers.—It shall be lawful for the commissioners of customs, and they are hereby authorised and empowered, to award, to any officer or other person detaining any person liable to detention under this or any other act relating to the revenue of customs, to be paid upon the conviction of such person, any reward they may think fit to direct, not exceeding the sum of 20*l.* for each person.—265.

Rewards to Officers where pecuniary Penalties are recovered.—It shall be lawful for the commissioners of customs, and they are hereby authorised, to order the following reward to be paid to any officer or officers or persons by whose means any pecuniary penalty or composition is recovered; (that is to say) 1/3 part of the penalty or sum recovered, except in seizures of silk goods, in which case the officers may receive 1/4 the penalty or sum recovered.—266.

Rewards to Officers making Seizures.—It shall be lawful for the commissioners of customs, and they are hereby authorised, to order to be paid, in respect of any seizure made under this or any act relating to the customs or to trade and navigation, to the person or persons making the same, the following rewards; (that is to say,)

In the case of seizures of spirits or tobacco:—

If all the parties concerned in the act which occasions the seizure, being above the age of 16 years, are detained and convicted, the whole value thereof, such value to be fixed and settled by the Lords of the Treasury, or by the commissioners of his Majesty's customs, as hereafter directed: If two more of such parties, not being the whole, are so detained and convicted, 7/8ths of such value.

If such party, not being the whole of them, but being a seafaring man, is detained and convicted, 3/4ths of such value.

If such party, not being the whole of them, is detained and convicted, and the vessel or means of conveyance is or are seized and condemned, 3/4ths of such value.

If such party, not being the whole of them, nor being a seafaring man, is so detained and convicted, 5/8ths of such value.

If the vessel or means of conveyance is seized and condemned without any person being detained, 1/3d of such value.

If all the goods are seized, and all the parties concerned as aforesaid are subsequently convicted in consequence of such seizure, and by the seizure of the vessel, 1/3d of such value.

If the goods only are seized, 1/8th, or such other part as the com-

missioners of the customs shall think proper, not exceeding 1/4th of such value.

In the case of seizures of other goods, not silks:—

If the vessel or other means of conveyance are seized and condemned, or if any person is prosecuted in conviction on account of the same, 1/2 of the produce, exclusive of the duties.

If the goods only, 1/4th of such produce.

In the case of damaged tobacco, snuff, or other goods destroyed, such reward as the Lords of the Treasury or the commissioners of his Majesty's customs may think proper to direct, not exceeding a moiety of the duty payable on such goods in case the same had been sold for home consumption.

In the case of seizures of silk goods, the whole value of such goods, exclusive of the duty thereon.

In the case of seizures of vessels and boats:—

If sold, a moiety of the produce.

If taken into the public service, or broken up, a moiety of the value.

In the case of seizures of cattle and carriages in all cases 3/4ths of the produce of the sale.—Secs. 267.

The Treasury, &c. to fix the Value of Spirits & Tobacco.—The value of spirits and tobacco seized as aforesaid shall in all cases be deemed and taken to be such as the Lords of the Treasury or the commissioners of customs may think fit to fix the same at per gallon or per pound weight, for the purpose of rewarding the officer; and all the before-mentioned rewards shall be paid, subject to a deduction of 10l. per cent. on account of law charges and other expenses.—q 68.

All Rewards, &c. payable to Officers of Army, &c. to be regulated by H. M. Orders in Council.—Every such reward, or part or share of any such seizure or of the value thereof, as shall be payable to any officer or officers, non-commissioned officers, petty officers, seamen, or privates of the army, navy, or marines, or acting under the orders of the Lord High Admiral or commissioners of the admiralty, shall be divided and distributed in such proportions, and according to such rules, regulations, and orders, as His Majesty shall be pleased to direct and appoint.—q 69.

Commissioners may distribute Shares of Seizures so as to reward Persons not actually present.—It shall be lawful for the commissioners of customs or excise respectively, in case of any seizure of vessels, boats, or goods, or of the apprehension of any parties, under this or any other act relating to the customs, to direct the distribution of the seisor's share of such vessels, boats, or goods, or of any penalties or rewards that may be recovered on account of any seizure, in such manner as to enable any officer or officers, or other person or persons through whose information or means such seizure shall have been made, or penalty recovered, or party apprehended, and who may by them be deemed to be so entitled, to participate in such proportion as the said commissioners shall respectively deem expedient.—q 70.

In case Officers act negligently or collusively.—Upon proof being made to the satisfaction of the commissioners of customs or excise that any officer or officers or person or persons as aforesaid have acted collusively or negligently in the making of any seizure, the said commissioners may direct that the whole or any part of the proportion of such seizure he applied to the use of His Majesty.—q 71.

None except Officers to take up Spirits in small Casks sunk or floating upon the Sea.—No person or persons whatsoever, being a subject or subjects of His Majesty, other than an officer or officers of the navy, customs, or excise, or some person or persons authorized that behalf, shall intermeddle with or take up any spirits, being in casks of less content than 40 gallons found floating upon or sunk in the sea within 100 leagues of the United Kingdom; and if any spirits shall be so intermeddled with or taken up, the same shall be forfeited, together with any vessel or boat in which they are found.—q 72.

Rewards to Persons giving Information of Goods floating or sunk in the Sea.—If any person or persons shall discover any spirits, being in casks of less content than 40 gallons, floating upon or sunk in the sea, and give information to any officer of the customs, or other person or persons authorized to make seizure of such spirits, so that seizure be made of the same, the person or persons giving such information shall be entitled to and shall receive such reward as the commissioners of customs may deem expedient to direct.—q 73.

Allowance to poor Persons confined for Offences against Laws of Customs and Excise.—For the necessary subsistence of any poor person confined in the United Kingdom or in the Isle of Man, under or by virtue of any exchequer or other process for the recovery of any duties or penalties, upon a bond or otherwise, sued for, under or by virtue of any order of the commissioners of customs or excise, it shall be lawful for said commissioners respectively to cause an allowance, not exceeding the sum of 12d. and not less than 4d. per day, to be made to any such poor person, out of any money in their hands arising from the duties of customs or excise, as the case may require.—q 74.

JURISDICTION.

Penalties and Forfeitures how to be sued for.—All penalties and forfeitures incurred or imposed by this or any other act relating to the customs, or to trade or navigation, shall and may be sued for, prosecuted, and recovered by action, debt, bill, plaint, or information, in any court of record at Westminster, or at Dublin, or at Edinburgh, or in the royal courts of the islands of Guernsey, Jersey, Alderney, Sark, or Man, in the name or names of the attorney general or of the lord advocate of Scotland, or in the name of some officer or officers of customs, or by information before any 2 or more justices of the peace in the U. K., or before any governor, deputy governor, or demurrer in the Isle of Man.—Section 75.

Vessels, Boats, and Goods seized, shall be deemed to be condemned, unless the Owner gives Notice that he intends to claim.—All vessels, boats, and goods which have been or shall be heretofore seized as forfeited under any law relating to the customs, and which have been or shall hereafter be ordered to be prosecuted by the commissioners of customs, shall be deemed and taken to be condemned, and may be sold in the manner directed by law in respect to vessels, boats, and goods seized and condemned for breach of any law relating to the customs, unless the person from whom such vessels, boats, and goods have been seized, or the owner of them, or some person authorized by him, shall, within 1 calendar month from the day of seizing the same, give notice in writing, if in London, to the person seizing the same or to the secretary or solicitor for the customs, and if elsewhere, to the person seizing the same or to the collector and comptroller or other chief officer of the customs at the nearest port, that he claims the vessel, boat, or goods, or intends to claim them.—Section 76.

Offences on the High Seas deemed to have been committed at the Place into which the Offender is brought, or in which he is found.—In case any offence be committed upon the high seas against any other act relating to the customs, or any penalty or forfeiture incurred upon the high seas for any breach of such acts, such offence shall, for the purpose of prosecution, be deemed and taken to have been committed, and such penalties and forfeitures to have been incurred, at the place on land in the U. K. or the Isle of Man into which the person committing such offence or incurring such penalty or forfeiture shall be taken, brought, or carried, or in which such person shall be found; and in case such place on land is situated within any city, borough, liberty, division, franchise, or town corporate, as well as any justice of the peace for such city, borough, liberty, division, franchise, or town corporate, as any justice of the peace of the county within which such city, borough, liberty, division, franchise, or town corporate is situated, shall have jurisdiction to hear and determine all cases of offences against such act so committed upon the high seas, any charter or act of parliament to the contrary notwithstanding; provided always, that where any offence shall be committed in any place upon the water not being within any county of the U. K., or where any doubt exists as to the same being within any county, such offence shall, for the purposes of this act, be deemed and taken to be committed upon the high seas.—Section 77.

Justices may summon Offenders, and the Statutory writs left at their Place of Residence, or on board any ship to which he belongs.—Upon the exhibiting any information before any justice of the peace for any offence against this or any act relating to the customs, or to trade or navigation, for which the party charged is not liable to be detained in manner hereinafore mentioned, such justice is hereby empowered to issue a summons for the appearance of the party against

whom such information is exhibited before 2 justices of the peace; and such summons, directed to such party, being left either to his or her that know place of residence, or on board any ship or vessel to which such party may belong, shall be deemed to have been sufficiently served.—Section 78.

Two Justices may, upon Appearance or Default of the Party, proceed to the Hearing.—Upon the appearance or default of any party so summoned, or shall be lawful for any 2 justices of the peace to proceed to the examination of the matter contained in such information, and upon due proof thereof, either upon the confession of party or upon the oath of 1 or more credible witnesses or witnesses to convict such party in the penalty or penalties set for by such information; and in case of contumacy thereof, such justice, or justices, or some other justices or justice of the peace, or justice or justices authorized and required, by warrant under hand and seal, to command such party to any of His Majesty's goals within his or his jurisdiction, there to remain until the penalty or penalties shall be paid.—Section 79.

Warrants shall and may be executed in any part of the United Kingdom.—Section 80.

Justices empowered to mitigate Penalties.—Where any party shall or may be convicted before any 2 or more of His Majesty's justices of the peace in any penalty or penalties incurred as aforesaid, or set for in heretofore provided, it shall and may be lawful for the said justices, in cases where upon consideration of the circumstances they shall deem it expedient so to do, to mitigate the payment of the said penalty or penalties, so as the sum to be paid by such party be not less than 1-6th of the amount of the penalty in which such party shall have been convicted.—Section 81.

As to Persons committed for Penalties under 100l.—Where any person shall be committed for any penalty less than 100l., the gaoler or keeper of such prison is hereby authorized and required to discharge such person from the real of calendar months from the commencement of such imprisonment.—Section 82.

Married Women may be committed to Prison.—Where any party so convicted before 2 justices of the peace shall be a married woman, such party shall be liable to be committed to prison in heretofore before mentioned, notwithstanding her coverture.—Section 83.

Mode of Proceeding before Justices.—When any information shall have been exhibited before any 2 justices of the peace for the offence of any goods seized under this or any act relating to the customs shall be lawful for the said justice, and he is hereby authorized and required, to summon the party to whom such information is exhibited, or any other party who may be deemed to have been sufficiently served, and upon his, her, or their appearance or default, any 2 justices may proceed to the examination of the matter, and, upon due proof of the said goods seized, to issue a warrant for the seizure of such goods, the customs may continue the said goods.—Section 84.

Persons on Conviction to forfeit 100l. or if remaining in Prison to be sent into the Army for 3 years.—It shall be lawful for any 2 justices of the peace before whom any person liable to be detained, and who shall have been detained, for any offence against any act relating to the customs, shall be brought, either on the conviction of such person of such offence, or on proof thereof upon the oath of 2

(The 85th clause in the act 3 & 4 Will. 4. c. 53, for the prevention of smuggling (ante, p. 524), authorising justices to sentence seafaring men, convicted of smuggling, to serve in the navy for 5 years, has been repealed. Persons convicted of such offences are now to be committed to the house of correction, to hard labour, for not less than 6 months for the first offence, 9 for the second, and 12 for the third.—(4 & 5 Will. 4. c. 13. § 2.)

Boats used in fishing on the coasts of Scotland are not required to have licences.—(6 & 7 Will. 4. c. 60. § 8.)

Magistrates are authorised to commit offenders convicted of offences against the customs' laws to the nearest house of correction.—(§ 9.)—(Sup.)

(Concerning frauds on the customs, and penalties for breach of the revenue laws of the United States, see Gordon's Digest of the Laws of the United States, book 9th, chapter 16th, section 4th.—Am. Ed.)

SMYRNA, a large city and sea-port of Asiatic Turkey, on the western side of Asia Minor, lat. 38° 25' 36" N., lon. 27° 6' 45" E. Population, probably, about 120,000; of whom 60,000 may be Turks, 40,000 Greeks, and the remainder Armenians, Franks, Jews, &c. Smyrna is situated at the bottom of a deep gulf; the entrance to which lies between the island of Mytilene on the north, and Cape Carabouron, in lat. 38° 41' 30" N., lon. 26° 21' E., on the south. The woodcut on the next page gives a better idea of the gulf of Smyrna than could be derived from any description. The dotted line shows the course inwards. The passage between James's Castle (D) on the south and the opposite sand bank is narrow; but there is from 9 to 10 fathoms water, with a blue clay bottom. Merchant ships anchor abreast of the city in from 7 to 8 fathoms; but the water is so deep that they may come close to the quays. The in-bat or sea breeze blows from morning till evening, and is always waited for by ships going up to the city. There is excellent anchorage in most parts of the gulf, merely avoiding the shoals on the north side. Smyrna is a place of great antiquity. The excellence of its port, and its admirable situation, have made it be several times rebuilt, after being destroyed by earthquakes. On approaching it from the sea, it has the appearance of an amphitheatre; the castle is at the back of the town, which it commands, on the top of the hill; but it is in a state of decay, and could oppose no resistance to an invading force. The interior of the city does not correspond to its external appearance; the streets being, for the most part, narrow, dirty, and ill paved. Owing to the want of cleanliness, and of all sorts of precautions, on the part of the Turks, Smyrna is frequently visited by the plague. So late as 1814, from 50,000 to 60,000 of the inhabitants are said to have been cut off by this dreadful scourge. The trade of this city is more extensive than that of any other in the Turkish empire. The caravans from Persia are chiefly composed of Armenians. They arrive and depart at fixed periods, which are nearly identical with those of the arrival and departure of most of the foreign ships frequenting the port. Bargains are principally effected by Jew brokers, many of whom have amassed considerable fortunes. The principal articles of import consist of grain, furs, iron, butter, &c. from Odessa and Taganrog and of cotton stuffs and twist, silk and woollen goods, coffee, sugar, cochineal, and dye

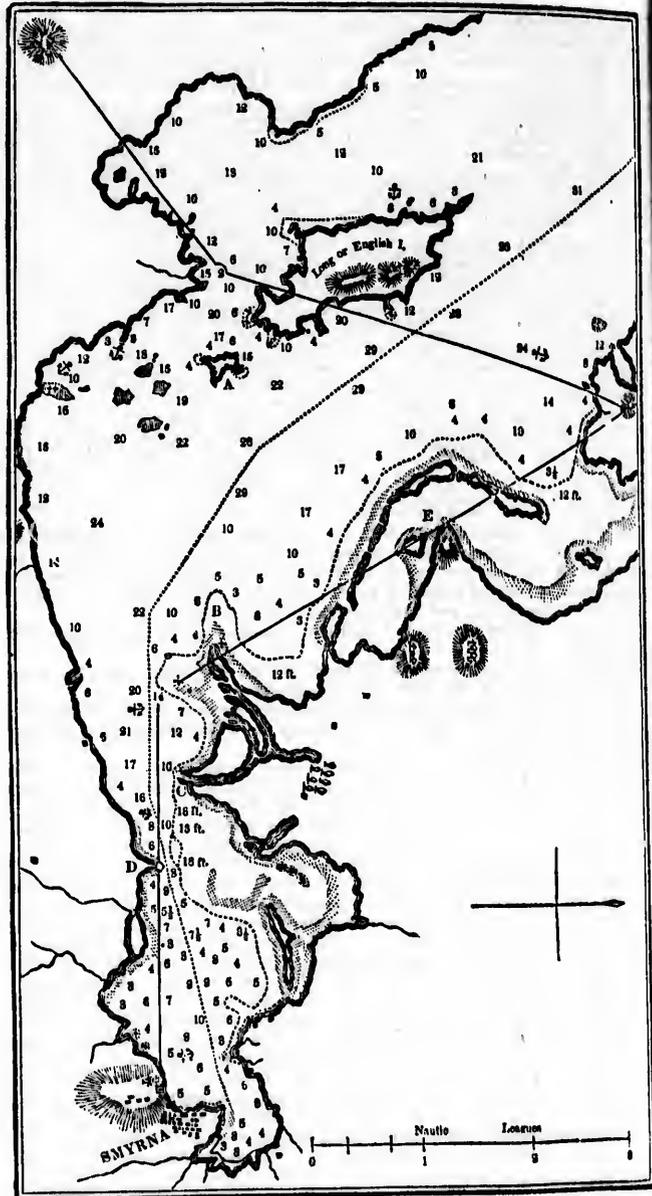

as such shall be deemed sufficient, and such person shall not be required to produce his commission or deputation, unless sufficient proof be given to the contrary; and every such officer, and any person acting in his aid or assistance, shall be a competent witness upon the trial of any suit or information on account of any seizure or penalty, notwithstanding such officer or person may be entitled to the whole or any part of such seizure or penalty, or to any reward upon conviction of the party charged in such suit or information.—(Sec. 11.)

What deemed sufficient Evidence of an Order of Commissioners of Customs or Excise.—Upon the trial of any issue, or upon any judicial hearing or investigation touching any penalty or forfeiture under any law or laws relating to the customs or excise, or to the law of navigation, where it may be necessary to give proof of any order issued by the commissioners of the treasury, or by the commissioners of customs or excise, the letter or instructions officially received by the officer of customs or excise at the place or district where such penalty or forfeiture was incurred, or shall be alleged to have been incurred, for his government, and in which such order is mentioned or referred to, and under which instructions he shall have acted, shall be admitted and taken as sufficient evidence and proof of such order to all intents and purposes whatsoever.—(Sec. 119)

Within what Time Suits, &c. are to be exhibited.—All suits, indictments, or informations exhibited for any offence against this or any other act relating to the customs in any court of record at Westminster, or in Dublin, or in Edinburgh, or in the royal courts of Guernsey, Jersey, Alderney, Sark, or Man, shall and may be had, brought, sued, or exhibited within three years next after the date of the offence committed, and shall and may be exhibited before 1 or more justices of the peace within 6 months next after the date of the offence committed.—(Sec. 120.)

Information may be exhibited any Time after 6 Months.—Where any person shall have been detained for any offence against this or any other customs act, and shall have made his escape from custody, an information may be exhibited before 1 or more justices of the peace against such person, for such offence, at any time afterwards, although more than 6 months have expired.—(Sec. 121.)

Indictments or Informations may be tried in any County.—Any indictments or informations for any offence against this or any other customs act shall be inquired of, examined, tried, and determined in any county of England where the offence is committed in England, and in any county in Scotland where the offence is committed in Scotland, and in any county in Ireland where the offence is committed in Ireland, in such manner and form as if the offence had been committed in the said county where the said indictment or information shall be tried.—(Sec. 122.)

References to Plan.—A, Pniridge Island, on the south side of which there is excellent anchorage in from 15 to 7 fathoms, muddy bottom. B, a mid point. C, Pelican Point. D, James's Castle. E, Low narrow island. Soundings, except where otherwise marked, in fathoms.

wool, iron, tin, and tin plates, rum, brandy, paper, cheesc, glass, wine, &c. from Great Britain, France, Italy, the United States, &c. The exports consist principally of raw silk and cotton, fruits—particularly raisins; opium, rhubarb, and a variety of drugs and gums; olive oil, madder roots, Turkey carpets, valonia, sponge, galls, wax, copper, hare skins, goats' wool, willow, &c.—(For further details, see *Turnefort, Voyage du Levant*, tome ii. pp. 433-507. 4to edit.; and *Macgill's Travels in Turkey*, vol. i. Letters 5, 6, 7, 8, and 9.)

Meas. Weights, and Measures, same as at Constantinople; which see. Accounts are kept in plaques of 40 paras, or medini. The value of the plaque fluctuates according to the exchange. It has been very much degraded; and is at present worth about 4d. The oke is the principal weight used. It is equivalent to 2 lbs. 13 oz. 5 dr. avoirdupois; 45 okes = 1 kinta = 100 rottolos = 127.48 lbs. avoirdupois. The kinta of Constantinople is only 44 okes. A tefese of silk = 4½ lbs. avoirdupois. A cheques of opium = 1½ lb.; a cheques of goats' wool = 3½ lbs. Corn is measured by the killo = 12½ Winch. bushel. The pic, or long measure, = 27 Eng. inches.—(*Kelly's Cambist*, &c.)

COMMERCE OF SMYRNA.—The following details with respect to the commerce of Smyrna with Western Europe are copied from a letter addressed by an intelligent English merchant, established in Smyrna, to his correspondent in London, to whom we are indebted for it. Nothing so complete or satisfactory has ever been published as to the trade of this emporium. It is right, however, to mention, that since 1800 when this paper was drawn up, the commerce of Smyrna has lost some of its importance. Syria, the islands of the *Archipelago*, the eastern parts of Greece, &c. used formerly to derive a considerable part of their supplies of foreign produce at second hand from Smyrna; but they now, for the most part, are either supplied direct from England, Marseilles, &c., or indirectly from Syria, which is become a considerable depot.

Charges on Selling and Buying.—As we conceive that a correct list of selling and buying charges is an essential piece of information for those interested in the commerce of the Levant, we annex the same, including every item of expense, namely:—

On Selling.		On Buying.	
	Per cent.		Per cent.
Height (according to the rate agreed upon in England) say	2	Custom duty (according to the quality of the article)	1 to 3
Out day (or perusal goods)	3	Favours (included in the cost of packages, which vary according to the quality of the goods packed)	3
Charge from 1 to 2 piastres per package (according to the size)	0.12	House and street brokerage	1 to 2
Postage	0.12	Commission (except on figs, which is 5 per cent.)	0.12
Five per cent. brokerage	5	Warehouse rent	0.12
Commission for effecting sale	3		
Out. if proceeds are remitted by bill or specie	1 to 2		
Expence duty (when required to be charged)	3		
Insurance	0.12		

With regard to the cost of packages, those for silk are about 24 piastres each; for galls, 18 do.; puma antls, tragacanth, &c., 20 do.; scammony, 18 do.; opium, 30 to 36 do.; raisins, 12 to 14 do.; figs, 25 to 30 do.; cotton wool, from 12 to 20 piastres, &c.

We learn from —, that your firm deals largely in skins and furs, but he does not state the quality of either; the latter article is, however, of a very limited and ordinary nature with us, and chiefly consists of hare skins, which are abundant and shipped in considerable quantities for the German and French markets. They are most plentiful during the winter season, when they are also cheaper and keep better than in the hot months of the year. Sheep, goat, lamb, and kid skins are plentiful, and are often in request for America; particularly the 3 latter when in season, which is, for lamb skins from the middle of March to the beginning of June, and for goat skins from November until April. We have no want of ox and cow hides, both dried and salted, the leather of which is said to be more pliable than those of Europe. They are now and then sent to Marseilles in small parcels; but as it would be difficult to convey, by a written description, the exact quality of those skins, we intend making up a little bale of such kinds as may for the moment be met with, and to forward it by an early vessel to London, when it shall be submitted to your inspection, with an invoice, and remain, if you think proper, at your disposal.

We now proceed to make you acquainted with the manner in which our sales, purchases, and barter are effected, together with the nature of sales made on credit or for cash, &c.

Sales are effected in this country between our house's brokers, and what is termed a street or outdoor broker; the former receiving their instructions from us, and the latter acting on behalf of the buyer. When the terms are mutually agreed upon, the real buyer and seller personally meet; and a bond or obligatory note stating the terms and amount of the transaction is drawn out and signed by the buyer, and when not much approved of, one or more signatures are required to the bond, who individually and collectively become responsible for the fulfilment of it.

Parties are similarly made, except that the purchaser or agent himself, in the first instance, and his brokers, inspect the goods he is about to treat for; each down is generally expected; and it is but when that a short credit of 1 or 2 couriers is obtained: it is not unfrequently happens, also, that 1 or even 1/2 of the purchase amount is advanced to the seller, when an insufficient quantity of the article wanted by the buyer is in the place, and which must then be procured from the interior or place of growth. The money advanced (which is to be returned if the quality does not suit) is sent by a confidential person on the part of the purchaser, accompanied either by the seller in person, or by some one representing him.

Barter is generally attended with delay, impediments, and sacrifices to the European agent who exchanges his constituents' goods for native produce, and are never completed without his paying a large portion in cash, which is mostly 1/3, sometimes even 1/2, but never less than 1/3 of the full amount; besides always paying a higher price for the produce than if it were bought for ready money. On the other hand, so far as the agent's transaction goes in goods, the price of which he also advances, it is equal to an advantageous cash sale, deducting a discount; but still he loses, as we have just stated, on that part of the operation which subjects him to the necessity of giving ready money for such part of the produce as remains above the counter-value given in goods, at a higher rate than it is worth in the open market. Thus the advantage is all in favour of this country, and against the agent. Indeed, barter is seldom undertaken unless when a profitable result is anticipated, when European goods are difficult to be placed upon saving conditions, either from the want of demand or a glutted market, or when (which is mostly the case) the holder of such goods has orders from the owners of them to quit them in produce, and thus realize their property, if not upon profitable terms, at least without the risk arising from bad debts; sometimes, also, outstanding bonds are taken in part payment, to the extent occasionally of 1/3; another 1/3 is taken in goods at an advance of from 5 to 10 or 12 per cent. above

current prices; and the remaining in cash against produce, at from 5 to 10 per cent. more than fetches in the bazaars. However, it is by barter alone that any extensive transaction ever takes place or that it can be either readily or safely effected.

Sales on Credit.—The terms of credit vary considerably, and depend entirely upon the quality of the goods which the agent sells: for current or demanded merchandise, 2 couriers (or 2 periods of 15 days) and two and three 31 days, are the present terms; which are extended to four, five, and six months for articles not much in request. Couriers mean post days; of which we have 2 in each month; each courier, and 31 days, a proportionate payment becomes payable; for instance, on a credit of 31 days, 1-6th falls due at the expiration of the first month; and if paid, is noted accordingly on the bond, and so on until the remaining 5 periods are expired; it must, however, be observed, that payments are by no means punctually made, except by a few of our more wealthy bazaar buyers, although for the first 3 or 4 periods of a long credit some regularity is observed; but as the time begins to shorten, payments are proportionally retarded, so that two 31 days on a bond of credit for 6 months may be considered as a fair average of time in addition to the limited term.

Sales for Cash.—These very seldom occur, indeed, and then only when money is abundant, or the article sold scarce and in great demand; in fact, not 1 sale in 100 is made on these terms; and in about the same ratio is a discount taken off from a bazaar bond at even an exorbitant rate, however about the period may be that it has to run: occasionally a sale is, however, effected for cash, and the other for short credit, for some very current goods.

Character of Dealers.—Before entering upon the articles of commerce, we are desirous of making you acquainted with the character and customs of our bazaar dealers. The Greek dealers are in general petty shopkeepers, very cunning, and very bad payers. The Jews have similar defects, but are well supported by their brethren, who generally become guarantee for each other. The Armenians are by far the largest traffickers both for buying and selling; and though hard bargainers, are usually all solvent, and honourable as well as honest. The Turks are, however, as far superior to the foregoing races in all moral qualities, as they are inferior to them in means and commercial abilities; yet they sometimes deal largely, and their bond is as punctually discharged, in general, as the day comes when it falls due. The laws in this country mostly favour the debtor at the expense of the creditor, and so far they encourage dishonesty. The number of insolvent native dealers is at one time excessive; but of late the means of each individual buyer have been so carefully investigated, that at present we are not aware that there is one bazaar dealer who is not able to meet the demands of those from whom he has purchased. The European consuls, who enjoy much consideration by the Turks, protect the interests of their countrymen in disputed points; and, in general, questions of a commercial nature are submitted to the decision of a Turkish tribunal, where very little pleading but a good deal of plain straight-forward justice, goes forward; except that, perhaps, the European is, if anything, rather less favoured than the native.

We now proceed to offer some observations on the leading articles of our imports and exports for your government, the correctness of which may be relied upon.

IMPORTS.

Coffee.—This is by far the most current article received here, and is sent from England, France, Holland, Trieste, Marseilles, Leghorn, Genoa, and America; but first, and principally of late years, from the latter country; the vessels of which are frequently laden with coffee, and always partly so, the next in point of quantity comes from England; but is shipped mostly in small parcels at a time, of from 300 to 600 sacks, although occasionally that amount is doubled. France follows, but on a less extensive scale; and Austria, Holland, and the small ports in the south of Europe, do not together export more than what is received from England alone. We have 4 different qualities of coffee in our markets; namely, Mocha, St. Domingo, Havannah, and Brazil: the first is sent from Alexandria, and by American vessels, and but seldom from Europe; the consumption is, however, limited, and does not exceed 60,000 oke annually. At Constantinople, about 2 times that quantity is sold yearly. We never remember to have known such heavy importations of West India coffee as within the last 6 months (written in November, 1827); the consequence of which has been such an excess beyond the wants of the place, that not only buyers are fully supplied for some time to come, but also the heavy stock in first hands can only be diminished either by forced or ruinous sales, or must wait for 2 or 3 months, until the demand again comes round; which is, however, certain to take place, as coffee forms one of the necessities of life in this country; in short, an Asiatic cannot do without his coffee; and it is well known that in Smyrna alone not less than perhaps 400,000 cups of it are daily drunk, which, computed at the cost price of 2 pras each, amount to 800,000 piastres! The St. Domingo and Havannah coffee are preferred to the Brazil, although, when the latter is of a fair round quality, there is not more than 5 per cent. difference in price; the small green West India berry certainly commands a ready sale; but, for the finest sort, not more than 6 or 8 per cent. can be obtained above the middling and sound quality. Coffee is amongst the very few articles which occasionally meet with a partial and entire cash sale and short credit; and is, moreover, from the means and character of the dealers in it, the least liable to risk from insolvency. It is also the easiest through which an advantageous barter can be effected, as a much larger quantity of coffee will be taken in exchange for produce than almost any other item of European merchandise. Annual consumption, about 3,000,000 oke.

Sugar is the next in consequence. This article is supplied from the same sources as coffee, and is attended in its disposal with similar results. We receive the following qualities:—White crushed, white Havannah, brown do., white East India, refined in small loaves of 4 lbs. and in large of 8 lbs. each: the 2 latter are mostly shipped from America and England. The brown and ordinary sorts are not so current. Annual consumption, 10,000 kintals.

Indigo follows the 2 preceding articles, not so much in extent as meeting a ready sale always, and not unfrequently a profitable one: it is attended likewise with all the advantages and facilities attached to coffee and sugar, and is furnished by Europe and America, but principally by England. The qualities we receive consist of East India purple and copper, ditto common, and Guatemala. The first of the 3 is the kind best adapted for our markets, and is placed sooner and better than the other 2; but, as is the case with coffee, the very fine will not pay cost price, and ought therefore never to be sent. The pieces suited for our buyers ought to be good sized, with about an equal proportion of purple and copper in each piece. The few chests on sale are all ordinary, and consequently dull; and the first arrival of 15 or 20 chests (and not more ought ever to be shipped at one time) of fair East India will meet with a ready and favourable sale at 20 piastres per oke. Annual consumption, 80 chests.

Manufactures—This is, in point of amount, the most extensive branch of trade carried on in Turkey. We have, as you will perceive from our price current, a numerous assortment of British and East India cotton goods and English shalloons. The white or unprinted cotton goods are most in demand during the warm weather, and the coloured or printed stuffs during winter, although a considerable quantity of all sorts is regularly and largely sold throughout the whole year. The East India manufactures are supplied by America and England exclusively; the latter country also sends fair imitations of the East India loom, in long cloths, seracuckers, &c. The native consumers are exceedingly fastidious in their choice of designs and colours, which ought very frequently to be altered, in order to meet their capricious taste. Manufactured goods are always sold at long credits, but large barterers are

is effected through them. A person desirous of entering into this item of our commerce is almost ultimately to reap an advantage; but he must have patience, a large capital, and must not be disappointed at the first or second result of his enterprise, should it disappoint his hopes of profit. He must also enter into the thing with spirit, and keep his agent always supplied with the goods he may command; and he is to remember that many months must elapse before he can expect a return by way of exchange, but sooner if he orders a barter. The capital employed must also at least be to the amount of 20,000, to do any good; and further, the sum ought to be dispersed by him without any necessary embarrassment or inconvenience. For a person willing to undertake such a step, he would require to be regularly furnished with patterns, and advices of the manner in which they ought to be prepared and varied; and we again repeat, that with competent means, a real desire to follow the branch fully, and full information hence of what is required, a most extensive and finally lucrative business would be done; and we recommend the matter strongly to your best consideration. Annual consumption of all kinds (British), about 367,300 pieces.

Cotes Tatist forms no inconsiderable article in our trade, and is supplied exclusively from England. It is, however, superseded, in some degree, the demand which formerly existed for water twist, and is consequently more in request. Water twist is nevertheless saleable, and both qualities appear to be rather high numbers. This article is often given in barter, but mostly sold at rather long credit, and hardly ever for cash. Annual consumption of water twist, 10,000 oke; ditto of mule twine, 20,000 oke.

Iron Bars, English, was formerly largely consumed; but from the buyers being plentifully supplied, it is at present but little demanded, even at the losing price of the day. Barter is very frequently effected through irons of all descriptions, and commands a short credit, and sometimes a cash bid. Annual consumption, 16,000 to 18,000 kintals.

Iron Plates are generally employed for building purposes, and store doors.

Iron Rods are always saleable.

Iron Nails are most saleable in August, September, and October, for fruit and other export barrels. *Iron Bars*, and *Swedish Bars*.—These kinds are sent in rather large parcels, particularly the latter, and fetch a higher price than the English, owing to their malleable qualities, which render them easier, and by that advantage command a preference: though the high price, beyond the English rates, puts the two qualities upon a level, and commands a larger consumption of the latter. Annual consumption, 3,500 kintals.

Iron Bars is a good, steady, saleable article; is often given on fair terms in barter, always disposed of on short credit, and now and then placed for cash. It comes from England exclusively. Annual consumption, 850 to 1,000 barrels of 4 cwt. each.

Iron Plates is attended with the foregoing advantages, and is also supplied by England alone. Annual consumption, 1,200 double boxes.

Lead in Sheets, Pigs, and Shot.—These 3 items have lately, particularly shot, been sent from Germany, and prove dangerous competitors with the English; in consequence of which the thing is overdone, and we have more in market than meets the demand at losing prices.

Lead, Red and White.—These 2 articles have lately been much in request for the formation of paint. Some large parcels of red have lately arrived, and sell well and currently, but we are altogether without white. The consumption of all sorts of lead has, however, considerably decreased of late years, and no longer forms an item of any great consequence in our trade. *Lead in Brandy*.—Lowland Island and Jamaica are furnished by America and England; the former particularly in the lower qualities, of which we have a full market at low prices. The better kind and quality are supplied from England, but do not obtain a proportionate advance compared with the numerous sorts. Brandy is but of limited demand, and 2 or 3 puncheons are sufficient at a time. It ought, as well as rum, to be deeply coloured. Annual consumption of rum, 300 puncheons.

Peppers are all saleable in small parcels at a time, particularly pepper and plumetto; the latter of which, in small sound berries, is demanded at good prices. Nutmegs are very abundant, and offering very low without finding purchasers. France, America, and England supply us with spices, but in none more so in cloves than in other kinds; and it may be remarked that the qualities received from England are preferred. Credit on selling is generally short.

Cinnamon is a fair article now and then in small quantities; and, when in demand, at times fetches good prices, occasionally a cash sale, and always one of the shortest credits. Annual consumption, 150 oke.

In concluding our observations on imports, we could wish to impress the conviction, that a poor man's purpose cannot be answered in speculating to this country; for, should his circumstances require a speedy remittance in bills, he must submit to a heavy sacrifice, in order to meet his wants, by selling his property for whatever it may fetch in cash; and such a measure cannot but be attended with very heavy loss. On the contrary, when an opulent person finds that his property cannot be disposed at selling prices, he can afford to wait until a more favourable moment presents itself; and such a moment, in less than 12 months, is almost certain to arrive, when he retires his money with advantage more than equal to any interest he could obtain for it in Europe.

That the rate of exchange has regularly advanced, and will continue to advance, is the natural result of the continual deterioration of the Turkish specie. We remember when the piece of money designated 'Mahmoudia,' passed at about its value, or nearly so, of 10 piastres: it rose to 25 soon afterwards; and the few which remain are at present worth 39 each. At the period we allude to (1812), the exchange on London was at 25 piastres the pound sterling; and until lately (owing to the great depression of trade, and to political events, which have lowered it), the rate has been up to 60. It cannot, however, increase beyond that rate more than 5 per cent., as it then will nearly be on a par with the value of the gold and silver current coin of the realm, when it will be better to result in specie than by a bill at 63 piastres for 61 days' sight.*

The rates of exchange fluctuate considerably, and a difference of 1 to 1 per cent. often occurs between one post day and another, and are attributable to the inequality scarcity of paper in market: it is for this reason that the rate always decreases during the present season, which takes place at the latter end of August, and continues until the middle of October; when it rises again to meet the limited wants of drawers, and the larger demands of those remittances who do not ship fruit, and invest the funds of their employers in that article. These observations lead us to submit the question of the advantage which a person in Europe has in receiving from this country, instead of sending to it. Late extensive barter have proved to us, and which we have endeavoured to show you, the unprofitable terms upon which they are conducted, were it only in paying, and that in cash too, for at least 1/2 of the amount, at a higher rate than was current; and this higher rate is, in itself, supposing the produce taken in barter to meet with a selling sale in Europe, of so small consideration;—then you have the advantage of drawing at a high exchange in making a purchase; and again you have the choice of selecting the good part of the produce, and of rejecting

* The exchange, partly from the further degradation of the coin, and partly from the balance of payments being against Smyrna, is now (February, 1834) 93 piastres to the pound sterling! This situation of the exchange renders the holding of property upon a speculation for an advance very hazardous.

the inferior,—a choice which is not allowed in taking it in barter; lastly, the principal advantage in buying over bartering is, that you can avail yourself of a depression in the produce market, and effect your purchase upon easy terms; whereas, when a barter is proposed, it has the immediate effect of producing a general rise in the whole market, and also of engendering the most absurd pretensions on the part of produce holders, who are too conversant with commerce not to see that either the European house, wishing to barter, is in want of procuring returns for his principal, or else that either the articles of produce wanted are in great demand in Europe—without which, the European agent would never submit to take produce at so much higher a price than he could procure it for with cash! The only time in which the person sending to this country can calculate upon a profitable return, is during the fruit season; and for that reason he ought to forward his shipments from Europe so as to meet the demand, and to be cashed by the beginning of August. A vessel from England hence is in general from 40 to 50 days in performing her voyage; sometimes much less, and but seldom longer; goods ought, if possible, always to be shipped in a fast and first class ship.

We now continue our remarks on the articles of our trade, and the following are some of them hence, and deserving of serious attention.

EXPORTS.

Silk.—This is the richest raw article in our export trade with Europe in general, but almost exclusively with England, which consumes nearly our entire produce. There are 3 different qualities, viz. fine, middling, and coarse. Bales, adapted for the English market, are composed of the 3 qualities, but the lesser quantity is of the coarse kind; at one time, all coarse was in request in London, but at present an assortment of the 3 qualities is preferred. When an order is given, it ought to be accompanied by a description of the quality required; and it is necessary to state that, for all of the qualities without being mixed, a higher price is demanded. A bale contains 40 tiffes; and, before being packed, is carefully examined and approved of by competent native judges. Silk is produced in *Brussa*, a large city about 200 miles distant from Smyrna, whence it is forwarded by caravans to the different places of consumption, which are Constantinople and this town. Until very lately, almost the entire crop of silk came for sale to Smyrna, but at present the most considerable part is sent to Constantinople, where the price is higher; we have therefore here an advantage, not only in price, but also in our manner of packing, which fetches 5 or 6 per cent. more in England than if packed in the capital. Silk is mostly a ready money article, though it sometimes may be had on credit, either at a short credit; or half cash and half 1 or 2 couriers; it is also now and then given in barter. Annual average produce, 2,500 bales, or about 450,000 lbs.*

Opium. In point of value, and as an article of speculation, hardly gives way to silk; but as it is largely shipped by Americans, and sent in smaller quantities to Holland, and the south of Europe, it is subject to much competition and variation of price, although we have invariably observed that the opening price of the new crop is always the lowest, which, however, is in some measure counterbalanced by the decrease in weight which occurs by keeping. This is also a cash article, and indeed subject to the same conditions as purchasing or bartering for silk; it nevertheless has one inferiority, which the silk is not liable to—namely, a difference in the quality of the crops: last year, our inferior opium was of a very bad kind, and hardly saleable in England; this year, though small, it is fine. On the Continent and in America, the small sort is preferred to the larger sized. We observe that, in England, the prices of opium fluctuate considerably; but we are not aware that, by holding it, any loss has ever happened,—another reason why a wealthy man only should embark in the Turkey trade. It would be impossible, or at least difficult, and attended with much expense, to obtain a monopoly of the opium crop, as it is produced through some thousands of individuals, each one (and they are all poor) adding his produce; and when collected in sufficient quantities, it is brought to market by the natives, having each of them 1 or 2 baskets for sale. What might be done is this:—Send a person to the place of growth with ready money to purchase a certain but limited quantity, and which he can do easily, if not hurried, to the extent of 50, or even 100 baskets, and upon terms of advantage, from the simple fact that the collectors of it prefer to receive a remunerating price on the spot of growth, rather than perform a long and expensive journey, with the chance of not finding purchasers immediately. Opium is produced at sundry places in the interior, of from 10 to 30 days' distance hence, but that grown at *Caissa*, about 600 miles from Smyrna, is the most esteemed, from its cleanliness and good quality; it comes to market in June, and finishes about December or January. Annual average produce, 3,000 baskets, or about 400,000 lbs.*

Drugs and Gums form one of our principal branches of commerce, and is almost entirely in the hands of the Jews. At present, gum Arabic and mastic are exceedingly scarce; and it is only when that the case, or the demand for exportation is very brisk, that much variation exists in the price of drugs, Trieste, and occasionally America, consume a considerable portion of gums, but the largest quantity goes to the English markets. Barterers are often effected through this medium; but it is not attended with much advantage, as they are conducted by a race who never lose in any transaction they undertake. It is impossible to ascertain the quantities of drugs received in Smyrna, and equally so to know the quantity remaining, as they are dispersed all over the city, and consumed so irregularly in Europe, as to hide defiance to all regular calculation.

Sponges have been, and still are, an article of considerable moment, particularly for the English markets, and are found about the islands in the Grecian Archipelago, brought here, and cleared for exportation. They vary in price from 6 to 90 piastres per ske, according to fineness and quality; the better sort alone answers for speculation, and which, it would appear, from the considerable quantity sent to London, turns to good account. The produce depends so entirely on chance, that no correct estimate of the yearly quantity can be formed; however, we are seldom in want of a moderate supply.

Galls are shipped in considerable quantities for the English, German, and French markets; the former, however, being the largest consumers; for England, the blue galls are those principally sent, though the market there for their sale being dull and low, prices with us, moderate as they are compared to last year, will still further decline, should a demand not spring up, of which there is no appearance. Annual produce of all sorts, 3,500 kintals.

* Since the period when this paper was drawn up, a considerable change has taken place in the silk and opium trade of Smyrna. A few years ago, the Turkish government so far receded from the principles which pervade its commercial policy—(see CONSTANTINOPLE),—as to attempt the establishment of monopolies of silk and opium; by compelling the producers of these articles to sell them at a fixed and low price to the government agents, by whom they were afterwards disposed of at an advanced rate. But a plan of this sort could not be carried into effect in such a country as Turkey; and had, consequently, to be abandoned. A duty of nearly 10 per cent. has, however, been imposed on the silk and opium exported to foreign parts. And in order to facilitate the collection of this duty, the whole of these articles intended for exportation are required to be brought to Constantinople! The regulation has done there for their sale being dull and low, prices with us, moderate as they are compared to last year, will still further decline, should a demand not spring up, of which there is no appearance. Annual produce of all sorts, 3,500 kintals. (See *Quarterly Turkey and its Resources*, p. 169.)

Cotton Wool, cleaned at present with us, which generally were produced of possible quantities of growth, which much resorted to, as with us, in Europe. It can

Pratt.—This is during the season, and all their quality, however, Cabsick, quality gained, quality fair with, and with a risk depends upon a variety. The quantity of the cotton used in carding, is seldom exceeding in price, is expected to be only bought up, usually. Made

SNUFF-BO

British. We are met with in Cannon boxes

These beautiful, about 40 years ago. In place of preparation for the inventor, instead of years since, purity. The first box, is so called, required in its mystery attached, who are rigorous.

About the beginning of the 18th century, of the various attempts, producing a strongly enriched, most in demand, improved and probably, 20 made in Smyrna, who employ 20, and it was a manufacture of Smyrna in the wool, 1/2, the intricate, finest colour, this return it yields!

Cotton Wool, of which we have several qualities, is chiefly exported to Trieste and Marseilles. The demand at present for a kind of this produce is extremely limited, and we expect that prices will go lower with us before long, when perhaps something good might be done in Shouboogear to England, which generally receives only that quality. Barters are made to a large extent in cottons. Annual exports produce of all sorts, 60,000 kintals.

Raisins employs more British shipping for full cargoes of only one article, than any other species of produce, if we except, perhaps, fruit: it is also sent to Dublin and to the German markets in considerable quantities. Almost any supply can be obtained, and it is shipped generally near the places of growth, which are numerous, although there is never any want of it in the Smyrna market. It is much resorted to as a means of making barter, which perhaps are as easily effected, upon pretty fair terms, as with any other article of produce. The annual produce is sufficient to meet the wants of all Europe. It can be had to any extent, and at all periods.

Figs.—This is an article which occupies the attention of all Smyrna, more or less, and produces, during the season, great interest and activity. Figs come to market early in September, and raisins are ready for shipping early in October: the former are procurable only at Smyrna, where the latter in all their qualities may be procured; but the shipments are generally made at Cesme, Vouria, Carabourn, Uabek, &c., from which ports the name of the raisin takes its origin. Large sums are frequently gained in fruit speculations; and when the demand in England is brisk, and the prices and quality fair with us, it very seldom happens, indeed, that any loss is sustained: it is, however, attended with risk; it must be shipped dry; and ought only to go in a very fast, sound vessel, as much depends upon a fast, or at least an early arrival, which obtains in general a higher price than the later arrivals. The quantity produced is always uncertain.

The remaining articles of exports hence, we refer you to our price current. Carpets are produced to the extent of about 80,000 to 100,000 pikes a year. Oil (olive), to the amount of 10 to 15 million stook cargoes, from the islands of Mytilene, Candia, &c., is generally shipped for America and France; seldom for England; the season commences in September, but the crops of olives fluctuate exceedingly in point of quantity; hence arise dear and cheap years: last year was a high one, and it is expected to be lower this. Copper, old and new, may be computed at 20,000 oke, which are generally bought up as soon as offered in Europe. Hare's kins are computed at 350,000 to 400,000 annually. Madar roots at 12,000 kintals. Peletons, at 12,000 to 15,000 cheques. Goats' wool of all kinds may be calculated per year at 45,000 to 50,000 cheques; sheep's wool at 22,000 kintals. Wax (yellow), 1,600 kintals.

We have now finished our general remarks on the exports and imports of the place; and in concluding them, we beg to state that, upon an average of all of them, with the exception of fruit from, and of iron to, Turkey, the selling charges may (excluding del credere commission) be calculated at about 12 per cent., and on purchasing at about 8 per cent.

SNUFF (Ger. *Schnupftaback*; Fr. *Tabac en poudre*; It. *Tabacco da naso*; Sp. *Tabaco de pelo*; Rua. *Nosowoi tabak*), a powder in very general use as an errhine. Tobacco is the usual basis of snuff; but small quantities of other articles are frequently added to it, to vary its pungency, flavour, scent, &c. Though substantially the same, the kinds and names of snuff are infinite, and are perpetually changing. There are, however, 3 principal sorts: the first, granulated; the second, an impalpable powder; and the third, the bran, or coarse part remaining after sifting the second sort. Unless taken in excess, no bad consequences result from its use.

Dealers in tobacco and snuff are obliged to take out a licence, renewable annually, which costs 5s. They are also obliged to enter their premises, and have their names written in large legible characters over their doors, or on some conspicuous part of their houses, under a penalty of 50l. The dyeing of snuff with ochre, amber, or any other colouring matter except water tinged with colour, is prohibited under a penalty of 100l.; and its intermixture with fustic, yellow ebony, touchwood, sand, dirt, leaves, &c. is prohibited under a penalty of 100l. and the forfeiture of the article.—(1 & 2 Geo. 4. c. 109.) If snuff be found to contain 4 per cent. of any substance, not being tobacco, and other than water only, or water tinged with colour, or flavoured only, such snuff shall be deemed adulterated, and shall be forfeited, and the parties subjected to a penalty of 100l. over and above all other penalties and forfeitures.—(2.) No quantity of snuff weighing above 2 lbs. shall be removed by land or water without a permit.—(29 Geo. 3. c. 68.)—(See **TOBACCO**.)

SNUFF-BOXES are made of every variety of pattern, and of an endless variety of materials. We only mention them here for the purpose of giving the following details, not to be met with in any other publication, with respect to the manufacture of Laurencekirk or Cumnock boxes. These are made of wood, admirably jointed, painted, and varnished.

These beautiful boxes were first manufactured at the village of Laurencekirk, in Kincardineshire, about 40 years since. The original inventor was a cripple hardly possessed of the power of locomotion. In place of curtains, his bed (rather a curious workshop) was surrounded with benches and respectives for tools, in the contrivance and use of which he discovered the utmost ingenuity. The inventor, instead of taking out a patent, confided his secret to a joiner in the same village, who in a few years amassed a considerable property; while the other died, as he had lived in the greatest poverty. The great difficulty of the manufacture lies in the formation of the hinge, which, in a genuine box, is an delicately made as hardly to be visible. Peculiar, or as they are called, secret tools, are required in its formation; and though they must have been improved by time and experience, the mystery attached to their preparation is still so studiously kept up, that the workmen employed in one shop are rigorously debarred from having any communication with those employed in another.

About the beginning of this century, an ingenious individual belonging to the village of Cumnock, in Ayrshire, of the name of Crawford, having seen one of the Laurencekirk snuff-boxes, succeeded after various attempts, by the assistance of a watchmaker of the same village, who made the tools, in producing a similar box; and by his success, not only laid the foundation of his own fortune, but greatly enriched his native parish and province. For a while, the Laurencekirk boxes were most in demand; but Mr. Crawford and his neighbours in Cumnock not only copied the art, but so improved and perfected it, that, in a very few years, for every box made in the north there were, probably, 20 made in the south. In 1820, the Cumnock trade was divided amongst 8 master manufacturers, who employed considerably more than 100 persons. The demand at that time equalled the supply, and it was calculated that the trade yielded from 7,000l. to 8,000l. annually,—a large product for a manufacture seemingly so insignificant, and consisting almost exclusively of the wages of labour. Fine is the wood commonly used, and the cost of the wood in an ordinary sized box does not exceed 1s.; the paints and varnish are added at 2d.; and though something is lost by selecting timber of the best colour, the whole expense of the raw material falls considerably short of 1 per cent. on the return it yields:

Laws, vol. ii. pp. 418-420.)

Exports of Soap and Candles.—We annually export from 10,000,000 to 12,000,000 lbs. of soap and candles, worth from 250,000l. to 350,000l. Nearly 3/4 are exported to the British West Indian and American colonies. A very large quantity is also exported to Brazil.

Oppressiveness of the Duty.—The direct duty charged on hard soap, which is by far the most extensively used, amounted, till June, 1833, to 3d. per lb., or 2s. per cwt., while the price of soap rarely exceeded 6d. per lb., or 56s. per cwt., so that the direct duty was fully 100 per cent. But besides this enormous duty, the substances of which soap is made, viz. tallow, burilla, and turpentine, or rosin, were respectively charged with duties of 3s. 4d., 2s., and 4s. 4d. a cwt.; and taking these indirect taxes into account, it may be truly stated that soap was taxed from 150 to 130 per cent. ad valorem. The imposition of so exorbitant a duty on an article that is indispensable to the prosecution of many branches of manufacture, and to the comfort and cleanliness of all orders of persons, was in the last degree oppressive. There were good reasons, too, for thinking that in consequence of the encouragement which this excessive duty gave to smuggling and fraud, the revenue derived from it was not much greater than it will be now that it is reduced to 1/2 its former amount. During the 5 years ending with 1833, the consumption of duty-paid soap was nearly stationary; though there can be no doubt, from the increase of manufactures and population during that period, that it would have been very considerably extended, but for the increase of smuggling. This baneful practice is facilitated by the total exemption which Ireland enjoys from this duty; for it most infrequently happens that the soap made in that country, and sent to Ireland under a drawback, is again clandestinely introduced into Great Britain. It is, perhaps, needless to say, that nothing but the effectual reduction of the duty could put a stop to the smuggling and fraud that has been so generally practised. So long as the profit to be made by breaking the law was so high as 120 or 130 per cent., so long was it sure to be broken, in despite of the multiplication of penalties and the utmost activity and vigilance of the officers. But now that the duty has been reduced 1/2, the temptation to smuggle will be most materially diminished. And it may be fairly concluded that the increased consumption that will, no doubt, follow this reduction of duty, will go far to render the low duty as productive as the higher one; so that the advantages resulting from the diminished temptation to smuggling and fraud, and the influence of the reduced price of the article in facilitating manufacturing industry, and in promoting habits of cleanliness, will, most probably, be obtained, without any considerable loss of revenue.

The entire repeal of the soap duty would be a popular measure; but, seeing that a large amount of revenue must be raised, and that those taxes only are productive which affect all classes of the community, we should not be depressed to recommend such a measure. It is not the tax itself, but the oppressive extent to which it was carried that made it objectionable. Instead of proposing its repeal, we think it ought to be extended to Ireland. The exemption of one part of the empire from a duty which is imposed on another part, is contrary to all principle, and is fraught with the most pernicious results. It will be impossible to get rid of smuggling as long as this unjust distinction is suffered to exist. Were the duty extended to Ireland, the necessity for granting drawbacks on the soap exported thence, and of laying countervailing duties on that imported from it, would, of course, fall to the ground. And we feel confident that, though a still further deduction were made from the rate of duty, its productiveness would not, under such circumstances, be impaired even in England.

SOUTH SEA DUTIES. The act of the 9 Ann. c. 21., establishing the South Sea Company, conveyed to them the exclusive privilege of trading to the Pacific Ocean, and along the east coast of America, from the Orinoco to Cape Horn.

This privilege was taken away by the 47 Geo. 3. c. 23.; and in order to raise a guarantee fund for the indemnification of the Company, a duty of 2 per cent. *ad valorem* was imposed by the 53 Geo. 3. c. 57. on all goods (with the exception of those from Brazil and Dutch Surinam*); and with the exception of hubber, oil, &c. of whales, or fish caught by the crews of British or Irish ships imported from within the afore-said limits. A duty of 1s. 6d. per ton was also imposed on all vessels (except in ballast or importing the produce of the fishery of British subjects) entering inwards or clearing outwards from or to places within the said limits. The duties are to cease when the guarantee fund is completed.

SOY, a species of sauce prepared in China and Japan from a small bean, the produce of the *Dolichos soja*. It is eaten with fish and other articles. It should be chosen of a good flavour, not too salt nor too sweet, of a good thick consistence, a brown colour, and clear; when shaken in a glass, it should leave a coat on the surface, of a bright yellowish brown colour; if it do not, it is of an inferior kind, and should be rejected. Japan soy is deemed superior to the Chinese. It is worth, in bond, from 6s. to 7s. a gallon. It is believed to be extensively counterfeited.—(*Milburn's Orient. Com.*)

SPELTER, a name frequently given to ZINC; which see.

(The exportation of spelter or zinc from Europe to India, which began in 1821, produced an extent of speculation, and a fluctuation of price, that could hardly have been conceived possible.—Subjoined is an account of the

Quantity, Value, and Selling Price of the Spelter Imported into Calcutta, from all Parts, from the year 1820—21.

Years.	Quantity Imported.		Value.		Years.	Quantity Imported.		Value.		Average Price per T. M.
	Baz.	Mds.	Rs.	Ann.		Baz.	Mds.	Rs.	Ann.	
1820-21					1827-28					
1821-22					1828-29					
18-2-23					1830-30					
1823-24					1830-31					
1824-25					1831-32					
1825-26					1832-33					
1826-27					1833-34					

This table shows the extraordinary extent to which speculation had operated on this article. The excess of imports from 1824-25 to 1828-29 was such, that recently the trade may be said to have been altogether extinct; the supplies that were carried out during the 3 years ending with 1831-32 being intended rather to serve as dead weight than as a merchantable article. The stock in the India market has now, however, been so much reduced, that a considerable rise of prices may, at no distant period, be fairly anticipated. (*Bull's Comparative View of the Commerce of Bengal for 1830-31, and 1831-32, p. 5.; and for 1832-33, and 1833-34, p. 24.*)—*Sup.*

SPERMACETI (Ger. *Wallrath*; Fr. *Blanc de Baleine*, *Sperme de Baleine*; It. *Spermaceti*; Sp. *Espuma de Ballena*; Rus. *Spermazet*), a product obtained from the brain of the *physeter macrocephalus*, a species of whale inhabiting the Southern Ocean. The brain being dug out from the cavity of the head, the oil is separated from it by dripping. The residue is crude spermaceti, of which an ordinary sized whale will yield 12 barrels. After being brought to England, it is purified. It then concretes into a white, crystallised, brittle, semitransparent, unctuous substance, nearly inodorous and insipid. On being cut into small

* The provinces of the Rio de la Plata have since been added.—(*Treas. Order*, 12th of March, 1833.)

pieces it assumes a flaky aspect. It is very heavy; its specific gravity being 9.433. It is used in the manufacture of candles, in medicine, &c.

SPICES (Ger. *Spezereyen*; Du. *Speceryen*; Fr. *Epiceries, Epices*; It. *Spezi, Spezie-rie*; Sp. *Espicias, Especerias*; Port. *Especiaria*; Rus. *Pränue korenja*). Under this denomination are included all those vegetable productions which are fragrant to the smell and pungent to the palate; such as cloves, ginger, nutmegs, allspice, &c. These will be found under their proper heads.

SPIRIT OF WINE. See **ALCOHOL.**

SPIRITS. All inflammable liquors obtained by distillation, as brandy, rum, geneva, whisky, gin, &c., are comprised under this designation. The term *British spirits* is applied indiscriminately to the various sorts of spirits manufactured in Great Britain and Ireland. Of these, gin and whisky are by far the most important.

The manufacture of spirits is placed under the *surveillance* of the excise, and a very large revenue is obtained from it. The act 6 Geo. 4. c. 80. lays down the regulations to be followed by the distillers in the manufacture, and by the officers in charging the duties. This act is of great length, having no fewer than 151 clauses; it is, besides, exceedingly complicated, and the penalties in it amount to many thousand pounds. It would, therefore, be to no purpose to attempt giving any abstract of it in this place. Every one carrying on the business of distillation must have the act in his possession, and must be practically acquainted with its operation.

1. *Spirit Duties.* *Consumption of British Spirits in Great Britain and Ireland.*—These are, perhaps, no better subjects for taxation than spirituous and fermented liquors. They are essentially luxuries; and while moderate duties on them are, in consequence of their being very generally used, exceedingly productive, the increase of price which they occasion has a tendency to lessen their consumption by the poor, to whom, when taken in excess, they are exceedingly pernicious. Few governments, however, have been satisfied with imposing moderate duties on spirits; but partly in the view of increasing the revenue, and partly in the view of placing them beyond the reach of the lower classes, have almost invariably loaded them with such oppressively high duties as have entirely defeated both objects. The imposition of such duties does not take away the appetite for spirits; and as no vigilance of the officers or severity of the laws has been found sufficient to secure a monopoly of the market to the legal distillers, the real effect of the high duties has been to throw the supply of a large proportion of the demand into the hands of the illicit distiller, and to superadd the atrocities of the smuggler to the idleness and dissipation of the drunkard.

During the latter part of the reign of George I., and the earlier part of that of George II., gin-drinking was exceedingly prevalent; and the cheapness of ardent spirits, and the multiplication of public houses, were denounced from the pulpit, and in the presentations of grand juries, as pregnant with the most destructive consequences to the health and morals of the community. At length, ministers determined to make a vigorous effort to put a stop to the further use of spirituous liquors, except as a cordial or medicine. For this purpose an act was passed in 1736, the history and effects of which deserve to be studied by all who are clamorous for an increase of the duties on spirits. Its preamble is to this effect:—"Whereas the drinking of spirituous liquors, or strong water, is become very common, especially among people of lower and inferior rank, the constant and excessive use of which tends greatly to the destruction of their health, rendering them unfit for useful labour and business, debauching their morals, and inciting them to perpetrate all vices; and the ill consequences of the excessive use of such liquors are not confined to the present generation, but extend to future ages, and tend to the destruction and ruin of this kingdom." The enactments were such as might be expected to follow a preamble of this sort. They were not intended to repress the vice of gin-drinking, but to root it out altogether. To accomplish this, a duty of *twenty shillings* a gallon was laid on spirits, exclusive of a heavy licence duty on retailers. Extraordinary encouragements were at the same time held out to informers, and a fine of 100*l.* was ordered to be rigorously exacted from those who, were it even through inadvertency, should vend the smallest quantity of spirits which had not paid the full duty. Here was an act which might, one should think, have satisfied the bitterest enemy of gin. But instead of the anticipated effects, it produced those directly opposite. The respectable dealers withdrew from a trade proscribed by the legislature; so that the spirit business fell almost entirely into the hands of the lowest and most profligate characters, who, as they had nothing to lose, were not deterred by penalties from breaking through all its provisions. The populace having in this, as in all similar cases, espoused the cause of the smugglers and unlicensed dealers, the officers of the revenue were openly assaulted in the streets of London and other great towns; informers were hunted down like wild beasts; and drunkenness, disorders, and crimes, increased with a frightful rapidity. "Within 2 years of the passing of the act," says Tindal, "it had become *odious and contemptible*, and policy as well as humanity forced the commissioners of excise to mitigate its penalties."—(*Continuation of Rapin*, vol. viii. p. 358, ed. 1759.) The same historian mentions (vol. viii. p. 390.), that during

the 2 years in question, no fewer than 12,000 persons were convicted of offences connected with the sale of spirits. But no exertion on the part of the revenue officers and magistrates could stem the torrent of smuggling. According to a statement made by the Earl of Chomondelley, in the House of Lords—(*Timberland's Debates in the House of Lords*, vol. viii. p. 388.), it appears, that at the very moment when the sale of spirits was declared to be illegal, and every possible exertion made to suppress it, upwards of SEVEN MILLIONS of gallons were annually consumed in London, and other parts immediately adjacent! Under such circumstances, government had but one course to follow—to give up the unequal struggle. In 1742, the high prohibitory duties were accordingly repealed, and such moderate duties imposed, as were calculated to increase the revenue, by increasing the consumption of legally distilled spirits. The bill for this purpose was vehemently opposed in the House of Lords by most of the Bishops, and many other peers, who exhausted all their rhetoric in depicting the mischievous consequences that would result from a toleration of the practice of gin-drinking. To these declamations it was unanswerably replied, that whatever the evils of the practice might be, it was impossible to repress them by prohibitory enactments; and that the attempts to do so had been productive of far more mischief than had ever resulted, or could be expected to result, from the greatest abuse of spirits. The consequences of the change were highly beneficial. An instant stop was put to smuggling; and if the vice of drunkenness was not materially diminished, it has never been stated that it was increased.

But it is unnecessary to go back to the reign of George II. for proofs of the impotency of high duties to take away the taste for such an article, or to lessen its consumption. The occurrences that took place in the late reign, though they would seem to be already forgotten, are equally decisive as to this question.

Duties in Ireland.—Perhaps no country has suffered more from the excessive height to which duties on spirits have been carried than Ireland. If heavy taxes, enforced by severe fiscal regulations, could make a people sober and industrious, the Irish would be the most so of any on the face of the earth. In order to make the possessors of property join heartily in suppressing illicit distillation, the novel expedient was here resorted to, of imposing a heavy fine on every parish, town land, manor land, or lordship, in which an unlicensed still was found; while the unfortunate wretches found working in it were subjected to *transportation for seven years*. But instead of putting down illicit distillation, these unheard-of severities rendered it universal, and filled the country with bloodshed, and even rebellion. It is stated by the Rev. Mr. Chichester, in his valuable pamphlet on the *Irish Distillery Laws*, published in 1818, that “the Irish system seemed to have been formed in order to perpetuate smuggling and anarchy. It has culled the evils of both savage and civilised life, and rejected all the advantages which they contain. The calamities of civilised warfare are, in general, inferior to those produced by the Irish distillery laws; and I doubt whether any nation of modern Europe, which is not in a state of actual revolution, can furnish instances of legal cruelty commensurate to those which I have represented.”—(Pp. 92–107.)

These statements are borne out to the fullest extent by the official details in the *Reports of the Revenue Commissioners*. In 1811, say the commissioners (*Fifth Report*, p. 19.), when the duty on spirits was 2s. 6d. a gallon, duty was paid in Ireland on 6,500,361 gallons (Irish measure); whereas, in 1822, when the duty was 5s. 6d., only 2,950,647 gallons were brought to the charge. The commissioners estimate, that the annual consumption of spirits in Ireland was at this very period not less than TEN MILLIONS of gallons; and, as scarcely three millions paid duty, it followed, that seven millions were illegally supplied; and “taking one million of gallons as the quantity fraudulently furnished for consumption by the licensed distillers, the produce of the unlicensed stills may be estimated at six millions of gallons.”—(*Ib.* p. 8.) Now, it is material to keep in mind that this vast amount of smuggling was carried on in the teeth of the above barbarous statutes, and in despite of the utmost exertions of the police and military to prevent it; the only result being the exasperation of the populace, and the perpetration of revolting atrocities both by them and the military. “In Ireland,” say the commissioners, “it will appear, from the evidence annexed to this Report, that parts of the country have been absolutely disorganised, and placed in opposition not only to the civil authority, but to the military force of the government. The profits to be obtained from the evasion of the law have been such as to encourage numerous individuals to persevere in these desperate pursuits, notwithstanding the risk of property and life which they have been attended.”

To put an end to such evils, the commissioners recommended that the duty on spirits should be reduced from 5s. 6d. to 2s. the wine gallon (2s. 4d. the imperial gallon), and government wisely consented to act upon this recommendation. In 1823, the duties were accordingly reduced; and the following official account will show what has been the result of this measure:—

It may appear, on a superficial view of this Table, as if the consumption of spirits in Ireland had been nearly trebled since 1823; but, in point of fact, it has not been in any degree increased. The reduction of the duties substituted legal for illicit distillation, and freed the

has diminished

country from the perjuries and other atrocities that grew out of the previous system; but it would be wholly erroneous to say that it increased drunkenness. We have already seen that the commissioners, who had the best means of obtaining accurate information, estimated the consumption of spirits in Ireland, in 1823, at *two millions* of gallons; and it was not more in 1828 and 1829. The measure was, therefore, in every point of view most successful; and it is much to be regretted that it was interfered with in 1830, by raising the duties from 2s. 10d. to 3s. 4d. The following Table shows that this increase has materially diminished the quantity of spirits brought to the charge. We do not, however, believe that it has occasioned any diminution of consumption. The truth is, that 2s. 10d. was as high a duty as the article would bear; and the additional 6d. has again thrown the balance in favour of the smuggler, and led to a partial revival of illicit distillation. The evidence taken before the commissioners of excise inquiry has completely established this fact; and sound policy would, therefore, suggest that the duty should be once more reduced to 2s. 10d. At all events, we trust that no senseless, though well-meant clamour about the prevalence of drunkenness, and no pecuniary necessity, will ever tempt ministers to add further to the duties on spirits. Such a measure would not bring a shilling into the public treasury, nor cause any diminution of the vice of drinking; it would merely add smuggling and its attendant evils to the other disorders with which Ireland is afflicted.

An Account of the Quantities of Spirits made in Ireland, which have paid the duties of Excise for Home Consumption; stating the Rate of Duty paid, and also the Nett Amount of Revenue received in each Year, since the Year 1820.—(Parl. Paper, No. 340, Sess. 1829, No. 61, Sess. 1831, &c.)

Duties in Scotland.—The experience of Scotland is hardly less decisive as to this question. The exorbitance of the duties produced nearly the same effects there as in Ireland. Mr. John Hay Forbes, formerly sheriff-depute of Perthshire, now one of the Lords of Session, stated in evidence before the commissioners, that, according to the best information he could obtain, the quantity of illegally distilled spirits annually produced in the Highlands could not amount to less than *two millions of gallons*. In corroboration of this he stated, that, in 1821, only 298,138 gallons were brought to the charge in the Highlands; and of these, 254,000 gallons were permitted to the Lowlands, leaving only 44,000 gallons for the consumption of the whole country;—a supply which, we are well assured, would hardly be sufficient for the demand of 2 moderately populous parishes. In a letter of Captain Munro of Terrinich to the commissioners, it is stated that, “at Tain, where there are upwards of 20 licensed public houses, *not one gallon had been permitted from the legal distilleries for upwards of twelve months*,” though a small quantity of smuggled whisky had been purchased at the excise sales, to give a colour of legality to the trade. The same gentleman thus expresses himself in another part of his letter:—“The moral effects of this baneful trade of smuggling on the lower classes is most conspicuous, and increasing in an alarming degree, as evidenced by the multiplicity of crimes, and by a degree of insubordination formerly little known in this part of the country. In several districts, such as Strathconon, Strathcarron, &c., the excise officers are now often deforced, and dare not attempt to do their duty; and smuggled whisky is often carried to market by smugglers escorted by armed men, in defiance of the laws. In short, the Irish system is making progress in the Highlands of Scotland.”

To arrest the progress of demoralisation, government, pursuant to the judicious advice of the commissioners, reduced the duties on Scotch to the same level as those on Irish whisky; and the consequences were equally salutary. The subjoined official statement (page 540) shows the effect of the reduction of the duty in 1823, and of its subsequent increase in 1830.

This Table sets the impolicy of the increase of duty in 1830 in nearly as striking a point of view as it does the policy of its reduction in 1823. There is no denying the fact, that this unequalled measure has diminished the consumption, and given a powerful stimulus to illicit distillation. We understand

that the commissioners of excise inquiry mean to recommend that the duty be again reduced to 2s. 10d.; and every one, not anxious for the prevalence of smuggling, will be desirous that this recommendation should be carried into effect.

An Account of the Quantities of Spirits made in Scotland, which have paid the Duties of Excise for Home Consumption; and stating the Rate of Duty paid, and also the Nett Amount of Revenue received in each Year, since the Year 1820.—(Parl. Paper, No. 340, Sess. 1829, No. 61, Sess. 1831, &c.)

Duties in England.—Previously to the reduction of the duty on Irish and Scotch spirits, the duty on English spirits had been as high as 10s. 6d. a gallon. This high duty, and the restrictions under which the trade was placed, were productive of the worst effects. They went far to enable the distillers to fix the price of spirits, "and consequently," (we quote the words of the commissioners) "to raise it much beyond that which was sufficient to repay, with a profit, the cost of the manufacture and the duty advanced to the Crown." And, in proof of this, the commissioners mention, that in November, 1823, "when corn spirits might be purchased in Scotland for about 2s. 3d. a gallon, raw spirits could not be purchased in England for less than 4s. 6d. ready money, and 4s. 9d. credit, omitting in both cases, the duty." In consequence of this state of things, the adulteration of spirits was carried on to a great extent in England; and the large profits made by the smuggler occasioned clandestine importation in considerable quantities from Scotland and Ireland. To obviate these inconveniences, and at the same time to neutralize the powerful additional stimulus that the reduction of the duties in Scotland and Ireland would have given to smuggling, had the duties in England been continued at their former amount, the latter were reduced, in 1825, to 7s. a gallon, facilities being at the same time given to the importation of spirits from the other parts of the empire. It is of the effects of this measure that so many complaints have been made, though nothing can well be imagined more completely destitute of foundation. The commissioners estimated the consumption of British spirits in England and Wales in 1823, at 5,000,000 gallons.—(Sup. to Fifth Report, p. 8.); and it appears from the subjoined account, that it amounted, for the year ending the 5th of January, 1834, to 7,717,303 gallons; producing 2,838,694 12s. 6d. of revenue; so that, making allowance for the increase of population, and the check given to adulteration and smuggling, the increase must appear very trifling indeed; and we are warranted in affirming that the reduction of the duties has been as eminently successful in England as in either Scotland or Ireland.

Total	12,159,561	5,603,889	5,587,340	1,028,332	8,715,167	1,491,026	26,420,658	

The extraordinary increase in the consumption of brandy in 1832 is wholly ascribable to the alarm occasioned by the breaking out of the cholera, and the prevalent, but now exploded, notion that brandy potations were an antidote to the disease. As soon as the alarm subsided, the consumption of brandy declined to its old level; the entries for home use in 1833 not having exceeded 1,335,820 gallons.

Penalty on Spirits.—No spirits made in England, Scotland, or Ireland, shall be conveyed from England to Scotland or Ireland, or from Scotland or Ireland to England, otherwise than in casks containing any gallons at the least, and in vessels of not less than fifty tons burthen.

All persons who, not being licensed distillers, rectifiers, or compounders, having more than eighty gallons of spirits in their possession, shall be deemed dealers in spirits, and subject to the survey of the officers of excise, and to all the regulations, penalties, &c. to which such persons are liable. (6 Geo. 4. c. 80. sect. 132.)

Distillers in British spirits are prohibited selling or having in their possession any plain British spirits, except spirits of wine, of any strength exceeding the strength of 23 per cent. above hydrometer, or of any strength below 17 per cent. under hydrometer proof; or any compound spirits, except brandy, of any greater strength than 17 per cent. under hydrometer, under pain of forfeiting all such spirits, with double the value. (6 Geo. 4. c. 80. sect. 132.)

Distillers in foreign and British spirits are to keep them separate, in casks, vats, or other vessels specially intended for that purpose, under a heavy penalty; and if any person mixing, selling, or sending any British spirits mixed with foreign or colonial spirits, shall be liable to prosecution for every such offence. (6 Geo. 4. c. 80. sect. 133.)

No retailer of spirits, or any other person licensed or unlicensed, shall sell or send out from his stock or custody any quantity of spirits exceeding 1 gallon, unless the same be accompanied by a true and lawful permit, under pain of forfeiting 20*l.*; and any rectifier, compounder, or dealer in spirits, receiving the same into their stock, or allowing any one else to receive it, and any carrier, boatman, or other person, knowingly carrying the same, shall forfeit the sum of 20*l.*, with the boat, horse, cart, &c. used in the carriage. (6 Geo. 4. c. 80. sect. 134.)

No licence to be granted for retailing spirits within goals, houses of correction, or workhouses for parish poor; nor are spirits to be used there, except medicinally prescribed by a regular physician, surgeon, or apothecary. Penalty for a first offence of this sort committed by a gaoler, &c. 100*l.*; a second offence in be deemed a forfeiture of their office. (6 Geo. 4. c. 80. sect. 135.)

Persons housing spirits to forfeit them and 100*l.*; and if the penalty be not immediately paid, they are to be committed to the house of correction for 3 months, or until paid. (6 Geo. 4. c. 80. sect. 136.)

Any person is authorised to detain a lawbreaker of spirits, and give notice to a peace officer, who is to carry the offender before a justice. (6 Geo. 4. c. 80. sect. 137.)

Any officer of excise, or other person employed in the excise, taking any sum of money or other reward from, or entering into any collusion agreement with, any person, to act contrary to his duty, to forfeit 500*l.*, and be incapacitated; and any person offering such reward or proposing such agreement, to forfeit 500*l.*. (6 Geo. 4. c. 80. sect. 138.)

For the regulations as to the importation, &c. of foreign spirits, see *Brandy, Geneva, and Rum.*

(The reader will find in the foregoing article a statement of the smuggling and other pernicious consequences resulting in Ireland from the oppressive duties laid on spirits previously to 1833; of the good effects of the reduction of the duty to 2*s.* 10*d.* the imperial gallon in that year; and of the influence which the addition of 6*d.* to the duty in 1831 had in reviving that illicit distillation, the preceding reduction had gone far to put down. The view we took of the necessity of making a fresh reduction of the duty was approved and strongly recommended by the Commissioners of Excise Inquiry; and has, we are glad to say, been acted on by government; the act 4 & 5 Will. 4. c. 75. having reduced the duty on British spirits, entered for home consumption in Ireland, to 2*s.* 4*d.* a gallon.)

It was contended, when this measure was before parliament, that the reduction should be extended to all parts of the empire; and that, by confining it to spirits used in Ireland, a new temptation would be created to smuggle from that country into England and Scotland. This no doubt will be, in some degree, the case; and we hope that no long period will be allowed in elapse till the measure be generalised. We do not, however, think, that there is much probability of its giving birth to any considerable amount of smuggling; and it is not to be denied that the reduction was much more urgently required in Ireland than any where else. Scotch whiskey carried to Ireland is admitted for consumption at the low duty.

SPIRITS AND WINE, (CONSUMPTION OF.)
Account of the Number of Gallons of Foreign and Colonial Spirits upon which Duty was charged in the United Kingdom since the Year 1832; with the Amount of Duty received thereon; also, a similar Account of Home-made Spirits and of Foreign Wine.

Spirit Licences.—The act 4 & 5 Will. 4. c. 75. made certain additions to the duties on spirit licences; but these have been repealed by the act 6 & 7 Will. 4. c. 72; and the spirit licences are now the same as those dated in p. 138.—*Sup.*

SPONGE (Ger. Schwamm; Fr. Eponge; It. Spugna; Sp. Esponja), a soft, light, very porous and compressible substance, readily imbibing water, and as readily giving it out again. It is found adhering to rocks, particularly in the Mediterranean Sea, about the islands of the Archipelago. It was formerly supposed to be a vegetable production, but is now classed among the zoöphytes; and analysed, it yields the same principles as animal substances in general. The inhabitants in several of the Greek islands have been trained from their infancy to dive for sponges. They adhere firmly to the bottom; and are not detached without a good deal of trouble. The extraordinary clearness of the water facilitates the operations of the divers. Smyrna is the great market for sponge. The price varies from 6 to 16 piastres per oke for ordinary and dirty, and from 80 to 100 piastres per oke, for fine and picked specimens. Sponge is also fished in the Red Sea.—(Vre's Dictionary; Savory's Letters on Greece, Eng. ed. p. 109; and private communications.)

Sponge is used in surgery, and for a variety of purposes in the arts. The duty on it, in 1829, produced 2,071, 4s. 1d.; but it has since been judiciously reduced from 2s. in 6d. per lb. when brought from a foreign country, and from 6d. to 1d. per lb., when brought from a British possession. The far greater portion comes from the former. No deduction is made from the duty on account of sand or dirt, unless it exceed 7 per cent., and then only for the excess above 7 per cent.

SQUILL (Ger. Meerzwiebel; Fr. Seille, Oignon marin; It. Scilla, Cipolla marina; Sp. Cebolla albarrana), or, as it is sometimes denominated, the Sea onion, is a plant with a large bulbous root, which is the only part that is used. It grows spontaneously on sandy shores in Spain, and the Levant; whence we are annually supplied with the roots. They should be chosen large, plump, fresh, and full of a clammy juice: some are of a reddish colour, and others white; but no difference is observed in the squills of the 2 sorts. The root is very nauseous, intensely bitter, and acrimonious; much handled, it ulcerates the skin. The bulbs are brought to England, preserved fresh in sand. The acrimony of the roots, on which their virtue depends, is partially destroyed by drying and long keeping, and is completely destroyed by exposure to heat above 212°. Squill is one of the most powerful and useful remedies in the materia medica.—(Lewis's Mat. Med.; Thomson's Dispensatory.)

STADE, a small city of Hanover, on the Schwinge, 22 miles W. by N. of Hamburg, lat. 53° 36' 32" N., lon. 9° 28' 34" E. It has very little trade; and would be quite unworthy of notice in a work of this sort, except for the circumstance that a toll or duty charged by the Hanoverian government on all goods imported into Hamburg, whether for consumption or transit, is paid at the castle of Brunshausen, contiguous to this town. The duty is generally about 1/3 per cent. *ad valorem*. It is rated according to a tariff; and is computed from the ship's manifest, bills of lading, cocketts, &c., which must be left at Brunshausen for that purpose. The duties are paid in Hamburg; and no vessel is allowed to unload, till a receipt, subscribed by the Hanoverian authorities in that city, be produced for the duties. We have already—(See HAMBURG)—expressed our surprise that an obstruction of this sort should have been tolerated for so long a period. The duties fall heavily on certain descriptions of goods; particularly on some manufactured articles; and are, at an average, decidedly higher than the duties charged in Hamburg. They are most objectionable, however, from their requiring many troublesome regulations to be complied with; the unintentional deviation from any one of which exposes the cargo to confiscation, and never fails to occasion a great deal of delay, trouble, and expense. As the principal part of the foreign trade of the Elbe is in our hands, we are, of course, principally affected by the Stade toll; and, considering the source of the nuisance, it is really not a little astonishing it should not have been abated long ago. The sum which the Hanoverian government derives from the

is but trifling compared with the injury they inflict on our trade; it would, conse-
quently, be good policy for the former to sell, and for the British government to buy, an ex-
emption from so vexatious a duty; and we are well assured that few things would do more
to extend our trade with Hamburg than the completion of an arrangement of this sort.

Previously to 1736, English ships passing up the Elbe had to come to an anchor opposite
Brunshausen: but they were then allowed, under certain conditions, to pass on to Ham-
burgh. The proclamation to this effect, and which contains an epitome of the regulations
that have still to be observed, is subjoined.

1. That all English vessels be exempted from coming to an anchor
before Brunshausen, and allowed to sail directly up to Ham-
burgh.

2. That all English vessels shall be obliged, at their approach, within
the space of 4 leagues thereof, to hoist their colours, to lower their
masts only to drive, till the legitimation is made at the king's
house.

3. The master of the ship, or a proper person fully provided with
the necessary documents, is to go on board the frigate, and afterwards
to the Custom-house at Brunshausen and Stade; and there to produce
an exact manifest, and the original bills of lading, cocketts, &c.

4. The documents being produced, the accounts shall be stated, and
the duties made to be paid at Brunshausen, Stade, or Hamburg.

5. The clearance shall be given at Brunshausen to the person sent
on board the master of the vessel; by whom it must be delivered to
the commissary in Hamburg, together with the documents of
cargo, and a specification of the parcels, bales, casks, &c. which
were on board at the port of lading, whither designed for
any other place.

6. This must not be broken till all this has been performed, except
in urgent cases, in which the commissary in Hamburg permits, in
urgent cases, the
pass.

a certificate in lieu of an oath—that they neither have received nor
expected more goods than have been specified,—which must be de-
livered to his Majesty's commissary in Hamburg, to enable him to
examine the report made by the master.

8. No master is to depart from Hamburg before he has taken a
certificate from his Majesty's commissary, proving that all has been
fully performed; which is to be sent to the king's frigate, near
Brunshausen.

9. The signals mentioned in the second article are likewise to be
made when the ship re-passes Stade.

10. The taking cognizance of, and punishing misdemeanors,
frauds, and mismanagements, as well as the neglecting of the pre-
ceding articles, remains in the Court of the King's Customs at Stade;
so that both the merchants and masters of ships, who may be called in
an account, shall, when summoned, appear before the said court, and
submit to its decisions; but they have the liberty of appeal to the
superior courts for a revision and relief.

11. As to all other points not expressly mentioned in the foregoing
articles, they shall be observed at the King's Customs houses at Brun-
shausen, Stade, and Hamburg, according to the regulations and
customs heretofore practised.

12. This gracious concession is hereby granted only *durante lora*
placita: the king reserving to himself and his successors in his Ger-
man dominions the right of revoking it, and making any alterations
or new orders, whenever they shall see reason.

The following statement, taken from the books of a Hamburg merchant, shows in parallel columns,
the amount of the Stade and Hamburg duties paid on certain articles imported into Hamburg. It
is taken from II, that even though there were no burdensome regulations to be complied with, the
amount of the Stade duties must be a very serious drawback on the trade of the Elbe.

Table, showing the Amount of Stade Duties, and the Amount of Hamburg Duties paid on the same
Goods imported into Hamburg.

STARCH (Ger. *Amidan*; Fr. *Amidon*; It. *Amodi, Amido*; Sp. *Amidon, Almidon*; and
Am. Kruchmal), a substance obtained from vegetables. It has a fine white colour, and is
usually concreted in longish masses; it has scarcely any smell, and very little taste. When
kept dry, it continues for a long time uninjured, though exposed to the air. It is insoluble
in cold water; but combines with boiling water—forming with it a kind of jelly. It exists
chiefly in the white and brittle parts of vegetables, particularly in tuberose roots, and the
seeds of the gramineous plants. It may be extracted by pounding these parts, and agitating
them in cold water; when the *parenchyma*, or fibrous parts, will first subside; and these
being removed, a fine white powder, diffused through the water, will gradually subside, which
is the starch. Or the pounded or grated substance, as the roots of potatoes, acorns, or horse
chestnuts, for instance, may be put into a hair sieve, and the starch washed through with
cold water, leaving the grosser matters behind. Farinaceous seeds may be ground and treated
in a similar manner. Oily seeds require to have the oil expressed from them before the farina
is extracted. Potato starch goes a good deal further than wheat starch—a less quantity of it
is sufficient to form a paste of equal thickness, with water. It has a very perceptible crystallised
appearance, and is apparently heavier than common starch.—(*Thomson's Chemistry; Ure's
Dictionary.*)

Starch is charged with a duty of 3*d.* per lb.; and its manufacture is, consequently, placed under the
control of the excise. Every maker of starch for sale must take out an annual licence, which costs
2*l.* Notice must be given to the excise of the erection, and of all changes in the construction, of
workshops, implements, &c. used in the manufacture of starch, under a penalty of 50*l.* All starch,
before it be put into any stove or place to dry, must be papered and sealed or stamped by the officer,
under a penalty of 100*l.* Any person forging or counterfeiting such stamp or seal is guilty of felony,
but with the benefit of clergy. Any person knowingly selling any starch with a forged or counterfeit
stamp, &c. forfeits 500*l.* No quantity of starch exceeding 25 lbs. to be removed from one place to
another, unless the word *starch* be marked on the package in legible letters 3 inches long, under for-
feiture of the package, and of the cattle and carts conveying the same. Any dealer in starch receiv-
ing any quantity exceeding 25 lbs. not marked as above, shall forfeit 200*l.* Starch-makers are to make
truly samples of the starch made by them, under a penalty of 50*l.*; and are to make payment of the
duties within a week of each entry. Cocketts granted for shipping starch to be carried coastwise are

to express the quality, quantity, weight, the mark of the package, by whom made and sold, and to whom consigned; and if shipped without such ticket, it may be seized. No starch is to be imported, unless in packages containing at least 321 lbs. stowed openly in the hold, on pain of forfeiture and incurring a penalty of 50*l.* No starch is to be exported, unless the package as originally sealed or stamped by the officer be entire, and unless the officer mark the word *exportation* upon it. The duties must have been paid on all starch exported; but the exporter is entitled to an excise drawback of 2*l.* per lb.—(*Burn's Justice of the Peace*, Marriott's ed., tit. *Starch*.)

An Account of the Number of Pounds of Starch that paid the Home Consumption Duty in Great Britain, the Rate of Duty, and the Gross and Nett Produce of the Duty, in each of the Three Years ending with the 5th of January, 1833.

Years ended 5th Jan.	Rate per lb.	Lbs.	Gross Produce.			Nett Produce.		
			£	s.	d.	£	s.	d.
1831	3½	7,645,486	103,532	12	5	86,453	9	4
1832	—	7,533,469	102,286	11	2	76,414	3	8
1833	—	8,070,026	109,281	12	0	85,105	18	8

(The injurious influence of the duty on starch, the nett produce of which, in 1833, was only 91,517*l.* 18*s.* 2½*d.*, was most ably exposed, and its abolition strongly recommended, by the Commissioners of Excise Inquiry, and we are glad to have to add that, agreeably to that recommendation, the duty has been abolished.—(4 & 5 Will. 4. c. 77.)—*Sup.*)

(STEAM VESSELS.

An Account of the Number and Tonnage of Steam Vessels belonging to the British Empire in the Year 1837, distinguishing British Possessions in Europe from the British Plantations.

Steam Engines and Steam Vessels, &c. of the United States.—We believe we shall be doing an acceptable service to the bulk of our readers by laying before them the following extracts from a letter by the Secretary of the Treasury of the United States, prepared in pursuance of a resolution of the House of Representatives, of the 20th of June, 1838. It communicates many interesting particulars with respect to the employment of steam engines and steam vessels in the United States, and the accidents that have happened to the latter.

Number of Steamboats, Locomotives, and other Steam Engines in the United States.—“The whole number of steam engines, of every kind, in the United States, reckoning one to each boat, is estimated to be 3,010. Of these, 2,653 have been ascertained, and 357 are estimated, in places from which the returns are either defective or not received at all. Of this whole number, about 800 are supposed to be employed in steamboats, of which 700 are ascertained, and 100 estimated. About 350 are employed in locomotives upon railroads. Of these, 337 are ascertained, and 13 estimated. The residue, being 1,860, are used in manufactories of various kinds. Of these, 1,616 are ascertained, and 244 estimated.”

Number of Accidents to Steam Engines.—“The number of accidents occasioning loss of life or much injury to property, which have occurred in the use of steam engines of every kind in the United States, is computed to have been about 260. Of these, 253 are ascertained, and the rest are estimated. Such accidents, by explosions and other disasters to steamboats, appear to have constituted a great portion of the whole, and are supposed to have equalled 230, of which 215 are ascertained. The first of these is believed to have occurred in the Washington, on the Ohio river, in 1816.

“Since the employment of steamboats in the United States, it is computed that quite 1,200 have been built here. Of these, about 260 have been lost by various accidents, as many as 240 worn out, and the rest are now running.

“The first steamboat used for practical purposes here, (or indeed in any part of the world,) was in 1807, on the Hudson River, in the State of New York. She was built by Fulton, called the North River, with an engine of only 18-horse power, and made the passage between Albany and New York in thirty-three hours. Though with a steam engine manufactured abroad by Boulton and Watt, yet no boat was launched in Europe, that proved successful in practice, till five years after, by Mr. Bell, at Glasgow, in 1812. At that time the Car of Neptune, built in 1808, the Paragon, in 1811, and the Richmond, in 1812, were all, in addition to the boat first built, running from New York. Rumney is known to have made experiments on a small scale as to steamboats, in Virginia, as early as 1787; but they were not reduced to any practical use. Both he and Fitch commenced trials in this country as early as 1783 and 1784, and Oliver Evans, in 1785 and 1786. They had been preceded in France, in 1762, by the Marquis d'Jeauffrey; and the idea of applying steam in boats had been suggested in England as early as 1736, by Jonathan Hulls.

“The whole number of steamboats ascertained and estimated to be now in this country, is 800. In England, in 1836, the whole number is computed to have been 600. On the Western and South-western waters alone, near 400 are now supposed to be running, where

ed to be running, where

... were used till 1811, and where, in 1834, the number was computed to be only 334.
Of these 400, about 141 are estimated. On the Ohio river alone, in 1837, about 413 dif-
ferent steamboats are reported to have passed through the Louisville and Portland canal,
besides all below and above, which never passed through. But it deserves notice, that of
these 413, near 60 went out of use by accidents, decay, &c., within that year; and several
of the others, viz., 104, were new, and many of them probably were destined to run on
other rivers. As an illustration of the rapid increase of business in steamboats on the Ohio,
the number of passages by them through the Louisville canal increased from 400, in 1831,
to 1,501, in 1837, or nearly fourfold in six years. About 70 boats were running the present
year on the North-western lakes, where a few years since the number was very small, having
been in 1835 only 25. Of the 800 steamboats now in the United States, the greatest num-
ber ascertained to be in any State is 140, in the State of New York.

"It is a matter of surprise that so few of these are sea-going vessels, considering that the
first steamboat which ever crossed the Atlantic was built in New York, so long ago as 1810,
and went from Savannah (the place after which she was called) to Liverpool in 20 days;
and that the Robert Fulton, as early as 1822, made several trips to New Orleans and Ha-
vana. A similar remark applies to the circumstance that only one of the whole number
is a public vessel of war, when the first steam vessel of that kind ever launched was the
Fulton, and was built in this country, so long ago as 1815. The Government of the Uni-
ted States never owned but two steam vessels of war—both called the 'Fulton.' The first
was lost, by accident, in 1829; and now there is only the other, before alluded to, built in
1838. It has, however, 13 other steam vessels, employed in the war department, on the
public works, and in the transportation of troops and stores.

"Of the whole number of locomotives in the United States propelled by steam, being
about 350, the most which have been ascertained in any State is 98, in the State of Penn-
sylvania.

"None of them were introduced here 'till 1831, though they now run on nearly 1,600
miles of railroad. The first, it is believed, was in the State of Delaware, on the Newcastle
railroad; the second, in Maryland, on the Baltimore and Ohio railroad; and the third, be-
tween New Orleans and Lake Pontchartrain, in the State of Louisiana. They had been
used in this country, by Oliver Evans, as early as 1804, and in England as early as 1805;
but not reduced to useful practice in the latter till 1811, for freight, and in 1830 for passen-
gers and speed. One succeeded on a common road, from London to Bath, in 1829. Of
the whole number of other steam machines in the United States (being about 1,800), the
State of Pennsylvania has the most, being 383. The number in some States is not accu-
rately ascertained; but near 300 are ascertained and computed to exist in Louisiana alone.
The introduction of them here, and especially with the high pressure machinery, was much
promoted by Oliver Evans, about 1804. The first of them in use in the United States was
put up in 1787, in the State of New Jersey, for raising water and earth from mines. The
first were about 1791, in a cotton factory in Kensington, near Philadelphia; and soon after
in saw-mills, and iron slitting and rolling mills at Pittsburgh. The power has been known
in England to be applicable to mechanical uses since the experiments of the Marquis of Wor-
cester, in 1663. It is said by some that he was preceded in France (and a pamphlet pub-
lished on the subject as early as 1615) by Solomon de Caus. But the views of the latter, like
many who preceded him in the knowledge of steam as a moving power, are supposed to have
been rather theoretical than practical. Several machines were made in England as early as
1720; and Watt's first patent was taken out, for improvements in them, as early as 1769. But
they were not, even there, very extensively and successfully applied to mills and manufactu-
ries, till 1785, though 18 large engines were employed in the mines of Cornwall as early as
1770; and a flour-mill, with 20 pairs of stones, was moved by steam in London in 1784.

"The greatest employment of these in the South is in the sugar manufacture, and in
cleaning and pressing cotton; in the West in grist and saw mills, and in various manufac-
tures of iron machinery and tools; and in the East, in mills, in printing, in cotton manufac-
tories, and the public works at navy yards and armories.

"The government of the United States owns 17 of these; they being employed at their
navy yards, to empty docks, saw timber, &c.; and at some arsenals and armories, in manu-
facturing arms.

"The tonnage of all the steamboats in the United States is computed to exceed 153,473.
Of this, 137,473 is in boats ascertained or reported. By the official returns, the whole ton-
nage would now, probably, equal near 160,000 tons, having been, in 1837, equal to 153,060.
Many boats included in those returns have been lost or worn out, and several new ones built
since. In England, the tonnage is estimated to have been 67,969 in 1836. The tonnage
of each boat here averages about 200; and the estimates, where the returns have been de-
fective, were made on that basis. The power employed in all the steam engines in the Uni-
ted States is ascertained and estimated at 100,318 horse-power; of this, 12,140 only is in
engines estimated and not returned. In the aggregate, all this new mechanical force would
be equal to the power of 601,808 men. Of this force, 57,019 horse-power is computed to

be in steamboats; 6,980 in railroads; and the rest, being 36,319, in other engines. This averages about 70 horse-power to each boat, or one horse to between two and three tons, and less than 20 horse-power to each of the other engines. It is a striking fact, that the steam-power employed in standing engines, is equal to about two-thirds of all that is used in steamboats. The largest boat in the United States is supposed to be the Natchez, of 860 tons, and near 300 horse-power, destined to run between New York and Mississippi; the Illinois, and the Madison, on Lake Erie, are the next in size, the former being 755, and the latter 700 tons; the Massachusetts, in Long Island Sound, is the next largest, being 626 tons; and the Buffalo, on Lake Erie, next, being of 613 tons. The largest boats passing Louisville, in 1837, were, the Uncle Sam, of 447 tons, and the Mogul, of 414 tons; though below Louisville, the Mediterranean, of 490 tons, and the North America, of 445 tons, on the Ohio, and the St. Louis, of 550 tons, on the Mississippi, are running. The greatest loss of life well-authenticated on any one occasion in a steamboat, appears to have been by collision, and consequent sinking, in the case of the Monmouth, in 1837, on the Mississippi, by which 300 lives were lost. The next greatest were by explosions; of the Oronoka, in 1838, on the same river, by which 130, or more, lives were lost; and of the Moselle, at Cincinnati, Ohio, by which 100 to 120 persons were destroyed. The greatest injury to life by accidents to boats from snags and sawyers appears to have been 13 lost, in 1834, in the case of the St. Louis, on the Mississippi river. The greatest by shipwreck, was in the case of the Home, in 1837, on the coast of North Carolina, where 100 persons were lost. The greatest by fire, happened in the Ben Sherrod, on the Mississippi river, in 1837, when near 130 perished. The number of steamboats built in the United States in 1834, was 88; but in 1837, it was 181; or, had increased over 200 per cent. in three years. The places where the greatest number of steamboats, and other steam machines, appear to have been constructed in this country, are Pittsburgh, Cincinnati, and Louisville, on the Western waters; and New York, Philadelphia, and Baltimore, on the Atlantic. At Louisville alone, from 1819 to 1838, there appears to have been built 244 steam engines; of which 62 were for boats. The fuel originally used in steamboats in the United States, was wood; but, of late years, bituminous coal has, in many instances, been substituted; and, in several, anthracite coal. The latter, from the small space it occupies, would seem to possess a decided advantage, in sea-going vessels, as well as in locomotives.

"Some steamboats, made of iron, are believed to be in use in Georgia, if not in other parts of this country, though none of that material have been manufactured here; but it is computed that their cost is less than those of wood, and, as they draw less water with the same freight, they are more useful on shallow streams."—*Sup.*)

[The number of steamboats built in the United States, during the years ending on the 30th of September, 1838 and 1839, were 90 and 125 respectively.]

The 23d of April, 1838, constituted an era in the progress of navigation, by the arrival at New York of the steam ships Sirius and Great Western; the former having left Cork, in Ireland, on the 4th of April, and the latter Bristol, on the 8th.

The shortest passage of the Great Western, down to the 19th of June, 1840, from Bristol to New York, was 13 days; the longest 21½; and the average, 16. The shortest passage from New York to Bristol, during the same period, was 12 days; the longest, 15; and the average, 13½.

Besides the Great Western, the steam ship British Queen now passes regularly between New York and Great Britain. Her passages have averaged, from Portsmouth to New York, 17½; and in the contrary direction, 16 days.

Cunard's Liverpool, Halifax, and Boston line of steam-packet ships, consisting of the Britannia, Acadia, Caledonia, and Columbia, is now in successful operation; the first arrival at Boston being that of the Britannia, on the 18th of July, 1840, in 14½ days. On the 17th of August, the Acadia arrived at Boston, after a passage of only 12 days and 18 hours—the shortest passage ever made between Europe and America.

There can be no doubt that the success of the abovementioned vessels will speedily lead to the introduction of steam ships as the principal means for conveying passengers from the one continent to the other.—*Am. Ed.*

STEEL. (*Fr. Acier; Ger. Stahl; It. Acciajo; Lat. Chalybs; Rus. Stal; Sp. Aera; Sw. Stål*), is iron combined with a small portion of carbon; and has been, for that reason, called carburetted iron. The proportion of carbon has not been ascertained with much precision. It is supposed to amount, at an average, to $\frac{1}{100}$ th part. Steel is so hard as to be unmanageable while cold; or at least it acquires that property by being immersed, while ignited, in a cold liquid; for this immersion, though it has no effect upon iron, adds greatly to the hardness of steel. It is brittle, resists the file, cuts glass, affords sparks with flint, and retains the magnetic virtue for any length of time. It loses this hardness by being ignited, and cooled very slowly. It is malleable when red hot, but scarcely so when raised to a white heat. It may be hammered out into much thinner plates than iron. It is more sonorous; and its specific gravity, when hammered, is greater than that of iron—varying from 7.78 to 7.84.

Steel is usually divided into 3 sorts, according to the method in which it is prepared; as *natural steel*, *steel of cementation*; and *cast steel*. The latter is the most valuable of all, as its texture is the most compact, and it admits of the finest polish. It is used for razors, surgical instruments, and similar purposes. Steel is chiefly employed in the manufacture of saws, knives, and cutting instruments of all sorts used in the arts; for which it is peculiarly adapted by its hardness, and the fineness of the edge which may be given to it.—(Thomson's Chemistry; and see IRON.)

(STETTIN, a city of Prussia, on the left bank of the Oder, about 36 miles from its mouth, in lat. 53° 23' 20" N., long. 14° 33' E. It is well built, strongly fortified, and has a population, exclusive of troops, of 50,000.

Stettin is the seat of an extensive and growing commerce; and is now, indeed, the principal port of importation in Prussia. She owes this distinction mainly to her situation. The Oder, which flows through the centre of the Prussian dominions, is navigable as far as Ratibor, near the extreme southern boundary of Prussian Silesia; and is united, by means of canals, with the Vistula, the Elbe, the Spree, &c. Stettin is, consequently, the principal emporium of some very extensive and flourishing countries; and is not only the port of Frankfort-on-the-Oder, Breslaw, &c., but also of Berlin. Hence, at the proper seasons, its wharfs are crowded with lighters that bring down the produce of the different countries traversed by the river, and bring back colonial products, and other articles of foreign growth and manufacture. Vessels of considerable burden, or those drawing above 7 or 8 feet water, load and unload, by means of lighters, at the mouth of the river, at Swinemunde, the out-port of Stettin, on the east coast of the Isle of Usedom, in lat. 53° 55' N., long. 14° 15' 15" E. Formerly there were not more than 7 feet water over the bar adjacent to Swinemunde; but the harbour of the latter has recently been so much improved, by the construction of piers and breakwaters, dredging, &c., that it is now the best on the Prussian coast, and admits vessels drawing from 18 to 19 feet water. A light-house has been erected at the extremity of the Eastern pier. Stettin is a free port; that is, a port into which all sorts of goods may be imported and re-exported free of duty. If goods brought through the Sound be imported at Stettin, and entered for home consumption in the Prussian states, they are charged with 2½ per cent. less duty than if they had been imported through any other channel. This is intended to reimburse the merchant for the Sound duties, and to encourage importation by this direct route in preference to that carried on through Hamburg and Embden. There is a great wool fair in the month of June each year.

Meas., Weights, and Measures, same as at Dantzic, which see. The Bank of Berlin has a branch at Stettin, and there is also an insurance office.

Imports and Exports.—The principal articles of import at Stettin are sugar, coffee, dye woods, wine, iron, and hardware, oil, tallow, wax, and various goods, herrings, gelatin, linseed, coal, salt, &c. The principal exports are linen, timber and staves, corn, wool, zinc, tin, and glass, bones, manganese, fruits, &c. In 1834, among other articles, there were imported 32,363 tons raw sugar, 84,472 do. clayed sugar, 24,503 do. molasses, 1,296 barrels rice, 12,490 tons olive oil, 11,483 do. hempseed oil, 5,419 do. palm oil, 10,232 quintals dye-woods, 119,568 barrels herrings, 15,360 saltpetre, 17,358 quintals iron, 68,757 do. tallow, 47,066 do. potash, 158 do. copper, &c. Among the exports in the same year, various of linen, &c. were 1,620 quintals of wool, 4,783 lasts corn, 105,616 staves, 3,258 do. waincoat, 17,513 pieces of wood for making, 5,044 lasts of wood for ship building, 74,192 quintals of coal, 1,538 do. glass, 4,453 do. manganese, 36,850 do. bones, 36,046 do. saltpetre, 6,077 bottles, &c. The wheat shipped from Stettin is very good, and of very fine quality. The barley is also very good. These sorts are believed to be equal, or perhaps superior, to any from any other part of the Baltic.

Navigation.—Stettin is the principal shipping port in the Prussian dominions. In 1834, there belonged to it 229 ships, of the burthen of 4,289 lasts, being about a third part of the shipping belonging to Prussia.

Journal of the Arrivals and Departure of Shipping at Swinemunde, the Out-port of Stettin, in 1834.

Port Regulations.—All vessels are prohibited entering Swinemunde, unless forced by stress of weather, without previously heaving-to for, and receiving, a pilot on board. But when compelled to enter without a pilot, the master is to observe the signals made from the lighthouse on the eastern pier, and to shape his course accordingly. If no flag be hoisted on the lighthouse, no signal made, the port cannot be entered, and the master must either anchor in the roads or stand out to sea. After the pilot has been received on board, the master is bound, in all cases, to conform to his directions. Within 24 hours after arrival, the master must deliver to the custom-house an account of the species and quantity of each article on board; and he is subjected to a heavy fine if this account should turn out to be incorrect. He is to abide by the instructions given him as to discharging his cargo, loading, &c. No gunpowder is to be kept on board, nor any inflammable matter loaded in the ship. All ships proceeding from Swinemunde to Stettin must have pilots. The master must produce at the police office the muster roll of the crew, and the names of the passengers, if there be any on board. The latter are bound to go with him to the police, and the crew, if desired. All presents to pilots and custom-house officers are strictly prohibited. Vessels directed to perform quarantine must immediately hoist the yellow flag; and on no account quit their assigned berth. The master is responsible for the conduct of the crew; and if any of them be discharged or remain on shore, he must give notice thereof to the police.

The following regulations apply to all the Prussian ports.—
Notification to Captains of Ships respecting Importation and Exportation by Sea in the Prussian Dominions.—

As soon as a ship arrives in the road, and has complied with the police regulations of the port (which are communicated to her), the captain repairs to the custom-house, and delivers a complete list of manifest of cargo. This list bears the title of a chief declaration, or manifest, and in preparing it, the following conditions are to be observed:—

If the whole cargo be not destined for the port, that part which is to proceed further with the ship is to be placed under a distinct division. The goods accompanied with bills of lading are entered in notation after each other for every bill of lading.

The account (or statement) is made out in kind and quantity, agreeable to those measures and divisions adopted in the tariff for the payment of duties.

Excepting therefrom various articles conveyed in an unpacked state, the following measures are valid:—
For beer in casks, tuns of 100 Pruss. quart.

Regulations as to the working of Mines in Sweden.—The following paper, which we have received from Sweden, and on the authenticity of which our readers may rely, shows the nature of the obstructions laid on the principal branch of industry carried on in that kingdom. They appear to us to be in the last degree absurd and oppressive. It might be proper to enact regulations to prevent the waste of the forests; but having done this, every one ought to be at liberty to produce as much iron as he pleased, without being subject to any sort of regulation or control. We are surprised that so intelligent a government as that of Sweden should think of imposing such preposterous regulations.

"Sweden has at present from 330 to 340 smelting furnaces, which produce annually from 50,000 to 95,000 tons of pig iron. In converting the pig into bar iron, about 23 per cent. is allowed for waste; and as near as can be ascertained, the annual manufacture of bar iron is from 63,000 to 65,000 tons. The number of iron works is between 420 and 430, having about 1,100 forges (hearths). The annual exportation of bar iron, at an average of the 10 years ending 1831, was 49,568 tons; of which were, for—

Great Britain	10,000 tons.
United States	20,000
Germany, Holland, France, and Portugal	15,000
The remainder to Brazil, and a very little to the Mediterranean	4,568
Total	49,568

"The smelting furnaces and iron works are licensed for particular quantities, some being as low as 50 tons, and others as high as 400 or 500 tons; and some fine bar iron works have licenses for 1,000 tons each. These licenses are granted by the College of Mines, which has a control over all iron works and mining operations. The iron masters make annual returns of their manufacture, which must not exceed the privileged or licenced quantity, on pain of the overplus being confiscated. The College has subordinate courts, called Courts of Mines, in every district, with supervising officers of various ranks. All iron sent to a port of shipment must be landed at the public weigh-houses, the superintendent of which is a delegate of the College; and his duty is to register all that arrives, and transmit a quarterly report thereof to the college, so that it is impossible for an iron master to send more iron to market than his licence authorises. Many, however, sell iron to inland consumers at a forge, of which no returns are ever made out, and in so far the licenses are exceeded; but we do not suppose that the quantity so disposed of exceeds 2,000 or 3,000 tons a year. Every furnace and forge pays a certain annual duty to the Crown. Its amount is fixed by the College when the licence is granted; and care is taken not to grant a licence to any one, unless he has the command of a quantity equal to the required supply of charcoal, without encroaching on the supply of this material required

As the existing forges in the neighbourhood. As the supply of pig iron is limited, the quantity licenced to be made being never exceeded, the College, in granting new licences to bar iron works, always takes into consideration how far this may be done without creating a scarcity of pig iron. Hence, the erection of new forges depends—1st, on having a supply of charcoal, without encroaching on the forests which supply your neighbours; and 2dly, on the quantity of pig iron which the College knows to be disposable. The courts of the mines decide all disputes that arise among the iron masters regarding the exceeding of their licences, encroachments, &c.; an appeal to the College lying from their decision, and ultimately to the king in council, or to the supreme court of the kingdom. In 1834, the mines produced 850 tons of copper, 50 tons of brass, 40 tons of lead, 1,700 tons of alum, 45,029 lbs. of cobalt, 3,000 lbs. of silver; and of late years several mines of manganese have been worked, the produce of which may be from 300 to 400 tons.*

STOCKINGS, as every one knows, are coverings for the legs. They are formed of only 1 thread entwined, so as to form a species of tissue, extremely elastic, and readily adapting itself to the figure of the part it is employed to cover. This tissue cannot be called cloth, for it has neither warp nor woof, but it approaches closely to it; and for the purposes to which it is applied, it is very superior.

1. Historical Sketch of the Stocking Manufacture.—It is well known that the Romans and other ancient nations had no particular clothing for the legs. During the middle ages, however, hose or *leggings*, made of cloth, began to be used; and at a later period, the art of knitting stockings was discovered. Unluckily, nothing certain is known as to the individual by whom, the place where, or the time when, this important invention was made. Howell, in his *History of the World* (vol. iii. p. 222.), says, that Henry VIII. wore none but cloth hose, except there came from Spain by great chance a pair of silk stockings; that Sir Thomas Gresham, the famous merchant, presented Edward VI. with a pair of long silk stockings from Spain, and that the present was much taken notice of; and he adds, that Queen Elizabeth was presented, in the third year of her reign, with a pair of black knit silk stockings, and that from that time she ceased to wear cloth hose. It would appear from this circumstantial account, that the art of knitting stockings, or at least that the first specimens of knit stockings, had been introduced into England from Spain about the middle of the 16th century; and such seems to have been the general opinion, till an allusion to the practice of knitting, in the pretended poems of Rowley, forged by Chatterton, caused the subject to be more strictly investigated. The result of this investigation showed clearly that the practice of knitting was well known in England, and had been referred to in acts of parliament, a good many years previously to the period mentioned by Howell. But it had then, most probably, been applied only to the manufacture of woollen stockings; and the general use of cloth hose shows that even these had not been numerous. There is no evidence to show whether the art is native to England, or has been imported.—(See *Beckmann's Inventions*, vol. iv. art. *Knitting Nets and Stockings*.)

It is singular that the stocking frame, which, even in its rudest form, is a very complex and ingenious machine, that could not be discovered accidentally, but must have been the result of deep combination and profound sagacity, should have been discovered so early as 1589, before, in fact, the business of knitting was generally introduced. The inventor of this admirable machine was Mr. William Lee, of Woodborough, in Nottinghamshire. He attempted to set up an establishment at Calverton, near Nottingham, for the manufacture of stockings, but met with no success. In this situation he applied to the queen for assistance; but, instead of meeting with that remuneration to which his genius and inventions so well entitled him, he was discouraged and discountenanced! It need not, therefore, excite surprise that Lee accepted the invitation of Henry IV. of France, who, having heard of the invention promised him a magnificent reward if he would carry it to France. Henry kept his word, and Lee introduced the stocking frame at Rouen with distinguished success; but after the assassination of the king, the concern got into difficulties, and Lee died in poverty at Paris. A knowledge of the machine was brought back from France to England by some of the workmen who had emigrated with Lee, and who established themselves in Nottinghamshire, which still continues the principal seat of the manufacture.—(See *Beckmann's Inventions*, vol. iv. pp. 313—324.; and *Letters on the Utility and Policy of Machines*, Lond. 1780.)

During the first century after the invention of the stocking frame, few improvements were made upon it, and 2 men were usually employed to work 1 frame. But in the course of last century, the machine was very greatly improved. The late ingenious Mr. Jedediah Strutt, of Derby, was the first individual who succeeded in adapting it to the manufacture of *ribbed* stockings.

Statistical View of the Stocking Trade.—We subjoin, from a paper by Mr. Felkin, of Nottingham, who is very advantageously known by his statistical researches, the following view of the present state of the British hosiery trade.

* We do not mean that the manufacture of pig iron is limited; for any one can get a licence to smelt, who can prove he has a sufficiency of charcoal at his disposal; but the quantity licenced is never exceeded, but is often less.

It is, therefore, of the greatest importance accurately to define what shall be deemed stranding. But this is no easy matter; and much diversity of opinion has been entertained with respect to it. It would, however, appear that merely striking against a rock, bank, or shore, is not a stranding; and that, to constitute it, the ship must be upon the rock, &c. for some time (how long?).—Mr. Justice Park has the following observations on this subject:—"It is not every touching or striking upon a fixed body in the sea or river that will constitute a stranding. Thus, Lord Ellenborough held, that in order to establish a stranding, the ship must be stationary; for that merely striking on a rock, and remaining there a short time (as in the case at the bar, about a minute and a half), and then passing on, though the vessel may have received some injury, is not a stranding. Lord Ellenborough's language is important.—*Ex vi termini* stranding means lying on the shore, or something analogous to that. To use a vulgar phrase, which has been applied to this subject, if it be touch and go with the ship, there is no stranding. It cannot be enough that the ship lie for a few moments on her beam ends. Every striking must necessarily produce a retardation of the ship's motion. If by the force of the elements she is run aground, and becomes stationary, it is immaterial whether this be on piles, on the muddy bank of a river, or on rocks on the sea shore; but a mere striking will not do, wherever that may happen. I cannot look to the consequences, without considering the *causa causans*. There has been a curiosity in the cases about stranding not creditable to the law. A little common sense may dispose of them more satisfactorily.

This is the clearest and most satisfactory statement we have met with on this subject; still, however, it is very vague. Lord Ellenborough and Mr. Justice Park hold, that to constitute a stranding, the ship must be stationary; but they also hold, that if she merely remain upon a rock, &c. for a short time, she is not to be considered as having been stationary. Hence every thing turns upon what shall be considered as a short time. And we cannot help thinking that it would be better, in order to put to rest all doubts upon the subject, to decide either that every striking against a rock, the shore, &c. by which damage is done to the ship, should be considered a stranding; or that no striking against a rock, &c. should be considered as such, provided the ship be got off within a specified time. Perhaps a tide would be the most proper period that could be fixed.

The insurance companies exclude the words, "or the ship be stranded," from the memorandum.—(See INSURANCE, MARINE.)

STURGEON FISHERY. The sturgeon is a large, variable, and well known fish, of which there are several species, viz. the sturgeon, properly so called, or *Acipenser sturio*, the beluga, or *Acipenser huso*, the sevruga, or *Acipenser stellatus*, &c. The sturgeon annually ascends our rivers, but in no great number, and is taken by accident in the salmon nets. It is plentiful in the North American rivers, and on the southern shores of the Baltic; and is met with in the Mediterranean, &c. But it is found in the greatest abundance on the northern shores of the Caspian, and in the rivers Wolga and Ural; and there its fishery employs a great number of hands, and is an important object of national industry. Owing to the length and strictness of the Lents in the Greek Church, the consumption of fish in Russia is immense; and from its central position, and the facilities afforded for their conveyance by the Wolga, the products of the Caspian fishery, and those of its tributary streams, are easily distributed over a vast extent of country. Besides the pickled carcases of the fish, caviar is prepared from the roes; and isinglass, of the best quality, from the sounds. The caviar made by the Ural Cossacks is reckoned superior to any other; and both it and isinglass are exported in considerable quantities. The belugas are sometimes of a very large size, weighing from 1,000 to 1,500 lbs., and yield a good deal of oil. The seal fishery is also pretty extensively prosecuted in the Caspian. The reader will find a detailed account of the mode in which the fishery is carried on in the Caspian, and in the rivers Wolga and Ural, in *Tooke's Russia*, vol. iii. pp. 49—72. We subjoin the following official statement of the produce of the Russian fisheries of the Caspian and its tributary streams in 1823 and 1829:—

Year.	Number of Persons employed.		Number of Fish taken.					Products of Sturgeon.

SUCCORY, or CHICCORY, the wild endive, or *Cichorium Intybus* of Linnaeus. This plant is found growing wild on calcareous soils in England, and in most countries of Europe. In its natural state the stem rises from 1 to 3 feet high, but when cultivated it shoots to the height of 5 or 6 feet. The root runs deep into the ground, and is white, fleshy, and yields a milky juice. It is cultivated to some extent in this country as an herbage plant, its excellence in this respect having been strongly insisted upon by the late Arthur Young. But in Germany, and in some parts of the Netherlands and France, it is extensively cultivated for

Silybus of Linnaeus. This
 most countries of Europe,
 cultivated it shoots to the
 white, fleshy, and yields
 herbage plant, its credit
 Arthur Young. But in
 extensively cultivated for

the sake of its root, which is used as a substitute for coffee; and it is this circumstance only that has induced us to mention it. When prepared on a large scale, the roots are partially dried, and sold to the manufacturers of the article, who wash them, cut them in pieces, dry them, and grind them between fluted rollers into a powder, which is packed up in papers containing from 2 oz. to 3 or 4 lbs. The powder has a striking resemblance to dark ground coffee, and a strong odour of liquorice. It has been extensively used in Prussia, Brunswick, and other parts of Germany, for several years; but as it wants the essential oil and the rich aromatic flavour of coffee, it has little in common with the latter except its colour, and has nothing to recommend it except its cheapness. It is only lately that succory powder began to be used in England; but, within the last 3 years, considerable quantities have been imported from Hamburgh, Antwerp, &c. We believe, too, that a small quantity has been produced in the Isle of Thanet.—(*Loudon's Encyc. of Agriculture; Rees's Cyclopaedia; and private information.*)

Succory, when first imported, being an unenumerated article, was charged with a duty of 20 per cent *ad valorem*. But the average price of British plantation coffee may be taken at 80s. per cwt. in bond; and the duty, being 55s. per cwt., is equivalent to an *ad valorem* duty of about 70 per cent; so that coffee was taxed more than three times as much as *succary*. Had coffee been always sold unground, this distinction in the duties would have been less objectionable; but as the lower classes do not use the great consumers of coffee, have no facilities for roasting and grinding it at home, they uniformly buy it in the shape of powder; hence it is plain that the discriminating duty in favour of succory must have acted as a premium upon, and an incentive to the adulteration of coffee by its intermixture. We are, therefore, glad to have to state that it has been abolished, and that succory is now subjected to a duty of 6d. per lb. The imposition of different duties upon convertible articles is quite subversive of every sound principle; and, whether it be so intended or not, is calculated only to promote adulteration and fraud.

SUGAR (Fr. *Sucre*; Ger. *Zucker*; It. *Zucchero*; Russ. *Sachar*; Sp. *Azucar*; Arab. *Sakbir*; Malay, *Soola*; Sans. *Sarkarā*), a sweet granulated substance, too well known to require any particular description. It is every where in extensive use; and in this country ranks rather among the indispensable necessaries of life, than among luxuries. In point of commercial importance, it is second to very few articles. It is chiefly prepared from the expressed juice of the *arundo saccharifera*, or sugar cane; but it is also prepared from an immense variety of other plants, as maple, beet root, birch, parsnep, &c.

Species of Sugar.—The sugar met with in commerce is usually of 4 sorts;—brown, or muscovado sugar; clayed sugar; refined, or loaf sugar; and sugar candy. The difference between one sort of sugar and another depends altogether on the different modes in which they are prepared.

1. **Brown, or Muscovado Sugar.**—The plants or canes being crushed in a mill, the juice, having passed through a strainer, is collected in the clarifier, where it is first exposed to the action of a gentle fire, after being “tempered” (mixed with alkali), for the purpose of facilitating the separation of the liquor from its impurities. It is then conveyed into the large evaporating copper, and successively into two others, each of smaller size; the superintending boiler freeing it, during the process, from the scum and feculent matters which rise to the surface. The syrup then reaches the last copper vessel, called the “striking tache,” where it is boiled till sufficiently concentrated to be capable of granulating in the cooler, whence it is transferred with the least possible delay, to prevent charring. Here it soon ceases to be a liquid; and when fully crystallised, is put into hogsheds (called “potting”), placed on their ends in the curing-house, with several apertures in their bottoms, through which the molasses drains into a cistern below. In this state they remain till properly cured, when the casks are filled up, and prepared for shipment.

2. **Clayed Sugar** is prepared by taking the juice, as in the case of muscovado sugar, when boiled to a proper consistency, and pouring it into conical pots with the apex downwards. These pots have a hole at the lower extremity, through which the molasses or syrup is allowed to drain. After this drain has continued for some time, a stratum of moistened clay is spread over the surface of the pots; the moisture of which percolating through the mass, is found to contribute powerfully to its purification.

3. **Refined Sugar** may be prepared from muscovado or clayed sugar, by redissolving the sugar in water, and, after boiling it with some purifying substances, pouring it, as before, into conical pots, which are again covered with moistened clay. A repetition of this process produces *double refined* sugar. But a variety of improved processes are now resorted to.

4. **Sugar Candy.**—Solutions of brown or clayed sugar, boiled till they become thick, and then removed into a hot room, form, upon sticks or strings put into the vessel for that purpose, into crystals, or candy.

II. **Historical Notice of Sugar.**—The history of sugar is involved in a good deal of obscurity. It was very imperfectly known by the Greeks and Romans. Theophrastus, who lived about 320 years before the Christian era, the first writer whose works have come down to us by whom it is mentioned, calls it a sort of “honey extracted from canes or reeds.” Strabo states, on the authority of Nearchus, Alexander's admiral, that “reeds in India yield honey without bees.” And Seneca, who was put to death in the 65th year of the Christian era, alludes (Epist. 81.) to the sugar cane, in a manner which shows that he knew next to

nothing of sugar, and absolutely nothing of the manner in which it is prepared and obtained from the cane.

Of the ancients, Dioscorides and Pliny have given the most precise description of sugar. The former says, it is "a sort of concreted honey, found upon canes, in India, and Arabia Felix; it is in consistence like salt, and is, like it, brittle between the teeth." And Pliny describes it as "honey collected from canes, like a gum, white and brittle between the teeth; the largest is of the size of a hazel nut: it is used in medicine only."—(*Saccharum et Arabum fruti, sed laudatius India; est autem mel in arundinibus collectum, gummius modo concretum, dentibus fragile, amplissimum nucis avellanae magnitudine, ad medicinas tantum usum.*—Lib. xii. c. 8.)

It is evident, from these statements, that the knowledge of the Greeks and Romans with respect to the mode of obtaining sugar was singularly imperfect. They appear to have thought that it was found adhering to the cane, or that it issued from it in the state of juice, and then concreted like gum. Indeed Lucan expressly alludes to Indians near the Ganges,

Quique bibunt tenerâ dulces ab arundine succos.—(Lib. iii. l. 237.)

But these statements are evidently without foundation. Sugar cannot be obtained from the cane without the aid of art. It is never found native. Instead of flowing from the plant, it must be forcibly expressed, and then subjected to a variety of processes.

Dr. Moseley conjectures, apparently with much probability, that the sugar described by Pliny and Dioscorides, as being made use of at Rome, was sugar candy obtained from China. This, indeed, is the only sort of sugar to which their description will at all apply. And it would seem that the mode of preparing sugar candy has been understood and practised in China from a very remote antiquity; and that large quantities of it have been in all ages exported to India, whence, it is most probable, small quantities found their way to Rome.—(*Treatise on Sugar*, 2d edit. pp. 66—71. This, as well as Dr. Moseley's *Treatise on Coffee*, is a very learned and able work.)

Europe seems to be indebted to the Saracens not only for the first considerable supplies of sugar, but for the earliest example of its manufacture. Having, in the course of the 9th century, conquered Rhodes, Cyprus, Sicily, and Crete, the Saracens introduced into them the sugar cane, with the cultivation and preparation of which they were familiar. It is mentioned by the Venetian historians, that their countrymen imported, in the 12th century, sugar from Sicily at a cheaper rate than they could import it from Egypt.—(*Essai de l'Histoire du Commerce de Venise*, p. 100.) The crusades tended to spread a taste for sugar throughout the Western world; but there can be no doubt that it was cultivated, as now stated, in modern Europe, antecedently to the era of the crusades; and that it was also previously imported by the Venetians, Amaliphitans, and others, who carried on a commercial intercourse, from a very remote epoch, with Alexandria and other cities in the Levant. It was certainly imported into Venice in 996.—(See the *Essai*, &c. p. 70.)

The art of refining sugar, and making what is called loaf-sugar, is a modern European invention, the discovery of a Venetian about the end of the 15th or the beginning of the 16th century.—(*Moseley*, p. 66.)

The Saracens introduced the cultivation of the sugar cane into Spain soon after they obtained a footing in that country. The first plantations were at Valencia; but they were afterwards extended to Granada and Murcia. Mr. Thomas Willoughby, who travelled over great part of Spain in 1664, has given an interesting account of the state of the Spanish sugar plantations, and of the mode of manufacturing the sugar.

Plants of the sugar cane were carried by the Spaniards and Portuguese to the Canary Islands and Madeira, in the early part of the 15th century; and it has been asserted by many, that these islands furnished the first plants of the sugar cane that ever grew in America.

