Technical and Bibliographic Notes/Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming, are checked below.

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

The copy filmed here has been reproduced thanks to the generosity of:

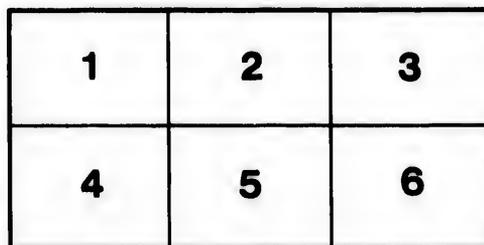

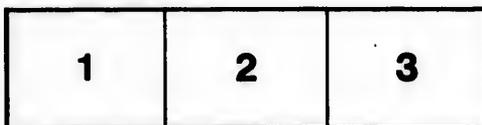

Library of the Public
Archives of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol \rightarrow (meaning "CONTINUED"), or the symbol ∇ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

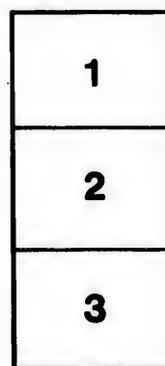

La bibliothèque des Archives
publiques du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole \rightarrow signifie "A SUIVRE", le symbole ∇ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

IN TWO VOLUMES.—VOL. II.

PHILADELPHIA:
A. HART, LATE CAREY AND HART,
126 CHESTNUT STREET.
1852.

Handwritten signature

"Though immediately and primarily written for the merchants, this Commercial Dictionary will be of use to every man of business or of curiosity. There is no man who is not in some degree a merchant; who has not something to buy and something to sell, and who does not therefore want such instructions as may teach him the true value of possessions or commodities. The descriptions of the productions of the earth and water which this volume contains, may be equally pleasing and useful to the speculatist with any other Natural History. The descriptions of ports and cities may instruct the geographer as well as if they were found in books appropriated only to his own science; and the doctrines of funds, insurances, currency, monopolies, exchanges, and duties, is so necessary to the politician, that without it he can be of no use either in the council or the senate, nor can speak or think justly either on war or trade.

"We, therefore, hope that we shall not repent the labour of compiling this work, nor flatter ourselves unreasonably, in predicting a favourable reception to a book which no condition of life can render useless, which may contribute to the advantage of all that make or receive laws, of all that buy or sell, of all that wish to keep or improve their possessions, of all that desire to be rich, and all that desire to be wise."

JONSON, Preface to Rolfe's Dict.

AND

COMMERCIAL NAVIGATION.

I. AND J.

JALAP, or **JALOP** (Ger. *Jalapp*; Fr. *Jalap*; It. *Sciarappa*; Sp. *Jalapa*), the root of a sort of convolvulus, so named from Xalapa, in Mexico, whence we chiefly import it. The root, when brought to this country, is in thin transverse slices, solid, hard, weighty, of a blackish colour on the outside, and internally of a dark grey, with black circular strimæ. The hardest and darkest coloured is the best; that which is light, spongy, and pale coloured, should be rejected. The odour of jalap, especially when in powder, is very characteristic. Its taste is exceedingly nauseous, accompanied by a sweetish bitterness.—(*Lewis's Mat. Med.*; *Brandé's Pharmacy*.) The entries of jalap for home consumption amounted, at an average of 1831 and 1832, to 47,816 lbs. a year.

JAMAICA PEPPER. See **PIXEPTO**.

JAPANED WARES (Ger. *Japanische ware*; Du. *Japansch lakwerk*; Fr. *Marchandises de Japon*), articles of every description, such as tea-trays, clock-dials, candlesticks, snuff-boxes, &c. covered with coats of japan, whether plain, or embellished with painting or gilding. Birmingham is the grand staple of this manufacture, which is there carried on to a great extent. Pontypool, in Monmouthshire, was formerly famous for jappanning; but it is at present continued there on a very small scale only. It is prosecuted with spirit and success at Bilston and Wolverhampton.

JASPER (Ger. *Jaspis*; Du. *Jaspis*; Fr. *Jaspe*; It. *Diaspro*; Sp. *Jaspe*; Rus. *Jaschma*). This stone is an ingredient in the composition of many mountains. It occurs usually in large amorphous masses, sometimes in round or angular pieces; its fracture is conchoidal; specific gravity from 2 to 2.7. Its colours are various; when heated it does not decrepitate: it is usually divided into four species, denominated Egyptian jasper, striped jasper, porcelain jasper, and common jasper. It is sometimes employed by jewellers in the formation of seals.

JERSEY. See **GUZANSKY**.

JET, or **PITCH COAL** (Du. *Git*, *Zwarte barnsteen*; Fr. *Jais*, *Jayet*; Ger. *Gagat*; It. *Gagata*, *Lustrino*; Lat. *Gagus*, *Gagates*), of a black velvet colour, occurs massive, in plates; sometimes in the shape of branches of trees, but without a regular woody texture. Internal lustre shining, resinous, soft; rather brittle; easily frangible; specific gravity 1.3. It is used for fuel, and for making vessels and snuff-boxes. In Prussia it is called black amber, and is cut into rosaries and necklaces. It is distinguished by its brilliancy, and conchoidal fracture.—(*Thomson's Chemistry*.)

JETSAM. See **FLOTSAM**.

IMPORTATION AND EXPORTATION, the bringing of commodities from and sending them to other countries. A very large portion of the revenue of Great Britain being derived from customs duties, or from duties on commodities imported from abroad; and drawbacks being given on many, and bounties on a few articles exported; the business of importation and exportation is subjected to various regulations, which must be carefully observed by those who would avoid incurring penalties, and subjecting their property to confiscation. The regulations referred to, have been embodied in the act 3 & 4 Will. 4. c. 52., which is subjoined

GENERAL REGULATIONS.

No Goods to be landed nor Bulk broken before Report and Entry.—No goods shall be unladen from any ship arriving from parts beyond the seas at any port or place in the United Kingdom or in the Isle of Man, nor shall bulk be broken after the arrival of such ship within 4 leagues of the coast thereof, before due report of such ship and due entry of such goods shall have been made, and warrant granted, in manner herein-after directed; and no goods shall be so unladen except at such times and places, and in such manner, and by such persons, and under the care of such officers, as is and are herein-after directed; and all goods not duly reported, or which shall be unladen contrary hereto, shall be forfeited; and if bulk be broken contrary hereto, the master of such ship shall forfeit the sum of 100l.; and if, after the arrival of any ship within 4 leagues of the coast of the United Kingdom or of the Isle of Man, any alteration be made in the stowage of the cargo of such ship, so as to facilitate the unloading of any part of such cargo, or if any part be staved, destroyed, or thrown overboard, or any package be opened, such ship shall be deemed to have broken bulk; provided always, that the several articles herein-after enumerated may be landed in the United Kingdom without report, entry, or warrant; (that is to say,) diamonds and bullion, fresh fish of British taking, and imported in British ships, turbot and lobsters fresh, however taken or imported.—§ 2.

MANIFEST.

All British Ships, and all Ships with Tobacco, to have Manifests.—No goods shall be imported into the United Kingdom, or into the Isle of Man, from parts beyond the seas, in any British ship, nor any tobacco in any ship, unless the master shall have on board a manifest of such goods or of such tobacco, made out; dated, and signed by him at the place or respective places where the same or the different parts of the same was or were taken on board, and authenticated in the manner herein-after provided; and every such manifest shall set forth the name and the tonnage of the ship, the name of the master and of the place to which the ship belongs, and of the place or places where the goods were taken on board respectively, and of the place or places for which they are destined respectively, and shall contain a particular account and description of all the packages on board, with the marks and numbers thereon, and the sorts of goods and different kinds of each sort contained therein, to the best of the master's knowledge, and of the particulars of such goods as are stowed loose, and the names of the respective shippers and consignees, as far as the same can be known to the master; and of such particular account shall be subjoined a general account or recapitulation of the total number of the packages of each sort, describing the same by their usual names, or by such descriptions as the same can best be known by, and the different goods therein, and also the total quantities of the different goods stowed loose; provided always, that every manifest for tobacco shall be a separate manifest distinct from any manifest for any other goods, and shall, without fail, contain the particular weight of tobacco in each hoghead, cask, chest, or case, with the tare of the same; and if such tobacco be the produce of the dominions of the Grand Seigneur, then the number of parcels or bundles within any such hoghead, cask, chest, or case, shall be stated in such manifest.—§ 3.

To be produced to Officers in Colonies, &c.—Before any ship shall be cleared out or depart from any place in any of the British possessions abroad, or from any place in China, with any goods for the United Kingdom or for the Isle of Man, the master of such ship shall produce the manifest to the collector or comptroller of the customs, or other proper officer, who shall certify upon the same the date of the production thereof to him; provided always, that in all places within the territorial possessions of the East India Company the servant of the said Company by whom the last despatches of such ship shall be delivered shall be the proper officer to authenticate the manifest as aforesaid; and in all places in China the chief supercargo of the said Company shall be the proper officer for such purpose.—§ 4.

To be produced to Consuls.—Before the departure of any ship from any place beyond the seas not under the British dominions, where any tobacco has been taken on board such ship for the United Kingdom or for the Isle of Man, the master of such ship shall produce the manifest of such tobacco to the British consul or other chief British officer, if there be any such resident at or near such place; and such consul or other officer shall certify upon the same the date of the production thereof to him.—§ 5.

If wanting, Master to forfeit 100l.—If any goods be imported into the United Kingdom or into the Isle of Man, in any British ship, or any tobacco in any ship, without such a manifest, or if any goods contained in such manifest be not on board, the master of such ship shall forfeit the sum of 100l.—§ 6.

Manifest to be produced within 4 Leagues.—The master of every ship required to have a manifest on board shall produce such manifest to any officer of the customs who shall come on board his ship after her arrival within 4 leagues of the coast of the United Kingdom or of the coast of the Isle of Man, and who shall demand the same, for his inspection; and such master shall also deliver to any such officer who shall be the first to demand it, a true copy of such manifest signed by the master; and shall also deliver another copy to any other officer of the customs who shall be the first to demand the same within the limits of the port to which such ship is bound; and thereupon such officers respectively shall notify on such manifest and on such copies the date of the production of such manifest and of the receipt of such copies, and shall transmit such copies to the collector and comptroller of the port to which such vessel is first bound, and shall return such manifest to the master; and if such master shall not in any case produce such manifest, or deliver such copy, he shall forfeit the sum of 100l.—§ 7.

REPORT.

Master, within 24 Hours, and before breaking Bulk, shall report.—The master of every ship arriving from parts beyond the seas at any port in the United Kingdom or in the Isle of Man, whether laden or in ballast, shall, within 24 hours after such arrival, and before bulk be broken, make due report of such ship, and shall make and subscribe a declaration to the truth of the same, before the collector or comptroller of such port; and such report shall contain an account of the particular marks, numbers, and contents of all the different packages or parcels of the goods on board such ship, and the particulars of such goods as are stowed loose, to the best of his knowledge, and of the place or places where such goods were respectively taken on board, and of the burden of such ship, and of the country where such ship was built, or, if British, of the port of registry, and of the country of the people to whom such ship belongs, and of the name and country of the person who was master during the voyage, and of the number of the people by whom such ship was navigated, stating how many are subjects of the country to which such ship belongs, and how many are of some other country; and in such report it shall be further declared, whether and in what cases such ship has broken bulk in the course of her voyage, and what part of the cargo, if any, is intended for importation at such port, and what part, if any, is intended for importation at another port in the United Kingdom, or at another port in the Isle of Man respectively, and what part, if any, is prohibited to be imported, except to be warehoused for exportation only, and what part, if any, is intended for exportation in such ship to parts beyond the seas, and what surplus stores or stock remain on board such ship, and, if a British ship, what foreign-made sails or cordage, not being standing or running rigging, are in use on board such ship; and the master of any ship, who shall fail to make such report, or who shall make a false report, shall forfeit the sum of 100l.—§ 8.

Masters of Vessels of every vessel and person or persons be state, in the report of and any such master owner or owners of to enter into bond to extra-parochial or of other place may be p and any such master sum of 200l.—§ 2.

Packages reported as aforesaid by the master as being examined such packages if there be found in such packages to be forfeited; or if the duties of importation consideration of the same fit to deliver the same.

Master to deliver the manifest to the collector required, and, if required, and a true copy all such questions relating to the collector or comptroller questions, or to answer bill of lading, or copy, expressed therein shall uttered or produced by been received or made bill of lading or copy of 100l.—§ 11.

Part of Cargo reported is required he reports port in the Isle of Man been delivered shall of ship.—§ 12.

Ship to comply with the knowledge of of such ship, provided places to be the proper ships only shall be moored ships shall not be without charged shall remain at the master shall in either

Officers to board Ships arriving at any port in the goods laden therein free access to every box before landing, and to any place, or any box superior to (clean-on power; and if it be officer, who may open power; and if any of the officers shall place be willfully opened, and secretly conveyed away opened, the master of a

National Ships, British or foreign 100l.—If any arriving as aforesaid at goods laden in parts be of such ship or of such ship, or when called upon his hand, to the best of goods, and of the marks signs of the same, and to the truth thereof, concerning such goods as or other person shall of merchant ships are listed ships, and bring from of ship as aforesaid; and His Majesty shall from treasury of the United Kingdom

Master to deliver list at any port in the United Kingdom, within 10 days of and descriptions of the crew of the ship who has deserted or died to each seaman so dying to the truth thereof; and shall be kept by the collector

Masters of Vessels coming from Africa to report how many Natives they have on board.—The master of every vessel coming from the coast of Africa, and having taken on board at any place in Africa any person or persons being or appearing to be natives of Africa, shall, in addition to all other matters, state, in the report of his vessel, how many such persons have been taken on board by him in Africa; and any such master failing herein shall forfeit the sum of 100*l.*; provided also, that the master or owner or owners of such vessel, or some one of them, at the time of making such report, be required to enter into bond to his Majesty in the sum of 100*l.*, conditioned to keep harmless any parish, or any extra-parochial or other place maintaining its own poor, against any expense which such parish or other place may be put to in supporting any such person during their stay in the United Kingdom; and any such master, owner or owners refusing or neglecting to enter into such bond shall forfeit the sum of 200*l.*—§ 9.

Packages reported "Contents unknown," may be opened and examined.—If the contents of any packages so intended as aforesaid for exportation in the same ship to parts beyond the seas shall be reported by the master as being unknown to him, it shall be lawful for the officers of the customs to open and examine such packages on board, or to bring the same to the king's warehouse for that purpose; and if there be found in such package any goods which may not be entered for home use, such goods shall be forfeited; or if the goods be such as may be entered for home use, the same shall be chargeable with the duties of importation; unless in either case the commissioners of his Majesty's customs, in consideration of the sort or quality of such goods, or the small rate of duty payable thereon, shall see fit to deliver the same for exportation.—§ 10.

Master to deliver Manifest, &c.—The master of every ship shall, at the time of making such report, deliver to the collector or comptroller the manifest of the cargo of such ship, where a manifest is required, and, if required by the collector or comptroller, shall produce to him any bill or bills of lading, or a true copy thereof, for any and every part of the cargo laden on board; and shall answer all such questions relating to the ship and cargo, and crew and voyage, as shall be put to him by such collector or comptroller; and in case of failure or refusal to produce such manifest, or to answer such questions, or to answer them truly, or to produce such bill of lading or copy, or if such manifest, or bill of lading, or copy, shall be false, or if any bill of lading be uttered by any master, and the goods expressed therein shall not have been *bona fide* shipped on board such ship, or if any bill of lading uttered or produced by any master shall not have been signed by him, or any such copy shall not have been received or made by him previously to his leaving the place where the goods expressed in such bill of lading or copy were shipped, then and in every such case such master shall forfeit the sum of 100*l.*—§ 11.

Part of Cargo reported for another Port.—If any part of the cargo of any ship for which a manifest is required be reported for importation at some other port in the United Kingdom, or at some other port in the Isle of Man, the collector and comptroller of the port at which some part of the cargo has been delivered shall notify such delivery on the manifest, and return the same to the master of such ship.—§ 12.

Ship to come quickly to Place of Unloading, &c.—Every ship shall come as quickly up to the proper place of mooring or unloading as the nature of the port will admit, and without touching at any other place; and in proceeding to such place shall bring to at stations appointed by the commissioners of customs for the boarding of ships by the officers of the customs; and after arrival at such place of mooring or unloading such ship shall not remove from such place except directly to some other proper place, and with the knowledge of the proper officer of the customs, on penalty of 100*l.*, to be paid by the master of such ship; provided always, that it shall be lawful for the commissioners of customs to appoint places to be the proper places for the mooring or unloading of ships importing tobacco, and where such ships only shall be moored or unladen; and in case the place so appointed for the unloading of such ships shall not be within some dock surrounded with walls, if any such ship after having been discharged shall remain at such place, or if any ship not importing tobacco shall be moored at such place, the master shall in either case forfeit and pay the sum of 20*l.*—§ 13.

Officers to board Ships.—It shall be lawful for the proper officers of the customs to board any ship arriving at any port in the United Kingdom or in the Isle of Man, and freely to stay on board until all the goods laden therein shall have been duly delivered from the same; and such officers shall have free access to every part of the ship, with power to fasten down hatchways, and to mark any goods before landing, and to lock up, seal, mark, or otherwise secure any goods on board such ship; and if any place, or any box or chest, be locked, and the keys be withheld, such officers, if they be of a degree superior to lieutenant or watermen, may open any such place, box, or chest in the best manner in their power; and if they be lieutenant or watermen, or only of that degree, they shall send for their superior officer, who may open or cause to be opened any such place, box, or chest in the best manner in his power; and if any goods be found concealed on board any such ship, they shall be forfeited; and if the officers shall place any lock, mark, or seal upon any goods on board, and such lock, mark, or seal be wilfully opened, altered, or broken before due delivery of such goods, or if any of such goods be secretly conveyed away, or if the hatchways, after having been fastened down by the officers, be opened, the master of such ship shall forfeit the sum of 100*l.*—§ 14.

*National Ships, British or Foreign, having Goods on board, Person in charge to deliver an Account, or Forfeit 100*l.**—If any ship (having commission from his Majesty, or from any foreign prince or state) arriving as aforesaid at any port in the United Kingdom or in the Isle of Man shall have on board any goods laden in parts beyond the seas, the captain, master, purser, or other person having the charge of such ship or of such goods for that voyage, shall, before any part of such goods be taken out of such ship, or when called upon so to do by any officer of the customs, deliver an account in writing under his hand, to the best of his knowledge, of the quality and quantity of every package or parcel of such goods, and of the marks and numbers thereon, and of the names of the respective shippers and consignees of the same, and shall make and subscribe a declaration at the foot of such account, declaring to the truth thereof, and shall also truly answer to the collector or comptroller such questions concerning such goods as shall be required of him; and on failure thereof, such captain, master, purser, or other person shall forfeit the sum of 100*l.*; and all such ships shall be liable to such searches as merchant ships are liable to; and the officers of the customs may freely enter and go on board all such ships, and bring from thence on shore into the king's warehouse any goods found on board any such ship as aforesaid; subject nevertheless to such regulations in respect of ships of war belonging to his Majesty as shall from time to time be directed in that respect by the commissioners of his Majesty's treasury of the United Kingdom of Great Britain and Ireland.—§ 15.

Master to deliver List of Crew of Ships from West Indies.—The master of every British ship arriving at any port in the United Kingdom, on her return from any British possession in the West Indies, shall, within 10 days of such arrival, deliver to the collector or comptroller a list, containing the names and descriptions of the crew which was on board at the time of clearing from the United Kingdom, and of the crew on board at the time of arrival in any of the said possessions, and of every seaman who has deserted or died during the voyage, and also the amount of wages due at the time of his death to each seaman so dying, and shall make and subscribe a declaration at the foot of such list, declaring to the truth thereof; and every master omitting so to do, shall forfeit the sum of 50*l.*; and such list shall be kept by the collector for the inspection of all persons interested therein.—§ 16.

ENTRY.

After 14 Days, Officer may land Goods not entered, &c.—Every importer of any goods shall, within 14 days after the arrival of the ship importing the same, make perfect entry inwards of such goods, or entry by bill of lading, in manner herein-after provided, and shall within such time land the same; and in default of such entry and landing it shall be lawful for the officers of the customs to convey such goods to the king's warehouse; and whenever the cargo of any ship shall have been discharged, with the exception only of a small quantity of goods, it shall be lawful for the officers of the customs to convey such remaining goods, and at any time to convey any small packages or parcels of goods, to the king's warehouse, although such 14 days shall not have expired, there to be kept waiting the due entry thereof during the remainder of such 14 days; and if the duties due upon any goods so conveyed to the king's warehouse shall not be paid within 3 months after such 14 days shall have expired, together with all charges of removal and warehouse rent, the same shall be sold, and the produce thereof shall be applied, first to the payment of freight and charges, next of duties, and the overplus, if any, shall be paid to the proprietor of the goods.—§ 17.

Bill of Entry to be delivered.—The person entering any goods inwards (whether for payment of duty, or to be warehoused upon the first perfect entry thereof, or for payment of duty upon the taking out of the warehouse, or whether such goods be free of duty,) shall deliver to the collector or comptroller a bill of the entry of such goods, fairly written in words at length, expressing the name of the ship, and of the master of the ship in which the goods were imported, and of the place from whence they were brought, and the description and situation of the warehouse, if they are to be warehoused, and the name of the person in whose name the goods are to be entered, and the quantity and description of the goods, and the number and denomination or description of the respective packages containing the goods, and in the margin of such bill shall delineate the respective marks and numbers of such packages, and shall pay down any duties which may be payable upon the goods mentioned in such entry; and such person shall also deliver at the same time 2 or more duplicates, as the case may require, of such bill, in which all sums and numbers may be expressed in figures, and the particulars to be contained in such bill shall be written and arranged in such form and manner, and the number of such duplicates shall be such as the collector and comptroller shall require; and such bill being duly signed by the collector and comptroller, and transmitted to the landing waiter, shall be the warrant to him for the landing or delivering of such goods.—§ 18.

Unauthorized Persons not permitted to make Entries.—Every person who shall make or cause to be made any such entry inwards of any goods, not being duly authorized thereto by the proprietor or consignee of such goods, shall for every such offence forfeit the sum of 100*l.*; provided always, that no such penalty shall extend or be deemed to extend to any person acting under the direction of the several dock companies or other corporate bodies authorized by law to pass entries.—§ 19.

Not valid unless agreeing with Manifest, Report, and other Documents.—No entry nor any warrant for the landing of any goods, or for the taking of any goods out of any warehouse, shall be deemed valid, unless the particulars of the goods and packages in such entry shall correspond with the particulars of the goods and packages, purporting to be the same, in the report of the ship, and in the manifest, where a manifest is required, and in the certificate or other document, where any is required, by which the importation or entry of such goods is authorized, nor unless the goods shall have been properly described in such entry by the denominations and with the characters and circumstances according to which such goods are charged with duty or may be imported, either to be used in the United Kingdom, or to be warehoused for exportation only; and any goods taken or delivered out of any ship, or out of any warehouse, or for the delivery of which or for any order for the delivery of which, from any warehouse, demand shall have been made, not having been duly entered, shall be forfeited.—§ 20.

Goods by Number, Measure, or Weight, &c.—If the goods in such entry be charged to pay duty according to the number, measure, or weight thereof, such number, measure, or weight shall be stated in the entry; and if the goods in such entry be charged to pay duty according to the value thereof, such value shall be stated in the entry, and shall be affirmed by the declaration of the importer or his known agent, written upon the entry, and attested by his signature; and if the goods in such entry be chargeable at the option of the officers of customs, either according to the number, measure, or weight thereof, or according to the value thereof, then as well such number, measure, or weight, as also such value, shall be in like manner stated in the entry, and attested; and if any person make such declaration, not being the importer or proprietor of such goods, nor his agent duly authorized by him, such person shall forfeit the sum of 100*l.*; and such declaration shall be made in manner and form following, and shall be binding upon the person by or in behalf of whom the same shall be made; (that is to say),

"I, A. B. of [place of abode] do hereby declare, that I am [the importer or authorised by the importer] of the goods contained in this entry, and that I enter the same [stating which, if partly] at the sum of _____ day of _____ 18__.

"A. B."—§ 21.

Goods undervalued, Officers may detain.—If upon examination it shall appear to the officers of the customs that such goods are not valued according to the true value thereof, it shall be lawful for such officers to detain and secure such goods, and (within 5 days from the landing thereof if it be in the ports of London, Leith, or Dublin, or within 7 days if in any other port in the United Kingdom, or if in any port in the Isle of Man,) to take such goods for the use of the Crown; and if a different rate of duty shall be charged upon any goods according as the value of the same shall be described in the entry to be above or to be below any particular price or sum, and such goods shall be valued in the entry so as to be liable to the lower rate of duty, and it shall appear to the officers of the customs that such goods, by reason of their real value, are properly liable to the higher rate of duty, it shall be lawful for such officers in like manner to take such goods for the use of the Crown; and the commissioners of his Majesty's customs shall thereupon in any of such cases cause the amount of such valuation, together with an addition of 10*l.* per cent. thereon, and also the duties paid upon such entry, to be paid to the importer or proprietor of such goods in full satisfaction for the same, and shall dispose of such goods for the benefit of the Crown; and if the produce of such sale shall exceed the sums so paid and all charges incurred by the Crown, one moiety of the overplus shall be given to the officer or officers who had detained and taken the goods; and the money retained for the benefit of the Crown shall be paid into the hands of the collector of the customs, with the knowledge of the comptroller, and carried to account as duties of customs.—§ 22.

East India Company to sell Goods.—The value of goods imported by the East India Company shall be ascertained at the gross price at which the same shall have been sold by auction at the public sales of the said Company; and that the said Company shall fairly and openly expose to sale and cause to be sold all such goods so charged to pay duty according to the value thereof by way of public auction in the city of London, within 3 years from the importation thereof, and shall give due notice at the Custom-house in London to the officers appointed to attend such sales of the time and place thereof.—§ 23.

Bill of Sight if Goods be not known.—If the importer of any goods, or his agent after full conference with him, shall declare before the collector or comptroller that he cannot for want of full information

make a full or perfect entry thereof, it shall be lawful for the collector or parcels of such goods thereupon, in order that such importer, in presence of the collector, the importer of which shall be due and for the purpose of the full or perfect entry thereof; provided that such goods shall be provisionally landed as if they were required for the due landing thereof, and shall be sold if such goods shall have been deposited to be payable on the goods in value of the warrant exceed the sum so deposited.

Goods to be taken to King's Warehouse.—If such goods shall be taken to the king's warehouse within 1 month after such entry, or on such public warehouse rent, such goods as cannot be entered shall be taken to the king's warehouse, and the duties thereon shall be paid.

East India Company may make Entries.—The East India Company, with the consent of the Board, may within 3 months after the expiration of the duties thereon pay the duties thereon if such goods be charged from the sale of the goods or weight thereof, then to the importation of such goods such goods shall be secured by the collector, and the customs shall require, unless they have been duly paid, or until they are for any other person who shall import such goods in like manner as any goods imported by the East India Company, with the consent of the Board, may be secured.

In default of Payment.—If the duties on any goods aforesaid, or of due entry thereof, shall be respectively required, it shall be lawful for the collector of such goods in respect of such duties, (or for exportation of such goods) to detain the same until the duties thereon shall be paid to the proprietor thereof.

Goods landed by Bill of Lading.—If any goods have been landed by bill of lading in any parcel concealed in any parcel as well as all such goods as are things contained in such parcels.

East India Company to account for Goods.—The East India Company shall be liable to account of the duties of the said receiver-general shall be accounted for to the collector of the customs, and shall be paid to him as cash.—§ 29.

Goods damaged on Voyage.—If any goods shall be damaged during the voyage, and such goods shall be received; provided proof of such damage shall be given to the officers of customs, and such goods shall be valued in the United Kingdom; and if such goods shall be the first examination of such goods.

Officers to examine Damaged Goods.—The officers of customs shall thereupon examine of damage which, in the statement of duties; but if the importer be not satisfied with the valuation of such goods, two indifferent merchants shall be chosen to make the same, and shall make a judgment of such goods as to the value of the customs may make by such merchants.—§ 30.

No Abatement for cartage.—No abatement for cartage received by any of the said pepper, currants, raisins, &c.

Returned Goods.—If any goods of any country, any goods from the United Kingdom, or any goods exported therefrom, shall be re-exported therefrom, the account the same have to be made of the date of the exportation

make a full or perfect entry of such goods, and shall make and subscribe a declaration to the truth thereof, it shall be lawful for the collector and comptroller to receive an entry by bill of sight for the packages or parcels of such goods by the best description which can be given, and to grant a warrant thereupon, in order that the same may be provisionally landed, and may be seen and examined by such importer, in presence of the proper officers; and within 3 days after any goods shall have been so landed, the importer shall make a full or perfect entry thereof, and shall either pay down all duties which shall be due and payable upon such goods, or shall duly warehouse the same, according to the purport of the full or perfect entry or entries so made for such goods, or for the several parts or sorts thereof: provided always, that if, when full or perfect entry be at any time made for any goods provisionally landed as aforesaid by bill of sight, such entry shall not be made in manner herein-before required for the due landing of goods, such goods shall be deemed to be goods landed without due entry thereof, and shall be subject to the like forfeiture accordingly: provided also, that if any sum of money shall have been deposited upon any entry by bill of sight, on account of the duties which may be found to be payable on the goods intended therein, it shall be lawful for the officers of the customs to deliver, in virtue of the warrant for landing the same, any quantity of goods the duty on which shall not exceed the sum so deposited. — § 24.

Goods to be taken to King's Warehouse.—In default of perfect entry within such 3 days, such goods shall be taken to the king's warehouse by the officers of the customs; and if the importer shall not, within 1 month after such landing, make perfect entry or entries of such goods and pay the duties thereon, or on such parts as can be entered for home use, together with charges of removal and of warehouse rent, such goods shall be sold for payment of such duties (or for exportation, if they be such as cannot be entered for home use, or shall not be worth the duties and charges,) and for the payment of such charges; and the overplus, if any, shall be paid to the importer or proprietor thereof. — § 25.

East India Company may enter by Bill of Sight.—It shall be lawful for the East India Company, without making the proof herein-before required, to enter by bill of sight, to be landed and secured in such manner as the commissioners of his Majesty's customs shall require, any goods imported by them, and also any goods imported by any other person from places within the limits of the charter of the said Company, with the consent of such person, upon condition to cause perfect entry to be made of such goods within 3 months from the date of the importation thereof, either to warehouse the same or to pay the duties thereon within the times and in the manner herein-after mentioned; (that is to say,) if such goods be charged to pay duty according to the value, then to pay such duty within 4 months from the sale of the goods; and if such goods be charged to pay duty according to the number, measure, or weight thereof, then to pay one moiety of such duties within 6 calendar months from the time of the importation of such goods, and the other moiety within 12 calendar months from such time; and such goods shall be secured in such pieces and in such manner as the commissioners of his Majesty's customs shall require, until the same shall have been duly entered, and the duties thereon shall have been duly paid, or until the same shall have been duly exported: provided also, that it shall be lawful for any other person who shall have imported any goods from places within the said limits into the port of London in like manner to enter such goods by bill of sight in his own name, upon giving sufficient security by bond, to the satisfaction of the commissioners of his Majesty's customs, with the like conditions as are required of the said Company for making perfect entries, and for the securing and the paying of duties, provided such goods be entered by such bill of sight to be warehoused in some warehouse under the superintendence of the said Company, and in which goods imported by the said Company may be secured in the manner before mentioned. — § 26.

In default of Payment of Duties, Goods to be sold.—In default of perfect entry within 3 months as aforesaid, or of due entry and payment of duty within the times and in the manner herein-before respectively required, it shall be lawful for the commissioners of his Majesty's customs to cause any such goods in respect of which such default shall have been made to be sold for the payment of such duties, (or for exportation, if they be such as cannot be entered for home use,) and for the payment of all charges incurred by the Crown in respect of such goods; and the overplus, if any, shall be paid to the proprietor thereof. — § 27.

Goods landed by Bill of Sight fraudulently concealed, forfeited.—When any package or parcel shall have been landed by bill of sight, and any goods or other things shall be found in such package or parcel concealed in any way, or packed with intent to deceive the officers of his Majesty's customs, as well all such goods and other things as the package or parcel in which they are found, and all other things contained in such package or parcel, shall be forfeited. — § 28.

East India Company to pay Duties to Receiver-general.—The East India Company shall pay into the hands of the receiver-general of the customs every sum of money due from the said Company on account of the duties of customs at the respective times when the same shall become due; and the said receiver-general shall give to the said Company a receipt for the monies so paid, on the account of the collector of the customs, which receipt, when delivered to such collector, shall be received by him as cash. — § 29.

Goods damaged on Voyages.—Any goods which are rated to pay duty according to the number, measure, or weight thereof (except certain goods herein-after mentioned) shall receive damage during the voyage, an abatement of such duties shall be allowed in proportion to the damage so received; provided proof be made to the satisfaction of the commissioners of his Majesty's customs, or of any officers of customs acting therein under their directions, that such damage was received after the goods were shipped abroad in the ship importing the same, and before they were landed in the United Kingdom; and provided claim to such an abatement of duties be made at the time of the first examination of such goods. — § 30.

Officers to examine Damages, and state Proportion, or choose two Merchants.—The officers of the customs shall thereupon examine such goods with reference to such damage, and may state the proportion of damage which, in their opinion, such goods have so received, and may make a proportionate abatement of duties; but if the officers of customs be incompetent to estimate such damage, or if the importer be not satisfied with the abatement made by them, the collector and comptroller shall choose two indifferent merchants experienced in the nature and value of such goods, who shall examine the same, and shall make and subscribe a declaration, stating in what proportion, according to their judgment, such goods are lessened in their value by reason of such damage, and thereupon the officers of the customs may make an abatement of the duties according to the proportion of damage so declared by such merchants. — § 31.

No Abatement for certain Goods.—No abatement of duties shall be made on account of any damage received by any of the sorts of goods herein-after enumerated; (that is to say,) cocon, coffee, oranges, pepper, currants, raisins, figs, tobacco, lemons, and wine. — § 32.

Returned Goods.—It shall be lawful to re-import into the United Kingdom from any place, in a ship of any country, any goods (except as herein-after excepted) which shall have been legally exported from the United Kingdom, and to enter the same by bill of store, referring to the entry outwards, and exportation thereof, provided the property in such goods continue in the person by whom or on whose account the same have been exported, and that such re-importation take place within 6 years from the date of the exportation; and if the goods so returned be foreign goods, which had before been legally

imported into the United Kingdom, the same duties shall be payable thereon as would, at the time of such re-importation, be payable on the like goods under the same circumstances of importation as those under which such goods had been originally imported, or such goods may be warehoused as the like goods might be warehoused upon a first importation thereof; provided always, that the several sorts of goods enumerated or described in the Table following shall not be re-imported into the United Kingdom for home use upon the ground that the same had been legally exported from thence, but that the same shall be deemed to be foreign goods, whether originally such or not, and shall also be deemed to be imported for the first time into the United Kingdom; (that is to say,)

A Table of Goods imported which may not be re-imported for Home Use.

Corn, grain, meal, flour, and malt, hops, tobacco, &c.
Goods for which any bounty or any drawback of excise had been received on exportation, unless by special permission of the commissioners of his Majesty's customs, and on repayment of such bounty or such drawback.

All goods for which bill of store cannot be issued in manner herein after directed, except small remnants of British goods by special permission of the commissioners of his Majesty's customs, upon proof to their satisfaction that the same are British, and had not been sold.—Stat. 25.

Bill of Store, by whom they may be taken out.—The person in whose name any goods so re-imported were entered for exportation shall deliver to the searcher at the port of exportation an exact account, signed by him, of the particulars of such goods, referring to the entry and clearance outwards and to the return inwards of the same, with the marks and numbers of the packages, both inwards and outwards; and thereupon the searcher, finding that such goods had been legally exported, shall grant a bill of store for the same; and if the person in whose name such goods were entered for exportation was not the proprietor thereof, but his agent, he shall declare upon oath on such bill of store the name of the person by whom he was employed as such agent; and if the person to whom such returned goods are consigned shall not be such proprietor and exporter, he shall make and subscribe a declaration on such bill of store of the name of the person for whose use such goods have been consigned to him; and the seal provided, as aforesaid, to be such, shall make and subscribe a declaration upon such bill of store, to the identity of the goods so exported and so returned, and that he was at the time of exportation and of re-importation the proprietor of such goods, and that the same had not during such time been sold or disposed of to any other person; and such declaration shall be made before the collector or comptroller at the ports of exportation and of importation respectively; and thereupon the collector and comptroller shall admit such goods to entry by bill of store, and grant their warrant accordingly.—§ 24.

Surplus Stores subject as Goods.—The surplus stores of every ship arriving from parts beyond the seas, in the United Kingdom or in the Isle of Man, shall be subject to the same duties, and the same prohibitions, restrictions, and regulations, as the like sorts of goods shall be subject to when imported by way of merchandise; but if it shall appear to the collector and comptroller that the quantity or description of such stores is not excessive or unsuitable, under all the circumstances of the voyage, it shall be lawful for them to permit such surplus stores to be entered for the private use of the master, purser, or owner of such ship, or of any passenger of such ship to whom any such surplus stores may belong, on payment of the proper duties, or to be warehoused for the future use of such ship, although the same could not be legally imported by way of merchandise.—§ 25.

Goods from Plantations, &c.—No goods shall be entered as being of or from any British possession in America (if any benefit in such distinction) unless the master of the ship importing the same shall have delivered to the collector or comptroller a certificate, under the hand of the proper officer of the place where such goods were taken on board, of the due clearance of such ship from thence, containing an account of such goods.—§ 26.

Certificates of Growth of Sugar, Coffee, Cocoa, Spirits, from Plantations.—Before any sugar, coffee, cocoa, or spirits shall be entered as being the produce of some British possession in America, or the Island of Mauritius, the master of the ship importing the same shall deliver to the collector or comptroller a certificate, under the hand of the proper officer of the place where such goods were taken on board, testifying that proof had been made in manner required by law that such goods are of the produce of some British possession in America, or of the Island of Mauritius, stating the name of the place where such goods were produced, and the quantity and quality of the goods, and the number and denomination of the packages containing the same, and the name of the ship in which they are laden, and of the master thereof; and such master shall also make and subscribe a declaration before the collector or comptroller, that such certificate was received by him at the place where such goods were taken on board, and that the goods so imported are the same as are mentioned therein.—§ 27.

Certificates of Sugar from Limits of Charter.—Before any sugar shall be entered as being the produce of any British possession within the limits of the East India Company's charter, the master of the ship importing the same shall deliver to the collector or comptroller a certificate under the hand and seal of the proper officer at the place where such sugar was taken on board, testifying that oath had been made before him, by the shipper of such sugar, that the same was really and bona fide the produce of such British possession; and such master shall also make and subscribe a declaration before the collector or comptroller, that such certificate was received by him at the place where such sugar was taken on board, and that the sugar so imported is the same as is mentioned therein.—§ 28.

Certificates of Wine, Produce of Cape of Good Hope.—Before any wine shall be entered as being the produce of the Cape of Good Hope, the master of the ship importing the same shall deliver to the collector or comptroller a certificate under the hand of the proper officer of the Cape of Good Hope, testifying that proof had been made, in manner required by law, that such wine is of the produce of the Cape of Good Hope or the dependencies thereof, stating the quantity and sort of such wine, and the number and denomination of the packages containing the same; and such master shall also make and subscribe a declaration before the collector or comptroller, that such certificate was received by him at the Cape of Good Hope, and that the wine so imported is the same as is mentioned therein.—§ 29.

Goods of Guernsey, Jersey, &c.—It shall be lawful to import into the United Kingdom any goods of the produce or manufacture of the islands of Guernsey, Jersey, Alderney, Sark, or Man, from the said islands respectively, without payment of any duty (except in special cases herein after mentioned); and such goods shall not be deemed to be included in any charge of duties imposed by any act hereafter to be made on the importation of goods generally from parts beyond the seas: provided always, that such goods may nevertheless be charged with any proportion of such duties as shall fairly counterveil any duties of excise, or any coast duty, payable on the like goods the produce of the part of the United Kingdom into which they shall be imported: provided also, that such exemption from duty shall not extend to any manufactures of the said islands made from materials the produce of any foreign country, except manufactures of linen and cotton made in and imported from the Isle of Man.—§ 30.

Master to deliver Certificate of Produce, and deliver a Certificate.—Before any goods shall be entered as being the produce of the said islands (if any benefit attach to such distinction), the master of the ship or vessel importing the same shall deliver to the collector or comptroller a certificate from the governor, lieutenant-governor, or commander-in-chief of the island from whence such goods were imported, that proof had been made, in manner required by law, that such goods were of the produce of such island, stating the quantity and quality of the goods, and the number and denomination of the packages containing the same; and such master shall also make and subscribe a declaration before

the collector or comptroller were taken on board, and,

Treasury may permit the collector for the Lords Commissioners to permit any goods the produce of the said islands to be imported into the United Kingdom, and the said commissioners shall

ing.—§ 31.

Vessels with Stores from Guernsey, Jersey, &c.—No vessel shall be liable to be conducted of House of Deputees Street.

Fish, British taking and every kind of British taken or in whatever ship imported in British ships, in any charge of duty imposed provided always, that before curing, the master of the collector or comptroller, the crews of such ships, or

Certificates of Blubber, Tallow, oil, head matter, or whale sea taken and caught wholly or in part in British ships, shall deliver to the collector a certificate under the hand had been made before him fish or creatures living in law; and such master shall that the goods so imported also make and subscribe the best of his knowledge taken wholly by British vessels.

Before entry of Blubber, Before any blubber, train fishery, shall be entered a wholly by the crews of the Guernsey, Jersey, Alderney, and subscribe a declaration shall make and subscribe seen taken and caught who ship) cleared out from the Bark, or Man (stating whether

Blubber from Greenland be lawful upon the return down with any blubber, be imports thereof to cause inspection of the proper or and the duties be paid the same come to be exported.—§ 47.

Importation direct.—No goods shall be imported direct from any place either as the first shipment or as a re-shipment.

Saloon may sell Goods or property liable to the payment of any duty, or agreed to be paid by the same, to sell so much of it as he may think fit, or such other sum so paid

tion of any such law to the commissioners such that such owners are hereby empowered payment of all duties, to the amount of such other sum always, that if such owners owners as to the amount of salivior to refer any such doubt to the High Court of Admiralty; court shall have been heard

Foreign Goods landed, at Jettam, Rotterdam, and elsewhere, at all times be subject to respectively are subject to payable, any question shall of the growth, produce, or shall upon investigation be are entitled to allowance duty as the said commodity cannot be sold for the amount of any other person entitled to be liable to and be charged

Persons having such Goods shall have possession of a bill shall not give notice there

the collector or comptroller, that such certificate was received by him at the place where such goods were taken on board, and that the goods so imported are the same as are mentioned therein.—*41.*

Treasury may permit Produce of Colonial Fisheries to be imported from Guernsey, &c.—It shall be lawful for the Lords Commissioners of his Majesty's Treasury, when and so long as they shall see fit, to permit any goods the produce of the British possessions or fisheries in North America, which shall have been legally imported into the islands of Guernsey or Jersey, direct from such possessions, to be imported into the United Kingdom for home use direct from those islands, under such regulations as the said commissioners shall direct, any thing in the law of navigation to the contrary notwithstanding.—*42.*

Vessels with Stone from Guernsey, &c. not to be piloted.—No vessel arriving on the coast of England from Guernsey, Jersey, Alderney, Sark, or Man, wholly laden with stone the production thereof, shall be liable to be conducted or piloted by pilots appointed and licensed by the corporation of the Trinity House of Deptford Strand, any law, custom, or usage to the contrary notwithstanding.—*43.*

Fish, British taking and curing, and Lobsters and Turbots, free of Duty on Importation.—Fresh fish of every kind of British taking, and imported in British ships, and fresh lobsters and turbot, however taken or in whatever ship imported, and cured fish of every kind, of British taking and curing, imported in British ships, shall be imported free of all duties, and shall not be deemed to be included in any charge of duty imposed by any act hereafter to be made on the importation of goods generally: provided always, that before any cured fish shall be entered free of duty, as being of such taking and curing, the master of the ship importing the same shall make and subscribe a declaration before the collector or comptroller, that such fish was actually caught and taken in British ships, and cured by the crews of such ships, or by his Majesty's subjects.—*44.*

Certificates of Blubber, Train Oil, &c. British colonial taking.—Before any blubber, train oil, spermaceti oil, head matter, or whale fins, shall be entered as being the produce of fish or creatures living in the sea taken and caught wholly by his Majesty's subjects usually residing in some part of his Majesty's dominions, and imported from some British possession, the master of the ship importing the same shall deliver to the collector or comptroller a certificate under the hand of the proper officer of such British possession where such goods were taken on board, (or if no such officer be residing there, then a certificate under the hands of two principal inhabitants at the place of shipment,) notifying that oath had been made before him or them, by the shipper of such goods, that the same were the produce of fish or creatures living in the sea taken wholly by British vessels owned and navigated according to law; and such master shall also make and subscribe a declaration before the collector or comptroller, that such certificate was received by him at the place where such goods were taken on board, and that the goods so imported are the same as mentioned therein; and the importer of such goods shall also make and subscribe a declaration before the collector or comptroller, at the time of entry, that to the best of his knowledge and belief the same were the produce of fish or creatures living in the sea taken wholly by British vessels in manner aforesaid.—*45.*

Before entry of Blubber, &c. of British taking, Master and Importer to make Declaration of the same.—Before any blubber, train oil, spermaceti oil, head matter, or whale fins, imported direct from the fishery, shall be entered as being the produce of fish or creatures living in the sea taken and caught wholly by the crews of ships cleared out from the United Kingdom, or from one of the islands of Guernsey, Jersey, Alderney, Sark, or Man, the master of the ship importing such goods shall make and subscribe a declaration, and the importer of such goods (to the best of his knowledge and belief) shall make and subscribe a declaration, that the same are the produce of fish or creatures living in the sea taken and caught wholly by the crew of such ship, or by the crew of some other ship (naming the ship) cleared out from the United Kingdom, or from one of the islands of Guernsey, Jersey, Alderney, Sark, or Man (stating which).—*46.*

Blubber from Greenland may be boiled, and entered as Oil imported, and be exported as such.—It shall be lawful upon the return of any ship from the Greenland seas or Davis's Straits to the United Kingdom with any blubber, being the produce of whales or other creatures living in the sea, for the importers thereof to cause the same to be boiled into oil at the port of importation, under the care and inspection of the proper officers of the customs; and the oil so produced shall be admitted to entry, and the duties be paid thereon, as if imported in that state, and such oil shall not afterwards, if the same come to be exported, be subject to duty of exportation as a manufacture of the United Kingdom.—*47.*

Importation direct.—No goods shall be deemed to be imported from any particular place unless they be imported direct from such place, and shall have been there laden on board the importing ship, either as the first shipment of such goods, or after the same shall have been actually landed at such place.—*48.*

Salvor may sell Goods sufficient to defray Salvage.—It shall be lawful for the owner or salvor of any property liable to the payment of duty saved from sea, and in respect of which any sum shall have been awarded under any law at the time in force, or in respect of which any sum shall have been paid or agreed to be paid by the owner thereof or his agent, to the salvors, to defray the salvage of the same, to sell so much of the property so saved as will be sufficient to defray the salvage so awarded, or such other sum so paid or agreed to be paid; and upon the production of an award made in execution of any such law to the commissioners of customs, or upon proof to the satisfaction of the said commissioners that such sum of money has been paid, or has been agreed to be paid, the said commissioners are hereby empowered and required to allow the sale of such property aforesaid, free from the payment of all duties, to the amount of such sum so awarded, paid, or agreed to be paid, or to the amount of such other sum as to the said commissioners shall seem just and reasonable: provided always, that if such owner or salvor shall be dissatisfied with any determination of the said commissioners as to the amount of such property to be sold duty free, it shall be lawful for such owner or salvor to refer any such determination of the said commissioners to the judgment and revision of the High Court of Admiralty; and in that case such sale shall be suspended until the decision of such court shall have been had thereon.—*49.*

Foreign Goods derelict, &c. to be subject to same Duties as on Importation.—All foreign goods, derelict, jettam, flotsam, and wreck, brought or coming into the United Kingdom or into the Isle of Man, shall at all times be subject to the same duties as goods of the like kind imported into the United Kingdom respectively are subject to: provided always, that if, for ascertaining the proper amount of duty so payable, any question shall arise as to the origin of any such goods, the same shall be deemed to be of the growth, produce, or manufacture of such country or place as the commissioners of customs shall upon investigation by them determine: provided also, that if any such goods be of such sorts as are entitled to allowance for damage, such allowance shall be made under such regulations and conditions as the said commissioners shall from time to time direct: provided also, that all such goods as cannot be sold for the amount of duty due thereon shall be delivered over to the lord of the manor or other person entitled to receive the same, and shall be deemed to be unenumerated goods, and shall be liable to and be charged with duty accordingly.—*50.*

*Persons having such Goods in Possession, without Notice, liable to a Penalty of 100*l.**—If any person shall have possession of any such goods, either on land or within any port in the United Kingdom, and shall not give notice thereof to the proper officer of the customs within 24 hours after such possession,

articles, so as to be complete and perfect, if such article be subject in duty according to the value thereof.

5th, manufactures in silk, being the manufactures of Europe, unless into the port of London, or to the port of Dublin direct from Bordeaux, or into the port of Dover direct from Calais, and unless in a ship or vessel of 70 tons or upwards, or into the port of Dover in a vessel of the burden of 60 tons at least, with licence of the commissioners of the customs.

Spirits, not being perturbed or medicinal spirits; viz. all spirits, unless in ships of 70 tons or upwards.

rum of and from the British plantations, if in casks, unless in casks containing not less than 30 gallons.

all other spirits, if in casks, unless in casks containing not less than 40 gallons.

unless from the place of its growth, and by the East India Company, and into the port of London, during the continuance of their exclusive privileges of trade.

Tobacco and snuff, viz. unless in a ship of the burden of 120 tons or upwards.

tobacco of and imported from the state of Colombia, and made up in rolls, unless in packages containing at least 330 lbs. weight of such rolls.

sears, unless in packages containing 100 lbs. weight of sears.

all other tobacco and snuff, unless in hogsheads, casks, chests, or cases, each of which shall contain of net tobacco or snuff at least 100 lbs. weight if from the East Indies, or 450 lbs. weight if from any other place, and not packed in bags or packages.

Forfeiture.—And if any goods shall be imported into the United Kingdom contrary to any of the prohibitions or restrictions mentioned in such Table in respect of such goods, the same shall be forfeited.—§ 58.

But Goods may be warehoused for Exportation only, although prohibited.—Any goods, of whatsoever sort, may be imported into the United Kingdom to be warehoused under the regulations of any act in force for the time being for the warehousing of goods, without payment of duty at the time of the first entry thereof; or notwithstanding that such goods may be prohibited to be imported into the United Kingdom to be used therein, except the several sorts of goods enumerated or described in manner following; (that is to say,) goods prohibited on account of the package in which they are contained, or the tonnage of the ship in which they are laden; tea and goods from China in other than British ships, or by other persons than the East India Company during the continuance of their exclusive privileges of trade; gunpowder, arms, ammunition, or utensils of war; dried or salted fish, not being stock-fish; infected hides, skins, horns, hoofs, or any other part of any cattle or beast; counterfeited coin or tokens; books first composed or written or printed and published in the United Kingdom, and reprinted in any other country or place; copies of printed books, etched or engraved, and reprinted in the United Kingdom; copies of casts of sculptures or models first made in the United Kingdom; clocks or watches, being such as are prohibited to be imported for home use.—§ 59.

Goods to be entered to be warehoused for Exportation only.—If by reason of the sort of any goods, or of the place from whence, or the country, or navigation of the ship in which any goods have been imported, they be such or be so imported as that they may not be used in the United Kingdom, they shall not be entered except to be warehoused, and it shall be declared upon the entry of such goods that they are entered to be warehoused for exportation only.—§ 60.

ENTRY OUTWARDS.

Goods not to be shipped till Entry of Ship and Entry of Goods, and Cocket granted; nor till cleared.—No goods shall be shipped, or waterborne to be shipped, on board any ship in any port or place in the United Kingdom or in the Isle of Man, to be carried to parts beyond the seas, before the entry outwards of such ship and due entry of such goods shall have been made, and cocket granted, nor before such goods shall have been duly cleared for shipment in manner herein-after directed; and no stores shall be shipped for the use of any such ship bound to parts beyond the seas, nor shall any goods be deemed or admitted to be such stores, except such as shall be borne upon the victualling bill duly granted for such ship; and no goods shall be so shipped, or waterborne to be so shipped, except at such times and places, and in such manner, and by such persons, and under the care of such officers, as is and are herein-after directed; and all goods and stores which shall be shipped, or be waterborne to be shipped contrary hereto shall be forfeited.—§ 61.

Ships to be cleared, or Master to forfeit 100l.—No ship on board of which any goods or stores shall have been shipped in any port in the United Kingdom or in the Isle of Man, for parts beyond the seas, shall depart from such port until such ship shall have been duly cleared outwards for her intended voyage, in manner herein-after directed, under forfeiture of the sum of 100l. by the master of such ship.—§ 62.

Victualling Bill for Stores.—The master of every ship which is to depart from any port in the United Kingdom or in the Isle of Man, for parts beyond the seas, shall, upon due application made by him, receive from the searcher a victualling bill for the shipment of such stores as he shall require, and as shall be allowed by the collector and comptroller, for the use of such ship, according to the voyage upon which she is about to depart; and no articles taken on board any ship shall be deemed to be stores except such as shall be borne upon the victualling bill for the same.—§ 63.

Master to deliver Certificate of Clearances of Last Voyage, and to make Entry Outwards.—The master of every ship in which any goods are to be exported from the United Kingdom or from the Isle of Man to parts beyond the seas shall, before any goods be taken on board, deliver to the collector or comptroller a certificate from the proper officer of the clearance inwards or coastwise of such ship of her last voyage, specifying what goods, if any, have been reported inwards for exportation, and shall also deliver to the collector or comptroller an account, signed by the master or his agent, of the entry outwards of such ship for her intended voyage, setting forth the name and tonnage of the ship, the name of the place to which she belongs, if a British ship, or of the country if a foreign ship, the name of the master, and the name or names of the place or places for which she is bound, if any goods are to be shipped for the same, and the name of the place in such port at which she is to take in her lading for such voyage; and if such ship shall have commenced her lading at some other port, the master shall state the name of any port at which any goods have been laden, and shall produce a certificate from the searcher that the cockets for such goods have been delivered to him; and the particulars of such account shall be written and arranged in such form and manner as the collector and comptroller shall require; and such account shall be the entry outwards of such ship, and shall be entered in a book to be kept by the collector, for the information of all parties interested; and if any goods be taken on board any ship before she shall have been entered outwards, the master shall forfeit the sum of 100l. provided always, that where it shall become necessary to lade any heavy goods on board any ship before the whole of the inward cargo is discharged, it shall be lawful for the collector and comptroller to issue a stiffening order for that purpose, previous to the entry outwards of the ship.—§ 64.

Bill of the Entry to be delivered.—The person entering outwards any goods to be exported to parts beyond the seas, or from any port in the United Kingdom or in the Isle of Man, shall deliver to the collector or comptroller a bill of the entry thereof, fairly written in words at length, expressing the

Tobacco and snuff—continued.

within any such hogshead, cask, chest, or case, nor separated nor divided in any manner whatever, except tobacco of the dominions of the Turkish empire, which may be packed in inward bags or packages, or separated or divided in any manner within the outward package, provided such outward package be a hogshead, cask, chest, or case, and contain 450 lbs. net at least.

and unless the particular weight of tobacco or snuff in each hogshead, cask, chest, or case, with the tare of the same, be marked thereon.

and unless into the ports of London, Liverpool, Bristol, Lancaster, Coventry, Falmouth, Whitehaven, Hull, Port Glasgow, Greenock, Leith, Newcastle-upon-Tyne, Plymouth, Belfast, Cork, Drogheda, Dublin, Galway, Limerick, Londonderry, Newry, Bishops, Waterford, and Wexford.

or into some other port or ports which may hereafter be appointed for such purposes by the Lords Commissioners of his Majesty's Treasury; such appointments in Great Britain being published in the London Gazette, and such appointments in Ireland being published in the Dublin Gazette.

but any ship wholly laden with tobacco may come into the ports of Coventry or Falmouth to wait for orders, and there remain 14 days, provided due report of such ship be made by the master with the collector or comptroller of such port.

And all goods from the Isle of Man, except such as be of the growth, produce, or manufacture thereof.

name of the ship and of the master, and of the place to which the goods are to be exported, and of the person in whose name the goods are to be entered, and the quantities and proper denominations or descriptions of the several sorts of goods, and shall pay down any duties which may be due upon the exportation of any such goods; and such person shall also deliver at the same time 1 or more duplicates of such bill, in which all sums and numbers may be expressed in figures; and the particulars to be contained in such bill shall be written and arranged in the form and manner, and the number of duplicates shall be such as the collector and comptroller shall require; and thereupon the collector and comptroller shall cause a cocket to be written for such goods, making it known that such goods have been so entered; and every cocket shall be signed by such collector and comptroller, and be delivered to the person who shall have made such entry, and such person shall keep and be responsible for the proper use of the same.—§ 65.

Goods for Drawback or Bounty.—If any drawback or bounty be allowable upon the exportation of any such goods, or any duty be payable thereon, or any exemption from duty claimed, or if any such goods be exportable only according to some particular rule or regulation, or under some restriction or condition, or for some particular purpose or destination, such goods shall be entered and cleared for shipment by such denominations or descriptions as are used, mentioned, or referred to in the granting of such drawback or bounty, or in the levying of such duty, or granting such exemption, or in the directing of such rules, regulations, restrictions, conditions, purpose, or destination; and if the goods in such entry are charged to pay duty according to the value thereof, such value shall be stated in the entry, and shall be affirmed by the declaration of the exporter or his known agent, to be made upon the entry, and attested by his signature; and if any person shall make such declaration, not being the exporter of such goods, nor his agent duly authorized by him, such person shall forfeit the sum of 100*l.*; and such declaration shall be made in manner and form following, and shall be binding upon the person making the same; (that is to say),

"I, *A. B.* of *[place of abode]* do hereby declare, that I am the exporter of the goods mentioned in this entry, [or, that I am duly authorized by him,] and I do enter the same at the value of _____
Witness my hand the _____ day of _____ *A. B.*"—§ 66.

Goods undervalued detained.—If upon examination it shall appear to the officers of the customs that such goods are not valued according to the true value thereof, the same may be detained, and (within 3 days) taken and disposed of for the benefit of the Crown, in like manner as is herein-before provided in respect of goods imported, except that no sum in addition to the amount of the valuation and the duties paid shall be paid to the exporter or proprietor of the goods.—§ 67.

For Drawback, or from Warehouse, or Duties to be first paid.—The person intending to enter outwards any foreign goods for drawback, at any other port than that at which the duties inwards on such goods had been paid, shall first deliver to the collector or comptroller of the port where the duties on such goods were paid, 2 or more bills, as the case may require, of the particulars of the importation of such goods, and of the entry outwards intended to be made; and thereupon such collector and comptroller, finding such bills to agree with the entry inwards, shall write off such goods from the same, and shall issue a certificate of such entry, with such particulars thereof as shall be necessary for the computation of the drawback allowable on such goods, and setting forth in such certificate the destination of the goods, and the person in whose name they are to be entered for exportation, and also the name of such other port; and such certificate, together with 3 or more bills of the same, as the case may require, in which all sums and numbers may be expressed in figures, being delivered to the collector or comptroller of the port from which the goods are to be exported, shall be the entry outwards of such goods; and such collector and comptroller shall thereupon cause a cocket to be written and delivered for such goods, in manner herein-before directed.—§ 68.

Coals Export Bond to Isle of Man and British Possessions.—No cocket shall be granted for the exportation of any coals to the Isle of Man, or to any British possession, until the exporter thereof shall have given security by bond in a penal sum of 40*l.* the chaldron, with condition that the same shall be landed at the place for which they shall be exported, or otherwise accounted for to the satisfaction of the commissioners of the customs; and also with condition to produce (within such time as the said commissioners shall require, to be expressed in such bond), a certificate of the landing of such coals at such place, under the hand of the collector or comptroller or other proper officer at such place; provided always, that the bond so to be given in respect of coals shall not be liable to any duty of stamps.—§ 69.

CLEARANCE OF GOODS.

Packages to be indorsed on Cocket.—Before any part of the goods for which any cocket shall have been granted shall have been shipped or waterborne to be shipped, the same shall be duly cleared for shipment with the searcher; and before any goods be cleared for shipment, the particulars of the goods for each clearance shall be indorsed on such cocket, together with the number and denomination or description of the respective packages containing the same; and in the margin of each such indorsement shall be delineated the respective marks and numbers of such packages; and to each such indorsement shall be subjoined, in words at length, an account of the total quantities of each sort of goods intended in such indorsement, and the total number of each sort of package in which such goods are contained, distinguishing such goods, if any, as are to be cleared for any bounty or drawback of excise or customs, and also such goods, if any, as are subject to any duty on exportation, or entitled to any exemption from such duty, and also such goods, if any, as can only be exported by virtue of some particular order or authority, or under some particular restriction or condition, or for some particular purpose or destination; and all goods shipped or waterborne to be shipped, not being duly cleared as aforesaid, shall be forfeited.—§ 70.

Cocket indorsed, &c.—The person clearing such goods for shipment shall upon each occasion produce the cocket so indorsed to the searcher, and shall also deliver a shipping bill or copy of such indorsement, referring by names and date to the cocket upon which such indorsement is made, and shall obtain the order of the searcher for the shipment of such goods; and the particulars to be contained in such indorsement and in such shipping bill shall be written and arranged in such form and manner as the collector and comptroller shall require.—§ 71.

Coals brought coastwise may be exported without landing.—If any coals shall have been brought coastwise from one port of the United Kingdom to another, and the master shall be minded to proceed with such coals, or any part of them, to parts beyond the seas, it shall be lawful for such master to enter such ship and such coals outwards for the intended voyage, without first landing the coals intended for exportation, provided the officers of the customs shall be satisfied that the quantity of coals left on board does not exceed the quantity so entered outwards.—§ 72.

Account of Value to be delivered to the Searcher.—Upon the clearance for shipment of any goods, the produce or manufacture of the United Kingdom, not liable to any export duty, an account, containing an accurate specification of the quantity, quality, and value of such goods, together with a declaration to the truth of the same, signed by the exporter or his known agent, shall be delivered to the searcher by the person clearing such goods; and if such declaration be false, the person signing the same shall forfeit the sum of 30*l.*; and it shall be lawful for the searcher to cut for the invoice bills of parcels, and such other documents relating to the goods, as he may think necessary for ascertaining the true

value of the same: provided that the collector or the shipment of the same, and, in case of failure thereof, such exportation.

Goods for Excise Drawback.—The person intending to export any such goods shall be bound to produce to the searcher of the officer of excise, counts to be claimed; and if the goods, and such goods as such shipment upon such do

Officer of Excise may attend and assist at such examination, together with the sole charge of the searcher, and

value of the same: provided always, that if such exporter or agent shall make and subscribe a declaration before the collector or comptroller, that the value of the goods cannot be ascertained in time for the shipment of the same, and such declaration shall be delivered to the searcher, at the time of clearance, a further time of 3 months shall be allowed for the delivery of such separate shipping bill, or failure whereof such exporter or agent shall forfeit the sum of 20*l*.—§ 73.

Goods for Excise Drawback.—No drawback of excise shall be allowed upon any goods so cleared, unless the person intending to claim such drawback shall have given due notice to the officer of excise, in form and manner required by any law or order relating to the excise, and shall have obtained, and have produced to the searcher, at the time of clearing such goods, a proper document, under the hand of the officer of excise, containing the necessary description of the goods for which such drawback is to be claimed; and if the goods to be cleared and shipped under the care of the searchers shall, upon examination, be found to correspond in all respects with the particulars of the goods contained in such document, and such goods shall be duly shipped and exported, the searcher shall, if required, certify such shipment upon such document, and shall transmit the same to the officer of excise.—§ 74.

Officer of Excise may attend Examination.—It shall be lawful for the officer of excise, if he see fit, to attend and assist at such examination, and to mark or seal the packages, and to keep joint charge of the same, together with the searcher, until the same shall have been finally delivered by him into the sole charge of the searcher, to be shipped and exported under his care.—§ 75.

Goods for Duty, Bounty, or Drawback, &c. brought for Shipment.—If any goods which are subject to any duty or restriction, in respect of exportation, or if any goods, which are to be shipped for any drawback or bounty, shall be brought to any quay, wharf, or other place, to be shipped for exportation, and such goods shall not agree with the indorsement on the cocket, or with the shipping bill, the same shall be forfeited; and if any goods prohibited to be exported be found in any packages brought as aforesaid, such package and every thing contained therein shall be forfeited.—§ 76.

Searcher may open any Packages; but if correct, must repack.—It shall be lawful for the searcher to open all packages, and fully to examine all goods shipped or brought for shipment at any place in the United Kingdom or in the Isle of Man; and if the goods so examined shall be found to correspond in all respects with the cocket and clearance purporting to be for the same, such goods shall be repacked at the charge of such sealer, who may be allowed such charge by the commissioners of the customs, if they shall see fit so to do.—§ 77.

CLEARANCE OF SHIP.

Content to be delivered to Searcher, &c.—Before any ship shall be cleared outwards at any port in the United Kingdom or in the Isle of Man, for parts beyond the seas, with any goods shipped on board the same in such port, the master shall deliver a content of such ship to the searcher, setting forth the name and tonnage of such ship, and the place or places of her destination, and the name of the master, and also an account of the goods shipped on board, and of the packages containing such goods, and of the marks and numbers upon such packages, and a like account of the goods on board, if any, which had been reported inwards for exportation in such ship, so far as any of such particulars can be known by him; and also, before the clearance of such ship, the cockets, with the indorsements and clearances thereon for the goods shipped, shall be finally delivered by the respective shippers of such goods to the searcher, who shall file the same together, and shall attach with a seal a label to the file, showing the number of cockets contained in the file, and shall compare the particulars of the goods in the cockets with the particulars of the goods in such content, and shall attest the correctness thereof by his signature on the label, and on the content; and the master of the ship shall make and sign a declaration before the collector or comptroller to the truth of such content, and shall also answer to the collector or comptroller such questions concerning the ship, the cargo, and the intended voyage, as shall be demanded of him; and thereupon the collector or comptroller shall clear such ship for her intended voyage, and shall notify such clearance, and the date thereof, upon the content, and upon the label to the file of cockets, and upon the victualling bill, and also in the book of ships' entries outwards, for the information of all parties interested, and shall transmit the content, and the cockets, and the victualling bill to the searcher; and the particulars to be contained in such content shall be written and arranged in such form and manner as the collector and comptroller shall require.—§ 78.

File of Cockets, &c. shipped to Master.—The file of cockets and the victualling bill shall thereupon be delivered by the searcher to the master of such ship, at such station within the port and in such manner as shall be appointed by the commissioners of his Majesty's customs for that purpose; and such file of cockets and victualling bill, so delivered, shall be kept by the master of such ship as the authority for departing from the port with the several parcels and packages of goods and of stores on board, so far as they shall agree with the particulars in the indorsements on such cockets or with such victualling bill.—§ 79.

In Ballast.—If any ship is to depart in ballast from the United Kingdom or from the Isle of Man for parts beyond the seas, having no goods on board except the stores of such ship borne upon the victualling bill, or any goods reported inwards for exportation in such ship, the master of such ship shall, before her departure, answer to the collector or comptroller such questions touching her departure and destination as shall be demanded of him; and thereupon the collector or comptroller shall clear such ship in ballast, and shall notify such clearance and the date thereof on the victualling bill, and also in the book of ships' entries outwards, for the information of all parties interested; and such victualling bill shall be kept by the master of such ship as the clearance of the same.—§ 80.

Part of former Cargo reported for Exportation.—If there be on board any ship any goods of the inward cargo which were reported for exportation in the same, the master shall, before clearance outwards of such ship from any port in the United Kingdom or in the Isle of Man, deliver to the searcher a copy of the report inwards of such goods, certified by the collector and comptroller; and such copy, being found to correspond with the goods so remaining on board, shall be the authority to the searcher to pass such ship with such goods on board; and being signed by the searcher, and filed with the cockets, shall be the clearance of the ship for those goods.—§ 81.

If any Passengers, Master may enter Baggage in his Name.—If any passengers are to depart in any ship from the United Kingdom or from the Isle of Man for parts beyond the seas, it shall be lawful for the master of such ship to pass an entry and to receive a cocket in his name for the necessary personal baggage of all such passengers, and duly to clear such baggage for shipment in their behalf, stating in such clearance the particulars of the packages and the names of the respective passengers; and if such ship is to take on other goods than the necessary personal baggage of passengers actually going the voyage, it shall be lawful for such master to enter such ship outwards in ballast for passengers only; and if no other goods than such baggage duly entered and cleared be taken on board such ship, the same shall be deemed to be a ship in ballast, notwithstanding such baggage, and shall be described in the clearance, on the content, and on the label to the cocket or cockets, and on the victualling bill, and in the book of ships' entries, as a ship cleared in ballast, except as to the necessary personal baggage of passengers going the voyage.—§ 82.

Master may enter Goods for private Use of Self and Crew.—If the master and crew of any foreign ship which is to depart in ballast from the United Kingdom for parts beyond the seas, shall be desirous to take on board such rubbish by way of ballast, or to take with them for their private use any small

packer reside more than 10 miles from the port, then by declaration made and subscribed upon an account of such goods, before a magistrate or justice of the peace for the county or place where such packer shall reside; and if such bales be not cleared as being press-packed, then the searcher, having opened any such bale, shall not be required to repack the same at his charge.—§ 93.

Cleared Lighters, &c.—No goods cleared for drawback or bounty, or from the warehouse, shall be carried waterborne to be put on board any ship for exportation from the United Kingdom, by any person, unless such persons shall be authorised for that purpose by licence under the hands of the commissioners of the customs; and before granting such licence, it shall be lawful for the said commissioners to require such security by bond for the faithful and incorrupt conduct of such person as they shall deem necessary; and after granting such licence it shall be lawful for the said commissioners to revoke the same, if the person to whom the same shall have been granted shall be convicted of any offence against the laws relating to the customs or excise: provided always, that all such licences which shall be in force at the time of the commencement of this act shall continue in force as if the same had been afterwards granted under the authority of this act.—§ 94.

Warehouses or Debenture Goods not exported.—If any goods which have been taken from the warehouse to be exported from the same, or any goods which have been cleared to be exported for any drawback or bounty, shall not be duly exported to parts beyond the seas, or shall be re-landed in any part of the United Kingdom (such goods not having been duly re-landed or discharged as short-shipped under the care of the proper officers), or shall be landed in the islands of Faro or Ferro, or shall be carried to any of the islands of Guernsey, Jersey, Alderney, Sark, or Man (not having been duly entered, cleared, and shipped to be exported directly to such island), the same shall be forfeited, together with the ship from or by which the same had been so re-landed, landed, or carried, and any other ship, vessel, boat, or craft which may have been used in so re-landed, landing, or carrying such goods; and any person by whom or by whose orders or means such goods shall have been so taken or cleared, or so re-landed, landed, or carried, shall forfeit a sum equal to treble the value of such goods.—§ 95.

Drawback of Duties on Wine allowed for Officers in the Navy.—Drawback of the whole of the duties of customs shall be allowed for wine intended for the consumption of officers of his Majesty's navy, on board such of his Majesty's ships in actual service as they shall serve in, not exceeding the quantities of wine, in any 1 year, for the use of such officers, herein-after respectively mentioned; (that is to say),

For every admiral	Gallons	For every captain of the third, fourth, and fifth rate	Gallons
— vice-admiral	1,280	— captains of an inferior rate	483
— rear-admiral	1,000	— lieutenants, and other commanding officers, &c.	310
— captains of the first and second rate	630	— for every marine officer	103

provided always, that such wine be shipped only at one of the ports herein-after mentioned; (that is to say,) London, Rochester, Deal, Dover, Portsmouth, Plymouth, Yarmouth, Falmouth, Belfast, Dublin, Cork, Leth, or Glasgow.—§ 96.

Persons entering Wine for Drawback to declare the Name and Rank of Officer claiming same.—The person entering such wine, and claiming the drawback for the same, shall state in the entry and declare on the debenture the name of the officer for whose use such wine is intended, and of the ship in which he serves; and such wine shall be delivered into the charge of the officers of the customs at the port of shipment, to be secured in the king's warehouse until the same shall be shipped under their care; and such officers having certified upon the debenture the receipt of the wine into their charge, the debenture shall be computed and passed, and be delivered to the person entitled to receive the same.—§ 97.

Officers leaving the Service, &c. such Wine permitted to be transferred to others.—If any such officer shall leave the service or be removed to another ship, it shall be lawful for the officers of the customs of any of the ports before mentioned to permit the transfer of any such wine from one officer to another, as part of his proportion, whether on board the same ship or another, or the transshipment from one ship to another for the same officer, or the re-landed and warehousing for future reshipment; and it shall also be lawful for the officers of customs at any port to receive back the duties for any of such wine, and deliver the same for home use; provided always, that if any of such wine be not laden on board the ship for which the same was intended, or be unladen from such ship without permission of the proper officer of the customs, the same shall be forfeited.—§ 98.

Pursers of his Majesty's Ships of War may ship Tobacco for Use of Crew free of Duty, on giving Bond.—It shall be lawful for the purser of any of his Majesty's ships of war in actual service to enter and ship at the ports of Rochester, Portsmouth, or Plymouth, in the proportions herein-after mentioned, any tobacco there warehoused in his name or transferred into his name, for the use of the ship in which he shall serve; provided such purser shall deliver to the collector or comptroller of such port a certificate from the captain of such ship, stating the name of the purser and the number of men belonging to the ship, and shall also give bond, with one sufficient surety, in treble the duties payable on the tobacco, that no part thereof shall be re-landed in the United Kingdom without leave of the officers of the customs, or be landed in either of the islands of Guernsey, Jersey, Alderney, Sark, or Man.—§ 99.

Pursers removed from one Ship to another may tranship Tobacco with Permission of Collector.—If any purser shall be removed from one ship to another, it shall be lawful for the collector and comptroller of the port where such ship shall be, to permit the transshipment of the remains of any such tobacco for the use of such other ship, upon due entry of such tobacco by such purser, as settling forth the time when and the port at which such tobacco was first shipped; and if any such ship shall be paid off, it shall be lawful for the collector and comptroller of any port where such ship shall be paid off to permit the remains of any such tobacco to be landed, and to be entered by the purser of such ship, either for payment of duties, or to be warehoused for the term of 6 months, for the supply of some other such ship, in like manner as any tobacco may be warehoused and supplied at either of the ports before mentioned, or for payment of all duties within such 6 months; provided always, that all tobacco warehoused for the purpose of supplying his Majesty's ships of war shall be subject to the provisions of this act made for the warehousing of tobacco generally, as far as the same are applicable, and are not expressly altered by any of the provisions herein particularly made.—§ 100.

Quantity of Tobacco not to exceed, &c.—No greater quantity of such tobacco shall be allowed to any ship of war than 2 lbs. by the lunar month for each of the crew of such ship, nor shall any greater quantity be shipped at one time than sufficient to serve the crew of such ship for 6 months, after such rate of allowance; and the collector and comptroller of the port at or from which any such tobacco shall be supplied to any such ship, or landed from any such ship, or transferred from one such ship to another, shall transmit a particular account thereof to the commissioners of his Majesty's customs, in order that a general account may be kept of all the quantities supplied to and consumed on board each of such ships under the allowances before granted.—§ 101.

Times and Places for shipping Goods.—No goods shall be put off from any wharf, quay, or other place, or shall be waterborne in order to be exported, but only on days not being Sundays or holidays, and in the day-time; (that is to say,) from the first day of September until the last day of March,

betwixt sun-rising and sun-setting, and from the last day of March until the first day of September, between the hours of 7 of the clock in the morning and 4 of the clock in the afternoon; nor shall any such goods be then put off or waterborne for exportation unless in the presence or with the authority of the proper officer of the customs, nor except from a legal quay appointed by his Majesty, or at some wharf, quay, or place appointed by the commissioners of his Majesty's customs for the shipping of such goods by surance.—§ 102.

Penalty for exporting prohibited Goods.—If any goods liable to forfeiture for being shipped for exportation shall be shipped and exported without discovery by the officers of the customs, the person or persons who shall have caused such goods to be exported shall forfeit double the value of such goods.—§ 103.

PROHIBITIONS OUTWARDS.

Prohibitions and Restrictions absolute or modified.—The several sorts of goods enumerated or described in the Table following (denominated "A Table of Prohibitions and Restrictions Outwards") shall be either absolutely prohibited to be exported from the United Kingdom, or shall be exported only under the restrictions mentioned in such Table, according as the several sorts of such goods are respectively set forth therein; (that is to say,)

A TABLE OF PROHIBITIONS AND RESTRICTIONS OUTWARDS.

Clocks and watches; viz. any outward or inward box, case, or dial plate, of any metal, without the movement in or with every such box, case, or dial plate made up fit for use, with the clock or watchmaker's name engraven thereon.

Lace; viz. any metal inferior to silver which shall be spun, mixed, wrought, or set upon silk, or which shall be gilt, or drawn into wire, or fatted into plate, and spun or woven, or wrought into or upon, or mixed with lace, fringe, cord, embroidery, tawbour work, or lace made to the gold or silver lace manufactory, or set upon silk, or made into hollow spangles, or pearl or any other materials made in the gold or silver lace manufactory, or which shall imitate or be mixed to imitate such lace, fringe, cord, embroidery, tawbour work, or buttons; nor shall any person export any copper, brass, or other metal which shall be silvered or drawn into wire, or fatted into plate, or made into hollow spangles, or pearl or any other materials used in the gold or silver lace manufactory, or in imitation of such lace, fringe, cord, embroidery, tawbour work, or buttons; nor shall any person export any metal which shall hold more or bear a greater proportion than 3 pennyweights of fine silver to the pound avoirdupois of such copper, brass, or other metal.

any metal inferior to silver, whether gilt, silvered, stained, or coloured, or otherwise, which shall be worked up or mixed with gold or silver in any manufactory of lace, fringe, cord, embroidery, tawbour work, or buttons.

Tools and utensils; viz. any machine, engine, tool, press, paper, utensil, or instrument used in or proper for the preparing, working, printing, or finishing of the woollen, cotton, linen, or silk manufactory of this kingdom, or any other goods wherein wool, cotton, linen, or silk is used, or any part of such machines, engines, tools, presses, paper, utensils, or instruments of any model or plan thereof, or any part thereof, except wool cards or stock cards not worth above 4s. per pair, and spinnings cards not worth above 1s. 6d. per pair, used in the woollen manufactory.

locks, plates, engines, tools, or utensils commonly used in or

proper for the preparing, working up, or finishing of the calico, cotton, muslin, or linen printing, manufactory, or any part of such blocks, plates, engines, tools, or utensils.

rollers, either plain, grooved, or of any other form or denomination, of cast iron, wrought iron, or steel, for the rolling of iron or any sort of metals, beds, pillars, screws, pinions, and each and every implement, tool, or utensil therewith belonging; rollers, millers, frames, beds, pillars, and screws for fulling-mills; presses of all sorts, in iron and steel, or other metals, which are used with a screw exceeding 1 1/2 inch in diameter, or any parts of these several articles, or any model of the before-mentioned utensils, or any part thereof; all sorts of muscils, engines, or machines used in the casting or boring of cannon or any sort of artillery, or any parts thereof, or any models of tools, utensils, engines, or machines used in such casting or boring, or any parts thereof; hand stamps, dog-head stamps, pulley stamps, hammers, and anvils for stamps; presses of all sorts called cutting-out presses, beds or punches to be used therein; dies, in iron and steel, or other metals; their; scouring or abbing engines; presses for horse buttons; dies for horn buttons; rolled metal, with silver thereto; parts of buttons not fitted up into buttons, or in an unfinished state; anvils for chasing, stocks for casting buckles, buttons, and rings; die-stamping tools of all sorts; engines for making button-shanks; taps of all sorts; tools for pinching of glass; engines for erecting of whips; bars of metal covered with gold or silver, and burnishing stones, commonly called metal-stones, either in the rough state or finished for use; wire moulds for making paper; wheels of metal, stone, or wood, for cutting, roughing, smoothing, polishing, or engraving glass; parcelling pieces, shears, and pipes used in blowing glass; potter's wheels and lathes, for piallo, round, and engine turning; tools used by saddlers, harness-makers, and bridle-makers; viz. gaule strainers, silk strainers, point strainers, creasing irons, screw drivers, wheel irons, seal irons, pricking irons, bolstering irons, claws, and head knives.

frames for making weaving spars.

or made useful in increasing the quantity of military or naval stores.

Provisions, or any sort of victual which may be used as food by man.

A List of Goods which may be prohibited to be exported by Proclamation or Order in Council.

Arms, ammunition, and gunpowder.

Alexa, pot and pearl.

Military stores and naval stores, and any articles (except copper) which his Majesty shall judge capable of being converted into

And if any goods shall be exported, or be waterborne to be exported, from the United Kingdom, contrary to any of the prohibitions or restrictions mentioned in such table in respect of such goods, the same shall be forfeited.—§ 104.

The sections from 105. to 118., both inclusive, relate to the COASTING TRADE, and are given under that head.

CONSTRUCTION IN GENERAL.

Terms used in Acts.—Whenever the several terms or expressions following shall occur in this act, or in any other act relating to the customs, or to trade and navigation, the same shall be construed respectively in the manner herein-after directed; (that is to say,) the term "ship" shall be construed to mean ship or vessel generally, unless such term shall be used to distinguish a ship from sloop, brigantine, and other classes of vessels; and the term "master" of any ship shall be construed to mean the person having or taking the charge or command of such ship; the term "owners" and the term "newer" of any ship shall be construed alike to mean 1 owner, if there be only 1, and any or all the owners if there be more than 1; the term "mate" of any ship shall be construed to mean the person next in command of such ship to the master thereof; the term "seaman" shall be construed to mean alike seaman, mariner, sailor, or landman, being one of the crew of any ship; the term "British possession" shall be construed to mean colony, plantation, island, territory, or settlement belonging to his Majesty; the term "his Majesty" shall be construed to mean his Majesty, his heirs, and successors; the term "East India Company" shall be construed to mean the United Company of Merchants of England trading to the East Indies; the term "limits of the East India Company's charter" shall be construed to mean all places and seas eastward of the Cape of Good Hope to the straits of Magellan; the term "collector and comptroller" shall be construed to mean the collector and comptroller of the customs of the port intended in the sentence; whenever mention is made of any public officer, the officer mentioned shall be deemed to be such officer for the time being; the term "warehouse" shall be construed to mean any place, whether house, shed, yard, timber pond, or other place in which goods entered to be warehoused upon importation may be lodged, kept, and secured without payment of duty, or although prohibited to be used in the United Kingdom; the term "king's warehouse" shall be construed to mean any place provided by the Crown for lodging goods therein for security of the customs.—§ 119.

Mella in Europa.—The island of Mella and its dependencies shall be deemed to be in Europe.—§ 120.

GENERAL REGULATIONS.

Weights, Measures, Currency, and Management.—All duties, bounties, and drawbacks of customs shall be paid and received in every part of the United Kingdom and of the Isle of Man in British currency, and according to Imperial weights and measures; and in all cases where such duties, bounties,

and drawbacks are imposed, the same shall be deemed to apply to all such duties, bounties, and drawbacks.—§ 121.

Collector to take Bonds in respect of duties.—If any goods are required to be given in respect of his Majesty; and after limited therein for the performance or suit shall have been

Modes of ascertaining Strengths of foreign goods.—If imported made in practice for ascertainment; be it therefore enacted, and the same rules and methods being directed to use, adopt spirits made within the United excise payable thereon, shall and ascertaining the strength of foreign goods for the purpose of computing and collecting duties of Customs to take such samples of any goods of the same; and all such samples of the Majesty's customs.

Time of an Importation and duty.—If upon the first grant or prohibiting of any imports United Kingdom or in the field an importation or exportation such time, in respect of imported goods (not actually come within and such goods be discharged) time at which the goods had such question shall arise upon such question shall arise upon a departure shall be deemed to comptroller for the voyage up.

Return of Duties overpaid.—After any duty of customs shall that the same had been charged return any such overcharge as

Tonnage or Burden of Ships.—The tonnage of every other ship or the tonnage of British ships is

Officers may refuse Master officers of customs at any port of the customs, or refuse to do so, unless his name shall be in the name of the master thereof, or troller.—§ 125.

Falsifying Documents.—If a or falsified, any entry, warrant, reporting, or clearing of baggage, or article whatever, made for any of such purposes of 200l.; provided always, that other penalty shall be expressed

Authority of an Agent may officer of the customs to trans officer to require of the person behalf such application shall transact such business.—§ 130.

Persons falsifying Declarations or by any other act relating to any particular, or if any person answer questions put to him in answer such questions, the person and above any other penalty

Seizures.—All goods, and all force relating to the customs of the customs; and such force, tackle, apparel, and furniture the proper package in which

Restoration of seized Goods.—If any goods, or any part thereof, shall be lawful for the commission such manner and on such terms of the same shall accept the to have or maintain any action the person making such seizure

Remission of Forfeitures, &c.—If any goods laden therein, or unladed any penalty on account of any small in quantity or of trifling amount of his Majesty's customs of the owners of such ship, or lawful for the said commission as they shall see reason to attribute the conclusion of

and drawbacks are imposed and allowed according to any specific quantity, or any specific value, the same shall be deemed to apply in the same proportion to any greater or less quantity or value; and all such duties, bounties, and drawbacks shall be under the management of the commissioners of the customs.—§ 121.

Collectors to take Bonds in respect of Goods relating to the Customs.—All bonds relating to the customs required to be given in respect of goods or ships shall be taken by the collector and comptroller for the use of his Majesty; and after the expiration of 3 years from the date thereof, or from the time, if any, limited therein for the performance of the condition thereof, every such bond upon which no prosecution or suit shall have been commenced shall be void, and may be cancelled and destroyed.—§ 122.

Mode of ascertaining Strength of Foreign Spirits.—The mode of ascertaining the strengths and quantities of foreign spirits imported into the United Kingdom should at all times be exactly similar to the mode in practice for ascertaining the strengths and quantities of spirits made within the United Kingdom; be it therefore enacted, that the same instruments, and the same Tables and scales of graduation, and the same rules and methods, as the officers of the excise shall by any law in force for the time being be directed to use, adopt, and employ in trying and ascertaining the strengths and quantities of spirits made within the United Kingdom, for the purpose of computing and collecting the duties of excise payable thereon, shall be used, adopted, and employed by the officers of the customs in trying and ascertaining the strengths and quantities of spirits imported into the United Kingdom, for the purpose of computing and collecting the duties of customs payable thereon.—§ 123.

Officers of Customs to take Sample of Goods.—It shall be lawful for the officers of the customs to take such samples of any goods as shall be necessary for ascertaining the amount of any duties payable on the same; and all such samples shall be disposed of and accounted for in such manner as the commissioners of his Majesty's customs shall direct.—§ 124.

Time of an Importation and of an Exportation defined.—If, upon the first levying or repealing of any duty, or upon the first granting or repealing of any drawback or bounty, or upon the first permitting or prohibiting of any importation or exportation, whether inwards, outwards, or coastwise, in the United Kingdom or in the Isle of Man, it shall become necessary to determine the precise time at which an importation or exportation of any goods made and completed shall be deemed to have had effect, such time, in respect of importation, shall be deemed to be the time at which the ship importing such goods had actually come within the limits of the port at which such ship shall in due course be reported, and such goods be discharged; and such time, in respect of exportation, shall be deemed to be the time at which the goods had been shipped on board the ship in which they had been exported; and if such question shall arise upon the arrival or departure of any ship, in respect of any charge or allowance upon such ship, exclusive of any cargo, the time of such arrival shall be deemed to be the time at which the report of such ship shall have been or ought to have been made; and the time of such departure shall be deemed to be the time of the last clearance of such ship with the collector and comptroller for the voyage upon which she had departed.—§ 125.

Returns of Duties overpaid.—Although any duty of customs shall have been overpaid, or although, after any duty of customs shall have been charged and paid, it shall appear or be judicially established that the same had been charged under an erroneous construction of the law, it shall not be lawful to return any such overcharge after the expiration of 3 years from the date of such payment.—§ 126.

Tonnage or Burden of Ships declared.—The tonnage or burden of every British ship within the meaning of this act shall be the tonnage set forth in the certificate of registry of such ship, and the tonnage or burden of every other ship shall, for the purposes of this act, be ascertained in the same manner as the tonnage of British ships is ascertained.—§ 127.

Officers may refuse Master of British Ship, unless indorsed on Register.—It shall be lawful for the officers of customs at any port under British dominion where there shall be a collector and comptroller of the customs, to refuse to admit any person to do any act at such port as master of any British ship, unless his name shall be inserted in or have been indorsed upon the certificate of registry of such ship as being the master thereof, or until his name shall have been so indorsed by such collector and comptroller.—§ 128.

Falsifying Documents.—If any person shall counterfeit or falsify, or wilfully use when counterfeited or falsified, any entry, warrant, cocket, or transire, or other document for the unloading, lading, entering, reporting, or clearing of any ship or vessel, or for the landing or shipping of any goods, stores, baggage, or article whatever, or shall by any false statement procure any writing or document to be made for any of such purposes, every person so offending shall for every such offence forfeit the sum of 200*l.*; provided always, that this penalty shall not attach to any particular offence for which any other penalty shall be expressly imposed by any law in force for the time being.—§ 129.

Authority of an Agent may be required.—Whenever any person shall make any application to any officer of the customs to transact any business on behalf of any other person, it shall be lawful for such officer to require of the person so applying to produce a written authority from the person on whose behalf such application shall be made, and in default of the production of such authority, to refuse to transact such business.—§ 130.

Persons falsifying Declaration liable to Penalty.—If any declaration required to be made by this act or by any other act relating to the customs (except declarations to the value of goods) be untrue in any particular, or if any person required by this act or by any other act relating to the customs to answer questions put to him by the officers of the customs, touching certain matters, shall not truly answer such questions, the person making such declaration or answering such questions shall, over and above any other penalty to which he may become subject, forfeit the sum of 100*l.*; and if the proprietor of the same shall accept the terms and conditions prescribed by the said commissioners, he shall not have or maintain any action for recompence or damage on account of such seizure or detention; and the person making such seizure shall not proceed in any manner for condemnation.—§ 131.

Restoration of seized Goods, Ships, &c.—In case any goods, ships, vessels, or boats shall be seized as forfeited, or detained as under-valued, by virtue of any act of parliament relating to the customs, it shall be lawful for the commissioners of his Majesty's customs to order the same to be restored in such manner and on such terms and conditions as they shall think fit to direct; and if the proprietor of the same shall accept the terms and conditions prescribed by the said commissioners, he shall not have or maintain any action for recompence or damage on account of such seizure or detention; and the person making such seizure shall not proceed in any manner for condemnation.—§ 132.

Remission of Forfeitures, &c.—If any ship shall have become liable to forfeiture on account of any goods laden therein, or unladen therefrom, or if the master of any ship shall have become liable to any penalty on account of any goods laden in such ship or unladen therefrom, and such goods shall be small in quantity or of trifling value, and it shall be made appear to the satisfaction of the commissioners of his Majesty's customs that such goods had been laden or unladen contrary to the intention of the owners of such ship, or without the privity of the master thereof, as the case may be, it shall be lawful for the said commissioners to remit such forfeiture, and also to remit or mitigate such penalty as they shall see reason to acquit such master of all blame in respect of such offence, or more or less to attribute the commission of such offence to neglect of duty on his part as master of such ship; and

IMPORTATION AND EXPORTATION.

Treasury may extend Regulations to other Ports.—It shall be lawful for the said commissioners of his Majesty's Treasury, by their warrant, to be published in the *London or Dublin Gazette*, to extend the regulations herein made relating to agents in the port of London to agents at any other port in Great Britain, or at any port in Ireland.—§ 148.

(The commissioners of customs, agreeably to the powers given them to that effect by the 3 & 4 Will. 4. c. 52. § 135. (see vol. ii. p. 17.), have appointed the undermentioned places, within the several ports of the United Kingdom, at which vessels coming into or departing out of such ports shall bring to, for the boarding or landing of customs officers. Every master of a vessel failing to comply with the provisions of said act in this respect forfeits 100*l.*

ENGLAND.

Ports	Stations for bringing in.

[It was at first intended by the American editor to annex to the present article such information concerning the topics treated in it, and having relation to the United States, as might be desirable for those occasionally to refer to who consult a commercial dictionary. On proceeding to this task, however, it became manifest to him that the execution of his design was quite impracticable in any thing like reasonable bounds. Not to speak of copying the very words of the acts of Congress, or of the sections of acts of Congress, which prescribe the course in every case to be pursued by the importer or exporter of merchandise, a digest only of these enactments, after the manner of Gordon, would occupy altogether a disproportionate space in the present work. Indeed, the space occupied by the 9th book of this author, much of which contains matter that would have a claim for insertion here, amounts to no less than 900 closely printed octavo pages.

For the reason which has been stated, the reader is referred for the information in question to *Story's Laws of the United States*, or to *Gordon's Digest* of those laws.—*Am. Ed.]*

IMPORTS AND EXPORTS, THE ARTICLES IMPORTED INTO AND EXPORTED FROM A COUNTRY.

We have explained in another article (**BALANCE OF TRADES**), the mode in which the value of the imports and exports is officially determined by the Custom-house, and have shown the fallacy of the common notions as to the advantage of the exports exceeding the imports. The scale of prices according to which the official value of the imports and exports is determined having been fixed so far back as 1698, the account is of no use as showing their true value; but it is of material importance as showing the fluctuations in their quantity. We were anxious, had the means existed, to have given accounts of the various articles imported and exported at different periods during the last century, that the comparative increase or diminution of the trade in each might have been exhibited in one general view. Unluckily, however, no means exist for completing such an account. The Tables published by Sir Charles Whitworth, Mr. Macpherson, and others, specify only the aggregate value of the imports from and exports to particular countries, without specifying the articles or their value of which such imports and exports consisted. And on applying at the Custom-house, we found that the fire in 1814 had destroyed the records; so that there were no means of compiling any complete account of the value of the articles imported or exported previously to that period. We therefore have been obliged to confine ourselves, except as respects the period since 1815, to an attempt to exhibit the amount of the trade with each country for such periods as seemed best calculated to show its real progress. Those selected for this purpose, in the first of the following Tables, are periods of peace; for, during war, the com-

merce with particular countries is limited as to afford no more than a Table. (with the exception of such extraordinary circumstances of duties, or any other; and as they extend to the progress of the foreign trade, by Mr. Cesar M. either been copied from in a brief space, by far half dozen years ending with the value of our export trade.

During the first half of the article of native products, cutlery, leather manufactures, earthenware, provision, down to 1770; since war, very decidedly on account of the export of the cotton manufactures and yarn amount, at this time, and manufactures!—(8) tively stationary.

The principal articles of corn, timber and naval stores, and spirits, tobacco, silk, and other foreign products, re-exported.

IMPORTS AND EXPORTS.

merce with particular countries is liable to be extended or depressed so far beyond its natural limits as to afford no means of judging of its ordinary amount. The averages given in the Table (with the exception of 1802), are sufficiently extensive to neutralise the influence of such extraordinary circumstances (whether arising from bad harvests, the repeal or imposition of duties, or any other cause), as might materially affect an average for 2 or 3 years only; and as they extend from 1698 to 1822, they afford a pretty complete view of the progress of the foreign trade of Great Britain. This Table was compiled from official documents by Mr. Cesar Moreau, and may be safely relied on. The Tables which follow have either been copied from, or have been founded upon, official returns. Nos. IV. and V. give, in a brief space, by far the most complete view of the foreign trade of the empire during the half dozen years ending with 1835, than is anywhere to be met with. The proportional value of our export trade to different countries is, for the first time, exhibited in Table V.

During the first half of last century, and previously, woollen goods formed the principal article of native produce exported from Great Britain; and next to it were hardware and cutlery, leather manufactures, linen, tin, and lead, copper and brass manufactures, coal, earthenware, provision, slops, &c. Corn formed a considerable article in the list of exports down to 1770; since which period the balance of the corn trade has been, with a few exceptions, very decidedly on the side of importation. Cotton did not begin to be of any importance as an article of export till after 1770; but since then the extension and improvement of the cotton manufacture has been so astonishingly great, that the exports of cotton stuffs and yarn amount, at this moment, to about a half of the entire exports of British produce and manufactures.—(See vol. i. p. 526.) The export of woollen goods has been comparatively stationary.

The principal articles of import during the last half century have consisted of sugar, tea, corn, timber and naval stores, cotton wool, sheep's wool, woods and drugs for dyeing, wine and spirits, tobacco, silk, tallow, hides and skins, coffee, spices, bullion, &c. Of the colonial and other foreign products imported into England, considerable quantities have always been re-exported.

N.B.—The reader will find in the Supplement [to this article, p. 33] a table deduced from, and forming a sequel to, the above, but which we could not get inserted in this place. It exhibits the different countries to which articles of the produce or manufacture of the United Kingdom have been exported during the six years ending with 1835, arranged in the order of the magnitude of the exports to them, with their average annual amount, and the proportional value of the exports to each.

VI. Account of the Value of the various Articles of the Produce and Manufacture of the United Kingdom exported to Foreign Parts, according to the real or declared Value thereof, in the Years 1833, 1834, and 1835.

Articles.	1833.			1834.			1835.

* There is a slight discrepancy between the numbers in this and the previous table. They were derived from different parliamentary papers, and these do not always agree.

Causes of the Magnitude of British Commerce.—The immediate cause of the rapid increase and vast magnitude of the commerce of Great Britain is, doubtless, to be found in the extraordinary improvements, and consequent extension, of our manufactures since 1770. The cotton manufacture may be said to have grown up during the intervening period. It must also be borne in mind, that the effect of an improvement in the production of any article in considerable demand is not confined to that particular article, but extends itself to others. Those who produce it according to the old plan, are undersold unless they adopt the same or similar improvements; and the improved article, by coming into competition with others for which it may be substituted, infuses new energy into their producers, and impels every one to put forth all his powers, that he may either preserve his old, or acquire new advantages. The cotton manufacture may be said to be the result of the stupendous inventions and discoveries of Hargreaves, Arkwright, Crompton, and a few others; but we should greatly under-rate the importance of their inventions, if we supposed that their influence was limited to this single department. They imparted a powerful stimulus to every branch of industry. Their success, and that of Watt and Wedgwood, gave that confidence to genius so essential in all great undertakings. After machines had been invented for spinning and weaving cottons, whose fineness emulates the web of the gossamer, and steam-engines had been made "to engrave seals, and to lift a ship like a bauble in the air," every thing seemed

possible—*nil arduum visum*—distinction, and the intimation perpetuated the impulse given. The immense accumulation of war has been at once a cause. Those who reflect on the progress have no difficulty in seeing it cheaper, because they buy on the other hand, it gives them credit and an object of pride. An increase of capital is necessary in the best manner, most proper distribution of effects have been strikingly last half century; and thus in its turn, nourishment, and

The improvement that has been partly the effect, extension of commerce, ancestors, exertion and industry usurped the place of idleness under which he is sometimes, till, in highly civilized of the human mind; in the constant increase of industry as intense at one period as another. What is a luxury in one country both having worn a pair of historians; while, at present without them. The lower again, upon the higher; and as to increase the amount of industry, is not to be supplied, may be carried beyond their means. But it is, after all, confined within the resulting from the general science, industry, wealth,

We are also inclined to the improvement of the pressure of the public but corresponding efforts to produce either dejected to render a considerable encroaching on the fortune which they were previously rising in the world, the two together produced ration of either. We do not that the capital of the country of Europe been made. We do not state these as a heavy taxation; but merely augmented and kept with influence on a nation that private individual.

But after every fair and of others of a similar government, affording full power, and securing all the grand *sine qua non* of and tyranny prevail, the wealth, are invariably poor has a decided advantage former present, when con-

possibile—*nil arduum visum est*. And the unceasing efforts of new aspirants to wealth and distinction, and the intimate connection of the various arts and sciences, have extended and perpetuated the impulse given by the invention of the spinning-frame and the steam-engine.

The immense accumulation of capital that has taken place since the close of the American war has been at once a cause and a consequence of our increased trade and manufactures. Those who reflect on the advantages which an increase of capital confers on its possessors can have no difficulty in perceiving now it operates to extend trade. It enables them to buy cheaper, because they buy larger quantities of goods, and pay ready money; and, on the other hand, it gives them a decided superiority in foreign markets where capital is scarce, and credit an object of primary importance with the native dealers. To the manufacturer, an increase of capital is of equal importance, by giving him the means of constructing his works in the best manner, and of carrying on the business on such a scale as to admit of the most proper distribution of whatever has to be done among different individuals. These effects have been strikingly evinced in the commercial history of Great Britain during the last half century; and thus it is, that capital, originally accumulated by means of trade, gives, in its turn, nourishment, vigour, and enlarged growth to it.

The improvement that has taken place in the mode of living during the last half century has been partly the effect, and partly the cause, of the improvement of manufactures, and the extension of commerce. Had we been contented with the same accommodations as our ancestors, exertion and ingenuity would long since have been at an end, and routine have usurped the place of invention. Happily, however, the desires of man vary with the circumstances under which he is placed, extending with every extension of the means of gratifying them, till, in highly civilised countries, they appear almost illimitable. This endless craving of the human mind, its inability to rest satisfied with previous acquisitions, combined with the constant increase of population, renders the demand for new inventions and discoveries as intense at one period as at another, and provides for the continued advancement of society. What is a luxury in one age, becomes a necessary in the next. The fact of Queen Elizabeth having worn a pair of silk stockings was reckoned deserving of notice by contemporary historians; while, at present, no individual, in the rank of a gentleman, can go to dinner without them. The lower classes are continually pressing upon the middle; and these, again, upon the higher; so that invention is racked, as well to vary the modes of enjoyment, as to increase the amount of wealth. That this competition should be, in all respects, advantageous, is not to be supposed. Emulation in show, though the most powerful incentive to industry, may be carried to excess; and has certainly been ruinous to many individuals, obliged sometimes, perhaps, by their situation, or seduced by example, to incur expenses beyond their means. But the abuse, even when most extended, as it probably is in England, is, after all, confined within comparatively narrow limits; while the beneficial influence resulting from the general diffusion of a taste for improved accommodations adds to the science, industry, wealth, and enjoyments of the whole community.

We are also inclined to think that the increase of taxation, during the late war, contributed to the improvement of manufactures, and the extension of trade. The gradually increasing pressure of the public burdens stimulated the industrious portion of the community to make corresponding efforts to preserve their place in society; and produced a spirit of invention and economy that we should have in vain attempted to excite by any less powerful means. Had taxation been very oppressive, it would not have had this effect; but it was not so high as to produce either dejection or despair, though it was, at the same time, sufficiently heavy to render a considerable increase of exertion and parsimony necessary, to prevent it from encroaching on the fortunes of individuals, or, at all events, from diminishing the rate at which they were previously accumulating. To the excitement afforded by the desire of rising in the world, the fear of falling superadded an additional and powerful stimulus; and the two together produced results that could not have been produced by the unassisted operation of either. We do not think that any evidence has been, or can be, produced to show, that the capital of the country would have been materially greater than it is, had the tranquillity of Europe been maintained uninterrupted from 1793 to the present moment.

We do not state these circumstances in order to extenuate the evils of war, or of oppressive taxation; but merely to show the real influence of taxation on industry, when gradually augmented and kept within reasonable bounds. Under such circumstances, it has the same influence on a nation that an increase of his family, or of his unavoidable expense, has on a private individual.

But after every fair allowance has been made for the influence of the causes above stated, and of others of a similar description, still it is abundantly certain that a liberal system of government, affording full scope for the expansion and cultivation of every mental and bodily power, and securing all the advantages of superior talent and address to their possessors, is the grand *sine qua non* of commercial and manufacturing prosperity. Where oppression and tyranny prevail, the inhabitants, though surrounded by all the means of civilisation and wealth, are invariably poor and miserable. In respect of soil, climate, and situation, Spain has a decided advantage over Great Britain; and yet, what a miserable contrast does the former present, when compared with the latter! The despotism and intolerance of her

ruled, and the want of good order and tranquillity, have extinguished every germ of improvement in the Peninsula, and sunk the inhabitants to the level of the Turks and Moors. Had a similar political system been established in England, we should have been equally depressed. Our superiority in science, arts, and arms, though promoted by subsidiary means, is, at bottom, the result of *freedom and security*—freedom to engage in every employment, and to pursue our own interest in our own way, coupled with an intimate conviction, derived from the nature of our institutions, and their opposition to every thing like arbitrary power, that acquisitions, when made, may be securely enjoyed or disposed of. These form the grand sources of our wealth and power. There have only been two countries,—Holland and the United States,—which have, in these respects, been placed under nearly the same circumstances as England; and, notwithstanding they inhabit a morass, defended only by artificial mounds from being deluged by the ocean, the Dutch have long been, and still continue to be, the most prosperous and opulent people of the Continent; while the Americans, whose situation is more favourable, are advancing in the career of improvement with a rapidity hitherto unknown. In Great Britain we have been exempted, for a lengthened period, from foreign aggression and intestine commotion; the pernicious influence of the feudal system has long been at an end; the same equal burdens have been laid on all classes; we have enjoyed the advantage of liberal institutions, without any material alloy of popular licentiousness or violence; our intercourse with foreign nations, though subjected to many vexatious restraints, has been comparatively free; full scope has been given to the competition of the home producers; the highest offices have been open to deserving individuals; and, on the whole, the natural order of things has been less disturbed amongst us by artificial restraints than in most other countries. But without security, no degree of freedom would have been of material importance. Happily, however, every man has felt satisfied, not only of the temporary, but of the permanent tranquillity of the country, and of the stability of its institutions. The plans and combinations of capitalists have not been affected by misgivings as to what might take place in future. Monied fortunes have not been amassed in preference to others, because they might more easily be sent abroad in periods of confusion and disorder; but all individuals have unhesitatingly engaged, whenever an opportunity offered, in undertakings of which a remote posterity was alone to reap the benefit. No one can look at the immense sums expended upon the permanent improvement of the land, on docks, warehouses, canals, &c., or reflect for a moment on the settlements of property in the funds, and on the extent of our system of life insurance, without being deeply impressed with the vast importance of that confidence which the public have placed in the security of property, and the good faith of government. Had this confidence been imperfect, industry and invention would have been paralysed; and much of that capital which feeds and clothes the industrious classes would never have existed. The preservation of this security entire, both *in fact and in opinion*, is essential to the public welfare. If it be anywise impaired, the colossal fabric of our prosperity will crumble into dust; and the commerce of London, Liverpool, and Glasgow, like that of Tyre, Carthage, and Palmyra, will, at no very remote period, be famous only in history.—(From the *Treatise on Commerce*, contributed by the author of this work to the Society for the Diffusion of Useful Knowledge.)

(I. Table exhibiting the different Countries in which Articles of the Produce or Manufacture of the United Kingdom have been exported during the Six Years ending with 1835, arranged in the Order of the Magnitude of the Exports to them; and specifying the average annual Amount of the Exports to each during the said Six Years, and the Portion of such Exports destined for each, supposing the whole Exports to be 1,000.

Remarks on the above Tables.—Foreign Competition.—It is seen from the last of the above tables, that the falling off in the exports in 1837 was almost entirely owing to the decline in the exports to the United States, which fell off from 12,425,605*l.* in 1836, to 4,695,225*l.* in 1837. But this extraordinary decline was wholly owing to accidental causes, or to the pecuniary difficulties in which the mercantile class in the United States were involved in the latter part of 1836 and 1837, through the previous abuses of credit, and the revulsion occasioned by the universal stoppage of the banks. It was clear, that how severe soever in the meantime, any check to commerce originating in such circumstances would be of a very evanescent description; and, in point of fact, its influence has already almost ceased to be felt, and our exports to the United States were last year almost as large as ever. We subjoin

An Account of the Real or Declared Value of the principal Articles of British and Irish Produce and Manufactures exported in 1837 and 1838.

Articles.	Declared Value.

It is obvious, from this and the previous tables, that the statements that have recently been put forth with so much misplaced confidence, as to the influence of foreign competition on our trade, and the consequent decay of our exports, if not wholly unfounded, are, at all events, very grossly exaggerated. Provided tranquillity be maintained at home, and that Britain continues to be exempted from that political agitation that is the bane of industry and the curse of every country in which it prevails, we have nothing to fear from foreign competition. Our natural and acquired advantages for the prosecution of manufactures and trade, are vastly superior to those of every other country; and though foreigners do excel us in a few departments, and may come to excel us in others, so that the character and

channels of our trade may, in shadow of a foundation for a contrary, it is all but certain that population of the innumerable Our restrictive regulation (preserved) it is at all reasonable has been much modified dur still further diminished. 1838	80,033,821
1839	100,951,004

channels of our trade may, in consequence, be partially changed, there is not so much as the shadow of a foundation for supposing that its amount will be at all affected. On the contrary, it is all but certain that it will continue to augment with the augmenting wealth and population of the innumerable nations with which we have commercial relations.

Our restrictive regulations are the only thing from which (supposing tranquillity to be preserved) it is at all reasonable to apprehend any serious injury; and though their influence has been much modified during the last few years, it were much to be wished that it were still further diminished. They not only lead to lessen exportation, by diminishing importation, but give a handle to all sorts of misrepresentation, and enable a clamour to be raised when there is really little or no foundation for one. This has been very strikingly evinced in the recent discussions as to the Corn Laws. All parties, manufacturers and agriculturists, seem generally to entertain the most erroneous notions as to the influence of these statutes. The truth is, that, in ordinary years, it is now, thanks to the spread of agricultural improvement, all but imperceptible. During the six years ending with 1837, the average price of wheat in Great Britain was 50s. 2d. a quarter; and we are bold to say, that not a tittle of evidence has been, or can be produced, to show that this price would have been reduced 5s. a quarter had the ports been all the while open to unconditional importation from abroad. Hence, were our manufactures really declining, or in a perilous state, which happily they are not, it is idle to suppose that this decline or danger could be obviated by the repeal of the Corn Laws. The influence of the latter is now nearly restricted to years when the home crops are deficient, and then, certainly, it is very injurious. Seeing, therefore, that the agriculturists have nothing to fear from the opening of the ports, sound policy would suggest that foreign corn should be admitted at all times for home consumption, under such a reasonable constant duty (5s. or 6s. on wheat and other grain in proportion) as may be required to countervail the burdens peculiarly affecting the land; and were this done, and the timber duties equalised, the sugar duties placed on a fair footing, and some of the more oppressive duties in our tariff, as those on brandy and holland, adequately reduced, the foreign competition to which we might be exposed would be productive of nothing but advantage. Such competition is, in reality, the vivifying principle of industry, *curis acens mortalia corda*. It gives a new stimulus to the inventive powers, at the same time that it supplies new products and new modes of enjoyment to reward the labour of the industrious. It must ever be borne in mind that the amount of the exports from a country always depends upon, and is, in fact, measured by the amount of its imports; and while the magnitude of the latter continues to increase, and we freely open our ports to the products of all countries and climates, we may be sure that our exports will equally increase, and be found in every market.—*Sup.*)

[The tables which follow (and which give a very interesting and satisfactory view of the commerce of the United States), with the exception of what is expressly stated to have been copied from Mr. Hazari's *Commercial and Statistical Register*, are derived from the reports to Congress of the present Secretary of the Treasury.

It was intended to have added to them a table exhibiting a comparative view of the commerce of our principal ports; but to prepare such a table with the desirable degree of accuracy has been found impracticable; and the reader must be left to gather the information on the subject, afforded by this work, by consulting the articles relating to each of those ports separately.—*Am. Ed.*

A Statement exhibiting the Value of Imports into and Exports from the United States, during the Years 1834, 1835, 1836, 1837, 1838, and 1839.

* For the early years, the aggregate of the value of imports does not appear on the official statement, and has been estimated at different amounts by different persons; and has been estimated at different amounts by different persons; and has been estimated at different amounts by different persons.

† The value of imports is based on the value of the goods as they are imported, and not on the value of the goods as they are consumed in the country.

‡ The practice of making regular reports of the value and quantity of each article imported, did not commence till 1881. Previous to that time, the value of imports was estimated by collectors of the customs in their quarterly statements of exports for each month, and by the value of the goods as they are consumed in the country.

§ The value has been estimated approximately on the basis of the value of the goods as they are imported, and not on the value of the goods as they are consumed in the country.

¶ The exports of sugar and salt were not tallied the imports, though below that proportion.

IMPORTS AND EXPORTS.

The value of articles paying ad valorem rates of duty, in 1789 amounted to about one-third of the amount, and consisted of cotton, molasses, hides, skins, honey, iron, crockery, &c. The value of the articles which has been estimated by adding one-third to the ad valorem. They consisted of spirits, molasses, coffee, sugar, tallow, &c. The ad valorem articles imported into each State are taken from actual returns; the others are appraised among the States, by estimate, in a like ratio.

IMPORTS AND EXPORTS.

IMPRESSMENT, the forcible taking away of seamen from their ordinary employment and compelling them to serve, against their will, in his Majesty's ships.

1. *Regulations as to Impressment.*—This practice is not expressly sanctioned by any act of parliament; but it is so indirectly by the numerous statutes that have been passed, granting exemptions from it. According to Lord Mansfield, it is "a power founded upon immemorial usage," and is understood to make a part of the common law. All sea-faring men are liable to impressment; specially protected by custom or statute. Seamen executing particular services for government, not unfrequently get protections from the Admiralty, Navy Board, &c. Some are exempted by local custom; and ferrymen are every where privileged from impressment. The statutory exemptions are numerous.

1. Every ship in the coal trade has the following persons protected, viz. 2 able seamen (such as the master shall nominate) for every ship of 100 tons; and for every 50 tons for every ship of 100 tons and upwards; and any officer who presumes to impress any of the above, shall forfeit, to the master or owner of such vessel, 10*l.* for every man so impressed; and such officer shall be incapable of holding any place, office, or employment in any of his Majesty's ships of war. (2 & 3 Will. 3. c. 18. sect. 18.)

2. No parish apprentice shall be compelled or permitted to enter into his Majesty's sea service till he arrives at the age of 18 years.—(2 & 3 Anne, c. 5. sect. 4.)

3. Persons voluntarily binding themselves apprentices to sea service, shall not be impressed for 3 years from the date of their indentures. But no persons above 18 years of age shall have any exemption or protection from his Majesty's services, if they have been at sea before they became apprentices.—(2 & 3 Anne, c. 5. sect. 15. 4 Anne, c. 18. sect. 17.; and 13 Geo. 2. c. 17. sect. 2.)

4. *Apprentices.*—The act 4 Geo. 4. c. 25. makes some new regulations with respect to the number of apprentices that may be taken on board according to their tonnage, and grants protection to such apprentices till they have attained the age of 21 years.—(For the regulations of this act, see *Apprentices*.)

5. *Persons employed on the Fisheries.*—The act 50 Geo. 3. c. 106. grants the following exemptions from impressment, viz.:

1*o.* Masters of fishing vessels or boats, who either themselves or their owners or within 6 months before applying for a protection shall have had 1 apprentice or more under 18 years of age, bound for 5 years, and employed in the business of fishing.

2*o.* All such apprentices, not exceeding eight to every master or owner of any fishing vessel of 50 tons or upwards; not exceeding seven to every vessel or boat of 35 tons and under 50; not exceeding six to every vessel of 30 tons and under 35 tons; and not exceeding five to every vessel or boat under 30 tons burden, during the time

2. *Policy of Impressment.*—This practice, so subversive of every principle of Justice, is vindicated on the allegor ground of its being absolutely necessary to the manning of the fleet. But this position, notwithstanding the confidence with which it has been taken up, is not quite so tenable as has been supposed. The difficulties experienced in procuring sailors for the fleet at the breaking out of a war, are not natural but artificial, and might be got rid of by a very simple arrangement. During peace, not more than a fourth or a fifth part of the seamen are retained in his Majesty's service; that are commonly required during war; and if peace continue for a few years, the total number of sailors in the King's and the merchant service is limited to that which is merely adequate to supply the reduced demand of the former, and the ordinary demand of the latter. When, therefore, war is declared, and 30,000 or 40,000 additional seamen are wanted for the fleet, they cannot be obtained, unless by withdrawing them from the merchant service, which has not more than its proper complement of hands. But to do this by offering the seamen higher wages would be next to impossible, and would, supposing it were practicable, impose such a sacrifice upon the public as could hardly be borne. And hence, it is said, the necessity of impressment, a practice which every one admits can be justified on no other ground than that of its being absolutely essential to the public safety.

It is plain, however, that a necessity of this sort may be easily obviated. All, in fact, that is necessary for this purpose, is merely to keep such a number of sailors in his Majesty's service during peace as may suffice, with the ordinary proportion of landmen and boys, to man the fleet at the breaking out of a war. Were this done, there would not be the smallest ground of a pretence for resorting to impressment; and the practice, with the cruelty and injustice inseparable from it, might be entirely abolished.

But it is said that, though desirable in many respects, the expense of such a plan will always prevent it from being adopted. It admits, however, of demonstration, that instead of being dearer, this plan would be actually cheaper than that which is now followed. Not more than 1,000,000*l.* or 1,200,000*l.* a year would be required to be added to the navy estimates, and that would not be a real, but merely a nominal advance. The violence and injustice to which the practice of impressment exposes sailors, operates at all times to raise their wages; by creating a disinclination on the part of many young men to enter the sea service; and this disinclination is vastly increased during war, when wages usually rise to four or five times their previous amount, imposing a burden on the commerce of the country, exclusive of other equally mischievous consequences, many times greater than the tax that would be required to keep up the peace establishment of the navy to its proper level. It is really, therefore, a vulgar error to suppose that impressment has the recommendation of cheapness in its favour; and, though it had, no reasonable man would contend that it is the only, or even the principal, circumstance to be attended to. In point of fact, however, it is as costly as it is oppressive and unjust.—(The reader is referred, for a fuller discussion of this interesting question, to the note on *Impressment* in the 4th volume of the *Health of Nations*.)

INDEMNITY, is where one person secures another from responsibility against any particular event; thus, a policy of insurance is a contract of indemnity against any particular loss. Where one person also becomes bail for another, a bond of indemnity is frequently executed; and where a bond or bill of exchange has been lost or mislaid, the acceptor or obligee would not act prudently in paying it, without being secured by a bond of indemnity.

INDIAN RUBBER. See **CAOUTCHOUC.**

INDIGO (Fr. Indigo; Ger. Indigo; Sans. Nili; Arab. Neel; Malay, Taroom), the drug

* In order that these men shall be thus protected, it is necessary for the master to name them, before they are impressed: this is to be done by going before the mayor or other chief magistrates of the place, who is to give the master a certificate, in which is contained the names of the particular men whom he thus nominates; and this certificate will be their protection.

of their apprenticeship, and till the age of 20 years; they continuing for the time, in the business of fishing only.

3*o.* One mariner, towards the master and apprentices, to every fishing vessel of 10 tons or upwards, employed on the sea coast, during his continuance in such service.

4*o.* Any landman above the age of 18, entering and employed on land such vessel, for 3 years from his first going to sea; and if he be of the voyage then engaged in, if he so long continue in such service.

An affidavit sworn before a Justice of the peace, containing the tonnage of such fishing vessel or boat, the port or place to which she belongs, the names and dwell places of the master, the age of every apprentice, the term for which he is bound, and the date of his indenture, and the names, ages, and descriptions of every such mariner and landman respectively, and the time of such landman's first going to sea, is to be transmitted to the Admiralty; who, upon finding the facts correctly stated, grant a separate protection to every individual, in case, however, of an actual insurrection of these *Abdalgans*, or men-of-war, or any other persons, such protection may be impugned; but except upon such an emergency, any officer or officers impressing such protected person shall respectively forfeit 50*l.* to the party injured, if not an apprentice, or to his master if he be an apprentice.—(Sect. 2, 3, 4.)

6. *General Exemptions.*—All persons 55 years of age and upwards, and under 18 years. Every person being a foreigner, who shall arrive in any merchant ship, or other trading vessel, or privateer, belonging to a subject of the Crown of Great Britain; and all persons, of what age soever, who shall use the sea shall be protected for 5 years, to be computed from the time of their first being.—(13 Geo. 2. c. 17.)

7. *Harpooners, line managers, or boat steersmen, engaged in the southern whale fishery, are also protected.*—(26 Geo. 3. c. 60.)

8. *Structures employed in the herring fishery are exempted while actually employed.*—(48 Geo. 3. c. 110.)

which yields the beautiful blue in water of certain tropical from leguminous plants of the *fera tinctoria*; and that in leaves and a slender lignaceous stem, 3, 4, or 5 feet high, and 6 feet.

which yields the beautiful blue dye known by that name. It is obtained by the maceration in water of certain tropical plants; but the indigo of commerce is almost entirely obtained from leguminous plants of the genus *Indigofera*: that cultivated in India being the *Indigofera tinctoria*; and that in America the *Indigofera anil*. The Indian plant has pinnate leaves and a slender ligneous stem; and when successfully cultivated, rises to the height of 20, and even 6 feet.

It appears pretty certain that the culture of the indigo plant, and the preparation of the drug, have been practised in India from a very remote epoch. It has been questioned, indeed, whether the *indicum* mentioned by Pliny (*Hist. Nat.* lib. xxxv. c. 6.) was indigo, but, as it would seem, without any good reason. Pliny states that it was brought from India; that when diluted it produced an admirable mixture of blue and purple colours (*in diluendo misturam purpuree caeruleique mirabilem reddit*); and he gives tests by which the genuine drug might be discriminated with sufficient precision. It is true that Pliny is egregiously mistaken as to the mode in which the drug was produced; but there are many examples in modern as well as ancient times, to prove that the possession of an article brought from a distance implies no accurate knowledge of its nature, or of the processes followed in its manufacture. Beckmann (*Hist. of Inventions*, vol. iv. art. *Indigo*) and Dr. Bancroft (*Permanent Colours*, vol. i. pp. 241—252.) have each investigated this subject with great learning and sagacity; and agree in the conclusion that the *indicum* of Pliny was real indigo, and not, as has been supposed, a drug prepared from the *isatis* or woad. At all events, there can be no question that indigo was imported into modern Europe, by way of Alexandria, previously to the discovery of the route to India by the Cape of Good Hope. When first introduced, it was customary to mix a little of it with woad to heighten and improve the colour of the latter; but, by degrees, the quantity of indigo was increased; and woad was, at last, entirely superseded. It is worth while, however, to remark, that indigo did not make its way into general use without encountering much opposition. The growers of woad prevailed on several governments to prohibit the use of indigo! In Germany, an Imperial edict was published in 1654, prohibiting the use of indigo, or "*devil's dye*," and directing great care to be taken to prevent its clandestine importation, "because," says the edict, "the trade in woad is lessened, dyed articles injured, and money carried out of the country!" The magistrates of Nuremberg went further, and compelled the dyers of that city to take an oath once a year not to use indigo; which practice was continued down to a late period. In 1598, upon an urgent representation of the states of Languedoc, at the solicitation of the woad growers, the use of indigo was prohibited in that province; and it was not till 1737, that the dyers of France were left at liberty to dye with such articles, and in such a way, as they pleased.—(Beckmann, vol. iv. p. 142.) Let not those who may happen to throw their eyes over this paragraph, smile at the ignorance of our ancestors—*Mutato nomine, de te fabula narratur*. How much opposition is made at this moment to the importation of many important articles, for no better reasons than were alleged, in the sixteenth century, against the importation of indigo!

Indigo is at present produced in Bengal, and the other provinces subject to the presidency of that name, from the 20th to the 30th degree of north latitude; in the province of Thuevely, under the Madras government; in Java; in Luconia, the principal of the Philippine Islands; and Guatemala, and the Caraccas, in Central America. Bengal is, however, the great mart for indigo; and the quantity produced in the other places is comparatively inconsiderable.

Raynal was of opinion that the culture of indigo had been introduced into America by the Spaniards; but this is undoubtedly an error. Several species of *indigofera* belong to the New World; and the Spaniards used it as a substitute for ink very soon after the conquest.—(Humboldt, *Essai Politique sur la Nouvelle Espagne*, tom. iii. p. 54. 2d ed.)

For the first 20 years after the English became masters of Bengal, the culture and manufacture of indigo, now of such importance, was unknown as a branch of British industry; and the exports were but trifling. The European markets were, at this period, principally supplied from America. In 1763, however, the attention of the English began to be directed to this business; and though the processes pursued by them be nearly the same as those followed by the natives, their greater skill, intelligence, and capital, give them immense advantages. In their hands, the growth and preparation of indigo has become the most important employment, at least in a commercial point of view, carried on in the country. The indigo made by the natives supplies the internal demand; so that all that is raised by Europeans is exported.

In the Delta of the Ganges, where the best and largest quantity of indigo is produced, the plant lasts only for a single season, being destroyed by the periodical inundation; but in the dry central and western provinces, one or two ratoon crops are obtained; and owing to this circumstance, the latter are enabled to furnish a large supply of seed to the former.

The fixed capital required in the manufacture of indigo consists of a few vnts of common masonry for steeping the plant, and precipitating the colouring matter; a boiling and drying house; and a dwelling house for the planter. These, for a factory of 10 pair of vats, capable of producing, at an average, 12,500 lbs. of indigo, worth on the spot about 2,500*l.*, will not cost above 1,500*l.* sterling. The buildings and machinery necessary to produce an equal value in sugar and rum, would probably cost about 4,000*l.* This fact, therefore, without any reference to municipal regulations, affords a ready answer to the question which has been frequently put, why the British planters in India have never engaged in the manufacture of sugar.

During the 9 years which preceded the opening of the trade with India, in 1814, the annual average produce of indigo in Bengal, for exportation, was nearly 5,000,000 lbs.; but the average produce of the 4 last years of this period scarcely equalled that of the preceding 5. But since the ports were opened, indigo produced for exportation has increased fully a third; the exports during the 16 years ending with 1820-30, being above 7,400,000 lbs. a year. The following brief statement shows the rate of this increase, taking the average produce of each 4 years:—

1814	Lbs.	1815	Lbs.	1822	Lbs.	1825	Lbs.
1815	- - 7,040,000	1819	- - 6,000,000	1823	- - 8,000,000	1827	- - 9,000,000
1816		1820		1824		1828	
1817		1821		1825		1829	

and it has continued about the same since. It deserves to be remarked, that since the opening of the trade, Indian capitalists have betaken themselves to the manufacture of indigo on the European method, and that at present about a fifth part of the whole annual produce is prepared by them. The culture of indigo is very precarious, not only in so far as respects the growth of the plant from year to year, but also as regards the quantity and quality of the drug which the same amount of plant will afford even in the same season. Thus, the produce of 1825-26 was 41,000 chests, while the produce of the following year was but 25,000 chests; and the produce of 1827-28 was about 42,000 chests, and that of 1828-29 only 26,500 chests! The average of these years, that is, about 9,000,000 lbs., may be considered as the present annual produce of Bengal. The price of indigo in India increased, for a while, in a far greater ratio than its quantity. In 1818-19 the real value of that exported from Calcutta was 1,461,000l.; but in 1827-28, although the quantity had increased but 20 per cent., the value rose to 8,220,000l., or was about doubled. There was no corresponding rise in the price in Europe, but, on the contrary, a decline; and the circumstance is to be accounted for by the restraints placed on the investment of capital in the production of colonial articles suited to the European market, the consequent difficulty of making remittances from India, and an unnatural flow of capital to the only great article of Indian produce and export that is supposed capable of bearing its application.

But the effects of the profuse advances made by the Calcutta capitalists to those engaged in the indigo culture, coupled with the increasing imports from Madras, and the stationary demand for the drug in this country, have at length manifested themselves in the most distressing manner. Prices have been so much reduced that a ruinous reaction has taken place; most of the Calcutta merchants engaged in the trade having been obliged to stop payment, involving in their fall several opulent houses in this country. It remains to be seen whether this will occasion any diminution in the supplies of indigo, or whether the supply may not be maintained even at the reduced prices by increased economy. The subjoined Table shows that prices advanced considerably in 1833; but it is doubtful whether this advance will be sustained.

The consumption of indigo has varied but little in this country during the last dozen years, having been, at an average of that period, about 8,500,000 lbs. a year. This stationary demand, notwithstanding the fall in the price of the drug and the increase of population, is principally to be ascribed to the decreasing use of blue cloth, in the dyeing of which it is principally made use of. Its consumption in France is about as great as in Britain. Besides the exports to Great Britain, France, and the United States, a good deal of Bengal indigo is exported to the ports on the Persian Gulf, whence it finds its way to southern Russia. It is singular that it is not used by the Chinese, with whom blue is a favourite colour.

The indigo of Bengal is divided into two classes, called, in commercial language, *Bengal and Oude*; the first being the produce of the southern provinces of Bengal and Bahar, and the last that of the northern provinces. The first is, in point of quality, much superior to the other. This arose at one time, in a considerable degree, from the practice which prevailed in the northern provinces, of the European planter purchasing the wet fecula from the native manufacturer, and completing the processes of curing and drying the drug. This is at present in a great measure discontinued; and the Oude indigo has, in consequence, considerably improved in quality. Its inferiority is probably more the result of soil and climate, than of any difference in the skill with which the manufacture is conducted.

In 1827-28, and we are possessed of no later data, the export of indigo from the port of Madras amounted to 890,850 lbs. weight; having more than quadrupled in the course of the preceding 5 years. Besides the export from Madras, there is also a considerable one from the French settlement of Pondicherry; of which, however, we have no detailed statement. In 1827, the export of indigo from Manila amounted to about 290,000 lbs. avoirdupois; but it is understood to have materially increased since. The export from Batavia, in 1829, amounted to 152,000 lbs. weight, and the production is rapidly increasing. According to the statement now given, the annual exports of Asiatic indigo are as follow:—Bengal, 9,000,000 lbs.; Madras, 900,000 lbs.; Manila, 300,000 lbs.; Batavia, 150,000 lbs. Hence the annual average produce for foreign markets, making allowance for a trifling augmentation in the exports from Madras, Java, and the Philippines, is certainly not less than 10,500,000 lbs.

According to M. Humboldt, the exportation of indigo from Guatemala, in 1825, amounted to 1,800,000 lbs. Indigo is also produced in some of the West India islands, but not in large quantities. Good indigo is known by its lightness or small specific gravity, indicating the absence of earthy impurities; by the mass not readily parting with its colouring matter when tested by drawing a streak with it over a white surface; but, above all, by the purity of the colour itself. The first quality, estimated by this last test, is called, in commercial language, *fine blue*; then follow *ordinary blue*, *fine purple*, *purple and violet*, *ordinary purple and violet*, *dull blue*, *inferior purple and violet*, *strong copper*, and *ordinary copper*. These distinctions refer to the Bengal indigo only, the Oude being distinguished only into *fine and ordinary*. The qualities of Madras and Manila indigo are nearly the same, and equal to ordinary Bengal indigo. The indigo of Java is superior to these.

We are indebted to Mr. Cook for the following Table, which gives a very comprehensive view of the state of the crops of indigo in Bengal, and the imports, consumption, and prices of Bengal indigo, since 1811-12:—

Crops in Bengal.		Years.	Total Import from India into Great Britain.		Total Deliveries for Export and Home Con.		Stock in Great Britain and India.	Average Prices in London.

Of 7,299,665 lbs of indigo imported into Great Britain in 1831, 6,996,063 lbs. were from India, 19,249 lbs. from the British West Indies, 81,991 lbs. from Guatemala, 16,014 lbs. from Colombia, &c. Of the total quantity imported, 2,490,000 lbs. were retained for consumption.

The imports of indigo, in 1832, were 6,353,665 lbs.; of which 2,565,653 lbs. were retained. Indigo of British possessions, not deemed their produce unless imported from thence.—*J. Geo. 4. c. 48.*

For further information as to indigo, see *Colbrooke's Husbandry of Bengal*, p. 151; *Milburn's Orient. Com.*; *Bell's Review of Commerce of Bengal*; *Wilson's Review of do.*; evidence of Gillian MacLaine, Esq., East India Committee, 1830-31, &c.

[Indigo is imported into the United States chiefly from the British East Indies, Manilla and the Philippine islands, and the republic of Colombia.—*Am. Ed.*]

INK (Du. *Ink*, *Inkt*; Fr. *Encre*; Ger. *Dinte*; It. *Inchoistro*; Lat. *Atramentum*; Rus. *Tschernilo*; Sp. *Tinta*; Sw. *Blak*.)

"Every liquor or pigment used for writing or printing is distinguished by the name of ink. Common practice knows only black and red. Of black ink there are three principal kinds: 1. Indian ink; 2. Printer's ink; and 3. Writing ink. The Indian ink is used in China for writing with a brush, and for painting upon the soft flexible paper of Chinese manufacture. It is ascertained, as well from experiment as from information, that the cakes of this ink are made of lampblack and size, or animal glue, with the addition of perfumes or other substances not essential to its quality as an ink. The fine soot from the flame of a lamp or candle received by holding a plate over it, mixed with clean size from shreds of parchment or glove-leather not dyed, will make an ink equal to that imported. Good printer's ink is a black paint, smooth, and uniform in its composition, of a firm black colour, and possesses a singular aptitude to adhere to paper thoroughly impregnated with moisture.

"Common ink for writing is made by adding an infusion or decoction of the nut-gall to sulphate of iron, dissolved in water. A very fine black precipitate is thrown down, the speedy subsidence of which is prevented by the addition of a proper quantity of gum Arabic. Lampblack is the common material to give the black colour, of which 2½ ounces are sufficient for 16 ounces of the varnish. Vermilion is a good red. They are ground together on a stone with a muller, in the same manner as oil paints. Among the amusing experiments of the art of chemistry, the exhibition of 'sympathetic inks holds a distinguished place. With these the writing is invisible, until some reagent gives it opacity. These inks have been proposed as the instruments of secret correspondence. But they are of little use in this respect, because the properties change by a few days' remaining on the paper; most of them have more or less of a tinge when thoroughly dry; and none of them resist the test of heating the paper till it begins to be scorched."—(*Ure's Dictionary*.)

INKLE, a sort of broad linen tape, principally manufactured at Manchester and some other towns in Lancashire.

INSOLVENCY and BANKRUPTCY. Insolvency is a term in mercantile law, applied to designate the condition of all persons unable to pay their debts according to the ordinary usage of trade. A bankrupt is an insolvent; but persons may be in a state of insolvency without having committed any of the specific acts which render them liable to a commission of bankruptcy.

We have, under the article **BANKRUPTCY**, explained the most important differences in the law as to insolvency and bankruptcy; and have also briefly stated in that article, and in the article **CREDIT**, some of the alterations which seem to be imperatively required to make these laws more in harmony, than they are at present, with the principles of justice, and more conducive to the interests of commerce and the public advantage. In the present article, therefore, we shall confine ourselves to a summary statement of the proceedings under the existing laws.

Under the bankrupt laws, the creditors have a compulsory authority to sequester the entire possessions of their debtor; under the insolvent laws, the debtor himself may make a voluntary surrender of his property for the benefit of all his creditors. From this diversity in the initiative process results the greatest diversity in the ultimate operation of the bankrupt and insolvent acts. The proceedings under a commission of bankruptcy being insti-

* These numbers are partly from estimate; but they cannot be far wrong.

distinction to every class of persons actually in prison for debt; the benefits of the Bankrupt Act extend to traders only. But persons relieved under a commission of bankruptcy for the first time are for ever discharged from all debts proveable against them, and their property from any future liability; whereas, if relieved under the Insolvent Act, their persons only are protected from arrest, while any property they may subsequently acquire continues liable to their creditors till the whole amount of their debts is paid in full. It follows that the Insolvent Act affords merely a personal relief; while the Bankrupt Act discharges both person and property, and even returns the bankrupt a certain allowance out of the produce of his assets, proportioned to good behaviour, and the amount of his dividend.

Having already treated of insolvency, we shall now proceed to describe the proceedings under a commission of bankruptcy, as regulated by the act of Lord Brougham, the 1 & 2 Will. 4. c. 56, and the 6 Geo. 4. c. 16, which are the last general acts on the subject, and by which former statutes have been consolidated, and several important improvements introduced; leaving, however, untouched, many of the radical defects inherent in this branch of the law. The chief points to be considered, are—1. The persons who may become bankrupt; 2. Acts constituting bankruptcy; 3. Proceedings of petitioning creditor; 4. New Court of Bankruptcy; 5. Debts proveable under the commission; 6. Official assignees; 7. Assignees chosen by creditors; 8. Property liable under bankruptcy; 9. Examination and liabilities of bankrupt; 10. Payment of a dividend; 11. Certificate and allowance to bankrupt.

1. *Who may become Bankrupt.*—Generally all persons in trade, capable of making binding contracts, whether natural-born subjects, alien, or denizens, are within the extent of the bankrupt laws; and the statute expressly includes builders, bankers, brokers, grocers, carpenters, scriveners, ship insurers, warehousemen, wharfingers, shipwrights, vicars; keepers of inns, taverns, hotels, and colleges; dyers, printers, bleachers, fullers, scolders, callers or sheep shears, factors, agents, and all persons who use the trade of merchandise by bargaining, bartering, commission, consignment, and otherwise; and all persons who seek their living by buying and selling, letting for hire, or by the manufacturing of goods and commodities. Persons who cannot become bankrupt, are, graniers, millers, bakers, brewers, distillers, and all persons who are not members to any commercial or trading company established by charter or act of parliament.

A foreigner, and a trader, cannot be made a bankrupt; nor an attorney, in the common course of his profession; nor an infant, nor a lunatic, nor a married woman, except in those cases where she may be sued and taken in execution for her debts.—(8 T. R. 645.)

A single act of buying or selling is not sufficient to make a trader; as a schoolmaster selling books to his scholars only, or a keeper of a house buying dead horses and selling the skin and bones.—(6 Moore, 85.) But the quantity of dealing is immaterial, where an intention to deal generally may be inferred.—(1 Ross, 84.) A buyer or seller of land, or any interest in land, is not a trader within the act; and on this principle it has been decided, that a brick maker, selling bricks made in his own field, or the owner of a mine selling minerals from his own quarry, is not liable, because such business is carried on only as a mode of enjoying the profits of a real estate.—(3 Wils. 108.)

Traders having privileges of parliament are subject to the bankrupt laws, and may be proceeded against as other traders; but such persons cannot be arrested or imprisoned, except in cases made felony by the statute.

2. *Acts constituting Bankruptcy.*—In general, any act which is intended to delay or defraud creditors, is an act of bankruptcy; such as a trader concealing himself from his creditors, leaving the country, making himself to be arrested or his goods taken in execution, or making any fraudulent conveyance, gift, or delivery of his property. A trader keeps his house committed an act of bankruptcy, if he gives a general order to be detained. So is closing the door, and not admitting persons till ascertained who they are from window, though no actual denial.—(1 Bur. & Cr. 54.) But it is no act of bankruptcy if the denial be on Sunday, or at an unreasonable hour of the night, or to prevent interruption at dinner time.

Traders held in prison for any really subsisting debt for the period of 60 days or who, being arrested, makes their escape out of prison or custody, commit acts of bankruptcy. A penalty due to the Crown is a sufficient debt, and the time is computed from the first arrest, unless any time is previously specified, and the day of arrest is included, and the whole of the last day.

Filing a petition, in order to take the benefit of the Insolvent Act, is an act of bankruptcy, and a fiat may be issued any time before the petition is heard by the Insolvent Court, or within Calendar months. A trader may make a declaration of his insolvency, signed and attested by an attorney or solicitor, and afterwards to be filed in the Bankrupt Office, and the attorney or solicitor a memorandum thereof, is authority for advertising it in the Gazette. Upon this act of bankruptcy an commission can issue, if not within two calendar months after the date of the declaration, and unless such advertisement be within 8 days after filing the declaration; and no docket can be struck till 4 days after advertisement, if the commission is to be executed in London, and until the 15 days after notice thereof within 9 months, if elsewhere, given in the Gazette, and 3 daily newspapers; or, if the trader reside more than 50 miles from London, notice may be given in the Gazette, and two newspapers.

3. *Proceedings of Petitioning Creditors.*—A person being a trader, and having committed an act of bankruptcy, the next step in the proceeding is to petition the Lord Chancellor to issue his fiat. No fiat is issued, unless the petitioning creditor's debt, if a person or firm, amounts to 10*l.*; if 2 creditors, to 100*l.*; if 3 or more creditors, to 500*l.* or upwards. The petitioning creditor must make an affidavit

before a Master in Chancery, of the truth of his debt, and give bond in 20*l.* to prove it, and the act of bankruptcy. If the debt prove insufficient to support a fiat, the Lord Chancellor, upon the application of another creditor who has proved a sufficient debt, contracted posterior to that of the petitioning creditor, may order the bankruptcy to be proceeded in.

The petitioning creditor proceeds at his own cost until the choice of assignees, when his expenses are paid out of the first money received under the bankruptcy.

Creditors entitled to sue out a fiat against all the partners in a firm, may elect to petition only against one or more of such partners; and the commission may be superseded as to one or more partners, without affecting its validity as to the other partners.

Creditors who have sued out a fiat compounding with the bankrupt, or receiving more in the pound than other creditors, forfeit the benefit of their debt, and whatever they received, for the benefit of the other creditors, and the Lord Chancellor may either order the commission to be proceeded in or superseded.

4. *New Court of Bankruptcy.*—Formerly the bankrupt business of the metropolis was transacted by 10 commissioners, appointed by the Lord Chancellor. They received no regular commission, but derived their authority from a letter written to them by the Chancellor, informing them of their appointment. The whole proceedings under a laws commission, from its issuing to the winding up of the bankrupt's affairs, were managed by these commissioners, who acted by rotation, in lots of 5 each. In place of these an entire new court has been substituted, consisting of a chief judge, with 3 puisne judges, and 6 commissioners. There are also 3 principal registrars, and 2 deputy registrars. The secretary of bankrupts is also constituted as one of the officers under the new system.

The judges, or any 3 of them, sit as a Court of Review, to adjudicate in all matters of bankruptcy brought before them, subject to an appeal to the Lord Chancellor. The 6 commissioners sit occasionally in 2 subdivision courts of 3 commissioners each. The powers of the single commissioner are nearly the same as the old commissioners. The examination of any bankrupt or other person, or of a proof of debt, may be adjourned by a single commissioner to a subdivision court; and disputed debts, if all parties consent, may be tried by a jury. An appeal lies from a single commissioner, or a subdivision court, to the Court of Review; and a decree of the court is final, unless appealed against within 1 month.

The London commissioners under the old law had a jurisdiction for 40 miles round London, which is continued to their successors. Commissioners in the country beyond this distance were directed to barristers, or, if these could not be had, to solicitors, resident near the spot where the commission was to be executed. Under the new act, the Judges of assize name to the Lord Chancellor such barristers and solicitors in the county as they think fit for the office; and if he agrees, they are to appoint the same commissioners for the execution of all bankruptcy business in the county; and flats, not referred to the Court of Bankruptcy in London, are directed to them.

Let us now proceed with the powers and duties of the commissioners.

Commissioners are empowered to summon persons, examine them on oath, and call for any deeds or documents necessary to establish the trading and act of bankruptcy; and upon full proof thereof, to adjudge the debtor a bankrupt. Notice of such adjudication must be given in the Gazette, and 3 public notices appointed for the bankrupt to surrender the act of bankruptcy, to which notice he has 40 days after. A bankrupt refusing to attend at the appointed time may be apprehended; and no refusing to answer any question touching his business or property, may be committed to prison.

By warrant of the commissioners, persons may break open any house, premises, door, chest, or trunk of any bankrupt, and seize on his body or property; and if the bankrupt be in prison or custody, they may seize any property necessary for the purposes of the execution of such bankruptcy, or any other person. Authorized by a justice's warrant, premises may be searched not belonging to the bankrupt, on suspicion of property being concealed there; and persons suspected to have any of the bankrupt's property in their possession, refusing to obey the summons of commissioners, or refusing to answer interrogatories, or to surrender documents, without lawful excuse, may be imprisoned. The wife of the bankrupt may be examined, or, on refusal, committed.

Persons summoned are entitled to testify in their expenses; and those attending, whether summoned or not, to assist the commissioners in their inquiries, are protected from arrest on any civil suit.

5. *Debt proveable under Commission.*—At the 3 meetings ap

INSURANCE.

er, in contemplation of bankruptcy, has destroyed or falsified his books, or concealed property in amount of 10%; or, if any person being proved a false debtor under the commission, such bankruptcy being given thereon, or afterwards knowing the same, has not disclosed it to his assignees within 1 month after such knowledge. Lastly, upon request by the bankrupt, the official assignee is re-

quired to declare to him how he has disposed of his property, and account to him for the surplus, if any; but before any surplus can be admitted, interest must be paid, first, on all debts proved that carry interest, at the rate payable thereon; and next, upon all other debts, at the rate of 4l. per cent., to be calculated from the date of the commission.

[By the constitution of the United States "Congress shall have power to establish uniform laws on the subject of bankruptcies through the United States." This power, however, has only been exercised for a very short period. An act establishing a uniform system of bankruptcy was passed on April 4th, 1800. It was limited to five years, and thence to the end of the next session of Congress, but was repealed by the act of December 19th, 1803.

The power of Congress in respect to bankruptcies has been adjudged not to be exclusive. So long as Congress refuse to exercise it, the respective states may pass bankrupt, or, what amounts to the same thing, insolvent laws; but such laws must not be of a nature to impair the obligation of contracts made prior to their passage. State insolvent laws are, moreover, invalid as to all contracts, whether prior or posterior to their existence, to which citizens of other states are parties.—See Kent's *Commentaries on American Law*, Sect. 37.—*Am. Ed.*]

INSURANCE, a contract of indemnity, by which one party engages, for a stipulated sum, to insure another against a risk to which he is exposed. The party who takes upon him the risk, is called the *Insurer*, *Assurer*, or *Underwriter*; and the party protected by the insurance is called the *Insured*, or *Assured*; the sum paid is called the *Premium*; and the instrument containing the contract is called the *Policy*.

- I. INSURANCE (GENERAL PRINCIPLES OF).
 II. INSURANCE (MARINE).
 III. INSURANCE (FIRE).
 IV. INSURANCE (LIFE).

I. INSURANCE (GENERAL PRINCIPLES OF).

It is the duty of government to assist, by every means in its power, the efforts of individuals to protect their property. Losses do not always arise from accidental circumstances, but are frequently occasioned by the crimes and misconduct of individuals; and there are no means so effectual for their prevention, when they arise from this source, as the establishment of a vigilant system of police, and of such an administration of the law as may be calculated to afford those who are injured a ready and cheap method of obtaining every practicable redress; and, as far as possible, of insuring the punishment of culprits. But in despite of all that may be done by government, and of the utmost vigilance on the part of individuals, property must always be exposed to a variety of casualties from fire, shipwreck, and other unforeseen disasters. And hence the importance of inquiring how such unavoidable losses, when they do occur, may be rendered least injurious.

The loss of a ship, or the conflagration of a cotton mill, is a calamity that would press heavily even on the richest individual. But were it distributed among several individuals, each would feel it proportionally less; and provided the number of those among whom it was distributed were very considerable, it would hardly occasion any sensible inconvenience to any one in particular. Hence the advantage of combining to lessen the injury arising from the accidental destruction of property: and it is the diffusion of the risk of loss over a wide surface, and its valuation, that forms the employment of those engaged in insurance.

Though it be impossible to trace the circumstances which occasion those events that are, on that account, termed accidental, they are, notwithstanding, found to obey certain laws. The number of births, marriages, and deaths; the proportions of male to female, and of legitimate to illegitimate births; the ships cast away; the houses burned; and a vast variety of other apparently accidental events; are yet, when our experience embraces a sufficiently wide field, found to be nearly equal in equal periods of time: and it is easy, from observations made upon them, to estimate the sum which an individual should pay, either to guarantee his property from risk, or to secure a certain sum for his heirs at his death.

It must, however, be carefully observed, that no confidence can be placed in such estimates, unless they are deduced from a very wide induction. Suppose, for example, it happens, that during the present year one house is accidentally burned, in a town containing 1,000 houses; this would afford very little ground for presuming that the average probability of fire in that town was as 1 to 1,000. For it might be found that not a single house had been burned during the previous 10 years, or that 10 were burned during each of these years. But supposing it were ascertained, that, on an average of 10 years, 1 house had been annually burned, the presumption that 1 to 1,000 was the real ratio of the probability of fire would be very much strengthened; and if it were found to obtain for 20 or 30 years together, it might be held, for all practical purposes at least, as indicating the precise degree of probability.

Besides its being necessary, in order to obtain the true measure of the probability of any event, that the series of events, of which it is one, should be observed for a rather lengthened period, it is necessary also that the events should be numerous, or of pretty frequent occurrence. Suppose it were found, by observing the births and deaths of 1,000,000 individuals taken indiscriminately from among the whole population, that the mean duration of human life was 40 years; we should have but very slender grounds for concluding that this ratio would hold in the case of the next 10, 20, or 50 individuals that are born. Such a number is so small as hardly to admit of the operation of what is called the *law of average*. When a large number of lives is taken, those that exceed the medium term are balanced by those that fall short of it; but when the number is small, there is comparatively little room for the principle of compensation, and the result cannot, therefore, be depended upon.

It is found, by the experience of all countries in which censuses of the population have been taken with considerable accuracy, that the number of male children born is to that of female children in the proportion nearly of 22 to 21. But unless the observations be made on a very large scale, this result will not be obtained. If we look at particular families, they sometimes consist wholly of boys, and sometimes wholly of girls; and it is not possible that the boys can be to the girls of a single family in a ratio of 22 to 21. But when, instead of confining our observations to particular families, or even parishes, we extend them so as to embrace a population of 500,000, these discrepancies disappear, and we find that there is invariably a small excess in the number of males born over the females.

The false inferences that have been drawn from the doctrine of chances, have uniformly, almost, proceeded from generalising too rapidly, or from deducing a rate of probability from such a number of instances as do not give a fair average. But when the instances on which

we found our conclusions events, such as suicides, do without any address, &c. estimatéd *à priori*.

The business of insurance has been remarked that of a given trade, 1 is annually *fortieth*. And if an individual in this trade, he ought to be exclusive of such an additional trouble, and to leave him a pail; and if it fall below it

Insurances are effected being in either case diffuse on the business have generally enables them to raise, with make good losses. Societies do not often refuse to insure their capitals afford them being proportioned to their agencies.

Individuals, it is plain, large capitals; and besides, that few would be disposed 20,000L., upon a single ship cases, take a greater risk than added together, amount to supposing 1 or 2 ships to lessen his profits. Hence a ship insured by a company same thing done at Lloyd's manner, the business of insurance engage.

To establish a policy of paid by the insured shall be ous necessary expense to vary, as previously remarked is not, however, at all need lead to those events that are would, indeed, be entirely ignorant of the causes of them

It appears, from the accounts Regions, that of 588 ships em whale fishery, during being at the rate of about 1 to be about the average loss be 1l. 7s. 4d. per cent., excepter. Both the insurer and on this fair principle. Wherever a considerable number and may be as fairly calculated other hand, the individual chances of loss, and placed

It is easy, from the brevity of navigation and commerce that it affords, comparative property to the risk of long absence security, and the capital exposed to all the perils of blue his measures and arrangements. The chances of shipwreck, He has purchased an exemption the prosecution of his business of security can inspire. 'tôme des assurances a paru interrogé ce terrible élément épici la politique: il a reco

we found our conclusions are sufficiently numerous, it is seen that the most anomalous events, such as suicides, deaths by accidents, the number of letters put into the post-office without any address, &c., form pretty regular series, and consequently admit of being estimated *à priori*.

The business of insurance is founded upon the principles thus briefly stated. Suppose it has been remarked that of forty ships, of the ordinary degree of sea-worthiness, employed in a given trade, 1 is annually cast away, the probability of loss will plainly be equal to *one fortieth*. And if an individual wish to insure a ship, or the cargo on board a ship, engaged in this trade, he ought to pay a premium equal to the 1-40th part of the sum he insures, exclusive of such an additional sum as may be required to indemnify the insurer, for his trouble, and to leave him a fair profit. If the premium exceed this sum, the insurer is overpaid; and if it fall below it, he is underpaid.

Insurances are effected sometimes by societies, and sometimes by individuals, the risk being in either case diffused among a number of persons. Companies formed for carrying on the business have generally a large subscribed capital, or such a number of proprietors as enables them to raise, without difficulty, whatever sums may at any time be required to make good losses. Societies of this sort do not limit their risks to small sums; that is, they do not often refuse to insure a large sum upon a ship, a house, a life, &c. The magnitude of their capitals affords them the means of easily defraying a heavy loss; and their premiums being proportioned to their risks, their profit is, at an average, independent of such contingencies.

Individuals, it is plain, could not act in this way, unless they were possessed of very large capitals; and besides, the taking of large risks would render the business so hazardous, that few would be disposed to engage in it. Instead, therefore, of insuring a large sum, as 20,000*l.*, upon a single ship, a private underwriter or insurer may not, probably, in ordinary cases, take a greater risk than 200*l.* or 500*l.*; so that, though his engagements may, when added together, amount to 20,000*l.*, they will be diffused over from 40 to 100 ships; and supposing 1 or 2 ships to be lost, the loss would not impair his capital, and would only lessen his profits. Hence it is, that while one transaction only may be required in getting a ship insured by a company, 10 or 20 separate transactions may be required in getting the same thing done at Lloyd's, or by private individuals. When conducted in this cautious manner, the business of insurance is as safe a line of speculation as any in which individuals can engage.

To establish a policy of insurance on a fair foundation, or in such a way that the premiums paid by the insured shall exactly balance the risks incurred by the insurers, and the various necessary expenses to which they are put, including, of course, their profit, it is necessary, as previously remarked, that the experience of the risks should be pretty extensive. It is not, however, at all necessary, that either party should inquire into the circumstances that lead to those events that are most commonly made the subject of insurance. Such a research would, indeed, be entirely fruitless: we are, and must necessarily continue to be, wholly ignorant of the causes of their occurrences.

It appears, from the accounts given by Mr. Scoresby, in his valuable work on the Arctic Regions, that of 586 ships which sailed from the various ports of Great Britain for the northern whale fishery, during the 4 years ending with 1817, 8 were lost—(vol. ii. p. 131),—being at the rate of about 1 ship out of every 73 of those employed. Now, supposing this to be about the average loss, it follows that the premium required to insure against it should be 1*l.* 7*s.* 4*d.* per cent., exclusive, as already observed, of the expenses and profits of the insurer. Both the insurer and the insured would gain by entering into a transaction founded on this fair principle. When the operations of the insurer are extensive, and his risks spread over a considerable number of ships, his profit does not depend upon chance, but is as steady, and may be as fairly calculated upon, as that of a manufacturer or a merchant; while, on the other hand, the individuals who have insured their property have exempted it from any chance of loss, and placed it, as it were, in a state of absolute security.

It is easy, from the brief statement now made, to perceive the immense advantage resulting to navigation and commerce from the practice of marine insurance. Without the aid that it affords, comparatively few individuals would be found disposed to expose their property to the risk of long and hazardous voyages; but by its means insecurity is changed for security, and the capital of the merchant whose ships are dispersed over every sea, and exposed to all the perils of the ocean, is as secure as that of the agriculturist. He can combine his measures and arrange his plans as if they could no longer be affected by accident. The chances of shipwreck, or of loss by unforeseen occurrences, enter not into his calculations. He has purchased an exemption from the effects of such casualties; and applies himself to the prosecution of his business with that confidence and energy which nothing but a feeling of security can inspire. "Les chances de la navigation entravaient le commerce. Le système des assurances a paru; il a consulté les saisons; il a porté ses regards sur la mer; il a interrogé ce terrible élément; il en a jugé l'inconstance; il en a pressenti les orages; il a épilé la politique: il a reconnu les ports et les côtes des deux mondes; il a tout soumis à des

calculs savans, à des théories approximatives; et il a dit au commerçant habile, au navigateur intrépide: certes, il y a des désastres sur lesquels l'humanité ne peut que gémir; mais quant à votre fortune, allez, franchisez les mers, déployez votre activité et votre industrie; je me charge de vos risques. Alors, Messieurs, s'il est permis de le dire, les quatre parties du monde se sont rapprochées."—(Code de Commerce, Exposé des Motifs, liv. ii.)

Besides insuring against the perils of the sea, and losses arising from accidents caused by the operation of natural causes, it is common to insure against enemies, pirates, thieves, and even the fraud, or, as it is technically termed, *barratry*, of the master. The risk arising from the sources of casualty being extremely fluctuating and various, it is not easy to estimate it with any considerable degree of accuracy; and nothing more than a rough average can, in most cases, be looked for. In time of war, the fluctuation in the rates of insurance are particularly great: and the intelligence that an enemy's squadron, or even a single privateer, is cruising in the course which the ships bound to or returning from any given port usually follow, causes an instantaneous rise in the premium. The appointment of convoys for the protection of trade during war, necessarily tends, by lessening the chances of capture, to lessen the premium on insurance. Still, however, the risk in such periods is, in most cases, very considerable; and as it is liable to change very suddenly, great caution is required on the part of the underwriters.

Provision may also be made, by means of insurance, against loss by fire, and almost all the casualties to which property on land is subject.

But, notwithstanding what has now been stated, it must be admitted, that the advantages deriv'd from the practice of insuring against losses by sea and land are not altogether unmixed with evil. The security which it affords tends to relax that vigilant attention to the protection of property which the fear of its loss is sure otherwise to excite. This, however, is not its worst effect. The records of our courts, and the experience of all who are largely engaged in the business of insurance, too clearly prove that ships have been repeatedly sunk, and houses burned, in order to defraud the insurers. In despite, however, of the temptation to inattention and fraud which is thus afforded, there can be no doubt that, on the whole, the practice is, in a public as well as private point of view, decidedly beneficial. The frauds that are occasionally committed raise, in some degree, the rate of insurance. Still it is exceedingly moderate; and it is most probable, that the precautions adopted by the insurance offices for the prevention of fire, especially in great towns, where it is most destructive, outweigh the chances of increased conflagration arising from the greater tendency to carelessness and crime.

The business of life insurance has been carried to a far greater extent in Great Britain than in any other country, and has been productive of the most beneficial effects. Life insurances are of various kinds. Individuals without any very near connections, and possessing only a limited fortune, are sometimes desirous, or are sometimes, from the necessity of their situation, obliged, annually to encroach on their capitals. But should the life of such persons be extended beyond the ordinary term of existence, they might be totally unprovided for in old age; and to secure themselves against this contingency, they pay to an insurance company the whole or a part of their capital, on condition of its guaranteeing them, as long as they live, a certain annuity, proportioned partly, of course, to the amount of the sum paid, and partly to their age when they buy the annuity.

But though sometimes serviceable to individuals, it may be questioned whether insurances of this sort are, in a public point of view, really advantageous. So far as their influence extends, its obvious tendency is to weaken the principle of accumulation; to stimulate individuals to consume their capitals during their own life, without thinking or caring about the interest of their successors. Were such a practice to become general, it would be productive of the most extensively ruinous consequences. The interest which most men take in the welfare of their families and friends affords, indeed, a pretty strong security against its becoming injuriously prevalent. There can, however, be little doubt that this selfish practice may be strengthened by adventitious means; such, for example, as the opening of government loans in the shape of life annuities, or in the still more objectionable form of tontines. But when no extrinsic stimulus of this sort is given to it, there do not seem to be any very good grounds for thinking that the sale of annuities by private individuals or associations can materially weaken the principle of accumulation.

Unluckily, however, the species of insurance now referred to is but inconsiderable compared with that which has accumulation for its object. All professional persons, or those living on salaries or wages, such as lawyers, physicians, military and naval officers, clerks in public or private offices, &c., whose incomes must, of course, terminate with their lives, and a host of others, who are either not possessed of capital, or cannot dispose of their capital at pleasure, must naturally be desirous of providing, so far as they may be able, for the comfortable subsistence of their families in the event of their death. Take, for example, a physician or lawyer, without fortune, but making, perhaps, 1,000*l.* or 2,000*l.* a year by his business; and suppose that he marries and has a family: if this individual attain to the average duration of human life, he may accumulate such a fortune as will provide for the adequate support of his family at his death. But who can presume to say that such

will be the case?—that he And suppose that he were destitute. Now, it is again chiefly to provide. An individual to pay a certain sum annually for the support of his family, at his death, a and the profits of the insurance interest would amount to, a human life. Though he would be as simply provided for the ordinary duration of life to an average age, their are prolonged beyond the security which they must of time when they effect their ration of human life, they relies sufficiently provided for term is nothing more than those who insure houses against an indemnity for losses after the event of accident, is a property. The case of life proper footing, the extra sum but the value of the premium.

In order so to adjust the too much nor too little, it is a prudent year should be determined.

To ascertain this probability and periods, showing, out of place, how many complete extinct. The results of such are called Tables of Mortality, ing to the number and species the observations were made accuracy, the expectation of be learned from them; and of any age. Thus, in the Life Office, and which is but very considerable accuracy, year; and it further appears 124; so that the probability hence is $\frac{124}{1000}$. But, reckoning ANNUITIES, that the present, if its receipt be age will fall in the 66th year $\frac{124 \times 65 - 5692}{4000} = 2.094$, or 2*l.* of a party now 56 years of up to its extreme limit (which calculated in this way, the whenever the life may fail, made to it for the profits a

More compendious processes; but the above statement In practice, a life insurance effected, but almost always the first being paid down adopted by the insurers fall it follows that when a part Table, the insurers will when, on the other hand average, the profits of the extensive as to enable the will be balanced by the p mean duration of life for profits of the society will

will be the case?—that he will not be one of the many exceptions to the general rule?—And suppose that he were hurried into an untimely grave, his family would necessarily be destitute. Now, it is against such calamitous contingencies that life insurance is intended chiefly to provide. An individual possessed of an income terminating at his death, agrees to pay a certain sum annually to an insurance office; and this office binds itself to pay to his family, at his death, a sum equivalent, under deduction of the expenses of management and the profits of the insurers, to what these annual contributions, accumulated at compound interest would amount to, supposing the insured to reach the common and average term of human life. Though he were to die the day after the insurance has been effected, his family would be as amply provided for as it is likely they would be by his accumulations were his life of the ordinary duration. In all cases, indeed, in which those insured die before attaining to an average age, their gain is obvious. But even in those cases in which their lives are prolonged beyond the ordinary term, they are not losers—they then merely pay for a security which they must otherwise have been without. During the whole period, from the time when they effect their insurances, down to the time when they arrive at the mean duration of human life, they are protected against the risk of dying without leaving their families sufficiently provided for; and the sum which they pay after having passed this mean term is nothing more than a fair compensation for the security they previously enjoyed. Of those who insure houses against fire, a very small proportion only have occasion to claim an indemnity for losses actually sustained; but the possession of a security against loss in the event of accident, is a sufficient motive to induce every prudent individual to insure his property. The case of life insurance is in no respect different. When established on a proper footing, the extra sums which those pay whose lives exceed the estimated duration is but the value of the previous security.

In order so to adjust the terms of an insurance, that the party insuring may neither pay too much nor too little, it is necessary that the probability of his life failing in each subsequent year should be determined with as much accuracy as possible.