But though it is sufficiently established, that the Spaniards early conveyed plants of the sugar cane to the New World, there can be no doubt, notwithstanding Humboldt seems to incline to the opposite opinion (*Essai Politique sur la Nouvelle Espagne*, liv. iv. c. 10.) that this was a work of supererogation, and that the cane was indigenous both to the American continent and islands. It was not for the plant itself, which flourished spontaneously in many parts when it was discovered by Columbus, but for the secret of making sugar from it, that the New World is indebted to the Spaniards and Portuguese; and these to the nations of the East.—(See *Laflau, Mœurs des Sauvages*, tome ii. p. 150.; *Edwards's West Indies*, vol. ii. p. 238.)

Barbadoes is the oldest settlement of the English in the West Indies. They took possession of it in 1627; and so early as 1648 began to export sugar. In 1670, the trade of Barbadoes is said to have attained its maximum, being then capable of employing 400 sail of vessels, averaging 150 tons burden.

Jamaica was discovered by Columbus, in his second voyage, and was first occupied by the Spaniards. It was wrested from them by an expedition sent against it by Cromwell, in 1656; and has since continued in our possession, forming by far the most valuable of our West Indian colonies. At the time when it was conquered, there were only 3 small sugar

plantations and the rice increase.

 was first occupied by the
 against it by Cromwell, in
 the most valuable of com-
 mercial articles were only 3 small sugar

plantations upon it. But, in consequence of the influx of English settlers from Barbadoes and the mother country, fresh plantations were speedily formed, and continued rapidly to increase.

The sugar cane is said to have been first cultivated in St. Domingo, or Hayti, in 1506. It succeeded better there than in any other of the West Indian islands. Peter Martyr, in a work published in 1530, states that, in 1518, there were 28 sugar-works in St. Domingo established by the Spaniards. "It is marvellous," says he, "to consider how all things increase and prosper in the island. There are now 28 sugar presses, wherewith great plenty of sugar is made. The canes or reeds wherein the sugar groweth are bigger and higher than in any other place; and are as big as a man's wrist, and higher than the stature of a man by the half. This is more wonderful, that whereas in Valencia, in Spain, where a great quantity of sugar is made yearly, whensoever they apply themselves to the great increase thereof, yet doth every root bring forth not past 5 or 6, or at most 7 of these reeds; whereas in St. Domingo 1 root beareth 20, and oftentimes 30."—(Eng. trans. p. 172.)

Sugar from St. Domingo formed, for a very long period, the principal part of the European supplies. Previously to its devastation, in 1790, no fewer than 65,000 tons of sugar were exported from the French portion of the island.

iii. Sources whence the Supply of Sugar is derived.—The West Indies, Brazil, Surinam, Java, Mauritius, Bengal, Siam, the Isle de Bourbon, and the Philippines, are the principal sources whence the supplies required for the European and American markets are derived. The average quantities exported from these countries during each of the 3 years ending with 1833 were nearly as follows:—

	Tons.
British West Indies, including Demerara and Berbice	190,000
Mauritius	30,000
Bengal, Isle de Bourbon, Java, Siam, Philippines, &c.	60,000
Cuba and Porto Rico	110,000
French, Dutch, and Danish West Indies	95,000
Brazil	75,000

560,000 tons.

Use of lump sugar is unknown in the East, sugar candy being the only species of refined sugar that is made use of in India, China, &c. The manufacture of sugar candy is carried on in Hindostan, but the process is extremely rude and imperfect. In China, however, it is manufactured in a very superior manner and large quantities are exported. When of the best description, it is in large white crystals, and is a very beautiful article. Two sorts of sugar candy are met with at Canton, viz. Chinesew and Canton; the former being the produce of the province of Fokien, and the latter, as its name implies, of that of Canton. The Chinesew is by far the best, and is about 50 per cent. dearer than the other. Chinese sugar candy is consumed, to the almost total exclusion of any other species of sugar, by the Europeans at the different settlements throughout the East. There were exported from Canton, in 1831-32, by British ships, 32,279 piculs (38,427 cwt.) of sugar candy, valued at 212,000 dollars; and 60,627 piculs (72,175 cwt.) of clayed sugar, valued at 318,250 dollars; and during the previous year the exports were about 50 per cent. greater.—(See vol. i., pp. 302, 303.) The exports by the Americans are also considerable. At an average, the exports of sugar from Canton may be taken at from 4,000 to 10,000 tons; but of this only a small quantity finds its way to Europe. The exports from Siam and Cochinchina are estimated at about 12,500 tons.

Consumption of Sugar in Europe, &c.—Mr. Cook gives the following Table of the imports of sugar into France and the principal Continental ports in 1831, 1832, and 1833, and of the stocks on hand on the 31st of December of each of these years:—

	Imports.			Stocks, 31st of December.		
	1831.	1832.	1833.	1831.	1832.	1833.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
France	97,450	82,000	79,500	25,870	9,350	10,450
Trieste	17,950	22,400	13,800	6,900	11,900	6,840
Genoa	9,500	10,500	6,800	1,500	2,200	2,180
Antwerp	5,210	8,780	12,800	2,000	2,000	5,100
Rotterdam	10,700	11,600	8,650	1,800	3,900	3,350
Amsterdam	18,370	22,380	20,100	2,300	3,400	5,300
Hamburg	38,800	37,330	30,000	9,000	13,400	9,820
Bremen	12,380	12,500	7,350	3,230	5,800	3,550
Copenhagen	5,350	5,850	5,560	600	2,370	1,650
Petersburgh	11,170	23,100	18,500	8,840	11,000	15,000
	226,910	237,040	203,060	61,740	65,980	64,020

This Table does not, however, give the imports into any of the ports of the Peninsula, but the imports of Spain, only, has been estimated, apparently on good grounds, by Martevan (*Essai de Statistique sur les Colonies*, p. 92.), at 45,000,000 kilogrammes (41,050 tons.) This may appear large for a country in the situation of Spain; but the quantity is deduced from comparing the imports with the exports; and it is explained partly by the moderation of the duties, and partly by the large consumption of cocoa, and other articles that require a corresponding consumption of sugar. Mr. Cook's Table also omits the imports into Leghorn, Naples, Palermo, and other Italian ports. Neither does it give those into Stettin, Königsberg, Riga, Stockholm, Gottenburg, &c. It is, besides, very difficult, owing to transshipments from one place to another, accurately to estimate the real amount of the imports. On the whole, however, we believe that we shall be within the mark, if we estimate those for the whole Continent at from 255,000 to 310,000 tons, including what is sent from England.

The following Table, compiled from the best authorities, exhibits the total consumption of colonial and foreign sugars in France at different periods since 1788, with the population, and the average consumption of each individual.—(See *Montveran, Essai de Statistique*, p. 96., and the authorities there referred to.)

Years.	Consumption.	Population.	Individual Consumption.
	<i>Kilog.</i>		<i>Kilog.</i>
1788 - - - - -	21,300,000	23,600,000	966
1801 - - - - -	25,200,000	31,000,000	813
1812 - - - - -	16,000,000	43,000,000	372
1816 to 1819 average - - - - -	36,000,000	30,000,000	1200
1819 - 1822 - - - - -	47,000,000	30,833,000	1566
1823 - 1824 - - - - -	47,250,000	31,103,000	1513
1824 - 1825 - - - - -	65,750,000	31,280,000	2103
1825 - 1827 - - - - -	62,500,000	31,625,000	1976
1830 - - - - -	67,250,000	31,845,000	2116

This, however, is independent of the consumption of indigenous sugar—(see *post*), and of the sugar introduced by the contraband trade,—both of which are very considerable. The entire consumption of all sorts of sugar in France in 1832, including from 8,000,000 to 9,000,000 kilog. of beet-root sugar, and allowing for the quantity fraudulently introduced, may be estimated at about 88,000,000 kilog., or 193,000,000 lbs.; which, taking the population at 32,000,000, gives an average consumption of 6 lbs. to each individual, being about $\frac{1}{4}$ th part of the consumption of each individual in Great Britain! This extraordinary discrepancy is no doubt ascribable to various causes;—partly to the greater poverty of the mass of the French people; partly to their smaller consumption of tea, coffee, punch, and other articles that occasion a large consumption of sugar; and partly and principally, perhaps, to the oppressive duties with which foreign sugars are loaded on their being taken into France for home consumption.

The United States consume from 70,000 to 80,000 tons; but of these, from 30,000 to 40,000 tons are produced in Louisiana.

About 170,000 tons of sugar are retained for home consumption in Great Britain, and 17,000 tons in Ireland; exclusive of about 12,000 tons of bastard, or inferior sugar obtained by the boiling of molasses, and exclusive also of the refuse sugar and treacle remaining after the process of refining.

On the whole, therefore, we believe we may estimate the aggregate consumption of the Continent and of the British islands at about 500,000 tons a year; to which if we add the consumption of the United States, Turkey, &c., the aggregate will be nearly equivalent to the supply. The demand is rapidly increasing in most countries; but as the power to produce sugar is almost illimitable, no permanent rise of prices need be looked for.

Taking the price of sugar at the low rate of 1*l.* 4*s.* a cwt., or 24*l.* a ton, the prime cost of the article to the people of Europe will be 12,000,000*l.* sterling; to which adding 75 per cent. for duty, its total cost will be 21,000,000*l.*! This is sufficient to prove the paramount importance of the trade in this article. Exclusive, however, of sugar, the other products of the cane, as rum, molasses, treacle, &c., are of very great value. The revenue derived by the British treasury from rum, only, amounts to nearly 1,600,000*l.* a year.

Progressive Consumption of Sugar in Great Britain.—We are not aware that there are any authentic accounts with respect to the precise period when sugar first began to be used in England. It was, however, imported in small quantities by the Venetians and Genoese in the 14th and 15th centuries†, but honey was then, and long after, the principal ingredient employed in sweetening liquors and dishes. Even in the early part of the 17th century, the quantity of sugar imported was very inconsiderable; and it was made use of only in the houses of the rich and great. It was not till the latter part of the century, when coffee and tea began to be introduced, that sugar came into general demand. In 1700, the quantity consumed was about 10,000 tons, or 22,000,000 lbs.; at this moment the consumption has increased (bastards included) to above 180,000 tons, or more than 400,000,000 lbs.; so that sugar forms not only one of the principal articles of importation and sources of revenue, but an important necessary of life.

Great, however, as the increase in the use of sugar has certainly been, it may, we think, be easily shown, that the demand for it is still very far below its natural limit; and that, were the existing duties on this article reduced, and the trade placed on a proper footing, its consumption, and the revenue derived from it, would be greatly increased.

During the first half of last century, the consumption of sugar increased five-fold. It amounted, as already stated—

In 1700, to 10,000 tons -	or 22,000,000 lbs.	In 1754, to 53,370 tons	or 119,320,000 lbs.
1710, - 14,000 - - -	- 31,360,000 - -	1770-1775, 72,500 (average) -	162,500,000 - -
1731, - 42,000 - - -	- 94,080,000 - -	1786-1790, 81,000 - -	- 181,500,000 - -

In the reign of Queen Anne, the duty on sugar amounted to 3s. 5d. per cwt. Small additions were made to it in the reign of George II.; but in 1780 it was only 6s. 8d. In 1781, a considerable addition was made to the previous duty; and in 1787 it was as high as 15s. 4d. In 1791 it was raised to 15s.; and while its extensive and increasing consumption pointed it out as an article well fitted to augment the public revenue, the pressure on the public finances, caused by the French war, occasioned its being loaded with duties, which, although they yielded a large return, would, there is good reason to think, have been more productive had they been lower. In 1797, the duty was raised to 17s. 6d.; 2 years after, it was raised to 20s.; and, by successive augmentations in 1803, 1804, and 1806, it was raised to 30s.: but in the last-mentioned year it was enacted, that, in the event of the market price of sugar in bond, or exclusive of the duty, being, for the 4 months previous to the 5th of January, the 5th of May, or the 5th of September, below 49s. a cwt., the Lords of the Treasury might remit 1s. a cwt. of the duty; that if the prices were below 48s., they might remit 2s.; and if below 47s., they might remit 3s., which was the greatest reduction that could be made. In 1826, the duty was declared to be constant at 27s., without regard to price; but it was reduced, in 1830, to 24s. on West India sugar, and to 32s. on East India sugar.

Account of the Quantity of Sugar retained for Home Consumption in GREAT BRITAIN, the Nett Revenue derived from it, and the Rates of Duty with which it was charged; and the Price, exclusive of the Duty, in each Year from 1789 to 1832, both inclusive.

* Sugar used in the distilleries included in these years.

† Previously to 1829, the importation of East India sugar was comparatively trifling, and does not at this moment amount to above 190,000 cwt. The imports from the Mauritius have increased rapidly during the last 5 years, more especially since 1826, when the duty on sugar from that island was reduced to the same level as that on sugar from the West Indies.—(See ante, p. 327.)

‡ N.B.—These quantities include the sugar refined in Britain for exportation to Ireland.

V. Account of the Quantity of Raw and Refined Sugar exported from the United Kingdom, in the Year ended 5th of January, 1836; reducing the Quantity of Refined into its Proportion of Raw; distinguishing the several Sorts of Sugar, and the Countries to which the same was exported.—(N.B.—Losses omitted in the Columns, but allowed for in the Totals.)

Countries to which exported.	Raw Sugar.					Refined Sugar.		Total (said in Column Raw Sugar.)
	Of the British Plantations.	Of Mauritius.	Of the East Indies.	Of the Foreign Plantations.	Total of Raw Sugar.	Actual Weight exported.	The same stated as Raw Sugar in the Proportion of 84 Cwt. of Raw to 50 Cwt. of Refined.

The duty on foreign sugars is a prohibitory one of 63s. a cwt. Sugar from the Mauritius is, however, by a special provision, allowed to be imported at the same duty as West India sugar.

Influences of the Duties.—The price of sugar, exclusive of the duty, may be taken, at an average of the last few years, at from 24s. to 25s. a cwt. But to lay a tax of 24s. on a necessary of life costing from 24s. to 35s., including 8s. per cwt. freight and charges, is obviously a most oppressive proceeding. Indeed, there does not seem to be much room for doubting that the consumption, and consequently also the revenue, would be very greatly increased by reducing the duty to 12s. or 18s. This may be pretty confidently inferred from the increase of consumption that has invariably followed every fall in the price of sugar. During the 3 years ending with 1808, when the price of brown or muscovado sugar, inclusive of the duty, was about 66s. a cwt., there were, at an average, 3,640,741 cwt. retained for home consumption. During the 3 years ending with 1816, the price was about 93s., and the same quantity retained for home consumption fell off to 2,038,373 cwt. But during the 3 years ending with 1824, the price having fallen to about 57s., the average quantity retained for home consumption rose to 3,267,581 cwt.; being an increase of more than fifty per cent. upon the quantity consumed during the previous period!

It will be observed that the duty was either the same, or very nearly the same, in those 3 periods; but had it been imposed on an *ad valorem* principle, or made to vary directly as the price, the reduction in the last-mentioned period would have been proportionately greater, and there would, consequently, have been a still greater increase of consumption.

The reduction of 3s. a cwt. from the duty, in 1830, was too trifling to have much effect; and it is difficult to say what portion of the increased consumption that has since taken place is to be ascribed to it, and what to other things. But if, instead of reducing the duty from 27s. to 24s., it had been reduced from 27s. to 16s., or 18s., the reduction would have had a powerful influence; and would certainly have occasioned a great increase in the consumption of the lower priced sugars, particularly in Ireland.

The quantity of sugar consumed in Great Britain is, at present, allowing for the quantity sent to Ireland, more than double what it was in 1790. But had the duty continued at 12s. 4d., as enacted in 1790, there cannot, we think, be much doubt that the consumption would have been quadrupled. During the intervening period, the population has been little less than doubled; and the proportion which the middle classes now bear to the whole population has been decidedly augmented. The consumption of coffee—an article in the preparation of which a great deal of sugar is used in this country, by all who can afford it—is more than 23 times as great now as in 1790; that is, it has increased from under 1,000,000 lbs. to above 23,000,000 lbs. The consumption of tea has about doubled; and there has been a vast increase in the use of home-made wines, preserved and baked fruits, &c. In short, therefore, of having done little more than increase proportionally to the increase of the population, it may be fairly presumed that the consumption of sugar would, had there not been some powerful coun-

the United Kingdom, in the Year

increasing cause in operation, have increased in a far greater degree. Instead of amounting to little more than 3,000,000, it might have amounted to 8,000,000 cwt.

Taking the aggregate consumption of Great Britain at 400,000,000 lbs., and the population at 30,000,000, the average consumption of each individual will be about 24 lbs. This, though a far greater average than that of France, or any of the Continental states, is small compared with what it might be were sugar supplied under a more liberal system. In workhouses, the customary annual allowance for each individual is, we believe, 34 lbs.; and in private families, the smallest separate allowance for domestic is 1 lb. a week, or 52 lbs. a year. These facts strongly corroborate what we have already stated as to the extent to which the consumption of sugar may be increased; and others may be referred to, that are, if possible, still more conclusive. Mr. Huskisson stated, in his place in the House of Commons, on Mr. Grant's motion for a reduction of the sugar duties, 25th of May, 1830, that "in consequence of the present enormous duty on sugar, the poor working-man with a large family, to whom sugar was a serious consideration, was denied the use of that commodity; and he believed it did not go too far when he stated, that two-thirds of the poorer consumers of coffee drank that beverage without sugar. If, then, the price of sugar were reduced, it would become an article of his consumption, like many other articles—woolens, for example, which are now used from their cheapness—which he was formerly unable to purchase."—(Speeches, vol. III. p. 455.) There are no grounds for thinking that this statement is in any degree exaggerated; and it strikingly shows the very great extent to which the consumption of sugar might be increased, were it brought fully under the command of the labouring classes.

In Ireland, however, that we should anticipate the greatest and most salutary effects from a reduction of the duties on sugar. The direct importations into Ireland do not exceed 15,000 tons; and if we add to these 6,000 tons for the second-hand importations from Great Britain, which, we believe, is quite as much or more than they amount to, the entire consumption of that country will be 21,000 tons, or 87,000,000 lbs., which, taking the population of Ireland at 8,000,000, gives about 8 lbs. to each individual; or about 1-4th part of the average consumption of each individual in Great Britain. So singular a result must, we believe, be ascribed, in a considerable degree, to the comparative poverty of the Irish; but there can be no doubt that it is partly, if not principally, owing to over-taxation. The direct imports of sugar into Ireland were twice as great 30 years ago as they are at this moment; and there is no reason for thinking that the increase in the second-hand imports has been equivalent to the decrease in the population. Hence, in order to diffuse a taste for so necessary an article as sugar among the population of Ireland, it would be very desirable, if possible, to reduce the duties even as low as 1s. a cwt.; and we are well convinced that such reduction, though it might occasion an immediate loss, would, in the end, be productive of a great increase of revenue, besides being attended with other and still more beneficial consequences. The "one thing needful" in Ireland is to inspire the population with a taste for the conveniences and enjoyments of civilized life; but how is it possible to do this while these conveniences are burdened with oppressive duties, that form an insuperable obstacle to their being used by any but the richest classes? Hence, the first step towards supplying what is confessedly the grand desideratum in the case of Ireland, is to reduce the duties on articles of convenience and luxury, so that they may become attainable by the mass of the people. If this be done, we may rest assured that the desire inherent in all individuals of improving their condition, will impel them to exert themselves to obtain them. A taste for the articles in question will be gradually diffused amongst all ranks; and, ultimately, it will be thought discreditable to be without them.—(Pol. Paper, No. 97. Sess. 1831.)

We have already seen that the imports of sugar from the British West Indies and the Mauritius may be estimated at 216,500 tons, and the consumption of Great Britain and Ireland at above 184,000 tons, exclusive of the East India Company's duty; but of this quantity, about 6,000 tons is Bengal sugar,—making the net consumption of West India and Mauritius sugar 178,000 tons, leaving 38,000 tons of the latter for exportation, exclusive of the surplus of Bengal sugar.

The duty on East India sugar ought to be reduced to the same level as that on West India sugar. It is difficult to imagine that there can be any good reason why all the productions of the different dependencies of the empire should not be allowed to come into the home market on paying the same duty. The admission of Mauritius sugar at a duty of 9s. is, indeed, a full concession of the principle; for there is not a single argument that could be alleged in favour of admitting Mauritius sugar at the same duty as West India sugar, that will not equally apply to Bengal sugar. However, we do not think that this point is of so much practical importance as is generally supposed. East India sugar has no sale, made any way in the Continental markets, most of which are open to it on the same terms as other sugars; and unless its quality be materially improved, or its price considerably reduced, there is but little prospect of its being able to come into competition with the sugars of Jamaica, Brazil, and Cuba.

Bounty on the Exportation of Refined Sugar.—The business of refining sugar for exportation has been carried on to a considerable extent in this country; but it may be doubted whether its prosecution has ever been productive of any material national advantage. It had long been suspected,—and the fact seems now sufficiently established,—that the drawback allowed on the exportation of refined sugar has been greater than the duty charged on the raw sugar used in its manufacture; the excess being, in fact, a bounty paid to those engaged in the trade. Previously to 1826, the drawback on double refined sugar was 4s. a cwt. It was then reduced to 4s., but there is reason to think that it is still considerably above the mark. The average price of sugar in bond in this country, for several years past, has been from 5s. to 6s. a cwt. above what sugar of the same quality has brought on the Continent; a difference which, as we export sugar, could not have been maintained, had it not been for the bounty. The same conclusion has been established by the trials made under the superintendence of Dr. Ure at a sugar house taken for the purpose by government. It is said to be the intention of ministers to reduce the drawback to what may be supposed to be the fair equivalent of the duties paid on the raw sugar; a measure of which no doubt can be entertained. It has been the practice, in making up returns to parliament, to reduce the refined sugar exported into raw sugar, by allowing 34 cwt. of the latter to 90 of the former. But the export of sugar in this mode to appear greater than it really is; for though 34 cwt. of raw may be required to produce 20 cwt. of refined sugar, the whole of the molasses and harkards that remain (about 13 cwt.) are consumed at home. We subjoin those clauses of the act 3 & 4 Will. 4. c. 58, which refer to the allowing of a bounty on refined sugar.

Regulations upon the Exportation of Refined Sugar.—So long as the duties which are now payable upon the importation of sugar until the 25th of April, 1834, shall be continued, there shall be allowed upon the exportation of refined sugar made in the United Kingdom the several bounties set forth in the Table herein-after contained; (that is to say)

Refined sugar, viz.—	L. s. d.	L. s. d.
Double refined sugar, or refined loaf sugar broken in pieces, or being crushed or powdered sugar, or such sugar as may be used for confectionery, or for the manufacture of sugar candy, or for any other purpose, when exported in a British ship, for every cwt.	1 4 0	1 10 0
When exported in a ship not British, for every cwt.	1 8 0	1 15 0
When refined sugar in loaf, crushed, and white, or in pieces, or in any other form, is exported in a British ship, having been perfectly clarified and then roughly dried in the stove, and being of a uniform whiteness throughout, or such sugar powdered, crushed, or broken, and sugar candy,		1 10 0
When exported in a British ship, for every cwt.		1 15 0
When exported in a ship not British, for every cwt.		1 15 0
Double refined sugar, and sugar equal in quality to double refined sugar, additional bounty for every cwt. 0 8 4		0 8 4

Sugar from the Mauritius
the same duty as West India

may be taken, at an average of 100 lbs. a cwt. as a necessary of life costing 10s. a cwt. and the consumption, and consequently to 10s. or 15s. This may be invariably followed every fall by a crop of brown or muscovado sugar, 2,040,741 cwt. retained for home use, and the average quantity of the 3 years ending with 1888, for home consumption will be 1,000,000 cwt. The quantity consumed during the same, in those 3 periods, directly as the price, the retailer, and there would, consequently, have much effect; and if it were taken place is to be sacrificed from 37s. to 34s., it had been a great influence; and would certainly have a powerful effect, particularly in the quantity sent to the Continent, and it would have been quadrupled. Denied; and the proportion which it augmented. The consumption of sugar is used in this country, that is, it has increased from 100,000 to 1,000,000 lbs. has about doubled, and there are baked fruits, &c. Instead of the increase of the population, it has not been some powerful count-

Bond to be given for the due Exportation.—The exporter of goods in respect of which any bounty is claimed under this act, or the person in whose name the same are entered outwards, shall, at the time of entry and before cocks, be granted, give security by bond in double the value of the goods, with a sufficient surety, that the same shall be duly exported to the place for which they are entered, or be otherwise accounted for to the satisfaction of the commissioners of customs, and shall not be re-landed in the United Kingdom, or landed in the Isle of Man, unless expressly entered to be exported there.

Candy in Packages of ½ Cwt.—No bounty shall be given upon the exportation of any refined sugar called candy, unless it be properly refined and manufactured, and free from dirt and acids, and packed in packages, each of which shall contain ½ cwt. of such candy at the least.—4.

Sugar crushed for Exportation.—If any sugar in lumps or loaves is to be pounded, crushed, or broken before the same be exported, for the bounty payable thereon, such lumps or loaves shall, after due entry thereof, be lodged in some warehouse provided by the exporter, and proved by the commissioners of the customs for such purpose, to be then first examined by the officers of customs while in such lumps or loaves, as if for immediate shipment, and afterwards to be there pounded, crushed, or broken, and packed for exportation, in the presence of such officers and at the expense of the exporter; and such sugar shall be kept in such warehouse, and be removed thence for shipment, and be shipped under the care and in the charge of the searchers, that the shipment and exportation thereof may be duly certified by them, upon the debenture, according to the quality ascertained by them of the same while in such lumps or loaves.—5.

Different Sorts of washed Sugar to be kept separate.—The different sorts of such sugar shall be kept apart from each other in such manner and in such distinct rooms or divisions of such warehouse as shall be directed and appointed by the commissioners of the customs; and if any sort of such sugar shall be found in any part of such warehouse appointed for the keeping of sugar of a sort superior in quality thereto; the same shall be forfeited; and if any sort of such sugar shall be brought to such warehouse to be pounded, crushed, or broken, which shall be of a quality inferior to the sort of sugar expressed in the entry for the same, such sugar shall be forfeited.—6.

Sugar Refiners to provide Sample Loaves of Double Refined Sugar.—There shall be provided by and at the expense of the committee of sugar refiners in London, and by and at the expense of the committee of merchants in Dublin, as many loaves of double refined sugar, prepared in manner hereinafter directed, as the commissioners of customs shall think necessary; which loaves, when approved of by the said commissioners, shall be deemed and taken to be standard samples; 1 of which loaves shall be lodged with the said committees respectively, and 1 other with such person or persons as the said commissioners shall direct, for the purpose of comparing therewith double refined sugar, or sugar equal in quality to double refined sugar, entered for exportation for the bounty; and fresh standard samples shall be again furnished by such committees, whenever it may be deemed expedient by the commissioners: provided always, that no loaf of sugar shall be deemed to be a proper sample loaf of double refined sugar, if it be of greater weight than 14 lbs., nor unless it be a loaf complete and whole, nor unless the same shall have been made by a distinct second process of refinement from a quantity of single refined sugar, every part of which had first been perfectly clarified and duly refined, and had been made into loaves or lumps, which were of a uniform whiteness throughout, and had been thoroughly dried in the stove.—7.

Sugar entered not equal to the Standard shall be forfeited.—In case any sugar which shall be entered in order to obtain the bounty on double refined sugar, or sugar equal in quality to double refined sugar, shall, on examination by the proper officer, be found to be of a quality not equal to such standard sample, all sugar so entered shall be forfeited and may be seized.—8.

Refining in Bond.—If any further proof, in addition to what has been stated above, were required to show that the trade of refining in this country has been at all times mainly dependent on the bounty, it would be found in the circumstances that have occurred under the late act authorizing refining in bond. In 1828, 1829, 1830, and down to July, 1831, foreign sugars were allowed to be refined on the same terms as British sugars—that is, they paid the same duty and were entitled to the same drawback. The quantity of foreign sugar so refined amounted, in 1830, to 2,105 tons, and in the first half of 1831, when the privilege ceased, to about 4,500 tons. The renewal of this system was strongly advocated in 1831 and 1833; but it was successfully opposed by the West India merchants, who considered the scheme injurious to their interests. Last year (1833), however, the refiners having pressed upon parliament the expediency of allowing them to refine foreign sugars in bond, which excluded, of course, the possibility of the revenue losing any thing by the drawback exceeding the duty, their request was complied with. The result, however, has shown that the trade had formerly been mainly artificial, or that it had depended principally on the drawback being above the duty. Out of 65 houses in London, 4 only have availed themselves of the permission to refine in bond; and of these 4, 3 are now about to give up working; and the total quantity that has been used is 100 tons Siam, 100 tons Havana, and 470 tons Brazil: in all, but 670 tons. A statement has, also, been recently put forth, which shows that, notwithstanding the aid of a bounty, the export had declined from 611,000 cwt. in 1818, to 344,000 in 1828; and although it has since fluctuated between these quantities, it has amounted during the first 3 quarters of the present year (1833) to 195,271 cwt. only, against 289,479 cwt. in the same period of the last year, and 482,222 cwt. in the preceding one, notwithstanding there has been abundance of foreign sugar to be had at low prices, and the powers of chemical science have been at work to improve the process of refining.—(Cobden's *Commerce of Great Britain* for 1833.)

This unfavourable state of things is owing, not to the concurrence of causes; but principally, we believe, to the exaggerated opinions entertained by most foreign nations as to the importance of the sugar refining business. We have no wish, certainly, to undervalue it; but every unprejudiced person must admit that, compared with most other businesses carried on in a great country, it is of very inferior consideration. Instead, however, of regarding it in this point of view, most foreign governments seem to look upon it as of the highest value; and have endeavoured to extend the business, not merely by excluding foreign refined sugars from their markets, but by granting the most lavish bounties on the exportation of sugar refined at home. In France, this sort of policy, if we may so call it, was carried so far, that out of a gross revenue of about 40,000,000 francs (1,570,000*l.*) paid into the treasury on account of the sugar duties in 1832, about 19,000,000 (760,000*l.*) were returned as drawback on the export of refined sugar! As the French government could not afford to lose the sugar duties, which would very speedily have been swallowed up by the drawback, necessarily has compelled them to modify their system, by making the allowance to the exporter more nearly correspond with the duty. This will, no doubt, diminish the exportation of refined sugar from France; a change by which it is reasonable to suppose our refiners will in some degree be benefited.

Prussia, and most parts of Germany, to which we formerly exported large quantities of refined sugar, no longer admit it except at a high duty. And even in those Continental markets that are still open for its importation under moderate duties, we have formidable competitors in the Dutch and Belgian refiners, whose governments continue to allow pretty high bounties.

On the whole, therefore, we are afraid that the refining business in this country is in a rather precarious state. Improvements in the process seem to be the only notice of relief to which the refiners need look with much hope of advantage. The idea of attempting to bolster up the business by the aid of bounties is not one that can be any longer entertained.

Vol. II

We join the act 3 & 4 Will. 4. c. 61., allowing sugar to be refined in bond.
Act 3 & 4 Will. 4. c. 61., FOR ADMITTING SUGAR TO BE REFINED FOR EXPORTATION WITHOUT PAYMENT OF DUTY.

Commissioners of Customs may approve Premises for Bonded Sugar Houses.—Upon application to the commissioners of customs of any person actually carrying on the business of a sugar refiner in the ports of London, Liverpool, Bristol, Hull, Greenock, or Glasgow, or any other port approved by any 3 Lords of the Treasury, it shall be lawful for the commissioners of customs to approve of such premises as bonded sugar houses for the refining of sugar for exportation only, on it being made appear to the satisfaction of said commissioners that the said premises are fit in every respect for receiving such sugars, and wherein the same may be safely deposited.—2 1.

Officers of Customs empowered to deliver Sugars Duty-free, to be there refined for Exportation only.—On the approval of any premises as bonded sugar houses, it shall be lawful for the officers of the customs at the ports where such premises are situated, to deliver, without payment of duty, to the party so applying as aforesaid, on entry with the proper officer of customs, any quantity of foreign sugar, or sugar the produce of any British possession, for the purpose of being there refined, under the locks of the Crown, for exportation only; and all sugars so delivered shall be lodged and secured in such premises, under such conditions, regulations, and restrictions as the said commissioners shall from time to time direct: provided, that it shall be lawful for the commissioners to revoke or alter any order of approval of any such premises.—2 2.

Refiner to give Bond that Sugar received be refined and exported, or delivered into Bonded Warehouse.—Upon the entry of sugar to be refined in any premises approved of under the authority of this act, the refiner on whose premises the same is to be refined shall give bond, to the satisfaction of the officers of the customs, in the penalty of double the amount of the duty payable upon a like quantity of sugar of the British plantations, with a condition that the whole of such sugar shall be actually subjected to the process of refinement upon the said premises, and that within 4 months from the date of such bond the whole of the refined sugar and treacle produced by such process shall be either duly exported from the said premises, or delivered into an approved bonded warehouse, under the locks of the crown, for the purpose of being eventually exported to foreign parts.—2 3.

Regulations as to Importation, &c. of Sugar.—No allowance to be made for damage or increase of weight by water, on sugars; unless special permission.
 Duty on British plantation sugar:—
 Under 1 cwt. — 14 per cent.
 1 cwt. and under 12 — 1 cwt. each cask.
 12 — 16 — 1 cwt. 1 qr. 12 lbs. each cask.
 16 — 17 — 1 — 3 0
 17 and upwards — 1 — 3 0

Certificates of Growth are required before any sugar can be entered as the produce of a British possession in America, or of the Mauritius; and before it can be entered as the produce of any British possession within the limits of the East India Company's charter.—(See the clauses in the act 3 & 4 Will. 4. c. 62. ante, p. 5.)

BETTER BEET SUGAR.—The manufacture of sugar from beet root is carried on to a very considerable extent in several parts of the Continent, particularly in France, where the annual produce of the sugar from this source may at present be estimated at about 8,000 tons. This branch of industry began during the exclusion of colonial products from France in the reign of Napoleon. It received a severe check at the return of peace, by the admission of West India sugars at a reasonable duty: and would, it is most probable, have been entirely extinguished, but for the oppressive additions made to the duties on colonial sugars in 1820 and 1822. It is opposed by some, that at no distant period the manufacture of sugar from beet root will be so much improved, that it may be able to stand a competition with colonial sugar at the same duty; but we have no idea that this supposition will ever be realised. It is of importance, however, to bear in mind, that were the culture of beet root sugar to be extensively carried on at home, it would be quite impossible to collect a duty upon it; so that the large amount of revenue that may be advantageously derived from a moderate duty on imported sugar, would be almost entirely lost.—(For an account of the beet root cultivation in France, see the article on the *French Commercial System*, in the *Edinburgh Review*, No. 99.)

We understand that a few small parcels of beet root sugar have recently been produced in this country; and with the present enormous duty on colonial sugar, we are not sure that the manufacture may not succeed. But, as the preservation of the revenue from sugar is of infinitely more importance than the introduction of this spurious business, the foundations of which must entirely rest on the miserable machinery of Custom-house regulations, sound policy would seem to dictate that the precedent established in the case of tobacco should be followed in this instance, and that the beet root sugar manufacture should be abolished. Inasmuch, too, as it is better to check an evil at the outset, than to grapple with it afterwards, we trust that no time may be lost in taking vigorous measures, should there be any appearance of the business extending.

MAPLE SUGAR.—A species of maple (*Acer saccharinum* Lin.) yields a considerable quantity of sugar. It grows plentifully in the United States and in Canada; and in some districts furnishes the inhabitants with most of the sugar they make use of. Though inferior both in gain and strength to that which is produced from the cane, maple sugar granulates better than that of the beet root, or any other vegetable, the cane excepted. It is produced from the sap, which is obtained by perforating the tree in the spring, to the depth of about 2 inches, and setting a vessel for its reception. The quantity afforded varies with the tree and the season. From 2 to 3 gallons may be about the daily average yield of a single tree; but some trees have yielded more than 20 gallons in a day, and others not more than a pint. The process of boiling the juice does not differ materially from what is followed with the cane juices in the West Indies. It is necessary that it should be boiled as soon after it is drawn from the tree as possible. If it be allowed to stand above 24 hours, it is apt to undergo the vinous and acetous fermentation, by which its saccharine quality is destroyed.—(*Bouchette's British America*, vol. i. p. 371, *Timber Trees and Fruits*; *Library of Entertaining Knowledge*.)

Vol. II.—3 B

Prices of Sugar.—The following statement of the prices of sugar in the London market, on the 19th of December, 1884, is taken from *Prince's Price Current* of that date:—

Sugar.	Price per Cwt.		Duty per Cwt.	Sugar.	Price per Cwt.		Duty per Cwt.
	L. s. d.	L. s. d.			L. s. d.	L. s. d.

ACCOUNTS OF SALES OF SUGAR.—Subjoined are *pro forma* accounts of sales of sugar from Jamaica, Brazil, Bengal, Mauritius, &c. These accounts are interesting, inasmuch as they exhibit the various charges affecting this necessary article, from the time it is shipped in the colonies till it finds its way into the hands of the grocer; and our readers may rely on their authenticity. It will be observed, that the duties are very much greater than the sums received by the planters.

(*State of the Sugar Trade.*—The sugar trade is at this moment in a very singular and perplexing state. In consequence of the efforts made by the abolitionists in this country, the apprenticeship system, which was to have continued till 1840, ceased in August last (1838); and the blacks in the different sugar islands belonging to Great Britain are now as free, and as much entitled to the free disposal of their labour, as the workmen in England. It would be premature to speculate as to the ultimate influence of this great change. Even as respects the present state of the islands, the accounts are contradictory, and little to be relied on. Certainly, however, we have little doubt, whatever may be the result in the long run, that in the first instance the emancipation of the blacks will be productive of a great decline in the growth and exportation of sugar. It would, indeed, be extraordinary were it otherwise. Labour in sugar plantations has hitherto been associated in the minds of the blacks with all that is most revolting to the feelings; and it is not rational to suppose, now that they are free, that they should apply themselves to what has been the badge and test of their degradation, with the energy that the lash used formerly to inspire. It should further be recollected, that the wants of the blacks are comparatively few, and that they may be partially or fully met by labouring on grounds where sugar is not raised, and where the work is much lighter. The circumstances now stated may not, indeed, have the influence that one should naturally expect; and they may be partially counterbalanced by others. But after every abatement, our conviction is, that a very great falling-off may be anticipated. It will be seen from the subjoined account, that the export of sugar from Jamaica has declined from 1,556,991 cwt. in 1833, to 903,933 cwt. in 1837! And taking the entire produce of the West Indian colonies, and of the Mauritius, in 1838, at 180,000 tons, Mr. Cook estimates the probable deficiency in the supply of the current year at no less than 30,000 tons.

The equalisation of the duties on East and West India sugars judiciously effected by the act 6 & 7 Will. 4. cap. 26., has, by occasioning a considerably increased exportation of East India sugar, contributed in so far to counteract the influence of the decreasing imports from the West Indies. But it is doubtful whether this resource will be sufficient under the new state of things, and whether it will not be necessary to open our ports to the importation of foreign sugars, under such regulations as may appear to be necessary to secure the rights and interests of all parties. We believe that such a measure would be of signal importance, and that it would not merely contribute to reduce the cost of one of the principal necessities of life, but would greatly extend our trade with Brazil, and other countries rapidly rising in commercial importance, sugar being the principal article they have to offer in exchange for foreign products.

An Account of the Sugars imported into the United Kingdom from the Colonies and Settlements in the West Indies and the Mauritius during the Four Years ending with 1837: distinguishing each Year, and each Colony or Settlement.

* The f
of France,
1 For fur
recently 3

The consumption of sugar is rapidly increasing on the continent and in America. But the increase in the former is to a great extent met by the culture of beet-root sugar. The entire consumption of sugar in France is estimated to amount at present to 120,000 tons; but of this amount no fewer than 80,000 tons are said to have been supplied in 1838 by the beet-root plantations. In 1833, beet-root sugar did not exceed 10,000 or 12,000 tons; and the remaining increase in the interval has been owing to the circumstance of colonial sugar having been loaded in France with a duty of about 18s. a cwt.; whereas, till last year, beet-root sugar was exempted from all duty. It now, however, pays a duty of 9s. a cwt.; and it remains to be seen whether it will continue to advance under this duty, which still leaves it in a very advantageous situation as compared with colonial sugar; if it do, the manufacture may be looked upon as firmly established, and able to maintain its ground against the competition of the French colonists.

But the production of beet-root sugar is not confined to France. On the contrary, it is rapidly extending in Belgium, Germany, Prussia, and even Russia. Nor is this to be wondered at, as it everywhere enjoys an exemption from duty; and comes into competition with a foreign article loaded with a heavy duty. But were the sugars of Cuba, Brazil, and Java allowed to come into the continental markets on the same terms as beet-root sugar, we are inclined to think that we should not hear much more of the progress of the latter.

The consumption of sugar in America, Australia, and, indeed, in all civilized countries, and in all countries emerging from barbarism, is augmenting every day. But, independent even of the novel and important resource of beet-root sugar, the production of the article is extending so very rapidly in Brazil, Cuba, Java, the Philippines, &c., that there is no reason to fear any great increase of price, even though the worst anticipations should be realised as to its production in the British West Indies.—(Sup.)

[What follows is extracted from a memorial of the Legislature of Louisiana to Congress, in 1840. It will be found to contain an interesting account of the condition of the sugar-growing interest of the United States.]

That from 1816 to 1828 the annual production increased from 15,000 hhd. of 1,000 to 45,000 hhd. That in 1828, the capital invested and the power used, in this branch of industry, was estimated as follows:

38 estates, - - - - - \$34,000,000 | Animal power, about - 12,000 horses and oxen.
Manual power, about - - - 21,000 hands. | Mechanical, about - 1,640 horse power.
That from 1828 to 1830, 363 new estates were undertaken, which required a further outlay of about \$10,000,000; making a total outlay for 391 estates of about \$50,000,000.

That under the tariff of 1816, Louisiana was already supplying one half of the sugars required for the consumption of the United States, and was bidding fair soon to meet the entire consumption.

That before these 363 estates could be brought into full operation, the tariff of 1834 was adopted; that 155 estates have already been compelled to abandon their sugar works, under the effect of this act; that its further action cannot fail to annihilate this important branch of national industry.

That the sugar estates yet in operation, number 525.
That the power used thereupon is estimated as follows:
Manual, about - - - 40,000 hands. | Mechanical - - - - 10,000 horses.

That the annual expenses of a well-regulated plantation are computed at \$50 per hand.
That these estates, with their increased machinery, have required, at a low valuation, a cash investment of at least \$52,000,000.

That the annual average crops do not exceed 70,000 hhd. or 70 millions of pounds of sugar, and 25,000 gallons of molasses.

That the product of such a crop, at 6 cents for sugar and 20 cents for molasses, would be \$4,900,000.
That deducting expenses therefrom, say \$50 per hand, \$2,000,000.

There would remain nett, \$2,900,000, or 5 57-100 per cent. on the capital invested.
That the nett product of the same crop, at 5 1/2 cents, and 18, would be \$2,480,000, or 4 76-100 per cent.

That the nett product, at 5 and 17, would be \$2,095,000, or 4 per cent.
That the nett product, at 4 and 18, would be \$1,460,000, or about 2 50-100 per cent.

From which it is evident that Louisiana, with its uncertain climate and expensive operations, cannot produce sugar under 5 1/2 cents; while in the West India Islands, with their genial climate and cheap operations, muscovadoes can be produced, so as to yield a fair remuneration, at 2 1/2 a 3 cents.

That under these circumstances the enormous investments of capital in the cultivation of sugar since 1816, would not have taken place, had not a continuation of the revenue tax, then laid upon foreign sugar, been implicitly relied upon.

That during the last 10 years, prices in Havanna, for muscovadoes, have ruled as follows:

April,	1830	6 a 3	reals per arroba,	3 a 4	cents.
—	1831	5 a 0	—	2 a 3	—
—	1832	6 1/2 a 7 1/2	—	2 a 3	—
—	1833	4 1/2 a 6	—	2 37-7 a 3	—
—	1834	5 1/2 a 7 1/2	—	2 87-7 a 3 1/2	—
—	1835	8 a 9 1/2	—	4 a 4 62-7	—
—	1836	12 1/2 a 14	—	6 1/2 a 7	—
—	1837	5 a 6	—	2 1/2 a 4	—
—	1838	7 a 8 1/2	—	3 1/2 a 4 1/2	—
—	1839	6 1/2 a 8	—	2 1/2 a 4	—

That owing to an early winter, the crop of Louisiana for 1835-6 was reduced to 25,000 hhd., and prices advanced to 11 cents.

That the crop of the West India Islands and Cuba had been at that period as large as usual; that yet muscovadoes advanced in Havanna to 6 1/2 a 7 cents, or nearly cent. per cent. That the Louisiana crop for 1836 and '37 was an average one, and prices receded in Havanna to 3 1/2 a 4 cents, and in New Orleans to 5 1/2 a 6 cents.—(Am. Ed.)

* The French government recently published a very complete and useful work on the colonies of France, entitled *Notices Statistiques sur les Colonies Françaises*. 2 tomes, 8vo. Paris, 1837.

† For further particulars respecting the sugar trade, the reader is referred to the able statement recently issued by Mr. Cook, of Milning Lane.

to a want of attention at first, the streets of Sydney were laid out and the houses built, according to the views of individuals, without any fixed or regular plan. But latterly this defect has been to a considerable degree remedied in the old streets; and the new ones are systematically laid out. The town covers a great extent of land; almost every house having a considerable piece of ground attached to it. There are different joint stock banks at Sydney; and there is also a savings' bank. Schools for the instruction of poor children have been established; and there are, besides, two establishments dignified with the pompous title of colleges, numerous seminaries, some of them said to be very well conducted, for the education of the middle and upper classes. There are several periodical publications.

Population, &c.—The British settlements in New South Wales were originally intended to serve penal establishments, to which convicts might be transported, and employed in public and private works; and are still used for this purpose. The first vessel with convicts arrived at Botany Bay in January, 1788; but it having been found to be quite unsuitable as a site for a colony, the establishment was removed to Port Jackson. The progress of the colony has been much more rapid than might have been anticipated, considering the character and habits of the convicts annually landed upon its shores, the difficulties which the great distance from England interposes in the way of an emigration of voluntary settlers, and the inferiority of the soil. Owing to the circumstances of the great majority of the convicts and other emigrants being males, a great disproportion has always existed between the sexes in the colony, which has materially retarded its progress, and been, in other respects, productive of very pernicious results. Government, however, availing itself of the assistance of benevolent individuals at home, and in the colony, has within these few years endeavoured to lessen the disproportion referred to, by sending out considerable numbers of young unmarried females, free of expense. Much, it was obvious, of the influence of this measure, would depend on the discrimination with which the female emigrants were selected; and various precautions were taken by the regulation of committees, and otherwise, to exclude from amongst them all whose character was found not to be in any degree suspicious. It was not, however, to be expected that these precautions should be completely successful; and the most conflicting accounts have been received as to the conduct of the females on their landing, and the influence of their immigration on the colony. There can be no question, indeed, that the latter has, in many respects, fallen short of the anticipations of its promoters; and that, whether from want of due care in the selection, or from the force of circumstances, many of the emigrants have fallen into vicious courses. On the whole, however, we have no doubt that the measure has been decidedly advantageous; and that it will tend both to increase the population, and to improve the morals of the colony.

According to a census taken on the 2d of September, 1833, the population of the colony, exclusive of aborigines, was as follows:—

	Males.	Females.	Total.
Free	82,799	18,448	101,247
Bond	81,948	2,606	84,554
	164,747	21,054	185,801

At the above date, the population of Sydney amounted to 16,333, and that of Parramatta to 4,537.

The immigration into the colony from the 1st of January, 1832, to the 31st of December, 1833, has been,

	1832.	1833.	1834.	1836.
Free	819	636	571	411
Women	706	1,146	556	610
Children	481	701	377	311
Men	2,857	3,658	3,704	3,483
Convicts	361	686	471	179
Total	5,274	6,811	4,785	5,154

The total population of the colony, on the 31st of December, 1833, was estimated at 90,000.

Climate.—The climate of such parts of New South Wales as have been explored by the English is particularly mild and salubrious. The high summer heat indicated by the thermometer has not the relaxing and enfeebling effect that a similar high temperature has in India and many other countries. Fearless of damps, and unmolested by noxious insects, the traveller may throw himself under the shade of the first tree that invites him to repose in safety. On the other hand, however, the climate has the serious defect of being too dry. It seems to be subject to the periodical recurrence of severe droughts. These prevail sometimes for 2, 3, or even 4 years together. The last "great drought" began in 1826, and did not terminate till 1829. Very little rain fell during the whole of this lengthened period, and for more than 6 months there was not a single shower! In consequence, the whole surface of the ground was so parched and withered, that all minor vegetation ceased; and even culinary vegetables were raised with much difficulty. It well nigh ruined many of the settlers; nor is the colony as yet quite recovered from its effects.—(Breton's Excursions in New South Wales, p. 336.) *Sturt's Southern Australia*, vol. 1, p. 2.) There was, also, a pretty severe drought in 1825. This, in fact, the great drawback upon the colony; and were it more populous, the droughts would expose it to still more serious difficulties.

Soil, Products, &c.—The fertility of the soil in most parts of New Holland that have been explored with any care is very far, indeed, from corresponding with the glowing descriptions of some of its casual visitors, whose imaginations seem to have been dazzled by the magnificence of its botanical productions, and the clearness and beauty of the climate. The truth is, that the bad land seems to bear a much greater proportion to the good in New Holland, than in almost any other country with which we are acquainted. Different theories have been framed to account for the fact; but the fact itself there seems no manner of doubt. Of course, it is not to be supposed but that in a country of such vast extent there must be some fertile districts; but along the east coast, with which we are best acquainted, these seem to be much more confined than might have been expected; and the little experience we have had on the west side, at Swan River and other places, does not seem to lead to any more favourable conclusions. It is true that only a comparatively small part of the interior has as yet been explored; and it is not improbable that in the hitherto undiscovered regions of this vast continent, land suitable for tillage may be found. At present, however, it would appear that the soil and climate, not of New South Wales only, but of New Holland generally, are much better fitted for pastoral than for agricultural pursuits. The colony is mainly indebted for the introduction of the sheep farming system to the example and exertions of John Macarthur, Esq. Its success has exceeded the expectations of the most sanguine. The growth and exports of wool have increased with a rapidity hitherto unexampled in the history of industry. In 1822, only 152,800 lbs. of wool were exported; in 1825, the exports amounted to 411,600 lbs.; in 1830, to 899,750 lbs.; and in 1835, to no fewer than 3,273,353 lbs.; being an increase of about 600 per cent. in the interval between 1822 and 1835! And considering the attention that is now universally paid to the improvement of the breed of sheep, the efforts made by the colonists to increase their numbers, and the still but boundless extent of pasture land over which they may be diffused, it is impossible to conjecture to what extent the production of wool may be carried. Under these circumstances, we need not wonder that some of the best informed individuals belonging to the colony are of opinion that the inhabitants would equally

Consumption of Spirits.—We need not be surprised, considering how the population is made up, that drunkenness should be rather prevalent in New South Wales, and the consumption of spirits proportionally great. In 1833 there were entered for consumption in the colony as follows: viz, rum 234,785 proof gallons, brandy 30,438 do., gin 16,397 do., other foreign and British spirits 1,203 do., and spirits produced in the colony, 8,450 do., making in all 301,138 gallons; which, taking the population at 30,000, gives an average annual supply of 8 5/8th gallons to each individual. It has been proposed to lessen this consumption by increasing the customs duties on imported spirits, and prohibiting distillation in the colony. But the former are already high; and it is all but certain that their further an extensive smuggling trade, and be injurious to the revenue without being in other respects of any material service.

Monies, Weights, and Measures.—Accounts are kept in sterling money; but Spanish dollars are most abundant. They pass current at 5s. each. The weights and measures are the same as those of England.

Rate of Agency, Commission, and Warehouse Rent, agreed to at a Meeting of the New South Wales Chamber of Commerce, 1832.

- Commission.**
1. On all sales or purchases of ships and other vessels, houses, or lands, where an advance on them has been made, 2 1/2 per cent.
 2. On all other sales, purchases, or shipments, 5 per cent.
 3. On goods consigned and afterwards withdrawn, or sent to public auction, if no advance on them has been made, 2 1/4 per cent.
 4. On giving orders for the provision of goods, 2 1/2 per cent.
 5. On guaranteeing sales, bills, bonds, or other engagements, 2 1/2 per cent.
 6. On the management of estates for others, 5 per cent.
 7. On procuring freight or charter, and on freight collected, 5 per cent.
 8. On insurances effected, 1 1/2 per cent.
 9. On settling losses, partial or general, 1 per cent.
 10. On effecting remittances, or purchasing, selling, or negotiating bills of exchange, 1 per cent.

6. On the recovery of money, 2 1/2 per cent. If by law or arbitration, 5 per cent.
10. On collecting house rent, 5 per cent.
11. On attending the delivery of contract goods, 5 per cent.
12. On becoming security for contracts, 5 per cent.
13. On ships' disbursements, 5 per cent.
14. On obtaining money on promissories, 5 per cent.
15. On letters of credit granted, 2 1/2 per cent.
16. On purchasing, selling, receiving from any of the public offices, lodging in ditto, delivering up or exchanging government paper or other public securities, 1 1/2 per cent.
17. On all items on the debit or credit side of an account, on which a commission of 5 per cent. has not been previously charged in the same account, including government paper, 1 per cent.
18. On entering and clearing ships at the Custom house, each 1 guinea.
19. On the discount of foreign bills, exclusive of protest and other law expenses, a re-exchange of 50 per cent.

Warehouse Rent.

On all measurement goods, 1s. per ton of 40 cubic feet, per week. On liquids, 1s. 12d. per ton of 252 gallons (old measure) per week. On sugar, rice, salt, and similar articles, 6d. per ton per week. On grain, 4d. per bushel for first month, 1 1/2d. per bushel per month afterwards.

On iron, lead, &c., 4d. per ton per week.

Duties levied at Sydney under Acts of Parliament.

Tailors, 6s. to 7s per day.—In demand. Piece-work one-third higher than in England.

Turkeys.—A few might work profitably on their own account. Vine dressers, 10s. to 10s. or upwards per annum, according to qualifications.—Gardeners always in demand. The vine begins to be extensively cultivated, and proper and skillful vine-dressers are likely to find encouragement.

Prices.—A knowledge of the prices of the principal articles of subsistence is as necessary to enable any one to form a correct estimate of the advantages likely to be realised by emigrating, as a knowledge of the wages of labour. Provisions at Sydney are, generally speaking, cheap except in seasons of drought; but as these are unfortunately of frequent recurrence, the labourer is exposed to considerable vicissitudes. We give below an account of the average prices of the principal articles of provision at Sydney during the alternate months of 1835. It must, however, be remembered that that was a season of rather severe drought, which has a powerful influence over prices. In ordinary seasons, butcher's meat, at Sydney, does not exceed from 1d. to 2d. per lb., and bread (loaf of 4 lbs.) 5d.

The prices of the principal articles of provision in the market of Sydney, in January, 1833, a plentiful season, were as follows:—

Articles.	Prices.		Articles.	Prices.	
	L. s. d.	L. s. d.		L. s. d.	L. s. d.
Beef, per lb. per quarter	0 0 4	0 0 3	Game	-	-
Do. joint, per lb.	0 0 2	0 0 3	Fresh butter, per lb.	0 0 0	0 0 0
Veal do.	0 0 2	0 0 3	Salt do. do.	0 0 0	0 0 0
Mutton do.	0 0 2	0 0 3	Chesse	0 0 0	0 0 0
Do. carcass	0 0 1	0 0 2	Wheat, per bushel	0 0 4	0 0 0
Fork, joint	0 0 4	0 0 5	Maize	0 0 3	0 0 0
Do. carcass	0 0 1	0 0 2	Barley	0 0 3	0 0 0
Couple of fowls	0 1 2	0 2 3	Oats	0 0 0	0 0 0
Do. of ducks	0 2 0	0 4 0	Hay, per ton, from English seed	8 0 0	0 0 0
Turkey	0 6 0	0 8 2	Do. do. colonial	4 0 0	0 0 0

Rations for Convicts.—The weekly rations of the convicts are 12 lbs. of wheat, or 9 lbs. of flour, or 3 1/2 lbs. of maize and 9 lbs. of wheat, or 7 lbs. of 3d flour; 7 lbs. of beef or mutton, or 4 1/2 lbs. of salt pork; 2 oz. of salt; 2 oz. of soap.

Insurance.—Different joint stock insurance companies have been established at Sydney, for the insurance of ships, houses, and lives. The Australian Marine Insurance Company divided 16 per cent. net profit for the year ending 31st December, 1835. The customary premium on vessels engaged in the whale fishery, is from 8 to 10 guineas for 12 months, or from 8 to 16 guineas for the voyage.

Banking would seem to be one of the most profitable modes in which capital can be invested in New South Wales. Four joint stock banking companies were carrying on business at Sydney in December, 1835. Of these, the bank of New South Wales, established in 1818, is the most ancient. All of them issue notes payable on demand; and their profits vary from 15 to 22 per cent. on the paid up capital. They allow from 4 to 5 per cent. interest on deposits. Subjoined is a state of the affairs of the Bank of New South Wales on the 31st December, 1835:—

Wheelwrights, 5s. to 6s. per day, or 1s. to 2s. per week, and rations.—General workmen always find employment in the colony.

The above embraces all those departments of mechanical and common labour for which there is at present any adequate demand in the colony.

The clothing to which they are entitled consists of 8 frocks or jackets; 2 pair of shoes, of stout and durable leather; 2 shirts; 2 pair of trousers; 1 hat or cap.

Granting of Land in Australia.—We have previously given (vol. i. p. 437.) a copy of the terms on which lands are now granted to emigrants to New South Wales and Van Diemen's Land. They are not very explicit. All land is to be sold by auction; the minimum or upset price is to be 5s. an acre; and government has a discretionary power of fixing a higher minimum price on superior lots, and of declining to sell them till that price be obtained. Even were there nothing to object to the principle of this plan, if any thing so very vague deserve that name, in its practical operation it can hardly fail to generate every species of abuse. The local government, having the power of limiting the quantity of land to be put up to auction, has it completely in its power to fix its price; for it may either increase the quantity of land so that it shall fetch no more than the upset price, or it may limit it so that it shall fetch any greater sum. Such auctions must in reality be a mere farce; it is not possible that they can be conducted on a fair principle. The price must, in every instance, really depend on the pleasure of the sellers, and not on the competition of the buyers. Supposing the local authorities to be uniformly actuated by the sincerest desire to deal fairly by every one, by what test are they to discover the probable number of offerers at different periods, the amount of their funds, and the intensity of their desire to purchase? And yet

without knowing all these things, they cannot decide upon the quantity of land to be put up, so as to have any thing like a fair sale. And supposing them to be influenced by the partialities and weaknesses incident to humanity, how easy, when they wish to oblige, will it be for them to increase the number of parcels put up, and conversely! Even when the regulations are *bona fide* carried into effect, the delay that compliance with them necessarily involves is found to be exceedingly injurious. According to the rule originally laid down by government, all parcels of land desired to be put up to sale were to be advertised for *three* months previously to the sale taking place. The period for advertising has now, however, been reduced to *one* month; but, notwithstanding this judicious abbreviation, the delays that have still to be undergone before completing a purchase are loudly and justly complained of. An emigrant, on arriving at New South Wales, has to fix his family at Sydney, where lodgings and living are usually very high. He has then to make inquiries as to the best place for fixing himself; and having at length succeeded in finding a location which he thinks suitable to his views, he applies to have it put up to auction. But here he has most likely to encounter new difficulties. Almost all the land in the vicinity of the settled districts is either occupied on payment of a small rent to government, under leases which determine the moment it is purchased, or by trespass, that is, by *squatting*, or forcible possession. Both classes of occupiers are in general very unwilling to quit; so that the chances are, that, when the sale comes on, the emigrant, unless he retire a great distance into the wilderness, will have powerful competitors to contend with, and may not be able to conclude a purchase; and should such be the case, he has nothing for it but to begin his operations anew! On the whole, we have been assured by undoubted authority that about *five* months may be taken as a fair average of the period that must elapse before an emigrant arriving in New South Wales can complete the purchase of a parcel of land from government; and as he has to keep his family all the while at Sydney, his means are either greatly narrowed or wholly exhausted; so that it not infrequently happens that the small capitalist, who left England in the expectation of becoming a proprietor and wool-grower in New South Wales, finds himself, about a year after, a pauper in the town of Sydney! Hence it is that the existing regulations, the high price demanded for land, and the difficulty of getting a location, have put an almost total stop to the immigration of the most valuable class of persons; that is, of small capitalists. They are by no means so unfavourable to speculators, and persons of large capital; and the former and paupers now constitute the principal part of the free emigrants to the colony.

To obviate the chances of abuse, and the practical difficulties now stated, the better way, as it appears to us, would be to get a *large tract* of country surveyed, and divided into lots, and to fix prices on these according to the estimate formed of their various advantages, assigning them in absolute property to the *first applicant* ready to pay down the price and to conform to the regulations as to occupancy, &c. To prevent persons on the spot monopolising the best lands, it might be enacted that no more than a certain number of acres should be assigned to one individual, and that under the condition of residence or occupancy. We confess, however, that we entertain serious doubts as to the soundness of the principle involved in this plan, even supposing it could be fairly and easily carried into effect; and these doubts have not been in any degree lessened by the extravagant eulogies lavished upon it. It would seem, indeed, to be supposed that all the evils incident to colonisation have resulted from the settlers getting land on too easy terms; and that all that was required for the establishment of a colony on the best possible foundation, was, to sell its land at a high price; in other words, to make it as like an old country as possible! It says little for the public discernment, that opinions of this sort should have obtained any currency. We conclude, indeed, that nothing can be more injurious to a colony than the making of large grants of land to individuals who either do not intend to settle upon them, or are unable to clear and bring any considerable portion of them into cultivation. But because such inconveniences have resulted from the injudicious granting of land, it does not, therefore, follow that it should be sold at a high price, or even at any price at all. In making grants of land, regard ought to be always had to the means and the intentions of the grantee; that is, the grant should depend partly on the probable amount of his available capital, and partly on the purposes to which he means to apply it. And it might be properly enough stipulated, that if, at the end of some fixed period, certain improvements were not made, buildings erected, &c., it should revert to the Crown. But the more we reflect on the subject, the greater are our doubts as to the policy of exacting any price for land, particularly in such a country as New South Wales. Considering the very inferior quality of most of the land in that colony, 5s. an acre seems quite extravagant as a minimum price; and, instead of being made the lowest point in the scale, it should rather have been made the highest. At all events, if an upper price of 5s. an acre be not a great deal above the mark in New Holland, it must be a great deal below it in Upper Canada. It would not really be more absurd to set about establishing a uniform rate by which to regulate the sale of land in Essex and the Hebrides, than it is to apply the same scale to all our colonial possessions. We have already seen that an emigrant may be conveyed to Quebec for 5*l.*, while it costs 10*l.* to convey him to Sydney; and

day, or 1*l.* to 2*l.* per acre, and always find employment.

supposing an emigrant's family to consist, servants included, of seven grown up persons, he would save 77l. on the mere expenses of the voyage by going to Canada rather than to New South Wales! It does appear to us that government should pay some regard to this circumstance in fixing the price of land in Australia. In our view of the matter, it would be both just and expedient to allow all emigrants to Australia who made purchases of land, a deduction from its price equivalent to the sum which the passage out costs them over and above what it would have cost them to go to America. This would be a great relief to small capitalists; and, even with this regulation, the balance would still incline, in the opinion of most persons, very much in favour of Canada.

But, however modified, the principle of the measure is, we apprehend, radically bad. If the Americans exacted the same price for their public lands that we do, something might be found to say in favour of extending the principle to Canada. They, however, do nothing of the sort; but sell much better land at a decidedly lower price. Hence, if this preposterous scheme do not discourage emigration, it will assuredly turn the tide from our own colonies to the United States. And though it had no such effect, it would still be highly objectionable; inasmuch as it cripples the resources of the colonist at the very moment when they are most indispensable, and deprives him of funds which he would have laid out better than it is easy to suppose, they can be laid out by government. The mode of letting land by lease, that is, by the receipt of a large sum of money on the tenant's entry to a farm,—the rent during the currency of the lease being proportionally small,—has been severely censured by all the best agricultural writers; and for the very sufficient reason, that it deprives the tenant, on entering into his farm, of the greater part of his capital, and disables him from undertaking any considerable improvements at the very time it is most essential he should set about making them. And yet we are loudly called upon to do the same thing by the settlers in a new colony,—who, for the most part, emigrate only because they have little or no capital,—that is so justly condemned at home. This precious project has actually been trumpeted forth as a signal discovery that was to be productive of the very greatest utility; and a society has been formed to promote colonisation, on the avowed principle of rendering it much more difficult than it has ever hitherto been for a colonist in the lower walks of life to acquire land and become independent! If slaves could be imported into a colony of this sort, there might be some chance of its succeeding. But while land of the very best quality may be had in the valley of the Mississippi for about a dollar an acre, or less, we think better of the common sense of our countrymen, than to suppose that any one able to carry himself across the Atlantic will resort to Australia under the auspices of any company of the sort now alluded to.

In compiling this article we have made use of the *Report of Mr. Biggs on the Agriculture and Trade of New South Wales*, being *Parl. Paper*, No. 136. *Session*, 1833; *Report of Commissioners of Inquiry*, *Parl. Paper*, No. 323. *Session*, 1831; *Papers laid before the Finance Committee*; the excellent *New South Wales Calendar and Directory for 1836*; the works of *Massey*, *Sturt*, *Bretton*, and others; the tract of *Mr. Carmichael*, &c.; but we are indebted for by far the most interesting portion of our information to exceedingly valuable private communications from the colony.

SYRA, the ancient Syros, one of the islands of the Greek Archipelago, in the group called the Northern Cyclades. It is from 7 to 8 miles long, and 4 broad. Though rugged, it is tolerably well cultivated, and produces corn, wine, cotton, olives, figs, &c. The population, in 1830, is set down by Mr. Urquhart at 4,500; but we have been assured that it is, at present, little if at all short of 7,000. Pherycides, one of the most celebrated of the ancient Greek philosophers, the disciple of Pittacus, and the master of Pythagoras, was a native of this island.

The port is on the east side of the island, in lat. 37° 26' 30" N., lon. 24° 55' E. It affords excellent anchorage for vessels of light draught, and is capable of accommodating a few even of the largest ships. In consequence partly of the advantages it enjoys through the possession of its port, but more of its central situation, Syra has recently become a considerable commercial *entrepôt*; and has attracted a good deal of the carrying trade that formerly centered at Smyrna, Constantinople, &c.

A few miles to the east of Syra, lies Delos. This island, regarded in antiquity with peculiar veneration, from its being the birthplace of Apollo and Diana, is no less celebrated in the commercial life in the religious history of ancient Greece. Its sacred character, by insuring its immunity from hostile attacks, and its central situation, made it a favourite mart for the products of the states of Greece, Asia Minor, Phœnicia, Egypt, &c. Religion, pleasure, and trade had all their votaries at its festivals, which were famous throughout the ancient world for the splendour of the rites and processions, and the magnitude of the business transacted. It were too much to expect that Syra should ever attain to equal importance, even as an *entrepôt*. But as she enjoys most of those advantages of position that contributed to render Delos one of the principal emporiums of antiquity, it may be hoped, now that there is a reasonable prospect of good order and freedom being again established in Greece, that she may also acquire some commercial celebrity. It may be worth while mentioning, as strikingly evincing the mutability of human affairs, that, at present, both the great and the little Delos are uninhabited. And Tournefort states, that the inhabitants of Mycone were, in the early part of last century, in the habit of holding the greater Delos for the purposes of pasturage, paying to the Grand Seigneur a rent of 20 crowns a year for that famous island!—(*Tournefort, Voyage du Levant*, 4to ed. tome I. pp. 290—325. There is a good account of the religious rites celebrated at Delos, though but a very indifferent one of its commerce, in the *Travels of Anacharsis*.)

N. B.—Of the vessels here described, only 1 Persian arrived, and 1 ditto departed, of burden unknown.

Magnitude of the Caspian Sea. Ports, &c.—The Caspian Sea, or rather lake (the *Mare Hyrcanum* of the ancients), extends lengthwise from N. to S. about 740 miles, varying in breadth from 112 to 275 miles. In some parts, particularly on the southern shores, it is so very deep that a line of 450 fathoms will not reach the bottom; whereas, in the northern parts, and opposite to the mouths of the Wolga, it is comparatively shallow; and owing to the frequent occurrence of shoals, it is not safely navigated by vessels drawing more than 10 or 12 feet water. Its level had been variously estimated by Olivier and Lowitz, at from 64 to 53 feet below that of the Black Sea; but according to the recent observations of M. Humboldt, the difference of level between them is no less than 300 feet! We confess, however, that we are not without our doubts as to the perfect accuracy of this statement; and would not have been inclined to attach much weight to it had it proceeded from any inferior authority. The water of the Caspian is not salt, but brackish merely; it has no tides, but gales of wind raise a very heavy sea. It is extremely prolific of fish and seals. The value of the sturgeon caught in the Russian fisheries amounts to a very large sum. (See *Stronozes FISHERY*.) They proceed in shoals up the rivers, where they are captured without the least apparent diminution of their numbers. The salmon is remarkably fine; and herrings are in such abundance, that, after a storm, the shores of the Persian provinces of Ghilan and Mazanderan are nearly covered with them.—(*Kinnier's Memoir of the Persian Empire*, p. 6; *Memoir on the Caspian Sea, in Malte-Brun's Geography; Humboldt, Fragmens de Géologie, &c.*)

Astrakhan is situated on an island of the Wolga, more than 50 miles from the mouth of that river; and owing to the extensive command of internal navigation it possesses, it is a place of very considerable commercial importance. Baku, acquired by the Russians in 1801, is, however, the best port on the western side of the Caspian. It is situated on the southern shore of a peninsula that projects far into the sea, in lat. 40° 22' N., lon. 51° 10' E. The harbour is spacious and convenient; and its central and advanced position gives it superior advantages as a trading station. Prodigious quantities of naphtha are procured in the vicinity of Baku. It is drawn from wells, some of which yield from 1,000 to 1,500 lbs. a day. It is used as a substitute for lamp oil; and when ignited emits a clear light, with much smoke

and a disagreeable smell. Large quantities are exported in skins to the Persian and Tartar ports on the south and east shores of the sea.

Vessels.—The largest class of vessels by which the Caspian Sea is navigated are called by the Russians *schuyts*, and belong wholly to Astrakhan and Baku; their burden varies from 90 to 180, and, in some instances, 300 tons. They are not built on any scientific principle, and are constructed of the worst materials, that is, of the timber of the barks that bring grain down the Volga to Astrakhan. There are supposed to be, in all, about 100 sail of these vessels. There is a second class of vessels employed in the trade of the Caspian, called *reuchies*. They carry from 70 to 140 tons, and sail better than the *schuyts*. Their number is estimated at about 50. Exclusive of the above, there are great numbers of small craft employed in the coasting trade, in the rivers, in the fisheries, and in acting as lighters to the *schuyts*. Steam boats have been introduced upon the Volga; and one has been launched on the Caspian itself. The masters and crews of the vessels employed on this sea are, for the most part, as ignorant as can well be imagined. They are generally quite incapable of making an observation, or of keeping a reckoning; so that accidents frequently occur, that might be avoided by the most ordinary acquaintance with the principles of navigation.—(These statements are made, partly upon official, and partly upon private authority; the latter may, however, be safely relied on.)

The trade of this great sea is entirely in the hands of the Russians; by whom it is carried on from the ports of Astrakhan and Baku, with the Persian ports of Astrabad, Balfooch, &c. on the south; and with the Tartar ports of Mangishlak, Baikan, &c. on the east. It is very insignificant, compared with what it ought to be. On the whole, however, a gradual improvement is taking place; and whatever objections may, on other grounds, be made to the encroachments of Russia in this quarter, there can be no manner of doubt that, by introducing comparative security and good order into the countries under her authority, she has materially improved their condition, and accelerated their progress to a more advanced state.

Account of the Value of the Foreign Trade of the Port of Baku, on the Caspian Sea, during the Eight Years ending with 1831.

TALC, a species of fossil nearly allied to mica. It is soft, smooth, greasy to the feel, and may be split into fine plates or leaves, which are flexible, but not elastic. It has a greenish, whitish, or silver-like lustre. The leaves are transparent, and are used in many parts of India and China, as they were used in ancient Rome—(*Plin. Hist. Nat.* lib. xxxvi. c. 22.)—in windows instead of glass. In Bengal, a seer of talc costs about 2 rupees, and will sometimes yield a dozen panes 12 inches by 9, or 10 by 10, according to the form of the mass, transparent enough to allow ordinary subjects to be seen at 20 or 30 yards' distance. It should be chosen of a beautiful pearl colour; but it has, in general, either a yellowish or faint blue tinge. Its pure translucent flakes are frequently used by the Indians, for ornamenting the baubles employed in their ceremonies. Talc is employed in the composition of *rouge végétal*. The Romans prepared with it a beautiful blue, by combining it with the colouring fluid of particular kinds of testaceous animals. Talc is met with in Aberdeenshire, Perthshire, and Banffshire in Scotland; and in various parts of the Continent, where rocks of serpentine and porphyry occur. The talc brought from the Tyrolean mountains is called in commerce Venetian talc. Several varieties are found in India and Ceylon.—(*Thomson's Chemistry; Rees's Cyclopædia; Milburn's Orient. Com.; Ainslie's Mat. Indian.*)

TALLOW (Fr. *Suif*; Ger. *Talg*; It. *Sevo, Sego*; Rus. *Salo, toplenoe*; Sp. *Sebo*), animal fat melted and separated from the fibrous matter mixed with it. Its quality depends partly on the animal from which it has been prepared; but more, perhaps, on the care taken in its purification. It is firm, brittle, and has a peculiar heavy odour. When pure, it is white, tasteless, and nearly insipid; but the tallow of commerce has usually a yellowish tinge; and is divided, according to the degree of its purity and consistence, into candle and soap tallow.

Tallow is an article of great importance. It is manufactured into candles and soap; and

be extensively used in the dressing of leather, and in various processes of the arts. Besides our extensive supplies of native tallow, we annually import a very large quantity, principally from Russia. The exports of tallow from Peterburgh amount, at an average, to between 3,500,000 and 4,000,000 poods, of which the largest portion by far is brought to England; the remainder being exported to Prussia, France, the Hanse Towns, Turkey, &c.

We borrow from the work of Mr. Borrison, on the Commerce of Peterburgh, the following details with respect to the tallow trade of that city:—

Tallow is divided into different sorts; namely, white and yellow *scandle tallow*, and common and Siberian *soap tallow*; although it is allowed that the same sort often differs in quality.

Tallow is brought to Peterburgh from the interior; and the best soap tallow from Siberia, by various rivers, to the lake Ladoga; and thence, by the canal of Schlüsselburg, to the Neva.

An *ambare*, or warehouse, is appropriated to the reception of tallow, where, on its arrival, it is selected and assorted (*bracketed*). The casks are then marked with three circular stamps, which state the quality of the tallow, the period of selecting, and the name of the selector (*bracket*).

The casks in which white tallow is brought have a singular appearance; their form being conical, and their diameter at one end about 3½ feet, and at the other only 1½ foot: the casks of yellow tallow are of the common shape. There are also others, denominated *3 casks*.

To calculate the tare, the tallow is removed from a certain number of casks, which are weighed, and an average tare is thence deducted for the whole lot. A cask weighs 84, 9, 10, or 11 per cent, but the average is generally about 10 per cent. of the entire weight of tallow and cask.

Yellow candle tallow, when good, should be clean, dry, hard when broken, and of a fine yellow colour throughout. The white candle tallow, when good, is white, brittle, hard, dry, and clean. The best white tallow is brought from Woronesch. As for soap tallow, the more greasy and yellow it is, the better the quality. That from Siberia is the purest, and commonly fetches a higher price than the other sorts.

Formerly the oil and tallow warehouses were the same; and this occasioned great difficulties in shipping, because all vessels or lighters taking in tallow or oil were obliged to haul down to the *ambare*, and wait in rotation for their cargoes. The consequence was, that when much business was doing, a vessel was often detained for several weeks at the *ambare* before she could get her cargo on board. Now the tallow and oil warehouses are separated, and every article has its own place. When a shipment of tallow is made, the agent is furnished by the selector (*bracket*) with a sample from each cask.

Captains, in order to obtain more freight, usually load some casks of tallow upon deck; but it is more for the interest of the owner to avoid this if possible, because the tallow loses, through the heat of the sun, considerably both in weight and quality.

One hundred and twenty poods of tallow, gross weight, make a Peterburgh last, and 63 poods an English ton.

Of 1,177,908 cwt. of tallow imported in 1829, 1,164,180 came from Russia, 6,143 from the United States, 2,790 from Turkey, 1,992 from France, and 1,626 from Sweden.

We subjoin an official account of the export of tallow from Russia in 1832.

Exports of Tallow from Russia in 1832.

Sundry	25,588	France	61,772		
Total	4,206,919	Spain, Portugal, and Italy	3	Total	4,206,919

The exports of tallow from Peterburgh, in 1833, amounted to above 4,100,000 poods (see *act. p. 292*), being the largest quantity ever shipped in 1 year. The shipments to Great Britain were about 3,600,000 poods. Supposing the tallow to have been worth, when delivered to the shipper, 3s. a ton, its total value will have been 2,306,150*l.* This statement shows the great importance of this trade.

The price of tallow fluctuated very much during the war. This was occasioned, principally, by the obstacles that were at different periods thrown in the way of supplies from Russia. The price of tallow is also affected by the state of the seasons. Some very extensive speculations have at various periods been attempted in tallow; but seldom, it is believed, with much advantage to the parties.

Account of the Price of Tallow in the London Market, in the Month of January each Year, from 1813.

Year.	Yellow Soap.	Peterburgh.	Year.	Yellow Soap.	Peterburgh.

* The ships, receive, at Elsinour, orders for their ultimate destination, and most of them are for Great Britain.

TALLY TRADE, the name given to a system of dealing carried on in London and other large towns, by which shopkeepers furnish certain articles on credit to their customers, the latter agreeing to pay the stipulated price by certain weekly or monthly instalments.

In the metropolis there are about 60 or 70 tally-shops of note; and from 500 to 800 on a smaller scale. They are also spread over the country to a considerable extent, particularly in the manufacturing districts. The customers of the tally-shops are mostly women; consisting, principally, of the wives of labourers, mechanics, porters, &c., servant girls, and females of lower character. Few only of the more respectable classes have been infatuated enough to resort to them. Drapery goods, wearing apparel, coals, household furniture, hardware, &c. are furnished; and even funerals are performed; but few or no articles of food, except tea, are sold upon the tally plan.

We believe that this is the very worst mode in which credit is afforded. The facility which it gives of obtaining an article when wanted, and the notion so apt to be entertained that the weekly or monthly instalments may be paid without difficulty, makes those who resort to the tally-shops overlook the exorbitant price, and usual bad quality, of the articles they obtain from them; and generate habits of improvidence that seldom fail to involve the parties in irretrievable ruin. It is not going too far to say that nine tenths of the articles supplied by tally-shops might be dispensed with. As already observed, women are the principal customers; and it is not easy to exaggerate the mischief that has been entailed on the families of many industrious labourers by their wives having got entangled with tally-shops. They buy goods without the knowledge of their husbands; and these are not unfrequently pawned, and the proceeds spent in gin. So destructive, indeed, is the operation of the system, that the establishment of a tally-shop in any district is almost certain to occasion an increase in the paupers belonging to it. Even the unmarried females, who do not pay are demoralised and ruined by the system; because, if a woman who buys three gowns, pays for the first, and runs away from the payment of the last, she gains nothing in point of saving, while she becomes indifferent to an act of dishonesty. As tally debts can only be collected whilst a supply of goods is kept up, as soon as that supply is stopped, the debtor either flies to another district, or awaits a summons. Where the wife has contracted the debt, she usually appears before the commissioners, who in general order the debt to be paid by weekly or monthly instalments. But it often occurs, from the wife not being able to keep up such payments, that execution issues, and the poor husband is frequently arrested and lodged in prison for a debt, of the existence of which he was entirely ignorant. In this way, numbers of the working classes are completely ruined; they lose their employment, and themselves and families are reduced to beggary. The intemperate keeper of Whitecross-street prison (Mr. Barrett) states, that from 150 to 200 persons are annually imprisoned there for tally-shop debts, in sums from 10s. to 5l., and that in one year 30 prisoners were at the suit of one tally-shop alone! Such imprisonments, however, are now much decreased, in consequence, as is believed, of the Court of Requests discouraging the tally system, by ordering claims of this kind to be paid by extremely small instalments, and these at very distant intervals; and also in consequence of no composition being allowed by the charities for the relief of poor prisoners with reference to such debts.

It is estimated that in London alone about 850,000l., or nearly 1,000,000l. sterling is annually returned in this trade. From his large profits (generally from 25 to 40 per cent.), it is obvious that in a few transactions the tally-shop keeper becomes independent of the existing debt; and with capital and good management, it is said that some have realised considerable sums of money in this business. According to the custom of the trade, Mondays, Tuesdays, Wednesdays, and Thursdays, are the days set apart for collecting money from the customers. The tally-man sends round his collector through the different "walks," and the amount of a collection, which keeps the collector engaged from morning till night, even in a good tally concern, seldom exceeds 4l. a day. The payments are invariably made in shillings and pence—but the people seldom or never pay at the tally-shops; they rarely call there unless something else is wanted. The tally-shop keeper trusts one party on the recommendation of another; but guarantees are never required—certainly no written guarantees; and a verbal guarantee is, according to Lord Tenenden's act, not binding. It is part of the collector's business, besides getting money, to beat up for fresh customers in his walk. The greater number of the small tally concerns are kept by Scotchmen; it is a curious fact, that when a "Tally-walk" is to be sold, which is often the case, a Scotchman's walk will bring 15 per cent. more than an Englishman's! It is believed to contain a better description of customers. From the causes above mentioned, assisted, perhaps, by the salutary influence of Savings' Banks, this obnoxious trade is understood to be rather on the wane. It will never, however, be completely rooted out, except by adopting the plan we have previously suggested—(see CHAPTER.)—for placing all small debts beyond the pale of the law; and the fact, that the adoption of this plan would have so beneficial a result, is an additional and powerful recommendation in its favour. In cases where failures take place, the creditors of a tally shop

l of goods, on account
ned. Tare is distin-

packed into real tare, customary tare, and average tare. The first is the actual weight of the package; the second, its supposed weight according to the practice among merchants; and the third is the medium tare, deduced from weighing a few packages, and taking it as the standard for the whole. In Amsterdam, and some other commercial cities, tares are generally fixed by custom; but in this country, the prevailing practice, as to all goods that can be unpacked without injury, both at the Custom-house and among merchants, is to ascertain the real tare. Sometimes, however, the buyer and seller make a particular agreement about it. We have, for the most part, specified the different tares allowed upon particular commodities, in the descriptions given of them in this work.—(For the tares at Amsterdam, Bordeaux, &c., see these articles; see also ALLOWANCES.)

TARE, VETCH, or FITCH, a plant (*Vicia sativa*, Lin.) that has been cultivated in this country from time immemorial; principally for its stem and leaves, which are used in the feeding of sheep, horses, and cattle; but partly, also, for its seed. Horses thrive better upon tares than upon clover and rye grass; and cows that are fed upon them give most milk. The seed is principally used in the feeding of pigeons and other poultry. In 1829, we imported 87,101 bushels of tares, principally from Denmark and Prussia.

TARIFF, a Table, alphabetically arranged, specifying the various duties, drawbacks, bounties, &c. charged and allowed on the importation and exportation of articles of foreign and domestic produce.

We intended at one time to have given the tariffs of some of the principal foreign states, and had some of them translated for that purpose; but, as the duties and regulations in them are perpetually changing, they would very soon have become obsolete, and would have tended more to mislead than to instruct. The circulars issued by foreign houses usually specify the duties on importation and exportation. But the reader will find under the articles DANZIG, HAMBURG, NEW YORK, TAINTE, &c., pretty full details as to the principal foreign tariffs. Subjoined is the British tariff.

TARIFF (BRITISH).—1st of January, 1834.

DUTIES OF CUSTOMS INWARDS.

Duties Inwards.—The first column of the following Table contains an account of the existing duties payable on the importation of foreign products into Great Britain for home use, as the same were fixed by the act 3 & 4 Will. 4. c. 56. The next column exhibits the duties payable on the same articles as they were fixed by the act 59 Geo. 3. c. 53; and the third and last column exhibits the duties as they were fixed in 1767, by Mr. Pitt's Consolidation Act, the 27 Geo. 3. c. 13. The reader has, therefore, before him, and may compare together, the present customs duties with the duties as they stood at the end of the late war, and at its commencement. No table of the sort is to be met with in any other publication. We owe it to the kindness of Mr. J. D. Hume, of the Board of Trade, under whose direction it has been prepared. The duties are rated throughout in Imperial weights and measures.

Table of the Duties of Customs payable on Goods, Wares, and Merchandise imported into the United Kingdom from Foreign Parts.

1st.—Goods on which duties are payable by measure of capacity, are rated according to the Imperial gallon and bushel.

Glass, vit. flint, per lb.	0 0 8	All other articles, the growth, produce, or manufacture of Great Britain or Ireland, to be drawn back from either country to the other without duty or drawback.	
broad, per cwt.	1 10 0		
crowns per cwt.	0 0 8		
plates, of wrought gold, per oz. Troy	0 12 0		

Remarks on Duties Inwards.—The Table of duties inwards previously laid before the reader, affords copious materials for reflection and comparison. Excepting a very few articles, such as silk, linens, gloves, &c., that were prohibited, the highest duties in 1787 seldom exceeded 27l. 10s. per cent. *ad valorem*. In the interval between 1787 and 1819 a good many changes were made in the mode of assessing the duties; several of those that were charged on the *ad valorem* principle at the former epoch, being changed into rated duties at the latter. The extraordinary rise of duties in the interval referred to is, however, the most striking circumstance. The fact, that in the arithmetic of the customs, 2 and 2, instead of always making 4, sometimes make only 1, was then totally forgotten. During the war, it does not seem to have once occurred to any of our finance ministers, that every increase of price necessarily lessens consumption; and that, were twice the quantity of a

TARIFF, (AUSTRIAN).—Subjoined is the tariff of the import, export, and transit duties charged in the Austrian empire on some of the most important articles of trade and consumption. It came into operation on the 27th of February, 1838.

The duties imposed by this tariff, though, in some instances, considerably lower than those formerly charged, are still, speaking generally, very heavy. The duty on cotton and woollen goods, for example, is 60 per cent. *ad valorem*; while that on coffee is 38s. the English cwt., and on raw sugar for consumption, 32s. the cwt., and so forth. There is, in fact, a singular contradiction in the commercial policy of Austria; in some respects it is as liberal as could be wished for, while in others it is selfish and illiberal in the extreme. In all that respects ports and shipping, the legislation of Austria may be advantageously contrasted with that of almost any other nation. All articles are freely admitted into Trieste and Venice, and may be consumed in them, or warehoused and re-exported without being liable to any duty, the port charges being at the same time very reasonable. But the moment that it is attempted to introduce any article from a free port into the interior, it is loaded with oppressive duties, and subjected to vexatious regulations. These have been imposed in the view of protecting and encouraging domestic industry; but it is, perhaps, unnecessary to say that their effect in Austria, as in all other countries, has been precisely the reverse. Instead of trusting to their own exertions, and bringing the inexhaustible resources of science and ingenuity to their aid, the native producers, deprived of the stimulus of competition, depend for success on the efforts of the customs' officers to exclude foreign products, and to secure them a monopoly. There is, consequently, but little improvement. Every thing has about it an air of languor and routine. Most part, also, of the foreign products to be met with in the interior, have found their way there through clandestine channels. The mischievous influence of such a system is, indeed, too obvious to be disputed by any one not interested in its support. The recent modifications of the tariff, and the commercial treaty negotiated with this country, may, we hope, be regarded as the forerunners of still greater changes. A reduction of the duty on most foreign articles to a third or a fourth part of its present amount, would do more than any thing else to promote the industry of the empire, to stimulate commerce, and to increase the customs' revenue. Now that the navigation of the Danube is being opened, a reduction of this sort is more than ever necessary. The introduction of a taste for the productions of foreigners is of all others the most likely means by which the long dormant

energies, and immense productive capacities of Hungary, Transylvania, and the other eastern provinces of the empire, may be stimulated and developed. Unluckily, however, the existing duties must either go far, by excluding foreign products, wholly to prevent the formation of such a taste in the countries referred to, or if they should be imported, it will only be in limited quantities, and through the agency of the smuggler. The latter derives employment and wealth from this vicious system; and were it intended for his advantage, it might be said to be well contrived, and the means judiciously adapted to bring about the desired end. But it is directly opposed to invention and industry; paralyzes the manufactures it was intended to protect; and either annihilates all commerce, or makes it redound to the advantage only of those who trample on the laws. No system can be more completely at variance with the paternal intentions of the Austrian government; and its downfall may be expected the moment they become fully aware of its real nature and practical influence.

The great drawback under which Austria labours, is the situation of by far the larger portion of her provinces in the central parts of Europe; and separated from the great markets for their produce, either by a wide tract of intervening country, or by high mountain ridges, Austria is naturally an agricultural country; and, unless compelled by circumstances to divert a portion of her energies to manufactures, will, no doubt, continue such for a lengthened period: and hence, as the products of agricultural industry are at once heavy and bulky in proportion to their value, the advantage of opening improved channels of communication with other countries. In this respect, the free navigation of the Danube is of much importance, though more stress has been laid upon it in this country than it probably deserves. The expense of carrying corn and timber from Hungary to the Black Sea, and thence to the ports of Western Europe, will, we apprehend, always be found too heavy to permit of England or France ever supplying themselves, at least to any considerable extent, with the corn, flax, or timber of Hungary or Transylvania. The cost of conveying produce from the interior of the continent to the nearest shipping ports, is a most important element, which is too generally lost sight of in this country. To show its influence, we may mention that, on the 28th of November, 1838, wheat sold at Lemberg, one of the principal markets of Galicia, for 15s. 2d. a quarter; when its price at Dantzic, on the 20th of the same month, was 41s. 6d.; the difference, amounting to 26s. 4d. a quarter, being occasioned by the difficulty and expense of conveying corn down the Vistula, from Lemberg to Dantzic. We may remark, by the way, that this fact sets in a very striking point of view the absurdity of the statements so frequently put forth in our newspapers, contrasting prices in this country with those in foreign markets, and ascribing their excess in England wholly to the influence of our corn laws.

The Austrian government and people have long been alive to the many advantages that would result from opening a communication between Hungary and Fiume, and other ports on the Adriatic. And notwithstanding the obstacles opposed by the interposition of the Julian Alps, and other mountain ridges, an excellent road has been carried from Carlsbad to Fiume. Still, however, the expenses of the carriage of bulky products are too great to make this route sufficiently available; and the advantage of further improving and cheapening the communication is too obvious to need being pointed out.

Taxs of Import, Export, and Transit Duties levied in the Austrian Empire on the following Articles, as modified by the late Imperial Ordinance in force from the 27th of February, 1838.

One Vienna pound = 1.235 lb. avoirdupois, hence the centner of 100 Vienna pounds = 123.5 lb. avoirdupois.
 The Austrian florin of the standard of 20 to the Cologne mark, is almost exactly 2 shillings sterling.
 In the Lombardo Venetian kingdom, the centner of 100 kilogrammes is still the weight used in levying the duty, the difference between 100 kilogrammes = 78.8 lb. of Austria being allowed.

TARIFF (RUSSIAN).—By comparing the following important document with the late tariff, it will be seen that nearly 100 articles that were formerly prohibited are now admitted under payment of duties; and that the duties on several articles that were formerly admitted have been materially reduced. The publication of this tariff is evidence that sounder and more enlarged opinions on commercial affairs have made their way into the cabinet of Petersburg. The duties on many imported articles are still, no doubt, quite oppressive; but it

may be fair to present a means of doing business will do half of the value of the commercial trade; but attempts to industry to equal or surpass it is pretty other foreign the concessions history of it have ex far, in the of abusing to undertake figure us; instances, government whod to. have no reason one country of protection losses as to years of the Decree labor, in lump fine, on extrinsic side of public, still appears, and letters and cut- which to be w (class unen- prohibited. TARTAR. See ARGAL.

TARTAR, a town in the territory of Sinde, situated about 60 miles in a direct line from the sea, at a short distance from the western bank of the river Indus, in lat. 24° 44' N., lon. 67° 17' E. Population uncertain, probably about 10,000. The streets are narrow and dirty; but the houses, though built of mud, chopped straw, and timber, are superior to the low huts seen in the adjoining towns and villages.

Trade.—Being situated a little above the part where the Indus divides into the two great branches by which its waters are poured into the Indian Ocean, it might be supposed that Tartar would be a place of great trade. But, owing to the unwholesomeness of the climate, the barbarism of the tribes on the banks, and other causes, its commerce has never corresponded with what might have been anticipated, looking at its position on the map. It had probably attained the acme of its prosperity in the beginning of the 16th century. In 1555, the Portuguese, by way, as they stated, of avenging the treachery of the king of Sinde, inhumanly massacred 8,000 of the inhabitants, and burned the town.—(Comptes des Portugais, tome iv. p. 182.) It is probable that Tartar never fully recovered from this dreadful blow; but Mr. Hamilton mentions, that in the 17th century it was extensive and populous, possessing much commerce, with manufactures of silk, wool, and cabinet ware. The decayed state in which we now find it, has been a consequence of the misgovernment and rapacity of its present rulers, the Ameers of Sinde, under whose sway it fell more than 40 years ago.

In 1835, the English established a factory at Tartar, in the view of facilitating the disposal of woollens and other goods in the countries traversed by the Indus; and the building occupied by the factory, though far from magnificent, was recently, if it be not still, the best, not in Tartar only, but in the whole country of Sinde.

The chief exports are rice, shawls from Cashmere, opium from Malwah, hides, ghee, cotton, goats' wool, carpets, drugs, &c. Pitchcock, an article largely consumed in China, is a peculiar export of Sinde. The imports comprise a variety of articles, but the quantities are trifling; they consist principally of sugar, dye stuffs, hardware, tin, iron, &c., broad cloths, English cottons, silks, &c. But at present the trade is quite inconsiderable; and no one could believe a priori, that the natural enporium of an noble river as the Indus, traversing many rich and extensive countries, would cut so insignificant a figure in the trading world.

Indus.—Its navigation by Alexander the Great has conferred on the Indus a classical celebrity not to be antedated by any other river of the East. Its magnitude, too, is worthy of its fame. It may be estimated by Rai-bottoned boats as far as Attock; and its tributary stream, the Ravee, one of the Punjab rivers, is navigable as far as Lahore; both places being fully 1,000 miles from the sea. Unhappily its mouths are much encumbered by sand banks; and, owing to the violence of the bores or tides, such navigation is attended with considerable difficulty and danger. This is no doubt the reason that at present the navigation through the delta of the Indus is quite deserted: all the products brought down the river destined for exportation by sea, being conveyed from Tartar over-land to Curachee, a report a little to the north of the most northerly mouth of the river, about 60 miles in a direct line from Tartar. Above this point the current of the river is not rapid. The boats by which it is navigated are called *doondies*, and are exceeding 50 tons burden; and drawing, when laden, about 4 feet water. They have two masts, and, with a good wind, make their way against the stream at the rate of about 1 mile an hour. They use a sort of floating houses; resembling in this respect the Chinese junks. There would seem to be no river in the world where steam navigation might be applied more advantageously than the Indus. But until the country near its embouchure fall under the sway of some more enlightened and less rapacious rulers than those by whom it is now possessed, little improvement need, we are afraid, be expected. But should Sinde be conquered by some civilized people, or should its present rulers learn to respect the right of property, and to encourage industry, it would not be easy to exaggerate the importance of the Indus as a commercial highway. The navigable rivers of the Punjab that fill into it, lay open a vast extent of rich and fruitful country, with great commercial resources. It is not, indeed, possible to estimate the extent of the trade that would be carried on by the channel of the Indus, did security and good order prevail on its banks; and there is reason to think that some progress is making towards their establishment.

The delta of the Indus has little in common with the delta of the Nile, except its shape. Not a fourth part of it is cultivated, and its few inhabitants principally lead a pastoral life. It is overgrown with tamarisks and other wild shrubs; and, though intersected by the numerous mouths of the river, its surface is dry and arid, and it is in a great degree destitute of fresh water. The unfavourable appearance of the tract of country does not, however, generally speaking, depend on any infertility of soil, but on the neglect of cultivation arising out of the oppression under which the people live. Mr. Burnes says, that in most places it requires little or no labour on the part of the husbandman to prepare the land; and the seed, scattered without care or attention, yields a plentiful harvest. But where property is insecure, even this little labour is not expended. (See a *Memoir on the Indus*, by Lieut. Burnes, in the 3d vol. of the *Journal of the London Geographical Society; Hamilton's East India Gazetteer*, article, *Indus, Tartar*, &c.)

Long Weights and Measures.—Accounts are kept in rupees, mauls, and pice; 16 pice = 1 carval; 50 carvals = 1 rupee. Grains are weighed in Sind, 40 coorvas = 1 pice. Small Weights.—24 Moons = 1 Rutlee, 8 Rutlees = 1 Anna, 16 Annas = 1 Tola, One Weights.—4 Pice = 1 Anna, 16 Annas = 1 Pucca seer, 40 Seers = 1 Maund, or 74 lbs. 5 oz. 7 dwts. avoirdupois.

Long Measure.—1 Garco = 2 inches, 16 Garcos = 1 Guz, but 1 Guz cloth = 34 inches at Tartar. *Grain Measures.*—4 Pultoes = 1 Twiler, 4 Twilers = 1 Coon, 60 Coons = 1 Carval of wheat; or 22 Pucca maunds, or 1 Bombay parsh. Diamonds and pearls are sold by habbes and rupees—8 habbes = 1 rutlee, about 2 grs. Troy.—*Milburn's Orient. Commerce.*

TEA (in one dialect of Chin, *Cha*; in another *Te*; Du. *Te*; Fr. *Thé*; It. *Te*; Rus. *Chai*; Hind. *Cha*; Malay, *Teh*), the leaves of the tea tree or shrub (*Thea viridis* Lin.).

is seen in congenial situations in the southern countries of Europe. It is a polyandrous plant of the natural order, *Columniferae*, and has a white blossom, with yellow style and anthers, not unlike those of a small dog-rose. The stem is bushy, with numerous branches, and very leafy. The leaves are alternate, on short, thick, channelled footstalks, evergreen, of a longish elliptic form, with a blunt, notched point, and serrated except at the base. These leaves are the valuable part of the plant. The *Camellias*, particularly the *Camellia Sasanqua*, of the same natural family as the tea tree, and very closely resembling it, are the only plants liable to be confounded with it by a careful observer. The leaves of the particular camellia just named are, indeed, often used in some parts of China, as a substitute for those of the tea tree.

The effects of tea on the human frame are those of a very mild narcotic; and, like those of many other narcotics taken in small quantities,—even of opium itself,—they are exhilarating. The green varieties of the plant possess this quality in a much higher degree than the black; and a strong infusion of the former will, in most constitutions, produce considerable excitement and wakefulness. Of all narcotics, however, tea is the least pernicious; if, indeed, it be so at all in any degree, which we very much doubt.

The tea shrub may be described as a very hardy evergreen, growing readily in the open air, from the equator to the 45th degree of latitude. For the last 60 years, it has been reared in this country, without difficulty, in greenhouses; and thriving plants of it are to be seen in the gardens of Java, Singapore, Malacca, and Penang; all within 6 degrees of the equator. The climate most congenial to it, however, seems to be that between the 25th and 33d degrees of latitude, judging from the success of its cultivation in China. For the general purposes of commerce, the growth of good tea is confined to China; and is there restricted to 5 provinces, or rather parts of provinces, viz. Fokien and Canton, but more particularly the first, for black tea; and Kiang-nan, Kiang-si, and Che-kiang, but chiefly the first of these, for green. The tea districts all lie between the latitudes just mentioned, and the 115th and 122d degrees of East longitude. However, almost every province of China produces more or less tea, but generally of an inferior quality, and for local consumption only; or when of a superior quality, like some of the fine wines of France, losing its flavour when exported. The plant is also extensively cultivated in Japan, Tonquin, and Cachin-china; and in some of the mountainous parts of Ava; the people of which country use it largely as a kind of *pickle preserved in oil*!

Botanically considered, the tea tree is a single species; the green and black, with all the diversities of each, being mere varieties, like the varieties of the grape, produced by difference of climate, soil, locality, age of the crop when taken, and modes of preparation for the market. Considered as an object of agricultural produce, the tea plant bears a close resemblance to the vine. In the husbandry of China, it may be said to take the same place which the vine occupies in the southern countries of Europe. Like the latter, its growth is chiefly confined to hilly tracts, not suited to the growth of corn. The soils capable of producing the finest kinds are within given districts, limited, and partial. Skill and care, both in husbandry and preparation, are quite as necessary to the production of good tea, as to that of good wine.

The best wine is produced only in particular latitudes, as is the best tea; although, perhaps, the latter is not restricted to an equal degree. Only the most civilised nations of Europe have as yet succeeded in producing good wines; which is also the case in the East with tea; for the agricultural and manufacturing skill and industry of the Chinese are there unquestionably pre-eminent. These circumstances deserve to be attended to, in estimating the difficulties which must be encountered in any attempt to propagate the tea plant in colonial or other possessions. These difficulties are obviously very great; and, perhaps, all but insuperable. Most of the attempts hitherto made to raise it in foreign countries were not, indeed, of a sort from which much was to be expected. Within the last few years, however, considerable efforts have been made by the Dutch government of Java, to produce tea on the hills of that island; and having the assistance of Chinese cultivators from Fokien, who form a considerable part of the emigrants to Java, a degree of success has attended them, beyond what might have been expected in so warm a climate. The Brazilians have made similar efforts; having also, with the assistance of Chinese labourers, attempted to propagate the tea shrub near Rio de Janeiro; and a small quantity of tolerably good tea has been produced. But owing to the high price of labour in America, and the quantity required in the cultivation and manipulation of tea, there is no probability, even were the soil suitable to the plant, that its culture can be profitably carried on in that country.

It might probably be successfully attempted in Hindostan, where labour is comparatively cheap, and where the hilly and table lands bear a close resemblance to those of the tea districts of China; but we are not sanguine in our expectations as to the result.

Species of Tea.—Manner in which they are manufactured.—The black teas usually exported by Europeans from Canton are as follows, beginning with the lowest qualities:—Bohea, Cor-gou, Souchong, and Pekoe. The green teas are Twankay, Hyson skin, young Hyson, Hyson, Imperial, and Gunpowder. All the black teas exported (with the exception of a part of the bohea, grown in Woping, a district of Canton) are grown in Fokien—a

black teas usually ex-
the lowest qualities:—
y, Hyson skin, young
d (with the exception
grown in Fokien—a

ally, maritime, populous, and industrious province, bordering to the northeast on Canton. Owing to the peculiar nature of the Chinese laws as to inheritance, and probably, also, in some degree, to the despotic genius of the government, landed property is much subdivided throughout the empire; so that tea is generally grown in gardens or plantations of no great extent. The plant comes to maturity and yields a crop in from 2 to 3 years. The leaves are picked by the cultivator's family, and immediately conveyed to market; where a class of persons, who make it their particular business, purchase and collect them in quantities, and manufacture them in part; that is, expose them to be dried under a shed. A second class of persons, commonly known in the Canton market as "the tea merchants," repair to the districts where the tea is produced, and purchase it in its half-prepared state from the first class, and complete the manufacture by garbling the different qualities; in which operation, women and children are chiefly employed. A final drying is then given, and the tea packed in chests, and divided, according to quality, into parcels of from 100 to 600 chests each. These parcels are stamped with the name of the district, grower, or manufacturer, exactly as is practised with the wines of Bordeaux and Burgundy, the indigo of Bengal, and many other commodities; and, from this circumstance, get the name of *chops*, the Chinese term for a seal or signet. Some of the leaf-buds of the finest black tea plants are picked early in the spring, before they expand. These constitute pekoe, or black tea of the highest quality; sometimes called "white-blossom" tea, from there being intermixed with it, to give it a higher perfume, a few blossoms of a species of olive (*Olea fragrans*), a native of China. A second crop is taken from the same plants in the beginning of May, a third about the middle of June, and a fourth in August; which last, consisting of large and old leaves, is of very inferior flavour and value. The younger the leaf, the more high flavoured, and consequently the more valuable, is the tea. With some of the congous and souchongs are occasionally mixed a little pekoe, to enhance their flavour; and hence the distinction, among the London tea dealers, of these sorts of tea, into the ordinary kinds and those of a "Pekoe flavour." Bohea, or the lowest black tea, is partly composed of the lower grades; that is, of the fourth crop of the teas of Fokien, left unsold in the market of Canton after the season of exportation has passed; and partly of the teas of the district of Woping in Canton. The green teas are grown and selected in the same manner as the black, to which the description now given more particularly refers; and the different qualities arise from the same causes. The gunpowder here stands in place of the pekoe; being composed of the unopened buds of the spring crop. Imperial hyson, and young hyson, consist of the second and third crops. The light and inferior leaves, separated from the hyson by a winnowing machine, constitute hyson skin,—an article in considerable demand amongst the Americans. The process of drying the green teas differs from that of the black; the first being dried in iron pots or vases over a fire, the operator continually stirring the leaves with his naked hand. The operation is one of considerable nicety, particularly with the finer teas; and is performed by persons who make it their exclusive business.

Tea Trade in China.—The tea merchants commonly receive advances from the Hong merchants and other capitalists of Canton; but, with this exception, are altogether independent of them; nor have the latter any exclusive privilege or claim of pre-emption. They are very numerous; those connected with the green tea districts alone being about 400 in number. The black tea merchants are less numerous but more wealthy. The greater part of the tea is brought to Canton by land carriage or inland navigation, but chiefly by the first: it is conveyed by porters; the roads of China, in the southern provinces, not generally admitting of wheel carriages, and beasts of burden being very rare. A small quantity of black tea is brought by sea, but probably smuggled; for this cheaper mode of transportation is discouraged by government, which it deprives of the transit duties levied on inland carriage. The length of land carriage from the principal districts where the green teas are grown, to Canton, is probably not less than 700 miles; nor that of the black tea, over a more mountainous country, less than 200 miles. The tea merchants begin to arrive in Canton about the middle of October, and the busy season continues until the beginning of March; being brisker in November, December, and January. Tea, for the most part, can only be bought from the Hong or licensed merchants; but some of these, the least prosperous in their circumstances, are supported by wealthy *outside* merchants, as they are called; and thus the trade is considerably extended. The prices in the Canton market vary from year to year with the crop, the stock on hand, and the external demand, as in any other article, and in any other market. After the season is over, or when the westerly monsoon sets in, in the month of March, and impedes the regular intercourse of foreigners with China, there is a fall in the price of tea, not only arising from this circumstance, but from a certain depreciation in quality, from the age of the tea; which, like most other vegetable productions, is injured by keeping, particularly in a hot and damp climate.

Foreign Trade in Tea.—There seems to be little mystery in the selection and purchase of teas; for the business is both safely and effectively accomplished, not only by the supercargoes of the American ships, but frequently by the masters; and it is ascertained from the sales at the East India House, that there is no difference between the qualities of the teas

purchased by the commanders and officers of the Company's ships, without any assistance from the officers of the factory, and those purchased for the Company by the latter. An unusual degree of good faith, indeed, appears to be observed, on the part of the Chinese merchants, with respect to this commodity; for it was proved before the select committee of the House of Commons, in 1830, that it is the regular practice of the Hong merchants to receive back, and return good tea for, any chest or parcel upon which any fraud may have been practised, which sometimes happens in the conveyance of the teas from Canton on board ship. Such restitution has occasionally been made even at the distance of 1 or 2 years. The Company seem to enjoy no advantage over other purchasers in the Canton market, except that which the largest purchaser has in every market, viz. a selection of the teas, on the payment of the same prices as others; and this advantage they enjoy only as respects the black teas; for the Americans are the largest purchasers of green teas.

We subjoin a Table for calculating the cost of tea:—

Comparison of the Cost of Tea per Picul (133½ lbs. Avoldupois), with the Rate per Pound and Ton, at 9 Cwt. or 1,008 Pounds per Ton.

Per Picul.	Exchange 4s. per Dol.		Exchange 4s. 3d. per Dol.		Exch. 4s. 4d. per Dol.		Exchange 4s. 5d. per Dol.		Exch. 4s. 6d. per Dol.

II. RISE AND PROGRESS OF THE BRITISH TEA TRADE.—CONSUMPTION OF TEA.

The late rise and present magnitude of the British tea trade are among the most extraordinary phenomena in the history of commerce. Tea was wholly unknown to the Greeks and Romans, and even to our ancestors previously to the end of the 16th or the beginning of the 17th century. It seems to have been originally imported in small quantities by the Dutch; but was hardly known in this country till after 1650. In 1660, however, it began to be used in coffee houses; for, in an act passed in that year, a duty of 8d. is laid on every gallon of "coffee, chocolate, sherbet, and tea," made and sold. But it is abundantly evident that it was then only beginning to be introduced. The following entry appears in the Diary of Mr. Pepys, secretary to the Admiralty:—"September 25, 1661. I sent for a cup of tea (a China drink), of which I had never drunk before." In 1664, the East India Company bought 2 lbs. 2 oz. of tea as a present for his Majesty. In 1687, they issued the first order to import tea, directed to their agent at Bantam, to the effect he should send home 100 lbs. of the best tea he could get!—(See the references in *Milburn's Orient. Com.* vol. ii. p. 530; *Macpherson's Hist. of Com. with India*, pp. 130—132.) Since then, the consumption seems to have gone on regularly though slowly increasing. In 1689, instead of charging a duty on the decoction made from the leaves, an excise duty of 5s. per lb. was laid on the tea itself. The importation of tea from 1710 downwards is exhibited in the following Tables.

The great increase that took place in the consumption of duty paid tea in 1784 and 1785, over its consumption in the preceding years, is to be ascribed to the reduction that was then effected in the duties. In the nine years preceding 1780, above 180,000,000 lbs. of tea were exported from China to Europe, in ships belonging to the Continent, and about 50,000,000 lbs. in ships belonging to England. But from the best information attainable, it appears that the real consumption was almost exactly the reverse of the quantities imported; and that, while the consumption of the British dominions amounted to above 13,000,000 lbs., the consumption of the Continent did not exceed 5,500,000 lbs. If this statement be nearly correct, it follows that an annual supply of above 8,000,000 lbs. was

Industriously imported. It was well known, indeed, that smuggling was carried on to an enormous extent; and after every other means of checking it had been tried to no purpose, Mr. Pitt proposed, in 1784, to reduce the duties from 119 to 12½ per cent. This measure was signally successful. Smuggling and the practice of adulteration were immediately put an end to, and the legal imports of tea were about trebled. In 1795, however, the duty was raised to 25 per cent.; and after successive augmentations in 1797, 1800, and 1803, it was raised, in 1806, to 96 per cent. *ad valorem*, at which it continued till 1819, when it was raised to 100 per cent. on all teas that brought above 2s. per lb. at the Company's sales.

The following statements show the progress of the consumption of tea in this country from a very remote epoch down to the present time:—

II. Account of the Quantity of Tea remaining for Home Consumption in Great Britain from 1711 to 1786, obtained by deducting the Quantity exported from the Quantity sold at the Company's Sales.

Year.	Lbs.	Lbs.	Lbs.	Lbs.	Lbs.	Lbs.

1735	1,390,199						

N.B.—We have extracted this account from that given from the Company's records in *Milburn's Oriental Commerce* (vol. ii. p. 534.). There is an account, furnished by the Excise, of the quantities of tea retained for home consumption from 1725 to 1832, in the *Appendix to the First Report of the Commissioners of Excise Inquiry*. It appears, however, to involve some very material errors. Thus, it represents the consumption from 1768 to 1772, both inclusive, as under 200,000 lbs. a year, at the same time that it makes the consumption, in the immediately preceding and subsequent years, above 4,000,000 lbs. A statement of this sort is obviously inaccurate; and yet it is not accompanied by a single remark or explanation of any sort.

III. Account of the Quantity of Tea retained for Home Consumption in Great Britain from 1789 to 1833, and of the Quantity that paid Duty for Home Consumption in Ireland from 1789 to 1831; specifying the Nett Produce of the Duties in each Country, and the Rates of Duty.

* This amount includes all tea shipped to Ireland for consumption in that country subsequently to the passing of the act 9 Geo. 4 c. 46.

British Currency.

It appears that the population of the East India Company's territories has been increasing since the year 1789. The East India Company's territories are situated in the East Indies, and the population of these territories has been increasing since the year 1789. The East India Company's territories are situated in the East Indies, and the population of these territories has been increasing since the year 1789.

II. Account of the Quantity of Tea entered for Home Consumption, the Rate of Duty, and the Nett Produce of the Duty, in the Year ended 5th of January, 1834.

Year ended 5th of January.	Lbs. Weight of Tea.			Rate of Duty on the Sale Price.	Total Lbs. Weight.	Nett Produce.
	Sold at or under 2s. per Lb.	Rate of Duty on the Sale Price.	Sold above 2s. per Lb.			
1834	7,663,333	96 per cent.	24,166,287	100 per cent.	31,529,620	3,444,101 18 1

It appears from the third of the foregoing Tables, making allowance for the increase of population, that the consumption of tea in Great Britain has been about stationary, or has rather diminished, from 1800 to the present period. This has been occasioned partly, perhaps, by the increased use of coffee; but more, we think, by the enhanced price arising out of the increase of the duty, and the operation of the monopoly. In Ireland, the consumption has been about stationary since 1801, notwithstanding the population has more than doubled in the interval.

III. EAST INDIA COMPANY'S MONOPOLY—INFLUENCE OF, ON THE PRICE OF TEA—CONDITIONS UNDER WHICH IT WAS HELD—ABOLITION OF.

From its origin down to the present year (1834), the tea trade has been monopolised by the East India Company. Considerable quantities of tea have, indeed, been at different times smuggled into the country; but no British subject, not authorised by the Company, was ever allowed openly to import tea. Being thus the *only sellers*, they had it in their power, by limiting the quantity brought to market, to raise its price above its natural elevation, and to realise immense profits at the expense of the public. They might, no doubt, have declined availing themselves of this power; but no such forbearance could be rationally expected from the Company, or from any other body of men. All individuals and associations exert themselves to obtain the highest price for whatever they have to sell: and it is found that those who are protected from the competition of others, or who have obtained a monopoly of any market, invariably raise the price of their commodities to a very high pitch. The East India Company have done this, probably, to a less extent than most other bodies that have enjoyed such exclusive privileges. Still, however, it is an undoubted fact that the tea sold by them of late years cost the people of Britain upwards of 1,500,000*l.* a year more than they would have cost had they been sold at the price at which teas of equal quality were sold, under a system of free competition, in New-York, Hamburg, Amsterdam, &c.—(For proofs of this statement, see former edition of this Dictionary, p. 1031.)

The legislature endeavoured, at different periods, to prevent the Company from abusing their monopoly, by enacting regulations as to the sale of tea; and though no longer of any practical importance, it may be still worth while briefly to notice some of the more important, and the means by which they were defeated. In 1745, for example, a very great reduction was made from the amount of the tea duties; and by a statute passed in that year (18 Geo. 2. c. 26.), it was enacted, in order to prevent the Company from depriving the public of the benefit of this reduction, that in case the tea imported by the East India Company shall not always be sufficient to answer the consumption thereof in Great Britain, and to keep the price of tea in this country upon an equality with the price thereof in the neighbouring Continent of Europe, it shall be lawful for the said Company, and their successors, to import into Great Britain such quantities of tea as they shall think necessary from any part of Europe: and by another section of the same statute, it is enacted, that if the East India Company shall, at any time, neglect to keep the British market supplied with a sufficient quantity of tea at reasonable prices, it shall be lawful for the Lords of the Treasury to grant licences to any other person or persons, body politic or corporate, to import tea into Great Britain from any part of Europe.

Had this statute been enforced, it would certainly have restrained the demands of the Company within reasonable limits; but it was very soon forgotten, and the Company continued, as before, to sell their teas at an enormous advance as compared with their prices in Hamburg and Amsterdam.

The same well-founded jealousy, which dictated the act of 1745, was again displayed in the proceedings at the reduction of the duties in 1784. It was then enacted (24 Geo. 3. c. 39.), that the East India Company should make 4 sales of tea every year, as near as conveniently may be at equal distances of time from each other, and should put up at such sales such quantities of tea as may be judged sufficient to supply the demand; and at each sale, the tea to be put up shall be sold without reserve to the highest bidder, provided an advance of 1*l.* per lb. be bid upon the price at which the same is put up. By another clause it was enacted, that it should not be lawful for the East India Company "to put up their teas for sale at any price which shall, upon the whole of the teas so put up at any sale, exceed the prime cost thereof, with the freight and charges of importation, together with lawful interest from the time of arrival of such teas in Great Britain, and the common premium of insurance as a compensation for the sea risk incurred thereon." The Company were further ordered

to keep a stock, equal to at least 1 year's consumption, according to the sales of the preceding year, always beforehand." And they were bound to lay before the Lords of the Treasury, copies of the accounts and estimates upon which their orders for importation, prices for sale, and quantities put up to sale, should be grounded.

The object of these conditions is obvious. They were intended to secure a plentiful supply of tea to the public, and to prevent its being sold at an oppressive increase of price. But monopoly and low prices are altogether incompatible. The conditions now referred to were, as to all practical purposes at least, quite inoperative.

1. In the first place, the Company made various additions to the prime cost, and consequently to the putting up price of their tea, which they ought not to have made, but which the Lords of the Treasury, had they been so disposed, could hardly disallow. They always, for example, charged the cost of the factory at Canton to the price of tea. This establishment consisted of about 20 persons, and cost at an average about 100,000*l.* a year! We do not presume to say that it was altogether useless. Undoubtedly, however, it might have been conducted at half the expense. It is a fact, that the whole American business at Canton has been transacted by the captains of the ships; and every one knows that they have had fewer disturbances with the natives than the English.

2. In the second place, it was established by the evidence taken before the select committee of 1830, that the Company had for many years thrown the whole losses arising from their outward investment upon tea, by estimating the value of the tael, or Chinese money in which the accounts are kept, at the price which it cost for the purpose of being vested in tea. This was a complete evasion of the provisions of the statute; but it was one which it was very difficult, if not impossible, to defeat.

3. In the third place, the obligation imposed on the Company, of keeping a year's supply of tea in their warehouses, contributed both to raise its price, and deteriorate its quality. From a return made to an order of the select committee of the House of Commons in 1830 (*First Report*, App. p. 23.), it appears that the shortest time any tea sold by the Company had been in store was 14 months; and that, at an average, all the teas sold during the 3 years ending with 1829 had been 17 months in store. But, according to the evidence of the most respectable American witnesses, the black and coarser kinds of tea are depreciated at least 5 per cent. by being kept a twelvemonth, and are, indeed, hardly saleable after the arrival of fresh teas from China. Adding, therefore, warehouse rent, interest of capital, and insurance for 17 months, to the deterioration in point of quality, we may estimate the loss to the public, by this well-meant but most injudicious interference of the legislature, at 15 per cent. upon the price of all the teas sold.

4. In the fourth place, it is obvious, even supposing the prime cost of the Company's teas had not been improperly enhanced, that the regulation obliging them to be sold at an advance of 1*d.* per lb. if offered, on the putting-up price, could not be otherwise than nugatory. Had the trade been open, private merchants would have undersold each other, until the price of tea, like that of sugar or coffee, had been reduced to the very lowest point that would yield the sellers the customary rate of profit. But the Company was in an entirely different situation. Being the *only sellers*, they invariably *understocked* the market. Instead of bringing forward such quantities of tea as might have occasioned its sale at a small advance upon the upset price, they adjusted the supply so that the price was raised to a much higher elevation. Now, it will be observed, that all that this system of management put into the Company's coffers consisted of *extra profit*; for the putting up price embraced every item that could fairly enter into the cost of the tea, including both *interest* on capital and insurance, and including also, as we have seen, several items that had but little to do with it. To show the extent to which this source of profit was cultivated, we may mention, that at the June sale in 1830, the company put up congon at 1*s.* 8*d.* and 2*s.* 1*d.* per lb.; the lowest sort, or that put up at 1*s.* 8*d.*, being sold partly at 2*s.* 1½*d.*, being an advance of *twenty-two and a half* per cent., and partly at 2*s.* 5*d.*, being an advance of *forty-nine* per cent.; while the highest sort, or that put up at 2*s.* 1*d.*, was sold partly at 2*s.* 2*d.*, being an advance of *four* per cent., and partly at 3*s.* 7*d.*, being an advance of no less than *seventy-two* per cent. above the upset price; that is, above a price calculated to yield *ordinary profits*. Mr. Mills, an intelligent and extensive wholesale tea merchant, in a paper laid before the recent committee of the House of Lords on East India affairs, showed, that the advance on the teas sold at the Company's June sale in 1830, above the putting-up price, amounted to 122,177*l.* 18*s.* 1*d.*; and as there are 4 such sales in the year, the total advance must have been about 500,000*l.*; and this was considerably under what it had been a few years previously!

These statements show generally how the Company defeated the provisions of the act of 1784, and, indeed, turned them to its own advantage. But, as already observed, nothing else could be expected. It is nugatory to attempt to combine monopoly with low prices and good qualities. They never have existed, and it is not possible they ever should exist together. Monopoly is the parent of dearth and scarcity; freedom, of cheapness and plenty. Great, however, as was the sacrifice entailed on the people of Britain by the Company's mono-

poly, it is doubtful whether it yielded any considerable amount of revenue to the Company. Every one, indeed, must be satisfied, on general grounds, that it was impossible for the Company to make any thing like the same profits by the privileges conceded to them, that would have been made by private individuals enjoying similar advantages. "The spirit of monopolies," to borrow the just and expressive language of Gibbon, "is narrow, lazy, and oppressive. Their work is more costly and less productive than that of independent artists; and the new improvements so eagerly grasped by the competition of freedom, are admitted with slow and sullen reluctance, in those proud corporations above the fear of a rival, and below the confession of an error." We have no doubt that the directors of the East India Company were disposed to extend its commerce, and to manage it according to the most approved principles, but they were wholly without the means of giving effect to their wishes. They had to operate through servants; and it is to be imagined that the *employés* of such bodies will ever display that watchful attention to their interests, or conduct the business intrusted to their care with the unsparring economy practised by private merchants trading on their own account, superintending their own concerns, and responsible in their own private fortunes for every error they may commit! The affairs of the Company, notwithstanding the efforts of the directors to introduce activity and economy, have always been managed according to a system of routine. Their captains and mercantile agents were, we doubt not, "all honourable men;" but it were an insult to common sense to suppose that they may be compared for a moment with individuals trading on their own account, in the great requisites of zeal, conduct, and skill.

Several gentlemen of great knowledge and experience, who have carefully inquired into the state of the Company's affairs, have expressed their decided conviction, that they made nothing by the tea trade!—the increased price at which they sold the article not being more than sufficient to balance the immense expenses incident to the monopoly! Perhaps this statement may be somewhat exaggerated, though we incline to think it is not far from the mark.—(See vol. i. p. 629.) Taking, however, the accounts laid by the Company before the late committee on Indian affairs, as they stand, it would appear that the profits realised by them during the 3 years ending with 1827–28 amounted to 2,542,569*l.*, being at the rate of 817,523*l.* a year.—(Appen. to Second Report of Select Committee of 1830, p. 95.) But we have already seen that the excess of price received by the Company for their teas, over the price of similar teas sold at New York and Hamburgh, has been above 1,500,000*l.* a year; so that, according to the Company's own showing, their monopoly occasioned an absolute loss of 652,477*l.* exclusive of its mischievous influence in lessening the consumption of tea, and in confining our trade with China to less than a third of what it will probably amount to under a system giving free scope to the energies of individual enterprise.

The renewal of a monopoly productive of such results was, therefore, wholly out of the question. There was hardly, indeed, in 1833, an individual in the empire out of the pale of the Company who was not anxious for the opening of the trade to China; and the act 3 & 4 Will. 4. c. 93,—(see vol. i. p. 304.) abolishing the Company's monopoly, and making it lawful for all individuals to import tea, was passed with almost no opposition.

IV. DUTIES ON TEA.—CONSUMPTION OF, ON THE CONTINENT AND IN THE UNITED STATES, ETC.

Down to the 22d of April, 1834, the duty on tea was an *ad valorem* one, being 96 per cent. on all teas sold under 2*s.* a pound, and 100 per cent. on all that were sold at or above 2*s.* Seeing that tea may now be considered almost as a necessary of life, this was, certainly, a high duty; though, as a large amount of revenue must be raised, we do not know that it could be fairly objected to on that ground. But under the monopoly system, the duty was, in fact, about 200 per cent. *ad valorem*! For, the price of the tea sold by the Company being forced up to nearly double what it would have been had the trade been free, it followed, inasmuch as the duty varied directly as the price, that it also was doubled when the latter was doubled. The price of Congou at Hamburgh, for example, varies from 1*s.* 2*d.* to 1*s.* 4*d.* per lb.; and had the Company supplied our markets with congou at the same rate, it would have cost us, duty included, from 2*s.* 2*d.* to 2*s.* 8*d.* per lb. But instead of this, the congou sold by the Company has been, at an average, a good deal above 2*s.* per lb.; and, the duty being as much, it has invariably cost us from 4*s.* to 5*s.* per lb. Hence, though the duty was only 100 per cent. on the Company's price, it was really above 200 per cent. on the price of tea in an open market! The mischief of the monopoly was thus aggravated almost beyond endurance; inasmuch as every addition made by it to the cost of the article, made an equal addition to the duty on it.