To ascertain this probability, various observations have been made in different countries and periods, showing, out of a given number of persons born in a particular country or place, how many complete each subsequent year, and how many die in it, till the whole be extinct. The results of such observations, when collected and arranged in a tabular form, are called Tables of Mortality; being entitled, of course, to more or less confidence, according to the number and species of lives observed; the period when, and the care with which, the observations were made, &c. But, supposing these Tables to be formed with sufficient accuracy, the expectation of life at any age, or its mean duration after such age, may readily be learned from them; and hence, also, the value of an annuity, or an assurance on a life of any age. Thus, in the Table of Mortality for Carlisle, framed by Mr. Milne, of the Sun Life Office, and which is believed to represent the average law of mortality in England with very considerable accuracy, out of 10,000 persons born together, 4,000 complete their 56th year; and it further appears, that the number of such persons who die in their 66th year is 124; so that the probability that a life now 56 years of age will terminate in the 10th year hence is $\frac{124}{4000}$. But, reckoning interest at 4 per cent., it appears (Table II. INTEREST AND ANNUITIES), that the present value of 100*l.* to be received 10 years hence is 67.556*l.*; consequently, if its receipt be made to depend upon the probability that a life now 56 years of age will fail in the 66th year, its present value will be reduced by that contingency to $\frac{124 \times 67.556}{4000} = 2.094*l.*, or 2*l.* 1*s.* 10½*d.* The present value of 100*l.* receivable upon the life of a party now 56 years of age terminating in the 57th or any subsequent year of his life, up to its extreme limit (which, according to the Carlisle Table, is the 105th year), being calculated in this way, the sum of the whole will be the present value of 100*l.* receivable whenever the life may fail, that is, of 100*l.* insured upon it, supposing no additions were made to it for the profits and expenses of the insurers.$

More expeditious processes are resorted to for calculating Tables of insurances at all ages; but the above statement sufficiently illustrates the principle on which they all depend. In practice, a life insurance is seldom made by the payment of a single sum when it is effected, but almost always by the payment of an annual premium during its continuance, the first being paid down at the commencement of the insurance.* If the Table of Mortality adopted by the insurers fairly represent the law of mortality prevailing among the insured, it follows that when a party insured does not attain to the average age according to the Table, the insurers will either lose by him, or realise less than their ordinary profit; and when, on the other hand, the life of an insured party is prolonged beyond the tabular average, the profits of the insurers are proportionally increased. But if their business be so extensive as to enable the law of average fully to apply, what they lose by premature death will be balanced by the payments received from those whose lives are prolonged beyond the mean duration of life for the ages at which they were respectively insured, so that the profits of the society will be wholly independent of chance.

* For the method of calculating these annual premiums, see *post*, INTEREST AND ANNUITIES.

The relief from anxiety afforded by life insurance very frequently contributes to prolong the life of the insured, at the same time that it materially augments the comfort and well-being of those dependent on him. It has, also, an obvious tendency to strengthen habits of accumulation. An individual who has insured a sum on his life, would forfeit all the advantages of the insurance, were he not to continue regularly to make his annual payments. It is not, therefore, optional with him to save a sum from his ordinary expenditure adequate for this purpose. He is compelled, under a heavy penalty, to do so; and having thus been led to contract a habit of saving to a certain extent, it is most probable that the habit will acquire additional strength, and that he will either insure an additional sum, or privately accumulate.

The practice of marine insurance, no doubt from the extraordinary hazard to which property at sea is exposed, seems to have long preceded insurances against fire and upon lives. We are ignorant of the precise period when it began to be introduced; but it appears most probable that it dates from the end of the fourteenth or the beginning of the fifteenth century. It has, however, been contended by Loccenius (*De Jure Maritimo*, lib. ii. c. 1.), Puffendorf (*Droit de la Nature et des Gens*, lib. v. c. 9.), and others, that the practice of marine insurances is of much higher antiquity, and that traces of it may be found in the history of the Punic wars. Livy mentions, that during the second of these contests, the contractors employed by the Romans to transport ammunition and provisions to Spain, stipulated that government should indemnify them against such losses as might be occasioned by the enemy, or by tempests, in the course of the voyage. (*Impetratum fuit, ut quæ navibus imponerentur ad exercitum Hispaniensem deferenda, ab hostium tempestatisque vi, publico periculo essent.*—Hist. lib. xxiii. c. 49.) Malynes (*Lex Mercatoria*, 3d ed. p. 105.), founding on a passage in Suetonius, ascribes the first introduction of insurance to the emperor Claudius, who, in a period of scarcity at Rome, to encourage the importation of corn, took upon himself all the loss or damage it might sustain in the voyage thither by storms and tempests.—(*Negotiatoribus certa lucra propositis, suscepto in se damno, si cui quid per tempestates accidisset, et naves mercaturæ causâ, fabricantibus, magna commoda constituit.*—c. 18.) It is curious to observe that this stipulation gave occasion to the commission of acts of fraud, similar to those so frequent in modern times. Shipwrecks were pretended to have happened, that never took place; old shattered vessels, freighted with articles of little value were purposely sunk, and the crew saved in boats; large sums being then demanded as a recompense for the loss. Some years after, the fraud was discovered, and some of the contractors were prosecuted and punished. (Lib. xv. c. 3.) But none of these passages, nor a similar one in Cicero's letters—(*Ad Fam.* lib. ii. c. 17.), warrant the inferences that Loccenius, Malynes, and others have attempted to draw from them. Insurance is a contract between two parties; one of whom, on receiving a certain premium (*pretium periculi*), agrees to take upon himself the risk of any loss that may happen to the property of the other. In ancient no less than in modern times, every one must have been desirous to be exonerated from the chance of loss arising from the exposure of property to the perils of the sea. But though, in the cases referred to, the carriers were exempted from this chance, they were not exempted by a contract *propter aversionem periculi*, or by an insurance; but by their employers taking the risk upon themselves. And it is abundantly obvious that the object of the latter in doing this was not to profit, like an insurer, by dealing in risks, but to induce individuals the more readily to undertake the performance of an urgent public duty.

But with the exception of the instances now mentioned, nothing bearing the remotest resemblance to an insurance is to be met with till a comparatively recent period. If we might rely on a passage in one of the Flemish chroniclers, quoted by the learned M. Pardessus,—(see his excellent work, *Collection des Loix Maritimes*, tome i. p. 356.), we should be warranted in concluding that insurances had been effected at Bruges so early as the end of the thirteenth century: for the chronicler states that, in 1311, the Earl of Flanders consented, on a requisition from the inhabitants, to establish a chamber of insurance at Bruges. M. Pardessus is not, however, inclined to think that this statement should be regarded as decisive. It is evident, from the manner in which the subject is mentioned, that the chronicler was not a contemporary; and no trace can be found, either in the archives of Bruges, or in any authentic publication, of any thing like the circumstance alluded to. The earliest extant Flemish law as to insurance is dated in 1537; and none of the early maritime codes of the North so much as alludes to this interesting subject.

Beckmann seems to have thought that the practice of insurance originated in Italy, in the latter part of the fifteenth or the early part of the sixteenth century.—(*Hist. of Invent.* vol. i. art. *Insurance*.) But the learned Spanish antiquary, Don Antonio de Capmany, has given, in his very valuable publication on the History and Commerce of Barcelona (*Memorias Historicas sobre la Marina, &c. de Barcelona*, tomo ii. p. 383.), an ordinance relative to insurance, issued by the magistrates of that city in 1435; whereas the earliest Italian law on the subject is nearly a century later, being dated in 1523. It is, however, exceedingly unlikely, had insurance been as early practised in Italy as in Catalonia, that the

former should have been so it is still more unlikely that any previous Italian writer until some authentic evidence the birthplace of this most (Tomo i. p. 237.)

A knowledge of the principles According to Malynes—(The Lombards, who were established was introduced some time in the statute 43 Eliz. c. 12 had been an immemorial made any great adventure, tured. former should have been so much behind the latter in subjecting it to any fixed rules; and it is still more unlikely that the practice should have escaped, as is the case, all mention by any previous Italian writer. We, therefore, agree entirely in Capmany's opinion, that, until some authentic evidence to the contrary be produced, Barcelona should be regarded as the birthplace of this most useful and beautiful application of the doctrine of chances.—(Tomo i. p. 237.)

A knowledge of the principles and practice of insurance was early brought into England. According to Malynes—(*Lex Mercat.* p. 105.), it was first practised amongst us by the Lombards, who were established in London from a very remote epoch. It is probable it was introduced some time about the beginning of the sixteenth century; for it is mentioned in the statute 43 Eliz. c. 12.—a statute in which its utility is very clearly set forth—that it had been an *immemorial usage* among merchants, both English and foreign, when they made any great adventure, to procure insurance to be made on the ships or goods adventured. From this it may reasonably be supposed that insurance had been in use in England for at least a century previous. It appears from the same statute, that it had originally been usual to refer all disputes that arose with respect to insurance to the decision of "grave and discreet" merchants appointed by the Lord Mayor. But abuses having grown out of this practice, the statute authorised the Lord Chancellor to appoint a commission for the trial of insurance cases; and in the reign of Charles II. the powers of the commissioners were enlarged. But this court soon after fell into disuse; and, what is singular, no trace can now be discovered of any of its proceedings.—(*Marshall on Insurance*, Prelim. Disc. p. 26.)

Few questions as to insurance seem to have come before the courts of Westminster till after the middle of last century. The decisions of Lord Mansfield may, indeed, be said to have fixed, and in a considerable degree formed, the law upon this subject. His judgments were not bottomed on narrow views, or on the municipal regulations of England; but on those great principles of public justice and convenience which had been sanctioned and approved by universal experience. His deep and extensive information was acquired by consulting the most intelligent merchants, and the works of distinguished foreign jurists; and by carefully studying the famous French ordinance of 1681, the most admirably digested body of maritime law of which any country has ever had to boast. Hence the comprehensiveness and excellence of his Lordship's decisions, and the respect they have justly commanded in all countries.* In his hands the law of insurance became, in a far greater degree than any other department of English law, a branch of that national or public law of which Cicero has beautifully said, "*Non erit alia lex Romæ, alia Athenis, alia nunc, alia posthac, sed et omnes gentes et omni tempore una lex et sempiterna, et immortalis continebit, unaque erit communis quasi magister et imperator omnium Deus.*"—(*Fragm. lib. iii. de Republicâ.*)

Insurance against fire and upon lives is of much later origin than insurance against the perils of the sea. The former, however, has been known and carried on amongst us, to some extent at least, for nearly a century and a half. The Amicable Society, for insurance upon lives, was established by charter of Queen Anne, in 1706; the Royal Exchange and London Assurance Companies began to make insurances upon lives in the reign of George I.; and the Equitable Society was established in 1762. But the advantages of life insurance, and the principles on which the business should be conducted, were then very ill understood; and the practice can hardly be said to have obtained any firm footing amongst us, till the Equitable Society, by adopting the judicious suggestions of Dr. Price, began its career of prosperity about 1775. Notwithstanding the example of England, life insurance has made very little progress on the Continent. It was, indeed, expressly forbidden by the French ordinance of 1681 (liv. iii. tit. 6. art. 10.); by the regulations as to insurance issued at Amsterdam in 1612 (art. 24.); and it is doubtful whether the practice be not inconsistent with the 334th art. of the *Code de Commerce*. But we are inclined to think that the want of security, more than any positive regulations, has been the principal cause of the little progress of life insurance on the Continent. Of whatever disadvantages our large public debt may be productive, it is not to be doubted that the facilities it has afforded for making investments, and the punctuality with which the national engagements have been fulfilled, have been the principal causes of the extraordinary extent to which the business of life and even fire insurance has been carried in this country.

II. INSURANCE (MARINE).

There are few persons who are not acquainted, in some degree, with fire and life insurances. The security which they afford to individuals and families is a luxury which nobody, in tolerably comfortable circumstances, is willing to be without. Hence the great increase, in our days, of companies professing to afford this security; and hence the knowledge, on the part of the public generally, of the nature and principles of the engagements into which these companies enter. But marine insurance is a subject which is of immediate interest only to merchants and ship owners; unless, indeed, we should refer to that small portion of the community, who have occasion to transport themselves beyond seas with captives and effects for purposes of colonization, or to fill some official situation

* See Emerigon's famous *Traité des Assurances*, tome ii. p. 67.

from the outports and manufacturing towns. They charge the whole premium to their principals, and their profit consists in 5 per cent. upon the premium, 12 per cent. upon the money that they pay to the underwriters, and 4 per cent. that they deduct from all the claims which they recover from the underwriters. It is proper to remark, that this is the established or regular profit; but competition has occasioned numerous deviations from it by the brokers, many of whom consent to divide the profit with the principals who employ them. The insurance brokers are not unfrequently underwriters also; and as some insurances are considered far more lucrative than others to underwriters, and as the brokers have particular facilities, in some respects, of judging of the goodness of their own risks, so likewise have they an inducement to play into one another's hands, and they do so accordingly.—(See BOOKS.)

It will at once be seen, that the trouble of effecting insurances at Lloyd's is considerable; that a good deal of time must be consumed; and that merchants and ship owners, therefore, have great inducement to consign their insurance business to brokers. But where the business is transacted with a company, this inducement, if not destroyed altogether, is, at all events, very much diminished. Any party having property to insure, has merely to go in the manager of the company, and state the particulars of the risk to be insured; the premium being agreed upon, the manager writes out a memorandum for the policy, which the party signs, and he is thus effectually insured. The companies procure the stamp and write out the policy, which is ready for delivery in 4 or 5 days. The companies, like the underwriters, charge the premium less 5 per cent. In other respects they vary.

The Royal Exchange Assurance Company allow 12 per cent. upon the profitable balance of each year's premium, with credit till March for the premiums of the preceding year, and 5 per cent. for prompt payment.

The Alliance Marine Assurance Company allow 12 per cent. upon the profitable balance of each year's premium, with credit till March; or 10 per cent. for prompt payment.

The Indemnity Mutual Marine Assurance Company allow 12 per cent. upon the profitable balance of each year's premium, with credit till June; or 10 per cent. for prompt payment.

The allowances of the London Assurance Company are the same as those of the Indemnity.

Payment of Losses.—Losses are paid at all the offices promptly, and without deduction. A month's credit is allowed to the underwriters; and another month, and sometimes 2 months, are given to the broker, to collect from the underwriters, and pay over to his principals.

Clubs.—Besides the individual underwriters and companies above noticed, there are clubs or associations formed by ship owners, who agree, each entering his ships for a certain amount, to divide among themselves one another's losses. These clubs are institutions of long standing; but since the alteration of the law in 1824, appear to be on the decline. Their formation originated in a twofold reason: 1st, that the underwriters charged premiums more than commensurate with the risk; 2dly, that they did not afford adequate protection. To avoid the first of these two evils, instead of paying a fixed premium, they pay among themselves the actual losses of their several members as they occur; and to avoid the second, they lay down certain principles of settlement in accordance with their views of indemnity. Each member of one of these clubs gives his power of attorney to the selected manager; and this manager issues a policy for each ship, which policy is subscribed by him as attorney for all the members, the premium inserted in the policy being understood to be nominal. These clubs are open to the leading objections that apply to individual underwriters; for the members are not collectively, but only individually, liable to those of their number who happen to sustain a loss; and the delay of settlement is such, that more than 12 months have been known to elapse before the payment of a loss has been obtained from all the members.

Rate of Premium.—But little need be said upon the circumstances that influence the rate of premium demanded by the insurers. It must be self-evident that premiums will vary according to the seasons, the quality of the vessel, the known character of the captain, the nature of the commodity, and the state of our political relations. All these, of course, are matters upon which each individual must exercise his own discretion, partly from general experience, and partly from particular information; exaggeration of risk, and consequent exorbitancy of premium for any length of time, being out of the question, where so many individual underwriters, in addition to the companies, are in competition with one another, and where the merchants have the means at hand of effecting their insurances abroad. We have already taken notice of the intelligence of which Lloyd's is the focus. In addition to this, there are 2 subscription register books for shipping maintained by the principal merchants, ship owners, and underwriters. These books profess to give an account of the tonnage, build, age, repairs, and quality of almost all the vessels that frequent our ports; and, although exceedingly defective in many respects, are material assistants to the insurers, who have no means of ascertaining by their own observation the particulars of 1 in 100 of the ships they are called upon to insure. But active measures are now in progress for superseding these two register books by one, giving a much more accurate and faithful account of the state of the mercantile shipping. We doubt, however, whether its real state will ever be revealed, as it ought to be, for the general benefit, until public officers are appointed to perform this duty. This might be done at a trifling expense; and the advantage to the owners of good ships, to merchants, and to passengers, would be immense.

CONTRACT OF INSURANCE.

Having thus given a general outline of the mode of transacting business between the insurers and insured, and the means used to enable both parties to come, as near as possible, to a due estimate of the risk to be insured against, our next step will be to explain the nature of the contract, and the bearing of its more important clauses.

It is unnecessary to state that the object of those who are engaged in commerce, or in moving articles of merchandise from one part of the world to another, is to buy at such a price that, after paying all the expenses of transport, the sale price may leave them a surplus in the shape of profit. If there were no such contrivance as insurance, merchants would be obliged to calculate upon the probability of the occasional loss of their property, and to regulate their transactions accordingly; but it must be obvious that enterprise, under such circumstances, would be very much crippled. Now, insurance, in as far as it approaches perfection in guaranteeing the merchant against all loss, except that of the market, substitutes a fixed charge for uncertain and contingent loss, and enables him to confine his attention exclusively to price and quality, and to charges of transport; in which latter, of course, the premium of insurance is included, as, however, in practice, insurance is by no means a perfect protection, either to the merchant or ship owner, against all loss that may occur *in transitu*, there is, even after insurance, some contingencies remaining to be taken into consideration; and we do not know that we can do better, by way of explaining the contract of insurance, than state, as briefly and succinctly as possible, what are the losses against which the merchant and ship owner are not protected by an insurance effected in this country.

1. **Acts of our own Government.**—All losses arising from the acts of our own government. Thus, if an embargo were laid on vessels about to sail for a particular quarter, and the merchant obliged to unload his goods; or if his goods were condemned to be destroyed in quarantine; or purposely destroyed at sea by some of our cruisers; no part of his loss would be made good by the insurer. The insurer in this country, although liable for the acts of foreign powers, is not liable for such acts of

rected against the property of their own subjects. Thus, if French property, insured in this country, were confiscated by the French government, the owner would have no remedy against his insurer.

2. Breaches of the Revenue Laws.—All losses arising from a breach of the revenue laws. It may be observed, that if the owner of the ship, by his act, expose the goods of the merchant to loss, the merchant so injured, although he cannot recover from his insurers, may claim from him. It may also be observed, that if the captain of the vessel, by his act, to which neither the owner of the ship nor the merchant is a party, expose the ship and cargo to loss, the insurers, in such case, are bound to make good the loss; the insurers being liable for all damage arising from illegal acts of the captain and crew, supposing the owner of the ship not to be accessory. The illegal acts of the captain and crew, contrary to the instructions and without the consent of the owners, are termed "barratry" in the policy.—(See *BARRATRY*.)

3. Breaches of the Law of Nations.—All losses arising from a breach of the law of nations. Thus, if any port is declared by a foreign power to be in a state of blockade, and such blockade is acknowledged by our government; and if a ship, in defiance of that notification, attempt to break the blockade, and is taken in the attempt; the insurer is not liable to the loss. It will often happen, when a port is under blockade, that the profit is so great upon goods introduced in defiance of the blockade, as to tempt adventurers to break it, and to enable them to afford a very high premium to insure against the risk. But as policies for such an object are not acknowledged in our courts of law, when offered, they are understood to be *policies of honour*. The same kind of policy is adopted by the underwriters, to protect foreign merchants who prefer insuring in this country against British capture.

1. Consequences of Deviation.—All losses subsequent to any deviation from the terms of the policy. Thus, if a merchant, in a policy on produce from the West Indies to London, warrant a ship to sail on or before the 1st of August, and the ship sail after that day and be lost, the insurer is exonerated. Or, if a merchant insure from London to Lisbon, and the ship call at Havre and is afterwards lost, the insurer is not liable. It will be understood, of course, that the owner of the ship is liable to the merchant for any breach of contract on his part, as well as that the insurer is liable for the barratry of the master; a deviation on the part of the master, not intended for the benefit of the owner, and contrary to his instructions, being considered barratry. Should the owner of the goods neglect to describe accurately the voyage for which he wishes to be insured, the loss would be a consequence of his own negligence.

There is a doctrine connected with barratry which it will here be proper to notice. A captain, owner or part owner of the ship in which he sails, cannot commit an act of barratry. In other words, the insurers are not, in such a case, liable for an act of his which would otherwise be barratrous. The equity of this doctrine, as far as regards the interests of the captain himself, cannot be called in question; but it is difficult to understand why the merchant who ships goods on board such a captain's vessel should not be permitted to insure, among other risks, against the captain's illegal acts. We have heard, that a clause has occasionally been introduced into policies to protect merchants against captain-owners, and we do not suppose that our courts of law would refuse to enforce such a clause. Indeed, we cannot discover any reason why every party, saving the captain, should not have the power of insuring against the consequences of illegal acts of the captain. We believe, that among the life offices, which protect themselves from loss by suicide and the hands of justice, there are some which make a distinction in favour of those who merely hold policies on the lives of others as a collateral security. The propriety of such a distinction must strike every body.

5. Unseaworthiness.—All losses arising from unseaworthiness. Unseaworthiness may be caused in various ways, such as want of repair, want of stores, want of provisions, want of nautical instruments, insufficiency of hands to navigate the vessel, or incompetency of the master. It might be supposed, at first sight, that insurance affords a much less perfect security than it really does, seeing on how many pleas it is possible for the insurer to dispute his liability; but when it is considered that the proof of unseaworthiness is thrown upon the defendant, and that the leaning of the courts is always in favour of the insured, it will be easy to suppose that no respectable insurers would ever plead unseaworthiness, unless they could make out a case of more than ordinary strength and clearness. The degree of unseaworthiness which merchants and ship owners at their liability to be involved in loss by cargo unseaworthiness may be guessed from the fact, that although the Indemnity Assurance Company at one time pleaded themselves from pleading unseaworthiness by a special clause in their policy, not only did they obtain no additional premium in consequence thereof, but they did not even obtain a preference over other companies and individuals at the same premium. At least, this fact must either be admitted as a proof of the absence of unseaworthiness on this head, or of that inveteracy of habit which seems to lead the great bulk of mankind always, if possible, to continue undeviatingly in those courses to which they are accustomed, even where the benefits to be derived from a deviation are undeniable.

6. Protraction of the Voyage.—All loss arising from unusual protraction of the voyage. Thus, if a ship meet with an accident in the Baltic, and the repairs detain the vessel till the close of the season, when the passage home is rendered impracticable by the ice till the opening of the ensuing season, no payment is made to the merchant, in mitigation of his loss from interest of money, loss of market (if the market fall), or deterioration in the quality of his goods (unless arising from actual sea damage); nor to the ship owner, in mitigation of his loss from the extra wages and maintenance of his crew. In most foreign countries the ship owner is remunerated by the insurers for the wages and maintenance of his crew while his ship is detained in consequence of any loss for the making good of which they are liable.

7. Liability for doing Damage to other Vessels.—All loss to which the ship owner is liable when his vessel does damage to others. According to our laws, the owner of every ship not in charge of a pilot, that does damage, by negligence of the master and crew, to any description of craft or vessel, is liable to make good the same to the extent of value of his own ship and freight: for beyond this he is not liable. The common policy in use among the underwriters at Lloyd's and the companies does not protect the ship owner from this loss. But the clubs or associations before mentioned almost universally take this risk. Indeed, this is one of the purposes which gave rise to their formation. But even they limit their liability to the amount of the policy; so that if a ship insured with them were to run down another, and to sink herself in the concussion, the owner would only receive the value of his own vessel from the club, and still be liable to the owner of the other vessel. The Indemnity Company, by a clause in their policy, make themselves liable for 3-4ths of the loss which the owner of the vessel insured with them may sustain from damage done by his vessel to those of others. If such a case as the one just supposed should occur under their policy, the insured would receive the value of his own vessel and 3-4ths of the loss to be made good by him to the owner of the other vessel. The policies of this Company approach in this respect the nearest of any to perfect protection to the ship owner. But the loss from running down other vessels, although serious, nay, sometimes ruinous, seldom occurs; and many ship owners trust so confidently that it will never fall upon them, that they are as well satisfied to be without as with this protection.

8. Average Clause.—The next description of loss of which we shall treat, against which the insured are not protected, is described in the following clause of the policy:—"Corn, fish, salt, seed, flour, and fruit, are warranted free from average, unless general, or the ship be stranded; sugar, tobacco, hemp, flax, hides, and skins, are warranted free from average under 5 per cent., unless general, or the

ship be stranded; and all other goods under 3 per cent., unless general.

The language employed in this clause is the general reading. A vessel and ship owner are liable for the loss of goods comprehended in the clause, made by the captain or crew, or cut from an anchor or other cause, and fairly submitted to for the benefit of the cargo, and is called "general average."

Particular Average comprehends a serious nature as to debar the ship to be so extensive as to render it such a state as to be unfit to undergo to repair, are called "particular average and salvage loss, is the damage sustained, or part made good by the insurer; and the value insured claimed from the insurer.

Particular Average on Goods.—The property insured we shall refer what the practical difference is for which sum it is insured from which the merchant is subjected to a loss, on its arrival, is so damaged as to be a total loss. The insurer will not be bound to pay the value of the property insured, or that it would not

If the hemp upon arrival in this country have fetched in a sound state

Loss duty, freight, and charges

But in its damaged state is only worth

Loss duty, freight, and charges

The merchant's loss by the damage

Whereas he only receives from the insurer a salvage loss he would also receive

If the hemp would have fetched in a sound state

Loss duty, freight, and charges

But in its damaged state is only worth

Loss duty, freight, and charges

The merchant's loss by the damage

It will be observed that the market. It may also be observed, that the whole amount of the loss that must usually be so well as the losing one, his policy does not

The argument in favour of the observed that the subject has is, that the insurer's liability is consideration; that he is not price of the sound, and the rate of damage upon the amount of the extra charges arising out of the contract. In the first case stated, the total loss, 100, upon 100, or 100 per cent. and charges were diminished would be fifty per cent. upon duty is concerned, government value of the goods; and if the be indemnified for his loss by a sum of 50, or such arrangement.

To make the principle upon clearer, we shall illustrate it by a case of rice and a cask of 100, the freight of each 10s. per cwt. at a market where no more than 50 per cent.—the rice by loss

10 cwt. of rice, had it arrived sound

Freight on 100 cwt. at 10s. per cwt.

But being damaged, did only produce

Loss freight on 10 cwt. at 10s. per cwt.

Merchant's loss

In each case the merchant sum insured, which, although his loss upon the rice. If the for freight, as to reduce the sum insured, he would be completely insured from loss by reduction

ship be stranded; and all other goods, also the ship and freight, are warranted free from average under 3 per cent., unless general, or the ship be stranded."

The language employed in this clause, being technical, requires explanation, to render it intelligible to the general reader. Average is a name applied to certain descriptions of loss, to which the merchant and ship owner are liable. There are two kinds of average, general and particular.

General Average comprehends all loss arising out of a voluntary sacrifice of a part of either vessel or cargo, made by the captain for the benefit of the whole. Thus, if a captain throw part of his cargo overboard, cut from an anchor and cable, or cut away his masts, the loss so sustained, being voluntarily submitted to for the benefit of the whole, is distributed over the value of the whole ship and cargo, and is called "general average."

Particular Average comprehends all loss occasioned to ship, freight, and cargo, which is not of so serious a nature as to debar them from reaching their port of destination, and when the damage to the ship is not an extensive as to render her unworthy of repair. Losses where the goods are saved, but in such a state as to be unfit to forward to their port of destination, and where the ship is rendered unfit to repair, are called "partial or salvage loss." The leading distinction between particular average and salvage loss is, that, in the first, the property insured remains the property of the assured—the damage sustained, or part thereof, as the case may be, and as will be hereafter explained, being made good by the insurer; and in the second, the property insured is abandoned to the insurer, and the value insured claimed from him, he retaining the property so abandoned, or its value.

Particular Average on Goods.—A few cases illustrative of the method of stating a claim for particular average will best explain the nature of this description of loss, and will at the same time show the reader what the practical distinction is between particular average and salvage loss.

The property insured we shall suppose to be a *tea of Assam*, the cost of which at Petersburg is 30*l.*, for which sum it is insured from Petersburg to London, and that the duty, freight, and charges to which the merchant is subject on landing at London are 10*l.* We shall likewise suppose that the hemp, on its arrival, is so damaged as not to be worth more than half what it would have fetched had it been sound. The insurer would then be called upon to make good to the insured 15*l.*, or 50 per cent. upon the sum insured. But it does not follow that this payment of 15*l.* would indemnify the merchant, or that it would not more than indemnify him, for the loss sustained.

	L. s. L. s.
If the hemp upon arrival in this country would have fetched in a sound state	50 0
Less duty, freight, and charges	10 0
But in its damaged state is only worth	25 0
Less duty, freight, and charges	10 0
	15 0
The merchant's loss by the damage is	L. 35 0

Whereas he receives from the insurer 15*l.* Upon the principle of a salvage loss he would receive 30*l.*

	L. s. L. s.
If the hemp would have fetched in a sound state	50 0
Less duty, freight, and charges	10 0
But in its damaged state is only worth	15 0
Less duty, freight, and charges	10 0
	5 0
The merchant's loss by the damage is	L. 15 0

Whereas he only receives from the insurer 15*l.* Upon the principle of a salvage loss he would also receive 15*l.*

	L. s. L. s.
If the hemp would have fetched in a sound state	50 0
Less duty, freight, and charges	10 0
But in its damaged state is only worth	10 0
Less duty, freight, and charges	10 0
	L. 10 0

And he receives from the insurer 15*l.* Upon the principle of a salvage loss he would receive 30*l.*

It will be observed that the merchant's loss by the damage of his goods varies with the state of the market. It may also be observed, that in general the merchant will not receive from the insurer the whole amount of the loss that he sustains. Whenever his market is a profitable one (and that it must usually be so will be obvious to every body), whenever, indeed, his market is not a decidedly losing one, his policy does not afford him a complete protection.

The argument in favour of this mode of settling claims for particular average—and it should be observed that the subject has been discussed, and the principle acknowledged in the courts of law—is, that the insurer's liability is to be guided by the amount upon which he has received a premium or consideration; that he is not to be affected by the rise or fall of markets; but that the *gross* market price of the sound, and the *gross* market price of the damaged goods, are to be the test by which the rate of damage upon the amount insured is to be adjusted; the insurer being liable, besides, for all the extra charges arising out of the damage.

In the first case stated, the merchant's loss by damage is 25*l.* upon 40*l.*, or 62½ per cent.; in the second, 10*l.* upon 10*l.*, or 100 per cent.; in the third, 15*l.* upon 20*l.*, or 75 per cent. If the duty, freight, and charges were diminished in proportion to the diminished value of the goods, the loss in each case would be fifty per cent. upon the net price, as it is 50 per cent. upon the gross price. As far as the duty is concerned, government, upon many articles, reduces it in proportion to the diminution in the value of the goods; and if the freight were reduced in a similar manner, the merchant would always be indemnified for his loss by the insurer. But the practice with regard to freight in this country admits of no such arrangement; freight being paid according to the quantity delivered.

To make the principle upon which claims for particular average are adjusted, and its bearing, still clearer, we shall illustrate it by a few more cases. Suppose two packages to be insured at cost price—a cask of rice and a cask of sugar—each weighing 10 cwt.; the cost of each at the port of shipment 10*l.*, the freight of each 10*l.* per cwt. at the port of delivery, both articles free from duty, and to arrive at a market where no more than the cost price is realised; assuming that both packages are damaged 50 per cent.—the rice by loss of quality, the sugar by loss of weight—the statement will be as follows:—

	L. s. L. s.
10 cwt. of rice, had it arrived sound, would have produced	15 0
Less freight on 10 cwt. at 10 <i>l.</i> per cwt.	5 0
	10 0
But being damaged, did only produce	7 10
Less freight on 10 cwt. at 10 <i>l.</i> per cwt.	5 0
	2 10
Merchant's loss	L. 7 10

	L. s. L. s.
10 cwt. of sugar, if sound, would have produced	15 0
Less freight on 10 cwt. at 10 <i>l.</i> per cwt.	5 0
	10 0
The barrel being damaged, did only weigh 5 cwt., and produce	7 10
Less freight on 5 cwt. at 10 <i>l.</i> per cwt.	2 10
	5 0
Merchant's loss	L. 5 0

In each case the merchant is entitled to recover from his insurer 5*l.*, or 50 per cent., upon 10*l.*, the sum insured, which, although an indemnity to him for his loss on the sugar, is far from being so for his loss upon the rice. If the merchant would contrive so to shape his contract with the ship owner for freight, as to reduce the freight in proportion to the depreciation in the value of the damaged commodity, he would be completely protected. The ship owner might on his side protect himself by insurance from loss by reduction of quality, as he now does from loss by reduction of quantity. But

articles to be peculiarly susceptible of damage, will not consent to take that risk, except on some extraordinary occasion. A ship, laden with corn, makes a very stormy passage from the Baltic to London, and damages the wheat of her cargo. Upon arrival off our coast she is stranded, but got off without stranding or sustaining any damage. The insurer is held to be liable for the damage to the corn, under the clause of the policy. On another occasion, after a very favourable passage to our coast, a ship strikes upon a shoal, but is not stranded, sustaining, however, so much damage that she arrives at London with 8 feet water in her hold, and her cargo almost wholly spoiled. The insurer is held out to be liable under the clause of the policy.

General Average.—The insurer is bound to make good all general average without exception, however trifling the amount. General average is treated as though altogether unconnected with particular average; and damage to the goods not amounting to 3 per cent. is not payable by the insurer, although there may be also a general average, and the general and particular average together may amount to more than 3 or 5 per cent. General average is a charge which must be paid by the merchant and ship owner, even if uninsured; although, when insured, he transfers, as it were, in virtue of his insurance, the charge from himself to his insurer. All the elements that can be possibly entered into general average may be classed under four heads—1. Sacrifice of part of the ship and stores; 2. Sacrifice of part of the cargo and freight; 3. Remuneration of services required for general preservation; 4. Expense of raising money to replace what has been sacrificed, and to remunerate services.

1. When any part of the ship is sacrificed for the general benefit, the owner is entitled to receive (deducting of course, his share of contribution) the amount of his outlay in the replacing of such sacrifice; allowances being made, on the principle stated above, where old works and materials are replaced with new. The deduction of 1-3d, however, does not invariably apply. For instance, 1-4th only is taken off the price of an iron cable that is slipped from for the general benefit, because iron cables are calculated to last for a great number of years; and no deduction is ever made from the price of anchors. The charge of replacing the loss may amount to considerably more than the value lost, computing the value at the place where the ship was originally fitted. Thus, the cost of replacing an anchor and cable slipped from in the Downs, is frequently double the value of the anchor and cable at London. But whatever the charge may be, such charge forms the basis of settlement.

2. Sacrifice of the cargo and freight takes place in jettison, or where part of the cargo is flung overboard to lighten the vessel. Upon arrival in port, after such jettison, the owner of the goods jettisoned is entitled to receive (deducting his share of contribution) what the goods would have produced net to him, supposing them to have arrived sound; and the owner of the ship is entitled to receive (deducting his share of contribution) the freight to which he would have been entitled upon the safe delivery of the goods.

3. Remuneration of services and other charges. When a ship loses her anchors and cables, very large sums are frequently awarded to boatmen who venture off to her with new ones at the immediate hazard of their lives. A ship doubled at sea is towed into port by another, and remunerations for such service is awarded according to the value saved, the detention occasioned, and the loss sustained. The ship rendering the service may be laden with fish or fruit, that may be totally spoiled by the detention, or may be in ballast. A ship captured by the enemy may be re-captured by a man of war or armed merchant vessel; here, again, salvage is awarded according to the circumstances of the case. All these charges are general average; that is to say, must be distributed over ship, freight, and cargo. When a ship, with her cargo, is driven on shore, the expense of attempting to get her off is general average. If she cannot be got off without discharging, the expense of discharging is general average; but the expense of getting the ship off after her cargo has been taken out falls exclusively upon the ship. The warehousing of the cargo, and other expenses incurred for its preservation, are charges exclusively upon the cargo. The expense of reloading is borne by the freight. When a ship puts into port in distress, the pilotage inwards is general average; the pilotage outwards is a charge upon the freight. This distribution of charges has settled into a tolerably well established practice; and upon this principle claims are settled at the offices, and at Lloyd's.

4. The money required to meet the above charges is sometimes attainable without expense. If the accident happen near home, and the ship owner be respectable, he advances the money, and recovers from the various parties concerned as soon as the accounts can be made up; or if the accident happen in a foreign port, where the owner of the ship is well known, the captain's bill upon him will sometimes be received in payment of the charges incurred. But where such facilities do not exist, the captain is empowered to pledge his ship, freight, and cargo, as security in any one he may prevail upon to supply the necessary funds. This pledge is termed a bottomry bond. By it the captain admits the receipt of the money; consents to the payment of a premium (which varies with the distance of the port of destination, the risk of the voyage, the respectability of the owner, and the necessities of the captain); and assigns the ship, freight, and cargo, as security for the repayment of the money advanced and the stipulated premium. Should the captain consider the bottomry premium demanded of him exorbitant, or should he deem it preferable in other respects, he may sell a portion of the cargo for the purpose of raising such money as he may stand in need of towards the prosecution of his voyage. The expense of raising the requisite funds, whether by commission, by bottomry premium, or by loss on the sale of the cargo, is charged to those parties for whose interest the money is required. Thus, if a ship, having struck upon a rock, puts into port in distress, and is obliged to unload to repair; supposing the particular average upon the ship to amount to 500*l.*; the general average, consisting of assistance into port and expense of unloading, 200*l.*; particular charges on freight, consisting of expense of reloading and pilotage outwards, 100*l.*; and particular charges on cargo, consisting of warehouse rent and repair of packages, 200*l.*; and the expense of raising money should be 2*l.* per cent.—these sums would be severally increased by this addition, and would be raised to 600*l.*, 210*l.*, 120*l.*, and 210*l.*—(See *BOTTOMRY*.)

It will remain to be inquired in what proportion the general average is to be paid by the different owners of the cargo, and the owner of ship and freight. Almost all general averages are adjusted at the ship's port of destination, and the value of the ship and cargo are taken at what they would produce in their actual state upon arrival, and the freight according to what is actually receivable, less the wages of the captain and crew; the general average being distributed in proportion to these values. Should the cargo be altogether worthless, it cannot be made to contribute; and should the wages of the crew exceed the freight, then the freight is not liable to contribute. In case of jettison, the party whose property has been sacrificed for the general benefit receives indemnity on the same principle; the value to which he is entitled being what his property would have produced *net*, supposing it to have been sold on the arrival of the vessel—the same value serving for the basis of his proportion of contribution. Some few cases occur, where the general average is adjusted at the port of departure. Thus, if a ship, outward bound to the British colonies, cut from an anchor and cable in the Downs, or incur other general average on our own coast, the insurances being principally effected in this country, it is the custom to adjust it on the spot, by which means both delay and expense are avoided. On these occasions, the values at the port of shipment are taken as the basis of contribution. A total loss, subsequently to a general average, does not exonerate the insurer from his prior liability; and although it is customary with the ship owner, or his agent, specifically to in-

peruse this article with ordinary attention will, we hope, gain a tolerably clear insight into the principles and practice of the business. But a perfectly familiar acquaintance with it can only be acquired by those who are daily conversant with its details.

Duty on Policies of Marine Insurance.—Amount and Expediency of such Duty.—All policies of marine insurance must be on stamped paper, the duties on which are as follows:—

For every 100*l.* insured on a voyage in the coasting trade of the kingdom, where the premium does not exceed 30*s.* per cent., 1*s.* 3*d.*

Where the premium does exceed 30*s.* per cent., 2*s.* 6*d.*

For every 100*l.* insured to or from any colonial or foreign port, where the premium does not exceed 15*s.* per cent., 1*s.* 3*d.*

Where the premium does exceed 15*s.* per cent., but does not exceed 30*s.* per cent., 2*s.* 6*d.*

Where the premium exceeds 30*s.* per cent., 5*s.*

For every 100*l.* insured for a period of time not exceeding 3 months, 2*s.* 6*d.*; exceeding 3 months (no ship can be insured on one stamp for a longer period than 12 months), 5*s.*

This duty was reduced in the year 1833. It is now about two thirds of what it was before. The reduction, so far as it goes, must of course be beneficial. But the tax is altogether wrong in principle, and ought to be repealed altogether. Its obvious tendency is to discourage the coasting trade, by imposing a duty on goods carried by sea, from which those carried by land and canal are exempted; and we believe it will be found that this unjust preference costs more to the public in the greater carriage of goods sent, through its means, by the more expensive channel of inland conveyance, than all that portion of the duty which affects coasting vessels produces to the revenue. But the other portion of the tax, or that which affects vessels engaged in the foreign or colonial trade, is still more objectionable. It is immaterial to a merchant sending a ship to sea, whether he insure her in London, Amsterdam, or Hamburgh; and as policies executed in the last two cities are either wholly exempted from duties, or subject to such only as are merely nominal, the effect of the duty is to transfer to the Continent a considerable part of the business of marine insurance, that would otherwise be transacted in London. It is plain, therefore, that this duty operates to drive a valuable branch of business from amongst us; and even though it had no such effect, still it is sufficiently clear that a tax on providence, or on the endeavour to guarantee the safety of property at sea, is not one that ought to exist in any country, and least of all in so commercial a country as England. Where the latitude given is so great, doubt will arise whether one stamp be adequate to cover a long voyage. And when difficulties are made to the settlement of a loss on such grounds, they are very prejudicial to the interests of the assured, and by no means creditable to the character of the underwriter.

If the trifling revenue (amounting in 1832 to only 210,000*l.*) derived from these stamps cannot be spared, a very small addition to the import duties would more than cover its amount, save the expense of collection, and relieve the mercantile public from the annoyance and loss above alluded to.*

Form of a Policy of Insurance executed at Lloyd's.

S. G. IN THE NAME OF GOD, Amen. Charles Brown and Co., as well in their own names as for and in the name and names of all and every other person or persons to whom the same doth, may, or shall appertain, in part or in all, doth make assurance, and cause themselves and them and every of them, to be insured, lost or not lost, at and from St. Petersburg to any port or ports in the United Kingdom, upon any kind of goods and merchandises, and also upon the body, tackle, apparel, ordnance, munition, artillery, boat, and other furniture of and in the good ship or vessel called the Swift, whereof is master, under God, for this present voyage, Bright, or whoever else shall go for master in the said ship, or by whatsoever other name or names the said ship, or the master thereof, is or shall be named or called; beginning the adventure upon the said goods and merchandises from the loading thereof on board the said ship

upon the said ship, &c. and so shall continue and endure during her abode there, upon the said ship, &c. And further, until the said ship, with all her ordnance, tackle, apparel, &c. and goods and merchandises whatsoever, shall be arrived at her final port of discharge (as above), upon the said ship, &c., until she hath moored at anchor twenty-four hours in good safety; and upon the goods and merchandises, until the same be there discharged and safely landed. And it shall be lawful for the said ship, &c. in this voyage, to proceed and sail to, and touch and stay at any ports or places whatsoever, without prejudice to this insurance. The said ship, &c. goods and merchandises, &c. for so much as concerns the assured, by agreement between the assured and assurers in this policy, are and shall be valued at eight hundred pounds, being on the captain's one fourth share of said ship, said one fourth share valued at that sum. Touching the adventures and perils which we the assurers are contented to bear, and do take upon us in this voyage: they are of the seas, men-of-war, fire, enemies, pirates, rovers, thieves, jettisons, letters of mart and countermart, surprisals, takings at sea, arrears, restraints, and detainerments of all kings, princes and people, of what nation, condition, or quality soever, barratry of the master and mariners, and of all other perils, losses, and misfortunes, that have or shall come to the hurt, detriment, or damage of the said goods and merchandises and ship, &c. or any part thereof; offences against the revenue of the United Kingdom of Great Britain or Ireland excepted. And, in case of any loss or misfortune, it shall be lawful for the assured, their factors, servants, and assignees, to sue, labour, and travel for, in, and about the defence, safeguard, and recovery of the said goods and merchandises and ship, &c. or any part thereof, without prejudice to this insurance; to the charges whereof we the assurers will contribute, each one according to the rate and quantity of his sum herein assured. And it is agreed by us, the insurers, that this writing, or policy of assurance, shall be of as much force and effect, as the surest writing or policy of assurance, heretofore made in Lombard Street, or in the Royal Exchange, or elsewhere in London. And so we the assurers are contented, and do hereby promise and bind ourselves, each one for his own part, our heirs, executors, and goods, to the assured, their executors, administrators, and assigns, for the true performance of the premises, confessing ourselves paid the consideration due unto us for this assurance by the assured, at and after the rate of five guineas per cent., to return one pound per cent. if the voyage end on the east coast of England.

IN WITNESS whereof, we, the assurers, have subscribed our names and sums assured in London,

N. B.—Corn, fish, salt, fruit, flour, and seeds, are warranted free from average, unless

* This very valuable article (on Marine Insurance) has been, as the reader will easily perceive, furnished by a gentleman thoroughly conversant with the principles and details of the business.

The conditions on which the different offices insure are contained in their proposals, which are printed on the back of every policy; and it is in most instances expressly conditioned, that they undertake to pay the loss, not exceeding the sum insured, "according to the exact tenor of their printed proposals."

Nothing can be recovered from the insurers, in the event of loss, unless the party insuring had an interest or property in the thing insured at the time when the insurance was effected, and when the loss happened. It often occurs that no one office will insure to the full amount required by an individual who has a large property; and in such a case the party, to cover his whole interest, is obliged to insure at different offices. But, in order to prevent the frauds that might be practised by insuring the full value in various offices, there is, in the proposals issued by all the companies, an article which declares, that persons insuring must give notice of any other insurance made elsewhere upon the same houses or goods, that the same may be specified and allowed by indorsement on the policy, in order that each office may bear its rateable proportion of any loss that may happen; and unless such notice be given of each insurance to the office where another insurance is made on the same effects, the insurance made without such notice will be void.

Any trustee, mortgagee, reversioner, factor, or agent, has sufficient interest in the goods under his custody, to effect a policy of insurance, provided the nature of such property be distinctly specified at the time of executing such policy.

Most of the offices except in their proposals against making good any loss occasioned by "invasion," "foreign enemy," "civil commotions," &c.; and under this condition the Sun Fire Office was exonerated from the loss occasioned by the disgraceful proceedings of the mob in 1780.

One of the principal conditions in the proposals has reference to the proof of loss. The Sun Fire Office—(see post), and most other offices, make it a condition, that the individual claiming shall "procure a certificate, under the hands of the minister and churchwardens, and some other respectable inhabitants of the parish or place, not concerned or interested in such loss, importing that they are well acquainted with the character and circumstances of the person or persons insured or sinking; and do know, or verily believe, that he she, or they, really, and by misfortune, without any fraud or evil practice, have sustained by such fire the loss or damage, as his, her, or their loss, to the value therein mentioned." This condition has given rise to a great deal of discussion in the courts; but it has been finally decided, that the procuring of the certificate is a condition precedent to the payment of any loss, and that its being wrongfully refused will not excuse the want of it.

The risk commences in general from the signing of the policy, unless there be some other time specified. Policies of insurance may be annual, or for a term of years at an annual premium; and it is usual for the office, by way of indulgence, to allow fifteen days after each year for the payment of the premium for the next year in succession; and provided the premium be paid within that time, the insured is considered as within the protection of the office.

A policy of insurance is not in its nature assignable, nor can it be transferred without the express consent of the office. When, however, any person dies, his interest remains in his executors or administrators respectively, who succeed or become entitled to the property, provided such representatives respectively procure their right to be indorsed on the policy.

(For further details, see *Marshall on Insurance*, book iv.; *Park on Insurance*, c. 23.)

Insurances are generally divided into common, hazardous, and doubly hazardous. The distinguishing characteristics of these may be learned from the subjoined proposals of the Sun Fire Office. The charge for insuring property of the first description is now usually 1s. 6d. per cent., the second 2s. 6d., and the third 4s. 6d. These charges are exclusive of the duty payable to government, of 1s. on the policy, and 3s. per cent. on the sum in the policy.

We subjoin a copy of a policy of insurance on a house valued at 1,000l., and furniture, plate, books, &c. in the same, valued also at 1,000l., executed by the Sun Fire Office, and of the proposals indorsed on the same. The latter correspond in most particulars with those issued by the other offices.

Received, for the insurance of the property undermentioned, from *Knox 1833*, to *Xmas 1834*.

No. —

550
 WHEREAS A. B. Esq. of No. — Street, has paid the sum of one pound ten shillings to the Society of the Sun Fire Office in London, and has agreed to pay or cause to be paid, to them, at their said office, the sum of one pound ten shillings on the 25th of December, 1833, and the like sum of one pound ten shillings yearly on the 25th day of December during the continuance of this policy, for insurance from loss or damage by fire, on his now dwelling house only, situate as aforesaid, brick, one thousand pounds; household goods, wearing apparel, printed books, and plate therein only, one thousand pounds.

Now KNOW YE, That, from the date of these presents, and so long as the said A. B. shall duly pay, or cause to be paid, the said sum of one pound ten shillings at the times and place aforesaid; and the trustees or acting members of the said Society, for the time being, shall agree to accept the same; the stock and fund of the said Society shall be subject and liable to pay to the said A. B., his executors, administrators, and assigns, all such his damage and loss which he, the said A. B., shall suffer by fire, not exceeding upon each head of insurance, the sum or sums above-mentioned, amounting in the whole to no more than two thousand pounds, according to the exact tenor of their printed proposals, indorsed on this policy, and of an act of parliament, on the 5th of George the Third, for singling a duty on persons whose property shall be insured against loss by fire. In Witness whereof, we (three of the trustees or acting members for the said Society) have hereunto set our hands and seals, the 24th day of December, 1833.

Signed and sealed (being stamped according to act of parliament) in the presence of J. K.

C. D. (s. s.)

 G. H. (s. s.)

"N. B.—The interest in this policy may be transferred by indorsement, made and entered at the office, if the trustees or acting members approve thereof, but not otherwise."

INSURANCE (FIRE).

(ENDORSEMENT OF THE POLICY.)

SUN FIRE OFFICE.

This office insures against loss or damage by fire, in Great Britain and Ireland, all descriptions of buildings, including mills and manufactories, and goods, wares, and merchandise, in the same; ships in harbour, or in dock; and on navigable rivers and canals, and the goods laden on the same; wagons travelling the roads, and their contents; and farming stock of all descriptions, upon the following terms and conditions:—

Common Insurances.

1. Buildings covered with slates, tiles, or metals, and built on all sides with brick or stone, or separated by party-walls of brick or stone, and wherein no hazardous trade or manufacture is carried on, or hazardous goods deposited.

2. Goods in buildings as above described, such as household goods, plate, jewels in private use, apparel, and printed books; liquors in private use, merchandise, stock and utensils in trade, not hazardous, and farming stock.

At 1s. 6d. per cent. per annum, with certain exceptions.

Hazardous Insurances.

1. Buildings of timber or plaster, or not wholly separated by partition-walls of brick or stone, or not covered with slates, tiles, or metals, and thatched barns and out-houses having no chimneys, nor adjoining to any building having a chimney; and buildings falling under the description of common insurance, but in which some hazardous trade or manufacture is carried on, such as brewers (without a steam-engine), bread and biscuit bakers (not sea-biscuit bakers), bottlers and packers of wine, spirits, or beer; chemists (without a laboratory); gun-holders, maltsters (who make pale malt only), oil-men, soap boilers, stable-keepers, and certain others; or in which hazardous goods are deposited, as the stock and utensils in the above trades; and, also, tallow, pitch, tar, hemp, flax, rosin, and turpentine; hay, straw, and all manner of fodder and corn unthreshed; molasses, stock, and oil; and wine and spirituous liquors as merchandise.

2. Ships and craft, with their contents (lime barges, with their contents, alone excepted).

At 2s. 6d. per cent. per annum, with certain exceptions.

Doubtful Hazardous Insurances.

1. Buildings—All thatched buildings having chimneys, or communicating with, or adjoining to, buildings having one, although no hazardous trade shall be carried on, nor hazardous goods deposited therein; and all iron buildings, in which hazardous goods are deposited, or hazardous trades carried on.

2. Goods—All hazardous goods deposited in hazardous buildings, and in thatched buildings having no chimney, nor adjoining to any building having a chimney.

3. Trades—and their stock and utensils, such as millsters (who make brown malt), and certain others; also china, glass, and earthen-ware, saltpetre, and waxes in their contents.

At 4s. 6d. per cent. per annum, with certain exceptions.

Farming stock on any part of a farm may be insured under general policies, without the average clause, at 1d. per cent. insurances of any kind to be insured in a fair average value. This office will not be subject to any loss on hay or corn, occasioned by its own natural heating, but the loss of any other property in consequence of such fire will be made good, as well losses or fire from lightning.

Insurances may also be made by special agreement on the following risks, and on others of a similar description, not mentioned under the 2d and 3d heads of insurances, viz. on mills of all kinds, and the stock and utensils in them; also on buildings, containing kilns, steam-engines, sluice, or oven, used in the process of any manufacture, and the stock therein; sugar refiners, sea biscuit bakers, distillers, varnish makers, chemists, laboratories, theatres, coach painters, colour manufacturers, varnishers, musical instrument makers, carriers of saltpetre, spermaceti, wax, and oil, barge and boat builders, ropemakers, cabinet makers, coach makers, cooper, cork burners, floor-cloth makers, japanners, hoopblack makers, letter-press printers, machine makers, makers of lalins and of rough fat, raddle makers, cast-iron saws, rope and mill makers, ship chandlers, hemp and flax dressers, oil leather dressers, medals, curiosities, pictures, prints, drawings, statuary work, spinners of cotton, flax, lint and wool, throughout all the operations attending the manufacturing of these materials, from the raw state into thread for the weaver, and such other risks as, by reason of the nature of the trade, the narrowness of the situation, or other dangerous circumstances, may increase the hazard thereof; all which special hazards must be inserted in the policy, to render the same valid and in force.

N. B.—Gunpowder, and buildings in which it is made, cannot be insured on any terms; neither does this office insure writings of any kind, books of accounts, ready money, bonds, bills, or any other securities for money.

N. B.—By an act of the 56th of Geo. 3. a duty of 3s. per annum is to be levied on every 100l. of property insured against fire.

N. B.—Persons may insure for more years than one, and in such cases there will be a discount allowed of 5 per cent. per annum.

Insurance of Mills, &c.—We submit for the information of each of our readers as they may be interested in the insurance of mills, the following statements, put forth by the Leeds and Yorkshire Assurance Company.

CLASSIFICATION OF MILLS.

Class I.—Fire Proof. Mills built entirely of stone or brick the floor laid upon stone or brick arches, resting upon stone, brick, or iron pillars, and consisting of stone flags, lime, cement, or plaster; the frame-work of the windows and roof of iron, the roof covered with slates, tiles, or metal; the interior detached, constructed of solid masonry of brick-work, without any mixture of wood or timber, and having no communication with the mill but at the several landing openings in upright shafts or machinery (if any) to be hoisted off with iron or stone.

Class II.—Fire Proof. Mills of which the construction is in all respects the same as Class I. except that the floors do not rest upon stone or brick arches, but consist of stone flags laid upon beams and joists.

Class III.—Mills constructed as Classes I and II, but having the same floor as that resting upon timber beams and joists, and the frame-work of the windows and roof of wood.

compound interest, on the premium and duty for every year except the first.

Conditions.

Art. I.—Any person desirous of effecting insurances upon buildings or goods must furnish the office, or its agents, with a particular description thereof, and of the process of manufacture carried on therein; and if there be any omission or misrepresentation in describing the building or goods, or process of manufacture, whereby the same may be charged at a different rate of premium than they otherwise would be, this office will not be responsible in case of any loss or damage. And if any alteration be made in the state of the buildings or goods, or process of manufacture, after such insurance shall have been effected, then the insured shall give due notice thereof, in writing, to the office or its agents, or in default of such notice, such insurance shall become void, and no benefit be derived therefrom.

Art. II.—All policies shall be signed and sealed by three or more trustees or acting members; and no receipts are to be taken for any premiums of insurance, but such as are printed and issued from the office, and witnessed by one of its clerks or agents.

Art. III.—Houses, buildings, and goods in trust, and merchandise on commission (except as aforesaid), may be insured, provided the same are declared in the policy to be in trust or on commission, but not otherwise.

Art. IV.—On bespeaking policies, all persons shall pay the premium to the next quarter day, and from thence for one year or more, at least, or shall make a deposit for the same, and shall, as long as the managers agree to accept the same, make all future payments assentually at the said office, within fifteen days after the day limited by their respective policies, upon forfeiture of the benefit thereof.

Art. V.—Any number of houses and out-houses, and household goods, printed books, and other articles, may be insured in the said brackets in private use, stock in trade, goods in trust, or on commission, may be insured in one policy.

Art. VI.—Persons who have this office shall receive no benefit from their policies, if the same houses, or goods, &c. are insured by any other office, unless such insurance, and the amount thereof, is first specified and endorsed on the policy, in which case this office will pay its fairable proportion on any loss or damage.

Art. VII.—When any person dies, the policy and interest thereon shall continue to the heir, executor, or administrator, respectively, to whom the right of the property insured shall belong, provided, before any new payment be made, such heir, executor, or administrator, do procure his or her right to be indorsed on the policy at the said office, or the amount to be paid in the name of the said heir, executor, or administrator.

Art. VIII.—Persons changing their habitations or warehouses may preserve the benefit of their policies, if the nature and circumstance of such policy be not altered; but such insurance will be of no force till such removal or alteration is allowed at the office, by endorsement on the policy.

Art. IX.—No fire or damage will be paid on fire happening by any invasion, foreign enemy, civil commotion, or any military or usurped power whatsoever.

Art. X.—Persons sustaining any loss or damage by fire are to forthwith give notice thereof at the office; and, as soon as possible afterwards, deliver in as particular an account of their loss or damage as the nature of the case will admit of, and make proof of the same by their oath or affirmations according to the practice in vogue in the said office, and by their books of accounts, or such other proper vouchers as shall be reasonably required, and procure a certificate under the hands of the ministers and churchwardens, and some other respectable inhabitants of the parish and place, not concerned or interested in such loss, importing that they are well acquainted with the character and nature of the persons or persons insured or claiming; and do know, or verily believe that they are, or are really, and by misfortune, without any fraud or evasive practice, have sustained by such fire the loss or damage, as his, her, or their loss, is the value therein mentioned. And till the said certificate and evidence of such the assured's loss shall be made and produced, the loss money shall not be payable. And, if there appear any fraud or false swearing, or if the fire shall have happened by the procurement, or willful act, means, or contrivance of the insured or persons, his, she, or they shall be excluded from all benefit from their policies. And in case any difference shall arise between the office and the insured, touching any loss or damage, such difference shall be submitted to the judgment and determination of arbitrators, indifferently chosen, whose award in writing shall be conclusive and binding on all parties.

N. B.—In every case of loss the Company reserves the right of reinstatement in preference to the payment of claims, if it should judge the former course to be more expedient; but when any loss is settled and adjusted, the insured will receive immediate payment for the same, without any deduction or discount; and will not be liable to any covenant or evil for contribution to make good losses.

* * * To encourage the removal of goods in case of fire, this office will allow the reasonable charges resulting the same, and will not suffer the loss, whether destroyed, lost, or damaged, by such removal.

Remarks.—The premiums affixed in the above scale are on the supposition that 3/4ths of the value of the building or stock are given in for insurance. If only half the value is given in, the premium will be 1/3d more; if only 1/4th, the premium will be 2/3d more; and so on. Buildings, machinery, and stock, may however be insured for any sum or sums, subject to the average clause; or machinery and stock may be insured by rooms.

The introduction of stoves or fires, for heating, in lieu of steam, will add to classes I. and II. 6d. premium; | V. and VI. 1s. 6d. premium. III. and IV. 1s. premium; | VII. - 2s. premium.

When mills are more than 3 miles distant from any of the companies.

Against fire, though practised in France, Holland, and some other countries, is not general any where except in Great Britain. It has been known amongst us for a century and a half, and is now very widely extended. It appears from the official accounts, that the gross duty received on policies of insurance against fire in the United Kingdom, in 1832, amounted to 886,096*l.*; which, as the duty is 3s. per cent. shows that the property insured was valued at the immense sum of 557,397,533*l.* But notwithstanding the magnitude of this sum, it is still true that most buildings are not insured up to their full value; even in towns, many are not insured at all; and in the country it is far from being customary to insure farm buildings or barn-yards. It is difficult to imagine that this can be owing to any thing other than the exorbitance of the duty. On common risks the duty is no less than 200 per cent. upon the premium; or, in other words, if a person pay to an insurance office 15s. for insuring 1,000*l.* worth of property, he must at the same time pay a duty of 30*l.* to government! On hazardous and doubly hazardous risks, the duty varies from about 120 to 75 and 80 per cent. upon the premium. Such a duty is in the last degree oppressive and impolitic. There cannot, in fact, be the slightest doubt that, were it reduced, we it ought to be, to one third its present amount, the business of insurance would be very much extended; and as it could not be extended without an increase of security, and without lessening the injurious consequences arising from the casualties to which property is exposed, the reduction of the duty would be productive of the best consequences in a public point of view; while the increase of business would prevent the revenue from being materially diminished.

During last session (1833), the duty on the insurance of farming stock was repealed. But the relief thence arising is immaterial; and the increase is, besides, highly objectionable in point of principle, inasmuch as there is no ground whatever for exempting farming stock from duty in preference to any other description of stock. A duty on insurance is not, in itself, objectionable. We do not wish to see it repealed, but to have it effectually reduced. Were it fixed at 1s. per cent., it would hardly be felt as a burden; while the revenue would suffer little or nothing from the measure.

The Hope, Eagle, Albion, Beacon, British Commercial, Palladium, Surrey, Sussex, and Southwark, Brighton, Old Bath, Gloucestershire, Canterbury, Berke, Gloucester and Provincial, Harford, Cambridge, and Country, and others, (in all 22 offices, chiefly those lately established,) have discontinued their fire insurance business.

IV. INSURANCE (LIFE).

That part of the business of life insurance which consists of granting annuities upon lives, is treated of under **INTEREST AND ANNUITIES**; so that we have only to treat, in this place, of the insurance of sums payable at the death of the insurers or their nominees.

Suppose an individual of a given age wishes to insure 100*l.* payable at his death, the single premium, or the series of annual premiums, he ought to pay an office for such insurance, must plainly depend on the expectation of life of such individual, and on the rate of interest or net profit which the insurers may make by investing the premiums.

With respect to the first of these conditions, or the *expectation of life*, it is usual in estimating it to have recourse to Tables framed from the mortality observed to take place in particular cities or districts, as in Northampton, Carlisle, &c.—(See **INTEREST AND ANNUITIES**.) But though the actual decrement and expectation of life among an average population, at every year of their lives, were accurately determined, it is doubtful whether it would form a fair basis for an insurance office to proceed upon. The general opinion seems to be, that insured lives are decidedly above the average; for insurance offices invariably profess to act on the principle of rejecting bad lives or of making them pay a proportional increase of premium; and it may, besides, it is said, be fairly presumed that persons insuring their lives are of a superior class, and are not, generally speaking, engaged in those manual and laborious occupations that are esteemed most injurious to health. But, on the other hand, the friends of parties whose lives are supposed to be bad, and the parties themselves, are most anxious they should be insured. It is also far from being an uncommon practice, for certain individuals to prevail upon persons whom they happen to know, or believe to be bad lives to insure; and then to get a legal assignment of the policy in their favour, or their giving the "men of straw" a bonus for their share in the fraud. At all events, there can be no question that large numbers of such lives are perpetually offered for insurance; and every individual conversant with the business knows that, in despite of all precautions, policies are very frequently effected upon them. Mr. Milne, on whose judgment every reliance may be placed, states distinctly that "all the caution and selection which the officers in general can exercise, is necessary to keep the lives insured up to the average goodness of the bulk of the population."—(*Ency. Brit.* new ed. art. *Annuities*.) Since the competition among the different offices became so very keen as it has been of late years, there are but few lives so bad that they will not be taken by one office or another; and we doubt, were the results of their experience made public, whether it would be found that there is much foundation for the opinion as to the superiority of insured lives.

With respect to the second condition in valuing an insurance, or the rate at which the interest of money may be estimated, it is impossible to arrive at any thing like accurate conclusions. As an average, perhaps, transactions in life insurance may extend over a period of 30 years from the time v. hen they are entered into; and in such a lengthened term the greatest changes may take place in the rate of profit and the rate of interest. Mr. Finlaison, of the National Debt Office, appears to think that 4 per cent. may be taken as the true average rate in this country; and that 4½ is a rate at which no loss need be apprehended.—(*Parl. Paper*, No. 284, Sess. 1825.) But this is not a point on which (as Mr. Finlaison seems to suppose) previous experience can be safely depended upon in forming engagements for the future; and were this the proper place for entering upon such discussions, we think we could assign pretty solid grounds for concluding that no institution, intended to last for the next half century, would be wise in ad in reckoning upon realising more than 3 per cent. upon its investments. We should look upon this as the maximum, and of course could expect nothing but ruin to fall upon any institution founded up on the hypothesis of realising 4½ per cent. of interest. At the same time, we would not be under odd as laying any undue stress upon this opinion; and are ready to admit that there must always be more of conjecture than of certainty in such conclusions.

Security being the principal object to be aimed at by every insurance office established on sound principles, they would not act wisely, if they did not calculate their premiums considerably higher than may appear necessary to those who look only at what has taken place during the last 30 or 40 years. Societies contracting prospective engagements that may extend for half a century or more, are exposed to numerous unforeseen contingencies; and they would be highly censurable, and altogether unworthy of the public confidence, were they so to conduct their affairs, that they might be liable to serious embarrassments from fluctuation in the rate of interest, or an increase of sickness, or any other cause. The success that has hitherto attended the Equitable, and some of the long-established offices, must not be taken as any criterion of what may befall them and others during the next 100 years. Mr. Morgan, the late able actuary of the Equitable, in his account of the rise and progress of that institution, published in 1828, has satisfactorily shown that its peculiar prosperity was been in a very great degree owing to circumstances which cannot possibly occur again. The premium, for example, charged by the Society, as late as 1771, for insuring 100*l.* on the life of a person aged 30, was 4*l.* 15*s.* 4*d.*, whereas it is now only 2*l.* 13*s.* 4*d.*; and there was a corresponding difference in the premiums for the other ages.—(p. 36.) But the excessive magnitude of the premiums was not the only extraordinary source of profit enjoyed by this Society in the earlier part of its career. We learn from the same unquestionable authority, that half the insurances made during the first twenty-five years of the Society's existence were abandoned by the insurers, in many cases, after the premium upon them had been paid for a considerable number of years, without any valuable consideration being given for them by the Society!—(p. 38.) So obvious a source of profit was almost adequate to enrich any society; but such things rarely occur now,—people are too familiar with life insurance, and aware of the possibility of too frequent occurrence, to allow any office to realize any thing considerable in this way. Now, we ask, can any one who takes these facts into view, and compares them with the frugal and

cautious management which he to success? and can any thing scope of the societies that have of these considerations, there some of the old offices, place in the rate of mortality; no interest in commotion; we into the funds, during the do not presume to say that ch offered during the next half cent of those who proceeded to insu b, in life insurance, the param premiums were at one time tro them too low. A great relaxa section of it follows. And the adv to be resorted to in different co consider well v. hat he is abou statements, unless where th ought not to go for much. Life for a long time have all the app very insecure foundation. If a credit he gets doubtful, he will certainly. The bargain is one tility on the part of an establish productive of a degree of misery

Life insurance companies are panies, who undertake to pay profits made by such companies Exchange, the Ann, the Globe, bodies; but instead of under the assured, they allow the last profits made by the business. T to the insured, is not the same disclosed. Supposing the premiums dema be fairly proportioned to the va the most advisable to insure in Sun, Globe, Scottish Union, &c. of the chartered companies, to dealing with them know exact have to pay, and the exact amo their death. They incur no re dented and unlooked-for charg with certainty on the terms of

But, as already observed, even mium with the advantages to carelessness, or intentionally, high, it may be more expedient for the benefit of the proprietary bo any respectable company of this the flourishing condition of the mlions should be too high. It should, however, be borne in of his getting a proportionate responsibility. In detail, this responsibility can hardly be in the field, and holding out v some future period, that this re highly respectable compa—insert in all its policies the members shall, in all cases, be condition be good in law; but which otherwise would justly seeme himself against a comb of this sort implies a doubt, a blishment. Such a doubt may most likely, he believed to this Albion Fire and Life Insurance

cautious management which has hitherto always distinguished the Equitable Society, be surprised at the success it and can any thing be more absurd than to appeal to its experience in casting the horoscope of the societies that have sprung into existence within the last few years. But, independently of these considerations, there are other circumstances sufficient to account for the great success of some of the old offices. Since the close of the American war, a very decided diminution has taken place in the rate of mortality; the public tranquillity has neither been disturbed by foreign invasion nor intestine commotion; we have not been once visited by any epidemic disorder; and the investments in the funds, during the war made at from 50 to 60, may now be realised at from 80 to 90. We do not presume to say that circumstances may not be even more advantageous for the insurance offices during the next half century; but we should not, certainly, think very highly of the prudence of those who proceeded to insure on such an assumption. Security, we take leave again to repeat, is in life insurance, the paramount consideration. It is, we believe, admitted on all hands, that the premiums were at one time too high; but we doubt whether the tendency at present be not to sink them too low. A great relaxation has taken place, even in the most respectable offices, as to the selection of lives. And the advertisements daily appearing in the newspapers, and the practices known to be resorted to in different quarters to procure business, ought to make every prudent individual consider well what he is about before he decides upon the office with which he is to insure. Attractive statements, unless where they emanate from individuals of unquestionable character and science, ought not to go for much. Life insurance is one of the most deceptive of businesses; and offices may for a long time have all the appearance of prosperity, which are, notwithstanding, established on a very insecure foundation. If a man insure a house or a ship with a society, or an individual, of whose credit he gets doubtful, he will forthwith insure somewhere else. But life insurance is quite a different affair. The bargain is one that is not to be finally concluded for, perhaps, 50 years; and any inability on the part of an establishment in extensive business to make good its engagements, would be productive of a degree of misery not easy to be imagined.

Life insurance companies are divided into three classes. The first class consists of joint stock companies, who undertake to pay fixed sums upon the death of the individuals insuring with them; the profits made by such companies being wholly divided among the proprietors. Of this class are the Royal Exchange, the Sun, the Globe, &c. The second class are also joint stock companies, with proprietary bodies; but instead of undertaking, like the former, to pay certain specified sums upon the death of the insured, they allow the latter to participate to a certain extent, along with the proprietors, in the profits made by the business. The mode in which this sort of mixed companies allot the profit granted to the insured, is not the same in all; and in some, the principle on which the allotment is made is not declared. The Rock, Alliance, Guardian, Atlas, &c. belong to this mixed class. The third species of company is that which is formed on the basis of mutual insurance. In this sort of company there is no proprietary body distinct from the insured; the latter share among themselves the whole profits of the concern, after deducting the expenses of management. The Equitable Society, the Anicable, the Norwich Life, &c. belong to this class.

The advantage to a person insuring in any one office as compared with another, must plainly depend on a comparison between the premiums demanded, the conditions of the policy, and, above all, the security which it holds out. It may appear, on a superficial view, as if the mutual insurance companies would be in all respects the most eligible to deal with, inasmuch as they have no proprietors to draw away any share of the profits from the insured. It is doubtful, however, whether this advantage be not more than balanced by disadvantages incident to such establishments. Every one being a partner in the concern, has not only his own life insured, but is part insurer of the lives of all the other members; and may, in this capacity, should the affairs of the society get into disorder, incur some very serious responsibilities. The management, too, of such societies, is very apt to get into the hands of a junta; and to be conducted without the greater number of those interested knowing any thing of the matter. There is, also, considerable difficulty, in constituting such societies, in distinguishing clearly between the rights of old and new members: for, supposing a society to be prosperous, it is but reasonable that those who have belonged to it while it has accumulated a large fund, should object to new entrants participating in this advantage. But the affairs of a society conducted in this way, or making distinctions in the rights of the members during a long series of years, could hardly fail of becoming at last exceedingly complicated: nor is it, indeed, at all improbable that the conflicting claims of the parties in some of the societies of this sort now in existence, may ultimately have to be adjusted in the courts of law, or by an act of the legislature.

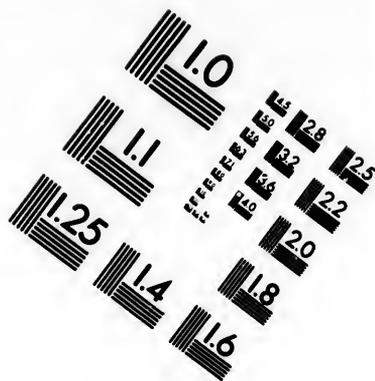

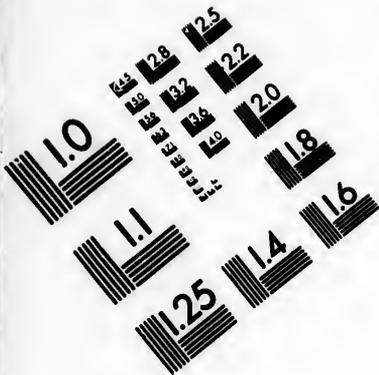

Supposing the premiums demanded by the societies which retain the whole profits to themselves, to be fairly proportioned to the values insured, we should be inclined to think that they are, on the whole, the most advisable to insure in. The subscribed capital of such associations as the Royal Exchange, Sun, Globe, Scottish Union, &c., and the wealth of the partners (which is all liable, except in the case of the chartered companies, to the claims of the insured), afford unquestionable security. Individuals dealing with them know exactly what they are about. They know the precise premiums they will have to pay, and the exact amount of the sums that will be paid to their assignees in the event of their death. They incur no responsibility of any kind whatever. For, unless some very unprecedented and unlooked-for change should take place in the condition of the country, they may reckon with certainty on the terms of the policy being fulfilled to the letter.

But, as already observed, every thing depends, in matters of this sort, on a comparison of the premium with the advantages to be realised. And were the premiums as believed, either through carelessness, or intentionally in order to procure the preference of the establishment, to be a little too high, it may be more expedient, perhaps, to deal with a mixed company. The subscribed capital and fortunes of the proprietary body afford a guarantee on which the public may depend in dealing with any respectable company of this sort; while, by receiving a share of the profits, the insured gain by the flourishing condition of the association, and it is of less consequence to them though the premiums should be too high.

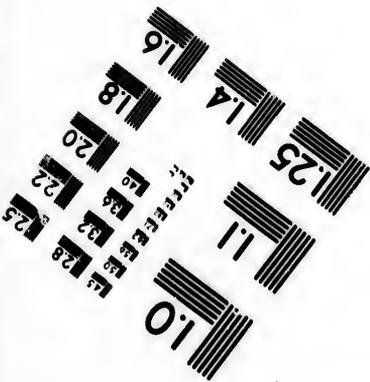

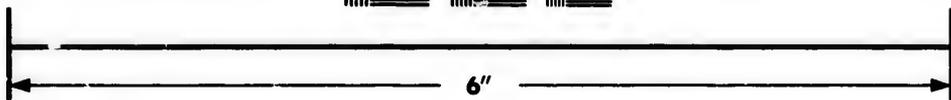

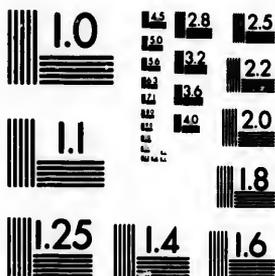

It should, however, be borne in mind, that an individual insuring with a mixed company, on condition of his getting a proportion of the profits, becomes a partner of such company; and being so, incurs responsibility with such associations as the Alliance, the Rock, and a few others, this responsibility can hardly be said to amount to any thing. But there are companies of this class in the field, and holding out very tempting baits to the unwary, those insured in which may find, at some future period, that this responsibility is by no means a light matter.

A highly respectable company of this mixed class, with a large subscribed capital,—the Guardian,—inserts in all its policies the following condition, viz.—“That the responsibility of the individual members shall, in all cases, be limited to their respective shares.” It may be doubted whether this condition be good in law; but if it be, it materially affects the security afforded by the Company, which otherwise would justly claim a place in the very first class of offices. As no one attempts to secure himself against a contingency which he is satisfied cannot happen, the existence of a condition of this sort implies a doubt, on the part of the proprietary body, of the perfect solidity of the establishment. Such a doubt may be, and we believe really is, very ill-founded; but the public will, most likely, be inclined to think that the proprietors ought to know better than any one else. The Albion Fire and Life Insurance Company also inserts in its policies a condition to the same effect.

my knowledge and belief the age of the said does not exceed years: that he has had the rupture, nor any fit or distemper, nor any disorder tending to shorten life; and this declaration is to be the basis of the contract between me and the said Society.

and if there be any untrue averment therein, all monies which shall have been paid in the Society upon account of the assurance made in consequence thereof, shall be forfeited. Dated the day of 18

I insert small-pox or cow-pox, as the case may require.

Policy by the Sun Life Assurance Society for 1,000*l.*, on the Life of A. B., aged Thirty, insuring his own Life No. —

SUN LIFE ASSURANCE SOCIETY.

THIS POLICY OF ASSURANCE WITNESSETH, that, whereas A. B. Esq. of — Square, London, being desirous of making an assurance upon his own life, for the whole duration thereof, and having subscribed, or caused to be subscribed, and delivered into this office, a declaration setting forth his ordinary and present state of health, wherein it is declared that the age of the said A. B. did not then exceed 30 years; and having paid to the managers for the Sun Life Assurance Society, at their office in Cornhill, in the city of London, the sum of twenty-four pounds eleven shillings and eight pence sterling, as a consideration for the assurance of the sum under-mentioned for one year, from the twentieth day of January, 1834.

NOW KNOW ALL MEN BY THESE PRESENTS, that in case the said assured shall happen to die at any time within the term of one year, as above set forth, the stock and funds of this Society shall be subject and liable to pay and make good to the executors, administrators, or assigns, of the said assured, within three months after the demise of the said assured shall have been duly certified to the managers aforesaid, at their said office, the sum of one thousand pounds sterling, of lawful money of Great Britain.

It is hereby agreed, that this policy may continue in force from year to year, until the expiration of the term first above-mentioned, provided that the said assured shall duly pay, or cause to be paid, to the managers, at their said office, on or before the nineteenth day of October next ensuing, the sum of twenty-four pounds eleven shillings and eight pence sterling, and the like sum annually, on or before the day aforesaid; which annual payments shall be accepted, at every such period, as a full consideration for such assurance.

And it is hereby further agreed, that the assurance by this policy shall be extended during peace, to the risk of the above-named A. B. Esq. dying upon the sea in any whole-decked vessel or steam-boat, in passing between any one part of the United Kingdom of Great Britain and Ireland, including the islands of Guernsey, Jersey, Alderney, and Sark, and any other part thereof; or in passing between any port in the said United Kingdom, and any port on the continent of Europe, between Hamburg and Bordeaux, both inclusive.

PROVIDED NEVERTHELESS, that should the said assured depart beyond the limits of Europe, die upon the seas (except as above stated), or engage in any military or naval service whatsoever, within the term for which the policy is granted; or should the assurance have been obtained through any misrepresentation of the age, state of health, or description of the assured; or should the said assured die by duelling, suicide, or the hands of justice; then this policy, and every thing appertaining thereto, shall cease, be void, and of none effect.

IN WITNESS WHEREOF, we, three of the managers for the said Society, have hereunto set our hands and seals, this twentieth day of January, 1834.

Signed, sealed, and delivered, J. K.

The following offices require the same premiums as the Equitable; viz. Atlas, Globe, Imperial, Law Life, London Life Association (for persons not members), Palladium, Provident, Rock, Royal Exchange, Union, Westminster.

The following are the premiums demanded by the Sun Life Insurance Society, for insurances on joint lives and survivorships.

Joint Lives.—A Table of Annual Premiums payable during the Joint Continuance of Two Lives, for assuring One Hundred Pounds, to be paid as soon as either of the Two shall drop.

Age next Birthday.	Age next Birthday.	Annual Premium.	Age next Birthday.	Age next Birthday.	Annual Premium.	Age next Birthday.	Age next Birthday.	Annual Premium.
10	10	£ s. d. 3 7 5	20	35	£ s. d. 3 17 3	35	45	£ s. d. 5 7 5

	80	0 15 7		80	1 7 4		80	2 3 2
20	10	1 0 11	40	10	2 19 7	60	10	7 8 6
	20	1 10 0		20	2 19 6		20	7 8 5
	30	1 8 10		30	2 15 4		30	7 8 3
	40	1 6 7		40	2 12 10		40	7 4 11
	50	1 4 7		50	2 0 2		50	6 17 5
	60	1 2 8		60	2 0 6		60	6 4 5
	70	1 0 9		70	1 10 3		70	5 8 8
	80	0 19 3		80	1 13 6		80	4 14 4

From the specimens of premiums in the two preceding Tables, the reader will easily judge of the proportional premiums for any combination of two ages not inserted in them.

Instead of a gross sum payable at the decease of A. provided B. be then living, a reversionary annuity on the remainder of the life of B. after the decease of A. may be insured by the payment of an annual premium during the joint continuance of the two lives; which annual premium may be least by application at the office.

Equitable Assurance Society.—The following is the

Declaration required to be made and signed in the Office, by or on the Behalf of a Person who proposes to make an Assurance on his or her own Life.

Being desirous of becoming a member of the Society for Equitable Assurance on Lives and Survivorships, and intending to make assurance in the sum of

upon and for the continuance of my own life, and having presented and considered that I am of the age and sound mind and legal capacity, and that I am not afflicted with any disorder which tends to the shortening of life; and I do hereby agree that this declaration be the basis of the contract between the said Society and me, and that if any untrue statement is contained in this declaration, all monies which shall have been paid to the Society upon account of the assurance made in consequence thereof, shall be forfeited. Dated the day of the year of our Lord

Form of a Proposal to be presented to a Weekly Court of Directors.

Name and profession of the life to be assured.

Place and date of birth.

Place of residence. Sum. Term.

By whom made. To give reference to two persons of good repute (one, if possible, of the medical profession), to ascertain the present and general state of health of the life to be assured.

If had the small-pox. If vaccinated. If ever ruptured.

The Clause which is referred to in the Declaration.

That every person desirous of making assurance with the Society, shall sign or execute a declaration in writing (in the presence of one or more credible witnesses, who shall attest the same), setting forth the age, state of health, profession, occupation, and other circumstances attending the person or persons whose life or lives shall be proposed to be assured; which declaration shall be the basis of the contract between the said Society and the person desiring to make assurance with them; in which declaration, if any artful, false, or fraudulent representations shall be used, and the same shall at any time thereafter be discovered, from thenceforth the same which shall have been paid to the Society on account of any assurance so fraudulently obtained, shall be forfeited to the use of the Society; and all claims to be made on that behalf shall cease, determine, and be void, to all intents and purposes whatsoever.

Parties who do not appear before the Court of Directors are required to give a reference to 3 persons for an account of the present and general state of their health.

A Table of Annual Premiums payable during the Continuance of Two Joint Lives for Assuring One Hundred Pounds, to be paid when either of the Lives shall drop.

An addition of 22 per cent. computed upon the premium, is charged upon military persons; and an addition of eleven per cent. on officers on half-pay, officers in the militia, fencibles, and the like levies; also on persons not having had the small-pox, or having had the gout.

Persons preferring the payment of a gross sum or single premium upon an assurance for any certain term, are chargeable in a due proportion to the annual premium for such term.

Every person making any assurance with the Society, pays 5s. in the name of entrance money; and if the sum assured exceeds 100l., the entrance money is charged after the rate of 5s. for every 100l. But if the person upon whose life an assurance is proposed, does not appear before the directors, the entrance money is charged after the rate of 1l. for every 100l.

The following are the present annuity on the con

It is stated by Mr. Morgan that the number of insurances in this country for the whole period of the assurance confined to the assurance for life, or for continuance, being, as proposed by the new office.

[The reader is referred to the information concerning the Lecture of the same work.]

It is stated by Mr. Morgan, in his Account of the Equitable Society already referred to, that the number of insurances in that institution for terms of years does not much exceed *one hundredth part* of those for the whole period of life; and that the business of the office at present is almost wholly confined to the assurance of persons on *their own lives*—those on the lives of *others*, whether for terms or for continuance, being, in consequence of the commission money allowed to agents and attorneys, engrossed by the new offices.—(Account of the Equitable Society, p. 53.)

The reader is referred to *Kent's Commentaries on American Law*, Lecture 48th, for information concerning the law of marine insurance in the United States,—and to the 50th Lecture of the same work for the law relating to life and fire insurances.

It is to be regretted that life insurance is so little practised in the United States. There is no country to which its benefits are more important. That country in which enterprise and activity is most rapidly developed and becomes characteristic of a people is precisely the country where the practice of life insurance accomplishes the most in alleviating calamity and in securing social comfort.

The Massachusetts Hospital Life Insurance Company was incorporated in 1818; since which time the privilege of effecting insurances upon lives has been conferred on a number of other companies. Of these the principal are the Baltimore Life Insurance Company, the Pennsylvania Company and the Girard Life Insurance and Trust Company in Philadelphia, the New York Life Insurance and Trust Company and the Farmers' Loan and Trust Company in the city of New York. It may be stated that the Girard Life Insurance and Trust Company, which commenced business in 1836, is the only one in the United States that has offered, to those who make insurance for the whole of life, a bonus, or addition to the value of their policy, after the expiration of a term of years. This practice has, in several of the London offices, contributed greatly to the benefit of both the insurers and the insured. Calculations of the earnings upon life insurance are usually made after a lapse of seven years, and a proportion of the amount is added to the policies for the whole of life.

No tables of mortality of a general nature have been constructed in the United States. It is, however, believed by those who have directed their attention to the subject, that the duration of life in the northern and middle states is equal to its duration in England and Scotland. Hence all insurances for lives have in this country been computed from the English tables, founded for the most part upon the Carlisle rates of mortality.

The American policies of insurance, when they have reference to the lives of persons in the northern states, stipulate that they shall be void if the insured enter into the military or naval service, or in the event of his dying by suicide, in a duel, or by the hands of justice. They are also declared to be void if the insured should die on the high seas, or the great lakes; or if he pass beyond the settled limits of the United States, or of the British pro-

vinces to the north of them, or south of the states of Virginia and Kentucky, without the consent of the insurers being first obtained.—*Ann. Ed.*]

INTEREST AND ANNUITIES. Interest is the sum paid by the borrower of a sum of money, or of any sort of valuable produce, to the lender, for its use.

The rate of interest, supposing the security for and facility of re-possessing the principal, or sum lent, to be equal, must obviously depend on what may be made by the employment of capital in industrious undertakings, or on the rate of profit. Where profits are high, as in the United States, interest is also high; and where they are comparatively low, as in Holland and England, interest is proportionally low. In fact, the rate of interest is nothing more than the *net* profit on capital: whatever returns are obtained by the borrower, beyond the interest he has agreed to pay, really accrue to him on account of risk, trouble, or skill, or of advantages of situation and connection.

But besides fluctuations in the rate of interest caused by the varying productiveness of industry, the rate of interest on each particular loan must, of course, vary according to the supposed solvency of the borrowers, or the degree of risk supposed to be incurred by the lender, of either not recovering payment at all, or not recovering it at the stipulated term. No person of sound mind would lend on the personal security of an individual of doubtful character and solvency, and on mortgage over a valuable estate, at the same rate of interest. Wherever there is risk, it must be compensated to the lender by a higher premium or interest.

And yet, obvious as this principle may appear, all governments have interfered with the adjustment of the terms of loans; some to prohibit interest altogether, and others to fix certain rates which it should be deemed legal to charge, and illegal to exceed. The prejudice against taking interest seems to have principally originated in a mistaken view of some enactments of the Mosaic law—(see *Michaelis on the Laws of Moses*, vol. ii. pp. 327—353. Eng. ed.), and, a statement of Aristotle, to the effect that, as money did not produce money, no return could be equitably claimed by the lender! But whatever may have been the origin of this prejudice, it was formerly universal in Christendom; and is still supported by law in all Mohammedan countries. The famous reformer, Calvin, was one of the first who saw and exposed the absurdity of such notions—(see an extract from one of his epistles in *M. Cullock's Political Economy*, 2d ed. p. 510.); and the abuses caused by the prohibition, and the growing conviction of its impolicy, soon after led to its relaxation. In 1554, a statute was passed, authorizing lenders to charge 10 per cent. interest. In 1624, the legal rate was reduced to 8 per cent.; and in the reign of Queen Anne it was further reduced to 5 per cent., at which it still continues. It is enacted, by the statute (12 Ann. c. 16.) making this reduction, that “all persons who shall receive, by means of any corrupt bargain, loan, exchange, chivance, or interest of any wares, merchandise, or other thing whatever, or by any deceitful way or means, or by any covin, engine, or deceitful conveyance for the forbearing or giving day of payment, for one whole year for their money or other thing, above the sum of 5*l.* for 100*l.* for a year, shall forfeit for every such offence, the *treble* value of the monies, or other things, so lent, bargained,” &c.

It is needless to waste the reader's time by entering into any lengthened arguments to show the inexpediency and mischievous effect of such interferences. This has been done over and over again. It is plainly in no respect more desirable to limit the rate of interest, than it would be to limit the rate of insurance, or the prices of commodities. And though it were desirable, it cannot be accomplished. The real effect of all legislative enactments having such an object in view, is to increase, not diminish, the rate of interest. When the rate fixed by law is less than the market or customary rate, lenders and borrowers are obliged to resort to circuitous devices to evade the law; and as these devices are always attended with more or less trouble and risk, the rate of interest is proportionally enhanced. During the late war it was not uncommon for a person to be paying 10 or 12 per cent. for a loan, which, had there been no usury laws, he might have got for 6 or 7 per cent. Neither is it by any means uncommon, when the rate fixed by law is more than the market rate, for borrowers to be obliged to pay more than they really stipulated for. It is singular than an enactment which contradicts the most obvious principles, and has been repeatedly condemned by committees of the legislature, should still be allowed to preserve a place in the statute book.

Distinction of Simple and Compound Interest.—When a loan is made, it is usual to stipulate that the interest upon it should be regularly paid at the end of every year, half year, &c. A loan of this sort is said to be at simple interest. It is of the essence of such loan, that no part of the interest accruing upon it should be added to the principal to form a new principal; and though payment of the interest were not made when it becomes due, the lender would not be entitled to charge interest upon such unpaid interest. Thus, suppose 100*l.* were lent at simple interest at 5 per cent., payable at the end of each year; the lender would, at the end of 3 or 4 years, supposing him to have received no previous payments, be entitled to 15*l.* or 20*l.*, and no more.

Sometimes, however, money or capital is invested so that the interest is not paid at the periods when it becomes due, but is progressively added to the principal; so that at every term a new principal is formed, consisting of the original principal, and the successive accumulations of interest upon interest. Money invested in this way is said to be placed at *compound interest*.

In counting-houses, Interest Tables are very frequently made use of. Such publications here, in consequence, become very numerous. Most of them have some peculiar recommendation; and are selected according to the object in view.

When interest, instead of being simple, is compound, the first year's or term's interest must be found, and being added to the original principal, makes the principal upon which interest is to be calculated for the second year or term; and the second year's or term's interest being added to this last principal, makes that upon which interest is to be calculated for the third year or term; and so on for any number of years.

But when the number of years is considerable, this process becomes exceedingly cumbersome and tedious, and to facilitate it Tables have been constructed, which are subjoined to this article.

The first of these Tables (No. I.) represents the amount of £1. accumulating at compound interest, at 3, 4, 4½, and five per cent. every year, from 1 year to 70 years, in pounds and decimals of a pound. Now, suppose that we wish to know how much 500l. will amount to in 7 years at 4 per cent. In the column marked 4 per cent. and opposite to 7 years, we find 1315.922l., which shows that £1. will, if invested at 4 per cent. compound interest amount to 1315.922 in 7 years; and consequently, 500l. will, in the same time and at the same rate, amount to 500 X 1315.922, or 657961.00; that is, 657, 19s. 4d.

For the same purpose of facilitating calculation, the present value of £1. due any number of years hence, not exceeding 70, at 3, 4, 4½, and 5 per cent. compound interest, is given in the subjoined Table No. II. The use of this Table is precisely similar to the foregoing. Let it, for example, be required to find the present worth of 500l. due 7 years hence, reckoning compound interest at 4 per cent. Opposite to 7 years, and under 4 per cent., we find 75291.781s., the present worth of £1. due at the end of 7 years; and multiplying this sum by 500l., the product, being 37645891s., or 376, 19s. 2d., is the answer required.

ANNUITIES.

1. *Annuities certain.*—When a sum of money is to be paid yearly for a certain number of years, it is called an annuity. The annuities usually met with are either for a given number of years, which are called *annuities certain*; or they are to be paid so long as one or more individuals shall live, and are thence called *contingent annuities*.

By the amount of an annuity at any given time, is meant the sum to which it will then amount, supposing it to have been regularly improved at compound interest during the intervening period.

The present value of an annuity for any given period, is the sum of the present value of all the payments of that annuity.

Numbers III. and IV. of the subjoined Tables represent the amount and present value of an annuity of £1. reckoning compound interest at 3, 3½, 4, 4½, 5, and 6 per cent., from 1 year to 70. They, as well as Nos. I. and II., are taken from "Tables of Interest, Discount, and Annuities, by John Smart, Gent. 4to. London, 1736." They are carried to 8 decimal places, and enjoy the highest character both here and on the Continent, for accuracy and completeness. The original work is now become very scarce.

The uses of these Tables are numerous; and they are easily applied. Suppose, for example, it were required to tell the amount of an annuity of 50l. a year for 17 years at 4 per cent. compound interest.

Opposite to 17 (Table III.) in the column of years, and under 4 per cent., is 2340751.239, being the amount of an annuity of £1. for the given time at the given rate per cent.; and this multiplied by 50 gives 117037561.95, or 1,170,375, 61s. 9d., the amount required.

Suppose now that it is required what sum one must pay down to receive an annuity of 50l. to continue for 17 years, compound interest at 4 per cent.?

Opposite to 17 years (Table IV.) and under 4 per cent. is 1216566.866, the present value of an annuity of £1. for the given time and at the given rate per cent.; and this multiplied by 50 gives 60828343.3, or 608, 283, 43s. 6d., the present value required.

When it is required to find the time which must elapse, in order that a given sum improved at a specified rate of compound interest may increase to some other given sum, divide the latter sum by the former, and look for the quotient, or the number nearest to it, in Table No. I. under the given rate per cent., and the years opposite to it are the answer.—Thus,

In what time will 500l. Divide 10872794, &c. It is opposite to 15 years.

If it had been required to find the time which would be required to divide 10872794, &c. by 500l. (but in Table No. III., &c.) it would be 15 years.

Thus, A owes 1,000l. and will the debt be extinguished in 10 years, if 1,000l. divided by 10 gives the quotient is 999265, &c.

Dr. Price (Annuities, &c.) fund was constructed, on every thing depends on same terms; and this, &c.

Let it next be required interest during a given sum by the amount of 1 answer.—Thus,

What annuity will amount to 15 years hence at 4 per cent. interest, if the annuity required.

Deferred annuities are arithmetical annuities, or an individual, &c.

The present value of a whole period, the value

What is the present value from the present time, in accordance to Table No. and that of 1l. for 7 years which multiplied by 50

Supposing the annuity worth 1,250l., from which remains 949. 18s., the value for a selection of problems, pp. 92—100.

2. *Life Annuities.*

PRINCIPLES OF, respectively, life annuity is calculated that it were required to the contingency of a person's death, as in the Carlisle Table of mortality, of 10,000 persons born at the same time, the probability that a person shall survive to the age of 70, and the present value of an annuity of 1000l. per annum, follows, that if its present value will be reduced to 500l., we had to find the present value of an annuity of 500l. we should calculate according to the Carlisle Table of mortality, the present value of the annuity.

This statement is erroneous; and this also was the case with Mr. Simpson and M. J. B. Simpson's Tables of mortality, which estimate the present value of an annuity to arise from any difference of mortality, by the use of Tables of mortality employed and careful observation, or when the average lengthened period, have been determined, who alone made on a sufficiently large scale, and until a very few years ago, the value of annuities on whose lives government had a solid foundation, the work of a few persons to work upon.

The celebrated method

What time will 533l. amount to 1,087l. 5s. 7d. at 5 per cent. compound interest?
Divide 1087-3794, &c., by 533, and the quotient will be 2-0789, &c., which under 5 per cent. in Table I. is opposite to 15 years, the time required.

If it had been required to find the time in which a given annuity, improved at a certain rate of compound interest, would have increased to some given sum, the question would have been answered by dividing, as above, the given sum by the annuity; and looking for the quotient (not in Table No. I., but) in Table No. III., under the given rate per cent., it would be found on a line with the time required.—Thus,

A owes 1,000l. and resolves to appropriate 10l. a year of his income to its discharge: in what time will the debt be extinguished, reckoning compound interest at 4 per cent.?

1,000 divided by 10 gives 100, the number in Table No. III. under 4 per cent., and nearest to this quotient is 99-5965, &c. opposite to 41 years, the required time. Had the rate of interest been 5 per cent., the debt would have been discharged in somewhat less than 37 years. This example is given by Dr. Price (*Annuities*, 6th ed. vol. II. p. 289); and on this principle the whole fabric of the sinking fund was constructed. Of the abstract truth of the principle there cannot, indeed, be a doubt. But every thing depends on the increasing sums annually produced being immediately invested on the same terms; and this, when the sum is large, and the period long, is altogether impracticable.

Let it next be required to find an annuity which, being increased at a given rate of compound interest during a given time, will amount to a specified sum: in this case we divide the specified sum by the amount of 1l. for the time and rate given, as found in Table III., and the quotient is the answer.—Thus,

What annuity will amount to 1,087l. 5s. 7d. in 15 years at 5 per cent. compound interest?
Opposite to 15 years in Table III., and under 5 per cent., is 21-5785, &c., the amount of 1l. for the given time and rate; and dividing 1087-3794, &c., by this sum, the quotient 50-387, &c., or 50l. 7s. 9d., is the annuity required.

Deferred annuities are those which do not commence till after a certain number of years; and *reversionary annuities*, such as depend upon the concurrence of some uncertain event, as the death of an individual, &c.

The present value of a deferred annuity is found by deducting, from the value of an annuity for the whole period, the value of an annuity to the term at which the reversionary annuity is to commence.—Thus,

What is the present value of an annuity of 50l. to continue for 25 years, commencing at 7 years from the present time, interest at 4 per cent.?

According to Table No. IV., the value of an annuity of 1l. for 25 years at 4 per cent. is 15-62307,995, and that of 1l. for 7 years is 6-02905,487, which being deducted from the other, leaves 9-59402,508, which multiplied by 50 gives 481l., the answer required.

Supposing the annuity, instead of being for 25 years, had been a perpetuity, it would have been worth 1,250l., from which deducting 300l. 3s., the value of an annuity for 7 years at 4 per cent., there remains 949l. 18s., the value of the reversion.

For a selection of problems that may be solved by Tables of annuities certain, see *Smart's Tables*, pp. 92-100.

2. Life Annuities.—After what has been stated in the article on **INSURANCE (GENERAL PRINCIPLES OF)**, respecting Tables of mortality, it will be easy to see how the value of a life annuity is calculated. Supposing,—to revert to the example given before (p. 73),—that it were required to find the present value of 1l., the receipt of which is dependent on the contingency of a person, now 56 years of age, being alive 10 years hence, taking the Carlisle Table of mortality, and interest at 4 per cent.: Now, according to that Table, of 10,000 persons born together, 4,000 attain to 56, and 2,894 to 66 years of age. The probability that a person, now 56 years, will be alive 10 years hence, is consequently, $\frac{2894}{4000}$, and the present value of 1l., to be received certain 10 years hence being 0-675564l., it follows, that if its receipt be made to depend on a life 56 years of age, attaining to 66, its value will be reduced by that contingency to $\frac{2894 \times 0-675564}{4000} = 0-488771$, or 0s. 9½d. If, then, we had to find the present value of an annuity of 1l. secured on the life of a person now 56, we should calculate in this way the present value of each of the 48 payments, which, according to the Carlisle Table, he might receive, and their sum would, of course, be the present value of the annuity.

This statement is enough to show the principle on which all calculations of annuities depend; and this also was, in fact, the method according to which they were calculated, till Mr. Simpson and M. Euler invented a shorter and easier process, deriving from the value of an annuity at any age; that of an annuity at the next younger age. There is a considerable discrepancy in the sums at which different authors, and different insurance offices, estimate the present value of life annuities payable to persons of the same age. This does not arise from any difference in the mode of calculating the annuities, but from differences in the Tables of mortality employed. These can only be accurate when they are deduced from multiplied and careful observations made, during a long series of years, on a large body of persons; or when the average numbers of the whole population, and of the deaths at every age, for a lengthened period, have been determined with the necessary care. It is to be regretted, that governments, who alone have the means of ascertaining the rate of mortality by observations made on a sufficiently large scale, have been singularly inattentive to their duty in this respect. And until a very few years since, when Mr. Finlaison was employed to calculate Tables of the value of annuities from the ages of the nominees in public lotteries, and of individuals on whose lives government had granted annuities, all that had been done in this country to lay a solid foundation on which to construct the vast fabric of life insurance had been the work of a few private persons, who had, of course, but a limited number of observations to work upon.

The celebrated mathematician, Dr. Halley, was the first who calculated a Table of mor-

tality, which he deduced from observations made at Breslaw, in Silesia. In 1724, M. De Moivre published the first edition of his tract on *Annuities on Lives*. In order to facilitate the calculation of their values, M. De Moivre assumed the annual decrements of life to be equal; that is, he supposed that out of 86 (the utmost limit of life on his hypothesis) persons born together, one would die every year till the whole were extinct. This assumption agreed pretty well with the true values between 30 and 70 years of age, as given in Dr. Halley's Table; but was very remote from the truth in the earlier and later periods. Mr. Thomas Simpson, in his work on *Annuities and Reversions*, originally published in 1722, gave a Table of mortality deduced from the London bills, and Tables founded upon it of the values of annuities. But at the period when this Table was calculated, the mortality in London was so much higher than in the rest of the country, that the values of the annuities given in it were far too small for general use. In 1746, M. Deparcieux published, in his *Essai sur les Probabilités de la Durée de la Vie Humaine*—a work distinguished by its perspicuity and neatness.—Tables of mortality deduced from observations made on the mortuary registers of several religious houses, and on the list of the nominees in several townships. In this work, separate Tables were first constructed for males and females, and the greater longevity of the latter rendered apparent. M. Deparcieux's Tables were a very great acquisition to the science; and are decidedly superior to some that are still extensively used. Dr. Price's famous work on *Annuities*, the first edition of which was published in 1770, contributed powerfully to direct the public attention to inquiries of this sort; and was, in this respect, of very great utility. Of the more recent works, the best are those of Mr. Baily and Mr. Milne, which indeed, are both excellent. The latter, besides all that was previously known as to the history, theory, or practice of the science, contains much new and valuable matter; and to it we beg to refer such of our readers as wish to enter fully into the subject.

The Table on which Dr. Price laid the greatest stress, was calculated from the burial registers kept in the parish of All Saints in Northampton, containing little more than half the population of the town. There can be no doubt, however, as well from original defects in the construction of the Table, as from the improvement that has since taken place in the healthiness of the public, that the mortality represented in the Northampton Table is, and has long been decidedly above the average rate of mortality in England. Mr. Morgan, indeed, the late learned actuary of the Equitable Society, contended that this is not the case, and that the Society's experience shows that the Northampton Table is still remarkably accurate. But the facts Mr. Morgan disclosed in his *View of the Rise and Progress of the Equitable Society* (p. 42.), published in 1828, are quite at variance with this opinion: for he there states, that the deaths of persons insured in the Equitable Society, from 50 to 60 years of age, during the 12 years previously to 1828, were 339; whereas, according to the Northampton Table, they should have been 545! And Mr. Milne has endeavoured to show (*Art. Annuities*, new ed. of *Ency. Brit.*) that the discrepancy is really much greater.

The only other Table used to any extent in England for the calculation of life annuities, is that framed by Mr. Milne from observations made by Dr. Heysham on the rate of mortality at Carlisle. It gives a decidedly lower rate of mortality than the Northampton Table; and there are good grounds for thinking that the mortality which it represents is not very different from the actual rate throughout most parts of England; though it cannot be supposed that a Table founded on so narrow a basis should give a perfectly fair view of the average mortality of the entire kingdom.

In life insurance, the first annual premium is always paid at the commencement of the assurance, and the others at the termination of each year so long as the party assured survives. Hence, at the beginning of the assurance, the whole of the annual premiums payable for it exceed the value of an equal annuity on the life by one year's purchase. And, therefore, when the value of an assurance in present money is given, to find the equivalent annual premium during the life, the whole present value must be divided by the number of years' purchase an annuity on the life is worth, increased by 1. Thus, for an assurance of 100*l.* on a life 40 years of age, an office, calculating by the Carlisle Table of mortality, and at 4 per cent. interest, requires 53-44*l.* in present money. Now according to that Table and rate of interest, an annuity on a life just 40 years of age is worth 15-074 years' purchase, so that the equivalent annual premium is $\frac{53-44}{15-074} = 3-545*l.*$, or 3*l.* 6*s.* 8*d.* The annual premium may, however, be derived directly from the value of an annuity on the life, without first calculating the total present value of the assurance.—(See Mr. Milne's *Treatise on Annuities*, or the art. *Annuities* in the new edition of the *Ency. Britannica*.)

In order to exhibit the foundations on which Tables of life annuities and insurance have been founded in this and other countries, we have given, in No. V. of the following Tables, the rate of mortality that has been observed to take place among 1,000 children born together, or the numbers alive at the end of each year, till the whole become extinct, in England, France, Sweden, &c., according to the most celebrated authorities.* The rate of mortality

* The greater part of this Table was originally published by Dr. Hatton in his *Mathematical Dictionary*, art. *Life Annuities*. Mr. Baily inserted it with additions in his work on *Annuities*; and it

of Carlisle, represented in this Table, is less than that observed any where else: the rates which approach nearest to it are those deduced from the observations already referred to, of M. Deparcieux, and those of M. Kerneboom, on the nominees of life annuities in Holland.

In order to calculate from this Table the chance which a person of any given age has of attaining to any higher age, we have only to divide the number of persons alive at such higher age, given in that column of the Table selected to decide the question, by the number of persons alive at the given age, and the fraction resulting is the chance.

We have added, by way of supplement to this Table, Mr. Finlaison's Table (No. VI.) of the rate of mortality among 1,000 children born together, according to the decrement of life observed to take place among the nominees in government tontines and life annuities in this country, distinguishing males from females. The rate of mortality which this Table exhibits is decidedly less than that given in the Carlisle Table; but the lives in the latter are the average of the population, while those in the former are all picked. The nominees in tontines are uniformly chosen among the healthiest individuals; and none but those who consider their lives as good ever buy an annuity. Still, however, the Table is very curious; and it sets the superiority of female life in a very striking point of view.

Tables VII. and VIII. give the *expectation of life*, according to the mortality observed at Northampton and Carlisle; the former by Dr. Price, and the latter by Mr. Milne.

The next Table, No. IX., extracted from the *Second Report of the Committee of the House of Commons on Friendly Societies*, gives a comparative view of the results of some of the most celebrated Tables of mortality, in relation to the rate of mortality, the expectation of life, the value of an annuity, &c. The coincidence between the results deduced from M. Deparcieux's Table, and that for Carlisle, is very striking. And to render the information on these subjects laid before the reader as complete as the nature of this work will admit, we have given Tables (Nos. X.—XV.) of the value of an annuity of 1*l.* on a single life, at every age, and at 3, 4, 5, 6, 7, and 8 per cent, according to the Northampton and Carlisle Tables; we have also given Tables of the value of an annuity of 1*l.* on 2 equal lives, and on 2 lives differing by 5 years, at 3, 4, 5, and 6 per cent, according to the same Tables. It is but seldom, therefore, that our readers will require to resort to any other work for the means of solving the questions that usually occur in practice with regard to annuities; and there are not many works in which they will find so good a collection of Tables.—We subjoin one or two examples of the mode of using the Tables of life annuities.

Suppose it were required, what ought a person, aged 45, to give, to secure an annuity of 50*l.* a year for life, interest at 4 per cent, according to the Carlisle Table?

In Table No. XI., under 4 per cent, and opposite 45, is 14-104, the value of an annuity of 1*l.*, which being multiplied by 50, gives 705-2, or 705*l.* 4*s.*, the value required. According to the Northampton Table, the annuity would only have been worth 614*l.* 3*s.*

The value of an annuity on 2 lives of the same age, or on 2 lives differing by 5 years, may be found in precisely the same way.

Some questions in *reversionary* life annuities admit of an equally easy solution. Thus, suppose it is required to find the present value of A's interest in an estate worth 100*l.* a year, falling to him at the death of B., aged 40, interest 4 per cent, according to the Carlisle Table?

The value of the perpetuity of 100*l.* a year, interest 4 per cent, is 2,500*l.*; and the value of an annuity of 100*l.* on a person aged 40, interest at 4 per cent, is 1,507*l.* 8*s.*, which deducted from 2,500*l.* leaves 992*l.* 12*s.*, the present value required.

A person, aged 30, wishes to purchase an annuity of 50*l.* for his wife, aged 25, provided she survive him; what ought he to pay for it, interest at 4 per cent, according to the Carlisle Table?

The value of an annuity of 1*l.* on a life aged 30 is 16-852; from which subtracting the value of an annuity of 1*l.* on 2 joint lives of 25 and 30, 14-339, the difference, 2-513 \times 50 = 125-650, or 125*l.* 13*s.*, the sum required.

For the solution of the more complex cases of survivorship, which do not often occur in practice, recourse may be had to the directions in Mr. Milne's *Treatise on Annuities*, and other works of that description. To attempt explaining them here would lead us into details quite inconsistent with the objects of this work.

was published with the column for Carlisle added, in the *Report of the Committee of the House of Commons on Friendly Societies*.

INTEREST AND ANNUITIES.

TABLES OF INTEREST AND ANNUITIES.

IX. Table giving a COMPARATIVE VIEW of the Results of the undermentioned Tables of Mortality, in Relation to the following Particulars.

	By Dr. Price's Table, founded on the Register of Births and Burials at Northampton.	By the First Swedish Table, as published by Dr. Price for both Sexes.	By Mr. Deparcieux's Table, founded on the Mortality in the French Towns, prior to 1745.	By Mr. Milne's Table, founded on the Mortality observed at Carlisle.	By Mr. Griffith Davies's Table, founded on the Experience of the Equitable Life Insurance Office.	By Mr. Finlaison's Table, founded on the Experience of the Government Life Annuities.	
						According to his First Investigation, as mentioned in his Evidence in 1828.	According to his Second Investigation, as mentioned in his Evidence in 1837.
	Mean of both Sexes.		Mean of both Sexes.		Mean of both Sexes.		
Of 100,000 persons aged 25, there would be alive at the age of 65	24,286	43,127	51,033	51,335	49,330	52,470	53,950
Of 100,000 persons aged 65, there would be alive at the age of 80	26,738	23,704	26,587	31,577	37,307	26,058	27,353
Expectation of life at the age of 25 years	20.85	24.56	37.17	37.86	37.43	38.35	38.52
Expectation of life at the age of 65 years	10.98	10.10	11.23	11.70	12.35	12.61	12.50
Value of an annuity on a life aged 25, interest being at 4 per cent.	£15,436	£16,630	£17,480	£17,645	£17,494	£17,534	£17,534
Value of an annuity on a life aged 65, interest being at 4 per cent.	£7,761	£7,389	£8,039	£8,307	£8,635	£8,896	£8,761
Value of a deferred annuity commencing at 65, to a life now aged 25, interest at 4 per cent.	£0-55484	£0-63648	£0-85453	£0-86823	£0-86723	£0-90078	£0-86334

Note.—In all the Tables above mentioned, it is to be observed that the mortality is deduced from an equal, or nearly equal, number of each sex; with the single exception of Mr. Davies's Table, founded on the experience of the Equitable, in which office, from the practical objects of life insurance, it is evident the male sex must have composed the vast majority of lives subjected to mortality. But as it is agreed on all hands that the duration of life among females exceeds that of males, it follows that the results of Mr. Davies's Table fall materially short of what they would have been, if the facts on which he has reasoned had comprehended an equal number of each sex. The Tables here set out, in all cases, been computed at 4 per cent., the rate allowed by government.

The Northampton Table (No. 7.), by under-rating the duration of life, was a very advantageous guide for the insurance offices to go by in insuring lives; but to whatever extent it might be beneficial to them in this respect, it became equally injurious when they adopted it as a guide in selling annuities. And yet, singular as it may seem, some of the insurance offices granted annuities on the same terms that they insured lives; and not perceiving that, if they gained by the latter transaction, they must obviously lose by the former. Government also continued for a lengthened period to sell annuities according to the Northampton Tables, and without making any distinction between male and female lives! A glance at the Tables of M. De Moivre ought to have satisfied them that they were proceeding on entirely false principles. But, in despite even of the admonitions of some of the most skillful mathematicians, this system was persevered in until within these few years! We understand that the loss thence arising to the public may be moderately estimated at 2,000,000. sterling. Nor will this appear a large sum to those who recollect that, supposing interest to be 4 per cent., there is a difference of no less than 91. 1s. in the value of an annuity of 50l. for life, to a person aged 45, between the Northampton and Carlisle Tables.

INVOICE, an account of goods & merchandise sent by merchants to their correspondents at home or abroad, in which the peculiar marks of each package, with other particulars, are set forth.—(See example, vol. 1. p. 207.)

IONIAN ISLANDS, the name given to the islands of Corfu, Paxo, Santa Maura, Ithaca, Cephalonia, Zante, Cerigo, and their dependent islets. With the exception of Cerigo, which lies opposite to the south-eastern extremity of the Morea, the rest lie pretty contiguous, along the western coasts of Epirus and Greece; the most northerly point of Corfu being in lat. 39° 48' 15" N., and the most southerly point of Zante (Cape Kieri, on which there is a light-house) being in lat. 37° 38' 35" N. Kapsali, the port of Cerigo, is in lat. 36° 7' 30" N., lon. 23° E.

The area and present population of the different islands may be estimated as follows:—

Island.	Area in Square Miles, 15 to a Degree.	Population.
Corfu	10.75	59,839
Cephalonia	16.20	56,969
Zante	5.60	35,423
Santa Maura	2.20	18,100
Ithaca and Calamos	3.33	9,330
Cerigo and Cerigotto	4.50	8,550
Paxo and Antipaxo	1.90	4,953
Totals	47.12*	192,848

Soil and Climate.—These are very various—Zante is the most fruitful. It consists principally of an extensive plain, occupied by plantations of currants, and having an air of luxuriant fertility and richness. Its climate is comparatively equal and fine, but it is very subject to earthquakes. Corfu and Cephalonia are more rugged and less fruitful than Zante; and the former from its vicinity to the snowy mountains of Epirus, and the latter from the Black Mountain (the Mount Ennos of antiquity) in its interior, are exposed in winter to great and sudden variations of temperature. In January, 1833, the cold was more rigorous than usual, from damaging to a great extent the oranges and vines of these islands and those of Santa Maura. The latter is, in the hot season, exceedingly unhealthy—a consequence of the vapours arising from the marshes, and the shallow seas to the N. E. Cerigo is rocky and sterile; it is subject to continued gales, and the currents seldom permit its waters to remain unruined.

History, Government, &c.—These islands have undergone many vicissitudes. Corfu, the ancient Corcyra, was famous in antiquity for its naval power, and for the contest between it and its mother state Corinth, which eventually terminated in the Peloponnesian war. Ithaca, the kingdom of Ulysses; Cephalonia, sometimes called Dulchium, from the name of one of its cities; Zante, or Zacynthus; Santa Maura, known to the ancients by the names of Leuca or Leucadia, celebrated for its promontory, surmounted by a temple of Apollo, whence Sappho precipitated herself into the ocean; and Cerigo, or Cythera, the birth-place of Helen, and sacred to Venus;—have all acquired an immortality of renown. But, on comparing their present with their former state, we may well exclaim,—

Hec quantum hœc Niobe, Niobe distabat ab illa!

After innumerable revolutions, they fell, about 350 years ago, under the dominion of Venice. Since the downfall of that republic, they have had several protectors, or rather masters, being successively under the dominion of the Russians, the French, and the English. By the treaty of Paris, in 1815, they were formed into a sort of semi-independent state. They enjoy an internal government of their own, under the protection of Great Britain; a Lord High Commissioner, appointed by the king of England, having charge of the foreign relations, and of the internal, maritime, and sanitary police. His Majesty's commander-in-chief has the custody of the fortresses, and the disposal of the forces. It is stipulated in the treaty of Paris, that the islands may be called upon for the pay and subsistence of 2,000 men, as well as for the repair of their fortresses occupied by the British troops. The executive government is vested in a president nominated by the commissioner, and a senate of 5 members (1 for each of the larger islands of Corfu, Cephalonia, Zante, and Santa Maura, and 1 representing collectively the smaller ones of Ithaca, Cerigo, and Paxo, by each of which he is elected to rotation). The senators are elected at the commencement of every quinquennial parliament (subject to a negative from the commissioner) from a legislative chamber of 40 members, themselves elected by the constituencies of the different islands, for 5 years. The senate and legislative assembly, together with the commissioner, are thus the supreme authority; they are, when united, termed the Parliament, and, as such, pass, amend, and repeal laws, in the mode prescribed by the constitution of 1817. Besides the general government, there is in each island a local administration, composed of a regent, named by the senate, and from 2 to 5 municipal officers elected by their fellow citizens.

The State of Society, in these islands, is far from being good, and was formerly the most depraved imaginable. The people, when they were placed under theegis of England, were at once lazy, ignorant, superstitious, cowardly, and bloodthirsty. Their vice may, we believe, be, in a great degree, ascribed to the government and religion established amongst them. The latter consisted of little more than a series of feasts and puerile observances; while the former was both weak and corrupt. The Venetians appointed to situations of power and emolument belonged mostly to noble but decayed families, and looked upon their offices merely as a means by which they might repair their shattered fortunes. Hence the grossest corruption pervaded every department. There was no crime for which impunity might not be purchased. Justice, in fact, was openly bought and sold; and suits were decided, not according to the principles of law or equity, but by the irresistible influence of faction or gold. In consequence, the islands became a prey to all the vices that afflict and degrade a corrupt and semi-barbarous society. Sandys, one of the best English travellers who ever visited the Levant, having touched at Zante in 1610, expresses himself with respect to the inhabitants as follows:—"I habite they imitate the Italians, but transcend them in their revenges, and infinitely less civil. They will threaten to kill a merchant that will not buy their commodities; and make more conscience to break a fast than to commit a murder. He is weary of his life that hath a difference with any of them, and will walke abroad after daylight. But cowardice is joined with their cruelty, who dare do nothing but souldnly upon advantage; and are ever privately armed. They are encouraged to villainies by the remissness of their laws. The labourers do go into the fields with swords and par-

If the Zantians did not deteriorate during the next 3 centuries, which, indeed, was hardly possible, they certainly did not improve. But Holland, by whom they were visited in 1812, tells us that he heard of no more authority, than the number of assassinations in Zante has been more than 1 for each day of the year, though the population was only 40,000!—(Travels in the Ionian Isles, &c. 4to ed. p. 23.)
 Matters were, if not quite so bad, very little better in the other islands. In Cephalonia, the inhabitants were divided into factions, sutertaining the most implacable animosities, and waging a war of extermination against each other. A little vigour on the part of their rulers would have served to suppress their murderous contests. But this was not an object they wished to attain: on the contrary, their selfish and crooked policy made them seek to strengthen their own power by fomenting the dissensions that prevailed amongst their subjects.—(Bodin, Description des Golfs de Venise, p. 165.) Considering the state of society at home, we need not wonder that the Cephalonians, who were distinguished among the islanders for activity and enterprise, were much addicted to emigration. The Venetians attempted to check its prevalence; but, as they neglected the only means by which it could be prevented,—the establishment of security and good order at home,—their efforts were wholly unsuccessful.

The islanders did not, however, satisfy themselves with attempting to stab and prey upon each other. They were much addicted to piracy, particularly the inhabitants of Santa Maura and Cerigo; and it has been alleged that the Venetian government participated in the profits of this public robbery, which, at all events they took little pains to suppress.

A long series of wars will be required to eradicate vices so deeply rooted, and to effect that thorough change in the habits and morals of the people that is so indispensable. The power and influence of the British government has already, however, had a very decided effect: assassination has become comparatively unknown; piracy has been suppressed; and a spirit of industry, sincerity, and fair dealing is beginning to manifest itself. The present generation of nobles possess a superior degree of information, and a knowledge of the true interests of their country, which, if not all that could be wished, was, at least, unknown to their fathers. It is not easy to exaggerate the difficulties with which Sir Thomas Maitland had to struggle during the first years of the British government. He was opposed by every means that feudal rancour, corruption, and duplicity could throw in his way. Those accustomed to the treachery, shuffling, and jobbing of the Venetian and Russo-Turkish governments, and the intrigues of the French, could neither appreciate nor understand the plain, straightforward course natural to British officers. These difficulties have, however, materially diminished; and it is to be hoped that the influence of our example, and of that education now pretty generally diffused, will gradually accomplish the regeneration of the islanders.

Manufactures, &c.—These islands possess few manufactures properly so termed. The wives of the wealthy, or peasants, spin and weave a coarse kind of woollen cloth, sufficient in great part for the use of their families. A little soap is made at Corfu and Zante. The latter manufactures a considerable quantity of silk gros-de-Naples and handkerchiefs; the art of dyeing is, however, too little studied, and the establishments are on too small a scale. The peasantry, in general, are lazy, vain, delighting in display, and very superstitious. Those of Zante and Cephalonia are more industrious than the Corfiotes; in the first particular, their superior condition is probably to be ascribed, in part at least, to the nobles residing more on their estates in the country, and contributing, by their example, to stimulate industry. In Corfu, the taste for the city life, which prevailed in the time of the Venetian government, still operates to a great degree. The Corfiote proprietor resides but little in his villa; his land is neglected, while he continues in the practice of his forefathers, who preferred watching opportunities at the seat of a corrupt government, to improving their fortunes by the more legitimate means of honourable exertion and attention to their patrimony. In this respect, however, a material change for the better has taken place during the last 20 years.

Imports of Grain, &c.—Great part of the land is held under short tenures, on the *metayer system*, the tenant paying half the produce to the landlord. Owing to the nature of the soil, and the superior attention given to the culture of olives and currants, the staple products of the islands, most part of the grain and cattle required for their consumption is imported. The hard wheat of Odessa is preferred, and about 800,000 dollars may be annually sent to the Black Sea in payment. The imports of wheat in 1838 were 172,888 mogri, or about 891,434 bushels. The parliament, in March, 1833, repealed the duties on the introduction of corn; and the grain monopoly of Corfu, which had been established in favour of government, in order to provide against the possibility of a general or partial scarcity, was then also suffered to expire. These 2 sources of revenue, while they existed, did not probably produce less than 20,000*l.* annually.

Cattle.—They are similarly dependent upon Greece and Turkey for supplies of butcher's meat; a small number only of sheep and goats being bred in the islands. Oxen, whether for agriculture or the slaughterhouse, are brought from Turkey, to the annual amount of more than 90,000 dollars. The beef eaten by the troops is 6 weeks or 2 months walking down from the Danube, and the provinces that skirt it, to the shores of Epirus, where they remain in pasture until fit for the table.

Exports.—The staple exports from these islands are oil, currants, valonia, wine, soap, and salt. The first is produced in great abundance in Corfu and Paxo, and in a less quantity in Zante, Santa Maura, and Cephalonia. Corfu has, in fact, the appearance of a continuous olive wood; a consequence, partly, of the extraordinary encouragement formerly given to the culture of the plant by the Venetians. Although there is a harvest every year, the great crop is properly biennial; the tree generally reposing for a year after its effort. (In France and Piedmont the period of inactivity is 2 and 3 years.) During 5 or 6 months, from October till April, the country, particularly in Corfu, presents an animated appearance, persons of all ages being busily employed in picking up the fruit. It is calculated that the islands produce, one year with another, about 95,000 barrels, of 18 gallons each, and that of this quantity 60,000 are exported, principally to Trieste. The average price may be about 1*l.* 1*s.* per barrel. Under the old Venetian system, the oil could only be carried to Trieste. An *ad valorem* duty of 10 per cent, payable on the export, produces upon an average 28,000*l.* annually. The quality might be much improved by a little more care in the manufacture, the trees being generally finer than in any other country.

Currents, originally introduced from the Moors, are grown in the Isles of Zante, Cephalonia, and Ithaca, but principally in the first. The plant is a vine of small size and delicate nature, the cultivation of which requires much care. Six or 7 years elapse after a plantation has been made, before it yields a crop. In the beginning of October, the earth about the roots of the plant is loosened, and gathered up in small heaps, away from the vine, which is pruned in March; after which the ground again laid down smooth around the plant, which grows low, and is supported by sticks. The crops are liable to injury in spring from the blight called the "brina," and rainy weather at the harvest season produces great mischief. The currants are gathered towards September, and, after being carefully picked are thrown singly upon a stone floor, exposed to the sun in the open air. The drying process may occupy a fortnight or longer, if the weather be not favourable. A heavy shower or thunderstorm (not infrequent occurrence at that season) not only interrupts it, but sometimes causes fermentation. The fruit is then only fit to be given to animals. Should it escape these risks, it is

The extraordinary increase that has taken place in the production of iron since 1823, is principally to be ascribed to the high prices of 1824, 1825, and 1826, when pig iron met with a ready sale at from \$4 to \$12 and 12 1/2 a ton. But, in consequence partly of the failure or postponement of most of the projects as to rail-roads, &c., that were then on foot, and partly of the vast additional supplies which the extension of the manufacture threw on the market, the price fell in 1828 to from \$4 to 7 1/2 a ton, and continued gradually to decline, till in 1832 it was only worth 4 1/2. So heavy a fall had the effect of introducing the severest economy into every department of the manufacture. In despite, however, of all the saving that could be effected in this way, many of the manufacturers were involved in much distress, and the production of iron is believed to have been considerably diminished. This, coupled with the increasing demand for iron, naturally led to a reaction. Prices began to rise early in 1833; and the advance has been such, that at present (January, 1834), pig iron fetches 6 1/2 a ton, and the manufacture is in a state of great activity.

The following statements as to the number of furnaces and the quantity of iron produced in the different districts where the manufacture is carried on, in 1823, 1825, 1826, and 1830, appeared originally in the Birmingham Journal.—We have been assured that their accuracy may be depended upon.

About 2-10ths of the total quantity of iron produced are used as cast iron, being consumed principally in Great Britain and Ireland; the exports, not exceeding 15,000 tons, go chiefly to the United States and British North America. The other 7-10ths are converted into wrought iron, being formed into bars, bolts, rods, &c. The exports of the different sorts of iron amount at present to about 145,000 tons, which, at 8 1/2 lbs. a ton, would be worth 1,232,500.

The increase of the iron manufacture has not only led to its exportation in very large quantities, but has reduced our imports of foreign iron for home consumption from about 34,000 tons, which they amounted to at an average of the 5 years ending with 1833, to about 15,000 or 20,000 tons, consisting principally of Swedish iron, which is subsequently manufactured into steel. The following is

An Account of the British Iron (including unwrought Steel) exported from Great Britain in the Year 1833.—P. & Quarters of a Hundred Weight and Pounds are omitted in the printing of this Table, but they are taken into account in the summing up.

In 1707, the iron exported from Great Britain amounted to only 11,000 tons. At an average of the 15 years ending with 1806, the exports amounted to 28,000 tons; being less than a fifth part of their amount in 1832.

Supposing the total quantity of pig iron produced in Great Britain in 1833 to have amounted to 60,000 tons, and to have been worth at an average, 7 1/2 a ton, its total value will have been 4,500,000. If the additional labour expended in forming the pig iron into bar iron, that is, into bars, bolts, rods, &c., may probably have added about 1,250,000. more to its value; making it worth in all about 5,750,000.

Prices of Hardware.—We noticed, under the article HARDWARE (which see), the extraordinary fall which has taken place in the price of that description of goods since the peace. Since that article was printed, we have obtained from Mr. William Weston, accountant, Birmingham, the following Table of the prices of hardware articles, on which, we believe, every reliance may be placed.

(Report of the Committee on the Iron Manufacture, 1833.)

Comparative Prices of Hardware in and near Birmingham, in 1818, 1824, 1825, 1832, and in Jan., 1834.

Iron ore occurs in great abundance in the United States. Immense masses of it have lately been discovered beyond the Alleghany mountains, especially in Kentucky and Missouri. But it is, perhaps, in Vermont, Massachusetts, New Jersey, Pennsylvania, and Ohio, that it has hitherto been chiefly worked.

Extensive, however, as has been the production of American iron, there can be little or no doubt that this branch of our home industry is shortly destined to a very great expansion. In every successive year, iron is applied to uses never dreamed of by the preceding generation: only a few years have elapsed since an extraordinary demand for it was created by the constructing of rail-roads; and it is not improbable that vast quantities of it will be wanted, before long, as the most desirable material for the building of houses and ships.

But the enlarged demand for iron would have comparatively little effect in altering the relative proportions of it produced in the country itself and imported from abroad. The former of these will be augmented in a remarkable degree, at the expense, so to speak, of the latter, on account of the success which has attended the experiments lately made, on the Lehigh, in Schuylkill county, and elsewhere in Pennsylvania, for smelting the ore with anthracite coal instead of wood. This improvement, on account of the vicinity of the anthracite to the ore, cannot but diminish considerably the cost of producing iron, and therefore its price; which will, of course, be followed by an augmented production and consumption of it.

Any diminution of the importation of iron into the country, which may be consequent upon the introduction generally of the improvement just mentioned, ought not to be regarded as in itself a national advantage. It can have no permanent effect in preventing the existence of an undue excess of importation above exportation. These, as every one is a slight degree only conversant with political economy is aware of, have a certain determinate average relation to each other,—a relation which is preserved, by whatever restrictive or forcible measures either the amount of the commodities imported, or that of the commodities exported, may be attempted to be diminished. If less iron than heretofore shall hereafter be procured from other countries, the inevitable result must be that the exports of the products of American capital and labour will be lessened in the same proportion. The indebtedness of the United States to Europe, in an embarrassing and more than ordinary degree, can only be prevented from recurring, at intervals of a very few years, when some mode shall have been devised of effectually guarding against an undue expansion of our currency, which, by causing a general rise of prices, offers an inducement for importing more from abroad, as well as for exporting less to foreign countries.

The importations of iron and steel have been very considerable. They have amounted, in the last five years, to nearly fifty millions of dollars. And the duties remitted on iron,—chiefly rail-road iron,—from the 1st of January, 1832, to June 30th, 1839, exceeded the sum of three millions and a half of dollars; “being in fact,” says the Secretary of the Treasury, “a donation, or free subscription, by the general government, to that amount, chiefly in aid of rail-roads.”—*Am. Ed.*

IRON-WOOD (Ger. *Eisenholz*; Du. *Yserhout*; Fr. *Bois de fer*; It. *Legno di ferro*; Sp. *Palo hierro*; Lat. *Sideroxylon*, *Lignum ferreum*), a species of wood of a reddish cast, so called on account of its corroding as that metal does, and its being remarkably hard and ponderous,—even more so than ebony. The tree which produces it grows principally in the West India islands, and is likewise very common in South America, and in some part of Asia, especially about Siam.

ISINGLASS (Ger. *Hausenblase*, *Hausblase*; Fr. *Colle de poisson*, *Carlock*; It. *Colo*

di pesce; Rus. *Klei rd*) is a product, the preparation of which is into the North Sea and the best; next to that barrel, though not so good laid together like the leather. When fine, it is of a white water, and it is used extending plaster, &c. The price varies year. The price varies. *Thomson's Chemistry*.

si pesce; Rus. *Klei ribii, Karluk*), one of the purest and finest of the animal glues. It is a product, the preparation of which is almost peculiar to Russia. It is made of the air-bladders and sounds of different kinds of fish which are found in the large rivers that fall into the North Sea and the Caspian. That prepared from the sturgeon is generally esteemed the best; next to that the beluga; but isinglass is also prepared from sterlets, shad, and harel, though not so good. The best is usually rolled in little ringlets; the second sort is laid together like the leaves of a book; and the common sort is dried without any care. When fine, it is of a white colour, semi-transparent, and dry. It dissolves readily in boiling water, and it is used extensively in cookery. It is also used for stiffening silk, making sticking plaster, &c. The imports, in 1831 and 1832, amounted, at an average, to 1,984½ cwt. a year. The price varies at present (January, 1834) from 5s. to 14s. 6d. per lb.—(See *Thomson's Chemistry*; and *Tooke's View of Russia*, 2d ed. vol. iii. p. 343.)

JUICE OF LEMONS, LIMES, OR ORANGES. The 9th section of the act 6 Geo. 4. c. 111. is as follows:—"For ascertaining the degrees of specific gravity or strength, according to which the duty on the juice of lemons, limes, and oranges shall be paid, it is enacted, that the degrees of such specific gravity or strength shall be ascertained by a glass citrometer, which shall be graduated in degrees in such manner, that distilled water being assumed as unity at the temperature of 60° by Fahrenheit's thermometer, every degree of the scale of such citrometer shall be denoted by a variation of $\frac{1}{1000}$ parts of the specific gravity of such water."

JUNIPER BERRIES. See *BERRIES*.

IVORY, the name given to the teeth or tusks of the elephant, and of the walrus or sea-norse. Each male elephant come to maturity has 2 tusks. These are hollow at the root, tapering, and of various sizes, depending principally on the age of the animal. Colour externally yellowish, brownish, and sometimes dark, internally white. The best are large, straight, and light-coloured, without flaws; not very hollow in the stump, but solid and thick. The most esteemed come from Africa, being of a closer texture, and less liable to turn yellow, than those from the East Indies.

The trade in London thus divide them:—

First sort, weighing 70 lbs. or upwards; second sort, weighing 56 lbs. to 60 lbs.; third sort, weighing 38 lbs. to 56 lbs.; fourth sort, weighing 28 lbs. to 37 lbs.; fifth sort, weighing 18 lbs. to 27 lbs.

All under 18 lbs. are called *scraples*, and are of the least value. In purchasing elephants' teeth, those that are very crooked, hollow, and broken at the ends, or cracked and decayed in the inside, should be rejected; and care taken that lead or any other substance has not been poured into the hollow. The freight is rated at 16 cwt. to the ton.—(*Milburn's Orient. Com.*)

Supply of Ivory.—The imports of elephants' teeth, in 1831 and 1832, were, at an average, 4,130 cwt., of which 2,950 cwt. were retained for consumption. The medium weight of a tusk may be taken at about 60 lbs.; so that the yearly imports of 1831 and 1832 may be taken at 7,709 tusks; a fact which supposes the destruction of at least 3,854 male elephants! But, supposing the tusks could only be obtained by killing the animal, the destruction would really be a good deal greater, and would most probably, indeed, amount to 4,500 or 5,000 elephants. Occasionally, however, tusks are accidentally broken, one lost in this way being replaced by a new one; and a good many are, also, obtained from elephants that have died in the natural way. Still it is sufficiently obvious, that the supply from the sources now alluded to cannot be very large; and if to the quantity of ivory required for Great Britain, we add that required for the other countries of Europe, America, and Asia, the slaughter of elephants must, after every reasonable deduction is made, appear immense, and it may well excite surprise, that the breed of this noble animal has not been more diminished. The western and eastern coasts of Africa, the Cape of Good Hope, Ceylon, India, and the countries to the eastward of the Straits of Malacca, are the great marts whence supplies of ivory are derived. The imports from Western Africa into Great Britain, in 1831, amounted to 2,575 cwt.; the Cape only furnished 198 cwt. The imports during the same year from India, Ceylon and other Eastern countries, were 2,173 cwt.—(*Parl. Paper*, No. 550. Sess. 1833.) The Chinese market is principally supplied with ivory from Malacca, Siam, and Sumatra.

The chief consumption of ivory in England is in the manufacture of handles for knives; but it is also extensively used in the manufacture of musical and mathematical instruments, chess-men, billiard-balls, plates for miniatures, toys, &c. Ivory articles are said to be manufactured to a greater extent, and with better success, at Dieppe, than in any other place in Europe. But the preparation of this beautiful material is much better understood by the Chinese than by any other people. No European artist has hitherto succeeded in cutting concentric balls after the manner of the Chinese; and their boxes, chess-men, and other ivory articles, are all far superior to any that are to be met with any where else.

Historical Notice.—It is a curious fact, that the people of all Asiatic countries in which the elephant is found, have always had the art of taming the animal and applying it to useful purposes, but that no such art has ever been possessed by any native African nation. Is this owing to any difference between the Asiatic and African elephants, or to the inferior sagacity

of the African people! We incline to think that the latter is the true hypothesis. Alexander the Great is believed to have been the first European who employed elephants in war. It appears pretty certain, that the elephants made use of by the Carthaginians were mostly, if not wholly, brought from India; and that they were managed by Indian leaders. Some of the latter were captured by the Romans, in the great victory gained by Metellus over Asdrubal.—(See, on this curious subject, two very learned and valuable notes in the *Ancient Universal History*, 8vo ed. vol. xvii. p. 529. and p. 549. *Buffon's Article on the Elephant* is a splendid piece of composition.)

The price per cwt., duty (11. per cwt.) included, of elephants' teeth in the London market, in December, 1833, was—

K.

KELP. A substance composed of different materials, of which the fossil or mineral alkali, or, as it is commonly termed, soda, is the chief. This ingredient renders it useful in the composition of soap, in the manufacture of alum, and in the formation of crown and bottle glass. It is formed of marine plants; which, being cut from the rocks with a hook, are collected and dried on the beach to a certain extent; they are afterwards put into kilns prepared for the purpose, the heat of which is sufficient to bring the plants into a state of semification. They are then strongly stirred with iron rakes; and when cool, condense into a dark blue or whitish mass, very hard and solid. Plants about 3 years old yield the largest quantity of kelp. The best kelp has an acrid caustic taste, a sulphurous odour, is compact, and of a dark blue greenish colour. It yields about 5 per cent. of its weight of soda.—(*Barry's Orkney Islands*, p. 377.; *Thomson's Dispensatory*.)

The manufacture of kelp is, or rather was, principally carried on in the Western Islands, and on the western shores of Scotland, where it was introduced from Ireland, about the middle of last century. Towards the end of the late war, the kelp shores of the island of North Uist let for 7,000l. a year. It has been calculated that the quantity of kelp annually manufactured in the Hebrides only, exclusive of the mainland, and of the Orkney and Shetland Isles, amounted, at the period referred to, to about 6,000 tons a year; and that the total quantity made in Scotland and its adjacent isles amounted to about 20,000 tons. At some periods during the war, it sold for 20s. a ton; but at an average of the 23 years ending with 1822, the price was 10l. 9s. 7d.—(*Art. Scotland, Edinburgh Encyclopaedia*.)

Unluckily, however, the foundations on which this manufacture rested were altogether fallacious. Its existence depended on the maintenance of the high duties on barilla and salt. Inasmuch, however, as kelp could not be substituted, without undergoing a very expensive process, for barilla, in a great many departments of industry in which the use of mineral alkali is indispensable, it became necessary materially to reduce the high duty laid on barilla during the war. The ruin of the kelp manufacture has been ascribed to this reduction; but though barilla had been altogether excluded from our markets, which could not have been done without great injury to many most important manufactures, the result would have been perfectly the same, in so far as kelp is concerned, unless the high duty on salt had also been maintained. It was the repeal of the latter that gave the kelp manufacture the coup de grace. The purification of kelp so as to render it fit for soap-making, is a much more troublesome and expensive process than the decomposition of salt; and the greatest quantity of alkali used, is now obtained by the latter method. Had the duty on salt not been repealed, kelp might still have been manufactured, notwithstanding the reduction of duty on barilla.

The manufacture is now almost extinct. Shores that formerly yielded the proprietors a rent of 200l. to 500l. a year, are now worth nothing. The price of kelp since 1822 has not been, at an average, above 4s. a ton; and the article will, most probably, soon cease to be produced.

This result, though injurious to the proprietors of kelp shores, and productive of temporary distress to the labourers employed in the manufacture, is not to be regretted. It could not have been avoided, without keeping up the price of some of the most important necessities of life at a forced and unnatural elevation. The high price of kelp was occasioned by the exigencies of the late war, which, besides obstructing the supply of barilla, forced government to lay high duties on it and on salt. The proprietors had not the vestige of a ground for considering that such a state of things would be permanent; they did right in profiting by it while it lasted; but they could not expect that government was to subject the country, during peace, to some of the severest privations occasioned by the war, merely that they might continue to enjoy an accidental advantage.

KENTLEDGE, the name sometimes given to the iron pigs cast in a particular form for ballasting ships, and employed for that purpose.

KERMES (Ger. *Scharlachbeeren*; Du. *Grein, Scharlakenenbessen*; It. *Grana, Chermes, Cremese, Cocchi*; Sp. *Grana Kermes, Grana de la coconja*), an insect (*Coccus ilicis* Lin.) of the same species as the true Mexican cochineal, found upon the *quercus ilex*, a species of oak growing in Spain, France, the Levant, &c. Before the discovery of America, kermes was the most esteemed drug for dyeing scarlet, and had been used for that purpose from a very remote period. Beckmann inclines to think that it was employed by the Phœnicians, and that it excelled even the famous Tyrian purple.—(*Hist. of Invent.* vol. ii. p. 197. Enq. ed.) From the name of *coccum* or *coccus*, cloth dyed with kermes was called *coccinum*, and persons wearing this cloth were said by the Romans to be *coccinati*.—*Mart* lib i.

epig. 97. lin. 6.) It is that the ancients had the opinion of others after his puncture of a particular century that it was but an insect, assuming kermes is of Persian origin. The earliest periods in an article of commerce, of cochineal, it has been vet, prepared in some and though much inferior, they retain the color, and other places it vivaciously, though 200 years has been treated with gletted. trans.); and by

epig. 97. lin. 6.) It is singular, however, notwithstanding its extensive use in antiquity, that the ancients had the most incorrect notions with respect to the nature of kermes: many of them supposing that it was the grains (*grana*) or fruit of the *ilex*. This was Pliny's opinion: others after him considered it in the same light, or as an excrescence formed by the puncture of a particular kind of fly, like the gall nut. It was not till the early part of last century that it was finally and satisfactorily established that the kermes is really nothing but an insect, assuming the appearance of a berry in the process of drying. The term kermes is of Persian origin. The Arabians had been acquainted with this production from the earliest periods in Africa, and having found it in Spain, they cultivated it extensively as an article of commerce, as well as a dye drug for their own use. But since the introduction of cochineal, it has become an object of comparatively trifling importance. It is still, however, prepared in some parts of Spain. Cloths dyed with kermes are of a deep red colour; and though much inferior in brilliancy to the scarlet cloths dyed with real Mexican cochineal, they retain the colour better, and are less liable to stain. The old tapestries of Brussels, and other places in Flanders, which have scarcely lost any thing of their original vivacity, though 200 years old, were all dyed with kermes. The history of this production has been treated with great learning by Beckmann (*Hist. of Invent.* vol. i. pp. 171—191. 1st ed. trans.); and by Dr. Bancroft (*Permanent Colours*, vol. i. pp. 393—409.)

KINO (Fr. *Gomme de Kino*; Ger. *Kinoharz*; It. *Chino*), a gum, the produce of trees that grow in the East and West Indies, Africa, Botany Bay, &c. The kino now found in the shops is said by Dr. A. T. Thomson to come from India, and to be the produce of the *nauclea gambir*. The branches and twigs are bruised and boiled in water. The decoction is then evaporated until it acquires the consistence of an extract, which is kino. It is imported in chests containing from 1 to 2 cwt.; and on the inside of the lid of each chest is a paper, inscribed with the name of John Brown, the month and year of its importation, and stating that it is the produce of Amboyna. It is inodorous, very rough, and slightly bitter when first taken into the mouth: but it afterwards impresses a degree of sweetness on the palate. It is in small, uniform, deep brown, shining, brittle fragments, which appear like portions of a dried extract broken down; being perfectly uniform in their appearance. It is easily pulverised, affording a powder of a lighter brown colour than the fragments. But it may be doubted whether the inspissated juice of the *nauclea gambir* ought to be considered as kino. Dr. Ainslie says that Botany Bay kino is the only kind he had seen in an Indian bazaar. The tree which yields it grows to a great height: it flows from incisions made into the wood of the trunk.—(*Thomson's Dispensatory*; *Ainslie's Materia Indica*.)

KNIVES (Ger. *Messer*; Du. *Messen*; Fr. *Couteaux*; It. *Coltelli*; Sp. *Cuchillos*; Rus. *Noshi*) well known utensils made of iron and steel, and employed to cut with; they are principally manufactured in London and Sheffield. Knives are made for a variety of purposes, as their different denominations imply; such as table knives, penknives, oyster knives, pruning knives, &c. Although England at present excels every part of the world in the manufacture of knives, as in most branches of cutlery, the finer kinds were imported until the reign of Elizabeth. It is stated by Mr. Macpherson (*Annals of Com. Anno 1563*), that knives were not made for use in England till 1563; but there can be no doubt that this is an error. They had been made, though probably of a rude and clumsy pattern, for centuries before, in the district called Hallamshire, of which Sheffield is the centre; and the cutlers of London were formed into a corporation in 1417.—(*Manufactures in Metal*, vol. ii. c. i. in *Lardner's Cyclopædia*.)

KÖNIGSBERG, the capital of East Prussia, in lat. 54° 42' 11" N., lon. 20° 29' 15" E. Population 68,000.

Port, &c.—Königsberg is situated on the Pregel, which flows into the Frische Haff, or Fresh Bay, a large lake having from 10 to 14 feet water. The bar at the mouth of the Pregel has only from 5 to 12 feet water, so that none but flat-bottomed boats can ascend to the city. Pillau, in lat. 54° 33' 39" N., lon. 19° 52' 30" E., on the north side of the entrance from the Baltic to the Frische Haff, is properly the port of Königsberg. Within these few years, a light-house has been erected on a rising ground, a little to the south of Pillau, the lantern of which is elevated 103 feet above the level of the sea. The light is fixed and brilliant. The entrance to the harbour is marked by buoys; those on the leeward side being surmounted by small flags. A Gothic building, 120 feet above the level of the sea, has been erected to serve for a land-mark; at a distance it looks like a three-masted ship under sail. There is usually from 15 to 16 feet water between the buoys on entering the harbour; but particular winds occasion material differences in this respect.

Trade of Königsberg.—Being situated on a navigable river of considerable importance, Königsberg has a large command of internal navigation, and is the principal emporium of a large extent of country. Wheat, rye, and other species of grain, are the chief articles of export. The wheat is somewhat similar to that of Dantzic, but of inferior quality, being larger in the berry, and thicker skinned. The rye is thin, and also the barley, with few exceptions, and light. Peas are of a remarkably large quality. Oats are common feed, with a slight admixture of tares; but as these last answer in some degree the purpose of beans, the value of the oats is rather enhanced than otherwise by the circumstance. More tares are shipped here than from any other port in the Baltic. The prices of all sorts of grain are usually lower at Königsberg than at the neighbouring Prussian ports. Hemp, flax, lin-

seed, yarn, and bristles, are largely exported; with smaller quantities of wool, ashes, feathers, wax, hides and skins, &c. The bristles are the best in the Baltic. Timber, deals, and staves, are as good as at Memel, but are rather scarce. The imports are coffee, sugar, cotton stuffs and yarn, hardware, dye woods, spices, tobacco, coals, rum, &c. Salt is a government monopoly; any person being allowed to import it, but he must either sell it to government at a price fixed by them, or export it again.

Money, Weights, and Measures, same as at DANZIC; which see.

LAC, or GUM LAC (Ger. *Lack*, *Gummilack*; Fr. *Lacque*, *Gomme lacque*; It. *Lacca*, *Gommilacca*; Sp. *Goma laca*; Rus. *Laka*, *Gummilak*; Arab. *Lauk*; Hind. *Laksh*; Sans. *Lakshā*), a substance, which has been improperly called a gum, produced in Bengal, Assam, Pegu, Siam, &c., on the leaves and branches of certain trees, by an insect (*Chermes lacca*). The trees selected by the insect on which to deposit its eggs are known by the names of the bihar tree (*Croton laciferum* Lin.), the popal (*Butea frondosa*), both, and coosim trees, &c. After being deposited, the egg is covered by the insect with a quantity of this peculiar substance, or lac, evidently intended to serve, in the economy of nature, as a nidus and protection to the ovum and insect in its first stage, and as food for the maggot in its more advanced stage. It is formed into cells, finished with as much art as a honey-comb, but differently arranged. Lac yields a fine red dye, which, though not so bright as the true Mexican cochineal, is said to be more permanent; and the resinous part is extensively used in the manufacture of sealing wax and hats, and as a varnish.

Lac, when in its natural state, encrusting leaves and twigs, is called *stick lac*; it is collected twice a year; and the only trouble in procuring it is in breaking down the leaves and branches, and carrying

them to market. When separated from them, as freight. The best stick lac is when broken shreds of their cells, it becomes pale for a varnish.

Lac dye, lac lake, or lake process have been adopted instead of indigo. It should be scraped or powdered, it is sandy, light-coloured and rejected.

Notwithstanding the extent of the country. The annual since 1818. The finest quality manufactured under contract. When stick lac has been rounded, the native silk water. The yellowish, but mustard seed, is called *stick lac*. The natives use the lower class of female superior classes.

Stick lac is produced from a charcoal fire, when the most liquefiable, is obtained. Thin-transparent, or embossed, it should always, when burnt, however thin, should be burnt with a strong country in the manufacture to be very extensively used in the last three or four years, fall in the price of lac dye. In Bengal, lac is chiefly obtained from the stick lac, is inferior to that produced from the lac tree.

LACE (Du. *Kanten*; Sp. *Encajes*), a threads of gold, silver, hem or fringe of a garment. The origin of this del there is no doubt it lays many beautiful lace patterns and from the derivation. It is supposed to be from Venice, where, and long previously worn; but laces of gold, and silk are exported.—(1 Rich. 3. c. begun in England prior (19 Hon. 7. c. 21, § 5 E

In addition to the above and from other countries.

them to market. When the twigs or sticks are large, or only partially covered, the lac is frequently separated from them, as it always ought to be when shipped for Europe, to lessen the expense of freight. The best stick lac is of a deep red colour. When held against the light, it should look bright, and when broken should appear in diamond-like points. If it be not gathered till the insects have left their cells, it becomes pale, and pierced at the top; and is of little use as a dye, though probably better for a varnish.

Lac dye, lac lake, or cake lac, consists of the colouring matter extracted from the stick lac. Various processes have been adopted for this purpose. It is formed into small square cakes or pieces, like those of indigo. It should, when broken, look dark-coloured, shining, smooth, and compact; when scraped or powdered, it should be of a bright red colour, approaching to that of carmine. That which is sandy, light-coloured and spongy, and which, when scraped, is of a dull brick-dust colour, should be rejected.

Notwithstanding the continued fall in the price of cochineal, the use of lac dye has been extending in this country. The annual consumption may at present amount to about 600,000 lbs., having trebled since 1818. The finest qualities of lac dye are seldom met with for sale in Calcutta, being generally manufactured under contract for the European market.

When stick lac has been separated from the twigs to which it naturally adheres, and coarsely powdered, the native silk and cotton dyers extract the colour as far as it conveniently can be done by water. The yellowish, hard, resinous powder which remains, having somewhat of the appearance of mustard seed, is called **seed lac**. When liquified by fire, it is formed into cakes, and denominated **lump lac**. The natives use the latter in making bangles, or ornaments in the form of rings, for the arms of the lower class of females; the best **shellac** being used in manufacturing these ornaments for the superior classes.

Shellac is produced from seed lac, by putting the latter into bags of cotton cloth, and holding it over a charcoal fire, when the lac melts, and being strained through the bag, the resinous part, which is the most liquefiable, is obtained in a considerable degree of purity; it is formed into thin sheets or plates. Thin-transparent, or amber-coloured shells are the best; and that which is thick, dark, or speckled; it should always, when broken, be amber-coloured on the edge; that which has a dark brown fracture, however thin, should be rejected. When laid on a hot iron, shellac, if pure, will instantly catch fire, and burn with a strong but not disagreeable smell. It used to be principally employed in this country in the manufacture of sealing wax, and as a varnish; but within these few years it has begun to be very extensively used in the manufacture of hats. Shellac has advanced rapidly in price during the last three or four years; a circumstance which has had a considerable effect in accelerating the fall in the price of lac dye; the quantity of the latter being necessarily increased in consequence of the greater demand for the former.

In Bengal, lac is chiefly produced in the forests of Sylhet and Burdwan. The finest dye is said to be obtained from the stick lac of Slam and Pegu; but the shellac or resinous part obtained from the latter, is inferior to that produced from Sylhet stick lac. It may be obtained in almost any quantity.

Account of the Quantities of Lac Dye or Lac Lake, Shellac and Seed Lac, and Stick Lac, imported into Great Britain, from the Countries eastward of the Cape of Good Hope, since 1814.

The finest lac dye is distinguished by the mark D. T.; the second by J. M. R.; the third, by C. F. R. In January, 1824, the prices of the different species of lac in bond in the London market were as follows:—

	per lb.	L. s. d.	to	L. s. d.
Lac lake		0 0	to	0 0
dye, D. T.		0 8	to	0 8
J. M. R.		0 1	to	0 1
C. F. R.		0 1	to	0 1
low and mid.		0 0	to	0 1
Seed lac	per cwt.	8 0	to	4 0
Stick lac		2 10	to	2 16
Shellac, liver		6 0	to	6 10

Shellac, liver, D. T.	per cwt.	L. s. d.	L. s. d.
— orange		7 0	to 7 10
— black		6 0	to 6 10

In 1829, D. T. lac dye was as high as 8s. 6d. and 8s. 6d. per lb. The duties used to be 6 per cent. on lac dye, seed lac, and stick lac; and 30 per cent. on shellac; but it was obviously absurd to charge shellac, which, as already seen, is prepared from the refuse of the lac dye, with four times the duty laid upon the latter. This ridiculous distinction is now, however, put an end to; the present duties being 6s. a cwt. on lac dye and shellac, and 1s. a cwt. on stick lac—(See *Encyclopædia of Practical Colours*, vol. II. pp. 11—20) *Annals of Man. Ind. & Milburn's Orient. Com. & Transit Information*.)

LACE (Du. *Kanten*; Fr. *Dentelle*; Ger. *Spitzen*; It. *Merletti*, *Pizzi*; Rus. *Krushewo*; Sp. *Encajes*), a plain or ornamental net-work, tastefully composed of many fine threads of gold, silver, silk, flax, or cotton, interwoven, from *Lacinia* (Lat.), the guard hem or fringe of a garment.

The origin of this delicate and beautiful fabric is involved in considerable obscurity, but there is no doubt it lays claim to high antiquity. In Mr. Hope's *Costumes of the Ancients*, many beautiful lace patterns are portrayed on the borders of the dresses of Grecian females; and from the derivation of the word "lace," it is probable it was not unknown to the Romans. It is supposed that Mary de' Medici was the first who brought lace into France, from Venice, where, and in the neighbouring states of Italy, it is understood to have been long previously worn; but we find that in England, so early as 1483, "laces of thread, and laces of gold, and silk and gold," were enumerated among the articles prohibited to be imported.—(1 *Rich. 3. c. 10*.) It is, therefore, fair to presume that this manufacture had begun in England prior to that period, as this and many subsequent acts were passed—(10 *Hon. 7. c. 21*; 5 *Eliz. c. 7*; 13 & 14 *Car. 2. c. 13*; 4 & 5 *W. & M. c. 10*, &c.)—

* In addition to the above, an inconsiderable quantity of lac dye, &c. is sometimes imported at second hand from other countries.

for the encouragement and protection of our home manufacture; but it may equally be concluded, that as *pins* (which are indispensable in the process of lace making) were not used in England till 1543, the manufacture of lace must have been vulgar in fabric, and circumscribed in its extent. Tradition says that the lace manufacture was introduced into this country by some refugees from Flanders, who settled at or near Cranfield, now a scattered village on the west side of Bedfordshire, and adjoining Bucks; but there is no certain evidence that we are indebted to the Flemings for the original introduction of this beautiful art, although from them we have undoubtedly derived almost all the different manufactures relating to dress. We have, however, imitated many of their lace fabrics, and greatly improved our manufactures at various periods, from the superior taste displayed in the production of this article in the Low Countries. In 1626, Sir Henry Borlase founded and endowed the free school at Great Marlow, for 24 boys, to read, write, and cast accounts; and for 24 girls to knit, spin, and make *bone lace*—(*Lewis's Topography*); so that there is reason to suppose that at this time the manufacture had commenced in Buckinghamshire, which, by degrees extended to the adjoining counties of Bedford and Northampton. In 1640, the lace trade was a flourishing interest in Buckinghamshire—(*Fuller's Worthies*, and different *Itineraries*); and so greatly had it advanced in England, that by a royal ordinance in France, passed in 1660, a mark was established upon the thread lace imported from this country and from Flanders, and upon the point lace from Genoa, Venice, and other foreign countries, in order to secure payment of the customs duties.—(*Universal Dictionary*.)

Pillow Lace,—the original manufacture,—is worked upon a hard stuffed pillow, with silk, flax, or cotton threads, according to a parchment pattern placed upon it, by means of pins, bobbins and spindles, which are placed and displaced, twisting, and interweaving the threads, so as to imitate the pattern designed. This manufacture has been long pursued in almost every town and village in the midland counties, particularly in Buckinghamshire, Bedfordshire, and Northamptonshire, besides at Honiton, in Devon, and various other places in the west of England. The principal places where it is made in the Netherlands are Antwerp, Brussels, Mechlin, Louvaine, Ghent, Valenciennes, and Lisle. It is also made at Chantilly near Paris (celebrated for veils), Charleville, Sedan, Le Compté de Bourgoyne, Liege, Dieppe, Havre de Grace, Harfleur, Pont l'Evesque, Gosors, Fescamp, Caen, Arras, Bapaume, &c., in France; and at various places in Spain, Portugal, and Italy. We can form no estimate of the number of persons employed on the Continent; but in Brussels alone not less than 10,000 are said to be engaged in this manufacture.—(*Ency. Metrop.*) In England and Ireland, besides the laws passed at different times to encourage and protect the manufacture, associations were formed in various places, with the view of exciting a spirit of emulation and improvement, by holding out premiums for the production of the best pieces of bone lace; and although smuggling of foreign lace was carried on to a great extent, (in 1772, 72,000 ells of French lace were seized in the port of Leigh, and lodged in the king's warehouse there, besides numerous other seizures,) the British manufacture advanced in an unparalleled degree.—(*Gentleman's Mag.* 1751, vol. xxi. p. 520; vol. xlii. p. 434.) It is imagined that the first lace ever made in this country was of the sort called *Brussels point*, the net work made by bone bobbins on the pillow, and the pattern and sprigs worked with the needle. Such appears to have been the kind worn by the nobility and people of high rank, as is evident by the different portraits now in existence, painted by Vanduyke, in the time of Charles I., and afterwards by Sir Peter Lely and Sir Godfrey Kneller, in the succeeding reigns of Charles II., Queen Anne, and George I. About a century since, the *grounds* in use were the old Mechlin, and what the trade termed the *wire ground*, which was very similar, if not identical, with the *modern Mochlin*, the principal article in the present French manufacture. The laces made in these grounds were singularly rich and durable; the designs of the *old Mechlin* resembled the figures commonly introduced in ornamental carving. Between 70 and 80 years ago, a great deterioration was occasioned by the introduction of the *Trolley ground*, which was exceedingly coarse and vulgar, the figure angular, and altogether in the worst taste conceivable. An improvement, however, took place about the year 1770, when the ground which is probably the most ancient known, was reintroduced; this was no other than the one still in partial use, and denominated the *old French ground*. About 1777 or 1778, quite a *new ground* was attempted by the inhabitants of Buckingham and its neighbourhood, which quickly superseded all the others; this was the *point ground*, which had (as is supposed) been imported from the Netherlands. From the first appearance of this ground may be dated the origin of the modern pillow lace trade; but it was not until the beginning of the present century that the most striking improvements were made; for during the last quarter of the eighteenth century, the article, though certainly much more light and elegant from the construction of the ground, was miserably poor and spiritless in the design. Soon after the year 1800, a freer and bolder style was adopted; and from that time to 1812, the improvement and consequent success were astonishing and unprecedented. At Honiton, in Devon, the manufacture had arrived at that perfection, was so tasteful in the design, and so delicate and

beautiful in the workmanship. During the late war they are now sold from ever, were about this time new manufacture. The lace, and has at length become truly deplorable. It is in pillow lace making, however, that the neighbourhood of Honiton and the neighbourhood of 120,000 persons were diminished.

Nottingham Lace.—In the year 1768, was the first of money, employment in wife's cap, that he could see. *Senior Henson* on *Hosiery* is ostensibly for lace (imported from London) was called *Brussels ground*. This in manufacturing the lace their leisure hours employed perfecting a complete lace in 1782, the warp frame was in 1799, it was first attended answer. During the use of the machines, with succeeded in discovering for 14 years for his invention 1815-16; but did not succeed and a great stimulus was Heathcoat's patent, the different hand frames had trade; and numerous barked capital in so to be increased; but the demand of general supply,—rivalling of France and the Netherlands.

Mr. William Felkin, manufacturer, considers bobbin net trade may be

beautiful in the workmanship, as not to be excelled even by the best specimens of Brussels lace. During the late war, veils of this lace were sold in London at from 20 to 100 guineas; they are now sold from 8 to 15 guineas. The effects of the competition of machinery, however, were about this time felt; and in 1815, the broad laces began to be superseded by the new manufacture. The pillow lace trade has since been gradually dwindling into insignificance, and has at length sunk into a state which, compared with its condition 20 years back, is truly deplorable. It is difficult to form an estimate of the number of persons employed in pillow lace, making during its prosperity; but in a petition from the makers in Buckingham and the neighbourhood, presented to her present Majesty in 1830, it was stated that 120,000 persons were dependent on this trade; but this number had since been materially diminished.