But this system is now happily at an end. The *ad valorem* duties ceased on the 22d of April, 1834; and all tea imported in the United Kingdom for home consumption is now charged with a customs duty as follows:—

Bohea	-	1 <i>s.</i> 6 <i>d.</i> per lb.

by the Company's mono-

If we compare these duties with the prices of tea at New York and Hamburgh, they will be found to be exceedingly heavy, particularly on bohea and congou. It is pretty certain, that, at no distant period, bohea will be sold, exclusive of the duty, at or under 1s. per lb.; and supposing this to be the case, the present fixed duty will be equivalent to an *ad valorem* duty of 150 per cent. But to impose such a duty on an article fitted to enter largely into the consumption of the lower classes, seems to be in the last degree oppressive and absurd. It will go far to neutralise the beneficial effects that would otherwise result from the abolition of the monopoly; and cannot fail, by confining the consumption of the article within comparatively narrow bounds, to render the duty less productive than it would be were it lower. Nothing can be more injurious, both in a commercial and financial point of view, than the imposition of oppressive duties on articles, the consumption of which would be materially extended by a fall of price; and that such is the case with bohea is beyond all question. The Company, by reducing its price from about 2s. 6d. to 1s. 10½d. per lb. (which was, of course, accompanied by a corresponding reduction of duty), increased the consumption from 1,873,981 lbs. in 1822-23; to 4,474,838 lbs. in 1831-32. Here we have the consumption more than trebled by a fall of about 1s. 3d. per lb. And we have not the slightest doubt that a further fall of 1s. 3d. would, by bringing the article fairly within the command of a vastly greater number of consumers, extend the demand for it in a much greater degree. But it is hardly possible that such a reduction should take place, unless 6d. be taken from the duty. We trust, however, that this may be done. At 1s. per lb., the duty would undoubtedly yield more than it will ever do at 1s. 6d. We may also add that nothing would do so much to weaken the pernicious habit of gin-drinking, as a fall in the price of tea, coffee, &c. And it is not to be endured that the price of such desirable articles should be raised to an exorbitant height by duties, that would be more productive of revenue were they effectually reduced.

It has been wholly owing to their exorbitant prices, that notwithstanding the English are the richest people in the world, and that the taste for tea is so very generally diffused amongst us, we consume very little of the superior qualities! Indeed, some of the finest are not to be met with in our markets; and while about a dozen kinds of tea are regularly quoted in the Hamburgh, Amsterdam, and New York Price Currents, there are never more than 7, and sometimes only 6, species to be met with here. Imperial, a very fine green tea, regularly imported into America, and all parts of the Continent, is unknown in the English market. Single, once imported by the Company, has disappeared for about 50 years. Peckoe and gunpowder, the finest qualities of black and green, are little known in the English market; and have been only imported in small quantities by the officers of the Company's ships.

The abolition of the monopoly will, no doubt, introduce a greater variety of teas; and, by lowering their price, will materially extend the demand for those of a superior quality. The fixed duty on the finer teas is, when compared to their prices, a good deal less than that laid on bohea and congou. But a preference of this sort ought not to exist, or to exist only in favour of the coarser teas, or of those consumed by the mass of the people. A duty even of 1s. on bohea would be very decidedly higher than a duty of 3s. on imperial and gunpowder.

We subjoin an abstract of the act 3 & 4 Will. 4. c. 101. regulating the tea duties.

Tea importable into the U. K. from the Cape of Good Hope, &c.—From and after the 23d of April 1834, it shall be lawful to import any tea into the United Kingdom from the Cape of Good Hope, and from places eastward of the same to the Straits of Magellan, and not from any other place.—§ 1.

Tea importable into British possessions, &c.—It shall be lawful to import any tea into any of the islands of Guernsey, Jersey, Alderney, or Sark, or into the British possessions of America, from the Cape of Good Hope and places eastward of the same to the Straits of Magellan, or from the United Kingdom, and not from any other place.—§ 2.

Duties.—From and after the 23d of April, 1834, the duties of excise payable upon tea shall cease and determine, except as hereafter provided, and in lieu of such duties, there shall be paid the duties of customs set forth in the Table following; and such duties shall be raised, levied, collected, and paid unto his Majesty, and shall be appropriated and applied in like manner as if the same had been imposed by an act passed in the present session of parliament for granting duties of customs; viz.

Table of Duties on Tea in Warehouse, or imported into the United Kingdom:

Tea, viz	L. s. d.	L. s. d.
Bohea, per lb.	0 1 6	
Congou, twankay, hyson skin, orange pekoe, and campoi, per lb.	0 2 2	0 3 0
		Souchong, flowery pekoe, hyson, young hyson, gunpowder, imperial, and other sorts not enumerated, per lb.

I recited, that nothing herein contained shall alter or affect the duties payable upon tea sold by the East India Company at their public sales, prior to the said 23d of April, 1834: provided also, that the allowance commonly called draft, made by the commissioners of excise in the weighing of tea, shall be made by the commissioners of customs under the authority of this act.—§ 3.

Abatement for Sea Damage not allowed.—No abatement of duty shall be made on account of damage received by tea during the voyage; but it shall be lawful for the importer to separate the damaged parts, and to abandon the same to the commissioners of the customs for the duty.—§ 4.

Mixed Tea liable to highest Duty.—If different sorts of tea mixed together be imported in the same package, the whole shall be liable to the highest rate of duty to which any of such sorts would be

* The price of bohea in the New York market, in January, 1834, was from 13 to 16 cents per lb.; that is, about 7½d. Should the price of bohea sink to this level in London, the duty would be near 300 per cent. on its value!—(See post.)

separately liable; and if 2 or more sorts of tea not perfectly mixed together be imported in 1 package, the same shall be forfeited, and may be seized, sued for, recovered, and dealt with in the same manner as any forfeiture incurred under any law relating to the customs.—§ 5.

Importation of Tea to be under the Customs.—From and after the passing of this act, it shall be lawful for the Lords of the Treasury, by warrant under the hands of 3 or more of them, to order and direct that the importation of tea, and the duties thereon, shall be under the management of the commissioners of customs, instead of the commissioners of excise, and from and after the time specified in such warrant, the same shall be transferred accordingly; provided, that until the transfer of such management, and of the custody of tea in warehouse, shall be fully made under the directions of the Lords of the Treasury, any act, &c. done or performed by, to, or with the commissioners of excise, or their officers, shall have the same effect in law as if it had been done or performed by, to, or with the commissioners of customs, or their officers, under the authority of this act; but nothing herein contained shall alter or affect any law of excise relating to licences for the sale of tea, or to permits for its removal, or to the internal management of tea by the excise, after the import duties have been paid, and after it has been delivered out of the charge of the officers of the customs.—§ 6.

Treasury may discontinue Permits for Tea and other Goods.—It shall be lawful for the Lords of the Treasury, by warrant or order under the hands of 3 or more of them, to discontinue the practice of issuing permits for the removal of tea, and to make and establish any other rules, regulations, and restrictions in lieu of such practice, as shall appear to them necessary for the security of the revenue; and all rules, regulations, and restrictions so made and established, shall have the force of law, as fully as if they were embodied in this act, and shall be obeyed and enforced in like manner as any rules, regulations, &c. are or can be obeyed or enforced under the provisions of any act or acts of parliament relating to the customs, or to the excise; and copies of such rules, regulations, &c. shall be laid before parliament.—§ 7.

Assessment of the Duties.—A good deal of discussion has recently taken place with respect to these duties. It has been contended, that it will be impossible to assess them fairly; and that it would be better to establish a uniform duty of 2s. a pound. We understand, however, that the *ad valorem* duties formerly charged on teas imported into the United States, were collected with considerable success; and we do not see why the same duty not be done here. But whatever device may be fallen upon to obviate frauds upon the revenue, or to facilitate the collection of the duties, we protest against its being attempted by an equalisation of the duties. The real objection to the present scale is not that the duties differ too much, but that they differ too little—that the duty on bohea is much too high as compared with that on the finer teas. The equalisation of the duties, would, indeed, be a proceeding too glaringly opposed to every fair principle, to be tolerated. Should it, however, be found necessary to make any alteration in the duties, on account of the difficulty in the way of their assessment, the better way would probably be, to admit congon at the duty of 1s. 6d. It is only in the substitution of congon for bohea, that any considerable frauds can take place; and this would, of course, effectually obviate them. This plan is objectionable, no doubt, from its leaving the duty on bohea too high; but as we have only to choose among difficulties, it is, perhaps, as good a one as could be made.

Port Charges in China.—We expressed, in a previous article, (see vol. I. p. 304.) our doubts as to the policy of the clause in the act opening the China trade, which authorised the imposition of peculiar duties on the ships and goods engaged in the trade, for the purpose of defraying the cost of the establishment to be kept up at Canton. Soon after that paragraph was printed, an order in council was issued, fixing the duties in question at 2s. per ton of tonnage duty, and 7s. per cent. on the value of the goods into and exports from China. These were heavy charges; and as the American and other foreign ships resorting to Canton are not liable to any claims of the sort, their imposition on British ships would have been most injurious to them. The order in council, being, in consequence, loudly and justly objected to, was very properly withdrawn. An arrangement has since been made, by which the expense of the factory is to be defrayed, $\frac{1}{2}$ by the British government, and $\frac{1}{2}$ by the East India Company; so that British ships will not be liable to any charges, except such as are imposed by the Chinese, and which fall on all foreigners alike.—(For an account of these charges, see vol. I. p. 256.)

Capacity of China to furnish additional Supplies of Tea.—It has been sometimes contended, that the tea trade being thrown open, were the duties materially reduced, the increased demand of this country could not be supplied, and that the reduction of the duty would not really benefit the British consumer, but the Chinese government. Our readers will hardly expect that we should enter at any length into the refutation of so absurd a notion. At the commencement of last century, the entire annual consumption of tea in this country, the Continent, and America, did not certainly amount to 500,000 lbs.; whereas the consumption of Great Britain, the Continent, and United States, amounts at present to about 80,000,000 lbs.; and yet every one acquainted with the history of the trade is aware, that though the consumption has increased a hundred fold, the prices in all open markets have been regularly declining, and even at the Company's sales they have lately been a good deal less than they were 50 or 60 years since. We may, therefore, rest quite easy upon this point. The production of tea is rapidly extending in China; and the vast extent of that empire, its capacities for raising unlimited quantities of tea, and the extent to which it is there used, negative the idea that any conceivable increase of the consumption of this country should have any perceptible or permanent influence on its cost price.

Retail Dealers in Tea.—Retailers of tea are obliged to take out a licence, which costs 11s. a year. In 1832, their numbers were, in England, 76,713, in Scotland 13,701, in Ireland 11,273; making, for the United Kingdom, a grand total of 101,687!

ADULTERATION OF TEA.—It might have been fairly enough anticipated, from the high price of, and the high duty on, tea, and the facility with which it may be mixed up with foreign substances, that it would not escape adulteration; and the records of the courts of justice show that such is the case; several dealers having been convicted of this pernicious practice. The adulteration is usually effected either by the intermixture of silex or ash leaves with fresh tea; or by mixing the latter with tea that has been already used. The penalties on such offences are stated below; but the best, or rather the only, security on which any reliance can be placed, is to be found in the character and respectability of the parties dealing in tea. Even were he influenced by nothing else, it would be extreme folly in any person carrying on an extensive business to engage in such dishonest practices; for they can hardly fail of being detected; and the ruin of his business, that would follow such exposure, would far more than balance whatever gains he could hope to make by his fraudulent schemes.

... presents a very different result; the imports having amounted to 43,000,000 lbs., exceeding by above 10,000,000 lbs., or 30 per cent., the Company's imports when largest! We submit

An account of the Quantities of Tea imported into the United Kingdom, the Quantities retained for Consumption, and the Net Revenue derived from the same, in 1831, 1835, 1836, 1837, and 1838.

Year.	Imported	Exports.	Retained for Consumption.	Net Revenue.
	<i>lbs.</i>	<i>lbs.</i>	<i>lbs.</i>	<i>£</i>
1834	33,643,680	1,181,005	34,069,651	3,589,361
1835	41,560,550	2,158,020	39,571,004	3,532,427
1836	49,307,701	4,269,863	49,142,236	4,674,555
1837	56,073,981	4,716,245	56,025,206	3,223,840
1838	39,867,441	-	39,866,412	-

The excess of the quantity retained for consumption in 1836 was occasioned by the change in the duties that year, which made it necessary to enter all the heavy stock of bales then in bond, in order to escape the duty of 2s. 1d. to which it would otherwise have become liable.

For an account of the species of tea, and the quantities of each exported from Canton to England and the United States, during the year ended 30th of June, 1837, see art. *CANTON*, vol. i. p. 300-310.

The extension of the trade is not, however, the only gratifying circumstance connected with it. Notwithstanding the great additions made to the exports, there has been no rise of prices at Canton worth mentioning; a fact which sets the ability of China to furnish additional supplies in the most striking point of view. The quality, too, of the free trade teas is said by some to be superior, and is admitted by all to be at least equal, to that of the Company's teas. Many apprehensions were entertained of disturbances taking place between the crews of the private ships and the natives that might interrupt or stop the trade; but nothing of the sort has occurred. Under all the disadvantages of inexperience, the free traders have, with but few exceptions, conducted themselves with singular tact and address; and the captives of the different ships agree in affirming, that Canton is a port where they may unload, load, and clear out, not only without any difficulty, but with as much facility and expedition as at either London or Liverpool. It is singular, indeed, how completely the statements put forth by the Company's advocates, in favour of the monopoly, have been disproved: in fact, the only interruption of any kind given to the free traders was occasioned by the pretensions advanced by the individual sent out to watch over their interests; and, however painful the way in which that interruption was terminated, there can be no doubt that the event was a most fortunate one for the success of this great experiment.

The opening of the trade has been quite as successful as respects exports as imports. The quantity and value of the cottons shipped for China in 1836 very much exceed the quantity and value of those shipped in any previous year; and though, owing to the revolution in the American trade, they fell off considerably in 1837; they have since nearly reached their highest level. This, indeed, might have been anticipated; but few comparatively anticipated what has turned out to be the fact, that the cotton stuffs have met with a quick and advantageous sale; and that all descriptions of twist, with the exception of some of the higher numbers, have, also, realised good prices and profits. Indeed, we have no doubt, as well for other reasons as from the statements of gentlemen of great experience recently arrived from China, that the trade between that country and England is yet only in its infancy. Nor is it possible to estimate the mighty dimensions to which it may attain, should our cottons, as there seems to be a fair prospect, come into extensive use among the Chinese.

Tea (Duties on).—We mentioned (p. 629.) that objections had been made to the duties imposed on tea by the act 3 & 4 Will. 4. c. 101.; and that it had been proposed to repeal them, and to impose in their stead an equal duty of 2s. per lb. Had tea been of a nearly uniform quality, or had the different teas been of nearly the same value, there would have been nothing to object to in the equalisation of the duty; but, so far from this being the case, small beer does not differ more from strong than some sorts of tea from others; and while the price in bond, of the inferior sorts, in most markets, does not exceed 10d. or 1s. per lb., that of the superior sorts is as high as 4s. or 5s. Under these circumstances, it is not easy to imagine that any thing can apparently be more oppressive or unjust than the imposition of the same rate of duty on all sorts of tea. But, admitting the injustice, it was contended that it was not really of a kind that could be obviated; that it was impossible to discriminate between different qualities of tea; that, by imposing different rates of duty, a door was opened to every species of fraud; and that teas admitted at one port at the low duty of 1s. 6d. were charged at another with the higher duties of 2s. 2d. and 3s. per lb. We believe these statements were much exaggerated; though no doubt can be entertained of their being true to a certain extent. It was evident, indeed, that considerable difficulties would have to be encountered at the outset of a new system; but it is probable that a little experience would have done much to obviate them; and it is believed by many well-informed persons, that the duties charged under the act 3 & 4 Will. 4. c. 101. might have been, at no very distant period, assessed with considerable fairness. But government, influenced partly by a wish to get rid of the clamour and outcry raised by the importers against the discriminating duties, and partly, perhaps, by a doubt whether they could ever be fairly collected, consented

ee RANGOON.)—*Prisist*

A species of timber called African teak is pretty largely imported into England, from the west coast of Africa. But, in point of fact, it is not teak, and it is destitute of several of its most valuable properties. It is, however, for some purposes, a useful species of timber.

TEASEL, or FULLERS' THISTLE (Ger. *Weberdistel*, *Kratzdistel*; Fr. *Chardon carder*; It. *Cardo da cardare*; Sp. *Carduecha*, *Cardo peinador*). This plant, which is cultivated in the north and west of England, is an article of considerable importance to clothiers, who employ the crooked awns of the heads for raising the nap on woollen cloths; for this purpose they are fixed round the periphery of a large broad wheel, against which the cloth is held while the machine is turned. In choosing teasels, the preference should be given to those with the largest bur, and most pointed, which are generally called *male teasels*. They are mostly used in preparing and dressing stockings and coverlets; the smaller kind, commonly called the fullers' or drapers', and sometimes the *female teasels*, are used in the preparation of the finer stuffs, as cloths, ratens, &c.

THREAD (Ger. *Zwirn*; Du. *Garen*; Fr. *Fil*; It. *Refce*; Sp. *Hilo*, *Torzal*; Rus. *Nitki*), a small line made up of a number of fibres of some vegetable or animal substance, such as flax, cotton, or silk; whence its names of linen, cotton, or silk, thread.

TILES (Ger. *Dachziegel*; Fr. *Tuiles*; It. *Tegole*, *Embrici*; Sp. *Trijas*; Rus. *Tsherpiza*), a sort of thin bricks, dried in kilns, and used in covering and paving different kinds of buildings. The best brick earth only should be made into tiles.—(See БИТКА and ТИЛЫ.)

TIMBER (Ger. *Bauholz*, *Zimmer*; Du. *Timmerhout*; Fr. *Bois de charpente*, *Bois à bâtir*; It. *Legname da fabbricare*; Sp. *Madera de construccion*; Rus. *Стрѣвовой Гѣс*; Pol. *Cembrowina*), the term used to express every large tree squared, or capable of being squared, and fit for being employed in house or ship building. In the language of the customs, when a tree is sawn into thin pieces, not above 7 inches broad, it is called *hatten*; when above that breadth, such thin pieces are called *deal*. Wood is the general term, comprehending under it timber, dye woods, fire wood, &c.

Timber is generally sold by the load.

The following are the contents of the loads of different species of timber, hewn and unheewn:—

A load of timber unheewn	- - 40 cubic feet.	A load of 2½ inch plank	- - 240 square feet.
square-d timber	- - 40	3 inch plank	- - 200
1 inch plank	- - 600 square feet.	3½ inch plank	- - 170

(During the session of 1835 a committee of the House of Commons was appointed to inquire into the operation of the existing duties on timber. Having examined several witnesses, the committee agreed to the following resolutions:—

1. *Resolved*, That it is the opinion of this committee, that the present mode of taking the duties on deals is susceptible of improvement, and that this committee would recommend that a mode be adopted which shall approach more nearly to a payment according to the contents of the deals.
2. *Resolved*, That it is the opinion of this committee, that the difference of duty of 45s., now imposed by law upon timber the produce of Europe, as compared with timber the produce of our North American colonies, is too great, and may be reduced.
3. *Resolved*, That it is the opinion of this committee, that, having a due regard to the interests which have been created in the British North American colonies by the system hitherto pursued, and to the representations of the shipping interest, a reduction of the protective duty, not exceeding 15s. per load, appears to them to be a fair arrangement.
4. *Resolved*, That it is the opinion of this committee, that such reduction be made, so far as may be consistent with the interests of the revenue, without any augmentation on the duty on colonial timber.
5. *Resolved*, That it is the opinion of this committee, that, in any alteration made, such alteration should not affect the shipments made in the year 1836.
6. *Resolved*, That it is the opinion of this committee, that there should be an uniform mode of taking the duty on deals throughout the United Kingdom.

The adoption of these resolutions would be a material improvement. Still, however, they fall far short of what the public exigencies require. An ample supply of the best and cheapest timber being, if not absolutely indispensable, of the almost possible importance to a manufacturing nation, (possessed of a large mercantile and warlike navy, it should be about the very last article on which duties should be imposed. But, if a tax must, on the principle of *quævus modo ram*, be laid on timber, it is surely unnecessary to say that it should be laid equally on all timber imported; or that, if a distinction be made, it ought plainly to be in favour of the best, and not of the worst, article. But, for several years past, our policy, if we may so call it, has been exactly the reverse of this. We have laid high discriminating duties on the superior and cheaper timber of the north of Europe, to force the importation of a dearer and comparatively bad article from our North American possessions! Even supposing the suggestion of the committee were adopted, there would still be a discriminative duty of 30s. a load charged on the superior timber of the north of Europe over that which is laid on inferior timber from North America. The folly of thus enhancing the cost, and deteriorating the quality, of an important article as timber, is the greater, seeing that it is by no means clear that our North American possessions derive any real advantage from the timber trade; at all events, it is certain that they do not gain by it more than a very small part of the loss it entails on us; and any injury that might be done them by the equalisation of the timber duties, would be more than made up by the repeal of the discriminating duties that are at present charged on most articles of foreign produce imported into the colonies; duties which, without being productive of revenue, are the source of much irritation and disgust.

The shipowners would sustain more injury from an equalisation of the timber duties than any one else. But we have shown (vol. II. p. 639.) that, even as regards them, the inconvenience would not be very considerable. But, whatever it might be, it would be fully obviated by allowing them a bounty of 30s. or 40s. on the conveyance of emigrants to Quebec; a measure of the policy of which we are on this, as well as on other grounds fully persuaded.—(See *Dict. in loc. cit.*)

TIMBER TRADE. Having, in separate articles, described those species of timber most in demand in this country, we mean to confine ourselves in this article to a few remarks on the policy of the regulations under which the trade in timber is conducted.

Importance of a cheap Supply of Timber.—It is surely unnecessary to enter into any lengthened statements on this head. If there be one article more than another with which it is of primary importance that a great commercial nation like England should be abundantly supplied on the lowest possible terms, that article is timber. Owing to the deficiency of our home supplies, most of the timber, with the exception of oak, required for building ships and houses; and most part, also, of that employed in the construction of machinery; is imported from abroad. Any individual acquainted with the purposes to which timber is applied, but ignorant of our peculiar policy with respect to it, would never, certainly, imagine that such an article could be made the subject of oppressive duties, and of still more oppressive preferences. Timber is not to be looked at in the same light as most other commodities. It is against all principle to impose duties on materials intended to be subsequently manufactured; but timber is the raw material of the most important of all manufactures—the construction of the instruments of production! Suppose it were proposed to lay a heavy tax on ships, wagons, looms, or workshops when completed, would not such a monstrous proposal be universally scouted? And yet this is what is really done. The finished articles are not, indeed, directly taxed; but the principal material of which they are made, and without which they could not be constructed, is burdened with an exorbitant duty! To dwell on the absurdity of such a tax would be worse than useless. Of all things essential to the prosperity of manufacturing industry, improved and cheap machinery is the most indispensable. Most individuals amongst us are ready enough to ridicule the contradictory conduct of the French government, who, at the very moment that they are endeavouring to bolster up a manufacturing interest, lay enormous duties on foreign iron, and thus double or treble the price of some of the most important manufacturing implements. Timber is, however, of quite as much importance in this respect as iron; and our conduct in burdening it with exorbitant

was appointed to examine several wit-

of taking the duties on wood that a mode be devised for the duty of 45s. now imposed on the duty of our North Amer-

ard to the interests which are pursued, and to the exceeding 15s. per load,

be made, an far as may be on the duty on colonies

made, such alteration in uniform mode of taking

il, however, they fall far and cheapest timber being, during nations, possessed the on which duties should be laid on timber, it is surely that, if a distinction be

But, for several years we have laid high duties to force the importation of timber. Even supposing the duty of 30s. a load of inferior timber from a quality, of an important our North American pro-

cess certain that they do not injury that might be done by the repeal of the dis-

produce imported into the of each irritation and

timber duties than any un- inconvenience would not be allowed them a share of the policy of which (loc. cit.)

duties partakes as largely of the *felo-de-se* character as that of our neighbours! Indeed, as will be immediately seen, it is decidedly less defensible. Some plausible, though inconclusive, reasonings might be urged in defence of duties on iron and timber, were they imposed for the sake of revenue: but even this poor apology for financial ignorance and rapacity cannot be set up in defence of the iron duties of France or the timber duties of England. The former, however, are the least objectionable; they were imposed, and are still kept up, to encourage the production of iron in France: whereas the duties on timber in England have been imposed for the sake, principally, of promoting the lumber trade of Canada, and of forcing the employment of a few thousand additional 'ous of shipping! We do not sacrifice the goose for the sake of the golden eggs, but for the sake of the offal she has picked up.

2. *Origin and Operation of the discriminating Duty in favour of American Timber.*—The practice of encouraging the importation of the timber of Canada and our other possessions in North America, in preference to that of foreign countries, is but of recent growth. It took its rise during the administration of Mr. Vanarsdall, and bears in every part the impress of his favourite policy. The events that took place in 1808 having seriously affected our previous relations with the Baltic powers, a deficiency in the accustomed supply of timber began to be apprehended; and the ship owners and Canada merchants naturally enough availed themselves of this circumstance, to excite the fears of the ministry, and to induce them to change the fair and liberal system on which the trade in timber had been conducted down to that time, by granting extraordinary encouragement to its importation from Canada. Even as a temporary expedient, applicable to a peculiar emergency, the policy of giving any such encouragement is extremely doubtful. Supposing timber not to have been any longer obtainable from the north of Europe, its price would have risen, and it would, of course, have been imported from Canada, the United States, or wherever it could be had, without any interference on the part of government. But, in 1809, a large addition was made to the duties previously charged on timber from the north of Europe, at the same time that those previously charged on timber from Canada and our other possessions in America were almost entirely repealed; and in the very next year (1810), the duties thus imposed on Baltic timber were *doubled!* Nor did the increase of duties on such timber stop even here. In 1813, after Napoleon's disastrous campaign in Russia, and when the free navigation of the Baltic had been restored, 25 per cent. were added to the duties on European timber! The increase of the revenue was pleaded as a pretext for this measure; but we believe it was really intended to augment the preference in favour of Canada timber; for how could it be supposed that an increase of the duties on an article imported from a particular quarter of the world, that was already taxed up to the very highest point, could add any thing considerable to the revenue, when a convertible article might be imported from another quarter duty free? The various duties laid on European timber amounted, when consolidated by the act 59 Geo. 3. c. 52., to 3*l.* 5*s.* per load.

Admitting, for the moment, that the peculiar and unprecedented aspect of things in 1808 and 1809 warranted the giving of some preference to the importation of timber from Canada, such preference should plainly have ceased in 1813. So long as the communication with the bridge is interrupted, we may be forced to use a boat to cross the river; but when the communication is again opened, and when there is not the remotest chance of its future interruption, it would be a singular absurdity to refuse to resume the use of the bridge, and to continue the costly and inconvenient practice of being ferried over! This, however, is exactly what we have done in the case of the Canada trade. Because a fortuitous combination of circumstances obliged us, upon one occasion, to import inferior timber at a comparatively high price, we resolved to continue the practice in all time to come! The history of commerce affords no parallel display of gratuitous folly.

The absurdity of this conduct will appear still more striking, if we reflect for a moment on the peculiar situation of the countries in the north of Europe. The nations round the Baltic have made little progress in manufacturing industry. They abound in valuable raw products; but they are wholly destitute of the finer species of manufactured commodities, and of colonies. Nor have they any real inducement to attempt supplying themselves directly with the former, or to establish the latter. Their iron and copper mines, their vast forests, and their immense tracts of fertile and hitherto unoccupied land, afford far more ready and advantageous investments for their deficient capital, than could be found in manufactures or foreign trade. Russia and Prussia have, indeed, been tempted, by our corn and timber laws, to exclude some species of manufactured goods; but it is not possible that they should succeed in materially limiting our exports to them, provided we do not second their efforts by refusing to admit their products.

Of all the countries in the world, there is obviously none which has so many facilities for carrying on an advantageous trade with the North as Great Britain. We have a surplus of all those products of which Russia, Prussia, Sweden, Denmark, and Norway stand most in need; and, on the other hand, they have a surplus of many of those of which we are comparatively destitute. The immense traffic we carry on with the Baltic does not, therefore, depend in any considerable degree on artificial or accidental circumstances. It does not rest

on the wretched foundation of Custom-house regulations or discriminating duties, but on the gratification of mutual wants and desires. It has been justly remarked by the Marquis Gairdner, the excellent translator of the "Wealth of Nations," that no inconsiderable portion of the increased power and wealth of England may be traced to the growing opulence of Russia. But the Russian empire is yet only in the infancy of civilisation; she must continue for a very long period to advance in the career of improvement, and it will be our own fault if we do not reap still greater advantages from her progress.

Such is the nature of that commerce against which the discriminating duties on timber from the north of Europe aimed a severe blow! In 1809, when this system began, 428,000 tons of British shipping entered inwards from the Baltic. In 1814, the year after the 25 per cent. of additional duty had been imposed on Baltic timber, and when all the ports of that sea were open to our ships, only 242,000 tons of British shipping entered inwards,—being little more than the half of what it amounted to when the system began. In 1816, the British shipping entered inwards from the Baltic amounted to 181,000 tons. It was materially augmented in 1818 and 1819, in consequence of the failure of the crops in this country in 1817 and 1818; but even in 1819 the entries inwards were 55,000 tons under what they had been 10 years before!

By diminishing our imports from the northern nations, the high discriminating duty on timber necessarily diminished our exports to them in the same proportion.

The following extract from the evidence of Mr. Edward Patzcker, a merchant of Memel, given before the committee of the House of Commons on the foreign trade of the country, in 1821, shows the effect that the increased duties on timber had on the commerce with Prussia:—

"Has there been a great alteration in the timber trade between Memel and this country of late years?"—"Since the war, a great alteration; before the war we used to have 950 to 1,000 English ships in 1 year, and since the war we have had from 200 to 300 only."

"When you talk of 900 ships, do you mean 900 ships trading between Great Britain and Memel?"—"Yes."

"Do you mean that number of cargoes were loaded in the year for England?"—"Yes."

"How many cargoes were loaded for Great Britain during the last year (1820)?"—"About 270 or 300 cargoes; there have not been more."

"To what cause do you attribute that diminution in the trade?"—"To the high duties in England; by formerly the duties were only 10s. and some pence; now they are 3l. 5s. in a British, and 3l. 8s. in a foreign ship."

"Has that diminished trade in timber produced a great alteration in the circumstances of the people of Prussia?"—"Yes: for it is the only trade which we can carry on; wheat and all the rest of our articles cannot be brought here; timber is the only one that can be brought, and the trade from Poland has very much ceased in consequence of the diminished demand for it; the people cannot sell their goods, and we cannot take such quantities of timber as we used to do; and, therefore, they cannot take English goods from us."

"If such an alteration was to take place in the duties on timber in this country, as to give the Prussians a larger share of the trade than they at present enjoy, do you think that would produce increased friendly feelings on the part of the people of your country to the people of this country?"—"It would. They would certainly take far more goods from hence, as they could get better rid of them. The Poles, too, would take more of them."—(Report, 9th of March, 1821, p. 107.)

The effect that the increased duties had on the trade with Norway and Sweden, aggravated as they in some degree were by an absurd method of charging the duty on deals, was still more striking and extraordinary. These countries had few products, except timber and iron, to exchange for our commodities; and as neither of these could be advantageously imported into England under the new system, the trade with them almost entirely ceased; and they were reluctantly compelled to resort to the markets of France and Holland for the articles they had formerly imported from us. In proof of this, we may mention, that the exports to Sweden, which had amounted in 1814 to 511,818*l.*, declined in 1819 to 46,656*l.*; and the exports to Norway, which had in 1815 amounted to 199,902*l.*, amounted in 1819 to only 64,741*l.*—(Lord's Report on the Foreign Trade of the Country, 3d of July, 1820, p. 34.)

This extraordinary falling off in so very important a branch of our commerce having been established beyond all question by the evidence taken before the committees now referred to, an approach to a better system was made in 1821, when the duty on timber from the north of Europe was reduced from 3*l.* 5s. to 2*l.* 15s. per load, at the same time that a duty of 10s. per load was laid on timber from British America. This, however, was a comparatively inefficient measure. It was stated, to be sure, at the time, that the 2*l.* 5s. per load of excess of duty that was thus continued on Baltic timber over that laid on timber imported from Canada, was not more than enough to balance the higher prime cost, the greater freight, and other charges consequent upon the importation of the latter; and that it would, there-

"Even at present, the official value of the total exports, including colonial produce, from the United Kingdom to Sweden, does not exceed 160,000*l.* a year. Our exports of all sorts in Norway amount to about 150,000*l.* a year, while our imports hardly amount to 85,000*l.* In fact, were it not that Norway finds means of paying us by drafts on Holland, into which her produce is admitted, she could import almost nothing from England. The injury done to our commerce with these two nations, by our heavy discriminating duties on the principal equivalent they have to give in exchange for commodities brought from abroad, was placed in a very striking point of view by Lord Althorp, in the debate on the timber duties, the 18th of March, 1831.

fore, be in future indifferent to a merchant whether he imported timber from Memel or Miramichi! In point of fact, however, the discriminating duty continued in favour of Canada timber has been far too high to allow of this equalisation being effected. So much so is this the case, that there have been instances of ships loading with timber in the north of Europe, carrying that timber to Canada, and then bringing it to England as Canada timber; the difference of duty being about sufficient to indemnify the enormous expense of this round-about voyage! We do not mean to say that this has been a common practice; but what are we to think of a commercial regulation that admits of such an adventure being undertaken with any prospect of success! Admitting, however, that the duty had been adjusted so as to have had the anticipated effect, could any thing be more preposterous and absurd than to impose it on such a principle? There are mines of coal in New Holland; but what should we think, were an attempt made to impose such duties on coals from Newcastle as should render it indifferent to a London merchant whether he imported a cargo of coal from the Tyne or Botany Bay! Now, the case of the timber duties is, in point of principle, precisely the same. We may obtain timber from countries so near at hand that our ships may make 3, 4, 5, and even 6 voyages a year to them;* and we refuse to admit it unless loaded with a duty that raises its price to a level with what is brought from the other side of the Atlantic—a voyage which our ships cannot, at most, perform above twice a year!

The following official account shows the extent to which the system of preference has been carried:—

An Account of the Rates of Duty payable in Great Britain on the Principal Articles of Wood.

So long as the foreigner can lay his finger on such a Table as this, it will not be easy to convince him that our commercial system has lost so much of its exclusive character as it really has done during the last few years. Having set such an example to the Russians and Prussians, need we wonder at their having attempted to shut several of our peculiar productions out of their markets! Could we expect that they were to follow our precepts rather than our practice?

3. *Comparative Quality of Baltic and Canada Timber.*—Had the timber of Canada been decidedly superior to that of the north of Europe, something might have been found to say in favour of the discriminating duty: for it might have been contended, with some show of reason, that it was of the utmost consequence, considering the application of timber to ship and house building, and other important purposes, to prevent the importation of an inferior species, even though it might be cheaper. But the system we have adopted is of a totally different character. We have not attempted to shut out an article which, though cheap, is inferior; but have committed the twofold absurdity of shutting out one that is at once cheap and superior!

The committee of the House of Lords observe, in their *First Report on the Foreign*

* According to the evidence of Mr. J. D. Powles, an extensive ship and insurance broker, ships can make six voyages from Norway, 3 or 4 from Prussia, and 2 from Russia, in a season.—(Commons Report, p. 99.)

Trade of the Country. that the "North American timber is more soft, less durable, and every description of it more liable, though in different degrees, to the dry rot, than timber of the north of Europe. The red pine, however, which bears a small proportion to the other descriptions of timber, and the greater part of which, though imported from Canada, is the produce of the United States, is distinguished from the white pine by its greater durability. On the whole, it is stated by one of the commissioners of his Majesty's navy, most distinguished for practical knowledge, experience, and skill, that the timber of Canada, both oak and fir, does not possess, for the purpose of ship building, more than half the durability of wood of the same description, the produce of the north of Europe. The result of its application to other purposes of building is described by timber merchants and carpenters to be nearly similar."—(p. 4.)

We subjoin the following extracts from the evidence of Sir Robert Seppings, the commissioner alluded to by the committee, whose great intelligence and experience render his opinion of the highest authority:—

"On you state to the committee the result of any observations that you or others in his Majesty's service have made, on the durability of timber, the produce of the North American colonies, or timber imported from the north of Europe, applied to the same purposes?"—"About the year 1796, there were certain number of frigates built of the fir of the Baltic, and their average durability was about EIGHT years. About the year 1812, there were a considerable number of frigates built also, of fir of the growth of North America, and their average durability was not HALF that time."

"You have stated that Canada timber is peculiarly subject to the dry rot, and the dry rot is known to have prevailed lately to a great degree in the navy; has that prevailed principally since the introduction of Canada timber to the uses of the navy?"—"I believe the navy has suffered very considerably from the introduction of Canada timber, or timber of the growth of North America; and in consequence, from experience, we have entirely discontinued the use of it, except for deals and masts."—(p. 56.)

Mr. Copland, an extensive builder and timber merchant, being asked by the committee what was his opinion with respect to the comparative qualities of American and Baltic timber, answered,—"The timber of the Baltic in general, speaking of Norway, Russian, Prussian, and Swedish timber, is of very superior quality to that imported from America; the bulk of the latter is very inferior in quality, much softer in its nature, not so durable, and very liable to dry rot; indeed, it is not allowed by any professional man under government to be used, nor is it ever used in the best buildings in London; it is only speculators that are induced to use it, from the price of it being much lower (in consequence of its exemption from duty) than the Baltic timber; if you were to lay two planks of American timber upon each other, in the course of a twelvemonth they would have the dry rot, almost invariably, to a certain extent."—(p. 56.) And many passages to the same effect might be produced, from the evidence of persons of the greatest experience in building.

Now, we would beg leave to ask whether any thing can be more absolutely monstrous, than to force, by means of a system of discriminating duties, a large proportion of the public to use that very timber in the construction of their ships and houses, which government will not use for either of these purposes, and which the most experienced engineers and builders pronounce to be utterly unfit for them? This is not to impose duties on a fair and equal principle for the sake of revenue, but for the sake of securing a preference to a worthless article: it is not imposing them in the way in which they may be least, but in that in which they are certain to be most injurious to those who have to pay them.

It appears from the official account subjoined to this article, that, at an average of the years 1828 and 1829, the revenue would have gained considerably more than 1,500,000*l.* a year, had the same duty been laid on Canada timber that is laid on timber from the north of Europe; and this, therefore, may be considered as the amount of the pecuniary sacrifice we consent to make, in order that our ships and houses may be inoculated with dry rot!

4. *Apologies for the discriminating Duty.*—If any thing ought, more than another, to make legislators pause before enacting a restrictive regulation, it is the difficulty of receding from it. After it has been enforced for a while, a variety of interests usually grow up under its protection, which may be materially injured by its repeal. All, however, that the persons so interested can justly claim, is, that sufficient time, and every possible facility, should be afforded them to prepare for a change of system. Because the interests of a comparatively small portion of the community may be injuriously affected by the abolition of a regulation ascertained to be in the last degree inimical to the public, is it, therefore, to be contended that we ought, at all hazards, to continue to enforce the regulation we have so unwisely enacted? To maintain the affirmative, would be to give perpetuity to the worst errors and absurdities, and would be an effectual bar to every sort of improvement. No change, even from a bad to a good system, ought to be rashly set about: but when once the expediency of an alteration has been clearly established, it ought to be resolutely carried into effect.

It is objected to the abolition of the discriminating duties on timber, that it would be injurious to Canada and the shipping interest. We believe, however, that the injury would not be nearly so great as has been represented; that it would, in fact, be quite inconsiderable. So far from the *lumber trade*—or the trade of felling wood, squaring it, and floating it down the rivers to the shipping ports—being advantageous to a colony, it is distinctly and com-

ber from Memel or M... in favour of Canada... So much so is this in the north of Europe, as Canada timber; the expense of this round-trip practice; but what adventure being under-duty had been adjusted... New Holland; but what coals from Newcastle... point of principle, pre- and that our ships may... to admit it unless loaded... from the other side of the... twice a year!

pletely the reverse. The habits which it generates are quite subversive of that sober, steady spirit of industry, so essential to a settler in a rude country; to such a degree, indeed, is this the case, that lumberers have been described as the pests of a colony, "made and kept vicious by the very trade by which they live."—But abstracting altogether from the circumstances now alluded to, Mr. Poulett Thomson showed, in his unanswerable speech on the timber question (March 18, 1831), that the abolition of the lumber trade would materially benefit the real interests of the colonies. It is ludicrous, indeed, seeing that not one tree in a hundred is fit for the purposes of being squared for timber, to suppose that the discontinuance of the trade could be any serious loss. But the fact is, that when trees are cut down by lumberers, for export as timber, instead of being burnt down, so great a growth of brushwood takes place, that it actually costs more to clear the ground where the lumberers have been, than where they have not been. Mr. Richards, who was sent out by government to report on the influence of the lumber trade, represents it as most unfavourable; and observes, that, "when time or chance shall induce or compel the inhabitants to desist from this employment, agriculture will begin to raise its head." The statements of Captain Moorsom, in his *Letters from Nova Scotia*, are exactly similar. He considers the depression of the timber market although a severe loss to many individuals, a "decided gain to the colony," from the check it has given to the "lumbering mania."—(p. 53.)

The statements that have been made as to the amount of capital expended on saw mills, and other fixed works for carrying on the lumber trade, have been singularly exaggerated. Mr. Thomson, who had the best means of acquiring accurate information on this point, made the following statement with respect to it in his speech already referred to:—"From the means I have had of calculating the amount of capital embarked in these saw mills, I believe it is about 300,000*l.*: I am sure that I may say that if 500,000*l.* were taken as the amount, it would be a great deal above rather than under the real value; but, after all, this description of property is not to be sacrificed by the arrangements proposed, even if they were carried to the fullest extent. I am ready at once to admit, that the consequence of the proposed alteration may be, that it will diminish the exports of timber from Canada to England, and affect the productiveness of the capital vested in the mills to which I have referred; but the committee ought not to lose sight of the fact, that though in this one branch of industry there will be a great falling off, yet the same amount of labour might be applied to much greater advantage on land in the colonies; and the mills, which will be rendered useless for their original purposes, may be converted to useful auxiliaries to the agricultural and other pursuits of the colonists; so that the enormous losses that have been placed in so faithful a point of view, will, as I have shown, be absolutely next to nothing."

So far, therefore, as the interests of the colonies are concerned, it is plain they would not really lose, but gain, by a repeal of the discriminating duties on foreign timber. They would still continue to possess a respectable share of the trade; for their timber, though unfit for more important purposes, is well suited, by its softness and freedom from knots, to the finishing of rooms and cabins, the manufacture of boxes, &c.; and in the mast trade, it is believed, that they would be able to maintain a successful competition with Riga. It might also be expedient to assist in turning the industry of the colonies into the profitable channel of agriculture, by giving their corn and flour a still more decided preference than they now enjoy in our markets. In our opinion, it would be good policy to admit them, at all times, duty free.

The ship owners would undoubtedly have more cause to complain of injury from the equalisation of the duties; but even as respects them, it would not be nearly so great as is commonly supposed. The statement usually put forward by those who represent the timber trade to North America as of vital importance to the shipping interest, is, that it employs 1,800 ships, of 470,000 tons, navigated by 20,000 sailors. But Mr. Poulett Thomson showed, in his previously quoted speech, that this statement is utterly erroneous. The entries inwards of British ships from our possessions in North America correspond with the sums now stated; but, at an average, every ship employed in the trade makes $1\frac{1}{2}$ voyages a year; so that, in point of fact, only 1,028 ships, of 270,000 tons and 11,427 men, are employed in the trade.* From this latter number must, however, be struck off ships employed in other branches of trade; for no one pretends that the only trade we carry on with British North America is the importation of timber. We believe that the number to be so struck off may be safely estimated at 200 ships, of 54,000 tons and 2,200 men, leaving about 800 ships, of 216,000 tons and 9,200 men, to be affected by the change. Inasmuch, however, as about a third part of the timber now brought from Canada would most probably continue to be brought for the purposes already referred to, were the duties equalised, only 534 ships, of 144,000 tons and 6,134 men, would be forced to change their employments. Now of these, a half, at least, would be immediately employed in bringing from the Baltic the same quantity of timber that is brought from America; and as the price of timber would be materially

* It is singular that Mr. Bouchette should have fallen into the common but palpable error on this point.—(See the Preface to his valuable work on British America.)

...vered by the reduction of the duty, the demand for it would no doubt materially increase; and that it is abundantly plain that very few, if any, ships would be thrown out of employment by the abolition of the discriminating duties. It is material, too, to observe, that whatever temporary inconvenience the shipping interest might sustain from the change, its future consequences would be singularly advantageous to it. The high price of timber employed in the building of ships is at present the heaviest drawback on the British ship owners; but the equalisation of the duties would materially reduce this price; and we have the authority of the best practical judges for affirming, that were the duty (as it ought to be) entirely repealed, ships might be built decidedly cheaper in England than in any part of the world.

It would be desirable, however, to secure the interests of so important a class as that of the ship owners from any chance even of temporary loss or inconvenience from an equalisation of the duties. And it is fortunate that this object may be attained, not only without any loss, but with certain benefit to the public. The expediency of encouraging emigration to the colonies, as a means of relieving parts of England and Ireland from that mass of paupers by which they are burdened, is no longer questioned; and we incline to think that no more effectual means of promoting emigration could be devised, than the giving a bounty to the owners of ships landing emigrants in Canada, the Cape of Good Hope, or New South Wales. We have already seen that the number of emigrants to British North America, in 1832, amounted to about 66,000 (*ante*, p. 274.); and supposing that a bounty of 30s. or 40s. a head were in future to be paid on the arrival of emigrants at Quebec, it would more than indemnify the ship owners for any inconvenience resulting from a new arrangement of the timber duties; at the same time that the stimulus it would give to emigration would be of the utmost importance to Great Britain and to the colonies.

5. *Alteration proposed in the Timber Duties in 1831.*—To suppose that the timber trade should be allowed to continue on its present footing, seems to be quite out of the question. We have already seen that the discriminating duties impose a pecuniary sacrifice of 1,500,000*l.* a year on the British public, besides forcing the use of a comparatively worthless article where none but the very best ought to be employed. We have also seen that this sacrifice produces no real benefit to the colonies; and that the benefit it does produce to the ship owners is but trifling, and may be more than made up to them without loss to the public. The existing government seems to have been early satisfied of the propriety of attempting to introduce a less objectionable system; and on the 18th of March, 1831, Lord Althorp moved that the duties on Baltic timber should be reduced 6s. a load on the 1st of January, 1832; 6s. more on the 1st of January, 1833; and 3s. on the 1st of January, 1834; making the total reduction 15s. a load, and leaving a protection in favour of Canada timber of 30s. a load. The only real objection to this scheme was, that it did not go far enough; that "it scotched the snake, without killing it." There is not the shadow of a ground on which to justify the granting of a bounty (for such is the real operation of the duty) to force the use of an inferior and more costly article; and even if a reasonable bounty could be justified, one of 30s. a load is quite excessive. But singular as it may seem, this proposal, moderate as it certainly was, encountered a very keen opposition. Some of those who had previously expressed their concurrence in the expediency of some measure of the sort, thought proper to vote against it; and, upon a division, it was lost by a majority of 46. Lord Althorp seems to have been much discouraged by the result of this motion; for, during the lengthened period that has since elapsed, he has made no attempt to effect any modification of the duties. But notwithstanding these unfavourable appearances, we do not believe that a system so destructive of the public interests will be upheld much longer. It were much to be wished that the duties could be wholly dispensed with. Timber is about the very worst subject for taxation; but, at all events, an end must be put to the discriminating duties. It is not to be endured, that so essential an article—that the *prime necessary of manufacturing industry*—should be loaded with exorbitant duties, imposed, not for the sake of revenue, but for the sake of those who either reap no advantage from them, or none that is material.

Account of the Amount of Duties paid in the United Kingdom on Timber and other Articles of Wood, imported from the British Provinces of North America, in each of the Years ending the 5th of January, 1828, the 5th of January, 1829, and the 5th of January, 1830; and of the Amount of Duties which would have been paid on such Timber and other Articles of Wood, if they had been charged with the Rates of Duty payable on similar Articles imported from the Baltic.

Year ending 5th of January,	Amount of Duty paid in the United Kingdom on Timber, Deals, and other Articles of Wood, imported from the British Provinces to North America. TIN (Ger. Blech, Weissblech; Fr. Fer blanc; It. Latta, Banda stagnata; Sp. Hoja de lata; Rus. Blichka, Shest; Arab. Resas; Sans. Trapu and Ranga), a metal which has a fine white colour like silver; and when fresh, its brilliancy is very great. It has a slightly disagreeable taste, and emits a peculiar smell when rubbed. Its hardness is between that of gold and lead. Its specific gravity is 7.29. It is very malleable; tin-foil, or tin leaf, is about $\frac{1}{100}$ of an inch thick; and it might be beat out into leaves as thin again, if such were required for the purposes of art. In ductility and tenacity it is very inferior. A tin wire 0.078 inch in diameter is capable of supporting a weight of 34.7 pounds only without breaking. Tin is very flexible, and produces a crackling noise when bent. It may be readily alloyed with copper, zinc, &c., forming very valuable compounds.—(Thomson's Chemistry.)

The ores of this metal are found in comparatively few places; the principal, and perhaps the only ones are Cornwall, Galicia, Erzgebirge in Saxony, Bohemia, the Malay countries, China, and Banca in Asia. They are peculiar to primitive rocks, generally in granite, either in veins or beds, and are often associated with copper and iron pyrites.

Tin is much used as a covering to several other metals: iron is tinned, to prevent its rapid oxidation when exposed to air and moisture; and the same process is applied to copper, to a void its injurious effects to which those who are in the habit of employing cooking utensils made of this metal are always liable. The solutions of tin in the nitric, muriatic, nitro-sulphuric, and tartaric acids, are much used in dyeing, as giving a degree of permanency and brilliancy to several colours, to be obtained by the use of no other mordants with which we are at present acquainted: tin forms the basis of pewter, in the composition of which it is alloyed with lead; when rolled into thin sheets, it is called tin-foil, and is applied, with the addition of mercury, to cover the surface of glass, thus forming looking-glasses, mirrors, &c.; and in combination with sulphur, it constitutes what is called mottled gold.—(Joyce's Chem. Min.)

Tin PLATES, known in Scotland by the name of white iron, are applicable to a great variety of purposes, and are in very extensive demand. They are formed of thin plates of iron dipped into molten tin. The tin not only covers the surface of the iron, but penetrates it completely, and gives the whole a white colour. It is usual to add about 1-10th of copper to the tin, to prevent it from forming too thick a coat upon the iron.—(Thomson's Chemistry.)

Historical Notice of the British Tin Trade.—The tin mines of Cornwall have been noted from a very remote era. The voyages of the Phœnicians to the Cassiterides, or tin islands, are mentioned by Herodotus (lib. iii. c. 115.), Diodorus Siculus (lib. iv. p. 301. ed. 1041.) and Strabo (*Geog.* lib. iii.). Some difference of opinion has, indeed, been entertained as to the particular islands to which the Phœnicians applied the term Cassiterides; but Bortius (*Account of the Scilly Islands*, p. 72.). Larcher (*Herodote*, tome iii. p. 384, ed. 1802), and the ablest critics, agree that they are the Scilly Islands, and the western extremity of Cornwall. After the destruction of Carthage, the British tin trade, which was always reckoned of peculiar importance, was carried on by the merchants of Marseilles, and subsequently by the Romans. Besides Britain, Spain furnished the ancients with considerable quantities of tin. We have no very precise information as to the purposes to which they applied this metal. It has been supposed that the Phœnicians, so famous for their purple dye, were acquainted with the use of the solution of tin in nitro-muriatic acid in fixing that colour. The best of the ancient mirrors, or *specula*, were also made of a mixture of copper and tin; and tin was used in the coating of copper vessels.—(*Watson's Chemical Essays*, vol. iv.)

In modern times, the tin mines of Cornwall and Devon have been wrought with various degrees of energy and success. Queen Elizabeth brought over some German miners, by whom some of the processes were improved. During the civil wars, the mines were much neglected. At the commencement of last century, however, the business of mining was carried on with renewed vigour; and from 1720 to 1740, the annual produce was about 1,100 tons. The produce went on gradually increasing, till it amounted, in the 10 years from 1790 to 1800, to 3,254 tons a year. During the next 15 years, the produce fell off; and for the 5 years ending with 1815, it was always considerably under 3,000 tons a year. But in the last-mentioned year, a considerable increase took place; and since 1816, the produce has been, with the exception of 1820, always above 3,000 tons a year; and in 1827 and 1828, it was very near 5,000 tons. The present average produce of the mines may be estimated at 4,500 tons a year. We subjoin from the papers published by the Board of Trade and other authorities, an

Account of the Quantities of British Tin coined and exported, and of the average Price of the same, in each Year from 1820 to 1832, both inclusive; exhibiting, also, the Imports and Exports of Foreign Tin during the same Period.

The price of British tin, on an average, from 1811 to 1815, inclusive, was about 7l. a cwt. It fell from 1815 to 1820, and its comparatively low price since, have been owing to a variety of causes; partly to improvements in the art of working the mines, partly to the increased supply of metal obtained from them, and partly and principally to the competition of the tin of Banca and of the Malay countries. Previously to 1814, we had in some measure a monopoly of the market of the world. But since then the Banca mines have been wrought with unusual spirit; and their produce has been so much increased, as not only fully to supply the market of China, to which we formerly exported from 600 to 1,000 tons, but to meet us in every European market. It appears, from the foregoing Tables, that Malay tin is now very extensively imported, for warehousing, into England, at the same time that large quantities are carried direct to Holland, where there are refining houses. Hence, notwithstanding the fall of price, and the increased produce of the Cornish mines, our exports of tin have continued nearly stationary, or have rather fallen off; having been less in 1831 and 1832, when the produce of the mines exceeded 4,000 tons a year, than in 1820 and 1821, when it was only about 2,000 tons a year.

Duty on British Tin.—All tin produced in Cornwall has been subject, from a very remote period, to a coinage duty of 4l. a ton, payable to the Duke of Cornwall; the tin raised in Devonshire is subject to a similar duty of 1l. 13s. 4d. a ton. This duty produces from 16,000l. to 20,000l. a year; and is felt to be a serious grievance, not only from its amount, but from the vexatious regulations under which it is collected. Though the orders sent the miner were for tin of a peculiar description, he is not allowed to smelt it at once into the required form, but is obliged to cast it, in the first instance, into blocks. This regulation being complied with, it might be expected that the tin would be surveyed by officers at the smelting-house, and the duty charged accordingly; but instead of this the miner is obliged to convey it sometimes as far as 8 or 10 miles, to one of the *coinage towns*, where it is used where only it can be coined; that is, a small piece is struck off one of the corners, and the block is impressed with the arms of the duchy, and the duty paid. This useless ceremony being gone through, the tin is frequently to be carried back, before it can be shipped, to the very place whence it was taken to be coined! Another grievance is, that the coinage is only performed quarterly; so that, whenever pressing the demand for tin may be in the interim, the miner cannot supply it. There are also certain fees payable on the coinage, particularly if it take place during the Christmas and Ladyday quarters; so that if we add to the duty of 4l. a ton, those charges, and make a reasonable allowance for the expense of carriage, and for the trouble and inconvenience to which the miner is put, the whole may be moderately estimated at 5l. a ton.

It is surely high time that this tax, and the preposterous regulations connected with it, were abolished. So long as we enjoyed a sort of monopoly of the tin trade, the duchy duty was comparatively little felt; but now that we have to sustain a competition that has already sunk the price of tin about 50 per cent., and that in every day becoming more severe, it is found to be quite oppressive. And it is not to be endured that the existence of an ancient and important branch of industry, supposed to afford employment for about 20,000 persons, should be endangered, that the Crown may gain a paltry revenue of from 16,000l. to 20,000l. a year. This is a subject which calls loudly for the interference of the legislature; and should another edition of this work be called for, we trust we shall then have to announce the abolition or commutation of the tin duty.—(For further particulars, see an excellent little tract entitled the *Tin Duties*, (ascribed to Sir Charles Lemon) published in 1833. There is a useful and instructive paper on the tin trade in the *Spectator*, No. 217.)

Tin.—General. (Malay, *Tina*; Hind. *Kalai*; Siamese, *Dibok*; Burmese, *Kye-p'Kye*, white copper). In commercial language usually called Banca tin. It is found in several provinces of China; and the most extensive and, probably, richest tin district in the world, exists in the Malay countries. This comprehends the whole of the peninsula, from the extreme cape to the latitude of 14° on its western side, and to 11° on its eastern, and comprehends several of the small islands lying in the route between the peninsula and Java, as far as the latitude of 3° south; so that the whole of this tin district has an extreme length of near 1,200 miles. By far the greater number of the mines within these limits are as yet unwrought and unexplored. It was only in the beginning of last century that the mines of Banca, the most productive at present worked, were accidentally discovered. The whole tin of the Malay countries is the produce of alluvial ore, or what is called, in Cornwall, "stream-work;" and from the abundance in which the mineral has been found by the mere washing of the soil, no attempt has hitherto been made at regular mining, or obtaining the ore from its rocky matrix. Malay tin, consequently, is grain tin, or tin in a very pure state; that being the species which alluvial ore uniformly produces. The mines, or rather excavations, are perpendicular pits of from 15 to 25 feet deep; and when the soil and a superstratum of common clay are removed, the bed containing the ore, consisting of quartz and granitic gravel, is reached. The sand and gravel are separated from the ore by passing a stream of water through the whole materials. The ore so obtained is preserved in heaps, and smelted periodically with charcoal in a blast furnace. The mine or pit is kept clear of water by the Chinese wheel. No cattle are used in any part of the process; human labour being had recourse to throughout the whole of its stages. The most imperfect part of the process is the smelting. The stream ores of Cornwall, which are generally poor, afford from 65 to 75 per cent. of grain tin; whereas, owing to the imperfection of the process, from those of Banca not more than 55 or 60 are usually obtained. The difference in the produce suggested, a few years ago, the practicability of sending the ore to England for the purpose of being smelted; and the experiment was tried; but our customs regulations not allowing the produce to be bonded and re-exported without duty, rendered the scheme abortive.

With very trifling exceptions, the whole tin of the Malay islands is mined and smelted by Chinese settlers; and before their skill and enterprise were applied to its production, the metal seems to have been obtained by the inhabitants of the countries which produce it, by processes hardly more skilful than those by which the precious metals were procured by the native inhabitants of America, prior to the introduction of European skill and machinery. The following estimate has been given of the annual produce of the principal states and places producing tin:—

East coast of the Malay peninsula—		Piculs.	West coast of the Malay peninsula and islands—		Piculs.
Junk Ceylon		5,000	Sungora and Patani		8,000
Quelea		3,000	Praha		7,000
Pera		3,000	Pahang		3,000
Balangora		3,000	Singkep		5,000
Balacaca		4,000	Banca		25,000
Total		Piculs 17,000	Total		Piculs 43,000

This can be considered only as a rough estimate; but we believe it is not far wide of the truth. At an average of the 2 years, 1826-27 and 1827-28 the exports of Singapore amounted to 16,342 piculs, or about 970 tons. The most considerable part of the exportation is Batavia; and from which there is sent annually, either directly, or through orders from the Dutch government or the authorities at Banca, 2,000 tons. From Prince of Wales Island there is also a considerable quantity exported; and a smaller one direct to China in junka, from several of the native ports on the eastern shore of the Malay peninsula. The great markets for the consumption of tin are China, Hindustan, and the continent of Europe. The quality of the different descriptions of Malay tin, although there may be some inconsiderable difference in the process of smelting it conducted; and this, again, necessarily depends upon the extent of capital, and goodness of the machinery employed. The mining operations of Banca have long been conducted upon a larger scale, and with more skill, than in any other of the Malay countries; and consequently, the metal produced in this island is superior by from 10 to 12 per cent. in the market of Canton it is called "old tin," in contradistinction to "new tin," the produce of the other Malay countries. Next in point of quality, to the produce of Banca, are those of Tringana and Singkep, which are not more than 5 per cent. inferior to it. The tin of the state of Pera, a considerable part of which is produced by the natives themselves, without Chinese assistance, is the worst, and usually about 15 per cent. below that of Banca. The native tin of China is 10 per cent. inferior to that of Banca, and is probably black like the greater part of that of Cornwall; and, like it, the produce of regular mining operations, and not alluvial. The produce of the Chinese mines is said of late years to have greatly decreased; probably owing to the great increase which has recently taken place in the produce of the Malay countries, and the cheapness and abundance with which it finds its way to China. It should be added, that of late years, and chiefly owing to the very low price and abundance of German spelter (zinc) in the Indian market, this commodity has occasionally been fraudulently mixed with tin. The Chinese buyers of Canton, however, are sufficiently expert to detect the adulteration; and it is believed that this discreditable practice has lately ceased.

The price of tin, taking the market of Singapore as the standard, has fluctuated of late years from 4 to 20 Spanish dollars per picul; equal, at the exchange of 4s. per dollar, to 47s. and 67s. per cwt. At an average of these prices, the annual value of the whole Malay tin will be about 240,000l. per annum.—(Crawford's History of the Indian Archipelago; Dr. Horsfield's MS. Statistical View of the Island of Banca; Singapore Chronicle; Canton Register, &c.)

(We have great satisfaction in being able to state that the duties on tin raised in Cornwall and Devon, and all regulations with respect to the coinage of the same, have been abolished by the 1 & 2 Vict. c. 120. This wise and beneficial measure provides that compensation shall be made to the duchy of Cornwall for the loss arising from this abolition, by settling on its possessors a perpetual annuity equal to the nett average amount of the duties during the 10 years ending with 1837. And having thus secured the interests of the miners and the duke of Cornwall, the act goes on to secure those of the public, by enacting that the duties on foreign tin and tin ore shall be reduced to 15s. and 10s. a cwt. respectively. The total quantity of tin produced in Devon and Cornwall, in 1837-38, amounted to 5,130 tons, of the average value of 82l., making its total value 420,660l.—Sup.)

TOBACCO (Da. *Tobak*; Du. *Tubak*; Fr. *Tabac*; Ger. *Taback*; It. *Tabacco*; Pol. *Tobak*; Rus. *Tubak*; Sp. *Tabaco*; Arab. *Bujjirbhang*; Hind. *Tumbakū*; Malay, *Tambico*), the dried leaves of the *Nicotiana Tabacum*, a plant indigenous to America, but which succeeds very well, and is extensively cultivated, in most parts of the Old World. The recent leaves possess very little odour or taste; but when dried, their odour is strong, acrid, and somewhat foetid; their taste bitter and extremely acrid. When well cured, they are of a yellowish green colour. When distilled, they yield an essential oil, on which their virtue depends, and which is said to be a virulent poison. The leaves are used in various ways; being chewed, smoked, and ground and manufactured into snuff. It is in the last mentioned form that tobacco is principally used in Great Britain; and, though the contrary has been often asserted, its use does not seem to have been productive of any perceptible bad consequences.

1. *Historical Sketch of Tobacco.*—The taste for tobacco, though apparently administering only to a frivolous gratification, has given birth to a most extensive commerce, and been a powerful spur to industry. Being a native of the New World, its introduction into Europe dates only from the early part of the 16th century. Seeds of the plant were sent, in 1560, from Portugal, to Catharine de' Medici, by Jean Nicot, the French ambassador in that country, from whom it has received its botanical name. The notion, at one time so general, that the specific appellation tobacco was derived from its having been imported from Tobago, is now universally admitted to be without foundation. Humboldt has shown, that tobacco was the term used in the Haytian language to designate the pipe, or instrument made use of by the natives in smoking the herb; and the term having been transferred by the Spaniards from the pipe to the herb itself, has been adopted by the other nations of the ancient world.—(Essai Politique sur la Nouvelle Espagne, vol. iii. p. 50. 2d edit.) Tobacco is believed to have been first introduced into England by the settlers who returned, in 1586, from the colony which it had been attempted to found in Virginia, under the auspices of Sir Walter Raleigh, in the preceding year. Harriott, who accompanied this expedition, gives, in his description of Virginia, an account of the tobacco plant, and of the manner in which it was used by the natives; adding, that the English, during the time they were in Virginia, and since their return home, were accustomed to smoke it after the fashion of the Indians, "and found many rare and wonderful experiments of the virtue thereof."—(Hakluyt, vol. i. p. 75.) Raleigh, and other young men of fashion having adopted the practice of smoking, it spread amongst the English; as it had previously spread amongst the Spaniards, Portuguese, French, and other Continental nations. But it made its greatest progress in this country

after the foundation of the colony at James Town in Virginia, in 1607. The soil of the colony being found particularly well fitted for the culture of tobacco, considerable quantities were raised and sent home; and the numerous individuals interested in the colony contributed to introduce that taste for it which was diffused amongst all classes with astonishing rapidity.

James I. attempted, by repeated proclamations and publications, some of them couched in very strong terms, to restrain the use of tobacco. But his efforts had very little effect; and the settlers in Virginia continued to experience a more rapidly increasing and better demand for tobacco than for any other product of the colony.

During the earlier part of the reign of Charles I., the trade in tobacco was monopolised by the Crown. This monopoly was not, however, of long continuance, and totally ceased at the breaking out of the civil war.

Tobacco plants had been early introduced into England, and were found to answer remarkably well. Their cultivation was, indeed, prohibited by James, and afterwards by Charles, but apparently without effect. At length, however, the growing consumption of tobacco having excited the attention of the government financiers, it was seen that, by imposing a duty on its importation, a considerable revenue might be raised; but that, were it allowed to be freely cultivated at home, it would be very difficult to collect a duty upon it. In 1643, the Lords and Commons imposed a moderate duty, for the sake of revenue, on plantation tobacco; but instead of directly prohibiting the use of native tobacco, they burdened it with such a duty as, it was supposed, would occasion its culture to be abandoned. The facility, however, with which the duty was evaded, soon satisfied the republican leaders that more vigorous measures were required to stop its cultivation, and consequently to render its importation a source of revenue. Hence, in 1652, an act was passed, prohibiting the growth of tobacco in England, and appointing commissioners to see its provisions carried into effect. This act was confirmed at the Restoration, by the act Charles 2. c. 1, which ordered that all tobacco plantations should be destroyed. These measures were believed, at the time, to have been principally brought about by the solicitations of the planters; but their real intention was not so much to conciliate or benefit the latter, as to facilitate the collection of a revenue from tobacco; and, considered in this point of view, their policy seems quite unexceptionable.

This act did not, however, extend to Ireland; and, of late years, the cultivation of tobacco made considerable progress in that country. Had this been allowed to continue, there can be no question, that in a few years the revenue from tobacco, amounting to about 3,000,000*l.* a year, would have been materially diminished; for it would be quite visionary to suppose that any plan could have been devised for collecting a duty even of 100 per cent. upon tobacco—(see *post*)—supposing it to have been generally cultivated in Ireland. No one, therefore, can question the wisdom of the late act prohibiting its growth in that country, and of rigorously enforcing its provisions. Any advantage Ireland might have gained by its cultivation, would have been but a poor compensation for the sacrifice of revenue it must have occasioned.

In some countries, as England, tobacco is principally used in the form of snuff; in others it is principally chewed; but in one form or other it is everywhere made use of. So early as 1624, Pope Urban VIII. issued a bull, excommunicating those who smoked in churches! The practice of smoking was at one time exceedingly prevalent in this country; but during the reign of George III. it was well nigh superseded, at least amongst the higher and middle classes, by the practice of snuff taking. Latterly, however, smoking has been in some measure revived, though it is still very far from being so extensively practised as formerly.

We quote the following statement as to the universality of the use of tobacco from a learned and able paper on its "Introduction and Use," in the 22d volume (p. 142.) of the *Asiatic Journal*.—"In Spain, France, and Germany, in Holland, Sweden, Denmark, and Russia, the practice of smoking tobacco prevails amongst the rich and poor, the learned and the gay. In the United States of America, smoking is often carried to an excess. It is not uncommon for boys to have a pipe or cigar in the mouth during the greatest part of the day. The death of a child is not unfrequently recorded in American newspapers, with the following remark subjoined:—'supposed to be occasioned by excessive smoking.' If we pass to the East, we shall find the practice almost universal. In Turkey, the pipe is perpetually in the mouth; and the most solemn conferences are generally concluded with a friendly pipe, employed like the *calumet of peace* amongst the Indians. In the East Indies, not merely all classes, but both sexes, inhale the fragrant steam; the only distinction among them consisting in the shape of the instrument employed, and the species of the herb smoked. In China, the habit equally prevails; and a modern traveller in that country (Barrow) states, that every Chinese female, from the age of 8 or 9 years, wears, as an appendage to her dress, a small silken purse or pocket to hold tobacco, and a pipe, with the use of which many of them are not unacquainted at this tender age. This prevalence of the practice, at an early period, amongst the Chinese, is appealed to by M. Pallas as an evidence that in Asia, and especially in China, the use of tobacco for smoking is more ancient than the discovery of

the New World.' He adds—'Among the Chinese, and amongst the Mongol tribes who had the most intercourse with them, the custom of smoking is so general, so frequent, and has become so indispensable a luxury; the tobacco purse affixed to their belt so necessary an article of dress; the form of the pipes, from which the Dutch seem to have taken the model of theirs, so original; and, lastly, the preparation of the yellow leaves, which are merely rubbed to pieces and then put into the pipe, so peculiar; that they could not possibly derive all this from America by way of Europe; especially as India, where the practice of smoking is not so general, intervenes between Persia and China.'

This, however, is a very doubtful proposition. It seems sufficiently established that the tobacco plant was first brought from Brazil to India about the year 1617; and it is most probable that it was thence carried to Siam, China, and other Eastern countries. The names given to it in all the languages of the East, are obviously of European, or rather American, origin; a fact which seems completely to negative the idea of its being indigenous to the East.

Sources of Supply. Importation into Great Britain.—Tobacco is now very extensively cultivated in France and other European countries, in the Levant, and in India; but the tobacco of the United States is still very generally admitted to be decidedly superior to most others. It is much higher flavoured than the tobacco of Europe; a superiority attributable in some degree, perhaps, to a different mode of treatment; but far more, it is believed, to differences of soil and climate.

Previously to the American war, our supplies of tobacco were almost entirely derived from Virginia and Maryland; and they are still principally imported from these states; so much so, that of 33,107,679 lbs. of unmanufactured tobacco imported in 1831, 32,712,108 lbs. came from the United States. Mr. Jefferson, in his *Notes on Virginia*, has given a very unfavourable view of the effects of the tobacco culture. It was, indeed, well known to be a crop that speedily exhausted all but the very best lands; and in addition to this, Mr. J. says, that 'it is a culture productive of infinite wretchedness. Those employed in it are in a continued state of exertion, beyond the powers of nature to support. Little food of any kind is raised by them; so that the men and animals on these farms are badly fed, and the earth is rapidly impoverished.'—(English ed. p. 278.)

Tobacco is extensively cultivated in Mexico, but only for home consumption. It might probably, however, were it not for the restrictions under which it is placed, form a considerable article of export from that country. Under the Spanish government, the tobacco monopoly was one of the principal sources of revenue; yielding from 4,000,000 to 4,500,000 dollars, exclusive of the expenses of administration, amounting to about 800,000 dollars. No tobacco was allowed to be cultivated, except in a few specified places. Commissioners, or *guardas de tabaco*, were appointed, whose duty it was to take care that all tobacco plantations without the privileged districts should be destroyed. The government fixed the price at which the cultivators of tobacco were obliged to sell it to its agents. The sale of the manufactured tobacco was farmed out; and *cigars* were not allowed to be sold, except at the royal *estancos*. No one was allowed to use cigars of his own manufacture. This most oppressive monopoly was established in 1764. It has been continued, from the difficulty of supplying the revenue which it produces, by the present government.—(Humboldt, *Nouveau Voyage en Espagne*, vol. iii. p. 49; *Poinsett's Notes on Mexico*, note 116. Lond. ed.)

Cuba is celebrated for its tobacco, particularly its cigars. These consist of the leaves, formed into small rolls, for the purpose of smoking. Formerly their importation into this country was prohibited; but they may now be imported on paying the exorbitant duty of 9s. per lb. Havannah cigars are usually reckoned the best. Previously to 1820, the cultivation and sale of tobacco were subjected to the same sort of monopoly in Cuba as in Mexico: but, at the period referred to, the trade was thrown open. In consequence of the freedom thus given to the business, the production and exportation of tobacco are both rapidly increasing, though hardly, perhaps, so much as might have been expected; the culture of sugar and coffee being reckoned more profitable. In 1828, the declared value of the tobacco exported from Cuba amounted to 868,000 dollars; but there is good reason to think that its real value considerably exceeded this sum. At present, the total real value of the exports of tobacco from the Havannah and other ports is probably not much under 2,000,000 dollars. The tobacco used in Cuba by the lower classes is chiefly imported from the United States.

Consumption of Duty-paid Tobacco in the United Kingdom.—It appears from the following official account, that the consumption of duty-paid tobacco in Great Britain has increased from about 8,000,000 lbs. in 1789, to 16,214,000 lbs. in 1833; the duty having fluctuated during the same period from 1s. 3d. to 4s. and 3s. per lb. There are, however, sufficient grounds for thinking that the consumption would have been at least *one-fourth part* greater, had the duty been less. But, whatever difference of opinion may exist as to the influence of the duty in Great Britain, there can be none as to its influence in Ireland. The subjoined Table shows that during the 5 years ending with 1798, when the duty was 8d. a pound, the annual average consumption of duty-paid tobacco was 7,337,217 lbs.

TOBACCO.

Regulations as to Importation.—Tobacco is not to be imported in a vessel of less than 120 tons burden, unless in hogheads, casks, chests, or cases, containing at least 100 lbs. nett weight, if from the East Indies; or 450 lbs. weight, if from any other place; or 100 lbs. weight, if cigars; except tobacco from Turkey, which may be packed in separate bags or packages, provided the outward package be a hoghead, cask, chest, or case, containing 450 lbs. nett at least; and except Guatemal and Columbian tobacco, which may be imported in packages of not less than 90 lbs. Tobacco is not allowed to be imported, unless into the following ports; viz. London, Liverpool, Bristol, Lancaster, Graves, Falmouth, Whitehaven, Hull, Glasgow, Port Glasgow, Greenock, Leith, Newcastle, Plymouth, Belfast, Cork, Drogheda, Dublin, Galway, Limerick, Londonderry, Newry, Sligo, Waterford, and Wexford. A rent of four shillings is charged upon every hoghead, cask, chest, or case of tobacco, warehoused in every warehouse provided by the Crown: 2s. being paid immediately upon depositing the tobacco in the warehouse, and 2s. more before the tobacco is taken out for home consumption, or exportation: It may remain for six years in the warehouse without any additional charge for rent. No statement is made from the tobacco duties on account of damage; but the merchant may, if he choose, abandon the tobacco, which is to be destroyed. The allowance of duty-free tobacco for each sailor on board his Majesty's navy, and for each soldier on foreign service, is fixed at 2 lbs. per lunar month. Tobacco that has been exported, cannot be reimported, without being subject to the same duty as if it were imported for the first time. Tobacco cannot be entered for exportation in any vessel of less than 70 tons burden.—(See a full statement of the regulations in Ellis's British Tariff for 1833-34.) When tobacco is respiced for exportation, an allowance is made for shrinkage, from the seller to the buyer, of 30 lbs. per hind, on Virginia and Kentucky, and 15 lbs. per hind, on Maryland, on the landing weights; the draft of the former 8 lbs. and of the latter 4 lbs., with a tret on all sorts of 4 lbs. per 104 lbs.

Note.—The duty on Importation of American raw tobacco and stems, is in Prussia, Baden, Wurtemberg, Bavaria, Hesse-Cassel, Hesse-Carmstadt, Nassau, Saxony, Saxe-Altenburg, Hesse-Homburg, Frankfurt, Waldeck, Schaumburg-Lippe, Lippe-Detmold, in the Anti-Rhin provinces, Saxe-Weimar-Eisenach, Saxe-Meiningen-Hildburghausen, Saxe-Altenburg, Saxe-Coburg-Gotha, and the Rhine provinces, 12 1/2 per cent.; in Mecklenburg-Schwerin, and in Mecklenburg-Strelitz the duty is very trifling.—U. S. Cons. and Sid. Reg.—Am. Ed.]

TON, an English weight containing 20 cwt.

TONNAGE, in commercial navigation, the number of tons burden that a ship will carry.

The mode in which the tonnage of British ships is at present, and has hitherto been, ascertained is specified in the Registry act, 3 & 4 Will. 4. c. 55. §§ 16. & 17. (see vol. ii. p. 200.). This mode has, however, led to very inaccurate conclusions; and as most shipping charges depend on the tonnage, it has occasioned the building of ships of an improper form for the purpose of navigation, in order that, by measuring less than their real burden, they might evade a part of the duties. It, therefore, has long been felt to be desirable that some mode should be made in the plan of measuring ships. But the practical obstacles in the way of any change are much greater than is commonly supposed. The accurate estimation of the tonnage of a ship is a very difficult problem indeed; and it is indispensable that any system to be adopted in practice be not very complex; for if so, it will either be wholly inapplicable, or it will be sure to be incorrectly applied. At best, therefore, only an approximative measurement can be obtained.

(The subjoined statute, 5 & 6 Will. 4. cap. 56., which has embodied similar clauses, prescribes the rules according to which the tonnage of ships has been ascertained since the 1st of January, 1836. These rules are not so simple or easily applied as those that were previously used; but they give the tonnage of all ships, however built, with tolerable accuracy, and, consequently, take away the temptation, that till then existed, to build ships of a form suitable for the purposes of navigation, in order that, by measuring less than their true burden, the duties charged according to the tonnage might be evaded.

Repeal of Former Regulations.—The rules laid down in the act 3 & 4 Will. 4. c. 55. (see vol. ii. p. 200.) relating to the admeasurement of ships, are hereby repealed, so far as relates to the merchant ships to be hereafter registered.—§ 1.

Manner in which Tonnage of Vessels is to be ascertained.—From and after the commencement of this act the tonnage of every ship or vessel shall, previous to her being registered, be measured and ascertained while her hull is clear, and according to the following rule: viz.: divide the length of the upper deck between the sternpost of the stern and the forepart of the sternpost into 6 equal parts. Depth: at the foremast, the middle, and the aftermost of these points of division, measure in feet and decimal parts of a foot the depths from the under side of the upper deck to the ceiling at the timber strake. In case of a break in the upper deck, the depths are to be measured from a line stretched in a continuation of the deck. Breadths: divide each of those 3 depths into 5 equal parts, and measure the inside breadths at the following points; viz. at 1-5th and at 4-5ths from the upper deck of the foremast and aftermost depths, and at 2-5ths and 4-5ths from the upper deck of the middle depth. Length: at half the midship depth measure the length of the vessel from the afterpart of the stem to the forepart of the sternpost; then to twice the midship depth add the foremast and the aftermost depths for the sum of the depths; add together the upper and lower breadths at the foremast division, 3 times the upper breadths, and the lower breadths at the middle division, and the upper and twice the lower breadths at the after division, for the sum of the breadths; then multiply the sum of the depths by the sum of the breadths, and this product by the length, and divide the final product by 3,500, which will give the number of tons for register. If the vessel have a poop, or half deck, or a break in the upper deck, measure the inside mean length, breadth, and height of such part thereof as may be included within the bulk-head; multiply these 3 measurements together, and, dividing the product by 92.4, the quotient will be the number of tons to be added to the result as above found. In order to ascertain the tonnage of open vessels, the depths are to be measured from the upper edge of the upper strake.—§ 2.

Tonnage to be entered on Register.—The tonnage or burden of every ship belonging to the U. K. ascertained in the manner before directed, shall, in respect of any ship registered after the commencement of this act (except as herein excepted), be inserted in the certificate of the registry thereof, and be taken and deemed to be the tonnage or burden thereof for all the purposes of the said act.—§ 3.

Tonnage of Steam Vessels.—In each of the rules before prescribed, when applied to ascertain the tonnage of any ship or vessel propelled by steam, the tonnage due to the cubical contents of the engine room shall be deducted from the total tonnage of the vessel as determined by either of the rules aforesaid, and the remainder shall be deemed the true register tonnage of said ship or vessel. The tonnage due to the cubical contents of the engine room shall be determined in the following manner; viz.: measure the inside length of the engine room in feet and decimal parts of a foot from the foremast to the aftermost bulk-head, then multiply the said length by the depth of the ship or vessel at the middle division as aforesaid, and the product by the inside breadth at the same division at 2-5ths of the length from the deck to the ceiling as aforesaid, and divide the last product by 92.4, and the quotient shall be deemed the tonnage due to the cubical contents of the engine room.—§ 4.

Length and Contents of Engine Room to be set forth in Description of Steam Vessel.—The tonnage due to the cubical contents of the engine room, and also the length of the engine room, shall be set forth in the certificate of registry as part of the description of the ship or vessel; and any alteration of such tonnage due to the cubical contents of the engine room, or of such length of the engine room, after registry, shall be deemed to be an alteration requiring registry *de novo* within the meaning of the said act for the registration of ships or vessels.—§ 5.

Ascertaining Tonnage of Vessels when Laden.—The tonnage of all ships, whether belonging to the U. K. or otherwise, as there shall be occasion to measure while their cargoes are on board, the following rule shall be observed; viz.: measure, first, the length on the upper deck between the afterpart of the stem and the forepart of the sternpost; secondly, the inside breadth on the underside of the upper deck at the middle point of the length; and, thirdly, the depth from the underside of the upper deck down the pumpwell to the skin; multiply these 3 dimensions together, and divide the product by 130, and the quotient will be the amount of the register tonnage of such ships.—§ 6.

Amount of Register Tonnage to be carved on Main Beam.—The true amount of the register tonnage of every merchant ship or vessel belonging to the U. K., ascertained according to the rule by this act established in respect of such ships, shall be deeply carved or cut in figures of at least 3 inches in length on the main beam of every such ship or vessel, prior to her being registered.—§ 7.

Acts after Tonnage of Vessels already registered.—Nothing herein contained shall extend to alter the present measure of tonnage of any ship or vessel which registered prior to the commencement of this act, unless in cases where the owners of such ships shall require to have their tonnage established according to the rule before provided, or unless there be occasion to have such ship admeasured on account of any alteration made in the form or burden of the same, in which cases only such ships shall be re-admeasured according to the said rule, and their tonnage registered accordingly.—§ 8.

Commencement of Act.—This act shall commence and take effect upon and from the 1st day of January, 1836.—(U.)—*Sup.*

den that a ship will carry.

The tonnage of goods and stores is taken sometimes by weight, and sometimes by measurement; that method being allowed to the vessel which yields the most tonnage. In tonnage by weight, 20 cwt. make a ton. In tonnage by measurement, 40 cubic feet are equal to a ton. All carriages, or other stores measured by the tonnage, are taken in pieces and packed so as to occupy the least room. Ordnance, whether brass or iron, is taken in tonnage at its actual weight; as are musket cartridges in barrels or boxes, ammunition in boxes, &c.

TOOLS AND MACHINES. Under this designation are comprised all sorts of instruments employed to assist in the performance of any undertaking, from the rudest and simplest to the most improved and complex. But we only mention them here for the purpose of making one or two remarks on the restrictions to which the trade in them is subjected.

Importation and Exportation of Tools and Machines.—Tools and machines being instruments of production, it is obviously of the utmost importance that they should be as much improved as possible, and hence the expediency of allowing their free importation. Their exclusion, or the exclusion of the articles of which they are made, would obviously lay every branch of industry carried on in a nation less advanced than others in their manufacture, under the most serious disadvantages. And supposing the implements it employed to be superior to those of other countries when the exclusion took place, the absence of foreign competition, and of the emulation which it inspires, would most probably, in a very short time, occasion the loss of this superiority. The injury arising from the prohibition of most other articles is comparatively limited, affecting only the producers and consumers of those that are prohibited. But a prohibition of machines strikes at the root of every species of industry: it is not injurious to one, or a few branches, but to all.

The question, whether the exportation of machinery ought to be free, is not so easy of solution. It is the duty of a nation to avail itself of every fair means for its own aggrandizement; and supposing the machinery belonging to any particular people were decidedly superior to that employed by their neighbours, and that they had it in their power to preserve this advantage, their generosity would certainly out-run their sense, were they to communicate their improved machinery to others. We do not, however, believe that it is possible, whatever measures may be adopted in that view, for one country to monopolise, for any considerable period, any material improvement in machinery or the arts: and on this ground we think that the existing restraints on the exportation of machinery had better be abolished. Drawings and models of all sorts of machines used in Manchester, Glasgow, and Birmingham, are to be found in most parts of the Continent; and at Rouen, Paris, &c., numbers of the best English workmen are employed in the manufacture of prohibited machines. Now, it does certainly appear not a little preposterous to prevent the exportation of a machine, at the same time that we allow (it could not, indeed be prevented) the free egress of the workmen by whom it is made! The effect of this absurd policy is, not to secure a monopoly of improved machines for the manufactures of England, but to occasion the emigration of English artisans to the Continent, and the establishment there of machine manufactories under their superintendance. The prejudice that must arise from this state of things to the interests of England, is too obvious to require being pointed out. It is plain, therefore, that the exportation of all sorts of machinery, on payment of a moderate duty, ought to be allowed. A policy of this sort would afford much more efficient protection to our manufacturers than they enjoy at present; at the same time that it would tend to keep our artisans at home, and make England the grand seat of the tool as well as of the cotton manufacture.

For an account of the restrictions on the exportation of machinery from Great Britain, see *anté*, vol. ii. p. 16.

Account of the Value of the Machinery exported from Great Britain, during the Six Years ending with 1830.—(*Parl. Paper*, No. 373. Sess. 1830.)

TOPAZ (Ger. *Topas*; Fr. *Topase*; It. *Topazio*; Sp. *Topacio*; Rus. *Topas*). The name Topaz has been restricted by M. Haüy to the stones called by mineralogists Occidental ruby, topaz, and sapphire; which, agreeing in their crystallisation and most of their properties, were arranged under one species by M. Romé de Lisle. The word topaz, derived from an island in the Red Sea, where the ancients used to find topazes, was applied by them to a mineral very different from ours. One variety of our topaz they denominated Chrysolite. Colour, wine yellow. From pale wine yellow it passes into yellowish white, greenish white, mountain green, sky blue: from deep wine yellow into flesh red and crimson red. Specific gravity from 3.464 to 3.641.—(*Thomson's Chemistry*.)

False Topaz.—In speaking of the topaz, a gem of a beautiful yellow colour is always understood; this is the yellow of different degrees of intensity; and the fuller and deeper the tinge, the more the gem is esteemed. In hardness it yields to the spinelle.

There are few gems more universal favourites than the yellow topaz, when perfect: the rich gem tones of its colour, the vivacity of its lustre (which it retains even by the side of the diamond), and its large size, compared with many others, are characters which deservedly entitle it to distinction; it bears accordingly a high price when of good quality.

It is chiefly employed for necklaces, ear-drops, bracelets, &c. in suit. No little skill and taste are required in cutting and duly proportioning this gem; the table should be perfectly symmetrical, and not too large, the bezel of sufficient depth, and the collet aide should be formed in delicate steps. It cuts easily on the mill, and the lapidaries are in general tolerably well acquainted with it; yet it is uncommon to meet with one well cut.

The yellow topaz varies in price according to its beauty and perfection. A superlatively fine one, perfect in colour and workmanship, sufficiently large for an ornament, or any other ornament, and weighing nearly 80 carats, was sold for 100*l*.

Topazes have become more common since our intercourse with Brazil; consequently they are less in demand, and lower in price. A fine stone of 80 carats may be purchased at from 20*l*. to 35*l*.; and smaller, calculated for ring stones, at from 2*l*. to 5*l*.; but it is not usual to sell them by weight.

Pink Topaz.—This is made from the yellow, which, when of intense colour, is put into the bowl of a tobacco pipe or small crucible, covered with ashes or sand; on the application of a low degree of heat, it changes its colour from a yellow to a beautiful pink. This is performed with little hazard; and if the colour produced happens to be fine, the price is much augmented.

Red Topaz.—This beautiful gem, which very seldom occurs naturally, is of a fine crimson colour, tinged with a rich brown; it is extremely rare, and generally taken to be a variety of ruby, for which I have seen it offered for sale. Its price, from its scarcity, is quite capricious; it has an exquisite pleasing colour, very different from the glare of the artificial pink topaz.

Blue Topaz.—is also a beautiful gem, of a fine celestial blue colour. It has occurred of considerable magnitude; the finest specimen known, I brought in the rough from Brazil; when cut and polished, it weighed about 1*1*/₂ oz. Smaller specimens are not uncommon, and, when light-coloured, are often seen for aqua-marinas, from which they may always be distinguished by their greater weight and hardness, &c.

White Topaz.—is familiarly called *Minas Nova*. It is a beautiful pellucid gem, and is used for bracelets, necklaces, &c. It possesses greater brilliancy than crystal, and, from its hardness, has been used to cover pistols, &c., and in form doublets.—(*Musee on Diamonds*, &c. 2d ed. p. 108—112.)

TORTOISESHELL. (Fr. *Ecaille de Tortue*; It. *Scaglia de Tartaruga*; Ger. *Schildpad*; Malay. *Sirik Iurakura*), the brown and yellow scales of the *Testudo imbricata*, or tortoise, a native of the tropical seas. It is extensively used in the manufacture of combs, snuff-boxes, &c., and in inlaying and other ornamental work. The best tortoiseshell is that of the Indian Archipelago; and the finest of this quarter is obtained on the shores of the Spice Islands and New Guinea. When the finest West Indian tortoiseshell is worth, in the London market, 46*s*., the finest East Indian is worth 60*s*. per lb. Under the latter name, however, a great deal of inferior shell is imported, brought from various parts of the East Indies. The goodness of tortoiseshell depends mainly on the thickness and size of the scales, and in a smaller degree on the clearness and brilliancy of the colours. Before the opening of the British intercourse with India, the greater part of the tortoiseshell which eventually found its way to Europe, was first carried to Canton, which then formed the principal mart for the commodity. It is still an article of trade from that city; the value of the tortoiseshell exported by British ships, in 1831 and 1832, having amounted to 19,017 dollars. At present, however, Singapore is the chief mart, the exports from it in 1831 and 1832 having amounted at an average to 208 piculs. The price at Singapore varies from 750 and 900 to from 1,000 to 1,600 dollars per picul, according to quality.—(*Craufurd's Indian Archipelago*; *Singapore Chronicle*; *Canton Register*.)

The imports of tortoiseshell into Great Britain from all places eastward of the Cape of Good Hope, except China, were, in 1830, 32,180 lbs.; in 1831, 30,902; and in 1832, 39,004.—(*Parl. Paper*, No. 425. Sess. 1833.) The duty, which is 2*s*. per lb. on the shells imported from foreign countries, and 1*s*. per lb. on those imported from a British possession, produced, in 1832, 438*l*. 1*s*. 7*d*. n.t.

TOYS (Ger. *Spielzeug*, *Speilsachen*; Du. *Speelgoed*; Fr. *Jouets*, *Bimbolots*; It. *Trastulli*; Sp. *Dijas*, *Juguetes de ninos*; Rus. *Igrushki*), include every trifling article made expressly for the amusement of children. How frivolous soever these articles may appear in the estimation of superficial observers, their manufacture employs hundreds of hands, and gives bread to many families in London, Birmingham, &c. The greatness of the demand for them may be inferred, from the fact, that a manufacturer of glass beads, and articles of that description, has received a single order for 500*l*. worth of dolls' eyes.—(*Fourth Report, Artisans and Machinery*, p. 314.) Considerable quantities are also imported from Holland; which supplies us with several sorts of wooden toys on more reasonable terms than we can afford to produce them. But of late years, these have been made in greater abundance in England than formerly. The duty on toys, which is an *ad valorem* one of 20 per cent., produced, in 1832, 3,469*l*. 1*s*. 7*d*., showing that the value of the toys imported for home use amounted to 17,345*l*.

TRAGACANTH, a species of gum, the produce of the *Astragalus Tragacantha*, a thorny shrub growing in Persia, Crete, and the islands of the Levant. It exudes about the end of June from the stem and larger branches, and soon dries in the sun. It is inodorous; impressing a very slightly bitter taste as it softens in the mouth. It has a whitish colour; is semitransparent; and in very thin, wrinkled, vermiform pieces; it is brittle, but not easily pulverised, except in frosty weather, or in a warmed mortar. It should be chosen in long twisted pieces, white, very clear, and free from all other colours; the brown, and particula-

sometimes by measurement; in tonnage by weight, 30 to a ton. All cartridges, or as to occupy the least room, as are musket cartridges in

The entries of tragacanth for home consumption in 1831 and 1832, were at the rate of 45,836 lbs. a year. In March, 1834, tragacanth sold in the London market at from 11s. 10s. to 16s. per cwt., duty (6s.) included.

TREATIES (COMMERCIAL). By a commercial treaty is meant a treaty between two independent nations, for facilitating, and most commonly, also, regulating, the commerce carried on between them.

Origin, Objects, and Policy of modern Commercial Treaties.—During the middle ages, and down, indeed, to a comparatively recent period, foreigners resident in a country, whether for commercial or other purposes, were, for the most part, subject to very harsh treatment. At one time, it was usual in England to make aliens liable for the debts and crimes of each other; and the practice, formerly so common, of laying heavier duties on the goods imported and exported by aliens than by British subjects, is not even yet, we grieve to say, altogether abandoned. In France, and some other countries, during the 14th and 15th centuries, a stranger was incapable of bequeathing property by will; and the whole of his personal as well as real estate fell, at his death, to the king or the lord of the barony. This barbarous law was known by the name of *Droit d'Aubaine*, and was not completely abolished in France till a very late period.—(*Robertson's Charles V.* vol. i. note 29.) Previously to last century, the laws with respect to shipwreck, though infinitely more humane than they had been at a more remote period, were calculated rather to promote the interests of the sovereign of the country, or the feudal lords on whose territories shipwrecked vessels might be thrown, than those of the unfortunate owners or survivors.—(See *ВНЕСЕК*.) The most serious obstacles were then, also, opposed, by the prevalent insecurity, and the arbitrary nature of the tolls which the lords were in the habit of exacting, to the transit of commodities through the territories of one state to those of another.

Under such circumstances, it became of much importance for commercial states to endeavour to obtain, by means of treaties, that protection and security for the persons and properties of their subjects, when abroad, against unjust treatment and vexatious exactions, which they could not have obtained from the laws of the countries in which they might happen to reside. Thus, it was stipulated by Edward II., in 1325, that the merchants and mariners of Venice should have power to come to England for 10 years, with liberty to sell their merchandises and to return home in safety, "without having either their persons or goods stopped on account of other people's crimes or debts."—(*Anderson*, anno 1325.) The commercial treaties negotiated during the 15th, 16th, and 17th centuries, are full of similar conditions; and there can be no doubt that, by providing for the security of merchants and seamen when abroad, and suspending, with respect to them, the barbarous laws and practices then in force, they contributed materially to accelerate the progress of commerce and civilisation.

Commercial treaties were also negotiated at a very early period for the regulation of neutral commerce during war; and for defining the articles that should be deemed contraband, or which it should not be lawful for neutral ships to convey or carry to either belligerent. These are obviously points that can only be decided by express stipulations.†

Instead, however, of confining commercial treaties to their legitimate and proper purposes—the security of merchants and navigators, and the facility of commercial transactions—they very soon began to be employed as engines for promoting the commerce of one country at the expense of another. For more than 2 centuries, those engaged in framing commercial treaties have principally applied themselves to secure, either by force or address, some exclusive advantage in favour of the ships and products of their particular countries. Hence these compacts are full of regulations as to the duties to be charged on certain articles, and the privileges to be enjoyed by certain ships, according as they were either produced by or belonged to particular countries. It was in the adjustment of these duties and regulations that the skill of the negotiator was chiefly put to the test. It was expected that he should be thoroughly acquainted with the state of every branch of industry, both in his own country, and in the country with which he was negotiating; and he was to endeavour so to adjust the tariff of duties that those branches in which his own country was deficient might be benefited, and those in which the other was superior might be depressed! The idea of conducting a negotiation of this sort on a fair principle of reciprocity is of very late origin; success in circumventing, in over-reaching, or in extorting from fear or ignorance some oppressive, but at the same time worthless privilege, was long esteemed the only proof of superior talent in negotiators.

* The practice of confiscating shipwrecked property continued in France till 1681, when it was abolished by an edict of Louis XIV. It was at one time common in Germany, to use the words of M. Bouchaud, "pour les prédicateurs de prier Dieu en chaire, qu'il se fasse bien des naufrages sur leurs côtes!"—(*Théorie des Traités de Commerce*, p. 118.) And the fact that the celebrated jurist Thomasius wrote a dissertation in defence of such prayers, affords, if possible, a still more striking proof of the spirit of the period.

† There is a good collection of treaties as to this point, in the Appendix to the excellent work of Lamprei, *Del Commercio de' Popoli Neutrali*.—(See *CONTRABAND*.)

In an able tract, attributed to Mr. Eden, afterwards Lord Auckland, published in 1787 (*Historical and Political Remarks on the Tariff of the French Treaty*), there is the following outline of the qualifications necessary in the negotiator of a commercial treaty:—
 "Besides a general knowledge of the trade and reciprocal interests of the contracting parties, he ought to be precisely acquainted with their several kinds of industry and skill; to discover their wants, to calculate their resources, and to weigh with nicety the state of their finances, and the proportionate interest of their money: nay, further, he should be able to ascertain the comparative population and strength of each country, together with the price and quality both of first materials, and also of the labour bestowed upon them: for this purpose he should inquire into the operations of every class of merchants and manufacturers concerned in the trade; should consult their expectations on each of its several branches; and collect their hopes and fears on the effect of such commercial revolution, on the competition of rival nations. A good treaty of commerce, independent of the art of negotiation, is pronounced, by one who well knew the extent and difficulty of the subject, to be a 'masterpiece of skill.'"—(p. 10.)

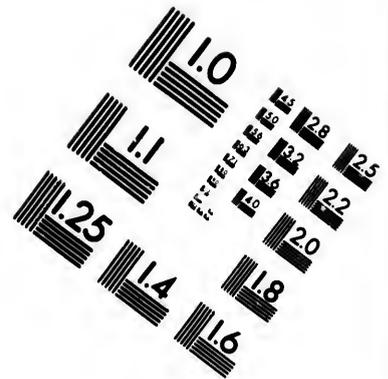

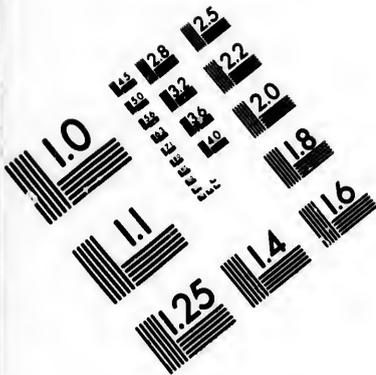

Had Mr. Eden concluded by stating, that no individual, or number of individuals, ever possessed, or ever would possess, the various qualifications which in his estimation were required in negotiating a "good commercial treaty," he would only have affirmed what is most certainly true. We believe, however, that he had formed a too false estimate, not only of the qualifications of a negotiator, but of the objects he ought to have in view. It was the opinion of the Abbé Mably—(*Droit Public de l'Europe*, p. 561.)—an opinion in which we are disposed, with very little modification, to concur, that when a few general rules are agreed upon for the effectual security of trade and navigation, including the importation and exportation of all commodities not prohibited by law; the speedy adjustment of disputes; the regulations of pilotage, harbour, and light-house duties; the protection of the property and effects of merchants in the event of a rupture, &c.; all is done that ought to be attempted in a commercial treaty. It may, indeed, be properly stipulated that the goods of the contracting powers shall be admitted into each other's ports on the same terms as "those of the most favoured nations,"—that is, that no higher duties shall be charged upon them than on those of others. But here stipulations ought to cease. It is an abuse and a perversion of commercial treaties, to make them instruments for regulating duties or proscribing Custom-house regulations.

We admit, indeed, that occasions may occur, in which it may be expedient to stipulate for a reduction of duties or an abolition of prohibitions on the one side, in return for similar concessions on the other. But all arrangements of this sort ought to be determined by a convention limited to that particular object; and a fixed and not very distant term should be specified, when the obligation in the convention should expire, and both parties be at liberty to continue or abandon the regulations agreed upon. Generally speaking, all treaties which determine what the duties on importation or exportation shall be, or which stipulate for preferences, are radically objectionable. Nations ought to regulate their tariffs in whatever mode they judge best for the promotion of their own interests, without being shackled by engagements with others.* If foreign powers be all treated alike, none of them has just grounds of complaint; and it can never be for the interest of any people to show preferences to one over another. Those, for example, by whom we may be most advantageously supplied with foreign products, require no preferences; and if we exclude them, or give a preference to others, we incontestably injure ourselves: and yet 19 out of 20 of the regulations as to duties in commercial treaties have been founded on this preposterous principle. They have been employed to divert trade into channels, where it would not naturally flow; that is, to render it less secure and less profitable than it would otherwise have been.

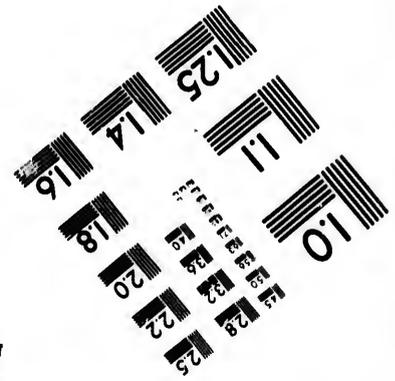

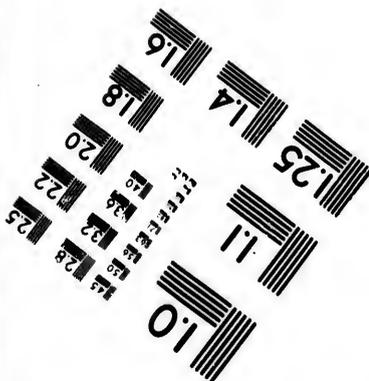

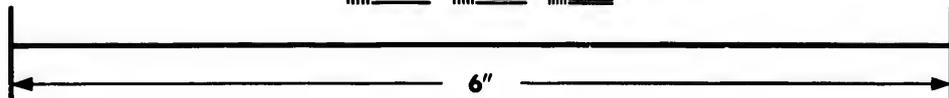

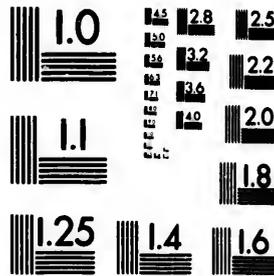

A great deal of stress has usually been laid upon the advantages supposed to be derived from the privileges sometimes conceded in commercial treaties. But we believe that those who inquire into the subject will find that such concessions have, in every case, been not only injurious to the party making them, but also to the party in whose favour they have been made. The famous commercial treaty with Portugal, negotiated by Mr. Methuen in 1703, was almost universally regarded, for a very long period, as admirably calculated to promote the interests of this country; but it is now generally admitted, by every one who has reflected upon such subjects, that few transactions have taken place by which these interests have been more deeply injured. It stipulated for the free admission of British woollens into Portugal, from which they happened, at the time, to be excluded; but in return for this concession—a concession far more advantageous to the Portuguese than to us—we bound ourselves "for ever hereafter" to admit wines of growth of Portugal into Great Britain at $\frac{3}{4}$ of the duty payable on the wines of France! Thus, in order to open an access for our woollens to the limited market of Portugal, we consented, in all time to come, to drink inferior wine, bought at a comparatively high price!—(See WINE.) This, however, was not all: by excluding one of the principal equivalents the French had to offer for our com-

* This principle is laid down as fundamental by a very high authority, Sir Henry Parnell, in his tract *Sur les Avantages des Relations Commerciales entre la France et l'Angleterre*.

modities, we necessarily lessened their ability to deal with us; at the same time that we provoked them to adopt retaliatory measures against our trade. It is owing more to the stipulations in the Methuen treaty than to any thing else, that the trade between England and France—a trade that would naturally be of vast extent and importance—is confined within the narrowest limits; and is hardly, indeed, of as much consequence as the trade with Sweden and Norway.—(See *ante*, p. 644.)

It is visionary to imagine that any nation will ever continue to grant to another any exclusive advantage in her markets, unless she obtain what she reckons an equivalent advantage in the markets of the other. And if a commercial treaty stipulating for an exclusive privilege be really and *bonâ fide* observed by the country granting the privilege, we may be sure that the concessions made by the country in whose favour it is granted are sufficient fully to countervail it. Those who grasp at exclusive privileges in matters of this sort, or who attempt to extort valuable concessions from the weakness or ignorance of their neighbours, are uniformly defeated in their object. All really beneficial commercial transactions are bottomed on a fair principle of reciprocity; and that nation will always flourish most, and have the foundations of her prosperity best secured, who is a universal merchant, and deals with all the world on the same fair and liberal principles.

The justness of these principles, we are glad to observe, is now beginning to be very generally admitted. Stipulations as to duties and Custom-house regulations are disappearing from commercial treaties; and it is to be hoped that, at no distant period, every trace of them may have vanished.

A good work on the principles, style, and history of commercial treaties is a desideratum. The best we have seen are *Mancovius De Fœderibus Commercialibus*, 4to. Lipsie, 1735.; and Bouchaud, *Théorie des Traités de Commerce*, 12mo. Paris, 1777. But these are principally works of erudition, and were written before the sound principles of commercial policy had been unfolded. There is no good collection of treaties in the English language; but Mr. Hertlet's work is valuable, as containing the recent treaties in an accessible form. A work containing new treaties and state papers is annually compiled at the Foreign Office; it used to be distributed to a few official persons only, but it is now sold to the public.

We subjoin copies of some of the commercial treaties and conventions existing at this moment between Great Britain and other powers.

AUSTRIA.

Convention of Commerce and Navigation between His Britannic Majesty and the Emperor of Austria, signed at London, December 31, 1830.

Article 1. From the 1st day of February, 1830, Austrian vessels entering or departing from the ports of the United Kingdom of Great Britain and Ireland, and British vessels entering or departing from the ports of his Imperial and Royal Apostolic Majesty's dominions, shall not be subject to any other or higher duties or charges whatever than are or shall be levied on national vessels entering or departing from such ports respectively.

2. All articles of the growth, produce, or manufacture of any of the dominions of either of the high contracting parties, which are or shall be permitted to be imported into or exported from the ports of the United Kingdom and of Austria, respectively, in vessels of the one country, shall, in like manner, be permitted to be imported into and exported from those ports in vessels of the other.

3. All articles not of the growth, produce, or manufacture of the dominions of his Britannic Majesty, which can legally be imported from the United Kingdom of Great Britain and Ireland into the ports of Austria, in British ships, shall be subject only to the same duties as are payable upon the like articles if imported in Austrian ships; and the same reciprocity shall be observed in the ports of the United Kingdom, in respect to all articles not the growth, produce, or manufacture of the dominions of his Imperial and Royal Apostolic Majesty, which can legally be imported into the ports of the United Kingdom in Austrian ships.

4. All goods which can legally be imported into the ports of either country shall be admitted at the same rate of duty, whether imported in vessels of the other country or in national vessels; and all goods which can be legally exported from the ports of either country shall be entitled to the same bounties, drawbacks, and allowances, whether exported in vessels of the other country or in national vessels.

5. No priority or preference shall be given, directly or indirectly, by the government of either country, or by any company, corporation, or agent, acting in its behalf, or under its authority, in the purchase of any article the growth, produce, or manufacture of either country, imported into the other, on account of or in reference to the national character of the vessel in which such article may be imported; it being the true intent and meaning of the high contracting parties, that no distinction or difference whatever shall be made in this respect.

6. In respect to the commerce to be carried on in Austrian vessels with the British dominions in the East Indies, or now held by the East India Company in virtue of their charter, his Britannic Majesty consents to grant the same facilities and privileges, in all respects, to the subjects of his Imperial and Royal Apostolic Majesty, as are or may be enjoyed under any treaty or act of parliament by the subjects or citizens of the most favoured nation; subject to the laws and regulations which are, or may be, applicable to the ships and subjects of any other foreign country enjoying the like facilities and privileges of trading with the said dominions.

7. All the possessions of his Britannic Majesty in Europe, except the British possessions in the Mediterranean Sea, shall, for all the purposes of this convention, be considered as forming part of the United Kingdom of Great Britain and Ireland.

8. That clause of article 7. of the convention concluded at Paris on the 5th of November, 1815, between the courts of Great Britain, Austria, Prussia, and Russia, which relates to the commerce between the dominions of his Imperial and Royal Apostolic Majesty and the United States of the Ionian Islands, is hereby confirmed.

9. The present convention shall be in force until the 18th day of March, 1836; and further, until the end of twelve months after either of the high contracting parties shall have given notice to the other of its intention to terminate the same; each of the high contracting parties reserving to itself the right of giving such notice to the other, on or at any time after the said 18th day of March, 1836; and it is hereby agreed between them, that, at the expiration of 12 months after such notice shall

ESTERHARY.

British ships may import from the dominions of his Majesty the Emperor of Austria into any of the British possessions abroad, goods the produce of such dominions, and export goods from such British possessions abroad, to be carried to any foreign country whatever.—(*Order in Council*, April 7, 1831.)

DENMARK.

Convention of Commerce between Great Britain and Denmark, signed at London, the 16th of June, 1824.

Article 1. From and after the 1st day of July next, Danish vessels entering or departing from the ports of the United Kingdom of Great Britain and Ireland, and British vessels entering or departing from the ports of his Danish Majesty's dominions, shall not be subject to any other or higher duties or charges whatever, than are or shall be levied on national vessels entering or departing from such ports respectively.

1. All articles of the growth, produce, or manufacture of any of the dominions of either of the high contracting parties, which are or shall be permitted to be imported into or exported from the ports of the United Kingdom and of Denmark respectively, in vessels of the one country, shall, in like manner, be imported into and exported from those ports in vessels of the other.

2. All articles not of the growth, produce, or manufacture of the dominions of his Britannic Majesty, which can legally be imported from the United Kingdom of Great Britain and Ireland into the ports and dominions of the King of Denmark, in British ships, shall be subject only to the same duties as are payable upon the like articles if imported in Danish ships; and the same reciprocity shall be observed with regard to Danish vessels in the ports of the said United Kingdom of Great Britain and Ireland, in respect to all articles not the growth, produce, or manufacture of the dominions of his Danish Majesty, which can legally be imported into the ports of the United Kingdom in British ships.

3. All goods which can legally be imported into the ports of either country, shall be admitted at the same rate of duty, whether imported in vessels of the other country, or in national vessels; and all goods which can be legally exported from the ports of either country, shall be entitled to the same bounties, drawbacks, and allowances, whether exported in vessels of the other country, or in national vessels.

4. No priority or preference shall be given, directly or indirectly, by the government of either country, or by any company, corporation, or agent, acting on its behalf, or under its authority, in the purchase of any article the growth, produce, or manufacture of either country imported into the other, on account of or in reference to the character of the vessel in which such article was imported; it being the true intent and meaning of the high contracting parties, that no distinction or difference whatever shall be made in this respect.

5. The high contracting parties having mutually determined not to include, in the present convention, their respective colonies, in which are comprehended, on the part of Denmark, Greenland, Iceland, and the islands of Ferroe; it is expressly agreed that the intercourse which may at present legally be carried on by the subjects or ships of either of the said high contracting parties with the colonies of the other, shall remain upon the same footing as if this convention had never been concluded.

6. The present convention shall be in force for the term of 10 years from the date hereof; and further, until the end of 12 months after either of the high contracting parties shall have given notice to the other of its intention to terminate the same; each of the high contracting parties reserving to itself the right of giving such notice to the other, at the end of the said term of 10 years; and it is hereby agreed between them, that, at the expiration of 12 months after such notice shall have been received by either party from the other, this convention, and all the provisions thereof, shall altogether cease and determine.

7. The present convention shall be ratified, and the ratifications shall be exchanged at London, within 1 month from the date hereof, or sooner if possible.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, the 16th of June, 1824.

GEORGE CANNING.
W. HUSKISSON.
C. E. MOLTKE.

Separate Article.

The high contracting parties reserve to themselves to enter upon additional stipulations for the purpose of facilitating and extending, even beyond what is comprehended in the convention of this date, the commercial regulations of their respective subjects and dominions, upon the principles either of reciprocal or equivalent advantages, as the case may be. And in the event of any articles or article being concluded between the said high contracting parties, for giving effect to such stipulations, it is hereby agreed, that the article or articles which may hereafter be so concluded shall be considered as forming part of the aforesaid convention.

Additional Article.

Their Britannic and Danish Majesties mutually agree, that no higher or other duties shall be levied in either of their dominions (their respective colonies being excepted from the convention of this date), upon any personal property of their respective subjects, on the removal of same from the dominions of their said Majesties reciprocally, either upon the inheritance of such property, or otherwise, than are or shall be payable in each state, upon the like property, when removed by a subject of such state, respectively.

FRANCE.

Convention of Commerce between His Britannic Majesty and the Most Christian King, together with two additional Articles thereto annexed, signed at London, January 20, 1820.

Article 1. French vessels coming from or departing for the ports of France, or, if in ballast, coming from or departing for any place, shall not be subject, in the ports of the United Kingdom, either on arriving in or departing from the same, to any higher duties of tonnage, harbour, light-house, pilotage, quarantine, or other similar or corresponding duties, of whatever nature, or under whatever denomination, than those to which British vessels, in respect of the same voyages, are or may be subject, on entering into or departing from such ports; and, reciprocally, from and after the same period, British vessels coming from or departing for the ports of the United Kingdom, or, if in ballast,

coming from or departing for any place, shall not be subject, in the ports of France, either in entering into or departing from the same, to any higher duties of tonnage, harbour, light-house, pilotage, quarantine, or other similar or corresponding duties, of whatever nature, or under whatever denomination, than those to which French vessels, in respect of the same voyages, are or may be subject, on entering into or departing from such ports; whether such duties are collected separately, or are consolidated in one and the same duty:—his Most Christian Majesty reserving to himself to regulate the amount of such duty or duties in France, according to the rate at which they are or may be established in the United Kingdom; at the same time, with a view of diminishing the burdens imposed upon the navigation of the two countries, his Most Christian Majesty will always be disposed to reduce the amount of the said burdens in France, in proportion to any reduction which may hereafter be made of those now levied in the ports of the United Kingdom.

3. Goods which can or may be legally imported into the ports of the United Kingdom, from the ports of France, if so imported in French vessels, shall be subject to no higher duties than if imported in British vessels; and, reciprocally, goods which can or may be legally imported into the ports of France, from the ports of the United Kingdom, if so imported in British vessels, shall be subject to no higher duties than if imported in French vessels. The produce of Asia, Africa, and America, not being allowed to be imported from the said countries, nor from any other, in French vessels, nor from France in French, British, or any other vessels, into the ports of the United Kingdom, for home consumption, but only for warehousing and re-exportation, his Most Christian Majesty reserves to himself to direct that, in like manner, the produce of Asia, Africa, and America, shall not be imported from the said countries, nor from any other, in British vessels, nor from the United Kingdom in British, French, or any other vessels, into the ports of France, for the consumption of that kingdom, but only for warehousing and re-exportation.

With regard to the productions of the countries of Europe, it is understood between the high contracting parties, that such productions shall not be imported, in British ships, into France, for the consumption of that kingdom, unless such ships shall have been laden therewith in some port of the United Kingdom; and that his Britannic Majesty may adopt, if he shall think fit, some corresponding restrictive measure, with regard to the productions of the countries of Europe imported into the ports of the United Kingdom in French vessels: the high contracting parties reserving, however, to themselves the power of making, by mutual consent, such relaxations in the strict execution of the present article, as they may think useful to the respective interests of the 2 countries, upon the principle of mutual concessions, affording each to the other reciprocal or equivalent advantages.

3. All goods which can or may be legally exported from the ports of either of the 2 countries, shall, on their export, pay the same duties of exportation, whether the exportation of such goods be made in British or in French vessels, provided the said vessels proceed, respectively, direct from the ports of the one country to those of the other. And all the said goods so exported in British or French vessels, shall be reciprocally entitled to the same bounties, drawbacks, and other allowances of the same nature, which are granted by the regulations of each country, respectively.

4. It is mutually agreed between the high contracting parties, that in the intercourse of navigation between their 2 countries, the vessels of any third power shall, in no case, obtain more favourable conditions than those stipulated, in the present convention, in favour of British and French vessels.

5. The fishing-boats of either of the 2 countries, which may be forced by stress of weather to seek shelter in the ports, or on the coast of the other country, shall not be subject to any duties or port charges of any description whatsoever; provided the said boats, when so driven in by stress of weather, shall not discharge or receive on board any cargo, or portion of cargo, in the ports, or on the parts of the coast where they shall have sought shelter.

6. It is agreed that the provisions of the present convention between the high contracting parties shall be reciprocally extended and in force, in all the possessions subject to their respective dominions in Europe.

7. The present convention shall be in force for the term of 10 years, from the 5th of April of the present year; and further, until the end of 12 months after either of the high contracting parties shall have given notice to the other of its intention to terminate its operation; each of the high contracting parties reserving to itself the right of giving such notice to the other, at the end of the said term of 10 years; and it is agreed between them that, at the expiration of the 12 months' extension agreed to on both sides, this convention, and all the stipulations thereof, shall altogether cease and determine.

8. The present convention shall be ratified, and the ratifications shall be exchanged in London, within the space of 1 month, or sooner if possible.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, the 26th day of January, in the year of our Lord 1826.

GEORGE CANNING,
WILLIAM HOBHOUSE.

LE FRANCE DE POLIGNAC.

Additional Articles.

Article 1. French vessels shall be allowed to sail from any port of the United Kingdom under the dominion of his Most Christian Majesty, to all the colonies of the United Kingdom (except those possessed by the East India Company), and to import into the said colonies all kinds of merchandise (being productions the growth or manufacture of France, or of any country under the dominion of France), with the exception of such as are prohibited to be imported into the said colonies, or are permitted to be imported only from countries under the British dominion; and the said French vessels, as well as the merchandise imported in the same, shall not be subject, in the colonies of the United Kingdom, to other or higher duties than those to which British vessels may be subject, on importing the same merchandise from any foreign country, or which are imposed upon the merchandise itself.

The same facilities shall be granted, reciprocally, in the colonies of France with regard to the importation, in British vessels, of all kinds of merchandise, (being productions the growth and manufacture of the United Kingdom, or any country under the British dominion,) with the exception of such as are prohibited to be imported into the said colonies, or are permitted to be imported only from countries under the dominion of France. And whereas all goods, the produce of any foreign country, may now be imported into the colonies of the United Kingdom, in the ships of that country, with the exception of a limited list of specified articles, which can only be imported into the said colonies in British ships, his Majesty the King of the United Kingdom reserves to himself the power of adding to the said list of excepted articles any other, the produce of the French dominions, the addition whereof may appear to his Majesty to be necessary for placing the commerce and navigation to be permitted to the subjects of each of the high contracting parties with the colonies of the other, upon a footing of full reciprocity.

3. French vessels shall be allowed to export from all the colonies of the United Kingdom (except those possessed by the East India Company), all kinds of merchandise which are not prohibited to be exported from such colonies in vessels other than those of Great Britain; and the said vessels, as well as the merchandise exported in the same, shall not be subject to other or higher duties than those to

The same facilities and privileges shall be granted, reciprocally, in all the colonies of France, for the exportation, in British vessels, of all kinds of merchandise, which are not prohibited to be exported from such colonies in vessels other than those of France.

These 3 additional articles shall have the same force and validity as if they were inserted, word for word, in the convention signed this day. They shall be ratified, and the ratifications shall be exchanged at the same time.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, Jan. 26, 1826.

GEORGE CANNING.

WILLIAM HUSKISSON.

LE PRINCE DE POLIGNAC.

A Treasury letter, dated 28th of March, 1826, directs that French vessels, and their cargoes legally imported or exported on board the same, according to the terms of the convention in the preceding pages, are, from the 6th of April, 1826, to be charged with such and the like duties only, of whatever kind they may be, that are charged on British vessels, and similar cargoes laden on board thereof; and in like manner the same bounties, drawbacks, and allowances are to be paid on articles exported in French vessels, that are paid, granted, or allowed on similar articles exported in British vessels. The necessary instructions are to be transmitted to the officers in the colonies for carrying into effect the stipulations contained in the 3 additional articles of the said convention, respecting French vessels and their cargoes, from the 1st of October, 1826.

HANSE TOWNS.

Convention of Commerce between His Britannic Majesty and the Free Hanseatic Republics of Lubeck, Bremen, and Hamburg, signed at London, Sept. 29, 1825.

Article 1. From and after the date hereof, British vessels entering or departing from the ports of the free Hanseatic republics of Lubeck, Bremen, or Hamburg; and Lubeck, Bremen, or Hamburg vessels entering or departing from the ports of the United Kingdom of Great Britain and Ireland; shall not be subject to any other or higher ship duties or charges than are or shall be levied on national vessels entering or departing from such ports respectively.

1. All goods, whether the production of the territories of the free Hanseatic republics of Lubeck, Bremen, or Hamburg, or of any other country, which may be legally imported from any of the ports of the said republics into the United Kingdom of Great Britain and Ireland in British vessels, shall, in the manner, be permitted to be imported in Lubeck, Bremen, or Hamburg vessels; and all goods, whether the production of any of the dominions of His Britannic Majesty, or of any other country, which may be legally exported from the ports of the United Kingdom in British vessels, shall in like manner, be permitted to be exported from the said ports, in Lubeck, Bremen, or Hamburg vessels. And all goods, which may be legally imported into or exported from the ports of Lubeck, Bremen, or Hamburg, in national vessels, shall, in like manner, be permitted to be imported into or exported from the ports of Lubeck, Bremen, or Hamburg, in British vessels.

2. All goods which can be legally imported into the ports of the United Kingdom directly from the ports of Lubeck, Bremen, or Hamburg, or either of them, shall be admitted at the same rate of duty, whether imported in British vessels, or in vessels belonging to either of the said republics; and all goods which can be legally exported from the United Kingdom, shall be entitled to the same bounties, drawbacks, and allowances, whether exported in British or Hanseatic vessels. And the like reciprocity shall be observed, in the ports of the said republics, in respect to all goods which can be legally imported into or exported from any or either of the said ports in vessels belonging to the United Kingdom.

3. No priority or preference shall be given, directly or indirectly, by any or either of the contracting parties, nor by any company, corporation, or agent, acting on their behalf or under their authority, in the purchase of any article, the growth, produce, or manufacture of their states respectively, imported into the other, on account of or in reference to the character of the vessel in which such article was imported; it being the true intent and meaning of the high contracting parties that no distinction or difference whatever shall be made in this respect.

4. In consideration of the limited extent of the territories belonging to the republics of Lubeck, Bremen, and Hamburg, and the intimate connection of trade and navigation subsisting between these republics, it is hereby stipulated and agreed, that any vessel which shall have been built in any or either of the ports of the said republics, and which shall be owned exclusively by a citizen or citizens of any or either of them, and of which the master shall also be a citizen of either of them, and provided 3-4ths of the crew shall be subjects or citizens of any or either of the said republics, or of any or either of the states comprised in the Germanic Confederation, such vessel, so built, owned, and navigated, shall, for all the purposes of this convention, be taken to be and be considered as a vessel belonging to Lubeck, Bremen, or Hamburg.

5. Any vessel, together with her cargo, belonging to either of the three free Hanseatic republics of Lubeck, Bremen, or Hamburg, and coming from either of the said ports to the United Kingdom, shall, for all the purposes of this convention, be deemed to come from the country to which such vessel belongs; and any British vessel and her cargo trading to the ports of Lubeck, Bremen, or Hamburg, directly or in succession, shall, for the like purposes, be on the footing of a Hanseatic vessel and her cargo making the same voyage.

6. It is further mutually agreed, that no higher or other duties shall be levied, in any or either of the states of the high contracting parties, upon any personal property of the subjects and citizens of each respectively, on the removal of the same from the dominions or territory of such state, (either upon inheritance of such property, or otherwise), than are or shall be payable, in each state, upon the like property when removed by a subject or citizen of such state respectively.

7. The high contracting parties reserve to themselves to enter upon additional stipulations for the purpose of facilitating and extending, even beyond what is comprehended in the convention of this date, the commercial relations of their respective subjects and dominions, citizens and territories, upon the principle either of reciprocal or equivalent advantages, as the case may be; and, in the event of any article or articles being concluded between the said high contracting parties, for giving effect to such stipulations, it is hereby agreed that the article or articles which may hereafter be so concluded shall be considered as forming part of the present convention.

8. The present convention shall be in force for the term of 10 years from the date hereof; and further, until the end of 12 months after the King of the United Kingdom of Great Britain and Ireland, on the one part, or the governments of the free Hanseatic republics of Lubeck, Bremen, or Hamburg, or either of them, on the other part, shall have given notice of their intention to terminate the same; each of the said high contracting parties reserving to itself the right of giving such notice to the other at the end of the said term of 10 years; and it is hereby agreed between them, that, at the expiration of 12 months after such notice shall have been received by either of the parties from the

other, this convention, and all the provisions thereof, shall altogether cease and determine, as far as regards the states giving and receiving such notice; it being always understood and agreed, that, if one or more of the Hisseanic republics aforesaid shall, at the expiration of 10 years from the date hereof, give or receive notice of the proposed termination of this convention, such convention shall, nevertheless, remain in full force and operation as far as regards the remaining Hisseanic republics or republic which may not have given or received such notice.

10. The present convention shall be ratified, and the ratification shall be exchanged at London, within 1 month from the date hereof, or sooner if possible.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, Sept. 29, 1825.

GEORGE CANNING.
W. HUNTSLAW.
JAMES COLQUHOUN.

Mexico.

Treaty of Amity, Commerce, and Navigation, between Great Britain and Mexico, signed at London, December 26, 1826.

Article 1. There shall be perpetual amity between the dominions and subjects of his Majesty the King of the United Kingdom of Great Britain and Ireland, and the United States of Mexico, and their citizens.

2. There shall be, between all the territories of his Britannic Majesty in Europe and the territories of Mexico, a reciprocal freedom of commerce. The inhabitants of the two countries, respectively, shall have liberty freely and securely to come, with their ships and cargoes, to all places and rivers in the territories aforesaid, saving only such particular ports to which other foreigners shall not be permitted to come, to enter into the same, and to remain and reside in any part of the said territories respectively; also to hire and occupy houses and warehouses for the purposes of their commerce; and, generally, the merchants and traders of each nation, respectively, shall enjoy the most complete protection and security for their commerce.

In like manner, the respective ships of war, and post-office packets of the 2 countries, shall have liberty freely and securely to come to all harbours, rivers, and places, saving only such particular ports (if any) to which other foreign ships of war and packets shall not be permitted to come, to enter into the same, to anchor, and to remain there and rest; subject always to the laws and statutes of the two countries respectively.

By the right of entering the places, ports, and rivers, mentioned in this article, the privileges of carrying on the coasting trade is not understood, in which national vessels only are permitted to engage.

3. His Majesty the King of the United Kingdom of Great Britain and Ireland engages further, that the inhabitants of Mexico shall have the like liberty of commerce and navigation stipulated for in the preceding article, in all his dominions situated out of Europe, to the full extent in which the same is permitted at present, or shall be permitted hereafter, to any other nation.