Nottingham Lace.—A frame-work knitter of Nottingham, named Hammond, about the year 1788, was the first who made lace by machinery. Dissipated in habits, and destitute of money, employment, or credit, the idea struck him, while looking at the broad lace on his wife's cap, that he could fabricate a similar article by means of his stocking frame.—(*Grassner's History of Hosiery, Lace, &c.*, p. 295.) He tried, and succeeded. The first machine ostensibly for lace (introduced at Nottingham about the same period, by A. Else and Harvey of London) was called a pin machine, for making single press *point net* in imitation of the Brussels ground. This machine, although lost here, is still used in France to a great extent in manufacturing the net called *tulle*. This was the age of experiments; and workmen at their leisure hours employed themselves in forming new meshes on the hand, in hope of perfecting a complete hexagon, which had hitherto eluded all their efforts to discover. In 1782, the warp frame was introduced, which is still in use for making *warp lace*; and in 1799, it was first attempted to make *bobbin net* by machinery; but this was not found to answer. During the succeeding 10 years many alterations were made in the construction of the machines, with no better success, until at length, in 1809, Mr. Heathcoat of Tiverton succeeded in discovering the correct principle of the bobbin net frame, and obtained a patent for 14 years for his invention.* Steam power was first introduced by Mr. John Lindley, in 1815-16; but did not come into active operation till 1820. It became general in 1822-23; and a great stimulus was at this period given to the trade, owing to the expiration of Mr. Heathcoat's patent, the increased application of power, and the perfection to which the different hand frames had by this time been brought. A temporary prosperity shone on the trade; and numerous individuals—clergymen, lawyers, doctors, and others—readily embarked capital in so tempting a speculation. Prices fell in proportion as production increased; but the demand was immense; and the Nottingham lace frame became the organ of general supply,—rivaling and supplanting, in plain nets, the most finished productions of France and the Netherlands.

Mr. William Felkin, of Nottingham, the author of a very able statement relative to this manufacture, considers that the amount of capital and the number of hands employed in the bobbin net trade may be thus estimated.—(Published August, 1833.)

Capital employed in spinning and doubling the Yarn.		Number of Hands employed.	
L.	£.		
Fixed capital in 85 spinning and 34 doubling factories—724,000 spinning 296,700 doubling spindles	716,000	In spinning: adults, 4,400; children, 5,500	10,900
Floating capital in spinners' and doublers' stock, and necessary sundries	200,000	In doubling: adults, 1,300; children, 2,000	3,300
Deduct 1-8th employed for foreign bobbin net trade	155,000	Deduct 1-8th employed for foreign demand	2,300
Total capital in spinning and doubling for English bobbin net trade	760,000		11,300
Capital employed in Bobbin Net making.			
Fixed capital in 25 factories, principally for power machines	85,000	In power net making: adults, 1,500; youths, 1,000; children, 500; women and girls, mending, 2,000	5,000
1,101 power machines, averaging 11-4ths wide	170,000	In hand machine working: small machine owners, 4,000; journeymen and apprentices, 4,000; winders, 4,000; mendors, 4,000	16,000
9,800 hand machines, averaging 9-4ths wide	207,000	In mending, pearting, drawing, finishing, &c.	36,000
Floating capital in stock on hand: Power owners	150,000	In embroidering: at present very uncertain; probably about	100,000
Hand owners	250,000	Total of hands employed	116,800
Capital in embroidering, preparing, and stock	250,000		
Total capital employed in the trade	£ 1,308,000		

* I expressed our conviction, in the former edition of this work, that Mr. Felkin had exaggerated the number of persons employed; and we observe, that in this estimate the number is materially diminished; but it must be remarked, that during the last 2 years an extraordinary depression has taken place in the embroidery branch, and many have abandoned the trade.

In 1831 (*vide* former edition of this work), the annual produce was estimated at 23,400,000 square yards, worth 1,891,875*l.* It is now estimated at 30,771,000 square yards,

* Since this article was printed in our first edition, Mr. Heathcoat was pointed out to us as the original inventor of the bobbin net machine, and that, prior to his patent being obtained, bobbin net by machinery was unknown, although numerous attempts had been made to produce it by its means. Mr. Brunel, engineer, who was examined, as a witness, in the action *Boville v. Moore*, tried before Sir Vinery Gibbs, in March, 1816, stated in reference to this machine, that when Mr. Heathcoat had separated one half of the threads, and placed them on a beam as warp threads, and made the bobbin which carried the other half of the threads act between those warp threads, so as to produce Buckinghamshire or pillow lace, *the lace machine was invented*. Relying upon the authenticity of his statement, we feel it due to Mr. Heathcoat to give this explanation.

worth 1,850,650*l*. It would therefore appear that 7,000,000 square yards more per annum are now produced for about the same amount of wages and profits. This increase in quantity is understood to have arisen from the new and improved machinery which in the mean time has been introduced. At this moment, there are, perhaps, 20 new applications of known principles, all tending to promote variety and increased production; but it is doubtful if any new principle has been brought into operation. A considerable increase has also taken place in bobbin net machinery on the Continent, particularly at Calais, where, in 1823, there were not 35 machines, and, perhaps, not 100 on the Continent altogether. Mr Felkin states the number of frames now employed there, as under:—

Calais	600	8-4ths 11 point hand circular quillings. 100 of these built this year and last.	Paris	10	hand machines chiefly.
Do.	60	7-4th 11 point hand levers.	Lyons	50	do. do.
Do.	45	various widths; old machines, pinbars, traverses, &c.	Villages in the north of France	340	do. do.
Boulogne	80	hand circular; chiefly 8-4th quillings.	Switzerland	80	nearly all hand machines.
St. Omers	30	hand machines; plain nets.	Saxony	70	do. do.
Donay	145	part power, part hand machines; plain net.	Austria	60	power and hand do.
Lisle	120	chiefly 8-4ths, 10-4ths, and 12-4ths, power; plain nets.	Russia and Prussia	20	probably; and both hand and power.
Ghent	35	power, 10-4ths.			
St. Quentin	30	chiefly hand; plain nets.			
Do.	80	8-4ths, 10-4ths, and 12-4ths, power; plain nets chiefly.			
Caen	35	hand; quillings chiefly.			
			Total	1,850	machines.

The produce of these machines is estimated at 9,924,000 square yards of net, of the value in English money of 570,250*l*. In France alone, it was stated in an address presented to the Chamber of Deputies in March, 1833, that bobbin net to the value of 1,000,000*l*, sterling was annually used in that country, formed of equal moieties of French and English manufacture. But in other parts of Europe, where the manufacture was previously unknown, it is now also beginning to be established. Besides Austria, Russia, and Prussia, it is stated that orders have been sent to this country for bobbin net frames from Barcelona and Astorga in Spain, and even from some places in Persia. The attention of government has been called to the circumstance, and measures taken to prevent the illegal exportation of machinery. At a public meeting, held in Nottingham in August last, a committee was formed for the same purpose.

The population of Nottingham and the surrounding villages in 1811, when the bobbin net manufacture commenced, was 47,000; the present number is 79,000. As the hosiery and the point net trade are understood to have declined in the mean time, and no other branch materially advanced or sprung up, this large increase may fairly be attributed to the bobbin net manufacture.

By comparing the value of 1,270,000 lbs. of Sea Island cotton, worth 148,000*l*, and about 10,000*l* worth of thrown silk, which appears to be annually used in this manufacture, with the manufactured value of the same, worked into 30,771,000 square yards of bobbin net, the estimated value of which is 1,850,650*l*, the great national utility of this trade becomes at once evident. A clear surplus of more than a pound sterling is realised upon every pound avoirdupois of the raw material, which is distributed over the trade in rent, profit, and wages, and this is altogether independent of the profits arising from embroidering, in itself a most extensive and important branch. About half, or perhaps three-fourths, of this production is supposed to be exported in a plain state, chiefly to Hamburg, the Leipzig and Frankfort fairs, Antwerp and the rest of Belgium, to France (contraband), Italy, Sicily, and North and South America. Of the remainder, three-fourths are sold unembroidered, and the remaining fourth embroidered, in this country.

The English manufacture from machinery is now confined to *point net*, *warp net*, and *bobbin net*, so called from the peculiar construction of the machines by which they are produced. There were various other descriptions made; viz. *two-plain net*, *square or tuck knotted net*, the *fish mesh net*, and the *platted or Urling's net*; but they are now discontinued—(*Gravenor Henson*.) Nottingham is the *dépot* of the lace trade; and the supplies, collected from all the surrounding villages, and even from the more distant counties where it is manufactured, are thence distributed to the four quarters of the world.

Present condition of the Lace Trade, Wages, &c.—We are grieved to say that the manufacture, not only of pillow but also of Nottingham lace, is at this moment in a state of great depression. The growth of the latter has been the means of destroying the former; but as the new manufacture is by far the most valuable, the change, though severely felt by many thousands of poor persons in Bucks, Bedford, and other counties, is, in a national point of view, decidedly advantageous. The depression in the Nottingham lace trade seems to be the result of its previous prosperity; which, besides contributing to the extraordinary increase in the powers of production, attracted too much capital and too many hands to the trade. So long as the demand kept pace with the supply, workmen were kept in full employment, wages and profits were good, and the stocks on hand small. But of late years the supply has been a question of *quantity* rather than of *quality*, and prices have consequently suffered a great depression. Lace, having become a common ornament, easily accessible to all classes, has lost its attractions in the fashionable circles, by which it was

formerly patronised, so that dresses, which in our drawing tasteful patterns in lace, are

The wages of the power to 18s. per week—(*Felkin*), eighth in number, and one chine than heretofore have shifts, or 18 hours per day, wages; the effect of which plaited in value), and reduce the increase in power machine workmen (already below the accumulating production, by immediate amelioration in the embroidering branch; he employed, and had to leave mens of embroidery (some 14 hours a day), the young filiation of the embroiderers in tion of the Belgians, who is easy to account for. formerly patronised, so that very rich lace is no longer in demand. And many articles of dress, which in our drawing-rooms and ball-rooms, lately consisted of the most costly and beautiful patterns in lace, are now either superseded, or made of a different manufacture.

The wages of the *power loom* workmen have fallen, within the last 4 years, from 1*l.* 4*s.* to 1*s.* per week—(Felkin, p. 2.) and, in 1830 and 1831, machines had increased one eighth in number, and one sixth in capacity of production. But wider or speedier machines than heretofore have since come into more general use, worked by 3 men in 6 hour shifts, or 18 hours per day, and calculated to produce about a *fourth more net for the same wages*; the effect of which is to supersede the single-handed machines, (now much depreciated in value), and reduce many of the small owners to journeymen. The tendency of the increase in power machinery is still further to depreciate the wages of the *hand machine* workmen (already below the standard of the power loom weaver); and the increased and accumulating production, beyond a proportionate demand, renders it hopeless to expect any immediate amelioration in their condition. A favourable reaction is now taking place in the *embroidering* branch; but many of the embroiderers in Nottingham were recently unemployed, and had to leave the trade; and even for the most splendid and beautiful specimens of embroidery (some of which have occupied 6 weeks, working 8 days a week and 14 hours a day), the young women did not earn more than 1*s.* a day. The depressed condition of the embroiderers is believed to be owing in no inconsiderable degree to the competition of the Belgians, who have acquired a superiority in this department which it is not easy to account for. The condition of the *pillow lace* workers is still more deplorable. Many have now abandoned that pursuit for straw plaiting, which offers a more certain, though not a much more profitable employment; but those who still linger on in the fabrication of thread lace, working from 12 to 14 hours a day, cannot obtain more, on the average, than *two shillings and sixpence a week* for their anxious and unremitting labour. Ten years ago they could, with greater ease, earn 10*s.* a week, working only 8 hours a day.

The health of the power machine workman is, on the whole, understood to be good; the factories are neither hot nor confined; and the hands have only to superintend, not work the machines. Hand machine labour is much heavier; but as it is the custom to work by "shifts," the men are seldom more than 6 hours a day at the frame. It is, however, believed, that the gradual depression of wages, requiring increased exertion, will tend to deteriorate the general health of this class, particularly of those employed in wide machines. The embroidery frame is, perhaps, the most destructive. The workers in general, commence at a tender age; and from constantly leaning over the frame, while their bodies remain in a state of inactivity, they are frequently distorted in their persons, and become the victims of pulmonary disease. Notwithstanding the sedentary habits of the pillow lace workers, their general health is understood to be better than that of the lace embroiderers; but, in both these employments, the hours of labour are too long for children. They are, however, purely domestic employments, under the superintendence of parents; but as the existence of the latter depends on the quantity of labour they can bring into operation, their necessities place filial considerations beyond the reach of legislative, or even social, interference.

The most celebrated foreign laces are—

1. *Brunois*; the most valuable. There are 2 kinds; *Brunois ground*, having a hexagon mesh, formed by plaiting and twisting 4 strands of flax in a perpendicular line of mesh; *Brunois veuve ground*, made of silk—meshes partly straight, and partly arched. The pattern is worked separately, and set on by the needle.
2. *Mechlin*; a hexagon mesh formed of 8 flax threads twisted and plaited in a perpendicular line or pillar. The pattern is worked in the net.
3. *Falencienne*; an irregular hexagonal form of 8 threads, partly twisted and plaited at the top of the mesh. The pattern is worked in the net similar to Mechlin lace.
4. *Lille*; a diamond mesh, formed of 8 threads plaited to a pillar.
5. *Alencon* (called blind); hexagon of 8 threads, twisted similar to buckingham lace; considered the most inferior of any made on the cushion.
6. *Alencon Point*; formed of 8 threads to a pillar, with octagon and square meshes alternately.

The French nets made by machinery, are—

1. *Single Presspoint*, called, when not ornamented, *tulle*, and when ornamented, *dentelle*; made of silk; is an inferior net, but is attractive from the beautiful manner in which it is stiffened.
 2. *Tulle Berlin*; so called from its being invented at Berlin, and the stitch being removed 3 needles from its place of looping; is fanciful and ornamented in appearance, but not in demand in England.
 3. *Tulle de Tulle*, made from the warp net machine; mesh of 8 descriptions, which gives a shaded appearance to the net.
 4. *Tulle Anglaise* is double pressed point lace.
- Bobbin net*, principally made by English emigrants, who have *Warp net*, settled in France.

* * * We are indebted for this learned and very excellent article to Mr. Robert Slater, of Finsbury Street, London.

LACK, a word used in the East Indies to denote the sum of 100,000 rupees, which, supposing them standard, or sicca, at 2*s.* 6*d.*, amounts to 12,500*l.* sterling.

LAGAN. See **FLOTSAM.**

LA GUAYRA, the principal sea-port of the republic of Venezuela, in the province of Caracas, on the Caribbean Sea, in lat. 10° 36' 19" N., lon. 67° 6' 45" W. Population 6,000. In 1810, the population is believed to have amounted to 13,000; the reduction being a consequence of the loss of life caused by the tremendous earthquake of 1812, and the massacres and proscriptions incident to the revolutionary war. The population of the city of Caracas, of which La Guayra may be considered as the port, fell off, from the same cause, from 43,000 in 1810; to 23,000 in 1830; but they are now both increasing.

Port.—There is neither quay nor mole at La Guayra. Ships moor E.N.E. and W.S.W., with their head to the north, at from $\frac{1}{2}$ to $\frac{3}{4}$ of a mile from the land, in from 9 to 16 fathoms. The holding ground

in good; and notwithstanding the openness of the road, vessels properly found in anchors and cables run very little risk of being driven from their moorings.

Trade.—The principal articles of export are coffee, cacao, indigo, hides, sarsaparilla, &c. The quantities and values of these articles exported in 1829, 1830, and 1831, are exhibited in the following Table:—

Years.	Coffee.		Cacao.		Indigo.		Hides.		Sarsaparilla.		Sugar.	
	Weight.	Value in Sterling Money.	Weight.	Value in Sterling Money.	Weight.	Value in Sterling Money.	Number.	Value in Sterling Money.	Weight.	Value in Sterling Money.	Weight.	Value in Sterling Money.
1829	4,822,221	83,758	1,834,322	45,020	865,974	1,099	8,993	2,295	4,201	93	2,314	—
1830	4,870,609	81,301	2,121,448	87,045	917,658	39,237	6,990	2,130	32,172	782	75,410	—
1831	5,268,646	69,390	1,791,814	63,741	102,055	31,456	12,508	4,189	14,990	965	232,672	2,228

The principal articles of import are cotton, linen, and woollen goods, principally from England; with provisions, hats, machinery and utensils, hardware, wine, &c. The entire value of the imports in 1831, was supposed to amount to 102,503*l.*; of which 62,423*l.* was furnished by England; 26,082*l.* by Germany; 32,758*l.* by the United States; 39,344*l.* at second hand by St. Thomas; and the residue by France, Spain, &c.

The duties are moderate. Cottons and linsens pay 27 per cent. *ad valorem*. Smuggling has been very prevalent; but efforts have recently been made, by establishing a sort of coast-guard, to effect its suppression.

Arrivals in 1831.

Health officer's fee	4	0	4	0					
Municipal charge for water	40	0	40	0					

N. B.—A ship introducing a cargo, and sailing in ballast, would be liable to all the above charges, with the exception of the last two.

The charge for water is levied without regard to tonnage; viz. sloops and schooners, 20 dollars each, brig, 20, and ships 40.

Port Regulations.—On casting anchor, a visit is paid by the collector of customs, or his agent, accompanied by other officers, who take from the master his register, manifest, and muster-roll, and an officer is left on board until the cargo is discharged. The master must, within 24 hours after his arrival, when the permit to discharge is granted, and within 3 days all invoices must be presented. The discharge completed, the same officers repair on board to examine the vessel, and all being found in order, the officer is withdrawn. The clearing of a vessel outwards (that has entered with cargo) in ballast is then completed by paying the port charges; proof whereof being produced, the permission to sail is signed by the governor and harbour master. If the vessel take cargo on board, then the same formality, as to visiting, is pursued, as on the entry of a vessel.

Credit.—Goods imported are almost invariably sold upon credit; those exported are, on the other hand always sold for ready money. The terms of credit vary from 2 to 6 months, or more. Bankruptcy is very rare.

Commissioners, Brokers, &c.—Any one who pleases may undertake the functions of broker, factor, or merchant in Venezuela. The only obligation is the paying the patent or licence, that must be taken out by every one exercising such trades. This varies, according to the business, from about 1*l.* to 4*l.*, to 6*l.*, 18*l.*, 4*l.*, and falls on natives as well as foreigners. The rates of commission are as follows:—

On sales of goods imported	5 per cent.	But when monies are collected, and remittance is ordered in bills of exchange, including guarantee of the same.	2 1/2 per cent.
Quarantining the same without regard to time	2 1/2	Negotiating and indorsing bills	2 1/2
On sales of produce	1 1/2	On money remitted as return for goods sold	1 1/2
On shipping produce, as returns for goods imported, or upon orders where cash is provided by the purchaser	2 1/2	On bills remitted as return for goods sold, including guarantee thereof, as may be agreed	1 to 2 1/2
But upon orders where the amount has to be drawn for, or when provision is made in bills of exchange	8	Advancing money upon letters of credit, and drawing for the same	2 1/2
Collecting monies, and remitting the same	8	Collecting or procuring freight for vessels	8

Insurance.—There are no establishments for conducting the business of insurance in Venezuela. **Money, Weights, and Measures.**—The currency of the country consists of silver money, known by the name of *escudos*, divided into dollars of 8 reals, 4 dn. of 3 reals, besides reals, 4 reals, and quattiles or 1/2 reals. This money is of very unequal weight and purity, the coins issued since the commencement of the revolutionary war having been often a good deal defaced. The real should be worth 5*d.* sterling.

Weights and measures same as those of Spain, but it is intended to introduce the British Imperial gallon.

Taxes.—Real tare is taken both at the Custom-house and by the merchant.

Commercial Prospects.—The commerce and industry of Venezuela suffered severely from the revolutionary struggle of which she has been the theatre. But the country is now comparatively tranquil, and there seem to be good reasons for thinking that she is about to enter on a career of prosperity. As the riches of Venezuela consist entirely of the products of her agriculture, the legislature has wisely asserted itself to give it all the encouragement possible. In this view tithes have been abolished, and their collection was finally to cease on the 1st of January, 1834. The tobacco monopoly has also

been abolished, and invites the prospect of their being taken by Spain of the interests; and it is to be 1 We have derived these from Ker Porter, the British con

(LAMAR, formerly Peru, on the west coast population, 2,000.)

In 1833 Lamar is declared public. His situation is, he and is obliged to import at Arica, on the other. The country, where the towns at La Cruz is conveyed across the mines being brought in and chichilla skins, from desert; the copper is founded in the shape of ore.

Pera possesses a long navigation to the Bay of Pica, which the Bolivian government which besides greatly impairs the interest of Arica, which is of her trade. Ellitherto, however, Lamar at present engrosses the trade.

We submit the decree of

1. From and after the 1st of July 1834 shall be absolutely free and open to every nation every nation may enter any place, without being subjected to any tax, or during their stay, or

3. They shall be free from any tax, or any other charge, by levying, or reloading of cargo, or whatever denomination.

4. Goods may be deposited in private warehouses on the part of the government.

other colour. English lambs introduced by Merino of quality, arrived at a pitch of the best fleeces in Spain on an average of 1831 are supplied by Italy. They

LAMP (Ger. Lampe) instrument used for the producing artificial light.

It is unnecessary to give a further remark that the decrees issued in producing a lamp one of the most ingenious and important of Mr. Huddle, of the great importance of Sir

"Besides the facilities afforded, it has enabled the direct expedition, both the presence by each with a candle, as is in order to ascertain its present

facts, prove the actual state of the lamp, in an experiment and as usual in matters of mere conjecture.

been abolished, and invitations have been held out to foreigners to settle in the country; but there is little prospect of their being much attended to, at least for some considerable time. The final recognition by Spain of the independence of this and the other new states would materially promote their interests; and it is to be hoped that it may not be much longer deferred.

We have derived these details principally from the carefully drawn up *Answers* made by Sir Robert Ker Porter, the British consul at Caracas, to the *Circular Queries*.

(LAMAR, formerly COCHISA, a sea-port of the republic of Bolivia, the ci-devant Upper Peru, on the west coast of South America, in lat. 22° 39' 30" S., long. 70° 12' W. Population, 2,000.)

In 1833 Lamar was declared a free port, and in it centres almost the whole foreign trade of the republic. Its situation is, however, very unfavourable. It labours under a great want of fresh water; and is obliged to import all its provisions by sea, either from Valparaiso, on the one hand, or from Arica, on the other. The desert of Atacama lies between it and the internal and populous part of the country, where the towns of Potosi, Cochabamba, Chiriqui, &c. are situated. The produce imported at Lamar is conveyed across the desert on the backs of mules to the interior; the gold and silver of the mines being brought in the same way to the port to be shipped. These, with copper, saltpetre, and chinchilla skins, form the principal articles of export. Saltpetre is found in large quantities in the desert; the copper is found near the coast, and owing to the scarcity of fuel, most part of it is exported in the shape of ore.

Peru possesses a long narrow slip of land, stretching along the coast of the Pacific from Arequipa to the Bay of Pica, which ought naturally to belong to Bolivia, being, in fact the *littoral* of the latter. The Bolivian government has set on foot various negotiations to obtain the cession of this tract, which, besides greatly improving the frontier of the republic, would, at the same time, render her mistress of Arica, which is, in all respects, much better fitted than Lamar for becoming the entrepôt of her trade. Hitherto, however, these negotiations have proved abortive, so that, as already stated, Lamar at present engrosses the whole foreign trade of the state.

We subjoin the decree constituting Lamar a free port:—

1. From and after the 1st of July of the present year, 1833, Port Lamar shall be absolutely free and open.
2. Vessels of every nation may enter this port and remain as long as they please, without being subjected to any tax whatever, either at arrival, or during their stay, or on their departure.
3. They shall be free from all duties of anchorage, tonnage, shifting, unloading, or reloading of cargo, deposit, storage, or any other of whatever denomination.
4. Goods may be deposited in private warehouses, without any interference on the part of the government.
5. The custom-house of Port Lamar is suppressed. In its stead will be a commissary's office, for the purpose of distributing permits for the transportation of goods into the interior.
6. Whichever goods are to be sent into the interior, they must first be presented to the commissary, together with the invoice corresponding.
7. The commissary will register them in a book, together with their valuation, made by two merchants of the place, and the names of their owners, of the person of whom, and the place where they are to be sent. This is to be signed by the person entering the goods, who at the same time binds himself to have them transported direct to the custom house for which they are destined, without opening any of the casks, bags, or other envelops, such of which shall be sealed, marked, and numbered before departure. These points are to be expressed in the permit.
8. The commissary shall by the earliest post send a notice to the collector of the custom-house for which any merchandise is destined, specifying the numbers, characters, quantities, and qualities of the several articles.
9. The goods must not be carried by any accustomed roads, but only through Catana and the public thoroughfares; and whenever they pass through any place at which a guard or commissary is stationed, the permits must be exhibited, in order that their arrival and their sale subsequent may be ascertained.

(See *Digest of Commercial Regulations published by the Government of the United States*, vol. iii. p. 413. *Bull. Abregé de la Géographie*, p. 1106.)—Sup.)

LAMB-SKINS (Ger. *Lammfelle*; Fr. *Peaux d'agneaux*; It. *Pelli agnelline*; Sp. *Pielles de corderos*). The value of lamb-skins varies according to the fineness, brilliancy, and colour of the wool. Black lamb-skins are more generally esteemed than those of any other colour. English lamb-skins are seldom to be met with perfectly black; but since the introduction of Merino sheep into this country, many of the white fleeces have, in point of quality, arrived at a pitch of perfection which justly entitles them to be ranked with some of the best fleeces in Spain. The importation of lamb-skins is immense, having amounted, on an average of 1831 and 1832, to 2,365,635. Eight tenths of the whole quantity are supplied by Italy. They are mostly used in the glove manufacture.

LAMP (Ger. *Lampe*; Fr. *Lampe*; It. *Lucerna*; Sp. *Lampara*; Rus. *Lampadu*), an instrument used for the combustion of liquid inflammable bodies, for the purpose of producing artificial light.

It is unnecessary to give any description of instruments that are so well known. We may, however, remark that the discovery of Sir H. Davy, who, by covering the flame with wire gauze, succeeded in producing a lamp that may be securely used in coal mines charged with inflammable gas; is one of the most ingenious and valuable that has ever been made. The following extracts from a communication of Mr. Huddell, one of the ablest and best-informed coal engineers in the kingdom, evince the great importance of Sir Humphry Davy's invention.

"Besides the facilities afforded by this invention to the working of coal mines abounding in fire damp, it has enabled the directors and superintendents to ascertain, with the utmost precision and expedition, both the presence, the quantity, and correct situation of the gas. Instead of creeping inch by inch with a candle, as is usual, along the galleries of a mine suspected to contain fire damp, in order to ascertain its presence, we walk firmly on with the safe lamp, and, with the utmost confidence, prove the actual state of the mine. By observing attentively the several appearances upon the flame of the lamp, in an examination of this kind, the cause of accidents which happened to the most experienced and cautious miners is completely developed; and this has hitherto been in a great measure matter of mere conjecture.

"It is not necessary that I should enlarge upon the national advantages which must necessarily result from an invention calculated to prolong our supply of mineral coal, because I think them obvious to every reflecting mind; but I cannot conclude without expressing my highest sentiments of admiration for those talents which have developed the properties, and controlled the power, of one of the most dangerous elements which human enterprise has hitherto had to encounter."

LAMP-BLACK (Ger. *Kienruss*; Fr. *Noir de fumée*; It. *Nero di fumo*, *Negrofumo*; Sp. *Negro de humo*). "The finest lamp-black is produced by collecting the smoke from a lamp with a long wick, which supplies more oil than can be perfectly consumed, or by suffering the flame to play against a metalline cover, which impedes the combustion, not only by conducting off part of the heat, but by obstructing the current of air. Lamp-black, however, is prepared in a much cheaper way for the demands of trade. The dregs which remain after the eliquation of pitch, or else small pieces of fir wood, are burned in furnaces of a peculiar construction, the smoke of which is made to pass through a long horizontal flue, terminating in a close boarded chamber. The roof of this chamber is made of coarse cloth, through which the current of air escapes, while the soot remains."—(*Ure's Dictionary*.)

LAND-WAITER, an officer of the Custom-house, whose duty it is, upon landing any merchandise, to taste, weigh, measure, or otherwise examine the various articles, &c., and to take an account of the same. They are likewise styled searchers, and are to attend, and join with, the patent searchers, in execution of all cockets for the shipping of goods to be exported to foreign parts; and, in cases where drawbacks or bounties are to be paid to the merchant on the exportation of any goods, they, as well as the patent searchers, are to certify the shipping thereof on the debentures.

LAPIS LAZULI. See **ULTRAMARINE**.

LAST, an uncertain quantity, varying in different countries, and with respect to different articles. Generally, however, a last is estimated at 4,000 lbs.; but there are great discrepancies.

The following quantities of different articles make a last, viz.—14 barrels of pitch, tar, or asphalt; 12 dozen of hides or skins; 18 barrels of cod-fish, potato, or meal; 20 cades, each of 1,000 herrings, every 1,000 ten handrats, and every 100 five score; 104 quarters of cole-seed; 10 quarters of corn or rape-seed; in some parts of England, 21 quarters of corn go to a last; 13 sacks of wool; 20 dickers (every dicker 12 skins) of leather; 18 barrels of unpacked herrings; 10,000 pilchards; 24 barrels (each barrel containing 100 lbs.) of gunpowder; 1,700 lbs. of feathers or flax.

Last is sometimes used to signify the burden or load of a ship.

LATH, LATHS (Du. *Latten*; Fr. *Lattes*; Ger. *Latten*; It. *Correnti*; Rus. *Slégi*), long, thin, and narrow slips of wood, nailed to the rafters of a roof or ceiling, in order to sustain the covering. Laths are distinguished into various sorts, according to the different kinds of wood of which they are made, and the different purposes to which they are to be applied. They are also distinguished, according to their length, into 5, 4, and 3 feet laths. Their ordinary breadth is about an inch, and their thickness $\frac{1}{2}$ of an inch. Laths are sold by the bundle, which is generally called a hundred; but 7 score, or 140, are computed in the hundred for three feet laths; 6 score or 120, in such as are 4 feet; and for those which are denominated 5 feet, the common hundred, or 5 score.

LATTEN, a name sometimes given to tin plates; that is, to thin plates of iron tinned over.—(See **TRX**.)

LAWN (Ger. and Fr. *Linon*; It. *Linone*, *Rensa*; Sp. *Cambray clarin*), a sort of clear or open worked cambric, which, till of late years, was exclusively manufactured in France and Flanders. At present, the lawn manufacture is established in Scotland, and in the north of Ireland, where articles of this kind are brought to such a degree of perfection, as nearly to rival the productions of the French and Flemish manufactories. In the manufacture of lawns, finer flaxen thread is used than in that of cambric.

LAZARETTO. See **QUARANTINE**.

LEAD (Ger. *Bley*, *Blei*; Du. *Lood*, *Loot*; Fr. *Plomb*; It. *Piombo*; Sp. *Plomo*; Rus. *Swinez*; Pol. *Ołow*; Lat. *Plumbum*; Arab. *Anuk*; Hind. *Sisa*; Pers. *Surb*), one of the most useful metals. It is of a bluish white colour, and when newly melted is very bright, but it soon becomes tarnished by exposure to the air. It has scarcely any taste, but emits, on friction, a peculiar smell. It stains paper or the fingers of a bluish colour. When taken internally, it acts as a poison. It is one of the softest of the metals: its specific gravity is 11.35. It is very malleable, and may be reduced to thin plates by the hammer; it may also be drawn out into wire, but its ductility is not very great. Its tenacity is so small, that a lead wire $\frac{1}{16}$ inch diameter is capable of supporting only 18.4 lbs. without breaking. It melts at 612°.—(*Thomson's Chemistry*.)

Lead is a metal of much importance, as, from its durability, it is extensively used in the construction of water-pipes and cisterns, as a covering for flat surfaces or tops of buildings, &c. &c. Its salts, which are poisonous, are used in medicine to form sedative external applications; and frequently not a little, by the disreputable wine merchant, to stop the progress of acetous fermentation. Wine thus poisoned, may, however, be readily distinguished, a small quantity of the bicarbonate of potassa producing a white precipitate, and sulphureted hydrogen a black one. Pure wine will not be affected by either of these tests. "The oxide

of lead enters into the composition of lead glass, and is also used in glazing common red pans become poisonous when other metals, forms pewter; with lead, &c."—(*Joyce's Chem. Minerals*.)

The lead mines of Great Britain to 1829, however, it would seem the year now mentioned, lead was not so abundant as it was formerly, and it is certain, that the ore of these mines was not so rich as it was in their working. The produce of the lead mines of Derbyshire annually has been declining since the year 1829. Those on the border of the field, at an average, from 11,000 to 12,000 tons.—(*General Report of Scotland*.) The Welsh lead mines have suffered from inundations. Subjoined is

Full of Prices. Spanish Lead Mines, amount of the imports, and the extent

of lead enters into the composition of white glass, which it renders clearer and more fusible; it is also used in glazing common earthen vessels; hence the reason that pickles kept in common red pans become poisonous. Lead, with tin, and a small quantity of some of the other metals, forms pewter; with antimony, it forms the alloy of which printing types are made.—(*Joyce's Chem. Mineralogy.*)

The lead mines of Great Britain have been wrought from a very remote era. Previously to 1829, however, it would seem that those of Derbyshire only had been explored. But in the year now mentioned, lead mines were discovered in Wales; and the fact being ascertained, that the ore of these mines produced some silver, increased attention was paid to their working. The produce of the lead mines at present wrought in Great Britain cannot be accurately ascertained. Mr. Stevenson supposes (*art. England, Edin. Ency.*) that the lead mines of Derbyshire annually produce 5,000 or 6,000 tons; but they seem to be on the decline. Those on the borders of Cumberland and Northumberland are supposed to yield, at an average, from 11,000 to 12,000 tons. The total produce of the Scotch lead mines is estimated at 65,000 bars; which, as each bar is 1 cwt. 1 qr. 2 lbs., is equal to 4,120 tons.—(*General Report of Scotland, vol. iii. Addenda, p. 7.*) Some of the most productive of the Welsh lead mines have either been wrought out, or have been rendered unserviceable from inundations. Subjoined is

Fall of Prices. Spanish Lead Mines.—The falling off in the exports of British lead, the increased amount of the imports, and the extraordinary fall that has taken place in the price of lead since 1825,

value of the finished articles, then the value of the manufacture must exceed 16,000,000*l.* We, however, are inclined to think that we shall be nearer the truth, if we take the smaller sum, and estimate the value of the manufacture at 12,500,000*l.* To get the number of persons employed, we have first to deduct from this sum, 4,000,000*l.* for the material, which leaves 8,500,000*l.* as the aggregate amount of profits, wages, &c. And setting aside 20 per cent. as profit, rent of workshops, compensation for capital wasted, &c., we have a sum of 6,800,000*l.* remaining as wages: and supposing those employed as shoemakers, saddlers, glovers, &c., to make at an average 30*l.* a year each, the entire number of such persons will amount to 226,000.

This, however, does not give the total number of persons employed in the leather trade, inasmuch as it excludes the tanners, curriers, &c., employed in dressing and preparing the leather. But if, from the value of the prepared leather, 4,000,000*l.*, we deduct 1,000,000*l.* for the value of the hides, and 2,000,000*l.* for tanners' and curriers' profits, including the expense of lime, bark, pits, &c., we shall have 1,000,000*l.* left as wages. Now, as the wages of tanners, curriers, leather dressers, &c., may, we believe, be taken at 35*l.* a year at an average, we shall have 28,300 as the number employed in these departments. And adding these to the persons employed in manufacturing the leather, we have a grand total of 254,300 persons employed in the various departments of the business.

Those who may be inclined to suspect these estimates of exaggeration, would do well to reflect on the value of the shoes annually manufactured. It is generally supposed that the expenditure upon shoes may be taken, at an average of the whole population, at 10*s.* each individual, young and old; which, supposing the population to amount to 16,000,000, would give 160*m.* millions for the value of shoes only; but taking the value of the shoes at only 8*s.* 6*d.* each individual, it gives 6,800,000*l.* for the amount. Mr. Stevenson (art. *England, Edin. Ency.*) supposes that the value of the saddlery, harness, gloves, &c. may be assumed to be at least equal to that of the shoes; but we believe this is too high, and have taken it at 1,100,000*l.* below the value of the shoes. In estimating the value of the entire manufacture at 12,500,000*l.*, we incline to think that we are as near the mark as it is easy to come in such investigations.

In speaking of the leather manufacture, Dr. Campbell has the following striking observations:—"If we look abroad on the instruments of husbandry, on the implements used in most mechanic trades, on the structure of a multitude of engines and machines; or if we contemplate at home the necessary parts of our clothing—breeches, shoes, boots, gloves—or the furniture of our houses, the books on our shelves, the harness of our horses, and even the substance of our carriages; what do we see but instances of human industry exerted upon leather? What an aptitude has this single material in a variety of circumstances for the relief of our necessities, and supplying conveniences in every state and stage of life? Without it, or even without it in the plenty we have it, to what difficulties should we be exposed!—(*Political State of Great Britain*, vol. ii. p. 176.)

Leather was long subject to a duty; the manufacture being, in consequence, necessarily conducted under the surveillance of the excise. In 1812, the duty, which had previously amounted to 1*d.* per lb., was doubled; and continued at 3*d.* per lb. till July, 1822, when it was again reduced to 1*d.* per lb. The reduced duty produced a net revenue of about 360,000*l.* It is clear, however, that either the duty ought not to have been reduced in 1822, or that it ought to have been totally repealed. The continuance of any part of the duty rendered it necessary to continue all the vexatious regulations required to insure the collection of the revenue, while the reduction of 1*d.* in the cost of preparing a pound of leather was so trifling as hardly to be sensible. It is, however, unnecessary to enter into any discussion to show the extreme inexpediency of laying any duty on an article so indispensable to the labouring class, and to the prosecution of many branches of industry, as leather; and still less to show the inexpediency of subjecting so very important and valuable a manufacture to a vexatious system of revenue laws, for the sake of only 360,000*l.* a year. Luckily, however, these have become matters of history. The leather duties were totally abolished in 1830; and as the manufacture is now relieved from every sort of trammel and restraint, its rapid increase may be confidently expected. It is to be hoped that no future necessity may arise to occasion the re-imposition of the leather duty.

Account of the Number of Pounds' Weight of Leather charged with Duties of Excise in England, in 1824—1829.

1824	-	53,420,539	1826	-	44,927,316	1828	-	50,233,080
1825	-	52,274,957	1827	-	37,616,316	1829	-	46,300,843

The quantity annually charged with duty in Scotland during the same period was, at an average, about 6,000,000 lbs.

The quantity of wrought and unwrought leather exported in 1820, amounted to 1,335,937 lbs., of the declared value of 208,360*l.* The value of the saddlery and harness exported during the same year was 52,303*l.* Nearly two thirds of the leather exported, is sent, principally in the shape of shoes, to the British West Indian and North American colonies.

LEDGER, the principal book of accounts kept by merchants and tradesmen, wherein every person's account is placed by itself, after being extracted from the Journal.—(See *BOOK-KEEPING*.)

LEECH FISHERY. The demand for the medicinal leech (*Hirudo medicinalis*) is so great as to afford employment to a considerable number of persons in catching and selling the animal. It is common throughout Europe, America, and India, inhabiting lakes and pools. Norfolk supplies the greater part of the leeches brought to the London market; but some are taken in Kent, Suffolk, Essex, and Wales; and large quantities are imported

with the exception of those produced by Italy. Sugar, coffee, and all sorts of colonial produce; cotton stuffs, yarn, and wool; corn, woollen stuffs, spices, dried fish, indigo, dye woods, rice, iron, tin, hides, &c.; are among the most prominent articles. Ships with corn on board may unload within the limits of the lazaretto, without being detained to perform quarantines; a circumstance which has contributed to make Leghorn one of the principal depôts for the wheat of the Black Sea. Hard wheat, particularly from Taganrog, is in high estimation here and in the other Italian ports. It is particularly well fitted for making vermicelli, macaroni, &c. The government do not publish any official account of the imports and exports of Leghorn; and no mercantile circulars that we have been fortunate enough to fall in with, afford the means of supplying the deficiency.

Money.—Accounts are principally kept in *pezza da otto reati* (or *denari* of 8 reati), the *pezza* being divided into 20 *scudi* or 240 *denari*. The *lire* is another money of account, chiefly used in inferior transactions; it is also divided into 20 *scudi* and 240 *denari*: 1 *pezza* = 154 *lire*.

The pieces of Leghorn have two values; the one called *moneta* being the other *moneta lunga*. The former is the effective money of the place. *Moneta lunga* is converted into *moneta lunga* by adding 1/4, and the latter is reduced to the former by subtracting 1/24. The *lire* of account = 8 1/2 *scudi*, sterling very nearly; hence the *pezza* = 3s. 10 3/4d. very nearly.

The principal silver coins are, the *Francesconi*, or *Leopoldo*, of 10 *scudi*, or 6 2/3 *lire* = 4s. 6d. sterling very nearly. The pieces of 5 *lire* = 3s. 4 1/2d., and the *lire* = 7 1/2d. sterling.

Weights and Measures.—The pound by which gold and silver are all sorts of merchandises are weighed, is divided into 12 ounces, 96 *grains*, 288 *denari*, and 6,912 *grains*. It is = 359.542 French grammes, or 5.240 English grains. Hence 100 lbs. of Leghorn = 100 lbs. *avodupois*; but in mercantile calculations it is usual to reckon 100 lbs. of Leghorn = 77 lbs. *avodupois*; this, perhaps, has arisen from taking the *lance* and other allowances, as to which there is a good deal of uncertainty, into account. Thus it is found that the English *wt.* *avodupois* weighs more than 140 or 142 lbs. at Leghorn, though it is = 150 lbs.; in the instances of logwood, tobacco, and a few others, it does not render more than 136 lbs. The *quintal*, or *centajo* = 100 lbs. The *cantaro* is generally 150 lbs.; but a *cantaro* = 100 lbs.

Prices of Corn.—The subjoined account of the different sorts of grain free on board at Leghorn in January, 1833, is interesting, as negating the notions so current in this country as to the extraordinary cheapness at which corn may be brought from the Black Sea.

Prices of Corn free on board at Leghorn, January, 1833.

Shipping.—Arrivals in 1829, 1830, and 1831.

	Yr.	Ships.	Crews.	Tons.
British	1829	189	1,792	28,411
	1830	219	2,078	33,990
	1831	193	1,792	28,468

The crews and tonnage of the foreign ships entering the port are not given. Their numbers in 1831 were as follows:—

Flags.	Ships.	Flags.	Ships.	Flags.	Ships.	Flags.	Ships.
French	180	Dutch	12	Neapolitan	266	Lucchese	31
Russian	47	Austrian	106	Sardinian	690	Roman	39
Swedish	39	Spanish	18	Tuscan	1,257	Greek	82
Danish	16	American	89				

The greater portion of the Neapolitan, Sardinian, Tuscan, Roman, and Lucchese vessels consists of small coasting craft of from 15 to 20 tons burden.

Port Charges are the same on native and foreign ships. The anchorage dues on a vessel of 300 tons amount to 112 current lire, or to 3l. 14s. sterling; besides which she must have a bill of health, which costs 7s. 2d. sterling; These, if she clear out in ballast, are the only charges to which she is subject; but if she clear out loaded, the bill of health will cost about 9s. sterling, and there is besides a charge of about 3d. sterling for each bill of lading. There are no other port charges whatever. Good water may be had at about 11d. sterling per tun; and beef, bread, and fuel are all reasonably cheap. There are companies for the insurance of ships, but not of lives or houses.—(We have gleaned these particulars from the *Annuaire du Commerce* for 1833, p. 303.; *Kelly's Cambist*; *Nelkenbrecher, Manuel Universel*; *Circular Statement of Grant and Co.*, Leghorn, 2d of January, 1833; *Consul's Answer to Circular Queries*, &c. A plan of the road of Leghorn is given in Captain Smyth's *General Chart of the Mediterranean*.)

Trade of Italy and the Italian Islands with England.—It is not generally known that with the single exception of Germany, Italy is the largest European importer of English goods. During the year 1831,

the real or declared value of the different articles of British and Irish produce shipped from the United Kingdom direct for Italy, amounted to 2,490,376*l*. Cotton stuffs and twist formed about $\frac{1}{10}$ of this immense sum (see vol. 1. p. 527.). The articles next in importance were refined sugar, value 501,152*l*.; woollens, value 204,186*l*.; iron and steel, value 50,360*l*.; with hardware, linens, fish, earthenware, &c. It is right, however, to add, that a part of these articles was not intended for the consumption of Italy; but was sent to Genoa and Trieste, for the purpose of being subsequently forwarded to Switzerland, Austria, Hungary, &c. There are no means of accurately estimating the value of the products destined for such ulterior consumption, but there are good grounds for thinking that they do not amount to 1-4th part of the total value of the exports; leaving above 2,000,000*l*. for the consumption of Italy.

During the same year (1831), we imported from Italy 23,867 cwt. barilla; 96,143 do. oak and cork bark; 264,944 do. sulphur; 263,059 quarters of wheat (a good deal of second hand from the Black Sea); 70,547 straw bonnets; 64,348 packages of oranges and lemons; 3,557,983 gallons olive oil; 105,248 bushels linseed; 127,531 cwt. shumac; 526,510 lbs. raw silk; 516,457 kid skins; 2,113,676 lamb skins; 17,644 cwt. valonia; 227,468 gallons wine; exclusive of various other articles of inferior importance.

LEMONS (Ger. *Limonen*; Du. *Limoenen*; Fr. *Limon, Citrons*; It. *Limoni*; Sp. *Limonas*; Port. *Límdes*; Rus. *Limonú*; Arab. *Lémón*), the fruit of the lemon tree (*Citrus medica* var. β . C.). It is a native of Assyria and Persia, whence it was brought into Europe; first to Greece and afterwards to Italy. It is now cultivated in Spain, Portugal, and France, and is not uncommon in our greenhouses. Lemons are brought to England from Spain, Portugal and the Azores, packed in chests, each lemon being separately rolled in paper. The Spanish lemons are most esteemed.—(For an account of the imports, see **ORANGES**.)

LEMON JUICE, or CITRIC ACID (Ger. *Zitronensaft*; Fr. *Jus de limon*; It. *Agro o Sugo de limone*; Sp. *Jugo de limon*), the liquor contained in the lemon. It may be preserved in bottles for a considerable time by covering it with a thin stratum of oil; thus secured, great quantities of the juice are exported from Italy to different parts of the world; from Turkey, also, where abundance of lemons are grown, it is a considerable article of export, particularly to Odessa. The discovery of the antiscorbatic influence of lemon juice is one of the most valuable that has ever been made. The scurvy, formerly so fatal in ships making long voyages, is now almost wholly unknown; a result that is entirely to be ascribed to the regular allowance of lemon juice served out to the men. The juice is also frequently administered as a medicine, and is extensively used in the manufacture of punch.

LEMON PEEL (Ger. *Zitronenshalen, Limonschellen*; Fr. *Lames d'écorce de citron*; It. *Scorze de limone*; Sp. *Cortezas de citra*). The outward rind of lemons is warm, aromatic, and slightly bitter,—qualities depending on the essential oil it contains. It is turned to many uses; and when well candied, constitutes a very good preserve. In Barbadoes, a *liqueur*, known under the name of *Eau de Barbade*, is manufactured from lemon peel, which the inhabitants have the art of preserving in a manner peculiar to themselves. Both the liqueur and the conserve used to be in high repute, especially in France.

LETTER. (See **POST OFFICES**.)

LETTER OF CREDIT, a letter written by one merchant or correspondent to another, requesting him to credit the bearer with a certain sum of money. Advice by post should always follow the granting of a letter of credit; a duplicate of it accompanying such advice. It is prudent, also, in giving advice, to describe the bearer of the letter, with as many particulars as possible, lest it fall improperly into other hands.

LETTERS OF MARQUE AND REPRISAL, "are grantable by the law of nations, whenever the subjects of one state are oppressed and injured by those of another, and justice is denied by that state to which the oppressor belongs."—(*Chitty's Com. Law*, vol. iii. p. 604.) Before granting letters of marque, government is directed by the 5 Hen. 5. c. 7, to require that satisfaction be made to the party aggrieved; and in the event of such satisfaction not being made within a reasonable period, letters of marque and reprisal may be issued, authorising the aggrieved party to attack and seize the property of the aggressor nation, without hazard of being condemned as a robber or pirate. Such letters are now only issued to the owners or captains of privateers during war, or when war has been determined upon. They may be revoked at the pleasure of the sovereign; and when hostilities terminate, they cease to have any effect.

LICENCES, in commercial navigation. The rules and regulations to be observed in the granting of licences to ships are embodied in the act 3 & 4 Will. 4. c. 53., and are as follow:—

Vessels of certain Proportions, not being square-rigged, &c. to be licensed.—All vessels belonging in the whole or in part to his Majesty's subjects, not being square-rigged, or propelled by steam, and all vessels belonging as aforesaid, whether propelled by steam or otherwise, being of less burden than 200 tons, of which the length is to the breadth in a greater proportion than 3 feet 6 inches to 1 foot, and all such last-mentioned vessels carrying arms for resistance, and all vessels of more than 200 tons burden, belonging as aforesaid, armed with more than 2 carriage guns of a calibre exceeding 4 pounds, and with more than 2 muskets for every 10 men, and all boats belonging as aforesaid, which shall be found within 100 leagues of the coast of the United Kingdom, shall be forfeited, unless the owners thereof shall have obtained a licence from the commissioners of his Majesty's customs in the manner herein-after directed.— \S 16.

British Vessels and Boats, or those whereof Half the Persons on board are British Subjects, not to be navigated with more than a specified Number of Persons, unless licensed.—Every vessel or boat belonging

to the whole or in part to his Majesty, (not being navigated by a greater number of persons than is to be specified in the licence) if of 30 tons or more, 5 men; if of 20 tons or more, 7 men; and above 30 tons, 10 men; and above 40 tons or more, 12 men; and above 50 tons or more, 15 men; and above 60 tons or more, 18 men; and above 70 tons or more, 21 men; and above 80 tons or more, 24 men; and above 90 tons or more, 27 men; and above 100 tons, 30 men; and above 110 tons, 33 men; and above 120 tons, 36 men; and above 130 tons, 39 men; and above 140 tons, 42 men; and above 150 tons, 45 men; and above 160 tons, 48 men; and above 170 tons, 51 men; and above 180 tons, 54 men; and above 190 tons, 57 men; and above 200 tons, 60 men; and above 210 tons, 63 men; and above 220 tons, 66 men; and above 230 tons, 69 men; and above 240 tons, 72 men; and above 250 tons, 75 men; and above 260 tons, 78 men; and above 270 tons, 81 men; and above 280 tons, 84 men; and above 290 tons, 87 men; and above 300 tons, 90 men; and above 310 tons, 93 men; and above 320 tons, 96 men; and above 330 tons, 99 men; and above 340 tons, 102 men; and above 350 tons, 105 men; and above 360 tons, 108 men; and above 370 tons, 111 men; and above 380 tons, 114 men; and above 390 tons, 117 men; and above 400 tons, 120 men; and above 410 tons, 123 men; and above 420 tons, 126 men; and above 430 tons, 129 men; and above 440 tons, 132 men; and above 450 tons, 135 men; and above 460 tons, 138 men; and above 470 tons, 141 men; and above 480 tons, 144 men; and above 490 tons, 147 men; and above 500 tons, 150 men; and above 510 tons, 153 men; and above 520 tons, 156 men; and above 530 tons, 159 men; and above 540 tons, 162 men; and above 550 tons, 165 men; and above 560 tons, 168 men; and above 570 tons, 171 men; and above 580 tons, 174 men; and above 590 tons, 177 men; and above 600 tons, 180 men; and above 610 tons, 183 men; and above 620 tons, 186 men; and above 630 tons, 189 men; and above 640 tons, 192 men; and above 650 tons, 195 men; and above 660 tons, 198 men; and above 670 tons, 201 men; and above 680 tons, 204 men; and above 690 tons, 207 men; and above 700 tons, 210 men; and above 710 tons, 213 men; and above 720 tons, 216 men; and above 730 tons, 219 men; and above 740 tons, 222 men; and above 750 tons, 225 men; and above 760 tons, 228 men; and above 770 tons, 231 men; and above 780 tons, 234 men; and above 790 tons, 237 men; and above 800 tons, 240 men; and above 810 tons, 243 men; and above 820 tons, 246 men; and above 830 tons, 249 men; and above 840 tons, 252 men; and above 850 tons, 255 men; and above 860 tons, 258 men; and above 870 tons, 261 men; and above 880 tons, 264 men; and above 890 tons, 267 men; and above 900 tons, 270 men; and above 910 tons, 273 men; and above 920 tons, 276 men; and above 930 tons, 279 men; and above 940 tons, 282 men; and above 950 tons, 285 men; and above 960 tons, 288 men; and above 970 tons, 291 men; and above 980 tons, 294 men; and above 990 tons, 297 men; and above 1000 tons, 300 men; and above 1010 tons, 303 men; and above 1020 tons, 306 men; and above 1030 tons, 309 men; and above 1040 tons, 312 men; and above 1050 tons, 315 men; and above 1060 tons, 318 men; and above 1070 tons, 321 men; and above 1080 tons, 324 men; and above 1090 tons, 327 men; and above 1100 tons, 330 men; and above 1110 tons, 333 men; and above 1120 tons, 336 men; and above 1130 tons, 339 men; and above 1140 tons, 342 men; and above 1150 tons, 345 men; and above 1160 tons, 348 men; and above 1170 tons, 351 men; and above 1180 tons, 354 men; and above 1190 tons, 357 men; and above 1200 tons, 360 men; and above 1210 tons, 363 men; and above 1220 tons, 366 men; and above 1230 tons, 369 men; and above 1240 tons, 372 men; and above 1250 tons, 375 men; and above 1260 tons, 378 men; and above 1270 tons, 381 men; and above 1280 tons, 384 men; and above 1290 tons, 387 men; and above 1300 tons, 390 men; and above 1310 tons, 393 men; and above 1320 tons, 396 men; and above 1330 tons, 399 men; and above 1340 tons, 402 men; and above 1350 tons, 405 men; and above 1360 tons, 408 men; and above 1370 tons, 411 men; and above 1380 tons, 414 men; and above 1390 tons, 417 men; and above 1400 tons, 420 men; and above 1410 tons, 423 men; and above 1420 tons, 426 men; and above 1430 tons, 429 men; and above 1440 tons, 432 men; and above 1450 tons, 435 men; and above 1460 tons, 438 men; and above 1470 tons, 441 men; and above 1480 tons, 444 men; and above 1490 tons, 447 men; and above 1500 tons, 450 men; and above 1510 tons, 453 men; and above 1520 tons, 456 men; and above 1530 tons, 459 men; and above 1540 tons, 462 men; and above 1550 tons, 465 men; and above 1560 tons, 468 men; and above 1570 tons, 471 men; and above 1580 tons, 474 men; and above 1590 tons, 477 men; and above 1600 tons, 480 men; and above 1610 tons, 483 men; and above 1620 tons, 486 men; and above 1630 tons, 489 men; and above 1640 tons, 492 men; and above 1650 tons, 495 men; and above 1660 tons, 498 men; and above 1670 tons, 501 men; and above 1680 tons, 504 men; and above 1690 tons, 507 men; and above 1700 tons, 510 men; and above 1710 tons, 513 men; and above 1720 tons, 516 men; and above 1730 tons, 519 men; and above 1740 tons, 522 men; and above 1750 tons, 525 men; and above 1760 tons, 528 men; and above 1770 tons, 531 men; and above 1780 tons, 534 men; and above 1790 tons, 537 men; and above 1800 tons, 540 men; and above 6360 tons, 1908 men; and above 6370 tons, 1911 men; and above 6380 tons, 1914 men; and above 6390 tons, 1917 men; and above 6400 tons, 1920 men; and above 6410 tons, 1923 men; and above 6420 tons, 1926 men; and above 6430 tons, 1929 men; and above 6440 tons, 1932 men; and above 6450 tons, 1935 men; and above 6460 tons, 1938 men; and above 6470 tons, 1941 men; and above 6480 tons, 1944 men; and above 6490 tons, 1947 men; and above 6500 tons, 1950 men; and above 6510 tons, 1953 men; and above 6520 tons, 1956 men; and above 6530 tons, 1959 men; and above 6540 tons, 1962 men; and above 6550 tons, 1965 men; and above 6560 tons, 1968 men; and above 6570 tons, 1971 men; and above 6580 tons, 1974 men;

to the whole or in part to his Majesty's subjects, or whereof half the persons on board shall be subjects of his Majesty, (not being a lugger, and at the time fitted and rigged as such,) which shall be navigated by a greater number of men (officers and boys included) than in the following proportions; (that is to say,) if of 30 tons or under, and above 5 tons, 4 men; if of 40 tons or under, and above 30 tons, 5 men; if of 50 tons or under, and above 40 tons, 6 men; if of 60 tons or under, and above 50 tons, 7 men; if of 70 tons or under, and above 60 tons, 8 men; if of 80 tons or under, and above 70 tons, 9 men; if of 90 tons or under, and above 80 tons, 10 men; if of 100 tons or under, and above 90 tons, 11 men; if of 110 tons or under, and above 100 tons, 12 men; and if above 100 tons, 1 man for every 10 tons of such additional tonnage, which shall be found within 100 leagues of the coast of the United Kingdom, shall be forfeited, unless such vessel, boat, or lugger, shall be especially licensed for that purpose by the commissioners of customs.—§ 17.

Certain Particulars to be inserted in Licences for Vessels and Boats.—Every licence granted by the commissioners of customs under this act shall contain the proper description of the vessel or boat, the name or names of the owner or owners, with his or their place or places of abode, and the manner and the limits in which the same is to be employed, and, if armed, the numbers and description of arms, and the quantity of ammunition, together with any other particulars which the said commissioners may require and direct; and it shall be lawful for the commissioners of customs to restrict the granting of a licence for any vessel or boat in any way that they may deem expedient for the security of the revenue.—§ 18.

The Owners to give Security by Bond, with the Condition herein-mentioned.—Before any such licence shall be issued or delivered, or shall have effect for the use of such vessel or boat, the owner or owners of the same shall give security by bond in the single value of such vessel or boat, with condition as follows; (that is to say,) that the vessel or boat shall not be employed in the importation, landing, or removing of any prohibited or uncustomed goods, contrary to the true intent and meaning of this act or any other act relating to the revenues of customs or excise, nor in the exportation of any goods which are or may be prohibited to be exported, nor in the reimporting of any goods contrary to law, nor shall receive or take on board or be found at sea or in port with any goods subject to forfeiture, nor shall do any act contrary to this act, or any act hereafter to be made relating to the revenues of customs or excise, or for the protection of the trade and commerce of the United Kingdom, nor shall be employed otherwise than mentioned in the licence, and within the limits therein mentioned; and in case of loss, breaking up, or disposal of the vessel or boat, that the licence shall be delivered, within 6 months from the date of such loss, breaking up, or disposal of such vessel or boat, to the collector or principal officer of customs at the port to which such vessel or boat shall belong; and that no such bond given in respect of any boat shall be liable to any stamp duty.—§ 19.

Bonds not to exceed 1,000*l.*, or single Value of the Vessel.—Nothing herein contained shall authorise the requiring any bond in any higher sum than 1,000*l.*, although the single value of the vessel or boat for which such licence is to be issued may be more than 1,000*l.*—§ 20.

Licence Bonds given by Minors to be valid.—All bonds given by persons under the age of 21 years, in pursuance of the directions herein contained, shall be valid and effectual to all intents and purposes, any thing in any act, or any law or custom, to the contrary in anywise notwithstanding.—§ 21.

Vessels not to be used in any Manner not mentioned in the Licence.—When any vessel or boat shall be found or discovered to have been used or employed in any manner or in any limits other than such as shall be specified in the licence, or if such licence shall not be on board such vessel or boat, or shall not at any time be produced and delivered for examination to any officer of the army, navy, or marines duly employed for the prevention of smuggling, and on full pay, or any officer of customs or excise, demanding the same, then and in every such case such vessel or boat, and all the goods laden on board, shall be forfeited.—§ 22.

Certain Vessels, Boats, and Luggers not required to be licensed.—Nothing herein contained shall extend or be deemed or taken to extend to any vessel, boat, or lugger belonging to any of the royal family, or being in the service of the navy, victualling, ordnance, customs, excise, or post-office, nor to any whale boat, or boat solely employed in the fisheries, nor to any boat belonging to any square-rigged vessel in the merchant service, nor to any life boat, or tow boat used in towing vessels belonging to licensed pilots, nor to any boat used solely in rivers or inland navigation, nor to any boats solely used in fishing on the coasts of the North and West Highlands of Scotland, nor to any boats so used on the coast of Ireland.—§ 23.

Penalty for counterfeiting or falsifying Licences, or making Use thereof.—If any person or persons shall counterfeit, erase, alter, or falsify, or cause to be counterfeited, erased, altered, or falsified, any licence so to be granted as aforesaid, or shall knowingly make use of any licence so counterfeited, erased, altered, or falsified, such person or persons shall for every such offence forfeit the sum of 50*l.*—§ 24.

How long Bonds are to be in Force.—No bond given on account of the licence of any vessel or boat under the said act for the prevention of smuggling shall be cancelled until the space of 12 months after the licence for which such bond had been entered into shall have been delivered up to the proper officer of the customs, and such bond shall remain in full force and effect for 12 months after the delivering up of the licence as aforesaid.—§ 25.

Licences and Bonds granted previous to this Act to continue valid.—§ 26.
Provisions as to Licences to extend to Guernsey, Jersey, Alderney, Sark, and Man.—§ 27.

LICENCES, in the excise, are required in order that individuals may engage in certain businesses.—(See Table in the next page.)

LICENCES, in the stamps, are required by those engaged in the professions and businesses mentioned below:—

The first light-house erected on the Eddystone rocks only stood about 7 years, having been blown down in the dreadful storm of the 27th of November, 1703; a second, erected in 1708, was burnt down in 1755. The present light-house, constructed by the celebrated engineer Smeaton, was completed in 1759. It is regarded as a masterpiece of its kind; and bids fair to be little less lasting than the rocks on which it stands.

The Bell Rock light-house was built by Mr. Stevenson on the model of the Eddystone.

Numerous light-houses, marking the most dangerous points, and the entrance to the principal harbours, are now erected in most civilised maritime countries. They are particularly abundant in the Baltic and in the Sound, and have contributed, in no ordinary degree, to render their navigation comparatively safe. Within these few years several new ones have been erected on the British coasts, and on those of France, the United States, &c.

Precautions as to Light-houses.—Many fatal accidents have arisen from ships mistaking one light for another; and hence the importance of those on the same coast being made to differ distinctly from each other, and of their position and appearance being accurately laid down and described. The modern inventions of revolving, intermitting, and coloured lights, afford facilities for varying the appearance of each light unknown to our ancestors, and have been, in that respect, of the greatest importance.

Chart of Light-houses, &c.—A good descriptive work on light-houses, beacons, &c. is a desideratum. That of Coulier, *Guide des Marins pendant la Navigation nocturne*, Paris, 1829, is perhaps the best. It must not be judged by its preface, which is as bad as possible; consisting of scraps from the most fantastical parts of Bryant's Mythology, and of attacks on us for our conduct in relation to Parga, and the alleged ill-treatment of the crew of a vessel wrecked on the island of Alderney. The book is really pretty good, which could not certainly be anticipated from such a commencement. The reader will find the existing English and Irish light-houses, and the greater number of those belonging to Scotland, laid down in the chart attached to the article CANALS in this work. Its accuracy may be depended upon; as it has been copied from the beautiful chart of the light-houses on the British and contiguous coasts recently published by the Trinity House; the corporation having readily and obligingly granted permission to that effect. In the Supplement the reader will find the position, description, &c. of the principal British and Irish light-houses and floating lights.

Law as to British Light-houses.—The 8 Eliz. c. 13. empowers the corporation of the Trinity House to erect beacons, &c. to prevent accidents to ships; and though the act does not expressly mention light-houses, it has been held to extend to them; and on its authority, and the privileges attached to the office of buoyage and beaconage conferred on the Trinity House in 1594, the corporation erects light-houses. The tolls for their maintenance are generally collected under the authority of letters patent from the crown; those for the support of the Eddystone light, and some others in different parts of the kingdom, being, however, established by act of parliament. The first light-house erected by the Trinity Corporation was in 1675; but several had been previously erected by private parties in virtue of letters patent. Customs' officers are prohibited from making out any cockpit or other discharge, or taking any report outwards for any ship, until the light duties are paid, and the master shall have produced a light-bill testifying the receipt thereof. It is lawful for persons authorised by the Trinity House to go on board any British or foreign ship to receive the duties, and for non-payment to detain the tackle of the ship; and in case of delay of payment for 3 days after distress, the collectors of the said duties may cause the same to be appraised by two persons, and proceed to sell the distress. (2 & 7 Will. 4. c. 79. § 54.)

All the light-houses, floating lights, &c., exclusive of harbour lights, from the Fern Islands, on the coast of Northumberland, round by Beachy Head and the Land's End, to the coast of Cumberland, have always belonged to the Trinity House, with the exception of about a dozen lights, viz. Tyne-mouth, Spurn (shore), Winterton and Orford, Harwich, Dungeness, Skerries, &c. These lights have been partly public and partly private property; provision has, however, been made in the act now referred to, for vesting them exclusively in the Trinity House.—(See below.) The duties on their account have been, for the most part, always payable to the Trinity collectors.

Fees on Account of Light-houses.—A wish to keep the charges on native ships as low as possible, and to insure them a preference, seems to have given rise to the practice that has long existed, of exacting comparatively high duties from the foreign shipping entering our ports. But whatever may have been the motives for making this distinction, its policy seems more than questionable. It is quite right that the foreign ships coming to our shores for commercial purposes should be made to pay the same light and harbour duties as British vessels; but the imposition of comparatively high duties on them is decidedly injurious, inasmuch as it provokes retaliatory measures on the part of other states, obstructs the resort of foreigners to our markets, and, consequently, checks the growth of commerce.

This system was very properly condemned in a report by a committee of the House of Commons, in 1822. There is, in the evidence annexed to that report, some well-authenticated instances of foreign ships having been totally lost, from the disinclination of the captain to enter a British port, while it was in their power, on account of the heavy charges to which they would have been exposed for lights, &c. Down, indeed, to 1835, all ships, whether native or foreign, coming into any British port by stress of weather, were charged with full light duties; but we are glad to say that this inhospitable regulation has been repealed by an order in council of the 7th of February that year, issued on the recommendation of the Trinity House, which exempts such vessels from all charge on account of lights. Our whole policy as to light duties, port charges, &c. has, within these few years, been materially improved, and is now the very reverse of illiberal. It is true that the discriminating duties on foreign ships are still kept up; but in consequence of the general establishment of reciprocity treaties, the distinction has become rather nominal than real, and affects comparatively few of the ships sailing our seas.*

We are glad, also, to have to announce, that very large deductions have been, in most instances,

* We stated inadvertently in the former impressions of this work, that light duties were charged on foreign ships, if in the prosecution of their voyage they came within sight of any of our light-houses. But in point of fact, no light duties are charged by the Trinity House either upon foreign or British ships for voyages from one foreign port to another; unless, in the course of such voyages, they actually come to or touch at a British port or roadstead. (See No. 3. of Instructions to Trinity Collectors, given below.) But foreign vessels sailing along the Irish coasts are charged 4d. a ton for each light passed, except harbour lights, which are only charged upon vessels entering the same.

LIGHT-HOUSE.

You shall from time to time effect: and, before you do, all of your light bills, to enter the same distinctly in a book to be provided by the Corporation for that purpose, wherein all the particulars which are to be entered—of all which you are, within 14 days after the 1st of every, the 1st of April, the 1st of July, and the 1st of October (to which periods you are to make up your accounts), to send a copy of

the printed form furnished from this house, together with the balance of your collection, after a deduction of the pound for your care, trouble, and ordinary expenses therein, to the Secretary of the Corporation at this house.
By command of the Corporation,
J. HANBERT, Secretary.

Account specifying the various Light-houses and Floating Lights under the management of the Corporation of the Trinity House of Deptford Strond; the Rates of Charge on the British and Foreign Ships passing such Lights; with the Amount of Duties collected on Account of each Light, during each of the Three Years ending with 1836.—(Furnished by Trinity House.)

* All British vessels, and all foreign vessels privileged as British in respect of charges, are exempted from all rates and duties payable to the Trinity Corporation when navigated wholly in ballast.

* These lights were, on the expiration of the Crown lease of the same to Greenwich Hospital, on the 30th of June, 1832, transferred to the Trinity House, that corporation paying to the commissioners of the Hospital the sum of 8,390*l.* for the purchase of the buildings, the ground on which they are erected, stores, &c. On this transfer being made, the tolls were reduced from *1d.* to *1/2d.* per ton.

† This light exhibited 20th of April 1836; the following are the rates of charges—
4*d.* per ton. Foreign vessels not privileged as British, double the foregoing rates.

British and foreign privileged vessels overseas - 1/2
British and foreign vessels entering the port of Falmouth, but not for the purposes of trade - 1/2
All vessels entering Falmouth harbour from stores of weather on -
Dues collected at Falmouth, Truro, and Greenwich only.

Private Light-houses.—Private individuals erecting light-houses have generally obtained a lease of the same from the Crown for a definite number of years, with authority to charge certain fees on shipping. Owing to the great increase of navigation, some of these light-houses have become very valuable properties. The *Minna* and *Loneuse* lights have always belonged to the Trinity House, but were leased by that body to private individuals. The leases have, however, been recently purchased by the Corporation.—We extract from the *Parl. Paper*, No. 608. Sess. 1836, the following

Account of the Gross and Nett Revenue of the private Light-houses of Harwich, Dungeness, Wintertonness and Orfordness, and Hunstanton Cliff, during 1834 and 1835, stating how the same was divided.

Names of Light-houses.	Gross Receipts.	Expense of Collecting and Maintenance.	Nett Proceeds.	Appropriation of the Nett Revenue.	
				Amount paid to the Crown.	Amount paid to the Lessee.
Harwich light houses	1834 8,324 11 1835 10,468 12	1834 1,400 4 1835 1,777 14	1834 6,924 7 1835 8,691 18	1834 8 11 1835 3,475 13	1834 8,316 12 1835 5,216 4

Harwich Lights, held by General Rowley, under lease from the Crown, for 24 years from the 6th of January, 1827, paying to the Crown 3-6ths of the nett duty collected.

Dungeness Lights, held under lease from the Crown by Thomas Williams Cole, Esq. for 20 years from Midsummer 1828. Nett produce of the duties equally divided between the Crown and the lessee. The duties were reduced at the renewal of the lease from 1d. to 1-2d. per ton and it is provided, that at the termination of the light-houses and buildings connected therewith, and the ground on which they are erected, shall become the property of the lessee.

Wintertonness and Orfordness Lights, held by Lord Braybrooke under a lease from the Crown, which expires on the 1st of June, 1843. Nett produce of the duties equally divided between the Crown and his Lordship. The duties were reduced at the last renewal of the lease in 1826, from 1d. to 1-2d. per ton. At the expiration of the lease, the light-houses, grounds, &c. become the property of the Crown.

Hunstanton Cliff Light, held by S. Lane, Esq. under a lease from the Crown, which expires in 1848. From the 16th of October, 1837, 4-15th parts of the nett produce are to go to the Crown; and

The nett revenue of the *Small Light-house* in St. George's Channel amounted, at an average of the 2 years ending with 1832, to 10,510*l.* 10*s.* 5*d.* a year. The lease had then 44 years to run. In 1822, the Trinity Corporation having proposed to purchase the reversion, the lessee demanded for it 148,430*l.* The Corporation has recently effected the purchase; but owing to the increase of commerce in the interim, they have had to pay a larger sum, notwithstanding the diminished length of the lease. This fact affords a striking illustration of the extreme inexpediency of the practice of leasing light-houses to private parties. Wherever they are necessary, they ought to be raised at the public expense, and the fees kept as low as possible. There cannot, in fact, be any greater improvidence or abuse, than to make over to a private individual or association a power to levy, for a long series of years, a certain amount of toll on the ships passing particular lights. The renewals mentioned above are, however, the last transactions of the sort that are ever likely to occur; for by the act 6 & 7 Will. 4. c. 76, the whole right and property in the Harwich, Dungeness, Winterton and Orford, and Hunstanton lights is vested in the Trinity House, subject to the existing leases; and for these the Corporation is at present (1836) in treaty.

The *Skerries* is by far the most valuable of the private light-houses. It is situated on a small island or rock to the north-west of the island of Anglesey; and was granted to the ancestor of the present proprietor, to be for ever holden by him, his heirs and assigns, by the act 3 Geo. 2. c. 36. This light produced, at an average of the 7 years ending with 1834, a nett revenue of 13,524*l.* 15*s.* 2*d.* a year!

The *Scottish or Northern Lights* are under the management of a set of parliamentary commissioners. The act of 6 & 7 Will. 4. c. 79, s. 46, enacts, that from the 1st of January, 1837, all British and foreign privileged vessels, not wholly in ballast, which shall pass any Scotch light-house, or derive any benefit therefrom, shall pay 1-2d. per ton for each time of passing every such light-house, except that on the Bell Rock, for which they are to pay 1*d.* per ton each time of passing. Foreign vessels, not privileged, pay double these rates.

Irish Lights.—It appears from the *Parl. Paper*, No. 608. Sess.

Compensation to Private Parties.—The authority acquired by certain individuals and public bodies, under letters patent, acts of parliament, and otherwise, of levying certain duties on account of light, beacon, pilotage, harbour, dues, &c. entitles them, for the most part, to demand higher fees from foreign than from British shipping. When, therefore, we entered into reciprocity treaties with foreign powers, government had to compensate the parties in question for the diminution that consequently took place in their charges on foreign ships. The total sum paid on this account, in 1832, amounted to 35,182*l.* Of this sum 1,566*l.* was paid to the lessees of the *Small Light-house* already alluded to, and 3,982*l.* to the proprietors of the *Skerris* and *Skerries* lights. The Trinity Corporation relinquished their claim to compensation some time since; and the act 6 & 7 Will. 4. c. 79, forbids such compensation being made to them, the Commissioners of Northern Lights, and the commissioners for managing the Irish lights.—(For some account of the Trinity Corporation, the reader is referred to that article; and for accounts of the charges on account of Beaconage, Ballastage, Pilotage, &c. see these titles.)

(The following important regulations, in respect of light-houses, are embodied in the act of the last session, 6 & 7 Will. 4. c. 79.)

All English Lights to be subjected to the Control of the Trinity House.—Provision is made by this act for placing all light-houses, floating lights, harbour lights, buoys, beacons, &c. on and round the coasts of England and Wales, under the control and management of the Trinity House; and also for placing all light-houses, &c. on the coasts of Scotland and of Ireland respectively under the control and management of the Commissioners of Northern Lights and of the Commissioners for improving the Irish lights.—(For some account of this object, and to attain that uniformity of management that is so desirable, the property of all light-houses (Dungeness, Harwich, Wintertonness, Hun-

stanton and Orfordness, and *Howe*, subject to the existing leases, to purchase up the right of the property and interest in the Trinity House, and the Tyne-mouth light) to agree as to the sum to be agreed to a jury, the method of a new light-house shall in the Trinity House having the power at all times to enter a

Duties on account of Scotch British ships, and all foreign ships passing each light on the coast of Great Britain, or on the coast of the British Empire, the duties on Foreign Ships to the Trinity House, the O

Edinburgh Light.—From 1834 in any port or place within the bounds of the Heilgoland, from within the above mentioned light.—(Sess. 1836.)

The following particulars, the Official Statement issued

the light-houses, &c., become, at the expiration of the lease, the property of the Crown, as in the case of the Dungeness and Winterton lights. The duties are to be reduced to a half in 1837. There are several other lights, of the revenue of which we have no account.

The charges for the undermentioned lights are as follow:—

	Foreign Ships.	British Ships.
Harwich	1 <i>d.</i> per ton.	1-2 <i>d.</i> per ton.
Hunstanton	1-2 <i>d.</i>	1-2 <i>d.</i>
Longships (off Land's End)	1-2 <i>d.</i>	1-2 <i>d.</i>
Munkles (near Swansea)	1-2 <i>d.</i>	1-2 <i>d.</i>
Skerries (St. George's Channel)	1-2 <i>d.</i>	1-2 <i>d.</i>
Dungeness	1-2 <i>d.</i>	1-2 <i>d.</i>
Winterton and Orford	1-2 <i>d.</i>	1-2 <i>d.</i>
Minna (St. George's Channel)	1-2 <i>d.</i>	1-2 <i>d.</i>
Ditto (ditto) (coasting)	1-2 <i>d.</i>	1-2 <i>d.</i>
Spurn (Spurn) mouth of Humber	1-2 <i>d.</i>	1-2 <i>d.</i>
Tysemouth	3 <i>d.</i> per ton.	1-2 <i>d.</i> per ton.
Ditto (additional)	1-2 <i>d.</i> per ton.	1-2 <i>d.</i> per ton.

1836, p. 12, that the gross sum collected for Irish light duties, during 1835, amounted to 44,841*l.* 6*s.* of which 26,558*l.* 14*s.* 2*d.* was collected in Great Britain. The rates of charge are as follow:—

Foreign vessels, 1-2*d.* per ton for each light; except labour lights, which are only chargeable to vessels entering the port within which they are situated.

British and Irish, 1-2*d.* per ton (1-2*d.* if in ballast) for each light, except as above.

With a duty of 5*s.* on every entry, cockpit, or warrant, when from foreign ports, but not otherwise.

station and Orfordness, and *Howe*, subject to the existing leases, to purchase up the right of the property and interest in the Trinity House, and the Tyne-mouth light) to agree as to the sum to be agreed to a jury, the method of a new light-house shall in the Trinity House having the power at all times to enter a

the light-houses, &c., become, at the expiration of the lease, the property of the Crown, as in the case of the Dungeness and Winterton lights. The duties are to be reduced to a half in 1837. There are several other lights, of the revenue of which we have no account.

The charges for the undermentioned lights are as follow:—

Name of Light.	Place where Light-house situated.
Edinburgh	Highest part of Agnes Island, Longships Rock, East.
Lizard	Lizard Point.
Eddystone	Eddystone Rocks, Casquet Rocks.
Portland	Bill of Portland.
Howe	Howe Beach.
Needle	Needle Point, Light.
Crows Nesting	East end of the shoals, coast of Belleisle Cliff.
Longships	Dungeness Point, South Pier, South Foreland.
South Sand Head	South end of the W. Sand.
Goodwin	Western edge of Goodwin Sands.
North Sand Head	North Sand Head.
Longships	South Pier Head, North Foreland.
Howe	Howe Beach, East end of the Sands.
Harwich	Harwich.
Galper	West end of the Loper Shoal.
East	East end of the Loper Shoal.
Orford	Orfordness, Harw.
Lowestoffe	Lowestoffe.
Winterton	Winterton Point, North end of H. Head.
Howe	Near Haisborough.
Orford	Orfordness, near C.
Claydon	Hunstanton Point, Off the back of the Sand, Lynn De.
Dungeness	Dungeness Shoal, Off Dungeness Point, Humber.
Spurn	Spurn Point.
Flamborough	Flamborough Head.
Winterton	Vincent's Pier H. West Pier Head.
Southland	North and South

station and Orfordness, *ante*, p. 142.), held under lease from the crown, is vested in the Trinity House, subject to the existing leases. Provision is also made in the act for enabling the Trinity House, to purchase up the reversion of the leases granted by them of the Longships and Smalls lights, and the property and interest of the owners or parties having the management of the Skerries, Spurn Point, and the Tynemouth light-houses. Should the Trinity House, and the parties interested, not be able to agree as to the sum to be paid the latter, the matter, in all such cases, is to be referred to the decision of a jury, the method of whose proceeding is pointed out in the act. It is also enacted that no new light-house shall in future be erected on the Scotch or Irish coasts, without the approval of the Trinity House having been previously obtained; and that the officers of the latter shall have power at all times to enter upon and examine such Scotch and Irish lights.—(§ 2, 3, 4, &c.)

Duties on account of Scotch Lights.—It is enacted that from and after the 1st of January, 1837, all British ships, and all foreign privileged ships, not wholly in ballast, shall pay 1d. per ton each time of passing each light on the coasts of Scotland, with the exception of the Bell Rock light, the charge on passing which is 1d. per ton.—(§ 40.)

Extra Duties on Foreign Ships privileged.—These are no longer to be paid out of the customs' duties to the Trinity House, the Commissioners of Northern Lights, or the Commissioners for Improving the Port of Dublin.—(§ 31, 41.)

Heligoland Light.—From the 31st of December, 1836, foreign ships clearing out from any British port to any port or place within or near the rivers Elbe and Weser, are to be charged 1d. per ton, on account of the Heligoland light; and, from the same date, foreign ships, arriving at a British port from within the above mentioned limits, are to be charged the like sum of 1d. per ton for the said light.—(§ 36.)

The following particulars, as to the principal British and Irish light-houses, have been taken from the Official Statement issued by the Admiralty.

LIMA, the capital of Peru, on the west coast of South America, in lat. 12° 2' 45' S., lon. 77° 7' 15" W. Population variously estimated; but may probably amount to from 50,000 to 60,000.

Callao, the port of Lima, is about 6 miles W. from the latter. The harbour lies to the north of a projecting point of land, in the angle formed by the small uninhabited island of San Lorenzo. Previously to the emancipation of Peru, and the other *ci-devant* Spanish provinces in the New World, Lima was the grand *entrepôt* for the trade of all the west coast of South America; but a considerable portion of the foreign trade of Peru, is now carried on through Buenos Ayres, and the former is also in the habit of importing European goods at second hand from Valparaiso and other ports in Chili. The exports from Lima consist principally of copper and tin, silver, cordovan leather, and soap, vicunna wool, quinquina, &c. The imports consist principally of woollen and cotton stuffs, and hardware, from England; silks, brandy, and wine, from Spain and France; stock-fish from the United States, indigo from Mexico, Paraguay herb from Paraguay, spices, quicksilver, &c. Timber for the construction of ships and houses is brought from Guayaquil. The official value of the different articles of British produce and manufacture exported to Peru in 1781, amounted to 624,639*l.*, besides 21,392*l.* of foreign and colonial merchandise. The official value of the imports into Great Britain from Peru during the same year was 42,377*l.*

Monies, Weights, and Measures, same as those of Spain; for which, see CADIZ.
LIME (Ger. *Kalk*; Fr. *Chaux*; It. *Calcina, Calce*; Sp. *Cal*; Rus. *Invest*), an earthy substance of a white colour, moderately hard, but which is easily reduced to powder, either by sprinkling it with water or by trituration. It has a hot burning taste, and in some measure corrodes and destroys the texture of those animal bodies to which it is applied. Specific gravity, 2.3. Calcium, the metallic basis of lime, was discovered by Sir H. Davy.

There are few parts of the world in which lime does not exist. It is found purest in limestone, marble, and chalk. None of those substances is, however, strictly speaking, lime; but they are all easily converted into it by a well-known process; that is, by placing them in kilns or furnaces constructed for the purpose, and keeping them for some time in a white heat,—a process called the burning of lime.—(*Thomson's Chemistry*.)

The use of lime, as mortar in building, has prevailed from the earliest antiquity, and is nearly universal. It is also very extensively used in this country, and in an inferior degree in some parts of the Continent and of North America, as a manure to fertile land. But it is a curious fact that the use of lime as a manure is entirely a European practice; and that its employment in that way has never been so much as dreamed of in any part of Asia or Africa. Lime is of much importance in the arts, as a flux in the smelting of metals, in the shape of chlorate in bleaching, in tanning, &c. Lime and limestones may be carried and landed coastwise without any customs document whatever. Its consumption in this country is very great.

LIME (Fr. *Citronier*; Ger. *Citron*; Hind. *Neembo*), a species of lemon (*Citrus medica*, var. *J. C.*), which grows in abundance in most of the West India islands, and is also to be met with in some parts of France, in Spain, Portugal, and throughout India, &c. The lime is smaller than the lemon, its rind is usually thinner, and its colour, when the fruit arrives at a perfect state of maturity, is a fine bright yellow. It is uncommonly juicy, and its flavour is esteemed superior to that of the lemon; it is, besides, more acid than the latter, and to a certain degree acrid.

LINEN (Ger. *Linnen*, *Leinwand*; Du. *Lynwaat*; Fr. *Toile*; It. *Tela*, *Panno lino*; Sp. *Lienza*, *Tela de lino*; Rus. *Polotno*), a species of cloth made of thread of flax or hemp. The linen manufacture has been prosecuted in England for a very long period; but though its progress has been considerable, particularly of late years, it has not been so great as might have been anticipated. This is partly, perhaps, to be ascribed to the efforts that have been made to bolster up and encourage the manufacture in Ireland and Scotland, and partly to the rapid growth of the cotton manufacture—fabrics of cotton having to a considerable extent supplanted those of linen.

In 1696, both houses of parliament addressed his Majesty (William III.), representing that the progress of the woollen manufacture of Ireland was such as to prejudice that of this country; and that it would be for the public advantage, were the former discouraged, and the linen manufacture established in its stead. His Majesty replied,—“I shall do all that in me lies to discourage the woollen manufacture in Ireland, and encourage the linen manufacture, and to promote the trade of England!” We may remark, by the way; that nothing can be more strikingly characteristic of the illiberal and erroneous notions that were then entertained with respect to the plainest principles of public economy, than this address and answer to it. But whatever the people of Ireland might think of their sovereign deliberately avowing his determination to exert himself to crush a manufacture in which they had begun to make some progress, government had no difficulty in prevailing upon the legislature of that country to second their views, by prohibiting the exportation of all woollen goods from Ireland, except to England, where prohibitory duties were already laid on their importation! It is but justice, however, to the parliament and government of England, to state that they have never discovered any backwardness to promote the linen trade of Ireland; which, from the reign of William III. downwards, has been the object of regulation and

encouragement. It may, indeed, be doubted whether the regulations have been always the most judicious that might have been devised, and whether Ireland has really gained any thing by the forced extension of the manufacture. Mr. Young and Mr. Wakefield, two of the highest authorities as to all matters connected with Ireland, contend that the spread of the linen manufacture has not really been advantageous. And it seems to be sufficiently established, that though the manufacture might not have been so widely diffused, it would have been in a sounder and healthier state had it been less interfered with.

Bounties.—Besides premiums and encouragements of various kinds, bounties were granted on the exportation of linen for a very long period down to 1830. In 1823, for example, notwithstanding it had been very much reduced, the bounty amounted to about 300,000*l.*, or to nearly *one seventh* part of the entire real or declared value of the linen exported that year! It is not easy to imagine a greater abuse. A bounty of this sort, instead of promoting the manufacture, rendered those engaged in it comparatively indifferent to improvements; and though it had been otherwise, what is to be thought of the policy of persisting for more than a century in supplying the foreigner with linens for less than they cost? We have not the least doubt, that were the various sums expended in well-meant but useless attempts to force this manufacture, added together, with their accumulations at simple interest, they would be found sufficient to yield an annual revenue, little, if at all, inferior to the entire value of the linens we now send abroad. And after all, the business never began to do any real good, or to take firm root, till the manufacture ceased to be a domestic one, and was carried on principally in mills, and by the aid of machinery,—a change which the old forcing system tended to counteract. The only real and effectual legislative encouragement the manufacture has ever met with, has been the reduction of the duties on flax and hemp, and the relinquishing of the absurd attempts to force their growth at home.

Exports of Linen from Ireland, &c.—The following Table, which we regret the parliamentary accounts do not furnish the means of continuing to the present day, gives

An Account of the Quantity and Value of the Linens exported from Ireland, from 1800 to 1830, both inclusive.

Years.	To Great Britain.	To Foreign Parts.	Total.	Amount of Bounty paid in Ireland, on Linen exported to Foreign Parts.

1817	50,288,942	6,911,733	56,230,375	21,521	15 4½
1818	44,716,354	6,178,954	50,923,308	26,248	6 2
1819	34,957,396	3,689,355	37,641,451	16,177	8 3½
1820	40,316,279	2,304,918	43,613,318	11,928	9 11
1821	45,619,509	4,011,659	49,531,159	16,218	19 3½
1822	43,228,710	3,374,993	46,601,702	17,112	9 2
1823	48,066,591	3,169,006	61,335,597	17,765	6 10
1824	46,466,950	3,026,427	49,493,377	17,114	13 10½
1825	52,559,078	2,553,587	55,113,265	12,015	9 9½
1826		2,726,397	- - -	10,249	17 9
1827		4,384,506	- - -	12,114	0 8
1828		2,314,911	- - -	9,494	7 5
1829		2,386,223	- - -	6,586	11 11

Of these exports, more than 12-13ths have been to Great Britain. The total average export, during the 3 years ending with 1825, was 51,947,413 yards, of which 49,031,073 came to this country; the surplus to all other parts being only 2,916,340. Since 1825, the trade between Ireland and Great Britain has been placed on the footing of a coasting trade, so that linens are exported and imported without any specific entry at the Custom-house.

Scottish Linen Manufacture.—In 1727, a Board of Trustees was established in Scotland for the superintendance and improvement of the linen manufacture. It is not easy to suppose that the institution of this Board could of itself have been of any material service; but considerable bounties and premiums being at the same time given on the production and exportation of linen, the manufacture went on increasing. Still, however, it did not increase so fast as cotton and some others, which have not received any adventitious support, until machinery began to be extensively employed in the manufacture; so that it is very doubtful whether the influence of the bounty has been so great as it would at first sight appear to have been. The regulations as to the manufacture, after having been long objected to by those concerned, were abolished in 1823; and the bounties have now ceased. We subjoin

An Account of the Quantity and Value of the Linens exported from Ireland, from 1800 to 1830, both inclusive.

This account is not, however, of much use. The stamp was only affixed to linen on which a bounty was paid, that is, on linen intended for exportation. Linen manufactured for home use, or intended for private sale, was not stamped.—(Hedrick's Survey of Forfar, p. 506.)

Dundee is the grand seat of the Scotch linen manufacture; and its progress there during the last few years has been so extraordinary, that the following details in respect to it may not be unacceptable.

The manufacture appears to have been introduced into Dundee some time towards the beginning of last century; but, for a lengthened period, its progress was comparatively slow. In 1745, only 74 tons of flax were imported, without any hemp; the shipments of linen cloth during the same year being estimated at about 1,000,000 yards, no mention being made either of sail-cloth or bagging. In 1791, the imports of flax amounted to 2,444 tons, and those of hemp to 299 tons; the exports that year being 7,842,000 yards linen, 280,000 yards sail-cloth, and 85,000 do. bagging. From this period the trade began to extend itself gradually, though not rapidly. Previously to the peace of 1815, no great quantity of machinery was employed in spinning; but about this period, in consequence, partly and principally of the improvement of machinery, and its extensive introduction into the manufacture, and partly of the greater regularity with which supplies of the raw material were obtained from the Northern powers, the trade began rapidly to increase. Its progress has, indeed, been quite astonishing; the imports of flax having increased from about 3,000 tons in 1814, to 15,000 tons in 1830! The exports of manufactured goods have increased in a corresponding proportion. During the year ended the 31st of May, 1831, there were imported into Dundee 1,910 tons of flax, and 3,082 do. hemp; and there were shipped off 968,817 pieces, being about 56,000,000 yards, of linen; 85,522 pieces, or about 3,500,000 yards, of sail-cloth; and about 1,000,000 yards of bagging—in all, about 57,500,000 yards!—(See an excellent article on this subject in the *Dundee Chronicle*, 16th of October, 1832.) In the year ending the 31st of May, 1833, the imports of flax amounted to 18,777 tons, besides 3,380 tons of hemp. The shipments of linen, sail-cloth, &c. have increased in a corresponding ratio; and were valued, in the year now mentioned, at about 1,600,000*l*.

It appears, therefore, that the shipments of linen from this single port are quite as great as those from all Ireland; and while the manufacture has been very slowly progressive in the latter, it has increased at Dundee even more rapidly than the cotton manufacture has increased at Manchester. It is not easy to give any satisfactory explanation of this wonderful progress. Something must be ascribed to the convenient situation of the port for obtaining supplies of the raw material; and more, perhaps, to the manufacture having been long established in the towns and villages of Strathmore, the Carse of Gowrie, and the northern parts of Fife, of which Dundee is the emporium. But these circumstances do not seem adequate to explain the superiority to which she has recently attained in this department; and, however unphilosophical it may seem, we do not really know that we can ascribe it to any thing else than a concurrence of fortunate accidents. Nothing, in fact, is so difficult to explain as the superiority to which certain towns frequently attain in particular departments of industry, without apparently possessing any peculiar facilities for carrying them on. But from whatever causes their pre-eminence may arise in the first instance, it is very difficult, when once they have attained it, for others to come into competition with them. They have, on their side, established connections, workmen of superior skill and dexterity in manipulation, improved machinery, &c. Recently, indeed, the advantages in favour of old establishments have been, to a considerable extent, neutralised by the prevalence of combinations amongst their workmen; but it is to be hoped that means may speedily be devised for obviating this formidable evil.

Value of the Manufacture. Number of Persons employed.—There are no means by which to form an accurate estimate of the entire value of the linen manufacture of Great Britain and Ireland. Dr. Colquhoun estimated it at 15,000,000*l*.; but there cannot be the shadow of a doubt that this is an absurd exaggeration. In the former edition of this work we expressed our conviction that it could not be valued at more than 10,000,000*l*.; but further investigation has satisfied us that even this estimate is very decidedly beyond the mark, and that the entire produce of the manufacture in the United Kingdom does not exceed 7,500,000*l*.^a Some very intelligent individuals, largely engaged in the trade, do not esti-

^a Sir F. M. Eden estimated the entire value of the linen manufacture of Great Britain, in 1800, at 2,000,000*l*.—(Treatise on Insurance, p. 76.)

mate it at so much; and we feel fully confident that this sum, if not much beyond, is at all events not within the mark. Now, if we set aside a third part of this sum for the value of the raw material, and 25 per cent for profits, wages of superintendence, wear and tear of capital, coal, &c., we shall have 3,125,000*l.* to be divided as wages among those employed in the manufacture. And supposing each individual to earn, at an average, 18*l.* a year, the total number employed would be about 172,000. It may be thought, perhaps, that 18*l.* is too low an estimate for wages; and such, no doubt, would be the case, were not Ireland taken into the average. But as a great many persons are there employed in the manufacture at very low wages, we believe that 18*l.* is not very far from the mean rate.*

Linen Trade of the United Kingdom.—The following official statements show, in detail, the state of the import and export trade of the country in this department, in 1830, with the results for the subsequent years.

Account of the Quantities of Hemp and Flax, dressed and undressed, Hemp Tow, Flax Tow, and Linen Yarns, imported into Great Britain and Ireland, from Foreign Parts, in the year ended the 5th of January, 1831; distinguishing the Ports of Importation, and the Countries whence imported, together with the Real and Official Values thereof.—(Parl. Paper, No. 534. Sess. 1830, &c.)

For the quantity and value of linens exported during 1830, and 1837, see Table on the following page.

Consumption of Foreign Linens.—It appears from the second of the foregoing accounts, that the consumption of foreign linens in this country is quite inconsiderable; the real or declared value of those entered for home consumption, in 1830, could hardly amount to 20,000*l*.

Regulations as to the Linen Manufacture.—Any person, native or foreigner, may, without paying any thing, set up in any place, privileged or not, corporate or not, any branch of the linen manufacture; and foreigners practising the same shall, on taking the oath of allegiance, &c., be entitled to all the privileges of natural born subjects.—(15 Cha. 2. c. 15.)

Persons affixing stamps to foreign linens in imitation of the stamps affixed to those of Scotland or Ireland, shall forfeit 5*l*. for each offence; and persons exposing to sale or packing up any foreign linen as the manufacture of Great Britain or Ireland, shall forfeit the same, and 5*l*. for each piece of linen so exposed to sale or packed up.—(17 Geo. 2. c. 30.)

Any person sending to the value of 10*l*. any linen, woolen, silk, or cotton goods, whilst exposed during any stage of the manufacture in any building, field, or other place, shall, upon conviction, be liable at the discretion of the court to be transported beyond seas for life, or for any term not less than 7 years, or to be imprisoned for any term not exceeding 4 years, and, if a male, to be once, twice, or thrice publicly or privately whipped, as the court shall think fit.—(7 & 8 Geo. 4. c. 29. § 14.)

LIQUORICE (Ger. *Sussholz*; Fr. *Réglisse*, *Racine douce*; It. *Regolizia*, *Logorizia*, *Liquirizia*; Sp. *Regaliz Orozuz*), a perennial plant (*Glycyrrhiza glabra*), a native of the south of Europe, but cultivated to some extent in England, particularly at Mitcham in Surrey. Its root, which is its only valuable part, is long, slender, fibrous, of a yellow colour, and when fresh very juicy. The liquorice grown in England is fit for use at the end of 3 years; the roots, when taken up, are either immediately sold to the brewers' druggists, or to common druggists, by whom they are applied to different purposes, or they are packed in sand, like carrots or potatoes, till wanted.

* No British linen sent from Ireland.

† The declared value of the linens exported in 1831 was 2,461,704*l*.

LIQUORICE JUICE (*Succus Liquoritiæ*), popularly *black sugar*, the inspissated juice of the roots just mentioned. Very little of this extract is prepared in Britain, by far the larger part of our supply being imported from Spain and Sicily. The juice obtained by crushing the roots in a mill, and subjecting them to the press, is slowly boiled till it becomes of a proper consistency, when it is formed into rolls of a considerable thickness, which are usually covered with bay leaves. This is the state in which we import it. Most part of it is afterwards redissolved, purified, and cast into small cylindrical rolls of about the thickness of a goose quill, when it is called *refined liquorice*. It is then of a glossy black colour, brittle, having a sweet mucilaginous taste. It is used in the *materia medica*, particularly in coughs, colds, &c.—(*Thomson's Chemistry; Thomson's Dispensary.*)

The imports in 1831 and 1832 amounted, at an average to 7,321 cwt. a year. It is loaded with the oppressive duty of 3*l.* 15*s.* a cwt., producing rather more than 22,000*l.* a year of revenue.

LISBON, the capital of Portugal, situated on the north bank of the river Tagus, the observatory of the fort being in lat. 38° 42' 24" N., lon. 9° 5' 50" W. Population about 200,000, but formerly greater.

Trade, &c.—Lisbon is one of the best situated commercial cities of Europe. But, notwithstanding this circumstance, the excellence of the port, and the command of the navigation of the Tagus, her commerce is comparatively trifling. The despotism, intolerance, and imbecility of the government have weighed down all the energies of the nation. The law and the police being alike bad, there is no adequate security. Assassination is very frequent. Industry of all sorts is, in consequence, paralysed; and since the emancipation of Brazil, commerce has rapidly declined. Formerly Lisbon had about 400 ships, of from 300 to 600 tons burden, employed in the trade with South America. But at present there are not above 50 ships belonging to the port engaged in foreign trade; and, of these, the average burden does not exceed 150 tons! The produce of Portugal sent to foreign countries, is almost entirely conveyed to its destination in foreign ships. The trade between Lisbon and Cork is, we believe, the only exception to this; it being principally carried on in Portuguese vessels, which take salt from St. Ubes, and bring back butter in return. About 200 small craft belong to the city, which are exclusively employed in the coasting trade.

There are neither price in Lisbon. The principal to those of Spain; wine, caps, vinegar, salt, cork, ton, woolen, and linen ber and deans, hemp, &c. Britain to Portugal in 18 nearly a half; but of the

Weights and long mensu re measures of capacity. as follows.

There are neither price currents, shipping lists, nor official returns of any kind, published in Lisbon. The principal exports are lemons and oranges—which, however, are very inferior to those of Spain; wine, particularly Lisbon and Calcavella; wool, oil, tanned hides, woollen caps, vinegar, salt, cork, &c. Besides colonial produce, the principal imports consist of cotton, woollen, and linen goods; hardware, earthenware, dried fish, butter, corn, cheese, timber and deals, hemp, &c. The declared or real value of all articles exported from Great Britain to Portugal in 1831 amounted to 975,991*l.*, of which cotton stuffs and yarn made nearly a half; but of these exports a large proportion went to Oporto.

Port.—The harbour or rather road of Lisbon is one of the finest in the world, and the quays are at once convenient and beautiful. Fort St. Julian marks the northern entrance of the Tagus. It is built on a steep projecting rock. There is a light-house in the centre, 120 feet above the level of the sea. At the mouth of the Tagus are two large banks, called the North and South *Cachops*. There are two channels for entering the river; the north or little, and the south or great channel, exhibited in the adjoining plan. On the middle of the South Cachop, about $\frac{1}{4}$ mile from Fort St. Julian, is the Bugio fort and light-house, the latter being 66 feet in height. The least depth of water in the north channel on the bar is 4 fathoms, and in the south 6. The only danger in entering the port arises from the strength of the tide; the ebb running down at the rate of 7 miles an hour; and after heavy rains, when there is a great deal of fresh water in the river, the difficulty of entering is considerably augmented. When, at such periods, there is a strong wind from the sea, there is a complete break all over the bar; vessels moor up and down the river with open hawses to the southward. In some parts they may come within 200 yards of the shore, being guided by the depth of water, which, from nearly 20 fathoms in mid-channel, shoals gradually to 6 fathoms at the quays.

References to Plan.—A, Fort St. Julian and light-house. B, Bugio fort and light-house. C, Hercules look-out house. D, Belém Castle. E, Point Casilheas. F, Bugio fort and Sugar Loaf Hill in situ, mark the north channel.

Money.—Accounts are kept in rees, 1,000 of which = 1 milree. In the notation of accounts the milrees are separated from the rees by a crossed cypher (⊕), and the milrees from the millions by a colon: thus, Rs. 2:700 ⊕ 500 = 2,700 milrees and 500 rees.

The crusado of exchange, or old crusado, = 400 rees; the new crusado = 480 rees; the testoon = 100 rees; and the vinten or vintem = 20 rees.

The gold piece of 6,400 rees = 35*s.* 11*d.* sterling; the gold crusado = 2*s.* 3*d.*; and the milree, valued in gold, = 87*d.* sterling. It appears, however, from assays made at the London mint, in 1812, in modern silver crusados, that the average value of the milree in silver may be estimated at 80*d.* or 5*s.* sterling.

Weights and Measures.—The commercial weights are, 8 ounces = 1 marc; 2 marcs = 1 pound or arratel; 24 pounds = 1 arroba; 4 arrobas = 1 quintal; 100 lbs. or arratels of Portugal = 101.19 lbs. avoirdupois = 45.895 klog, = 94.701 lbs. of Hamburg = 92.918 lbs. of Amsterdam.

The principal measure for corn, salt, &c. is the moyo, divided into 15 fanegas, 60 alquílres, 240 quartos, 480 selemls, &c. The moyo = 23.03 Winchester bushels.

The principal liquid measure is the almude, divided into 3 potes, 12 canadas, or 48 quartellos; 18 almudes = 1 barril; 20 almudes = 1 pipe; 22 almudes = 1 tonelada. The almude = 4.37 English wine gallons; and the tonelada = 227*l.* ditto.

A pipe of Lisbon is estimated by the Custom-house (British) at 140 gallons; and this pipe is supposed to be 21 almudes. A pipe of port is 168 gallons, divided into 21 almudes of Oporto.

Of measures of length, 3 pes = 3 palmes = 1 covado, or cubit; 14 covados = 1 vara; 2 varas = 1 braça. The pe or foot = 12.944 English inches; 100 feet of Portugal = 107.8 English feet; the vara = 43.3 English inches.

For freight a last is reckoned at 4 pipes of oil or wine, 4 chests of sugar, 4,000 lbs. of tobacco, 3,600 lbs. of annac.

But from one place in Portugal to another, a tonelada is reckoned at 52 almudes of liquids, or 54 almudes of dry goods.

Coffee is sold per arroba; cotton, indigo, and pepper per lb.; oil, per almude; wine, per pipe; corn, per alquílre; salt, per moyo.

Grain, seed, fish, wool, and timber, are sold on board.

Weights and long measures are the same throughout Portugal; but there is a great discrepancy in the measures of capacity. The almude and alquílre, at the principal places, are in English measures as follows:

Lisbon - Alimude = 5-37 gall. Eng. wine meas.	Faro - Alquêre = 34 gull. Winch. meas.
— Alquêre = 3-07 — 1/2 inch. meas.	Figuera - Alimude = 34 — wine meas.
Oporto - Alimude = 64 — wine meas.	— Alquêre = 34 — Winch. meas.
— Alquêre = 34 — Winch. meas.	Vianna - Alimude = 64 — wine meas.
Faro - Alimude = 44 — wine meas.	— Alquêre = 34 — Winch. meas.

(Kelly's Comber, vol. 1, art. Lisboa.)
Bank of Lisbon.—This establishment was founded in 1823. Its capital consisted, in 1832, of about 601,160*l.*, divided into 6,911 shares of about 100*l.* each. The shareholders are not liable beyond the amount of their shares. The bank discounts bills not having more than 3 months to run, at 5 per cent. Its dividends, at an average of the 3 years ending with 1831, were about 6 per cent. It enjoys the singular but valuable privilege of having its claims on all estates paid off in full, provided the estate amounts to so much; other creditors being obliged to content themselves with a division of the residue, if there be any.

Duties.—These are moderate. British goods pay a duty of 15 per cent. on a valuation fixed in 1782; but this on some articles is a good deal more, and on others less. The importation of tobacco, snuff, and soap is prohibited, except for the use of the contractors to whom the manufacture and sale of these articles is assigned. All imported articles pay a duty (consolidated) of 4 per cent. ad valorem. The duties collected at the different Custom-houses in Lisbon,—for of these there are no fewer than seven,—amounted, in 1831, to about 2,600,000*l.*

authorities at Belem, who deliver the signal the vessel is to land where going to sea.
 There is no regular warehousing and bonding system in Lisbon. All imported dry goods are allowed to remain in the Custom-house stores 3 years, and liquids 6 months, without being changed warehouse rent, provided they are intended for consumption, and pay the duties accordingly. But if, after that period, they are taken out to be re-ported, they are charged 3 per cent. duty.
Post Charges.—On a foreign ship of 200 tons entering the port of Lisbon, with a general or mixed cargo, and clearing out with the same:—

Arrivals.	1828.		1830.		1831.	
	Ships.	Tons.	Ships.	Tons.	Ships.	Tons.
British	322	34,308	304	30,334	280	34,749
Portuguese	340	—	343	—	131	—
Foreign	460	—	422	—	338	—

Royal passport	7,800
Fetty expenses on entering at the Custom house, about	700
Anchorage	400
Ballast clearance	400
Tonnage, 100 rees per ton	30,000
Lights, 50 rees per ton	16,000
Contribution to Board of Trade	1,600
Ferry charges	720
Bill of health	840
Total	54,960 = 11<i>l.</i> 6<i>s.</i> 6<i>d.</i> ster.

There is no return of the tonnage of the Portuguese and foreign ships.

Port Regulations.—All vessels entering the Tagus are obliged to come to anchor off Belem Castle, where there is an office at which they must be entered, their cargoes declared, from whence they come, and whether the cargo be intended to be landed in Lisbon or not; if not, the master supplies for "franchise," that is, for leave to remain 8 days in the port for the purpose of disposing of the cargo or of departing with it. Two Custom-house officers are then sent on board, and if the cargo is to be discharged at Lisbon, the vessel proceeds to the Custom house, when the master speaks entry, delivering the manifest and bills of lading attached to the certificate of the Portuguese consul, at the port of lading, in order to identify the cargo. The officers put on board at Belem are then relieved by two others, who remain until the vessel be discharged and visited by the Custom-house officers. The port dues have to be paid in different offices; but the vessel is not subject to any other charges.

Vessels coming with a cargo, or in ballast, and departing in ballast, pay 200 rees per ton lights, or 4 lines as much as if they sailed with cargo. Vessels coming with a cargo, and sailing with the same cargo, pay no tonnage dues.

Commission.—The ordinary rates of commission are, on the sale of goods, 1/4 per cent.; *del credere*, 1/2 per cent.; on the value of goods landed from a vessel putting in to effect repairs, 1 per cent.; on ships' disbursements, 5 per cent.

Insurances are effected to a trifling amount. There is a national company for effecting insurances; but it is sojourning little credit. Rates are not regulated by any certain rule. These amounts are generally those invoiced or marked on the packages.—(See *Annuaire des Commerce Maritimes*, p. 253; *Kelly's Comber*; *Compendium de Circulars Quercus*, &c.)

(In return for the privilege conceded to the Portuguese under the Methuen treaty (see **TREATIES**), of admitting their wines to entry for consumption in Great Britain, at 2-3*d.* the duty charged on French wines, British woollens were admitted into Portugal at a duty of 15 per cent. This rate of duty was afterwards extended to all British articles; and, since 1782, it has been charged according to a tariff or valuation fixed that year. But, with the exception of goods from Brazil, all other foreign goods consumed in Portugal paid a duty of 30 per cent. These distinctions are now, however, at an end; the subjoined decrees having fixed the duty on all goods admitted to consumption in Portugal, without regard to their origin, at 15 per cent. This regulation was a good deal complained of here, but without reason. Having judiciously equalised the duties on French and Portuguese wines, we had no right or title to expect that the Portuguese should continue to render us the stipulated equivalent of what we had ourselves withdrawn. In so far, too, as we are concerned, the change is not really of any material importance, and will not sensibly affect our trade with Portugal. We subjoin the decree referred to:—

1. All goods and merchandise, of whatever nature and origin, and under whatever flag they may be imported, are admitted into the Custom-house of Lisbon and Oporto, to be despatched for consumption.
2. Live pica, gunpowder, and foreign oils and turpentine, are excepted from the foregoing article.
3. The importation of grain will be regulated by a special law; and in the mean time the existing dispositions thereunto relating, will continue in force.
4. Wine, vinegar, brandy, and other spirits, of whatever quality they may be, are only admitted in bottles or jars of half a

- canada, Lisbon measure, and in boxes containing 3 dozens of bottles each. Rum, however, is admitted in casks of any size.
5. Goods admitted to consumption by the present decree, if imported in Portuguese vessels from the country to which they are so-ported, or in ships of that country coming direct, will pay 10 per cent., levied upon the tariff valuation, and where there is no tariff, ad valorem. In the contrary case, will pay the duty hereby established increased by 1/2 of the same duty.
6. Vinegar, wine, brandy, and all other spirits, will pay 200 reis per bottle or jar. The decree of the 7th of December, 1828, in relation to full force as regards rum, whatever place it comes from. The goods comprehended in this paragraph remain subject to the clauses of the preceding article, in so far as they are applicable.

[The following decree of the Portuguese government is important to American ship-owners.

Article 1. All foreign ships entering the ports of this kingdom in ballast, and loading a full cargo of salt, shall be free from the tonnage duty. **Sec.**—Foreign ships entering any of the ports of this kingdom in ballast, and sailing out again to take a full cargo of salt at another of our ports, are equally free from the tonnage duty.

Article 2. All foreign vessels entering the ports of this kingdom under Frangul, in order to complete their cargoes with salt, shall pay the duty of 100 reis per ton.

Article 3. All foreign vessels entering the ports of this kingdom to discharge cargoes of merchandise, and here load a full cargo of salt, shall pay the duty of 100 reis per ton.

Article 4. All foreign vessels which (having paid the duty in one of the ports of this kingdom) sailed in ballast to another port of the kingdom, in order there to take full cargo of salt, are entitled to receive back the duty paid in the first port, with the deduction merely of 100 reis per ton, on presenting to the competent authority of a legal certificate of said payment.—*Am. Ed.*

LITHARGE (Ger. *Glätte, Glätte*; Du. *Gelit*; Fr. *Litharge*; It. *Lithargio*; Sp. *Almortaga, Lithargio*; Rus. *Glet*; Lat. *Lithargyrium*), an oxide of lead in an imperfect state of vitrification. Most of the lead met with in commerce contains silver, from a few grains to 20 ounces or more in the fodder: when the quantity is sufficient to pay the expense of separation, it is *refined*; that is, the metal is exposed to a high heat, passing at the same time a current of air over the surface: the lead is thus oxidised and converted into litharge, while the silver, remaining unchanged, is collected at the end of the process.—(*Thomson's Chemistry, &c.*) Litharge is used for various purposes in the arts, by potters, glass makers, painters, &c.

[LIVERPOOL. See Supplement.—Am. Ed.]

LOADSTONE (Ger. *Magnet*; Du. *Magneet*; Fr. *Aimant*; It. *Calamita*; Sp. *Iman*; Rus. *Magnit*; Lat. *Magnes*). M. Haly observes, that the ores in which the iron contains the least oxygen were being engaged in other combinations, form natural magnets; and he calls the *loadstones* of commerce, which are found in considerable masses in Germany, Sweden, Norway, Spain, Italy, China, Siam, the Philippine Isles, Corlica, and Ethiopia, *acidulated iron*. The loadstone is characterised by the following properties:—A very strong action on the magnetic needle. Specific gravity 4.2457. Not ductile. Of a dark grey colour, with a metallic lustre.—Primitive form, the regular octahedron. Insoluble in nitric acid. This singular substance was known to the ancients; and they had remarked its peculiar property of attracting iron; but it does not appear that they were acquainted with the wonderful property which it also has, of turning to the pole when suspended, and left at liberty to move freely. Upon this remarkable circumstance the mariner's compass depends,—an instrument which gives us such infinite advantages over the ancients. It is this which enables the mariner to conduct his vessel through vast oceans out of the sight of land, in any given direction; and this directive property also guides the miner in subterranean excavations, and the traveller through deserts otherwise impassable. The natural loadstone has also the quality of communicating its properties to iron and steel; and when pieces of steel properly prepared are touched, as it is called, by the loadstone, they are denominated artificial magnets.—(See COMPASS.)

LOBSTER (Fr. *Erevisse*; Lat. *Cancer*), a fish of the crab species, of which vast quantities are consumed in London.

The minimum size of lobsters offered for sale is fixed by 10 & 11 Will. 3. c. 24, at eight inches from the tip of the nose to the end of the middle fin of the tail. No lobsters are to be taken on the coast of Scotland between the 1st of June and the 1st of September, under a penalty of 5*l*. The Scilly Islands and the Land's End abound in lobsters, as well as several places on the Scotch shores, particularly about Montrose. But the principal lobster fishery is on the coast of Norway; whence it is believed upwards of 1,200,000 lobsters are annually imported into London. Those of Helligland are, however, esteemed the best; they are of a deeper black colour, and their flesh is firmer than those brought from Norway. Foreign caught turbot and lobsters may be imported either in British or foreign vessels free of duty.

LOCK, LOCKS (Ger. *Schlösser*; Du. *Sloten*; Fr. *Serrures*; It. *Serrature*; Sp. *Cerraduras, Cerrajos*; Rus. *Samki*), a well known instrument, of which there are infinite varieties. A great deal of art and delicacy is sometimes displayed in contriving and varying the wards, springs, bolts, &c., and adjusting them to the places where they are to be used, and to the occasions of using them. From the various structure of locks, accommodated to their different intentions, they acquire various names, as stock locks, spring locks, padlocks, &c. Wolverhampton was, at a very early period, famous for the superior skill and ingenuity of its locksmiths; but the best locks are now made in London and Birmingham. The grand difficulty to be overcome in making a lock is to construct it so that it may not be opened by any key except its own, nor admit of being picked; it should also be possessed of sufficient strength and durability, and not be too complex. Many ingenious contrivances have been proposed for the attainment of the desired security,—several of which are possessed of considerable merit. We believe, however, that there is none that combines all the principal requisites of a lock in so eminent a degree as "Chubb's Detector Lock," so called from the inventor, Mr. Chubb, of Portsea. Common door-locks are now usually inserted in the wood, instead of being, as formerly, screwed to it; and when so placed are called *mortise locks*.

LOGWOOD (Fr. *Bois de Campêche*; Ger. *Kampescholz*; Du. *Campecheout*; Sp. *Palo de Campeche*), the wood of a tree (*Hæmatoxylon Campechianum* Lin.), a native of America, and which attains the greatest perfection at Campeachy, and in the West Indies. It thrives best in a wet soil, with a large proportion of clay. The logwood tree is like the white-thorn, but of a deep red larger. The wood is hard, compact, heavy, and of a deep red colour internally, which it gives out both to water and alcohol. It is an article of great commercial importance, being extensively used as a dye wood. It is imported in logs, that are afterwards chipped.—(The logwood tree, and the adventures of those that were formerly engaged in cutting it, are described by Dampier; see his *Voyages*, vol. ii. part 2. p. 66. ed. 1729.)

The entries for home consumption, at an average of the 3 years ending with 1832, amounted to 10,373 tons a year. The duty of 4*s*. 6*d*. a ton on foreign logwood, and of 3*s*. on that from a British

stant land their arms, for a trifling consideration, to such foreigners as wish to be associated with them for the purpose of trading from the port. Independently, however, of this, vessels of other nations usually experience no difficulty in obtaining the connivance of the Chinese officers to the landing or receiving of goods in the roads, by means of Portuguese boats. At intervals, indeed, the prohibitory regulation is strictly enforced; but we believe that there has been no instance of this for the last 3 years.

Vessels of other nations, if in distress, and not engaged in the contraband trade, are admitted into the harbour for repairs, on application to the senate.

Port Charges.—The measurement duty paid by Spanish and Portuguese vessels is moderate. When a vessel has once paid the full amount, and is admitted on the list of registered ships belonging to the port (limited by the Chinese to 30), she is liable only to a third of the original charge, on every subsequent occasion of her entering, as long as she continues on the register. Portuguese vessels from Europe do not possess this privilege, unless they be registered as belonging to a member of the senate.

The rates of measurement duty, which vary, as at Canton, (which has three classes of vessels, are the following—

Tons.
 1st. On vessels of 154 coveids and upwards, 6-225 per covid.
 2d. — from 120 to 154 coveids 4-72 —
 3d. — from 50 to 120 coveids 4 —

These rates are nearly the same as those levied on Canton junks, trading with foreign countries, and ought, in fact, to be entirely so. The dimensions are taken and calculated in the same manner as at Canton (see p. 107); but the Chinese, at both places, speak out of the coveid, but of the change of 10 coveids. However, as this is only a nominal increase, it makes no difference in the method of calculation.

The following additional charge, to be calculated on the amount of measurement duty, are the same on every class of vessels, viz.
 1. 3 per cent. for inspection.
 2. 10 — for difference in weight by the treasury scales.
 3. 10 — for loss in melting.

For making opium:
 10 — for loss in melting.
 11 — for loss in melting.
 12 — for loss in melting.

Also the sum of 70 taels for the "public park," or hoppo's treasury. In addition to these, the following are the charges levied by the hoppo (collector of customs), or his assistants—

1. On 4th class vessel from Europe, 500 taels; if belonging to Macao or Manilla, 30 taels.
 2. On 3d class vessel from Europe, 340 taels; if belonging to Macao or Manilla, 30 taels.

On 2d class vessel from Europe, 170 taels; if belonging to Macao or Manilla, 30 taels.

On 1st class vessel from Europe, 100 taels; if belonging to Macao or Manilla, 30 taels.

These imposing rates are exempt from the measurement duty, and pay only 50 dollars, as has the procurator of Macao and the officers of his departments.

Portuguese vessels from Europe, in addition to the measurement duty, have to pay to the Canton local merchants a charge, termed by the Portuguese, *Manistagem*, or *Commo charge*, which is usually a matter of specific bargain, varying from about 500 dollars on a vessel of 200 tons, to 3,500 dollars and upwards on those of 600 tons and of larger size.

The charges on goods carried by the inner passage, between Canton and Macao, being generally less than those paid on goods to and from Whampoa; and the duties levied by the Portuguese, on articles of merchandise imported by vessels belonging to Macao, being very moderate, the Chinese are often led to engage in speculations on board the Macao vessels, the risk being so much less than in native junks.

If the ship owners could manage their business so as to be satisfied with only the same freight as is charged by English vessels, it would probably induce many more Chinese to make remittances in this way.

Opium.—The trade in opium is prohibited at Macao by the Chinese government, as well as throughout the rest of the empire. It was, nevertheless, formerly carried on to a great extent by the Portuguese merchants, or slaves, to the exclusion of all others, even Portuguese who were not slaves. But this restriction having occurred the decline of the trade, it was abolished in 1823, when the senate passed a resolution throwing open the trade to all, without distinction, whether Portuguese or foreigners; securing to the latter a hospital, and the utmost freedom in their speculations. At present, however, very little opium is imported, in consequence, it is said, of the heavy bribes demanded by the Chinese officers to insure

their connivance. The trade, as already observed (vol. I. p. 258), is now principally carried on at Lintia, about 30 miles from Macao.

Imports.—Goods imported pay at the Portuguese Customs-house a duty of 8 per cent. on a fixed valuation, besides some fees and excise duties. The following are a few articles extracted from the tariff—

	per picul	per covid	per picul	per covid
Cotton	1-800	0-006	1-800	0-006
Broad cloth, middling	—	—	—	—
— better than ordinary	—	—	—	—

Pepper	4-000	0-240	4-000	0-240

Opium imported in Portuguese ships, pays per chest, drs. 10 1-4
 Do. foreign do. 10 1-4

Gold and silver, whether in coin, in bullion, or manufacturer, pay on importation, 2 per cent.; except in Spanish vessels from Manilla, which pay the charge at 1 1/2 per cent.

Exports.—No duty is levied by the Portuguese on goods exported from Macao; nor does the Customs house take any cognizance of them.

Duties and Charges on Goods landed at Macao.—Macao is a place without any manufacture or commerce of its own. Prices are, in consequence, generally dependent on those of Canton. Money is usually paid at 73 taels per 100 dollars.

It is a point of some interest to ascertain the internal duties and expenses to which goods landed at Macao are liable, before coming into the Chinese purchaser's hands at Canton. But the subject is so involved in mystery and uncertainty, the charges varying according to the quantity of goods laden in one boat, &c., that it is scarcely possible to arrive at any accurate information respecting it. We believe, however, that the following may be considered as a pretty close approximation to the real amount of charges incurred on cotton landed at Macao—

Portuguese duty, fees, &c.	maco, 2-6	per picul
Duties and charges on conveyance to Canton	6-3	—
Canton charges, difference of weight, brokerage on sale, &c.	8-0	—
Total, about taels,	2-6-9	—

The duties and charges on conveyance from Macao to Canton are, for pepper, per picul maco, 3-0
 — — — — — do. — — — — — 4-6
 — — — — — do. — — — — — 4-6
 — — — — — do. — — — — — 4-6

The hoppo's exorbitant charges 80 taels per boat of 1,000 piculs, the largest quantity allowed to be conveyed by a single boat; but the same charge of 80 taels is levied, although the boat should only contain 100 piculs.

The duty on exporting goods from Canton to Macao is in some cases less, in other cases greater, than the Whampoa duty. Thus, nankeens to Macao pay 3 dollars per 100 lbs. less than to Whampoa. Most descriptions of silk piece goods also pay less duty. On the other hand, tea, paper, China ware, &c., pay a higher duty to Macao than to Whampoa.

For details as to the *Weights, Measures, &c.* use to Macao, see Canton.

For further particulars, see *Hamilton's East India Gazetteer*, art. *Macao*; *Milburn's Orient. Com.*; and the *Anglo-Chinese Calendar and Companion to the Almanac*, Macao, 1832.

MACE (Ger. *Macis*, *Muskatelnblüthe*; Du. *Poelie*, *Foely*, *Muscantbloom*; Fr. *Macis*, *Fleur de muscade*; It. *Mace*; Sp. *Macio*; Port. *Maccis*, *Flor de noz muscada*; Lat. *Macia*), a thin, flat, membranous substance, enveloping the nutmeg; of a lively, reddish yellow colour, a pleasant aromatic smell, and a warm, bitterish, pungent taste. Mace should be chosen fresh, tough, oleaginous, of an extremely fragrant smell, and a bright colour—the brighter the better. The smaller pieces are esteemed the best. The preferable mode of packing is in bales, pressed down close and firm, which preserves its fragrance and consistence.

Account of the Quantity of Mace retained for Home Consumption, the Rates of Duty on it, and the total Revenue derived therefrom, since 1810.

A production is met with on the coast of Malabar, so like mace, that at first it is not easy to be distinguished; but it has not the least flavour of apiciness, and when chewed has a kind of resinous taste. Eight cwt. of mace are allowed to a ton.—(Milburn's *Oriental Com.*)

MADDER (Ger. *Färberöthe*, Du. *Mee*; Fr. *Aizari*, *Garance*; It. *Robbia*; Sp. *Grana*, *Rubia*; Rus. *Mariona*, *Krap*; Hind. *Munjith*), the roots of a plant (*Rubia tinctorum*), of which there are several varieties. They are long and slender, varying from the thickness of a goose-quill to that of the little finger. They are semi-transparent, of a reddish colour, have a strong smell, and a smooth bark. Madder is very extensively used in dyeing red; and though the colour which it imparts be less bright and beautiful than that of cochineal, it has the advantage of being cheaper and more durable. It is a native of the south of Europe, Asia Minor, and India; but has been long since introduced into and successfully cultivated in Holland, Alsace, Provence, &c. Its cultivation has been attempted in England, but without any beneficial result. Our supplies of madder were, for a lengthened period, almost entirely derived from Holland (Zealand); but large quantities are now imported from France and Turkey.

Dutch or Zealand madder is never exported except in a prepared or manufactured state. It is divided by commercial men into four qualities, distinguished by the terms *mull*, *gamene*, *ombro*, and *crops*. The roots being dried in stoves, the first species, or mull, consists of a powder formed by pounding the very small roots, and the husk or bark of the larger ones. It is comparatively low priced, and is employed for dyeing cheap dark colours. A second pounding separates about a third part of the larger roots; and this being sifted and packed separately, is sold here under the name of gamene, or gemeens. The third and last pounding comprehends the interior, pure, and bright part of the roots, and is sold in Holland under the name of *kor krops*, but is here simply denominated *crops*. Sometimes, however, after the mull has been separated, the entire residue is ground, sifted, and packed together under the name of *onberooft*, or ombro. It consists of about one third of gamene, and two thirds of *crops*. Prepared madder should be kept dry. It attracts the moisture of the atmosphere, and is injured by it.

The Smyrna or Levant madder (*Rubia peregrina*), the alizari or lizary of the modern Greeks, is cultivated in Bœotia, along the border of lake Copais, and in the plain of Thebes. It also grows in large quantities at Kurdar near Smyrna, and in Cyprus. The madder of Provence has been raised from seeds carried from the latter in 1761. Turkey madder affords, when properly prepared, a brighter colour than that of Zealand. It is, however, imported in its natural state, or as roots: the natives, by whom it is chiefly produced, not having industry or skill sufficient to prepare it like the Zealanders, by pounding and separating the skins and inferior roots; so that the finer colouring matter of the larger roots being degraded by the presence of that derived from the former, a peculiar process is required to evolve that beautiful Turkey red which is so highly and deservedly esteemed.—(Thomson's *Chemistry*; Bancroft on *Colours*, vol. ii. pp. 231—278.: see also Beckmann, *Hist. of Invent.* vol. iii. art. *Madder*.)

In France, madder is prepared nearly in the same manner as in Zealand. The following instructive details as to its cultivation, price, &c. in Provence, were obligingly furnished to us by an English gentleman intimately acquainted with such subjects; who visited Avignon in the autumn of 1829:—

"This town (Avignon) is the centre of the madder country, the cultivation of which was introduced here about the middle of the 18th century, and, with the exception of Alsace, is still confined (in France) to this department (Vaucluse). The soil appears to be better adapted for its cultivation here than any where else, and it has long been the source of great wealth to the cultivators. Of late years, however, the prices have fluctuated so much, that many proprietors have abandoned, or only occasionally cultivated this root, so that the crop, which was formerly estimated to average 800,000 quintals, is now supposed not to exceed from 300,000 to 400,000.

"The root is called *aizari*, and the powder (made from 10 gerena. The plant is raised from seed, and requires 3 years to come to maturity. It is, however, often sown in 12 months, without injury to the quality; the quantity only is smaller. A rich soil is necessary for its successful cultivation) and when the soil is impregnated with alkaline matter, the root acquires a red colour—in other cases it is yellow. The latter is preferred in England, from the long habit of using Dutch madder, which is of this colour; but in France the red sets at 3 fr. per quintal higher, being used for the Turkey red dye.

"It is calculated that when wheat sells at 20 fr. per hectolitre, *aizari* should bring 35 fr. per quintal (pois de table), to give the same remuneration to the cultivator. That is, wheat 63s. per Eng. quarter, and *aizari* 51s. per Eng. cwt. The price has, however, been frequently as low as 22 fr. per quintal.

"Prices undergo a revolution every 1 or 2 years, reaching the minimum of 22, and rising as high as 100 fr. As in every similar case, the high price induces extensive cultivation, and this generally produces its full effect 4 or 5 years after. The produce of Alsace, which is inferior both in quantity and quality to that of Vaucluse, is generally sold in Strasbourg market.

"England employs both the root and the powder, according to the purposes for which they are intended. The Dutch madder is more employed by the woollen dyers, and the French by the cotton dyers and printers.

"In making purchases of gamene it is essential to employ a house of confidence, because the quality depends entirely upon the care and honesty of the agent. The *gamene* is produced from the roots after being cleaned and stripped of their bark. The second by grinding

the roots without cleaning. A third by mixing the bark of the first with grinding; and so on to any degree of adulteration.

"The price of *aizari* in the country, which was only 25 fr. in July, is now, (November, 1829) at 58 fr., and is expected to be at 60 fr. very shortly. The crop being deficient both here and in Holland, and the certainty of its being also deficient next year, added to the small quantity existing in England, give reason to believe that the price will reach 80 fr. before many months, and will continue to advance for a year or two more.

"The quintals here mentioned are of 100 lbs. poids de table—the weight in general use over the south of France, and even in *Neuchâtel*.—This weight is different in the different provinces, varying from 80 to 95 per cent. lighter than the *pois de commerce*. At Avignon 184 lbs. poids de table = 50 livres, consequently 186 lbs. are equal to 1 cwt. Eng. At the exchange of 25-50, the cwt. cost (including its freight, duty, and all charges till delivered in London or Liverpool) 61s. or 65s.

"It is considered that only one sixth or one seventh of the present crop remains for sale.

"Madder does not deteriorate by keeping, provided it is kept dry.

Complete *aizari*. 58
Cost of 1 quintal of roots in the country 5
Expenses in do. 37

The root gives 85 per cent. powder, consequently 1 quintal powder 49-5
Grinding and cart 5
Transport 5-50

The English cwt. costs therefore 60-5
All expenses till on board at Marseilles 8
Beside commission 7-50

For an account of East India madder or munjeet, see *Munjeet*.

Account of the Quantity of each Year since 1820; with Papers published by Board

Year	Quantity entered for Consumption.
1820	67,375
1821	48,480
1822	54,282
1823	78,458
1824	63,054
1825	75,346
1826	48,487
1827	56,750
1828	55,658
1829	60,658
1830	48,255
1831	48,758
1832	60,548

Of the imports of prepared madder, 12,637 were brought from France, 12,637 were imported from the south of the Indian coast (Madras), and 2,377 from the West Indies. The quantity of madder in use reduced to 1820, and its price, duty included, December, 1829, was as follows:—

Madder, Dutch mull
gamene

MADRAAS. See **W.B. BAY OF BENGAL**, the principality of Bengal, in lat. 22° 30' N. It is a second presidency of the British Empire, and covers an area of 100,000 square miles, with a population of 10,000,000. Its annual revenue of above 20 millions of rupees is derived from a variety of sources—land, salt, and opium. Besides these duties, the sphere of the hurricane, indeed, it is a very greatly inferior to that of English 192 years, being ascertained to be 28,788 about 160,000. Fort St. George, the Black Town, and other Portuguese merchant houses, Madras, like the Court of Judicature, the president of the local government.

In Madras roads, large a W.N.W., 3 miles from shore of the year, in consequence of the 15th of October the flag which period, a ship coming Coromandel (reckoned from the dilations of the policies of all above the level of the sea, or from the main-head at a Madras boats, are large ar instead of caulking, which the surf, the coromandel stam rowers work their oars b boat along with faithful v the wave from taking the l is thrown high and dry upo to the back of the surf, s dangerous to have commu near the landing-place, a The fishermen and lowe very simple construction, long length, lashed together, piece. When ready for th through the surf, to carry venture out. They wear no damage. The men are interrupted by a shark. M persons in danger.

Account of the Quantity of Madder and Madder Roots respectively entered for Home Consumption each Year since 1823, with the Rates of Duty, and the Produce of the Duty on each.—(From Papers published by Board of Trade.)

Year	Madder.			Madder Roots.		
	Quantity entered for Consumption.	Rate of Duty, Malt manufactured.	Net Revenue.	Quantity entered for Consumption.	Rate of Duty, all sorts.	Net Revenue.

East India, or monjeet	1 14 0	1 10 0

The duty on madder is now reduced to 12s. a cwt., and on roots to 6s. a cwt., and their price, duty included, in the London market, in December, 1832, was as follows:—

	L. s. d.	L. s. d.
Madder, Dutch small	0 10 0	1 5 0
gannese	1 10 0	2 5 0

Madder, the produce of Europe, is not to be imported for home consumption except in British ships, or in ships of the country of which it is the produce, or from which it is imported, under forfeiture of the same, and 100*l.* by the master of the vessel.—(8 & 4 7th. c. 4. s. 58. sect. 55.)

MADEIRA: See WINE.

MADRAS, the principal emporium on the coast of Coromandel, or western shore of the Bay of Bengal, in lat. 13° 5' N., lon. 80° 21' E. It is the seat of government of the second presidency of the British possessions in India, having under it a territory of 154,000 square miles, with a population, according to a recent census, of 15,000,000, paying a gross annual revenue of above 5,000,000*l.* sterling. The town is situated in the Carnatic province—a low, sandy, and rather sterile country. It is without port or harbour, lying close upon the margin of an open roadstead, the shores of which are constantly beat by a heavy surf. Besides these disadvantages, a rapid current runs along the coast; and it is within the sphere of the hurricanes or typhoons, by which it is occasionally visited. In every respect, indeed, it is a very inconvenient place for trade, and its commerce is consequently greatly inferior to that of either Calcutta or Bombay. It has been in possession of the English 192 years, being founded by them in 1639. In 1823, the number of houses was ascertained to be 26,786; which allowing 6 inhabitants to each, makes the total population about 160,000. Fort Saint George is a strong and handsome fortification, lying close to the shore. The Black Town of Madras, as it is called, stands to the north and eastward of the fort, from which it is separated by a spacious esplanade. Here reside the native, Armenian, and Portuguese merchants, with many Europeans unconnected with the government. Like most other Indian towns, it is irregular and confused, being a mixture of brick and bamboo houses. Madras, like Calcutta and Bombay, is subject to English law; having a Supreme Court of Judicature, the judges of which are named by the Crown, and are altogether independent of the local government, and the East India Company.

In Madras roads, large ships moor in from 7 to 9 fathoms, with the flagstaff of the fort bearing W.N.W., 3 miles from shore. From October to January is generally considered the most unsafe season of the year, in consequence of the prevalence, during that interval, of storms and typhoons. On the 15th of October the flagstaff is struck, and not erected again until the 15th of December; during which period, a ship coming into the roads, or, indeed, any where within soundings on the coast of Coromandel (reckoned from Point Palmyras to Ceylon), vitates her insurance, according to the conditions of the policies of all the insurance offices in India. In the fort there is a light-house, 50 feet above the level of the sea, and which may be seen from the deck of a large ship, at 17 miles' distance, or from the mast-head at a distance of 26 miles. The cargo boats used for crossing the surf, called *Masala* boats, are large and light; made of very thin planks sewed together, with straw in the seams, instead of caulking, which it is supposed might render them too stiff. When within the influence of the surf, the coxswain stands up, and beats time in great agitation with his voice and feet, while the rowers work their oars backwards, until overtake by a strong surf curling up, which sweeps the boat along with frightful violence. Every oar is then plied forward with the utmost vigour to prevent the wave from taking the boat back as it recedes; until at length, by a few successive surfs, the boat is thrown high and dry upon the beach. The boats belonging to ships in the roads sometimes proceed to the back of the surf, and wait for the country boats from the beach to come to them. When it is dangerous to have communication with the shore, a flag is displayed at the beach-house, which stands near the landing-place, as a caution.

The fishermen and lower classes employed on the water, use a species of floating machine of a very simple construction, named a *catamaran*. It is formed of 2 or 3 logs of light wood, 8 or 10 feet in length, lashed together, with a small piece of wood inserted between them to serve as a stem-plate. When ready for the water, they hold generally 2 men, who with their paddles impel themselves through the surf, to carry waters, or refreshments in small quantities, to ships, when no boat can venture out. They wear a pointed cap made of matting, where they secure the letters, which take no damage. The men are often washed off the catamaran, which they regain by swimming, unless interrupted by a shark. Medals are given to such catamaran men as distinguish themselves by saving persons in danger.

The following are the established rates of port charges at Madras :-

town of Madras; it receives deposits and grants discounts. The accumulated profits of the bank, from its first institution in 1806, amounted to 820,926, being at the rate of about 31,000 a year; but the Indian money is here reckoned at the rate of 8s. the pagoda, which is much above both the mint price and the value in exchange, the real profits are considerably smaller.

Mercantile Establishments.—At Madras there are but 3 principal European mercantile establishments, or houses of agency, with 7 of an inferior class. There are 2 American houses, and 1 considerable native house of business. The daubashes, or native brokers of Madras, are expert, intelligent, and sometimes knavish. Among the native merchants there are few men of wealth; and the contrast, in this respect, with Calcutta and Bombay, is striking. The degree of liberality exercised by the respective governments, and the prosperity of the different portions of the British territory in India, may safely be implied by the proportion of British settlers to be found in them. Tried by this test, the Madras provinces will be found amply wanting, as will be seen by the following brief Table:—

1813	Bengal	1,225	Madras	187	Bombay	489
1830		1,707		134		308

Insurance.—There is but one insurance company, called the India Insurance Society; but there are agents of the Calcutta companies, who effect insurance on shipping.

Agency and Commission.—The general rates of agency, commission, and warehouse rent, are as follow:—

- On the total sum of a debit or credit side of an account, at the option of the agent, excepting items on which a commission of 4 per cent. is chargeable, 1 per cent.
 - On effecting remittances, or purchasing, selling, or negotiating bills of exchange, 1 per cent.
 - On subscriptions in government loans, purchasing, selling, transferring, or exchanging public securities, 1-2 per cent.
 - On delivering up public securities, or lodging them in any of the public offices, 1-2 per cent.
 - On receiving and delivering private commissions of wines, cattle, and merchandises, 2-3 per cent.
 - On collecting rents, 2-3 per cent.
 - On the purchase of lottery tickets and amount of prizes, 1 per cent.
 - On the sale of lottery tickets from the other settlements, 1-2 per cent.
 - On letters of credit granted, 2-3 per cent.
 - On the management of estates, as executors, administrators, or attorneys, 5 per cent.
 - On doing, when a process at law or arbitration is necessary, 2-3 per cent.
 - And if recovered by such means, 5 per cent.
 - On bills of exchange, notes, &c. dishonoured, 1 per cent.
 - On overdue debts collected by absence, 3-4 per cent.
 - On becoming security for individuals to government, 1 per cent.
 - On all sales or purchases of goods, 5 per cent.
- With the following exceptions:—**
- On houses, lands, and ships, 1-2 per cent.
 - On diamonds, pearls, and jewellery, 2-3 per cent.
 - On treasure and bullion, 1 per cent.
 - On all goods and merchandises withdrawn, shipped, or delivered to order, 1-2 commissions.
 - On all other descriptions of property for sale, if withdrawn or otherwise disposed of by the owners, 1-2 commission.
 - On goods transferred to auction or commission salesmen, 1-2 commission.
 - On retail sales, 10 per cent.
 - On guaranteeing sales, bills, bonds, contracts for goods, or other engagements, 2-3 per cent.
 - On ships' disbursements, 2-3 per cent.
 - On advertising as the agents of owners or commanders of ships for freight or passengers; on the amount of freight and passage money, whether the same shall pass through the agent's hands or not, 5 per cent.
 - On effecting insurance, or writing orders for insurance, 1-2 per cent.
 - On settling losses, partial or general, and returns of premiums, 1 per cent.
 - On procuring money on respondentia, wherever payable, 2 per cent.
 - On making up goods to order, and taking risk of advances, 10 per cent.
 - On giving orders for the provision of goods, where a commission is not chargeable on sale or shipment, 2-3 per cent.
 - On attending the delivery of contract goods, 2 per cent.

Exports and Imports.—Madras trades with Great Britain and other European countries, the United States, the South American States, China, the Eastern islands, the Burman empire, Calcutta, and Ceylon. In speaking of the trade of Madras, it is to be observed that it comprehends, for the most part, the trade of the whole coast of Coromandel. The principal articles of import are rice and other grain, chiefly from Bengal; cotton piece goods, iron, copper, spelter, and other British manufactures; raw silk from Bengal and China, with betel or areca nut, gold dust, tin, and pepper, from the Malay countries; and rice and pepper from the coast of Malabar, with teak timber from Pegu. The exports consist of plain and printed cottons, cotton wool, indigo, salt, pearls of Ceylon, chank shells, tobacco, soap, nutron, some dyeing drugs, and a little coffee produced on the table land of Mysore, and of which the quantity is increasing. The great staples of sugar, rice, opium, saltpetre, and lac dye, of such importance in Bengal, are unknown as exports at Madras.

The following is a statement of the value of the trade of Madras, and its subordinate ports, with Europe and America, in the years 1813-14 and 1828-29.

Countries.	1813-1814.						1828-1829.

Taking the Madras rupee at its British mint value of 1s. 11d. nearly, the joint exports and imports of 1813-14 were 685,373l.; and those of 1828-29, 788,950l.; showing an increase, in 15 years, of no more than 93,586l., or about 13 per cent.—a striking contrast with the great augmentation which has taken place in the same period in the trade of Calcutta and Bombay. The exports, it will be seen by the Table, have even fallen off. The causes which have led to this state of things deserve some explanation. The raw silks, nankeens, camphor, and cassia of China, which, on account of the monopoly, could not be directly sent from Canton to Europe, were formerly brought by the country ships to Madras, and there reshipped. They are now more conveniently, and in much larger quantity, brought for the same purpose to Singapore. But the chief causes which contribute to retard the external commerce of Madras, are the vexatious restraints on industry, and the taxation so much heavier in that presidency than in Bengal or Bombay. The land tax, instead of being fixed in perpetuity, as in the former, is temporary and fluctuating; and hence, neither British nor native industry is applied with any vigour in the improvement of the productions of the soil. Inland duties prevail every where, and fresh ones are not only exacted when goods pass from one province to another, but often when passing from town to town, or even from village to village. These imposts are, at the same time, farmed to a very corrupt class of persons. Of the value of the trade between Madras and China we have no statement; but the tonnage employed in the export trade, at an average of the 5 years ending with 1817-18, was 3,677 tons; and at an average of the 5 years ending with 1826-27, 3,078 tons. The import tonnage in the same periods amounted respectively to 683 tons and 2,989 tons; the disparity in this case being accounted for, from its having lately become usual for country ships returning in ball

last from China, to touch at Madras for cargoes of salt to be conveyed to Bengal on behalf of the monopoly. For many ages, a commercial intercourse of considerable extent appears to have prevailed thence within the straits of Malacca, with the west coast of Sumatra, and the island of Java. This is still carried on in native vessels, to the extent of 50 or 60 annually, mostly brig or ketches, clumsily constructed, but equipped and navigated on the European model. A few British-owned vessels also occasionally engage in it. In this trade, the exports from Madras and its subordinate ports consist chiefly of piece goods and salt. British fabrics have of late years interfered with the former, and the salt of Siam with the latter, so that the trade is on the decline. The principal foreign trade of Pegu at one time, was carried on with Madras; but within the last 30 years it has been, in a great measure, transferred to Calcutta. There is still, however, a trade of some amount carried on in vessels owned both by Europeans and natives. The exports from Madras to Pegu consist chiefly of piece goods, tobacco, and cocoa nuts; the returns being made in teak timber, horses, opium, stick lac, ballion, sappires, and rubies. The largest branch of the trade of Madras is with Calcutta. In 1813-14, the imports from Madras, and other parts of the Coromandel coast, into Calcutta, amounted to sicca rupees 18,74,941, and the exports to sicca rupees 22,77,934 or jointly to about 425,3971, sterling in 1821-22, the imports amounted to sicca rupees 8,87,221, and the exports to sicca rupees 12,35,015, or jointly to about 212,2231; showing a falling off to the extent of half the whole amount.—The disproportion, in this case, between the imports and exports, is to be accounted for by the omission, in the public accounts, of all salt imported on account of the monopoly, and which has amounted yearly to about 10,000 tons. The great impediment to the intercourse between the Bengal and Madras provinces is the salt monopoly, the quantity of salt taken annually being restricted by the government of Bengal. This limits the consumption of salt in Bengal, where it is naturally dear, and, by compelling the inhabitants of Madras to grow corn on poor lands, precludes the export of the cheap rice of Bengal. The Indian governments, instead of having improved of late years in liberality, have really drawn tighter the cords of monopoly. The effect of this upon the export of corn from Bengal to Madras has been remarkable. In 1806-7, when the salt of Madras was admitted into Calcutta with some liberality, the export of grain to the Coromandel coast amounted to 2,635,658 maunds, or about 470,000 quarters; whereas, in 1823-24, a year of scarcity in the Madras provinces, it amounted to only 1,491,326 maunds, or about 254,900 quarters. The trade between Calcutta and the Coromandel coast is carried on, both in European and native vessels. The latter are of the same description, but not so well equipped as those that trade between the Coromandel coast and the Malay islands. In 1810, the number which cleared out from Calcutta for Madras and its subordinate ports was no less than 397, their burden being estimated at 46,073 tons. Since then, their numbers have declined; being, in 1821, only 103 vessels, of the burden of 11,991 tons. The European tonnage employed in this trade is extremely fluctuating. In 1807, a year of extraordinary scarcity in the Madras provinces, the registered tonnage which cleared out from Calcutta for the Coromandel coast amounted to 91,236 tons which conveyed 6,000,000 quarters of rice. Next year the tonnage amounted to only 6,861 tons. In 1812, another year of scarcity, it was 15,068 tons; and in 1821, a year of plenty, it was but 2,642 tons. These striking facts show the vast importance of a free trade in corn to the countries in question.—(In compiling this article, we have made use of *Hamilton's Description of Hindostan*; *Hamilton's East India Gazetteer*, 2d ed. 1838; *Phipp's Guide to the Commerce of Bengal*; *Papers relative to the Trade with India and China*, printed by order of the House of Commons, and *Evidence taken before the Parliamentary Committee*, in 1820, 1821, and 1831; *Madras Almanack*, for 1831; *Kelly's Cambist*, 2d ed.; and *Horsburg's Directory*,—an accurate and useful work.)

MAGNESIA (Fr. *Magnésie*; Ger. *Gebrauchte Magnesia*; It. *Magnesia*), one of the primitive earths, having a metallic basis. It is not found native in a state of purity, but is easily prepared. It is inodorous and insipid, in the form of a very light, white, soft powder having a specific gravity of 2.3. It turns to green the more delicate vegetable blues, in is fusible, and requires for its solution 2,000 parts of water at 60°.

MAHOGANY, the wood of a tree (*Swietenia Mahogani*) growing in the West Indies and Central America. There are two other species of *Swietenia* found in the East Indies, but they are not much known in this country.

Mahogany is one of the most majestic and beautiful of trees: its trunk is often 40 feet in length, and 6 feet in diameter; and it divides into so many mossy arms, and throws the shade of its shining green leaves over so vast an extent of surface, that few more magnificent objects are to be met with in the vegetable world. It is abundant in Cuba and Hayti, and it used to be plentiful in Jamaica; but in the latter island, most of the larger trees, at least in accessible situations, have been cut down. The principal importations into Great Britain are made from Honduras and Campechy. That which is imported from the islands is called Spanish mahogany; it is not so large as that from Honduras, being generally in logs from 20 to 25 inches square and 10 feet long, while the latter is usually from 1 to 4 feet square and 12 or 14 feet long, but some logs are much larger. Mahogany is a very beautiful and valuable species of wood: its colour is a red brown, of different shades, and various degrees of brightness; sometimes yellowish brown; often very much veined and mottled, with darker shades of the same colour. The texture is uniform, and the annual rings not very distinct. It has no large septa; but the smaller septa are often very visible, with pores between them, which in the Honduras wood are generally empty, but in the Spanish wood are mostly filled with a whitish substance. When either taste or smell, shrinks very little, and warps or swells less than any other species of timber. It is very durable when kept dry, but does not last long when exposed to the weather. It is not attacked by worms. Like the pine tribe, the timber is best on dry rocky soils, or in exposed situations. That which is most accessible at Honduras grows upon moist low land, and is, generally speaking, decidedly inferior to that brought from Cuba and Hayti; being soft, coarse, and spongy; while the other is close grained and hard, of a darker colour, and sometimes strongly figured. Honduras mahogany has, however, the advantage of holding glue admirably well; and is, for this reason, frequently used as a ground on which to lay veneers of the finer sorts. The best qualities of mahogany bring a very high price. Not long since, Broadwood, the distinguished pianoforte manufacturer, gave the enormous sum of 3,000l. for three logs of mahogany! These logs, the produce of a single tree were each about 15 feet long and 28 inches square; they were cut into veneers of 8 to 10 inch. The wood was particularly beautiful, capable of receiving the highest polish; and when polished, reflecting the light in the most varied manner, like the surface of a crystal; and, from the wavy form of the pores, offering a different figure in whatever direction it was viewed. Dealers in mahogany generally introduce an auger before buying a log; but, notwithstanding, they are seldom able to decide with much precision as to the quality of the wood, so that there is a good deal of loss in the trade. The logs for which Messrs. Broadwood gave so high a price were brought to this country with a full knowledge of their superior worth. Mahogany was used in repairing some of Sir Walter Raleigh's ships at Trinidad, in 1597; but it was not introduced into use in England till 1724.

The cutting of mahogany towards midsummer. The trees are cut about 11,542 tons of mahogany, and 2,623 from Honduras, and 2,623 from mahogany pays only 1 l. to force the consumption to 45,000.—(See *Travels* volume on *Timber Trees* West India or America, as if it had been imported mahogany had been so w Mahogany not to be employed importing the same are the produce of such p

Hinar Almanack the pop

The cutting of mahogany at Honduras takes place at two different seasons; after Christmas, and towards midsummer. The negroes employed in felling the trees are divided into groups of from 10 to 50. The trees are cut about 12 feet from the ground, and are floated down the rivers.

Of 11,543 tons of mahogany imported in 1831, 8314 came from the British West Indies (including Honduras, and 3,228 from Hayti). The duty on foreign mahogany is 7l. 10s. a ton, whereas Honduras mahogany pays only 1l. 10s., and Jamaica mahogany 4l. The effect of such a duty must obviously be to force the consumption of the inferior in preference to the superior article. In 1832, the duty produced 45,465l.—(See *Tredgold's Principles of Carpentry*, p. 204; *Library of Entertaining Knowledge*, volume on *Timber Trees and Fruits*, and *Edward's West Indies*, vol. iv. p. 258. ed. 1819, &c.)

Mahogany from Honduras, imported into any free warehousing port in the British possessions to the West Indies or America, in a ship cleared out from Balize, and then warehoused as having been so imported and cleared, may be exported from the warehouse and imported into the United Kingdom, as if it had been imported direct in a British ship, provided it be stated in the ship's clearance that the mahogany had been so warehoused and exported.—(9 Geo. 4. c. 76. § 13.)

Mahogany not to be entered as being the produce of any British possession, unless the master of the ship importing the same deliver to the collector or comptroller a certificate, and declare that the goods are the produce of such place.—(See *ante*, p. 8.)

(The duty on foreign mahogany has been reduced to 5l. per ton.—(6 & 7 Will. 4. cap. 60.)—*Sup.*)

MAIZE, or INDIAN CORN (Fr. *Bled de Turquie*; Ger. *Türkisch korn*, *Mays*; It. *Grano Turco* or *Siciliano*; Sp. *Trigo de Indias*, *Trigo de Turquía*), one of the cereal grasses (*Zea Mays*), supposed to be indigenous to South America, being the only species of corn cultivated in the New World previously to its discovery. It was introduced into the Continent about the beginning, and into England a little while after the middle, of the 16th century.

Its culture has spread with astonishing rapidity; being now extensively grown in most Asiatic countries, and in all the southern parts of Europe. It has the widest geographical range of all the cerealia, growing luxuriantly at the equator, and as far as the 50th degree of north, and the 40th of south latitude. It has been raised in England, in nursery gardens near the metropolis, for more than a century; and recently it has been attempted to raise it in the fields, but with indifferent success. Like other plants that have been long in cultivation, it has an immense number of varieties. The ear consists of about 600 grains, set close together in rows, to the number of 8, 10, or 12. The grains are usually yellow; but they are sometimes red, bluish, greenish, or olive-coloured, and sometimes striped and variegated. The maize of Virginia is tall and robust, growing 7 or 8 feet high; that of New England is shorter and lower; and the Indians further up the country have a still smaller sort in common use. The stalk is jointed like the sugar cane. The straw makes excellent fodder; and the grain, as a bread corn, is liked by some; but though it abounds in mucilage, it contains little or no gluten, and is not likely to be much used by those who can procure wheaten or even rye bread.—(*Loudon's Encyclopædia of Agriculture*, &c.) For the imports of maize, duties, &c., see CORN LAWS AND TRADE.

MALAGA, a city and sea-port of Spain, in the kingdom of Granada, in lat. 36° 43½' N., lon. 4° 25' 7" W. Population, perhaps, 55,000.*

Harbour.—Malaga has an excellent harbour. It is protected on its eastern side by a fine mole, full 700 yards in length. At its extremity a light-house has been constructed, furnished with a powerful light, revolving once every minute. At a distance it appears obscured for 45 seconds, when a brilliant flash succeeds for the other 15 seconds. A shoal has grown up round the mole head, and the depth of water throughout the harbour is said to be diminishing. Latterly, however, a dredging machine has been employed to deepen it, by clearing out the mud and accumulating sand. The depth of water, at the entrance to the harbour and within the mole, is from 28 to 30 feet; and close to the city, from 8 to 10 feet. The harbour could easily accommodate more than 450 merchant ships: it may be entered with all winds, and affords perfect shelter.

Trade, &c.—Owing to the want of official returns, and to the prevalence of smuggling, which may be said to have annihilated all fair trade, it is not possible to obtain any accurate accounts of the trade of Malaga, or, indeed, of any Spanish port. The great articles of export are wine and fruits, particularly raisins and almonds, grapes, figs, and lemons; there is also a considerable exportation of olive oil, with quantities of brandy, anchovies, cummin seed, aniseed, barilla, soap, &c. The lead exported from Malaga is brought from Adra.—(See LEAD.) The imports are salt fish, iron hoops, bar iron, and nails; cotton stuffs, hides, earthenware, &c., with dye stuffs, all sorts of colonial produce, butter and cheese from Holland and Ireland, linens from Germany, &c. The trade with England seems to be diminishing, and that with the United States to be increasing. This is a consequence, no doubt, of Malaga wine being very little in demand in the former, while it is pretty largely consumed in the latter. The Americans are also the largest consumers of Malaga fruit.

The following details, abstracted from Mr. Inglis's valuable work, entitled "Spain in 1830," contain the fullest and by far the best account that we have met with of the trade of Malaga. Their authenticity may, we believe, be depended upon.

* Wine.—The wines of Malaga are of two sorts, sweet and dry; and of the former of these there are four kinds: first, the common "Malaga," known and exported under that name. In this there is a certain proportion of boiled wine, which is allowed to burn, and which communicates a slightly burnt taste to the "Malaga." The grape from which this wine is made is a white grape, and every pipe of

* The consul says 75,000; but we have little doubt that this is very much beyond the mark. In the *Witmer Almanack* the population is set down at 53,370.

'Malaga' contains no less than *six* gallons of brandy. Secondly, 'Mountain.' This wine is made from the same grape as the others, and like it contains colouring matter and brandy; the only difference is that, for 'Mountain,' the grape is allowed to become riper. Thirdly, 'Lagrimas,' the richest and finest of the sweet wines of Malaga; the name of which almost explains the manner in which it is made. It is the droppings of the ripe grape hung up, and is obtained without the application of pressure.

"The dry wine of Malaga is produced from the same grape as the sweet wine, but pressed *whiter*; in this wine there is an eighth part more of brandy than in the sweet wine; no less than 1-12th part of the dry Malaga being brandy.

"The whole produce of the Malaga vineyards is estimated at from 35,000 to 40,000 pipes, but owing to the increasing stock of old wine in the cellars, it is impossible to be precise in this calculation. The export of all sorts of Malaga wine may be stated at about 27,000 pipes. The principal market is the United States and South America; and to these the export is upon the increase. The average price of the wines shipped from Malaga does not exceed 35 dollars per pipe; but wines are occasionally exported: 1st at the price of 170 dollars. Many attempts have been made at Malaga to produce sherry, but not with perfect success. The sherry grape has been reared at Malaga upon a soil very similar to that of Xeres; but the merchants of Malaga have not ventured to enter the wine for export. One reason of the very low price of the wines of Malaga is to be found in the cheapness of labour; field labour is only 24 reals a day (14d.). In the fruit and vintage time it is about double.

"Fruit.—Next to its wines, the chief export of Malaga is fruit, consisting of raisins, almonds, grapes, figs, and lemons; but of these, raisins are principally exported. I have before me a note of the exports of Malaga for the months of September and October, 1830—the chief, though not the whole, exporting months—and I find that during that time the export of raisins amounted to 268,845 boxes, and 31,916 smaller packages. Of this quantity, 126,334 boxes were entered for the United States, 45,513 for England; the remaining quantity being for France, the West Indies, the Spanish ports, South America, and Holland.

"The raisins exported from Malaga are of three kinds, muscatel, bloom, or sun raisin, and lexias.—The muscatel is the finest raisin in the world. In its preparation no art is used; the grape is merely placed in the sun, and frequently turned. The bloom, or sun raisin, is a different grape from the muscatel; but its preparation is the same. The lexias acquires this name from the flower, or ley, in which they are dipped, and which is composed of water, ashes, and oil; these, after being dipped, are dried in the sun. All muscatel raisins are exported in boxes, and also a part of the bloom raisins. In 1829, the exports of muscatel and bloom raisins were 235,000 boxes of 25 lbs. each; in all, 8,125,000 lbs. This quantity is independent of the export of bloom raisins in casks, and of lexias; the latter amounting to about 30,000 arrobas. The export of raisins to England has fallen off, while that to America has considerably increased. In 1824, 75 ships cleared from Malaga, for England, with fruit; in 1830, down to the 1st of November, 34 vessels had cleared out.

"Of the other fruits raised near Malaga, grapes, almonds, and lemons are the most extensively exported. In the months of September and October, 1830, 11,013 jars of grapes were shipped for England, 6,429 for America; and 1,650 for Russia. During the same months, 6,335 arrobas of almonds (133,375 lbs.) were shipped for England, this being nearly the whole export; there were also exported during the same period, 3,749 boxes of lemons for England; 4,301 ditto for Germany; and 840 ditto for Russia.

"Oil.—There is also a large export of oil from Malaga; but the exportation during the latter part of 1830, would be no criterion of the average; because, the Greenland whaling fishery having failed, extensive orders had been received from England.

"Shipping.—The trade between England and Malaga is on the decline; that with both the Americas is increasing, especially in wines. The number of British vessels entered at the port of Malaga, in 1827, I find from an official note furnished by the British consul to have been 104; in 1828, 120; in 1829, 105; and in 1830, to the 1st of November, 83, exclusive of small Gibraltar vessels. The number of American vessels entering in 1829, was 55; but the average burden of the Americans being 13 tons, and that of the English vessels not exceeding 100, the whole American is nearly equal to the whole English trade."—(Vol. ii. pp. 190.—196.)

"Money.—Accounts are kept in reals of 34 maravedis vellon.—(For the coins, and their value, see *Spain*.)

"Weights and Measures.—The weights are the same as those of Cadix. The arroba, or cantara = 419 English wine gallons; the regular pipe of Malaga wine contains 35 arrobas, but is reckoned only at 34; a bota of Pedro Ximenes wine = 53; arrobas; a bota of oil is 43, and a pipe 35 arrobas; the latter weighs about 800 lbs. avoirdupois; a carga of raisins is 2 baskets, or 7 arrobas; a cask contains as much, though only called 4 arrobas; as a hat for freight are reckoned—4 botes or 5 pipes of wine or oil; 4 bales of orange peel; 5 pipes of Pedro Ximenes wine or oil; 10 casks of almonds (each about 380 lbs. English); 20 chests of lemons and oranges; 24 casks of almonds (of 8 arrobas each); 44 casks of raisins (of 4 arrobas each); 88 half casks of raisins; 50 baskets of 100 jars of raisins.

"Port Charges.—The port and harbour dues amount, on an English vessel of 300 tons, to about 21s. on a Spanish vessel, of the same burden, they would be about 14. 10s. *Warehousing*.—Goods may be warehoused for 12 months, paying 3 per cent. *ad valorem* in lieu of all charges; but, at the end of the year, they must be either entered for consumption or reshipped. The 3 per cent. is charged, whether they lie a day or the whole year.

There is an excellent account of Malaga in *Townsend's Travels in Spain*, vol. iii. pp. 10.—42. The *Answers* by the consul at Malaga to the *Circular Queries* contain little or no information.

MALMSEY. See WINE.

MALT (Ger. *Maly*; Du. *Mout*; Fr. *Mal*, *Bledgermé*; It. *Malto*; Sp. *Cebada retornada* & *entallecida*; Rus. *Solod*; Lat. *Maltum*). The term malt is applied to designate grain which, being steeped in water, is made to germinate to a certain extent, after which the process is checked by the application of heat. This evolves the saccharine principle of the grain, which is the essence of malt. The process followed in the manufacture is very simple. Few changes have been made in it; and it is carried on at this moment very much in the same manner that it was carried on by our ancestors centuries ago. Rice, and almost every species of grain has been used in malting; but in Europe, and especially in England, malt is prepared almost wholly from barley. It is the principal ingredient in the manufacture of beer, and is not used for any other purpose.

"Duties on, and Consumption of Malt. Influence of the reduction of the Duty and the Opening of the Trade.—Owing to malt liquor having early become the favourite beverage of the people of England, the manufacture of malt has carried on amongst us, for a long

ened period, on a very wealth and population. This apparent by the increased consumption there cannot be a question and the ale or beer market imposed on the manufacturing regulations was to impede barley; which, taking lent to an *ad valorem* duty was not, however, its rate being assessed directly brewed by public brewers; and as rich families brewed any beer; or, in malt he made use of, they have been made, or suffering. Originally, however, increased by slow to the gross inequality length forcibly attracted beer in increasing the *Edinburgh Review*, N. substantial justice and Duke of Wellington; the licensing system, as

The repeal of the duties of those who would be no great loss has been raised against drunkenness, is, we find as it certainly has diminished the consumption of beer; but it has not occasioned no common country, has been produced, the trade of shops have been shut out of alehouses that people; but that disposition is by giving less grovelling enjoyment to promote sobriety have lower classes more ena and to stimulate them

The following Table down to 1833, and in malt had been about been more than doubled. increased. In point of period—for more than very well-informed Mr. the quantity of malt ending with 1723, was next 10 years was 3,35 the malt duty as if they always be taken into account. Ample information will save the trouble of referring their repeal, into one p

ened period, on a very large scale. Instead, however, of increasing with the increasing wealth and population of the country, it has been nearly stationary for the last hundred years. This apparently anomalous result is probably in some measure to be accounted for by the increased consumption of tea and coffee, which are now in almost universal use; but there cannot be a question that it is mainly owing to the exorbitant duties with which malt, and the ale or beer manufactured from it, have been loaded, and to the oppressive regulations imposed on the manufacture of malt and the sale of beer. The effect of these duties and regulations was to impose a tax of about 7s. on the malt and beer made from a bushel of barley; which, taking the average price of barley at from 4s. to 5s. a bushel, was equivalent to an *ad valorem* duty of from 140 to 175 per cent. The exorbitancy of the duty was not, however, its most objectionable feature. It was about equally divided—one half being assessed directly on malt, and the other on beer: but the beer duty affected only beer brewed by public brewers, or for sale, and did not affect that which was brewed for private use; and as rich families brewed all the beer they made use of, the consequence of this distinction was, that the beer duty fell wholly on the lower and middle classes, who did not brew any beer; or, in other words, the poor man was compelled to pay twice the duty on the malt he made use of that was paid by the rich man! That such a distinction should ever have been made, or submitted to for any considerable period, is certainly not a little astonishing. Originally, however, the distinction was not so great as it afterwards became; and being increased by slow degrees, the force of habit reconciled the parliament and the country to the gross inequality and oppressiveness of the tax. But the public attention being at length forcibly attracted to the subject, and the effect of the exorbitant duties on malt and beer in increasing the consumption of ardent spirits having been clearly pointed out—(see *Edinburgh Review*, No. 98. art. 4.), the beer duty was repealed in 1830. This measure of substantial justice and sound policy reflects the greatest credit on the administration of the Duke of Wellington; which is also entitled to the public gratitude for having put an end to the licensing system, and established, for the first time, a really free trade in beer.