4. No higher or other duties shall be imposed on the importation into the dominions of his Britannic Majesty, of any article of the growth, produce, or manufacture of Mexico, and no higher or other duties shall be imposed on the importation into the territories of Mexico, or any articles of the growth, produce, or manufacture of his Britannic Majesty's dominions, than are or shall be payable on the like articles, being the growth, produce, or manufacture of any other foreign country; nor shall any other or higher duties or charges be imposed in the territories or dominions of either of the contracting parties, on the exportation of any articles to the territories of the other, than such as are or may be payable on the exportation of the like articles to any other foreign country; nor shall any prohibition be imposed upon the exportation of any articles the growth, produce, or manufacture of his Britannic Majesty's dominions, or of the said territories of Mexico, to or from the said dominions of his Britannic Majesty, or to or from the said territories of Mexico, which shall not equally extend to all other nations.

5. No higher or other duties or charges on account of tonnage, light or harbour dues, pilotage, salvage in case of damage or shipwreck, or any other local charges, shall be imposed, in any of the ports of Mexico, on British vessels, than those payable in the same ports by Mexican vessels; nor, in the ports of his Britannic Majesty's territories, on Mexican vessels, than shall be payable, in the same ports, on British vessels.

6. The same duties shall be paid on the importation into the territories of Mexico, of any article the growth, produce, or manufacture of his Britannic Majesty's dominions, whether such importation shall be in Mexican or in British vessels; and the same duties shall be paid on the importation into the dominions of his Britannic Majesty, of any article the growth, produce, or manufacture of Mexico, whether such importation shall be in British or in Mexican vessels. The same duties shall be paid, and the same bounties and drawbacks allowed, on the exportation to Mexico of any articles of the growth, produce, or manufacture of his Britannic Majesty's dominions, whether such exportation shall be in Mexican or in British vessels; and the same duties shall be paid, and the same bounties and drawbacks allowed, on the exportation of any articles the growth, produce, or manufacture of Mexico, to his Britannic Majesty's dominions, whether such exportation shall be in British or in Mexican vessels.

7. In order to avoid any misunderstanding with respect to the regulations which may respectively constitute a British or Mexican vessel, it is hereby agreed that all vessels built in the dominions of his Britannic Majesty, or vessels which shall have been captured from an enemy by his Britannic Majesty's ships of war, or by subjects of his said Majesty furnished with letters of marque by the Lords Commissioners of the Admiralty, and regularly condemned in one of his said Majesty's prize courts as a lawful prize, or which shall have been condemned in any competent court for the breach of the laws made for the prevention of the slave trade, and owned, navigated, and registered according to the laws of Great Britain, shall be considered as British vessels; and that all vessels built in the territories of Mexico, or captured from the enemy by the ships of Mexico, and condemned under similar circumstances, and which shall be owned by any citizen or citizens thereof, and whereof the master and 3-4ths of the mariners are citizens of Mexico, excepting where the laws provide for any extreme case, shall be considered as Mexican vessels.

And it is further agreed, that every vessel, qualified to trade as above described, under the provisions of this treaty, shall be furnished with a register, passport, or sea letter, under the signature of the proper person authorised to grant the same, according to the laws of the respective countries (the form of which shall be communicated), certifying the name, occupation, and residence of the owner or owners, in the dominions of his Britannic Majesty, or in the territories of Mexico, as the case may be; and that he, or they, is, or are, the sole owner or owners, in the proportion to be specified; together with the name, build, and description of the vessel as to built and measurement, and the several particulars constituting the national character of the vessel, as the case may be.

8. All merchants, commanders of ships, and others, the subjects of his Britannic Majesty, shall have full liberty, in all the territories of Mexico, to manage their own affairs themselves, or to commit

his Britannic Majesty, shall
 sign themselves, or to commit

them to the management of whomsoever they please, as broker, factor, agent, or interpreter; nor shall they be obliged to employ any other person for those purposes than those employed by Mexicans, nor to pay them any other salary or remuneration than such as is paid, in like cases, by Mexican citizens; and absolute freedom shall be allowed, in all cases, to the buyer and seller, to bargain and fix the price of any goods, imported into or exported from Mexico, as they shall see good, observing the laws and established customs of the country. The same privileges shall be enjoyed in the dominions of his Britannic Majesty, by the citizens of Mexico, under the same conditions.

The citizens and subjects of the contracting parties, in the territories of each other, shall receive and enjoy the full and perfect protection for their persons and property, and shall have free and open access to the courts of justice in the said countries, respectively, for the prosecution and defence of their just rights; and they shall be at liberty to employ, in all causes, the advocates, attorneys, or agents of whatever description, whom they may think proper; and they shall enjoy, in this respect, the same rights and privileges therein as native citizens.

9. In whatever relates to the succession to personal estates, by will or otherwise, and the disposal of personal property of every sort and denomination, by sale, donation, exchange, or testament, or in any other manner whatsoever, as also the administration of justice, the subjects and citizens of the contracting parties shall enjoy, in their respective dominions and territories, the same privileges, benefits, and rights, as native subjects; and shall not be charged, in any of these respects, with any higher imposts or duties than those which are paid, or may be paid, by the native subjects or citizens of the power in whose dominions or territories they may be resident.

10. In all that relates to the police of the ports, the lading and unlading of ships, the safety of merchandise, goods, and effects, the subjects of his Britannic Majesty, and the citizens of Mexico, respectively, shall be subject to the local laws and regulations of the dominions and territories in which they may reside. They shall be exempted from all compulsory military service, whether by sea or land. No forced loans shall be levied upon them; nor shall their property be subject to any other charges, regulations, or taxes, than such as are paid by the native subjects or citizens of the contracting parties in their respective dominions.

11. It shall be free for each of the two contracting parties to appoint consuls for the protection of trade, to reside in the dominions and territories of the other party; but, before any consul shall act as such, he shall, in the usual form, be approved and admitted by the government to which he is sent; and neither of the contracting parties may except from the residence of consuls such particular places as either of them may judge fit to be excepted. The Mexican diplomatic agents and consuls shall enjoy, in the dominions of his Britannic Majesty, whatever privileges, exceptions, and immunities are or shall be granted to agents of the same rank belonging to the most favoured nation; and, in like manner, the diplomatic agents and consuls of his Britannic Majesty in the Mexican territories shall enjoy, according to the strictest reciprocity, whatever privileges, exceptions, and immunities are or may be granted to the Mexican diplomatic agents and consuls in the dominions of his Britannic Majesty.

12. For the better security of commerce between the subjects of his Britannic Majesty and the citizens of the Mexican States, it is agreed that if, at any time, any interruption of friendly intercourse, or any rupture, should unfortunately take place between the two contracting parties, the merchants residing upon the coast shall be allowed six months, and those of the interior a whole year, to wind up their accounts, and dispose of their property; and a safe-conduct shall be given them to embark at the port which they shall themselves select. All those who are established in the respective dominions and territories of the two contracting parties, in the exercise of any trade or special employment, shall have the privilege of remaining and continuing such trade and employment therein, without any manner of interruption, in full enjoyment of their liberty and property, as long as they behave peaceably, and commit no offence against the laws; and their goods and effects, of whatever description they may be, shall not be liable to seizure or sequestration, or to any other charges or demands than those which may be made upon the like effects or property belonging to the native subjects or citizens of the respective dominions or territories in which such subjects or citizens may reside. In the same case, debts, between individuals, public funds, and the shares of companies, shall never be confiscated, sequestered, or detained.

13. The subjects of his Britannic Majesty, residing in the Mexican territories, shall enjoy, in their houses, persons, and properties, the protection of the government; and, continuing in possession of what they now enjoy, they shall not be disturbed, molested, or annoyed, in any manner, on account of their religion, provided they respect that of the nation to which they reside, as well as the constitution, laws, and customs of the country. They shall continue to enjoy, to the full, the privilege already granted to them of burying, in the places already assigned for that purpose, such subjects of his Britannic Majesty as may die within the Mexican territories; nor shall the funerals and sepulchres of the dead be disturbed in any way or upon any account. The citizens of Mexico shall enjoy, in all the dominions of his Britannic Majesty, the same protection, and shall be allowed the free exercise of their religion, in public or private, either within their own houses, or in the chapels and places of worship set apart for that purpose.

14. The subjects of his Britannic Majesty shall, on no account or pretext whatsoever, be disturbed or molested in the peaceable possession and exercise of whatever rights, privileges, and immunities they have at any time enjoyed within the limits described and laid down in a convention signed between his said Majesty and the King of Spain, on the 14th of July, 1788; whether such rights, privileges, and immunities shall be derived from the stipulations of the said convention, or from any other concession which may, at any time, have been made by the King of Spain, or his predecessors, to British subjects and settlers residing and following their lawful occupations within the limits aforesaid: the two contracting parties reserving, however, for some more fitting opportunity, the further arrangements on this article.

15. The government of Mexico engages to co-operate with his Britannic Majesty for the total abolition of the slave trade, and to prohibit all persons inhabiting within the territories of Mexico, in the most effectual manner, from taking any share in such trade.

16. The two contracting parties reserve to themselves the right of treating and agreeing hereafter, from time to time, upon such other articles as may appear to them to contribute still further to the improvement of their mutual intercourse, and the advancement of the general interests of their respective subjects and citizens; and such articles as may be so agreed upon, shall, when duly ratified, be regarded as forming a part of the present treaty, and shall have the same force as those now contained in it.

17. The present treaty shall be ratified, and the ratifications shall be exchanged at London, within the space of six months, or sooner if possible.

In witness whereof the respective Plenipotentiaries have signed the same, and have affixed thereto their respective seals.

Done at London, the 26th day of December, in the year of our Lord 1826.
 WILLIAM HUBERTSON, SEBASTIAN CAMACHO.
 JAMES J. MORIER.

Additional Articles.

1. Whereas in the present state of Mexican shipping, it would not be possible for Mexico to receive the full advantage of the reciprocity established by the articles 5, 6, 7, of the treaty signed this day, if that part of the 7th article which stipulates that, in order to be considered as a Mexican ship, a ship shall actually have been built in Mexico, should be strictly and literally observed, and immediately brought into operation; it is agreed that, for the space of ten years, to be reckoned from the date of the exchange of the ratifications of this treaty, any ships *wherever* built, being *bound for* the property of and wholly owned by one or more citizens of Mexico, and whereof the master and 3/4ths of the mariners, at least, are also natural born citizens of Mexico, or persons domiciliated in Mexico, by act of the government, as lawful subjects of Mexico, to be certified according to the laws of that country, shall be considered as Mexican ships; his Majesty the King of the United Kingdom of Great Britain and Ireland reserving to himself the right, at the end of the said term of ten years, to claim the principle of reciprocal restriction stipulated for in the article 7, above referred to, if the interests of British navigation shall be found to be prejudiced by the present exception to that reciprocity, in favour of Mexican shipping.

2. It is further agreed that, for the like term of ten years, the stipulations contained in articles 5. and 6. of the present treaty shall be suspended; and in lieu thereof, it is hereby agreed that, until the expiration of the said term of ten years, British ships entering into the ports of Mexico, from the United Kingdom of Great Britain and Ireland, or any other of his Britannic Majesty's dominions, and all articles the growth, produce, or manufacture of the United Kingdom, or of any of the said dominions, imported in such ships, shall pay no other or higher duties than are or may hereafter be payable, in the said ports, by the ships, and the like goods, the growth, produce, or manufacture of the most favoured nation; and, reciprocally, it is agreed, that Mexican ships entering into the ports of the United Kingdom of Great Britain and Ireland, or any other of his Britannic Majesty's dominions, from any port of the States of Mexico, and all articles the growth, produce, or manufacture of the said States, imported in such ships, shall pay no other or higher duties than are or may hereafter be payable, in the said ports, by the ships, and the like goods, the growth, produce, or manufacture of the most favoured nation; and that no higher duties shall be paid, or bounties or drawbacks allowed, on the exportation of any article the growth, produce, or manufacture of the dominions of either country, in the ships of the other, than upon the exportation of the like articles in the ships of any other foreign country.

It being understood that, at the end of the said term of ten years, the stipulations of the said 5th and 6th articles shall, from thenceforward, be in full force between the two countries.

The present additional articles shall have the same force and validity as if they were inserted, word for word, in the treaty signed this day. They shall be ratified, and the ratifications shall be exchanged at the same time.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto their respective seals.

Done at London, the 90th day of December, in the year of our Lord 1826.

WILLIAM HARRISON.
JAMES J. MORRIS.

SEBASTIAN CANACHO.

An order in council, dated September 3, 1827, orders, that vessels of the United States of Mexico, entering the ports of the United Kingdom of Great Britain and Ireland in ballast, or laden direct from any of the ports of Mexico, or departing from the ports of the said United Kingdom, together with the cargoes on board the same, such cargoes consisting of articles which may be legally imported or exported, shall not be subject to any other or higher duties or charges whatever than are or shall be levied on British vessels entering or departing from such ports, or on similar articles when imported into, or exported from, such ports in British vessels; and also such articles, when exported from the said ports in vessels of the United States of Mexico respectively, shall be entitled to the same bounties, drawbacks, and allowances that are granted on similar articles when exported in British vessels.

N. B.—Treaties similar to the above have been negotiated with Colombia, Buenos Ayres, &c.

NETHERLANDS.

Treaty between His Britannic Majesty and the King of the Netherlands, respecting Territories and Commerce in the East Indies, signed at London, March 17, 1824.

Article 1. The high contracting parties engage to admit the subjects of each other to trade with their respective possessions in the Eastern Archipelago, and on the continent of India, and in Ceylon, upon the footing of the most favoured nation; their respective subjects conforming themselves to the local regulations of each settlement.

2. The subjects and vessels of one nation shall not pay, upon importation or exportation, at the ports of the other in the Eastern seas, any duty at a rate beyond the double of that at which the subjects and vessels of the nation to which the port belongs, are charged.

The duties paid on exports or imports at a British port, on the continent of India, or in Ceylon, on Dutch bottoms, shall be arranged so as, in no case, to be charged at more than double the amount of the duties paid by British subjects, and on British bottoms.

In regard to any article upon which no duty is imposed, when imported or exported by the subjects, or on the vessels, of the nation to which the port belongs, the duty charged upon the subjects or vessels of the other shall, in no case, exceed 6 per cent.

3. The high contracting parties engage, that no treaty hereafter made by either, with any native power in the Eastern seas, shall contain any article tending, either expressly, or by the imposition of unequal duties, to exclude the trade of the other party from the ports of such native power; and that if, in any treaty now existing on either part, any article to that effect has been admitted, such article shall be abrogated upon the conclusion of the present treaty.

It is understood that, before the conclusion of the present treaty, communication has been made by each of the contracting parties to the other, of all treaties or engagements subsisting between each of them, respectively, and any native powers in the Eastern seas; and that the like communication shall be made of all such treaties concluded by them, respectively, hereafter.

4. Their Britannic and Netherland Majesties engage to give strict orders, as well to their civil and military authorities, as to their ships of war, to respect the freedom of trade, established by articles 1, 2, and 3; and, in no case, to impede a free communication of the natives in the Eastern Archipelago, with the ports of the two governments, respectively, or of the subjects of the two governments with the ports belonging to native powers.

5. Their Britannic and Netherland Majesties, in like manner, engage to concur effectually in repressing piracy in those seas; they will not grant either asylum or protection to vessels engaged in piracy, and they will, in no case, permit the ships or merchandise captured by such vessels, to be introduced, deposited, or sold, in any of their possessions.

responsible for Mexico to receive the treaty signed this day, and as a Mexican ship, a ship observed, and immediately reckoned from the date of being bound, the property of the master and 2-4ths of the netted in Mexico, by act to the laws of that country, Kingdom of Great Britain in years, to claim the privilege, if the interests of British that reciprocity, in favour of

contained in articles 5. and 6. agreed that, until the expiration of Mexico, from the United Majesty's dominions, and all of any of the said dominions, may hereafter be payable, in or manufacture of the most entering into the ports of the Majesty's dominions, from or manufacture of the said re or may hereafter be payable, or manufacture of the or drawbacks allowed, on dominions of either country, the ships of any other foreign

4. It is agreed that orders shall be given by the two governments, to their officers and agents in the East, not to form any new settlement on any of the Islands in the Eastern sea, without previous authority from their respective governments in Europe.

7. The Molucca Islands, and especially Amboyna, Banda, Ternate, and their immediate dependencies, are excepted from the operation of the 1st, 2d, 3d, and 4th articles, until the Netherland government shall think fit to abandon the monopoly of spices; but if the said government shall, at any time previous to such abandonment of the monopoly, allow the subjects of any power, other than an Asiatic native power, to carry on any commercial intercourse with the said Islands, the subjects of his Britannic Majesty shall be admitted to such intercourse, upon a footing precisely similar.

8. His Netherland Majesty cedes to his Britannic Majesty all his establishment on the continent of India; and renounces all privileges and exemptions enjoyed or claimed in virtue of those establishments.

9. The factory of Fort Marlborough, and all the English possessions on the island of Sumatra, are hereby ceded to his Netherland Majesty; and his Britannic Majesty further engages that no British settlement shall be formed on that island, nor any treaty concluded by British authority, with any native prince, chief, or state therein.

10. The town and Fort of Malacca, and its dependencies, are hereby ceded to his Britannic Majesty; and his Netherland Majesty engages, for himself and his subjects, never to form any establishment on any part of the peninsula of Malacca, or to conclude any treaty with any native prince, chief, or state therein.

11. All the colonies, possessions, and establishments which are ceded by the preceding articles, shall be delivered up to the officers of the respective sovereigns on the 1st of March, 1825. The fortifications shall remain in the state in which they shall be at the period of the notification of this treaty in India; but no claim shall be made, on either side, for ordnance, or stores of any description, either left or removed by the ceding power, nor for any arrears of revenue, or any charge of administration whatever.

12. It is agreed that all accounts and reclamations, arising out of the restoration of Java, and other possessions, to the officers of his Netherland Majesty in the East Indies,—as well those which were the subject of a convention made at Java on the 24th of June, 1817, between the commissioners of the two nations, as all others,—shall be finally and completely closed and satisfied, on the payment of the sum of 100,000*l.*, sterling money, to be made in London on the part of the Netherlands, before the expiration of the year 1825.

17. The present treaty shall be ratified, and the ratifications exchanged at London, within 3 months from the date hereof, or sooner if possible.

In witness whereof the respective Plenipotentiaries have signed the same, and affixed thereto the seal of their arms.

Done at London, the 17th day of March, in the year of our Lord 1824.

GEORGE CANNING. CHARLES WATKINS WILLIAMS WYNN. H. FAGEL. A. K. FALCK.

PORTUGAL.

Treaty of Commerce between Great Britain and Portugal, signed at Lisbon, December 27, 1703.

Article 1. His Sacred Royal Majesty of Portugal promises, both in his own name and that of his successors, to admit, forever hereafter, into Portugal, the woollen cloths, and the rest of the woollen manufactures of the Britons, as was accustomed till they were prohibited by the laws; nevertheless, upon this condition:

2. That is to say, that her Sacred Royal Majesty of Great Britain shall, in her own name and that of her successors, be obliged forever hereafter to admit the wines of the growth of Portugal into Britain; as that at no time, whether there shall be peace or war between the Kingdoms of Britain and France, anything more shall be demanded for these wines, by the name of custom or duty, or by whatsoever other title, directly or indirectly, whether they shall be imported into Great Britain in pipes or hogsheads, or other casks, than what shall be demanded from the like quantity or measure of French wine deducting or abating a third part of the custom or duty; but if at any time this deduction or statement of customs, which is to be made as aforesaid, shall in any manner be attempted and prejudiced, it shall be just and lawful for his Sacred Royal Majesty of Portugal again to prohibit the woollen cloths, and the rest of the British woollen manufactures.

3. The most excellent lords the Plenipotentiaries promise, and take upon themselves, that their above named masters shall ratify this treaty, and that within the space of two months the ratifications shall be exchanged.

Given at Lisbon, the 27th of December, 1703.

JOHN METHUEN.

MARCUS ALEORANTENSIS.

Treaty of Commerce and Navigation between Great Britain and Portugal, signed at Rio de Janeiro, the 19th of February, 1810.

1. Peace established.

2. There shall be reciprocal liberty of commerce and navigation between the respective subjects of the two high contracting parties, in all the territories and dominions of either. They may trade, travel, sojourn, or establish themselves, in all the ports, cities, towns, countries, provinces, or places whatsoever, belonging to each of the two high contracting parties, except in those from which all foreigners whatsoever are generally and positively excluded, the names of which places may be hereafter specified in a separate article of this treaty. Provided, however, that it be thoroughly understood that any place belonging to either of the two high contracting parties, which may hereafter be opened to the commerce of the subjects of any other country, shall thereby be considered as equally opened, and upon correspondent terms, to the subjects of the other high contracting party. In the same manner as if it had been expressly stipulated by the present treaty. And his Britannic Majesty, and his Royal Highness the Prince Regent of Portugal, do hereby bind themselves not to grant any favour, privilege, or immunity in matters of commerce and navigation, to the subjects of any other state, which shall not be also at the same time respectively extended to the subjects of the high contracting parties, gratuitously, if the concession in favour of that other state should have been gratuitous, and on giving, *quam proxime*, the same compensation or equivalent, in case the concession should have been conditional.

3. The subjects of the two sovereigns respectively shall not pay, in the ports, harbours, roads, cities, towns, or places whatsoever, belonging to either of them, any greater duties, taxes, or impost (under whatsoever names they may be designated or included), than those that are paid by the subjects of the most favoured nation; and the subjects of each of the high contracting parties shall enjoy, within the dominions of the other, the same rights, privileges, or exemptions, in matters of commerce and navigation, that are granted, or may hereafter be granted, to the subjects of the most favoured nation.

4. His Britannic Majesty and his Royal Highness the Prince Regent of Portugal do agree, that there shall be a perfect reciprocity on the subject of the duties and imposts to be paid by the vessels of the high contracting parties, within the several ports and anchoring places belonging to each of them; to wit, that the vessels or the subjects of his Britannic Majesty shall not pay any higher duties or imposts

(under whatsoever name they be designated or implied,) within the dominions of his Royal Highness the Prince Regent of Portugal, than the vessels belonging to the subjects of his Royal Highness the Prince Regent of Portugal shall be bound to pay within the dominions of his Britannic Majesty, and *vice versa*. And this agreement shall particularly extend to the payment of the duties known by the name of *Port Charges, Tonnage, and Anchorage Duties*, which shall not, in any case, or under any pretext, be greater for British vessels within the dominions of Portugal, than for Portuguese vessels within the dominions of his Britannic Majesty, and *vice versa*.

5. The two high contracting parties do also agree, that the same rates of bounties and drawbacks shall be established in their respective ports upon the exportation of goods, whether those goods be exported in British or Portuguese vessels; that is, that British vessels shall enjoy the same favour in this respect, within the dominions of Portugal, that may be shown to Portuguese vessels within the dominions of his Britannic Majesty, and *vice versa*. The two high contracting parties do also agree, that goods coming respectively from the ports of either of them, shall pay the same duties, whether imported in British or Portuguese vessels; or otherwise, that an increase of duties may be imposed upon goods coming into the ports of the dominions of Portugal from those of his Britannic Majesty in British ships, equivalent, and in exact proportion, to any increase of duties that may hereafter be imposed upon goods coming into the ports of his Britannic Majesty from those of his Royal Highness the Prince Regent of Portugal, imported in Portuguese ships. And in order that this matter may be settled with due exactness, and that nothing may be left undetermined concerning it, it is agreed, that Tables shall be drawn up by each government, respectively, specifying the difference of duties to be paid on goods so imported; and the Tables (which shall be made applicable to all the ports within the respective dominions of each of the contracting parties) shall be adjudged to form part of this present treaty.

In order to avoid any differences or misunderstandings with respect to the regulations which may respectively constitute a British or Portuguese vessel, the high contracting parties agree in declaring, that all vessels built in the dominions of his Britannic Majesty, and owned, navigated, and registered according to the laws of Great Britain, shall be considered as British vessels; and that all vessels built in the countries belonging to Portugal, or ships taken by any of the vessels of war belonging to the Portuguese government, or any of the inhabitants of the dominions of Portugal, having commissions or letters of marque and reprisal from the government of Portugal, and condemned as lawful prize in any court of admiralty of the Portuguese government, and owned by the subjects of his Royal Highness the Prince Regent of Portugal, and whereof the master and 3-4ths of the mariners, at least, are subjects of his Royal Highness the Prince Regent of Portugal, shall be considered as Portuguese vessels.

6. The mutual commerce and navigation of the subjects of Great Britain and Portugal, respectively, in the ports and seas of Asia, are expressly permitted, to the same degree as they have heretofore been allowed by the two Crowns: and the commerce and navigation thus permitted, shall be placed on the footing of the commerce and navigation of the most favoured nation trading in the ports and seas of Asia; that is, that neither of the high contracting parties shall grant any favour or privilege in matters of commerce and navigation to the subjects of any other state trading within the ports and seas of Asia, which shall not be also granted, *quæ proxime*, on the same terms, to the subjects of the other contracting party. His Britannic Majesty engages not to make any regulation which may be prejudicial or inconvenient to the commerce and navigation of the subjects of his Royal Highness the Prince Regent of Portugal within the ports and seas of Asia, to the extent which is or may hereafter be permitted to the most favoured nation. And his Royal Highness the Prince Regent of Portugal does also engage not to make any regulations which may be prejudicial or inconvenient to the commerce and navigation of the subjects of his Britannic Majesty within the ports, seas, and dominions opened to them by virtue of the present treaty.

13. Packets shall be established for the purpose of furthering the public service of the two courts, and facilitating the commercial intercourse of their respective subjects. A convention shall be concluded forthwith on the basis of that which was signed at Rio de Janeiro, on the 14th day of September, 1808, in order to settle the terms upon which the Packets are to be established, which convention shall be ratified at the same time with the present treaty.

15. All goods and articles whatsoever of the produce, manufacture, industry, or invention of the dominions and subjects of his Britannic Majesty, shall be admitted into all the ports and dominions of his Royal Highness the Prince Regent of Portugal, as well in America, Africa, and Asia, whether consigned to British or Portuguese subjects, on paying, generally and solely, duties to the amount of 15 per cent. according to the value which shall be set upon them by a tariff or table of valuations, called in the Portuguese language *pesta*, the principal basis of which shall be the sworn invoice cost of the aforesaid goods, merchandises, and articles, taking also into consideration (so far as may be just or practicable) the current prices thereof in the country into which they are imported. This tariff or valuation shall be determined and settled by an equal number of British and Portuguese merchants of known integrity and honour, with the assistance, on the part of the British merchants, of his Britannic Majesty's consul general, or consul; and on the part of the Portuguese merchants, with the assistance of the superintendent, or administrator general of the customs, or of their respective deputies. And the aforesaid tariff shall be made and promulgated in each of the ports belonging to his Royal Highness the Prince Regent of Portugal, in which there are or may be custom-houses. And it shall be revised and altered if necessary, from time to time, either in the whole, or in part, whenever the subjects of his Britannic Majesty, resident within the dominions of his Royal Highness the Prince Regent of Portugal, shall make a requisition to that effect through the medium of his Britannic Majesty's consul general, or consul, or whenever the trading and commercial subjects of Portugal shall make the same requisition on their own part.

If any British goods should hereafter arrive in the ports of the Portuguese dominions, without having been specifically valued and rated in the new tariff or *pesta*, they shall be admitted on paying the same duties of 15 per cent. *ad valorem*, according to the invoices of the goods, which shall be duly presented and sworn to by the parties importing the same. And in case that any suspicion of fraud, or unfair practices, should arise, the invoices shall be examined, and the real value of the goods ascertained by a reference to an equal number of British and Portuguese merchants of known integrity and honour; and in case of a difference of opinion amongst them, followed by an equality of votes upon the subject, they shall then nominate another merchant, likewise of known integrity and honour, to whom the matter shall be ultimately referred, and whose decision thereon shall be final and without appeal. And in case the invoice should appear to have been fair and correct, the goods specified in it shall be admitted, on paying the duties above mentioned of 15 per cent.; and the expenses, if any, of the examination of the invoice, shall be defrayed by the party who called its fairness and correctness into question. But if the invoice should be found to be fraudulent and unfair, then the goods and merchandises shall be bought up by the officers of the customs on the account of the Portuguese government, according to the value specified in the invoice, with an addition of 10 per cent. to the sum so paid for them by the officers of the customs, the Portuguese government engaging for the payment of the goods so valued and purchased by the officers of the customs within the space of 15 days; and the expenses, if any, of the examination of the fraudulent invoice shall be paid by the party who presented it as just and fair.

sons of his Royal Highness the Prince Regent of Portugal, which the Portuguese government may be desirous of taking for its own use, shall be paid for without delay at the prices appointed by the proprietors, who shall not be compelled to sell such articles on any other terms.

If the Portuguese government shall take into its own care and custody any cargo, or part of a cargo, with a view to purchase, or otherwise, the Portuguese government shall be responsible for any damage or injury that the same may receive while in the care and custody of the officers of the Portuguese government.

If the Royal Highness the Prince Regent of Portugal is pleased to grant to the subjects of Great Britain the privilege of being assignees for the duties to be paid in the Custom-houses of his Majesty's dominions, on the same terms, and on giving the same security, as was required from the subjects of Portugal.

On the other hand, the subjects of the Crown of Portugal shall receive, as far as it may be just or level, the same favour in the custom-houses of Great Britain as is shown to the natural subjects of his Majesty.

If the British Majesty does premise and engage, that all goods and articles whatsoever, of the produce, manufacture, industry, or invention of the dominions or subjects of the Prince Regent of Portugal, shall be admitted into the ports and dominions of his Majesty, on paying generally not only the same duties that are paid upon similar articles by the subjects of the most favoured nation.

If any reduction of duties should take place exclusively in favour of British goods imported into the dominions of Portugal, an equivalent reduction shall take place on Portuguese goods and merchandise imported into his Majesty's dominions, and *vice versa*; the articles upon which such equivalent reduction is to take place being settled by previous concert and agreement between the 2 contracting parties.

It is understood, that any such reduction so granted by either party to the other, shall not be granted upwards (except upon the same terms and for the same compensation) in favour of any other state or nation whatsoever. And this declaration is to be considered as reciprocal on the part of the 2 contracting parties.

But as there are some articles of the growth and production of Brazil, which are excluded from the markets and home consumption of the British dominions, such as sugar, coffee, and other articles similar to the produce of the British colonies; his Majesty, willing to favour and protect (as far as possible) the commerce of the subjects of his Majesty, reserves to himself the right of imposing duties and permits that the said articles, as well as all others the growth and produce of Brazil, and of other parts of the Portuguese dominions, may be received and warehoused in all the ports of his dominions, which shall be by law appointed to be warehousing ports for those articles, for the purpose of re-exportation, under due regulation, exempted from the greater duties with which they would be charged were they destined for consumption within the British dominions, and liable only to the reduced duties and expenses on warehousing and re-exportation.

In like manner, notwithstanding the general privilege of admission thus granted in the 15th article of the present treaty by the Prince Regent of Portugal, in favour of all goods the produce and manufacture of the British dominions, his Majesty reserves to himself the right of imposing duties, and even prohibitory duties on all articles known by the name of *British East Indian Goods*, and *East Indian Produce*, such as sugar and coffee, which cannot be admitted for consumption in the Portuguese dominions, by reason of the same principle of colonial policy which prevents the free admission into the British dominions of corresponding articles of Brazilian produce.

But his Royal Highness the Prince Regent of Portugal consents that all the ports of his dominions, where there are or may be Custom-houses, shall be free ports for the reception and admission of all articles whatsoever, the produce and manufacture of the British dominions, not destined for the consumption of the place at which they may be received or admitted, but for re-exportation, either for other parts of the dominions of Portugal, or for those of other states. And the articles thus received and admitted (subject to due regulations) shall be exempted from the duties with which they would be charged, if destined for the consumption of the place at which they may be imported or warehoused, and liable only to the same expenses that may be paid by articles of Brazilian produce received and warehoused for re-exportation in the ports of his Majesty's dominions.

his Royal Highness the Prince Regent of Portugal is pleased to declare the port of St. Catherine to be a *Free Port*, according to the terms mentioned in the preceding article of the present treaty.

his Royal Highness the Prince Regent of Portugal is pleased to render Goa a *Free Port*, and to permit the free toleration of all religious sects whatever in that city and its dependencies.

All trade with the Portuguese possessions situated upon the eastern coast of the continent of Africa (in articles not included in the exclusive contracts possessed by the Crown of Portugal) which may have been formerly allowed to the subjects of Great Britain, is confirmed and secured to them now, and for ever, in the same manner as the trade which has hitherto been permitted to Portuguese subjects in the ports and seas of Asia is confirmed and secured to them by virtue of the 6th article of the present treaty.

his Majesty consents to waive the right of creating factories or incorporated bodies of British merchants, within the dominions of Portugal; provided, however, that this shall not deprive the subjects of his Majesty, residing within the dominions of Portugal, of the full enjoyment, as individuals engaged in commerce, of any of those rights and privileges which they did or might possess as members of incorporated commercial bodies; and also that the commerce and trade carried on by British subjects shall not be restricted, or otherwise affected, by any commercial company whatever, possessing exclusive privileges and favours within the dominions of Portugal. And his Majesty consents to waive the right of creating factories or incorporated bodies of merchants within his dominions, in so far as British factories shall not be established therein.

The two high contracting parties agree, that they will forthwith proceed in the revision of all other former treaties subsisting between the 2 Crowns, for the purpose of ascertaining what stipulations contained in them are, in the present state of affairs, proper to be confirmed or renewed.

It is agreed that the stipulations contained in former treaties concerning the admission of the wines of Portugal on the one hand, and the woollen cloths of Great Britain on the other, shall at present remain unaltered. In the same manner it is agreed, that the privileges and immunities granted by either contracting party to the subjects of the other, whether by treaty, decree, or *alms*, shall remain unaltered, except the power granted by former treaties, of carrying in the ships of either country goods of any description whatsoever, the property of the enemies of the other country, which power is now mutually and publicly renounced and abrogated.

The reciprocal liberty of commerce and navigation, declared by the present treaty, shall be considered to extend to all goods whatsoever, except those articles the property of the enemies of either power, or contraband of war.

Under the name of contraband or prohibited articles shall be comprehended not only arms, cannon, arquebuses, mortars, petards, bombs, grenades, saucisses, carcases, carriages for cannon

3 x 2

84

market-rests, bandollers, gunpowder, match, saltpetre, ball, pikes, swords, hand-pieces, helmets, cuirasses, halberts, javelins, holsters, belts, borses, and their harness, but generally all other articles that may have been specified as contraband in any former treaties concluded by Great Britain or by Portugal with other powers. But goods which have not been brought into the form of warlike instruments, or which cannot become such, shall not be reputed contraband, much less such as have been already wrought and made up for other purposes, all which shall be deemed not contraband, and may be freely carried by the subjects of both sovereigns, even to places belonging to an enemy, excepting only such pieces as are besieged, blockaded, or invested by sea or land.

29. In case any vessels of war, or merchantmen, should be wrecked on the coasts of either of the high contracting parties, all such parts of the vessels, or of the furniture or appurtenances thereof, as also of goods as shall be saved, or the produce thereof, shall be faithfully restored upon the same being claimed by the proprietors or their factors duly authorised, paying only the expenses incurred in the preservation thereof, according to the rate of salvage settled on both sides (saving at the same time the rights and customs of each nation, the abolition or modification of which shall, however, be treated upon in the cases where they shall be contrary to the stipulations of the present article); and the high contracting parties will mutually interpose their authority, that such of their subjects as shall take advantage of any such misfortune may be severely punished.

30. It is further agreed, that both his Britannic Majesty and his Royal Highness the Prince Regent of Portugal shall not only refuse to receive any pirates or sea-rovers whatsoever into any of their havens, ports, cities, or towns, or permit any of their subjects, citizens, or inhabitants, on either part, to receive or protect them in their ports, to harbour them in their houses, or to assist them in any manner whatsoever; but further, that they shall cause all such pirates and sea-rovers, and all persons who shall receive, conceal, or assist them, to be brought to condign punishment for a terror and example to others. And all their ships, with the goods or merchandises taken by them, and brought into the ports belonging to either of the high contracting parties, shall be seized, as far as they can be discovered, and shall be restored to the owners, or the factors duly authorised or deputed by them in writing, proper evidence being first given to prove the property, even in case such effects should have passed into other hands by sale, if it be ascertained that the buyers knew or might have known that they had been piratically taken.

31. If at any time there should arise any disagreement, breach of friendship, or rupture between the Crowns of the high contracting parties, which God forbid (which rupture shall not be deemed to exist until the recalling or sending home of their respective ambassadors and ministers), the subjects of each of the 2 parties residing in the dominions of the other, shall have the privilege of remaining and continuing their trade therein, without any manner of interruption, so long as they behave peaceably, and commit no offence against the laws and ordinances; and in case their conduct should render them suspected, and the respective governments should be obliged to order them to remove, the term of 12 months shall be allowed them for that purpose, in order that they might retire with their effects and property, whether intrusted to individuals or to the state.

At the same time it is to be understood that this favour is not to be extended to those who shall act in any manner contrary to the established laws.

32. The present treaty shall be unlimited in point of duration, that the obligations and conditions expressed or implied in it shall be perpetual and immutable; and they shall not be changed or affected in any manner in case his Royal Highness the Prince Regent of Portugal should again establish the seat of the Portuguese monarchy within the European dominions of that Crown.

33. But the 2 high contracting parties do reserve to themselves the right of jointly examining and revising the several articles of this treaty at the end of 15 years, counted in the first instance from the date of the exchange of the ratifications thereof, and of then proposing, discussing, and making such amendments or additions, as the real interest of their respective subjects may seem to require. It being understood that any stipulation which at the period of revision of the treaty shall be objected to by either of the high contracting parties, shall be considered as suspended in its operation until the discussion concerning that stipulation shall be terminated, due notice being previously given to the other contracting party of the intended suspension of such stipulation, for the purpose of avoiding mutual inconvenience.

34. The several stipulations and conditions of the present treaty shall begin to have effect from the date of his Britannic Majesty's ratification thereof; and the mutual exchange of ratifications shall take place in the city of London, within the space of 4 months, or sooner if possible, to be computed from the day of the signature of the present treaty.

Done in the city of Rio de Janeiro, on the 19th day of February, in the year of our Lord 1810.

STANHOPE.

CONDÉ DE LITANES.

Agreement between the British and Portuguese Commissioners, on Four Points connected with the Execution of the Treaty of 1810. Signed at London, 18th of December, 1812.

1. The official certificate of registry, signed by the proper officer of the British customs, shall be deemed sufficient to identify a British built ship; and on the production of such certificate she shall be admitted as such in any of the ports within the dominions of Portugal.

2. Upon the importation of any goods from the United Kingdom, into any of the ports in the dominions of Portugal, all such goods shall be accompanied by the original caskets, signed and sealed by the proper officers of the British customs at the port of shipping, and the caskets belonging to each ship shall be numbered progressively, the total number stated on the first and last casket, by the proper officers of customs, at the final clearance of each vessel at the British port; and it is further agreed, that prior to the final clearance by the searchers at the shipping port, the caskets for each ship must be collected and fastened together, to which shall be annexed a paper, with the number of the caskets, sealed with the official seal, and signed by the searchers; the caskets, when collected, shall be produced, together with the manifest sworn to by the captain, to the Portuguese consul, who shall certify the same on the manifest; the caskets, thus secured together, and the manifest, so authenticated, to be returned to the searcher, in order to the final clearance of the ship.

3. It is agreed to place the Portuguese merchant on the same footing with the British, both with regard to the duties of scavage and package payable to the corporation of London, and the duties payable on shipping to the corporation of the Trinity House in London. To effect this, and at the same time to preserve the chartered rights of the corporation of London, and of the Trinity House, it will be necessary that those duties should, in the first instance, be paid as at present; and in all cases where it shall appear that the Portuguese merchants shall have paid more than the British, the difference to be returned without expense, in such manner as the British government shall direct.

4. The importer shall, on making the entry at the Portuguese Custom-house, sign a declaration of the value of his goods, to such amount as he shall deem proper; and in case the Portuguese examining officers should be of opinion that such valuation is insufficient, they shall be at liberty to take

* These ratifications were exchanged in London, on the 19th of June, 1810.

the goods, on paying the importer the amount, according to his declaration, with the addition of 10 per cent., and also return: g the duty paid.
The amount to be paid on the goods being delivered to the Portuguese officer, which must be within 10 days from the first detention of the goods.
London, 10th of December, 1812.

Prussia.

Convention of Commerce between His Britannic Majesty and the King of Prussia, signed at London, April 2, 1806.

Article 1. From and after the 1st day of May next, Prussian vessels entering or departing from the ports of the United Kingdom of Great Britain and Ireland, and British vessels entering or departing from the ports of his Prussian Majesty's dominions, shall not be subject to any other or higher duties or charges whatever, than are or shall be levied on national vessels entering or departing from such ports respectively.

2. All articles of the growth, produce, or manufacture of any of the dominions of either of the high contracting parties, which are or shall be permitted to be imported into or exported from the ports of the United Kingdom and of Prussia, respectively, in vessels of the one country, shall, in like manner, be permitted to be imported into and exported from those ports in vessels of the other.

3. All articles not of the growth, produce, or manufacture of the dominions of his Britannic Majesty, which can legally be imported from the United Kingdom of Great Britain and Ireland, into the ports of Prussia, in British ships, shall be subject only to the same duties as are payable upon the like articles if imported in Prussian ships; and the same reciprocity shall be observed in the ports of the United Kingdom, in respect to all articles not the growth, produce, or manufacture of the dominions of his Prussian Majesty, which can legally be imported into the ports of the United Kingdom in Prussian ships.

4. All goods, which can legally be imported into the ports of either country, shall be admitted, at the same rate of duty, whether imported in vessels of the other country, or in national vessels; and all goods which can be legally exported from the ports of either country, shall be entitled to the same bounties, drawbacks, and allowances, whether exported in vessels of the other country, or in national vessels.

5. No priority or preference shall be given, directly or indirectly, by the government of either country, or by any company, corporation, or agent, acting on its behalf, or under its authority, in the purchase of any article, the growth, produce, or manufacture of either country, imported into the other, on account of, or in reference to, the character of the vessel in which such article was imported; it being the true intent and meaning of the high contracting parties, that no distinction or preference whatever shall be made in this respect.

6. The present convention shall be in force for the term of 10 years from the date hereof; and further, until the end of 12 months after either of the high contracting parties shall have given notice to the other of its intention to terminate the same; each of the high contracting parties reserving to itself the right of giving such notice to the other, at the end of the said term of 10 years; and it is hereby agreed between them, that, at the expiration of 12 months after such notice shall have been received by either party from the other, this convention, and all the provisions thereof, shall altogether cease and determine.

7. The present convention shall be ratified, and the ratifications shall be exchanged at London, within 1 month from the date hereof, or sooner if possible.
In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, the second day of April, in the year of our Lord one thousand eight hundred and twenty-four.
GEORGE CANNING. W. HUSKISSON. WARTHAU.

An order in council, dated May 25, 1804, directs that from May 1, 1804, Prussian vessels entering or departing from the ports of the United Kingdom of Great Britain and Ireland, shall not be subject to any other or higher duties or charges whatever than are or shall be levied on British vessels entering or departing from such ports; that all articles of the growth, produce, or manufacture of any of the dominions of his Prussian Majesty, which are or shall be permitted to be imported into or exported from the ports of the United Kingdom of Great Britain and Ireland in British vessels, shall, in like manner, be permitted to be imported into and exported from the said ports in Prussian vessels; that all articles not of the growth, produce, or manufacture of the dominions of his Prussian Majesty, which can legally be imported from Prussia into the ports of the United Kingdom in Prussian vessels, shall be subject only to the same duties as are payable upon the like articles if imported in British ships; that all goods which can legally be imported into the ports of the United Kingdom, shall be admitted at the same rate of duty, when imported in Prussian vessels, that is charged on similar articles imported in British vessels; and that all goods which can be legally exported from the ports of the United Kingdom, shall be entitled to the same bounties, drawbacks, and allowances, when exported in Prussian vessels, that are granted, paid, or allowed on similar articles when exported in British vessels.

A Treasury letter, dated October 13, 1804, directs, that with respect to pilotage and all other duties charged on vessels belonging to Prussia, Sweden, and Norway, Denmark, Hanover, and Hamburg, which have entered, or which may enter, the ports of the United Kingdom, either from stress of weather or from any other cause, it was the intention of the Lords of the Committee of Privy Council for Trade, that such duties should not be higher than are charged upon British vessels; and that it is only in the case of goods imported into this kingdom, and not brought direct from the country to which the vessel belongs, that the equality of duty does not apply.

An order in council, dated May 3, 1823, states, that his Majesty is pleased to declare, that the ships of war belonging to the dominions of his Majesty the King of Prussia are entitled to the privileges granted by the law of navigation, and may import from the dominions of his Majesty the King of Prussia, into any of the British possessions abroad, goods the produce of such dominions, and may export goods from such British possessions abroad, to be carried to any foreign country whatever.

Russia.

Convention between His Britannic Majesty and the Emperor of Russia, signed at Petersburg, in February, 1825.

Article 1. It is agreed that the respective subjects of the high contracting parties shall not be troubled or molested, in any part of the ocean commonly called the Pacific Ocean, either in navigating the same, or in fishing therein, or in landing at such parts of the coasts as shall not have been already occupied, in order to trade with the natives, under the restrictions and conditions specified in the following articles.

2. In order to prevent the right of navigating and fishing, exercised upon the ocean by the subjects of the high contracting parties, from becoming the pretext for an illicit commerce, it is agreed that the

ords, head-pieces, helmets, &c. generally all other articles used by Great Britain or by the form of warlike instruments less such as have been used not contraband, and may engage to an enemy, excepting

in the coasts of either of the or appurtenances thereof, as restored upon the same being the expenses incurred in the sea (saying at the same time shall, however, be treated present article); and the high their subjects as shall take

Highness the Prince Regent whatsoever into any of their or inhabitants, on either part, seas, or to assist them in any and sea-coasters, and all punishment for a terror and taken by them, and brought delinquency, as far as they can be or deputed by them in case such effects should have w or might have known that

ship, or rupture between the shall not be deemed to exist (in ministers), the subjects of e privileges of remaining and as they behave peaceably, or conduct should render them to remove, the term of 12 retire with their effects and tended to those who shall act

house, sign a declaration of case the Portuguese exami- ners shall be at liberty to take

th of June, 1810.

subjects of his Britannic Majesty shall not land at any place where there may be a Russian establishment, without the permission of the governor or commandant of the same, on the other hand, that Russian subjects shall not land, without permission, at any British establishment on the north-west coast.

3. The line of demarcation between the possessions of the high contracting parties, upon the coast of the continent, and the islands of America to the north-west, shall be drawn in the manner following:—

Commencing from the southernmost point of the island called Prince of Wales Island, which point lies in the parallel of 54 degrees 40 minutes north latitude, and between the 131st and 133d degree of west longitude (meridian of Greenwich) the said line shall ascend to the north along the channel, as far as the point of the continent where it strikes the 56th degree of north latitude; from this last mentioned point, the line of demarcation shall follow the summit of the mountains situated parallel to the coast, as far as the point of intersection of the 141st degree of west longitude (of the same meridian); and, finally, from the said point of intersection, the said meridian line of the 141st degree, in its prolongation as far as the Frozen Ocean, shall form the limit between the Russian and British possessions on the continent of America to the north-west.

4. With reference to the line of demarcation laid down in the preceding article, it is understood:—

1st. That the island called Prince of Wales Island shall belong wholly to Russia.

2d. That wherever the summit of the mountains which extend in a direction parallel to the coast, from the 56th degree of north latitude to the point of intersection of the 141st degree of west longitude, shall prove to be at the distance of more than 10 marine leagues from the ocean, the limit between the British possessions and the line of coast which is to belong to Russia, an above mentioned, shall be formed by a line parallel to the windings of the coast, and which shall never exceed the distance of 10 marine leagues therefrom.

5. It is moreover agreed, that no establishment shall be formed by either of the 2 parties, within the limits assigned by the preceding 3 articles in the possessions of the other; consequently, British subjects shall not form any establishment either upon the coast, or upon the border of the continent comprised within the limits of the Russian possessions, as designated in the two preceding articles; and, in like manner, no establishment shall be formed by Russian subjects beyond the said limits.

6. It is understood, that the subjects of his Britannic Majesty, from whatever quarter they may arrive, whether from the ocean, or from the interior of the continent, shall for ever enjoy the right of navigating freely, and without any hindrance whatever, all the rivers and streams which, in their course towards the Pacific Ocean, may cross the line of demarcation upon the line of coast described in article 3, of the present convention.

7. It is also understood that, for the space of 10 years from the signature of the present convention, the vessels of the 2 powers, or those belonging to their respective subjects, shall mutually be at liberty to frequent, without any hindrance whatever, all the inland seas, the gulfs, havens, and creeks, on the coast mentioned in article 3, for the purposes of fishing and trading with the natives.

8. The port of Sitka, or Novo Archangelsk, shall be open to the commerce and vessels of British subjects for the space of 10 years from the date of the exchange of the ratifications of the present convention. In the event of an extension of this term of 10 years being granted to any other power, the like extension shall be granted also to Great Britain.

9. The above-mentioned liberty of commerce shall not apply to the trade in spirituous liquors, in fire-arms or other arms, gunpowder, or other warlike stores; the high contracting parties reciprocally engaging not to permit the above-mentioned articles to be sold or delivered, in any manner whatever, to the natives of the country.

10. Every British or Russian vessel navigating the Pacific Ocean, which may be compelled, by storms or by accident, to take shelter in the ports of the parties, shall be at liberty to rest therein, to provide itself with all necessary stores, and to put to sea again, without paying any other than port and light-house dues, which shall be the same as those paid by national vessels. In case, however, the master of such vessel should be under the necessity of disposing of a part of his merchandise in order to defray his expenses, he shall conform himself to the regulations and tariffs of the place where he may have landed.

11. In case of complaint of an infraction of the articles of the present convention, the civil and military authorities of the high contracting parties, without previously acting or taking any forcible measure, shall make an exact and circumstantial report of the matter to their respective courts, who engage to settle the same, in a friendly manner, and according to the principles of justice.

12. The present convention shall be ratified, and the ratifications shall be exchanged at London, within the space of 6 weeks, or sooner if possible.

In witness whereof the respective Plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at St. Peterburgh, the 26th [16th] of February, 1825.

STAFFORD CANNING.
THE COUNT DE NESSELEDE.
PIRRAR DE POLETICA.

THE TWO SICILIES.

Treaty of Commerce and Navigation between His Britannic Majesty and the King of the Two Sicilies, signed at London, September 26, 1816.

Article 1. His Britannic Majesty consents, that all the privileges and exemptions which his subjects, their commerce and shipping, have enjoyed, and do enjoy, in the dominions, ports, and domains of his Sicilian Majesty, in virtue of the treaty of peace and commerce concluded at Madrid on the 10th of May, (23d of May), 1667, between Great Britain and Spain; of the treaty of commerce between the same powers, signed at Utrecht, the 9th of December, 1713, and at Madrid, the 13th of December, 1715; and of the convention concluded at Utrecht, the 8th of March, 1712-1713, between Great Britain and the kingdom of Sicily, shall be abolished; and it is agreed upon in consequence, between their said Britannic and Sicilian Majesties, their heirs and successors, that the said privileges and exemptions, whether of persons, or of flags and shipping, are and shall continue for ever abolished.

2. His Sicilian Majesty engages not to continue, nor hereafter to grant, to the subjects of any other power whatever, the privileges and exemptions abolished by the present convention.

3. His Sicilian Majesty promises that the subjects of his Britannic Majesty shall not be subjected, within his dominions, to a more rigorous system of examination and search by the officers of customs, than that to which the subjects of his said Sicilian Majesty are liable.

4. His Majesty the King of the Two Sicilies promises that British commerce in general, and the British subjects who carry it on, shall be treated throughout his dominions upon the same footing as the most favoured nation, not only with respect to the persons and property of the said British subjects, but also with regard to every species of article in which they may traffic, and the taxes or other charges payable on the said articles, or on the shipping in which the importation shall be made.

5. With respect to the personal privileges to be enjoyed by the subjects of his Britannic Majesty in the kingdom of the Two Sicilies, his Sicilian Majesty promises that they shall have a free and

subjected right to travel, and to reside in the territories and dominions of his said Majesty, subject to the same precautions of police which are practised towards the most favoured nations. They shall be entitled to occupy dwellings and warehouses, and to dispose of their personal property of every kind and description, by sale, gift, exchange, or will, and in any other way whatever, without the smallest loss or hindrance being given them on that head. They shall not be obliged to pay, under any pretence whatever, other taxes or rates than those which are paid, or that hereafter may be paid, by the most favoured nations in the dominions of his said Sicilian Majesty. They shall be exempt from all arbitrary service, whether by land or sea; their dwellings, warehouses, and every thing belonging appertaining thereto for objects of commerce or residence, shall be respected. They shall not be subjected to any vexatious search or visits. No arbitrary examination or inspection of their books, papers, or accounts, shall be made under the pretence of the supreme authority of the state, but these shall alone be executed by the legal sentence of the competent tribunals. His Sicilian Majesty engages on all these occasions to guarantee to the subjects of his Britannic Majesty who shall reside in his states and dominions, the preservation of their property and personal security, in the same manner as those are guaranteed to his subjects, and to all foreigners belonging to the most favoured and most highly privileged nations.

According to the tenor of the articles 1. and 2. of this treaty, his Sicilian Majesty engages not to annul and void the privileges and exemptions which actually exist in favour of British commerce within his dominions, till the same day, and except by the same act, by which the privileges and exemptions, whatsoever they are, of all other nations, shall be declared null and void within the same.

His Sicilian Majesty promises, from the date when the general abolition of the privileges according to the articles 1, 2, and 5. shall take place, to make a reduction of 10 per cent. upon the amount of the duties payable according to the tariff in force the 1st of January, 1816, upon the total of the merchandise or production of the United Kingdom of Great Britain and Ireland, her colonies, possessions, and dependencies, imported into the states of his said Sicilian Majesty, according to the tenor of article 4. of the present convention; it being understood that nothing in this article shall be construed to prevent the King of the Two Sicilies from granting, if he shall think proper, the same reduction of duty to other foreign nations.

The subjects of the Ionian Islands shall, in consequence of their being actually under the immediate protection of his Britannic Majesty, enjoy all the advantages which are granted to the commerce and to the subjects of Great Britain by the present treaty; it being well understood that, to prevent all abuses, and to prove its identity, every Ionian vessel shall be furnished with a patent, signed by the Lord High Commissioner or his representative.

The present convention shall be ratified, and the ratifications thereof exchanged in London, within the space of 6 months, or sooner if possible.

In witness whereof, the respective Plenipotentiaries have signed it, and have thereunto affixed the seal of their arms.

Done at London, the 26th of September, 1816.

CASTELOICALA.

Separate and Additional Articles.

In order to avoid all doubt respecting the reduction upon the duties in favour of British commerce, which his Sicilian Majesty has promised in the 7th article of the convention signed this day between his Britannic Majesty and his Sicilian Majesty, it is declared, by this present separate and additional article, that by the concession of 10 per cent. of diminution, it is understood that in case the amount of the duty should be 30 per cent. upon the value of the merchandise, the effect of the reduction of 10 per cent. is to reduce the duty from 30 to 18; and so for other cases in proportion. And that for the articles which are not taxed *ad valorem* in the tariff, the reduction of the duty shall be proportionate; that is to say, a deduction of a tenth part upon the amount of the sum payable shall be granted.

The present separate and additional article shall have the same force and validity as if it had been inserted word for word in the convention of this day—it shall be ratified, and the ratification thereof shall be exchanged at the same time.

In witness whereof the respective Plenipotentiaries have signed it, and have thereunto affixed the seal of their arms.

Done at London, the 26th of September, 1816.

TURKEY.

Capitulations and Articles of Peace between Great Britain and the Ottoman Empire, as agreed upon, augmented, and altered, at different Periods, and, finally, confirmed by the Treaty of Peace concluded at the Dardanelles, in 1809.

SULTAN MEHEMED,

MAY HE LIVE FOR EVER.

"Let every thing be observed in conformity to these capitulations, and contrary thereto let nothing be done."

1. The English nation and merchants, and all other merchants sailing under the English flag, with their vessels and merchandises of all descriptions, may pass safely by sea, and go and come into our dominions, without any least prejudice or molestation being given to their persons, property, or effects, by any person whatsoever, but they shall be left in the undisturbed enjoyment of their privileges, and be at liberty to attend to their affairs.

2. If any of the English coming into our dominions by land be molested or detained, such persons shall be instantly released, without any further obstruction being given to them.

3. English vessels entering the ports and harbours of our dominions shall and may at all times safely and securely abide and remain therein, and at their free will and pleasure depart therefrom, without any opposition or hindrance from any one.

4. If it shall happen that any of their ships suffer by stress of weather, and not be provided with necessary stores and requisites, they shall be assisted by all who happen to be present, whether the crews of our Imperial ships, or others, both by sea and land.

5. Being come into the ports and harbours of our dominions, they shall and may be at liberty to purchase at their pleasure, with their own money, provisions and all other necessary articles, and to provide themselves with water, without interruption or hindrance from any one.

6. If any of their ships be wrecked upon any of the coasts of our dominions, all boys, eads, governours, commandants, and others our servants, who may be near or present, shall give them all help, protection, and assistance, and restore to them whatsoever goods and effects may be driven ashore; and in the event of any plunder being committed, they shall make diligent search and inquiry to find out the property, which, when recovered, shall be wholly restored by them.

7. The merchants, interpreters, bankers, and others, of the said nation, shall and may, both by sea and land, come into our dominions, and there trade with the most perfect security; and in coming and going, neither they nor their attendants shall receive any the least obstruction, molestation, or injury, either in their persons or property, from the beys, cadis, sea captains, soldiers, and others our slaves.

17. Our ships and galleys, and all other vessels, which may fall in with any English ships in the seas of our dominions, shall not give them any molestation, nor detain them by demanding any thing, but shall show good and mutual friendship the one to the other, without occasioning them any prejudice.

19. If the corsairs or galliots of the Levant be found to have taken any English vessels, or robbed or plundered them of their goods and effects, also if any one shall have forcibly taken any thing from the English, all possible diligence and exertion shall be used and employed for the discovery of the property, and inflicting condign punishment on those who may have committed such depredations; and their ships, goods, and effects, shall be restored to them without delay or intrigue.

21. Duties shall not be demanded or taken of the English, or the merchants sailing under the flag of that nation, on any piastres and sequias they may import into our sacred dominions, or on those they may transport to any other place.

36. English merchants, and all others sailing under their flag, may, freely and unrestrictedly, trade and purchase all sorts of merchandises (prohibited commodities alone excepted), and convey them, either by land or sea, or by way of the river Tanais, to the countries of Muscovy or Russia, and bring huck thence other merchandises into our sacred dominions, for the purposes of traffick, and also transport others to Persia and other conquered countries.

38. Should the ships bound for Constantinople be forced by contrary winds to put into Caffa, or any other place of those parts, and not be disposed to buy or sell any thing, no one shall presume forcibly to take out or seize any part of their merchandise, or give to the ships or crews any molestation, or obstruct the vessels that are bound to those ports.

40. On their ships arriving at any port, and landing their goods, they may, after having paid their duties, safely and securely depart, without experiencing any molestation.

41. English ships bound to Constantinople, Alexandria, Tripoli of Syria, Scanderoon, or other parts of our sacred dominions, shall in future be bound to pay duties, according to custom, on such goods only as they shall, of their own free will, land with a view to sale; and for such merchandises as they shall not discharge, no duty shall be demanded, neither shall the least molestation or hindrance be given to them.

44. English and other merchants navigating under their flag, who trade to Aleppo, shall pay such duties on the silks, brought and laden by them on board their ships, as are paid by the French and Venetians, and not one asper more.

55. The Imperial fleet, galleys, and other vessels, departing from our sacred dominions, and falling in with English ships at sea, shall in no wise molest or detain them, nor take from them any thing whatsoever. English ships shall no longer be liable to any further search, or exaction at sea under colour of search or examination.

70. English ships coming to the ports of Constantinople, Alexandria, Smyrna, Cyprus, and other parts of our sacred dominions, shall pay 300 aspers for anchorage duty, without an asper mora being demanded of them.

72. No molestation shall be given to any of the aforesaid nation buying camlets, mohatra, or program yarn, at Angora, and Beghazar, and desirous of exporting the same from thence, after having paid the duty of 3 per cent, by any demand of customs for the exportation thereof, neither shall one asper more be demanded of them.

75. That it being represented to us that English merchants have been accustomed hitherto to pay no custom or scale duty, either on the silks bought by them at Brusa and Constantinople, or on those which come from Persia and Georgia, and are purchased by them at Smyrna from the Armenians; if such custom or usage really exists, and the same be not prejudicial to the empire, such duty shall not be paid in future.

(N. B.—These capitulations may be found entire in *Hertslet's Treaties*; and in *Chitty's Commercial Law*, vol. II. pp. 290—311. Appen.)

Treaty between Great Britain and the Sublime Porte, concluded at the Dardanelles, the 5th of January, 1809.

1. From the moment of signing the present treaty, every act of hostility between England and Turkey shall cease.

5. In return for the indulgence and good treatment afforded by the Sublime Porte to English merchants, with respect to their goods and property, as well as in all matters tending to facilitate their commerce, England shall reciprocally extend every indulgence and friendly treatment to the fleet, subjects, and merchants of the Sublime Porte, which may hereafter frequent the dominions of his Britannic Majesty for the purposes of commerce.

6. The last Custom-house tariff established at Constantinople, at the ancient rate of 3 per cent, and particularly the article relating to the interior commerce, shall continue to be observed, as they are at present regulated, and to which England promises to conform.

10. English patents of protection shall not be granted to dependants, or merchants who are subjects of the Sublime Porte, nor shall any passport be delivered to such persons, on the part of ambassadors or consuls, without permission previously obtained from the Sublime Porte.

Done near the Castles of the Dardanelles, the 5th of January, 1809, which corresponds with the year of the Hegira 1223, the 19th day of the Moon Zilkande.

SEYD MEHEMMED ENIN VAHID EFFENDI.
ROBERT ADAIR.

UNITED STATES.

Convention of Commerce between Great Britain and the United States of America, signed at London, the 3d of July, 1815.

Article 1. There shall be between all the territories of his Britannic Majesty in Europe, and the territories of the United States, a reciprocal liberty of commerce. The inhabitants of the 2 countries respectively, shall have liberty freely and securely to come with their ships and cargoes in all such places, ports, and rivers in the territories aforesaid, to which other foreigners are permitted to come, to enter into the same, and to remain and reside in any part of the said territories respectively; and also to hire and occupy houses and warehouses for the purposes of their commerce; and generally the merchants and traders of each nation respectively shall enjoy the most complete protection and security for their commerce; but subject always to the laws and statutes of the 2 countries respectively.

2. No higher or other duties shall be imposed on the importation into the territories of his Britannic Majesty in Europe, of any articles, the growth, produce, or manufacture of the United States, and no higher or other duties shall be imposed on the importation into the United States, of any articles, the growth, produce, or manufacture of his Britannic Majesty's territories in Europe, than are or shall be

must necessarily, in the end, be productive of measures that will do more than any thing else to develop the hitherto almost latent, but vast resources of the Austrian empire. The clause as to the navigation of the Danube may have important political consequences, should Russia attempt to throw any obstacles in its way; though we are not certainly of the number of those who think that this is a matter of sufficient importance to British interests for us to involve ourselves in any very serious responsibilities with respect to it. Subjoined is a copy of the treaty.

"In the name of &c. His Majesty the Emperor of Austria, King of Hungary and Bohemia, and Her Majesty the Queen of the U. K. of Great Britain and Ireland, animated with a desire to develop, extend, and strengthen the commercial relations between their dominions and possessions, and thereby to afford to their subjects who take a part in those commercial relations every facility and encouragement possible; and convinced that nothing could more conduce to the accomplishment of this desire than to continue the suppression of all inequalities in the tariff of duties which, previous to the conclusion of the convention signed in London on the 31st of December, 1820, were levied in the harbours of one state on the vessels of the other, have appointed plenipotentiaries to conclude a treaty to that effect—namely: &c.—

"Who, after the exchange of their full powers, agreed to, and signed, the following articles:—

"Art. 1. From the date of the ratification of the present treaty, the vessels of the two Powers, on entering and quitting the respective harbours of the two contracting Powers, shall pay no other duties than those to which are subjected or may hereafter be subjected the national vessels of each of the two Powers.

"2. All the productions of the dominions of His Majesty the Emperor of Austria, including those exported to the north by the river Elbe, and to the east by the Danube, and which may be imported into the harbours of Her Majesty the Queen of the United Kingdom, as also all the productions of the soil and manufactures of the kingdom of Great Britain, which may be imported into the harbours of His Majesty the Emperor of Austria, shall enjoy the same privileges and immunities, and *vis versa*.

"3. All the articles which are not the produce of the soil and manufactures of the dominions of the two contracting Powers, but shall be imported in a regular manner from the harbours of Austria into those of the United Kingdom of Great Britain, Ireland, Malta, Gibraltar, and other possessions of Her Britannic Majesty, shall be held to pay no other duties than those they would have to discharge if they were imported in English vessels. Her Britannic Majesty grants by the present treaty to the trade and navigation of Austria the advantages secured by the two acts of Parliament of the 25th of August, 1833, to the vessels and productions of the United Kingdom and of its possessions, and those enjoyed by the most favoured nations.

"4. All Austrian vessels proceeding from the harbours of the Danube, as far as Galatz, inclusive, as well as their cargoes, may sail direct for the ports of Great Britain, and of all other the possessions of Her Britannic Majesty, as if they came direct from the harbours of Austria; and, reciprocally, all English vessels, as well as their cargoes, shall be admitted into the Austrian harbours, and depart therefrom, with the same immunities as Austrian vessels.

"5. Whereas English vessels coming direct from other countries may enter Austrian harbours, agreeably to the tenour of the present treaty, without paying any other duties than those to which Austrian vessels are liable, the productions of the soil and industry of those parts of Asia and Africa which are within the Straits of Gibraltar, and which, after being carried in a right line into the ports of Austria, are thence sent in Austrian vessels to the ports of Great Britain, shall enjoy the same advantages as if they had been imported by English vessels into Austrian ports.

"6. All articles of commerce imported or exported into or from the ports of the contracting countries, under the flag of either, whether in British or Austrian bottoms, are to be subjected to the same duties and premiums.

"7. All goods in bond from either country are to be subjected to the same duties on re-exportation.

"8. The Governments of the two states undertake not to inquire into the origin of the products introduced into the ports of either.

"9. With regard to trade with the East Indies in Austrian bottoms, the same privileges are granted by England to Austria as to the most favoured nations, but under the same conditions and legal prescriptions.

"10. The treaty does not apply to coasting navigation and trade between the ports of the same state in vessels belonging to the other of the two contracting states, as far as regards the transport of passengers and goods, because this navigation and trade are reserved to natives of each country respectively.

"11. The vessels and subjects of the contracting Powers, in their trade and navigation, are to enjoy reciprocally all the rights and privileges of the most favoured nations in the ports of either—that is to say, Austria is to have in the United Kingdom and all British possessions the full advantage of the Navigation Act passed 23rd of April, 1833, and of another act of the same date for regulating the trade of the foreign possessions of England, or of any future acts or Orders in Council to the same effect; and England is to have in Austrian ports all advantages insured by treaties to other Powers. The two Powers also bind themselves not to grant any favours and privileges of trade and navigation to the subjects of other Powers which shall not be at the same time granted to Austrian and British subjects reciprocally, either gratuitously or upon equivalent compensation, according to the nature of the privileges so granted to other Powers.

"12. The stipulations contained in the 7th article of the treaty concluded at Paris on the 5th of November, 1815, between the Courts of Austria, Great Britain, Prussia, and Russia, for the trade between the Austrian states and the Ionian Islands, continue in force.

"13. The present treaty, which replaces that of the 31st of December, 1820, between the Austrian and British Governments, is to remain in force until the 31st of December, 1848, and after that time for twelve months from the date when one of the contracting Powers shall signify to the other its intention of limiting the duration of the treaty. At the expiration of such twelve months after the reception of such notice, the treaty is to cease to be of effect.

"14. Done at Vienna, July 3, 1838.

"METTERNICH.
"FREDERICK JAMES LAURIE."

We have great pleasure in directing the attention of our readers to the following treaty. They are aware, as we have elsewhere shown (art. CONSTANTINOPLE), that nothing can be more liberal than the policy of the Turkish government, as to importation. But the freedom of exportation is quite as necessary to the successful prosecution of commerce as that of importation. A country prohibited from selling, that is, from exporting, cannot, how much soever it may be disposed, import, or buy; and hitherto this has been in a great degree

ers to the following treaty.
RINCIPLE), that nothing
to importation. But the
reosecution of commerce as
om exporting, cannot, how
has been in a great degree

the case with Turkey. The government has been in the habit of monopolising the trade in
silk and opium; and the exportation of a great many important articles, as corn, copper,
hemp, and flax, &c., has either been wholly prohibited, or sold or jobbed, by the divan or
the pacha of the province to the highest bidder, or some favoured minion. The subjoined
treaty expressly stipulates for the suppression of this wretched system. "The Sublime
Porte" formally engaging "to abolish all monopolies of agricultural produce, or of any
other articles whatsoever, as well as all permits from the local governors, either for the pur-
chase of any article or for its removal from one place to another when purchased;" and all
viziers, or other officers, who may act contrary to such stipulations are to be punished. If
this condition be *bonâ fide* enforced, it will effect one of the most salutary reforms that it
was possible to introduce. We confess, indeed, that we have little, or rather no hope, in the
regeneration or real improvement of Turkey, and should be glad to see her territories occu-
pied by any European power. But still the liberty freely to export will do something for
the inhabitants; and, by opening new markets for their products, will in so far stimulate
their industry, and promote civilisation. The benefits that may grow out of this treaty to
Great Britain and other commercial nations are but trifling compared to those that will
probably result from it to Turkey herself: and it is on this account, indeed, that it is espe-
cially deserving of eulogy. The treaty takes effect from the 1st of March, 1839.

*Convention of Commerce and Navigation between Her Majesty and the Sultan of the Ottoman Empire, with
two additional articles therunto annexed.*

Art. 1.—All rights, privileges, and immunities which have been conferred on the subjects or ships of
Great Britain by the existing capitulations and treaties are confirmed now and for ever, except in as
far as they may be specifically altered by the present convention; and it is, moreover, expressly stipu-
lated that all rights, privileges, or immunities which the Sublime Porte now grants, or may here-
after grant, to the ships and subjects of any other foreign power, or which it may suffer the ships and
subjects of any other foreign power to enjoy, shall be equally granted to, and exercised and enjoyed
by, the subjects and ships of Great Britain.

Art. 2.—The subjects of her Britannic Majesty, or their agents, shall be permitted to purchase at all
places in the Ottoman dominions (whether for the purposes of internal trade or exportation) all articles,
without any exception whatsoever, the produce, growth, or manufacture of the said dominions;
and the Sublime Porte formally engages to abolish all monopolies of agricultural produce, or of any
other articles whatsoever, as well as all permits from the local governors, either for the purchase of
any article or for its removal from one place to another when purchased; and any attempt to compel
the subjects of Her Britannic Majesty to receive such permits from the local governors shall be consid-
ered as an infraction of treaties, and the Sublime Porte shall immediately punish with severity any
vizier and other officers who shall have been guilty of such misconduct, and render full justice to British
subjects for all injuries or losses which they may duly prove themselves to have suffered.

Art. 3.—If any article of Turkish produce, growth, or manufacture be purchased by the British mer-
chant or his agent, for the purpose of selling the same for internal consumption in Turkey, the British
merchant or his agent shall pay, at the purchase and sale of such articles, and in any manner of trade
therein, the same duties that are paid, in similar circumstances, by the most favoured class of Turkish
subjects engaged in the internal trade of Turkey, whether Mussulmans or Rayas.

Art. 4.—If any article of Turkish produce, growth, or manufacture be purchased for exportation, the
same shall be conveyed by the British merchant or his agent, free of any kind of charge or duty what-
soever, to a convenient place of shipment, on its entry into which it shall be liable to one fixed duty
of 3 per cent. *ad valorem*, in lieu of all other interior duties.

Subsequently, on exportation, the duty of 3 per cent., as established and existing at present, shall
remain. But all articles bought in the shipping ports for exportation, and which have already paid
the interior duty at entering into the same, will only pay the 3 per cent. export duty.

Art. 5.—The regulations under which firmans are issued to British merchant vessels for passing the
Dardanelles and the Bosphorus, shall be so framed as to occasion to such vessels the least possible
delay.

Art. 6.—It is agreed by the Turkish government that the regulations established in the present con-
vention shall be general throughout the Turkish empire, whether in Turkey in Europe, in Turkey in
Asia, in Egypt, or other African possessions belonging to the Sublime Porte, and shall be applicable to
all the subjects, whatever their description, of the Ottoman dominions; and the Turkish government
does agree not to object to other foreign powers settling their trade upon the basis of this present
convention.

Art. 7.—It having been the custom of Great Britain and the Sublime Porte, with a view to prevent
all difficulties and delay in estimating the value of articles imported into the Turkish dominions, or
exported therefrom, by British subjects, to appoint, at intervals of fourteen years, a commission of
men well acquainted with the traffic of both countries, who have fixed by a tariff the sum of money
in the coin of the Grand Signior which should be paid as duty on each article; and the term of four-
teen years, during which the last adjustment of the said tariff was to remain in force, having expired,
the said contracting parties have agreed to name conjointly fresh commissioners to fix and determine
the amount in money which is to be paid by British subjects, as the duty of 3 per cent. upon the value
of all commodities imported and exported by them; and the said commissioners shall establish an
equitable arrangement for estimating the interior duties which, by the present treaty, are established
on Turkish goods to be exported, and shall also determine on the places of shipment where it may be
most convenient that such duties should be levied.

The new tariff thus established to be in force for seven years after it has been fixed, at the end of
which time it shall be in the power of either of the parties to demand a revision of that tariff; but if
no such demand be made on either side within the six months after the end of the first seven years,
then the tariff shall remain in force for seven years more, reckoning from the end of the preceding
seven years; and so it shall be at the end of each successive period of seven years.

Art. 8.—The present convention shall be ratified, and the ratifications shall be exchanged at Con-
stantinople within the space of four months.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed their
seals thereunto.

Done at Balta-Liman, near Constantinople, the 16th day of August, 1839.

FOR BRITAIN.

MUSTAFA RESCHID, &c.

(Signed in the Turkish Original)

ADDITIONAL ARTICLES.

Certain difficulties having arisen between the ambassador of Her Britannic Majesty and the plenipotentiaries of the Sublime Porte, in fixing the new conditions which should regulate the commerce in British goods imported into the Turkish dominions, or passing through the same in transit, it is agreed between his Excellency the British ambassador and the plenipotentiaries of the Sublime Porte, that the present convention should receive their signatures, without the articles which have reference to the above-mentioned subjects forming part of the body of the said convention.

But at the same time it is also agreed—the following articles having been consented to by the Turkish government—that they shall be submitted to the approbation of Her Majesty's government, and, should they be approved and accepted by Her Majesty's government, they shall then form an integral part of the treaty now concluded.

The articles in question are the following:—

Art. 1.—All articles being the growth, produce, or manufacture of the United Kingdom of Great Britain and Ireland and its dependencies, and all merchandises, of whatsoever description, embarked in British vessels, and being the property of British subjects, or being brought overland, or by sea, from other countries by the same, shall be admitted, as heretofore, into all ports of the Ottoman dominions, without exception, on the payment of 3 per cent. duty, calculated upon the value of such articles.

And in lieu of all other and interior duties, whether levied on the purchaser or seller, to which these articles are at present subject, it is agreed that the importer, after receiving his goods, shall pay, if he sells them at the place of reception, or if he send them thence to be sold elsewhere in the interior of the Turkish empire, one fixed duty of 2 per cent.; after which such goods may be sold and resold in the interior, or exported without any further duty whatsoever being levied or demanded on them.

But all goods that have paid the 3 per cent. import duty at one port shall be sent to another free of any further duty, and it is only when sold there, or transmitted thence into the interior, that the second duty shall be paid.

It is always understood that Her Majesty's government do not pretend, either by this article or any other in the present treaty, to stipulate for more than the plain and fair construction of the terms employed; nor to preclude in any manner the Ottoman government from the exercise of its rights of internal administration, where the exercise of those rights does not evidently infringe upon the privileges accorded by ancient treaties, or the present treaty, to British merchandises or British subjects.

Art. 2.—All foreign goods brought into Turkey from other countries shall be freely purchased and traded in, in any manner, by the subjects of Her Britannic Majesty, or the agents of the same, at any place in the Ottoman dominions; and if such foreign goods have paid no other duty than the duty paid on importation, then the British subject or his agent shall be able to purchase such foreign goods on paying the extra duty of 2 per cent., which he will have to pay on the sale of his own imported goods, or on their transmission for sale into the interior; and after that such foreign goods shall be resold in the interior, or exported, without further duty; or, should such foreign goods have already paid the amount of the two duties (i. e. the import duty and the one fixed interior duty), then they shall be purchased by the British subject or his agent, and afterwards resold or exported, without being ever submitted to any further duty.

Art. 3.—No charge whatsoever shall be made upon British goods (such being the growth, produce, or manufacture of the United Kingdom or its dependencies, or the growth, produce, or manufacture of any foreign country, and charged in British vessels, and belonging to British subjects) passing through the straits of the Dardanelles, of the Bosphorus, and of the Black Sea, whether such goods shall pass through those straits in the ships that brought them, or are transhipped in those straits, or, destined to be sold elsewhere, are landed with a view to their being transferred to other vessels (and thus to proceed on their voyage) within a reasonable time.

All merchandises imported into Turkey for the purposes of being transmitted to other countries, or which, remaining in the hands of the importer, shall be transmitted by him for sale to other countries, shall only pay the duty of 3 per cent. paid on importation, and no other duty whatsoever.

Done at Balta-Liman, near Constantinople, the 10th day of August, 1838.

PONSOMBY.

(Signed in the Turkish original)

MUSTAFA REŞİD, &c.

Official Note delivered to Lord Ponsomby by his Excellency Nourse Effendi, on the 27th of August, 1838, relative to the 2d Article of the preceding Convention.

(Translation.)

It is stipulated by the 2d article of the Treaty of Commerce concluded between the Sublime Porte and the British government on the 25th Djémaszulével, 1254 (August 16, 1838), that English merchants are at liberty to purchase all kinds of merchandises in the Ottoman empire.

But in order that the right of English merchants to sell within the Ottoman empire, or to export, the merchandises which they may purchase, may not be liable to misconception, the embassy of Her Britannic Majesty has desired that an explanation should be given on this point, either in the treaty itself, or in a special note.

The meaning of the passage of which an elucidation is requested is clear, from the relation which the subsequent points in the 2d article bear to each other. But we nevertheless repeat, that English merchants may, in virtue of the treaty, purchase within the Ottoman empire all kinds of merchandises; may, if they think proper, send the same abroad after having paid the duty thereon stipulated by the treaty, or may, if they think fit, resell the same within the Ottoman empire on conforming to the arrangements established by the said treaty with reference to internal commerce.

Such are the arrangements of the treaty; and we give this explanation to the ambassador, referring to his Excellency the assurances of our sincere and perfect friendship.

The 7th Djémaszul-akir, 1254 (August 27, 1838).

[For the commercial treaties between the United States and other nations, the reader is referred to *Gordon's Digest of the Laws of the United States*. In all these treaties the government of the Union has acted on the most liberal principles. It has aimed to place its commerce with other countries, on the basis of an entire reciprocity, asking from others such privileges only as it was willing in its turn to grant to them; and it has uniformly endeavoured to observe as strict an impartiality, in reference to them, as was consistent with a proper regard for its own dignity.—*Am. Ed.*]

TREBISOND, anciently Trapezus, from its resemblance to a trapezium, a town of Asia Minor, on the south-east coast of the Black Sea, lat. 40° 1' N., lon. 39° 44' 52" E. Population variously estimated at from 15,000 to 30,000. The town is built on the declivity of a hill rising gently from the sea. It is a place of great antiquity; and, from the year

1293 to the final subversion of the Eastern empire by Mohammed II, in the 15th century, was the seat of a dukedom, or, as it was sometimes called, an empire, comprising the country between the Phasis and the Halys. Its fortifications are still of considerable strength, at least for a Turkish city. The space included within the walls is of great extent; but it is principally filled with gardens and groves. The houses are mean in their outward appearance, and comfortless within.—(Tournfort, *Voyage du Levant*, tome ii. pp. 231—239; *Leont's Journey through Asia Minor*, &c. p. 338.)

Harbour.—Trebusond has two ports, one on the W. and one on the E. side of a small peninsula, or point of land, projecting a short way into the sea. That on the east is the best sheltered, and is the place of anchorage for the largest ships. It is, however, exposed to all but the southerly gales; but it does not appear, that, with ordinary precaution, any danger need be apprehended. The ground, from a mile E. from the point, is clean, and holds extremely well. Ships moor with open haws to the N., and a good hawser and stream anchor on shore, as a stern-fast. At night, the wind always comes off the land. Captain Middleton says that the only bad weather is from the N. W.; but that, though the swell be considerable, it does not cause any heavy strain upon the cables.—(*Nautical Magazine*, vol. ii. p. 181.)—At Platana, near Trebusond, and quite as exposed, Turkish vessels have from time immemorial rode in safety the whole winter; a satisfactory proof that the dangers supposed to be incident to the roads along the coast are wholly visionary.—(*Ibid.* p. 244.)

Navigations of the Black Sea.—We are happy to have this opportunity to state that Captain Middleton, who has been repeatedly in the Black Sea, agrees entirely with Tournfort—(see *ant.* p. 251.)—as to the groundlessness of the notions that have got abroad of its navigation being peculiarly dangerous. It shows that the "thick weather," supposed to prevail in this sea, is "quite imaginary."—There are fogs in it occasionally, but the *severest* last long; and, like fogs every where else, are unaccompanied by much wind. Unless sometimes occur, but they rarely amount to storms, and their duration is short. Except on its northern coast, it has deep water all over. It may, in fact, be considered a sea almost without a hidden danger. The only difficulty attaching to its navigation consists, as formerly asserted (*ant.* p. 251.), in making the Bosphorus. But this, also, has been much exaggerated; and ships able to keep out to sea, and properly navigated, quit it without encountering any considerable risk.—(For further particulars as to this interesting subject, the reader is referred to Captain Middleton's paper in the 3d volume of the *Nautical Magazine*,—a useful and excellent publication, well entitled to the public patronage.)

Trade.—In antiquity, and in more modern times, previously to the conquest of Constantinople by the Turks, and the exclusion of all foreign vessels from the Black Sea, Trebusond was the seat of an extensive trade. Any one, indeed, who casts his eye over the map of Asia, must be satisfied that this city is the natural emporium of all the countries to the S. E. of the Black Sea, from Kars on the east, beyond Diarbeker to Amasia, on the west. Erzerum, the principal city of Armenia, is only about 30 miles S. E. from Trebusond. Its merchants are distinguished by their superior attainments, and by their enterprise and activity. For a lengthened period, they have derived most part of their supplies of European commodities by way of Smyrna or Constantinople; nothing, however, but the impossibility of obtaining them at so convenient a port as Trebusond, could have made them resort to so distant markets as those now mentioned; and it may well excite surprise, considering the period long which the Black Sea has been open, that efforts were not sooner made to establish an intercourse with Armenia, Georgia, and the north-western parts of Persia, through this channel. We are glad, however, to have to state, that within these few years this has been done; and notwithstanding the difficulties that necessarily attach to every attempt to open new channels of commerce with semi-civilized nations, the experiment has proved more than ordinarily successful.

The policy of Russia has recently, also, given to Trebusond an importance it did not formerly possess. Previously to 1831, foreign commodities were admitted at the low duty of 5 per cent. into the Russian port of Redoutkalé, and others on the coast of Mingrelia, whence they were distributed over Georgia, and as far as Persia. But a ukase, issued at the epoch referred to, put an end to all the immunities with respect to duties enjoyed by the Russian provinces to the south of Mount Caucasus, and extended to them the same customs' regulations that obtain in the other parts of the empire. Considerable difficulties are, it is true, made from the duties charged on certain articles imported into these provinces, provided they are carried in the first instance to Odessa, and there reshipped for Mingrelia; but those that go direct to the latter are subject to the same duties and conditions as if they went to Petersburg or Riga. Printed cottons, and some other important articles, are in all cases prohibited.

The opening of a port on the S. E. extremity of the Black Sea, to which goods might be sent direct from Europe, and be thence conveyed to Armenia, Persia, &c., has, under these circumstances, become the object of a good deal of interest to the commercial world. There can be no doubt, indeed, did any thing like order or regular government prevail in the Turkish provinces of Asia Minor, Armenia, &c., that Trebusond would speedily become a considerable emporium. At present, however, and for a long time back, these beautiful provinces, in common with most other parts of the Turkish empire, have been in a state of extreme disorder; and, owing to the imbecility and ignorance of the government, there seems but little prospect of improvement so long as it is suffered to exist.

The principal articles of import are manufactured cottons, mostly from Great Britain, sugar, coffee, iron, salt, tin, wine, &c. Cottons are sold at long credits; sugar, coffee, &c. are sold at shorter credits, and are more regularly paid. The exports consist of silk, sheep's wool, tobacco, shawls, and carpets, &c. and drugs of various sorts, box wood, nuts, &c. There are very rich copper mines in the mountains to the south of Trebusond; but they are but little wrought; and the Turks are so blind to their own interests, as to prohibit the exportation of copper, as well as of corn, and wax. It is difficult, therefore, to obtain return cargoes. More than half the articles imported, are destined for Persia. In 1832, no fewer than 9,189 packages passed through Trebusond for Tabreez; and it is believed, that of these, fully 8,000 consisted of British manufactures.

Arms, Weights, and Measures, same as at Constantinople; which see.
Arrivals.—In 1832, there arrived at Trebusond, 6 ships under the British flag, of the burden of 718 tons.—(*Parl. Paper*, No. 756. Sess. 1833.)—During the same year, there arrived 19 foreign vessels, of the burden of 3,433 tons; of these, 10 were Austrian; 5 Sardinian; and 4 Russian. The total imports may, perhaps, be valued at about 300,000*l.* The exports are comparatively trifling.

Transit Trade with Persia.—We noticed, under the article TAKRISOON, in the *December*, the importance that the trade with this place was likely to attain from its becoming a channel through which to carry on trade with Persia. Previously to the 1st of January, 1832, the trade between Europe and Persia, by way of the Black Sea, principally centered in the Russian port of Redout Kalé, at the mouth of the Phasis. This was a consequence of the exemption granted in 1822 to the Russian provinces to the south of the Caucasus from the duties charged in the other parts of the empire. But the exemption having ceased

at the period referred to, and the Trans-Caucasian provinces having been subjected to the same duties as the other provinces, the transit trade to Persia by way of Redout Kalé, Tefflis, Erzeroum, and Tabreez. In consequence, the increase of trade at Trebisond has been very remarkable. In 1830, about 5,000 packages, valued at 250,000*L.*, were imported and forwarded for Persia; in 1834 about 12,000 packages, valued at 600,000*L.*, were so received and forwarded; and in 1835 the number of packages had increased to 19,327, valued at 966,350*L.* We subjoin a

Statement of the Number and Tonnage of Vessels, with the Value of their Cargoes, and distinguishing the Countries to which the same belonged, which entered and cleared at the Port of Trebisond in the Year 1835.—(Consular Returns.)

Total	170	96,444	1,611,638	156	94,572	690,320

Most of the vessels from Constantinople had on board British produce; and it is believed that from 7-10ths to 9-10ths of the goods imported to be forwarded to Persia are of British origin, consisting principally of cotton goods, woollen, hardware, tin, sugar, &c. Previously to 1831 no British iron had ever been seen at Trebisond; but it was then introduced, and is now imported, to the exclusion of all other sorts. M. de Hagemeister admits that it has entirely superseded the iron of Russia in this and other markets on the southern side of the Black Sea.—(Report on the Commerce of the Black Sea, p. 207.)

In Persia, as in almost all Eastern countries, foreign products are admitted, on paying a low duty. Lately, however, the schah has evinced a disposition to restrict the importation of English goods, and to load them with heavier duties. This conduct, so unusual in an Eastern prince, may, it is probable, have been suggested by the foreign agents at his court.

Direct Trade with Trebisond.—The transit trade of Trebisond is by far the most important; but, as the goods destined for Persia by this channel are cleared out for Turkey, they appear in the list of exports to it, and, consequently, make our trade with Turkey appear much greater than it really amounts to.

The trade with Trebisond itself is, however, far from inconsiderable, and might be indefinitely extended. The iron of Great Britain is now, as stated above, imported to the exclusion of that of Russia, which was formerly the only sort made use of. Considerable quantities of cotton yarn are also supplied through Trebisond to the looms in the eastern part of Asia Minor that used to be wholly supplied with native yarn, and a taste for British cottons is beginning to spread among the population.

We carry away from Trebisond Persian silk, wool, tobacco, wax, opium, boxwood, nuts, &c. But, owing to the restrictions on exportation, the trade has hitherto laboured under many difficulties; and numbers of ships have sailed in ballast for Odessa, Galacs, and other ports where they load.

A Statement of the Number and Tonnage of British Vessels, with the Nature and Value of their Cargoes, which entered and cleared at the Port of Trebisond, distinguishing the Ports to and from which the same sailed in the Year 1835.

* Note.—In these numbers are included 6 entries and 7 clearances of one vessel of 64 tons burden.

• We have elsewhere referred (art. ODessa) to this valuable publication. Though in the review of Russia, the author has not scrupled to point out errors in her policy & has justly censured the extension of the tariff to the Trans-Caucasian provinces in 1833.—(Sup.)

TRIESTE, a large city and sea-port of the Austrian dominions, the capital of a district of Illyria, situated near the N. E. extremity of the Gulf of Venice, lat. 45° 38' 37" N., lon. 13° 46' 27" E. Population 48,000. It is divided into the old and new towns. The former is built upon elevated ground; the latter, which is lower down, is laid out with greater regularity, and is partly intersected by a canal, into which vessels not drawing more than 9 or 10 feet water enter to load and unload.

Harbour.—The harbour of Trieste, though rather limited in size, is easy of access and convenient. It is protected from southerly gales by the *Molo Teresiano*, so called from the Empress Maria Theresa, at the extremity of which the new light-house, mentioned below, has been constructed. The port, with the mole, forms a crescent 14 mile in length, being a continued quay, faced with hewn stones, with stairs and jetties for the convenience of embarkation. On the north side of the port is a dock or harbour, appointed exclusively for vessels performing quarantine. It is walled round, and is furnished with boats, warehouses, and every sort of accommodation required for the use of passengers and goods. Ships under 300 tons burden lie close to the quays; those of greater size mooring a little further out. The principal defects of the port are, its limited size, and its being exposed to the N. W. winds, which sometimes blow with much violence, and throw in a heavy sea. The gales, however, are seldom of long continuance; and the holding ground being good, when the anchors are backed and proper precautions taken, no accidents occur. The tide at Trieste is scarcely perceptible; but the depth of water is influenced by the wind, being increased by a long continued sirocco or S. E. wind, and diminished by the prevalence of the E. N. E. wind, known by the name of *Bora*. The access to the port is not obstructed by any bar or shallow; and there is good anchorage in the roads, in from 6 to 8 and 10 fathoms water. A good sailing vessel may beat in by night or by day, except it blow hard from the N. E. or E. N. E., when she had better anchor in the Bay of Roses, or Pirano, where she will ride in perfect safety.

Pilots.—Ships bound for Trieste are under no obligation to take pilots; but those entering the port for the first time would do well to take one on making the coast of Istria. Boats are always hovering off Koiolino; they are not manned by regular pilots, but by fishermen, who, though unfit to be trusted with the management of the ship, know the bearings of the places and the depth of water. The fee usually paid them for piloting is 20 dollars; in addition to which, they are supported at the ship's expense during the performance of quarantine.

Light-houses.—The light-house at the extremity of the Theresian mole is 106 feet (Eng.) high. The light is intermittent; and may be seen, supposing the eye of the observer to be elevated 15 feet above the level of the sea, about 12 nautical miles, or from Pirano on the side of Istria, and the shoals of Gado on the Italian coast. A light-house has also been erected on the point of Salvora, bearing from Trieste W. by S., distant about 18 miles. The lantern is elevated about 103 feet above the level of the sea. From this point Pirano Bay opens, where vessels may anchor in all sorts of weather.

Trade.—Trieste has no command of internal navigation; but being the most convenient, or rather the only sea-port, not merely of the Illyrian provinces, but of the duchy of Austria, and the greater part of Hungary, she possesses an extensive commerce. This has been increased by the facilities afforded to all sorts of mercantile transactions by the privilege of *porta franco* conferred on the town, and a considerable extent of contiguous country. Under this franchise, all goods, with but very few exceptions, may be imported into and exported from the city free of all duties whatever. Foreign products, when taken for consumption into the interior, are subject to the duties mentioned under the head *Tariff*, in a subsequent part of this article.

Exports.—These are very various, consisting partly of the raw, and partly of the manufactured products of Austria Proper, Illyria, Dalmatia, Hungary, and Italy; with foreign articles imported and re-exported. Among the principal articles of raw produce may be specified, corn, chiefly wheat and maize, with rice, wine, oil, shumac, tobacco, wax, &c.; silk, silk rags and waste, hemp, wool, flax, linen rags, hides, furs, skins, &c.; the produce of the mines makes an important item, consisting of quicksilver, cinabar, iron, lead, copper, brass, litharge, alum, vitriol, &c.; the forests of Carniola furnish timber, for ship building and other purposes, of excellent quality and in great abundance, with staves, cork wood, box, hoops, &c.; marble also ranks under this head. Of manufactured articles, the most important are, thrown silk, silk stuffs, printed cottons from Austria and Switzerland, coarse and fine linens, and all sorts of leather; under this head are also ranked soap, Venetian treacle, laceras, &c. with jewellery, tools and utensils of all sorts, glass ware and mirrors, Venetian beads, refined sugar, and a host of other articles. Of foreign articles imported and reshipped, the most important are sugar, coffee, and dye stuffs. Trieste is also a considerable depot for all sorts of produce from the Black Sea, Turkey, and Egypt.

It is not possible to obtain any accurate account of the quantity and value of the exports; but Mr. Money, the British consul, who has carefully inquired into the subject, supposes that they may amount in all, exclusive of those shipped for Venice, Fiume, and other Austrian ports, to about 1,000,000*l.* a year, which he divides as follows:—

Raw Produce, viz.—Grain, rice, oil, honey, wax, shumac, tobacco, &c.	350,000
Silk, hemp, wool, rags, hides and skins	360,500
Metals, mineral and other products; as, quicksilver, iron, lead, copper, brass, zinc, litharge, argol, antimony, arsenic, alum, vitriol, potash, turpentine, marbles, &c.	230,000
Timber, plank, boards, &c.	160,000
Manufactures of silk, cotton, wool, linen, leather, &c.	235,000
Soap, candles, Venetian treacle, and medicines	80,000
Tools, machinery, arms, &c.	25,000
Household furniture, musical instruments, glass and glass wares, porcelain, &c.	20,000
Foreign Articles reshipped for exportation, exclusive of those for Lombardy and the Papal States	300,000
Total	£1,800,000

Mr. Money further supposes that these articles are distributed amongst the countries trading with Trieste, as follows:—

To Turkey and the Levant	380,000
Egypt	300,000
Greece, the Ionian Islands, and Malta	150,000
the Kingdom of the Two Sicilies	35,000
Porte in France, Sardinia, and Tuscany	100,000
Spain, Portugal, and Barbary	120,000
Great Britain	230,000
Porte in the North of Germany	150,000
the United States of America	30,000
South America and the West Indies	20,000
Total exports	£1,800,000

ed.

Perhaps these estimates are a little below the mark. We have been assured by high mercantile authority, that the entire value of the exports from Trieste to foreign countries is not under 2,000,000 a year.

Imports.—There is a great difference between the imports into and the exports from Trieste; the value of the former being certainly not less than 4,000,000 sterling. The excess of imports is explained partly by the fact that large quantities of foreign goods imported into Trieste are subsequently re-shipped by coasting vessels to Venice, Fiume, and other ports, partly by the residence of English and other foreigners at Vienna, and partly by there being an excess of exports as compared with imports from other parts of the empire. The great articles of import are sugar, cotton goods and raw cotton, oil, coffee, wheat, silks, indigo and other dry stuffs, valonia, &c. The following Table contains all the information that can be desired as to the import trade of Trieste in 1829, 1830, and 1831.

Money.—Mercantile accounts are usually kept at Trieste in what is commonly called *continental* money, from an agreement entered into with respect to it by some of the German princes, in 1763. The current coins that are legal tender are dollars, $\frac{1}{2}$ dollar or forin, and zwanzigers, or pieces of 20 kreutzers. Ten dollars are coined out of the Cologne marc (3,608 gr. Eng.) of pure silver, so that the value of the dollar is 4s. 3d. sterling.

The forin, or $\frac{1}{2}$ dollar = 2s. 1d. sterling; zwanzigers, or pieces of 20 kreutzers (60 to the marc), = 8 $\frac{1}{2}$ d. sterling. Hence it follows that 1s. sterling = 23 $\frac{1}{2}$ kreutzers (60 to a forin); and the pound sterling = 9 fl. 24 kr., or, as it is commonly taken, 9 fl. 25 kr. All contracts are either expressly declared, or are understood, to be in silver money; gold coins, not being legal tender, pass only as merchandise.

Weights and Measures.—Those chiefly in use at Trieste are those of Vienna and Venice. The commercial pound contains 4 quarters, 16 ounces, or 32 loths: it is = 8,639 English grains. Thus, 100 lbs. at Trieste = 123 lb. avoirdupois; or 90 $\frac{1}{2}$ lbs. of Trieste = 112 lbs. avoirdupois.

The principal dry measure is the stajo or storo = 2 $\frac{1}{2}$ Winch. bushels. The Vienna metzen, which is sometimes used, = 1 $\frac{1}{2}$ Winch. bushel. The polonick = 0.861 Winch. bushel.

The principal liquid measure is the orna or elmer = 40 boccali = 15 wine or 12 $\frac{1}{2}$ Imperial gallons very nearly. The barite = 17 $\frac{1}{2}$ English wine gallons.

The orna of oil contains 5 $\frac{1}{2}$ cafiat, and weighs about 107 commercial pounds. It is = 17 wine or 14 $\frac{1}{2}$ Imperial gallons.

The oil woolen measure = 26 $\frac{1}{2}$ English inches. The oil for silk = 25 $\frac{1}{2}$ English inches.

Tariff.—Trieste being a free port, goods destined for its consumption, and that of the adjoining territory, by duties whatever, and are exported and imported without notice by the customs. Goods brought from the interior for export at Trieste, are charged an export duty on passing the Customs-house line. Goods imported at Trieste, to be conveyed through the Austrian dominions to those of any other power, are charged a small transit duty. The principal foreign goods taken for consumption in the interior of the empire, pay the duties specified in the subjoined Table.

Statement of the Customs' Duties on the principal Articles imported from Trieste into the Interior of the Austrian Empire.

N.B.—Trieste being without the line of customs, these duties on exportation are payable on goods entering the territory or liberties of the port, whether for consumption or for exportation by sea. The duties on raw and thrown silk are tantamount to a prohibition.

Gunpowder, salt, and tobacco, being articles monopolised by government, are not allowed to be imported into Trieste except for sale to the government or its contractors. Vessels arriving with gunpowder on board, deliver it at the arsenal, and on their clearing out it is returned to them free of expense. The utmost vigilance is exerted to prevent the introduction of tobacco; but with very little effect. The only articles, the exportation of which from the Austrian dominions is at present prohibited, are gold and silver in bars, and silk cocoons.

Smuggling.—In consequence of the prohibition of tobacco, and of the high duties imposed on refined sugar, coffee, &c., these articles are very extensively smuggled into the Austrian dominions. Most part, too, of the cotton goods sent from this country to Trieste and Venice, are sold to smugglers, by whom they are introduced into the interior with very little difficulty. It would be absurd, indeed, to suppose, seeing the extent to which smuggling is practised in England and France—(see ante, p. 516.)—that it should not be in a flourishing condition in Austria, whose frontier is so much more difficult to guard. It is, in fact, carried on to a very great extent; prohibited and overtaxed goods being introduced with the greatest regularity, either by defeating the vigilance of the officers, or, which is said to be the more common case, by making them parties to, and gainers by, the fraud. Foreign goods through the Austrian states gives considerable facilities to the smuggler. But, independently of this, their introduction is an very easy, that nothing but the repeal of the existing prohibitions, and the effectual reduction of the duties, can give any considerable check to smuggling.

We would fain hope that the Austrian government is becoming sensible of the truth. Its commercial policy is, in many respects, far from liberal; and the alterations recently made in its tariff have contributed to facilitate importation. The slightest reflection must, indeed, satisfy every one, that in such a country, restrictions on importation can be of no real advantage to the home producers; and that their only effect is to divert trade into illegitimate channels, to deprive the public treasury of the revenue it might derive from moderate duties, and to enrich those who despise and trample on the law, at the expense of the sober and industrious citizen.

Considering the vast variety of valuable and desirable products furnished by Lombardy, Hungary, Austria proper, and the other Austrian States, it is not easy to estimate the extent to which their commerce might be carried, under a free system that should develop all the resources of the country. At present, however, there is, in Austria and most other parts of the Continent, a strong disposition to believe that our recommendations of a freer system of commercial policy are dictated solely by selfish, interested motives. They naturally attach greater weight to our practice than to our professions. So long, indeed, as our present corn laws and timber duties are suffered to pollute our statute book, so long shall we make but few practical converts to our doctrine. Such a modification of the former as would render our ports always open to the importation of corn under reasonable duties, combined with the equalization of the timber duties, and the reduction of the exorbitant duties on olive oil and tallow, would show that we are disposed to practise those liberal doctrines we so freely recommend to others; and would do more to extend our trade with Italy and Austria than any measure it is in our power to adopt.

Shipping.—Since the loss of Flanders, the mercantile navy of Austria has been confined wholly to the ports on the Adriatic. But it is, notwithstanding, very considerable; and engrosses at this moment a very large share of the trade of the Mediterranean and Black Sea. The oak timber of Carniola and the Dalmatian coast is reckoned about the very best in the world; so that the Austrian ships, being built of it, are very strong, at the same time that they are particularly handsome. They are also well manned and provided. The seamen are expert, temperate, and orderly; and Mr. Money says, that the laws for the regulation of the merchant service are excellent.

By far the greater number of vessels of large burden belong to Trieste. The rest belong in Venice, Fiume, Ragusa, and the Bocche di Cattaro. On the other hand, the smaller vessels employed in the coasting trade, which is very considerable, are more equally divided; Venice having, probably, as many as Trieste, while a good number belong to the ports of Istria, Hungary, and Dalmatia.

The foreign trade of this port comprises all voyages beyond the limits of the Adriatic; and may be divided as follows:—

1. The Levant trade, including the Ionian Islands, Greece, Constantinople, Smyrna, Odessa, &c., the ports in Syria, Cyprus, Candia, and especially Alexandria.
2. The ports of the Mediterranean trade, in the west, comprising the coast of Barbary, Spain, France, and Italy; being principally carried on with Marseilles, Genoa, and Leghorn.
3. The commerce on the ocean, which the Austrian merchants have attempted with considerable success. Several ships sail for Brazil, the United States, England, Hamburg, &c.

The number of Austrian vessels at present employed in foreign trade is believed to be about 750, of the burden of about 153,000 tons, manned by about 15,000 men and boys. In the coasting trade about 20 vessels are employed, averaging 40 tons each. The fishing trade is inconsiderable.

There has been no sensible increase or diminution in the tonnage for the last five years; but there is every probability of a gradual increase in future, proportioned to the anticipated improvement of trade in the Mediterranean, which has of late years been interrupted and depressed by political events.

The following Table shows the number of ships, and their tonnage, arriving at, and sailing from Trieste during each of the three years ending with 1831, specifying the number and tonnage of those under each flag.

Movement of Shipping at Trieste, during each of the Three Years ending with 1831.

Customs' Regulations.—The custom-house at Trieste has nothing whatever to do with the entry, reporting, &c. of vessels. When a ship arrives, she is reported to the Health Office; which publishes a list of arrivals and departures, with a statement of their cargoes, as they appear in the manifests. Ships are cleared by the same office; the masters being assisted by the consuls of the country to which they belong. As soon as a vessel has performed quarantine, she loads or unloads without any interference or inspection by the customs' officers, or by any one else. Goods unsusceptible of contagion may be landed during quarantine.

Being a free port, the bonding and warehousing system is, of course, unknown at Trieste. **Port Charges.**—These are paid at the office of the harbour master on clearing out. They are the same, whatever may be the ship's stay; and are, perhaps, the most moderate of any in Europe.

Port Charges paid by Austrian and Foreign Ships.		Fl. kr. Foreign ships not privileged.		Fl. kr.	
Anchorage, per ton admeasurement	0 4	Anchorage, light-house, and cargo as above, per ton admeasurement, and per ton weight of goods	0 10		
Light-house	0 3	New tonnage duty, per ton admeasurement	0 16		
Cargo duty per ton weight of goods	0 3	Abborraggio, payable by ships departing in ballast, or with less than half a cargo	0		
Fl. R.—If grain, per 30 stajls.					

duce, manufactures, &c.; 2d, bill brokers, or exchange agents; and, 3d, ship and insurance brokers. Such authorized brokers are alone allowed to extend contracts, certificates, surveys, or other documents; and they are considered as public functionaries, whose depositions are received as legal evidence.

Any one may be a commission merchant or factor, but he may not issue printed circulars or lists of prices; nor will his books, however regularly kept, be considered as evidence in a court of justice, unless he is *matriculated*, for which the possession of a certain amount of capital is required. This, however, is little more than mere form, and a great deal of business is done by persons acting both as merchants and brokers, without being duly authorized.

The usual rate of a merchant's or factor's commission on the purchase of goods is 2 per cent. On sales, $\frac{1}{2}$ per cent.; *del credere* is sometimes added.

A merchant's commission for collecting freights, and doing other shipping business, is 2 per cent. on the inward cargo; and by custom of the place, the house to which a ship is consigned or recommended by the charterers, is entitled to a commission of 2 per cent. on the outward cargo, whether it has or has not been instrumental in procuring the goods that are laden outwards.

A broker's commission for freighting a ship, or procuring a charter, is 2 per cent. This does not include the charge for writing charter, or for any other services performed in the clearance. In case of general cargoes, when the broker has to collect goods from different merchants, he charges 3 per cent. commission. A bill broker's commission (courtage) is sometimes 1 per mille, more commonly $\frac{1}{2}$ per mille. Brokerage for the sale or purchase of merchandise varies from $\frac{1}{2}$ per cent. to 1 per cent., according to circumstances, and the nature of the article.

Insurance.—The insurance of ships is carried on to a considerable extent at Trieste. The security is unexceptionable, the terms more moderate than in England, and losses are said to be adjusted promptly and liberally. The oppressive duties on policies of insurance in England have been the cause that most insurances on ships for the Adriatic, and those that were formerly effected in London, Liverpool, &c., are now effected at Trieste. The insurance of houses is universal; and that of lives is also, of late years, practised to a considerable extent. House insurance is carried on by joint stock companies, of limited responsibility.

Bankruptcy is not of very frequent occurrence at Trieste. The laws with respect to it do not differ much from those in force in most other countries. Frauds are punishable by imprisonment; but here, as elsewhere, they are very difficult to detect. Honest bankrupts are discharged, on making a complete disclosure of their affairs, and a surrender of their assets. Property settled on a wife is not affected by the debts of the husband; a regulation which, it is evident, must lead to fraud.

Communications by Land.—The intercourse between Trieste and Austria, Hungary, &c. is necessarily all carried on by land. The roads leading to Vienna, and to the Hungarian towns, particularly the first, are kept in good repair, and the tolls are moderate; but owing to the rugged nature of the country, the ascent is in some places very considerable. The diligence from Trieste to Vienna, 340 English miles, performs the journey in 72 hours. The draught horses employed on the roads are excellent; but, in some of the mountainous districts, bullocks are used.

Repeated surveys have been made of the country between Vienna and Trieste, in the view of forming a canal. But the difficulties in the way of such a project seem to be all but insuperable. The ground is not only rugged, but the subsoil of the country stretching northwards to a considerable distance from Trieste is so very porous, that, unless precautions were taken to obviate it, the water in the canal would speedily escape. A rail-road has been proposed, and it might, no doubt, be accomplished. But the expense would be a very great, that it is extremely problematical whether it would ever yield any thing like a return. We subjoin a statement of the

Rates of Land Carriage from Trieste to various Places.

Carreasing, Stores, &c.—Timber at Trieste is excellent, workmen good, and their wages moderate; so that it is a very favourable place for carreasing and repairing. Water is very good, but rather scarce; so that, if a large supply be required, due notice must be given. Ships are served in regular rotation. Beef is very good, but rather high priced. Butter and cheese are dear; and fuel is excessively so. On the whole, therefore, Trieste cannot be considered as a favourable place for the provisioning of a ship. Subjoined is an account of the

Average Prices of the principal Articles of Provisions at Trieste in 1831.

Banking.—There are no public banks at Trieste. The Bank of Vienna has an office here, but it is merely for the exchange of its notes for cash, or, more frequently, of large notes for small ones. These notes, being guaranteed by government, are legal tender, and in general circulation, but no other currency is allowed to issue notes to be used as a circulating medium. There is not, however, any deficiency of currency. Banking business is transacted by private companies, or by individuals, who are subject to certain regulations, and are obliged to lay before competent authority an attested statement of the capital embarked in their concerns. Their business principally consists in procuring bills of exchange from other places for the use of the merchants of Trieste, or in discounting, (in which latter operation they have many private competitors), at the rate of from 4 to 6 per cent. per annum, according to the nature of the paper offered, and in proportion to the scarcity or abundance of cash.

The principal bankers of Trieste are of undoubted solidity, and do not indulge in dangerous speculations; and notwithstanding the apparent want of great banking establishments, the business of buying and selling, and of making payments and remittances, whether in bills or specie, is transacted at this port with great facility; and there seldom arises any distress, pressure, or stagnation, from want of money or credit.

It is not usual for respectable bankers to give interest on deposits. The partners in joint stock companies, banks, &c. are, in general, responsible only to the extent of their declared capital; and the individuals composing them are only liable each to the extent of their share. The same individual is frequently a general merchant, a partner in a banking house, and a member of an insurance company. All these businesses may at present be said to be prosperous.

Credit.—Goods imported into Trieste are sometimes sold for ready money, a discount being usually undertaken, and allowed in such case, of 2 or 2½ per cent. But they are commonly sold at 3 months' credit, that is, by bills of that date; occasionally, but rarely, they are sold at 6 months.

Bills thus obtained, though offering no other guarantee than the signature of the drawer or acceptor, may be discounted or loaned at a moderate rate by companies who dedicate themselves to this branch of business, and who, from their extensive dealings, are good judges of the risk. This practice has become almost universal; and it not only facilitates sales, but has a tendency to prevent bankruptcies, as it is difficult for a house long to conceal its insolvency; and its credit is, by this mode of trial, soon ascertained.

Taxes.—Real tare is allowed on most articles of export; and on all articles of import, except cotton and sugar. The tare on Brazil sugar in chests depends on their length and size, but in general it amounts to from 15 to 18 per cent.; on Brazil sugar in bags the tare is 3 per cent.; on Havannah sugar a tare is allowed of 62 lb. English per box, being from 13 to 14 per cent.; on Jamaica sugar the tare is 14 per cent. Tare on American cotton, 4 per cent.

The answers to the *Circular Queries* by Mr. Taylor Money, consul general at Milan, are amongst the most valuable that have been received, and reflect the greatest credit on his industry and talent for observation. We have been largely indebted to them.

TRINITY HOUSE. This society was incorporated by Henry VIII., in 1515, for the promotion of commerce and navigation, by licensing and regulating pilots, and ordering and erecting beacons, light-houses, buoys, &c. A similar society, for the like purposes, was afterwards established at Hull; and also another at Newcastle-upon-Tyne, in 1537; which three establishments, says Hakluyt, were in imitation of that founded by the Emperor Charles V. at Seville in Spain; who, observing the numerous shipwrecks in the voyages to and from the West Indies, occasioned by the ignorance of seamen, established, at the *Casa de Contratacion*, lectures on navigation, and a pilot-major for the examination of other pilots and mariners; having also directed books to be published on that subject for the use of navigators.

Henry VIII., by his charter, confirmed to the Deptford Trinity House Society all the ancient rights, privileges, &c. of the shipmen and mariners of England, and their several possessions at Deptford, from which it is plain that the society had existed long previously. The corporation was confirmed, in 1685, in the enjoyment of its privileges and possessions, by letters patent of the 1st of James II. by the name of the Master, Wardens, and Assistants of the Guild or Fraternity of the most glorious and undivided Trinity, and of St. Clement's, in the Parish of Deptford Strond, in the county of Kent. At first, the corporation appears to have consisted of seamen only; but many gentlemen, and some noblemen, are now amongst its members, or elder brethren. It is governed by a master, 4 wardens, 8 assistants, and 31 elder brothers: but the inferior members of the fraternity, named younger brethren, are of an unlimited number; for every master or mate, expert in navigation, may be admitted as such. Besides the power of erecting light-houses, and other sea-marks, on the several coasts of the kingdom, for the security of navigation—(see **LIGHT-HOUSES**),—the master, wardens, assistants, and elder brethren are invested by charter with the following powers; viz. the examination of the mathematical scholars of Christ's Hospital, and of the masters of his Majesty's ships; the appointment of pilots to conduct ships into and out of the Thames; the amercement of such unlicensed persons as presume to act as masters of ships of war, or pilots, in a pecuniary fine; settling the several rates of pilotage; granting licenses to poor seamen, not free of the city, or past going to sea, to row on the river Thames for their support; preventing aliens from serving on board English ships without licence; hearing and determining the complaints of officers and seamen of British ships, subject to an appeal to the Lords of the Admiralty, &c. To this company belongs the Ballast Office, for clearing and deepening the Thames, by taking up a sufficient quantity of ballast for the supply of all ships that sail out of the river, for which they pay certain rates.—(See **BALLAST**.) The corporation is authorised to receive voluntary subscriptions, benefactions, &c.; and to purchase, in mortmain, lands, tenements, &c. to the amount of 500*l.* per annum. The ancient Hall of the Trinity House at Deptford, where the meetings of the brethren were formerly held, was pulled down in 1787, and an elegant building erected for the purpose in London, near the Tower.

Trinity House Revenue, &c.—The gross revenue under the management of the Trinity House amounts to about 135,000*l.* a year; but the nett revenue is rather under $\frac{1}{2}$ that sum. It arises from the dues payable to the corporation on account of light-houses, buoys, and beacons, and ballastage; and from the interest of money in the funds, and the rent of freehold property. In 1831, the receipts were as under:—

	L. s. d.	L. s. d.	L. s. d.
<i>Light-houses</i> —Total sums received on account of light-houses		79,249 11 1-4	
Deduct commission on collection	4,174 8 9 1-4		
Charges on account of maintenance, &c.	41,148 19 7 1-2	47,323 8 4-3-4	
Nett light house revenue			31,726 5 6 1-4
<i>Buoys and Beacons</i> —gross amount of		19,094 16 11 1-2	
Deduct commission on collection	796 8 0 1-2		
Charges	7,499 18 10 1-3	8,295 4 11	
Nett buoyage, beacons, and revenue			3,061 12 0 1-2
<i>Ballastage</i> —gross amount of	30,339 17 9		
Deduct charges	23,741 15 11		
Nett ballastage revenue			4,498 1 10
<i>Rent of Land and houses, dividends on account of funded property, &c., all charges deducted</i>			10,003 2 3
Total nett revenue			58,288 1 7 3 11

By far the greater portion of this large sum is laid out on pensions to poor disabled seamen, and on the maintenance of their widows, orphans, &c. We have seen the number of persons so relieved stated at 3,000; and we believe that the fund is both judiciously and economically administered. Still, however, as we have remarked in our article—(vol. i. p. 141.)—it does appear to us, considering the vast importance to a maritime nation, like this of keeping the charges on shipping as low as possible, that it would be good policy to provide otherwise for the poor persons now dependent on the Trinity House, and to reduce the charges on account of lights, &c. to the lowest sum that would suffice to maintain the establishment in a proper state of efficiency. No one, certainly, would wish to see the poor seamen deprived of any part of the pittance they now receive; but a larger amount might be given them from other sources, and be, at the same time, less felt by the public. Every one knows that nothing contributes so much to facilitate a commercial intercourse by land as good roads and low tolls; and good lights, buoys, beacons, &c., and light charges, have precisely the same influence at sea.

TRIPANG, or SEA SLUG (*Biche de Mer*), a species of fish of the genus *Holothuria*, found chiefly on coral reefs in the Eastern seas, and highly esteemed in China, into which it is imported in large quantities. It is an unseemly looking substance, of a dirty brown colour, hard, rigid, scarcely possessing any power of locomotion, or appearance of animation. Sometimes the slug is as much as 2 feet in length, and from 7 to 8 inches in circumference. A span in length, and 2 or 3 inches in girth, is, however, the ordinary size. The quality and value of the fish, however, do not by any means depend upon its size, but upon properties in it neither obvious to, nor discernible by, those who have not been long and extensively engaged in the trade. In shallow water the animal is taken out by the hand, but in deeper water it is sometimes speared. When taken it is gutted, dried in the sun, and smoked over a wood fire; this being the only preparation it receives. The fishery is carried on from the western shores of New Guinea, and the southern shores of Australia, to Ceylon inclusive. Indeed, within the last few years it has been successfully prosecuted on the shores of the Mauritius. The whole produce goes to China. In the market of Macassar, the great staple of this fishery, not less than thirty varieties are distinguished, varying in price from 5 Spanish dollars a *picul* (133½ lbs.) to 14 times that price, each variety being distinguished by well known names! The quantity of tripang sent annually to China from Macassar is about 7,000 piculs, or 8,333 cwt.; the price usually varying from 8 dollars to a picul to 110 and 115, according to quality.—(*Crawford's Indian Archipelago*, vol. iii. p. 441.) There is also a considerable export of tripang from Manila to Canton.

Besides tripang, *fish-maws* and *sharks' fins* are exported to China from every maritime country of India.

TROY WEIGHT, one of the most ancient of the different kinds used in Britain. The pound English Troy contains 12 ounces, or 5,760 grains. It is used in the weighing of gold, silver, and jewels; the compounding of medicines; in experiments in natural philosophy; in comparing different weights with each other; and is now (by 5 Geo. 4. c. 74.) made the standard of weight.

TROY WEIGHT, Scotch, was established by James VI. in the year 1618, who enacted that only one weight should be used in Scotland, viz. the French Troy stone of 16 pounds, and 16 ounces to the pound. The pound contains 7,609 grains, and is equal to 17 oz. 6 dr. avoirdupois. The cwt., or 112 lbs. avoirdupois, contains only 103 lbs. 2½ oz. of this weight, though generally reckoned equal to 104 lbs. This weight is very nearly identical with that formerly used at Paris and Amsterdam; and is generally known by the name of Dutch weight. Though prohibited by the articles of Union, it has been used in most parts of Scotland in weighing iron, hemp, flax, and other Dutch and Baltic goods, meal, butcher's meat, lead, &c.—(See **WEIGHTS AND MEASURES**.)

TRUCK SYSTEM, a name given to a practice that has prevailed, particularly in the mining and manufacturing districts, of paying the wages of workmen in goods instead of money. The plan has been, for the masters to establish warehouses or shops; and the workmen in their employment have either got their wages accounted for to them by supplies of goods from such *depôts*, without receiving any money; or they have got the money, with a tacit or express understanding that they were to resort to the warehouses or shops of their masters for such articles as they were furnished with.

* This includes a sum of 10,174*l.* laid out on new light-houses, and 1,015*l.* of incidental charges.

† See *Parl. Paper*, No. 86, Sess. 1833. For an account of the light-house revenue, see this work, vol. i. p. 14., for buoyage and beacons, see vol. i. p. 250.; and for ballastage, see vol. i. p. 65.

Advantages and Disadvantages of the Truck System.—A great deal of contradictory evidence has been given, and very opposite opinions have been held, as to the practical operation and real effect of this system on the workmen. Nor is this to be wondered at, seeing that every thing depends on the mode in which it is administered, and that it may be either highly advantageous or highly injurious to the labourer. If a manufacturer of character establish a shop supplied with the principal articles required for the use of the workmen in his employment, and give them free liberty to resort to it or not as they please, it can, at all events, do them no harm, and will, most likely, render them material service. The manufacturer, having the command of capital, may, in general, lay in his goods to greater advantage than they can be laid in by the greater number of retail tradesmen in moderate-sized towns; and not being dependent on the profits of his shop for support, he is, even though he had no advantage in their purchase, able to sell his goods at a cheaper rate than they can be afforded by the majority of shopkeepers. Sometimes, also, a factory is established in a district where shops either do not exist at all, or are very deficient; and in such cases the master consults the interest and convenience of those dependent on him when he provides a supply of the principal articles required for their subsistence. It is easy, therefore, to see, that the keeping of shops by masters for the use of their workmen may be very beneficial to the latter. But to insure its being so, it is indispensable that the masters should be above taking an advantage when it is within their reach, and that their conduct towards the workmen should not be in any degree influenced by the circumstance of the latter dealing or not dealing with their shops.

Such disinterestedness is, however, a great deal more than could be rationally expected from the generality of men; and hence, though many instances may be specified in which the truck system was advantageous to the workmen, those of a contrary description were, unfortunately, far more numerous. It is obvious, indeed, that a practice of this sort affords very great facilities for fraudulent dealings. Under the old law, a manufacturer who had a shop, had means, supposing he were inclined to use them, not possessed by any ordinary shopkeeper as respects his customers, for forcing upon his workmen inferior goods at an exorbitant price. They are at first supplied on liberal terms, and are readily accommodated with goods in anticipation of wages, till they get considerably into debt. The pernicious influence of this deceitful system then begins fully to disclose itself. The workmen cease to be free agents; they are compelled to take such goods and at such prices as the master pleases; for, were they to attempt to emancipate themselves from this state of thralldom by leaving their employment, they would be exposed to the risk of prosecution and imprisonment for the debts they had incurred. It is not easy to imagine the extent to which these facilities for defrauding the labouring class were taken advantage of in various districts of the country. In many instances, indeed, the profits made by the shops exceeded those made by the business to which they were contingent; and thousands of workmen, whose wages were nominally 30s. a week, did not really receive, owing to the bad quality and high price of the goods supplied to them, more than 20s., and often not so much.

Abolition of the Truck System.—A system of dealing with the labouring classes, so very susceptible of abuse, and which, in point of fact, was very extensively abused, was loudly and justly complained of. A bill was in consequence introduced for its suppression by Mr. Littleton, which, after a great deal of opposition and discussion, was passed into a law—1 & 2 Will. 4. c. 32.—(See abstract subjoined.)

Those who opposed this act did so on two grounds;—1st, that it was improper to interfere at all in a matter of this sort; and, 2d, that the interference would not be effective. The first of these objections does not appear entitled to any weight. In suppressing the truck system, the legislature did nothing that could in anywise regulate or fetter the fair employment of capital: it interfered merely to put down abuse; to carry, in fact, the contract of wages into full effect, by preventing the workman from being defrauded of a portion of the wages he had stipulated for. The presumption no doubt is, in questions between workmen and their employers, that government had better abstain from all interference, and leave it to the parties to adjust their disputes on the principle of mutual interest and compromised advantage. Still, however, this is merely a presumption; and must not be viewed as an absolute rule. Instances have repeatedly occurred, where the interference of the legislature, to prevent or suppress abuse, on occasions of the sort now alluded to, has been imperiously required, and been highly advantageous. Those who claim its interposition are, indeed, bound to show clearly that it is called for to obviate some gross abuse, or that it will materially redound to the public advantage; and this, we think, was done in the completest manner, by the opponents of the truck system. Regard for the interests of the more respectable part of the masters, as well as for those of the workmen, required its abolition; for, while it continued, those who despised taking an advantage of their dependents were less favourably situated than those who did. It is ludicrous, therefore, in a case of this sort, to set up a cuckoo cry about the "freedom of industry." The good incident to the truck system was in practice found to be vastly overbalanced by the abuses that grew out of it; and as these

could not, under the existing law of debtor and creditor, be separately destroyed, the legislature did right in attempting to suppress it altogether.

It was said, indeed, that this would be found to be impracticable; that the manufacturers would enter underhand into partnerships with the keepers of shops, and that the system would really be continued, in another and, perhaps, more objectionable form. This anticipation has, we believe, been in some degree realized; but the system has notwithstanding been in many places abandoned, and is nowhere practised to any thing like the extent to which it was carried previously to the passing of Mr. Littleton's act. It will not, however, be completely rooted out, till all small debts, however they originate, be put beyond the pale of the law. We have already vindicated the expediency of this measure on other grounds—(see *CREDIT*); and the influence it would have in effectually destroying whatever is most pernicious in the truck system, is a weighty additional recommendation in its favour. Were all right of action upon debts for less than 50*l.* or 100*l.* taken away, no master would think of acquiring a control over the free agency of his workmen, by getting them in debt to him; and no workman would, under such circumstances, submit to be directed in his choice of shops or goods. The case of the Scotch colliers affords a curious illustration of what is now stated. Down to 1775, these persons were really *adscripti glebes*, or prædial slaves; that is, they and their descendants were bound to perpetual service at the works to which they belonged,—a right to their labour being acquired by any new proprietor to whom the works were sold! The 15 Geo. 3. c. 28. was passed for the emancipation of the colliers from this state of bondage. It, however, failed of practically accomplishing its object; for the masters speedily contrived, by making them advances in anticipation of their wages, to retain them as completely as ever under their control! To obviate this abuse, the 39 Geo. 3. c. 56. was passed; which most properly took from the masters all title to pursue the colliers for loans, unless advanced for the support of the collier and his family during sickness. This act had the desired effect; and the colliers have since been as free as any other class of labourers.—(See my edition of the *Wealth of Nations*, vol. ii. p. 186.) In fact, were small debts put beyond the pale of the law, it would not be necessary to interfere directly with the truck system; for it would not then be possible to pervert it to any very injurious purpose.