The repeal of the duty has materially increased the consumption of malt; and the anticipations of those who contended that its abolition, if combined with a free trade in beer, would be no great loss to the revenue, are in a fair way of being realised. The clamour that has been raised against the measure, on account of its supposed influence in increasing drunkenness, is, we firmly believe, wholly without foundation. If the measure has increased, as it certainly has done, the consumption of beer, it has at the same time equally diminished the consumption of gin; and it is surely superfluous to add, that this is a most beneficial change. It is true that a number of new public houses have been opened for the sale of beer; but it has not hitherto been proved that this circumstance, though it seems to have occasioned no common alarm among the clergy and magistrates in different parts of the country, has been productive of any public inconvenience. Like all newly opened lines of business, the trade of beer selling has been overdone; and a considerable number of beer shops have been shut up. "It is not," as Dr. Smith sagaciously remarked, "the multiplication of alehouses that occasions a general disposition to drunkenness among the common people; but that disposition, arising from other causes, necessarily gives employment to a multitude of alehouses."—(*Wealth of Nations*, vol. ii. p. 146.) The way to eradicate this disposition is by giving a better education to the poor, and inspiring them with a taste for less grovelling enjoyments. All that the fiscal regulations and police enactments intended to promote sobriety have ever done, is to make bad worse, to irritate and disgust, to make the lower classes more enamoured of that which they conceive is unjustly withheld from them, and to stimulate them to elude and defeat the law.—(See vol. i. p. 15.)

The following Tables show the consumption of malt in England and Wales from 1787 down to 1833, and in the whole kingdom from 1821. They show that the consumption of malt had been about stationary for nearly half a century, notwithstanding the population had been more than doubled in that period, and that the wealth of all classes had been materially increased. In point of fact, however, the consumption had been stationary for a much longer period—for more than an entire century! For it appears from the accounts given by the very well-informed Mr. Charles Smith, in his tracts on the *Corn Trade* (2d ed. p. 199.), that the quantity of malt that paid duty in England and Wales, at an average of the 10 years ending with 1723, was 3,542,000 quarters a year; and that the annual average during the next 10 years was 3,358,071 quarters. The beer duties being, in effect, as much a part of the malt duty as if they had been laid directly on malt, it is indispensable that they should always be taken into account, before drawing any conclusions as to the influence of the duty. Ample information with respect to them will be found in the article ALE AND BEER; but, to save the trouble of references, the whole is brought, as far as respects the 10 years previous to their repeal, into one point of view in the subjoined Table, No. I.

I. An Account of the Number of Quarters of Malt charged with Duty, the Amount of the said Duty, the Rate per Quarter in each Year; also, the Number of Quarters of Malt used by Brewers and Victuallers; the Number of Barrels of Strong, Intermediate, and Table Beer, separately; the Amount of Duty on Beer, and the Rate of Duty per Barrel for each sort of Beer, in each Year, from the 5th of January, 1831, to the 5th of January, 1833; in Imperial Measures.

Tariff of Dues authorised to be levied for Account of Government, by the Superintendent of Quarantine, Malta.

Shipping in Quarantine.—1. Vessels entered upon a quarantine to pay, for each day of their continuance in port, as follows—
 Tonnage not exceeding 50 tons a. d. 3
 — from 51 — 100 1 0
 — from 101 — 150 2 0
 — from 151 — 300 3 0
 — from 301 — 500 4 0
 — from 501 and upwards 5 0
 2. Vessels of whatever size, sailing in quarantine, having entered upon the performance thereof, to pay at the above rates, but in no case more than 2s. a day for the remainder of the term of quarantine.
 3. Vessels liable to quarantine, not having entered upon the performance thereof, to pay 2s. for each day of their continuance in port.
 4. Vessels compelled by stress of weather to enter the great harbour, to be subject, while they remain there, to the additional charge

of 2s. a day, for every guard boat which the Superintendent of Quarantine may deem it necessary to place over them.

5. Any vessel in quarantine entering the great harbour, without a justifiable cause, incurs the penalty of 200 dollars imposed by the second article of the proclamation, dated 12th October, 1830. (No. 211.)

6. Vessels having contagious diseases on board to pay an extra rate in proportion to the expense that may be incurred, but in no case to exceed 30s. a day, in addition to the usual rate.
 Effects received into the lazaret for depuration to be chargeable with a due proportion of the actual expense thereof, which, at present, on ordinary occasions, is at the rate of 2s. 6d. a day for each guardian, and 1s. 6d. a day for each labourer, whom it may be necessary to employ.
 Cattle landed in the lazaret to be chargeable, for each—
 Horse, mule, or ass 2 0
 Bullock, or other animal of the kind 2 0
 Sheep, goat, pig, or other small animal 1 0
 Persons performing quarantine in the lazaret, to pay at the rate of 2s. 6d. a day, for each guardian employed, but no single individual to be chargeable with more than 1s. 3d. a day.
 Documents issued under the office seal, 2s. 6d. each.

The central position, excellent port, and great strength of Malta, make it an admirable naval station for the repair and accommodation of the men-of-war and merchant ships frequenting the Mediterranean, and render the possession of this important to the British empire. Since Malta built vessels were admitted into the ports of the United Kingdom on the same terms as those of British built, the trade of ship-building has materially increased in the island. The Maltese seamen are diligent expert workmen; and, their wages being moderate, it is a favourable place for ordering. Owing to the want of a dry dock, all ships above the size of a sloop of war, that require to have their bottoms examined, have to come to England for that purpose. This, surely, should be obviated. Quarantine is strictly enforced at Malta; but there is every facility for its performance, and the charges are less than at any other port in the Mediterranean.

Money.—In 1825, British silver money was introduced into Malta; the Spanish dollar being made legal tender at the rate of 4s. 4d.; the Sicilian dollar at 4s. 3d.; and the scudo of Malta at 1s. 8d. **Weights and Measures.**—The pound or rotton, commercial weight = 30 ounce = 12,816 English grains. Hence 100 rotton (the cantaro) = 174 1/2 lbs. avoirdupois, or 79 1/4 kils. Merchants usually reckon the cantaro at 175 lbs. The stroma of corn, stricure measure = 9 2/21 Winchester bushels 1 heaped measure is reckoned 18 per cent. more. The canna, or measure for oil, contains 5 1/2 English gallons = 2,016 litres. The barrel is double the canna. The Maltese foot = 1 1/10 English inches = 26.33 metres. The canna = 8 palmi = 81 1/2 English inches = 9.072 metres. Merchants usually convert Malta measure into English in the proportion of 3 1/2 palmi to a yard, or 9 2/21 yards to 1 canna. Bills on London are usually drawn at 30 and 60 days sight. The depositary general is obliged to grant, at all times, bills on the treasury here for British silver tendered to him, at the rate of 100L. bill for every 101L. 10s. silver, receiving, at the same time, other silver at a fluctuating rate of exchange.

MAN (ISLE OF) is, as every one knows, situated in the Irish sea, at about an equal distance from England, Scotland, and Ireland. It is about 30 miles long, and 10 or 12 broad. The interior is mountainous, and the soil no where very productive. Population Vol. II.—P 22

in 1831, 40,985. This island used to be one of the principal stations of the herring fishery; but for a considerable period it has been comparatively deserted by the herring shoals,—a circumstance which is not to be regretted; for the fishery, by withdrawing the attention of the inhabitants from agriculture and manufactures, and leading them to engage in what has usually been a gambling and unproductive business, has been, on the whole, injurious to the island. The steam packets from Glasgow to Liverpool touch at the Isle of Man; which has, in consequence, begun to be largely frequented by visitors from these cities, and other parts of the empire, whose influx has materially contributed to the improvement of Douglas and other towns.

The feudal sovereignty of Man was formerly vested in the Earls of Derby, and more recently in the Dukes of Athol,—a circumstance which accounts for the fact of the duties on most commodities consumed in the island having been, for a lengthened period, much lower than those on the same commodities when consumed in Great Britain. This distinction, which still subsists, has produced a great deal of smuggling, and been in no ordinary degree injurious to the revenue and trade of the empire. During the present century, indeed, the clandestine trade of Man has been confined within comparatively narrow limits; but to accomplish this, a considerable extra force of Custom-house officers and revenue cruisers is required, and the intercourse with the island has to be subjected to various restraints. Nothing, as it appears to us, can be more impolitic than the continuance of such a system. The public has, at a very heavy expense, purchased all the feudal rights of the Athol family; and having done so, it is certainly high time that an end were put to the anomalous absurdity of having a considerable island, lying, as it were, in the very centre of the empire, and in the direct line between some of the principal trading towns, with different duties on many important articles! It might be necessary, perhaps, to make some compensation to the inhabitants for such a change; and this might be done, with advantage to them and without expense to the public, by modifying and improving the internal regulations and policy of the island, which are very much in need of amendment. We do not, indeed, imagine that the island would lose any thing by the proposed alteration; for the temptation which the present system holds out to engage in smuggling enterprises diverts the population from the regular pursuits of industry, and, along with the herring lottery, is the principal cause of that idleness for which the Manx are so notorious. We subjoin an

ABSTRACT OF 3 & 4 WILL. IV., c. 60., FOR REGULATING THE TRADE OF THE ISLE OF MAN.

Commencement.—To commence the 1st of September, 1833.—§ 1.
 Duties payable on the Importation of Goods into the Isle of Man.—There shall be raised, levied, collected, and paid unto his Majesty, his heirs and successors, the several duties of customs respectively set forth in the table herin-after contained, denominated "Table of Duties," upon importation into the Isle of Man of the several goods, wares, and merchandise, according to the quantity or value thereof specified in such table, and so in proportion for any greater or less quantity or value of the same; (that is to say.)

Table of Duties.

A Table of the Duties of Customs payable on Goods, Wares, and Merchandise imported into the Isle of Man.	L. s. d.	United Kingdom, and not herein-before charged with duty, for every 100l. of the value thereof	L. s. d.
Coal, from the United Kingdom	Free.	2 10 0	
Coffee, the duties of consumption in the United Kingdom not having been then paid thereon, the lb.	0 0 4		
Hemp, the cwt.	0 0 1		
Hops, from the United Kingdom, the lb.	0 0 1/2		
Iron, from foreign parts, for every 100l. of the value thereof	10 0 0		
Spirits viz.— Foreign spirits, the gallon	0 4 6		
None of the British plantations, not exceeding the strength of proof by silver's hydrometer, and so in proportion for any greater strength the gallon	0 8 0		
Sugar, muscovado, the cwt.	0 1 0		
Tea, viz.— Bohea, the lb.	0 0 6		
Green, the lb.	0 1 0		
Tobacco, the lb.	0 1 8		
Wine, viz.— French, the tun of 252 gallons	16 0 0		
any other sort, the tun of 252 gallons	12 0 0		
Woods, from foreign parts, viz.— Deal boards, for every 100l. of the value thereof	10 0 0		
Timber, for every 100l. of the value thereof	10 0 0		
(Goods, wares, and merchandise imported from the United Kingdom, and entitled to any bounty or drawback of rebate on exportation from thence, and not herein-before enumerated or charged with duty, for every 100l. of the value thereof	8 0 0		

British Goods from the United Kingdom to appear upon the Coekets.—No goods shall be entered in the Isle of Man as being the growth, produce, or manufacture of the United Kingdom, or as being imported from thence, except such goods as shall appear upon the cocket or coekets of the ship or vessel importing the same to have been duly cleared at some port in the United Kingdom, to be exported to the said Isle.—§ 3.

Goods enumerated in the following Schedule importable only under Licence.—The several sorts of goods enumerated or described in the schedule herin-after contained, denominated "Schedule of Licensable Goods," shall not be imported into the Isle of Man, nor exported from any place to be carried to the Isle of Man, without the licence of the commissioners of customs first obtained, nor in greater quantity than in the wofol, in any one year, than the respective quantities of such goods specified in the said schedule; and such goods shall not be so exported nor so imported, except from the respective places set forth in the said schedule, and according to the rules subjoined thereto; (that is to say.)

Wine, 110 tons.
 Spirits, viz.—
 Foreign brandy, 10,000 gallons.
 Foreign spirits, 10,000 gallons.
 From the United Kingdom, or
 same might be imported for
 consumption therein.
 Rum of the British plantations,
 From Great Britain.
 Scotch whisky, 7,000 lbs.
 Gin, 4,000 lbs.
 Coffee (unless here paid thereon), 8,000
 lbs.
 Tobacco, 8,000 lbs.
 Muscovado sugar, of the British plantations,
 Paying one 4,000 pecks.
 From England.
 Refined sugar, 800 cwt.
 From the port of Liverpool.
 And such additional quantities of any
 of the above enumerated goods as may
 be imported under any special circumstances of
 trade, respectively subject to the rules laid
 down in his Majesty's statutes, and in British
 Acts of 20 Geo. 3. and onwards.
 2. Such tobacco to be shipped only
 in casks is allowed to be imported into
 the island.
 3. Such wine to be so imported only
 in casks, and not less than a hogshead each, or
 2 casks repeated quart bottles, or 8
 gallons.

Application for Licences to
 to import any of the goods
 between the 5th day of May
 port of Douglas in the said
 island, and occupation of
 which such licence is requi-
 red, shall be kept at the Cust
 during the hours of business
 within 14 days thereafter t

Schedule of Licence Goods.

Wine, 115 tons.
 Spirit wine:
 Foreign brandy, 10,000 gallons.
 French ginners, 10,000 gallons.
 From the United Kingdom, or from any place from which the same might be imported into the United Kingdom, for consumption therein.
 From the British plantations, 60,000 gallons.
 From Great Britain.
 Hops, 10,000 lbs.
 From the United Kingdom, or from any place from which the same might be imported into the United Kingdom, for consumption therein.
 Tobacco, 60,000 lbs.
 Nicotian sugar, of the British possessions, 10,000 cwt.
 Paying duty, 4,000 packs.
 From England.
 Indian sugar, 800 cwt.
 From the port of Liverpool.

And such additional quantities of any such several sorts of goods as the commissioners of his Majesty's treasury shall from time to time, under any special circumstances of necessity, direct, from such ports respectively; subject to the rules following: (That is to say.)
 1. All such goods to be imported into the port of Douglas, and by his Majesty's subjects, and in British ships or vessels of the burden of 20 tons or upwards.
 2. Such tobacco to be shipped only in ports in England, where it has been allowed to be imported and warehoused without payment of duty.
 3. Such wine to be so imported only in casks or packages containing not less than a hogshead each, or in cases containing not less than 3 dozen repined quart bottles, or 8 dozen repined pint bottles each.

4. Such brandy and Geneva to be imported only in casks containing 100 gallons each, at least.
 5. Such brandy and Geneva not to be of greater or higher degree of strength than that of 1 to 9 over hydrometer proof.
 6. Such goods, when exported from Great Britain, may be so exported from the warehouse in which they have been secured without payment of duty.
 7. If the duties of importation have been paid in the United Kingdom on such goods, a full drawback of such duties shall be allowed on the exportation.
 8. Upon the exportation from Liverpool of such refined sugar, the same bounty shall be allowed as would be allowable on exportation to foreign parts.
 9. Upon exportation from the United Kingdom of any such goods from the warehouse, or for drawback, or for Lowndy, so much of the form of the bond, or of the declaration, or of any other document, required in the case of exportation of such goods generally to foreign parts, as is intended to prevent the landing of the same in the Isle of Man shall be omitted.
 10. No drawback or bounty to be allowed, nor export bond cancelled, until a certificate of the due landing of the goods at the port of Douglas be produced from the collector and comptroller of the customs at that port.
 11. If any goods be laden at any foreign port or place, the species and quantity of such goods, with the marks, numbers, and denominations of the casks or packages containing the same, shall be indorsed on the licence, and signed by the British consul at the port of lading, or, if there be no British consul, by two known British merchants.
 12. Upon importation into the port of Douglas of any such goods, the licence for the same shall be delivered up to the collector or comptroller of that port.—*Sec't. 4.*

Application for Licences to be delivered to Officers between May and July.—Every application for licence to import any of the goods aforesaid into the Isle of Man shall be made in writing, and delivered, and be taken the 5th day of May and the 5th day of July in each year, to the collector or comptroller of the port of Douglas in the said Isle; and such application shall specify the date thereof, and the name, residence, and occupation of the person applying, and the description and quantity of each article for which such licence is required; and all such applications, with such particulars, shall be entered in a book to be kept at the Custom-house at the port of Douglas, and to be there open for public inspection during the hours of business; and on the 5th day of July in each year such book shall be closed; and within 14 days thereafter the collector and comptroller shall make out and sign a true copy of such entries, specifying the applicants resident, and the applicants not resident in the said Isle, and deliver or transmit such copy to the governor or lieutenant-governor of the said Isle for the time being.—*Sec't. 5.*

Governor to allot Quantities.—Within 14 days after the receipt of such copy, the governor or lieutenant-governor of the said Isle shall allot the whole quantity of each article, in the first place, among the applicants resident in the said Island, in case the whole quantity of any article shall not have been applied for by residents; then shall allot the quantity not so applied for among the non-resident applicants, in such proportions in all cases as he shall judge most fair and equitable; and shall cause a report thereon to be drawn up in writing, and sign and transmit the same to the Lords Commissioners of his Majesty's Treasury of the United Kingdom of Great Britain and Ireland, and shall cause a duplicate of such report so signed, to be transmitted to the commissioners of customs.—*Sec't. 6.*

Commissioners of Customs to grant Licences.—Upon receipt of such duplicate report the commissioners of customs shall grant licences, to continue in force for any period until the 5th of July then next ensuing, for the importation into the Isle of Man of the quantities of such goods as are allowed by law to be so imported, with their licence, according to the allotments in such report, and dividing the whole portion allotted to any one applicant into several licences, as they shall be desired and so fit; and such licences shall be transmitted without delay to the collector and comptroller of Douglas, to be by them delivered to the different applicants, after taking bond for the same under the provisions of this act.—*Sec't. 7.*

Before Delivery of Licences, Bond to be given.—Previous to the delivery of any such licences to the person to whom they are granted, the collector and comptroller of Douglas shall take the bond of such persons to his Majesty, his heirs and successors, with sufficient security, for the importation of the articles for which the said licences are respectively granted, on or before the 5th day of July succeeding the delivery of such licences, with such conditions, and for the forfeiture of such sums, not exceeding the whole amount of duties payable in Great Britain on articles similar to those specified in such licences, as the commissioners of customs shall think fit: provided always, that if any person to whom such licence shall be granted shall not have given such bond prior to the 5th day of January next after the granting such licence, it shall be lawful for the governor or lieutenant-governor of the said Isle, if he shall see fit, to transfer any such licence to any other person who shall be desirous to take up the same, and willing and able to give such bond; and such transfer shall be notified by indorsement on the licence, signed by such governor or lieutenant-governor.—*Sec't. 8.*

Counterfeiting or falsifying Licence, Penalty 500l.—If any person or persons shall counterfeit or falsify any licence or other document required for the importation into the Isle of Man of any goods which would otherwise be prohibited to be imported into the said Isle, or shall knowingly or wilfully make use of any such licence, or other document so counterfeited or falsified, such person or persons shall, for every such offence, forfeit the sum of 500l.—*Sec't. 9.*

Licence Goods not to be re-exported, &c.—It shall not be lawful to re-export from the Isle of Man any goods which have been imported into the said Isle with licence of the commissioners of customs as aforesaid; and it shall not be lawful to carry any such goods coastwise from one part of the said Isle to another, except in vessels of 50 tons burden at the least, and in the same packages in which such goods were imported into the said Isle; and it shall not be lawful to remove any wine from one part of the said Isle to another, by and except in such packages or in bottles.—*Sec't. 10.*

Foreign Goods not to be exported to United Kingdom.—It shall not be lawful to export from the Isle of Man to any part of the United Kingdom any goods which are of the growth, produce, or manufacture of any foreign country.—*Sec't. 11.*

Goods imported or exported, &c. contrary to Law forfeited, &c.—If any goods shall be imported into or exported from the Isle of Man, or carried coastwise from one part of the said Isle to another part of the same, or shall be waterborne, or brought to any wharf or other place with intent to be waterborne, in the manner or in the direction, or shall be removed by land within the said Isle, contrary to any of the directions or provisions of this act, the same, and the packages containing the same, shall be forfeited, together with all ships, vessels, or boats, and all cattle and carriages used or employed therein; and every person offending therein shall forfeit, for every such offence, the sum of 100l., or the full amount of all duties which would be payable in respect of such or similar goods, for home consumption of the same, in the United Kingdom, at the election of the commissioners of customs.—*Sec't. 12.*

Goods prohibited to be imported into the Isle of Man.—The several sorts of goods enumerated or de-

described in the schedule herein-after contained, denominated "Schedule of Prohibitions," shall not be imported into the Isle of Man; (that is to say,)

Schedule of Prohibitions.
 Goods, the produce or manufacture of places within the limits of the United East India Company's charter, except from the United Kingdoms;
 Cotton yarn, cotton cloth, linen cloth, glass manufactures, woollen manufactures, unless *hous fabris* in and imported directly from the United Kingdoms;
 Spirits of greater strength than 1 to 9 over hydrometer proof except

spirits the produce of the British possessions in America, and the Cape of Good Hope;
 British distilled spirits;
 All goods prohibited to be imported into the said Kingdoms by used or consumed therein, on account of the nature or description of the same.—Sect. 13.

Limiting the Quantity of Spirits, Tea, and Tobacco for Uses of Seamen.—If any decked vessel, bound from the Isle of Man to any port of Great Britain or Ireland, shall have on board for the use of the seamen, any spirits exceeding the quantity of $\frac{1}{4}$ gallon for each seaman, or any tobacco exceeding 1 lb. weight for each seaman, or any tea exceeding 3 lbs. weight for the whole of the seaman on board such vessel, or if any open boat, bound from the Isle of Man to any port of Great Britain or Ireland, shall have on board, for the use of the seamen, any spirits exceeding 1 quart for each seaman, or any tobacco exceeding $\frac{1}{4}$ lb. weight for each seaman, or any tea exceeding 1 lb. weight for the whole of the seamen on board such boat, all such foreign spirits, tobacco, and tea respectively, together with the casks or packages containing the same, and also every such vessel or boat, together with all the guns, furniture, ammunition, tackle, and apparel thereof, shall be forfeited.— \rightarrow 14.

Certificates for Goods the Produce of the Isle of Man.—Before any goods shall be shipped in the Isle of Man for exportation to the United Kingdom, as being the produce or manufacture of that island, proof shall be made by the written declaration of some competent person, to the satisfaction of the collector and comptroller of the customs at the port of shipment, that such goods, describing and identifying the same, are the produce or the manufacture, as the case may be, of the said island, and in such declaration shall be stated the name of the person by whom such goods are intended to be entered and shipped; and such person, at the time of entry (not being more than 1 month after the date of such declaration) shall make and subscribe a declaration before such collector or comptroller, that the goods to be shipped in virtue of the entry are the same as are mentioned in such declaration; and thereupon the collector and comptroller shall, on demand, give to the master of the ship in which the goods are to be exported a certificate of such proof of produce, or of manufacture, having been made in respect of such goods, describing the same, and setting forth the name of the exporter, and of the exporting ship, and of the master thereof, and the destination of the goods; and such certificate shall be received at the port of importation in the United Kingdom, instead of the certificate of the governor, lieutenant-governor, or commander-in-chief of the said island, heretofore required.— \rightarrow 15.

Management of Duties.—Section 16. relates to the appropriation of the duties, and is of no commercial importance.

MANGANESE (Ger. *Braunstein*, *Glasseise*; Du. *Bruinsteen*; Fr. *Manganèse*, *Mangese*, *Savon du verre*; It. *Manganesia*; Sp. *Manganesia*; Lat. *Magnesia nigra*, *Manganesium*), a metal which, when pure, is of a greyish white colour, like cast iron, and has a good deal of brilliancy. Its texture is granular; it has neither taste nor smell; it is softer than cast iron, and may be filed; its specific gravity is 8. It is very brittle, and can neither be hammered nor drawn out into wire. Its tenacity is unknown. When exposed to the air, it attracts oxygen with considerable rapidity. It soon loses its lustre, and becomes grey, violet, brown, and at last black. These changes take place still more rapidly if the metal be heated in an open vessel. Ores of manganese are common in Devonshire, Somersetshire, &c. The ore of manganese, known in Derbyshire by the name of *black wadd*, is remarkable for its spontaneous inflammation with oil. Oxide of manganese is of considerable use; it is employed in making oxymuriatic acid, for forming bleaching liquor. It is likewise used in glazing black earthenware, for giving colours to enamels, and in the manufacture of porcelain. It is the substance generally used by chemists for obtaining oxygen gas.—(*Thomson's Chemistry*, &c.)

MANGEL WURZEL, or **FIELD BEET** (Fr. *Betteraves*; Ger. *Mangold Wurzel*; It. *Bietola*), a mongrel between the red and white beet. It has been a good deal cultivated in France, Germany, and Switzerland, partly as food for cattle, and partly to be used in distillation, and in the extraction of sugar. Its culture in Great Britain is very recent; and Mr. Loudon questions whether it has any advantages over the turnip for general agricultural purposes. The preparation of the soil is exactly the same as for turnips, and immense crops are raised on strong clays. The produce per acre is about the same as that of the Swedish turnip: it is applied almost entirely to the fattening of stock, and the feeding of milch cows.—(*Loudon's Ency. of Agriculture*.)

MANNA (Fr. *Manne*; Ger. *Mannaesche*; It. *Manna*), the concrete juice of the *Fraxinus ornus*, a species of ash growing in the south of Europe. The juice exudes spontaneously in warm dry weather, and concretes into whitish tears; but the greater part of the manna of commerce is obtained by making incisions in the tree, and gathering the juice in baskets, where it forms irregular masses of a reddish or brownish colour often full of impurities. Manna is imported in chests, principally from Sicily and Calabria. The best is in oblong pieces or flakes, moderately dry, friable, light, of a whitish or pale yellow colour, and in some degree transparent; the inferior kinds are moist, unctuous, and brown. It has a slight peculiar odour, and a sweet taste, with some degree of bitterness not very pleasant, and leaving a nauseous impression on the tongue.—(*Thomson's Dispensatory*.)

MANIFEST, in commercial navigation, is a document signed by the master, containing the name or names of the places where the goods on board have been laden, and the place or places for which they are respectively destined; the name and tonnage of the vessel, the name of the master, and the name of the place to which the vessel belongs; a particular account and description of all the packages on board, with the marks and numbers thereon, the goods contained in such packages, the names of the respective shippers and consignees

as far as such particular tobacco. The manifest place: where the goods, (MAN EXPORTATION.)

MANILLA, the capital settlement of the Spanish nation about 40,000, of on the shore of a spacious small vessels a considerable Manila roads, in 5 fathoms river's mouth N. 18° E. leagues to the southwest S. W. winds. The American fortresses on the islands. tions are well furnished

MANILLA, the capital of Luconia, the largest of the Philippine Islands, and the principal settlement of the Spaniards in the East, in lat. 14° 36' 8" N., lon. 120° 53' E. Population about 40,000, of whom from 1,200, to 1,500 may be Europeans. Manilla is built on the shore of a spacious bay of the same name, at the mouth of a river navigable for small vessels a considerable way into the interior. The smaller class of ships anchor in Manilla roads, in 5 fathoms, the north bastion bearing N. 37° E., the fishery stakes at the river's mouth N. 18° E., distant about a mile; but large ships anchor at Cavita, about 3 leagues to the southward, where there is a good harbour, well sheltered from the W. and S. W. winds. The arsenal is at Cavita, which is defended by Fort St. Philip, the strongest fortress on the islands. The city is surrounded by a wall and towers, and some of the bastions are well furnished with artillery.

Though situated within the tropics, the climate of the Philippines is sufficiently temperate; the only considerable disadvantage under which they labour in this respect being that the principal part of the group comes within the range of the typhoons. The soil is of very different qualities; but for the most part singularly fertile. They are rich in mineral, vegetable, and animal productions. It is stated in a statistical account of the Philippines, published at Manilla in 1818 and 1819, that the entire population of the islands amounted to 2,249,852, of which 1,376,222 belonged to Luconia. There were, at the period referred to, only 2,837 Europeans in the islands, and little more than 6,000 Chinese. The natives are said to be the most active, bold, and energetic, of any belonging to the Eastern Archipelago. "These people," says a most intelligent navigator, "appear in no respect inferior to those of Europe. They cultivate the earth like men of understanding; are carpenters, joiners, smiths, goldsmiths, weavers, masons, &c. I have walked through their villages, and found them kind, hospitable, and communicative; and though the Spaniards speak of and treat them with contempt, I perceived that the vices they attributed to the Indians, ought rather to be imputed to the government they have themselves established."—(*Voyage de M. De la Perouse*, c. 15.)

The principal articles of export consist of indigo, sugar, rice, sapan wood, birds' nests, tripping or *biche de mer*, dried beef, hides, ebony, gold dust, &c. The principal articles of import are stuffs for clothing, iron, hardware, furniture, fire-arms, and ammunition, &c.

In 1832, 136 ships arrived at Manilla, of which 35 were American, 34 English, and 53 Spanish. The imports during the same year were, goods 1,204,694 dollars, and treasure 464,300 do., being together 1,669,194 dollars. The exports were, goods 1,531,540 dollars, treasure 317,990 do., together 1,849,530 dollars.

It was believed that the crop of sugar in Luconia in 1833, would amount to about 25,000,000 lbs. At this moment, the imports of British goods into the Philippines are estimated to amount to from 60,000, to 100,000, a year; but we have no doubt that the opening the trade to China will very materially increase our intercourse with Manilla.

Considering the great fertility and varied productions of the Philippines, and their peculiarly favourable situation for carrying on commerce, the limited extent of their trade, even with its late increase, may excite surprise. This, however, is entirely a consequence of the wretched policy of the Spanish government, which persevered until very recently in excluding all foreign ships from the ports of the Philippines—confining the trade between them and Mexico and South America to a single ship! Even ships and settlers from China were excluded. "Provisions," says La Perouse, "of all kinds are in the greatest abundance here, and extremely cheap; but clothing, European hardware, and furniture, bear an excessively high price. The want of competition, together with prohibitions and restraints

of every kind laid on commerce, *render the productions and merchandises of India and China at least as dear as in Europe.*" Happily, however, this miserable policy, the effects of which have been admirably depicted by M. de la Perouse, has been materially modified during the last few years. The events of the late war destroyed for ever the old colonial system of Spain; and the ships of all nations are now freely admitted into Manila and the other ports in the Philippines. An unprecedented stimulus has, in consequence, been given to all sorts of industry; and its progress will no doubt become more rapid, according as a wider experience and acquaintance with foreigners make the natives better aware of the advantages of commerce and industry, and disabuses them of the prejudices of which they have been so long the slaves.

The *Monies, Weights, and Measures*, used at Manila, are nearly the same as in Spain.—(See CADIZ.) They have, however, this difference,—that they estimate weight by piastres: 16 piastres are supposed to = 1 lb. Spanish weight, though they are not quite so much; 11 ounces or piastres = 1 tale of silk; 22 ounces = 1 catty; 8 ounces = 1 marc of silver; and 10 ounces = 1 tale of gold. 16 piastres or ounces = 15½ ounces avoirdupois; 100 catties = 1 picul = 133½ lbs. avoirdupois.

MARBLE (Ger. Rus. and Lat. *Marmor*; Du. *Marmer*; Fr. *Marbre*; It. *Marmo*; Sp. *Marmol*), a genus of fossils, composed chiefly of lime; being a bright and beautiful stone, moderately hard, not giving fire with steel, fermenting with and soluble in acid menstrua, and calcining in a slight fire.

The colours by which marbles are distinguished are almost innumerable. Some are quite black; others, again, are of a snowy white; some are greenish, others greyish, reddish, bluish, yellowish, &c.; while some are variegated and spotted with many different colours and shades of colour. The finest solid modern marbles are those of Italy, Blankenburg, France, and Flanders. Great quantities of very beautiful marble have been lately discovered at Portauy in Banffshire, and at Three and other places in the Western Isles. Kilkenny, in Ireland, has abundance of beautiful black marble intermixed with white spots, called *Kilkenny marble*. Derbyshire abounds in this mineral. Near Kyn-bay, in Anglesa there is a quarry of beautiful marble, called *verde di Corsica*, from its site being found in Corsica. Its colours are green, black, white, and dull purple, irregularly disposed. It produces the most valuable marble, and its exportation makes a considerable branch of her foreign commerce. The black and the milk-white marble of Carara, in the duchy of Massa, are particularly esteemed.

The marbles of Germany, Norway, and Sweden are very inferior, being mixed with a sort of rusty limestone.

Marble is of so hard, compact, and fine a texture, as readily to take a beautiful polish. That most esteemed by statuaries is brought from the island of Paros, in the Archipelago; it was employed by Praxiteles and Phidias, both of whom were natives of that island; whence also the famous Attic marbles were brought. The marble of Carara is likewise in high repute among sculptors.

The specific gravity of marble is from 2.700 to 2.800. Black marble owes its colour to a slight mixture of iron.

MARITIME LAW. By maritime law is meant the law relating to harbours, ships, and seamen. It forms an important branch of the commercial law of all maritime nations. It is divided into a variety of different departments; such as those with respect to harbours, to the property of ships, the duties and rights of masters and seamen, contracts of affreightment, average, salvage, &c. The reader will find those subjects treated of under their respective heads.

authors of antiquity have spoken in high terms of the wisdom of the Rhodian laws: luckily, however, we are not wholly left, in forming our opinion upon them, to the vague though commendatory statements of Cicero and Strabo.—(Cicero pro Lege Manilia; Strab. lib. xiv.) The laws of Rhodes were adopted by Augustus into the legislation of Rome; and such was the estimation in which they were held, that the Emperor Antoninus, being solicited to decide a contested point with respect to shipping, is reported to have answered, that it ought to be decided by the Rhodian laws, which were of paramount authority in such cases, unless they happened to be directly at variance with some regulation of the Roman law.—(“Ego quidem mundi dominus, lex autem maris legis id Rhodia, qua de rebus nauticis præscripta est, judicetur, quatenus nulla nostrarum legum adversatur. Hoc idem Divus quoque Augustus judicavit.”) The rule of the Rhodian law with respect to average contributions in the event of a sacrifice being made at sea for the safety of the ship and cargo, is expressly laid down in the Digest (lib. xiv. tit. 2.); and the most probable conclusion seems to be, that most of the regulations as to maritime affairs embodied in the compilations of Justinian have been derived from the same source. The regulations as to average adopted by all modern nations, are borrowed, with hardly any alteration, from the Roman, or rather, as we have seen, from the Rhodian law!—a conclusive proof of the sagacity of those by whom they had been originally framed. The only authentic fragments of the Rhodian laws are those in the Digest. The collection entitled *Jus Navale Rhodiorum*, published at Bâle in 1561, is now admitted by all critics to be apurians.

The first modern code of maritime law is said to have been compiled at Amalphi, in Italy,—a city at present in ruins; but which, besides being early distinguished for its commerce, will be for ever famous for the discovery of the Pandects, and the supposed invention of the mariner's compass. The Amalphan code is said to have been denominated *Tabula Amalphanita*. But if such a body of law really existed, it is singular that it should never have been published, nor even any extracts from it. M. Pardessus has shown that all the authors who have referred to the Amalphan code and asserted its existence, have copied the statement of Freccia, in his book *De Subfeudis*.—(Collection des Loix Maritimes, tome i. p. 145.) And as Freccia assures us that the Amalphan code continued to be followed in Naples at the time when he wrote (1570), it is difficult to suppose that it could have entirely disappeared; and it seems most probable, as nothing peculiar to it has ever transpired, that it consisted principally of the regulations laid down in the Roman law, which, it is known, preserved their ascendancy for a longer period in the south of Italy than any where else.

But, besides Amalphi, Venice, Marseilles, Pisa, Genoa, Barcelona, Valencia, and other towns of the Mediterranean, were early distinguished for the extent to which they carried commerce and navigation. In the absence of any positive information on the subject, it seems reasonable to suppose that their maritime laws would be principally borrowed from those of Rome, but with such alterations and modifications as might be deemed requisite to accommodate them to the particular views of each state. But whether in this or in some other way, it is certain that various conflicting regulations were established, which led to much confusion and uncertainty; and the experience of the inconveniences thence arising, doubtless contributed to the universal adoption of the *Consolato del Mare* as a code of maritime law. Nothing certain is known as to the origin of this code. Azuni (*Droit Maritime de l'Europe*, tome i. pp. 414—439, or rather Jorio, *Codice Ferdinando*, from whose work a large proportion of Azuni's is literally translated) contends, in a very able dissertation, that the Pisans are entitled to the glory of having compiled the whole, or at least the greater part, of the *Consolato del Mare*. On the other hand, Don Antonio de Capmany, in his learned and excellent work on the commerce of Barcelona—(*Antiguo Comercio de Barcelona*, tomo i. pp. 170—183.), has endeavoured to show that the *Consolato* was compiled at Barcelona; and that it contains the rules according to which the consuls, which the Barcelonense had established in foreign places so early as 1268, were to render their decisions. It is certain that the *Consolato* was printed for the first time at Barcelona, in 1502; and that the early Italian and French editions are translations from the Catalan. Azuni has, indeed, sufficiently proved, that the Pisans had a code of maritime laws at a very early period, and that several of the regulations in it are substantially the same as those in the *Consolato*. But it does not appear that the Barcelonense were aware of the regulations of the Pisans, or that the resemblance between them and those in the *Consolato* is more than accidental; or may not fairly be ascribed to the concurrence that can hardly fail to obtain among well-informed persons legislating upon the same topics, and influenced by principles and practices derived from the civil law.

M. Pardessus, in the second volume of his excellent work already referred to, appears to have been sufficiently disposed, had there been any grounds to go upon, to set up a claim in favour of Marseilles to the honour of being the birthplace of the *Consolato*; but he candidly admits that such a pretension could not be supported, and unwillingly adheres to Capmany's opinion.—“Quoique François,” says he, “quoique portée par des sentimens de reconnaissance, qu'aucun événement ne sauroit affaiblir, à faire valoir tout ce qui est en faveur de

But to whichever city the honour of compiling the *Consolato* may be due, there can be no doubt that its antiquity has been greatly exaggerated. It is affirmed, in a preface to the different editions, that it was solemnly accepted, subscribed and promulgated, as a body of maritime law, by the Holy See in 1075, and by the Kings of France and other potentates at different periods between 1075 and 1270. But Capmany, Azuni, and Pardessus, have shown in the clearest and most satisfactory manner that the circumstances alluded to in this preface could not possibly have taken place, and that it is wholly unworthy of the least attention. The most probable opinion seems to be, that it was compiled, and began to be introduced, about the end of the 13th or the beginning of the 14th century. And notwithstanding its prolixity, and the want of precision and clearness, the correspondence of the greater number of its rules with the ascertained principles of justice and public utility, gradually led, without the intervention of any agreement, to its adoption as a system of maritime jurisprudence by all the nations contiguous to the Mediterranean. It is still of high authority. Casaregis says of it, though, perhaps, too strongly "*Consulatus maris, in materiâ maritimâ, tanquam universalis consuetudo habens vim legis inviolabiliter attenda est apud omnes provincias et nationes.*"—(Disc. 213. n. 12.)

The collection of sea laws next in celebrity, but anterior, perhaps, in point of time, is that denominated the *Roole des Jugemens d'Oleron*. There is as much diversity of opinion as to the origin of these laws, as there is with respect to the origin of the *Consolato*. The prevailing opinion in Great Britain has been, that they were compiled by direction of Queen Eleanor, the wife of Henry II., in her quality of Duchess of Guienne; and that they were afterwards enlarged and improved by her son Richard I., at his return from the Holy Land; but this statement is now admitted to rest on no good foundation. The most probable theory seems to be, that they are a collection of the rules or practices followed at the principal French ports on the Atlantic, as Bordeaux, Rochelle, St. Malo, &c. They contain, indeed, rules that are essential to all maritime transactions, wherever they may be carried on; but the references in the code sufficiently prove that it is of French origin. The circumstances of our monarch's having large possessions in France at the period when the Rules of Oleron were collected, naturally facilitated their introduction into England; and they have long enjoyed a very high degree of authority in this country. "I call them the Laws of Oleron," said a great civilian—(*Sir Leoline Jenking, Charge to the Cinque Ports*), "not but that they are peculiarly enough English, being long since incorporated into the customs and statutes of our admiralties; but the equity of them is so great, and the use and reason of them so general, that they are known and received all the world over by that rather than by any other name." Molloy, however, has more correctly, perhaps, said of the laws of Oleron, that "they never obtained any other or greater force than those of Rhodes formerly did; that is, they were esteemed for the reason and equity found in them, and applied to the case emergent."—(*De Jure Maritimo et Navali*, Introd.)

A code of maritime law issued at Wisby, in the island of Gothland, in the Baltic, has long enjoyed a high reputation in the North. The date of its compilation is uncertain; but it is comparatively modern. It is true that some of the northern jurists contend that the Laws of Wisby are older than the Rules of Oleron, and that the latter are chiefly copied from the former! But it has been repeatedly shown that there is not so much as the shadow of a foundation for this statement.—(See *Pardessus, Collection*, &c. tome i. pp. 425—463. *Foreign Quarterly Review*, No. 13. art *Hanseatic League*.) The Laws of Wisby are not certainly older than the latter part of the 14th or beginning of the 15th century; and have obviously been compiled from the *Consolato del Mare*, the Rules of Oleron, and other codes that were then in use. Grotius has spoken of these laws in the most laudatory manner—"Quæ de maritimus negotiis," says he, "*in insula Gothlandiæ habitatoribus placuerunt, tantum in se habent, tum equitatis, tum prudentiæ, ut omnes oceani aecola eo, non tantum proprio, sed velut gentium jure, utantur.*"—(*Prolegomena ad Procopium*, p. 64.)

Besides the codes now mentioned, the ordinances of the Hanse towns, issued in 1587 and 1614, contain a system of laws relating to navigation that is of great authority. The judgments of Danme, the customs of Amsterdam, &c. are also often quoted."

But by far the most complete and well digested system of maritime jurisprudence that has ever appeared, is that comprised in the famous *Ordonnance de la Marine* issued by Louis XIV. in 1681. This excellent code was compiled under the direction of M. Colbert, by individuals of great talent and learning, after a careful revision of all the ancient sea laws of France and other countries, and upon consultation with the different parliaments, the courts of admiralty, and the chambers of commerce, of the different towns. It combines whatever experience and the wisdom of ages had shown to be best in the Roman laws, and in the institutions of the modern maritime states of Europe. In the preface to his treatise on the

* A translation of the Law of Oleron, Wisby, and the Hanse towns, is given in the 3d edition of Maty's *Lex Mercatoria*; but the edition of them in the work of M. Pardessus, referred to in the text is infinitely superior to every other.

leave it entirely to the direct him how to proceed powerful is the influence that this monstrous abuse

announced as intolerable. into this chaos. Under the repealed, and new ones substituted, so far at least as

Law of Shipping, Lord Tenterden says,—“If the reader should be offended at the frequent references to this ordinance, I must request him to recollect that those references are made to the maritime code of a great commercial nation, which has attributed much of its national prosperity to that code: a code composed in the reign of a politic prince; under the auspices of a wise and enlightened minister; by laborious and learned persons, who selected the most valuable principles of all the maritime laws then existing; and which, in matter, method, and style, is one of the most finished acts of legislation that ever was promulgated.”

The ordinance of 1681 was published in 1760, with a detailed and most elaborate commentary by M. Valin, in 2 volumes, 4to. It is impossible which to admire most in this commentary, the learning or the sound good sense of the writer. Lord Mansfield was indebted for no inconsiderable portion of his superior knowledge of the principles of maritime jurisprudence to a careful study of M. Valin's work.

That part of the *Code de Commerce* which treats of maritime affairs, insurance, &c. is copied, with very little alteration, from the ordinance of 1681. The few changes that have been made are not always improvements.

No system or code of maritime law has ever been issued by authority in Great Britain. The laws and practices that now obtain amongst us in reference to maritime affairs have been founded principally on the practices of merchants, the principles laid down in the civil law, the Laws of Oleron and Wisby, the works of distinguished jurists, the judicial decisions of our own and foreign countries, &c. A law so constructed has necessarily been in a progressive state of improvement; and, though still susceptible of material amendment, it corresponds, at this moment, more nearly, perhaps, than any other system of maritime law, with those universally recognised principles of justice and general convenience, by which the transactions of merchants and navigators ought to be regulated.

The decisions of Lord Mansfield did much to fix the principles, and to improve and perfect the maritime law of England. It is also under great obligations to Lord Stowell. The decisions of the latter chiefly, indeed, respect questions of neutrality, growing out of the conflicting pretensions of belligerents and neutrals during the late war; but the principles and doctrines which he unfolds in treating those questions, throw a strong and steady light on almost all branches of maritime law. It has occasionally, indeed, been alleged,—and the allegation is probably, in some degree, well founded,—that his Lordship has conceded too much to the claims of belligerents. Still, however, his judgments must be regarded, allowing for this excusable bias, as among the noblest monuments of judicial wisdom of which any country can boast. “They will be contemplated,” says Mr. Serjeant Marshall, “with applause and veneration, as long as depth of learning, soundness of argument, enlightened wisdom, and the chaste beauties of eloquence, hold any place in the estimation of mankind.”

(On *Insurance*, Prelim. Disc.)

The “Treatise of the Law relative to Merchant Ships and Seamen,” by the late Chief Justice of the Court of King's Bench, does credit to the talents, erudition, and liberality of this noble and learned author. It gives, within a brief compass, a clear and admirable exposition of the most important branches of our maritime law; and may be consulted with equal facility and advantage by the merchant or general scholar, as by the lawyer. Mr. Serjeant Marshall has entered very fully into some, and has touched upon most points of maritime law, in his work on *Insurance*; and has discussed them with great learning and sagacity. The works of Mr. Justice Park, Mr. Holt, and a few others, are also valuable. Of the earlier treatises, the *Lex Mercatoria* of Malynes is by far the best; and, considering the period of its publication (1622), is a very extraordinary performance.

Statutes with respect to Importation and Exportation, Navigation, &c.—The preceding remarks refer merely to the principles, or leading doctrines, of our maritime law. These, however, have often been very much modified by statutory enactments; and the excessive multiplication of acts of Parliament suspending, repealing, or altering parts of other acts, has often involved our commercial and maritime law in almost inextricable confusion, and been most injurious to the public interests. No one, indeed, who is not pretty conversant with the subject, would readily imagine to what an extent this abuse has sometimes been carried. From the Revolution down to 1786, some hundreds of acts were passed, each enacting some addition, diminution, or change, in the duties, drawbacks, bounties, and regulations previously existing in the customs. In consequence the customs laws became so intricate and unintelligible, that hardly one merchant in fifty could tell the exact amount of duty affecting any article, or the course to be followed either in entering or clearing out vessels; being obliged to leave it entirely to the clerks of the Custom-house to calculate the amount of duties, and to direct him how to proceed so as to avoid forfeiting the goods and the ship! and yet, so powerful is the influence of habit in procuring toleration for the most pernicious absurdities, that this monstrous abuse was allowed to go on increasing for 50 years after it had been denounced as intolerable. Mr. Pitt has the merit of having introduced something like order into this chaos. Under his auspices, all the separate customs duties existing in 1787 were repealed, and new ones substituted in their stead; consisting, in most instances, of the equivalents, so far at least as they could be ascertained, of the old duties. In carrying this mea-

tion—(see IMPORTATION AND EXPORTATION); and the act 3 & 4 Will. 4. c. 59., for regulating the trade with the British possessions abroad—(see COLONIES AND COLONY TRADE). Mr. Hume, formerly of the customs, now of the Board of Trade, had the principal share in the compilation of these acts, which do honour to his sagacity, industry, and talents for arrangement.

It may be worth while observing, that hardly a session passes without giving birth to more or fewer acts, making certain changes or modifications in those referred to above. Where these changes apply only to some particular emergency, without affecting the general principles or rules laid down in the statutes, there can be no doubt that they should be embodied in separate acts; but where any modification or alteration is to be made in the principles of the law, the better way, as it appears to us, would be to introduce it directly into the leading act on the subject—re-enacting it in an amended or altered form. In no other way is it possible to preserve that unity and clearness which are so very desirable. The multiplication of statutes is a very great evil, not only from the difficulty of ascertaining the exact degree in which one modifies another, but from its invariably leading to the enactment of contradictory clauses. The property and transactions of merchants ought not to depend upon the subtleties and niceties of forced constructions, but upon plain and obvious rules, about which there can be no mistake. It would, however, be idle to expect that such rules can ever be deduced from the conflicting provisions of a number of statutes: those in the same statute are not always in harmony with each other.

MARK, or MARC, a weight used in several parts of Europe, for various commodities, especially gold and silver. In France, the mark was divided into 8 oz. = 64 drachms = 292 deniers or pennyweights = 4,608 grains. In Holland, the mark weight was also called Troy weight, and was equal to that of France. When gold and silver are sold by the mark, it is divided into 24 carats.

The pound, or *livre, poids de marc*, the weight most commonly used in retail dealings throughout France previously to the Revolution, was equal to 2 marcs, and consequently contained 16 oz. = 128 drachms = 864 den. = 9,216 grs. One kilogramme is nearly equal to 2 livres.—Subjoined is a Table of livres, *poids de marc*, from 0 to 10, converted into kilogrammes. Any greater number may be learned by a simple multiplication and addition.

Livres.	Kilog.	Livres.	Kilog.	Livres.	Kilog.	Livres.	Kilog.
1	= 0.4535	4	= 1.8140	7	= 3.1755	9	= 4.0815
2	= 0.9070	5	= 2.2675	8	= 3.6280	10	= 4.5345
3	= 1.3605	6	= 2.7210				

MARK, a term sometimes used among us for a money of account, and in some other countries for a coin. The English mark is $\frac{3}{4}$ ds of a pound sterling, or 13s. 4d.; and the Scotch mark is $\frac{3}{4}$ ds of a pound Scotch. The mark Lubs, or Lubeck mark, used at Hamburg, is a money of account, equal to 14 $\frac{1}{2}$ d. sterling.

MARKET, a public place in a city or town, where provisions are sold. No market is to be kept within 7 miles of the city of London; but all butchers, victuallers, &c. may hire stalls and standings in the flesh-markets there, and sell meat and other provisions. Every person who has a market is entitled to receive toll for the things sold in it; and, by ancient custom, for things standing in the market, though not sold; but those who keep a market in any other manner than it is granted, or extort tolls or fees where none are due, forfeit the same.—(See FAIRS.)

MARSEILLES, a large commercial city and sea-port of France, on the Mediterranean, lat. 43° 17' 49" N., lon. 5° 22' E. Population 125,000.

Harbour.—The harbour, the access to which is defended by several strong fortifications, is in the centre of the city, forming a basin 525 fathoms in length, by about 150 do. in breadth. The tide is hardly variable; but the depth of water at the entrance to the harbour varies from 16 to 18 feet, being lowest when the wind is N.W., and highest when it is S.W. Within the basin the depth of water varies from 12 to 24 feet, being shallowest on the north, and deepest on the south side. Dredging machines are constantly at work to clear out the mud, and to prevent the harbour from filling up. Though not accessible to the largest class of ships, Marseilles is one of the best and safest ports in the world for moderate-sized merchantmen, of which it will accommodate above 1,000. Ships in the basin lie close alongside the quays; and there is every facility for getting them speedily loaded and unloaded. The *Ile de Ratonneau*, Pomegues, and the strongly fortified islet or rock of If, lie W.S.W. from the port; the latter, which is the nearest to it, being only $\frac{1}{3}$ mile distant, and not more than $\frac{1}{2}$ of a mile from the best point of land to the south of the city. There is good anchorage ground for men-of-war and other large ships between the *Iles de Ratonneau* and Pomegues, to the west of the *Ile d'If*, when coming from the south, it is usual to make the *Ile de Planier*, lat. 43° 11' 54" N., lon. 5° 13' E. A light-house erected on this island is 131 feet high; the flashes of the light, which is a revolving one, succeed each other every $\frac{1}{2}$ minute, and in clear weather it may be seen 7 leagues off. Ships that have made the *Ile de Planier*, or that of *Le Maire*, lying east from it about 4 $\frac{1}{2}$ miles, steer directly for the *Ile d'If*, distant about 7 miles from each, and having got within $\frac{1}{2}$ or a mile of it, are to go for a pilot, who carries them into harbour; it is not, however, obligatory on ships to take a pilot on board; but being obliged to pay for one whether they avail themselves of his services or not, they seldom dispense with them. The charge is 4 sous per ton in, and 3 sous per do. out, for French vessels, and the vessels of countries having reciprocity treaties with France. There is a light-house for *St. Jean*, on the north side of the entrance to the port. The *lazaretto*, which is one of the best in Europe, lies a little to the north of the city; and there is an hospital on *Ratonneau Island*, for *Malades* whose health is dubious. With the exception of the above charge for pilotage, and the charge for such vessels as perform quarantine, there are no port charges on ships entering at, or leaving out from, Marseilles.

Trade, &c.—Marseilles is a city of great antiquity, and has long enjoyed a very extensive commerce. Havre, partly, no doubt, from its being, as it were, the port of Paris, used to

contrary, the law has always considered the captain as contracting personally with the owner; and the case of the captain has, in that respect, been distinguished from that of all other persons belonging to the ship. This rule of law may have its foundation in policy, for the benefit of navigation; for, as ships may be making profit and earning every day, it might be attended with great inconvenience, if, on the change of a captain for misbehaviour, or any other reason, he should be entitled to keep the ship till he is paid. Work done for a ship in England is supposed to be done on the personal credit of the employer: in foreign parts the captain may hypothecate the ship. The defendant might have told the tradesman, that he only acted as an agent, and that they must look to the owner for payment."

The master is bound to employ his whole time and attention in the service of his employers, and is not at liberty to enter into any engagement for his own benefit that may occupy any portion of his time in other concerns; and therefore, if he do so, and the price of such engagement happen to be paid into the hands of his owners, they may retain the money, and he cannot recover from them.—(Abbott, part ii. c. 4.)

During war, a master should be particularly attentive to the regulations as to sailing under convoy; for, besides his responsibility to his owners or freighters, he may be prosecuted by the Court of Admiralty, and fined in any sum not exceeding 500*l.*, and imprisoned for any term not exceeding 1 year, if he wilfully disobey the signals, instructions, or lawful commands of the commander of the convoy; or desert it without leave.—(43 Geo. 3. c. 160.)

Wilfully destroying or casting away the ship, or procuring the same to be done by the master or mariners, to the prejudice of the owners, freighters, or insurers; running away with the cargo; and turning pirates; are capital offences punishable by death.—(7 & 8 Geo. 4. c. 29., and antecedent statutes.)

After the voyage has been commenced, the master must proceed direct to the place of his destination, without unnecessarily stopping at any intermediate port, or deviating from the shortest course. No such deviation will be sanctioned, unless it has been occasioned by stress of weather, the want of necessary repair, avoiding enemies or pirates, succouring of ships in distress, sickness of the master or mariners, or the mutiny of the crew.—(Marshall on Insurance, book i. c. 6. § 3.) To justify a deviation, the necessity must be real, inevitable, and imperious; and it must not be prolonged one moment after the necessity has ceased. A deviation without such necessity vitiates all insurances upon the ship and cargo, and exposes the owners to an action on the part of the freighters. If a ship be captured in consequence of deviation, the merchant is entitled to recover from the owners the prime cost of the goods, with shipping charges; but he is not entitled to more, unless he can show that the goods were enhanced in value beyond the sum above mentioned.

If a merchant ship has the misfortune to be attacked by pirates or enemies, the master is bound to do his duty as a man of courage and capacity, and to make the best resistance that the comparative strength of his ship and crew will allow.

By the common law, the master has authority over all the mariners on board the ship,—it being their duty to obey his commands in all lawful matters relating to the navigation of the ship, and the preservation of good order. But the master should, in all cases, use his authority with moderation, so as to be the father, not the tyrant, of his crew. On his return home he may be called upon, by action at law, to answer to a mariner he has either beat or imprisoned during the course of the voyage; and unless he show sufficient cause for chastising the mariner, and also that the chastisement was reasonable and moderate, he will be found liable in damages. Should the master strike a mariner without cause, or use a deadly weapon as an instrument of correction, and death ensue, he will be found guilty, according to the circumstances of the case, either of manslaughter or murder.—(Abbott, part ii. c. 4.)

The master may by force restrain the commission of great crimes; but he has no jurisdiction over the criminal. His business is to secure his person, and to deliver him over to the proper tribunals on his coming to his own country.—(See art. SEAMEN.)

If by shipwreck, capture, or other unavoidable accident, seamen, subjects of Great Britain, be found in foreign parts, his Majesty's governors, ministers, consuls, or two or more British merchants, residing in such parts, may send such seamen home in ships of war, or in merchant ships homeward bound in want of men; and if such ships cannot be found, they may send them home in merchant ships that are fully manned, but no such merchant ship shall be obliged to take on board more than *four* such persons for every 100 tons burthen: and the master, upon arrival, and producing to the Navy Board a certificate from the governor, minister, consul, &c. where he shipped the men, and his own affidavit of the time he maintained them, shall receive *1*s.* 6*d.* per diem* for all such seamen above his own complement of men.—(53 Geo. 3. c. 55.) A subsequent statute (58 Geo. 3. c. 38.) inflicts a penalty of 100*l.* on any master of a merchant vessel who shall refuse to take on board or bring home any seafaring man, a subject of Great Britain, left behind in any foreign country, upon being required to do so by the competent authorities.

The master of a ship forcing any man on shore when abroad, or refusing to bring back

Vol. II.—Q

such of the men he carried out with him as are in a condition to return, shall, upon conviction of such offence, be imprisoned for such term as the court shall award.—(9 Geo. 4. c. 31.)

A penalty of 20*l.* is imposed on every master of a vessel, who, having, on account of sickness, left any seafaring man at any foreign port or place, shall neglect or refuse to deliver an account of the wages due, and to pay the same.—(56 Geo. 3. c. 58.)

The law makes no distinction between carriers by land and carriers by water. The master of a merchant ship is, in the eye of the law, a carrier; and is, as such, bound to take reasonable and proper care of the goods committed to his charge, and to convey them to the place of their destination, *barring only the acts of God and the king's enemies*. Every act which may be provided against by ordinary care renders the master responsible. He would not, for example, be liable for damage done to goods on board in consequence of a leak in the ship occasioned by the violence of the tempest, or other accident; but if the leak were occasioned by rats, he would be liable, for these might have been exterminated by ordinary care, as by putting cats on board, &c. On the same principle, if the master run the ship in fair weather against a rock or shallow known to expert mariners, he is responsible. If any injury be done to the cargo by improper or careless stowage, the master will be liable.

The master must not take on board any contraband goods, by which the ship and other parts of the cargo may be rendered liable to forfeiture or seizure. Neither must he take on board any false or colourable papers, as these might subject the ship to the risk of capture or detention. But it is his duty to procure and keep on board all the papers and documents required for the manifestation of the ship and cargo, by the law of the countries from and to which the ship is bound, as well as by the law of nations in general, or by treaties between particular states. These papers and documents cannot be dispensed with at any time, and are quite essential to the safe navigation of neutral ships during war.—(See *SHIP'S PAPERS*.)

It is customary in bills of lading to insert a clause limiting the responsibility of the master and owners, as follows:—“*The act of God, the king's enemies, fire, and every other dangers and accidents of the seas, rivers, and navigation, of whatever nature and kind soever, save risk of boats, as far as ships are liable thereto, excepted.*” When no bill of lading is signed, the master and owners are bound according to the common law.

The most difficult part of the master's duty is, when, through the perils of the sea, the attacks of enemies or pirates, or other unforeseen accidents, he is prevented from completing his voyage. If his own ship have suffered from storms, and cannot be repaired within a reasonable time, and if the cargo be of a *perishable nature*, he is at liberty to employ another ship to convey it to the place of destination. He may do the same if the ship have been wrecked and the cargo saved, or if his own ship be in danger of sinking, and he can get the cargo transferred to another,* and in *extreme cases* he is at liberty to dispose of the cargo for the benefit of its owners. But, to use the words of Lord Chief Justice Tenterden, “the disposal of the cargo by the master is a matter that requires the utmost caution on his part. He should always bear in mind that it is his *duty to convey it to the place of destination*. This is the purpose for which he has been intrusted with it, and this purpose he is bound to accomplish by every reasonable and practical method. What, then, is the master to do, if, by any disaster happening in the course of his voyage, he is unable to carry the goods to the place of destination, or to deliver them there? To this, as a general question, I apprehend no answer can be given. Every case must depend upon its own peculiar circumstances. The conduct proper to be adopted with respect to perishable goods, will be improper with respect to a cargo not perishable: one thing may be fit to be done with fish or fruit, and another with timber or iron: one method may be proper in distant regions, another in the vicinity of the merchant; one in a frequented navigation, another on unfrequented shores. The wreck of the ship is not necessarily followed by an impossibility of sending forward the goods, and does not of itself make their sale a measure of necessity or expedience: much less (in the loss of the season, or of the proper course of the voyage, have this effect. An unexpected interdiction of commerce, or a sudden war, may defeat the

* The most celebrated maritime codes, and the opinions of the ablest writers, have differed considerably as to these points. According to the Rhodian law (Pand. l. 10. § 1.) the captain is released from all his engagements, if the ship, by the perils of the sea, and without any fault on his part, become incapable of proceeding on her voyage. The laws of Oleron (art. 4.) and those of Wisby (art. 18. 37. 55.), say that the captain may hire another ship; harmonising in this respect with the present law of England. The famous French ordinance of 1681 (tit. *Du Fret*, art. 11.), and the *Code de Commerce* (art. 206.), order the captain to hire another ship; and if he cannot procure one, freight is to be due only for that part of the voyage which has been performed (*pro ratâ itineris peracti*). Valla has objected to this article, and states that practically it meant only that the captain must hire another ship if he would earn the whole freight. Emerigon (tom. i. p. 428.) holds that the captain, being the agent not only of the owners of the ship, but also of the shippers of the goods on board, is bound, in the absence of both, to use his best endeavours to preserve the goods, and to do whatever, in the circumstances, he thinks will most conduce to the interest of all concerned; or what it may be presumed the shippers would do, were they present. This, which seems to be the best and wisest rule, has been laid down by Lords Mansfield and Tenterden, as stated above, and may be regarded as the law of England on this point.

adventure and oblige himself alone make it no the ship to resort. adventure and oblige the ship to stop in her course; but neither of these events doth of itself alone make it necessary to sell the cargo at the place to which it may be proper for the ship to resort. In these and many other cases, the master may be discharged of his obligation to deliver the cargo at the place of destination; but it does not therefore follow that he is authorized to sell it, or ought to do so. What, then, is he to do? In general, it may be said, *he is to do that which a wise and prudent man will think most conducive to the benefit of all concerned.* In so doing, he may expect to be safe, because the merchant will not have reason to be dissatisfied; but what this thing will be, no general rules can teach. Some regard may be allowed to the interest of the ship, and of its owners; but the interest of the cargo must not be sacrificed to it. Trans-shipment for the place of destination, if it be practicable, is the first object, because that is in furtherance of the original purpose: if that be impracticable, return, or a safe deposit, may be expedient. A disadvantageous sale (and almost every sale by the master will be disadvantageous) is the last thing he should think of, because it can only be justified by that necessity which supercedes all human laws.—(*Law of Shipping*, part iii. c. 3.)

The master of a ship is liable for goods of which she is robbed in part; and the reason, as Lord Mansfield stated, is, lest room should be given for collusion, and the master should get himself robbed on purpose, in order that he might share in the spoil. The master is, however, entitled to indemnify himself out of the seamen's wages for losses occasioned by their neglect.

If any passenger die on board, the master is obliged to take an inventory of his effects; and if no claim be made for them within a year, the master becomes proprietor of the goods, but answerable for them to the deceased's legal representatives. Bedding and furniture become the property of the master and mate; but the clothing must be brought to the mast head, and there appraised and distributed among the crew.

If a master die, leaving money on board, and the mate, becoming master, improve the money, he shall, on allowance being made to him for his trouble, account both for interest and profits.

No master is to proceed on any voyage for parts beyond the seas without previously coming to an agreement, *in writing*, with his mariners, for their wages. If he do so, he shall forfeit, for every mariner so taken without a written agreement 5*l.*—(2 *Geo.* 2. c. 36. § 1.)

The master of every vessel is required by the 2 *Geo.* 2. c. 36. to keep a regular account of the penalties and forfeitures due to Greenwich Hospital in consequence of the mariners' disobedience, to deduct the same from their wages, and to pay the amount thereof to the collector of the Greenwich Hospital duty, within 3 months after such deduction, upon pain of forfeiting treble the value thereof to the use of the said hospital.

Masters of vessels laden with coals are directed by 6 *Geo.* 4. c. 107. § 120. to produce to any officer of customs demanding its production, a copy of the certificate originally delivered to them by the fitters or vendors, and to deliver the certificate to the collector or comptroller of the port to which the coals are carried.

For the duty of the master, as respects Custom-house regulation, see the articles *IMPORTATION AND EXPORTATION, QUARANTINE, SMUGGLING, &c.*; and for a further discussion of this important subject, see the excellent work of *Lord Tenterden on the Law of Shipping*, part iii. c. 3. &c.; *Chitty on Commercial Law*, vol. iii. c. 8. &c.; and the articles *CHARTERPARTY, FREIGHT, &c.* in this Dictionary.

MASTICH, OR MASTIC (Ger. *Mastix*; Du. *Mastik*; Fr. *Mastic*; It. *Masticca*; Sp. *Almastic, Almaciga*; Arab. *Arâk*). This resinous substance is the produce of the *Pistacia lentiscus*, a native of the Levant, and particularly abundant in the island of Chios. It is obtained by making transverse incisions in the trunks and branches of the trees, whence the mastic slowly exudes. About 1,500 cwt. are annually exported from Chios, part of which is brought to this country, packed in chests. The best is in the form of dry, brittle, yellowish, transparent tears; it is nearly inodorous, except when heated, and then it has an agreeable odour; chewed, it is almost insipid, feeling at first gritty, and ultimately soft; its virtues are trifling.—(*Ainslie's Materia Indica*; *Thomson's Dispensatory*.)

MATE, in a merchant ship, the deputy of the master, taking in his absence the command. There are sometimes only 1, and sometimes 2, 3, or 4 mates in a merchantman, according to her size; denominated 1st, 2d, 3d, &c. mates. The law, however, recognises only 2 descriptions of persons in a merchantman—the master and mariners; the mates being included in the latter, and the captain being responsible for their proceedings.

In men-of-war, the officers immediately subordinate to the captain are called lieutenants. But the *master*, or officer whose peculiar duty it is to take charge of the navigation of the ship, has certain mates under him, selected from the midshipmen. The boatswain, gunner, carpenter, &c. have each their mates or deputies, taken from the crew.

The officers subordinate to the commander in the ships belonging to the East India Company, were called 1st, 2d, 3d, &c. officers. East Indians had no sailing masters, the commanders performing that duty.—(*Falconer's Marine Dictionary, &c.*)

MATS (Du. *Matten*; Fr. *Nattes*; Ger. *Matten*; It. *Sturje, Stoje*; Port. *Esteiras*; Rus. *Progoshki*; Sp. *Esteras*), textures composed, for the most part, of flags, reeds, the bark of trees, rushes, grass, rattans, old ropes, &c. In this country mats are used for a great variety of purposes. The coarser sort are very largely employed in the packing of furniture and goods; in the stowage of corn and various other articles on board ship; in horticultural operations; in covering the floors of churches and other public buildings, &c.: the finer sorts are principally employed in covering the floors of private houses.

In Europe mats are principally manufactured for sale in Russia, where they are produced in immense quantities, forming an article of very considerable value and importance. They are partly formed of flags; but principally of the inner bark of the lime or linden tree, the latter being known in this country by the name of *bast* mats. The Russian peasants manufacture this sort of material into shoes; and in consequence of the vast quantity of matting made use of in this way, and in shipments abroad, the destruction of the linden tree is immense; though, as it grows rapidly, there is probably less risk of its exhaustion than Mr. Tooke seems to have supposed.—(*View of Russia*, vol. iii. p. 262.) In 1832 above 840,000 pieces of mat were exported from Archangel only; and in addition to this there is a very considerable exportation from Petersburg, Riga, and other ports. Russian mats fetch at present (January, 1834), in the London market, 4*l.* 10*s.* per 100, duty (1*l.* 3*s.* 9*d.* the 100) included. Mats not otherwise enumerated or described are subject to a duty of 20 per cent. *ad valorem*.

Various descriptions of reed mats are extensively manufactured in Spain and Portugal; some of them being very beautifully varied. In Spain large quantities of matting are made of the *esparto* rush.—(See *ESPARTO*.)

Rush floor mats, and rattan table mats of a very superior description are brought from China. They should be chosen clean, of a bright clear colour, and should, when packed, be thoroughly dry.

The mats of the Japanese are soft and elastic, serving them both for carpets and beds; they are made of a peculiar species of rush cultivated for the purpose.

The bags in which sugar is imported from the Mauritius consist of matting formed of the leaves of a tree growing in the island, interwoven in broad stripes. They are very strong and durable, and may be washed and cleaned without sustaining any injury. Being imported in large quantities, they are sold very cheap.—(Besides *Tooke's Russia*, already referred to, see *Milburn's Oriental Commerce*, and the valuable little work entitled *Vegetable Substances, Materials of Manufactures*, published by the Society for the Diffusion of Useful Knowledge, pp. 116—123.)

It is probable that mats formed the first sort of wove fabrics produced by man; and it is worthy of remark that but few savage tribes have been discovered that have not attained to considerable eminence in their manufacture. On the coast of Guinea and other places on the west of Africa, pieces of fine mat, about a yard long, and of a pretty uniform texture, were denominated *mankutee*, and formed a sort of money; the value of commodities being rated and estimated in them!—(*Morellet, Prospectus d'un Dictionnaire de Commerce*, p. 122.) They enjoyed this distinction, no doubt, from their utility, and the great care and labour bestowed on their preparation. There is hardly an island in the South Seas in which the natives have not acquired great skill and dexterity in the making of mats. The finer sorts consist, generally, of dyed reeds or grass; and have a very brilliant appearance.

MAURITIUS. See **PORT LOUIS**.

MEAD, or **METHEGLIN** (Ger. *Mehl, Meth*; Du. *Meede, Meedrank*; Fr. *Hydromel*; It. *Idromele*; Rus. *Lipez*), the ancient, and for a long time, the favourite drink of the northern nations. It is a preparation of honey and water. Manufacturers of mead for sale must take out an annual licence.

MEAL (Ger. *Mehl*; Du. *Meel*; Fr. and It. *Farine*; Sp. *Farina*; Rus. *Muka*; Lat. *Farina*), the edible part of wheat, oats, rye, barley, and pulse of different kinds, ground into a species of coarse flour.

MEDALS, are pieces of metal, generally in the form of a coin, and impressed with some peculiar stamp, intended to commemorate some individual or action. Medals are of very different prices—varying according to their rarity and preservation, the fineness of the metal, the beauty of the workmanship, &c.

MEDITERRANEAN PASS. The nature of this sort of instrument has been described by Mr. Reeves, in his *Treatise on the Law of Shipping*, as follows:—

“In the treaties that have been made with the Barbary states, it has been agreed, that the subjects of the King of Great Britain should pass the seas unmolested by the cruisers of those states; and for better ascertaining what ships and vessels belong to British subjects, it is provided that they shall produce a *pass*, under the hand and seal of the Lord High Admiral, or the Lords Commissioners of the Admiralty. In pursuance of these treaties, passes are made out at the Admiralty, containing a very few words, written on parchment, with ornaments at the top, through which a scalloped indenture is made: the *scalloped tops* are sent to Barbary; and being put in possession of their cruisers, the commanders are instructed

to suffer all persons to pass the seas unmolested, as the law of nations afforded by the treaties, ever failing, as the Levant, Spain, and other parts, in need of them in. For the accommodation of the Admiralty, are granted to those who piece of security is of power, the entire registry, who, with the which these passes granted for none but of the mariners British in the sum of 300*l.* delivering up the passport to another; and “It has been found to recel and cancel. This has been done either accidental or carried on in security had been purchased. That the Barbary indenture to the passport subjects.”

The act 66 Geo. 3. c. 143. in the Mediterranean pass, as being an inhabitant of the port called to be an owner of such pass shall have resided in the port of 15 years previously.

An Account of the Am granted, the aggregate applied.—(*Parl. Pap.*)

MEMEL, a corner. Population 8,000. It is situated on the Currische pal entrepôt of the commerce.

Harbour.—The harbour seldom more than 16 feet water, where the anchorage is generally 75, but now about. The light, with miles distance. The lights from it, S. 35. E. north, and red on the lead directly into the both in depth and pilot; but this is not

to suffer all persons to pass who have passes that will fit these scolloped tops. The protection afforded by these passes is such, that no ships, which traverse the seas frequented by these rovers, ever fail to furnish themselves with them, whether in the trade to the East Indies, the Levant, Spain, Italy, or any part of the Mediterranean; and from the more particular deed of them in the latter, they, no doubt, obtained the name of *Mediterranean passes*. For the accommodation of merchants in distant parts, blank passes, signed by the Lords of the Admiralty, are lodged with the governors abroad, and with the British consuls, to be granted to those who comply with the requisites necessary for obtaining them. As this piece of security is derived wholly from the stipulations made by the crown with a foreign power, the entire regulation and management of it has been under the direction of his Majesty, who, with the advice of his privy council, has prescribed the terms and conditions on which these passes shall be granted. Among others are the following:—They are to be granted for none but British-built ships, or ships made free, navigated with a master and three of the mariners British subjects, or foreign protestants made denizens. Bond is to be given in the sum of 300*l.* if the vessel is under 100 tons, and in 500*l.* if it is that or more, for delivering up the pass within 12 months, unless in the case of ships trading from one foreign port to another; and such passes need not be returned in less than 3 years.

It has been found expedient, at the conclusion of a war, and sometimes during a peace, to recall and cancel all passes that have been issued, and to issue others in a new form. This has been done for 2 reasons. 1st, That these useful instruments, by various means, either accidental or fraudulent, came into the hands of foreigners, who, under the name of them, carried on in security a trade which otherwise would belong to British subjects, and which had been purchased by the crown, at the expense of keeping up this sort of impost. 2dly, That the Barbary states complained, that, adhering to the rule of fitting the other part of the indenture to the passes, they were obliged to suffer ships to pass that did not belong to British subjects.

The act 52 Geo. 3. c. 143. makes the forging of a Mediterranean pass felony without benefit of clergy. The 5 Geo. 4. c. 78. enacts, that no Mediterranean pass shall be issued for the benefit of any person as being an inhabitant of Malta or of Gibraltar but not being a person entitled to be an owner of a British registered ship, unless such person shall have resided at Malta or Gibraltar, respectively, upwards of 15 years previously to the 10th of October, 1837.

Mediterranean passes are either granted for 1 voyage, or are attached to the ship's certificate of registry, and are in force so long as the said certificate. A stamp duty of 2*l.* is charged on each pass so issued. When issued in the colonies, they continue in force for 12 months to colonial ships, and for 3 voyages to British ships supplied with them. The duty on such passes is 5*s.*—We subjoin

The foregoing fees for Mediterranean passes, after deducting the sums paid for stamps, have been applied, as all other fees are, in aid of the sum voted on the navy estimate for the contingent expenses of the Admiralty Office.

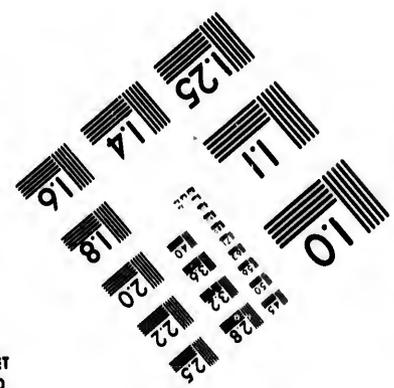

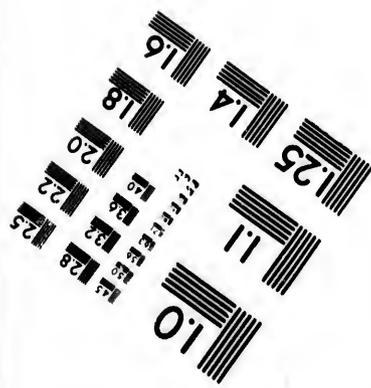

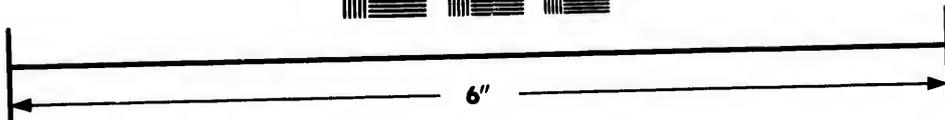

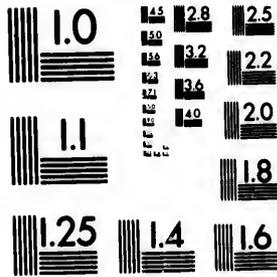

MEMEL, a commercial town of East Prussia, in lat. 55° 41' 42" N., lon. 21° 8' 14" E. Population 8,500. Memel is situated on the north-east side of the great bay, denominated the *Currische Haf*, near its junction with the Baltic. It is, consequently, the principal *entrepôt* of the country traversed by the Niemen, and as such enjoys a pretty extensive commerce.

Harbour.—The harbour of Memel is large and safe; but the bar at the mouth of the Currische Haf has seldom more than 17 feet water, and sometimes not more than 13 or 14 feet; so that ships drawing more than 16 feet water are frequently obliged to load and unload a part of their cargoes in the roads, where the anchorage is but indifferent, particularly when the wind is N. or N.W. A light-house, originally 75, but now 100 feet in height, has been erected on the N.E. side of the entrance to the harbour. The light, which is fixed and powerful, may be distinguished in clear weather at more than 20 miles distance. The outer buoy lies in 6 fathoms water, about a mile without the light-house, which bears from it, S.E. by E. 3 E. The channel thence to the harbour is marked by white buoys on the north, and red on the south side. Three beacons to the north of the town, when brought into a line, lead directly into the harbour. Inasmuch, however, as the channel is subject to frequent changes, both in depth and direction, it is always prudent, on arriving at the outer buoy, to heave to for a pilot; but this is not obligatory; and the Prussian authorities have issued directions for ships enter-

There are 3 sulphurets of mercury; the black or *siklops mineral*, and the red or *cinnabar*. When mercury and sulphur are triturated together in a mortar, the former gradually disappears, and the whole assumes the form of a black powder, denominated *ehllops mineral*. If this powder be heated red-hot, it sublimes; and on a proper vessel being placed to receive it, a cake is obtained, of a fine red colour, which is called *cinnabar*. This cake, when reduced to powder, is well known in commerce by the name of *vermillion*. Cinnabar may be prepared in various other ways.

Calomel, or protochloride of mercury (*mercurius dulcis*), is the most useful of all the preparations obtained from it. It is in the form of a dull white, semi-transparent mass, having a specific gravity of 7.176. It is more generally employed, and with better effect, than almost any other remedy in the whole range of the materia medica.

Besides its uses in medicine, mercury is extensively employed in the amalgamation of the noble metals, in water-gilding, the making of vermilion, the silvering of looking-glasses, the making of barometers and thermometers, &c.

MILE, the usual measure of roads in England, being 8 furlongs, or 1,760 yards.

MILK (Fr. *Lait*; It. *Latte*; Lat. *Lac*), a fluid secreted by the female of all those animals denominated *mammalia*, and evidently intended for the nourishment of her offspring. The milk of every animal has certain peculiarities which distinguish it from all other milk. But the animal whose milk is most used by man, and with which, consequently, we are best acquainted, is the cow. The external character of all milk is that of a white opaque fluid, having a sweetish taste, and a specific gravity somewhat greater than that of water. When allowed to remain at rest, it separates into 2 parts; a thick whitish fluid called *cream*, collecting in a thin stratum over its surface, and a more dense watery body, remaining below. Milk which has stood for some time after the separation of the cream, becomes acidulent, and then coagulates. When the coagulum is pressed gently, a serous fluid is forced out, and there remains the caseous part of the milk, or pure cheese.

Butter, one of the most valuable animal products, is solidified cream, and is obtained artificially by churning.—(See BUTTER.)