The following are the principal clauses in the Act 1 & 2 Will. 4. c. 37, entitled, "An Act to prohibit the Payment, in certain Trades, of Wages in Goods, or otherwise than in the Current coin of the Realm."

1. In all contracts hereafter to be made for the hiring of any artificer in any of the trades hereinafter enumerated, or for the performance by any artificer of any labour in any of the said trades, the wages of such artificer shall be made payable only in the current coin of this realm, and not otherwise; any contract to the contrary being illegal, null, and void.
2. If such contract contain any stipulations as to the manner in which the wages shall be expended, it is void.
3. Wages must be paid to the workman in coin only. Payment in goods is illegal and void.
4. Artificers may receive wages, if not paid in the current coin.
5. In an action brought for wages, no set-off shall be allowed for goods supplied by the employer, or by any shop in which he is interested.
6. No employer shall have any action or suit in equity against his artificer, for goods supplied to him on account of wages, or supplied by any shop in which he has an interest.
7. If the artificer, or his wife or children become chargeable to the parish, the overseers may recover any wages earned within the 3 preceding months, and not paid in cash.
8. Nothing in this act is to invalidate the payment of wages in bank notes or drafts on any bankers within 15 miles, if artificer consents.
9. Any employer of any artificer in any of the trades hereinafter enumerated, who shall, by himself, or by the agency of any other person, directly or indirectly enter into any contract, or make any payment hereby declared illegal, shall, for the first offence, forfeit a sum not exceeding 10*l.* nor less than 5*l.*, and for the second offence any sum not exceeding 20*l.* nor less than 10*l.*, and for a third offence he shall be guilty of a misdemeanour, and be punished by fine only at the discretion of the court, so that the fines shall not in any case exceed 100*l.*
10. Offences shall be inquired of and fines recovered before 2 Justices, and the amount of the fines shall be at the discretion of such justices, or in cases of misdemeanour, of the court before which the offence may be tried; and in case of a second offence, if shall be sufficient evidence of the previous conviction, if a certificate signed by the officer having the custody of the records, be produced, stating in a compendious form the general nature of the offence. But a second or third offence shall only be punished as a first or second offence, if committed within 10 days after the prior conviction; and a fourth or any subsequent offence shall be punished as a third offence. But no second or third offence shall be prosecuted after more than 2 years from the commission of the next preceding offence.
11. Justices may compel the attendance of witnesses, on the request of the parties. Penally for non-attendance without excuse, and after proof of due service of summonses at the usual place of abode for such persons, 24 hours at the least before the time appointed for appearance, a commitment to some prison within the jurisdiction of the justices, without bail or securities, for not exceeding 14 days, or until such person shall submit to be examined.
- Sections from 12. to 19. inclusive, regulate proceedings.
12. Act only to apply to the following trades:—Baking, caulding, converting, or manufacturing of iron or steel, or any parts, branches, or processes thereof; working any mines of coal, ironstone, tinestone, limestone, salt rock; or working or getting stone, slate, or clay; or making or preparing silk, beads, or quivers; or making or manufacturing any kinds of nails, chains, rivets, nails, &c., keys, &c., or any other articles of hardware made of iron or steel, or of iron and steel combined, or of any other articles of cutlery, or of any goods or wares made of brass, tin, lead, pewter, or other metal, or of

- any Japanese goods or wares whatsoever; or making, spinning, throwing, doubling, winding, weaving, combing, knitting, bleaching, dyeing, printing, or otherwise preparing any kinds of woollen, worsted, yarn, stuff, kersey, linen, fustian, cloth, serge, cotton, leather, fur, hemp, flax, mohair, or silk manufactures whatsoever, or any manufactures whatsoever made of the said last mentioned materials, whether the same be or be not mixed one with another; or making or otherwise preparing, ornamenting, or finishing, any true, silver, or precious thereof, or any materials used in any of such last mentioned trades; or making or preparing of bones, thread, silk or cotton lace, or of lace made of any mixed materials.
13. Not to extend to any domestic servant, or servant in habundant.
14. No one engaged in any of the trades or occupations enumerated, or his father, son, or brother, shall act as a justice.
15. County magistrates not to act in cases where those of towns are disqualified as above.
16. Not to prevent any employer from supplying or contracting to supply to any artificer any medicine or medical attendance, or any fuel, or any materials, tools, or implements to be by such artificer employed in his trade or occupation, if such artificer be employed in mining, or any hay, corn, or other produce to be consumed by any horse or other beast of burden employed by any such artificer in his trade and occupation; nor from desmiting to any artificer employed in any of the trades or occupations enumerated the whole or any part of any payment at any rate; nor from supplying or contracting to supply to any such artificer any victuals dressed or prepared under the roof of any such employer, and there consumed by such artificer; nor from making or contracting to make any deduction from the wages of any artificer for any such rent, or medicine, or medical attendance, or fuel, materials, tools, implements, hay, corn or produce, or such victuals, or for any money advanced to such artificer for any such purpose; nor from making any such deduction from the wages of such artificer for materials, tools, implements, hay, corn, and produce, and shall not be in any case made from the wages of such artificer unless the agreement for such deduction shall be in writing, and signed by such artificer.
17. Not to prevent any such employer from advancing to any such artificer any money to be by him contributed to any friendly society or bank for savings, or for his relief in sickness, or for the education of any child of such artificer, nor from deducting or contracting to deduct any money from the wages of such artificer, for the education of any such child, provided the agreement for such deduction shall be in writing and signed by such artificer.
18. Workmen, labourers, and other persons in any trade or occupation in any employment or occupation in or about the several trades and occupations aforesaid, shall be deemed "artificers," and all masters, foremen, managers, clerks, and other persons concerned in the hiring, employment, or superintendance of the labour of any such artificer shall be deemed to be "employers;" and any master or other thing had or contracted to be paid, or given as a remuneration for any labour done or to be done, whether within a certain time or for a certain amount, or for a time or an amount uncertain, shall be deemed to be the "wages" of such labour; and any agreement, understanding, device, contrivance, collusion, or arrangement whatsoever on the subject of wages, whether a gift or loan, whether direct or indirect, to which the employer and artificer are parties, or are assenting, or by which they are mutually bound to each other, whereby either of them shall be relieved from any obligation on the other of theirs, shall be deemed a "contract."

TRUFFLES, a sort of vegetable production, like a mushroom, formed under ground. A few have been found in Northamptonshire; they are pretty abundant in Italy, the south of France, and several other countries. They are reckoned a great delicacy. *The pâté au truffe d'Angoulême* are highly esteemed, and are sent as presents to very distant places.—(*See Cyclopædia.*)

TUNIS, the capital of the regency of the same name, on the northern coast of Africa, the Goletta fort being in lat. 36° 48' 30" N., lon. 10° 25' 45" E. The bay of Tunis is somewhat in the form of a horseshoe. Its western extremity, Cape Carthage, is situated about 4 miles N.E. from the Goletta; and its eastern extremity, Cape Zafran, bears from Cape Carthage E. by S., distant about 13 miles. The bay is about 16 miles deep, and has good anchorage all over, in from 10 to 4 fathoms water. It is exposed to the N. and N.E. gales; but they seldom occasion any damage. Tunis lies on the west side of the bay, being separated from it by a large lagoon, having, where deepest, about 7 feet water. The port is at the Goletta, or channel, passing through the narrow belt of land separating the lagoon from the sea; the entrance to it is by a canal, in which there is at all times 15 feet water; and ships may use it on paying a fee of 3 dollars a day. It is not, however, much resorted to; all vessels of considerable burden loading and unloading from their moorings in the bay, by means of lighters. The population of Tunis has been variously estimated; and may probably amount to 100,000, being the most populous of any African city after Cairo. The streets are narrow, unpaved, and filthy. The buildings, though of stone, are mean and poor; and the inhabitants present the picture of poverty and oppression. There is a fort at the Goletta, of considerable strength.

Trade.—Notwithstanding the various drawbacks arising out of the nature of the government, and the ignorance and prejudices of the people, commerce and industry are in a more advanced state in Tunis, than in any other part of Northern Africa, Egypt excepted. Though subject to droughts, the climate is, on the whole, excellent. The soil still preserves that exuberant fertility for which it was famous in antiquity.

Non quæquid Libyæ terit
Fervens aræ mesibus.—(*Sæcæ in Thyest.*)

holland receives any other manure than that of sometimes burning the weeds and stubble; and yet, in despite of its slovenly culture, the crops are luxuriant; and there is generally a considerable surplus of wheat and barley for exportation. Corn is principally shipped at Biserta, about 30 miles W. of Tunis. Olive oil is one of the principal articles of export. It is of various qualities; and some good, and some very indifferent. Susa is said to be the best place for its shipment. Soap of an excellent quality is largely manufactured in the regency. It may be had either soft or in wedges. The soft is made of barilla and pure oil, and is much esteemed. The hard soap is made from the fecæ of oil, and is reckoned very strong. The principal soap-works are at Susa. Little, however, is prepared on a speculative anticipation of a demand for exportation; but any quantity may be had by contracting for a few months before the period when it is wanted. A sort of woollen acull-caps are largely exported. They are in extensive demand all over the Levant, and are nowhere made in such perfection as there. Ivory and gold dust, hides, wax, morocco leather, sponge, barilla, coral, dates, ostrich feathers, &c. are among the articles of export.

The imports from Europe consist of woollens, coarse German and Irish linens, cotton stuffs, hardware, sugar, coffee, spices, tin plates, lead, alum, dye stuffs, wine, silk, Spanish wool, &c. There is very little direct trade between Tunis and England; but a good deal is indirectly carried on, through the intervention of Malta and Gibraltar. Marseilles has probably the largest share of the trade with the regency. In 1830, there entered the different ports of Tunis 194 ships, of the burden of 20,747 tons, exclusive of those engaged in the trade with the other African states and Turkey.

Exclusive of the trade by sea, a considerable trade is carried on between Tunis and the interior of Africa, by means of caravans. These import slaves, gold dust, ivory, feathers, drugs, &c. They carry back cotton stuffs, linens, hardware, spices, cochineal, &c.

Naval and military stores imported into Tunis pay no duty. Other articles pay a duty of 3 per cent. ad valorem on a rated tariff. Obstructions arising out of monopolies, &c. are occasionally thrown in the way of exportation; and in general it is necessary, before proceeding to ship, to obtain a *fishery*, a licence to that effect from the bey. That, however, may be, for the most part, procured without much difficulty.

Money.—Accounts are kept in pieces of 16 carobas or 52 aspers. The asper is worth about 1s. 1d. sterling. The asper is an insignificant money. The value of foreign coins depends on the state of the exchange.

Weights.—Gold, silver, and pearls are weighed by the ounce of 8 grains; 16 of these ounces make the Tunis pound = 7,775 8 Eng. lbs. The principal commercial weight is the cantaro, containing 114, or 115, and is equivalent to 11403 lbs. avoird., or 5036 lbs.

Measures.—The principal corn measure is the *caf*, divided into 16 *minas*, and the white into 18 *minas*. One *caf* = 14 1/2 Imperial bushels. The wine measure is the *millorillo* of Marseilles = 14 1/2 Imp. gal.

RUINS OF CARTHAGE.—The famous city of Carthage, one of the greatest emporiums of the ancient world, long the mistress of the sea, and the most formidable enemy of Rome, was situated near the cape which still bears her name, about 10 miles N.E. from Tunis. Such, however, have been the alterations on the coast, that the port of the city, within whose ample embrace whole navies used to ride, is now wholly filled up; antiquaries differ as to its situation; and the sea has in some places receded from 2 to 3 miles from the ruins of the buildings by which it was formerly skirted. The common sewers are still in a very perfect state, as are several cisterns, public reservoirs, and other remains of that sort, with the fragment of a noble aqueduct that supplied the city with water. But besides these, and a very few Punic inscriptions that have been dug up, there is nothing left to attest the ancient grandeur

and magnificence of the city, or to identify it with the illustrious people by whom it was founded and occupied till its destruction by Scipio Nasica. There are no temples, no triumphal arches, no granite columns or obelisks covered with Phœnician characters, and no ancient entablatures. These have all fallen a sacrifice to hostile attacks, or to the destroying hand of time.

Nunc passim, vix reliquias, vix nomina servans,
Obruitur, propris non agnoscenda rotulis.

Such mutilated fragments of buildings as still remain, are evidently the work of a later age; of those who occupied the city between the period when a colony was sent to it by Augustus, and its final subversion by the Saracens in the 7th century.

TURBITH, or **TURPETH**, the cortical part of the root of a species of *Convolvulus*, brought from different parts of the East Indies. It is a longish root, about the thickness of the finger, resinous, heavy, of a brownish hue without and whitish within. It is imported cloven in the middle, lengthwise, and the heart or woody matter taken out. The best is ponderous, not wrinkled, easy to break, and discovers to the eye a large quantity of resinous matter. At first it makes an impression of sweetness on the taste; but, when chewed for some time, betrays a nauseous acrimony. It is used in medicine, but only to a small extent.—(*Lewis's Mat. Med.*)

TURBITH (MINERAL), the name given by chemists to the subsulphate of mercury.
TURBOT (*Pleuronectes maximus*), a well known and highly esteemed species of fish. Very considerable quantities of turbot are now taken on various parts of our coasts, from the Orkneys to the Land's End, yet a preference is given in the London markets to those caught by the Dutch. The latter are said to have sometimes drawn as much as 80,000*l.* in a single year, for turbots sold in London.

Fresh turbots, however taken, or in whatever ship imported, may be imported free of duty.—(See FISH.)

TURMERIC, the root of the *Curcuma longa*. It is externally greyish, and internally of a deep lively yellow or saffron colour; very hard; and not unlike, either in figure or size, to ginger. That should be preferred, which is large, new, resinous, difficult to break, and heavy. It is imported from Bengal, Java, China, &c.; but some of a superior quality is said to have been brought from Tobago. Small quantities of it have also been grown in England. It has a somewhat aromatic, and not very agreeable smell; and a bitterish, slightly acrid, and rather warm taste. It used to be in considerable estimation as a medicine; but in Europe it is now used only as a dye. It yields a beautiful bright yellow colour; which, however, is extremely fugitive, and no means have hitherto been discovered of fixing it. It is sometimes employed to heighten the yellows made with weld, and to give an orange tint to scarlet; but the shade imparted by the turmeric soon disappears. The Indians use it to colour and season their food.—(*Lewis's Mat. Med.*; *Bancroft on Colours*, vol. i. p. 276.)

The imports of turmeric from all places eastward of the Cape of Good Hope were, in 1830, 1,867,764 *lbs.*; in 1831, 1,232,628 *lbs.*; and in 1832, 1,004,045 *lbs.*

Its price in bond in the London market, in March, 1834, was—Bengal, per cwt., 15*s.* to 16*s.*; Java, 24*s.* to 25*s.*; China, 25*s.* to 26*s.*

The duty on turmeric is 2*s.* 4*d.* per cwt. on that brought from a British possession, and 10*s.* per cwt. on that from a foreign country. The only effect of this injurious distinction is to force the use of an inferior article.

TURPENTINE (Ger. *Turpentin*; Fr. *Térébenthine*; It. *Tremantina*; Rus. *Skipidar*; Pol. *Terpentina*). There are several species of turpentine, but all of them possess the same general and chemical properties.

1. *Common Turpentine*, is a resinous juice which exudes from the Scotch fir or wild pine (*Pinus sylvestris*). The trees which are most exposed to the sun, and have the thickest barks, yield it in the greatest abundance. They begin to produce it when about 40 years old. The bark of the tree is wounded, and the turpentine flows out in drops, which fall into a hole, or sort of cup, previously dug at the foot of the tree, holding about 1½ pint. It is purified by being exposed to liquefy in the sun's rays, in barrels perforated in the bottom, through which it filters. In the United States, the collection of turpentine is confided chiefly to negroes, each of whom has the charge of from 3,000 to 4,000 trees. The process lasts all the year, although the incisions are not made in the trees till the middle of March, and the flow of the turpentine generally ceases about the end of October. The boxes are emptied 5 or 6 times during the year; and it is estimated that 250 boxes will produce a barrel weighing 320 *lbs.* Turpentine has a strong, somewhat fragrant odour, and a bitter disagreeable taste; its consistence is greater than that of honey; its colour dirty yellow; and it is more opaque than the other sorts. We import it almost entirely from the United States.

2. *Venice Turpentine*, is the produce of the larch (*Pinus Larix*). It is obtained by boring a hole into the heart of the tree about 2 feet from the ground, and fitting into it a small tube through which the turpentine flows into vessels prepared for its reception. It is purified by straining through cloths, or hair sieves. It is more fluid, having the consistence of new honey, a yellowish colour, and is less unpleasant to the smell and taste, than the common turpentine. Genuine Venetian turpentine is principally obtained from the forests

of Baye, in Provence; but much of that to be found in the shops comes from America, and is, perhaps, obtained from a different species of fir.

3. *Canadian Balsam*, or *Turpentine*, is obtained from incisions in the bark of the *Picea Balsamea*, a native of the coldest regions of North America. It is imported in casks, each containing about 1 cwt. It has a strong, not disagreeable odour, and a bitterish taste; is transparent, whitish, and has the consistence of copaiva balsam.—(See *BALSAM*.)

4. *Chian* or *Cyprus Turpentine*, is obtained from the *Pistacia Terebinthus*, a native of the north of Africa and the south of Europe, and cultivated in Chios and Cyprus. It flows out of incisions made in the bark of the tree in the month of July; and is subsequently strained and purified. It has a fragrant odour, a moderately warm taste, devoid of acrimony or bitterness, and a white or very pale yellow colour; it is about as consistent as thick honey, is clear, transparent, and tenacious. From its comparative high price, Chian turpentine is seldom procured genuine, being for the most part adulterated either with Venetian or common turpentine. The different species of turpentine may be dissolved in rectified spirit, or pure alcohol; and, by distillation, they all give similar oils, which from their being distilled (and not from any resemblance to alcohol, or spirits properly so called), are vulgarly termed spirits of turpentine. If the distillation be performed with water, the produce is an essential oil, the common spirit of turpentine; and if the distillation be carried on in a *retort*, without water, the product is more volatile and pungent,—a concentrated oil, as it were,—and is called the ethereal spirit of turpentine. The residuum that is left, in both cases, is a brownish resinous mass, brittle, capable of being melted, highly inflammable, insoluble in water, but mixing freely with oils: it is the common rosin of commerce.—(*Lib. of Entert. Knowledge, Vegetable Substances; Thomson's Dispensatory.*)

The entries of turpentine for home consumption in 1831 and 1832 amounted, at an average, to 22,239 cwt. a year. It is almost entirely imported from the United States; so much so, that of 317,995 cwt. imported in 1831, 317,095 were supplied by them: the residue came from France.

TURPENTINE OIL OF (Ger. *Terpentinöl*; Fr. *Eau de raze*, *Huile de térébenthine*; It. *Acqua di raso*; Sp. *Aguarras*), the essential oil drawn from turpentine by distillation. There are two sorts of this oil: the best, red; and the second, white. It is very extensively used by house painters, and in the manufacture of varnish, &c. The distillers have been charged with using it in the preparation of gin. Oil of turpentine is very often adulterated.

TURQUOISE (Ger. *Türkias*; Fr. *Turquoise*; It. *Turchina*; Sp. *Turquesa*), a precious stone in considerable estimation. Its colour, which is its principal recommendation, is a beautiful celestial blue, which migrates into pale blue, and is sometimes tinged with green. Specific gravity, 3.127. It is destitute of lustre, opaque, and does not admit of a very high polish. It is much worn in necklaces, and in every part of ornamental jewellery, from the size of a pin's head to that of an almond: it contrasts beautifully with brilliants, or pearls, set in fine gold, and appears to most advantage when cut spheroidal.—(*Mawe on Diamonds*, 2d ed. p. 129.)

Real turquoisees are exclusively furnished by Persia. The mines whence they are obtained are situated near Nishapore. They are the property of the Crown, and are farmed to the highest bidder. They bring a rent of from 2,000*l.* to 2,700*l.* a year.—(*Fraser's Travels on the Shores of the Caspian*, pp. 10—317.)

TUTENAG, the name given in commercial language to the zinc or spelter of China.—(See *ZINC*.) This commodity used to be smuggled from China (the exportation of unwrought metals from that empire being prohibited) to Hindostan, the Malay Archipelago, and neighbouring countries, to the amount, it is supposed, of about 50,000 cwt. a year. In 1830, the British free traders introduced German spelter for the first time into the Indian market. In 1826, the importation of tutenag from China into Calcutta ceased; and it has now been totally superseded throughout India by spelter. Of this latter commodity there were exported from Great Britain to all places eastward of the Cape of Good Hope, except China, at an average of the 3 years ending with 1832, 49,946 cwt. a year, besides the quantities furnished by Hamburg, Rotterdam, Antwerp, and other continental ports.

TYRE, the principal city of Phœnicia, and the most celebrated emporium of the ancient world. This famous city was situated on the S. E. coast of the Mediterranean, where the inconsiderable town of Tsour now stands, in lat. 33° 17' N., lon. 35° 14' 35" E. The trade that is at present carried on at Tsour is too trifling to deserve notice; but as this work is intended to give some account, however imperfect, of the revolutions in the channels of commercial enterprise, we may, perhaps, be excused for submitting a few statements with respect to the commerce carried on by so renowned a people as the Tyrians.

Tyre was founded by a colony from Sidon, the most ancient of the Phœnician cities. The date of this event is not certainly known, but Larcher supposes it to have been 1,690 years before the Christian era.—(*Chronologie d'Hérodote*, cap. ii. p. 131.) It is singular, that while Homer mentions Sidon, he takes no notice of Tyre, whose glory speedily eclipsed that of the mother city; but this is no conclusive proof that the latter was not then a considerable emporium. The prophets Isalah, Jeremiah, and Ezekiel, who flourished from 700 to 600 years before Christ, represent Tyre as a city of unrivalled wealth, whose "merchants

were princes, and her traffickers the honourable of the earth." Originally, the city was built on the main land: but having been besieged for a lengthened period by the Babylonian monarch Nebuchadnezzar, the inhabitants conveyed themselves and their goods to an island at a little distance, where a new city was founded, which enjoyed an increased degree of celebrity and commercial prosperity. The old city was, on that account, entitled *Paletyre*, and the other simply *Tyre*. The new city continued to flourish, extending its colonies and its commerce on all sides, till it was attacked by Alexander the Great. The resistance made by the Tyrians to that conqueror showed that they had not been enervated by luxury, and that their martial virtues were nowise inferior to their commercial skill and enterprise. The overthrow of the Persian empire was effected with less difficulty than the capture of this single city. The victor had not magnanimity to treat the vanquished as their heroic conduct deserved. In despite, however, of the cruelties inflicted on the city, she rose again to considerable eminence. But the foundation of Alexandria, by diverting the commerce that had formerly centered at Tyre into a new channel, gave her an irreparable blow; and she gradually declined till, consistently with the denunciation of the prophet, her palaces have been levelled with the dust, and she has become "a place for the spreading of nets in the midst of the sea."

Commerce, Colonies, &c. of Tyre.—Phœnicia was one of the smallest countries of antiquity. It occupied that part of the Syrian coast which stretches from *Aradus* (the modern *Roud*) on the north, to a little below *Tyre* on the south, a distance of about 60 leagues. Its breadth was much less considerable, being for the most part bounded by *Mount Libanus* to the east, and *Mount Carmel* on the south. The surface of this narrow tract was generally rugged and mountainous; and the soil in the valleys, though moderately fertile, did not afford sufficient supplies of food to feed the population. *Libanus* and its dependent ridges were, however, covered with timber suitable for ship building; and besides *Tyre* and *Sidon*, Phœnicia possessed the ports of *Tripoli*, *Dyblo*, *Berytus*, &c. In this situation, occupying a country unable to supply them with sufficient quantities of corn, hemmed in by mountains, and by powerful and warlike neighbours, on the one hand, and having, on the other, the wide expanse of the Mediterranean, studded with islands, and surrounded by fertile countries, to invite the enterprise of her citizens, they were naturally led to engage in maritime and commercial adventures; and became the boldest and most experienced mariners, and the greatest discoverers, of ancient times.

From the remotest antiquity, a considerable trade seems to have been carried on between the Eastern and Western worlds. The spices, drugs, precious stones, and other valuable products of Arabia and India, have always been highly esteemed in Europe, and have exchanged for the gold and silver, the tin, wines, &c. of the latter. At the first dawn of authentic history, we find Phœnicia the principal centre of this commerce. Her inhabitants are designated in the early sacred writings by the name of *Canaanites*,—a term which, in the language of the East, means merchants. The products of Arabia, India, Persia, &c. were originally conveyed to her by companies of travelling merchants, or caravans; which seem to have been constituted in the same way, and to have performed exactly the same part in the commerce of the East, in the days of Jacob, that they do at present.—(*Gen.* xxxvii. 25. &c.) At a later period, however, in the reigns of David and Solomon, the Phœnicians, having formed an alliance with the Hebrews, acquired the ports of *Elath* and *Eziongeber*, at the north-east extremity of the Red Sea. Here they fitted out fleets, which traded with the ports on that sea, and probably with those of Southern Arabia, the west coast of India, and Ethiopia. The ships are said to have visited *Ophir*; and a great deal of erudition has been expended in attempting to determine the exact situation of that emporium or country. We agree, however, with *Heeren*, in thinking that it was not the name of any particular place; but that it was a sort of general designation given to the coasts of Arabia, India, and Africa, bordering on the Indian Ocean; somewhat in the same loose way as we now use the terms *East* and *West Indies*.—(See the chapter on the *Navigations and Commerce of the Phœnicians*, in the translation of *Heeren's* work.)

The distance of the Red Sea from Tyre being very considerable, the conveyance of goods from the one to the other by land must have been tedious and expensive. To lessen this inconvenience, the Tyrians, shortly after they got possession of *Elath* and *Eziongeber*, seized upon *Rhinoculurs*, the port in the Mediterranean nearest to the Red Sea. The products of Arabia, India, &c., being carried thither by the most compendious route, were then put on board ships, and conveyed by a brief and easy voyage to Tyre. If we except the transit by Egypt, this was the shortest and most direct, and for that reason, no doubt, the cheapest, channel by which the commerce between Southern Asia and Europe could then be conducted. But it is not believed that the Phœnicians possessed any permanent footing on the Red Sea after the death of Solomon. The want of it does not, however, seem to have sensibly affected their trade; and Tyre continued, till the foundation of Alexandria, to be the grand emporium for Eastern products, with which it was abundantly supplied by caravans from Arabia, the bottom of the Persian Gulf, and from Babylon, by way of *Palmyra*.

The commerce of the Phœnicians with the countries bordering on the Mediterranean was still more extensive and valuable. At an early period, they established settlements in Cyprus and Rhodes. The former was a very valuable acquisition, from its proximity, the number of its ports, its fertility, and the variety of its vegetable and mineral productions. Having passed successively into Greece, Italy, and Sardinia, they proceeded to explore the southern shores of France and Spain, and the northern shores of Africa. They afterwards adventured upon the Atlantic; and were the first people whose flag was displayed beyond the pillars of Hercules.*

Of the colonies of Tyre, Gades, now Cadiz, was one of the most ancient and important. It is supposed by M. de St. Croix to have originally been distinguished by the name of *Tartessus* or *Tarshish*, mentioned in the sacred writings.—(*De l'Etat et du Sort des Anciennes Colonies*, p. 14.) Heeren, on the other hand, contends, as in the case of Ophir, that by *Tarshish* is to be understood the whole southern part of Spain, which was early occupied and settled by Phœnician colonists.—(See also *Huet, Commerce des Anciens*, cap. 8.) At all events, however, it is certain that Cadix early became the centre of a commerce that extended all along the coasts of Europe as far as Britain, and perhaps the Baltic. There can be no doubt that by the *Cassiterides*, or Tin Islands, visited by the Phœnicians, is to be understood the Scilly Islands and Cornwall.—(See *Trix*.) The navigation of the Phœnicians, probably, also, extended a considerable way along the western coast of Africa; of this, however, no details have reached us.

But, of all the colonies founded by Tyre, Carthage has been by far the most celebrated. It was at first only a simple factory; but was materially increased by the arrival of a large body of colonists, forced by dissensions at home to leave their native land, about 883 years before Christ.—(*St. Croix*, p. 20.) Imbued with the enterprising mercantile spirit of their ancestors, the Carthaginians rose in no very long period to the highest eminence as a naval and commercial state. The settlements founded by the Phœnicians in Africa, Spain, Sicily, &c. gradually fell into their hands; and after the destruction of Tyre by Alexander, Carthage engrossed a large share of the commerce of which it had previously been the centre. The subsequent history of Carthage, and the misfortunes by which she was overwhelmed, are well known. We shall only, therefore, observe, that commerce, instead of being, as some shallow theorists have imagined, the cause of her decline, was the real source of her power and greatness; the means by which she was enabled to wage a lengthened, doubtful, and desperate contest with Rome herself for the empire of the world.

The commerce and navigation of Tyre probably attained their maximum from 650 to 550 years before Christ. At that period the Tyrians were the factors and merchants of the civilised world; and they enjoyed an undisputed pre-eminence in maritime affairs. The prophet Ezekiel (chap. xxvii.) has described in magnificent terms the glory of Tyre; and has enumerated several of the most valuable productions found in her markets, and the countries whence they were brought. The fir trees of Senir (Hermon), the cedars of Lebanon, the oaks of Bashan (the country to the east of Galilee), the ivory of the Indies, the fine linen of Egypt, and the purple and hyacinth of the isles of Elishah (Peloponnesus), are specified among the articles used for her ships. The inhabitants of Sidon, Arvad (Aradus), Gebel (Byblos), served her as mariners and carpenters. Gold, silver, lead, tin, iron, and vessels of brass; slaves, horses, mules, sheep, and goats; pearls, precious stones, and coral; wheat, balm, honey, oil, spices, and gums; wine, wool, and silk; are mentioned as being brought into the port of Tyre by sea, or to its markets by land, from Syria, Arabia, Damascus, Greece, *Tarshish*, and other places, the exact site of which it is difficult to determine.†

Such, according to the inspired writer, was Tyre, the "Queen of the waters," before she was besieged by Nebuchadnezzar. But, as has been already remarked, the result of that siege did not affect her trade, which was as successfully and advantageously carried on from the new city as from the old. Inasmuch, however, as Carthage soon after began to rival her as a maritime and mercantile state, this may, perhaps, be considered as the era of her greatest celebrity.

It would not be easy to over-rate the beneficial influence of that extensive commerce from which the Phœnicians derived such immense wealth. It inspired the people with whom they traded with new wants and desires, at the same time that it gave them the means of gratifying them. It every where gave fresh life to industry, and a new and powerful stimulus to invention. The rude uncivilised inhabitants of Greece, Spain, and Northern Africa acquired some knowledge of the arts and sciences practised by the Phœnicians; and the advantages of which they were found to be productive secured their gradual though slow advancement.

Nor were the Phœnicians celebrated only for their wealth, and the extent of their com-

* Mons Calpe and Mons Abyla, the Gibraltar and Ceuta of modern times.

† There is, in Dr. Vincent's *Commerce and Navigation of the Ancients in the Indian Ocean* (vol. II. pp. 494-529), an elaborate and (like the other parts of that work) prolix commentary on this chapter of Ezekiel, in which most of the names of the things and places mentioned are satisfactorily explained.—(See also Heeren on the Phœnicians, cap. iv.)

merce and navigation. Their fame, and their right to be classed amongst those who have conferred the greatest benefits on mankind, rest on a still more unassailable foundation. Antiquity is unanimous in ascribing to them the invention and practice of all those arts, sciences, and contrivances that facilitate the prosecution of commercial undertakings. They are held to be the inventors of arithmetic, weights and measures, of money, of the art of keeping accounts, and, in short, of every thing that belongs to the business of a counting-house. They were, also, famous for the invention of ship building and navigation; for the discovery of glass—(see GLASS); for their manufactures of fine linen and tapestry; for their skill in architecture, and in the art of working metals and ivory; and still more for the incomparable splendour and beauty of their purple dye.—(See the learned and invaluable work of the President de Goguet, *Sur L'Origine des Loix, &c.* Eng. trans. vol. i. p. 296., and vol. ii. pp. 95—100.; see also the chapter of Heeren on the *Manufactures and Land Commerce of the Phœnicians.*)

But the invention and dissemination of these highly useful arts form but a part of what the people of Europe owe to the Phœnicians. It is not possible to say in what degree the religion of the Greeks was borrowed from theirs; but that it was to a pretty large extent seems abundantly certain. Hercules, under the name of Melcarthus, was the tutelary deity of Tyre; and his expeditions along the shores of the Mediterranean, and to the straits connecting it with the ocean, seem to be merely a poetical representation of the progress of the Phœnician navigators, who introduced arts and civilisation, and established the worship of Hercules, wherever they went. The temple erected in honour of the god at Gades was long regarded with peculiar veneration.

The Greeks were, however, indebted to the Phœnicians, not merely for the rudiments of civilisation, but for the great instrument of its future progress—the gift of letters! No fact in ancient history is better established than that a knowledge of alphabetic writing was first carried to Greece by Phœnician adventurers: and it may be safely affirmed, that this was the greatest boon any people ever received at the hands of another.

Before quitting this subject, we may briefly advert to the statement of Herodotus with respect to the circumnavigation of Africa by Phœnician sailors. The venerable father of history mentions, that a fleet fitted out by Necho king of Egypt, but manned and commanded by Phœnicians, took its departure from a port on the Red Sea, at an epoch which is believed to correspond with the year 604 before the Christian era, and that keeping always to the right, they doubled the southern promontory of Africa; and returned, after a voyage of 3 years, to Egypt, by the Pillars of Hercules.—(*Herod. lib. iv. § 42.*) Herodotus further mentions, that they related that, in sailing round Africa, they had the sun on their right hand, or to the north,—a circumstance which he frankly acknowledges seemed incredible to him, but which, as every one is now aware, must have been the case if the voyage was actually performed.

Many learned and able writers, and particularly Gosselin (*Recherches sur la Géographie Systématique et Positive des Anciens*, tome i. pp. 204—217.), have treated this account as fabulous. But the objections of Gosselin have been successfully answered in an elaborate note by Larcher (*Hérodote*, tome iii. pp. 458—464. ed. 1802.; and Major Rennell has sufficiently demonstrated the practicability of the voyage (*Geography of Herodotus*, p. 692. &c.). Without entering upon this discussion, we may observe, that not one of those who question the authenticity of the account given by Herodotus, presume to doubt that the Phœnicians braved the boisterous seas on the coasts of Spain, Gaul, and Britain; and that they had, partially at least, explored the Indian Ocean. But the ships and seamen that did this much, might, undoubtedly, under favourable circumstances, double the Cape of Good Hope. The relation of Herodotus has, besides, such an appearance of good faith; and the circumstance which he doubts, of the navigators having the sun on the right, affords so strong a confirmation of its truth; that there really seems no reasonable ground for doubting that the Phœnicians preceded, by 2,000 years, Vasco de Gama in his perilous enterprise.

Present State of Syria.—The principal modern ports on the coast of Syria are Alexandria, Latakia, Tripoli, Beyrout, Seyde, and Acre. The commerce which they carry on is but inconsiderable. This, however, is not owing to the badness of the ports, the unsuitableness of the country, or to any natural cause, but wholly to long continued oppression and misgovernment. There is a passage in the dedication to Sandys' *Travels*, that describes the modern state of Syria, Asia Minor, Egypt, &c. with a force and eloquence which it is not very likely will soon be surpassed:—

“Those countries, once so glorious and famous for their happy estate, are now, through vice and ingratitude, become the most deplorable spectacles of extreme misery; the wild beasts of mankind having broken in upon them and rooted out all civility, and the pride of a stern and barbarous tyrant possessing the thrones of ancient and just dominion. Who, syring only at the height of greatness and sensuality, hath in tract of time reduced so great and goodly a part of the world, to that lamentable distresse and servitude under which (to the astonishment of the understanding beholders) it now faints and groweth. Those

rich lands at this present remain waste and overgrown with bushes, receptacles of wild beasts, of thieves and murderers; large territories dispeopled or thinly inhabited; goodly cities made desolate; sumptuous buildings become ruins; glorious temples either subverted, or prostituted to impiecy; true religion discountenanced and oppressed; all nobilitie extinguished; no light of learning permitted, nor vertue cherished; violence and rapine insulting over all, and leaving no securitie save to an sbject mind and unlook on povertie."

Those who compare this beautiful passage with the authentic statements of Volney— incomparably the best of the modern travellers who have visited the countries referred to— will find that it is as accurate as it is eloquent.

U. V.

VALONIA, a species of acorn, forming a very considerable article of export from the Morea and the Levant. The more substance there is in the husk, or cup of the acorn, the better. It is of a bright drab colour, which it preserves so long as it is kept dry: any dampness injures it; as it then turns black, and loses both its strength and value. It is principally used by tanners, and is always in demand. Though a very bulky article, it is uniformly bought and sold by weight. A ship can only take a small proportion of her registered tonnage of valonia, so that its freight per ton is always high. The price in the London market, in March, 1834, varied from 12*l.* to 15*l.* per ton.

The entries of valonia for home consumption in 1831 and 1832 amounted, at an average, to 146,846 cwt. a year. Of 134,307 cwt. of valonia, imported in 1831, 102,226 were brought from Turkey and Continental Greece, exclusive of the Morea; 17,645 cwt. mostly at second hand, from Italy and the Italian islands; 7,461 cwt. from the Ionian Islands; 3,116 from the Morea and the Greek islands; and 3,959 cwt. from the Philippines.

VALPARAISO, the principal sea-port of Chili, in lat. 33° 1' 48" S., long. 71° 31' 8" W. Population uncertain, perhaps 6,000 or 7,000. The water in the bay is deep, and it affords a secure anchorage, except during northerly gales, to the violence of which it is exposed; but as the holding ground is good, and the pull of the anchor against a steep hill, accidents seldom occur to ships properly found in anchors and cables. There is no mole or jetty; but the water close to the shore is so deep, that it is customary for the smaller class of vessels to carry out an anchor to the northward, and to moor the ship with the stern ashore by another cable, made fast to the shore. Large ships lie a little further off, and load and unload by means of lighters. The best shelter is in that part called the Fisherman's Bay, lying between the castle and fort St. Antonio, where, close to a clear shingle beach, there is 9 fathoms water. In the very worst weather, a landing may be effected in this part of the bay.—(See *Miers's Travels in Chili and La Plata*, vol. i. p. 440., where there is a plan of Valparaiso.) The harbours of Valdivia and Concepcion are much superior to that of Valparaiso; the former being, indeed, not only the best in Chili, but second to few in any part of the world. But Valparaiso, being near the capital, Santiago, and being the central *dépôt* for the resources of the province, is most frequented. The town is inconveniently situated, at the extremity of a mountainous ridge; most of the houses being built either upon its acclivity or in its breaches. Large quantities of corn and other articles of provision are shipped here for Callao and Panama, but principally for the former. Exclusive of wheat, the principal articles of export are tallow and hides, copper, the precious metals, indigo, wool, sarsaparilla, &c. It appears from the account laid before the reader in another article—(see vol. ii. p. 345.)—that the produce of the gold mines of Chili, had materially increased during the 20 years ending with 1829, as compared with the previous 20 years. At present, the average produce of both the gold and silver mines may, we believe, be taken at about 175,000*l.* a year. There is a great want of capital in the country; and the anarchy and insecurity that have prevailed since the commencement of the revolutionary war have been very unfavourable to all sorts of industry. There can, however, be no doubt that Chili has already gained considerably, and that she will every day gain more, by her emancipation from the yoke of Old Spain. The trade we carry on with this distant country already amounts to above 1,000,000*l.* a year; and there can be no doubt that it will become far more extensive. In 1831, the declared or real value of the exports of British produce and manufactures from this country to Chili amounted to 651,617*l.*; of this sum, the exports of cotton goods amounted to about 460,000*l.*, those of woollens to 158,000*l.*, linen to 19,000*l.* &c. Chili also imports spices, tea, wine, sugar, coffee, tobacco, &c. A small part, however, of the imports are re-exported for Peru.

A country with a scanty population, which imports so extensively, cannot be in the wretched condition that Mr. Miers and other disappointed travellers would have us believe. The candour and good sense of M. de la Perouse are above all question; and every one who compares his remarks on the condition of Chili with what has now been stated, must see that its commerce, at least, has gained prodigiously by the revolution.

"The influence of the government is in constant opposition to that of the climate. The system of prohibition exists at Chili in its fullest extent. This kingdom, of which the productions would, if increased to their maximum, supply all Europe; whose wool would be sufficient for the manufactures of France and England; and whose herds, converted into salt provisions, would produce a vast revenue;—this kingdom, alas! has no commerce. Four or five small vessels bring, every year, from Lima, tobacco, sugar, and some articles of European manufacture, which the miserable inhabitants can obtain only at second or third hand, after they have been charged with heavy customs duties at Cadix, at Lima, and lastly, at their arrival in Chili; in exchange they give their tallow, hides, some deals, and their wheat, which, however, is at so low a price, that the cultivator has no inducement to extend his tillage. Thus Chili, with all its gold, and articles of exchange, can scarcely procure sugars, tobacco, stuffs, linens, cambrics, and hardware, necessary to the ordinary wants of life."—(*Perouse's Voyage*, vol. i. p. 50. Eng. ed.)

Instead, however, of 4 or 5 small ships from Lima, in 1831, 43 British ships, carrying 8,281 tons, entered Valparaiso only, besides several at the other ports! All sorts of European goods are carried direct to Chili, and are admitted at reasonable duties. The advantages resulting from this extensive intercourse with foreigners, and from the settlement of English adventurers in the country, have been already immense, and will every day become more visible. It was impossible, considering the ignorance of the mass of the people, that the old system of tyranny and superstition could be pulled to pieces without a good deal of violence and mischief; but the foundations of a better order of things have been laid; nor can there be a doubt that Chili is destined to become an opulent and a flourishing country.

Monies, Weights, and Measures of Chili are the same as those of Spain; for which, see CADIZ. The quintal of 4 arrobas, or 100 lbs., = 101.44 lbs. avoirdupois. The fanega, or principal corn measure, contains 2,439 English cubic inches, and is therefore = 1.599 Winch. bushels. Hence 5 fanegas = 1 Winch. quarter very nearly. The vara, or measure of length, = 33.864 Eng. inches.

VAN DIEMEN'S LAND, a large island belonging to Great Britain, forming part of Australia, lying between $41^{\circ} 20'$ and $43^{\circ} 30'$ S. lat., and $144^{\circ} 40'$ and $148^{\circ} 20'$ W. long. It is supposed to contain about 15,000,000 acres.

This land was discovered by the Dutch navigator Tasman, in 1642, and was named in honour of Anthony Van Diemen, at that time governor-general of the Dutch possessions in the East Indies. Previously to 1798, it was supposed to form part of New Holland, but it was then ascertained to be an island. It was taken possession of by the British in 1803; and in 1804, Hobart Town, the capital, was founded.

The surface is generally hilly and mountainous; but, though none of the land be of the first quality, there are several moderately fertile plains, and a good deal of the hilly ground is susceptible of being cultivated. On the whole, however, it is not supposed that more than about a third part of the entire surface of the island can be considered arable; but about a third more may be advantageously used as sheep pasture. As compared with New Holland, it is well watered. The climate, though very variable, is, generally speaking, good, and suitable for European constitutions; and it is not exposed to the tremendous droughts that occasion so much mischief in New South Wales. Wheat is raised in considerable quantities. Wool, however, is at present the staple produce of the colony.

Van Diemen's Land, like New South Wales, was originally intended to serve as a penal colony, and convicts are still sent to it; latterly, however, it has received a very considerable number of free settlers. In 1830, the total population of the island, exclusive of aborigines, amounted to 23,169, of whom about 10,000 were convicts. The disparity between the sexes is not quite so great here as in New South Wales.

The prosperity of the colony was formerly a good deal retarded by the enormities committed by a banditti of runaway convicts, known by the name of bush-rangers; and more recently by the hostilities of the natives. Vigorous measures have, however, been adopted for the suppression of such outrages, by confining the natives within a limited district; and it is to be hoped that they may be effectual.

Hobart Town is situated in the southern part of the island, on the west side of the river Derwent, near its junction with Storm Bay, in lat. $42^{\circ} 54'$ S., lon. $147^{\circ} 28'$ E. The water is deep, and the anchorage good. A jetty has been constructed, accessible to the largest ships. The situation appears to have been very well chosen; and the town has been judiciously laid out. In December, 1832, the district of Hobart Town contained 10,101 inhabitants, of which were, *free*, males 3,850, females 2,776; *convicts*, males 2,899, females 776. The population of the town itself, at the epoch referred to, was about 9,600. The houses are supposed to be worth, at an average, 50% a year. There are several printing establishments in the town, and no fewer than 9 or 10 newspapers, some of them very well conducted. There is also a Book Society, a Mechanics' Institute, and several respectable schools and academies. The Van Diemen's Land Banking Company, the Derwent Bank, and the Commercial Bank, have each offices in Hobart Town. They are joint-stock companies.

Launceston, the second town in the island, is situated in the northern part, at the head of the navigable river Tamar, which falls into Port Dalrymple. Its population may amount

is about 5,000. It has a considerable trade with Sydney and Hobart Town, and it has begun to trade direct to England.

Trade of Van Diemen's Land.—Imports.—Malt liquors, rum, brandy, and wine, form the principal part of the imports into the colony. Next to them are piece goods, hardware, tea, sugar, &c.

Account of the Exports from the United Kingdom to Van Diemen's Land during each of the Five Years ending with 1831.

Exclusive of the imports from the mother country, Van Diemen's Land imports sugar from the Mauritius, wine and fruit from the Cape, tea from China or Singapore, piece goods from India, tobacco from Brazil, and beef, bacon, cheese, horses, &c. from New South Wales. According to the statements in the papers published by the Board of Trade (vol. i. p. 251.), the total value of the imports in 1830, was 255,398*l.*, of which, 153,478*l.* was supplied by Great Britain, 93,251*l.* by British possessions, and 108,669*l.* by foreign states.

Exports.—Wool forms by far the principal article of export, and next to it is wheat, principally sent to Sydney, whale oil, whalebone, timber, minnow bark, live stock, potatoes, &c. The increase in the exports of wool is quite extraordinary. It is almost wholly brought to England.

Account of the Imports of Wool from Van Diemen's Land into the United Kingdom from 1827 to 1833, both inclusive.

Years.	Lbs.	Years.	Lbs.	Years.	Lbs.	Years.	Lbs.
1827	131,073	1829	985,330	1831	1,259,928	1833	1,547,301*
1828	52,846	1830	993,978	1832	911,131		

In 1831, the imports of whale oil from Van Diemen's Land amounted to 848 tons; and during the same year, 39,364 cwt. of bark were imported. The total real value of the articles exported in 1830 was estimated at 170,000*l.*, distributed as follows:—

Articles.	Amount.	Articles.	Amount.
Wool	48,000	Hides	600
Wheat	40,000	Seal skins	400
Oil	17,000	Opium and kangaroo ditto	400
Whalebone	6,000	Minnow bark	2,000
Flour	3,000	Timber	1,000
Live stock	5,000	Unenumerated goods	41,000
Potatoes	4,500		
Butter and oats	500		
		Total	170,000

Coin, Weights, and Measures, same as in England. The Spanish dollar circulates at 4*s.* 4*d.*

Shipping, &c.—In 1830, there belonged to the island 26 vessels, of the aggregate burden of 2,151 tons.

Arrivals at Hobart Town in 1832.—There arrived during the year, 51 ships, of the burden of 18,214 tons; 25 brigs, of 4,201 tons; and 29 schooners, of 1,948 tons; making in all, 105 vessels, of the burden of 24,363 tons. Of these, were from England 41, New South Wales 35, India and China 3, Swan River 1, New Zealand 8, Astory 2, Mauritius 5, Launceston 10, and Desolation Island 1.

Revenue, &c.—The customs duties collected in the colony amount to about 50,000*l.* a year, and the whole ordinary revenue is about 70,000*l.*; to which has to be added, the revenue derived from the sale of land, and other sources. Government contributes about 120,000*l.* a year in aid of the colonial revenue, to defray the expenses of the convict establishments, &c.

For the regulations as to the granting of land in Van Diemen's Land, &c., see SYDNEY.

Immigrants.—Of these there arrived at Van Diemen's Land, during 1832, men 926, women 769, children 416; in all, 2,131.

* The imports of wool from New South Wales in 1833, were 1,969,608 lbs.; making the total imports from Australia in that year, 3,516,869 lbs.

in case of George Town, or the weather not permitting the going to sea, if he be not ready to show the channel by keeping his boat a fair way until the ship can be boarded, he shall forfeit 1/2 the value of the cargo.

For every number of inches below 6, no charge is to be made; for 6 to 10 upwards, 1 shilling is to be charged.

Charter receipts are exempted from the payment of pilotage, unless in master shall make the signal for a pilot and accept his service.

the payment of the foregoing dues, unless the services of the harbour master be specifically required.

At Port Dalrymple.

	L.	s.	d.

For securing and unmooring a vessel within the harbour per register ton	0	0	1
For each removal of the ship within the harbour, per register ton	0	0	1
Colonial vessels under 80 tons per register, to be exempted from			

These details have been principally derived from *An Account of Van Diemen's Land*, published at Robert Town in 1833; and partly from Lieut. Breton's book, and different *Parliamentary Papers*.

(Population.—Including military, the total population of Van Diemen's Land amounted, in December, 1838, to 45,846, of whom 18,133 were convicts. The males are to the females in the proportion of about 7 to 1, and the free to the convict population nearly as 7 to 18. The total estimated value of the articles of colonial produce exported from the colony in 1838 was 581,475*l.*; the value of the imports during the same year being 702,951*l.*

Statement of the Value of the different Articles exported from Van Diemen's Land in 1835.

Articles	Amount.	Articles.	Amount.
<i>L.</i>	46,064	Potatoes	2,751
Wool	37,759	Fur, seal skins, opossum and kangaroo skins	3,345
Oil	54,180	Bark	11,932
Whalebone	10,836	Unenumerated goods	41,588
Tanned	6,026		
Line and	7,188	Total	321,578

The progress of the colony during the last few years has been singularly rapid, particularly in the breeding of sheep, its most valuable branch of industry. In 1828, for example, the stock of sheep amounted to 63,000 head, whereas in 1838 it had increased to 1,314,465 head. The export of wool has increased in like proportion, having advanced from 99,415 lbs. in 1820, to 993,979 lbs. in 1830, and to 2,609,520 lbs. in 1838. The revenue of the colony was 52,483*l.* in 1827, and 136,591*l.* in 1838. In the latter year there belonged to the colony 101 vessels, of the aggregate burden of 8,362 tons.—*Sup.*

VANILLA. The fruit of the *Epidendrum Vanilla*, a species of vine extensively cultivated in Mexico. It has a trailing stem, not unlike the common ivy, but not so woolly, which attaches itself to any tree that grows near it. The Indians propagate it by planting cuttings at the foot of trees selected for that purpose. It rises to the height of 18 or 20 feet; the flowers are of a greenish yellow colour, mixed with white; the fruit is about 8 or 10 inches long, of a yellow colour when gathered, but dark brown or black when imported into Europe; it is wrinkled on the outside, and full of a vast number of seeds like grains of sand, having, when properly prepared, a peculiar and delicious fragrance. It is principally used for mixing with and perfuming chocolate, and is, on that account, largely imported into Spain; but as chocolate, owing to oppressive duties, is little used in England, vanilla is not much known in this country.

Vanilla is principally gathered in the intendency of Vera Cruz, in Mexico, at Misantla, Colipa, Vacuaton, and other places. It is collected by the Indians, who sell it to the whites (*gente de razón*), who prepare it for the market. They spread it to dry in sun for some hours, then wrap it in woollen cloths to sweat. Like pepper, it changes its colour in this operation—becoming almost black. It is finally dried by exposing it to the sun for a day. There are four varieties of vanilla, all differing in price and excellence; viz. the *vanilla fina*, the *zacate*, the *rezacate*, and the *vanura*. The best comes from the forests surrounding the villages of Zentila, in the intendency of Oaxaca. According to Humboldt, the mean exportation of vanilla from Vera Cruz may amount to from 900 to 1,000 millares, worth at Vera Cruz from 30,000 to 40,000 dollars.—Vanilla is also imported from Brazil, but it is very inferior. The finest Mexican vanilla is extremely high priced. All sorts are subjected in this country to a duty of 5*s.* per lb.—(See *Humboldt, Nouvelle Espagne*, 2d edit. tome iii. pp. 37, 46.; *Poinsett's Notes on Mexico*, p. 194, &c.)

VELLIUM, a species of fine parchment.—(See **PARCHMENT**.)

(VENEZUELA.—An account of the trade of La Guayra, the principal port of this republic, in 1820, 1820, and 1831, is given under the article **LA GUAYRA**. The following details with respect to the foreign trade of the republic in 1833-34, are taken from the official statements contained in the Report of the *Secretario de Hacienda*, published at Caracas in 1835.

The trade under the head of Denmark is entirely carried on with the island of St. Thomas.

The total imports and exports from La Guayra in 1833-34 were 3,331,190 dollars, being more than half the trade of the republic. The imports and exports from Puerto Cabello during the same year were 1,455,721 dollars; the rest were from Maracaybo, Guiana, &c. The countries to which the shipping frequenting the ports of the republic belonged, is not specified; but, in all, there cleared out 212 foreign ships of the burden of 22,532 tons.—*Sup.*

VENICE, a famous city of Austrian Italy, formerly the capital of the republic of that name, situated on a cluster of small islands towards the northern extremity of the Adriatic, in lat. 45° 25' 53" N., lon. 12° 20' 31" E. Population about 100,000. The commerce of Venice, once the most extensive of any European city, is now comparatively trifling; and the population is gradually diminishing both in numbers and wealth. Her imports consist of wheat, and other sorts of grain, from the adjoining provinces of Lombardy and the Black Sea; olive oil, principally from the Ionian Islands; cotton stuffs and hardware from England; sugar, coffee, and other colonial products from England, the United States, Brazil, &c.; dried fish, dye stuffs, &c. The exports principally consist of grain, raw and wrought silk, paper, woollen manufactures, fruits, cheese, &c., the products of the adjoining provinces of Italy, and of her own industry; but her manufactures, so famous in the middle ages, are now much decayed.

Port.—The islands on which Venice is built lie within a line of long, low, narrow islands, running N. and S., and enclosing what is termed the lagoon, that surround the city, and separate it from the main land. The principal entrance from the sea to the lagoon is at Malamocco, about 1½ league S. from the city; but there are other, though less frequented, entrances, both to the S. and the N. of this one. There is a bar outside Malamocco, on which there are not more than 10 feet at high water at spring tides; but there is a channel between the western point of the bar and the village of San Pietro, which has 16 feet water at springs, and 14 at neaps. Merchant vessels usually moor off the ducal palace; but sometimes they come into the grand canal which intersects the city, and sometimes they moor in the wider channel of the Giudecca. Vessels coming from the south for the most part make Pirano or Rovigno on the coast of Istria, where they take on board pilots, who carry them to the bar opposite to Malamocco. But the employment of Istrian pilots is quite optional with the master, and is not, as is sometimes represented, a compulsory regulation. When one is taken, the usual fee from Pirano or Rovigno to the bar is 30 Austrian dollars, or about 4*l.* On arriving at the bar, ships are conducted across it and into port by pilots, whose duty it is to meet them outside, or on the bar, and of whose services they must avail themselves.—(For the charges on account of pilotage, see post.)

Money.—Formerly there were various methods of accounting here; but now accounts are kept, as at Genoa, in lire italiane, divided into centesimi, or 100th parts. The lira is supposed to be of the same weight, fineness, and, consequently, value as the franc. But the coins actually in circulation, denominated lira, are respectively equal in sterling value to about 3*d.* and 4½*d.* The latter are coined by the Austrian government.

Weights and Measures.—The commercial weights are here, as at Genoa, of two sorts; and the *peso sottile* and the *peso grosso*. The French kilogramme, called the libbra italiana, is also sometimes introduced.

100 lbs. peso grosso = 105-186 lbs. avoirdupois.	100 lbs. peso sottile = 65-428 lbs. avoirdupois.
— 127-830 lbs. Troy.	— 60-728 lbs. Troy.
— 47-608 kilogrammes.	— 30-123 kilogrammes.
— 98-435 lbs. of Hamburg.	— 62-191 lbs. of Hamburg.
— 99-569 lbs. of Amsterdam.	— 60-986 lbs. of Amsterdam.

The moggio, or measure for corn, is divided into 4 staja, 16 quarts, or 64 quartaroli. The staja = 3-27 Dutch bushels.

The measure for wine, anfora = 4 bizonzi, or 8 mastelli, or 48 sechil, or 192 bozza, or 768 quartuzzi. It contains 137 English wine gallons.

The botta = 5 bizonzi. Oil is sold by weight or measure. The botta contains 3 miglaja, or 60 mudi of 25 lbs. peso grosso. The tiro = 4-028 English wine gallons.

The braccio, or long measure, for woollens = 26-6 English inches; the braccio for silks = 21-8 *d.* The foot of Venice = 13-68 English inches.—(*Netherlands*, and *Dr. Kelly*.)

Historical Notice.—Venice was the earliest, and for a lengthened period the most considerable, commercial city of modern Europe. Her origin dates from the invasion of Italy by Attila in 452. A number of the inhabitants of Aquileia, and the neighbouring territory, flying from the ravages of the barbarians, found a pure but secure asylum in the cluster of small islands opposite to the mouth of the Brenta, near the head of the Adriatic Gulf. this situation they were forced to cultivate commerce and its subsidiary arts, as the only means by which they could maintain themselves. At a very early period they began to trade with Constantinople and the Levant; and notwithstanding the competition of the Genoese and Pisans, they continued to engross the principal trade in Eastern products, till the discovery of a route to India by the Cape of Good Hope turned this traffic into a totally new channel. The crusades contributed to increase the wealth, and to extend the commerce and the possessions of Venice. Towards the middle of the 15th century, when the Turkish sultan, Mahomet II., entered Constantinople sword in hand, and placed himself on the throne of Constantine and Justinian, the power of the Venetians had attained its maximum. At that period, besides several extensive, populous, and well cultivated provinces in Lombardy, the republic was mistress of Crete and Cyprus, of the greater part of the Morea, and most of the isles in the Egean Sea. She had secured a chain of forts and factories that extended along the coasts of Greece from the Morea to Dalmatia; while she monopolised almost the whole foreign trade of Egypt. The preservation of this monopoly, of the absolute dominion she had early usurped over the Adriatic, and of the dependence of her colonies and distant establishments, were amongst the principal objects of the Venetian government; and the measures it adopted in that view were at once skilfully devised, and prosecuted with inflexible consistency. With the single exception of Rome, Venice, in the 15th century, was by far the richest and most magnificent of European cities; and her singular situation in the midst of the sea, on which she seems to float, contributed to impress those who visited her with still higher notions of her wealth and grandeur. Sannazarius is not the only one who has preferred Venice to the ancient capital of the world; but none have so beautifully expressed their preference.

Viderat Adriacis Venetam Neptunus in undis,
Stare urbem, et toto ponere jura mari.
Nunc mihi Tarpeas quantumvis, Jupiter, arces
Objice, et illa tua mœnia Martia, sit:
Si Tiberim pelago præfers, urbem aspice utramque,
Illam homines dicas, hanc possuisse Deos.

Though justly regarded as one of the principal bulwarks of Christendom against the Turks, Venice had to contend, in the early part of the 16th century, against a combination of the European powers. The famous league of Cambray, of which Pope Julius II. was the real author, was formed for the avowed purpose of effecting the entire subjugation of the Venetians, and the partition of their territories. The emperor and the kings of France and Spain joined this powerful confederacy. But, owing less to the valour of the Venetians, than to dissensions amongst their enemies, the league was speedily dissolved without materially weakening the power of the republic. From that period the policy of Venice was comparatively pacific and cautious. But notwithstanding her efforts to keep on good terms with the Turks, the latter invaded Cyprus in 1570; and conquered it after a gallant resistance, continued for 11 years. The Venetians had the principal share in the decisive victory gained over the Turks at Lepanto in 1571: but owing to the discordant views of the confederates, it was not properly followed up, and could not prevent the fall of Cyprus.

The war with the Turks in Candia commenced in 1645, and continued till 1670. The Venetians exerted all their energies in defence of this valuable island; and its acquisition cost the Turks above 200,000 men. The loss of Candia, and the rapid decline of the commerce of the republic, now almost wholly turned into other channels, reduced Venice, at the close of the 17th century, to a state of great exhaustion. She may be said, indeed, to have owed the last 100 years of her existence more to the forbearance and jealousies of others than to any strength of her own. Nothing, however, could avert that fate she had seen overwhelm so many once powerful states. In 1797, the "maiden city" submitted to the yoke of the conqueror: and the last surviving witness of antiquity—the link that united the ancient to the modern world—stripped of independence, of commerce, and of wealth, is now slowly sinking into the waves whence she arose.

The foundation of Venice is described by Gibbon, c. 35.; and in his 60th chapter he has eloquently depicted her prosperity in the year 1200. Mr. Hallam, in his work on the *Middle Ages* (vol. I. pp. 470-487), has given a brief account of the changes of the Venetian government. Her history occupies a considerable space in the voluminous work of M. Siamondi on the *Italian Republics*; but his details as to her trade and commercial policy are singularly meagre and uninteresting. All previous histories of Venice have, however, been thrown into the shade by the admirable work of M. Daru (*Histoire de la République de Venise*, 2d ed. 8 vols. 8vo. Paris, 1821.) Having had access to genuine sources of information, inaccessible to all his predecessors, M. Daru's work is as superior to theirs in accuracy, as it is in most other qualities required in a history.

Trade, Navigation, and Manufactures of the Venetians in the 15th Century.—The Venetian ships of the largest class were denominated galeasses, and were fitted up for the double purpose of war and commerce. Some of them carried 50 pieces of cannon, and crews of 600 men. These vessels were sometimes, also, called argosiers or argosias. They had early an intercourse with England; and argosies used to be common in our ports. In 1326, Edward II. entered into a commercial treaty with Venice, in which full liberty is given

to them, for 10 years, to sell their merchandise in England, and to return home in safety, without being made answerable, as was the practice in those days, for the crimes or debts of other strangers.—(*Anderson's Chron. Deduction, Anno 1325.*) Sir William Monson mentions, that the last argosie that sailed from Venice for England was lost, with a rich cargo and many passengers, on the coast of the Isle of Wight, in 1587.

In the beginning of the 15th century, the annual value of the goods exported from Venice by sea, exclusive of those exported to the states adjoining her provinces in Lombardy, was estimated, by contemporary writers, at 10,000,000 ducats; the profits of the out and home voyage, including freight, being estimated at 4,000,000 ducats. At the period in question, the Venetian shipping consisted of 3,000 vessels of from 100 to 200 tons burden, carrying 17,000 sailors; 300 ships with 8,000 sailors; and 45 galleys of various size, kept afloat by the republic for the protection of her trade, &c., having 11,000 men on board. In the dock-yard, 16,000 labourers were usually employed.* The trade to Syria and Egypt seems to have been conducted principally by ready money; for 500,000 ducats are said to have been annually exported to these countries; 100,000 were sent to England.—(*Daru, tome ii. p. 189, &c.*) The vessels of Venice visited every port of the Mediterranean, and every coast of Europe; and her maritime commerce was, probably, not much inferior to that of all the rest of Christendom. So late as 1518, 5 Venetian galleasses arrived at Antwerp, laden with spices, drugs, silks, &c. for the fair at that city.

The Venetians did not, however, confine themselves to the supply of Europe with the commodities of the East, and to the extension and improvement of navigation. They attempted new arts, and prosecuted them with vigour and success, at a period when they were entirely unknown in other European countries. The glass manufacture of Venice was the first, and for a long time the most celebrated, of any in Europe; and her manufactures of silk, cloth of gold, leather, refined sugar, &c. were deservedly esteemed. The jealousy of the government, and their intolerance of any thing like free discussion, was unfavourable to the production of great literary works. Every scholar is, however, aware of the fame which Venice early acquired by the perfection to which she carried the art of printing. The classics that issued from the Aldine presses are still universally and justly admired for their beauty and correctness. The Bank of Venice was established in the 12th century. It continued throughout a bank of deposit merely, and was skilfully conducted.

But the policy of government, though favourable to the introduction and establishment of manufactures, was fatal to their progressive advancement. The importation of foreign manufactured commodities into the territories of the republic for domestic consumption was forbidden under the severest penalties. The processes to be followed in the manufacture of most articles were regulated by law.—“*Dès l'année 1172, un tribunal avoit été créé pour la police des arts et métiers, la qualité et la quantité des matières furent soigneusement déterminées.*”—(*Daru, tome iii. p. 153.*) Having, in this way, little to fear from foreign competition, and being tied down to a system of routine, there was nothing left to stimulate invention and discovery; and during the last century the manufactures of Venices were chiefly remarkable as evincing the extraordinary perfection to which they had early arrived, and the absence of all recent improvements. An unexceptionable judge, M. Berthollet, employed by the French government to report on the state of the arts of Venice, observed, “*Que l'industrie des Vénitiens, comme celle des Chinois, avoit été précoce, mais étoit restée stationnaire.*”—(*Daru, tome iii. p. 161.*)

M. Daru has given the following extract from an article in the statutes of the State Inquisition, which strikingly displays the real character of the Venetian government, and their jealousy of foreigners:—“If any workman or artisan carry his art to a foreign country, to the prejudice of the republic, he shall be ordered to return; if he do not obey, his nearest relations shall be imprisoned, that his regard for them may induce him to come back. If he return, the past shall be forgiven, and employment shall be provided for him at Venice. If, in despite of the imprisonment of his relations, he persevere in his absence, an emissary shall be employed to despatch him; and after his death his relations shall be set at liberty!”—(*Tom. iii. p. 150.*)

The 19th book of M. Daru's history contains a comprehensive and well-digested account of the commerce, manufactures, and navigation of Venice. But it was not possible, in a work on the general history of the republic, to enter so fully into the details as to these subjects as their importance would have justified. The *Storia Civile e Politica del Commercio de' Veneziani*, di Carlo Antonio Marin, in 8 vols. 8vo., published at Venice at different periods, from 1798 to 1808, is unworthy of the title. It contains, indeed, a great many curious statements; but it is exceedingly prolix; and while the most important and trivial subjects are frequently discussed at extreme length, many of great interest are either entirely omitted, or are treated in a very brief and unsatisfactory manner. The commercial history of Venice remains to be written; and were it executed by a person of competent attainments, it would be a most valuable acquisition.

Present Trade of Venice.—From the period when Venice came into the possession of Austria, down to 1830, it seems to have been the policy of the government to encourage Trieste in preference to Venice; and the circumstance of the former being a free port, gave her a very decided advantage over

* This is the statement of the native authorities; but there can be no doubt that it is much exaggerated;—1,500 would be a more reasonable number.

to return home in safety, for the crimes or debts of Sir William Monson and was lost, with a rich crew, in 1587.

Goods exported from Venice to the provinces in Lombardy, was the profits of the out and home at the period in question, 200 tons burden, carrying various size, kept afloat by on board. In the dock-eryria and Egypt seems to be scarce are said to have been from the island.—(Daru, tome ii. p. terranean, and every coast inferior to that of all the ed at Antwerp, laden with

the latter. Latterly, however, a more equitable policy has prevailed. In 1830, Venice was made a free port; and has since fully participated in every privilege conferred on Trieste. But, notwithstanding this circumstance, the latter still continues to preserve the ascendancy; and the revival of trade that has taken place at Venice has not been so great as might have been anticipated. The *7*th in that respect is so far as she is the entrepôt of the adjoining provinces of Lombardy, Venice has no considerable natural advantage as a trading city; and her extraordinary prosperity during the middle ages is more to be ascribed to the comparative security enjoyed by the inhabitants, and to their success in engrossing the principal share of the commerce of the Levant, than to any other circumstance. Still, however, the trade is far from inconsiderable. But, unfortunately, there are no means by which to ascertain its precise amount. The statements subjoined are to be regarded merely as rough approximations; they have, however, been obtained from the best sources, and come as near the mark as it is perhaps possible to attain. By far the largest part of the exports from Venice are made through Trieste by coasting vessels, that are every day passing between the two cities. The smuggling of prohibited and overtaxed articles into Austrian Lombardy is also practised to a great extent. It is believed that fully 2-3ds of the coffee made use of in Lombardy is clandestinely introduced; and sugar, British cottons, and hardware, with a variety of other articles, are supplied through illegitimate channels. The facilities for smuggling, owing to the nature of the frontier, and the ease with which the officers are corrupted, are such, that the articles passing through the hands of the fair trader afford no test of the real extent of the business done. It is to be hoped that the Austrian government will take an enlightened view of this important matter. It cannot but be anxious for the suppression of smuggling; and it may be assured that this is not practicable otherwise than by a reduction of the duties. The regulations as to the payment of the duties on goods destined for the interior, the clearing of ships, &c., are the same at Venice as Trieste; which see.

Shipping.—There belonged in Venice in 1832—

Vessels.	No.	Tonnage.	Men.
for foreign trade	104	21,841	1,114
coasting do.	107	8,208	646
	211	30,049	1,760

Fishing boats are not of a size to be rated as vessels of tonnage; but Mr. Money thinks that not less than 10,000 of the population subsist by fishing near the port and over the lagoon. The tonnage of Venice has not recently been either on the increase or the decline. Its inconsiderable amount, compared with what it once was, is a striking proof of the decline of this famous emporium.

Banking Establishments.—The old bank of Venice was founded so far back as 1171, being the most ancient establishment of the kind in Europe. It was a bank of deposit; and such was the estimation in which it was held, that its paper continued to bear an agio as compared with coin down to 1757, when the bank fell with the government by which it had been guaranteed. At present there are no corporate banking establishments in the city; and no bank notes are in circulation. There are, however, several private banking houses, which buy, sell, and discount bills; and make advances on land and other securities. They are under no legal regulations of any sort, except formally declaring the amount of their capital to the authorities when they commence business. The legal and usual rate of interest and discount is 6 per cent. It is not the practice to allow interest on deposits. Bills on London are usually drawn at 3 months, and on Trieste at 1 month.

Brokers, Commission, &c.—The number of brokers is limited, and they are licensed by government; but the business of commission merchant and factor is open to every one. Before, however, commencing any trade or profession at Venice, a petition must be presented for leave to the authorities; but this is more a matter of form than anything else; its prayer being rarely, if ever, refused.

The usual rate of commission and brokerage on the purchase or sale of colonial produce is 3 per cent.

* With the above exceptions, Trieste may be said to have wholly supplied Venice in the year 1830.

ied Venice in the year 1820.

ent, and on manufactured goods 3 per cent., inclusive of broker's commission, 1 per cent. A ship
 broker's commission on the freight of a whole cargo is 2 per cent., and on a general cargo 4 per cent.
 By the custom of the place, merchants charge 2 per cent. on the inward, and 2 per cent. on the out-
 ward, freight of all ships consigned to them; and this, though they had done no more than recommend
 the master to a broker! A bill broker's commission is 4 per mille. Merchants and bankers charge a
 commission on internal bills of 4 per cent., and on foreign do. of 1 per cent.

Insurance are effected by companies and individuals. The government charges no duty on the
 policies.

Communications with Lombardy are effected by flat-bottomed vessels, which, passing through the
 lagoons, enter the canals and rivers, and make their way through most part of the country watered by
 the Po and its tributaries. The freight of goods from Milan to Venice, distant about 170 miles, is about
 11 per ton. The principal products they bring down are grain, silk, hemp, and flax, cheese, rhubarb,
 &c. The country to the north of Venice affords large quantities of deals, which are shipped for Malia,
 Scilly, and the Levant.

Quarantine is enforced here the same as at Trieste. Ships coming from without the Straits of
 Gibraltar, provided there be no infectious disease on board, are admitted to *pratique* on performing a
 short quarantine of 7 days in a part of the lagoon, about a mile from the city. Long quarantine is
 performed a little farther off. The lazaretto, and establishments for passengers, &c. performing quar-
 antines, are among the best in Europe. Ships having foul bills, or coming from suspicious places, are
 sent thither from Trieste.—(For the quarantine charges, see ante.)

Provisions, Ships' Stores, &c.—These articles may all be had at Venice of excellent quality, but not
 cheap, with, perhaps, the exception of bread. Water is conveyed to the city by lighters, and is, con-
 sequently, pretty dear; fuel is very scarce, and very high priced. We subjoin an account of the

Average Prices in Sterling Money, per Imperial Quarter, of the several Sorts of Grain at Venice for
 the Ten Years ending with 1831.

Year.	Wheat.		Maize.		Oats.		Rye.		Years.	Wheat.		Maize.		Oats.		Rye.

Tax.—On goods leaving the free port of Venice for the interior
 the Austrian states, the Custom-house allows no tax; but cases,
 cats, and other coverings go into the scale with their contents, and
 a duty is levied on the gross weight. Wine, spirits, &c. consumed
 in the city, being liable to an excise duty to cover the municipal ex-
 penses, have no allowance, if in iron-bound casks, of 18 per cent.
 on the weight; and if not in iron-bound casks, of 12 per cent. The
 tax allowed between merchants are as follow:—
 Cotton wool, Pernambuco and Bahia . . . 4 per cent.
 East India, &c. . . 4

Sugar, Brazil . . . 15 to 18 per cent.
 Jamaica, muscovado . . . 14 —
 Bourbon, brown and yellow, and East India of all
 colours . . . 5 —
 refined, crushed . . . 12 —
 Brimstone . . . 10 —
 Italian hemp . . . 8 —
 Malabar root . . . 4 —
 Hungarian potash . . . 10 —

On other articles, real taxes are usually taken.

These details with respect to the present trade of Venice have been mostly derived from the well-
 digested and very valuable answers returned by the consul-general, Mr. Money, to the Circular
 Queries.

VERA CRUZ, the principal sea-port on the western coast of Mexico; lat. 19° 11' 52"
 N., long. 96° 8' 45" W. Population (supposed) 16,000. Opposite the town, at the distance
 of about 400 fathoms, is a small island, on which is built the strong castle of St. Juan d'Ulloa,
 which commands the town. The harbour lies between the town and the castle, and is ex-
 ceedingly insecure; the anchorage being so very bad, that no vessel is considered safe unless
 made fast to rings fixed for the purpose in the castle wall; nor is this always a sufficient
 protection from the fury of the northerly winds (*los nortes*), which sometimes blow with
 tremendous violence. Humboldt mentions, in proof of what is now stated, that a ship of the
 line, moored by 9 cables to the castle, tore, during a tempest, the brass rings from the wall,
 and was dashed to pieces on the opposite shore.—(*Nouvelle Espagne*, ed. 2do, tome iv. p.
 53.) Its extreme unhealthiness is, however, a more serious drawback upon Vera Cruz, than
 the badness of its port. It is said to be the original seat of the yellow fever. The city is
 well built, and the streets clean; but it is surrounded by sand hills and ponds of stagnant
 water, which, within the tropics, are quite enough to generate disease. The inhabitants, and
 those accustomed to the climate, are not subject to this formidable disorder; but all strangers,
 even those from Havannah and the West India islands, are liable to the infection. No
 precautions can prevent its attack; and many have died at Xalapa, on the road to Mexico,
 who merely passed through this pestilential spot. During the period that the foreign trade
 of Mexico was carried on exclusively by the *flota*, which sailed periodically from Cadiz, Vera
 Cruz was celebrated for its fair, held at the arrival of the ships. It was then crowded with
 dealers from Mexico, and most parts of Spanish America; but the abolition of the system of
 regular fleets in 1778 proved fatal to this fair, as well as to the still more celebrated fair of
 Portobello.

A light-house has been erected on the N.W. angle of the castle of St. Juan. The light,
 which is a revolving one of great power and brilliancy, is elevated 79 feet above the level
 of the sea.

The distance in a direct line from Mexico to Vera Cruz is about 70 leagues; but by the
 road it is about 93. Mexico being situated on a plateau elevated about 8,000 feet above the
 level of the sea, and the country being in many places very rugged, the road originally was
 so bad as to be hardly practicable, even for mules. During the last 30 years, immense sums
 have been laid out on its improvement; and a considerable part of it has been completed in
 the best, and, indeed, most splendid manner; but in many places it is still rough and
 unimproved, and does not admit of carriages being used. M. Humboldt seems to think, that

were this road completed, wheat and flour brought from the table land of Mexico might be shipped at Vera Cruz, and sold in the West Indies cheaper than the wheat and flour of the United States. But we agree with Mr. Poinsett in regarding any such expectation as quite chimerical. Though the advantage on the side of Mexico in respect of superior fertility of soil and cheapness of labour were decidedly greater than it really is, it would not balance the enormous expense of 300 miles of land carriage upon such bulky and heavy articles, more especially as the wagons would, in most cases, have to return empty. It is plain, however, that the advantage of getting the produce of the mines, and the peculiar productions of the country, as cochineal, indigo, sugar, vanilla, tobacco, &c., conveyed with comparative facility to market, and of receiving back European goods at a proportionally less expense, will more than indemnify all the outlay that may be required to perfect the road, and will be of the very greatest importance to the republic; but it is quite out of the question to imagine that Vera Cruz is ever destined to become a rival of New Orleans in the exportation of corn and flour.

For a considerable period after the town of Vera Cruz had thrown off the Spanish yoke, the title of St. Juan d'Ulloa continued in possession of the Spaniards. During this interval, the commerce of Vera Cruz was almost entirely transferred to the port of Alvarado, 12 leagues to the south-east. Alvarado is built upon the left bank of a river of the same name. The bar at the mouth of the river, about 1½ mile below the town, renders it inaccessible for vessels drawing above 10 or 12 feet water. Large ships are obliged to anchor in the roads, where they are exposed to all the violence of the north winds, loading and unloading by means of lighters. Alvarado is supposed, but probably without much foundation, to be a little healthier than Vera Cruz. The trade has now mostly reverted to its old channel.

But within these few years, Tampico has risen to considerable importance as a commercial sea-port. It is situated about 60 leagues N.N.W. of Vera Cruz, in lat. 22° 15' 30" N., lon. 97° 52' W., being about 104 leagues from Mexico. Hitherto it is said to have been free from fever. The shifting of the bar at the mouth of the river, and the shallowness of the water on it, which is sometimes under 8, and rarely above 15 feet, are serious obstacles to the growth of the port. Vessels coming in sight are boarded by pilots, who conduct them, provided they do not draw too much water, over the bar. Those that cannot enter the port load and unload by means of lighters; mooring so that they may get readily to sea in the event of a gale coming on from the north.

Exports and Imports.—The precious metals have always formed the principal article of exports from Mexico. During the 10 years ending with 1801, the average annual produce of the Mexican mines amounted, according to M. Humboldt, to 23,000,000 dollars—(*Nouvelle Espagne*, tome iv. p. 137.); and in 1805, the produce was 27,165,688 dollars.—(*Id.* tome iv. p. 83.) But during the revolutionary war, the old Spanish capitalists, to whom most of the mines belonged, being proscribed, emigrated with all the property they could scrape together: and this withdrawal of capital from the mines, added to the injury several of them sustained by the destruction of their works during the contest, the interruption of all regular pursuits which it occasioned, and the insecurity and anarchy that afterwards prevailed, caused an extraordinary falling off in the produce of the mines. Within these few years, however, a considerable improvement has taken place. The efforts, and the lavish expenditure, of a few of the companies formed in this country for working the mines, have been so far successful, that some of them have been got again into good order, and that a large increase of produce may be fairly anticipated, provided they are permitted to prosecute their operations without molestation. But, as we have elsewhere stated (see *ante*, p. 190.), some of the parties who sold or leased the mines, began to put forward claims never heard of before, the moment they perceived that there was a reasonable prospect of the companies succeeding; and in some instances they have not scrupled to enforce their claims by violence! It is to be hoped that the Mexican government will exert itself to repress these outrages. If it have power to put down, and yet wink at or tolerate such disgraceful proceedings, it will make itself responsible for the consequences; and will merit chastisement as well as contempt.

The total quantity of gold and silver coined in the different Mexican mints during the 4 years ending with 1829, was—

In 1826	-	8,608,378 dollars.		In 1829	-	9,989,905 dollars.
1827	-	10,619,817	-	1829	-	11,787,133

(*Parl. Paper*, No. 338. Sess. 1833.)

Besides the precious metals, cochineal, sugar, flour, indigo, provisions, leather, sarsaparilla, vanilla, jalap, soap, logwood, and pimento, are the principal articles exported from Vera Cruz.

The imports consist principally of linen, cotton, woollen, and silk goods, paper, brandy, cacao, quicksilver, iron, steel, wine, wax, &c.

According to the statement published by the Mexican government, the value of the imports and exports at Vera Cruz and Alvarado, in 1824, was as follows:—

		Dollars.
Imports from other Mexican ports	-	284,067
from American ports	-	4,360,568
from European and other foreign ports	-	7,437,375

Total	-	12,082,010

Exports for other Mexican ports	-	-	-	-	-	-	202,042
for American ports	-	-	-	-	-	-	3,022,423
for European and other ports	-	-	-	-	-	-	1,468,093
Total	-	-	-	-	-	-	4,692,557

This account is exclusive of the imports by government on account of the loan negotiated in London.

According to Humboldt, the imports at Vera Cruz, before the revolutionary struggles, might be estimated, at an average, at about 15,000,000 dollars, and the exports at about 20,000,000 ditto.

It must, however, be observed that this statement refers only to the registered articles, or to those that paid the duties on importation and exportation. But exclusive of these, the value of the articles clandestinely imported by the ports on the Gulf, previously to the revolution, was estimated at 4,500,000 dollars a year; and 2,500,000 dollars were supposed to be annually smuggled out of the country in plate and bars, and ingots of gold and silver. A regular contraband trade used to be carried on between Vera Cruz and Jamaica; and notwithstanding all the efforts of government for their exclusion, and the excessive severity of its laws against smuggling, the shops of Mexico were always pretty well supplied with the products of England and Germany.—(*Humboldt, Nouvelle Espagne*, tome iv. p. 125.; *Poinsett's Notes on Mexico*, p. 133.)

M. Humboldt states, that the total population of Mexico, exclusive of Guatemala, may be estimated at about 7,000,000. Of this number about $\frac{1}{3}$ are Indians, the rest being Europeans, or descendants of Europeans, and mixed races. But notwithstanding this large amount of population, the trade we carry on with Mexico is very inferior to that which we carry on with Brazil. The following is an account of the real or declared value of all sorts of British produce and manufactures exported to the States of Central and Southern America in 1831:—

Mexico	-	-	-	£	728,858	States of the Rio de la Plata	-	£	339,870
Guatemala	-	-	-	nil.		Chili	-	-	651,617
Colombia	-	-	-	-	218,250	Peru	-	-	409,093
Brazil	-	-	-	-	1,238,371				

The imports of British goods at second hand into Mexico and Colombia, from Jamaica, and the other West India islands, are no longer of any considerable importance; but considerable quantities are imported from New Orleans.

Mexico being, with the exception of the United States, the richest and most populous of all the American countries, the smallness of its trade with England may justly excite surprise. It originates principally, we believe, in the want of good ports and large cities on the coast, and the distance and difficulty of the roads from Vera Cruz and other ports to the healthy and elevated part of the country. These circumstances, coupled with the obstacles which the restrictive policy of the Spaniards threw in the way of the importation of foreign products, led to the establishment of manufactures in the interior. Previously to the commencement of the revolutionary struggles, some of these manufactures were in a very advanced state; and were sufficient to supply the population with most of the clothes and other articles required for their consumption. They have since declined considerably; but as it is pretty certain that the wealth of the inhabitants has declined still more, this circumstance has had little effect in increasing importation.

Revenues.—The revenues of Mexico have been, during the years (ended 30th of January),

1826	-	13,715,801 dollars.	1830	-	14,493,169 dollars.
1827	-	13,289,682 —	1831	-	18,922,399 —
1828	-	10,491,299 —	1832	-	15,413,000 —
1829	-	12,232,385 —			

Of these sums, about $\frac{1}{2}$ have been produced by the customs duties. The latter amount, in 1832, to 8,922,920 dollars. During the same year, the duties on imported cottons were 1,150,000 dollars, and those on the exportation of the precious metals 309,473 dollars. The total receipts of the Custom-house at Vera Cruz, in 1832, were 2,962,399 dollars, and those of Tampico 1,428,992 dollars.

Port Charges.—Foreign ships pay in the port of Vera Cruz—

Tonnage duty, &c. (per ton)	-	-	-	-	Dols. reals.
Pilotage on entering	-	-	-	-	2 1
on leaving	-	-	-	-	15 4
					19 0

A 5th part, or 20 per cent., is deducted from the duties on all commodities brought from a foreign port in Mexican ships. The Mexican Congress is, at this moment, engaged in discussions respecting a modification of the tariff.

Weights, Measures, and Money, same as in Spain; for which, see CANIS.

Duties, &c. at Vera Cruz.—The Mexican government issued, on the 16th of November, 1827, a new tariff, to which the following regulations were prefixed:—

Regulations as to the Mexican Tariff.

Vessels of all nations in amity with the United States of Mexico will be admitted to entry at the privileged ports of the republic, upon payment of the duties, and subject to the regulations to be observed at the maritime Custom-house, according to this tariff.

The anchorage duty is abolished, and all vessels arriving from foreign ports are to pay 2 dol 1 real per ton tonnage duty.

Foreign vessels will not be allowed to trade coastwise with the ports of the republic.

All vessels putting into any of the ports of this republic, by stress of weather or for refreshment, will

be allowed the requisite time to complete their repairs or provisions, and will only have to pay such charges as are customary.

All vessels on their arrival are to present their manifests by triplicate, specifying the marks and numbers of the packages, with the particulars of their respective contents.

The duties will be levied on all goods according to their specification in the manifest, whether they are landed or not; and any article that shall be found not specified in the manifest, or any alteration in the quantity or quality, will subject such goods to seizure.

The weights and measures designated in the tariff are those used in Mexico; and any article exceeding the maximum annexed to the same shall, for every $\frac{1}{2}$ of such excess in measurement, pay $\frac{1}{2}$ increase of the duty affixed to the said article.

All articles not specified or enumerated in the tariff shall pay a duty of 40 per cent. on the valuation that may be fixed in the same at the port of entry; and for every such valuation, 3 brokers shall be appointed, 1 of whom is to be chosen by the importer, and the other 2 on the part of the Custom-house.

The *acoria*, and all other duties lately payable in this republic under various denominations (excepting the State duty), are abolished.

The importer shall be liable for the whole amount of the duties $\frac{1}{2}$ of which is to be paid within 90 days from the day the goods are landed, and the other $\frac{1}{2}$ within 90 days after the expiration of the latter period. No article will be allowed to be taken out of the Custom-house until the duties shall have been paid, or security given for the due payment of the same, to the satisfaction of the proper authorities.

All articles imported prior to this law taking effect are liable to the international duties as before. After the duties have been once paid, no deduction or allowance whatever can be made on the same, excepting in cases where an error may have occurred.

No article will be allowed to be re-exported without previous payment of the import duties. All goods that may arrive damaged shall be examined in presence of the proper authorities, and an allowance made according to the damage such goods shall have sustained.

All goods arriving direct from the place of their growth or manufacture, in vessels under the Mexican flag, are to pay 1-5th less duty than in foreign vessels.

The tariff may be altered at any time, whenever the Congress shall deem it expedient so to do; but no alteration which may be prejudicial to commerce in general shall be put in force until 6 months after such alteration shall have been decided upon.

The laws contained in the preceding articles are not intended to interfere with any separate treaty of commerce which has or may be entered into by this nation.

These regulations are to be put in force within 60 days from the date hereof.

Articles admitted into Mexico Duty free.

Quick-silver.
Carts upon foreign construction.
Wrecks frames for houses.
Printed books, maps, and music.

Philosophical, mathematical, and optical instruments.
Scales of all sorts.

Instruments for agriculture, mines, and arts.
Beers.
Carding wire.
Flax's and seeds.

Articles prohibited to be imported into Mexico.

Aloe-wood, cummin, and caraway.
Rum and molasses.
Sugar, raw or refined.
Coffee and chocolate.
Rice.
Leather.
Horns and shoes.
Saddlery of every description.
Salted and dried meats of all kinds.
Lard.
Wax, wrought.

Tallow.
Soap, hard or soft.
Epaulets, gold and silver lace, galloons, &c.
Tapes of colours.
Shawls of silk or cotton.
Rods, bedding, and bed linen, made up, of every kind and description.
Copper, in sheets or pigs.
Lead, in sheet, pigs, or shot.
Silver.
Flour and wheat.

Vermorelli.
Cotton thread, under No. 20.
Horn wares.
Trunks and portmanteaus.
Woolen cloths, coarse and ordinary.
Furcloths.
Wearing apparel of every description.
Common mill.
Hats, common, stuff, and leather.
Tobacco, in leaf or manufactured.

Export Duties.—All articles, the growth and produce of this republic, are free of duty on exportation, excepting gold in coin, or wrought, which pays 3 per cent. *ad valorem*; silver in coin, or wrought, which pays 3-4 per cent. *ad valorem*.

N. B.—Gold and silver ore, or in lumps or dust, are prohibited under penalty of seizure.

Notices to Masters of Vessels and Passengers proceeding to any Mexican Port.

Notice is hereby given to all masters of vessels proceeding from London to any port or ports of the United States of Mexico, that the passengers they take out should be provided with passports, signed by his Excellency the minister of the republic, otherwise the vessels will be liable to detention on their arrival at those ports, and the passengers on board unprovided with such passports will not be permitted to land in the ports of Mexico. No plea for the want of them will be admitted.

Masters of vessels proceeding to and from those States are required to have on board all necessary papers and vouchers, which, according to the orders conveyed through his Excellency the Mexican minister plenipotentiary at the court of his Britannic Majesty, to this consulate, ought to consist of, besides the regular ship's papers, all the invoices of shippers, with the corresponding bills of lading. Merchandise found on board, which should not appear inserted in the invoices certified by the consul, or that otherwise is falsely described, either in quality or quantity, shall be considered and dealt with as contraband.

A bill of health, certified by the consul, will also be required from vessels on arrival, by the authorities at the Mexican ports.

The above regulations are to be in force from the date of this notice, Nov. 28, 1830.

Notice is hereby given, that the Congress of the United States of Mexico decreed, the 12th of October of the last year, that the Mexican envoys and consular agents must henceforward charge for each passport to Mexico 2 dollars, and for each certification and signature 4 dollars.

20, Aunin-friars, 9th of Jan, 1831.

The Vice-Consul, J. SCHEIDTBADEL.

VERDIGRIS (Ger. *Grünspan*; Fr. *Vert-de-gris*, *Verdet*; It. *Verderame*; Sp. *Car-denillo*, *Verdite*, *Verde-gris*; Rus. *Jar*), a kind of rust of copper, of a beautiful bluish green colour, formed from the corrosion of copper by fermented vegetables. Its specific gravity is 1.78. Its taste is disagreeably metallic; and, like all the compounds into which copper enters, it is poisonous. It was known to the ancients, and various ways of preparing it are described by Pliny. It is very extensively used by painters, and in dyeing; it is also used to some extent in medicine. The best verdigris is made at Montpellier; the wines of Languedoc being particularly well suited for corroding copper, and forming this substance. It is generally exported in cakes of about 25 lbs. weight each. It is also manufactured in this country, by means of the refuse of cider, &c.; the high duty of 2s. per lb. on

the foreign article giving the home producers a pretty complete monopoly of the market. The goodness of verdigris is judged of from the deepness and brightness of its colour, its dryness, and its forming, when rubbed on the hand with a little water or saliva, smooth paste, free from grittiness.—(Thomson's Chemistry; Rees's Cyclopaedia.)

VERJUICE (Ger. *Agreat*; Fr. *Verjus*; It. *Agresto*; Sp. *Agraz*), a kind of harsh, austere vinegar, made of the expressed juice of the wild apple, or crab. The French give this name to unripe grapes, and to the sour liquor obtained from them.

VERMICELLI (Ger. *Nudeln*; Du. *Meelneepen*, *Proppen*; Fr. *Vermicelli*; It. *Vermicelli*, *Tugliolini*; Sp. *Alcatras*), a species of wheaten paste formed into long, slender, hollow tubes, or threads, used amongst us in soups, broths, &c.

Vermicelli is the same substance as macaroni; the only difference between them being that the latter is made into larger tubes. Both of them are prepared in the greatest perfection in Naples, where they form the favourite dish of all classes, and the principal food of the bulk of the population. The flour of the hard wheat (*grano duro*) imported from the Black Sea is the best suited for the manufacture of macaroni. Being mixed with water, it is kneaded by means of heavy wooden blocks wrought by levers, till it acquires a sufficient degree of tenacity; it is then forced, by simple pressure, through a number of holes, so contrived that it is formed into hollow cylinders. The name given to the tubes depends on their diameter; those of the largest size being macaroni, the next to them vermicelli, and the smallest fedelini. At Genoa, and some other places, the paste is coloured by an admixture of saffron; but at Naples, where its preparation is best understood, nothing is used except flour and water; the best being made of the flour of hard wheat, and the inferior sorts of the flour of soft wheat. When properly prepared and boiled to a nicety, Neapolitan macaroni assumes a greenish tinge. It is then taken out of the caldron, drained of the water, and being saturated with concentrated meat gravy, and sprinkled with finely grated cheese, it forms a dish of which all classes from the prince to the beggar are passionately fond. But the macaroni used by the poor is merely boiled in plain water, and is rarely eaten with any condiment whatever. The macaroni usually served up in England, is said, by those familiar with that of Naples, to be a positive disgrace to the name it bears. When properly prepared, macaroni is nutritious and easy of digestion. The lazzaroni pique themselves on the dexterity with which they swallow long strings of macaroni and vermicelli without breaking them! (We have derived these details from an excellent article on macaroni in the *Penny Magazine* for the 10th of August, 1833.)

VERMILLION. See CINNABAR.

VINEGAR (Ger. *Essig*; Du. *Azyn*; Fr. *Vinaigre*; It. *Aceto*; Sp. and Port. *Vinagre*; Rus. *Ukzus*; Lat. *Acetum*).—(See ACID (ACETIC), for a description of vinegar.) A duty being imposed on vinegar of 2*d.* the gallon, its manufacture is placed under the control of the excise. A licence, costing 5*l.*, and renewable annually, has to be taken out by every maker of vinegar, or acetous acid.

All places for manufacturing or keeping vinegar must be entered, under a penalty of 50*l.* No vinegar maker is to receive any vinegar, or acetous acid, or sugar wash, or any preparation for vinegar, without giving 12 hours' notice to the excise, under penalty of 100*l.* Any person sending out or receiving vinegar shall, unless the duty on it be paid, and it be accompanied by a permit, forfeit 200*l.* All vinegar makers are to make entries at the next Excise-office of the quantity made within each month, and are bound to clear off the duties within a month of such entry, on pain of double duties.—(See 58 *Geo.* 3, c. 65, and *Burn's Justice of the Peace*, Marriot's ed.)

ULTRAMARINE (Ger. *Ultramarin*; Fr. *Bleu d'outremer*; It. *Oltamarino*; Sp. *Ultramar*; Rus. *Ultra-marin*), a very fine blue powder made from the blue parts of *lapis lazuli*. It has the valuable property of neither fading, nor becoming tarnished, on exposure to the air, or a moderate heat; and on this account is highly prized by painters. Owing to its great price, it is very apt to be adulterated. It was introduced about the end of the fifteenth century.

USANCE, a period of one, two, or three months, or of so many days, after the date of a bill of exchange, according to the custom of different places, before the bill becomes due. Double or treble usance, is double or treble the usual time; and $\frac{1}{2}$ usance is $\frac{1}{2}$ the time. When a month is divided, the $\frac{1}{2}$ usance, notwithstanding the differences in the lengths of

WALNUTS, the fruit of the *Juglans*, or walnut-tree, of which there are several varieties. The walnut is a large, handsome tree, with strong spreading branches. The fruit is a pretty large, smooth, ovate nut, containing an oily kernel, divided into four lobes. The nut has been always held in high estimation; it was called by the Romans *Jovis glans*, the acorn or mast of Jove, and hence the name of the tree. The walnut tree is indigenous to Persia and the countries bordering on the Caspian Sea. It has long been introduced into Great Britain; but the fruit seldom ripens in the more northerly parts of the island. Previously to the very general introduction of mahogany, the wood of the walnut tree was extensively used amongst us in making of furniture; and it continues to be largely employed for that purpose in many parts of the Continent. It is much used by turners; and is superior to every other sort of wood for the mounting of guns; a circumstance which caused great devastation among our walnut plantations during the latter years of the war. Great numbers of walnut trees are annually consumed in the Haute Vienne and other departments of France, in the manufacture of the wooden shoes or clogs used by the peasantry. The nuts are either gathered when ripe, being served up as desserts without any preparation; or they are plucked green, and pickled.—(*Poiret, Historie Philosophique des Plantes*, tome vii. p. 213.; *Rees's Cyclopaedia*, &c.)

WANGHEES, sometimes called **JAPAN CANES**, a species of cane imported from China. They should be chosen pliable, tough, round, and taper; the knots at regular distances from each other; and the heavier the better. Such as are dark-coloured, badly glazed, and light, should be rejected.—(*Millburn's Orient. Com.*)

WAREHOUSING SYSTEM. By this system is meant the provisions made for lodging imported articles in public warehouses, at a reasonable rent, without payment of the duties on importation till they be withdrawn for home consumption. If re-exported, no duty is ever paid.

1. *Expediency and Origin of the Warehousing System.*—It is laid down by Dr. Smith, in one of his justly celebrated maxims on the subject of taxation, that "Every tax ought to be levied at the time and in the manner that is most likely to be convenient for the contributor to pay it."—(*Wealth of Nations*, vol. iii. p. 368.) No one can doubt the soundness of this maxim; and yet it was very strangely neglected, down to 1803, in the management of the customs. Previously to this period, the duties on most goods imported had either to be paid at the moment of their importation, or a *bond*, with sufficient security for their future payment, had to be given to the revenue officers. The hardship and inconvenience of such a system is obvious. It was often very difficult to find sureties; and the merchant, in order to raise funds to pay the duties, was frequently reduced to the ruinous necessity of selling his goods immediately on their arrival, when, perhaps, the market was already glutted. Neither was this the only inconvenience that grew out of this system; for the duties having to be paid all at once, and not by degrees as the goods were sold for consumption, their price was raised by the amount of the profit on the capital advanced in payment of the duties: competition, too, was diminished in consequence of the greater command of funds required to carry on trade under such disadvantages; and a few rich individuals were enabled to monopolise the importation of those commodities on which heavy duties were payable. The system had, besides, an obvious tendency to discourage the carrying trade. It prevented this country from becoming an *entrepôt* for foreign products, by hindering the importation of such as were not immediately wanted for home consumption; and thus tended to lessen the resort of foreigners to our markets, inasmuch as it rendered it difficult, or rather impossible, for them to complete an assorted cargo. And in addition to all these circumstances, the difficulty of granting a really equivalent drawback to the exporters of such commodities as had paid duty, opened a door for the commission of every species of fraud.

But these disadvantages and drawbacks, obvious as they may now appear, did not attract the public attention till a comparatively late period. Sir Robert Walpole seems to have been

ow appear, did not attract
Walpole seems to have been

one of the first who had a clear perception of their injurious influence; and it was the principal object of the famous *Excise Scheme*, proposed by him in 1733, to oblige the importers of tobacco and wine to deposit them in public warehouses; relieving them, however, from the necessity of paying the duties chargeable on them till they were withdrawn for home consumption.

No doubt can now remain in the mind of any one, that the adoption of this scheme would have been of the greatest advantage to the commerce and industry of the country. But so powerful was the delusion generated in the public mind with respect to it, that its proposal well nigh caused a rebellion. Most of the merchants of the day had availed themselves of the facilities which the existing system afforded of defrauding the revenue; and they dexterously endeavoured to thwart the success of a scheme which would have given a serious check to such practices, by making the public believe that it would be fatal to the commercial prosperity of the country. The efforts of the merchants were powerfully seconded by the spirit of party, which then ran very high. The political opponents of the ministry, anxious for an opportunity to prejudice them in the public estimation, contended that the scheme was only the first step towards the introduction of such a universal system of excise as would inevitably prove alike subversive of the comfort and liberty of the people. In consequence of these artful misrepresentations, the most violent clamours were everywhere excited against the scheme. On one occasion Sir Robert Walpole narrowly escaped falling a sacrifice to the ungovernable fury of the mob, which beset all the avenues to the House of Commons; and, after many violent and lengthened debates, the scheme was ultimately abandoned.

The disadvantages of the old plan, and the benefits to be derived from the establishment of a voluntary warehousing system, were most ably pointed out by Dean Tucker, in his "Essay on the Comparative Advantages and Disadvantages of Great Britain and France with respect to Trade," published in 1750. But so powerful was the impression made by the violent opposition to Sir Robert Walpole's scheme, and such is the force of prejudice, that it was not till 1803 that this obvious and signal improvement—the greatest, perhaps, that has been made in our commercial and financial system—could be safely adopted.

2. *Regulations as to Warehousing.*—The statute of 43 Geo. 3. c. 132. laid the foundation of this system; but it was much improved and extended by subsequent statutes, the regulations of which have been embodied in the act 3 & 4 Will. 4. c. 57., which took effect on the 1st of September, 1833.

This act empowers the commissioners of the customs, under the authority and direction of the Lords of the Treasury, to nominate the ports at which goods may be warehoused without payment of duty, and the warehouses in which particular descriptions of goods may be deposited. It also fixes the time during which goods are allowed to remain in the warehouse; and prescribes the regulations as to their removal from port to port, their sale and storage in the warehouse, the remission of the duties in case of loss by accident, the allowances for waste, &c. But as this statute is of much importance, we subjoin a full abstract of it.

ABSTRACT OF THE ACT 3 & 4 WILL. 4. c. 57. FOR THE WAREHOUSING OF GOODS.

Commencement of Act.—Act to commence the 1st day of September, 1833, except where any other commencement is particularly directed.—§ 1.

Treasury to appoint warehousing Ports.—It shall be lawful for the commissioners of the treasury to appoint the ports in the U. K. which shall be warehousing ports for the purposes of this act; and it shall be lawful for the commissioners of customs, subject to the directions of the commissioners of the treasury, to appoint in what warehouses or places of special security, or of ordinary security, as the case may require, in such ports, and in what different parts or divisions of such warehouses or places, and in what manner any goods, and what sorts of goods, may be warehoused and secured without payment of any duty upon the first entry thereof, or for exportation only, in cases wherein the same may be prohibited to be imported for home use; and also to direct in what cases (if any) security by bond shall be required in respect of any warehouse so appointed by them.—§ 2.

Warehouses of special Security by Appointment.—Whenever any warehouse shall have been approved by the said commissioners, as being a warehouse of special security, it shall be stated in their order of appointment that it is appointed as a warehouse of special security: provided, that all warehouses connected with wharfs for the landing of the goods to be lodged therein, and enclosed together with such wharfs within walls, such as are or shall be required by any act for the constructing of such warehouses and wharfs, and being appointed to be legal quays, shall, without any order of the commissioners of the customs, be warehouses for the purposes of this act, for all goods landed at such wharfs or quays at any port appointed by the commissioners of the treasury to be a warehousing port, and all such warehouses shall be warehouses of special security.—§ 3.

Bonds given previous to Act to continue in force.—All appointments of warehouses made under the authority of any other act in force at the commencement of this act shall continue in force as if the same had been made under the authority of this act, and all bonds given in respect to any goods warehoused under any act in force at the commencement of this act shall continue in force for the purposes of this act.—§ 4.

Commissioners to provide Warehouses for Tobacco.—The commissioners of customs shall, out of the monies arising from the duties of customs, provide from time to time warehouses for the warehousing of tobacco at the ports into which tobacco may be legally imported: provided, that for every hoghead, then, or case of tobacco so warehoused the importer or proprietor thereof shall pay, for warehouse rent, such sum or sums, not exceeding any sum payable under any act in force at the commencement of this act, and at such periods and in such manner as the commissioners of the treasury shall direct; and all such sums shall be paid and appropriated as duties of customs.—§ 5.

Power to revoke or alter an Appointment.—It shall be lawful for the commissioners of the treasury by their warrant, and for the commissioners of the customs by their order, to revoke any former warrant

or any former order, or to make any alteration in or addition to any former warrant or any former order made by them respectively.—§ 6.

Publication of Appointment in Gazette.—Every order made by the commissioners of customs in respect of warehouses of special security, as well those of original appointment as those of revocation, alteration, or addition, shall be published in the London Gazette, for those appointed in Great Britain, and in the Dublin Gazette for those appointed in Ireland.—§ 7.

Warehouse-keeper may give general Bond.—Before any goods be entered to be warehoused in any warehouse in respect of which security by bond is required, the proprietor or occupier of such warehouse, if he be willing, shall give general security by bond, with 2 sufficient sureties, for the payment of the full duties of importation on all such goods as shall at any time be warehoused therein, or for the due exportation thereof; and if such proprietor or occupier be not willing to give such general security, the different importers of the separate quantities of goods shall, upon each importation, give such security in respect of the particular goods imported by them respectively, before such goods be entered to be warehoused.—§ 8.

Sale of Goods in Warehouse by Proprietor to be valid.—If any goods lodged in any warehouse be the property of its occupier, and be *bona fide* sold by him, and upon such sale there shall have been a written agreement, signed by the parties, or a written contract of sale made, executed, and delivered by a broker or other person legally authorized on behalf of the parties respectively, and the amount of the price stipulated in the said agreement or contract shall have been actually paid or secured to be paid by the purchaser, every such sale shall be valid, although such goods shall remain in such warehouse; provided a transfer of such goods, according to such sale, shall have been entered in a book to be kept for that purpose by the officer of the customs having the charge of such warehouse, who is hereby required to keep such book, and to enter such transfers, with the dates thereof, upon application of the owners of the goods, and to produce such book upon demand made.—§ 9.

Storage in Warehouse to afford easy Access.—All goods warehoused shall be stowed in such manner as that easy access may be had to every package and parcel of the same; and if the occupier shall omit so to stow the same, he shall for every such omission forfeit the sum of 5*l.*; and if any goods be taken out of the warehouse without due entry of the same with the proper officers of the customs, the occupier of the warehouse shall be liable to the payment of the duties due thereon.—§ 10.

Goods fraudulently concealed or removed, forfeited, &c.—If any goods warehoused be fraudulently concealed in or removed from the warehouse, the same shall be forfeited; and if any importer or proprietor of any goods warehoused, or any person in his employ, shall by any contrivance fraudulently open the warehouse or gain access to the goods, except in the presence of the proper officer acting in the execution of his duty, such importer or proprietor shall forfeit and pay for every such offence the sum of 500*l.*—§ 11.

Examination on entry and landing.—Within 1 month after any tobacco shall have been warehoused, and upon the entry and landing of any goods to be warehoused, the proper officer of the customs shall take a particular account of the same, and shall mark the contents on each package, and shall mark the word "prohibited" on such packages as contain goods prohibited to be imported for home use; and all goods shall be warehoused and kept in the packages in which they have been imported, and no alteration shall be made in the packages or the packing of any goods in the warehouse, except in the cases herein provided.—§ 12.

Goods to be carried to Warehouse under authority of Officers of Customs.—All goods entered to be warehoused, or to be re-warehoused, shall be carried to the warehouse under the care or with the authority or permission of the proper officer of customs, and in such manner, and by such persons, and by such roads or ways, and within such spaces of time, as the said officer shall authorize, permit, or direct; and all such goods not so carried shall be forfeited.—§ 13.

Goods to be cleared in 3 Years, and Ship's Stores, in 1 Year.—All goods which have been warehoused shall be duly cleared, either for exportation or for home use, within 3 years, and all surplus stores of ships within 1 year from the day of the first entry thereof (unless further time be given by the commissioners of the treasury); and if any such goods be not so cleared, it shall be lawful for the commissioners of customs to cause them to be sold, and the produce shall be applied to the payment of warehouse rent and other charges, and the surplus, if any, paid to the proprietor; and such goods, when sold, shall be held subject to all the conditions to which they were subject previous to such sale, except that a further time of 3 months from the date of the sale shall be allowed to the purchaser for clearing such goods from the warehouse; and if the goods so sold shall not be duly cleared within such 3 months, the same shall be forfeited: provided, that if the goods so to be disposed of shall have been imported by the East India Company, or be of the description called "piece goods," imported from places within the limits of their charter into the port of London, the same shall, at the requisition of the commissioners of customs, be duly exposed to sale by the said company at their next ensuing sale, and shall be sold for the highest price then publicly offered for them.—§ 14.

In case of Accident, Duty to be remitted.—If any goods entered to be warehoused, or entered to be delivered from the warehouse, be lost or destroyed by any unavoidable accident, either on shipboard or in the landing or shipping of the same, or in the receiving into or delivering from the warehouse, the commissioners of customs shall remit or return the duties payable or paid on the goods so lost or destroyed.—§ 15.

Entry for Exportation or Home Use.—No goods which have been warehoused shall be taken or delivered from the warehouse except upon due entry, and under care of the proper officers for exportation, or upon due entry and payment of the full duties payable thereon for home use; except goods delivered into the charge of the searchers to be shipped as stores, and which shall and may be so shipped without entry or payment of any duty for any ship of the burden of 70 tons at least, bound upon a voyage to foreign parts, the probable duration of which out and home will be not less than 30 days: provided that such stores shall be duly borne upon the ship's victualling bill, and shall be shipped in such quantities and subject to such directions and regulations as the commissioners of customs shall direct and appoint.—§ 16.

Rum for Stores and surplus Stores may be shipped without Entry.—Any rum of the British plantations may be delivered into the charge of the searcher, to be shipped as stores for any ship without entry or payment of any duty, and any surplus stores of any ship may be delivered into the charge of the searcher, to be reshipped as stores for the same ship, or for the same master in another ship, without entry or payment of duty, such rum and such surplus stores being duly borne upon the victualling bills of such ships respectively; and if the ship for the future use of which any surplus stores have been warehoused shall have been broken up or sold, such stores may be so delivered for the use of any other ship belonging to the same owners, or may be entered for payment of duty, and delivered for the private use of such owners, or any of them, or of the master or purser of such ship.—§ 17.

Duties to be paid on original Quantities, except in certain Cases.—Upon the entry of any goods to be cleared from the warehouse, if the same be for home use, the person entering such goods inward shall deliver a bill of the entry, and duplicates thereof, in like manner as is directed in the case of goods entered to be landed, as far as the same is applicable, and at the same time shall pay down to the proper officer of the customs the full duties of customs payable thereon, and not being less in amount than according to the account of the quantity first taken of the respective packages or parcels of the

or warrant or any former

Officers of customs in respect of those of revocation, altered in Great Britain, and

to be warehoused in any occupier of such warehouse, and delivered or re-warehoused therein, or for failing to give such general notice on each importation, give respectively, before such goods be

goods in such entry at the examination thereof at the time of the first entry and landing of the same, without any abatement on account of any deficiency, except as by this act is otherwise provided; and if the entry be for exportation or for removal to any other warehouse, and any of the packages or parcels of the goods be deficient of their respective quantities, according to the account first taken, a like entry inwards shall also be passed in respect of the quantities so deficient, and the full duties shall be paid on the amount thereof before such packages or parcels of goods shall be delivered or sent for exportation or removal, except as by this act is otherwise provided; and if any goods so deficient in quantity shall be such as are charged to pay duty according to the value thereof, such value shall be estimated at the price for which the like sorts of goods of the best quality have been last or lately sold, either at any sale of the East India Company, or in any other manner, as the case may be.—§ 18.

Duties on Tobacco, Sugar, and Spirits to be charged on Quantities delivered, except in certain Cases.—The duties payable upon tobacco, sugar, and spirits respectively, when taken out of warehouse for home use, shall be charged upon the quantities ascertained by the weight, measure, or strength of the same actually delivered, except that if the sugar shall not be in a warehouse of special security no greater abatement on account of deficiency of the quantity first ascertained as aforesaid shall be made than shall be after the rate of 3 per cent. of such quantity for the first 3 months, and 1 per cent. for every subsequent month during which such sugar shall have been warehoused; and except, that if the spirits (being any other spirits than rum of the British plantations) shall not be in a warehouse of special security, no greater abatement on account of deficiency of the quantity or strength first ascertained as aforesaid shall be made than shall be after the several rates of allowances following, viz.

For every 100 gallons, hydrometer proof; viz.		For every 100 gallons, hydrometer proof; viz.	
For any time not exceeding 3 months	1 gallon	For any time exceeding 13 months and not exceeding 2 years	4 gallons
For any time exceeding 3 months and not exceeding 6 months	2 gallons	For any time exceeding 2 years	6 gallons
For any time exceeding 6 months and not exceeding 12 months	3 gallons		
For any time exceeding 12 months and not exceeding 18 months	4 gallons		

Provided that no abatement shall be made in respect of any deficiency in quantity of any spirits occasioned either by leakage or accident, and not by natural evaporation, in whatever warehouse the same may be, except as by this act is otherwise specially provided.—§ 19.

Importer may enter Goods for Home Use, &c., although not actually rewarehouse.—If after any goods have been duly entered and landed to be warehoused, and before the same have been deposited in the warehouse, the importer shall further enter the same or any part thereof for home use or for exportation as from the warehouse, the goods so entered shall be considered as virtually and constructively warehoused, although not actually deposited in the warehouse, and may be delivered and taken for home use or for exportation, as the case may be.—§ 20.

Goods may be removed to other Ports to be rewarehouse.—Any goods which have been warehoused at some port in the U. K. may be removed by sea or inland carriage to any other port in the same, in which the like goods may be warehoused upon importation, to be rewarehouse at such other port, and again as often as may be required to any other such port, to be there rewarehouse, subject to the regulations hereinafter mentioned; viz. 12 hours notice in writing of the intention to remove such goods shall be given to the warehouse officer, specifying the particular goods intended to be removed, and the marks, numbers, and descriptions of the packages in which the same are contained, in what ship imported, when and by whom entered inwards to be warehoused, and, if subsequently rewarehouse, when and by whom rewarehouse, and to what port the same are to be removed; and thereupon the warehouse officer shall take a particular account of such goods, and shall mark the contents on every package in preparation for the delivering of the same for such removal, and previous to the delivery thereof may cause the proper seals of office to be affixed thereto; provided that tobacco, the produce of the British possessions in America or of the United States of America, and purchased for the use of his Majesty's navy, may be removed by the purser of any ship of war in actual service to the ports of Rochester, Portsmouth, or Plymouth, to be there rewarehouse, in name of such purser, in a warehouse approved for that purpose by the commissioners of customs.—§ 21.

Entry of Goods for Removal.—Before such goods be delivered to be removed, due entry of the same shall be made, and a proper bill of such entry, with duplicates thereof, be delivered to the collector or comptroller, containing the before-mentioned particulars, and an exact account of the quantities of the different sorts of goods; and such bill of entry, signed by the collector and comptroller, shall be the warrant for the removal of such goods; and an account of the same, containing all such particulars, shall be transmitted by the officers of the port of removal to the officers of the port of destination; and upon the arrival of such goods at the port of destination due entry of the same to be rewarehouse shall be made in like manner be made with the collector and comptroller at such port, containing all the particulars and accounts before mentioned, together with the name of the port from which such goods have been removed, and the description and situation of the warehouse in which they are to be warehoused; and the bill of such entry, signed by such collector and comptroller, shall be the warrant to the landing officer and the warehouse officer to admit such goods to be there rewarehouse, under such examination as is made of the like goods when first warehoused upon importation from parts beyond the seas; and the particulars to be contained in such notice and in such entries shall be written and arranged in such form and manner as the collector and comptroller shall require; and the officers at the port of arrival shall transmit to the officers at the port of removal an account of the goods so arrived, according as they shall upon examination prove to be, and the warehouse officers at the port of removal shall duly such arrival in their books.—§ 22.

Bond to be rewarehouse, which may be given at either Port.—The persons removing such goods shall at the time of entering the same give bond, with sufficient surety, for the due arrival and rewarehouse of such goods within a reasonable time, (with reference to the distance between the respective ports, to be fixed by the commissioners of customs), which bond may be taken by the collector and comptroller either of the port of removal or of the port of destination, as shall best suit the residence or convenience of the persons interested in the removal of such goods; and if such bond be given at the port of destination, a certificate thereof, under the hands of the collector and comptroller of such port shall, at the time of entering the goods, be produced to the collector or comptroller of the port of removal.—§ 23.

Bond how to be discharged.—Such bond shall not be discharged unless such goods shall have been duly rewarehouse at the port of destination within the time allowed for such removal, or shall have been otherwise accounted for to the satisfaction of the said commissioners, nor until the full duties due upon any deficiency of such goods shall have been paid, nor until fresh security have been given in respect of such goods as herein-after provided, unless such goods shall be lodged in some warehouse in respect of which general security has been given by the proprietor or occupier, or in some warehouse in respect of which no security is required.—§ 24.

Goods rewarehouse held on Terms of the first Warehousing.—Such goods when so rewarehouse may be entered and shipped for exportation, or entered and delivered for home use, as the like goods may be when first warehoused upon importation, and the time when such goods shall be allowed to remain rewarehouse at such port shall be reckoned from the day when the same were first entered to be warehoused.—§ 25.

On Arrival, after Forms of rewarehousing, Parties may enter to export, &c.—If upon the arrival of such goods at the port of destination the parties shall be desirous forthwith to export the same, or to pay duty thereon for home use, without lodging the same in the warehouse for which they have been entered and examined to be rewarehoused, it shall be lawful for the officers of the customs at such port, after all the formalities of entering and examining such goods for rewarehousing have been duly performed (except the actual labour of carrying and lodging the same in the warehouse), to consider the same as virtuously or constructively rewarehoused, and to permit them to be entered and shipped for exportation, or to be entered and delivered for home use, upon payment of the duties due thereon; and the account taken for the rewarehousing of such goods may serve as the account for delivering the same as if from the warehouse, either for shipment or for payment of duties, as the case may be; and all goods so exported, or for which the duties have been so paid, shall be deemed to have been duly cleared from the warehouse.—§ 25.

Removal in the same Port.—Any goods which have been warehoused in some warehouse in the port of London may, with the permission of the commissioners of customs first obtained, be removed to any other warehouse in the said port in which the like goods may be warehoused; and any goods which have been warehoused in any other port, may with the permission of the collector and comptroller of such port first obtained, be removed to any other warehouse in the same port in which like goods may be warehoused, under such regulations as the commissioners of customs shall direct.—§ 27.

Goods and Parties subject to original Conditions.—All goods which shall have been removed from one warehouse to another, whether in the same or in a different port, and all proprietors of such goods, shall be subject to all the conditions to which they would have been subject had such goods remained in the warehouse where they were originally warehoused.—§ 28.

Goods sold, new Owner may give Bond.—If any goods have been warehoused in respect of which general security by bond shall not have been given by the proprietor or occupier, and particular security, as in such case is required, shall have been given by the importer of such goods, and the goods shall have been sold or disposed of, so that the original bondholder shall be no longer interested in or have controul over such goods, it shall be lawful to admit fresh security to be given by the bond of the new proprietor of such goods, or persons having the controul over the same, with his sufficient surety, and to cancel the bond given by the original bondholder, or to exonerate him and his surety to the extent of the fresh security so given.—§ 29.

Bond of Remover to be in force until Bond be given by new Owner.—If the person removing any goods from 1 port to another, and who shall have given bond in respect of such removal and rewarehousing, shall continue to be interested in such goods after the same have been duly rewarehoused, and such goods shall have been so rewarehoused in some warehouse, in respect of which security is required, and the proprietor or occupier of the same shall not have given general security, the bond in respect of such removal and rewarehousing shall be conditioned and continue in force, for the rewarehousing of such goods, until fresh bond be given by some new proprietor or other person in manner herein-before provided.—§ 30.

To sort, separate, and repack in some or equal Packages.—It shall be lawful in the warehouse to sort, separate, pack, and repack any goods, and to make such lawful alterations therein, or arrangements thereof, as may be necessary either for the preservation of such goods, or for order to the sale, shipment, or legal disposal of the same; provided that such goods be repacked in the same packages in which the same goods, or some part of the whole quantity of the same parcel of goods, were imported, or in packages of entire quantity equal thereto, or in such other packages as the commissioners of customs shall permit (not being less in any case, if the goods be to be exported or to be removed to another warehouse, than may be required by law for the importation of such goods); and also in the warehouse to draw off any wine, or any rum of the British plantations into reputed quart bottles or reputed pint bottles, for the purpose only of being exported from the warehouse; and also to draw off any such rum into casks containing not less than 30 gallons each, for the purpose only of being disposed of as stores for ships; and also to draw off any other spirits into reputed quart bottles, under such regulations as the commissioners of customs shall from time to time direct, for the purpose only of being exported from the warehouse; and also to draw off and mix with any wine any brandy secured in the same warehouse, not exceeding the proportion of 10 gallons of brandy to 100 gallons of wine; and also to fill up any casks of wine or spirits from any other casks of the same, respectively secured in the same warehouse; and also in any warehouse of special security to rack off any wine from the lees, and to mix any wines of the same sort, erasing from the casks all import brands; and also to take such moderate samples of goods as may be allowed by the commissioners of customs, without entry and without payment of duty, except as the same may eventually become payable, on a deficiency of the original quantity.—§ 31.

No Alteration in Goods or Package but according as the Commissioners direct.—No alteration shall be made in any goods or packages, nor shall any wine, rum, brandy, or spirits be bottled, drawn off, mixed, or filled up, nor shall any samples be taken except after such notices given by the respective importers or proprietors, and at such times and in such manner, and under such regulations and restrictions, as the commissioners of customs shall require and direct.—§ 32.

Repacking in proper Packages.—Whereas it may happen, that after the repacking into proper packages of any parcel of goods which have been unpacked and separated or drawn off from the original package in any of cases herein-before provided for, there may remain some surplus quantities of the respective parcels of such goods, which may not be sufficient to make or fill up any 1 of such proper packages, or it may happen that some part of such goods, when separated from other parts, may be such refuse, or in so damaged a state as to be worthless, or that the total quantity of such parcel of goods may be reduced by the separation of dirt or sediment, or by the dispersion of dust or otherwise; and whereas the duties payable on such goods may have been levied at a rate having regard to a just allowance for the state in which such goods are imported, and it is not proper that any manufacturing process should be performed in such warehouse to the detriment of the revenue; it is therefore enacted, that after such goods have been repacked in proper packages, the commissioners of customs, at the request of the importer or proprietor of such goods, may permit any such refuse, damaged, or surplus goods not contained in any of such packages, to be destroyed; and if the goods be such as may be delivered for home use, the duties shall be immediately paid upon any part of such surplus as may remain, and the same shall be delivered for home use accordingly; and if they be such as may not be so delivered, such surplus as may so remain shall be disposed of for the purpose of exportation in such manner as the commissioners shall direct; and thereupon the quantity contained in each of such packages shall be ascertained and marked upon the same, and the deficiency shall be ascertained by a comparison of the total quantity in such packages with the total quantity first warehoused, and the proportion which such deficiency may bear to the quantity in each package shall also be marked on the same, and added to such quantity, and the total shall be deemed to be the imported contents of such package, and be held subject to the full duties of importation, except as otherwise provided by this act: provided that it shall be lawful for the commissioners of customs to accept the abandonment, for the duties, of any quantity of tobacco, coffee, pepper, cocoa, lees of wine, and also of any whole packages of other goods, and to cause or permit the same to be destroyed, and to deduct such quantity of tobacco or coffee, or pepper, or cocoa, or the contents of such whole packages, from the total quantity of the same importation, in computing the amount of the deficiency of such total quantity.—§ 33.

No Foreign Casks, &c. to be used for repacking.—No foreign casks, bottles, corks, packages, or materials whatsoever, except any in which some goods shall have been imported and warehoused, shall be used in the repacking of any goods in the warehouse, unless the full duties have been first paid thereon.—234.

Silks, Linens, &c. to be delivered out of Warehouse, to be cleaned.—It shall be lawful for the commissioners of the customs to permit any stuffs or fabrics of silk, linen, cotton, or wool, or of any mixture of them with any other material, to be taken out of warehouse to be cleaned, refreshed, dyed, stained, or calendered, or to be bleached or printed, without payment of duty of customs, under security, nevertheless, by bond to their satisfaction, that such goods shall be returned to the warehouse within the times that they shall appoint; and it shall be lawful for the said commissioners, in like manner and under like security, to permit any rice, the produce of places within the limits of the East India Company's Charter, to be delivered out of warehouse to be cleaned, making such allowance for waste as to the said commissioners shall appear to be reasonable.—235.

Copper Ore may be taken out of Warehouse to be smelted.—It shall be lawful for the importer or proprietor of any copper ore warehoused to give notice to the proper officers of his intention to take such ore out of warehouse to be smelted, stating in such notice the quantity of copper computed to be contained in such ore, and delivering to such officers sufficient samples or specimens for ascertaining by proper assays, at the expense of the proprietor, such quantity of copper, and giving sufficient security by bond for returning such quantity of copper into the warehouse; and if such officers shall be satisfied of the fairness of the samples or specimens of such ore, and of the assays made of the same, and of the security given, they shall deliver such ore for the purpose of being smelted: provided that if any copper ore intended to be so smelted shall be imported into any port where such ore or where copper cannot be warehoused, the same may be entered as being to be warehoused at the port at which the copper after smelting is to be warehoused, and such ore shall thereupon be taken account of and delivered for the purposes aforesaid, in like manner as if the same had been warehoused: provided also, that all copper so produced by smelting shall be deemed to be copper imported, and shall be warehoused as such.—236.

Goods in bulk delivered.—No parcels of goods so warehoused which were imported in bulk shall be delivered, except in the whole quantity of each parcel, or in a quantity not less than 1 ton weight, unless by special leave of the proper officers.—237.

Packages to be marked before delivery.—No goods in warehouse shall be delivered, unless the same or the packages containing the same shall have been marked in such distinguishing manner as the commissioners of customs shall from time to time direct.—238.

Decrease and Increase may be allowed, under Regulations of the Treasury.—It shall be lawful for the commissioners of the treasury to make regulations for ascertaining the amount of the decrease or increase of the quantity of any particular sorts of goods, and to direct in what proportion any abatement of duty payable under this act for deficiencies shall, upon the exportation of any such goods, be made on account of such decrease: provided, that if such goods be lodged in warehouses of special security, no duty shall be charged for any defect or deficiency of any of such goods on the exportation thereof, except in cases where such goods shall arise that part of such goods has been clandestinely conveyed away, nor shall any such goods (unless they be wine or spirits) be measured, counted, weighed, or gauged for exportation: except in such cases of suspicion.—239.

Allowances for Waste of Wine, &c. in Warehouses not of special Security.—For any wine, spirits, coffee, cocoa nuts, or pepper lodged in warehouses not of special security, the following allowances for natural waste, in proportion to the time during which such goods have remained in warehouse, shall be made upon the exportation thereof; viz.

Wine, upon every cask; viz.	Spirits, upon every 100 gallons hydrometer proof; viz.
For any time not exceeding 1 year 1 gallon	For any time exceeding 12 months, and not exceeding 18 months 3 gallons
For any time exceeding 1 year, and not exceeding 2 years 2 gallons	For any time exceeding 18 months, and not exceeding 2 years 4 gallons
For any time exceeding 2 years 3 gallons	For any time exceeding 2 years 5 gallons
Rice, upon every 100 gallons hydrometer proof; viz.	Coffee, cocoa nuts, pepper, for every 100 lbs, and so in proportion for any less quantity 2 lbs.
For any time not exceeding 6 months 1 gallon	
For any time exceeding 6 months, and not exceeding 12 months 2 gallons	

—240.

Embezzlement and Waste by Officers to be made good to Proprietor.—In case any embezzlement, waste, spoil, or destruction, shall be made of any goods or merchandise warehoused in warehouses under the authority of this act, through any wilful misconduct of any officer of customs or excise, such officer shall be deemed guilty of a misdemeanor, and shall upon conviction suffer such punishment as may be inflicted by law in cases of misdemeanor; and if such officer shall be so prosecuted to conviction by the importer, consignee, or proprietor of the goods or merchandise so embezzled, wasted, spoiled, or destroyed, no duty of customs or excise shall be payable for such goods or merchandise so embezzled, &c., and no forfeiture or seizure shall take place of any goods and merchandise so warehoused in respect of any deficiency caused by such embezzlement, waste, spoil, or destruction, and the damage occasioned by such embezzlement, &c. of such goods or merchandise shall be repaid and made good to such importer, consignee, or proprietor by the commissioners of customs or excise, under such orders as shall be given by the commissioners of the treasury, or any 3 of them.—241.

On Entry outwards Bond for due shipping and landing shall be given.—Upon the entry outwards of any goods to be exported from the warehouse to parts beyond the seas, and before cocket be granted, the person in whose name the same be entered shall give security by bond in double the value of such goods, with 2 sufficient sureties, that such goods shall be duly shipped and exported, and shall be landed at the place for which they be entered outwards, or otherwise accounted for to the satisfaction of the commissioners of customs.—242.

Bond for Beef and Pork exported from Warehouse.—Upon the entry outwards of any salted beef or salted pork to be exported from the warehouse to parts beyond seas, and before cocket be granted, the person in whose name the same be entered shall give security by bond in treble the value of the goods, with 2 sufficient sureties, of whom the master of the exporting ship shall be 1, that such beef or pork shall be duly shipped and exported, and that no part thereof shall be consumed on board such ship, and that the same shall be landed at the place for which it be entered outwards; and that a certificate of such landing shall be produced within a reasonable time, according to the voyage, to be fixed by the commissioners of customs, and mentioned in the bond, such certificate to be signed by the officers of the customs or other British officer, if the goods be landed at a place in the British dominions, or by the British consul, if the goods be landed at a place not in the British dominions, or such goods shall be otherwise accounted for to the satisfaction of said commissioners; and such master shall make and sign a declaration that such beef or pork is to be laden on board such ship as merchandise, to be carried to and landed at parts beyond the seas, and not as stores for the said ship; and if such ship shall not have on board at the time of clearance outwards a reasonable supply or stock of beef or pork, according to the intended voyage, borne upon the victualling bill, the master of such ship shall forfeit the amount of 100l.—243.

Restrictions as to the Isle of Man.—No goods shall be exported from the warehouse to the Isle of Man, except such goods as may be imported into the said island with licence of the commissioners of customs, and in virtue of any such licence first obtained.—244.

Goods removed from Ware-houses under Care of Customs' Officers.—All goods taken from the warehouse for removal or for exportation shall be removed or carried to be shipped under the care or with the authority or permission of the proper officers of customs, and in such manner, and by such persons, and within such spaces of time, and by such roads or ways, as be shall authorise or direct; and all such goods not so removed or carried shall be forfeited.—§ 45.

Ships to be not less than 70 Tons for exporting warehoused Goods.—It shall not be lawful for any person to export any goods so warehoused, nor to enter for exportation to parts beyond the seas any goods so warehoused, in any ship not of the burden of 70 tons or upwards.—§ 36.

Goods landed in Docks liable to Claims for Freight as before landing.—All goods or merchandise which shall be landed in docks, and lodged in the custody of their proprietors, under this act, not being goods seized as forfeited, shall be subject or liable to the same claim for freight in favour of the master and owner or owners of the respective ships or vessels, or of any other person or persons interested in the freight of the same, as they were subject and liable to before landing; and the directors and proprietors of such docks are empowered and required, upon due notice in that behalf given to them, to detain and keep such goods and merchandise, not being seized as forfeited, in the warehouses belonging to the said docks, until the respective freights to which the same are subject and liable be duly paid, together with the rates and charges to which the same shall have been subject and liable, or until a deposit be made by the owners or consignees of such goods or merchandise, equal in amount to the demands made by the master, owner or owners of the ships or vessels, or other persons, on account of freight; which deposit the directors or proprietors of such docks, or their agents, are directed to receive and hold in trust, until the claim or demand for freight upon such goods shall be satisfied; upon proof of which, and demand made by the persons, their executors, &c. by whom the said deposit has been made, and the rates and charges due upon the said goods being paid, the deposit shall be returned to them by the said directors or proprietors.—§ 47.

Quantities of the Principal Articles of Foreign Merchandise remaining in Warehouse under the Locks of the Crown, in the Ports of London, Liverpool, Bristol, and Hull, on or about the 5th of January, 1832 and 1833.—(Papers published by Board of Trade, vol. ii. p. 66.)

Some of the French and Swiss watches are excellent; but, generally speaking, they are slight, and inferior to those made in London. Paris and Geneva watches are largely exported to foreign countries; and are every where in high estimation, particularly among the ladies.

Watches impressed with any mark or stamp, appearing to be or to represent any legal British assay mark or stamp, or purporting by any mark or appearance to be of the manufacture of the United Kingdom, or not having the name and place of abode of some foreign maker abroad visible on the frame and also on the face, or not being in a complete state, with all the parts properly fixed in the case, may not be imported into the United Kingdom, even for the purpose of being warehoused.—(3 & 4 Will. 4. c. 58. See *ante*, p. 10.)

Watches in China.—Pretty considerable numbers of European watches are imported into China; and we anticipate, now that the monopoly is put down, a large increase of the trade. It may be worth mentioning, that those among the Chinese, as well as among some other Eastern nations, who can afford it, uniformly wear watches in pairs. This sort of extravagance is not, however, confined to watches, but extends to a variety of other articles. Shawls, for example, are invariably worn in India in pairs of exactly the same pattern; and it is hardly possible, indeed, to find a native dealer who will sell a single shawl.

In 1838, there were exported from Great Britain 19,678 watches of British manufacture; of these, 11,775 were silver, 4,167 metal, 435 gold, 671 being without cases. The duty on foreign watches and clocks is an *ad valorem* one of 35 per cent., and no account is kept of the numbers of each imported. In 1838, their aggregate value amounted to 25,332l.; the total value of all foreign clocks and watches imported during the same year being 1,094l.—(Parl. Paper, No. 460. 1838.)

WATER. It may be thought unnecessary, perhaps, to say anything in a work of this sort with respect to a fluid so well known and so abundant. It is said being an indispensable necessary of life, water is, in most large cities, an important commercial article. In the latter point of view, principally, that we mean to consider it.—Inasmuch, however, as the mode of supplying different places with water, and its price, necessarily vary in every possible way, we shall limit our remarks on these subjects to the metropolis only. The few remarks we intend to offer of a general nature will apply indifferently to any populous place, the supply of which with water occasions a considerable expense.

1. *Quality of Water.*—Dr. Ure has made the following statements with respect to the quality of water:—"Water," says he, "is a very transparent fluid, possessing a moderate degree of activity with regard to organised substances, which renders it friendly to animal and vegetable life, for both which it is, indeed, indispensably necessary. Hence it acts but slightly on the organs of sense, and is therefore said to have neither taste nor smell. It appears to possess considerable elasticity, and yields in a perceptible degree to the pressure of air in the condensing machine."

"Native water is seldom, if ever, found perfectly pure. The waters that flow within or upon the surface of the earth contain various earthy, saline, metallic, vegetable, or animal particles, according to the substances over or through which they pass. Rain and snow waters are much purer than these, although they also contain whatever floats in the air, or has been exhaled along with the water vapour."

"The purity of water may be known by the following marks or properties of pure water:—
"1. Pure water is lighter than water that is not pure.
"2. Pure water is more fluid than water that is not pure.
"3. It has no colour, smell, or taste.
"4. It wets more easily than the waters containing metallic and earthy salts, called hard waters, and feels softer when touched."

"5. Soap, or a solution of soap in alcohol, mixes easily and perfectly with it.
"6. It is not rendered turbid by adding to it a solution of gold in aqua regia; or a solution of silver, or of lead, or of mercury, in nitric acid; or a solution of acetate of lead in water.
"Water was, till modern times, considered as an elementary or simple substance; but it is now ascertained to be a compound of oxygen and hydrogen."

2. *Supply of Water.*—London was very ill supplied with water previously to the early part of the 17th century, when the New River water was introduced into the city. This exceedingly useful work was planned and carried into effect by the famous Sir Hugh Middleton, who expended his whole fortune on the project; having, like many other public benefactors, entailed poverty on himself and his posterity by embarking in an undertaking productive of vast wealth to others, and of great public utility. The New River has its principal source near Chadwell, between Herford and Ware, about 20 miles from London; but the artificial channel in which the water is conveyed is about forty miles in length. Sir Hugh Middleton encountered innumerable difficulties during the progress of the undertaking, which it is probable would have been abandoned, at least for a time, but for the aid afforded by James I. The New River Company was incorporated in 1619, 6 years after the water had been brought to the reservoir at Islington. The undertaking yielded very little profit for a considerable number of years; but it has since become extremely profitable; so much so, that an original 500l. share has been sold for 13,000l.!

The Chelsea Water-Works Company was formed in 1723, and (with the aid of 3 smaller companies, none of which are now in existence) it, and the New River, supplied all that part of the metropolis north of the Thames with water, down to the year 1810. In that year, however, 3 new companies, the East London, West Middlesex, and Grand Junction, were established, under the authority of different acts of parliament. At this moment the metropolis is supplied with water by the following companies:—

- | | |
|-----------------|--------------------------------|
| New River, | Grand Junction, |
| Chelsea, | Lambeth, |
| East London, | Vauxhall, or South London, and |
| West Middlesex, | Southwark Water Works. |

The following statements with respect to these companies are taken from Mr. Wade's valuable treatise on the police of the metropolis. The Report of the commissioners appointed by government in 1827, to inquire into the state of the supply of water in the metropolis is the principal authority on which they are founded.

"The New River Company get their supply from the spring at Chadwell, between Hertford and Ware. It comes in an open channel, of about 40 miles in length, to reservoirs at Clerkenwell. There are 3 reservoirs, having between them a surface of about 5 acres, and an average depth of 10 feet. These reservoirs are 64 feet above low water mark in the Thames; and, by means of steam engines and a stand-pipe, an additional height of 60 feet can be given to the water, so that all the mains belonging to this Company are kept full by a considerable pressure of water. The highest service given by the New River is the cistern on the top of Covent Garden Theatre. The aqueduct by which the water is brought has only a fall of 3 inches per mile; thus it wastes, by evaporation, during the drought of summer, and is impeded by frost in the winter. At these times the Company pump an additional supply from the Thames, at Broken Wharf, between Blackfriars and Southwark Bridges. To this, however, they seldom have recourse; and their engine, erected since the works at London Bridge were broken down, has worked only 176 hours in the year. The New River Company supply 66,000 houses with water, at an annual average of about 1,100 hogheads each, or, in all, about 75,000,000 hogheads annually."

"The East London Water Works are situated at Old Ford, on the river Lea, about 3 miles from the Thames, and a little below the point to which the tide flows up the Lea. By the act of parliament, this Company must take its water when the tide runs up and the mills below have ceased working. The water is pumped into reservoirs and allowed to settle; and a supply of 6,000,000 gallons is daily distributed to about 42,000 houses. This Company supply no water at a greater elevation than 30 feet, and the usual height at which the delivery is made to the tenants is 6 feet above the pavement; they have 300 miles of iron pipes, which, in some places, cost them 7 guineas a yard. This and the New River are the only companies which do not draw their supply of water entirely from the Thames."

"The West Middlesex derive their supply of water from the Thames, at the upper end of Hammer-smith, about 91 miles above London Bridge, and where the bed of the Thames is gravel. The water is forced by engines to a reservoir at Kensington, 300 feet long, 123 wide, and 30 deep, paved and lined with bricks, and elevated about 120 feet above low water in the Thames. They have another reservoir on Little Primrose Hill, about 70 feet higher, and containing 68,000 hogheads of water, under the pressure of which the drains are kept charged, in case of fires. They serve about 15,000 tenants, and the average daily supply is about 3,350,000 gallons."

"The Chelsea Water Works derive their supply from the Thames, about $\frac{1}{2}$ of a mile east of Chelsea Hospital; and they have 3 reservoirs—one in the Green Park and another in Hyde Park—the former having an elevation of 44 feet, and the latter of 70. These reservoirs, till within these few months, had never been cleaned, nor had there been any preparation made for that purpose in their construction. About $\frac{1}{2}$ of the water served out by this Company is allowed to settle in these reservoirs, and the remaining $\frac{1}{2}$ are sent directly from the Thames. Lately, the Company have been making preparations for filtering the water; and also for allowing it to settle in reservoirs, at Chelsea, before it is delivered into the mains. The Chelsea Company serve about 13,400 houses, and the average daily supply is 1,760,000 gallons."

"The Grand Junction Company derive the whole of their supply from the Thames, immediately adjoining Chelsea Hospital; thence it is pumped, without any filtration or settling, into 3 reservoirs at Paddington. These reservoirs are about 71, 86, and 93 feet above high water mark in the Thames; their united contents are 16,355,540 gallons; and by means of a stand-pipe, the water is forced to the height of 147 feet, or about 61 feet above the average height in the reservoir. The number of houses supplied by the Grand Junction Company is 7,700, and the average daily supply is about 3,800,000 gallons."

"The Lambeth Company take their supply from the Thames, between Westminster and Waterloo Bridges. It is drawn from the bed of the river by a suction pipe, and delivered to the tenants without being allowed to subside; there being only a cistern of 400 barrels at the works, as a temporary supply, until the engines can be started. The greatest height to which the Company force water is about 40 feet; the number of houses that they supply is 16,000, and the average service is 1,241,000 gallons daily."

"The South London, or Vauxhall Company, take their supply from the river Thames by a tunnel, which is laid 6 feet below low water mark, and as far into the river as the third arch of Vauxhall Bridge. At that particular place, the bed of the Thames is described as being always clean, and without any of those depositions of mud and more offensive substances that are found in many other places. Besides the greater purity of the bed of the Thames here than where any other Company on the south side take their supply, the Company allow the water to settle in reservoirs. The Vauxhall Company supply about 10,000 houses with about 1,000,000 gallons of water daily."

"The Southwark Water Works (the property of an individual) are supplied from the middle of the Thames, below Southwark and London Bridges; and the water thus taken is sent out to the tenants without standing to settle, or any filtration further than it receives from passing through wire grates and small holes in metallic plates. The number of houses supplied by these works is about 7,000, and the average daily supply about 720,000 gallons."

The results may be collected into a Table, as follows:—

Companies.	Services.	Average per Day, Gallons.	Gallons Annually.	Average per House, Gallons.
1. New River	67,000	13,000,000	4,666,000,000	152
2. East London	42,000	6,000,000	1,972,000,000	143
3. West Middlesex	15,000	3,250,000	702,000,000	140
4. Chelsea	13,400	1,760,000	648,120,000	142
5. Grand Junction	7,700	3,800,000	1,375,600,000	163
6. Lambeth	16,000	1,844,000	668,224,000	111
7. South London	10,000	1,000,000	312,000,000	100
8. Southwark	7,000	720,000	261,240,000	102
Total	183,100	28,774,000	8,977,868,000	157

Average per house north of the river 198 gallons.
Average per house south of the river 98 ditto.

It would appear from this Table, as if the supply of water were either excessive on the Middlesex side of the river, or very deficient on the Surrey side. But this discrepancy is more apparent than real. The inhabitants in the northern district are, speaking generally, decidedly richer than those in the southern district; they have, particularly in the west end of the town, larger families, and a much greater number of houses. There is also a much larger expenditure of water upon the roads in Middlesex than in Surrey. Still, however, we believe that there is a more liberal supply in the former than in the latter.

Monopoly of the Water Companies.—The sanction of parliament was given to the 3 new companies formed in 1810, not so much in the view of increasing the actual supply of water, as of checking monopoly, and reducing the rates by their competition. But these expectations have not been realized. For a while, indeed, the competition of the several companies was exceedingly injurious to their in-

well, between Hertford and Clerkenwell. There is an average depth of 10 feet, and, by means of steam engines, water, so that all the mains bear. The highest service given by the aqueduct by which the Corporation pump an additional Southwark Bridge. In this, the works at London Bridge River Company supply 66,000 gals, or, in all, about 75,000,000

r. Lea, about 3 miles from the city. By the act of parliament, below have ceased working. A greater elevation than 30 feet above the pavement is unless a yard. The water is drawn entirely from the Thames, at the upper end of Hammer-frames is gravel. The water is 20 deep, paved and lined with lead. They have another reservoirs of water, under the service about 15,000 tenants, and

iven to the 3 new companies of water, as of checking motions have not been realized, edgingly injurious to their in-

wards, and occasioned the total destruction of some of the inferior ones; but no sooner had this happened, than the others discovered that their interests were in reality the same, and that the true way to promote them was to concert measures together. In furtherance of this object, the 5 companies for the supply of that part of the metropolis north of the river proceeded to divide the town into as many districts, binding themselves, under heavy penalties, not to encroach on each other's estates; and having in this way gone far to secure themselves against any new competitors, their next measure was to add 1/2 and 1/3 per cent. to the rates established in 1810; and these have, in several instances, been still further augmented. The benefits that were expected to result from their multiplication have, therefore, proved quite imaginary; and though the supply of water has been increased, it is neither so cheap nor so good as it might have been under a different system.

The following statement of the rates and profits of the 5 principal Water Companies in 1820 and 1827, is extracted from the Report of the Select Committee of the House of Commons on the supply of water in 1828:—

Comparative Returns of 1820 with 1827.

Total South of the Thames.—Returns not complete.

The truth is, as we endeavoured to show in the article COMPANIES, that certain restrictions ought, in almost all cases, to be imposed on companies for the supply of water to a large city. These are not undertakings that can be safely trusted to the free principles that may generally be relied upon. If there be only one set of springs adjacent to a town, or if there be certain springs more conveniently situated for supplying it with water than any other, a company acquiring a right to such springs, and incorporated for the purpose of conveying the water to town, would thereby gain an exclusive advantage; and if no limits were set to the dividends, its partners might make an enormous profit at the expense of the public, and without its being possible materially to reduce them by means of competition. What has happened in the case of the New River Company sufficiently evinces the truth of what has now been stated. Had its dividends been limited to any thing like a reasonable profit, the water that is at present supplied by its means might have been furnished for a small part of what it actually costs. But in cases of this sort, priority of occupation, even without any other peculiar advantage, goes far to exclude all regular and wholesome competition. A company that has got pipes laid down in the streets may, if threatened by the competition of another company, lower its rates so as to make the latter withdraw from the field; and as soon as this is done, it may revert to its old, or even to higher charges. It is not, in fact, possible, in numerous concerns of this sort, to have any thing like competition, in the ordinary sense of the term; and experience shows that whenever it is attempted, it only continues for a limited period, and is sure to be in the end effectually suppressed. We are, therefore, clearly of opinion, that no company ought ever to be formed for the conveyance of water into a large city, without a maximum being set both to the rates and the dividends; giving the company an option, in the event of the maximum rate yielding more than the maximum dividend, either to reduce the rate, or to apply the surplus to the purchase of the company's stock; so that ultimately the charge on account of the dividends may be got rid of.

We are glad to have to add, that we are supported in what is now stated by the Report of the Select Committee of the House of Commons on the supply of water for the metropolis, printed in 1821. It is there said—"The public is at present without any protection even against a further indefinite extension of demand. In cases of dispute, there is no tribunal but the Boards of the companies themselves, to which individuals can appeal; there are no regulations but such as the companies may have voluntarily imposed upon themselves, and may therefore at any time revoke, for the continuance of the supply in its present state, or for defining the cases in which it may be withdrawn from the householder. All these points, and some others of the same nature, indispensably require legislative regulation, where the subject matter is an article of the first necessity, and the supply has, from peculiar circumstances, got into such a course that it is not under the operation of those principles which govern supply and demand in other cases."

"The principle of the acts under which these companies were instituted, was to encourage competition; and certainly in this, as in other cases, it is only from competition, or the expectation of competition, that a perfect security can be had for a good supply. But your committee are satisfied, that, from the peculiar nature of these undertakings, the principle of competition requires to be guarded by particular checks and limits in its application to them, in order to render it effectual, without the risk of destruction to the competing parties, and thereby, ultimately, of a serious injury to the public." And the committee proceeds to remark—"The submission of their accounts annually to parliament for a few years, would necessarily throw light on this part of the question."

We think that it would be highly expedient to adopt the suggestion of the committee, by calling upon the companies to lay annually detailed statements of their affairs before parliament. They should be obliged in these statements to give an account of the rates charged by them, and to make a special report as to every case in which they have withdrawn water from a household. It is to no purpose to repeat, in opposition to this proposal, the common-places about competition securing for the citizens a sufficient supply of water at the lowest price, in the same way that the competition of bakers and butchers secures them supplies of beef and bread! The statements already made show that there is no anomaly whatever in the circumstances under which these articles are supplied. If a man be dissatisfied with any particular butcher or baker, he may go to another; but it is not possible for him to change his water merchant, unless he also change the place of his residence. No water company will encroach upon the district assigned to another; and supposing an individual unlucky enough to quarrel with those who have the absolute monopoly of the supply of the district in which he resides, he must either migrate to another, or be without water, unless he can get a supply upon his own premises! Such being the actual state of things, it is quite ludicrous to talk about competition affording any real security against extortion and abuse. Even the publication of the proceedings of the companies would be a very inadequate check on their conduct; but such as it is, it is perhaps the only one that can now be resorted to; and as it would have considerable influence, it ought not, certainly, to be neglected.

3. *Quality of the London Water.*—All the companies, with the exception of the New River and East London Companies, derive their supplies of water from the Thames; and in consequence of their taking it up within the limits to which the tide flows, it is necessarily, in the first instance, loaded with many impurities. But the reports that were recently so very prevalent, with respect to the deleterious quality of the water taken from the river, have been shown to be very greatly exaggerated. The statement of Dr. Bostock, given in the *Report* of the commissioners, shows that by far the greater part of the impurities in the Thames water are mechanically suspended in, and not chemically combined with it; and that they may be separated from it by filtration, or by merely allowing it to stand at rest. Most of the companies have recently made considerable efforts to improve their water; and though they have not done in the respect as much as they might and ought to have done, a considerable improvement has, on the whole, been effected; and notwithstanding all that has been said to the contrary, we have been assured, by those best qualified to form an opinion on such a subject, that, though not nearly so pure as a little pains would render it, there is not the slightest foundation for the notion that its impurities have been such as to affect, in any degree, the health of the inhabitants.

4. *Water for Ships.*—Various improvements have been made in the art of preserving water on board ships. Of these, the principal are the charring the inside of the casks in which the water is kept, and the substitution of iron tanks for casks. The latter, being made of the required shape, may be conveniently stowed into any part of the ship. In men-of-war, the iron tanks serve as ballast; the water being brought up by a forcing pump. Wax is found to preserve better in them than in any other sort of vessel. Drip-stones may be employed with much advantage in the purification of water. When water is taken on board from a river into which the tide flows, it should, of course, be raised at low ebb.

WAX (*Ger. Wachs; Fr. Cire; It. and Sp. Cera; Rus. Wosk*), a vegetable product. Several plants contain wax in such abundance, as to make it worth while to extract it from them. But bees' wax is by far the most generally known. The honey is first pressed from the comb, and the wax is then melted into cakes. It has a slight odour of honey, is insipid, and of a bright yellow hue. It is brittle, yet soft, and somewhat unctuous to the touch. It is often adulterated with earth, pea-meal, resin, &c. The presence of the former may be suspected when the cake is very brittle, or when its colour inclines more to gray than to yellow; and the presence of resin may be suspected when the fracture appears smooth and shining, instead of being granulated. Wax, when bleached, or purified, is white, perfectly insipid, inodorous, and somewhat translucent; it is harder, less unctuous to the touch, heavier, and less fusible, than yellow wax. It is sometimes adulterated with the white oxide of lead to increase its weight, with white tallow, and with potato starch. The first is detected by melting the wax in water, when the oxide falls to the bottom; the presence of tallow is indicated by the wax being of a dull opaque white, and wanting the transparency which distinguishes pure wax; and starch may be detected by applying sulphuric acid in the suspected wax, as the acid carbonises the starch, without acting on the wax.—(*Thomson's Chemistry, and Dr. A. T. Thomson's Dispensatory.*)

Notwithstanding the large supply of wax produced at home, a considerable quantity is imported from abroad; and there can be no doubt that the import would be much greater, were it not for the magnitude of the duty, which, notwithstanding its late reduction, still amounts to *li. 10s. per cwt.* The total quantity imported, in 1831, amounted to 7,303 cwt., of which 3,592 cwt. came from Western Africa, 1,551 cwt. from Tripoli, Barbary, &c. 910 cwt. from the United States, and the rest from Russia, Germany, &c.

Account of the Imports and Exports of Wax, the Quantities retained for Home Use, the Rates of Duty thereon, and the Nett Produce of the Duty, in 1831 and 1832.—(*Papers published by the Board of Trade, vol. ii. p. 29.*)

The price of wax varies (duty included) from 5*l.* to 10*l.* a cwt.

WEIGHTS AND MEASURES. Weights are used to ascertain the gravity of bodies,—a quality depending partly on their magnitude, and partly on their density. Measures are used to determine the magnitude of bodies, or the space which they occupy.

(For an account of the weights and measures used in foreign countries, and their equivalents in English weights and measures, see the notices of the great sea-port towns dispersed

or multiples or certain proportions of the said standard yard; and that 1-3d part of the said standard yard shall be a foot, and the 12th part of such foot shall be an inch; and that the pole or perch in length shall contain 5½ such yards, the furlong 220 such yards, and the mile 1,760 such yards."—§ 1.

The superficial measures are formed on the basis of the square of this standard; it being enacted, that

"The rood of land shall contain 1,310 square yards, according to the said standard yard; and that the acre of land shall contain 4,840 such square yards, being 160 square perches, poles, or rods."—§ 2.

Uniformity of Weights and Measures.—The confusion and inconvenience attending the use of weights and measures of the same denomination, but of different magnitudes, was early remarked; and there is hardly a country in which efforts have not been made to reduce them to the same uniform system. Numerous acts of parliament have been passed, having this object in view, and enjoining the use of the same weights and measures, under very severe penalties. But, owing to the inveteracy of ancient customs, and the difficulty of enforcing new regulations, these statutes have always had a very limited influence, and the greatest diversity has continued to prevail, except in lineal measures. But the statute of 5 Geo. 4. c. 74. seems to have, at length, effected what former statutes failed of accomplishing. It is, perhaps, indebted for its success in this respect to the moderate nature of the changes which it introduced. We have already seen that it made no alteration in the lineal measures previously in use. Neither did it affect the previously existing system of weights: both the Troy and the Avoirdupois weights having been preserved.

"The Troy weight," says Mr. Davies Gilbert, President of the Royal Society, "appeared to us (the commissioners of weights and measures) to be the ancient weight of this kingdom, having, as we have reason to suppose, existed in the same state from the time of St. Edward the Confessor; and there are reasons, moreover, to believe, that the word Troy has no reference to any town in France, but rather to the month name given to London, of Troy Navant, founded on the legend of Brute. Troy weight, therefore, according to this etymology, is, in fact, London weight. We were induced, moreover, to preserve the Troy weight, because all the coinage has been uniformly regulated by it; and all medical prescriptions or formulæ now are, and always have been, estimated by Troy weight, under a peculiar subdivision, which the College of Physicians have expressed themselves most anxious to preserve."

It was resolved, therefore, to continue the use of Troy weight; and also, on account of the accuracy of the Troy standard, to raise the Avoirdupois weight from this basis.

"We found," said Mr. Davies Gilbert, "the Avoirdupois weight, by which all heavy goods have been for a long time weighed (probably derived from Avoirs (Averis), the ancient name for goods or chattels, and Poids, weight), to be universally used throughout the kingdom. This weight, however, seems not to have been preserved with such scrupulous accuracy as Troy weight, by which more precious articles have been weighed; but we had reason to believe that the pound cannot differ by more than 1, 2, or 3 grains, from 7,000 grains Troy; some being in excess, and others, though in a less degree, in defect, but in no case amounting to above 1, 2, or 3 grains. It therefore occurred to us, that we should be offering no violence to this system of weights, if we declared that 7,000 grains Troy should be hereafter considered as the pound Avoirdupois."

In accordance with these views, it was enacted,— "that from and after the 1st day of May, 1825, the standard brass weight of 1 pound Troy weight, made in the year 1758, now in the custody of the clerk of the House of Commons, shall be, and the same is hereby declared to be, the original and genuine standard measure of weight, and that such brass weight shall be, and is hereby denominated, the Imperial Standard Troy pound, and shall be, and the same is hereby declared to be, the unit or only standard measure of weight, from which all other weights shall be derived, computed, and ascertained; and that 1-12th part of the said Troy pound shall be an ounce; and that the 1-20th part of such ounce shall be a pennyweight; and that 1-34th part of such pennyweight shall be a grain; so that 5,760 such grains shall be a Troy pound; and that 7,000 such grains shall be, and they are hereby declared to be, a pound Avoirdupois, and that 1-16th part of the said pound Avoirdupois shall be an ounce Avoirdupois, and that 1-16th part of such ounce shall be a dram."

The measures of capacity were found to be, at the period of passing the late statute, in the greatest confusion; and a considerable change has consequently been made in them. The wine gallon formerly amounted to 231 cubic inches, the corn gallon to 268·8, and the ale gallon to 282. But these are superseded by the Imperial gallon, which contains 277·274 cubic inches, or 277½ very nearly. It is deduced as follows:—

"The standard measure of capacity, as well for liquids as for dry goods not measured by heaped measure, shall be THE GALLON, containing 10 lbs. avoirdupois weight of distilled water weighed in air, at the temperature of 62° of Fahrenheit's thermometer, the barometer being at 30 inches; and a measure shall be forthwith made of brass, of such contents as aforesaid, under the directions of the Lord High Treasurer, or the commissioners of his Majesty's treasury; and such brass measure shall be, and is hereby declared to be, the Imperial standard gallon, and shall be, and is hereby declared to be, the unit and only standard measure of capacity, from which all other measures of capacity to be used, as well for wine, beer, ale, spirits, and all sorts of liquids, as for dry goods not measured by heaped measure, shall be derived, computed, and ascertained; and all measures shall be taken in parts or multiples or certain proportions of the said Imperial standard gallon; and the quart shall be ¼ part of such standard gallon, and the pint shall be ½ of such standard gallon, and 2 such gallons shall be a peck, and 8 such gallons shall be a bushel, and 8 such bushels a quarter of corn or other dry goods, not measured by heaped measure."—§ 6.

We subjoin a Table showing the contents of the different gallons, both in measure and weight.

	Cubic inches.	Avoirdupois Weight.			Troy Weight.		
		Lbs.	oz.	dr.	Lbs.	oz.	grs.
Imperial gallon	277·274	10	0	0	12	1	16
Corn gallon	268·8	9	10	1½	11	9	12
Wine gallon	231	8	6	¾	10	1	9
ale gallon	282	10	2	1½	12	4	6

Heaped Measures.—The greatest blemish, by far, in the new act, is the continuance and legitimation of the practice of selling by heaped measure. We are astonished at the toleration of such a barbarous custom. All articles that may be sold by heaped measure ought to be sold by weight. In Scotland, indeed, the use of heaped measure was legally abolished above 300 years since; and the present ill-advised attempt to revive a practice productive of nothing but fraud has been universally rejected in that country. The clauses in the act as to heaped measure are as follow:—

The standard measure of capacity for coals, culm, lime, fish, potatoes, or fruit, and all other goods and things commonly sold by heaped measure, shall be the foresaid bushel, containing 80 lbs. a voiddupon of water as aforesaid, the same being made round, with a plain and even bottom, and being 19½ inches from outside to outside of such standard measure as aforesaid.—§ 7.

In making use of such bushel, all coals and other goods and things commonly sold by heaped measure, shall be duly heaped up in such bushel, in the form of a cone, such cone to be of the height of at least 6 inches, and the outside of the bushel to be the extremity of the base of such cone; and 2 bushels shall be a sack, and 12 such sacks shall be a chaldron.—§ 8. It was further enacted, by stat. 6 Geo. 4. c. 12, that from and after the 1st of January, 1826, all such heaped measures shall be made cylindrical, and the diameter of such measures shall be at the least double the depth thereof, and the height of the cone or heap shall be equal to ¾ths of the depth of the said measure, the outside of the measure being the extremity of or base of such cone.—§ 2.

Measure of Weight, or Heaped Measure, to be used for Wheat.—Provided always, that any contracts, bargains, sales, and dealings, made or had for or with respect to any coals, culm, lime, fish, potatoes, or fruit, and all other goods and things commonly sold by heaped measure, sold, delivered, done, or agreed for, or to be sold, delivered, done, or agreed for, by weight or measure, shall and may be either according to the said standard of weight, or the said standard for heaped measure; but all contracts, bargains, sales, and dealings, made or had for any other goods, wares, or merchandise, or other thing done or agreed for, or to be sold, delivered, done, or agreed for, by weight or measure, shall be made and had according to the said standard of weight, or to the said gallon, or the parts, multiples, or proportions thereof; and in using the same the measures shall not be heaped, but shall be stricken with round stick or roller, straight, and of the same diameter from end to end.—(5 Geo. 4. c. 74. § 9.)

Models.—The 12th section of the act directs models of the standard weights and measures to be kept in the different counties, cities, burghs, &c. for the verification of the weights and measures in use in such places.

Contracts for Sale, &c. by Weight or Measure.—All contracts, bargains, sales, and dealings, which shall be made or had within any part of the United Kingdom, for any work to be done, or for any goods, wares, merchandise, or other thing to be sold, delivered, done, or agreed for, by weight or measure, where no special agreement shall be made to the contrary, shall be deemed to be made and had according to the standard weights and measures ascertained by this act; and in all cases where any special agreement shall be made, with reference to any weight or measure established by local custom, the ratio or proportion which every such local weight or measure shall bear to any of the said standard weights or measures shall be expressed, declared, and specified in such agreement, or otherwise such agreement shall be null and void.—§ 15.

Existing Weights and Measures may be used, being marked.—And as it is expedient that persons should be allowed to use the several weights and measures which they may have in their possession, although such weights and measures may not be in conformity with the standard weights and measures established by this act; it is therefore enacted, that it shall be lawful for any person or persons to buy and sell goods and merchandise by any weights or measures established either by local custom, or founded on special agreement: provided that, in order that the ratio or proportion which all such measures and weights shall bear to the standard weights and measures established by this act shall be and become a matter of common notoriety, the ratio or proportion which all such customary measures and weights shall bear to the said standard weights and measures shall be painted or marked upon all such customary weights and measures respectively; but nothing herein contained shall extend to permit any maker of weights or measures, or any person or persons whomsoever, to make any weight or measure, at any time after the 1st of May, 1825, except in conformity with the standard weights and measures established under this act.—§ 16.

False or deficient Weights, &c.—The 21st section declares that all the powers, rules, and regulations in force by former acts for preventing the use of false and deficient measures are to be applied and put in execution, except such as are expressly repealed or altered by this act.

Invariable or Natural Standards.—As the standards adopted in most countries have been in a great degree arbitrary, it has long been the opinion of scientific men, that, to construct a more perfect system of weights and measures, some natural and unchangeable basis should be adopted. It has indeed been contended by Paucton and Bailly, that the measures of the ancients were deduced from a basis of this sort: and that the *stadium* always formed an aliquot part of the earth's circumference, that part differing amongst different nations and authors. But no learning or ingenuity can induce any one to believe what is so obviously incredible. The ancients had no means of determining the earth's circumference with any thing like the accuracy required to render it the great unit of a system of measures; and, what is equally decisive, no ancient author ever makes the slightest allusion to any such standard.

In more modern times, however, the idea of seeking for a unit of weight and measure in some unchanging natural object has been practically carried into effect. The standards that have been usually proposed for this object, have been some aliquot part of the quadrant of the meridian, or the length of a pendulum vibrating seconds in some given latitude. The latter has been in so far adopted into the existing system of weights and measures established by the act of 1823, that the length of the standard yard, as compared with that of a pendulum vibrating seconds in the latitude of London, is specified in the act as follows:—

Whereas it has been ascertained by the commissioners appointed by his Majesty to inquire into the subject of weights and measures, that the said yard hereby declared to be the Imperial standard yard, when compared with a pendulum vibrating seconds of mean time in the latitude of London, in a vacuum at the level of the sea, is in the proportion of 36 inches to 39 inches and 1,393 ten-thousandth parts of an inch: be it therefore enacted and declared, that if at any time hereafter the said Imperial standard yard shall be lost, or shall be in any manner destroyed, defaced, or otherwise injured, it shall

2 Weys	1 Last	-	99-540	-	=	2818-74433

The Winchester bushel is 18½ inches wide, and 8 inches deep. Corn and seeds are measured by striking the bushel from the brim, with a round piece of light wood, about 2 inches in diameter, and of equal thickness from one end to the other. All other dry goods are heaped.

Conversion of Winchester Bushels into Imperial Bushels.—The Winchester bushel contains 2150.42 cubic inches, and the Imperial standard bushel 2218.192 ditto. Hence, to convert Winchester bushels into Imperial bushels, multiply by $\frac{2150.42}{2218.192}$, or by .969447; and to convert Imperial bushels into Winchester bushels, multiply by the reciprocal fraction $\frac{2218.192}{2150.42}$, or 1.0315157. For practical purposes, multiply Winchester measure by 31 and divide by 32 for Imperial measure, and the contrary.

In some markets, corn is sold by weight, which is the fairest mode of dealing, though not the most convenient in practice. Even where measures are used, it is customary to weigh certain quantities

or proportions, and to regulate the prices accordingly. The average bushel of wheat is generally reckoned at 60 lbs.—of barley 47 lbs.—of oats 38 lbs.—peas 64, beans 63, clover 68, rye and canary 53, and rape 48 lbs. In some places, a load of corn, for a man, is reckoned 5 bushels, and a cart load 40 bushels.

French System of Weights and Measures.—The new metrical system established in France subsequently to the Revolution, is founded on the measurement of the quadrant of the meridian, or of the distance from the pole to the equator. This distance having been determined with the greatest care, the ten-millionth part of it was assumed as the *mètre*, or unit of length, all the other lineal measures being multiples, or submultiples of it in decimal proportion. The *mètre* corresponds pretty nearly to the ancient French *aune*, or yard, being equal to 3-07844 French feet, or 3-281 English feet, or 39-3708 English inches.

The unit of weight is the *gramme*, which is a cubic centimetre, or the 100th part of a *mètre* of distilled water of the temperature of melting ice; it weighs 15-434 English Troy grains.

In order to express the decimal proportion, the following vocabulary of names has been adopted, in which the terms for multiplying are Greek, and those for dividing are Latin.

For multipliers, the word

<i>Deca</i>	prefixed means	-	10 times.
<i>Hecto</i>	-	-	100 -
<i>Kilo</i>	-	-	1,000 -
<i>Myria</i>	-	-	10,000 -

On the contrary, for divisors, the word *Deci* expresses the 10th part. *Centi* - - - 100th - *Milli* - - - 1,000th -

Thus, *Decamètre* means 10 *mètres*. *Decimètre* - the 10th part of a *mètre*. *Kilogramme* - 1,000 grammes, &c.

The *are* is the element of square measure, being a square decamètre, equal to 3-955 English perches. The *stère* is the element of cube measure, and contains 35-317 cubic feet English.

The *litre* is the element of all measures of capacity. It is a cubic decimètre, and equals 2-1135 English pints. 100 litres make the hectolitre, which equals 26-419 wine gallons, or 2-838 Winchester bushels.

SYSTEM OF USE.—OR BINARY SYSTEM.—This new system has the metrical standards for its basis, but their divisions are binary, that is, by 2, 4, 8, &c.; and instead of the new vocabulary, the names of the ancient weights and measures are used, annexing the term *usuel* to each. Thus the half kilogramme is called the *livre usuelle*, and the double *mètre*, the *toise usuelle*.

The following Tables show the proportions between the new or metrical French system and the English system:—

Comparison of FRENCH and ENGLISH WEIGHTS and MEASURES, containing the New or Metrical Weights and measures of France, with their proportion to those of England, both according to the Decimal System and the Systeme usuel.

DECIMAL SYSTEM.		
Long Measures.		
French.	-	English.

(The act 4 & 5 Will. 4. c. 49., passed in 1834, repealed some of the clauses in the acts 5 Geo. 4. c. 74., and 6 Geo. 4. c. 12., establishing the new system of weights and measures, and enacted others in their stead. But the act referred to has been itself repealed by the 5 & 6 Will. 4. c. 63. This new act contains several important provisions. It abolishes all local or customary measures, under a penalty of 40s. for every sale made by them; it prohibits the mischievous practice of selling by heaped measure; it enacts that coals shall in all cases be sold by weight; that, with the exception of gold, silver, platinum, diamonds, and other precious stones (which may be sold by troy weight), and drugs (which may be sold in retail by apothecaries' weight), all other articles sold by weight shall be sold by avoirdupois weight only; and that a stone shall, in all cases, consist of 14 lbs. avoirdupois; a hundred weight of 8 such stones, &c. Lead and pewter weights are not to be stamped.

The act sets out with repealing the 4 & 5 of Will. 4. c. 49., and the provisions in the acts 5 Geo. 4. c. 74. and 6 Geo. 4. c. 12., which require that all weights and measures shall be exact models or copies in shape or form of the standards deposited in the exchequer; and those allowing the use of weights and measures, not in conformity with the Imperial standard, established by said acts; or that allow goods or merchandise to be bought or sold by weights or measures established by local custom, or founded on special agreement. It then goes on to enact as follows:—

Weights and Measures stamped at the Exchequer declared legal.—Weights and measures verified and stamped at the exchequer as copies of standard weights and measures, shall be taken to be legal weights and measures, to be used for comparison as copies of the Imperial standard weights and measures, although not similar in shape to those required under the provisions of the said acts; and the comptroller-general, or other duly authorised officer of the exchequer, may compare and verify, and stamp as correct, standard measures of a yard, standard weights, and standard measures of capacity, any weights and measures which correspond in length, weight, and capacity with the standards, or parts or multiples thereof, deposited in the exchequer, under the 5 Geo. 4. c. 74., although such weights and measures may not be models or copies in shape or form of the standards so deposited.—§ 1.

Copies of the Standard Weights and Measures worn to be re-verified.—All copies of the Imperial standard weights and measures which have become defective, or have been mended, in consequence of wear or accident, shall forthwith be sent to the exchequer, for the purpose of being again compared and verified, and shall be stamped as re-verified copies of such standard weights and measures, provided the comptroller-general, or other officer appointed for such verification, deem them fit for the purposes of standards; and every new comparison and verification shall be indured upon the original indenture of verification; and such weights and measures shall be stamped upon the payment of fees of verification only; and the comptroller-general, or other officer shall keep an account of all copies of the Imperial standard weights and measures verified at the exchequer.—§ 5.

Local and Customary Measures abolished.—From and after the passing of this act, the Winchester bushel, the Scotch ell, and all local or customary measures, shall be abolished; and every person who shall sell by any measure other than one of the Imperial measures, or some multiple or aliquot part thereof, shall be liable to a penalty not exceeding 40s. for every such sale; but nothing herein shall prevent the sale of any articles in any vessel, where such vessel is not represented as containing any amount of Imperial measure, or of any fixed, local, or customary measure heretofore in use.—§ 6.

Heaped Measure abolished.—From and after the passing of this act, so much of the said acts as relates to heaped measure is hereby repealed, and the use of heaped measure shall be abolished, and all bargains, sales, and contracts made after the passing of this act, by heaped measure, shall be null and void; and every person who shall sell any articles by heaped measure shall be liable to a penalty not exceeding 40s. for every such sale.—§ 7.

Articles sold by Heaped Measure, how to be sold.—Whereas some articles heretofore sold by heaped measure are incapable of being stricken, and may not be conveniently sold by weight; it is enacted, that all such articles may henceforth be sold by a bushel measure, corresponding in shape with the bushel prescribed by the 5 Geo. 4. c. 74. for the sale of heaped measure, or by any multiple or aliquot part thereof, filled in all parts as nearly to the level of the brim as the size and shape of the articles will admit; but nothing herein shall prevent the sale by weight of any article heretofore sold by heaped measure.—§ 8.

Coals to be sold by Weight.—From and after the 1st of January, 1836, all coals, slack, culm, and cannel of every description shall be sold by weight, and not by measure, under a penalty of 40s. for every anlo.—§ 9.

All Articles to be sold by Avoirdupois, except, &c.—From and after the passing of this act, all articles sold by weight shall be sold by avoirdupois weight, except gold, silver, platinum, diamonds, or other precious stones, which may be sold by troy weight; and drugs, which, when sold by retail, may be sold by apothecaries' weight.—§ 10.

The Stone, Hundred Weight, &c.—From and after the passing of this act, the weight denominated a

stone shall, in all cases, consist of 14 standard pounds avoirdupois, the hundred weight of 8 such stones and the ton of 20 such hundred weights; but nothing herein shall prevent any bargain, sale, or contract being made by any multiple or aliquot part of the pound weight.—§ 11.

Contents of Weights and Measures to be stamped on them.—All weights made after the passing of this act of the weight of one pound avoirdupois, or more, shall have the number of pounds contained in them stamped or cast on the top or side thereof in legible figures and letters; and all measures of capacity made after the passing of this act, shall have their contents stamped or marked on the outside thereof in legible figures and letters.—§ 12.

Weights of Lead or Pewter not to be stamped.—The stamping of weights of lead or pewter, or of any mixture thereof, is prohibited after the 1st of January, 1836; but nothing herein shall prevent the use of lead or pewter, or any mixture thereof, in the manufacture of weights wholly and exclusively made with brass, copper, or iron, and legibly stamped or marked "cased," or prevent the insertion of such a plug of lead or pewter into weights as shall be *bona fide* necessary for adjusting them and affixing the stamp thereon.—§ 13.

Conversion of Rents, Tolls, &c.—Clauses 14. and 15. regulate the proceedings that are to take place in England, Ireland, and Scotland, for the conversion of rents, tolls, &c. payable in weights or measures now abolished into Imperial standard weights and measures.

Fair Prices.—In Scotland, from and after the passing of this act, the fair prices of all grain in every county shall be struck by the Imperial quarter, and all other returns of the prices of grain shall be set forth by the same, without any reference to any other measure whatsoever; and any sheriff, clerk, clerk of a market, or other person offending against this provision shall forfeit not exceeding 5s.—§ 16.

Copies of Standards, Inspectors, &c.—Clauses 17, 18, 19, and 20, prescribe the mode in which copies of the standard weights and measures shall be provided in counties, cities, boroughs, &c., the appointment of inspectors of weights and measures, &c. Clause 22. orders, that the expense of providing copies of standard weights, with the remuneration to inspectors, be defrayed out of the county rate, Clause 23. prohibits any maker or seller of weights or measures from being appointed inspector, and orders all inspectors to enter into a bond of 300l. for the due performance of the duties of their office, and the safe custody of the stamps and standard weights and measures committed to their care. Clause 24. orders inspectors to attend at market towns when ordered by justices. The following clauses are of general importance.

Magistrates to procure Stamps for Inspectors for stamping all Weights, &c.—In England, the Justices in general or quarter sessions assembled, and in Scotland the justices and magistrates at a meeting called by the sheriff, and in Ireland the grand juries, shall provide the inspectors with good and sufficient stamps for stamping or sealing weights and measures; and all weights and measures whatsoever, except as herein excepted, used for buying and selling, or for the collecting of any tolls or duties, or for the making of any charges on the conveyance of any goods or merchandise, shall be examined and compared with one or more copies of the Imperial standard weights and measures provided under the authority of this act for such inspectors, who shall stamp, so as best to prevent fraud, such weights and measures, if they be found to correspond with the said copies; and the fees for such examination, comparison, and stamping, shall be those in the schedule at the end of this act; and every person using any weight or measure other than those authorised by this act, or some aliquot part thereof, or which has not been stamped as aforesaid, except as herein excepted, or which shall be found light or otherwise unjust, shall forfeit not exceeding 5s.; and any contract, bargain, or sale made by such weights or measures shall be wholly null and void; and every light or unjust weight and measure shall, on being discovered by any inspector, be seized, and, on conviction, forfeited; but nothing herein shall require any single weight above 5lb. to be inspected and stamped, nor any wooden or wicker measure used in the sale of lime, or other articles of the like nature, such as earthenware, earthenware jug or drinking cup, though represented as containing the amount of any Imperial measure, or of any multiple thereof; but any person buying by any vessel represented as containing the amount of an Imperial measure, or of any multiple thereof, is authorised to require the contents of such vessel to be ascertained by comparison with a stamped measure, such measure to be provided by the person using such wooden or wicker measure, glass jug, or drinking cup; and in case the person using such last-mentioned measure or vessel refuse to make such comparison, or if, upon comparison being made, it be found to be deficient in quantity, the person using the same shall be subject to the forfeitures and penalties imposed on those using light or unjust weights or measures.—§ 21.

Weights and Measures once stamped need not be re-stamped.—No weight or measure duly stamped by any inspector appointed under the 4 & 5 Will. 4. c. 49, or this act, or by any person or persons authorised to examine and stamp weights or measures, shall be liable to be re-stamped, although the same be used in any other place than that at which it was originally stamped, but shall be considered as a legal weight or measure throughout the U. K., unless found to be defective or unjust.—§ 27.

Power to Justices, &c. to enter Shops and inspect Weights and Measures.—Justices, sheriffs, magistrates, and inspectors are authorised to examine weights and measures, and to order such as are light or otherwise unjust to be seized and forfeited; those using such weights and measures are subjected to a penalty of not more than 5s.; and a like penalty is imposed on those refusing to produce such weights and measures, or obstructing the magistrates.—§ 28.

Penalties on Inspectors counterfeiting Stamps, &c.—Inspectors or other persons authorised to inspect weights or measures, who shall stamp any weight or measure without verifying the same, or who shall otherwise misconduct themselves in their office, shall for every such offence forfeit not more than 5s.; persons forging or counterfeiting any stamp or mark used for stamping or marking weights or measures, forfeit for every offence not more than 50l. and not less than 10l.; and persons knowingly using weights or measures marked with such counterfeit stamps, forfeit for every offence not more than 10l. nor less than 2s.—§ 29. 30.

Ready or Price Lists, &c.—From and after the 1st of January, 1836, any person printing, or clerk of any market or other person making any return, price list, price current, or any journal or other paper containing price list or price current, in which the weights and measures quoted or referred to denote or imply a greater or less weight or measure than is denoted or implied by the same denominations of Imperial weights and measures under the provisions of this act, shall forfeit and pay not exceeding 10s. for every copy of every such return, price list, price current, journal, or other paper which they publish.—§ 31.

The remaining clauses relate to the recovery of penalties; and save the rights of the Founders Company, and of the Universities of Oxford and Cambridge.

Schedule of fees to be taken by all inspectors of weights and measures appointed under the authority of this act:—

["At the organization of the federal government, authority was conferred upon congress to establish a uniform system of weights and measures. But, surprising as it may appear, no laws have as yet been enacted by that body for the perfection of so important an object. Some measures have been taken to obtain information on the subject, and able reports have been made by Messrs. Jefferson Adams, and H. Fraser. By an order of congress, in June, 1836, a set of standard weights and measures, similar to those in use in England anterior to the passing of the 'Act of Uniformity' in May, 1824, have been prepared by Mr. Hassler for the use of each customhouse, and for each state. Hence, the old measures of England, superseded by the imperial system, with such modifications as local customs or state laws have ingrafted upon it, may be regarded as the general standard adopted in this country.

Most of the states of the Union have attempted to reduce their standards of weights and measures to a uniform system, and numerous laws have been enacted with that view; but so far from succeeding in their object, they have had, in most instances, an opposite effect. There are but few states in which the proportions of their measures are required by law to be the same—linear, superficial, and cubic measures excepted—although they may bear the same names; and owing to the difficulty of enforcing new regulations, strong prejudices against any innovation, and a constant influx of settlers from one state into another, and from various countries of Europe, who bring their own accustomed weights and measures, uniformity cannot be said to exist in any state of the Union. In this country, as in England and France before their new systems were adopted, local consumers do not feel the whole disadvantage of this confusion; but merchants and others, who make large sales or purchases in distant parts of the country, often experience serious difficulties in converting to their own local standards the quantities expressed according to another rate. The proportion which one standard bears to another is not always easily obtained; and when it is, the calculations to be made are often long and difficult, and may not always give an accurate result."—*Hunt's Merchants' Magazine*, vol. iv., page 344.—*Am. Ed.*]

WELD, or DYER'S WEED (Ger. *Wau*; Du. *Wouw*, *Wouwje*; Fr. *Gaude*; It. *Gua-darella*; Lat. *Luteola*), is an imperfect biennial, with small fusiform roots, and a leafy stem from 1 to 3 feet in height. It is a native of Britain, Italy, and various parts of Europe; and is cultivated for the sake of its stalk, flowers, and leaves, which are employed in the dyeing of yellow, whence its botanical name *Reseda luteola*. Weld requires the growth of nearly 2 summers before it comes to maturity; and the crop is liable to fail from so many causes, and is besides so exhausting, that its cultivation is by no means profitable, and is only carried on, in this country at least, to a small extent, principally in Essex. Weld is preferred to all other substances in giving the lively green lemon yellow. It is, however, expensive; and it is found, when employed in topical dyeing, to degrade and interfere with madder colours more than other yellows, and to stain the parts wanted to be kept white. Hence quercitron bark is now employed in calico printing, to the almost total exclusion of weld. It is still, however, employed, in dyeing silk a golden yellow, and in paper staining.—(*Loudon's Encyc. of Agriculture*; *Benca's Colours*, vol. ii. pp. 95—100.; *Rees's Cyclopaedia*.)

WHALEBONE, a substance of the nature of horn, adhering in thin parallel laminae to the upper jaw of the whale. These vary in size from 3 to 12 feet in length; the breadth of the largest at the thick end, where they are attached to the jaw, is about a foot. They are extremely elastic. All above 6 feet in length is called *size bone*.

Whalebone bore anciently a very high price, when the rigid stays and the expanded hoops of our grandmothers produced an extensive demand for this commodity. The Dutch have occasionally obtained 700*l.* per ton, and were accustomed to draw 100,000*l.* annually from England for this one article. Even in 1763, it brought 500*l.*; but soon fell, and has never risen again to the same value. During the present century, the price has varied between 60*l.* and 300*l.*; seldom falling to the lowest rate, and rarely exceeding 150*l.* Mr. Scoresby reckons the price, in the 5 years ending with 1818, at 90*l.*; while at present (April, 1834), it is stated to be from 130*l.* to 145*l.* This is for what is called the *size bone*, or such pieces as measure 6 feet or upwards in length, those below this standard are usually sold at half price. It may appear singular that whalebone should rise, while oil has been so decidedly lowered; but the one change, it is obvious, causes the other. Oil, being the main product of the fishery, regulates its extent; which being diminished by the low price, the quantity of whalebone is lessened, while the demand for it continuing as great as before, the value consequently rises.—(*Polar Seas and Regions*, p. 321., *Edin. Cab. Lib.*)

It may be worth while to remark, as evincing the ignorance that at one time prevailed with respect to the whale, that, by an old feudal law, the *tail* of all whales belonged to the queen, as a perquisite, to furnish her Majesty's wardrobe with whalebone!—(*Blackstone*, vol. i. p. 233.)

WHALE (COMMON), the *Balæna mysticetus* of Linnæus, a marine animal of the cetaceous species, and the largest of all those with which men are acquainted. The whale has sometimes, it is affirmed, been found 160 feet in length; but this is most probably an exaggeration. In the Northern seas, it is at present seldom found above 66 feet long; being now, however, generally killed before it arrives at its full growth, this is no proof that the animal may not formerly have attained to a much larger size. The bodies of whales are covered, immediately under the skin, with a layer of fat or *blubber*, which, in a large fish, is

from 12 to 18 inches thick. In young whales, this fatty matter resembles hog's lard; but in old ones it is of a reddish colour. This is the valuable part of the whale; and the desire to possess it has prompted man to attempt the capture of this mighty animal. The blubber yields, by expression, nearly its own weight of a thick viscid oil (train oil). The common whale is now rarely found, except within the Arctic circle; but at a former period it was not unfrequently met with on our coasts. There is a good account of the common whale, and of the manner in which the fishery is carried on, in Mr. John Laing's "Voyage to Spitzbergen;" one of the shortest, cheapest, and best of the innumerable books published on this hacknied subject.

The *Physeter macrocephalus*, or black-headed spermaceti whale, is chiefly found in the Southern Ocean. It usually measures about 60 feet in length, and 30 in circumference at the thickest part. The valuable part of the fish is the spongy, oily mass dug from the cavity of the head; this is crude spermaceti; and of it an ordinary sized whale will yield about 12 large barrels.

WHALE FISHERY. We do not propose entering, in this article, into any details as to the mode in which the fishery is carried on; but mean to confine ourselves to a brief sketch of its history, and value in a commercial point of view.

It is probably true, as has been sometimes contended, that the Norwegians occasionally captured the whale before any other European nation engaged in so perilous an enterprise. But the early efforts of the Norwegians were not conducted on any systematic plan, and should be regarded only in the same point of view as the fishing expeditions of the Esquimaux. The Biscayans were certainly the first people who prosecuted the whale fishery as a regular commercial pursuit. They carried it on with great vigour and success in the 12th, 13th, and 14th centuries. In 1261, a tithe was laid upon the tongues of whales imported into Bayonne,—they being then a highly esteemed species of food. In 1388, Edward III. relinquished to Peter de Puysanne a duty of 6*l.* sterling a whale, laid on those brought into the port of Biarritz, to indemnify him for the extraordinary expenses he had incurred in fitting out a fleet for the service of his Majesty. This fact proves beyond dispute that the fishery carried on from Biarritz at the period referred to must have been very considerable indeed; and it was also prosecuted to a great extent from Cibourre, Vieux Boucan, and subsequently from Rochelle and other places.*

The whales captured by the Biscayans were not so large as those that are taken in the Polar seas, and are supposed to have been attracted southward in pursuit of herrings. They were not very productive of oil, but their flesh was used as an article of food, and the whalebone was applied to a variety of useful purposes, and brought a very high price.

This branch of industry ceased long since, and from the same cause that has occasioned the cessation of the whale fishery in many other places—the want of fish. Whether it were that the whales, from a sense of the dangers to which they exposed themselves in coming southwards, no longer left the Icy Sea, or that the breed had been nearly destroyed, certain it is, that they gradually became less numerous in the Bay of Biscay, and at length ceased almost entirely to frequent that sea; and the fishers being obliged to pursue their prey upon the banks of Newfoundland and the coasts of Iceland, the French fishery rapidly fell off.

The voyages of the Dutch and English to the Northern Ocean, in order, if possible, to discover a passage through it to India, though they failed of their main object, laid open the haunts of the whale. The companions of Barentz, who discovered Spitzbergen, in 1596, and of Hudson, who soon after explored the same seas, represented to their countrymen the amazing number of whales with which they were crowded. Vessels were in consequence fitted out for the Northern whale fishery by the English and Dutch, the harpooners and a part of the crew being Biscayans. They did not, however, confine their efforts to a fair competition with each other as fishers. The Muscovy Company obtained a royal charter, prohibiting the ships of all other nations from fishing in the seas round Spitzbergen, on pretext of its having been first discovered by Sir Hugh Willoughby. There can, however, be no doubt that Barentz, and not Sir Hugh, was its original discoverer; though, supposing that the fact had been otherwise, the attempt to exclude other nations from the surrounding seas, on such a ground, was not one that could be tolerated. The Dutch, who were at the time prompt to embark in every commercial pursuit that gave any hopes of success, eagerly entered on this new career, and sent out ships fitted equally for the purposes of fishing, and of defence against the attacks of others. The Muscovy Company having attempted to vindicate its pretensions by force, several encounters took place between their ships and those of the Dutch. The conviction at length became general, that there was room enough for all parties in the Northern seas; and in order to avoid the chance of coming into collision with each other, they parolled Spitzbergen and the adjacent ocean into districts, which were respectively assigned to the English, Dutch, Hamburgers, French, Danes, &c.

The Dutch, being thus left to prosecute the fishery without having their attention diverted by hostile attacks, speedily acquired a decided superiority over all their competitors.

When the Europeans first began to prosecute the fishery on the coast of Spitzbergen

* See *Mémoire sur l'Antiquité de la Pêche de la Baleine*, par. Noet, 12mn. Paris, 1793.

whales were every where found in vast numbers. Ignorant of the strength and stratagems of the formidable foe by whom they were now assailed, instead of betraying any symptoms of fear, they surrounded the ships and crowded all the bays. Their capture was in consequence a comparatively easy task, and many were killed which it was afterwards necessary to abandon, from the ships being already full.

While fish were thus easily obtained, it was the practice to boil the blubber on shore in the North, and to fetch home only the oil and whalebone. And, perhaps, nothing can give a more vivid idea of the extent and importance of the Dutch fishery, in the middle of the 17th century, than the fact, that they constructed a considerable village, the houses of which were all previously prepared in Holland, on the Isle of Amsterdam, on the northern shore of Spitzbergen, to which they gave the appropriate name of *Smeerenberg* (from *smieren*, to melt, and *berg*, a mountain). This was the grand rendezvous of the Dutch whale ships, and was amply provided with boilers, tanks, and every sort of apparatus required for preparing the oil and the bone. But this was not all. The whale fleets were attended with a number of provision ships, the cargoes of which were landed at *Smeerenberg*; which abounded, during the busy season, with well-furnished shops, good inns, &c.; so that many of the conveniences and enjoyments of Amsterdam were found within about 11 degrees of the Pole! It is particularly mentioned, that the sailors and others were every morning supplied with what a Dutchman regards as a very great luxury—*hot rolls* for breakfast. Batavia and *Smeerenberg* were founded nearly at the same period, and it was for a considerable time doubted whether the latter was not the more important establishment.—(*De Reste, Histoire des Peches*, &c. tome i. p. 42.)

During the flourishing period of the Dutch fishery, the quantity of oil made in the North was so great that it could not be carried home by the whale ships; and every year vessels were sent out in ballast to assist in importing the produce of the fishery.

But the same cause that had destroyed the fishery of the Biscayans, ruined that which was carried on in the immediate neighbourhood of Spitzbergen. Whales became gradually less common, and more and more timid and difficult to catch. They retreated first to the open seas, and then to the great banks of ice on the eastern coast of Greenland. When the site of the fishery had been thus removed to a very great distance from Spitzbergen, it was found most economical to send the blubber direct to Holland. *Smeerenberg* was in consequence totally deserted, and its position is now with difficulty discoverable.

But though very extensive, the Dutch whale fishery was not, during the first 30 years of its existence, very profitable. This arose from the circumstance of the right to carry it on having been conceded, in 1614, to an exclusive company. The expense inseparable from such great associations, the wastefulness and unfaithfulness of their servants, who were much more intent upon advancing their own interests than those of the company, increased the outlays so much, that the returns, great as they were, proved little more than adequate to defray them, and the fishery was confined within far narrower limits than it would otherwise have reached. But after various prolongations of the charter of the first company, and the formation of some new ones, the trade was finally thrown open in 1642. The effects of this measure were most salutary, and afford one of the most striking examples to be met with of the advantages of free competition. Within a few years the fishery was vastly extended; and though it became progressively more and more difficult from the growing scarcity of fish, it proved, notwithstanding these disadvantages, more profitable to the private adventurers than it had ever been to the company; and continued for above a century to be prosecuted with equal energy and success. The famous John de Witt has alluded as follows to this change in the mode of conducting the trade:—

"In this respect," says he, "it is worthy of observation, that the authorised Greenland Company made heretofore little profit by their fishery, because of the great charge of selling out their skins; and that the train oil, blubber, and whale fins were not well made, handled, or cured; and being brought hither and put into warehouse, were not sold soon enough, nor to the Company's best advantage. Whereas now that every one equips their vessels at the cheapest rate, follow their fishing diligently, and manage all carefully, the blubber, train oil, and whale fins are employed for so many uses in several countries, that they can sell them with that conveniency, that though there are now 15 ships for 1 that formerly sailed out of Holland on that account, and consequently each of them could not take so many whales as heretofore, and notwithstanding the new prohibition of France and other countries to import these commodities, and though there is greater plenty of them imported by our fishers—yet these commodities are so much raised in the value above what they were what there was a company, that the common inhabitants do exercise that fishery with profit, to the much greater benefit of our country than when it was under the management of a company carried on but by a few."—(*The Interest of Holland*, p. 63, 8vo. ed. London, 1740.)

The private ships sent by the Dutch to the whale fishery were fitted out on a principle that secured the utmost economy and vigilance on the part of every one connected with them. The hull of the vessel was furnished by an individual, who commonly took upon himself the office of captain; a sail-maker supplied the sails, a cooper the casks, &c. The parties engaged as adventurers in the undertaking. The cargo being brought to Holland and disposed of, each person shared in the produce according to his proportion of the outfit. The crew was hired on the same principle; so that every one had a motive to exert himself, to see that all unnecessary expenses were avoided, and that those that were necessary were

confined within the narrowest limits. This practice has been limited to some extent in this and some other countries, but in none has it been carried so far as in Holland. It appears to us that it might be advantageously introduced into other adventures.

When in its most flourishing state, towards the year 1680, the Dutch whale fishery employed about 260 ships, and 14,000 sailors.

The English whale fishery, like that of Holland, was originally carried on by an exclusive association. The Muscovy Company was, indeed, speedily driven from the field; but it was immediately succeeded by others, that did not prove more fortunate. In 1725, the South Sea Company embarked largely in the trade, and prosecuted it for 8 years; at the end of which, having lost a large sum, they gave it up. But the legislature, having resolved to support the trade, granted, in 1732, a bounty of 20s. a ton to every ship of more than 200 tons burden engaged in it; but this premium being insufficient, it was raised, in 1740, to 40s. a ton, when a number of ships were fitted out, as much certainly in the intention of catching the bounty as of catching fish. Deceived by the prosperous appearance of the fishery, parliament imagined that it was firmly established, and in 1775 the bounty was reduced to 30s. The effects of this reduction showed the factitious nature of the trade, the vessels engaged in it having fallen off in the course of the next 5 years from 105 to 39! To arrest this alarming decline, the bounty was raised to its old level in 1781, and of course the trade was soon restored to its previous state of apparent prosperity. The hostilities occasioned by the American war reduced the Dutch fishery to less than half its previous amount, and gave a proportional extension to that of England. The bounty, which had in consequence become very heavy, was reduced, in 1787, to 30s. a ton; in 1792 it was farther reduced to 25s., and in 1795 it was reduced to 20s., at which sum it continued till 1824, when it ceased.

It appears from accounts given in Macpherson's *Annals of Commerce* (vol. iii. p. 511., vol. iv. p. 130.), that the total bounties paid for the encouragement of the whale fishery, in the interval between 1750 and 1788, amounted to no less than 1,577,935*l*. It will be seen from the official account which follows, that there are no means of furnishing any accurate account of the sums paid as bounties from the year 1780 to 1813 inclusive; but it is, notwithstanding, abundantly certain that the total bounties paid during the period from 1780 to 1824 considerably exceeded 1,000,000*l*. Here, then, we have a sum of upwards of two millions and a half laid out since 1750 in promoting the whale fishery. Now we believe, that if we estimate the entire average value of the gross produce of the Northern whale fishery (and it is to it only that the preceding statements apply), during the last 3 or 4 years, at 375,000*l*. a year, we shall be about the mark. But had the 2,500,000*l*. expended in bolstering up this branch of industry been laid out as capital in any ordinary employment, it would have produced 125,000*l*. a year of net profit; and deducting this sum from the above, there remains only 250,000*l*. to replace the capital wasted and ships lost in carrying on the fishery, and to afford a clear national profit! Whatever, therefore, may be the value of the whale fishery as a nursery for seamen, it is absurd to regard it as contributing any thing to the public wealth. The remark of Dr. Franklin, that he who draws a fish out of the sea draws out a piece of silver, is ever in the mouths of those who are clamouring for bounties and protection against competition. But we apprehend that even Franklin himself, sagacious as he was, would have found it rather difficult to show how the wealth of those is to be increased, who, in fishing up one piece of silver, are obliged to throw another of equal value into the sea. We subjoin

An account of the Number of Ships annually fitted out in Great Britain for the Northern Whale Fishery, of the Tonnage and Crews of such Ships, and of the Bounties paid on their Account, from 1789 to 1824.

It is not even certain whether the expenditure of 2,500,000*l*. upon bounties would really have had the effect of establishing the whale fishery upon a solid foundation, but for the occupation of Holland by the French, and the consequent hostilities in which she was

involved with this country. These did more to promote and consolidate the British fishery than any thing else. The war entirely annihilated that of the Dutch: and our government having wisely offered to the fisheries of Holland all the immunities enjoyed by the citizens of Great Britain in the event of their settling amongst us, many availed themselves of the invitation, bringing with them their capital, industry, and skill. In consequence of this signal encouragement, the whale fishery of England was prosecuted with greater success than at any previous period: and at the termination of the late war, in 1815, there were 134 valuable ships and about 5,800 seamen engaged in the Northern fishery, and about 30 ships and 800 men in that to the South.

After peace was restored, the English capitalists and others became apprehensive lest the Dutch should engage anew with their ancient vigour and success in the whale fishery. But these apprehensions were without any real foundation. The Hollanders, during the 30 years they had been excluded from the sea, had lost all that practical acquaintance with the details of the fishery, for which they had long been so famous, and which is so essential to its success. The government attempted to rouse their dormant energies by the offer of considerable premiums and other advantages to those who embarked in the trade. Three companies were in consequence formed for carrying it on; 1 at Rotterdam, 1 at Harlingen, and 1 in South Holland. But their efforts have been very limited, and altogether unfortunate. In 1826, the company of South Holland was dissolved, while that of Harlingen despatched 4 ships, and that of Rotterdam 2. In 1827, Rotterdam sent only 1 ship, and Harlingen 2; and in 1828, 1 solitary ship sailed from Holland—a feeble and last effort of the company of Harlingen!

Such has been the fate of the Dutch whale fishery. The attempts to revive it failed, not because the ships sent out were ill calculated for the service, but because they were manned by un-kilful seamen. In the early ages of the fishery, this difficulty would have been got over, because, owing to the fewness of competitors, and the scanty supply of oil and whale-bone, even a small cargo brought a high price; but at present, when the fishery is prosecuted on a very large scale and at a very low rate of profit by the English, the Americans, the Hamburgers, &c., no new competitor coming into the field could expect to maintain himself unless he had nearly equal advantages. The Dutch have, therefore, done wisely in withdrawing from the trade. Any attempt to establish it by the aid of bounties and other artificial encouragements would be one of which the ultimate success must be very doubtful, and which could lead to no really useful result. During the 20 years preceding the late French war, the fishery of Holland was gradually declining, and had, in a great measure, ceased to be profitable. It would be folly to endeavour to raise anew, and at a great expense, a branch of industry that had become unproductive at a former period, when there is no ground for supposing that it would be more productive at this moment.

We have already noticed several changes of the localities in which the whale fishery has been carried on at different periods; within these few years another has taken place even more important. The seas between Spitzbergen and Greenland are now nearly abandoned by the whalers, who resort in preference to Davis's Straits and Baffin's Bay, or to the sea which washes the coast of West Greenland. The Dutch fishers first began to frequent Davis's Straits in 1719; and as the whales had not hitherto been pursued into this vast recess, they were found in greater numbers than in the seas round Spitzbergen. From about this period it was usually resorted to by about 3-10ths of the Dutch ships. It was not till a comparatively late period that Davis's Straits began to be frequented by English whalers; and even so late as 1820, when Captain Scoresby published his elaborate and valuable work on the whale fishery, that carried on in the Greenland seas was by far the most considerable. But within the last few years, the Greenland fishery has been almost entirely deserted. The various discoveries made by the expeditions recently fitted out by government for exploring the seas and inlets to the westward of Davis's Straits and Baffin's Bay, have made the fishers acquainted with several new and advantageous situations for the prosecution of their business. What further revolutions the fishery may be destined to undergo, it is impossible to foresee; but there can be little doubt that the same results that have happened elsewhere will happen in Davis's Straits, and that it will be necessary to pursue the whale to new and, perhaps, still more inaccessible haunts.

The sea in Davis's Straits is less incommoded with field ice than the Greenland and Spitzbergen seas, but it abounds with icebergs; and the fishery, when carried on in Baffin's Bay and Lancaster Sound, is more dangerous, perhaps, than any that has hitherto been attempted.

The following Table gives a view of the produce of the Northern whale fishery during the 3 years ending with 1827:—

Years.	No. of Ships despatched.	No. of Whales captured.	Quantity of Oil.	Quantity of Whalebone.
1825	110	501	Tons. 6,597	Tons. 360
1826	94	510	7,087	390
1827	88	1,155	13,179	732

It appears from this and the previous Table, that the number of ships sent out has declined nearly one half since 1820. The bounty was repealed in 1824, and the ships fitted out have since fallen off in the ratio of 112 to 88 or 90. This is a sufficient proof of the insecure foundation on which the trade had previously rested.

The whale fishery has for a lengthened period partaken more of the nature of a gambling adventure than of a regular industrious pursuit. Sometimes the ships do not get half a cargo, and sometimes they come home *clean*. The risk of shipwreck is also very considerable. It appears from Mr. Scoresby's Tables (vol. ii. p. 131.), that of 588 ships sent to the North during the 4 years ending with 1817, *eight* were lost. This period was, however, uncommonly free from disaster. It would seem, too, that the risk of shipwreck is greater in Davis's Straits than in the seas to the east of Greenland. In 1819, of 63 ships sent to Davis's Straits, no fewer than 10 were lost; in 1821, out of 79 ships, 11 were lost; and in 1822, out of 60 ships, 7 were lost. But 1830 has in this respect been the most disastrous.—Of 87 ships that sailed for Davis's Straits, no less than 18, or 22 per cent. of the whole, were totally lost; 24 returned *clean*, or without having caught a single fish; and of the remainder, not 1 had a full cargo, only 1 or 2 being *half fished*! If we estimate the value of the ships cast away, including the outfit, at 7,000*l.* each, the loss from shipwreck only will be 128,000*l.* The following Table exhibits a detailed account of the fishery in 1832:—

Account of the Northern Whale Fishery in 1832; exhibiting the Number and Tonnage of the Ships sent out by each Port, with the Number of Fish taken, and the Quantity of Oil and Bone.

There has been a somewhat singular change in the ports from which the fishery is chiefly carried on. In London were undertaken all the discoveries which led to its establishment; and for some time a complete monopoly was enjoyed by the great companies formed in that city. Even between the years 1760 and 1790, the metropolis sent out 4 times the number of vessels that sailed from any other port. It was observed, however, that her fishery was, on the whole, less fortunate than that of the new rivals which had sprung up; and her merchants were so much discouraged, that in Mr. Scoresby's time they equipped only 17 or 18 vessels. They have since almost entirely abandoned the trade, employing in 1832 not more than 3 ships.

Hull early became a rival to London, having sent out vessels at the very commencement of the fishery. Although checked at first by the monopoly of the great companies, as soon as the trade became free she prosecuted it with distinguished success. In the end of the last century, that town attained, and has ever since preserved, the character of the first whale-fishing port in Britain.

Whitby engaged in this pursuit in 1753, and carried it on for some time with more than common success; but her operations have since been much limited. Liverpool, after embarking in the undertaking with spirit, has now entirely relinquished it. Meantime the eastern ports of Scotland have steadily carried on, and even extended, their transactions, while those of the country at large were diminishing. The increase has been most remarkable at Peterhead; and indeed this town, as compared especially with London, must derive a great advantage from avoiding, both in the outward and homeward voyages, 600 miles of somewhat difficult navigation.

The following summary has been collected from Mr. Scoresby, as the average quantity of shipping fitted out in the different ports for 9 years, ending with 1818; and the comparison of it with the number sent out in 1832 will show the present state of the trade:—

England—	Average of 1810-18.		1832.	Scotland—	Average of 1810-18.		1832.

for seamen as is commonly supposed. The number employed in the Northern fishery, does not exceed 4,500; and it may be doubted whether the casualties to which they are exposed, do not, in a public point of view, more than balance the increased skill and hardihood they acquire in so perilous an occupation.

There seems no reason to apprehend any deficiency in the supply of oil from a falling off in the fishery. We have seen from the foregoing statements, that the fish oil imported in 1832 amounted to 12,610 tons. But at present nearly half this quantity of olive oil is annually imported; and as olive oil is loaded with a duty of 8*l.* 8*s.* a tun, it is obvious that if this duty were reduced, as it ought to be, to 2*l.* or 3*l.* a tun, the increased quantity imported would go far to balance any falling off in the supply of train oil. When a coarser species is required, rape and linseed oil may be advantageously substituted for that of the whale. Tallow may also be applied to several purposes, to the exclusion of train oil. Although, therefore, the whale fishery should decline, we need not fear that any material injury will thence arise to the industry of the country; and it would be most impolitic to attempt to bolster it up, either by resorting to the exploded system of bounties, or by laying heavy duties on oil or tallow imported from other countries.

The South Sea fishery was not prosecuted by the English till about the beginning of the American war: and as the Americans had already entered on it with vigour and success, 4 American harpooners were sent out in each vessel. In 1791, 75 whale ships were sent to the South Sea; but the number has not been so great since. In 1820, only 31 ships were sent out, of the burden of 10,997 tons, and carrying 937 men. The *Macrocephalus*, or spermaceti whale, is particularly abundant in the neighbourhood of the Spice Islands, and Mr. Crawford, in his valuable work on the *Eastern Archipelago*, (vol. iii. p. 447.), has entered into some details to show that the fishery carried on there is of greater importance than the spice trade. Unluckily, however, the statements on which Mr. Crawford founded his comparisons were entirely erroneous, neither the ships nor the men employed amounting to more than 1-5th or 1-6th part of what he has represented.

But errors of this sort abound in the works of those who had better means of coming at the truth. Mr. Barrow, in an article on the fisheries, in the *Supplement to the Encyclopædia Britannica*, states the number of ships fitted out for the Northern whale fishery in 1814 at 143, and their crews at 7,150; and he further states the number of ships fitted out for the Southern fishery in 1815 at 107, and their crews at 3,210. In point of fact, however, only 112 whale ships cleared out for the north in 1814, carrying 4,708 men; and in 1815, only 22 whale ships cleared out for the South, carrying 592 men! How Mr. Barrow, who has access to official documents, should have given the sanction of his authority to so erroneous an estimate, we know not. In the same article, Mr. Barrow estimates the entire annual value of the British fisheries of all sorts, at 8,300,000*l.* But it might be very easily shown that, in rating it at 3,500,000*l.*, we should certainly be up to the mark, or rather, perhaps, beyond it.—(See *FISH.*)

We annex a detailed account of the progress of the Southern whale fishery, since 1814.

American Whale Fishery.—For a lengthened period, the Americans have prosecuted the whale fishery with greater vigour and success than, perhaps, any other people. They commenced it in 1690, and for about 50 years found an ample supply of fish on their own shores. But the whale having abandoned them, the American navigators entered with extraordinary ardour into the fisheries carried on in the Northern and Southern Oceans. From 1778 to 1775, Massachusetts employed annually 183 vessels, carrying 13,820 tons, in the

the Northern fishery, for which they are exposed to skill and hardihood they

icans have prosecuted the other people. They con- pply of fish on their own gators entered with extra- Southern Oceans. From ying 13,820 tons, in the

former; and 121 vessels, carrying 14,026 tons, in the latter. Mr. Burke, in his famous speech on American affairs in 1774, adverted to this wonderful display of daring enterprise as follows:—

"As to the wealth," said he, "which the colonists have drawn from the sea by their fisheries, you had all that matter fully opened at your bar. You surely thought these acquisitions of value, for they seemed to excite your envy; and yet the spirit by which that enterprising employment has been exer- cised sought rather, in my opinion, to have raised esteem and admiration. And pray, Sir, what in the world is equal to it? Pass by the other parts, and look at the manner in which the New England people carry on the whale fishery. While we follow them among the trembling mountains of ice, and behold them penetrating into the deepest frozen recesses of Hudson's Bay and Davis's Straits; while we are looking for them beneath the Arctic circle, we hear that they have pierced into the opposite region of polar cold; that they are at the antipodes, and engaged under the frozen serpent of the South. Falkland Island, which seemed too remote and too romantic an object for the grasp of national ambition, is but a stage and resting-place for their victorious industry. Nor is the equinoctial heat more discouraging to them than the accumulated winter of both poles. We learn, that while some of them draw the line or strike the harpoon on the coast of Africa, others run the longitude and pursue their pringle game along the coast of Brazil. No sea, but what is used with their fisheries. No climate that is not witness of their toils. Neither the perseverance of Holland, nor the activity of France, nor the dexterous and firm sagacity of English enterprises, ever carried this most perilous mode of hardy industry to the extent in which it has been pursued by this recent people; a people who are still in the prime, and not hardened into manhood."

The unfortunate war that broke out soon after this speech was delivered, checked for a while the progress of the fishery; but it was resumed with renewed vigour as soon as peace was restored. The American fishery has been principally carried on from Nantucket and New Bedford in Massachusetts; and for a considerable time past the ships have mostly re- sorted to the Southern seas. "Although," says Mr. Pitkin, "Great Britain has, at various times, given large bounties to her ships employed in this fishery, yet the whalemens of Nan- tucket and New Bedford, unprotected and unsupported by any thing but their own industry and enterprise, have generally been able to meet their competitors in a foreign market."— (*Commerce of the United States*, 2d ed. p. 46.) The following statement may not be uninteresting.

French Whale Fishery.—France, which preceded the other nations of Europe in the whale fishery, can hardly be said, for many years past, to have had any share in it. In 1784, Louis XVI. endeavoured to revive it. With this view, he fitted out 6 ships at Dunkirk on his own account, which were furnished with harpooners and a number of experienced sea- men brought at a great expense from Nantucket. The adventure was more successful than could have been reasonably expected, considering the auspices under which it was carried on. Several private individuals followed the example of his Majesty, and in 1790 France had about 40 ships employed in the fishery. The revolutionary war destroyed every vestige of this rising trade. Since the peace, the government has made great efforts for its renewal, but hitherto without much success. At present there are only from 12 to 15 ships engaged in the fishery.

(This article has been principally taken from the *Foreign Quarterly Review*, No. 14, to which publication it was contributed by the author of this work.)

(*Whale Fishery (Southern).*)—This consists of three distinct branches; viz.; 1st, the catch of the sperm whale; 2d, that of the common black whale of the southern seas; and, 3d, that of the sea elephant, or southern walrus.

The sperm whale (*Physeter macrocephalus*) is found in all tropical climates, and on the coasts of New Zealand and Japan. The ordinary duration of the voyage of a ship from England, employed in this department of the fishery, is about 3 years.

The common black whale of the southern seas (*Physeter microops*) is met with in various places, but principally on the coast of Brazil; in the bays on the west coast of Africa; and in some of the bays in New South Wales, Van Diemen's Land, &c.

Sea elephants (intermediate between the walrus of the northern seas and the seal) are principally met with in the seas around the Islands of Desolation, South Georgia, and South Shetland, the coast of California, &c. Vast numbers of these animals are annually captured; vessels frequently load entirely with them; and they are believed to furnish more oil than the common South Sea whale. The oil of the black whale and that of the sea elephant, are both known in the market by the name of southern oil; and they are so very similar, that those most versed in the trade can with difficulty distinguish the one from the other. Hence ships commonly engage indifferently in either fishing as opportunity offers. The usual duration of the voyage of a ship from England in either of the last two departments, or in the two combined, varies from 12 to 18 months. We subjoin a

Statement of the Southern Whales Fishery carried on from Great Britain since 1800; exhibiting the Total Number of Ships annually absent from Great Britain on Whaling Expeditions; the Total Number of Ships that annually returned to Great Britain; the Annual Imports of Sperm and Common Oil, with the Prices of each; the Average Tonnage of the Ships at Sea; and the Average Number of Men to each Ship.

* The ships for this and the succeeding years, as for the previous ones, do not include colonial ships, but those from Britain only.
 † From this year commenced the Imperial Measure.
 ‡ American sperm oil.

We are indebted for the above valuable table, the only one of its kind that has ever been published, to a gentleman connected with a house that has been largely engaged in the trade since its commencement. The details may, therefore, be safely depended upon.

The sperm and southern colonial oils are principally imported from New South Wales and Van Diemen's Land. There used also to be a very considerable importation from the Cape of Good Hope; but that is now much fallen off. The imports of whale and seal oil from our North American possessions have been greatly augmented of late years. That, however, is mostly the product of the northern sea.

Whale Fishery (Northern).—We regret to have to state that additional experience has served to confirm the unfavourable view we took in the *Dictionary* of this branch of industry. The subjoined account exhibits its condition in each year, from 1815 to 1834, both inclusive. It is seen from it that the ships and tonnage sent out have fallen off about a half since 1821! The years 1835 and 1836 were peculiarly disastrous: the trade has since, however, somewhat improved. But the fishery has, in fact, been for several years past more akin to a lottery than to any thing else; and, latterly, the blanks seem to have predominated very decidedly over the prizes. Considering the profitless nature of the business, and the hazards to which the seamen engaged in it are exposed, it would seem to be high time to put an end to the existing temptations to embark in it, by reducing the duties on vegetable oils. A reduction of this sort would, besides, be of much advantage to several of our most important manufactures; and would, in no small degree, contribute to promote the commerce of the country.

WHALE FISHERY (AMERICAN).

739

Whale Fishery (American Southern).—The Americans were among the first to begin, and have long outstripped every other people in the extent and success with which they have prosecuted, the southern whale fishery. It is principally carried on from New Bedford and other ports in the state of Massachusetts; and from Nantucket, a small island dependent on this state, celebrated for the bold adventurous character of its sailors, and for being the earliest seat of the fishery. We borrow from a Nantucket journal the following details with respect to this fishery in 1834:—

Spermaceti Whale Fishery.—The whole number of ships engaged in this valuable branch of the fisheries is 273, of which 257 are now actual; viz from—

New Bedford	94	Falmouth	6
Nantucket	1	Newport	3
Fairhaven	14	Sagharbour	5
Rial	13	Stam	3
New London	10	Newburyport	3
Hobson	7	Poughkeepsie	2
Warra	8	Portsmouth	2
Edgartown	6	Dartmouth	2

And one from each of the following ports, viz.—Boston, Plymouth, Wiscam, Rochester, Portland, Wiscam, Fall River, Providence, Swanton, Newbury, New York, and Wilmington, Delaware. Sixteen ships only are in port, belonging as follows: to New Bedford, 7; Nantucket, 5; Fairhaven, Plymouth, Sagharbour, and Edgartown, each 1.

The aggregate tonnage of the 257 absent ships is nearly 400,000 tons. In those, only 91 had each at last dates obtained 1,000 brls. of oil upwards; and about the same number are not yet reported with any oil. The number of seamen and navigators employed on had these vessels is not far from 9,000. The cost of the entire fleet, as first for these voyages of 3 years' duration, probably exceeds 4,000,000 dollars.

Whale Fishery.—Annexed is a statement of the whale fishery of the United States during the year 1833, together with the arrivals for the last seven years. It will be seen (as we predicted in our statement last year) that the arrivals of sperm oil have fallen considerably short of last year, being only 120,400 brls. against 182,569 brls. in 1837, showing a decrease of 53,169 brls.; to which may be attributed the present high prices, together with the great increase of consumption. It will also be seen that the imports of whale oil have been larger than the previous year, having amounted to 223,710 brls.: yet so great has been the increase of home consumption, that prices have risen high during the year, and there is not at the present time any considerable quantity in the importers' hands. The quantity of whitebait has also increased pro rata.

Below is a Memorandum of arrivals at the different Ports in the United States during the Year 1838.

(Boston Daily Advertiser.)													

There are various circumstances that conspire to give the Americans advantages for the prosecution of the southern whale fishery that are not enjoyed by any European nation. It is difficult, however, to see why it should not be prosecuted with still greater advantage from the ports of New South Wales, Van Diemen's Land, &c. It is supposed by many that Rio de Janeiro would be a good station for the fishing.

We believe, however, that the southern, as well as the northern, whale fishery has passed its zenith, and from the same cause—the decreasing supply of fish. The whales are gradually becoming scarcer and more difficult to catch. They have been entirely, or almost entirely, driven from some of their old haunts; and the fishery is now very frequently prosecuted in very high latitudes.—*Sup.*

[See *Sup.* article FISH. *Am. Ed.*]

WHARF, a sort of quay, constructed of wood or stone, on the margin of a roadstead or harbour, alongside of which ships or lighters are brought for the sake of being conveniently loaded or unloaded.

There are 2 denominations of wharfs, viz. *legal quays* and *suffrance wharfs*. The former are certain wharfs in all sea-ports, at which all goods are required by the 1 Eliz. c. 11. to be landed and shipped, and they were set out for that purpose by commission from the Court of Exchequer, in the reign of Charles II. and subsequent sovereigns. Many others have been legalized by act of parliament. In some ports, as Chepetow, Gloucester, &c., certain wharfs are deemed legal quays by immemorial practice, though not set out by commission, or legalized by act of parliament.

Suffrance wharfs are places where certain goods may be landed and shipped; such as hemp, flax, coal, and other bulky goods; by special suffrance granted by the Crown for that purpose.

WHARFAGE, the fee paid for landing goods on a wharf, or for shipping them off. The stat. 22 Chas. 2. c. 11., after providing for the establishment of wharfs and quays, makes it lawful for any person to lade or unlade goods, on paying wharfage and crauage at the rates appointed by the king in council.

WHEAT (Ger. *Weitzen*; Du. *Turw*; Da. *Hvede*; Sw. *Hvete*; Fr. *Froment*, *Bled*, *Blé*; It. *Grano*, *Formento*; Sp. and Port. *Trigo*; Rus. *Pscheniza*; Pol. *Pszeniça*), a species of bread corn (*Triticum* Lin.), by far the most important of any cultivated in Europe. We are totally ignorant of the country whence this valuable grain was first derived; but it was very early cultivated in Sicily. It is raised in almost every part of the temperate zones, and in some places as high as 2,000 feet above the level of the sea.

The kinds of wheat sown are numerous, but they may be classed under 4 heads: viz. cone or bearded wheat, which, however, is now little cultivated; white wheat, of which there are innumerable varieties, the *white Dantzic* being considered one of the best; red wheat, which is seldom sown where the climate is good and early, and the land in proper condition; and spring wheat. A greater number of people are nourished by rice than by wheat; but owing to the greater quantity of gluten which the latter contains, it makes by far the best bread. Rye comes nearer to wheat in its bread-making qualities than any other sort of grain; still, however, it is very inferior to it. The finest samples of wheat are small in the berry, thin skinned, fresh, plump, and bright, slipping readily through the fingers.

Being very extensively cultivated on soils of very various qualities, and frequently with very imperfect preparation, the produce of wheat crops in Great Britain varies from about 12 to 56 bushels per acre.

The counties most distinguished for the quantity and quality of their wheat are, Kent, Essex, Suffolk, Rutland, Hertfordshire, Berkshire, Hampshire, and Herefordshire, in England; and Berwickshire, and the Lothians, in Scotland. In the northern counties it is, speaking generally, of an inferior quality; being cold to the feel, dark coloured, thick skinned, and yielding comparatively little flour. In the best wheat counties, and in good years, the weight of a Winchester bushel of wheat is from 60 to 62 lbs. In the Isle of Sheppey, in Kent (where, perhaps, the best samples of wheat sent to the London market are produced), this grain, in some favourable seasons, weighs 64 lbs. a bushel. Where the climate is colder, wetter, or more backward, or in bad seasons, the weight of the bushel of wheat is not more than 56 or 57 lbs. It is calculated that the average weight of the bushel of good English wheat is 58½ lbs.; and that the average yield of flour is 13 lbs. of flour to 14 lbs. of grain.—(See Mr. Stevenson's very valuable article on *England in Brewster's Encyclopædia*, vol. viii. p. 720.; *Loudon's Ency. of Agriculture*, &c.)

For a view of the regulations with respect to the importation and exportation of wheat, &c., see **CORN LAWS AND CORN TRADE**. The price of wheat in 1833 was 52s. 11d. per quarter.

WHISKY, a spirit obtained by distillation from corn, sugar, or molasses, though generally from the former. Whisky is the *national spirit*, if we may so term it, of Scotland and Ireland; but that distilled in the former is generally reckoned superior to that of the latter.—See (**SPRITS**.)

WINE (Ger. *Wein*; Fr. *Vin*; It. and Sp. *Vino*; Port. *Vinho*; Rus. *Wino*, *Wino-gradnoe winoc*; Lat. *Vinum*; Gr. *Oinos*; Arab. *Khumr*), the fermented juice of the grape, or berries of the vine (*Vitis vinifera*).

The vine is indigenous to Persia and the Levant; but it is now found in most temperate regions. The limits within which it is cultivated in the northern hemisphere of the Old World vary from about 15° to 48° and 52°; but in North America it is not cultivated farther north than 38° or 40°. It is rarely grown at a greater altitude than 3,000 feet. From Asia the vino was introduced into Greece, and thence into Italy. The Phœceans, who founded Marseilles, carried the vine to the south of France; but it is doubtful whether it was introduced into Burgundy till the age of the Antonines.* The species of *Vitis* indigenous

* The ancient writers give the most contradictory accounts with respect to the introduction of the vine into Gaul.—(See the learned and excellent work of Le Grand d'Aussy, *Vie Privée des Français*, tome II. pp. 329—333.) The statement given above seems the most probable.

North America is very different from the *Vitis vinifera*. In favourable seasons, the vine ripens in the open air in England; and in the eleventh and twelfth centuries, considerable quantities of inferior wine were made from native grapes. Vineyards are now, however, unknown in this country; but the grapes raised in hot-houses, and used in desserts, are excellent.

The vine grows in every sort of soil; but that which is light and gravelly seems best suited for the production of fine wines. It succeeds extremely well in volcanic countries. The best wines of Italy are produced in the neighbourhood of Vesuvius: the famous Tokay wine is also made in a volcanic district, as are several of the best French wines; many parts of the south of France bearing evident marks of extinct volcanoes. Hermitage is grown among the debris of granite rocks. The most favourable situation for a vineyard is upon a rising ground or hill facing the south-east, and the situation should not be too confined;

————— apertos
Bacchus amat colles.

The art of expressing and fermenting the juice of the grape appears to have been practised from the remotest antiquity. The sacred writings tell us that Noah planted a vineyard soon after the deluge—(*Gen. ix. 20.*); and a modern Latin poet ingeniously represents the vine as a gift from Heaven, to console mankind for the miseries entailed upon them by that grand catastrophe!

Omnia vastatis ergo quum cerneret arvis.
Desolata Deus, nobis felicia vini
Dona dedit; tristes heminum quo munere fovit
Reliquias, mundi solatus vite rubrum!

Vanierni Prod. Rusticum, lib. xi.

Species of Wine.—There are many varieties of vines; and this circumstance, combined with differences of soil, climate, mode of preparation, &c., occasions an extreme variety in the species of wine. But even between places immediately contiguous to each other, and where a cursory observer would hardly remark any difference, the qualities of the wines, though produced by the same species of grape, and treated in the same way, are often very different. A great deal evidently depends upon the aspect of the vineyard; and it is probable that a good deal depends on peculiarities of soil. But whatever may be the cause, it is certain that there are wines raised in a few limited districts, such as Tokay, Johannisberger, Constantia, the best Burgundy, Champagne, claret, &c., that no art or care has hitherto succeeded in producing of equal goodness in other places.

ANCIENT WINES.—The wines of Lesbos and Chios among the Greeks, and the Falernian and Cecuban among the Romans, have acquired an immortality of renown. Great uncertainty, however, prevails as to the nature of these wines. Dr. Henderson thinks that the most celebrated of them all, the Falernian, approached, in its most essential characters, near to Madeira. In preparing their wines, the ancients often inspissated them till they became of the consistence of honey, or even thicker. These were diluted with water previously to their being drunk; and, indeed, the habit of mixing wine with water seems to have prevailed much more in antiquity than in modern times.

MODERN WINES.—The principal wines made use of in this country are port, sherry, claret, Champagne, Madeira, hock, Marsala, Cape, &c.

Port,—the wine most commonly used in England,—is produced in the province of Upper Douro, in Portugal; and is shipped at Oporto, whence its name. When it arrives in this country, it is of a dark purple or inky colour; has a full, rough body, with an astringent bitter-sweet taste, and a strong flavour and odour of brandy. After it has remained some years longer in the wood, the sweetness, roughness, and astringency of the flavour abate; but it is only after it has been kept 10 or 15 years in bottle, that the odour of the brandy is completely subdued, and the genuine aroma of the wine developed. When kept to too great an age, it becomes tawny, and loses its peculiar flavour. During the process of melioration, a considerable portion of the extractive and colouring matter is precipitated on the sides of the vessels in the form of crust. In some wines this change occurs much earlier than in others.

A large quantity of brandy is always mixed with the wine shipped from Oporto for England. Genuine unmixed port wine is very rarely met with in this country. We have been so long accustomed to the compounded article, that, were it possible to procure it unmixed, it is doubtful whether it would be at all suited to our taste. According to Mr. Brande's analysis, on which, however, owing to the differences in the quality of the wine, no great stress can be laid, port, as used in England, contains about 23 per cent. of alcohol. In 1833, 2,598,550 gallons of port were retained for consumption in the United Kingdom.

Oporto Wine Company.—The quality of the wine shipped from Oporto has been materially injured by the monopoly so long enjoyed by the Oporto Wine Company. This company was founded in 1756, during the administration of the Marquis Pombal. A certain extent of territory is marked out by its charter as the only district on the Douro in which wine is to be raised for exportation; the entire and absolute disposal of the wines raised in this district is placed in the hands of the Company; who are further authorized to fix the prices to be paid for them to the cultivators, to prepare them for exportation, and to fix the price at which they shall be sold to foreigners! It is obvious that a company with such powers cannot be any thing else than an intolerable nuisance. What could be more arbitrary

and unjust than to interdict the export of all wines raised out of the limits of the Company's territory. But even in its own district, its proceedings have been most oppressive and injurious. The Company annually fix, by a fiat of their own, 2 rates of prices—one for the *vinho de feitoria*, or wine for exportation, and the other for *vinho de rama*, or wine for home consumption—at which the cultivators are to be paid, *whatever may be the quality of their wines!* They have, therefore, no motive to exert superior skill and industry; but content themselves with endeavouring to raise at the least possible expense, the greatest supply of *vinho de feitoria*, for which the Company allow the highest price. All emulation is thus effectually extinguished, and the proprietors who possess vineyards of a superior quality invariably adulterate their wines with inferior growths, so as to reduce them, to the average standard. "In this way," says Dr. Henderson "the finer products of the Douro vineyards have remained in a great measure unknown to us; and port wine has come to be considered as a *liquor*, if I may use the expression, of nearly uniform flavour and strength; varying, it is true, in a certain extent in quality, but still always approaching to a definite standard, and admitting of few degrees of excellence. The manipulations, the admixtures—in one word, the *adulterations*—to which the best wines of the Cinn do Douro are subjected, have much the same effect as if all the growths of Burgundy were to be mingled in one immense vat, and sent into the world as the only true Burgundian wine. The delicious produce of Romanée, Chambartin, and the Clos Vougeot, would disappear, and in their places we should find nothing better than a second-rate Beaune or Macon wine."—(*History of Ancient and Modern Wines*, p. 210.)

Not only, however, have the Oporto Wine Company deteriorated the quality, but they have also raised the price of their wines to an enormous height. Secured against the competition of their countrymen, and enjoying, down to 1831, a nearly absolute monopoly of the British market, by means of the high duties on French wines, they have filled their pockets at our expense. At the very moment when the Company have been shipping wine for England at 40*l.* a pipe, they have frequently shipped the same wine to other countries at 20*l.*—(*Fleetwood Williams on the Wine Trade*.) And the authentic Tables published by Bulbi show that the price of wine has been trebled or quadrupled under the management of this corporation.—(*Essai Statistique sur le Royaume de Portugal*, tome 1. p. 157.)

But though the abuses inherent in the constitution of the Company have been carried of late years to an enormous extent, it is long since its injurious effects on the commerce of this country were distinctly perceived and pointed out. So far back as 1767, the Board of Trade laid a memorial before his Majesty in council, in which they state, "With respect to many particular regulations of the Oporto Company, which we think justly objected to by the merchants as highly grievous and oppressive, we have not thought it necessary to enter into a minute description of them, being of opinion that one general and fatal objection lies against them all; viz.—that they all contribute to establish in the Company a monopoly against your Majesty's subjects, from which by treaty they have a right to be exempted."

But notwithstanding this authoritative exposition of the injury done to the English by this monopoly, and the experience which every subsequent year afforded of its mischievous influence, such has been the inveteracy of ancient prejudice, that it was not till the session of 1831 that we took the only step by which we could hope to rid ourselves of its evils, as well as of a host of others, by equalising the duties on French and Portuguese wines, and putting an end to the absurd and injurious preference in favour of the latter established by the Methuen treaty.

England and Brazil are the only countries to which any considerable quantity of port wine is exported. Our imports amounted, at an average of the 10 years ending with 1833, to 22,121 pipes a year; of which, however, a portion is subsequently exported; while the exports from Portugal to all other countries, Brazil inclusive, have not recently amounted to 3,000 pipes. It has been supposed, now that there is no discriminating duty in favour of port, that its consumption in this country will gradually fall off, its place being filled by French and other wines; but though such a result be not improbable, it derives no confirmation from the pretty gradual decrease in the quantities of port retained for home use since 1827, the French wines retained for the same purpose having declined still more rapidly.

Sherry is of a deep amber colour; when good, it has a fine aromatic odour; its taste is warm, with some degree of the agreeable bitterness of the peach kernel. When new, it tastes harsh and fiery; it is mellowed by being allowed to remain 4 or 5 years or longer in the wood; but it does not attain to its full flavour and perfection until it is kept for 15 or 20 years. It is a very strong wine, containing about 19 per cent. of alcohol. It is principally produced in the vicinity of Xeres, not far from Cadiz, in Spain. It is very extensively used in this country as a dinner wine. Dry sherry, or *amontillado*, when genuine and old, fetches a very high price. Perhaps no wine is so much adulterated as sherry. With the exception of Marsala, the consumption of sherry has been far more influenced than that of any other wine by the reduction of the duties in 1825. In 1833, the quantity retained for home consumption amounted to 2,246,085 gallons, being more than double the quantity retained for consumption at an average of 1823 and 1824!—(See *post*.)

Claret.—the term generally used in England to designate the red wines, the produce of the Bordelais. Of these, Lafite, Latour, Château-Margaux, and Haut-Brion, are so generally esteemed, that they always sell from 20 to 25 per cent. higher than any others of the province. The first mentioned is the most choice and delicate, and is characterised by its silky softness on the palate, and its charming perfume, which partakes of the nature of the violet and the raspberry. The Latour has a fuller body, and at the same time a considerable aroma, but wants the softness of the Lafite. The Château-Margaux, on the other hand, is lighter, and possesses all the delicate qualities of the Lafite, except that it has not quite so high a flavour. The Haut-Brion, again, has more spirit and body than any of the preceding, but is rough when new, and requires to be kept 6 or 7 years in the wood; while the others become fit for bottling in much less time.

Among the second-rate wines, that of Rozan, in the parish of St. Margaux, approaches in some respects to the growth of the Château-Margaux; while that of Gorce, in the same territory is little inferior to the Latour; and the vineyards of Leoville, Larose, Bran-moulon, and Pichon-Longueville, in the canton of Pauillac, afford light wines of good flavour, which, in favourable years, have much of the excellence of the finer growths. In the Entre-deux-Mers, the wines of Canon and St. Emilion, in the vicinity of Libourne, are deemed the best, being of a full body and very durable. When new, these wines are always harsh and astrin-

gent; but they acquire an agreeable softness, and are characterised by a peculiar flavour, which has been not unsightly compared to the smell of burning wax. The aroma of the first growth is seldom fully developed till after they have been kept 8 or 9 years: but the secondary qualities come to perfection a year or two sooner. The colour often grows darker as the wine advances in age, in consequence of the deposition of a portion of its tartar; but, when well made, and thoroughly fined, it seldom deposits any crust.

(These particulars are borrowed from the excellent work of *Dr. Henderson, on Ancient and Modern Wines* (p. 184.). We have given, in a previous article—(see *BOURNEUX*),—full and authentic details as to the trade in claret. We beg, also, to refer the reader to that article for some observations on the wine trade of France, and on the injury done to it by the restrictive system of commerce.)

There is generally a very good supply of claret in bond in the docks in London. Its price varies from about 15*l.* per hogshead for the inferior, to 50*l.* and 55*l.* per hogshead for the superior growths. What are called cargo or shipping clarets may be bought at from 5*l.* to 10*l.* per hogshead. The finest case claret in bond at about 50*l.* per dozen; but parcels of very well flavoured wine may be bought at 25*l.*

Champagne,—so called from the province of France of which it is the produce,—is one of the most deservedly esteemed of the French wines. The wines of Champagne are divided into the 2 grand classes of white and red wines; and each of these again into still and sparkling; but there is a great variety in the flavour of the produce of different vineyards. Sillery is universally allowed to be the best of the still wines. It is dry, of a light amber colour, has a considerable body, and a charming aroma. "Le corps," (says M. Jullien,) "le spiritueux, le charmant bouquet, et les vertus toniques dont il est pourvu, lui assurent la priorité sur tous les autres."—(*Topographie de tous les Vignobles*, p. 30.) Dr. Henderson agrees with M. Jullien, in considering it as one of the wholesomest of the Champagne wines. The sparkling wines are, however, the most popular, at least in this country. Of these, the wine of Ay, 5 leagues south from Rheims, is, perhaps, the best. It is lighter and sweeter than Sillery, and has an exquisite flavour and aroma. That which merely creams on the surface (*demi-mousseux*) is preferred to the full frothing wine (*grand-mousseux*). Being bright, clear, and sparkling, it is as pleasing to the eye as it is grateful to the palate.

"Cernis micanti concolor ut vitro
Latic in auras, gemmeus aspicit,
Sclitillet exultum; utque dulces
Naribus illecebras propinat.

"Succi latentis proditor habitus:
Ut spinus motu lactea turbido
Crystallinum letis referre
Mox oculis properet nitorem."

Hautvillers, about 4 leagues from Rheims and 1 from Epernay, used formerly to produce wine that equalled, and sometimes surpassed, the wine of Ay. But it is no longer cultivated with the same care; so that, though still very good, it now only ranks in the 2d class.

The best of the red wines of Champagne are those of Verzy, Verzenay, Mailly, Bouzy, and St. Basle. "Ils ont une belle couleur, du corps, du spiritueux, et surtout beaucoup de finesse, de sève, et de bouquet."—(*Jullien*, p. 27.) The Clos St. Thierry, in the vicinity of Rheims, produces wine which, according to M. Jullien, unites the colour and the aroma of Burgundy to the lightness of Champagne.

The province of Champagne produces altogether about 1,100,000 hectolitres of wine; of which, however, the finest growths make but a small part. The principal trade in wine is carried on at Rheims, Avise, and Epernay. The vaults in which the vintages are stored are excavated in a rock of calcareous tufa to the depth of 30 or 40 feet. Those of M. Moët, at Epernay, are the most extensive, and few travellers pass through the place without going to see them. The briskest wines (*grands-mousseux*) keep the worst.—(*Jullien*, p. 34.)

Burgundy.—The best wines of this province, though not so popular in England as those of Champagne, enjoy the highest reputation. "In richness of flavour and perfume, and all the more delicate qualities of the juice of the grape, they unquestionably rank as the first in the world; and it was not without reason that the dukes of Burgundy, in former times, were designated as the *princes des bons vins*."—(*Henderson*, p. 161.) M. Jullien is not less decided:—"Les vins des premiers crus, lorsqu'ils proviennent d'une bonne année, renissent, dans de justes proportions, toutes les qualités qui constituent les vins parfaits; ils n'ont besoin d'aucun mélange, d'aucune préparation, pour attendre leur plus haut degré de perfection. Ces opérations, que l'on qualifie dans certains pays de *soins qui aident à la qualité*, sont toujours nuisibles aux vins de Bourgogne."—(p. 104.)

Romané-Conti, Chambertin, the Clos Vougeot, and Richebourg, are the most celebrated of the great wines of Burgundy. Chambertin was the favourite wine of Louis XIV. and of Napoleon. It is the produce of a vineyard of that name, situated 7 miles to the south of Dijon, and furnishing each year from 130 to 150 puncheons, from an extent of about 65 acres. It has a fuller body and colour, and greater durability, than the Romané, with an aroma nearly as fragrant.

The white wines of Burgundy are less numerous, and, consequently, less generally known, than the others; but they maintain the highest rank among French white wines, and are not inferior to the red, either in aroma or flavour.

The entire annual produce of wine in Burgundy and Beaujolais may at present be estimated, at an average, at nearly 3,000,000 hectolitres, of which about 750,000 suffice for the consumption of the inhabitants. Since the Revolution, the cultivation of the vine has been greatly extended in the province. Many of the new vineyards having necessarily been planted in comparatively unfavourable situations, a notion has been gaining ground that the wines of Burgundy were degenerating. This, however, is not the case. On the contrary, the quantity of *bons crus*, instead of being diminished, has increased considerably; though, as the supply of inferior wines has increased in a still greater degree, the fine wines bear a less proportion to the whole than they did previously to the Revolution.—(Jullien, p. 90.)

The principal trade in Burgundy is carried on at Dijon, Gavey, Châlons-sur-Saône, &c. Besides the above, France has a great variety of other excellent wines. Hermitage, Saunterne, St. Pôry, &c. are well known in England; and deservedly enjoy, particularly the first, a high degree of reputation.

Account of the Quantity and Value of the Wines exported from France in 1831; distinguishing between those of the Gironde and those of other Departments, and between those exported in Casks and Bottles; and specifying the Quantity and Value of those sent to each Country.—(Administration des Douanes for 1831, p. 219.)

Exclusive of the above, there were exported from France, in the same year, 2,753,199 litres of *cins de liqueurs*, valued at 4,130,250 francs.

The total produce of the vineyards of France is estimated at about 25,000,000 hectolitres (77,000,000 Imp. gallons), worth 510,000,000 francs (21,000,000*l.*). We beg to refer the reader to the article BODEAUX, for an account of the influence of the French system of commercial policy on this great department of industry.

Dispute as to the Comparative Merit of Champagne and Burgundy.—The question, whether the wines of Champagne or of Burgundy were entitled to the preference, was agitated during the reign of Louis XIV. with extraordinary keenness. The celebrated Charles Coffin, rector of the University of Bourdeaux, published, during this controversy, the classical ode, partly quoted above, in which Champagne is eulogised, and its superiority vindicated, with a spirit, vivacity, and delicacy worthy of the theme. The citizens of Burgundy were not ungrateful to the poet; but liberally rewarded him with an appropriate and magnificent donation of the wine he had so happily panegyriced. Grégoire wrote an ode in praise of Burgundy; but, unlike its subject, it was flat and insipid, and failed to procure any recompense to its author. The different pieces in this amusing controversy were collected and published in octavo, at Paris, in 1712.—(See *Le Grand d'Assy, Vie Privée des Français*, tom. iii. p. 30., and the

Biographie Universelle, tom. ix. art. *Coffin (Charles)*. Erasmus attributes the restoration of his health to his having drunk liberally of Burgundy; and has eulogized it in the most extravagant terms. An epistle of his, quoted by Le Grand d'Aussy, shows that Falstaff and he could have spent an evening together less disagreeably than might have been supposed:—"Le premier qui enseigne l'art de faire ce vin (Bourgogne), on qui en fit present, ne doit-il point passer plutôt pour nous avoir donné la vie que pour nous avoir gratifié d'une liqueur."—(*Vie Privée des Français*, tom. iii. p. 9.)

Consumption of French Wine in England. Discriminating Duties.—Owing to the intimate connection subsisting between England and France for several centuries after the Conquest, the wines of the latter were long in almost exclusive possession of the English market; but the extension of commerce gradually led to the introduction of other species; and in the reigns of Elizabeth and James I., the dry white wines of Spain seem to have been held in the highest estimation. This, however, was only a temporary preference. Subsequently to the Restoration, the wines of France regained their former ascendancy. In 1687, their importations amounted to 15,518, in 1688 to 14,218, and in 1689 to 11,106 tons. It is exceedingly doubtful whether so much as a single pipe of port had ever found its way to England previously to this period—(Henderson, p. 313.); and it is most probable that the wines of France would have continued to preserve their ascendancy in our markets, had not their importation been artificially checked.

The trade with France had occasionally been prohibited previously to the accession of William III.; but it was not until 1693 that any distinction was made between the duties payable on French and other wines. But Louis XIV. having espoused the cause of the exiled family of Stuart, the British government, in the irritation of the moment, and without reflecting that the blow aimed at the French would infallibly recoil upon themselves, imposed, at the period above-mentioned, a discriminating duty of 8*l.* a tun on French wines, and in 1697 increased to 33*l.* In consequence of this enormous augmentation of duty on French wines, the merchants began to import wine from Oporto as a substitute for the red wines of Bordeaux, excluded by the high duties. It is probable, however, that these discriminating duties would have been repealed as soon as the excitement which produced them had subsided, and that the trade would have returned to its old channels, had not the stipulations in the famous commercial treaty with Portugal, negotiated by Mr. Methuen, in 1703, given them permanence. Such, however, was un luckily the case; for, according to this treaty, we bound ourselves to charge in future one third higher duties on the wines of France than on those of Portugal; the Portuguese, by way of compensation, binding themselves to admit our woollens into their markets in preference to those of other countries, at a fixed and invariable rate of duty.

Though very generally regarded at the time as the highest effort of diplomatic skill and address, the Methuen treaty was certainly founded on the narrowest views of national interest, and has proved, in no common degree, injurious to both parties, but especially to England. By binding ourselves to receive Portuguese wines for two thirds of the duty payable on those of France, we, in effect, gave the Portuguese growers a monopoly of the British market, and thereby attracted too great a proportion of the deficient capital of Portugal to the production of wine; while, on the other hand, we not only excluded one of the principal equivalents the French had to offer for our commodities, and proclaimed to the world that we considered it better to deal with two millions of poor beggary customers, than with thirty millions of rich ones, but we also provoked the retaliation of the French, who forthwith excluded most of our articles from their markets!

The injurious effects of the regulations in the Methuen treaty were distinctly pointed out by Dr. Davanant and Mr. Hume. The latter, in his *Essay on the Balance of Trade*, published in 1752, says, "Our jealousy and hatred of France are without bounds. These passions have occasioned insuperable barriers and obstructions on commerce, where we are commonly accused of being the aggressors. But what have we gained by the bargain? We lost the French market for our woollen manufactures, and transferred the commerce of wine to Spain and Portugal, where we buy much worse liquor at a much higher price! There are few Englishmen who would not think their country absolutely ruined were French wine sold in England so cheap, and in such abundance, as to supplant ale and other home-brewed liquors. But, would we lay aside prejudice, it would not be difficult to prove that nothing could be more innocent; perhaps, more advantageous. Each new acre of vineyard planted in France, in order to supply England with wine, would make it requisite for the French to take an equivalent in English goods, by the sale of which we should be equally benefited."

In consequence of the preference so unwisely given to the wines of Portugal over those of France, a preference continued, in defiance of every principle of sound policy and common sense, down to 1831,—the imports of French wine were for many years reduced to a mere trifle; and notwithstanding their increased consumption, occasioned by the reduction of the duties in 1825, the quantity made use of in 1833 did not exceed 232,500 gallons; while the consumption of Portuguese wines amounts to about 2,600,000 Imperial gallons! This is the most striking example, perhaps, in the history of commerce, of the influence of customs duties in diverting trades into new channels, and altering the taste of a people. All but the most opulent classes having been compelled, for a long series of years, either to renounce wine, or to use port, the taste for the latter has been firmly rooted; the beverage that was originally forced upon us by necessity having become congenial from habit. We have little doubt, however, now that the discriminating duty in favour of port is abolished, that the excellence of the French wines will ultimately regain for them some portion of that favour in the English market they formerly enjoyed.*

Madeira,—so called from the island of that name,—is a wine that has long been in extensive use in this and other countries. Plants of the vine were conveyed from Crete to Madeira in 1421, and have succeeded extremely well. There is a considerable difference in the flavour and other qualities of the wines of Madeira: the best are produced on the south side of the island. Though naturally strong, they receive an addition of brandy when racked from the vessels in which they have been fermented, and another portion is thrown in previously to their exportation. This is said to be required to sustain the wine in the high temperature to which it is subjected in its passage to and from India and China, to which large quantities of it are sent; it being found that it is mellowed, and its flavour materially improved by the voyage. It does not, however, necessarily follow, that the wines which have made the longest voyages are always the best. Much must obviously depend on the original quality of the wine; and many of the parcels selected to be sent to India are so inferior, that the wine, when brought to London, does not rank so high as that which has been imported direct. But when the parcel sent out has been well chosen, it is very much

*The mischievous operation of the Methuen treaty, and of the discriminating duty on French wines, were very strikingly exhibited by Mr. Hyde Villiers, in his able speech on the 15th of June, 1830. It is highly deserving of the reader's attention.

matured and improved by the voyage; and it not only fetches a higher price, but is in all respects superior to the direct importations. Most of the adventitious spirit is dissipated in the course of the Indian voyage.

Madeira wines may be kept for a very long period. "Like the ancient vintages of the Surrentine hills, they are truly *firmissima vina*, retaining their qualities unimpaired in both extremes of climate, suffering no decay, and constantly improving as they advance in age. Indeed, they cannot be pronounced in condition until they have been kept for 10 years in the wood, and afterwards allowed to mellow nearly twice that time in bottle: and even then they will hardly have reached the utmost perfection of which they are susceptible. When of good quality, and matured as above described, they lose all their original harshness, and acquire that agreeable pungency, that bitter sweetness, which was so highly prized in the choicest wines of antiquity; uniting great strength and richness of flavour with an exceedingly fragrant and diffusible aroma. The nutty taste, which is often very marked, is not communicated, as some have imagined, by means of bitter almonds, but is inherent in the wine."—(Henderson, p. 253.)

The wines of Madeira have latterly fallen into disrepute in England. The growth of the island is very limited—not exceeding 20,000 pipes, of which a considerable quantity goes to the West Indies and America. Hence, when Madeira was a fashionable wine in England, every sort of deception was practised with respect to it, and large quantities of spurious trash were disposed of for the genuine vintage of the island. This naturally brought the wine into discredit; so that sherry has been for several years the fashionable white wine. It is difficult, however, to imagine that adulteration was ever practised to a greater extent upon Madeira than it is now practised upon sherry. The quantity entered for home consumption in 1827 amounted to 308,295 gallons, whereas the quantity entered for home consumption in 1833 only amounted to 161,042 gallons.

Malmsey, a very rich luscious species of the Madeira, is made from grapes grown on rocky grounds exposed to the full influence of the sun's rays, and allowed to remain on the vine till they are over-ripe.

The trade in Madeira wine is carried on at Funchal, the capital of the island, in lat. 32° 37' N., lon. 17° 6' W. *Weights and Measures* same as Lisbon.

Teneriffe wine,—so called from the island of that name,—resembles Madeira, and is not unfrequently substituted in its place; but it wants the full body and rich flavour of the best growths of Madeira.

German Wines.—The wines of Germany imported into England are principally produced on the banks of the Rhine and the Moselle. The Rhine wines constitute a distinct order by themselves. They are drier than the French white wines, and are characterised by a delicate flavour and aroma, called in the country *gäre*, which is quite peculiar to them, and of which it would, therefore, be in vain to attempt the description. A notion prevails that they are naturally acid; and the inferior kinds, no doubt, are so: but this is not the constant character of the Rhine wines, which in good years have no perceptible acidity in the taste, at least not more than is common to them with the growths of warmer regions. Their chief distinction is their extreme durability. The wines made in warm dry years are always in great demand, and fetch very high prices.

The *Johannisberger* stands at the head of the Rhine wines. It has a very choice flavour and perfume, and is characterised by an almost total want of acidity. The vineyard is the property of Prince Metternich. The *Steinberger* ranks next to the *Johannisberger*. It is the strongest of all the Rhenish wines, and in favourable years has much flavour and delicacy.

The produce of certain vineyards on the banks of the Moselle, is of superior quality. The better sorts are clear and dry, with a light pleasant flavour and high aroma; but they sometimes contract a stony taste, from the strata on which they grow. They arrive at maturity in 5 or 6 years; though when made in a favourable season, they will keep twice that time, without experiencing any deterioration.—(Henderson, p. 226.)

Tokay,—so called from a town in Hungary, near which it is produced,—is but little known in England. It is luscious, possessing at the same time a high degree of flavour and aroma. It is scarce and dear; and very apt to be counterfeited.

Marsala.—The Sicilian white wine called *Marsala*, from the town (the ancient Lilybecum) whence it is shipped, and near which it is made, is now pretty largely consumed in England; the entries for home consumption having increased from 79,686 gallons in 1823, to 312,993 in 1833; an extraordinary increase, particularly when it is considered that during the same period the consumption of most sorts of wine has been nearly stationary. *Marsala* is a dry wine; the best qualities closely resembling the lighter sorts of Madeira; but the increasing demand for it seems to be owing as much to its cheapness as to any peculiarity of quality. It is, however, an agreeable dinner wine. *Marsala* has been brought to its present state of perfection and repute by the care and exertions of 2 Englishmen, the Messrs. Woodhouse established in Sicily, who have an extensive factory in the neighbourhood of Marsala. The wine is shipped in large quantities for America; whence a considerable quantity is again

conveyed to the West Indies, where it is not unfrequently disposed of as real Madeira.

With the exception of Marsala, very little wine either of Sicily or Italy is imported into England. The wines of those countries are, indeed, without, perhaps, a single exception, very inferior to those of France. The natives bestow no care upon the culture of the vine; and their ignorance, obstinacy, and want of skill in the preparation of wine, are said to be almost incredible. In some districts, the art is, no doubt, better understood than in others; but had the Falernian, Cecuban, and other famous ancient wines, not been incomparably better than the best of those that are now produced, they never would have elicited the glowing panegyrics of Horace.

Wines of Greece and Cyprus.—The soil in most parts of Greece and the Grecian islands is admirably fitted for the growth of the vine; and, in antiquity, they produced some of the choicest wines. But the rapacity of the Turks, and the insecurity of person and property that has always prevailed under their miserable government, has effectually prevented the careful cultivation of the vine; and has occasioned, in many places, its total abandonment. It may, however, be fairly presumed, now that Greece has emancipated herself from the iron yoke of her oppressors, that the culture of the vine will attract some portion of that attention to which it is justly entitled; and that, at no distant period, wine will form an important article of export from Greece.

Nowhere, perhaps, has the destructive influence of Turkish barbarism and misgovernment been so apparent as in Candia and Cyprus. While these 2 renowned and noble islands were possessed by the Venetians, they supplied all Europe with the choicest dessert wines. Bacci affirms, that towards the end of the 16th century, Candia sent annually 200,000 casks of malmsey to the Adriatic; whereas at present it hardly produces sufficient to supply the wants of its few impoverished inhabitants.—(Henderson, p. 243.) The wines of Cyprus, particularly those produced from the vineyard called the Commandery, from its having belonged to the Knights of Malta, were still more highly esteemed than those of Crete. In the earlier part of last century, the total produce of the vintage of the island was supposed to amount to above 2,000,000 gallons, of which nearly $\frac{1}{2}$ was exported; but now, the wine grown and exported does not amount to 1-10th part of these quantities! The oppression of which they have been the victims, has reduced the peasantry to the extreme of indigence. The present population of the island is not supposed to exceed 60,000,—a number insufficient to have peopled one of its many ancient cities; and small as this number is, it is constantly diminishing by the inhabitants availing themselves of every opportunity of emigrating. Recently Cyprus has passed into the hands of Mohammed Ali; but unless the Pacha establishes a different government in it from what he has established in Egypt, the miserable inhabitants will gain nothing by the change.—(There is a brief but good account of Cyprus in *Kinneir's Travels in Asia Minor, &c.* pp. 176—197.)

Cape Wines.—Of the remaining wines imported into England, those of the Cape of Good Hope form the largest proportion; the quantity annually entered for home consumption being about 540,000 Imperial gallons. The famous Constantia wine is the produce of 2 contiguous farms of that name, at the base of Table Mountain, between 8 and 9 miles from Cape Town. The wine is very rich and luscious; though, according to Dr. Henderson, it yields, in point of flavour and aroma, to the muscadine wines of Languedoc and Roussillon. But, with this exception, most of the Cape wines brought to England have an earthy disagreeable taste, are often acid, want flavour and aroma, and are, in fact, altogether execrable. And yet this vile trash, being the produce of a British possession, enjoys peculiar advantages in our markets; for while the duty on Cape wine is only 2s. 9d. a gallon, that on all other wines is 5s. 6d. The consequences of this unjust preference are doubly mischievous: in the first place it forces the importation of an article of which little is directly consumed, but which is extensively employed as a convenient menstruum for adulterating and degrading sherry, Madeira, and other good wines; and, in the second place, it prevents the improvement of the wine; for, while the legislature thinks fit to give a bounty on the importation of so inferior an article, is it to be supposed that the colonists should exert themselves to produce any thing better? It is not easy to imagine a more preposterous and absurd regulation. The act enforcing it ought to be entitled, an act for the adulteration of wines in Great Britain, and for encouraging the growth of bad wine in the Cape colony!

Consumption of Wine in Great Britain. Duties.—We have repeatedly had occasion, in the course of this work, to call the reader's attention to the injurious operation of unequal and exorbitant duties. Perhaps, however, the trade in wine has suffered more from this cause than any other department of industry. We have already endeavoured to point out some of the effects resulting from the inequality of the duties, or from the preference so long given to the inferior wines of Portugal and Spain over the superior wines of France. But the exorbitance of the duties was, if possible, still more objectionable than the partial principle on which they were imposed. It appears from the subjoined Table, that during the 3 years ending with 1792, when the duty on French wines was 3s. 9d., and on Portuguese 2s. 6d. per wine gallon, the consumption in Great Britain amounted, on an average, to 7,110,917 gallons a year, producing about 900,000*l.* of revenue. It is probable, had the increase taken place gradually, that these duties might have been doubled without any material diminution of consumption. But in 1795 and 1796 they were raised to 8s. 6d. per gallon on French, and to 5s. 2d. per gallon on

Portuguese and Spanish wine; and the consequence of this sudden and inordinate increase, as exhibited in the Table, was, that the consumption fell from nearly 7,000,000 gallons in 1795, to 5,752,283 gallons in 1796, and to 3,970,901 in 1797! But this unanswerable demonstration of the ruinous effects of heavy and sudden additions to the duties did not prevent them being raised, in 1804, to 11s. 3d. on French, and to 7s. 6d. on Portuguese and Spanish wine. They continued at this rate till 1825; and such was their influence, that, notwithstanding the vast increase of wealth and population since 1790, and the general improvement in the style of living, the total consumption of wine, during the 35 years ending with 1824, amounted, at an average, to only 5,918,767 gallons a year; being no less than 2,162,180 gallons under the annual consumption of the 3 years ending with 1793! It may, therefore, be truly said, making allowance for the increase of population, that the consumption of wine in Great Britain fell off more than fifty per cent. between 1790 and 1824!

If Mr. Vansittart continued in power, it is difficult to say when this system might have terminated; but no sooner had Mr. Robinson (now Lord Ripon) become Chancellor of the Exchequer, than he resolved upon the effortful reduction of the wine duties. In pursuance of this wise determination, Mr. Robinson took, in 1825, nearly 50 per cent. from the previously existing duties; and notwithstanding the spirit duties were at the same time reduced in a still greater degree, the consumption of wine in Great Britain has been increased from little more than 4,150,000 to about 5,300,000 Imperial gallons, while the loss of revenue has been but inconsiderable. We are, therefore, justified in affirming that this measure has been very successful, and that it is a most valuable example of the superior productiveness of low duties.*

The duties, as reduced by Mr. Robinson, were 7s. 3d. per Imperial gallon on French wines, 4s. 10d. per do. on all other foreign wines, and 2s. 5d. on those of the Cape of Good Hope. They continued on this footing till the equalisation act (1 & 2 Will. 4. c. 30), which imposes a duty of 5s. 6d. per Imperial gallon on all foreign wines, and of 2s. 6d. on those of the Cape.

But the equalisation effected by this act might not have been brought about by adding any thing to the duties on port, sherry, &c., but exclusively by reducing those on French wines to their level. The subjoined Tables show that the consumption of wine in the United Kingdom was about stationary from 1820 to 1831; and the addition of 8d. a gallon, that was then made to the duties on all sorts of foreign wine except French, from which 1s. 9d. was deducted, appears to have sensibly affected the consumption of 1832. Considering, indeed, the increasing wealth and population of the British empire, and the more generally diffused use of wine, the small increase of the quantities retained for consumption is not a little surprising. A good deal is, we believe, ascribable to adulteration. It is certain, however, that the duties are still too high; but they are principally objectionable from the mode of their assessment. The trade will never be placed on a proper footing till the duty is imposed on an *ad valorem* principle. The imposition of the same duty on inferior and cheap wines, worth 10l. a hogshead, as on the choicest Burgundy and Champagne, worth 50l. or 60l. a hogshead, is an utterly unjust and absurd principle, that one is astonished it should be maintained for an instant. Its absurdity would not be exceeded, were the same duty charged on small beer that is charged on gin! The effect of this apparently equal, but really most unequal duty, is to exclude all low priced wines from the English markets; and to deprive the middle classes of the gratification derivable from their use. Commercially speaking, Bordeaux is much nearer London than Paris: and, but for this preposterous system, the cheap wines of the Gironde, Languedoc, and Provence might be bought here at a less price than in most parts of France. Were it necessary for the sake of revenue to continue the present system, it might be reluctantly submitted to; but it is abundantly certain, that a fairly assessed *ad valorem* duty would, by increasing the consumption of the middle classes, yield a much larger amount of revenue than is produced by the constant duty: and it is not to be endured, that the trade of the country should be deeply injured, and the enjoyments of the great bulk of the community materially impaired, for no purpose of public utility, but merely that injustice and absurdity may be prolonged! It is said, indeed, that the imposition of an *ad valorem* duty would lead to the commission of fraud; but we have been assured, by those intimate with the customs, that such precautions might easily be adopted as would prevent any danger on this head. And though it were otherwise—though a few thousand gallons of wine were admitted for home consumption at a somewhat lower duty than they ought to have paid—the injury would be of the most trivial kind, and would hardly, indeed, deserve a moment's attention. In the United States, most duties are imposed on an *ad valorem* principle; and it is not alleged that any real difficulty has to be encountered in their collection.

Consumption of Wine in Ireland. Duties.—In 1790, the duties on wine consumed in Ireland were considerably below the level of those imposed in Great Britain, and the average annual quantity of all sorts retained for home consumption in that country amounted to about 1,160,000 Imperial gallons, producing about 138,000*l.* a year of revenue. Had those to whom the government of Ireland was intrusted possessed the slightest knowledge of the merest elements of finance, or of the condition of the Irish people, they would not have attempted to add to the public revenue by augmenting the duties on wine. Owing to the limited number of the middle classes in Ireland, an increase of duty could not be expected to be productive; and though it has yielded 50,000*l.*, or even 100,000*l.* a year additional revenue, that would have been no compensation for the injury it was sure to do in checking the diffusion of that taste for the luxuria and enjoyments so essential to the improvement of the people. But those who had to administer the affairs of Ireland were insensible to such considerations; and never doubted that 2 and 2 make 4 in the arithmetic of the customs as well as in Cocker! Such, indeed, was their almost incredible rapacity, that in the interval between 1791 and 1814, they raised the duty on French wine from 33*l.* 7s. a tun to 144*l.* 7s. 6d.; and that on port from 22*l.* 4s. 8d. to 56*l.* 11s. This was a much more rapid increase than had taken place in England; and as the country was far less able to bear even the same increase, the consequences have been proportionally more mischievous. In 1815, the quantity of wine retained for home consumption in Ireland had declined, notwithstanding the population had been doubled, to 608,000 Imperial gallons, or to about half the quantity consumed in 1790; and in 1824, the consumption had fallen to 467,000 gallons, while the revenue only amounted to 185,000*l.*

It is unnecessary to make any commentary on such statements. But it is mortifying to reflect, that the legislature of a civilized country like Great Britain should have obstinately persevered in such a system for about $\frac{1}{2}$ of a century. We venture to affirm, that those who ransack the financial annals of Turkey and Spain, will find nothing in them evincing in every part greater rapacity, ignorance, and contempt for the public interest, than is displayed in the history of Irish taxation from 1790 to 1819.

The reduction of the duties in 1825 has nearly doubled the consumption of wine in Ireland, and has added considerably to the revenue. The duties are still, however, oppressively high as compared with the means of the population; and hence, notwithstanding the population of Ireland has more than doubled, and the wealth of the country been materially increased in the interval, the quantity of wine

* An article in the Edinburgh Review, No. 80., contributed to bring about this measure. See also an excellent tract on the *Wine Trade*, by Mr. Warre, published in 1821.

ordinate increase, as shown in 1795, to 5,732,383 gallons of the ruinous effluvia, and, in 1804, to 11,514,000 at this rate till 1823; and population since 1790, wine, during the 3 years being no less than 9,162,180 may, therefore, be truly said to be in Great Britain full

retained for home consumption in 1700, exceeded that retained for the same purpose in 1832, by more than 350,000 Imperial gallons! The Irish are particularly attached to French wines; and supposing the duty were fixed on an *ad valorem* principle, so that it should be 3s. 6d. or 4s. a gallon on the finer wines, we have no doubt whatever that the consumption would be speedily doubled or trebled, not only in Ireland, but also in Britain. We subjoin

An Account of the Quantities of all Sorts of Wine retained for Consumption in IRELAND, during the Four Years ending with 1832, and of the Nett Revenue accruing thereon.

Year.	Retained for Consumption.	Revenue.	Year.	Retained for Consumption.	Revenue.
1830	Imp. Gall. 757,381	£. 181,144	1831	Imp. Gall. 757,381	£. 179,218

Rates of duty same in Ireland as in Great Britain, since 1814.

Alteration of Wine.—We have already alluded to this practice. It was prosecuted to a very great extent previously to the reduction of the duties in 1825, and is still very far from being suppressed. It has been affirmed, but we are inclined to suspect the statement of exaggeration, that at this moment more than a third of all the sherry consumed in London is the produce of the *house pressers*! Indeed, wines are every day offered for sale at prices at which every one conversant with the trade knows they could not be afforded were they genuine. Mr. Fleetwood Williams has given, in his valuable pamphlet on the *Wine Trade* (1821), some curious details on this subject.

The imposition of the duties on an *ad valorem* principle, by allowing genuine wine to be sold at low prices, would not be an effectual stop to the practices of the adulterators. The increase of the duties in the reigns of William and Anne first gave birth to this discreditable fraternity—(see a curious account of Addison's, *Tracts*, No. 131.); and it will continue to flourish as long as the duties are imposed on their present footing.

The only security against being imposed upon, is to deal only with respectable houses; with those largely engaged in the trade; and to whom a reputation for selling good wine is of ten times more importance than any thing they could expect to make by adulteration.

Account of the Quantity of French and other Sorts of Wine retained for Home Consumption in GREAT BRITAIN from 1789 to 1832; specifying the Produce of the Duty, and the Rates of Duty thereon.

Measures.—According to the system of wine measures that prevailed down to 1826, the gallon contained 231 cubic inches; the tierce, 42 gallons; the puncheon, 54 gallons; the hoghead, 63 gallons; the pipe or butt, 126 gallons; and the tun, 252 gallons. But in the new system of measures introduced by the act 5 Geo. 4. c. 74, the Imperial standard gallon contains 277.274 cubic inches; so that the tierce = 33 (very nearly) Imperial gallons; the puncheon = 70 (very nearly) do.; the hoghead = 52 (very nearly) do.; the pipe or butt = 105 (very nearly) do.; and the tun = 310 (very nearly) do.—(See WEIGHTS AND MEASURES.)

A very great quantity of wine is sold to the consumer in dozens; and much more, indeed, than is sold in any other way; and yet there is no regulation as to the size of bottles, a defect which has occasioned a great deal of abuse. No one doubts the propriety of making all gallons, bushels, &c. of the same capacity; and why should not similar regulations be enforced in the case of measures so universally used as bottles?

Wine the produce of Europe may not be imported for home consumption, except in British ships, or in ships of the country of which the wine is the produce, or of the country from which it is imported, on forfeiture thereof, and 100l. by the master of the ship.—(3 & 4 Will. 4. c. 54.)

No abatement of duties made on account of any damage received by wine.—(3 & 4 Will. 4. c. 52.)

Wine from the Cape must be accompanied by a certificate of its production.—(See ante, p. 8.)

Wine exported to foreign parts, from the bonded warehouses, must be shipped in vessels of not less than 70 tons burthen.—(3 & 4 Will. 4. c. 57.)

Wine for Officers of Navy.—For the quantity of duty-free wine to be allowed to officers of the navy, and the regulations under which it is to be allowed, see ante, p. 15.

Regulations as to mixing, bottling, &c. in Warehouses.—1. Wines, when deposited in warehouses of special security, or in warehouses situated near the places of landing and shipping, and declared in the order of approval to be substantially built, and capable of affording general accommodation to the trade, may be allowed to be fitted up, lined, and racked, as often as the owners may deem necessary, the lees to be destroyed without payment of duty, the quantities destroyed being correctly ascertained for the purpose of being eventually deducted from the official accounts.

2. Bonded brandy may be allowed to be added to wine in the bonded stores for its preservation or improvement, and the whole to pay duty as wine upon being taken out for home consumption, provided the whole quantity of brandy contained in the wine, at the time of entry for home consumption,

*The other sorts are quite trifling, and do not deserve notice.

do not exceed 30 per cent., and that a proper sample for the purpose of ascertaining the strength be allowed to be taken out by the proper officers.

3. Wines may be allowed to be mixed with wines of the same description as often as necessary for their preservation or improvement; provided that wine so mixed be kept separate from other wine, and that the packages containing the same be branded as mixed wine, and the brand or other marks of the original shipper be affixed.—(*Treasury Order*, 30th of May, 1830.)

Wine may be bottled for exportation in a bonded vault appropriated for the purpose, upon giving 24 hours' notice; but no foreign bottles, corks, or packages may be used, except those in which the wine may have been imported and warehoused, unless the full duties shall have been paid on the same; and not less than 3 dozen reputed quart, or 6 dozen reputed pint bottles, shall be exported in each package; and if any surplus or sediment remain, it is to be immediately destroyed in the presence of the officer, or the full duties paid upon it.—(3 & 4 Will. 4. c. 57., and *Customs Act*, 31st of Dec. 1828.)

The brands or marks on the casks into which wines or spirits may be racked at the bonded warehouses are to be effaced, and no other brand or mark to be retained thereon than those which were on the casks when originally imported.—(*Treasury Order*, 30th of June, 1830.)

(The Oporto Wine Company, described *anté*, p. 741., abolished by a decree dated Lisbon, 30th of May, 1834, has been re-established by the following decree, dated April 7, 1838:—

"1. Dona Maria, by the grace of God Queen of Portugal, &c. do hereby make it known to all my subjects, that the general, extraordinary, and constitutional Cortes have decreed, and I have sanctioned, the following law:—

"Art. 1. The General Company for the culture of the vines in Upper Douro, suppressed by the law of the 30th of May, 1834, is again established for the period of twenty years. This company will, however, merely have the right of proving and lotting the wines of Upper Douro, marking the casks, and issuing transit permits, according to the laws of May 17 and December 20, 1824, modified by the resolutions of December 8, 1834, and November 14, 1836, by which the mode of proving the wines was prescribed.

"Art. 2. Such wines only as shall have been approved of and furnished with a permit by the company, will be allowed to be exported over the bar of Oporto.

"The wine at present in store at Oporto, Villa Nova de Gaia, and in the Douro, shall be manifested immediately after the publication of the law; and, if previously qualified, may be exported over the bar of Oporto, either with or without a permit.

"Art. 3. As a compensation for the expenses to which the company will be put in proving and lotting the wines, branding casks, and issuing permits, they shall be entitled to levy 400 reis upon each pipe of wine receiving a permit. This sum of 400 reis shall be deducted from the amount of duties payable for consumption or exportation; and the company shall be obliged to render an annual account of the receipts and expenses to government, and to hand over the balance if there should be any.

"Art. 4. The company may promote the augmentation of its stock by means of shares, for which purpose the necessary authorisation is to be applied for to government, in whom the company shall also propose whatever else may be necessary for the execution of the law.

"Art. 5. All legislation to the contrary is hereby revoked.

"THE QUEEN.

"ANTONIO FERNANDES COLLO.

"Palace of Newitadon, April 7, 1838."

Wine, Survey of Permits, &c.—The 3 & 4 Will. 4. c. 39, exempts the dealers in and retailers of wine, not being dealers in or retailers of spirits, from the obligation to allow their premises to be entered and their stocks and premises to be surveyed by the officers. It also enacts that a permit shall no longer be necessary for the removal of wine. Licences may be granted by the commissioners of excise to sell wine in theatres, &c.—(See *sup*.)

WOAD (Ger. *Waid*; Du. *Weede*; Fr. *Pastel*, *Guède*, *Youède*; It. *Guadone*, *Guado*, *Glastro*; Sp. *Pastel*, *Glasto*), the *Isatis tinctoria* of botanists, a biennial plant, with a fusiform fibrous root, and smooth branchy stem, rising from 3 to 5 feet in height. Woad is indigenous to most parts of Europe; and was extensively used from a very remote period, down to the general introduction of indigo, in the dyeing of blue. It is still cultivated to a considerable extent in France; but in this country its cultivation is chiefly restricted to a few districts in Lincolnshire. After being bruised by machinery, to express the watery part, it is formed into balls, which ferment and fall into a dry powder, which is sold to the dyer. Woad is now seldom employed without a mixture of indigo. By itself, it is incapable of giving a bright and deep blue colour; but the colour which it does give is very durable. The best methods of conducting the fermentation and preparation of woad are still so very ill understood, that the goodness of any parcel of it can never be ascertained till it be actually used; so that it has the disadvantage of being purchased under the greatest uncertainty as to its true value. At the proper age, indigo plants yield about 30 times as much colouring matter, and of a far superior quality, as an equal weight of woad; so that there is no prospect that any improvement that may be made in its preparation will ever render it, either in goodness or cheapness, a rival of the former.—(*Loudon's Encyc. of Agriculture*; *Baneroff on Colours*, vol. i. p. 187.) We have previously—(see *Iranio*)—given some account of the efforts made by the woad growers to prevent the use of indigo.

WOOL. See *ТІННІА*.

WOOL (Ger. *Wolle*; Du. *Wol*; Da. *Uld*; Sw. *Ull*; Fr. *Laine*; It. and Sp. *Lana*; Port. *Lã*, *Lãa*; Rus. *Wolna*, *Scherst*; Pol. *Wolna*; Lat. *Lana*), a kind of soft hair or down. The term is not very well defined. It is applied both to the fine hair of animals, as sheep, rabbits, some species of goats, the vicuna, &c.; and to fine vegetable fibres, as cotton. In this article, however, we refer only to the wool of sheep,—an article which has continued, from the earliest period down to the present day, to be of primary importance,—having always formed the principal part of the clothing of mankind in most temperate regions.

Species of Wool.—It has been customary in this country to divide wool into 2 great classes—long and short wools; and these again into subordinate classes, according to the fineness of the fibre.

Short wool is used in the cloth manufacture; and is, therefore, frequently called clothing wool. It may vary in length from 1 to 3 or 4 inches: if it be longer, it requires to be cut or broken to prepare it for the manufacture.

The *felting* property of wool is known to every one. The process of hat making, for example, depends entirely upon it. The wool of which hats are made is neither spun nor woven; but locks of it, being thoroughly intermixed and compressed in warm water, cohere and form a solid tenacious substance.

Cloth and woollen goods are made from wool possessing this property; the wool is carded, spun, woven, and then being put into the fulling mill, the process of felting takes place. The strokes of the mill make the fibres cohere; the piece subjected to the operation contracts in length and breadth, and its texture becomes more compact and uniform. This process is essential to the beauty and strength of woollen cloth. But the long wool of which stuffs and worsted goods are made is deprived of its felting properties. This is done by passing the wool through heated iron combs, which takes away the lamina or feathery part of the wool, and approximates it to the nature of silk or cotton.

Long or combing wool may vary in length from 3 to 8 inches. The shorter combing wools are principally used for hose, and are spun softer than the long combing wools; the former being made into which is called hard, and the latter into soft worsted yarn.

The fineness of the hair or fibre can rarely be estimated, at least for any useful purpose, except by the wool sorter or dealer, accustomed by long habit to discern those minute differences that are quite inappreciable by common observers. In sorting wools, there are frequently 8 or 10 different species in a single fleece; and if the best wool of one fleece be not equal to the finest sort, it is thrown to a 2d, 3d, or 4th, or to a still lower sort, of an equal degree of fineness with it. The best English short native fleeces, such as the fine Norfolk and Southdown, are generally divided by the wool sorter into the following sorts, all varying in fineness from each other—viz. 1. Prime; 2. Choice; 3. Super; 4. Head; 5. Down-rights; 6. Seconds; 7. Fine Abb; 8. Coarse Abb; 9. Livery; 10. Short coarse or breech wool. The relative value of each varies, according to the greater demand for coarse, fine, or middle cloths.

The softness of the fibre is a quality of great importance. It is not dependent on the fineness of the fibre; and consists of a peculiar feel, approaching to that of silk or down. The difference in the value of 2 pieces of cloth made of 2 kinds of wool equally fine, but one distinguished for its softness and the other for the opposite quality, is such, that, with the same process and expense of manufacture, the one will be worth from 20 to 25 per cent. more than the other. Mr. Bakewell showed that the degree of softness depends principally on the nature of the soil on which sheep are fed; that sheep pastured on chalk districts, or light calcareous soils, usually produce hard wool; while the wool of those that are pastured on rich, loamy, argillaceous soils, is always distinguished by its softness. Of the foreign wools, the Saxon is generally softer than the Spanish. Hard wools are all defective in their *felting* properties.

In clothing wool, the colour of the fleece should always approach as much as possible to the purest white; because such wool is not only necessary for cloths dressed white, but for all cloths that are to be dyed bright colours, for which a clear white ground is required to give a due degree of richness and lustre. Some of the English fine woolled sheep, as the Norfolk and Southdown, have black or gray faces and legs. In all such sheep there is a tendency to grow gray wool on some part of the body, or to produce some gray fibres intermixed with the fleece, which renders the wool unfit for many kinds of white goods; for though the black hairs may be too few and minute to be detected by the wool sorter, yet when the cloth is stoved they become visible, forming reddish spots, by which its colour is much injured. The Herefordshire sheep, which have white faces, are entirely free from this defect, and yield a fleece without any admixture of gray hairs.

The cleanness of the wool is an important consideration. The Spanish wool, for example, is always scoured after it is shorn; whereas the English wool is only imperfectly washed on the sheep previously to its being shorn. In consequence, it is said that while a pack of English clothing wool of 240 lbs. weight will waste about 70 lbs. in the manufacture, the same quantity of Spanish will not waste more than 48 lbs. Cleanness, therefore, is an object of much importance to the buyer.

Before the recent improvements in the spinning of . . . by machinery, great length and strength of staple was considered indispensable in most combing wools. The fleeces of the long woolled sheep fed in the rich marshes of Kent and Lincoln used to be reckoned peculiarly suitable for the purposes of the wool-comber; but the improvements alluded to have effected a very great change in this respect; and have enabled the manufacturer to substitute short wool of 3 inches staple, in the place of long combing wool, in the preparation of most worsted articles. A great alteration has, in consequence, taken place in the proportion of long to short wool since 1800; there having been in the interim, according to Mr. Hubbard's calculations—(see *post*)—an increase of 132,053 packs in the quantity of the former produced in England, and a decrease of 72,820 in the quantity of the latter.

Whiteness of fleece is of less importance in the long combing than in clothing wool, provided it be free from gray hairs. Sometimes, however, the fleece has a dingy brown colour, called a *winter stain*, which is a sure indication that the wool is not in a thoroughly sound state. Such fleeces are carefully thrown out by the wool sorter; being suitable only for goods that are to be dyed black. The fineness of heavy combing wool is not of so much consequence as its other qualities.

The Merino or Spanish breed of sheep was introduced into this country about the close

of last century. George III. was a great patron of this breed, which was for several years a very great favourite. But it has been ascertained that, though the fleece does not much degenerate here, the carcase, which is naturally ill formed, and affords comparatively little weight of meat, does not improve; and as the farmer, in the kind of sheep which he keeps, must look not only to the produce of wool, but also to the butcher market, he has found it his interest rather to return to the native breeds of his own country, and to give up the Spanish sheep. They have, however, been of considerable service to the flocks of England; having been judiciously crossed with the Southdown, Ryeland, &c.

Deterioration of British Wool.—It appears to be sufficiently established, by the evidence taken before the House of Lords in 1828, and other authorities, that a considerable deterioration has taken place in the quality of British wool, particularly during the last 30 years. The great object of the agriculturist has been to increase the weight of the carcase and the quality of the wool; and it seems very difficult, if not quite impossible, to accomplish this without injuring the fineness of the fleece. Mr. Cully says, that the Herefordshire sheep that produce the finest wool are kept lean, and yield 1½ lb. each; he adds, "if they be better kept, they grow large and produce more wool, but of an inferior quality." This would seem to be universally true. The great extension of the turnip husbandry, and the general introduction of a larger breed of sheep, appears, in every instance, to have loosened the value of the fleeces. Speaking of the Norfolk fleeces, Mr. Fison, a wool sorter, says, that 25 years ago the weight was 2½ lbs. a fleece, and that now it is 3 lbs. or 2½ lbs.—(*Report*, p. 356.) But according to a Table furnished by the same gentleman, containing the results of his experience, it appears that of 15 tods, or 420 lbs. of clothing wool grown in Norfolk, in 1790, 200 lbs. were *prime*, while, in 1828, the same quantity of Norfolk wool only yielded 14 lbs. *prime*!—(*Ibid.* p. 207.) The statements of other witnesses are to the same effect.—(*Ibid.* pp. 338, 640, and 644.) According to the estimate in Mr. Luccock's *Treatise on English Wool*, which has always enjoyed the highest reputation, the produce of all sorts of wool in England, in 1800, was 384,000 packs, of 240 lbs. a pack. But Mr. Hubbard, a very intelligent and extensive wool-stapler at Leeds, has shown, that, supposing Mr. Luccock's estimate of the number of sheep to be correct, the quantity of wool now produced cannot, owing to the greater weight of the fleece, be estimated at less than 463,169 packs; being an increase of 20 per cent. ! It is, therefore, probable, notwithstanding the decline in the price of wool, that, taking into account the greater weight of the carcase, and the greater weight of the fleeces, sheep produce more at present to the farmer than at any former period.

Number of Sheep in Great Britain.—It is not possible to form any accurate estimate, either of the number of sheep, or of the quantity of wool annually produced. With the exception of Mr. Luccock's, most of the statements put forth with respect to both these points seem much exaggerated. But Mr. L.'s estimate, which is considerably under any that had previously appeared, was drawn up with great care; and is supposed to approach near to accuracy. According to Mr. Luccock, the

Number of long woolled sheep in England and Wales in 1800, was	4,153,308	
of short woolled ditto	14,854,399	
Total number shorn		19,007,607
Slaughter of short woolled sheep per annum	4,221,748	
Carrion of ditto	211,087	
Slaughter of long woolled ditto	1,180,413	
Carrion of ditto	59,020	
Slaughter of lambs	1,400,560	
Carrion of ditto	70,093	
		7,140,856
Total number of sheep and lambs	26,148,463	

In some parts of England there has been an increase in the number of sheep since 1800, and in others they have decreased. But we have been assured by competent judges, that, on the whole, the number has not materially varied in the interim.

During the last half century a very decided increase has taken place in the number of sheep in Scotland, and a very great improvement in the breed, particularly in the Highlands. In this district, many of the proprietors have let their estates in large farms to *store farmers*, who have introduced the Cheviot breed of sheep, in the place of the small black-faced heath breed that was formerly the only one to be met with. We may remark, by the way, that a good deal of unmerited odium has attached to the patrons of this system; for, though it be true that, in a few instances, the peasantry were rudely ejected from their little possessions, there can be no doubt that it has, on the whole, been decidedly advantageous. Besides rendering large tracts of country more valuable to the proprietors and the public generally, the condition and habits of the peasantry have been materially improved. Instead of loitering away more than half their time, as was their former practice, they have now either become the servants of the large farmers, or have resorted to towns and villages, and been metamorphosed into industrious tradesmen, fishermen, &c. A very small proportion of the whole has emigrated; and the country is more populous at present than before the sheep farming system began.

In the *General Report of Scotland* (vol. iii. Appen. p. 6.), the number of sheep is estimated at 2,850,000; and allowing for the increase that has taken place since 1814, we may, perhaps, estimate the total number of sheep in that part of the empire at this moment at 3,500,000.

According to Mr. Wakefield, there is not a single flock of breeding sheep in the whole province of Ulster.—(*Account of Ireland*, vol. i. p. 341.) And though there be considerable flocks in Roscommon and other counties, we believe that, if we estimate the whole number of sheep in Ireland at 2,000,000, we shall be a good deal beyond the mark.

On the whole, therefore, if we are right in these estimates, the total number of sheep in Great Britain and Ireland may be taken at about 32,000,000. This estimate is 10,000,000 under that given by Dr. Colquhoun for 1812; but that learned person assigns no grounds whatever for his estimate, which is utterly inconsistent with all the really authentic information on the subject. It is curious enough to observe the German statistical writers referring to Dr. Colquhoun's statements, as if they were of standard authority. They would be about as near the mark, were they to quote the "Arabian Nights" in proof of any disputed historical fact.

British Trade in Wool.—From 1660 down to 1825, the export of wool was strictly prohibited. A notion grew up towards the end of the 17th, and continued to gain ground during the first half of last century, that the wool of England was superior to that of every other country; that long wool could not be produced anywhere else; and that, if we succeeded in keeping the raw material at home, we should infallibly command the market of the world for our woollen manufactures. In consequence, innumerable statutes were passed,—the enactments in some of which were the most arbitrary and severe that can be imagined,—to prevent the clandestine exportation of wool. Mr. John Smith was one of the first who, in his excellent work, entitled *Memoirs of Wool*,* exposed the injustice and absurdity of this system, by proving that whatever advantages the manufacturers might gain by preventing the exportation of wool, were more than lost by the agriculturists. But in despite of Mr. Smith's reasonings, which were enforced by many later writers, and which experience had proved to be in all respects accurate, the prohibition of the exportation of wool was continued till 1825, when Mr. Huskisson happily succeeded in procuring the abolition of this miserable remnant of a barbarous policy. The improvement of machinery, by enabling short or clothing wool to be applied to most of those purposes for which long or combing wool had been exclusively appropriated, had annihilated the only apparently tenable argument on which the prohibition of exportation had ever been vindicated; and even this, it will be observed, applied only to a small proportion of the whole wool produced in England.

Down to 1802, the importation of foreign wool into Great Britain had been quite free; and, being the raw material of an important manufacture, the policy of allowing it to be imported free of duty is obvious. In 1803, however, a duty of 5s. 3d. a cwt. was laid on all foreign wool imported. In 1813, this duty was raised to 6s. 8d.; and in 1819, Mr. Vansittart raised it to the enormous amount of 56s. a cwt., or to 6d. per lb.! Had English wool sufficed for all the purposes of the manufacture, such a duty would have been less objectionable; but the very reverse was the case. The use of foreign wool had become, owing to the deterioration of British wool, and other circumstances, quite indispensable to the prosecution of the manufacture: and as our superiority over the foreigner in several departments of the trade was by no means decided, it is plain that the imposition of a duty which amounted to about 50 per cent. upon the price of a considerable quantity of the wool we were obliged to import, must, had it been persevered in, have ruined the manufacture. It occasioned, indeed, during the period of its continuance, a considerable decline of the exports of woollens, and was productive of other mischievous effects, from which the manufacture suffered for a considerable period after it was repealed.

The evidence as to the absolute necessity of employing foreign wool, taken before the Lords' committee, was as decisive as can well be imagined. Mr. Gott, of Leeds, one of the most extensive and best informed manufacturers of the empire, informed the committee, that, in his own works, he used only foreign wool. On being asked whether he could carry on an export trade to the same extent as at present, if he manufactured his cloth of British wool, Mr. G. replied, that, in certain descriptions of cloth, "he could not make an article that would be merchantable at all for the foreign market, or even for the home market, except of foreign wool." We subjoin a few additional extracts from the evidence of this most competent witness.

"Can you give the committee any information with respect to the competition that now exists between foreigners and this country in woollen cloths?"—"I think the competition is very strong. In some instances, the foreigner has, probably, the advantage; and in others, the superiority of the British manufacture, I think, has greatly the advantage; and that would apply, I should say, particularly to the fine cloths of Great Britain compared with

* This learned and accurate work contains a great deal of information with respect to the progress of manufactures and commerce in England.

number of sheep is estimated since 1814, we may, I presume at this moment at

the number of sheep in the whole country there be considerable ground to estimate the whole number at no mark.

The total number of sheep in the country is estimated to be 10,000,000. No person assigns no grounds for a really authentic information. Statistical writers referring to the wool. They would be about the proof of any disputed history

of wool was strictly prohibited. It is continued to gain ground superior to that of every other; and that, if we succeed in commanding the market of innumerable states were very easy and severe that can be done. John Smith was one of the witnesses who exposed the injustice and the manufacturers might be aided by the agriculturists. But any later writers, and which would be the ruin of the exportation of wool. It succeeded in procuring the improvement of machinery for most of those purposes for which had annihilated the only spinners had ever been vindicated; and the ruin of the whole wool pro-

duction in Britain had been quite free; and the policy of allowing it to be sold for 5s. 3d. a cwt. was laid on in 1819, Mr. Vanper lb. Had English wool would have been less objectionable. Foreign wool had become, owing to its being quite indispensable to the manufacturer in several departments of the wool trade, the imposition of a duty which would have ruined the manufacture. It was a considerable decline of the exports from which the manufacture

of foreign wool, taken before the evidence of Mr. Gott, of Leeds, one of the witnesses, informed the committee, that he did not think he could carry on the manufacture of his cloth of British wool could not make an article for even for the home market, as appears from the evidence of this

to the competition that now exists. "I think the competition is not to the advantage; and in others, it is to the advantage; and that Great Britain, compared with other countries, is in a position with respect to the progress

foreign cloths: in some descriptions of low cloths, the foreigners are nearly on a footing, and in some instances, perhaps, superior to us."

"Speaking of the finer cloths, is the competition such as to render an additional duty on the importation of foreign wool, likely to injure the export trade?"—"I have no doubt, speaking on my oath, that it would be fatal to the foreign cloth trade of the country. I would say further, that it would be equally injurious to coarse manufactures of all kinds made of English wool. The competition now with foreigners is as nearly balanced as possible; and the disturbing operation of attacks of that description would necessarily enable the foreigner to buy his wool cheaper than we should do it in this country; the result would be, that foreigners would, by such a premium, be enabled to extend their manufactures, to the exclusion of British manufactures of all descriptions."

In another part of his evidence, Mr. Gott says,—"If 2 pieces of cloth at 10s. a yard were put before a customer, one made of British wool, the other of foreign wool, one would be sold, and the other would remain on hand: I could not execute an order with it. If any person sent to me for cloth of 7s. or 8s. a yard, and it were made of English wool, it would be sent back to me, and I should resort to foreign wool or foreign mixed with British, to execute that order."

On Mr. Gott being asked whether, in his opinion, the price of British wool would have been higher, had the duty of 6d. per lb. on foreign wool been continued, he answered,—"My opinion is, that the price of British wool would have been less at this time; the demand for British wool would have been very much less. *British manufactures would have been shut out of every foreign market*; and the stock of wool would have accumulated, as it will do if ever that duty be imposed again."—(*Mr. Gott's Evidence*, pp. 292, 293.)

The view taken by Mr. Gott of the effect of the importation of foreign wool on the price of British wool was supported by the concurrent testimony of all the manufacturing witnesses examined by the committee. Blankets, flannels of all sorts, haizes, carpets, bearskins, &c. are made principally of English wool; and the command of foreign wool enables the manufacturer to use a considerable quantity of English wool in the manufacture of certain descriptions of cloth, which, if made entirely of it, would be quite unsaleable. On Mr. Goodman, a wool-stapler of Leeds, being asked whether, if a duty were laid on foreign wool, it would force the use of English wool in the manufacture of cloths, from which it is now excluded, he answered,—"Certainly not: we could not get people to wear such a cloth they want a better, finer cloth; it is so much handsomer in its wear, and so much more durable."—(*Report*, p. 241.) Mr. Francis, of Heytesbury, declared that there was no demand for cloth made wholly of British wool; that it was principally applicable to the manufacture of blankets, haizes, &c.; and that the exclusion of foreign wool would only injure the manufacture, without raising the price of British wool.—(p. 268.) Statements to the same effect were made by Mr. Webb (p. 270.), Mr. Sheppard (p. 294.), Mr. Ireland (p. 319.), and, in short, by every one of the witnesses conversant with the manufacture.

The history of the manufacture since 1828 has completely confirmed the accuracy of the statements made by Mr. Gott and the other witnesses. Its progress from that period down to the present time has been one of uninterrupted prosperity; and so far from having been injured by the immense importations that have been made of foreign wool, the price of British wool is higher at this moment (March, 1834,) than at any former period! We believe, indeed, that it has now attained an unnatural elevation; and that its extreme high price, by making a corresponding addition to the price of cloth, will react on the manufacture, and will, consequently, by occasioning its depression, lower wool to a more moderate level.

Foreign Wool imported into England.—A very great change has taken place, within the course of the present century, both as respects the quantity of foreign wool imported, and the countries whence it is derived. Previously to 1800, our average imports of wool did not much exceed 3,000,000 lbs., mostly brought from Spain; the wool of which has long maintained a high character. In 1800, our imports amounted to near 9,000,000 lbs.; and they have since gone on gradually increasing, till they now amount to between 25,000,000 and 40,000,000 lbs. Instead, however, of being principally derived from Spain, as was the case down to 1814, the greater part of this immense supply of foreign wool is now furnished by Germany. The late king of Saxony, when elector, introduced the breed of Merino sheep into his dominions, and exerted himself to promote the growth of this valuable race of animals. His praiseworthy efforts have been crowned with the most signal success. The Merino sheep seem to succeed better in Saxony and other German states than in Spain; and have increased so rapidly, that the Spanish wool trade has become insignificant compared with that of Germany! The importations of German wool were quite trifling during the war—amounting, in 1812, to only 28 lbs.; but since the peace they have increased beyond all precedent. In 1814, they amounted to 3,432,456 lbs.; in 1820, they were 5,113,442 lbs.; in 1825, they reached the enormous amount of 28,799,661 lbs.; but this being a year of overtrading, they declined, in 1826, to 10,645,232 lbs. They have since, however, recovered from this depression; and, in 1833, amounted to 25,370,106 lbs.—(There is a very good account of the German wool trade in the *Foreign Quarterly Review*, No. xi. art. 8.)

The breed of sheep that was carried out to New South Wales and Van Diemen's Land has succeeded remarkably well; and Australia promises, at no distant day, to be one of the principal wool-growing countries of the world. The imports into Great Britain have been rapidly increasing. In 1833, they amounted to 3,516,869 lbs., while the imports from Spain only amounted to 3,339,150 lbs. The Spanish fleeces suffered severely during the campaigns in Spain; and the best Spanish wool does not now bring more than $\frac{1}{2}$ the price of the best German wool.

[The value of the wool imported into the United States, in the year ending September 30th, 1839, not exceeding 8 cents per pound, amounted to \$627,620, and, exceeding that rate, to \$171,918, both together not much exceeding the value of the wool produced in Massachusetts alone. This amounted, in 1837, to \$539,689.—*Am. Ed.*]

WOOLLEN MANUFACTURE, the art of forming wool into cloth and stuffs. This has always ranked as an important branch of national industry; and, until it was recently surpassed by the cotton manufacture, was decidedly the most important of all the manufactures carried on in England.

Rise and Progress of the British Woollen Manufacture. Exports.—There can be no doubt that the arts of spinning wool, and manufacturing the yarn into cloth, were introduced into England by the Romans,—the inhabitants being previously clothed only in skins. From the period of the Romans quitting England, down to the 10th century, there are no notices of the manufacture; and those relating to the period from the 10th to the 13th century are but few and imperfect. It is certain, however, that the manufacture of broad cloths was established soon after the year 1200, if not previously.—(*Smith's Memoirs of Wool*, vol. i. p. 17.) But the woollen manufactures of Flanders being at this period, and long afterwards, in a comparatively advanced state, English wool was exported in large quantities to Bruges and other Flemish cities, whence fine cloths and other products were brought back in exchange. Edward III. took the most judicious measures for improving the English manufacture, by inviting over Flemish weavers, fullers, dyers, and others, and protecting them from the assaults of the rabble. Shortly after the first emigration of Flemings, or in 1337, an act was passed, prohibiting the wear of any cloths made beyond seas, and interdicting the export of English wool.—(*Ibid.* vol. i. p. 25.) But in these turbulent times such restraining acts were little better than a dead letter; and this, indeed, was soon after repealed.—(*Ibid.* vol. i. pp. 32, 30.) From this remote period the manufacture has always been regarded as of primary importance, and has been the object of the especial solicitude of the legislature. It may be doubted, however, whether it has derived any real advantage from the numberless statutes that have been passed in the view of contributing to its advancement. With the exception, indeed, of the prohibition of the export of English wool, which was finally put a stop to in 1660, the other acts, being mostly intended for the regulation of the manufacture, could not be otherwise than mischievous; and the benefit derived by the manufacturers from the prohibition was more apparent than real; inasmuch as it occasioned a diminished growth of wool, at the same time that it was impossible to prevent its clandestine exportation. Mr. Smith has proved that the manufacture made a far more rapid progress during the reign of Elizabeth, when wool might be freely carried out of the kingdom, than it ever did during any equal period subsequent to the restriction on exportation. Foreign wool began to be imported in small quantities in the 13th century.

At first, the manufacture seems to have been pretty equally distributed over the country. In an insurrection that took place in 1525, more than 4,000 weavers and other tradesmen are said to have assembled out of Laneham, Sudbury, and other towns in Suffolk. The manufacture had been previously introduced into Yorkshire. In 1533, an act was passed (34 & 35 Hen. 8. c. 10.), reciting, "that the city of York afore this time had been upholden principally by making and weaving of coverlets, and the poor thereof daily set on work in spinning, carding, dyeing, weaving, &c.;" that the manufacture, having spread into other parts, was "thereby debased and discredited;" and enacting, as a remedy for this evil, that henceforth "none shall make coverlets in Yorkshire, but inhabitants of the city of York!"

This may be taken as a fair specimen of the commercial legislation of the time. Indeed, it was enacted, nearly at the same period, that the manufacture should be restricted, in Worcestershire, to Worcester and 4 other towns. Worsted goods, so called from Worsted, now an inconsiderable town in Norfolk, where the manufacture was first set on foot, were produced in the reign of Edward II., or perhaps earlier; but Norwich soon after became, and, notwithstanding the competition of Bradford, probably is still, the principal seat of this branch of the manufacture. In an act of Henry VIII. (33 Hen. 8. c. 16.), worsted yarn is described as "the private commodity of the city of Norwich." In 1614, a great improvement took place in the woollen manufacture of the west of England, by the invention of what is called medley or mixed cloth, for which Gloucestershire is still famous. During the reign of Charles II., there were many, though unfounded, complaints of the decay of the manufacture; and, by way of encouraging it, an act was passed (30 Car. 2. st. i. c. 3.), ordering that all persons should be buried in woollen shrouds! This act, the provisions of which were subsequently enforced, preserved its place on the statute book for more than 130 years!

Towards the end of the 17th century, Mr. Gregory King and Dr. Davenant—(*Davenant's Works*, Whitworth's ed. vol. ii. p. 233)—estimated the value of the wool shorn in England at 2,000,000*l.* a year; and they supposed that the value of the wool (including that imported from abroad) was quadrupled in the manufacture; making the entire value of the woollen articles annually produced in England and Wales, 8,000,000*l.*, of which about 2,000,000*l.* were exported. In 1700 and 1701, the official value of the woollens exported amounted to about 3,000,000*l.* a year. Owing to the vast increase of wealth and population, the manufacture must have been very greatly extended during last century; but the increase in the amount of exports was comparatively inconsiderable. At an average of the 6 years ending with 1789, the official value of the exports was 3,544,160*l.* a year, being only about 540,000*l.* above the amount exported in 1700. The extraordinary increase of the cotton manufacture soon after 1780, and the extent to which cotton articles then began to be substituted for those of wool, though it did not occasion any absolute decline of the manufacture, no doubt contributed powerfully to check its progress. In 1802, the official value of the exports rose to 7,321,012*l.*, being the largest amount they ever reached till 1833, when they amounted to 7,777,952*l.* During the last few years, indeed, every branch of the manufacture has been in a state of unexampled improvement and extension. It was supposed that the high price of wool would give it a temporary check; but such has not hitherto been the case. During the 6 years ending with 1835, the official and real values of the woollen manufactures exported from the United Kingdom have been as under:—

	1800.	1831.	1839.	1833.	1834.	1835.
Official value of woollen manufactures exported. - - - -	£ 5,558,709	£ 6,097,558	£ 6,544,576	£ 7,777,952	£ 6,514,704	£ 7,406,909
Declared or real value of ditto -	4,850,684	5,237,701	5,239,992	6,289,649	5,736,870	6,840,511

Value of the Manufacture. Number of Persons employed.—The most discordant estimates have been given as to both these points. For the most part, however, they have been grossly exaggerated. In a tract published in 1739, entitled *Considerations on the Running (Smuggling) of Wool*, the number of persons engaged in the manufacture is stated at 1,500,000, and their wages at 11,737,560*l.* a year. Dr. Campbell, in his *Political Survey of Great Britain*, published in 1774, observes,—"Many computations have been made upon this important subject, and, amongst others, one about 30 years since, which, at that time, was thought to be pretty near the truth. According to the best information that can be obtained, there may be from 10,000,000 to 12,000,000 sheep in England, some think more. The value of their wool may, one year with another, amount to 3,000,000*l.*; the expense of manufacturing this may probably be 3,000,000*l.*, and the total value 12,000,000*l.* We may export annually to the value of 3,000,000*l.*, though one year we exported more than 4,000,000*l.* In reference to the number of persons who are maintained by this manufacture, they are probably upwards of 1,000,000. Sanguine men will judge these computations too low, and few will believe them too high."—(Vol. ii. p. 158.) But the moderation displayed in this estimate was very soon lost sight of. In 1800, the woollen manufacturers objected strenuously to some of the provisions in the treaty of union between Great Britain and Ireland, and were allowed to urge their objections at the bar of the House of Lords, and to produce evidence in their support. Mr. Law (afterwards Lord Ellenborough), the counsel employed by the manufacturers on this occasion, stated, in his address to their Lordships, on information communicated to him by his clients, that 600,000 pecks of wool were annually produced in England and Wales, worth, at 11*l.* a peck, 6,600,000*l.*; that the value of the manufactured goods was 3 times as great, or 19,800,000*l.*; that not less than 1,500,000 persons were immediately engaged in the operative branches of the manufacture; and that the trade collaterally employed about the same number of hands.—(*Account of the Proceedings of the Merchants, Manufacturers, &c.* p. 34.)

It is astonishing that reasonable men, conversant with the manufacture, should have put forth such ludicrously absurd statements. We have already seen that the quantity of wool

produced in England and Wales, in 1800, did not really amount to 400,000 pecks; and the notion that three out of the nine millions of people then in the country were directly and indirectly employed in the manufacture, is too ridiculous to deserve notice, though it was generally acquiesced in at the time.—(See Middleton's Survey of Middlesex, 2d ed. p. 614; Adolphus's Political State of the British Empire, vol. iii. p. 236.)

Mr. Stevenson, who is one of the very few writers on British statistics to whose statements much deference is due, has given the following estimate of the value of the woollen manufactured goods annually produced in England and Wales, and of the interest, &c. of the capital, and the number of persons employed in the manufacture—

Total value of manufactured articles	£ 18,000,000
Value of raw material	£ 6,000,000
Interest on capital, sum to replace its wear and tear, and manufacturers' profits	2,400,000
Wages of workmen	9,600,000
	£ 18,000,000
Number of people employed, 480,000, or perhaps 500,000.	

But even this estimate requires to be materially modified. Taking Scotland into account, and allowing for the increase of population and of exportation since Mr. Stevenson's estimate was made, the total value of the various descriptions of woollens annually produced in Great Britain may, at present, be moderately estimated at from 20,000,000*l.* to 22,000,000*l.*, or 21,000,000*l.* at a medium. We have further been assured by the highest practical authorities, that Mr. Stevenson's distribution of the items is essentially erroneous; and that, assuming the value of the manufacture to be 21,000,000*l.*, it is made up nearly as follows:—

Total value of manufactured articles	£ 21,000,000
Value of raw material	£ 7,000,000
Oil, soap, dye stuffs, &c.	1,450,000
Wear and tear of capital, and profit	4,250,000
Wages	8,300,000
	£ 21,000,000

At present, the average wages of the people employed may be taken at about 25*l.* a year, making the total number employed 332,000. And, however small this may look as compared with former estimates, we believe it is fully up to the mark, if not rather beyond it.

Most of the innumerable statutes formerly passed for the regulation of the different processes of the manufacture have been repealed within these few years; and the sooner every vestige of the remainder disappears from the statute book, the better.

I. Account of the Quantities of each Description of Woollen Manufactures exported from the United Kingdom in 1835; specifying the Quantities and Total Value of those sent to each Country.

WOOLLEN MANUFACTURE.

761

II. Summary Account of the Quantity and declared Value of the Woollen Yarn; and of the Quantities of the different Descriptions of Woollen Manufactures, with the Total declared Value of the same, exported from the United Kingdom, in each Year from 1850 to 1853, both inclusive.

Year	Woollen Manufactures.												
	Woollen and Worsted Yarn.		Cloths of all Sorts.	Napped Cloths, Duckings, &c.	Kerseys, Merinos, and Balans.	Stuffs, Woollens or Worsted.	Flannels.	Blankets and Blanketing.	Carpeting and Carpeting.	Woollens mixed with Cottons.	Hosiery and Stockings, Woollen or Woad.	Hosiery consisting of Bags, Tapes, &c.	Total declared Value of Woollen Manufactures.

The exemption from the export duty of 10s. per cent. enjoyed by woollen goods, or goods of wool and cotton or wool and linen, exported to places within the limits of the East India Company's charter, has been repealed by the 4 & 5 Will. 4. c. 89. § 18.—(Sup.)

[The value of the woollen manufactures imported into the United States during the year ending the 30th of September, 1839, amounted to \$10,646,067. See Imports and Exports—Am. Ed.]

WRECK, in navigation, is usually understood to mean any ship or goods driven ashore, or found floating at sea in a deserted or unmanageable condition. But in the legal sense of the word in England, *wreck* must have come to land; when at sea, it is distinguished by the barbarous appellations of *flotsam, jetsam, and lagan*.—(See *FLOTSAM*.)

In nothing, perhaps, has the beneficial influence of the advance of society in civilisation been more apparent than in the regulations with respect to the persons and property of shipwrecked individuals. In most rude and uncivilised countries, their treatment has been cruel in the extreme. Amongst the early Greeks and Romans, strangers and enemies were regarded in the same point of view.—(*Hostis apud antiquos, peregrinus dicebatur*.—*Pomp. Festus*; see also *Cicero de Offic. lib. l. c. 12.*) Where such inhospitable sentiments prevailed, the conduct observed towards those that were shipwrecked could not be otherwise than barbarous; and in fact they were, in most instances, either put to death or sold as slaves. But as law and good order grew up, and commerce and navigation were extended, those who escaped from the perils of the sea were treated in a way less repugnant to the dictates of humanity: and at length the Roman law made it a capital offence to destroy persons shipwrecked, or to prevent their saving the ship; and the stealing even of a plank from a vessel shipwrecked or in distress, made the party liable to answer for the whole ship and cargo.—(*Pand. 47. 9. 3.*)

During the gloomy period which followed the subversion of the Roman empire, and the establishment of the northern nations in the southern parts of Europe, the ancient barbarous practices with respect to shipwreck were every where renewed. Those who survived were in most countries reduced to servitude; and their goods were every where confiscated for the use of the lord on whose manor they had been thrown.—(*Robertson's Charles V. vol. i. note 29.*) But nothing, perhaps, can so strongly evince the prevalence and nature of the enormities, as the efforts that were made, as soon as governments began to acquire authority, for their suppression. The regulations as to shipwreck in the Laws of Oleron are, in this respect, most remarkable. The 35th and 38th articles state, that "Pilots, in order to ingratiate themselves with their lords, did, like faithless and treacherous villains, sometimes willingly run the ship upon the rocks, &c.;" for which offence they are held to be accused and excommunicated, and punished as thieves and robbers. The fate of the lord is still more severe. "He is to be apprehended, his goods confiscated and sold, and himself fastened to a post or stake in the midst of his own mansion house, which being fired at the four corners, all shall be burned together; the walls thereof be demolished; the stones pulled down; and the site converted into a market place, for the sale only of hogs and swine, to all posterity." The 31st article recites, that when a vessel was lost by running on shore, and the mariners had landed, they often, instead of meeting with help, "were attacked by people more barbarous, cruel, and inhuman, than mad dogs; who, to gain their monies, apparel, and other goods, did sometimes murder and destroy these poor distressed seamen. In this case, the lord of the country is to execute justice, by punishing them in their persons and their estates; and is commanded to plunge them in the sea till they be half dead, and then to have them drawn forth out of the sea, and stoned to death."

Such were the dreadful severities by which it was attempted to put a stop to the crimes against which they were directed. The violence of the remedy shows better than any thing else how inveterate the disease had become.

The law of England, like that of other modern countries, adjudged wrecks to belong to the king. But the rigour and injustice of this law was modified so early as the reign of Henry I., when it was ruled, that if any person escaped alive out of the ship, it should be no wreck. And after various modifications, it was decided, in the reign of Henry III., that if goods were cast on shore, having any marks by which they could be identified, they were to revert to the owners, if claimed any time within a year and a day. By the statute 27 Edw. 3. c. 12., if a ship be lost and the goods come to land, they are to be delivered to the merchants, paying only a reasonable reward or SALVAGE (which see) to those who saved or preserved them. But these ancient statutes, owing to the confusion and disorder of the times, were very ill enforced; and the disgraceful practices previously alluded to, continued to the middle of last century. A statute of Anne (19 Ann. st. 2. c. 18), confirmed by the 4 Geo. 1. c. 12., in order to put a stop to the atrocities in question, orders all head officers and others of the towns near the sea, upon application made to them, to summon as many hands as are necessary, and send them to the relief of any ship in distress, on forfeiture of 100*l.*; and in case of any assistance given, salvage is to be assessed by 3 justices, and paid by the owners. Persons secreting any goods cast ashore, are to forfeit treble their value; and if they wilfully do any act whereby the ship is lost or destroyed, they are guilty of felony without benefit of clergy. But even this statute seems not to have been sufficient to accomplish the end in view; and in 1753, a new statute (26 Geo. 2. c. 19) was enacted, the preamble of which is as follows:—"Whereas, notwithstanding the good and salutary laws now in being against plundering and destroying vessels in distress, and against taking away shipwrecked, lost, or stranded goods, many wicked enormities have been committed, to the disgrace of the nation, and the grievous damage of merchants and mariners of our own and other countries, be it," &c.; and it is then enacted, that the preventing of the escape of any person endeavouring to save his life, or wounding him with intent to destroy him, or putting out false lights in order to bring any vessel into danger, shall be capital felony. By the same statute, the pilfering of any goods cast ashore is made petty larceny.

By statute 1 & 2 Geo. 4. c. 75. it is enacted, that any person or persons wilfully cutting away, injuring, or removing any buoy or buoy rope attached to any anchor or cable belonging to any ship, whether in distress or otherwise, shall be judged guilty of felony, and may, upon conviction, be transported for 7 years.

(For an account of the sums to be paid to those assisting in the saving of wreck, see art. SALVAGE)

in this Dictionary; see also the chapter on Salvage in Mr. Abbott's (*Lord Tenterden's*) work on the *Law of Shipping.*)

Number of Shipwrecks.—The loss of property by shipwreck is very great. It appears from an examination of *Lloyd's List* from 1798 to 1832, that the losses in the British mercantile navy only amounted, at an average of that period, to about 857 vessels a year, of the aggregate burden of about 66,000 tons, or to about 1-40th part of its entire amount in ships and tonnage. The following account of the casualties of British shipping in 1832 is taken from *Lloyd's List*:—*As Foreign Voyages.*—157 wrecked; 284 driven on shore, of which 294 are known to have been got off, and probably more; 21 foundered or sunk, 1 run down; 25 abandoned at sea, 8 of them afterwards carried into port; 12 condemned as unseaworthy; 6 upset, 1 of them righted; 37 missing, 1 of them a packet, no doubt foundered. *Coasters and Colliers.*—109 wrecked; 297 driven on shore, of which 121 known to have been got off, and probably many more; 67 foundered or sunk, 4 of them raised, 6 run down; 13 abandoned, 5 of them afterwards carried in; 3 upset, 2 of them righted; 16 missing, no doubt foundered. During the year, 4 steam vessels were wrecked; 4 driven on shore, but got off; and 2 sunk.

Of the prodigious number of ships that are thus annually engulfed, many are laden with valuable cargoes; and besides the immense loss of property, there is also a very great loss of life. It is believed, that a little more strength in the building, and care in the selection of the masters, would obviate many of these calamities. And nothing, we are assured, would contribute so much to improve the fabric of ships, as the adoption of the plan we have elsewhere recommended (p. 467.), of showing them to be built in bond, free of all duty.

During the last war with France, 32 ships of the line went to the bottom, besides 7 fifty-gun ships, 86 frigates, and a vast number of smaller vessels. And the losses sustained by the navies of France, Spain, Holland, Denmark, &c. must have very greatly exceeded those of ours. Hence, as Mr. Lyell has observed, it is probable that a greater number of monuments of the skill and industry of man will, in the course of ages, be collected together in the bed of the ocean, than will be seen at one time on the surface of the continents.—(*Principles of Geology*, 2d ed. vol. II. p. 265.)

Y.

YARD, a long measure used in England, of 3 feet, or 36 inches.—(See **WEIGHTS AND MEASURES**.)

YARN (*Ger. Garn; Du. Garen; Fr. Fil; It. Filato; Sp. Hilo; Port. Fio; Rus. Prasha*), wool, cotton, flax, &c. spun into thread.

Z.

ZAFFER, or **ZAFRE**. After the sulphur, arsenic, and other volatile parts of cobalt have been expelled by calcination, the residuum is sold, mixed or unmixed with fine sand, under the above name. When the residuum is melted with siliceous earth and potash, it forms a kind of blue glass, known by the name of smaltz.—(see **SMALTZ**),—of great importance in the arts. When smaltz is ground very fine, it receives in commerce the name of *powder blue* Zaffer, like smaltz, is employed in the manufacture of earthenware and China, for painting the surface of the pieces a blue colour. It suffers no change from the most violent fire. It is also employed to tinge the crystal glasses, made in imitation of opaque and transparent precious stones, of a blue colour. It is almost wholly brought from Germany.

Account of the Zaffer imported, exported, and retained for Home Consumption, with the Nett Duty thereon, in 1831 and 1832.

Years.	Imports.	Exports.	Retained for Consumption.	Duty.
	<i>Lbs.</i>	<i>Lbs.</i>	<i>Lbs.</i>	<i>£.</i>
1831	227,512	115	227,893	950
1832	206,935	448	263,952	417

The duty was reduced, in 1832, from 9s. 4d. to 1s. a cwt.

ZEAL, INDIAN CORN, OR MAIZE. See **MAIZE**.

ZEDOARY (*Ger. Zittuer; Fr. Zédoaire; It. Zedonia; Sp. Cedonia; Arab. Judwar; Hind. Nirbizi*), the root of a plant which grows in Malabar, Ceylon, Cochin-China, &c., of which there are 3 distinct species. It is brought home in pieces of various sizes, externally wrinkled, and of an ash colour, but internally of a brownish red. Those roots which are heavy and free from worms are to be chosen; rejecting those which are decayed and broken. The odour of Zedoary is fragrant, and somewhat like that of camphor; the taste biting, aromatic, and bitterish, with some degree of acrimony. It was formerly employed in medicine; but is scarcely ever used by modern practitioners.—(*Milburn's Orient. Com.*)

ZINC, or **SPELTER** (*Ger. Zink; Fr. Zinc; It. Zinco; Sp. Zinco; Cinch; Rus. Schpinuter; Lat. Zincum*), a metal of a brilliant white colour, with a shade of blue, composed of a number of thin plates adhering together. When this metal is rubbed for some time between the fingers, they acquire a peculiar taste, and emit a very perceptible smell. It is rather soft; tingling the fingers, when rubbed upon them, with a black colour. The specific

gravity of melted zinc varies from 6·861 to 7·1, the lightest being esteemed the purest. When hammered, it becomes as high as 7·1908. This metal forms, as it were, the limit between the brittle and the malleable metals. Its malleability is by no means to be compared with that of copper, lead, or tin; yet it is not brittle, like antimony or arsenic. When struck with a hammer, it does not break, but yields, and becomes somewhat flatter; and by a cautious and equal pressure, it may be reduced to pretty thin plates, which are supple and elastic, but cannot be folded without breaking. When heated to about 400°, it becomes so brittle that it may be reduced to powder in a mortar. It possesses a certain degree of ductility, and may, with care, be drawn out into wire. Its tenacity is such, that a wire whose diameter is equal to 1-10th of an inch, is capable of supporting a weight of about 26 lbs. Zinc has never been found in a state of purity. The word zinc occurs for the first time in the writings of Paracelsus, who died in 1541; but the method of extracting it from its ores was not known till the early part of last century.—(*Thomson's Chemistry.*) The compounds of zinc and copper are of great importance.—(See BRASS.)

Manufacture of Zinc, &c.—There used to be 3 smelting-houses for the preparation of zinc near Bristol, and 3 near Swansea, but they have been all abandoned, with the exception of 1 of the latter. The material used by the English manufacturer is blende, or black jack (sulphuret of zinc); it is commonly found with lead, and is procured of the best quality in Flintshire and the Isle of Man. Besides its employment in the manufacture of brass, bell metal, and other important compounds, zinc has of late years been formed into plates, and applied to many purposes for which lead was formerly used, such as the roofing of buildings, the manufacture of water-spouts, dairy pans, &c. Foreign zinc, being less brittle, is better fitted for rolling than that of England.

The duties on spelter, which were formerly prohibitory, have been reduced to 2*l.* a ton on that formed into plates, or cakes, and to 10*s.* on what is not in cakes; and, in consequence, considerable quantities are now imported, partly for home use, and partly for re-exportation to India and China. Foreign zinc is principally made at Gleinitz, in Upper Silesia; whence it is conveyed by an internal navigation to Hamburg. The freight from the latter to Hull and London is nominal merely; the wool-ships being glad to take it as ballast. Hainault, near Namur, has also some part of the spelter trade. A good deal of spelter is shipped from Hamburg for France and America.

Zinc is produced in the province of Yunnan, in China; and previously to 1830, large quantities of it were exported from that empire to India, the Malay Archipelago, &c. But about that time the free traders began to convey European spelter (principally German) to India; and being, though less pure, decidedly cheaper than the Chinese article, it has entirely supplanted the latter in the Calcutta market; lately, indeed, it has begun to be imported even into Canton.—(See TURKADO.) During the 3 years ended with 1832, the exports of foreign spelter from this country for India and China were, in 1830, 62,356 cwt.; 1831, 51,609; 1832, 37,499. And, exclusive of these, considerable quantities were exported from Amsterdam, Rotterdam, &c. We subjoin an

Account of the Zinc or Spelter Imported, exported, and retained for Home Consumption, and the Duties thereon, in 1831 and 1832.

Year.	Imports.	Exports.	Retained for Consumption.	Duty.
	Cwt.	Cwt.	Cwt.	£.
1831	76,412	62,664	20,596	10,196
1832	62,764	49,740	25,914	5,784

The price of spelter declined within the last 3 or 4 years, from about 1*l.* to 9*s.* a ton; but it has recently rallied, and is now (April, 1834) about 11*l.* 10*s.* a ton in bond.

SUPPLEMENT.

The latest Supplement of the author was received when this edition had advanced as far as the article *Petersburgh*. Such portions of it, however, as have not been incorporated with the preceding pages, will be found in the present Supplement, with the letter S. affixed to each.—Additions to the body of the work in the last English edition are also inserted here, being distinguished by affixing to them the letter A.—*Am. Ed.*

BALTIMORE.

The Imports into Baltimore, during the year 1840, were,—

In American vessels,	\$ 4,282,755
In foreign do.	552,862
	\$ 4,835,617

The Exports were,—

Value of domestic productions,	
In American vessels,	\$ 4,096,139
In foreign do.	1,396,881
Total value of domestic exports,	\$ 5,493,020
Of foreign products in American vessels	210,810
do. foreign vessels,	51,040
Total value of exports,	\$ 5,756,870

Vessels arriving from foreign ports, 410—tons 82,000.
Do. departing to do. 461—tons 93,354.
Do. entering coastwise, 826
Vessels built in Baltimore—3 ships, 1 barque, 11 brigs, 43 schooners, 1 sloop, and 1 steamboat, in all sixty vessels—tons 6,553.

Inspections during the year 1840.

BANKS. BANK OF ENGLAND.—It is apparent from the table on the following page, that there has been a very heavy drain for bullion upon the coffers of the Bank since November and December, 1838; and much diversity of opinion has prevailed as to the causes of this drain, and the nature of the efforts made by the Bank to defeat it. But the circumstances that occasioned the drain seem, notwithstanding, to be sufficiently obvious. The harvest of 1838 was the most deficient that has occurred in this country for several years; and, in proof of this, it is sufficient to mention, that while the quantities of foreign wheat and wheat flour entered for consumption in the United Kingdom in 1836 amounted to only 30,108 quarters, and in 1837 to 244,275 quarters, they rose in

1838 to the enormous amount of 1,848,477 quarters, exclusive of a large amount of other grain. It should, however, be mentioned that the imports in 1838 only amounted to 1,355,119 quarters, about 500,000 quarters of the quantity taken into consumption in that year, having been previously imported in bond. Now, as the corn in bond had, no doubt, been all, or mostly all, paid for when imported, it is clear that the sum to be paid to foreigners for corn entered in 1838, was not so great by nearly a third part as, at first sight, it would appear to be. Still, however, the importation in 1838 was very large; it was also in a considerable degree unprecedented, being nearly three times as great as in 1837, more than five times greater than in 1836, and about twenty times as great as in 1835, so that from its suddenness it had a comparatively great effect in raising prices abroad. It was all but impossible that this extraordinary increase in the importation of foreign corn should not seriously affect the Exchange, and occasion a heavy drain for bullion. And by a singular coincidence, it so happened, that at the particular period when increased payments began to be required for foreign corn, there happened to be an unusual deficiency in the ordinary means of making them. In consequence of the real or supposed scarcity of cotton in the United States in 1838, and of the support given by the United States Bank, and other monied institutions in the United States, to the cotton planters and holders, a very considerable rise took place in the price of cotton: the necessary effect of this rise was to lessen the purchases made by the manufacturers, and to force them to narrow their business; so that at the very moment when a large extra foreign payment had to be made, there was an increase in the price, and consequent falling off in the production and export of cotton fabrics—that is, of by far the greatest article of export from this country. Vast quantities of American securities had also been purchased in our markets; and this necessarily either occasioned the transmission of money to America, or lessened the returns from that country, and in so far lessened our means of meeting the foreign demand for corn. The discredit of the Belgian Bank in the autumn of 1838 may also be mentioned as having occasioned a considerable extra demand for bullion.

It is not, therefore, to be wondered at that the exchange became unfavourable, and that there was a heavy drain for bullion on the Bank. But it is less easy to form a fair estimate of the measures taken by the Bank to meet this run. On the whole, however, we are inclined

to think that on this, as on most similar occasions, the Bank evinced too much tenderness for what she conceived to be the interests of commerce, and did not vigorously enough commence reducing her issues when the drain for bullion had fairly set in. We, however, cordially approve of the Bank's policy in negotiating credits abroad, and endeavouring to restore the exchange to par by selling bills on the Continent, rather than by giving bullion for notes. In fact, sound policy would seem to dictate that the Bank should always hold a considerable amount of easily convertible foreign securities, and draw bills against them when the exchange is unfavourable. The plan of accumulating a large stock of bullion to be kept locked up in the Bank's coffers for no purpose whatever, except to meet the demand occasioned by a fall in the exchange, seems to be a very clumsy and costly device for doing that which would be more easily and cheaply done by the Bank holding foreign securities, and having credits on some of the principal foreign banks. She might, were she to adopt this plan, dispense with the half of what is now reckoned the proper supply of bullion; holding, in its stead, productive securities, which might always be sold at an advantage when the exchange is against us, or which might be pledged to the foreign banks for temporary loans. What merchants want during an adverse exchange, is good foreign bills, it being only in default of such that they export bullion; and the Bank, by supplying them with such bills, and getting, of course, her notes in exchange, is able to diminish her issues quite as effectually as if her notes were sent in for bullion. Another advantage of this plan is, that it goes far to obviate that internal discredit and alarm that are apt to be produced when the stock of bullion in the Bank is reduced unusually low. In fact, had the Bank not acted, in part at least, on this plan during the current year, the probability is that she must have suspended payments. In June and July last, the stock of bullion in her coffers was reduced to about 3,500,000*l.*; and as the drain still continued, had she endeavoured to meet it in the ordinary way, by paying away bullion for notes, her stock of the former would very speedily have been reduced so low as to occasion a home demand for it, which the Bank could not have met. The Bank should never, if it be possible to prevent it, allow her stock of bullion to sink below 4½ or 5 millions; and she may always keep it above this amount, in so far at least as the foreign demand is concerned, by selling bills drawn against foreign credits or securities. The Bank should also, consentaneously with the selling of bills, adopt the most efficient measures for preventing the notes she receives for them from getting again into circulation, either by raising the rate of interest, or by refusing (though the latter be a much more questionable policy) to discount certain classes of bills. It should always be borne in mind, that however a drain for gold may originate, the fact of its existence is of itself a conclusive proof that gold is more valuable abroad than here, and consequently that the currency is redundant. We are not, therefore, of the number of those who censure the Bank for having raised the rate of interest to 6 per cent. On the contrary, this was a measure that seems to have been imperatively required by the circumstances under which she was placed. At the same time, however, it must be admitted that the Bank allowed her stock of bullion to be reduced far below what is consistent either with her safety or with the safety of the great interests involved in her stability. She did not avail herself of her credit abroad so soon or so consistently as she might have done; and she does not appear to have made that early, systematical, and continuous reduction of her issues, required to adjust the exchange, and to bring the currency to its proper level. It is probable, indeed, as matters have turned out, that less hardship has been inflicted on individuals by the course the Bank has taken, than if she had resolutely followed up the course pointed out by principle, and withdrawn from circulation the notes received for bullion delivered for exportation and for foreign bills. But it is always bad policy, in such cases, to trust to fortuitous occurrences; and, in the long run, the safest plan, or that dictated by principle, is sure to be the best.

BANK OF IRELAND.—Account showing the Circulation of the Bank of Ireland from 1823 to 1830, both inclusive.

Years.	Large Notes.	Small Notes.	Post Bills.	Total Average Circulation.	Years.	Large Notes.	Small Notes.	Post Bills.	Total Average Circulation.

Instead of the paragraph, vol. i. page 109, of this edition, beginning, "The committee seem to think that some regulation should be enacted,"—read the following:—

The committee seem to think that some regulation should be enacted, providing that a certain portion of its capital should be paid up before a bank begins business. But the better way would be to prohibit all advertising of nominal capital. This, in fact, is a mere device by which to entrap and delude the public. A bank is announced with a capital of 1,000,000*l.*, 2,000,000*l.*, or 3,000,000*l.*; and a great number of people, perhaps the majority

immediately conclude that there can be no risk in dealing with an establishment possessed of so great an amount of property. But what is the fact? The capital advertised is nominal merely; not more perhaps than a tenth or a fifth part of it has been received into the coffers of the bank, and we have nothing better than the statement of the bank proprietors, or their agents, that they will pay up the remainder, if necessary; of which necessity they of course are to be the only judges! Practically this is neither more nor less than a fraud upon the public; it is a contrivance for making 10,000*l.* pass in the public estimation for 100,000*l.*; and for procuring the same degree of credit to its holders. This, however, is not all. Where is the security that if a greater amount of capital were really required it would be forthcoming? The notion that the bulk of the shareholders in many, we are pretty sure we might safely say most, of the joint stock banks now in existence could pay up the full amount of their shares, is too ludicrous to deserve notice. We might as well call upon a man worth 5*l.* to extinguish a debt of 500*l.*

There can be no doubt, therefore, unless it be meant to affirm that deception and fallacious statements are indispensable to the success of joint stock banking schemes, that all advertising of nominal capitals should be put an end to; and that no association should be allowed to represent its capital as exceeding the sum actually paid up by the proprietors. But though this would obviate one source of fraud and deception, there would still be abundant means of practising on the credulity of the public at the disposal of parties inclined to use them. Admit that a bank has a capital of 500,000*l.* actually received into its coffers, what is to hinder the directors from lending out the whole of this sum, or even more, to themselves or to partners in the bank? or supposing them not to do this, who can tell whether the entire capital, or some considerable part of it, be not wholly engulfed in ruinous speculations? It is indeed alleged, and truly too, that this could not happen with any "respectable" bank, that "gentlemen of character" would not lend themselves to such transactions! Unluckily, however, there are no decisive marks or tests by which the public can, *a priori*, say what is or what is not a "respectable bank," or who is, or is not a "gentleman of character;" and it is not a little hazardous in such matters to indulge in speculative remarks. Hence it is that all banks are held to be respectable, that is, solvent, till the event prove the contrary; and that all gentlemen connected with banks are held to be "men of character," paragons in fact, of honour, honesty, and even intelligence, till their fraud or ignorance has involved hundreds or thousands in bankruptcy and ruin.

We do not state these circumstances in order to raise any prejudice against joint stock banks or other associations, for they apply equally to one, or to a small number of individuals; but we state them to show the folly of placing any reliance on statements as to the capital of any bank, or the character of its managers. Such statements may be either true or false; but, as the public cannot tell which, they are plainly good for nothing. The only real security is to be found, if it exist at all, in the names of the partners responsible for the debts and obligations of the bank. The number of such partners is a very inferior consideration. There cannot, in truth, be a greater error than to suppose that because a bank has a great number of partners, its security may be safely depended upon. A single individual worth 100,000*l.* is an incomparably better security than fifty individuals worth 2,000*l.* each; and a hundred individuals worth 1,000*l.* would hardly be any security at all; at least for a sum of 10,000*l.* or 20,000*l.* A private bank with six, may be a safer place of deposit than a joint stock bank with six hundred partners. Every thing depends upon the available *wealth* of those responsible for the debts of the concern; and hence the propriety and justice, whether the firm consist of one or of many partners, of publicly declaring and specifying their names.

We are decidedly hostile to a proposition we have heard mooted, and which seems to be countenanced by the committee on joint stock banks, for obliging all banks to establish a guarantee fund; that is, for obliging them to accumulate a *portion of their profits* as a reserve stock. But where is the security that such reserve would be always deducted from profits? The truth is, that bankrupt and fraudulent concerns, and none else, would gain by such a regulation; inasmuch as it would enable them, by appearing to be prosperous, the better to deceive the public, and to blind them as to the real state of their affairs. It is a good deal worse than absurd to induce the public to depend on guarantees that cannot be enforced, and which, consequently, must be good for nothing. The knowledge of who the partners are in a bank, and their unlimited responsibility, are the only securities that, speaking generally, are worth a pinch of snuff. If these cannot protect the public from fraud or loss, nothing else will; and the question will come to be, not whether the system should be reformed, but whether it should be abated as an incurable nuisance. On this ground also, we should be disposed to dissent from any attempt to prevent, by legislative enactment, the making of loans upon the credit of bank stock. We do not question the advantage of such a regulation, provided it were honestly carried into effect. But it is useless to say that, whenever the parties were disposed to defeat such a course, it would be quite inoperative.—S.

We have elsewhere (*Dict.* vol. i. p. 86.) said, that if the Bank of England could, with safety to herself, pay interest on deposits, as is done by the Scotch banks, it would be of the

 k of England could, with
 banks, it would be of the

greatest service to the public. The joint stock banks formed, or being formed in the city, are undertaking this function, and are offering a fair rate of interest on deposits. If they succeed in this, they will confer no slight advantage on the community, and will become, as it were, so many savings banks for the middle classes, and for the rich as well as the poor. But the responsibilities this system will bring along with it are neither few nor small. A bank with a numerous body of partners of undoubted wealth and integrity that should give 2 per cent. interest on all deposits of 10*l.* and upwards, how short soever the period for which the deposit might remain in the bank, would, there is little doubt, speedily have ample funds at its disposal. In quiet and prosperous times, the system would work exceedingly well; and the bank and the public would be vastly well pleased with each other. But when the cycle of prosperity has gone by, and the cycle of adversity has begun; when the waters are out and the winds begin to blow; it is doubtful whether either the bank or its depositors may feel quite at ease. The former will probably raise the rate of interest; but it is doubtful whether that will have the wished-for effect. Should the exchange set against us, and the Bank of England be forced to narrow her issues, and should bankruptcy and a feeling of insecurity begin to prevail, as they have done hitherto on all similar occasions, a run for deposits may, and most probably will, be made upon the bank; and in such a case her situation, however well she may have been managed, will be most critical. She will be compelled to dispose of, or pledge securities in a market where they may be all but unsaleable; and it will be impossible for her suddenly to pull up in discounting, without exposing herself to the imminent danger of extra loss, by bringing on the stoppage of those who have been accustomed to trust to her for loans.

It will be said, perhaps, that this is all imaginary, and that nothing of the sort ever occurs in Scotland! But it would really be about as much to the purpose to say that nothing of the sort ever occurs in Japan. London is the pivot on which the foreign exchanges turn, and when they become depressed, many of the London depositors will do what the Scotch depositors never so much as dreamed of; that is, they will demand their deposits, convert them into gold, and either send this gold abroad, or get a profit from those who will. From this source of annoyances and loss the Scotch banks are perfectly free; and this, by exhausting the resources of the London banks, and subjecting the weaker ones to difficulties, occasions discredit, and, in the end, runs or panics. Nothing, therefore, can be more perfectly futile than to contend that, because this system has proved profitable for the Scotch banks, it will also be profitable for the London banks. We do not presume to affirm that such will not, and we hope that it may be the case. But it would be rather illogical to affirm, because wheat succeeds remarkably well in the vale of Gloucester, that it will succeed equally well on the Welsh mountains.

The joint stock banks may, if they do not already, endeavour to obviate some of the difficulties now stated, by declining to pay interest on deposits unless they lie for a certain time, or by stipulating for a certain notice before they are paid. The first condition would, however, be of little effect in the evil day; but, either the one condition or the other is altogether subversive of what is meant by granting interest on deposits, and goes far to make the announcements to that effect little better than a hoax upon the public. All, or nearly all, the existing banks, are banks of deposits in this sense of the word; that is, they give interest on deposits of a certain amount, provided they be not called for till after the lapse of an agreed-on period, and that the depositors give them no farther trouble. But it is doubtful whether money deposited at 2 per cent. under such conditions, and still more under an engagement to give notice of demand, be as well laid out as if it were deposited with the Bank of England, or any other bank of undoubted solidity, at no interest, but payable on demand. Most men of business would, we believe, prefer the latter. Nobody, indeed, not wishing to get into difficulties, would be disposed to deal with any bank that required notice of demand; and it is questionable whether any such stipulation should be sanctioned by law.—S.

After the paragraph ending in the middle of page 110 of this edition, read the following:

But it is unnecessary to go back, even so far as 1836, for conclusive proofs that the issues of private banks are not governed by any principle other than the supposed interests of the parties. We have already seen that the Bank of England did not contract her issues so vigorously or systematically as she should have done when the supply of bullion in her coffers began to be reduced towards the end of 1838. Still, however, she did reduce her issues. During the quarter ending the 18th of September, 1838, the issues of the Bank of England amounted to 19,855,000*l.*; and they were progressively reduced till, in the quarter ending the 30th of June, 1839, they amounted to 18,101,000*l.*, being a reduction of about 1½ million. The reduction was also accompanied by a rapid diminution of the bullion in the Bank's coffers, by a rise in the rate of interest, and by great apprehensions in all moderately well-informed quarters as to what might be the ultimate result. Now what was the conduct of the joint stock and private banks during this period? Did they make any reduction of their issues, or did they so much as abstain from increasing them? No such thing! on the contrary, their issues, which amounted to 11,364,602*l.* at an average of the quarter endin-

the 29th of September, 1838, rose to 12,375,812L during the quarter ending the 29th of June, 1839, being an increase of about one million during the very period in which the Bank of England had reduced her issues 1½ millions! And but for the increasing difficulty of obtaining pecuniary accommodation in London, and the rise in the rate of interest, they would, no doubt, have gone on increasing their issues though the bank had been drained of her last shilling.

We do not, however, blame the joint stock and private banks for this: the government and legislature are the real culprits. What can be expected from a system which permits every cobbler and cheesemonger, and every association, how bankrupt soever in fortune and character, to usurp the royal prerogative, and issue paper money at pleasure? But though all private bankers, and all managers of joint stock banking companies, were patterns of honesty and intelligence, the result would not be materially different. The evil lies far more in the number than in the character of the issuers. When bullion is leaving the country, and the Bank of England is narrowing her issues and raising the rate of interest, many, perhaps we might say the majority, of the country bankers see that danger is abroad, and that they should also contract their issues; but being a very numerous body, comprising the managers of several hundred establishments scattered over all parts of the kingdom, jealous of each other, and with rival and opposing interests, no sort of concert ever prevails among them. Each is also impressed with the well-founded conviction, that all that he could do in the way of contraction would be all but imperceptible; and no one ever thinks of attempting it so long as he feels satisfied of the stability of those with whom he deals. On the contrary, every banker knows, were he to withdraw a portion of his notes, that some of his competitors would, most likely, embrace the opportunity of filling up the vacuum so created; and that consequently he should lose a portion of his business, without in any degree lessening the amount of paper afloat. Hence in nineteen out of twenty instances the country banks go on increasing their aggregate issues long after the exchange has been notoriously against the country, and the Bank of England has been striving to pull up. The fact is, that ruinous fluctuations in its amount and value are of the very essence of a currency supplied by different issuers. If the country continue to tolerate the latter, it must unavoidably continue to suffer the perpetual recurrence of the former.

I.—Return of all Places where United or Joint Stock Banks have been established under the Act 7 Geo. IV. c. 45, in ENGLAND and WALES; with the Dates when such Banks were established, and the Number of Partners therein, down to the 5th of January, 1839.

BANKS (AMERICAN).—The system of banking in America has recently attracted a great deal of attention in this country; and it certainly deserves to be carefully studied and meditated, were it only for the incontestable evidence which it affords that, how flourishing soever in other respects, a country cursed with a vicious banking system may be every now and then involved in the greatest difficulties, and reduced almost to a state of bankruptcy. Considering the peculiarly favourable circumstances under which the United States are placed, the boundless extent of their fertile and unoccupied lands, the lightness of their public burdens, and the intelligence, enterprise, and economy of the people, it might be presumed that distress and bankruptcy would be all but unknown in the Union, and that she would be exempted from those revulsions which so seriously affect less favourably situated communities. But the very reverse of all this is the fact: discredit and bankruptcy are incomparably more prevalent in America than in any European country; and all sorts of industrious undertakings and monied fortunes are infinitely more secure in Russia, and even in Turkey, than in the United States! This anomalous and apparently inexplicable state of things is entirely a consequence of the American banking system, which seems to combine within itself everything that can make it an engine of unmixed evil. Had a committee of clever men been selected to devise means by which the public might be tempted to engage in all manner of absurd projects, and be most easily duped and swindled, we do not know that they could have hit upon anything half so likely to effect their object as the existing American banking system. It has no one redeeming quality about it, but is from beginning to end a compound of quackery and imposture. Our own banking system is bad enough certainly; but it is as superior to the American as can well be imagined. A radical reform of the latter, or, if that cannot be effected, its entire suppression, would be the greatest boon that can be conferred on the Union; and would be no slight advantage to every nation with which the Americans have any intercourse.

The American banks are all joint-stock associations. But instead of the partners being liable, as in England, for the whole amount of the debts of the banks, they are in general liable only for the amount of their shares, or for some fixed multiple thereof. It is needless to dwell on the temptation to commit fraud held out by this system, which has not a single countervailing advantage to recommend it. The worthlessness of the plan on which the banks are founded was evinced by the fact that, between 1811 and the 1st of May, 1830, no fewer than a hundred and sixty-five banks became altogether bankrupt, many of them paying only an insignificant dividend; and this exclusive of a much greater number that stopped for a while, and afterwards resumed payments. The wide-spread mischief resulting from such a state of things led to the devising of various complicated schemes for insuring the stability and prudent management of banks; but, as they all involve regulations which it is impossible to enforce, they are practically worse than useless. In Massachusetts, for example, it is provided that no bank for the issue of notes can go into operation in any way until at least half its capital stock be paid in gold and silver into the bank, and be actually existing in its coffers, and seen in them by inspectors appointed for that purpose; and the cashier of every bank is bound to make specific returns once a year of its debts and assets, on being required to do so by the secretary of state. But our readers need hardly be told that these elaborately contrived regulations are really good for nothing, unless it be to afford an easy mode of cheating and defrauding the public. Instances have occurred of banks having borrowed an amount of dollars equal to half their capital for a single day, and of such dollars having been examined by the inspectors appointed for that purpose, and reported by them, and sworn by a majority of the directors, to be the first instalment paid by the stockholders of the bank, and intended to remain in it.* We do not of course imagine that such disgraceful instances can be of common occurrence; but what is to be thought of a system which permits a company for the issue of paper-money, founded on such an abominable fraud, to enter on business with a sort of public attestation of its respectability? The publicity, too, to which the American banks are subject is injurious rather than otherwise. Those who are so disposed may easily manufacture such returns as they think most suitable to their views; and the more respectable banks endeavour, for a month or two previously to

* Gouge's Paper Money and Banking in the United States.

the period when they have to make their returns, to increase the amount of bullion in their coffers by temporary loans, and all manner of devices. The whole system is, in fact, bottomed on the most vicious principles. But it is unnecessary, after what has recently occurred, to insist further upon the gross and glaring defects of American banking. Perhaps no instance is to be found in the history of commerce of such a wanton over-issue of paper as took place in the United States in 1835 and 1836. The result was such as every man of sense must have anticipated. The revulsion to which it necessarily led, after producing a frightful extent of bankruptcy and suffering in all parts of the Union, compelled, in May, 1837, every bank within the States, without, we believe, a single exception, to suspend payments! In 1838, such of them as were not entirely swept off resumed specie payments; and in 1839, by far the larger number of them, with the bank of the United States at their head, again suspended payments!

The United States Bank is not merely, however, unable from temporary embarrassments to pay its notes in specie; it is entangled in more serious difficulties, and is believed by many to be substantially insolvent. If it be really in this predicament, it is what we did not anticipate. It was originally incorporated by Congress in 1816 for 20 years, and had a paid-up capital of \$5,000,000 dollars, or of more than seven millions sterling. The question whether the charter should be renewed was debated with extraordinary vehemence in all parts of the Union. The late president, General Jackson, was violently opposed to the re-incorporation of the bank; and rejected a bill for that purpose that had been approved by both the other branches of the legislature. Ultimately, however, a majority of Congress came round to General Jackson's views, and the charter was definitively refused. The bank afterwards succeeded in obtaining a charter from the state of Pennsylvania. This, however, merely enables it to carry on business in that state, but it has since obtained leave from some of the other states to establish branches within their limits.

The embarrassments in which this institution has been involved are believed to have been mainly caused by the improvidence with which it has made advances on state stocks, the stocks of public companies, and such like securities. The extreme facility with which money, or rather what was called money, might be borrowed from the different banking establishments in America, in 1835 and 1836, created quite a mania for all sorts of joint stock and other speculative projects, such as banks, canals, railways, &c.; and this rage has been still further promoted by the different state governments embarking deeply in the same sort of projects, and borrowing largely to carry them on. (See *FUNDS, AMERICAN*, in this Supp.) The bank of the United States is believed to have made very large advances on this sort of securities; and after the revulsion in America in 1836 and 1837, this bank and every other institution in the Union that had any stock of any kind to dispose of, sent it over to England, where the temptation of a high rate of interest made vast quantities be sold in 1837 and 1838. But notwithstanding the proverbial gullibility of John Bull, and his determination to confide in every thing of which he knows little or nothing, the market here was beginning to be overloaded with American securities, and the collision that took place in Maine, in March, 1839, put a complete stop to their further sale. The agent of the U. States Bank is understood, when this occurrence took place, to have had a very large amount of such securities on his hands; and he has since had the greatest difficulty in raising money upon them, except at a great sacrifice.

The bank of the United States is also believed to have been materially injured by the advances she made to the holders of cotton. It has been alleged, too, that these advances were made, not so much in the view of supporting credit in America as of procuring engagements for a particular house in Liverpool. But it is hardly possible to suppose that such should have been the case, or that an institution with 7,000,000*l.* of capital should have been perverted from its legitimate purpose, and brought into jeopardy for so paltry and disgraceful an object. Since the stoppage of the U. States Bank the following statement has appeared:

Statement of the Affairs of the Bank of the United States in Pennsylvania, Oct. 1. 1839.

But this account, like all others of the same kind, is absolutely worthless. It communicates no information, or none that can be depended upon, as to the real state of the bank. Who knows any thing of the value of the bills for 11,316,469 dollars, discounted on "private security?" or of those for the 17,926,022 dollars, discounted on "other security?" They may be, and, no doubt, will be said to be as good as cash! But who attaches any value to an unexamined balance sheet, put forth by an individual or association that has stopped payment? The rendering of such accounts is, in fact, nothing better than a mere farce.

If the bank of the United States be really insolvent and unable to meet its engagements, a question will most likely arise as to the liability of the holders of bank stock resident in this country to make good its engagements. Will the charter protect them, or will it not? This is a question which, we believe, has not hitherto been mooted, but no doubt it will soon force itself on the public attention. We do not know how the existing law may be interpreted; but if they are to be protected, the sooner it is changed the better. Had the United States Bank not opened an agency here, the case would have been different: but having opened an office, and transacted a large amount of business in London, it has become to all intents and purposes an English establishment; and the partners belonging to it in England must, one should think, be amenable to English law, and not to the law of Pennsylvania. If this be not the case, it will necessarily follow that any institution, though consisting wholly of Englishmen, that obtained a charter from any foreign state, even though it were not generally known that it was chartered, as the foreign law might not require this to be divulged, might open places of business in London and Liverpool, and, after getting some hundreds of thousands of pounds into debt, might suspend payments, and laugh at the credulous dupes they had reduced to beggary and ruin. It would be, no doubt, strenuously affirmed of such an institution, that it had a paid-up capital amounting, perhaps, to several millions sterling; that it was a "highly respectable" association, and conducted by gentlemen of the "highest character:" probably, too, a balance sheet would be occasionally put forth "demonstrating" its flourishing situation; and a portion of the press would not fail to direct the particular attention of its readers to the "admirable principle" on which it was founded, and the "ability" of its managers! John Bull must change very much, indeed, if these representations, combined with the advantageous terms that would very probably be offered to those dealing with it in the first instance, did not procure for it a considerable amount of credit. But in the end, it would, most likely, turn out that no one knew whether it ever had any paid-up capital. And, supposing it had, what is to hinder the partners or managers from dividing it wholly amongst themselves? The legislature of England has wisely refused to allow of partnerships (except in extraordinary cases) being instituted here with limited responsibility; being well convinced that, despite every possible precaution, they would be sure, in many instances to be perverted to the basest purposes. And is it to be endured that foreigners should acquire privileges in this country denied to natives? or that foreign governments should have power to organise and establish institutions amongst us on a principle which parliament justly regards as most objectionable? If the law of England authorise *this*, it is most certainly high time that it were amended, and that a check were given to what must otherwise be by far the safest and most profitable species of swindling. But we do not believe that such can be the law. British subjects who embark their capital in foreign trading associations may, in so far as respects their interest in them, be amenable only to the foreign law, provided the associations to which they belong restrict their operations to foreign countries. But should these associations send agents here, and open offices and carry on business within the United Kingdom, the case is altogether different: the legislature of Pennsylvania may be omnipotent at home, but it is impotent in England; it may, if it choose, institute trading companies, with limited responsibility, or with no responsibility at all; but if these be joined by Englishmen, make England the scene of their operations, and issue their balance sheets in the city of London, what are they in practice but English companies! And such of our countrymen as have embarked in them would seem to have but slender grounds of complaint, should they be taught that they are responsible to *our* law; that the law of a foreign country cannot protect them; and that they will be made liable, in the event of the concern becoming bankrupt, to the utmost shilling of their fortunes for its liabilities to British subjects.

Owing to the privilege claimed by the different states, and exercised without interruption from the Revolution downwards, it is, we fear, impossible to effect the suppression of local paper in America, or to establish a paper currency which should at all times vary in amount and value, as if it were metallic. But the states have it in their power to do that which is next best: they may compel all banks which issue notes to give security for their issues. This, though it would not prevent destructive oscillations in the amount and value of the currency, would, at all events, prevent those ruinous and ever-recurring stoppages and bankruptcies of the issuers of paper-money, that render the American banking system one of the severest scourges to which any people was ever subjected. Common sense and experience alike demonstrate the inefficacy of all the regulations enacted by the American legislatures to prevent the abuse of banking. It is in vain for them to lay it down that the issues shall never

Taking the florin at 1s. 8d., the total value of the exports is 3,331,803*l*. Among the principal articles of import are cotton goods; copper, iron, and steel; glass and earthenware; wines and spirits; provisions, &c. We have not learned the exact value of the imports in 1836, but, taking it at 2,500,000*l*, it will make the whole trade of the island amount to about 6,000,000*l*.

It is stated in the Dictionary (vol. 1. p. 378.) that the export of coffee from Java might be estimated at about 18,000 tons; but it appears from the above table, that it has increased so rapidly that it amounted, in 1837, taking the picul at 136 lbs. to 22,152,792 lbs., or to above 41,500 tons! The export of sugar during the same year exceeded 40,000 tons.

BOMBAY. In 1836-7, 28 ships, of the aggregate burden of 20,800 tons, mostly owned by native merchants resident in Bombay, were employed in the China trade; and there are besides a considerable number of large ships engaged in the trade to England and other places. They are for the most part navigated by Indian seamen or Lascars, those of Bombay being accounted by far the best in India; the master and superior officers only, and not always, being Englishmen.

In 1836-7, there arrived at Bombay 253 ships (222 under British colours) of the aggregate burden of 104,913 tons.—A.

The small and sterile island of Bombay affords no produce for exportation; indeed, hardly yields a week's consumption of corn for its inhabitants. Nor does the whole presidency of Bombay, although estimated to contain about 70,000 square miles, and from 10,000,000 to 11,000,000 inhabitants, yield, with the exception of cotton and rice, any of the great colonial staples, such as coffee, sugar, and indigo; a circumstance that seems mainly ascribable to the inpolitic restraints upon the employment of British settlers and capital that were long imposed by law, and acted upon with peculiar rigour in this and the sister presidency of Madras, in contradistinction to the greater latitude afforded in Bengal. Bombay is also much less favourably situated, in respect of internal communications, than Calcutta. The Gauges and its tributary streams intersect the richest provinces of India, and give Calcutta a vast command of inland navigation; whereas all the inland trade of Bombay has to be carried on by means of roads, that are seldom available for carriages, and which can be used only by pack-bullocks and camels. The transit duties, by which the inland trade has been grievously oppressed, were abolished in Bengal in 1836; and they either have been, or are, immediately to be abolished in Bombay. And were this judicious measure followed up the formation of lines of road to the principal markets in the interior, a great increase of the trade of the town and improvement of the presidency would be the result.

The principal trade of Bombay is carried on with China, Great Britain, the countries on the Persian and Arabian gulfs, Calcutta, Cutch, and Sinde, the Malabar coast, foreign Europe, &c. The imports from China consist principally of raw silk, sugar, and sugar-candy, silk piece goods, treasure, &c. The principal articles of export to China, are raw cotton (44,464,364 lbs., in 1836-37.), opium (20,882½ chests, in 1836-37.), principally from Malwa, pearls, sharks' fins and fish maws, sandal-wood, &c. The exports to China being much greater than the imports, the returns for several years past have been made to a large extent in bills on London, drawn by American and other houses in China, and in bills on the Indian governments, drawn by the Agents of the East India Company in China.

The trade with the United Kingdom has been regularly increasing since the abolition of the restrictive system. The chief articles of import from Great Britain are, cotton and woolen stuffs, cotton yarn, hardware, copper, iron, and lead, glass, apparel, fur, stationary, wine, &c. The principal articles of export to Britain are, raw cotton (68,163,901 lbs. in 1836-37.), raw silk, from China and Persia, ivory, pepper, and spices, piece goods, coffee, and wool. The export of the last mentioned article has increased with extraordinary rapidity, the quantity shipped for England in 1833-34 being only 69,944 lbs.; whereas the shipments for England in 1836-37 amounted to 2,444,019 lbs. At present the principal supply of the article is drawn from Cutch and Sinde, and from Marwar, via Guzerat; but active measures have been taken by government for improving the flocks in the pastoral country of the Deccan, so that a further and very considerable increase of this new and important trade may be anticipated.

The trade between Bombay and the ports on the Persian gulf has materially varied of late years. A large portion of the articles of British produce and manufacture that were formerly exported to Persia, by way of Bombay and Bushire, being now sent through Trebizond and ports in the Levant; and a considerable portion of the raw silk that used to be exported from Persia, via Bombay, being now also sent through the ports referred to. On the other hand, however, there is a considerable increase in the exports and imports of other articles; so that, on the whole, the amount of the trade has not materially varied.

The trade between Bombay and Calcutta is not so great now as it was formerly; the abolition of the restrictive system in 1815 having given Bombay the means of bringing various articles direct from foreign ports which she was previously obliged to import at second-hand from Calcutta, and of exporting directly.

Account of the total Value of the Imports into, and of the Exports from Bombay, in the official years 1816-17, 1836-37, and 1836-37.

FISH.

[The reader will find in vol. i. p. 42., a statement of the value of the fish exported annually from the United States, from 1790 to 1838, inclusive.

The value of the fish imported during the year ending on the 30th of September, 1839, was, of dried or smoked fish, \$21,303; of salmon (pickled), \$73,768; of mackerel (pickled), \$60,374, and of all other pickled fish, \$71,489.

Of the fish imported, the quantity which was re-exported amounted in value to only \$9,034. The product of our own fisheries which was exported to foreign countries, chiefly to the West India Islands, during the same year, amounted in value, of dried or smoked fish, to \$705,816, and of pickled fish, to \$141,320.

The registered and enrolled tonnage of the United States employed in the whale fishery		Tons.
announced to	-	131,845
The enrolled and licensed tonnage employed in the cod fishery	-	65,107
In the mackerel fishery	-	35,983
In the whale fishery	-	439
That of vessels licensed under 20 tons employed in the cod fishery	-	7,091

The fisheries of the United States are carried on from the ports of Maine, New Hampshire, Massachusetts, Rhode Island, Connecticut, and New York; especially from those of Massachusetts. Its citizens own nearly three fourths of the whole tonnage employed in this branch of American industry.

The greater comparative importance of the Massachusetts fisheries has led to more exact inquiries concerning them than have been directed hitherto to the subject of the fisheries elsewhere. And we subjoin the following interesting extracts from a report of Dr. D. H. Storer, submitted to the legislature of that state.

Although, as fresh fish, mackerel are sold in the markets along our whole coast for several months in the year, and are considered by all excellent food, (from 6 to 8,000 barrels being sold annually in Boston market alone,) their great value to this people, arises from the means of employment afforded to an immense number, by the process of salting and packing.

Those packed in 1836 were furnished by the following towns:

	Barrels.		Barrels.
Boston	40,350	Saltuata	3,782
Gloucester and Manchester	45,387	Yarmouth	2,446
Newburyport and Newbury	21,463	Amherst and Beverly	2,294
Wellsfleet	17,500	Plymouth	1,377
Provincetown	14,139	Lynn	1,400
Hingham	13,892	Duxbury	1,000
Cohasset	11,700	Charlestown	822
Barnstable	4,116		

At the prices these fish were worth in November, 1836, the value of the year's fishing amounts to \$1,264,012.

The whole number of barrels of mackerel inspected in Massachusetts for the last five years is as follows:—1832, 221,000 barrels; 1833, 225,000; 1834, 253,000; 1835, 197,000; 1836, 180,616.

Although it would seem from the above table, that a smaller quantity of mackerel had been packed in 1836, than the several years immediately preceding it, yet it cannot be inferred from this circumstance, that fewer vessels were engaged, or that the business was considered less important than before. In some years, immense shoals of these fishes are readily met with, and the vessels return in a few weeks, with full cargoes; while the same localities may be visited at other seasons, and the efforts of the fisherman prove fruitless, and his fare meagre indeed.

So peculiar are the habits of this genus, that oftentimes weeks may pass, the fishing smacks be surrounded by millions sporting upon the surface of the ocean, and scarce one allow itself to be taken, while again the success of a few days will relieve the disappointments of nearly a season.

Thus, a fisherman informs me, that the last season, (1837,) having been to the bay of Chaleur, and taken but few fish, the vessel to which he belonged was returning home, when, off Cape Cod, the fish were so numerous and voracious, that the crew, consisting of ten or twelve, captured in two hours nearly 30 barrels of them. At this time about 200 smacks were together, and they were all equally successful, some of them taking 40 barrels of fish.

After being carefully inspected, these fish find a ready market in Philadelphia, New York, Baltimore, and New Orleans, and from this last port, they are sent over the entire western country. The inferior quality are shipped to the West India Islands.

I have not been able to learn with accuracy the number of vessels engaged exclusively in this fishery; in many towns, the same vessels are used at different seasons of the year for cod as well as the mackerel fishery. I have ascertained, however, that there were 202 vessels employed in this fishery in 1836, in the county of Barnstable, and that of this number 98 belonged to Provincetown, which were valued at \$147,000.

The family *Salmonides* includes several genera of fishes, which for delicacy and richness are not surpassed. Previous to the separation of Maine from this state, large quantities of the *Salmo salar*—salmon—were packed; thus, in the year 1816, 2,381 barrels were inspected. Since that time none have been inspected. The building of dams and manufacturing establishments, by preventing the fishes from going up the rivers to deposit their spawn, has almost entirely annihilated them in this Commonwealth. About 17 years since, two wagons, each bringing from 30 to 40 fine salmon from the Merrimack river, supplied the Boston market every week during the season of the fish—now, the few specimens taken are looked upon as rarities, and our market is enriched by the fishery of the Kennebec.

The *Osmia viridicaena*—Smelt—which is a universal favourite, is taken in great numbers in the spring and autumn, and through a great portion of the winter. In *Watertown* alone, 750,000 dozen are taken annually in scoop-nets from the first of March to the first of June—and sent to Boston market.

The family *Clupea*, are among our most valuable fishes. The *Clupea vernalis*—alewife—is taken in immense quantities still, in several parts of the state, although in several places where they have heretofore been most abundant, the various encroachments of man have sensibly diminished them. A larger quantity of alewives is packed, than of any other species of this family. In 1832, 1730 barrels were inspected; 1833, 2,206; 1834, 4,320; 1835, 5,600; 1836, 5,000.

At *Watertown*, the average quantity of alewives for the last 10 years is 700 barrels. They are first pickled, then salted and barreled, and sent to the West India Islands. They sell from \$1.50 to \$2.00 per barrel. At *Taunton*, which for years was so celebrated for its fishery, the alewives are gradually lessening. There are two or more dams across the Taunton "Great River," so called, which impedes their progress very much; and on the "Little River," where many dams and factories have been erected; and where, twenty years ago, thousands were taken, not one is to be seen. Twenty-five years since they were taken in such abundance, that they sold for 20 cents per hundred, and a great business was carried on by barreling and shipping them to the West India market.

The *Clupea harengus* (1)—common herring (1)—is in some seasons taken in great numbers. The quantities of herring packed and inspected according to tables kept at the General Inspection office for the last five years, are as follow: 1832, 58 bbls. 1833, 36; 1834, 518; 1835, 908; 1836, 77. That a small quantity only of the herring taken, are packed, is obvious, from the fact, that in 1836, 500 bbls. were taken at *Falmouth*; 400 bbls. at *Duxbury*, and 3000 at *Martha's Vineyard*.

Upon some portions of our coast herring have been limited in quantity for the few last years, during

 rd.
 ty for the few last years, during

the last two years very few, comparatively speaking, have been taken. Their scarcity has been attributed by the fishermen to torching them at night, by which the shoals are broken, and the fish frightened away.

The *Morhua vulgaris*—Shad—is taken in several of our rivers in large quantities, at some seasons of the year, and giving a number of them are packed. In 1832, 100 bbis. were inspected; 1833, 321; 1834, 3; 1835, 310; and 1836, 527. The quantities taken in Charles river at Watertown, for the five last years, have averaged about 6000 per annum; from 3000 to 4000 are yearly caught at Taunton. Those taken at the former place, are usually sent to Boston market, and sold at 25 cents each. Those caught at the latter locality are for the most part disposed of at the seines (fresh) and cured by the purchasers. When first taken, they sell for 100 cents per hundred; and as the season advances, diminish gradually in price to 50 cents.

No family of fishes, however, found in the state, presents a greater number of species of real utility, than that of the Gadides; and no species in the whole catalogue of our Ichthyology, is of greater importance than the *Morhua vulgaris*—common Cod; supplying our markets with an excellent food throughout the year, and giving employment to thousands. In some portions of the state this fishery is entirely superseded by the taking of whales. Thus, while every town in the county of Barnstable, is more or less engaged in this business, and collectively exhibit an aggregate of 212 vessels, but a single fishing-smack was licensed in Duke county in 1836—and not one in the county of Nantucket—the attention of the inhabitants of the last two counties, being entirely engrossed in whaling.

Imperfect as are the following data, they may not be thought valueless. I have been able to ascertain that, in 1830, there were engaged in the cod fishery, from Gloucester, Marblehead, Provincetown, South Wellfleet, Cohasset, Duxbury, Plymouth, Manchester, Salem, and Beverly, being ten towns, 501 vessels, having crews of 3,816 men—and that by these vessels there were taken 263,454 quintals of fish. To these may be added the towns of Newburyport, Lynn, Falmouth, Holmes Hole, and Sandwich, (in which I have not been able to learn the number of vessels exclusively employed in this fishery,) which furnished in 1836, 10,265 quintals. Thus exhibiting 273,719 quintals of cod fish, taken by the enterprise of the citizens of 15 towns. When it is observed, that about 3,500 of the cod fish from the Grand Bank, (which are generally much larger than those from the Straits of Bellisle,) constitute a single quintal, some conception may be formed of the immense number taken. At the usual price of these prepared fish, the above mentioned number of quintals would sell for \$639,154.

Besides these fishing vessels, a great number of boats are constantly employed in supplying the markets with fresh fish. Thus, at Duxbury, in 1836, there were 10 market boats, having 40 men on board, which took from 35 to 40,000 fish. At Provincetown, there were 10 boats thus engaged. Boston market is supplied with cod fish by about 15 or 20 small schooners, and a large number of boats. By the kindness of Capt. Nathaniel Blanchard of Lynn, master of one of these smacks, I am enabled to furnish the following table, by which some idea may be formed of the amount of fresh cod fish, brought to our market. He has presented me the result of his labours with a vessel of 25 tons, and a crew of 6 men, for nearly 5 months, commencing October 24, 1836, and terminating March 20, 1837. His account exhibits the number of fish taken, and the price obtained for the same for each day during that period. From this minute statement, I am able to ascertain that the largest quantity taken any one day, was 7,121 pounds—December 13th—which sold for 5 shillings per hundred = \$9.39.

The smallest quantity taken any one day, was 337 pounds—January 16th—which sold for 12 shillings = \$6.67.

The smallest receipts were March 20th, when 359 pounds taken, sold for 10 shillings 6 pence = \$5.02. The whole number of pounds taken during the period mentioned, were 194,125.

The entire receipts for the same, were \$3,028.14.

Besides the value of the fishes themselves in a fresh and dried state, large quantities of oil are extracted from their livers, which is sold for about \$15 per barrel.

Immense shoals of the *Morhua anglicana*—Haddock—are found on our coast in spring, and continue through the season until autumn. Large numbers are sold in the market—and during the entire summer it is generally eaten by the poorer classes, who are often able to obtain a fine fish weighing several pounds for one or two cents. When taken in larger quantities than can be disposed of in market, they are frequently strewed over the earth for manure.
 Several valuable species are furnished us by the family, *Planii*—the most important, however, is the *Hippoglossus vulgaris*—Halibut. The flesh of this fish is rather coarse and dry, but is by many highly esteemed. An unusual number of this species were brought to Boston market in the early part of 1837, and were all sold at considerable profit. Eighty large schooners, from 60 to 80 tons burden, belonging to Cape Ann, were thus employed. Smoked, this fish is quite a delicacy; and when dried, as is the usual habit of the Greenlanders, it is, I can affirm, far from uninviting.—*Am. Ed.]*

FUNDS (AMERICAN). We beg leave to lay before the following statements with respect to the loans contracted by the different American states; they are taken from the *American Almanac* for 1840, and are the fullest and most comprehensive that we have seen.

The following tables show the total amount of stock issued and authorised to be issued by each of the eighteen states, which have resorted to this mode of raising money. Where the returns from the financial officer did not afford all the information which was desired, the state laws have been examined, to ascertain the extent of the authorised loans. The operations of many of the states have been so extensive and varied, that it is not an easy matter to get at the precise amount of stock issued and authorised to be issued. It is probable, however, that the aggregate amount of stock authorised by all the states is even greater than the amount stated in the tables.

Statement of the Amount of Stocks and Bonds issued, and authorised by Statute to be issued, by the several States named below, giving the Year in which each State commenced issuing Stock, the Object for which it was issued, and the Rate of Interest.

* Whole or part for improvement of river navigation.

MAINE.—The stock issued by this state is to be redeemed under the direction of the legislature, by the sale of public lands, from the debts due to the state, by taxes, or new loans, as may be deemed expedient from time to time. The amount of notes due from individuals to the state (August, 1838) is 325,781 dollars. The whole amount of located lands belonging to the state, 1,400,000 acres, valued at 1,500,000 dollars; the unlocated lands belonging to Maine are estimated at 3,011,000 acres; making the total numbers of acres 4,411,000. This total includes half of the land north of the St. John's river in the king of Holland's award. The stock of this state is negotiable and transferable by the holder, and the interest in all cases is payable by the state. The interest on 235,000 dollars is payable at Boston annually, and the interest on the residue at the state treasury, annually and semi-annually; the stock bears interest at 5, 5½, and 6 per cent. The value of the taxable property of the state in 1830 was 28,907,687 34 dollars.

NEW HAMPSHIRE has issued no stock. The expenses of government are defrayed by a direct tax. **VERMONT.**—This state has issued no stock.

direction of the legislature, by new means, as may be deemed to the state (August, 1838) is 1,400,000 acres, valued at \$2,011,000 acres; making north of the St. John's river and transferable by the holder, 5,000 dollars is payable at Boston and semi-annually; the property of the state in 1830 was are defrayed by a direct tax.

MASSACHUSETTS.—Interest on 5,000,000 dollars of stock payable in London, by the Railroad Corporation, in whose favor the stock is granted, the interest on the rest is payable at the state treasury; the several corporations reimbursing the treasury for the interest so paid out. The scrip in all cases is made payable to the bearer, and no form is necessary in transferring the same. The real and personal property within the state (1830) is 908,360,407 dollars.

RHODE ISLAND.—This state has issued no stock. Valuation in January, 1834, 25,310,000 dollars.

CONNECTICUT.—This state has issued no stock, or bills of credit, since the revolutionary war. "The amount of the grand list is 97,122,697 dollars," in 1837.

NEW YORK.—This state commenced issuing stock in 1817 for the construction of the Erie and Champlain canals. The sum of 600,000 dollars was issued prior to 1830. The law of 1817 created a Board of Commissioners of the Canal Fund, consisting of the state officers, and placed under the management of the Board of Specific Revenues, which were pledged for the payment of the money borrowed. There has been derived from the auxiliary funds thus set apart, since the first organization of the canal fund, the sum of 5,824,761 dollars; which exceeds by 370,000 dollars the whole amount paid for interest on all the money borrowed for the Erie and Champlain canals for 31 years, from 1817 to 1838. From 1821 to 1838, these two canals have yielded in tolls 15,004,375-97 dollars. The result is, that the whole of the original debt is provided for, and, except about 32 millions, has been paid off, and the stock cancelled. The law authorizing money to be borrowed previous to 1835, contained the following provision, viz: "that it shall not be lawful for the commissioners of the canal fund to make loans under this act, beyond such amounts as, for the payment of the interest thereof, the canal fund, at the time, shall be deemed simple and sufficient."

In 1835, the financial policy in regard to monies borrowed, was changed; and loans from that time to the present have been authorized without setting apart specific funds for the payment of interest in each case, however, the payment of the interest is made a charge on the treasury and provision has been made to borrow from the Erie and Champlain canal fund, to meet this demand on the treasury. In 1837, after the suspension of specie payments, this state paid the interest on its whole debt in coin, and redeemed about 1,000,000 of the stock due in 1837, by paying 100 dollars in New York city paper for each 100 dollars of stock redeemed. For six years, from 1835 to 1838, the revenue from the tolls of the canals, after defraying all expenses of repairs, and paying interest on the whole amount of the outstanding debts, has yielded an average surplus of 610,000 dollars per annum. This surplus will sustain a debt of 12,000,000 dollars.

The stocks issued by the state of New York are transferable in the city of New York, either by the owner in person, or by a power of attorney. The original certificates in all cases to be produced when the transfer is made.

The aggregate valuation of real and personal estate in 1837 was 627,544,784 dollars.

NEW JERSEY has not issued stock of any kind, or lent her credit in any company.

PENNSYLVANIA.—This state pays the interest on its stock at the Bank of Pennsylvania, where the stock is transferable. The following revenues are set apart for the payment of interest on the stock loans, viz. canal and railroad tolls, dividend on turnpikes and bridge stock, auction duties, collateral inheritances, county rates and levies, tax on personal property, and excises. Whenever the revenues arising from the above sources is not sufficient for the payment of the interest on the stock loans, the deficiency is taken out of the treasury proper. The acts of assembly directing the loans to be made, direct also that the governor shall borrow on the credit of the commonwealth, and such fund or funds as have been or shall be created, for securing the punctual payment of the interest, and the reimbursement of the principal.

The aggregate valuation of real and personal estate in 1835 was 204,500,197 dollars.

MARYLAND.—This state, in all cases, pays the interest on the stock, half yearly and quarterly; but the companies which the state has aided by its loans reimburse the treasury for the amount of interest paid from time to time. A sinking fund has been established, from premiums and other sources, which now (1835) amounts to 1,070,306-03 dollars, which is applied to the purchase of the state stock.

During the suspension of specie payments, this state did not pay the interest on its stock either in specie or its equivalent. Some of the holders of the stock, refused to receive depreciated bank paper for the dividends; the treasurer, in December, 1837, reported this fact to the legislature; and in March, 1838, an act was passed, which provides that the state treasurer shall cause the interest on the state stock, that shall hereafter accrue, and that which has accrued since the 1st of April, 1837, to be paid, "either in coin, or its equivalent in current bank notes, to be determined by the commissioners of loans by the price of coin in Baltimore on the quarter day."

The private, real, and personal property, other than merchandise, and rights and credits of all sorts, is estimated at over 100,000,000 dollars. No uniform mode of valuing property throughout the state is observed. In most of the counties, the valuations are made under acts of 1785 and 1797, which require all lands to be put down at 3 dollars per acre; male slaves, at the highest, 100 dollars; and females at 80 dollars each.

VIRGINIA.—The interest on the stock issued by this state is payable semi-annually at the treasury, in gold or silver. The profits of the improvements for which the stock is issued are pledged for the payment of interest and principal; and, if necessary, the general revenues of the commonwealth are pledged for the payment of the interest.

The aggregate valuation of the real property of the state in 1818 was 206,803,978 dollars; and is now probably 300,000,000. There is no mode of ascertaining the personal property.

NORTH CAROLINA.—This state has set apart a large amount of funds for internal improvements, and for the establishment of public schools, which are placed under the direction of two boards, styled the Literary and Internal Improvement Boards. These funds, until required to meet specific appropriations by the legislature, are lent out to individuals and corporations at 6 per cent. The state of North Carolina owes no debt.

SOUTH CAROLINA.—The faith of the state and the capital of the bank of the state of South Carolina and the annual dividends thereof, are pledged for the payment of 800,000 dollars issued from 1822 to 1826; and the annual dividends have been formed into a sinking fund for that purpose; and at this time (October, 1838) they amount to upwards of 800,000 dollars, so that the 6 per cent. redeemable in 1840, will no doubt then be paid. The interest on 3,000,000 dollars to be lent in the Louisville, Cincinnati and Charleston railroad, is payable semi-annually in London. The 2,000,000 dollars for rebuilding a part of Charleston is to be lent to individuals, and the stock to be reimbursed from the mortgages of individuals. The interest on the state stock is payable semi-annually in London.

VALUATION OF PROPERTY, 200,000,000 DOLLARS.

MISSISSIPPI.—This state has issued bonds on the faith of the state, to the amount of 7,000,000 dollars, and has subscribed that amount in the stocks of two banks.

LOUISIANA.—The interest on the state bonds is paid by the respective banks to which they were originally issued. The interest on other state stocks is paid out of any moneys in the treasury.

The Bank of Louisiana, 2,000,000 dollars of stock; the profits retained for redemption of the installment of 1839, sufficient to cover the amount, 600,000 dollars.

Consolidated Association.—These bonds are guaranteed by mortgages on real productive property, amounting to 3,000,000 dollars. No stockholder can borrow more than 50 per cent. on his stock; and

this amount is returned by yearly instalments to meet the payment of the bonds by the bank. The state for its guarantee is considered as stockholder for 1,000,000 dollars, and, on the payment of the bonds, will divide accordingly with the stockholders. Dividends are only declared as the bonds are paid, and in the same proportion. The profits, until then, are retained as a sinking fund to meet the redemption of the bonds.

The Union Bank has bonds to the amount of 7,000,000 dollars, and is conducted on similar principles as the above. The original guarantee on mortgages of productive property is 8,000,000 dollars. The state for its guarantee is to receive one sixth of the net proceeds.

The Citizens' Bank has received bonds to the amount of 8,000,000 dollars, and can demand 4,000,000 more; it is conducted on the same principles as above described. The guarantee is on 14,000,000 dollars of mortgages on real productive property. The state holds one sixth of the net profits, which are only to be divided as the bonds are paid by the banks, and in the same proportion.

TENNESSEE.—The interest on the state bonds subscribed to the Union Bank were paid by the dividends on the stock, until the revolution of 1837, after which the state paid the interest from the ordinary resources of the treasury. The interest on the bonds issued to railroad and turnpike companies is paid by the state, and the companies are required to reimburse the treasury for the sums from time to time paid.

KENTUCKY.—This state, in all cases, pays the interest on her own stocks. Auxiliary funds are set apart for the payment of the interest; but if these funds should prove insufficient, the state is bound to resort to direct taxes. In 1836, the legislature established a sinking fund for the payment of the debt; to which fund are appropriated bonuses and dividends on bank stock, premiums on scrip, state dividends in turnpike stock and all internal improvements, profits of the commonwealth's bank, proceeds of state stock in the old Bank of Kentucky, and the excess in the treasury over 10,000 dollars of each year. The governor, by an act passed in 1838, is authorised to borrow any sum not exceeding the capacity of the sinking fund, to pay the interest, and ultimately the principal, of the state bonds, at an interest not exceeding 6 per cent. per annum.

Taxation is confined to specific subjects. The aggregate value of such as are chargeable with revenue is 217,453,041 dollars, upon which a tax of 10 cents on the 100 dollars is paid.

OHIO.—The interest on the stock of this state is payable in New York, where the stock is transferable. Auxiliary funds are set apart for the payment of the interest, and, in case of a deficiency therein, it is made the duty of the auditor of state to levy an adequate amount by direct taxation. The loans were invariably made on pledges of specific revenues for the payment of both principal and interest.

The state of Ohio, at the commencement of its loans, organised a system of finance on a firm foundation, providing by direct taxation for the payment of the interest and the ultimate redemption of the principal. In 1837, after the suspension of specie payments, Ohio paid the interest on its debt in New York city paper, at the rate of 100 dollars for each 100 dollars of interest.

Aggregate valuation of real and personal property, 110,000,000 dollars.

INDIANA.—The canal lands granted to the state by the general government on the Wabash river, are pledged for the payment of the loans made on account of the Wabash canal. The interest on the bonds issued to the state bank is paid by the bank.

In 1837, after the suspension of specie payments, this state purchased coin to pay the interest on its debt; and for the July quarter paid 111 dollars in New York paper for each 100 dollars in coin.

Aggregate valuation in 1837 estimated at 95,000,000 dollars.

ILLINOIS.—The state in all cases pays the interest on the stock. In addition to the usual pledge of the faith of the state, lands, revenues, &c., there are specifically pledged for the redemption of the canal bonds, the lands granted by the general government to aid in constructing the canal; the estimate of which is equal to the whole cost of the canal. There is also pledged for the interest and final redemption of the bank bonds, the dividends and the stock owned by the state in the banks, which amounts to nearly half a million of dollars more than the amount of these bonds.

MICHIGAN.—The proceeds of the public works, as well as the faith of the state, is pledged for 5,000,000 dollars—the lands set apart for the University is pledged for the loan for that object. The loans to railroads are secured by pledge of the roads, &c. The interest on 100,000 dollars issued to defray the expenses of the controversy with Ohio, is to be paid by a direct tax.

Missouri has issued bonds to the amount of 3,500,000 dollars to the state bank of Missouri.

ARKANSAS has issued 3,000,000 dollars of bonds to two banks in that state.

Statement showing the Amount of Stocks issued, and authorised by Law to be issued, by the several States named below, in each Period of Five Years, from 1820 to 1835, and from 1835 to 1838.

* Of this amount the sum of about 4-1/2 millions of dollars has been redeemed.

† Virginia has a war debt of 343,136-17 dollars, contracted previous to 1820.

‡ South Carolina has a revolutionary debt of 185,770-19 dollars.

Some doubts having been entertained as to the right of individual states to contract loans, Messrs. Baring, Brothers and Co. addressed a letter on the subject to the distinguished American senator and lawyer, Mr. Webster, lately on a visit to this country. We subjoin his reply:—

“London, Oct. 16, 1839.

“Gentlemen,—I have received your letter, and lose no time in giving you my opinion on the question which you have submitted for my consideration. The assertions and suggestions to which you refer, as having appeared in some of the public prints, had not escaped my notice.

ntered. 1830.

al states to contract loans, ject to the distinguished in this country. We subjoin

"London, Oct. 10, 1839. You my opinion on the ques- ed suggestions to which you y notice.

"Your first inquiry is, 'whether the legislature of one of the states has legal and constitutional power to contract loans at home and abroad?'"

"To this I answer, that the legislature of a state has such power; and how any doubt could have arisen on this point, it is difficult for me to conceive. Every state is an independent, sovereign, political community, except in so far as certain powers, which it might otherwise have exercised, have been conferred on a general government, established under a written constitution, and exerting its authority over the people of all the states. This general government is a limited government. Its powers are specific and enumerated. All powers not conferred upon it still remain with the states and with the people. The state legislatures, on the other hand, possess all usual and ordinary powers of government, subject to any limitations which may be imposed by their own constitutions, and with the exception, as I have said, of the operation, on those powers, of the constitution of the United States. The powers conferred on the general government cannot, of course, be exercised by any individual state; nor can any state pass any law which is prohibited by the constitution of the United States. Thus no state can by itself make war, or conclude peace, nor enter into alliances or treaties with foreign nations. In these, and other important particulars, the powers which would have otherwise belonged to the state can now be exercised only by the general government, or government of the United States. Nor can a state pass a law which is prohibited by its own constitution. But there is no provision in the constitution of the United States, nor, so far as I know or have understood, in any state constitution, prohibiting the legislature of a state from contracting debts, or making loans, either at home or abroad. Every state has the power of levying and collecting taxes, direct and indirect, of all kinds, except that no state can impose duties on goods and merchandise imported,—that power belonging exclusively to congress by the constitution. That power of taxation is exercised by every state, habitually and constantly, according to its own discretion, and the exigencies of its government.

"This is the general theory of that mixed system of government which prevails in America. And as the constitution of the United States contains no prohibition or restraint on state legislatures in regard to making loans, and as no state constitution, so far as known to me, contains any such prohibition, it is clear that, in this respect, these legislatures are left in the full possession of this power, as an ordinary and usual power of government.

"I have seen a suggestion, that state loans must be regarded as unconstitutional and illegal, inasmuch as the constitution of the United States has declared that no state shall emit bills of credit. It is certain that the constitution of the United States does contain this salutary prohibition; but what is a bill of credit? It has no resemblance whatever to a bond, or other security given for the payment of money borrowed. The term 'bill of credit' is familiar in our political history, and its meaning well ascertained and settled, not only by that history, but by judicial interpretations and decisions from the highest courts. For the purpose of this opinion, it may be sufficient to say, that bills of credit, the subject of the prohibition in the constitution of the United States, were essentially paper money. They were paper issues, intended for circulation, and for receipt into the treasury as cash, and were sometimes made a tender in payment of debts. To put an end at once, and for ever, to evils of this sort, and to dangers from this source, the constitution of the United States has declared, that 'no state shall emit bills of credit, nor make any thing but gold and silver a tender in payment of debts, nor pass any law which shall impair the obligation of contracts.' All this, however, proves, not that states cannot contract debts, but that, when contracted, they must pay them in coin, according to their stipulations. The several states possess the power of borrowing money for their own internal occasions of expenditures, as fully as congress possesses the power to borrow in behalf of the United States, for the purpose of raising armies, equipping navies, or performing any other of its constitutional duties. It may be added, that congress itself fully recognises this power in the states, as it has authorised the investment of large funds which it held in trust for very important purposes in certificates of state stocks.

"The security for state loans is the pledged faith of the state, as a political community. It rests on the same basis as other contracts with established governments—the same basis, for example, as loans made to the United States under the authority of congress; that is to say, the good faith of the government making the loan, and its ability to fulfil its engagements. These state loans, it is known, have been contracted principally for the purpose of making railroads and canals; and in some cases, although I know not how generally, the income or revenue expected to be derived from these works is directly and specifically pledged for the payment of the interest and the redemption of the debt, in addition to the obligation of public faith. In several states, other branches of revenue have been apudically pledged; and in others, very valuable tracts of land. It cannot be doubted that the general result of these works of internal improvement has been, and will be, to enhance the wealth and ability of the states.

"It has been said that the states cannot be sued on these bonds. But neither could the United States be sued, nor, as I suppose, the crown of England, in a like case. Nor would the power of suing, probably, give the creditor any substantial additional security. The solemn obligation of a government, arising on its own acknowledged bond, would not be enhanced by a judgment rendered on such bond. If it either could not, or would not, make provision for paying the bond, it is not probable that it could, or would, make provision for satisfying the judgment.

"The states cannot rid themselves of their obligations otherwise than by the honest payment of the debt. They can pass no law impairing the obligation of their own contracts,—they can make nothing a tender in discharge of such contracts but gold and silver. They possess all adequate power of providing for the case, by taxes and internal means of revenue. They cannot get round their duty, nor evade its force. Any failure to fulfil its undertakings would be an open violation of public faith, to be followed by the penalty of dishonour and disgrace,—a penalty, it may be presumed, which no state of the American Union would be likely to incur.

"I hope I may be justified by existing circumstances to close this letter with the expression of an opinion of a more general nature. It is, that I believe the citizens of the United States, like all honest men, regard debts, whether public or private, and whether existing at home or abroad, to be of moral as well as legal obligation; and I trust I may appeal to their history, from the moment when those states took their rank among the nations of the earth to the present time, for proof that this belief is well founded; and if it were possible that any of the states should at any time so entirely lose her self-respect and forget her duty as to violate the faith solemnly pledged for her pecuniary engagements, I believe there is no country upon earth—not even that of the injured creditors—in which such a proceeding would meet with less countenance or indulgence than it would receive from the great mass of the American people.

"I have the honour to be, gentlemen, your obedient servant,
"Messrs. Baring Brothers & Co."
"DANIEL WEBSTER."

There can, of course, be no further doubt as to the law on this important subject; and we trust that the states will respectively evince that high moral sense, and determination to pay their just debts, for which their distinguished countryman gives them credit. We confess,

however, that we are not without our misgivings on this point. The extreme facility with which loans on American account have recently been raised in Europe, and especially in this country, on all manner of securities, will turn out, in the end, a serious loss to America, inasmuch as it has tempted her citizens to engage, without sufficient consideration, in the most gigantic undertakings, and to generate and diffuse a spirit far more akin to gambling than to the pursuits of sober industry. In consequence, a vast amount of capital has been unprofitably expended, and to little better purpose, in fact, than if it had been absolutely thrown away. Now, the question which our countrymen, who are so fond of investing in American securities, would do well to ponder, is, will the states continue, after the excitement of the period of expenditure is gone by, regularly to pay the interest of these debts? Suppose that a system of universal suffrage were established in this country, and that we had several millions a year to pay to France or Russia, for loans borrowed from them, and expended less, perhaps, for the public advantage than for the private benefit of the parties who negotiated the loans: under such circumstances, we rather incline to think, should any thing occur to excite our prejudices against our foreign creditors, that there would be no small risk of a serious interruption taking place in the payments due to them. And if such a thing might, in the supposed case, be not unreasonably predicted of England, it is not uncharitable to suppose that it may also occur in America.—S.

GALACZ. To the conclusion of the paragraph, vol. i., page 701, of this edition, annex the following:—

Navigatio of the Danube.—Steam navigation was first established on the Danube in 1830, since which the undertaking has gone on prospering, so much so, that the communication between Vienna and Constantinople is now maintained by a line of seven steam vessels. The Austrian steam company, which was the first in the field, have extended their scheme by starting vessels between Vienna and Linz, and a Bavarian company commenced in 1838 running a vessel between Ratisbon and Linz. It is probable that in a year or two steamers may ply from Ulm downwards. At present steam boats ply on the Danube as long as the river remains free from ice (usually from February or March to November), from Ratisbon to Linz, once a week; Linz to Vienna, 10 hours, once a week; Vienna to Presburg and Pesth, twice; Pesth to Drenkova, once a week; Gladova to Galacz, once a week; Galacz to Constantinople, once a fortnight.

The voyage from Vienna to Constantinople, including stoppages, is seldom performed in less than fourteen days, and sometimes occupies seventeen; in returning against the stream it takes at least a month, including ten days' quarantine at Orsova. The fare, first place, is 134fl., about 13l.; second place, 94fl.

The navigation of the Danube by steamers is unfortunately interrupted for a length of about fifty miles, between Drenkova and Gladova, by rocks and rapids, the lowest and most considerable of which is a sort of cataract, called the "Irongate," about three miles below the Hungarian frontier. It is worthy of remark that the most illustrious of the Roman emperors, Trajan, alive to all the advantages to be derived from the easy navigation of the Danube, had with equal industry and sagacity formed a road, or towing path, along the river's edge for facilitating the operation of toiling, of which the remains are still extant, with an inscription commemorative of the completion of the works. It has been proposed to overcome the difficulties in the way of the navigation by renovating the old Roman road, and deepening the channel contiguous to it. But it rarely happens that attempts to improve the navigation in the bed of a river, under any thing like similar circumstances, are even tolerably successful. The better way undoubtedly would be, were it practicable, to construct a lateral canal, or rather a canal from the mouth of the Bereska to Palanka, which would not only avoid the rapids, but also shorten the navigation by getting rid of the bend of the river by Orsova. But the difficulties in the way of such an undertaking, from the nature of the ground, are said to be insuperable; and it is, therefore, probable that the distance of 60 miles along the rapids will continue. If not always, at least for some considerable time, a *portage*. The evil, however, of this break in the navigation has been diminished, as far as possible, by the construction of an admirable carriage road (recently finished), at great expense, by the Hungarian diet, from Moldova to Orsova. In the extent of excavations in the rock, and terraces of masonry, upon which it is carried, it is not inferior as a specimen of engineering to the finest roads over the Alps. Several steamers have been transported down these rapids at the season of floods, small barges pass them at all times, and little boats, laden with wax and wool, are towed up by men and oxen. The passengers and goods conveyed by the steamers are transferred from Moldova in row-boats, to Gladova, below the Irongate, where they embark on another steamer.

A railroad is nearly completed from Brunn, the capital of Moravia, to Vienna; another railroad diverges from the Danube, at Linz, north to Budweis in Bohemia, where it reaches the banks of the Muldau, and through it communicates with the Elbe.—A.

GUAYAQUIL.

Account of the Export of Cocoa from Guayaquil, during each of the Six Years ending with 1838, specifying the Countries to which it was exported, and the Quantities sent to each.

HAMBURGH—IMPORTS AND EXPORTS.

793

The district in which Guayaquil is situated has, for a considerable period, formed a part of the republic of Ecuador or Æquator. Like the other S. American states it has been subjected to perpetually recurring revolutions; but Guayaquil has notwithstanding continued to enjoy a considerable commerce. Its principal article of export is cocoa, of which large quantities are shipped; and next to it are timber, tobacco, calbo wool used in stuffing mattresses, &c. The principal articles of import are British manufactured cottons and hardware, silks, wine, flour, &c.—S.

Remarks on the above Tables.—Foreign Competition.—The falling off in the exports in 1837, (see p. 36.) was almost entirely owing to the decline in the exports to the United States, which fell off from 12,425,605*l.* in 1836, to 4,695,225*l.* in 1837. But this extraordinary decline was wholly owing to accidental causes, or to the pecuniary difficulties in which the mercantile class in the United States were involved in the latter part of 1836 and 1837, through the previous abuse of credit, and the revulsion occasioned by the universal stoppage of the banks. It was clear, that how severe soever in the meantime, any check to commerce originating in such circumstances would be of a temporary description; and, in point of fact, its influence soon ceased to have any very perceptible operation, and our exports to the United States were, in 1838, almost as large as ever.

But this is not all. Since the foregoing tables were published, an account has been printed exhibiting the declared value of the principal articles of native produce and manufacture exported from the United Kingdom in 1839. We subjoin this account, and it is seen from it, that the increase in the value of the exports of the 19 articles which it embraces in 1839 over the value of the same articles exported in 1838, amounts to nearly 2,000,000*l.* (See p. 797.)

It is obvious, therefore, that the statements that have recently been put forth with so much misplaced confidence, as to the injurious influence of foreign competition on our trade, and the consequent decline of our exports, are not mere exaggerations, but are wholly without any real foundation. The competition of Saxony, Rhenish Prussia, and Belgium, is represented as the most formidable; and if we might credit the statements put forth at public

IMPORTS AND EXPORTS.

meetings, and circulated by the press, as to the wonderful progress of manufactures in these countries, and the destructive influence of the Prussian League on our trade, it might be supposed that our exports to Germany had been reduced to little or nothing. But, how stands the fact? The declared value of our exports to Prussia, Germany, Holland, and Belgium, since 1830, has been—

It appears, therefore, that so far from there having been any falling off in our trade with Germany, and the countries through which Germany is supplied with manufactured goods, our exports to them have decidedly increased, and are greater at this moment than they were before the League was organised, or those improvements of which we have heard so much, had made any progress. It is not competition of the foreigner but of the home manufacturers against each other, that reduces prices and profits, and gives rise to perpetually recurring complaints of the decay of trade. Provided tranquillity be maintained at home, and Britain continue to be exempted from that political agitation that is the bane of industry and the curse of every country in which it prevails, we have nothing to fear from foreign competition. Our natural and acquired advantages for the prosecution of manufactures and trade, are vastly superior to those of every other country; and though foreigners do excel us in a few departments, and may come to excel us in others, so that the character and channels of our trade may, in consequence, be partially changed, there is not so much as the shadow of a foundation for supposing that its amount will be at all affected. On the contrary, it is all but certain that it will continue to augment with the augmenting wealth and population of the innumerable nations with which we have commercial relations.

But it has been said, that though the declared value of our exports in 1839 be considerably greater than in 1838, the quantities of raw cotton, foreign wool, &c. entered for home consumption in 1839 were decidedly less than in 1838; and that, consequently, the extension of the export trade has been owing to the decline of the home demand for manufactures, originating in the depressed state of the manufacturing population. But we doubt whether there be much in this. The quantity of any article entered for home consumption is a totally different thing from the quantity *actually consumed*; and it is this only that is of the least importance. Now it is plain, that to determine the quantity consumed, we must not only know the quantities entered for consumption, but we must further know the stocks on hand at the beginning and end of the year; and before it can be truly affirmed that there has been any decline in the consumption of cotton goods, it would be necessary to know whether the stocks of such goods in the manufacturers' and dealers' hands had increased or diminished.

It appears from the *Parl. Paper*, No. 80. sess. 1840, that the cotton entered for consumption, in 1838, amounted to 460,756,013 lbs., whereas in 1839 it only amounted to 355,781,960 lbs., being a decline of about 105,000,000 lbs. But the actual consumption did not fall off in any thing like this proportion: on the contrary, it is stated in the most valuable document published on the state of the cotton trade—the annual circular of Messrs. Holt & Co. of Liverpool, for the 31st of December, 1839 (vol. i., p. 522.)—that the consumption of cotton in 1838 amounted to about 416,700,000 lbs., and in 1839 to about 381,700,000 lbs., being a decline of only 35,000,000 lbs., which was wholly owing to the increase in the price of raw cotton; and we have been assured by those well acquainted with

falling off in the exports in 1839 to the United States, and to the other parts of the United States. But this extraordinary decline in our exports in the latter part of 1836 and 1837, is owing to the universal stoppage of our exports to the United States, and to the difficulties in the part of 1836 and 1837, by the universal stoppage of any check to commerce; and, in point of fact, our exports to the United States, in 1838, amounted to nearly

an account has been given of the five produce and manufactures in this account, and it is stated in the 19 articles which it contains, that in 1838, amounts to nearly

put forth with so much attention on our trade, and that we are wholly without any check to commerce, and Belgium, is represented as put forth at public

the facts, that this diminution of the consumption has been fully balanced by a proportionate diminution of the stocks of manufactured goods held by the manufacturers and dealers; so that it would appear that the supposed decrease of the home demand is about as visionary as the supposed disastrous influence of Prussian and Saxon competition. The decline in the entries of foreign sheep's wool in 1839, as compared with 1838, is too inconsiderable to deserve notice; but, such as it is, it is certainly to be accounted for in the same manner.

No doubt, however, there has been considerable mercantile and manufacturing distress during the last twelve months; but its extent has been ridiculously exaggerated, and it is besides clear that foreign competition had nothing to do with it. The distress that has existed is wholly, or almost wholly, ascribable to domestic causes—to the rise in the rate of interest, and the pressure on the money market, occasioned by the abuses that periodically and necessarily grow out of our vicious banking system, and to the indifferent harvests of 1838 and 1839. But the reader may be assured that there is nothing in the situation of the manufacture and commerce of the country that should excite any alarm.

Although, however, we attach no weight to the exaggerated and unfounded statements that have been so perseveringly circulated as to the decay of trade, we are not certainly of the number of those who think that no change should be made in the commercial policy of the country, or that it may not be very materially improved. Restrictive regulations and oppressive duties, though much diminished of late years, still continue to exert a very powerful and mischievous influence over many departments of industry; and are, in fact (supposing tranquillity to be preserved), the only thing from which it is at all reasonable to apprehend any serious injury. It is in all respects of the utmost importance that every practicable effort should be made for their modification and reduction. They not only diminish exportation, by diminishing importation, but inflict a grievous injury on the consumer, without producing any corresponding advantage to the revenue, to which, indeed, they are decidedly hostile. Perhaps, however, their worst effect consists in the handle and pretence which they afford for all sorts of misrepresentation and abuse. This has been strikingly evinced in the recent discussions as to the Corn Laws. All parties, manufacturers, and agriculturists, seem generally to entertain the most erroneous notions as to the influence of these statutes. The truth is, that, in ordinary years, it is now, thanks to the spread of agricultural improvement, all but imperceptible. During the six years ending with 1837, the average price of wheat in Great Britain was 50s. 2d. a quarter; and we are bold to say, that not a tittle of evidence has been, or can be produced, to show that this price would have been reduced 5s. a quarter had the ports been all the while open to unconditional importation from abroad. Hence, were our manufactures really declining, or in a perilous state, which happily they are not, it is idle to suppose that this decline or danger could be obviated by the repeal of the Corn Laws. The influence of the latter is now little felt, except in unfavourable years, when the home crops are deficient; but then it is extremely injurious. This arises not only from the restrictions which they lay on importation at the time, but also from the discouragement which they give to warehousing in ordinary years, and, consequently, forcing the required supply to be suddenly introduced, to the great derangement of the ordinary channels of trade and of the currency. Such a state of things should not be allowed to exist; and seeing that the agriculturists have really nothing to fear from the opening of the ports, sound policy would suggest that foreign corn should be admitted at all times for home consumption, under such a reasonable constant duty (5s. or 6s. on wheat, and other grain in proportion) as may be required to countervail the burdens peculiarly affecting the land. The exclusion of foreign sugar, and the regulations as to the timber trade, are productive of nothing but mischief, and have not, in fact, a single redeeming quality about them: their effect is to add very materially to the price of a most important necessary of life, and of our houses, ships, and machinery, and to deprive the Treasury of at least 1,500,000*l.* a year of revenue. But were the corn laws and those relating to timber and sugar placed on a proper footing, and some of the more oppressive duties in our tariff, as those on brandy and hollands, adequately reduced, the foreign competition to which we might be exposed would be productive of nothing but advantage. Such competition is, in reality, the vivifying principle of industry, *curis acens mortalia corda*. It gives a new stimulus to the inventive powers, at the same time that it supplies new products and new modes of enjoyment to reward the labour of the industrious. It must ever be borne in mind, that the amount of the exports from a country always depends upon, and is, in fact, measured by, the amount of its imports; and while the magnitude of the latter continues to increase, and we freely open our ports to the products of all countries and climates, we may be sure that our exports will equally increase, and be found in every market.—S.

[LIGHT-HOUSE.—The following six new light-houses have been erected on the coast of France:—

1. *Island of St. Marcouf*, in latitude of 49 deg. 30 min. 55 sec., longitude 3 deg. 29 min. west of Paris; the light situated on the fort, about 55 feet above the level of the sea, and may be perceived, in fine weather, at the distance of three leagues.

2. *Port Navalo*, on the right side of the entrance of the Morbihan; the light situated on the point, about 70 feet above the sea, and is visible, in fine weather, at the distance of 3 leagues.

3. *Caps Ferrat*, about one mile north of the entrance of the Basin of Arcachon, in latitude 44 deg. 38 min. 43 sec., longitude 3 deg. 35 min. 15 sec., west of Paris; the light situated about 200 feet above the level of the sea, and visible at the distance of 6 leagues.

The above are on the Atlantic coasts. The following are on the Mediterranean, near the mouths of the Rhone:

4. *La Camargue*.—In place of the small light-houses on the east bank of the entrance of the old Rhone, a new one, of the first order, with a fixed light, has been established on a tower, at the height of about 90 feet above the level of the sea, in latitude of 43 deg. 1 min. 30 sec., longitude 3 deg. 20 min. 30 sec. east from Paris; the light visible at the distance of 6 leagues.

5. *Port de Cassis*, in latitude of 43 deg. 12 min. 30 sec., longitude 3 deg. 11 min. 40 sec. east from Paris, on the left side of the entrance of the port, 90 feet above the level of the sea; visible at the distance of 3 leagues.

6. *Port de la Ciotat*.—Another light on a tower at the end of the new mole, on the right side of the entrance of the port, in latitude of 43 deg. 10 min. 35 sec., longitude 3 deg. 10 min. 28 sec. east of Paris, visible at the distance of 3 leagues. This second light will prevent all possibility of mistaking Ciotat, for Casals. *Am. Ed.*

[LIVERPOOL. The American editor originally intended to have given a separate article under this head, as well as under that of London; but, on further consideration, he has judged this to be unnecessary, on account of the very full description by the author of the commerce of these cities, in the article Docks, in the body of the work.—*Am. Ed.*]

It is seen from the first of the above returns, that the principal increase has been in the circulation of English provincial papers, which has risen from 9,559,585 in 1836, to 16,247,676 in 1838, being a rise of about 70 per cent. In Ireland, the stamp duty, previously to the reduction, was lower than in Britain, and the measure has consequently had comparatively little influence in that part of the empire.—S.

OPIUM. The opium trade, as the readers of the Dictionary are aware, has been, for a lengthened period, prohibited by the Chinese government, and has, in consequence, been conducted as a sort of smuggling speculation. There would seem, however, to be good grounds for thinking that the prohibition of the importation of opium was all along intended to be more apparent than real. At all events, it is certain that the trade has grown gradually up, from a small beginning, to be one of great extent and value; and it is contradictory and absurd to suppose that this should have been the case, had it encountered any considerable opposition from the Chinese authorities. But the truth is, that these functionaries, instead of opposing the trade, or even merely conniving at it, were parties to its being openly carried on; and received certain regulated and large fees on all the opium that was imported. It has even been alleged that a part of these fees had found its way into the imperial treasury at Peking, though that is more doubtful. The appetite for the drug increased with the increasing means of gratifying it; and there appeared to be no assignable limits to the quantity that might be disposed of in the empire.

The rapid extension of the trade seems at length to have awakened the attention of the court of Peking to the subject. We doubt, however, notwithstanding what has been alleged to the contrary, whether a sense of the injurious consequences of the use of the drug had much to do in the matter. This, indeed, is a part of the subject as to which there exists a great deal of misapprehension; and we are well assured, that, provided it be not carried to excess, the use of opium is not more injurious than that of wine, brandy, or other stimulants. In truth and reality, the alarm of the Chinese government was not about the health or morals of its subjects, but about their bullion! They are still haunted by the same visionary fears of being drained of a due supply of gold and silver, that formerly haunted the people of this country. The imports of opium having increased so rapidly as to be no longer balanced by the exports of tea and silk, *sycee* silver began also to be exported! The court of Peking could have tolerated what are called the demoralising effects of opium with stoical indifference, but the exportation of silver was not a thing to be endured.—It is, however, only fair to state, that the Chinese statesmen are not all of the Bexley school; and that some of them appear to have taken an enlightened view of the question, and to have emancipated themselves from the prejudices that still influence a majority of their colleagues. The statesmen in question contended, that the taste for the drug was far too deeply seated and too widely diffused to admit of its effectual prohibition; and they, therefore, proposed that its importation should be legalised, subjecting it, at the same time, to a heavy duty. There cannot be a doubt that this was the proper mode of dealing with the subject. In the end, however, the government of Peking, influenced by unfounded theories, as to the mischievous effect of the export of the precious metals, came to a different conclusion, and resolved to put a stop to the traffic.

No sooner had this resolution been adopted, than a most extraordinary change appears to have taken place in the conduct of the Chinese authorities; and their usual caution seems to have wholly deserted them. They now became as precipitate and violent as they had previously been slow and circumspect; and resolved at all hazards to attempt forcibly to put down the trade. To accomplish this, all foreigners were, in March, 1839, prohibited from leaving Canton; and compulsory measures were at the same time resorted to for compelling them to deliver up the opium in their possession.

How the affair might have ended, had our countrymen at Canton been left to the exercise of their own judgment in this crisis, it is impossible to say; but we have been assured by those on whose statements we are disposed to rely, that they would most probably have succeeded in getting out of it with comparatively little loss. Instead, however, of acting for themselves, they had to act in obedience to the orders of Mr. Elliot, chief superintendent of the British trade in Canton; and he, while under constraint, occasioned by confinement to the factory, and without supplies of food, which was withheld by the Chinese, commanded all the opium belonging to British subjects to be given up to him for delivery to the Chinese authorities; declaring, at the same time, that "failing the surrender of the said opium," the British government should be free "of all measure of responsibility or liability in respect of British-owned opium."

We do not presume to offer any opinion as to the necessity or policy of this proceeding on the part of the superintendent; but, in consequence thereof, and of the unjustifiable proceedings of the Chinese, above 20,000 chests of opium, worth upwards of 2,000,000*l.* sterling, were delivered up to Mr. Elliot by British subjects, and by him to the Chinese authorities; and the latter, not satisfied with the possession of the opium, which it was their duty to have placed in a state of security till the matters with respect to it should be arranged, immediately proceeded to destroy it! Having succeeded thus far, the Chinese next insisted that the foreign merchants should subscribe a bond, pledging themselves not to import opium into any part of China; or that, if they did, they were to be justly liable to the penalty of *death*. But this condition being refused, and no arrangement having been come to, Mr. Elliot suspended the trade on the 22d of May; and a collision has since taken place between a British sloop of war and some Chinese junks, when several of the latter were sunk.

Sundry grave questions will, no doubt, arise out of these extraordinary proceedings. That the Chinese have the same right to exclude opium from their empire, that we have to prohibit the importation of beef, or ammunition, or to lay a duty on corn, does not admit of any question. But in endeavouring to suppress a trade that had been carried on under the sanction of the authorities at Canton, all of whom had largely participated in its profits, justice required that notice should have been given to the parties concerned of the intentions of government. It is necessary to bear in mind, that the Chinese were in the habit of frequently issuing proclamations against the importation of opium; but as no attempt was ever made to give the slightest effect to these proclamations, the parties engaged in the trade were naturally led to conclude that such would always be the case. Hence the necessity for a distinct intimation being made, that the laws against the importation of opium were, in future, to be *bonâ fide* and truly carried into effect, and for fixing some period after which all parties found engaged in the trade would be subject to certain penalties. No valid objection could have been made to such a course of proceeding. The Chinese are clearly entitled to prohibit th

importation of opium; but neither the Chinese nor any other nation are entitled, after having, by a long connivance at and participation in the trade, induced foreigners to import a large amount of valuable property into their territories, to pounce upon and seize such property on pretence of its being contraband! The Chinese are a remarkably clever people; and it is impossible that they should not see that, in this instance, their government has been guilty of the grossest injustice; and that it has rendered itself liable for the full value of the property it has so unwarrantably seized and destroyed.

Suppose the British parliament had, in 1796, passed an act prohibiting the importation of tea; and suppose farther, that the collector of customs and other authorities in Liverpool had paid no attention whatever to this act, but that, from 1796 down to the present day, they had openly countenanced the trade, that it had rapidly increased; and that every year hundreds of Chinese ships laden with tea had arrived in the Mersey, safely unloaded their cargoes, and sailed either with silver or other British produce on board: what, under these circumstances, would the Chinese have said, had the British government suddenly turned round and declared, "You are engaged in an illegal trade;" and without farther intimation have proceeded to seize and destroy all the tea belonging to them in England? Would not the Chinese, the Russians, French, and, in short, the whole world, have declared such an act to be flagrantly unjust? And would not every honest man in England have said that the Chinese had been swindled; and that the government of China did not deserve to be treated with ordinary respect, if it did not endeavour to procure redress for its subjects.

Now, this is precisely the case of England against the Chinese. The morality or immorality of the opium trade is wholly beside the question. Though opium were ten times more injurious than has ever been represented, that would not alter the fact that the trade in it had been openly countenanced by the Chinese authorities for a period of more than forty years; and such being the case, foreigners were certainly entitled to infer that that countenance would not suddenly be withdrawn; and that, at all events, their property would be respected. This, in fact, is not a question about which there is any real room for doubt or difference of opinion. The conduct of the Chinese has been most unwarrantable; and the government of this country has not only a well-founded claim for redress, but is called upon to enforce it by a just regard for the national honour and the interests of the British subjects, whose rights have been so outrageously violated at Canton.

It is laid down by all writers on public law, that it depends wholly on the will of a nation to carry on commerce with another, or not to carry it on, and to regulate the manner in which it shall be carried on. (*Vattel*, book i. § 8.) But we incline to think that this rule must be interpreted as applying only to such commercial states as recognise the general principles of public or international law. If a state possessed of a rich and extensive territory, and abounding with products suited for the use and accommodation of the people of other countries, insulates itself by its institutions, and adopts a system of policy that is plainly inconsistent with the interests of every other nation, it appears to us that such nation may be justly compelled to adopt a course of policy more consistent with the general well-being of mankind. No doubt, the right of interference, in cases of this sort, is one that should be exercised with extreme caution, and requires strong grounds for its vindication. But that this right does exist, seems sufficiently clear. We admit that a slight degree of inconvenience, experienced from one nation refusing to enter into commercial transactions with another, or from its insisting that these transactions should be carried on in a troublesome and vexatious manner, would not warrant any interference with its internal affairs; but this, like all other questions of the same kind, is one of degree. Should the inconvenience resulting from such anti-social vexatious conduct become very oppressive on others, the parties so oppressed would have as good a right to interfere to enforce a change of conduct, as if the state that has adopted this anti-social offensive policy had openly attacked their territory or their citizens. A state has a perfect right to enact such rules and regulations for its internal government and the conduct of its trade as it pleases, provided they do not exercise any very injurious influence over others. But should such be the case—should the domestic or commercial policy of any particular state involve principles or regulations that trench on the rights or seriously injure the interests of other parties, none can doubt that these others have a right to complain; and, if the injury be of a grave character, and redress be not obtained on complaint being made,—no reasonable doubt can be entertained that the aggrieved party is justified in resorting to force.

These principles appear to us to apply with peculiar force in the case of China. Tea, a peculiar product of that country, has now become a necessary of life in England; and no one can doubt that a most serious injury would be inflicted on the people of Britain, were any considerable impediment thrown in the way of its importation; and as the arbitrary policy of the Chinese government, which is not influenced by the maxims, and is regardless of the forms, that prevail among civilised states, has already interrupted this trade, and constantly exposes it to great dangers, it certainly appears that this is a case for forcible intervention—*dignus vindicæ nodus*,—and that we are entitled to demand that the trade should

be placed on a solid footing, that the import and export duties should be rendered intelligible and moderate, and that an end should be put to the extortion and interference of the Chinese authorities.—S.

PAPER. The following is to be read as a conclusion of the article *Paper* in this edition of the Dictionary.

This measure has, also, in part obviated the injustice done to authors and publishers, by compelling them to pay a duty on the paper used in printing books previously to their publication; and, consequently, before it can be known whether the books will sell. When they do not sell, the tax has obviously to be paid out of the capital of the authors or publishers, and the loss arising from an unsuccessful publishing speculation is increased by its amount. (See vol. i., p. 200.) It is true that every duty on paper, how limited soever operates in this way, and is, therefore, objectionable on principle; but the hardship inflicted on an unsuccessful author by the existing paper duty being only half its former amount, is no longer of any very material importance.

As respects revenue, too, the measure promises to be most successful. In 1835, the net produce of the duties on paper, in the United Kingdom, amounted to 715,743*l.*, of which the duty on stained paper produced 60,141*l.* The latter duty, as already seen, was totally repealed in 1836, and deducting it, the duty on printing and writing papers, paste-board, &c., in 1835, amounted to 655,602*l.* Now, the rates on the latter descriptions having been reduced a half, it follows, that had the consumption continued stationary, the duty would now have amounted to 327,801*l.*; whereas, it amounted, in 1838, to 539,789*l.*, being an increase of 65 per cent., and we understand that the increase last year was still greater. The fair presumption, therefore, is that in a year or two, the consumption of taxed paper will be doubled, and that the revenue will have lost nothing by the reduction. This, in fact, is almost always the case. An oppressive tax on an article in general demand is never effectually reduced, without the revenue being in a very short time benefited by the measure. It may be truly said of taxation,—

—ab ipso
Duct opes animunque ferro.

The only thing to be regretted, is that the pruning knife is seldom vigorously and skilfully applied.—S.

STOCKS.

A BILL

REDUCING THE DUTY ON IMPORTS, AND FOR OTHER PURPOSES.

PASSED JULY 29, 1846.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That from and after the first day of December next, in lieu of the duties heretofore imposed by law on the articles hereinafter mentioned, and on such as may now be exempt from duty, there shall be levied, collected, and paid, on the goods, wares, and merchandise herein enumerated and provided for, imported from foreign countries, the following rates of duty—that is to say:

On goods, wares, and merchandise mentioned in schedule A, a duty of *one hundred* per centum ad valorem.

On goods, wares, and merchandise mentioned in schedule B, a duty of *forty per cent.*

On goods, wares, and merchandise mentioned in schedule C, a duty of *thirty* per centum ad valorem.

On goods, wares, and merchandise mentioned in schedule D, a duty of *twenty-five* per centum ad valorem.

On goods, wares, and merchandise mentioned in schedule E, a duty of *twenty* per centum ad valorem.

On goods, wares, and merchandise mentioned in schedule F, a duty of *fifteen* per centum ad valorem.

On goods, wares, and merchandise mentioned in schedule G, a duty of *ten* per centum ad valorem.

On goods, wares, and merchandise mentioned in schedule H, a duty of *five* per centum ad valorem.

SEC. 2. *And be it further enacted,* That from and after the first day of December next, the goods, wares, and merchandise mentioned in schedule I shall be exempt from duty.

SEC. 3. *And be it further enacted,* That, from and after the first day of December next, there shall be levied, collected, and paid on all goods, wares, and merchandise imported from foreign countries, and not specially provided for in this act, a duty of *twenty* per centum ad valorem.

SEC. 4. *And be it further enacted,* That in all cases in which the invoice or entry shall not contain the weight or quantity, or measure of goods, wares, or merchandise now weighed or measured or gauged, the same shall be weighed, gauged, or measured at the expense of the owner or consignee.

SEC. 5. *And be it further enacted,* That from and after the first day of December next, in lieu of the bounty heretofore authorized by law to be paid on the exportation of pickled fish of the fisheries of the United States, there shall be allowed, on the exportation thereof, if cured with foreign salt, a drawback equal in amount to the duty paid on the salt, and no

more, to be ascertained under such regulations as may be prescribed by the Secretary of the Treasury.

SEC. 6. *And be it further enacted*, That all goods, wares, and merchandise imported after the passage of this act, and which may be in the public stores on the second day of December next, shall be subject to no other duty upon the entry thereof than if the same were imported respectively after that day.

SEC. 7. *And be it further enacted*, That the twelfth section of the act entitled, "An act to provide revenue from imports, and to change and modify existing laws imposing duties on imports, and for other purposes," approved August thirty, eighteen hundred and forty-two, shall be, and the same is hereby, so far modified, that all goods imported from this side the Cape of Good Hope or Cape Horn may remain in the public stores for the space of one year instead of the term of sixty days prescribed in the said section; and that all goods imported from beyond the Cape of Good Hope or Cape Horn may remain in the public stores one year instead of the term of ninety days prescribed in the said section.

SEC. 8. *And be it further enacted*, That it shall be lawful for the owner, consignee, or agent of imports which have been actually purchased, on entry of the same, to make such addition in the entry to the cost or value given in the invoice, as in his opinion may raise the same to the true market value of such imports in the principal markets of the country whence the importation shall have been made, or in which the goods imported shall have been originally manufactured or produced, as the case may be; and to add thereto all costs and charges which, under existing laws, would form part of the true value at the port where the same may be entered, upon which the duties should be assessed. And it shall be the duty of the collector within whose district the same may be imported or entered to cause the dutiable value of such imports to be appraised, estimated, and ascertained in accordance with the provisions of existing laws; and if the appraised value thereof shall exceed by ten per centum or more the value so declared on the entry, then, in addition to the duties imposed by law on the same, there shall be levied, collected and paid, a duty of twenty per centum ad valorem, on such appraised value. *Provided nevertheless*, That under no circumstances shall the duty be assessed upon an amount less than the invoice value; any law of Congress to the contrary notwithstanding.

SEC. 10. *And be it further enacted*, That the deputies of any collector, naval officer, or surveyor, and the clerks employed by any collector, naval officer, surveyor, or appraiser, who are not by existing laws required to be sworn, shall, before entering upon their respective duties, or, if already employed, before continuing in the discharge thereof, take and subscribe an oath or affirmation faithfully and diligently to perform such duties, and to use their best endeavours to prevent and detect frauds upon the revenue of the United States; which oath or affirmation shall be administered by the collector of the port or district where the said deputies or clerks may be employed, and shall be of a form to be prescribed by the Secretary of the Treasury.

SEC. 11. *And be it further enacted*, That no officer or other person connected with the navy of the United States, shall under any pretence, import in any ship or vessel of the United States any goods, wares, or merchandize liable to the payment of any duty.

Sec. 12. *And be it further enacted,* That all acts and parts of acts repugnant to the provisions of this act be, and the same are hereby repealed.

SCHEDULE A.

Brandy and other spirits distilled from grain, or other materials; cordials, absynthe, arrack, curacoa, kirschenwasser, liqueurs, marashino, ratafia, and all other spirituous beverages of a similar character.

SCHEDULE B.

Alabaster and spar ornaments; almonds; anchovies, sardines, and all other fish preserved in oil; camphor refined; cassia; cloves; composition tops for tables, or other articles of furniture; comfits, sweetmeats, or fruit preserved in sugar, brandy, or molasses; currants; dates; figs; ginger root, dried or green; glass cut; mace; manufactures of cedar wood, granadilla, ebony, mahogany, rosewood, and satin wood; nutmegs; pimento; prepared vegetables, meats, poultry, and game sealed or enclosed in cases, or otherwise; prunes; raisins; scagliola tops for tables, or other articles of furniture; segars, snuff, paper segars, and all other manufactures of tobacco; wines, Burgundy, champagne, claret, Madeira, port, sherry, and all other wines and imitations of wines.

SCHEDULE C.

Argentine, alabatta, or German silver, manufactured or unmanufactured; ale, beer, and porter in casks or bottles; articles embroidered with gold, silver, or other metal; articles worn by men, women, or children, of whatever material composed, made up, or made wholly or in part, by hand; asses' skins; balsams, cosmetics, essences, extracts, pastes, perfumes, and tinctures, used either for the toilet, or for medicinal purposes; baskets, and all other articles composed of grass, osier, palmleaf, straw, whalebone, or willow, not otherwise provided for; bay rum; beads, of amber, composition, or wax, and all other beads; benzoates; bologna sausages; bracelets, braids, chains, curls, or ringlets composed of hair, or of which hair is a component part; braces, suspenders, webbing, or other fabrics, composed wholly or in part of India rubber, not otherwise provided for; brooms and brushes of all kinds; cameos, real and imitation, and mosaics, real and imitation, when set in gold, silver, or other metal; canes and sticks for walking, finished or unfinished; capers, pickles, and sauces of all kinds, not otherwise provided for; corks; earthen, China, and stone-ware, and all other wares composed of earthy and mineral substances not otherwise provided for; fire crackers; flats, braids, plaits, sparteere, and willow squares, used for making hats or bonnets; glass tumblers, plain, moulded, or pressed, not cut or printed; hats and bonnets for men, women, and children, composed of straw, satin straw, chip grass, palm leaf, willow, or any other vegetable substance, or of hair, whalebone, or other material, not otherwise provided for; caps, hats, muffs, and tippets of fur, and all other manufactures of fur, or of which fur shall be a component material; caps, gloves, leggins, mits, socks, stockings, wove shirts and drawers, and all similar articles made on frames, worn by men, women, or children, and not otherwise provided for; card cases, pocket books, shell boxes, souvenirs, and all similar articles, of whatever material composed; carpets, carpeting, hearth-rugs, bedsides, and other portions of carpeting, being either of Aubusson, Brussels; ingrain, Saxony, Turkey, Venetian, Wilton, or any other similar fabric; carriages and parts of carriages; cay-

parts of acts repag-
herely repealed.

 women, and children; cassia buds; castor oil; castorum; chocolate;
 chromate of lead; chromate, dichromate, hydriodate, and prussiate of pot-
 ash; cobalt; cocoa nuts; cocculus indicus; coppers or green vitriol, or
 sulphate of iron; copper rods, bolts, nails, and spikes; copper bottoms;
 plaster of Paris when ground; quicksilver; saffron and saffron cake;
 seppia; steel, all than otherwise provided for; copper in sheets or plates,
 called braziers' copper, and other sheets of copper not otherwise provided
 for; cubebs; dried pulp; emery; ether; felspar; fig blue; fish, foreign,
 whether fresh, smoked, salted, dried, or pickled, not otherwise provided
 for; fish glue or isinglass; fish skins; flour of sulphur; Frankfort black;
 French chalk; fruit, green or ripe, not otherwise provided for; fulmi-
 nates, or fulminating powders; furs dressed on the skin; gamboge; glue;
 gunpowder; hair, curled, moss, sea-weed, and all other vegetable sub-
 stances used for beds or mattresses; hams; hats of wool; hat bodies,
 made of wool, or of which wool shall be a component material of chief
 value; hatters' plush, composed of silk and cotton, but of which cotton is
 the component material of chief value; hemp seed or linseed, and rape-
 seed oil, and all other oils used in painting; Indian corn and corn meal;
 ipecacuanha; iridium; iris or orris root; ivory or bone black; jalap;
 juniper berries; lac sulphur, lump black; lard; leather, tanned, bend, or
 sole; leather, upper of all kinds; lead, in pigs, bars, or sheets; leaden
 pipes; leaden shot; leeches; limestones of all kinds; liquorice paste, juice,
 or root; litharge; malt; manganese; manufactures of flax, not otherwise
 provided for; manufactures of hemp, not otherwise provided for; marine
 coral, unmanufactured; medicinal drugs, roots, and leaves, in a crude state,
 not otherwise provided for; metals, unmanufactured, not otherwise pro-
 vided for; mineral and bituminous substances, in a crude state, not other-
 wise provided for; musical instruments of all kinds, and strings for mu-
 sical instruments of whip gut or cutgut, and all other strings of the same
 material; nitrate of lead; oats and oatmeal; oils, neatfoot and other ani-
 mal oil, spermaceti, whale, and other fish oil, the produce of foreign fish-
 eries; opium; oranges, lemons, and limes; orange and lemon peel; patent
 mordant; paints, dry or ground in oil, not otherwise provided for; paper
 hangings and paper for screens or fireboards; pearl or hulled barley;
 periodicals and other works in the course of printing and republication in
 the United States; pine apples; pitch; plantains; plumbago; pork; po-
 tassium; Prussian blue; pumpkins; putty; quills; red chalk; rhubarb;
 rice or paddy; roll brimstone; Roman cement; rye and rye flour; sad-
 dlery, common, tanned, or japanned; sago; sal soda, and all carbonates of
 soda, by whatever names designated, not otherwise provided for; salts,
 Epsom, glauber, Rochelle, and all other salts and preparations of salts, not
 otherwise provided for; sarsaparilla; shuddocks; sheathing paper;
 skins, tanned and dressed, of all kinds; skins of all kinds, not otherwise
 provided for; slate pencils; smalts; spermaceti candles and tapers;
 spirits of turpentine; sponges; spunk; squills; starch; stearine candles
 and tapers; stereotype plates; still bottoms; sulphate of barytes, crude
 or refined; sulphate of quinine; tallow candles; tapioca; tar; thread
 laces and insertings; type metal; types, new or old; vanilla beans; ver-
 digris; velvet, in the piece, composed wholly of cotton; velvet, in the
 piece, composed of cotton and silk, but of which cotton is the component
 material of chief value; vermilion; wax candles and tapers; whalebone
 the produce of foreign fisheries; wheat and wheat flour; white and red

lead; whiting, or Paris white; white vitriol, or sulphate of zinc; window glass, broad, crown, or cylinder, woollen listings, yams.

SCHEDULE F.

Arsenic bark, Peruvian; bark Quilla; Brazil paste, brimstone, crude iron bulk; cork tree bark, unmanufactured; codilla, or tow of hemp or flax, diamonds, glaziers, set or not set; dragons blood; flax, unmanufactured, gold and silver leaf; mineral kermes; silk, raw, not more advanced in manufacture than singles tram and thrown or organzine; terne tin plates tin foil; tin in plates or sheets; tin plates galvanised, not otherwise provided for; steel in bars; cast, shear, or German; zinc, spelter, or tutene-gue, in sheets.

SCHEDULE G.

Ammonia; anatto, rancon or Orleans; barilla; books printed, magazines, pamphlets, periodicals and illustrated newspapers, bound or unbound, not otherwise provided for; bleaching powders or chloride of lime; building stones; burr stones, wrought or unwrought, cameos and mosaics, and imitations thereof, not set; chronometers, box or ships, and parts thereof; cocoa, cochineal; cocoa shells, compositions of glass or paste, not set; cudbear; diamonds, gems, pearls, rubies, and other precious stones, and imitations thereof, when not set; engravings or plates, bound or unbound; hempsed, linseed and rapeseed, fullers' earth; furs, haters', dressed or undressed, not on the skin; furs, undressed when on the skin; goldbeaters' skins; gum Arabic; gum Senegal; gum Tragacanth; gum Barbary; gum East India; gum Jedda; gum substitute or burnt starch; indigo; kelp; natron; terra japonica or catechu; hair of all kinds, unclean and unmanufactured; India rubber, in bottles, slabs or sheets, unmanufactured; lemon and lime juice; lime; maps and charts; music and music paper, with lines, bound or unbound; rux vomica; oils, palm and cocoanut; orpiment; palm leaf, unmanufactured; polishing stones; pumice and pumice stone; rattans and reeds, unmanufactured; rotten stone; sal ammonia; salt-petre, (or nitrate of soda, or potash,) refined or partially refined; soda ash, sulphuric acid, or oil of vitriol; tallow, marrow, and all other grease and soap stocks and soap stuffs, not otherwise provided for; watches and parts of watches; watch materials of all kinds, not otherwise provided for; woad or pastel.

SCHEDULE H.

Alcornoque, argol, or crude tartar; bells when old, or bell metal, fit only to be remanufactured; brass in pigs or bars; Brazil wood, and all other dye-woods in sticks; brass, when old, and fit only to be remanufactured; bristles; chalk, not otherwise provided for; clay, unwrought; copper in pigs or bars; copper, when old, and fit only to be remanufactured; flints; grindstones, wrought or unwrought; berries, nuts, and vegetables used exclusively in dyeing, or in composing dyes, but no article shall be classed as such that has undergone any manufacture; ivory, unmanufactured; ivory nuts, or vegetable ivory; madder root; nutgalls, pearl, mother of; lastings, suitable for shoes, boots, bootees, or buttons, exclusively; manufactures of mohair cloth, silk twist, or other manufactures of cloth, suitable for the manufacture of shoes, boots, bootees, or buttons exclusively; horns, horn-tips, bones, bone-tips, and teeth, unmanufactured;

kermes; lac dye; lac spirits; madder, ground; nickel; pewter, when old, and fit only to be remanufactured; rags, of whatever material; raw hides and skins of all kinds, whether dried, salted, or pickled, not otherwise provided for; safflower; saltpetre, or nitrate of soda, or potash, when crude; seed-lac; shellac; sumac; tin in pigs, bars or blocks; tortois and other shells unmanufactured; tumeric; waste, or shoddy; weld; zinc, spelter, or teutenege, unmanufactured, not otherwise provided for.

SCHEDULE I.

Animals imported for breed; bullion, gold and silver; cabinets of coins, medals, and other collections of antiquities; coffee and tea when imported direct from the place of their growth or production, in American vessels, or in foreign vessels entitled by reciprocal treaties to be exempt from discriminating duties, tonnage, and other charges; coffee, the growth or production of the possessions of the Netherlands, imported from the Netherlands in the same manner; coins, gold, silver and copper; copper ore; copper when imported for the United States Mint; cotton; felt, adhesive, for sheathing; garden seeds, and all other seeds not otherwise provided for; goods, wares, and merchandise, the growth, produce or manufacture of the United States exported to a foreign country, and brought back to the United States in the same condition as when exported, upon which no drawback or bounty has been allowed: *Provided*, that all the regulations to ascertain the identity thereof, prescribed by existing laws, or which may be prescribed by the Secretary of the Treasury, shall be complied with; guano; household effects, old and in use, of persons or families from foreign countries, if used abroad by them, and not intended for any other person or persons, or for sale; junk, old; models of inventions and other improvement in the arts; *Provided*, That no article or articles shall be deemed a model or improvement which can be fitted for use; oakum; oil, spermaciti, whale and other fish, of American fisheries, and all other articles the produce of such fisheries; paintings and statuary, the production of American artists residing abroad, and all other paintings and statuary: *Provided*, The same be imported in good faith as objects of taste, and not of merchandise; personal household effects (not merchandise) of citizens of the United States dying abroad; plaster of Paris, unground platina, unmanufactured; sheathing copper, but no copper to be considered such, and admitted free, except in sheets forty-eight inches long and fourteen inches wide, and weighing from fourteen to thirty-four ounces the square foot; sheathing metal; specimens of natural history, mineralogy, or botany; trees, shrubs, bulbs, plants, and roots, not otherwise provided for; wearing apparel in actual use, and other personal effects, not merchandise, professional books, instruments, implements, and tools of trade, occupation, or employment, of persons arriving in the United States; *Provided*, That this exemption shall not be construed to include machinery or other articles imported for use in any manufacturing establishment or for sale.

THE WAREHOUSING BILL.

A BILL TO AMEND AN ACT ENTITLED "AN ACT TO PROVIDE REVENUE FROM IMPORTS, AND TO CHANGE AND MODIFY EXISTING LAWS IMPOSING DUTIES ON IMPORTS, AND FOR OTHER PURPOSES."

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the twelfth section of the act entitled "An act to provide revenue from imports, and to change and modify existing laws imposing duties on imports, and for other purposes," approved the thirtieth day of August, one thousand eight hundred and forty-two, is hereby amended so as hereafter to read as follows:—[Sec. 12] *And be it further enacted,* That, on and after the day this act goes into operation, the duties on all imported goods, wares, or merchandise shall be paid in cash: *Provided,* That in all cases of failure or neglect to pay the duties within the period allowed by law to the importer to make entry thereof, or whenever the owner, importer, or consignee shall make entry for warehousing the same in writing, in such form and supported by such proof as shall be prescribed by the Secretary of the Treasury, the said goods, wares, or merchandise shall be taken possession of by the collector, and deposited in the public stores, or in other stores to be agreed on by the collector or chief revenue officer of the port and the importer, owner, or consignee, the said stores to be secured in the manner provided for by the first section of the act of the twentieth day of April, one thousand eight hundred and eighteen, entitled "An act providing for the deposit of wines and distilled spirits in public warehouses, and for other purposes," there to be kept with due and reasonable care, at the charge and risk of the owner, importer, consignee, or agent, and subject at all times to their order upon the payment of the proper duties and expenses, to be ascertained on due entry for warehousing thereof, and to be secured by a bond of the owner, importer or consignee, with surety or sureties to the satisfaction of the Collector, in double the amount of the said duties, and in such form as the Secretary of the Treasury shall prescribe: *Provided,* That no merchandise shall be withdrawn from any warehouse in which it may be deposited, in less quantity than in an entire package, bale, cask, or box, unless in bulk; nor shall merchandise so imported in bulk, be delivered except in the whole quantity of each parcel, or in a quantity not less than one ton weight, unless by special authority of the Secretary of the Treasury. And in case the owner, importer, consignee, or agent of any goods on which the duties have not been paid, shall give to the collector satisfactory security that the said goods shall be landed out of the jurisdiction of the United States, in the manner now required by existing laws relating to exportations for the benefit of drawback, the collector and naval officer, if any, on an entry to re-export the same, shall, upon payment of the appropriate expenses, permit the said goods, under the inspection of the proper officers, to be shipped without the payment of any duties thereon. And in case any goods, wares, or merchandise, deposited as aforesaid, shall remain in public store beyond one year, without payment of the duties and charges thereon, then said goods, wares, or merchandise shall be appraised by the appraisers of the United States, if there be any at such port, and if none, then by two merchants to be designated and sworn by the collector for that purpose, and sold by the collector at public auction, on due public notice thereof being first given, in the manner and for the time to be prescribed by a general regulation of the Treasury Department; and at said public sale distinct printed catalogues descriptive of said goods, with the appraised value affixed thereto, shall be distributed among the persons present at said sale; and a reasonable opportunity shall be given before such sale, to persons desirous of purchasing, to inspect the quality of such goods; and the proceeds of said sales, after deducting the usual rate of storage at the port in question, with all other charges and expenses, including duties, shall be paid over to the owner, importer, consignee, or agent, and proper receipts taken for the same: *Provided,* That the overplus, if any there be, of the proceeds of such sales, after the payment of storage, charges, expenses, and duties as aforesaid, remaining unclaimed for the space of ten days after such sales, shall be paid by the collector into the treasury of the United States; and the said collector shall transmit to the Treasury Department, with the said over-

**CIRCULAR TO THE COLLECTORS AND OTHER OFFICERS OF THE
CUSTOMS, IN RELATION TO THE WAREHOUSING SYSTEM.**

TREASURY DEPARTMENT, Aug. 14, 1846.

The following instructions and forms are transmitted for the information and government of the officers of the customs in carrying into effect the provisions of the annexed Act of Congress, approved 6th August, 1846, entitled "An Act to establish a warehousing system, and to amend 'An Act to provide revenue from imports, and to change and modify existing laws imposing duties on imports, and for other purposes.'" Approved 30th August, 1842.

It is to be remarked, that goods, wares, or merchandise entitled to entry for warehousing, are such only as shall have been actually imported after the passage of the Act "reducing the duty on imports and for other purposes," approved 30th July, 1846, vide 6th section. All goods, wares, or merchandise, imported prior to 30th July, 1846, yet on deposit in public store, the duties on which have not been paid, are subject to the payment of the duty and charges imposed by the Tariff Act of 30th August, 1842.

Where owners, importers, consignees, or agents desire to warehouse their goods, due entry in writing must be made in each case, according to the form accompanying these instructions, marked A, and a bond taken with surety or sureties to the satisfaction of the collector, in double the amount of the dues, according to form marked B.

In making entry of any goods, wares, or merchandise to be warehoused, all acts necessary to determine their exact quantity, quality, and original cost, and dutiable value, such as appraising, weighing, gauging or measuring, in order to ascertain the precise amount of duty chargeable on the importation, must be performed and complied with.

Any goods, wares, or merchandise, proposed to be withdrawn from warehouse for home consumption, prior to the second day of December next, the day on which the new rate of duties take effect under the Act of 30th July last, must be entered, and the duties, with interest and other charges imposed by the Act of 30th August, 1842, must be duly paid before granting permit for the delivery of any such goods, wares, or merchandise. Due regard must be paid to these strictions imposed in the Act, in the withdrawal of merchandise from warehouse, to wit: in no case "a less quantity than an entire package, bale, cask, or box," or if in bulk, then only "the whole quantity of each parcel, or a quantity not less than one ton weight, unless by the special authority of the Secretary of the Treasury," can be withdrawn and delivered.

Where it is intended to withdraw any goods, wares, or merchandise, from warehouse for transportation to any other port of entry to be re-warehoused thereat, in pursuance of the second section of the Act of 6th August, to establish a warehousing system, twenty-four hours' notice at least must be given to the collector of such intention, and entry be made according to form C, and the transportation is to be made under the regulations provided in the act of 2d March, 1799, in respect to the transportation of goods, wares and merchandise, from one collection district to another, to be exported with the benefit of drawback. Hence goods may be transported from any port of entry to any other port of entry in the United States, subject to the regulations prescribed by the before-mentioned Act.

On making a transportation entry, a bond must be given by the owner of the merchandise to be withdrawn for transportation, with sufficient sureties in double the amount of the duties chargeable thereon, according to form herewith marked B; which bond is to be cancelled on production of a certificate, duly authenticated, from the collector of the port to which the goods may be transported, certifying that the identical goods, stated in the transportation certificate, have been duly entered and re-warehoused in public store, in his collection district, and bond given for the duties.

On the withdrawal of any such goods from warehouse at any port, the storage and other charges that may have accrued thereon must be duly paid. On re-deposit or re-warehousing of any transported goods as aforesaid, due entry must be made and bonds taken in the forms herewith marked E and F.

For the purpose of distinguishing goods which may have paid duty under the new Tariff Act, which goes into operation on the second day of December next, that may be withdrawn for consumption after said day, and entitled to drawback, if exported within the time prescribed by law, from other imports on which duty was paid under the Tariff Act of 30th August, 1842, it became proper that suitable marks should be placed on all goods that may be withdrawn as aforesaid, to identify the same, so as to prevent mistake or imposition in the allowance of drawback.

Goods, wares, or merchandise entered for warehousing must be conveyed from the vessel, or wharf, where landed, to the warehouse, under the special superintendance of an inspector of the customs, in drays, carts, or other usual mode of conveyance, to be employed on public account, by the proper officer of the customs, and the expense at

the rates usually paid for such service at the port in question, is to be defrayed at the time by the person who enters said goods, wares, or merchandise, for warehousing. In case where goods, wares, or merchandise imported after the passage of the Act of the 30th July, 1846, are intended to be exported directly from warehouse to a foreign country, entry must be made according to form herewith marked G, and bond given, according to form H, and such exportation be otherwise made in the manner now required by existing laws, relating to exportations for the benefit of drawback. In all such cases the appropriate expenses are to be paid before granting permit for exportation.

All stores used for warehousing purposes are to be rented by the collector on public account, and paid for as such, and appropriated exclusively to the storage of foreign merchandise, which is to be subject to the usual rates of storage existing at the respective ports where such stores may be hired or rented. Appropriate warehouses must be provided for goods of a perishable nature, as well as for gun-powder, fire-crackers, and explosive substances, having due respect to existing municipal regulations.

For warehousing of coal, woods of various kinds, &c.—Yards well enclosed and secured to the satisfaction of the collector, may be hired or rented and the usual rates for storage are to be charged on all articles deposited therein. Care must be observed by collectors in renting stores to select those of a substantial and secure character, and fire-proof where they can be obtained, and the rents stipulated for must be as reasonable as can be procured. Before entering into any lease of stores, the opinion and approval of the Department must first be obtained.

Where any goods, duly warehoused, shall remain in store beyond one year, without payment of the duties and charges thereon, which in pursuance of the Act are required to be appraised and sold, the department hereby prescribes that all such sales shall take place within thirty days after the expiration of the year, and due notice of such sales must be published in two or more of the public newspapers having the most extensive circulation at the port in question, daily at the principal ports for the space of ten days, and at the other ports three times a week, or as often as one or more papers may be published thereat, for the space of two weeks. But as the law provides that "all goods of a perishable nature, and all gun-powder, fire-crackers, and explosive substances deposited as aforesaid, shall be sold forthwith," they must be sold at the earliest day practicable, after due publication of notice, and time given for inspection by persons desirous of purchasing the same.

The quarterly returns required by the 4th section of the Act will be made according to the form herein marked I.

R. J. WALKER,
Secretary of the Treasury.

AN ACT,

FOR

THE ALLOWANCE OF DRAWBACK ON FOREIGN MERCHANDISE,

Imported into certain districts of the United States,

FROM

THE BRITISH NORTH AMERICAN PROVINCES

And exported to Foreign Countries

Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled, That any merchandise imported from the British North American Provinces adjoining the United States, which shall have been duly entered and the duties thereon paid or secured, according to law, at either of the ports of entry in the collection districts situated in the northern, north-eastern, and north-western portions of the United States, may be transported by land or by water, or partly by land and partly by water, to any port or ports from which merchandise may, under existing laws, be exported for the benefit of drawback, and be thence exported with such privilege to any foreign country: *Provided*, That such exportations shall be made within one year from the date of importation of said merchandise, and that existing laws relating to the transportation of merchandise entitled to drawback from one district to another, or to two other districts, and the due exportation and proof of landing thereof, and all regulations which the Secretary of the Treasury may prescribe for the security of the revenue shall be complied with.

Approved August 8th, 1846.

AN ACT TO EXEMPT CANAL BOATS FROM THE PAYMENT OF FEES AND HOSPITAL MONEY.

Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled, That the owner or owners, master or captain, or other persons employed in navigating canal boats without masts or steam power, now by law required to be registered, licensed, or enrolled and licensed, shall not be required to pay any marine hospital tax or money; nor shall the persons employed to navigate such boats receive any benefit or advantage from the marine hospital fund; nor shall such owner or owners, master or captain, or other persons be required to pay fees, or make any compensation for such register, license, or enrollment and license, nor shall any such boat be subject to be libelled in any of the United States courts for the wages of any person or persons who may be employed on board thereof, or in navigating the same.

Sec 2. And be it further enacted, That all acts and parts of acts repugnant to the provisions of this Act, be and the same are hereby repealed.

Approved, August, 1846.

CIRCULAR TO COLLECTORS AND OTHER OFFICERS OF THE CUSTOMS IN RELATION TO DRAWBACK.

TREASURY DEPARTMENT,
September 9th, 1846.

I have to call the attention of the officers of the customs generally, and more particularly those of certain mentioned districts on the frontiers of the United States, to the provisions of the annexed Act of Congress, approved the 8th of August, 1846, "For the allowance of drawback on foreign merchandise imported into certain districts of the United States, from the British North American provinces, and exported to foreign countries."

It is to be observed that the Act allows drawback on any merchandise imported from the British North American provinces adjoining the United States, which shall have been duly entered and the duties paid or secured according to law, at either of the ports of entry in the collection districts situated in the northern, north-eastern, and north-western portions of the United States, and authorizes such merchandise to be transported by land or by water, or partly by land and partly by water, to any port or ports from which merchandise may, under existing laws, be exported for the benefit of drawback, and be thence exported with such privileges to any foreign country. All such goods are, however, required to be exported within one year from the date of importation.—

Where goods are entered and the duties paid at the port of arrival on the frontiers referred to, and intended to be transported for exportation from another port, such transportation must be made in conformity with existing laws regulating the transportation of merchandise for benefit of drawback. In granting drawback in these cases, a deduction of 2 1-2 per cent. must be made from the drawback.

It is moreover to be observed, that any dutiable merchandise imported into the ports referred to, from the adjoining British provinces, is entitled to all the privileges and benefits granted by the warehousing act of the 6th of August, 1846, if the importers choose to avail themselves of said privileges and benefits. Consequently any such merchandise not entered for consumption, may be warehoused at either of the said ports, and be subsequently withdrawn therefrom for transportation to other ports of entry, to be re-warehoused thereat, and be exported *directly* from such warehouse to any foreign port on payment only of storage and expenses. In all such cases, therefore, the regulations and forms prescribed in the Circular issued by the department under date of the 11th ult., for the government of the officers of the customs, in carrying into effect the Warehousing Act, must be strictly complied with.

Any articles of merchandise subject to ad valorem duty imported into the frontier ports before referred to, which are not of the growth, manufacture, or production of the British provinces alluded to in the act, must pay duty upon "the current market value or wholesale price of similar articles at the principal markets of the country of production or manufacture at the period of the exportation of said goods, wares, and merchandise, to the United States." To this value is to be added all costs and charges, except insurance, and including, in every case, a charge for commissions at the usual rates.

For the appraisement of merchandise at ports where there are not legal appraisers, the appraisement is to be made in the manner indicated in the 16th section of the Act of 1st March, 1823, to wit: by two respectable resident merchants of the port, duly appointed by the collector for the purpose, to receive for their services while actually employed on that duty, a compensation of five dollars per diem, each, as authorized by the 17th section of the same Act.

It is specially enjoined upon the officers of the customs at ports to which merchandise may be transported under this Act, either for exportation therefrom to a foreign port for benefit of drawback, or to be re-warehoused thereat, and especially in the case of foreign spirits and wines, to have such merchandise carefully inspected and examined, to ascertain that the packages, boxes, casks, &c., contain the identical articles described in the transportation certificate accompanying the same, without diminution or change of the article in any respect having taken place during the transportation.

R. J. WALKER,
Secretary of the Treasury.

AN ACT,
ALLOWING DRAWBACK UPON FOREIGN MERCHANDISE,
EXPORTED IN THE ORIGINAL PACKAGES
To Chihuahua and Santa Fe, in Mexico,
AND
TO THE BRITISH NORTH AMERICAN PROVINCES, ADJOINING THE
UNITED STATES.

Sec. 1. Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That any imported merchandise which has been entered, and the duties paid or secured according to law, for drawback, may be exported to Chihuahua, in Mexico, or Santa Fé, in New Mexico, either by the route of the Arkansas river, through Van Buren, or by the route of the Red river through Fulton, or by the route of the Missouri river through Independence.

Sec. 2. And be it further enacted, That all the merchandise so exported shall be in the original packages as imported, a true invoice whereof, signed by the exporter, shall be made, to the satisfaction of the collector, describing accurately each package with its contents and all the marks upon it, exclusive of the name of the exporter, the place of destination, and the route by which it is to be exported; all which shall be inscribed thereon, upon which invoice the collector shall certify that he is fully convinced the same is true, that the goods are in the original packages as imported, that they are duly entered for drawback, and be exported by the owner, (naming him), to either of the places aforesaid, (naming it,) and by one of the aforesaid routes, (naming it.)

Sec. 3. And be it further enacted, That upon the arrival of such goods at either of the places in Arkansas or Missouri above named, they shall be again inspected and compared with the invoice and certificate aforesaid, by an officer of the United States, who shall, if fully convinced that the several packages are identical, having remained unbroken and unchanged, also certify on said invoice the facts, in such form as the Secretary of the Treasury shall prescribe.

Sec. 4. And be it further enacted, That upon the arrival of any such goods at Santa Fé or Chihuahua, they, with the invoice and certificates aforesaid, shall be submitted to the inspection of the Consul of the United States, or such agent as the President may appoint for that purpose; who, if fully convinced thereof, shall, in such form as the Secretary of the Treasury shall prescribe, certify upon said invoice that the goods have arrived there in the original packages as imported, without change or alteration, and have been exported from the United States in good faith, to be disposed of and consumed in a foreign country.

Sec. 5. And be it further enacted, That if the exporter shall give bond, with satisfactory securities, in thrice the amount of duties, that the said merchandise by him exported has been delivered at either of the places aforesaid without the United States, in good faith, to be sold and consumed there, and shall also produce said invoice, with the regular certificates thereon, the collector shall thereupon pay to him the usual drawback allowed by law.

Sec. 6. And be it further enacted, That the Secretary of the Treasury shall appoint inspectors to reside at each of the following places, to wit: Van Buren, Fulton, and Independence, above named, or such other place in Missouri as the Secretary of the Treasury shall designate; who shall each have a salary of two hundred and fifty dollars, and make a full report of all the trade that passes under their inspection, to the Secretary of the Treasury, semi-annually, giving an account of the number of packages, the kind of goods, the value, and the names of the exporters.

Sec. 7. And be it further enacted, That any imported merchandise which has been entered, and the duties paid or secured according to law, for drawback, may be exported to the British North American Provinces adjoining the United States; and the ports of Plattsburg, in the District of Champlain; Burlington, in the District of Vermont;

Sacketts Harbor, Oswego, and Ogdensburgh, in the District of Oswegatchie; Rochester, in the District of Genesee; Buffalo and Erie, in the District of Presqu'isle; Cleveland, in the District of Cuyahoga; Sandusky and Detroit, together with such ports on the seaboard from which merchandise may now be imported, for the benefit of drawback are hereby declared ports from which foreign goods, wares, and merchandise, on which the import duty has been paid, or secured to be paid, may be exported to ports in the adjoining British Provinces, and to which ports, foreign goods, wares, and merchandise may be transported inland, or by water from the port of original importation, under existing provisions of law, to be thence exported for the benefit of drawback; *Provided*, That such other ports situated on the frontiers of the United States, adjoining the British North American Provinces, as may hereafter be found expedient, may have extended to them the like privileges, on the recommendation of the Secretary of the Treasury, and proclamation duly made by the President of the United States, specially designating the ports to which the aforesaid privileges are to be extended.

Sec. 8. *And be it further enacted*, That all laws now in force in relation to the allowance of drawback of duties upon goods imported into the United States and exported therefrom, and in relation to the conditions and evidence on which such drawback is to be paid, shall be applicable to the drawback allowed by this Act. And, in addition to existing provisions on the subject, to entitle exporters of goods to the drawback allowed by this Act, they shall produce to the collector of the port from which such goods, wares and merchandise were exported, the certificate, under seal of the collector or other chief revenue officer of the port to which the said goods, wares, and merchandise were exported in the said adjoining provinces; which certificate shall be endorsed upon a duplicate or certified copy of the manifest granted at the time of such exportation, and shall state that the same identical goods contained in the said manifest had been landed at such foreign port, and duly entered at the custom-house there, and that the duties imposed by the laws in force at such port upon the said goods had been paid, or secured to be paid, in full; and the said exporters shall also produce the affidavit of the master of the vessel in which the said goods were exported, that the same identical goods specified in the manifest, granted at the time of such exportation, had been carried to the port named in the clearance or manifest, and had been landed and entered at the custom-house, and that the duties imposed thereon, at the said foreign port, had been paid, or secured to be paid; and that the goods referred to in the certificate of the collector or chief revenue officer of such foreign port herein mentioned, were the same identical goods described in the manifest aforesaid, and in the said affidavit.

Sec. 9. *And be it further enacted*, That no goods, wares or merchandise, exported according to the provisions of this Act shall be voluntary landed or brought into the United States; and on being so landed, or brought into the United States, they shall be forfeited; and the same proceeding shall be had for their condemnation, and the distribution of the proceeds of their sales, as in other cases of forfeiture of goods illegally imported. And every person concerned in the voluntary landing or bringing such goods into the United States shall be liable to a penalty of four hundred dollars.

Sec. 10. *And be it further enacted*, That from the amount of duties upon any goods, wares, and merchandise imported into the United States, and which shall be exported according to the provisions of this Act, there shall be deducted two and a half per centum of such amount, which shall be retained by the respective collectors for the United States, and the residue only shall be the drawback to be paid to the exporter of such goods wares and merchandise.

Sec. 11. *And be it further enacted*, That the Secretary of the Treasury is hereby further authorized to prescribe such rules and regulations, not inconsistent with the laws of the United States, as he may deem necessary to carry into effect the provisions of this Act, and to prevent the illegal re-importation of any goods, wares, or merchandise which shall have been exported as herein provided; and that all the Acts or parts of Acts inconsistent with the provisions of this Act be, and the same are, hereby repealed.

APPROVED, March 3d, 1845.

CIRCULAR INSTRUCTIONS TO COLLECTORS OF THE CUSTOMS.

TREASURY DEPARTMENT, April 10th, 1845.

Herewith you will receive an Act entitled "An act allowing drawback upon foreign merchandise exported in the original packages to Chihuahua and Santa Fé, in Mexico, and to the British North American provinces adjoining the United States," approved 3d March, 1845, accompanied with forms and instructions for carrying the same into execution.

The first six sections of the Act apply to the exportation of merchandise, "in the original packages as imported" to Chihuahua, in Mexico, or Santa Fé, in New Mexico either by the route of the Arkansas River through Van Buren, or by the route of the

Red river through Fulton, or by the route of the Missouri River, through Independence. Consequently foreign imported merchandise exported or conveyed to the places in Mexico, or New Mexico, mentioned, by any other routes than those indicated in the Act, will not be entitled to a drawback of the import duties. It is also to be remarked that the exportation of merchandise by the routes and to the places before mentioned can only be made from the *original port of importation*.

In pursuance of the authority vested in the Secretary of the Treasury, by the 11th section of the Act, the following rules, regulations, and forms, are prescribed, and are to be strictly observed.

First. In regard to the exportation of merchandise to Chihuahua and Santa Fé.

On first giving twenty-four hours notice at the Custom-house, of intention to export, the exporter must make due entry, and for that purpose must produce the invoice required by the 2d section of the Act. Said entry must recite the invoice in detail, and in addition give a particular description of the merchandise, whence and by whom imported, the name of the vessel and the time of importation, with the original invoice value of the goods; and also state the destination and route by which the merchandise is to be transported. The entry must in all cases be verified by the oath or affirmation of the person making the same, together with the oath or affirmation of the first importer, with that of any person through whose hands the merchandise may have passed, declaring the same to be in the original package or packages, and that the duties have been paid or secured. Inspection of the packages should also be carefully made by a proper officer of the customs at the time of making entry. The bond required by the 5th section of the Act must be given by the exporter.

In consideration of the large inland transportation and the consequent risk of injury and defacing the marks on the packages, thereby rendering it difficult to identify them, it is deemed proper for the more effectual security of the revenue, to require that each package shall be enclosed in a secure wooden box or covering, on which the same marks and numbers are to be placed as those on the inner package. The inner package is to be secured with a strong cord or rope, with the Custom-house seal attached.

Second.—The remaining sections of the Act apply to the exportation of merchandise for benefit of drawback to the British North American provinces adjoining the United States, and enumerate certain ports, "declared ports from which foreign goods, wares, and merchandise, on which the import duty has been paid or secured to be paid, may be exported to ports in the adjoining British Provinces, and to which ports foreign goods, wares, and merchandise, may be transported inland or by water, from the port of original importation under existing provisions of law to be thence exported for benefit of drawback."

The course to be pursued in the transportation inland of foreign merchandise in the original packages as imported, to the designated ports of exportation enumerated in the 7th section of the Act, is to be similar to that prescribed in the 79th section of the general collection Act of 2d March, 1799, and all the legal requirements and forms of law must be strictly pursued, in cases arising under this Act.

In the exportation by sea to ports in the adjoining British provinces, all existing requisitions of law, regulating the exportation of merchandise to foreign ports, for the benefit of drawback, must be fully complied with.

On the arrival of merchandise transported inland at either of the enumerated ports of exportation, a strict and thorough inspection of the same must be made by an officer of the customs, to see that the goods are identical with those described in the accompanying transportation certificate, granted by the collector of the port from whence they may have been originally transported.

In the event of any detention of the merchandise, at the port of exportation, for any cause, said merchandise must be deposited either in the custom-house, or some secure store-house, to be selected by the collector, the keys of which must be lodged in his hands. Any expense for storage must be defrayed by the owner or consignee of the goods. Before exporting the goods to their destined port in the adjoining British Provinces, entry must be made according to the forms herewith, marked E and F.

On the return of the manifest with the certificates thereon, in due form, to the collector of the port of exportation, it must be immediately transmitted to the collector of the district and port from whence the goods were originally transported, in order that the drawback of the duties may be duly paid by the collector of said port.

It is to be specially noted, that the law contemplating the probable retention of the original manifest at the foreign Custom-house, requires a *duplicate or certified copy* of the same to be granted at the time of exportation, on which is to be endorsed the certificate of the foreign collector, and also the oath or affirmation of the master.

CIRCULAR TO COLLECTORS AND OTHER OFFICERS OF CUSTOMS.

TREASURY DEPARTMENT, August 25th, 1846.

The Department has been asked by merchants whether foreign goods, wares, and merchandise, on which the import duty has been paid, can be entered for exportation for benefit of drawback, and shipped to a foreign port and there landed, but with the intention of being brought back and *re-landed* in the United States, and entry made of the same goods at the rates of duty imposed by the Tariff Act of the 30th July, 1846.

As this subject has heretofore received the consideration and decision of the Department, and instructions duly issued in accordance therewith, it is deemed proper at this time to recapitulate former instructions, and enjoin upon the respective officers of the Customs, a strict conformity therewith.

In a circular issued by the First Comptroller, under date of the 15th of November, 1830, with the concurrence of the then Secretary of the Treasury, the following decision is communicated for the government of the officers of the Customs, viz: "It has been supposed by some merchants, that when the duty on a certain article is reduced by law, nothing more is necessary, in order to obtain the benefit of the reduction on previous importations of it, than merely to comply with the forms of entering and shipping it for the benefit of drawback, without any intention whatever of selling, or even landing it at a foreign port, and then bringing it back to the United States and entering it at the low rate of duty." "Such a course, however, is considered to be totally irreconcilable with the oath which the 76th section of the collection law of 2d March, 1799, requires the exporter to take, and which is in the following words: 'And the said exporter, or exporters, shall likewise make oath, that the said goods, so noticed for exportation, and laden on board such ship or vessel previous to the clearance thereof, or within ten days (twenty days allowed by the 2d section of the Act of 18th April, 1820), after such clearance, are truly intended to be exported to the place whereof notice shall have been given, and are not intended to be re-landed within the United States.'"

In a more recent Circular from the Department, dated the 20th of July, 1845, in reference to Texas, but deemed specially applicable to the question now under consideration, the views and directions of the Department are more specifically given in the following extracts therefrom, to wit:

"By the 80th section of the Act of Congress of the 2d of March, 1799, it is provided:— 'That the Collector aforesaid may refuse to grant such debenture or debentures, in case it shall appear to him that any error has arisen, or any fraud has been committed, and in case of such refusal, if the debenture or debentures claimed shall exceed one hundred dollars, it shall be the duty of the said Collector to represent the case to the Comptroller of the Treasury, who shall determine whether such debenture or debentures shall be granted or not.' An entry for drawback, with a view to re-importation, free of all duty, into the United States, is a fraud within the meaning of this Act; and in all such cases, it is the duty of the collector to refuse the debenture certificate. In all cases where the debenture shall not exceed one hundred dollars, the Collector will judge for himself, whether such fraud as is before designated is contemplated; and, in the language of the law, 'if the debenture or debentures claimed shall exceed one hundred dollars, it shall be the duty of the said Collector to represent the case to the Comptroller of the Treasury, who shall determine whether such debenture or debentures shall be granted or not.'

"By the 76th section of the Act of 2d March, 1799, it is provided as follows:— 'And the said exporter or exporters shall likewise make oath that the said goods, so noticed for exportation, and laden on board such ship or vessel, previous to the clearance thereof, or within ten days after such clearance, are truly intended to be exported to the place whereof notice shall have been given, and are not intended to be re-landed within the United States, otherwise, the said goods, wares and merchandise shall not be entitled to the benefit of drawback.'

"If, then, in point of fact, the goods thus exported to Texas, are intended 'to be re-landed within the United States,' they are not entitled to drawback, and if re-landed, are subject to seizure and forfeiture, as well as the vessel in which they are thus introduced.

"Great vigilance will be required in obtaining ample security upon all exported bonds, as those bonds may not be cancelled in any case of exportation of goods to Texas with the privilege of drawback, until the numerous and important questions arising under such bonds shall have been finally adjudicated.

"You will in no case omit to publish in the newspapers, as now required by law, the names of all persons who shall be found guilty of the violations of the revenue laws therein prescribed, as well as to seize for forfeiture the goods, vessel, tackle, apparel, and furniture in all such cases."

It must be obvious from the foregoing, that the oath prescribed by law, could not be taken by an exporter, and the goods so exported be *re-landed* into the United States without subjecting said exporter to the penalties prescribed for perjury, and the goods to forfeiture.

An entry for drawback, with a view to the re-importation of the goods at the lower rate, into the United States, is a fraud within the meaning of the 80th section before quoted, of the Act of March 2, 1799, and in all such cases, it is the duty of the collector to refuse the debenture certificate, or pursue the course indicated in the Circular before quoted, of the 29th July, 1845.

R. J. WALKER, Secretary of the Treasury.

THE SUB-TREASURY BILL.

AN ACT TO PROVIDE FOR THE BETTER ORGANIZATION OF THE TREASURY, AND FOR THE COLLECTION, SAFE-KEEPING, TRANS- FER, AND DISBURSEMENT OF THE PUBLIC REVENUE.

Whereas, by the fourth section of the act entitled "Act to establish the Treasury Department," approved September second, seventeen hundred and eighty-nine, it was provided that it should be the duty of the Treasurer to receive and keep the moneys of the United States, and to disburse the same upon warrants drawn by the Secretary of the Treasury, countersigned by the Comptroller, and recorded by the Register, and not otherwise; and whereas it is found necessary to make further provisions to enable the Treasurer the better to carry into effect the intent of the said section, in relation to the receiving and disbursing the moneys of the United States: Therefore—

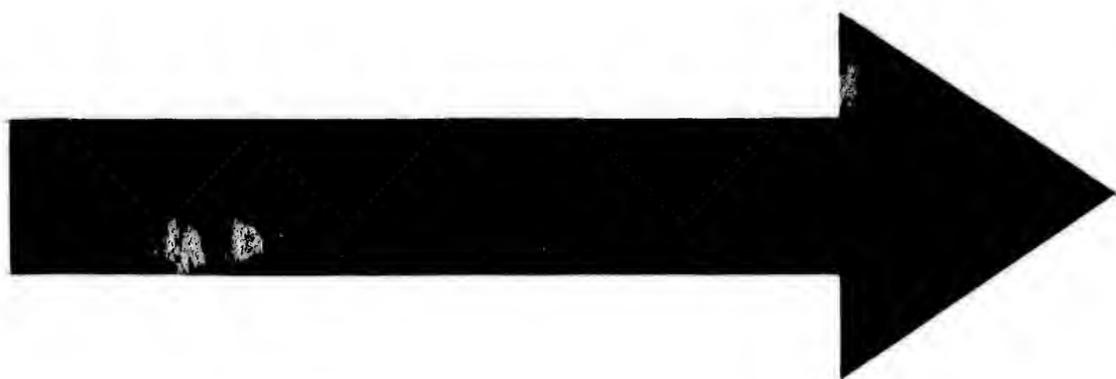

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the rooms prepared and provided for the new treasury building at the seat of government for the use of the Treasurer of the United States, his assistants, and clerks, and occupied by them, and also the fire-proof vaults and safes erected in said rooms for the keeping of the public moneys in the possession, and under the immediate control of said Treasurer, and such other apartments as are provided for in this act as places of deposit of the public money, are hereby constituted, and declared to be, the treasury of the United States; and all moneys paid into the same shall be subject to the draft of the Treasurer, drawn agreeably to appropriations made by law.

SEC. 2. And be it further enacted, That the mint of the United States, in the city of Philadelphia, in the State of Pennsylvania, and the branch mint in the city of New Orleans, in the State of Louisiana, and the vaults and safes thereof, respectively, shall be places of deposit and safe-keeping of the public moneys at those points, respectively; and the treasurer of the said mint and branch mint, respectively, for the time being, shall be assistant treasurers under the provisions of this act, and shall have the custody and care of all public moneys deposited within the same, and shall perform all the duties required to be performed by them, in reference to the receipt, safe-keeping, transfer, and disbursements of all such moneys, according to the provisions hereinafter contained.

SEC. 3. And be it further enacted, That the rooms which were directed to be prepared and provided within the custom-houses in the city of New York, in the State of New York, and in the city of Boston, in the State of Massachusetts, for the use of receivers general of public moneys, under the provisions of the act entitled "An act to provide for the collection, safe-keeping, transfer, and disbursement of the public revenue," approved July fourth, eighteen hundred and forty, shall be for the use of the assistant treasurers hereinafter directed to be appointed at those places, respectively; as shall be also the fire-proof vaults and safes prepared and provided within said rooms for the keeping of the public moneys collected and deposited with them, respectively; and the assistant treasurers, from time to time appointed at those points, shall have the custody and care of the said rooms, vaults, and safes, respectively, and of all the public moneys deposited within the same, and shall perform all the duties required to be performed by them, in reference to the receipt, safe-keeping, transfer, and disbursement of all such moneys, according to the provisions of this act.

SEC. 4. And be it further enacted, That the offices, with suitable and convenient rooms, which were directed to be erected, prepared, and provided for the use of receivers general of public money, at the expense of the United States, at the city of Charleston, in the State of South Carolina, and at the city of St. Louis, in the State of Missouri, under the act entitled "An act to provide for the collection, safe-keeping, transfer, and disbursement of the public revenue," approved July fourth, eighteen hundred and forty, shall be for the use of the assistant treasurers hereinafter directed to be appointed at the places above named; as shall be also the fire-proof vaults and safes, erected within the said offices and rooms, for the keeping of the public money collected and deposited at those points, respectively; and the said assistant treasurers, from time to time appointed at those places, shall have the custody and care of the said offices, vaults, and safes, erected, prepared, and provided as aforesaid, and of all the public moneys deposited within the same, and shall perform all the duties required to be performed by them, in reference to the receipt, safe-keeping, transfer, and disbursement of all such moneys, according to the provisions hereinafter contained.

SEC. 5. And be it further enacted, That the President shall nominate, and, by and with the advice and consent of the Senate, appoint four officers, to be denominated "assistant treasurers of the United States," which said officers shall hold their respective offices for the term of four years, unless sooner removed therefrom; one of which shall

be located at the city of New York, in the State of New York; one other of which shall be located at the city of Boston, in the State of Massachusetts; one other of which shall be located at the city of Charleston, in the State of South Carolina; and one other at St. Louis, in the State of Missouri. And all of which said officers shall give bonds to the United States, with sureties, according to the provisions hereinafter contained, for the faithful discharge of the duties of their respective offices.

Sec. 6. *And be it further enacted,* That the Treasurer of the United States, the treasurer of the mint of the United States, the treasurers, and those acting as such, of the various branch mints, all collectors of the customs, all surveyors of the customs acting also as collectors, all assistant treasurers, all receivers of public moneys at the several land offices, all post-masters, and all public officers of whatsoever character, be, and they are hereby, required to keep safely, without loaning, using, depositing in banks, or exchanging for other funds than as allowed by this act, all the public money collected by them, or otherwise, at any time, placed in their possession and custody, till the same is ordered, by the proper department or officer of the government, to be transferred or paid out; and when such orders for transfer or payment are received, faithfully and promptly to make the same as directed, and to do and perform all other duties as fiscal agents of the government which may be imposed by this or any other acts of Congress, or by any regulation of the Treasury Department made in conformity to law; and, also, to do and perform all acts and duties required by law, or by direction of any of the executive departments of the government, as agents for paying pensions, or for making any other disbursements, which either of the heads of those departments may be required by law to make, and which are of a character to be made by the depositaries hereby constituted, consistently with the other official duties imposed upon them.

Sec. 7. *And be it further enacted,* That the Treasurer of the United States, the treasurer of the mint of the United States, the treasurer of the branch mint at New Orleans, and all the assistant treasurers hereinbefore directed to be appointed, shall respectively give bonds to the United States faithfully to discharge the duties of their respective offices according to law, and for such amounts as shall be directed by the Secretary of the Treasury, with sureties to the satisfaction of the Solicitor of the Treasury; and shall, from time to time, renew, strengthen, and increase their official bonds, as the Secretary of the Treasury may direct, any law in reference to any of the official bonds of any of the said officers to the contrary notwithstanding.

Sec. 8. *And be it further enacted,* That it shall be the duty of the Secretary of the Treasury, at as early a day as possible after the passage of this act, to require from the several depositaries hereby constituted, and whose official bonds are not hereinbefore provided for, to execute bonds, new and suitable in their terms, to meet the new and increased duties imposed upon them, respectively, by this act, and with sureties and in sums such as shall seem reasonable and safe to the Solicitor of the Treasury; and, from time to time, to require such bonds to be renewed and increased in amount, and strengthened by new sureties, to meet any increasing responsibility which may grow out of accumulations of money in the hands of the depositary, or out of any other duty or responsibility arising under this or any other law of Congress.

Sec. 9. *And be it further enacted,* That all collectors and receivers of public money, of every character and description, within the District of Columbia, shall, as frequently as they may be directed by the Secretary of the Treasury or the Postmaster-General, so to do, pay over to the Treasurer of the United States, at the treasury all public moneys collected by them or in their hands; that all such collectors, and receivers of public moneys within the cities of Philadelphia and New Orleans shall, upon the same direction pay over to the treasurers of the mints in their respective cities, at the said mints, all public moneys collected by them, or in their hands; and that all such collectors and receivers of public moneys within the cities of New York, Boston, Charleston, and St. Louis, shall, upon the same direction, pay over to the assistant treasurers in their respective cities, at their offices respectively, all the public moneys collected by them, or in their hands, to be safely kept by the said respective depositaries until otherwise disposed of according to law; and it shall be the duty of the said Secretary and Postmaster-General respectively to direct such payments by the said collectors and receivers at all the said places, at least as often as once in each week, and as much more frequently, in all cases, as they in their discretion may think proper.

Sec. 10. *And be it further enacted,* That it shall be lawful for the Secretary of the Treasury to transfer the moneys in the hands of any depositary hereby constituted to the treasury of the United States to be there safely kept, to the credit of the Treasurer of the United States, according to the provisions of this act; and, also, to transfer moneys in the hands of any one depositary constituted by this act to any other depositary constituted by the same, at his discretion, and as the safety of the public moneys and the convenience of the public service shall seem to him to require; which authority to transfer the moneys belonging to the Post Office Department is also hereby conferred upon the Postmaster General, so far as its exercise by him may be consistent with the provisions of existing laws; and every depositary constituted by this act shall keep his account of the money paid to or deposited with him, belonging to the Post Office De-

one other of which shall

or any other acts of Con-
in conformity to law; or
w, or by direction of any
or paying pensions, or for
of those departments may
be made by the deposita-
ries imposed upon them.

The United States, the treas-
urer branch mint at New Or-
leans to be appointed, shall
discharge the duties of their
as shall be directed by the
the Solicitor of the Treas-
ury to increase their official bonds,
reference to any of the official
bonds.

The duty of the Secretary of the
Treasury, by this act, to require from the
depositors that the bonds are not hereinbefore
required, to meet the new and
increased, and with sureties and in-
crease of the Treasury; and, in-
creased in amount, and in-
crease of liability which may grow
out of any other duty
imposed.

Receivers of public money,
at Columbia, shall, as frequently
directed by the Postmaster-General,
at the treasury all public
deposits, collectors, and receivers of
public moneys shall, upon the same
respective cities, at the said
cities; and that all such collec-
tors at New York, Boston, Charleston,
and New Orleans, to the assistant treas-
urer, shall the public moneys col-
lected at said respective depositories
be the duty of the said Secre-
tary to receive payments by the said col-
lectors in each week, and as
soon as may think proper.

The duty of the Secretary of the
Treasury hereby constituted to
the credit of the Treasurer
of the United States; and, also, to transfer
the public moneys to any other depository
for the safety of the public moneys
to require; which authority
is also hereby conferred
may be consistent with the
duty by this act shall keep his
accounts and reports to the Post Office De-

partment, separate and distinct from the account kept by him of other public moneys so
paid or deposited. And for the purpose of payments on the public account, it shall be
lawful for the Treasurer of the United States to draw upon any of the said depositories,
as he may think most conducive to the public interests, or to the convenience of the
public creditors, or both. And each depository so drawn upon shall make returns to
the Treasury and Post Office Departments of all moneys received and paid by him, at
such time and in such form as shall be directed by the Secretary of the Treasury, or
the Postmaster General.

Sec. 11. *And be it further enacted*, That the Secretary of the Treasury shall be, and
he is hereby authorized to cause examinations to be made of the books, accounts, and
money on hand, of the several depositories constituted by this act; and for that purpose
to appoint special agents, as occasion may require, with such compensation, not exceed-
ing six dollars per day and travelling expenses, as he may think reasonable, to be fixed
and declared at the time of each appointment. The agents selected to make these
examinations shall be instructed to examine as well the books, accounts, and returns
of the officer, as the money on hand, and the manner of its being kept, to the end that
uniformity and accuracy in the accounts, as well as safety to the public moneys, may
be secured thereby.

Sec. 12. *And be it further enacted*, That in addition to the examinations provided
for in the last preceding section, and as a further guard over the public moneys, it shall
be the duty of each naval officer and surveyor, as a check upon the assistant treasurers,
or the collector of the customs, of their respective district; of each register of a land office,
as a check upon the receiver of his land office; and of the director and superintendent
of each mint and branch mint, when separate offices, as a check upon the treasurers,
respectively, of the said mints, or the persons acting as such, at the close of each quar-
ter of the year, and as much more frequently as they shall be directed by the Secretary
of the Treasury to do so, to examine the books, accounts, returns, and money on hand,
of the assistant treasurers, collectors, receivers of land offices, treasurers of the mint and
each branch mint, and persons acting as such, and to make a full, accurate, and
faithful return to the Treasury Department of their condition.

Sec. 13. *And be it further enacted*, That the said officers, respectively, whose duty it
is made, by this act, to receive, keep, and disburse the public moneys, as the fiscal
agents of the government, may be allowed any necessary additional expenses for clerks,
fire-proof chests, or vaults, or other necessary expenses of safe-keeping, transferring,
and disbursing said moneys; all such expenses of every character to be first expressly
authorized by the Secretary of the Treasury, whose directions upon all the above sub-
jects, by way of regulation and otherwise, so far as authorized by law, are to be strictly
followed by all the said officers: Provided, That the whole number of clerks, be
appointed by virtue of this section of this Act shall not exceed ten; and that the aggregate
compensations of the whole number shall not exceed eight thousand dollars, nor
shall the compensation of any one clerk, so appointed, exceed eight hundred dollars
per annum.

Sec. 14. *And be it further enacted*, That the Secretary of the Treasury may, at his
discretion, transfer the balances remaining with any of the present depositories, to any
other of the present depositories, as he may deem the safety of the public money or the
public convenience may require: Provided, That nothing in this Act shall be so con-
strued as to authorize the Secretary of the Treasury to transfer the balances remaining
with any of the present depositories, to the depositories constituted by this Act, before
the first day of January next. And provided that, for the purpose of payments on
public account, out of balances remaining with the present depositories, it shall be
lawful for the Treasurer of the United States to draw upon any of the said depositories
as he may think most conducive to the public interests, or to the convenience of
the public creditors, or both.

Sec. 15. *And be it further enacted*, That all marshals, district attorneys, and others
having public money to pay to the United States, and all patentees wishing to make
payment for patents to be issued, may pay all such moneys to the Treasurer of the
United States at the treasury, to the treasurer of either of the mints in Philadelphia or
New Orleans, to either of the other assistant treasurers, or to such other depository
constituted by this Act as shall be designated by the Secretary of the Treasury in other
parts of the United States to receive such payments, and give receipts or certificates of
deposit therefor.

Sec. 16. *And be it further enacted*, That all officers and other persons charged by
this or any other Act with the safe-keeping, transfer, and disbursement of the public
moneys, other than those connected with the Post Office Department, are hereby required
to keep an accurate entry of each sum received, and of each payment or transfer, and
that if any one of the said officers, or of those connected with the Post Office Depart-
ment, shall convert to his own use, in any way whatever, or shall use, by way of
investment in any kind of property or merchandise, or shall loan, with or without inter-
est, or shall deposit in any bank, or shall exchange for other funds, except as allowed
by this act, any portion of the public moneys intrusted to him for safekeeping, disburse-

ment, transfer, or for any other purpose, every such act shall be deemed and adjudged to be embezzlement of so much of the said moneys as shall be thus taken, converted, invested, used, loaned, deposited, or exchanged, which is hereby declared to be a felony; and any failure to pay over or to produce the public moneys intrusted to such person shall be held and taken to be *prima facie* evidence of such embezzlement; and if any officer charged with the disbursement of public moneys shall accept or receive, or transmit to the Treasury Department to be allowed in his favor, any receipt or voucher from a creditor of the United States, without having paid to such creditor, in such funds as the said officer may have received for disbursement, or such other funds as he may be authorized by this act to take in exchange, the full amount specified in such receipt or voucher, every such act shall be deemed to be a conversion by such officer to his own use of the amount specified in such receipt or voucher; and any officer or agent of the United States, and all persons advising or participating in such act, being convicted thereof before any court of the United States of competent jurisdiction, shall be sentenced to imprisonment for a term of not less than six months nor more than ten years, and to a fine equal to the amount of the money embezzled; and upon the trial of any indictment against any person, for embezzling public money, under the provisions of this act, it shall be sufficient evidence for the purpose of showing a balance against such person, to produce a transcript from the books and proceedings of the Treasury, as required in civil cases under the provisions of the act entitled, "An act to provide more effectually for the settlement of accounts between the United States and receivers of public money," approved March third, one thousand seven hundred and ninety-seven, and the provisions of this act shall be so construed as to apply to all persons charged with the safekeeping, transfer, or disbursement of the public money, whether such persons be indicted as receivers or depositaries of the same; and the refusal of such person, whether in or out of office, to pay any draft, order, or warrant, which may be drawn upon him by the proper officer of the Treasury Department, for any public money in his hands belonging to the United States, no matter in what capacity the same may have been received or may be held, or to transfer or disburse any such money promptly, upon the legal requirement of any authorized officer of the United States, shall be deemed and taken, upon the trial of any indictment against such person for embezzlement, as *prima facie* evidence of such embezzlement.

Sec. 17. *And be it further enacted*, That until the rooms, offices, vaults, and safes, directed by the first four sections of this act to be constructed and prepared for the use of the Treasurer of the United States, the treasurers of the mints at Philadelphia and New Orleans, and the assistant treasurers at New York, Boston, Charleston, and St. Louis, can be constructed and prepared for use, it shall be the duty of the Secretary of the Treasury to procure suitable rooms for offices for those officers at their respective locations, and to contract for such use of vaults and safes as may be required for the safekeeping of the public moneys in the charge and custody of those officers, respectively; the expense to be paid by the United States.

And whereas, by the thirtieth section of the act entitled "An Act to regulate the collection of duties imposed by law on the tonnage of ships or vessels, and on goods, wares, and merchandises imported into the United States," approved July thirty-one, seventeen hundred and eighty-nine, it was provided that all fees and dues collected by virtue of that act should be received in gold and silver coin only; and, whereas, also, by the fifth section of the act approved May ten, eighteen hundred, entitled "An act to amend the act entitled 'An act providing for the sale of the lands of the United States in the territory northwest of the Ohio, and above the mouth of Kentucky river,'" it was provided that payment for the said lands shall be made by all purchasers in specie, or in evidences of the public debt; and whereas experience has proved that said provisions ought to be revived and enforced, according to the true and wise intent of the Constitution of the United States:

Sec. 18. *And be it further enacted*, That from and after the thirtieth day of June on the first day of January, in the year one thousand eight hundred and forty-seven, and thereafter, all duties, taxes, sales of public lands, debts, and sums of money accruing, or becoming due, to the United States, and also all sums due for postage, or otherwise, to the General Post Office Department, shall be paid in gold and silver coin only, or in Treasury notes issued under the authority of the United States: Provided, That the Secretary of the Treasury shall publish monthly in two newspapers at the City of Washington the amount of specie at the several places of deposit, the amount of Treasury notes or drafts issued and the amount outstanding on the last day of each month.

Sec. 19. *And be it further enacted*, That on the first day of April, one thousand eight hundred and forty-seven, and thereafter, every officer or agent engaged in making disbursements on account of the United States, or of the General Post Office, shall make all payments in gold and silver coin or in treasury notes, if the creditors agree to receive said notes in payments; and any receiving or disbursing officer or agent who shall neglect, evade, or violate the provisions of this and the last preceding section of this Act, shall, by the Secretary of the Treasury, be immediately reported to the President of the United States, with the facts of such neglect, evasion, or violation; and

also to Congress, if in session, and if not in session, at the commencement of its session next after the violation takes place.

Sec. 20. *And be it further enacted*, That no exchange of funds shall be made by any disbursing officers or agents of the government, of any grade or denomination whatsoever, or connected with any branch of the public service, other than on exchange for gold and silver; and every such disbursing officer, when the means for his disbursements are furnished to him in gold and silver, shall make his payments in the money so furnished; or when those means are furnished to him in drafts, shall cause those drafts to be presented at their place of payment, and properly paid according to the law; and shall make his payments in the money so received for the drafts furnished, unless in either case he can exchange the means in his hands for gold and silver at par. And it shall be, and is hereby, made the duty of the head of the proper department immediately to suspend from duty any disbursing officer who shall violate the provisions of this section, and forthwith to report the name of the officer or agent to the President, with the fact of the violation, and all the circumstances accompanying the same and within the knowledge of the said Secretary, to the end that such officer or agent may be promptly removed from office, or restored to his trust and the performance of his duties, as to the President may seem just and proper: Provided, however, That those disbursing officers having, at present, credits in the banks, shall, until the first day of January next, be allowed to check on the same, allowing the public creditors to receive their pay from the banks either in specie or bank notes.

Sec. 21. *And be it further enacted*, That it shall be the duty of the Secretary of the Treasury to issue and publish regulations to enforce the speedy presentation of all government drafts for payment at the place where payable, and to prescribe the time, according to the different distances of the depositaries from the seat of government, within which all drafts upon them, respectively, shall be presented for payment; and, in default of such presentation, to direct any other mode and place of payment which he may deem proper; but, in all these regulations and directions it shall be the duty of the Secretary of the Treasury to guard, as far as may be, against those drafts being used or thrown into circulation as a paper currency, or medium of exchange, and no officer of the United States shall, either directly or indirectly, sell or dispose to any person or persons, or corporations whatsoever, for a premium, any Treasury note, draft, warrant or other public security, not his private property, or sell or dispose of the avails or proceeds of such note, draft, warrant or security in his hands for disbursement, without making return of such premium and accounting therefor by charging the same in his accounts to the credit of the United States, and any officer violating this section shall be forthwith dismissed from office.

Sec. 22. *And be it further enacted*, That the assistant treasurers directed by this act to be appointed shall receive, respectively, the following salaries per annum, to be paid quarter-yearly of the treasury of the United States, to wit: the assistant treasurer at New York shall be paid a salary of four thousand dollars per annum; the assistant treasurer at Boston shall be paid a salary of two thousand five hundred dollars per annum; the assistant treasurer at Charleston shall be paid a salary of two thousand five hundred dollars per annum; the assistant treasurer at St. Louis shall be paid a salary of two thousand five hundred dollars per annum; the treasurer of the mint at Philadelphia shall, in addition to his present salary, receive five hundred dollars annually, for the performance of the duties imposed by this Act; the treasurer of the branch mint at New Orleans shall also receive five hundred dollars annually, for the additional duties created by this Act; and these salaries, respectively, shall be in full for the services of the respective officers, nor shall either of them be permitted to charge or receive any commissions, pay, or perquisite, for any official service, of any character or description whatsoever; and the making of any such charge, or the receipt of any such compensation, is hereby declared to be a misdemeanor, for which the officer convicted thereof, before any court of the United States of competent jurisdiction, shall be subject to punishment by fine or imprisonment, or both, at the discretion of the court before which the offence shall be tried.

Sec. 23. *And be it further enacted*, That there shall be, and hereby is appropriated to be paid out of any money in the treasury not otherwise appropriated, the sum of five thousand dollars, to be expended, under the direction of the Secretary of the Treasury, in such repairs or additions as may be necessary to put in good condition for use, with as little delay as may be consistent with the public interests, the offices, rooms, vaults, and safes herein mentioned, and in the purchase of any necessary additional furniture and fixtures, in the purchase of necessary books and stationery, and in defraying any other incidental expenses necessary to carry this Act into effect.

Sec. 24. *And be it further enacted*. That all Acts or parts of Acts which come in conflict with the provisions of this Act be, and the same are, hereby repealed.

APPROVEN, August 6th, 1846.

CIRCULAR IN RELATION TO THE SUB-TREASURY.

To each Collector, Receiver of Public Money for Lands, Assistant Treasurer, Treasurer of the Mint at Philadelphia, Treasurer of each Branch mint, and Treasurer of the United States.

TREASURY DEPARTMENT,
September 15, 1846.

A copy of the "Act to provide for the better organization of the Treasury, and for the collection, safekeeping, transfer and disbursement of the public revenue," is herewith enclosed.

You will exercise great vigilance in the performance of the new duties it may devolve on you, without any omission of such as have been imposed and are still required by former laws and regulations.

The new instructions received in respect to the books you are to keep, and the returns you are to make, will be strictly conformed to. Any expenses necessary to be incurred under this Act, will be separated from others in your accounts, and cannot be allowed unless authority is previously obtained, or satisfactory reasons assigned to the department. It is hoped the expenses will be few, and on the most economical scale.

As a depository of the public money standing to the credit of the Treasurer of the United States, you will keep an account current with him, in which you will debit yourself with all sums received on his account, and credit yourself with all payments made by his order.

A weekly transcript of this account must be forwarded to the department, in duplicate, one directed to the secretary, the other to the treasurer, which latter must be accompanied by the vouchers for the charges made therein.

Collectors of customs, designated collectors and receivers of public moneys at 'and offices, who may act as depositaries of the money collected or received by them only, should credit the treasurer, weekly, with the surplus receipt of the week, after reserving sufficient to meet the current expenses of their offices. Moneys once reported to the treasurer, cannot afterwards be used except in compliance with his drafts, or orders, either for the transfer or the payment of warrants on the treasurer, issued under the authority of law.

The treasurer of the mint, of the branch mint at New Orleans, the assistant treasurers and such other depositaries as may be required to receive on deposit moneys not collected by them as collectors or receivers, should enter to the treasurer's credit each sum deposited with or transferred to them, specifically, setting forth the date of the deposit, name of the party or parties making it, the object for which and the name of the party for whose credit it is made, (which particulars must appear on the weekly transcripts,) and, also, the kind of funds in which it is made.

Entries of treasurer's drafts, when paid, should show the date of payment, number of draft, and number of warrant on which it was issued, or the designation "transfer draft," when of that character. The kind of money used in paying drafts must also be noted on your books, but not stated in the transcripts.

The principal book necessary to carry out these details, is a ledger account current, which will serve also as a cash-book; as auxiliary to this, particularly when the transactions are numerous, a day-book or blotter should be kept. It will be well, also, to keep a separate register of transfer drafts.

The form in which this account should be made out, for transmission to the department, is herewith inclosed, marked A. It should be made on paper of the same size of the form.

The form of certificate to be given by you to persons authorized to make deposits with you, to the credit of treasurer of the United States, is also enclosed, marked B.

The account current should be balanced at the close of each week, so as to correspond with the transcripts. They must be balanced at the close of each quarter, but the last weekly transcript of a quarter may be deferred, should the quarter terminate in the middle of a week, so as to embrace the odd days, and the first transcript of a new quarter may, also, be deferred for a like purpose.

You will also keep separate books for your incidental expenses, whether they be made under general instructions, as expenses of collection, or from advances by the treasury for that purpose; and a book for recording all letters from and to your office as a depository.

Be pleased to understand thoroughly this principle, that all money in your hands to the credit of the treasurer is, in fact, money in the treasury of the United States, and cannot be used for any other purpose than the payment of warrants (or the drafts thereon) issued in pursuance of appropriations by Congress; but these moneys may be transferred from one depository to any other depository, by direction of the Secretary of the Treasury, under the authority of the 10th section of the Act.

The 12th section of the Act requires each naval officer, and surveyor of each port where there is a naval officer and surveyor, and the register of each land office, to make

, and surveyor of each port
of each land office, to make

a quarterly examination of the books, accounts, returns, and money on hand of the public depository with which he is connected, and to make such examinations as much more frequently as he may be directed so to do by the Secretary of the Treasury. The 11th section of the Act authorizes me to make such examinations also, by special agents, as occasion may require. You will grant to the surveyor of the port, naval officer, or the register of the land office, as the case may be, and to such special agents as may be appointed, every facility in your power for making such examinations, and will always keep your money, papers, and books, in readiness for it.

By the 18th section provision is made as to the kind of money you may receive. To the requirements in that section you will, in all cases, conform, using great caution to avoid the receipt of money that is counterfeit, or the notes of banks not at par, or not convertible into specie on the spot, or not issued by institutions of high credit. After the 31st of December next all payments into the treasury must be made in gold and silver coin only, or in treasury notes. It is desirable that the notes received by you should, when acceptable to others in payment, be first paid out; and if, at the close of any quarter, an amount of them remain on hand over the sum of five thousand dollars, they should, for security, be converted into specie, and oftener, if loss is apprehended, or the specie wanted to meet drafts you are liable to pay in specie.

For greater accuracy in receiving coin, it will generally be desirable, in very large sums, to weigh as well as count it; and for convenience and speed in making payments and examinations, to keep it scaled up and marked, in bags or boxes of a hundred and a thousand dollars each. It may be well for the examiners to add their seal after their monthly examinations, to verify the amounts.

The receipt of treasury notes in all public payments as heretofore provided by Congress, and then to be cancelled and remitted here as required by former instructions, will still be continued when any debtors offer them in payment.

So you will receive in the same way any drafts drawn by the treasurer on yourself, instead of the useless delay and trouble of counting out the money on such drafts, and immediately receiving it back in payment.

In no instance will you permit any other than public money to be placed in the chest or vault in which that is kept.

All other parts of the Act relating to your duties will be strictly enforced by you, though not specially referred to in this Circular. In case of doubt you will apply to proper officers here for advice.

Further instructions, except those to particular classes of officers separately, it is considered unnecessary to give at this time. If you find any of these here given inconvenient in operation, or if you can suggest measures by which the ends of the law can be more easily obtained, I shall be very happy to hear from you on the subject.

R. J. WALKER,
Secretary of the Treasury.

CIRCULAR TO THE COLLECTORS OF THE CUSTOMS,

At Buffalo creek, Wilmington, N. C., Savannah and Mobile. To the surveyors of the customs at Nashville, and Cincinnati, and to the Receivers of public moneys at Little Rock, Ark., at Jeffersonville, Ind., Chicago, Ill., and Detroit, Mich.

TREASURY DEPARTMENT,
September 15, 1846.

The fifteenth section of "An Act to provide for the better organization of the Treasury, and for the collection, safekeeping, transfer, and disbursement of the public revenue," enacts, "That all marshals, district attorneys, and others having public money to pay to the United States, and all patentees wishing to make payment for patents to be issued, may pay all such moneys to the treasurer of the United States, to the treasurer of either of the mints in Philadelphia, or New Orleans, to either of the other assistant treasurers, or to such other depository constituted by this Act as shall be designated by the Secretary of the Treasury in other parts of the United States to receive such payments, and give receipts or certificates of deposit therefor."

Under this provision, for the local convenience of making payments, except for accruing duties and land sold, which are otherwise provided for, you will receive and place any such money to the credit of the treasurer of the United States, and will give receipts therefor, briefly stating therein, as well as in your returns, the character of each payment, whether for patents, fines, judgments, &c

R. J. WALKER,
Secretary of the Treasury.

GENERAL CUSTOM HOUSE INFORMATION.

On the arrival of a vessel from a Foreign Port, the Captain must within twenty-four hours come to the Custom House and report his vessel to the Collector, and within forty-eight hours after his arrival must enter his vessel.

The Master of any vessel having merchandise on board, is required to have a manifest made out in writing, signed by him, containing a specification of all the goods on board, the marks and numbers, to whom consigned, the names of all the passengers with their baggage, the age, sex, and occupation of each, the countries to which they belong, and where going, together with all the remaining sea stores.

Beer, ale, or porter, cannot be imported in casks of less capacity than forty gallons beer measure, or if in bottles, in packages containing less than six dozen, under the penalty of forfeiting the same, together with the ship or vessel in which they were imported.—Act of March 2, 1779, sec. 103.

No distilled spirits excepting arrack, brandy in casks of not less capacity than 15 gallons, and sweet cordial, can be imported in casks or vessels of less capacity than 90 gallons wine measure, nor in casks which have been marked pursuant to any law of the United States, on pain of forfeiture of the same, together with the ship or vessel in which they were imported.—Act of March 2, 1779, sec. 103.

No goods, wares, or merchandise, subject to duty, can be imported into the United States on the seaboard, in vessels of less than 30 tons burthen, under the penalty of the forfeiture of vessel and cargo. Nor can a drawback of any duties be obtained on exportation except by sea, and in vessels of not less than 30 tons burthen.—Act of 22d March, 1799, 92d section.

Invoice to contain the weight, quantity or measure of goods, or the same to be weighed, gauged, or measured at the expense of importer. Act 30th July, 1840, Sec. 4.

An allowance of 2 per cent. is made for leakage on any liquor in casks subject to duty by the gallon, and 10 per cent. on all beer, ale, and porter in bottles, and 5 per cent. on all other liquors in bottles, to be deducted from the invoice quantity, in lieu of breakage; or it shall be lawful to compute the duties on the actual quantity, to be ascertained by tale, at the option of the importer, to be made at the time of entry.—Act of March 2, 1779, sec. 59.

To be entitled to drawback, the duties on the importation of the goods exported, must have been at least 50 dollars by one vessel, at the same time, and by the same person, and the merchandise must be, at the time of exportation, in the same package, and condition, including wrapper and original mark and number, as when imported. Act of 22d May, 1824.

Drawback not allowed on goods exported to any place immediately adjoining the United States, except to places westward and southward of Louisiana, and to the north-west coast of America.

All goods on examination by the appraisers, not corresponding with the entry made of them, are liable to forfeiture.

Goods in order to receive the benefit of drawback, must be exported within three years from the date of importation.

Two and one-half per cent. is retained on the amount of all drawbacks allowed, except on foreign refined sugars for the use of the United States; and in the case of foreign refined sugars, ten per centum shall be so retained.

No allowance or drawback is made on the additional duties paid on merchandise imported in foreign and unequalized vessels.

No allowance of drawback on the exportation of iron cables or parts thereof, butter, fish oil, playing cards, cordage (if less than five tons), foreign dried or pickled fish, or other salted provisions, nor on sail-duck if less than fifty bolts.

Within twenty days after the clearance of a vessel, the exporter of goods by said vessel must swear to the export entry, and give a bond that they shall not be landed in any place or port within the limits of the United States; or forfeit the drawback.

In all cases where the value of goods are appraised by the appraisers at a value exceeding 10 per cent. of the invoice, in addition to the duty imposed by law on the same, there shall be collected on the same goods fifty per centum of the duty imposed on the same when fairly invoiced.

All indecent and obscene prints, paintings, &c., subject the whole invoice or package wherein such articles shall compose a part, to forfeiture.

Any person knowingly and wilfully engaged in smuggling any goods subject to duty into the United States, shall be deemed guilty of a misdemeanor, and on conviction thereof shall be fined in any sum not exceeding five thousand dollars, or imprisoned for any term of time not exceeding two years, or both, at the discretion of the Court.

Persons residing out of the United States, and interested in any shipment to the United States, must have their invoices authenticated before a Consul or Vice Consul of the United States; and in case there is none in the country in which they reside, the invoices must be authenticated before some magistrate of that country.

Invoices must always be made out in the currency of the country where the goods are purchased; and if the value of that currency is not fixed by law, they must always be accompanied by a Consul's certificate, stating the value of the same in dollars and cents.

Persons residing abroad must have their invoices authenticated, although they may have partners interested in these purchases residing in the United States.

In making entries or reports of cargoes or merchandise, specify the number of packages in writing, and not in figures; and the numbers of each description of package state distinctly and separately.

Interest is charged at the rate of six per cent. on the amount of all duties exceeding fifty dollars, if not paid within twenty days from the time of entering the vessel.

Goods should always be accompanied by an invoice. Where there is none, and the value of the goods exceed fifty dollars, the law requires that a Bond shall be given to produce an invoice; but the goods can be appraised, and if they are valued below the actual cost, the difference between the appraisement and invoice, when received, must be ascertained, and the duty paid on the same. If the appraisement exceeds the invoice, there is nothing returned.

Merchandise is liable to be sold for the duties, if not entered in sixty days from the arrival of the vessel.

Passengers arriving in this country should, previous to sailing, have all their baggage put upon the manifest; and if any of the packages contain merchandise, a bill of lading, specifying the marks and numbers, should be obtained, signed by the Captain. Tools of trade should be accompanied by an invoice or memorandum, so that an entry can be made and sworn to, without being sent up for examination.

No refined lump or loaf sugar can be imported into the United States, except in ships or vessels of at least 120 tons burthen, and in packages containing at least 600 lbs., under the penalty of forfeiting the same, together with the ship or vessel.—Act of 2d March, 1799, Section 103.

Bounty is allowed on the exportation of pickled fish of the fisheries of the United States, cured and packed solely with foreign salt, on which the duty shall have been paid.—Act of 2d March, 1799, Section 83.

The number of bushels of wheat is to be ascertained by actual measurement by the standard bushel, and not by weight.

Every owner of a vessel, residing within the limits of the United States, to swear (or affirm) to the register within ninety days after it being granted, or it becomes void, and the vessel and cargo pays foreign tonnage and duty.

In all cases where there are more goods found on board a vessel than the master thereof has reported on his manifest, he shall, with the consent of the officers of the customs, make a post entry for the same, and pay two dollars therefor: and for every disagreement between his manifest and cargo, he is liable to a fine of five hundred dollars.—Act of 2d March, 1799, Section 57.

Goods belonging to a person not residing at the time in the United States, cannot be admitted to duty, unless accompanied by an invoice verified by the owner's oath, stating that the goods were actually purchased for his account, and that the invoice contains a true and faithful account of the cost of such goods.—Act of 1st March, 1823, Section 7.

CANTON, CHINA.

The Spanish dollar and other foreign coins, circulate in Canton.

Accounts are kept in *taels, mace, cardarines, and cash.*

10 mace, 1 tael, equal to 100 cardarines, or 1000 cash, 6s. 8d.

Cash is of one kind only and cast, not coined. It is composed of 6 parts of copper and 4 of lead.

The value of the tael varies with the value of one ounce of Spanish dollars, in London, its standard.

The tables given for ascertaining its proportional value, may be calculated in pence sterling by the multiplier 1.208—thus, if the price of the Spanish dollar be 60d. per os, The value of the tael will be

$60 \times 1.208 = 72.48$ d. If a 66, the tael will be worth 79.728 d., and so on in the same proportion.

Gold Ingots are not considered as money but as

merchandise. The ingots are of determined weight called by the English shoes, the largest of which weighs 10 taels each, and is reckoned 93 to 94 tones (pence), and from 6 to 7 parts alloy.

Silver Ingots are used as money, and weigh from one half to 100 taels, and are composed of 94 parts pure silver and six of alloy.

Gold and silver are weighed by the catty of 16 taels. The tael is divided into 10 mace, 100 cardarines, or 1000 cash. 100 Taels weigh 120 or 15 dwts.

Troy, which makes the tael equal to 6798 English grains, or 37.566 grammes, F.

The following table of weights is applied to merchandise:

	lb. oz. dwts.	
1 Tael weighs, avoirdupois	1 5.333=	1 1/2 oz.
16 Taels, or catty	1 6 5.333=	1 1/2 lb.
100 Catties, or one picul	133 5 5.333=	133 1/2 lb.

NOTE BY THE COMPILER.

The Government valuation of \$4.84 cts. to the pound sterling has been adhered to throughout the compilation. This gives 24 4-20 cts. to the shilling sterling, or 12 2-20 cts. to the 6d. sterling. Odd pennies were estimated in the table as two cents to the penny. The basis of the compilation was found in assays of foreign coins carefully made at the mints of Paris and London, reduced to sterling money for their true standard value, and from thence into the currency of the United States.

Should the difference of exchange make the pound sterling less or more in value than \$4.84 cts., it will of course, to the same extent affect the value of foreign coins in federal money. Foreign exchanges at all times influence the value of all metallic currencies, foreign and domestic. As London is by common consent the chief centre and regulator of exchanges, the pound sterling at \$4.84 cts. has been adopted as the standard in forming the present compilation, or Cambist, by which the increase or decrease in the value of foreign coins, according to the varying rates of exchange can be ascertained. To make the compilation as practical as possible, many small fractions less than an eighth of a cent, have been dropped, except where smaller fractions have been introduced for discriminating between very slight differences between coins of different dates, &c., of the same country.

AN ACT TO ESTABLISH THE VALUE OF CERTAIN FOREIGN COINS AND MONEYS OF ACCOUNT, AND TO AMEND EXISTING LAWS.—PASSED 1846.

Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled, That in all computation at the Custom-house, the Foreign Coins and money of account herein specified, shall be estimated as follows, to wit:

The specie dollar of Sweden and Norway, at	\$1.060
The specie dollar of Denmark, at	1.030
The thaler of Prussia and of the northern States of Germany, at	0.630
The florin of the southern States of Germany, at	0.100
The florin of the Austrian empire and of the city of Augsburg, at	0.485
The Ducat of Naples, at	0.800
The ounce of Sicily, at	2.400
The lira of the Lombardo Venetian kingdom and the lira of Tuscany, at	0.160
The franc of France and Belgium, and the lira of Sardinia, at	0.180
The pound of the British provinces of Nova Scotia, New Brunswick, Newfoundland, and Canada, at	4.000

And all laws inconsistent with this act, are hereby repealed.

TABLE OF EXCHANGE,

Shewing the value of the Pound Sterling of Great Britain, in Dollars and Cents, from par value to 12 per cent. premium, according to the advance value in the standard of Gold made by act of Congress during Gen. Jackson's administration.

As the present rates of Sterling Exchange, from custom, continue to be calculated on the old par value standard of \$1.44 cents to the pound, it will be perceived that when it nominally reaches 9 per cent., it is only then at par—or \$1.814 to the pound, according to the new standard. Hence, when it is quoted at higher rates than 9 per cent., exchange is then above par, and when below 9 per cent., it is then under par to the same extent.

Old Par Ex.	\$1.444	3 1/2%	\$1.589	6 1/2%	\$1.722	9%	4.856

Hectolitre, in France	2.84 do.	Salma, in Malta, of grain	8.22 bushels.
Kilogramme, in France and Netherlands	2.21 lbs.	Salma, in Sicily, of grain	97 do.
Last, in Amsterdam, of grain	83 1/2 bushels.	Shippound, in Hamburg and Denmark	331 lbs.
Last, in Bremen, of grain	80 do.	Shippound, in Holland	368 lb. 4 oz.
Last, in Cadiz, of salt	76 4-5 do.	Sturo, in Trieste	7 1/2 bushels.
Last, in Dantzic, of grain	nearly 93 do.	Tale, in Chins.	14 oz.

FREIGHTS.—QUANTITY OF GOODS TO COMPOSE A TON.

Extract from the By-Laws of the New York Chamber of Commerce.

Resolved, That when vessels are freighted by the ton, and no special agreement is made between the owner of the vessel and freighter of the goods, respecting the proportion of tonnage which each particular article shall be computed at, the following regulation shall be the standard of computation:—

That the articles, the bulk of which shall compose a ton, to equal a ton of heavy materials, shall be in weight as follows: 1568 lbs. of coffee in casks, 1330 lbs. in bags; 1130 lbs. of cocoa in casks, 1307 lbs. in bags.

932 lbs. pimento in casks, 1110 in bags.

Eight barrels of flour, 196 lbs. each.

Six barrels of beef, pork, tallow, pickled fish, pitch, tar and turpentine.

Twenty hundred weight of pig and bar iron, potashes, sugar, logwood, fustic, Nicaragua wood, and all heavy drygoods, rice, honey, copper ore, and all other heavy goods.

Sixteen hundred weight of coffee, cocoa, and dried

codfish, in bulk, and twelve hundred weight of dried codfish in casks of any size.

Six hundred weight of ship bread in casks, seven hundred in bags, and eight hundred in bulk.

Two hundred gallons (wine measure), reckoning the full contents of the casks, oil, wine, brandy, or any kind of liquors.

Twenty-two bushels of grain, peas, or beans, in casks.

Thirty-six bushels of grain in bulk.

Thirty-six bushels of European salt.

Thirty-one bushels of salt from the West Indies.

Twenty-nine bushels of sea-coal.

Forty feet (cubic measure) of mahogany, square timber, oak plank, pine, and other boards, heavers, furs, petty, beeswax, cotton, wool, and bale goods of all kinds.

One hoghead of tobacco, and ten hundred weight of dry hides.

Eight hundred weight of China raw silk, ten hundred weight of net bohea, and 800 green tea.

TABLE OF DUTIES

ON IMPORTS INTO CANADA.

Compiled conformable to the Revenue Laws in force from the 6th April 1846

NOTE.—Articles from Foreign Countries pay the rates opposite to them, in both columns. Articles, the produce or manufacture of the United Kingdom, or of the British Possessions, pay the PROVINCIAL Duty only. Foreign articles (except Sugar and Tea) from the Warehouse in the United Kingdom pay three-fourths of the Imperial Duty, and the Provincial Duty in full. British Goods imported into this Province from a foreign country are deemed foreign.

* The Provincial Duty on all goods marked (*) in the Table is 5 per cent. when imported by sea. Against the articles of Dyewoods and Indigo, I have placed the duties which are actually levied upon them. My own opinion, however, is, that they are entitled to entry at 4 per cent. Provincial Duty.

EXEMPTIONS.

The following exemptions refer to the Provincial duty only:

I. Copies of the Holy Scriptures, printed in the United Kingdom.

II. Donations of books or clothing, specially imported for the use of, or to be distributed gratuitously by any Charitable Society in the Province.

III. Philosophical apparatus, instruments, books, maps, statuary, busts and casts of marble, bronze, alabaster or plaster of Paris, paintings, drawings, engravings, etchings, specimens of sculptures, cabinets of coins, medals, gems, all other collections of antiquities, provided the same be specially imported in good faith for the use of any society incorporated or established for Philosophical or literary purposes, or for the encouragement of the fine arts, or for the use of or by the order of any university, college, academy, school, or seminary of learning, within this Province.

IV. Arms or clothing which any contractor or contractors, commissaries, shall import or bring into the Province, for the use of Her Majesty's army or navy, or for the use of the Indian nations in this Province: Provided the duty otherwise payable would be delayed or borne by the Treasury of the United Kingdom or of this Province.

V. Specimens in natural history, mineralogy, and botany.

VI. Seeds of all kinds, farming utensils and implements of husbandry, animals for the improvement of stock,—when specially imported in good faith by any society incorporated or established for the encouragement of agriculture.

REMARKS.

I. The specific duties are levied according to the Imperial weights and measures, and in sterling money.—20s. stg.—24s. 4d. cy. or \$4 87. The Imperial Quarter of Grain is equal to 8¼ of our Winchester bushels.

II. In calculating the ad valorem Duties under the Imperial Act, one-tenth is first added to the amount of the invoices.

III. When the Tares cannot be ascertained from the Invoice, the following are allowed:—On Coffee, in bags, 3 per cent.; Coffee in casks, 12 per cent.; Raw Sugar and Molasses, 12 per cent.; Loaf Sugar in casks or boxes, 15 per cent.; Loaf Tobacco in casks, 12 per cent.

IV. Bonds, satisfactory to the Collector, will be taken for the Provincial Duties (except the Provincial Duties on live stock, grain, meal, provisions, and other agricultural produce), when the same shall exceed £50 currency, at 6 months' but all dated from 1st September till 1st April, are due on the 1st April. All other duties are payable in cash.

V. Goods imported, whether by sea or inland, may be entered for warehousing, and exported from the warehouse without payment of duty. American products may descend the St. Lawrence in bond, and be exported into the United States by way of Leprairie and St. John's.

UNITED STATES DRAWBACK BILL.

I insert the two clauses of this Bill which bear upon the trade with this Province:

Sec. 7. And be it further enacted, That any imported merchandise which has been entered, and the duties paid or secured according to law, for drawback, may be exported to the British North American Provinces adjoining the United States; and the ports of Plattsburgh, in the district of Champlain; Burlington, in the District of Vermont; Sackett's Harbor, Oswego and Ogdensburg, in the districts of Oswego and Rochester; in the district of Genesee; Buffalo and Erie, in the district of Niagara; Cleveland, in the district of Cuyahoga; Sandusky and Detroit, together with such ports on the seaboard, from which merchandise may now be exported for the benefit of drawback, are hereby declared ports from whence foreign goods, wares, and merchandise on which the import duty has been paid, or secured to be paid, may be exported to ports in the adjoining British Provinces, and to which ports foreign goods, wares and merchandise may be transported inland, or by water, from the port of original importation, under existing provisions of law, to be thence exported for the benefit of drawback: Provided, That such other ports situated on the frontiers of the United States, adjoining the British North American Provinces, as may hereafter be found expedient, may have extended to them the like privileges, on the recommendation of the Secretary of the Treasury, and proclamation duly made by the President of the United States, specially designating the ports to which the aforesaid privileges are to be extended.

Sec. 8. And be it further enacted, That all laws now in force in relation to the allowance of drawback of duties on goods imported into the United States and exported therefrom, and in relation to the conditions and evidence on which such drawback is to be paid, shall be applicable to the drawback allowed by this act. And, in addition to existing provisions on the subject, to entitle exporters of goods to the drawback allowed by this act, they shall produce to the collector of the port, from which such goods, wares and merchandise were exported, the certificate, under seal of the collector or other chief revenue officer of the port to which the said goods, wares and merchandise were exported in the said adjoining Province; which certificate shall be endorsed upon a duplicate or certified copy of the manifest granted at the time of such exportation, and shall state that the same identical goods contained in the same manifest had been landed at such foreign port, and duly entered at the custom house there, and that the duties imposed by the laws in force at such port upon the said goods had been paid, or secured to be paid, in full; and the said exporters shall also produce the affidavit of the master of the vessel in which the said goods were exported, that the same identical goods specified in the manifest granted at the time of such exportation, had been carried to the port named in the clearance or manifest, and had been landed and entered at the custom house, and that the duties imposed thereon at the said foreign port had been paid, or secured to be paid; and that the goods referred to in the certificate of the collector or chief revenue officer of such foreign port herein mentioned, were the same identical goods described in the manifest aforesaid, and in the said affidavit.

Sec. 10—Provides, that in paying the drawback, 2½ per cent. of the duties be retained.

The undersigned, in again presenting to his friends and correspondents a Revised Tariff of Import Duties, avails himself of the occasion to express his gratitude for the encouragement which he has received from them during the past five seasons; and in regard to the present season, he is happy to say that he possesses increased facilities for forwarding, inwards or outwards, all property that may be consigned to him, with the greatest possible dispatch. In order to this, however, it is necessary that he should be furnished with Invoices, a fact which he particularly requests shippers to bear in mind.

It would facilitate the entry of goods and lessen the delay, if packages, containing assorted goods, were numbered and invoiced to correspond, so that the exact contents of each package could be known without its being opened and unpacked.

Any of the correspondents of the undersigned, who may not have received a copy of this table, may have one sent, by acquainting him with the omission. He will, at all times, be happy to furnish additional information regarding our trade through this port with the United States, to those who may favor him with their correspondence.

The moderate and uniform rate of charges which the undersigned has adopted, having always proved satisfactory to his employers, he shall strictly adhere to; and shall, in return, look for a prompt settlement of his accounts when presented.

WILLIAM COOTE,

Custom House and Forwarding Agent.

Railroad Wharf St. John's, C. E., 1845.