Milk has always been a favourite food of most European nations, and especially of the British. *Lacte et carne vivunt*, says Cæsar of our ancestors; and the same articles still continue to form a large part of our subsistence. Mr. Middleton estimates (*Agricultural Survey of Middlesex*, 2d ed. p. 419.), that, in 1806, no fewer than 8,500 milch cows were kept for the supply of London and its environs with milk and cream; and he estimates the average quantity of milk obtained from each cow at *nine quarts* a day, or 3,285 quarts a year, leaving, every deduction being taken into account, 3,200 quarts of marketable produce.

If Mr. Middleton be well founded in these estimates, we may reasonably calculate the number of cows that are at present kept in London and its environs at 9,000, and their annual produce at 28,800,000 quarts of milk. Now, as milk is sold by the retailers at 4d. a quart after the cream is separated from it, and as the cream is usually sold at 3s. a quart, and there is reason to suspect that a good deal of water is intermixed with the milk, we believe we should not be warranted in estimating that the milk, as obtained from the cow, is sold at less than 6d. a quart which gives 720,000*l.* as the total price of the milk consumed in the city and its immediate vicinity. If to this sum were added the further sums paid for cheese and butter, the magnitude of the entire sum paid in the metropolis for milk, and the various products derived from it, would appear astonishing.

MILLET (Ger. *Hirse*; Fr. *Millet*, *Mil*; It. *Miglio*, *Panicastrello*; Sp. *Mijo*; Lat. *Milium*, *Panicum miliaceum*). There are 3 distinct species of millet; the Polish millet, the common or German millet, and the Indian millet. It is cultivated as a species of grain; and is sometimes employed to feed poultry, and as a substitute for rice. The Indian millet grows to a large size; but the autumns in England are seldom dry and warm enough to allow of its being cultivated here.—(*Loudon's Encyc. of Agriculture*.)

MILL-STONES (Ger. *Mühlsteine*; Fr. *Pierres meulieres*; It. *Mole macine*; Sp. *Muelas de molino*; Rus. *Schernovoi kamen*), the large circular stones, which, when put in motion by machinery, grind corn and other articles. The diameter of common mill-stones is from 5 to 7 feet, and their thickness varies from 12 to 18 inches. These stones have been principally imported from Rouen and other parts of France; the burr-stones of that country being supposed more durable than our own. Mill-stones are, however, found at Conway, North Wales, and in some parts of Scotland, which are said to equal any imported from foreign countries. Good mill-stones usually last 35 or 40 years.

"Milo," says Mr. Urquhart, "abounds in admirable mill-stones, which I believe answer better than the French burr for the hard wheat of the Black Sea, as much preferred in the Levant to the soft, though not so in England, for want of proper stones. These stones, of full dimensions, might be shipped at Milo for 5*l.* or 6*l.* the pair. But were they brought here, they would be met with a duty of 1*l.* 8*s.* the pair, whereas French burrs, a pair of which cost 3*l.*, pay but 10*s.* the 100."—(*Turkey and its Resources*, p. 146.) This extraordinary difference in the duty depends on the stones being under or over 4 feet in diameter. Surely, however, if a duty must be laid on such an article as mill-stones, common sense would suggest that it should be charged according to their weight or cubic contents. Were it not for the absurd way in which it is imposed, it is probable that stones from Milo might be brought home as ballast in some of the Turkey ships, all of which, except those loaded with currants and grain, are light.

MINING COMPANIES. By this designation is commonly meant the associations formed in London, a few years ago, for working mines in Mexico and South America.

and 1825, after the opening of Mexico and other parts of Spanish America to our intercourse, forms a remarkable, and, we are sorry to add, disgraceful era in our commercial history. Now that the madness is past, we have difficulty in conceiving how men in the habit of sober calculation could be led to entertain such romantic expectations, and to pay such high premiums for shares in distant and uncertain undertakings. We may, therefore, be excused for appropriating a page or two to the history of an infatuation hardly second to that which led to the South Sea and Mississippi schemes.

The mining companies formed at the outset had some sort of basis for favourable expectations, their directors having made contracts for a number of mines in Mexico, described by Humboldt as having enriched many hundred families. This particularly applies to the Real del Monte Company, whose mines are situated in the mountainous district of that name; to the Anglo-Mexican Company, whose mines are at Guanaxuato, the principal mining quarter in Mexico; and to the United Mexican Company, whose contracts, though far too widely spread, comprise several valuable mines at Zacatecas, Sombretete, Guanaxuato, and other parts.

These associations were formed in London early in 1804, and during the spring and summer of that year their stock or shares bore only a small premium; but towards the winter it began progressively to rise, to the surprise of several of the directors; seeing that it arose less from any favourable intelligence of the mines (for the accounts from Mexico merely reported the arrival of the English agents) than from a blind ardour and spirit of speculation in the public,—a spirit which, seeing nothing tempting in our own funds, or in those of continental Europe, directed itself to distant objects, and particularly to Spanish America. It appeared as if our countrymen were about to reap an immediate harvest; to lay their hands on a treasure hid for ages. America, it was said, had been discovered, in one sense, above 3 centuries; but this was the true discovery,—the effectual access to its resources. Every new contract for a Mexican mine produced a rise in the shares of the companies, as if this fresh undertaking must necessarily be a source of profit to the others! And the result was, that in January, 1825, the premium on the shares of each of the companies mentioned above exceeded cent. per cent., although no substantial reason could be given for any advance whatever. It must not, however, be imagined that this rise of price was occasioned solely by the competition of individuals who intended to continue to hold stock, and to trust to the dividends made by the companies for a return. That this was the case in the first instance, is, speaking generally, true. But others, actuated by very different views, speedily entered the field. A peculiar combination of circumstances, at the head of which must be placed an almost incredible degree of ignorance and folly on the part of a considerable portion of the public, spread a spirit of gambling among all classes. Many who were most eager in the pursuit of shares, intended only to hold them for a few days or weeks, to profit by the rise which they anticipated would take place, by selling them to others more credulous or bold than themselves. The confidence of one set of speculators confirmed that of others. Meanwhile the public gullibility, or rather its indiscriminating rapacity, was liberally administered to. Company after company was formed without any previous contract; in other words, without any foundation whatever! The plan was to fix on a district in America understood to contain mines; to form a company bearing the name of such district; to obtain a first payment from the shareholders, and to send out agents, or commissioners, as they were termed, to survey the district and engage mines. Such was the case of most of those having the names of districts in South America, subjoined to the present statement: it was the case also of the Hispaniola or St. Domingo Company, formed on the basis of accounts given by Dr. Robertson of mines wrought in that island some 3 centuries ago! And yet lawyers, clergymen, and even the nobles of the land, were candidates for shares in these miserable bubbles, in the hope of finding (in which, luckily, most of them were disappointed) some dupe to buy their shares at a premium.*

As the year 1825 proceeded, the mania gradually declined, not from any falling off in the prospects of the companies, but from the supply of money in London. Speculative merchants had made immense importations of cotton, silk, wool, timber, and other articles; money was, of course, wanted to pay for these; the banks were drained; discounts became difficult; mining shares and South American stock were brought to sale; and the holders found, to their cost, that the public had recovered its senses. The panic in December, 1825, took place; and the shares of the 3 principal companies, some of which had been at a premium of 500 per cent., fell to par: that is, 100*l.* in money, and no more, could be got for 100*l.* of the company's stock! This price they maintained a considerable time, because most of the parties interested continued to have a favourable impression of the issue of their undertakings.

* Those who may be desirous of seeing the extent to which the public credulity was practised upon in 1824 and 1825, may consult a pamphlet published by H. English, broker, in 1827, which contains an account of all the joint stock companies formed and projected in these memorable years. It presents a most extraordinary picture. There were in all 74 mining companies formed and projected! The number and quality of the other schemes were similar. It is due to Mr. Hartley to say that he denounced the evil when in progress; and warned the unthinking multitude of the ruin they were bringing upon themselves; but to no purpose.

Demands, however shareholders felt alluded by the change so that 100*l.* stock destroyed, and the

Even these would not the directors be whatever had been shareholder each person, such instalment by the directors, and had advanced 50*l.* incur the forfeiture less degree; but to They raised the money, or prevailing as far as can yet be the lesson of the nature of a company not been, in general number of shares (200 or 300, and drew their whole property

The managers of they trespassed not little communication Old Spain having part of the civil wars and of way to this country the published account formed the chief authority on this instance, to have merchants knew geography of Mexico, and they had no idea of the amount of expenditure aware how little use mines, like every opal natives of Old Spain can succeed in the native Mexicans,—without any due sense men to drain the mine the use of which was and creating a great to the last and most silver from the ore, Germany during their by them in a very ruin the whole, or any thing was merely to cause to their people for a they (the Mexicans) resources, or had been

Actuated by these agents of the companies All the companies conducting them, for a they proceeded, supported in quantity, seldom tracing the silver from distance of the undertakings of the agents of the companies afford any great disappointments, to waive fair character and reputation. Hence the a

Demands, however, were made for additional sums to meet the expenditure abroad: the shareholders felt all the pressure of these demands, after their incomes at home had been reduced by the change of times: and in 1826 and 1827 mining shares progressively declined, so that 100*l.* stock fetched only 20*l.* or 25*l.* in money. The bubble companies were entirely destroyed, and the few only remained who had some foundation to stand upon.

Even these would have been relinquished, or have shrunk into very small dimensions, had not the directors been able to enforce further payments, by forfeiting, in default of such, whatever had been previously paid by the subscribers. The usage was, that on becoming a shareholder each person subscribed the deed of the company, engaging to pay, when called on, such instalments or sums to account (generally 10*l.* on each share) as should be required by the directors, until he had completed payment of the 100*l.* Now, a shareholder who had advanced 50*l.* or 60*l.* naturally consented to pay 10*l.* from time to time, rather than incur the forfeiture of all that he had paid. Those who held only a few shares felt this in a less degree; but to the holders of a number of shares, the grievance was most serious. They raised the money with great difficulty; often selling at a heavy loss their family property, or prevailing on relations to make them advances, to their great inconvenience, and, as far as can yet be seen, with very little prospect of a return from the mines;—a memorable lesson of the caution that should be exercised before signing any engagement in the nature of a company deed. Resentment would be excited against the directors, had they not been, in general, the heaviest sufferers: their regulations required them to hold a certain number of shares (perhaps 20 or 30); but in their blind confidence they frequently held 200 or 300, and drew on themselves a proportionate sacrifice; in several cases, the loss of their whole property.

The managers of the companies formed in the outset are chargeable with ignorance only: they trespassed not knowingly, but from want of information. There had till then been little communication between this country and Spanish America; the monopoly enforced by Old Spain having prevented it. Of the Spaniards settled in Mexico, and driven from it by the civil wars and consequent emancipation of the country, none, or almost none, found their way to this country; they repaired to Cuba, to the south of France, or to Spain. Nor were the published accounts of the country entitled to much confidence: Humboldt's *Travels* formed the chief authority; but their illustrious author, though generally cautious, seems, in this instance, to have placed too much confidence in vague exaggerated statements. Our merchants knew generally that silver mines formed a main branch of the productive industry of Mexico, and had enriched very many families originally in humble circumstances; but they had no idea of the extent of injury sustained by the mines during the civil war, nor of the amount of expenditure required to bring them into a working state: nor were they aware how little useful information could be expected from the natives; the working of the mines, like every operation requiring skill and intelligence, having been superintended by natives of Old Spain, who had either fallen in the civil war, or been expelled after the Mexicans succeeded in the contest. Hence, the agents of our companies found on the spot only native Mexicans,—men without education or experience in business, and, it must be added, without any due sense of the importance of candour or probity. They urged our countrymen to drain the mines, not by machinery, of which they had no idea, but by animal power, the use of which was of advantage to the Mexican landholders, by employing their horses, and creating a great consumption of maize, the principal grain of the country. Then, as to the last and most important stage in the business of mining,—the mode of extracting the silver from the ore,—the Mexicans, wholly unacquainted with the improvements made in Germany during the last half century, recommended amalgamation,—a process conducted by them in a very rude manner, and which, in most qualities of silver ore, fails to extract the whole, or any thing like the whole, of the metal. The object of the Mexicans, in short, was merely to cause English capital to be circulated among them; thus giving employment to their people for a time, and bringing the mines into an improved state,—in which state they (the Mexicans) might hope to resume them after our countrymen had exhausted their resources, or had become weary of their contracts.

Actuated by these views, the Mexicans pressed one undertaking after another on the agents of the companies, who were but too eager to enter on them without such incitement. All the companies fell into errors of the same kind, viz. engaging too many mines, and conducting them, for a time, as if their funds were unlimited. They reckoned on finding, as they proceeded, supplies in the produce of the mines; but that produce, though considerable in quantity, seldom yielded the expected result, owing to the very imperfect method of extracting the silver from the ore, as well as to the various disadvantages attendant on the vast distance of the undertakings from this country. These disadvantages were ill supplied by the agents of the companies. Mining in England is not conducted on a scale sufficient to afford any great choice of superintendents for mines abroad: it was necessary, in such appointments, to waive the qualification of mining knowledge, and to be satisfied with men of fair character and reputed ability in their respective professions, however different from mining. Hence the appointments, as agents, of several officers, naval and military, on the

half pay list; whose habits, whatever might be their personal merits, were very different from those required for such concerns. Mercantile men might have been more suitable; but a merchant fully employed in business was not likely to relinquish or suspend it; and those who in middle age are not fully employed, frequently are indebted for their leisure to vacillation, want of exertion, or deficient judgment. This suffices to account for the disappointments of the companies in a very material point—the conduct of their commissioners or agents abroad; for, of the whole number, it would be difficult to point out more than 2 or 3 entitled to the praise of judicious management. The same applied to most of the inferior employes,—to the practical miners, clerks, and mechanics.

The expense of conveying the requisite machinery from the coast of Mexico to the mining districts, generally at a great distance in the interior, absorbed much capital. The country has few practicable roads, draught carriages are almost unknown, and burdens are carried on the backs of mules and horses: add to this, that Mexico being under-peopled, labour is nearly as high in it as in the United States of North America; and the mechanical arts being in a manner unknown, all skilled workmen, such as carpenters, blacksmiths, and working engineers, had to be sent from England at a heavy expense.

Such were the chief causes of the failures of the Mexican mining companies; and several of these may be referred to one radical disadvantage—the non-existence of silver-mines in England. We have, in Cornwall and in North Wales, considerable mines of tin and copper, while in the northern counties we have mines of lead; but of silver we have none that deserve the name. How much better had it been had our countrymen set out with a consciousness that Germany is the only country in Europe, or, indeed, in the world, in which the treatment of silver ore is conducted on scientific principles! The Saxons at Freyberg succeed in extracting a profit from ore of very inferior quality, often worth only a fourth or fifth part of the ore raised in abundance by the Mexicans on account of our companies, but which, wrought by their crude, inefficient, and expensive process, fails to afford any thing like a satisfactory return. There seems no reason to doubt that the German process may be applied to silver ore in Mexico as in Europe: the difficulties arise, not from difference in the quality of the ore, but from the want of experienced smelters, and the general backwardness of the Mexicans in mechanics. A German mining company established in Mexico has not as yet succeeded; but they have had to contend with the same difficulties as the English companies, with the additional disadvantage of insufficient capital; so that their methods have not had a fair trial.

But though the companies were in all other respects successful, they have a serious drawback to contend with in the unsettled state of the country. No government has as yet been established in Mexico, or in any other of the newly constituted American states, with power sufficient to put down disturbances, or to enforce the observance of contracts. So long as the companies were struggling to put their mines into order, they seem to have sustained little inconvenience from the circumstances now mentioned; but the moment they had succeeded in bringing them once more into a productive state, and were beginning to have a reasonable prospect of obtaining some return for their enormous outlays, they were annoyed by questions as to title, and by the setting up of claims on the mines, of which they had never heard before. Recently, we understand, the claimants have occasionally had recourse to violence, and, in some instances, the companies' servants have been forcibly ejected from their works! We hope, though we can hardly say we believe, that these outrages may be repressed and punished. If they be permitted to continue, it is difficult to see how the companies, how well soever they may be otherwise established, can escape ruin.

Without, however, pretending to anticipate the result of these remote speculations, we shall conclude with a brief notice of the considerations on both sides of the question. The circumstances adverse to the success of mining companies in America, conducted for account of parties in England or in any part of Europe, are—

1. The various disadvantages of distant management. These are so many and so serious, as to admit of only one corrective,—selling the ore as soon as raised, and transferring to individuals, for their own account, the extraction of the metal, as is done in Cornwall, and, in a somewhat different manner, in Saxony. The ore also ought to be raised by paying the workmen, not fixed wages, but tributes or portion of the proceeds.

2. The half-civilized state of the inhabitants, their unsettled political condition, and the want of power or disposition on the part of the parties in power to make contracts be observed; and to hinder the former proprietors of the mines, or those connected with them, from setting up fictitious claims, and enforcing them by violence.

3. The high price of labour; the ignorance of the natives as to mechanics, and still more as to science. Hence the necessity of having artisans and confidential superintendents from Europe at a heavy expense.

On the other hand, the circumstances in favour of such undertakings are—

1. The abundance of silver ore, which is far greater than in any part of Europe.

2. The former success of mining in Mexico, under a system extremely rude and expensive, compared to that which is now followed in Germany.

3. The probability of continued peace in Europe, and of an abundance of monied capital; so that the failure of the present companies would not involve a relinquishment of their enterprises, any more than the failure of the first New River Company, about two centuries ago, implied an abandonment of their project. Succeeding adventurers might come forward, and pursue the same object on a more judicious plan, and with more ample funds.

4. The probability of Old Spain recognizing the independence of Mexico and the other new States; and of the governments becoming more powerful and disposed to do justice.

British Mining Companies connected with America, which are still carried on.

United Mexican.	Mexican.
Real del Monte.	Brazilian (two companies.)
Mexican Anglo-Mexican.	Columbian.

The amount of capital invested by these companies is about £2,000,000 sterling.

Mining Companies connected with America, formed in 1825, but long since dissolved.

Anglo-Chilian.	Gold Coast (Africa).
Anglo-Peruvian.	Pisco Peruvian.
Bolivian.	Peruvian.
Chilian.	Potosi La Paz.
Colombian and Peruvian.	Rio de la Plata.
Catalan.	Talipuzaba.
General South American.	United Pacific.

The sums raised by these companies were not large; in general only 5 per cent. on their proposed capital.

There were also various companies formed in 1825, for mining in England; they were to the number of 30 and upwards; but they proved in general abortions, with the exception of the British Iron Company (with works chiefly in Staffordshire), which has drawn a large sum from its shareholders.

The following extract from the Share List for the 12th of October, 1833, published by Mr. Edmonds, broker, gives an account of the existing mining companies; the number of shares in each; the sums paid on account of such shares; and their selling price, &c. It is an instructive commentary on the prospectuses and prices of 1825.

MINIUM, or RED OXIDE OF LEAD, a tasteless powder of an intense red colour, often inclining to orange, and very heavy; its specific gravity being 8.94. It is extensively used in the arts.

MOCHA, the principal port in the Red Sea frequented by Europeans, in that part of Arabia called Yemen, about 40 miles to the north of the Strait of Bab-el-mandeb, lat. 13° 19' 30" N., lon. 43° 20' E. Population variously estimated; but may, perhaps, amount to from 5,000 to 7,000. It is encircled with walls, and indifferently fortified. Its appearance from the sea is imposing.

Mocha is situated on the margin of a dry sandy plain. It is built close to the shore, between 2 points of land which project and form a bay. Vessels drawing from 10 to 12 feet water may anchor within this bay at about a mile from the town; but large ships anchor without the bay in the roads, in 5 or 7 fathoms water—the grand mosque bearing E.S.E., and the fort to the south of the town S. by E., distant about two miles from the shore. The great article of export from Mocha is coffee, which is universally admitted to be of the finest quality. It is not possible to form any very accurate estimate of the quantity exported; but we believe it may be taken at 10,000 tons, or perhaps more. The greater portion is sent to Djidda and Suez; but there is a pretty large export to Bombay, and other parts of India, whence some is sent to Europe; occasionally, however, the exports from Mocha and Hodeida, direct for Europe, are very considerable. Besides coffee, the principal articles of export are, dates, adjuve, or paste made of dates, myrrh, gum Arabic, olibanum, senna (*caustia senna*), shanks' fins, tragacanth, horns and hides of the rhinoceros, balm of Gilead, ivory, gold dust, civet, aloes, sagapenum, &c. The principal articles of import are, rice, piece goods, iron and hardware, &c. The ivory, gold dust, and civet, met with at Mocha, are brought from the opposite coast of Abyssinia; whence are also brought slaves, ghee, &c.

The greater part of the foreign trade of Mocha is transacted by the Baniyas; and it is much safer to deal with them than with either Turks or Arabs. Europeans pay a duty of 3 per cent. *ad valorem* on all goods imported by them from Europe, India, or China; the duty being levied on the amount of the sales. The buyer pays brokerage, cooley and boat hire. All kinds of foreign goods are sold on credit, and the payment is made in 3 instalments, or at a certain day, according as may have been agreed on. Coffee is always paid for in ready money. On the sale of other goods, the produce of the country, a credit is given; or if ready money be paid, a discount is allowed at the rate of 9 per cent. When goods are discharging, the master must furnish the Custom-house officer with a manifest, or account of the marks, numbers, and contents of each package. He then opens two or three bales, taken at random; and if they correspond with the account delivered, no further examination is made; but if they do not correspond, the whole bales are opened, and double duty is charged upon the excess. The quantities being thus ascertained, their value is learned from the account of amins rendered by the seller, and the duty charged accordingly. In this respect there is nothing to object to at Mocha; but a good deal of extortion is practised in the exaction of port charges, presents, &c., which may, however, be defeated by proper firmness. The port charges on ships, or *three-mast* vessels, may amount to about 400 Mocha dollars, and those on brigs to about half as much. Provisions are plentiful and cheap; but water is dear: that in the vicinity being brackish and unwholesome, whatever is used for drinking, by all but the poorest persons, is brought from Mecca, about 20 miles off. Fish are abundant and cheap, but not very good.

Money.—The current coins of the country are carats and commassee; 7 carats = 1 commassee; 60 commassee = 1 Spanish dollar; 100 Spanish dollars = 12½ Mocha dollars.

Weights and Measures.—The commercial weights are—

15 Vekias = 1 Rottolo = 1 lb. 2 oz. avoird.	10 Maunds = 1 Frazel = 30 lbs. avoird.
40 Vekias = 1 Meund = 3 lbs. avoird.	15 Frazels = 1 Bahar = 450 lbs. avoird.

There is also a small maund of only 30 vekias: 1 Mocha bahar = 16½ Bombay maunds; 1 Mocha

bahar = 13 Surat maunds = 15-123 seers. Grain is measured by the kella, 40 of which = 1 toman, about 170 lbs. avoirdupois. The liquid measures are 16 vakias = 1 nuseah; 8 nuseahs = 1 cadd, about 3 English wine gallons. The long measures are the guz = 25 English inches; the hand covid = 18 inches, and the long iron covid = 27 inches.

In compiling this article, we made use of *Milburn's Oriental Commerce*, and *Elmore's Directory*. Niebuhr has given a plan of the port of Mocha in his *Voyage en Arabie*, tome i. p. 348, ed. Amst. 1776. He has also given some details as to its trade in his *Description de l'Arabie*, p. 191. But the best account we have seen of Mocha is in *Hamilton's Account of the East Indies* (vol. i. pp. 40-52), an accurate and valuable work. Burchardt did not visit Mocha; which is much to be regretted.

MOGADORE, a sea-port town on the west coast of Morocco, lat. $31^{\circ} 50' N$, lon. $9^{\circ} 20' W$. Population about 10,000. It is indifferently fortified; the country in the immediate vicinity is low, flat, sandy, and unproductive. Water is scarce and rather dear; being either rain water collected and preserved in cisterns, or brought from a river about $\frac{1}{2}$ mile distant. The port is formed by a small island lying to the southward of the town; but as there is not more than 10 or 12 feet water in it at ebb tide, large ships anchor without, the long battery bearing E. distant $\frac{1}{2}$ mile. The city of Morocco derives its most considerable supplies of European articles from Mogadore, from which it is distant about 4 days' journey (caravan travelling). The principal imports are, English woollen and cotton stuffs and hardware, German linens, tin, copper, earthenware, mirrors, glass, sugar, pepper, paper, and a variety of other articles. The exports principally consist of sweet and bitter almonds, gum Arabic, and other gums, bees' wax, cow and calf skins, ivory, ostrich feathers, gold dust, olive oil, dates, &c.

Money.—Accounts are kept in nutkeels of 10 ounces; the ounce being divided into 4 blankels, and the blankel into 24 fluces. From their proportion to the Spanish dollar, the blankel may be valued at 1d., the ounce at 4d., and the nutkeel or ducat at 3s. 4d.

Weights and Measures.—The commercial pound is generally regulated by the weight of 30 Spanish dollars; and, therefore, 100 lbs. Mogadore weight, or the quintal, = 119 lbs. avoirdupois. The market pound for provisions is 50 per cent. heavier, or 1 lb. 12½ oz. avoirdupois.

The corn measures are for the most part similar to those of Spain, but there are considerable discrepancies.

The cubit, or canna, = 21 English inches, is the principal long measure.

The most ample details with respect to the trade of Mogadore, and the trade and productions of Morocco in general, may be found in *Jackson's Account of Morocco*, c. 6, 7, and 13; see also *Killy's Cambist*.

MOHAIR (Ger. *Mohr*; Fr. *Moire*; It. *Moerro*; Sp. *Mue*, *Muer*), the hair of a variety of the common goat, famous for being soft and fine as silk, and of a silvery whiteness. It is not produced any where but in the vicinity of Angors, in Asia Minor. The exportation of this valuable and beautiful article, unless in the shape of yarn, was formerly prohibited; but it may now be exported unspun. The production, preparation, and sale of mohair have long engrossed the principal attention of the inhabitants of Angora; and it used to form an important article of Venetian commerce.—It is manufactured into camlets and other expensive stuffs. Hitherto but little has been imported into England.—(See, for further particulars, *Tournefort, Voyage du Levant*, tome ii. p. 463., where there is a figure of the goat; and *Urquhart on Turkey and its Resources*, p. 184.)

MOLASSES, or **MELASSES** (Fr. *Sirap de Sucre*, *Melasses*; Ger. *Syrup*; It. *Milazzo di zucchero*; Sp. *Miel de azucar*, *Chancaea*; Port. *Melasso*, *Assucar liquido*; Rus. *Patoka sacharnaja*), the uncrystallisable part of the juice of the sugar cane, separated from the sugar during its manufacture. It is of a brown or black colour, thick, and viscid; has a peculiar odour, and a sweet empyreumatic taste. Molasses imported from the West India colonies and the Mauritius is charged, on being entered for home consumption, with a duty of 9s. a cwt. It is not, however, used in its original state, but is purchased by the sugar-bakers, who, when it is of an ordinary degree of strength, extract from it a coarse, soft species of sugar called bastard, and treacle. But it is obvious, inasmuch as the duty on molasses is fixed, that the duty on the sugar extracted from it will vary indirectly according to the quantity of saccharine matter which it contains; and we understand that, in consequence, molasses is frequently imported so rich as to yield excellent crystallised sugar. We do not know whether the practice has been carried to such an extent as materially to injure the revenue; but it seems pretty clear that the duty ought to be made to depend, in part at least, on the quality of the molasses, or on the quantity of saccharine matter which it contains, as well as on the weight. It is difficult,—unless advantage has been taken of the way in which the duty is assessed, to elude the sugar duties,—to account for the increased importation of molasses.

About 8 gallons of proof spirit may, it is said, be obtained from a cwt. of molasses, such as has recently been imported; but this depends, of course, wholly on the richness of the molasses.

Part of the refuse that remains after refining muscovado sugar, is a sweet syrup, which, as well as the syrup that remains after boiling molasses to obtain bastard, is called treacle. But the treacle obtained from the former is always preferred to that obtained from the latter, and fetches 2s. per cwt. more.

Molasses is sometimes used in preparing the coarser sort of preserves; and on the Continent it is extensively used in the manufacture of tobacco.

1812	268,895	—	—	—	—	—	—	—	—	254,651	

In 1832, the consumption was, we understand, considerably larger. The imports of foreign molasses are quite inconsiderable.

MONEY. When the division of labour was first introduced, commodities were directly bartered for each other. Those, for example, who had a surplus of corn and were in want of wine, endeavoured to find out those who were in the opposite circumstances, or who had a surplus of wine and wanted corn, and then exchanged the one for the other. It is obvious, however, that the power of changing, and, consequently, of dividing employments, must have been subjected to perpetual interruptions, so long as it was restricted to mere barter. A. carries produce to market, and B. is desirous to purchase it; but the produce belonging to B. is not suitable for A. C., again, would like to buy B.'s produce, but B. is already fully supplied with the equivalent C. has to offer. In such cases—and they must be of constant occurrence wherever money is not introduced—no direct exchange could take place between the parties; and it might be very difficult to bring it about indirectly.*

The extreme inconvenience attending such situations must early have forced themselves on the attention of every one. Efforts would, in consequence, be made to avoid them; and it would speedily appear that the best or rather the only way in which this could be effected, was to exchange either the whole or a part of one's surplus produce for some commodity of known value, and in general demand; and which, consequently, few persons would be inclined to refuse to accept as an equivalent for whatever they had to dispose of. After this commodity had begun to be employed as a means of exchanging other commodities, individuals would become willing to purchase a greater quantity of it than might be required to pay for the products they were desirous of immediately obtaining; knowing that should they, at any future period, want a further supply either of these or other articles, they would be able readily to procure them in exchange for this universally desired commodity. Though at first circulating slowly and with difficulty, it would, as the advantages arising from its use were better appreciated, begin to pass freely from hand to hand. Its value, as compared with other things, would thus come to be universally known; and it would at last be used, not only as the common medium of exchange, but as a standard by which to measure the value of other things.

Now this commodity, whatever it may be, is *money*.

An infinite variety of commodities have been used as money in different countries and periods. But none can be advantageously used as such, unless it possesses several very peculiar qualities. The slightest reflection on the purposes to which it is applied, must, indeed, be sufficient to convince every one that it is indispensable, or, at least, exceedingly desirable. That the commodity selected to serve as money should, (1) be divisible into the smallest portions; (2) that it should admit of being kept for an indefinite period without deteriorating; (3) that it should, by possessing great value in small bulk, be capable of being easily transported from place to place; (4) that one piece of money, of a certain denomination, should always be equal, in magnitude and quality, to every other piece of money of the same denomination; and (5) that its value should be comparatively steady, or as little subject to variation as possible. Without the *first* of these qualities, or the capacity of being divided into portions of every different magnitude and value, money, it is evident, would be of almost no use, and could only be exchanged for the few commodities that might happen to be of the same value as its indivisible portions, or as whole multiples of them: without the *second*, or the capacity of being kept or hoarded without deteriorating, no one would choose to exchange commodities for money, except only when he expected to be able speedily to re-exchange that money for something else: without the *third*, or facility of transportation, money could not be conveniently used in transactions between places at any considerable distance: without the *fourth*, or perfect sameness, it would be extremely difficult to appreciate the value of different pieces of money: and without the *fifth* quality, or comparative steadiness of value, money could not serve as a standard by which to measure the value

* The difficulties that would arise on such occasions, and the devices that would be adopted to overcome them, have been very well illustrated by Colonel Torrens, in his work on the "Production of Wealth," p. 391.

of other commodities; and no one would be disposed to exchange the produce of his industry for an article that might shortly decline considerably in its power of purchasing.

The union of the different qualities of comparative steadiness of value, divisibility, durability, facility of transportation, and perfect sameness, in the precious metals, doubtless formed the irresistible reason that has induced every civilised community to employ them as money. The value of gold and silver is certainly not invariable, but, generally speaking, it changes only by slow degrees; they are divisible into any number of parts, and have the singular property of being easily reunited, by means of fusion, without loss; they do not deteriorate by being kept; and, from their firm and compact texture, they are very difficult to wear. Their cost of production, especially that of gold, is so considerable, that they possess great value in small bulk, and can, of course, be transported with comparative facility; and an ounce of pure gold or silver, taken from the mines in any quarter of the world, is precisely equal, in point of quality, to an ounce of pure gold or silver dug from the mines in any other quarter. No wonder, therefore, when all the qualities necessary to constitute money are possessed in so eminent a degree by the precious metals, that they have been used as such, in civilised societies, from a very remote era. "They became universal money," as M. Turgot has observed, "not in consequence of any arbitrary agreement among men, or of the intervention of any law, but by the nature and force of things."

When first used as money, the precious metals were in an unfashioned state, in bars or ingots. The parties having agreed about the quantity of metal to be given for a commodity, that quantity was then weighed off. But this, it is plain, must have been a tedious and troublesome process. Undoubtedly, however, the greatest obstacle that would be experienced in early ages to the use of gold and silver as money, would be found to consist in the difficulty of determining the degree of their purity with sufficient precision; and the discovery of some means by which their weight and fineness might be readily and correctly ascertained, would be felt to be indispensable to their extensive use as money. Fortunately, these means were not long in being discovered. The fabrication of coins, or the practice of impressing pieces of the precious metals with a stamp indicating their weight and purity, belongs to the remotest antiquity.—(*Goguet De l'Origine des Loix*, &c. tome i. p. 206.) And it may safely be affirmed, that there have been very few inventions of greater utility, or that have done more to accelerate the progress of improvement.

It is material, however, to observe, that the introduction and use of coined money makes no change whatever in the principle on which exchanges were previously conducted. The coinage saves the trouble of weighing and assaying gold and silver, but it does nothing more. It declares the weight and purity of the metal in a coin; but the value of that metal or coin is in all cases determined by precisely the same principles which determine the value of other commodities, and would be as little affected by being recoined with a new denomination, as the burden of a ship by a change of her name.

Inaccurate notions with respect to the influence of coinage seem to have given rise to the opinion, so long entertained, that coins were merely the signs of values! But it is clear they have no more claim to this designation than bars of iron or copper, sacks of wheat, or any other commodity. They exchange for other things, because they are desirable articles, and are possessed of real intrinsic value. A draft, check, or bill, may not improperly, perhaps, be regarded as the sign of the money to be given for it. But that money is nothing but a commodity; it is not a sign—it is the thing signified.

Money, however, is not merely the universal equivalent, or *marchandise banale*, used by society: it is also the *standard* used to compare the values of all sorts of products; and the stipulations in the great bulk of contracts and deeds, as to the delivery and disposal of property, have all reference to, and are commonly expressed in, quantities of money. It is plainly, therefore, of the utmost importance that its value should be preserved as invariable as possible. Owing, however, to improvements in the arts, the exhaustion of old mines and the discovery of new ones, the value of the precious metals is necessarily inconstant; though, if we except the effects produced in the 16th century by the discovery of the American mines, it does not appear to have varied so much at other times as might have been anticipated. Great mischief has, however, been repeatedly occasioned by the changes that have been made in most countries in the weight, and sometimes also in the purity, of coins; and since the impolicy of these changes has been recognised, similar, and perhaps still more extensive, disorders have sprung from the improper use of substitutes for coins. It is, indeed, quite obvious, that no change can take place in the value of money, without proportionally affecting the pecuniary conditions in all contracts and agreements. Much, however, of the influence of a change depends on its direction. An increase in the value of money is uniformly more prejudicial in a public point of view than its diminution; the latter, though injurious to individuals, may sometimes be productive of national advantage; but such can never be the case with the former.—(See my *Principles of Political Economy*, 2d ed. pp. 500—504.)

No certain estimate can ever be formed of the quantity of money required to conduct the business of any country; this quantity being, in all cases, determined by the value of no-

they themselves, the services it has to perform, and the devices used for economising its employment. Generally, however, it is very considerable; and when it consists wholly of gold and silver, it occasions a very heavy expense. There can, indeed, be no doubt that the wish to lessen this expense has been one of the chief causes that have led all civilized and commercial nations to fabricate a portion of their money of some less valuable material. Of the various substitutes resorted to for this purpose, paper is, in all respects, the most eligible. Its employment seems to have grown naturally out of the circumstances incident to an advancing society. When government becomes sufficiently powerful and intelligent to enforce the observance of contracts, individuals possessed of written promises from others, that they will pay certain sums at certain specified periods, begin to assign them to those to whom they are indebted; and when the subscribers are persons of fortune, and of whose solvency no doubt can be entertained, their obligations are readily accepted in payment of debts. But when the circulation of promises, or bills, in this way, has continued for a while, individuals begin to perceive that they may derive a profit by issuing them in such a form as to fit them to be readily used as a substitute for money in the ordinary transactions of life. Hence the origin of bank notes. An individual in whose wealth and discretion the public have confidence, being applied to for a loan, say of 5,000*l.*, grants the applicant his bill or note, payable on demand, for that sum. Now, as this note passes, in consequence of the confidence placed in the issuer, currently from hand to hand as cash, it is quite as useful to the borrower as if it had been gold; and supposing that the rate of interest is 5 per cent., it will yield, so long as it continues to circulate, a revenue of 250*l.* a year to the issuer. A merchant who issues notes, coins, as it were, his credit. He derives the same revenue from the man of his written promise to pay a certain sum, that he could derive from the loan of the sum itself, or of an equivalent amount of produce! And while he thus increases his own income, he, at the same time, contributes to increase the wealth of the public. The cheapest species of currency being substituted in the place of that which is most expensive, the various coins are either used in the arts, or are exported in exchange for raw materials or manufactured goods, by the use of which both wealth and enjoyments are increased. Ever since the introduction of bills, almost all great commercial transactions have been carried on by means of paper only. Notes are also used to a very great extent in the ordinary business of society; and while they are readily exchangeable at the pleasure of the holder for gold, or for the precise quantities of gold or silver they profess to represent, their value is maintained on a par with the value of these metals; and all injurious fluctuations in the value of money are as effectually avoided as if it consisted wholly of the precious metals. In common mercantile language, the party who exchanges money for a commodity is said to buy; the party who exchanges a commodity for money being said to sell. Price, unless here the contrary is distinctly mentioned, always means the value of a commodity estimated or rated in money.—(For a further account of metallic money, see the article *COIN*; and for an account of paper money, see the article *BANKS*.)

MONOPOLY. By this term is usually meant a grant from the Crown, or other competent authority, conveying to some one individual, or number of individuals, the sole right of buying, selling, making, importing, exporting, &c. some one commodity, or set of commodities. Such grants were very common previously to the accession of the House of Stuart, and were carried to a very oppressive and injurious extent during the reign of Queen Elizabeth. The grievances became at length so insupportable, that notwithstanding the opposition of government, which looked upon the power of granting monopolies as a very valuable part of the prerogative, they were abolished by the famous act of 1624, the 21*st* of James I. c. 3. This act declares that all monopolies, grants, letters patent for the sole buying, selling, and making of goods and manufactures, shall be null and void. It excepts patents for fourteen years for the sole working or making of any new manufactures within the kingdom, to the true and first inventors of such manufactures, provided they be not contrary to law, nor mischievous to the state. It also excepts grants by act of parliament to any corporation, company, or society, for the enlargement of trade, and letters patent concerning the making of gunpowder, &c. This act effectually secured the freedom of industry in Great Britain; and has done more, perhaps, to excite the spirit of invention and industry, and to accelerate the progress of wealth, than any other in the statute book.

MONTEVIDEO, a sea-port, and the capital of the republic of Uruguay, on the north bank of the Rio de la Plata, lat. 34° 54' 11" S., long. 56° 13' 18" W. Population variously estimated; but may probably be about 12,000. The town is built in the form of an amphitheatre, on a regular plan, and is well fortified. It has suffered much from the various plagues to which it has been subject during the last 30 years.

Montevideo is situated 2° 32' W. of Cape St. Mary, the northern limit of the embouchure of the Rio de la Plata. Vessels from the north bound to Montevideo generally make this cape, entering the river between it and the small island of Lobos, in from 14 to 17 fathoms. The course is thence nearly W. by the lile of Flores, on which is a light-house 112 feet above the level of the sea, with a revolving light-house, 475 feet above the level of the sea, has been erected on the summit of the Montevideo, and the town has its name. The latter is built on a projecting tongue of land, the port being on the S. side. This, which is the best on the La Plata, is a large circular basin open to the S. W.; ge-

nerally the water is shallow, not exceeding from 14 to 16 feet, but the bottom being soft mud, vessels are seldom damaged by grounding. It should, however, be observed that the depth of water in the harbour, as well as throughout the whole of the Rio de la Plata, depends very much on the direction and strength of the winds. The S. W. wind, called *pampero*, blows right into the bay of Montevideo with much force, not unfrequently causing a rise of a fathom or more in the depth of water. But it rarely occasions much damage to vessels properly moored with anchors to the S. W., S. E., and east to the N.—(*Blunt's American Pilot*, pp. 542—555; *Coulier sur les Phares*, &c.)

Montevideo has a considerable commerce. The great articles of export consist of animal products, or of hides, pork and beef, tallow, bones, grease, wool, &c. The imports principally consist of British cottons, woollens, and hardware, flour, wine and spirits, linens, sugar, tobacco, boots and shoes, salt, &c. The following tables give a view of the trade and navigation of Montevideo in 1854 and 1855.

Imports.—The entire value of the different articles imported into Montevideo, in 1854 and 1855, were estimated at 3,095,400 dollars. The quantities and value of some of the principal articles were as follow:—

					Value.
Flour	16,681 barrels				Dollars, 20,640
Rice	28,480 arrobas				61,200
Farina	55,328				20,000
Sugar	61,674				97,700
Brandy	2548 pipes, 7 barrels, 208 boxes				66,700
Cann	1,216 — 177 — 220 baskets				20,000
Wine, red	6,510 pipes, 1,628 boxes				Dollars, 100,620
Wine, white	765 — 228 — 76 baskets, 23 dozen barrels				41,245

Ditto fitted for sea	9	2500	250,000
			125,000
Total			Rs. 375,000

"We are not aware that the mode in which our statements are drawn up requires any particular explanation. The word "Sundries" may be, perhaps, thought too comprehensive, but we have divided it among articles of European, Indian, Chinese, and Birmese produce or manufacture. "The following is a statement of the imports into Maulmain from the neighbouring Shoo States during 1837:—

	No.	Value.
Elephants	68	13,500
Ponies	146	17,500
Hutches	99	980
Cows and bullocks	3480	45,000
Sundries		4,500
		Rs. 81,910

"Of the exports to these states, we can procure no detailed statement. Little else, however, is taken to them from hence but piece goods, either European or native; the value of which may, perhaps, be estimated at about 60,000 rupees.

"Taking, then, into consideration the various items above alluded to, and which are not brought into our statements, we shall have the following as the amount of imports and exports for the year 1837:—

Imports	Rs. 20,02,275	Exports	Rs. 11,03,410
---------	---------------	---------	---------------

MUNJEET, a species of *Rubia tinctorum*, or madder, produced in Nepal and in various districts of India. That which is brought to England is imported from Calcutta, and is cultivated in the high lands about Natpore in Purneah. The roots are long and slender, and when broken appear of a red colour. It is used in dyeing; the red which it produces being, though somewhat peculiar, nearly the same as that produced by European madder. Dr. Bancroft says, that the colour which it imparts to cotton and linen is not so durable as that of madder; but that upon wool or woollen cloth its colour is brighter and livelier; and, when proper mordants are used, nearly, perhaps quite, as permanent.—(*Permanent Colours*, vol. ii. p. 270.) The best munjeet is in pieces about the bigness of a small quill, clean and firm, breaking short, and not pipy or chafy. Its smell somewhat resembles liquorice root.

Being a very bulky article, as compared with its value, the freight adds greatly to its cost. The reasons to be the principal reason of its being so very little used in Great Britain, that the entire imports, during the 3 years ending with 1832, amounted to only 3,897 cwt. In 1824, 4,023 cwt. was imported; this increased importation being accounted for by the then comparatively low rate of freight.—(*Parl. Papers*, No. 22. Sess. 1830, and No. 425. Sess. 1833.) The brokers estimate that the per ton of freight is equal to 11s. 1d. per cwt. on the value of the article; 5s. per ton being equal to 13s. 10d.; 6s. to 16s. 7d.; and 7s. to 19s. 3d.; and as the price of munjeet in bond varies from 20s. to 25s. a cwt., it is plain it cannot be imported in any considerable quantity; except when freights are very much depressed. It is mostly imported in small packets or bundles of 600 or 800 to the ton; but sometimes it is packed in bales like cotton.

MUSCAT, a city and sea-port situated on the east coast of Arabia, about 96 miles N.W. of Cape Rasselgate (Ras-el-had), in lat. 23° 38' N., lon. 58° 37' E. Population uncertain; but estimated by Mr. Fraser at from 10,000 to 12,000; of these 1,000 may be Hindoos from Sindh, Cutch, and Guzerat, the rest being Arabs and negro slaves. The latter are numerous, and are generally stout, well made, and active.

The harbour, which is the best on this part of the Arabic coast, opens to the north, and is shaped like a horse-shoe. It is bounded on the W. and S. by the lofty projecting shores of the mainland, and on the E. by Muscat Island, a ridge of rocks from 200 to 300 feet high. The town stands on a sandy beach at the south end of bottom of the cove or harbour, about 1½ mile from its mouth. The depth of water near the town varies from 3 to 4 and 5 fathoms. Ships at anchor are exposed to the north or north-west winds; but as the anchorage is every where good, accidents are of very rare occurrence. The harbour is protected by some pretty strong forts. Vessels are not allowed to enter after dark, nor to leave before sunrise. If the usual signal be made for a pilot, one will come off, but not otherwise. It is best to make them attend till the vessel be secured, as they have excellent boats for carrying out warp anchors.

Muscat is a place of considerable importance, being at once the key to, and commanding the trade of, the Persian Gulf. The dominions of the Imam, or prince, are extensive, and his government is more liberal and intelligent than any other in Arabia or Persia. The town, situated at the bottom of a high hill, is ill-built and filthy; and, during the months of July and August, is one of the hottest inhabited places in the world. The country in the immediate vicinity of the town is extremely barren; but it improves as it recedes from the shore. Dates and wheat, particularly the first, are the principal articles of produce. The dates of this part of Arabia are held in high estimation, and are largely exported, those of Bushire and Bussorah being imported in their stead. A date tree is raised at from 7 to 10 dollars, and its annual produce at from 1 to 1½ dollar. An estate is said to be worth 2,000, 3,000, or 4,000 date trees, according to the number it possesses.

But the place derives its whole importance from the commerce and navigation of which it is the centre. The Imam has some large ships of war, and his subjects possess some of the finest trading vessels to be met with in the Indian sea. The port of Arabia adjoining to Muscat is too poor to have any very considerable direct trade; but owing to its favourable situation, the backward state of the country round the Persian Gulf, and the superiority of its ships and seamen, Muscat has become an important entrepôt, and has an extensive transit and carrying trade. Most European ships bound for Bussorah and Bushire touch at it; and more than half the trade of the Persian Gulf is carried on ships belonging to its merchants.—(See *Bussorah*.) But, exclusive of the ports on the gulf, and the south and west coasts of Arabia, ships under the flag of the Imam trade to all the ports of British India, to Singapore, Java, the Mauritius, the east coast of Africa, &c. The port trade of the Persian Gulf is now, also, wholly centered at Muscat. All merchandise passing up the gulf on Arab boats, pays a duty of 1 per cent to the Imam. He also rents the islands of Ormuz and Kishnee, the port of Gumbroon, and some sulphur mines from the Persian government.

In the magazines of the Persian Gulf. Val the internal consumption of cotton and cotton cloth. Bussorah, &c. In the magazines of Muscat may be found every species of produce imported into, or exported from the Persian Gulf. Various articles are also imported for the use of the surrounding country, and for the internal consumption of Arabia. Among these, the principal are rice, sugar, coffee from Mocha, cotton and cotton cloth, cocoa nuts, wood for building, slaves from Zanguebar, dates from Bushire and Bussorah, &c. Payment for these is chiefly made in specie and pearls; but they also export drugs of various descriptions, ivory, gums, hides, hairich feathers, horses, a sort of earthen jars, called marubans, to Tranquebar, dried fish, an esteemed sweetmeat called *Audooah*, and a few oilier articles.

The markets of Muscat are abundantly supplied with all sorts of provision. Beef, mutton, and vegetables of good quality may be had at all times, and reasonably cheap. The bay literally awarms with the greatest variety of most excellent fish. Water is excellent, and is conveyed to the beach in such a manner that the casks of a vessel may be filled in her boats while afloat. Fire-wood is also abundant, and is cheaper than at Bombay.

Mohammedans pay a duty of $\frac{1}{4}$ per cent. on imports and exports; and all other nations pay 5 per cent.

Money, Weights, and Measures.—Accounts here are kept in goz and mamoodies: 20 goz = 1 mamoodie; and 20 mamoodies = 1 dollar. All Persian, Turkish, and Indian coins, as well as French and German crowns, and Spanish dollars, are met with: their value fluctuating with the demand; and they are generally sold by weight.

The weights are, the *cuchas* and *maund*; 24 *cuchas* = 1 *maund* = 8 lbs. 12 oz. *svoldrupis*. Neibuhr thinks, that Muscat occupies the site of the Mosca of Arrian and other Greek writers—(*Popoge in Arabia*, vol. ii. p. 71 ed. Amst. 1780.); a conjecture which seems to be confirmed, not merely by the resemblance of the name, but also by the terms applied by Arrian to Mosca being sufficiently descriptive of Muscat; and as the port is bounded on all sides by rocks, it must now present almost the same appearance as in antiquity. Dr. Vincent, however, though he speaks doubtfully on the subject, is inclined to place Mosca to the west of Cape Rasselgate.—(*Commerce and Navigation of the Acetate*, vol. ii. pp. 344—347. For further particulars, besides the authorities above referred to, see Hamilton's *New Account of the East Indies*, vol. i. p. 63; *Frazer's Journey to Khorasan*, pp. 5—19; *Milburn's Orient. Com.*, &c. The longitude given above is that of *Arrowsmith's Chart of the Persian Gulf*.)

MUSK (Fr. *Musc*; Ger. *Bisam*; Du. *Muskus*; It. *Muschio*; Sp. *Aimizete*; Rus. *Muscus*; Arab. and Pers. *Mishk*) is obtained from a species of deer (*Moschus moschiferus*) inhabiting the Alpine mountains of the east of Asia. The musk is found in a small bag under the belly. Musk is in grains concreted together, dry, yet slightly unctuous, and free from greyness when rubbed between the fingers or chewed. It has a peculiar, aromatic, and extremely powerful and durable odour; the taste is bitterish and heavy; and the colour deep brown, with a shade of red. It is imported into England from China, in caddies containing from 60 to 100 oz. each; but an inferior kind is brought from Bengal, and a still baser sort from Russia. The best is that which is in the natural follicle or pod. Being a very high-priced article, it is often adulterated. That which is mixed with the animal's blood may be discovered by the largeness of the lump or clots. It is sometimes mixed with a dark, highly coloured, friable earth; but this appears to the touch to be of a more crumbling texture, and is harder as well as heavier than genuine musk. 20 cwt. of musk are allowed to a ton. It is not permitted to be brought home in the China ships belonging to the East India Company, but may be imported in others.—(*Thomson's Dispensatory*; *Milburn's Orient. Com.*) At an average of the 3 years ending with 1832, the imports of musk, from all places eastward of the Cape of Good Hope, with the exception of China, amounted to 4,965 oz. a year.—(*Parl. Paper*, No. 425. Seas. 1833.)

MUSLIN (Ger. *Musselin*, *Nesseltuch*; Du. *Neteldoek*; Fr. *Mousseline*; It. *Moussolina*; Sp. *Moselina*; Rus. *Kissea*), is derived from the word *mousale* or *mouseln*, a name given to it in India, where large quantities are made. It is a fine thin sort of cotton cloth, with a downy nap on the surface. Formerly all muslins were imported from the East; but now they are manufactured in immense quantities at Manchester, Glasgow, &c. of a fineness and durability which rival those of India, at the same time that they are very considerably cheaper.—(See *COTTOX*.)

MUSTARD (Ger. *Mustert*, *Senf*; Fr. *Moutarde*; It. *Mostarda*; Sp. *Mostaza*; Rus. *Gurtsehiza*; Lat. *Sinapis*; Arab. *Khirdal*; Hind. *Rai*), a plant (*Sinapis*) of which there are several species, some of them indigenous to Great Britain. It was formerly extensively cultivated in Durham, but it is now seldom seen in that country. At present it is principally raised in the neighbourhood of York, and throughout other parts of the North Riding; and being manufactured in the city of York, is afterwards sold under the name of Durham mustard. Two quarters an acre are reckoned a good crop. Mustard is of considerable importance in the materia medica, and is extensively used as a condiment. It was not, however, known, in its present form, at our tables, till 1720. The seed had previously been merely pounded in a mortar, and in that rude state separated from the integuments and prepared for use. But, at the period referred to, it occurred to a woman of the name of Clements, residing in Durham, to grind the seed in a mill, and to treat the meal in the same way that flour is treated. Her mustard was, in consequence, very superior; and, being approved by George I., speedily came into general use. Mrs. Clements kept her secret for a considerable time, and acquired a competent fortune. In Bengal, and other Eastern countries, mustard is extensively cultivated, as rape is in Europe, for the purpose of yielding oil.—(*Bailey's Survey of Durham*, p. 147.; *Loudon's Ency. of Agric.*)

MYROBALANS, are dried fruits of the plum kind, occasionally brought from Bengal and other parts of India. There are said to be 5 different species. They vary from the size of olives to that of gull nuts; have an unpleasant, bitterish, austere taste; produce, with

trade with Japan in 1825; the ships employed being one of 600, and one of 700 tons burden. The trade is exclusively carried on with the port of Batavia.

We may take this opportunity of stating that the least authentic account we have of any British vessel attempting to carry on an intercourse with Japan, was that of a ship commanded by Captain Gordon, which touched at the entrance of the bay of Jeddo, in 1818, in a voyage from Calcutta to Ochotsk. Captain Gordon remained at anchor 8 days, waiting the receipt of instructions from the capital, Jeddo, at the head of the bay, distant about 100 miles. He requested leave to return next year for the purpose of carrying on a trade, which in civil but peremptory terms was refused. During the ship's stay, she was closely watched by an immense police force, but liberal offers were made of supplies. The officers would permit no species of trade to be carried on, for which, however, the people evinced the greatest possible desire, admiring the broad cloths, calicoes, and other European articles which were shown them. The ship was visited by some thousand natives, chiefly from curiosity. Captain Gordon thinks that a contraband trade, similar to that conducted by the European nations off the mouth of the Canton river, may be successfully carried on with Japan.—(Kempfer's History of Japan, vol. i. p. 310—335; Krusenstern's Voyage round the World, vol. i. p. 201. English translation; Crawford's Indian Archipelago, vol. iii. p. 307; Evidence of John Down, Esq., Private Report of the Select Committee in the Affairs of the East India Company, 1830, p. 342; Personal communications from Capt. P. Gordon.)

Money—Accounts are kept in taels, mace, and candarines; 10 candarines make 1 mace, and 10 mace 1 tael. The Dutch reckon the Nangasacki tael at 3 1/2 Florins, equal to about 6s. 2d. The gold coin current are the new and old Jihin and cobangs, or copangs; the silver coins are the sandalvins, itapanes, and kodamas. They are in general very simple, struck plain, and unadorned, the greater part of them without any rim round the margin, and most of them without any defined value. For this reason they are always weighed by the merchants, who put their chop or stamp upon them, to signify that the coin is standard weight and unadulterated.

The new mabags are oblong, rounded at the ends, and flat, about 1/2 inch broad, scarcely thicker than an English farthing, of a pale yellow colour; the die on one side consists of several cres (lines ranged) and at both ends there is a rectangular figure, with raised letters on it, and besides a moonlike figure, with a flower on it in the middle. On the other side is a circular stamp with raised letters on it; and within the margin, towards one end, two smaller sunk stamps with raised letters, which are different on each cobang; they are reckoned at 60 mace. There are old cobangs occasionally met with, which are of fine gold, somewhat broader than the new.

The old cobangs weigh 37 1/2 Dutch mace, or 27 1/2 English grains, and the gold is said to be 22 carats fine, which would give 44c. 7d. for the value of the old cobang. But the Japanese coins are reckoned at Jihin only 87 touch, which is 30 2/3 carats; this reduces the old cobang to 4s. 10d. The new cobangs weigh 140 grains; the gold is about 17 carats fine, and the value is 21s. 3d. The oban is thrice the value of the cobang.

The Jihin is called by the Dutch golden bean, and is made of pale gold, of a parallelogramical figure and flat, rather thicker than a farthing, with many raised letters on one side, and two figures or flowers in relief on the other; the value of this is 1-4 of a cobang. There are old Jihin also to be met with; these are thicker than the new ones, and its value is 2 mace 5 candarines.

Nandrin is a parallelogramical fine silver coin, of twice the thickness of a halfpenny, 1 inch long, and 1/2 inch broad, and formed of silver. The sides are stamped with stars, and within the edges are raised dots. One side is marked all over with raised letters; and the other, on its lower and larger moiety, is filled with raised letters, and in some time exhibits a double moonlike figure. Its value is 1 mace 1 candarine.

Itapanes and kodama are denominations by which various tumps

of silver, without form or fashion are known, which are neither of the same size, shape, nor value. The former of these, however, are oblong, and the latter roundish, for the most part thick, but sometimes, though seldom, flat. These pass in trade, but are always weighed in payment from one individual to another, and have a dull leaden appearance.

Beni is a denomination applied to pieces of copper, brass, and iron coin, which bear a near resemblance to our old farthings. They differ in size, value, and external appearance, but are always cast, and have a square hole in the middle, by means of which they may be strung together; and likewise have always broad edges. Of these are current silver coins, of the value of 4 common ones, made of brass, and almost as broad as a halfpenny, but thin. The common ones are the size of a farthing, and made of red copper; 60 of them make a mace. Doos seni is a cast iron coin in appearance like the last, of the same size and value, but is so brittle, that it is easily broken by the hand, or breaks in pieces when let fall on the ground.

The seni are strung 100 at a time, or, as is most commonly the case, 95 on a rube. The coins in one of these parcels are seldom all of one sort, but generally consist of 2, 3, or more different kinds; in this case, the larger ones are strung on first, and then follow the smaller; the number diminishing in proportion to the number of large pieces in the parcel, which are of greater value than the smaller.

The schull is a silver piece, of 4 oz. 15 dwt. 16 grs. Troy, and is 1 1/2 in. long, which gives it value 11. 6s. 3d. The name is Dutch, referring, probably, to its shape, like a boat.

Wrijgits.—These are the candarine, mace, tael, catty, and picul, thus divided:—

10 candarines	}	1 mace,
10 mace		1 tael,
10 tael		1 catty,
100 catties	}	1 picul,

The picul = 125 Dutch pounds, or 133 1/3 lbs. avoirdupois. It is, however, said to weigh only 120 lbs.

Masures.—The measures of Japan are estimated by two measures of rice, the man and kufi; the former contains 10,000 kufis, each 3,100 bales or bags of rice.

The long measure is the bu, which is about 4 Chinese cubits, or 6 1/2 feet English nearly; and 2 1/2 Japanese leagues are computed to be about 1 Dutch league.—(Milburn's Oriental Com.)

NANKEEN, or NANKIN (Ger. *Nanking*; Du. *Nankings linnen*; Fr. *Toile de Nankin*; It. *Nanguino*; Sp. *Nanguina*), a species of cotton cloth in extensive use in this country. It takes its name from Nanking, in China, a European corruption of Kyang-ning, the capital of the extensive province of Kyang-nan, where it is principally produced, and which also furnishes the greater part of the green tea. In the East, the manufacture is wholly confined to China.† The cloth is usually of a yellowish, though occasionally it is of a blue colour, and of different degrees of fineness; the broad pieces, called "the Company's nankeens," are generally of a better quality than the narrow ones, and are most esteemed. We produce imitation nankeens at Manchester and other places, but it must be

* The imports of copper, in 1825, amounted to 11,631 piculs, worth 988,635 florins.
 † It was stated in the former edition of this work, on authority that should not have been trusted to, that the manufacture of nankeen was carried to great perfection in the East Indies; but, in point of fact, the manufacture is wholly unknown every where in the East except China.

admitted that they are inferior to the Chinese; neither lasting so long, nor holding their colour so well. The colour, whether yellow or blue, is given to the cloth by dyeing; for, though yellow cotton wool be raised in the East, the cloth made from it is too glaring. The nankeens brought to England come under the general denomination of piece goods. They are mostly made into trowsers and waistcoats for gentlemen's wear during summer, ladies' pelisses, &c. In some of the more southern parts of Europe, the warmer parts of Asia and America, and the British settlements in Africa, nankeen is worn by both sexes all the year round, and constitutes the principal article of attire. It is worthy of remark, that while the Indian cotton fabrics have ceased to be imported, the imports of nankeen have gone on increasing. The quantities imported into Great Britain in the undermentioned years have been—

Year.	Pieces.	Yards.	Pieces.	Yards.	Pieces.
1793	77,898	1814	788,253	1830	691,330
1794	374,338	1815	806,797	1831	657,171
1795	146,365	1816	896,453	1832	195,748

—(Report on Affairs of the East India Company, 2d Finance, Commercial Appendix, part iii. p. 768., and Parl. Paper, No. 425. Sess. 1833.)

Exclusive of the nankeens exported from Canton by the English, amounting in 1830-31 to 922,770 pieces, and in 1831-32 to 315,370 do., the Americans exported, in 1831-32, 128,265 pieces; considerable quantities being also taken by the Spaniards, Dutch, &c. It is probable that, under the new arrangements with respect to the Chinese trade, the exports of nankeen from Canton will be materially increased.—(See vol. i. pp. 302 and 305.)

NANTES, a large commercial city and sea-port of France, on the Loire, about 34 miles from its mouth, in lat. 47° 13' 6" N., lon. 1° 32' 44" W. Population 78,000. Vessels of 200 tons burden come up to the city; but those of a larger size load and unload in the roads of Paimbœuf, about 24 miles lower down the river.

Entrance to the Loire.—There are 3 entrances to the Loire. The first and most generally frequented is between the bank called *Le Four* and *Point Croisic*: there is a second between *Le Four* and the bank called *La Banche*; and the third, which in southerly winds is much resorted to, between the latter and the rocks called *La Couronne*. The navigation, which is naturally rather difficult, has been much facilitated by the erection of light-houses and beacons. Of the former, one has been recently constructed on the north part of *Le Four*, about a league from *Croisic*, in lat. 47° 17' 53" N., lon. 2° 26' 3" W. It is 56 feet high. The light is a revolving one; the flash, which continues for 7 seconds, being succeeded by a dark interval of 53 seconds. Two light-houses, called the *Alguillon lights*, stand on the north side of the river, near its mouth; the lower light adjoining *Point de Lest*, being in lat. 47° 14' 33" N., lon. 2° 15' 46" W. The light is fixed, and is 111 feet above the level of the sea. The upper *Alguillon light*, situated about a mile N. 31° E. from the lower, is 127 feet high; it also is a fixed light, varied, however, by a flash every 3 minutes. A beacon tower, called the *Turk*, is erected on the southernmost extremity of *La Banche*; the courses for vessels entering between it and *La Couronne*, is to bring the *Alguillon lights* in one. The depth of water on the bar at the mouth of the river varies from 2 to 2½ fathoms. At springs the rise is 14, and at neaps 7 or 8 feet. High water at full and change 3½ hours.

Trade, &c.—Her situation renders Nantes the emporium of all the rich and extensive country traversed by the Loire, so that she has a pretty considerable import and export trade, particularly with the West Indies. The exports consist of all sorts of French produce, but principally of brandy, wine and vinegar, silk, woollen and linen goods, refined sugar, wheat, rye, biscuits, &c. The principal imports are sugar, coffee, and other colonial products, cotton, indigo, timber, hemp, &c. Nantes is a considerable *entrepôt* for the commerce of salt, the duty on that article in 1831 having amounted to 4,657,408 fr. During the time that the slave trade was carried on, Nantes was more extensively engaged in it than any other French port.

The customs duties of Nantes produced, inclusive of those on salt, in 1831, 15,100,371 fr.; and in 1832, 13,907,400 fr. The falling-off in the latter year is attributed to the drought having, for a considerable period, rendered the upper parts of the Loire unnavigable; and to the uncertainty caused by the agitation of the question as to the sugar duties.

Arrivals.—In 1831 there entered the port of Nantes:—

	Ships.	Tons.
French ships from foreign countries	68	8,590
— from colonies	68	22,033
— from fishery	665	7,791
— coasting trade	2,327	91,663
Foreign ships	66	12,519
Totals	3,388	146,596

In 1832, there entered Nantes 17 British vessels, of the burden of 1,732 tons. *Monies, Weights, and Measures* same as the rest of France.—(See *HONNANUX*.)
Taxes.—2½ per cent. on coffee in bags; real on ditto in hhd., casks, &c.; 6 per cent. on cotton; real on indigo; 17 per cent. on Brazil muscovado sugar, 19 per cent. on Martinique and Guadeloupe ditto, 13 per cent. on ditto clayed.

NAPLES, a very large city and sea-port in the south of Italy, the capital of the kingdom of the same name, the light-house being in lat. 40° 50' 12" N., lon. 14° 14' 15" E. Population, on the 1st of January, 1830, 358,550.—(*Annal. di Statistica*, 1830.) Naples is well

We have no mean countries; but it is a Custom-house Regulation when 24 hours of their general manifest of their master, when consignee, or hour after the arrival of the for in detail, of all goods ordered the manifest in detail, of 30 per cent. upon This declaration or manifest are elapsed; and the master on for every package arrivally required, unless there is the director general of the

situated for commerce; but the perverse policy of the government has been most unfavourable to its growth, and has confined it within comparatively narrow limits.

Harbour.—The bay of Naples is spacious, and is celebrated for its picturesque view. The harbour is formed by a mole, built nearly in the form of the letter L, having a light-house on its elbow. Within the mole there is from 3 to 4 fathoms water, the ground being soft. The water in the bay is deep, and there is no bar: it is, however, a good deal exposed to the south-westerly winds; and to guard against their effects, vessels lying in the bay moor with open haws in that direction. There is no obligation to take a pilot on board, but it is usual to take one the first time that a ship anchors within the mole.

Money.—Accounts are kept at Naples in ducati di regno of 100 grani. According to the new monetary system introduced in 1818, the unit of coins is the silver ducat = 3s. 5 3/4d. sterling. The ducat = 10 carlini; and there are coins of 1, 2, 6, and 12 carlini in proportion. Coins of a less value than 1 carlino are in copper. The smallest gold piece is the oneceta = 10s. 3 1/2d. sterling.

Weights and Measures.—The commercial weights are the cantaro and rotolo. The cantaro grosso = 190 rotoli = 196 1/2 lbs. avoirdupois = 89.105 kilog. = 184 lbs. of Hamburg = 160 1/4 lbs. of Amsterdam. The cantaro piccolo = 106 lbs. avoirdupois = 48 kilog.

The dry measure, the carro of corn contains 36 tomoli. The tomolo = 1.45 Winchester bush. In wine measure, the carro is divided into 2 botti, or 24 barili, or 1,440 caraffe. The carro = 264 English wine gallons. The regular pipe of wine or brandy = 132 English gallons.

In oil measure, the salma is divided into 16 stajje; 256 quarti, or 1,536 misurette. The salma at Naples = 424 English wine gallons; at Gallipoli it is from 3 to 4 per cent. less; at Bari it is a little larger.

In long measure, the canna is divided into 8 palmi, or 96 onzie, and is = 6 feet 11 inches English. Hence the palmo = 10.38 English inches. Eleven salme are allowed to a ship's last.—(Nelson's Brecher; Dr. Kelly.)

Exports and Imports.—The exports principally consist of the products of the adjacent country. Of these olive oil is by far the most important. It is commonly called Gallipoli oil, from Gallipoli, a town in the Terra d'Otranto, whence it is largely exported. The entire exports of oil from the kingdom of Naples have been estimated at about 200,000 salme, or 36,333 tuns a year; which, taking its mean value, when exported, at 21l. per tun, is equivalent to the annual sum of 762,903l.—(See OLIVE OIL.) The other articles of export are silk, wine, brandy, dried fruits, brimstone, red and white argol, liquorice, oak and chestnut staves, rags, saffron, &c. There is a great variety in the Neapolitan wines. The most esteemed is the *lacrima Christi*, a red luscious wine, better known in England by name than in reality, the first growth being confined to a small quantity only, which is chiefly reserved for the royal cellars. There are, however, large quantities of second-rate wines produced in the vicinity of Naples, such as those of Pozzuoli, Ischia, Nola, &c., which are sold under the name of *lacrima Christi*, and are largely exported. Several parts of Calabria produce sweet wines of superior quality.—(Henderson's *Ancient and Modern Wines*, p. 239.) The price of wine at Naples depends entirely on the abundance of the vintage; only a small quantity comes to England. The imports consist principally of English cottons and cotton twist, hardware, iron and tin, woollens, sugar, coffee, indigo, spicery, &c. Naples is one of the best markets for pilchards, and it requires a large supply of dried and barrelled cod.

The imports from, and exports to, Naples are not given separately in our trade accounts, but are mixed up with those of the rest of Italy; and the accounts of the Neapolitan Custom-house are not made public. We are, consequently, without the means of forming any accurate statement of the amount of our trade with Naples, but there is reason to think that the following estimate is not very wide of the mark.

Statement of the Quantity and Value of the principal Articles annually Imported into Naples, in British Bottoms, from Great Britain and her Colonies; and of the Quantity and Value of the principal Articles exported in such Bottoms, from the former to the latter.

Imports into Naples from Britain and her Colonies.			Exports from Naples to Britain and her Colonies.

We have no means of forming any estimate of the amount of the trade between Naples and other countries; but it is trifling compared to what it might and ought to be.

Custom-house Regulations.—Masters of merchantmen are bound, within 24 hours of their arrival, to furnish the Custom-house with a general manifest of their cargoes, provisions, and stores; and the manifest, when consigned, or the consignees, are bound, within 48 hours after the arrival of the ship, to send in a declaration or manifest in detail, of all goods on board. Should the consignees omit to render the manifest in detail within 48 hours, they are subjected to a fine of 20 per cent. upon the non-specified articles.

This declaration or manifest cannot be corrected after the 48 hours are elapsed; and the master or consignee is liable to a fine of 30 ducats for every package erroneously declared. This, however, is usually remitted, in case there be suspicion of fraud, upon application to the director general of the customs. Masters should be particularly

careful in manifesting their salt and tobacco, as the slightest error with respect to them subjects the vessel to seizure. All goods, provisions, &c., not manifested, are liable to seizure.

Quarantine Regulations. are rigorously and arbitrarily enforced. The free admission, conditional reception, or absolute refusal of a vessel arriving at the port is determined by the wholesome or an unwholesome character of the place from which she comes. The place may be 1. Infected. 2. Susceptible. 3. Endangered. Or, 4. Secure. In the first case, the vessel is refused altogether; in the 2d, she is admitted on a long quarantine; in the 3d, she is received on a short quarantine; in the 4th, she is allowed free pratique. If the vessel be a ship of war, her quarantine is performed in the Bay of Naples, the days of her passage being allowed in the calculation; if a non-

Naples is well

chantmas, quarantine is performed at Nisita, an island about 6 miles from Naples. It commences from the day of her arrival; if it is ballast, or loaded with unsuspicious merchandise; if otherwise, from the day of the discharge of her cargo. For vessels from undesignated ports, the quarantine is not less than 14, nor more than 30 days. For vessels from suspicious places, not less than 34, nor more than 40 days. For vessels from excepted places, not less than 7, nor more than 31 days. No foul lasarretto exists at Naples; but at Nisita there is a lasarretto of expurgation for vessels from suspicious or endangered districts or territories. Vessels from infested places usually go to Lagnara or Giove, where they undergo a lasarretto *apoco*. The fees charged on ships performing quarantine are heavy. No distinction is made between national and foreign bottoms. The verdict of the board of health, in frequently declaring places infected or suspicious or more unfounded reports, is loudly objected to by the merchants; the more especially since, when such declaration is made, it is not revoked till the report be officially contradicted by the government of the country in question.

Shipping, Port Charges, &c.—In 1831, there entered the port of Naples 202 foreign vessels. Of these, 101 were British, 44 French, 35 Sardinian, 6 Spanish, 8 Tuscan, &c. Tonnage not stated. The charges of a public nature on a national ship of 300 tons burden entering and clearing out from the port of Naples, are as under:—

On entering.—For expediting	1 60
(Equal to 6s. 8d. sterling)	
On clearing out.—Expediting	1 60
Bill of health	1 30
Tonnage duty at 4 grains per ton	12 0
(Equal to about 2s. 8d. sterling.)	24 14 60

Port officers	0 60
Registering papers	0 30
Tonnage duty at 40 grains per ton	120 10
(Equal to about 51l. 17s. 1d. sterling.)	214 14 14

Brokers, Commission, &c.—No person can legally act as a broker unless authorized by government. All patented brokers are obliged, by way of security, to hold funded property producing 5000 ducats of "rents," or a dividend of 20l. 6s. 8d. sterling. Many persons, however, act as brokers without being patented, but no contract made by them is admitted in a court of law. Any person may set up as a merchant, by giving due notice to the Camera di Commercio.

The rates of commission generally established at Naples are as under:—

Rates of Commission and Charges established by the Merchants at Naples.

Commission on sales of fish	3 per cent.
Do. on manufactures of all kinds	3 —
Do. on all other goods	3 —
Do. on goods purchased	3 —
Do. on receiving and forwarding	1 1/2 —
Do. on attempting sales	1 —
Do. on sale of goods for the same account on which a purchasing commission has been charged	1 1/2 —
Do. on chartering vessels, or procuring charters	6 —
Do. on collecting freight on chartered ships	4 —
Do. on ships both inward and outward	4 —
Do. on advances on letters of credit	1 —
Do. on effecting insurance	1 1/2 —
Do. on negotiating bills	1 1/2 —
Do. on receiving and paying or remitting	1 1/2 —
Do. on purchase of oil, not exceeding 3 months	1 —
Do. do. do. not exceeding 6 do.	6 —
Do. per underwriter	1 1/2 —

Taxes usually allowed by the Custom-house at Naples on the leading articles of importation:—

Bacon, in hogsheads	12 per cent.
Do. in boxes or barrels	14 —
Do. in Brazil chests	15 to 20 —
Do. in bags	8 rotoli
Lewas, in casks	real tara
Do. extra for paper and strings	5 per cent.
Indigo	real tara
Tin, in barrels, each	12 rotoli
Alum, in casks	10 per cent.
Wax, real tara and extra	3 to 5 per cent.
Cod, and stick fish	1 per cent.
Coffee, in casks	real tara
Do. in bags, each	8 rotoli
Pepper	—

Tarif.—The duties on exports and imports are such as might be expected from a government that has suppressed the warehousing system, and allowed no drawbacks.

The duties on most sorts of imported articles are extremely oppressive, being seldom under 100, and often above 150 per cent. *ad valorem*. On coffee, the duty is no less than 46s. 8d. per cwt.; on sugar it varies from 41s. 10d. to 62s. 9d. per do.; on tea it is 30s. per do.; on cotton wool it varies from 16s. 8d. to 37s. 4d. per do. The duty on cotton and woollen manufactures is imposed by the piece, and is in common with all the other duties, most exorbitant. Even the indispensable articles, iron, ironed with 6s. 4d. per cwt. These duties have been imposed partly for the sake of revenue, and partly in the view of encouraging domestic manufactures; but they have not accomplished either object. The inordinate extent to which they have been carried has made them advantageous only to the smuggler, and ruinous to every one else. How, indeed, could it be otherwise? The coast of Naples, exclusive of Sicily, stretches from 800 to 1,000 miles; in many places it is uninhabited, while, in a great number of others, the people are not more than half civilised. The facilities for smuggling are, therefore, incalculably great; and, combined with the inadequate remuneration of the customs officers, and the ease with which they are corrupted, our only wonder is, not that smuggling is in a

thriving state, but that it is not more so. Naples, which is in a country town country subject to the same, is in fact, the only city that is not otherwise detected or unvisited. The following are the principal articles of commerce:—

Banking.—The principal merchants of Naples are all more or less bankers, inasmuch as they advance money on letters of credit, and deal in foreign exchanges, and other financial operations. The only banking establishment at present in existence, is the Bank of the Two Sicilies, founded by government, and guaranteed by the possession of landed property. It is not a bank for the issue of bank notes, but for the issue of bills on credit, like the Bank of England, but for their issue on deposit, on their paying an equivalent sum of money to the bank. These notes or orders form a considerable part of the circulating medium of Naples; they are paid in cash on demand.

Government has also established a discount office, where bills issued by 8 persons of good credit, and not at more than 2 months' date, are discounted at 1 per cent.

Prices of Provisions.—Naples is a favourable place for obtaining supplies of fruit, but not of solid provisions. The prices of the principal articles of consumption in 1831 were as follows:—

Articles.	Prices per lb. Anselopis.	
	In Neapolitan Grains.	In English pence.
Bread	8	2
Floor	5	2
Beef	10	3
Mutton	7	2 1/2
Pork	8	3
Cheese	0 20	10
Butter	40	10
Vegetables	6	2
Coffee	85	14
Sugar	11	7

Warehousing System.—The whole policy, if we may so live, of the Neapolitan government, with respect to commerce, is to suppress a nation of Holstenia. We believe that it is a mistake to suppose, after having established the warehousing system, to be of any sort of foreign produce. This was done in 1824. At present, all goods imported into Naples, may be deposited, on paying real, in warehouses under the joint locks of the king and the importer, for 3 years. At the end of the 1st year, half the import duty must be paid, and at the end of the 2d year, the other half. Whether sold or not, the goods must then be removed from the warehouse; and in paying the duties on deduction is made on account of damage in the warehouse, unless certain forms be complied with, the observance of which is invariably rectored more burdensome than the payment of the duties. No drawback for the import duty is allowed on the exportation of any sort of foreign produce. On the contrary, should it happen to be of the same species as native produce subject to a duty on export, it is charged, in addition to the duty it had paid on importation, with an export duty equal to that laid on the corresponding native product.

The influence of this system is most disastrous. So large a city as Naples, and so advantageously situated for the commerce with the Black Sea, the Levant, Greece, Spain, Northern Italy, North Africa, &c., would, had it been allowed to avail itself of its natural advantages, have become a most importantemporium. But, in consequence of the regulations now specified, no goods are carried except those destined for home consumption, and these are supplied sparingly; for, however much the price of an article may be depressed at Naples, it is impossible, owing to the oppressive duties charged on its importation not being drawn back on exportation, for the merchant to send it to Leghorno, Genoa, Trieste, or any other place where it is more in demand. It would really seem as if the government had been creating its illegality to find out the means of driving commerce, and with it enterprise and industry, from its shores; and it has not been denied that it has been, in no far, so successful.

Credit, &c.—Goods are universally sold at long credits, usually from 6 to 8 months; and for manufactured goods sometimes longer. On sales of indigo, from 12 to 16 months' credit is given. Discount for ready money is at the rate of 6 per cent. per annum. Merchants are arranged by the Chamber of Commerce into 5 different classes; and a 6 months' credit is given at the Custom-house for duties to the extent of 80,000, 40,000, 30,000, 20,000, and 10,000 ducats individuals, according to the class in which they happen to be entitled. But this is of little importance. Unless the transactions of a merchant be very limited indeed, the duties he has to pay amount much more than the credit he is allowed.

thriving state, but that it is not more so. Naples, which is in a country town country subject to the same, is in fact, the only city that is not otherwise detected or unvisited. The following are the principal articles of commerce:—

staring state, but that there should be any legitimate traffic. The latter, indeed, is principally confined to Naples, where a stricter police is established; for it is not uncommon to find the same articles in country towns at no great distance from the capital, selling for $\frac{1}{3}$ or $\frac{1}{4}$ of their cost in it. In a country subjected to such a commercial code as Naples, the smuggler is a great public benefactor. He is, in fact, the natural enemy of oppressive duties and prohibitions. These bring him into the field, and make him put forth all his enterprise and energy; and it is fortunate for the best interests of society that he is uniformly victorious over penalties, confiscations, racks, and gibbets; and cannot be defeated otherwise than by the adoption of enlarged and liberal principles of commercial policy. The following are the duties charged on the principal articles of export from Naples:—

Tariff of the principal Articles of Export in force at Naples in 1833.

exported in foreign vessels - - - - -	per cantaro	0 30	per cwt.	0 0 6½

Of these duties, that on oil is by far the most objectionable. Even though Naples enjoyed a monopoly of this valuable product, the imposition of such a duty would be wholly indefensible on any sound principle. But when, instead of having a monopoly of the oil trade, the Neapolitans are exposed to the least degree destructive. It depresses that branch of industry which is more suitable for the country, and gives a corresponding encouragement to its extension amongst foreigners. The increased duty of 30c. a tun on oil exported in foreign ships, is, of course, intended to force the employment of native ships; but it has not had, and could not rationally be expected to have, any such consequence; its only effect being to tempt foreigners to make a corresponding addition to the duties on oil, when imported in Neapolitan ships. Such regulations are never, in fact, productive of any thing except injury to those by whom they are enacted.

Of the direct taxes, the most productive is the *fondiaris*, or tax on rent, producing about 1,240,000*l.* a year. It was imposed during the French occupation, when it was fixed at 25 per cent. of the sum received by the landlord. It has not been altered since; and as agricultural produce has materially declined in price, while the rents of houses in towns, and particularly in the capital, have very much increased, its unequal pressure is much complained of.

The perverse policy we have thus endeavoured to develop, cannot surely be permitted to exist much longer. The reasonings of Filangieri, and other able native economists, might have forewarned the government of the real nature of that system of prohibition and restriction which it has laboured, ever since its restoration, to protect and defend. But facts have now taken the place of theory; and the results of the system are too obvious and too mischievous not to arrest the attention of every varied production, and advantageous situation of Naples and Sicily, it is plain that nothing more than freedom and security are required to render them among the richest, most industrious, and flourishing countries of Europe. But instead of this, the fetters laid upon commerce, by depriving the inhabitants of a market for their productions, and, consequently, of the most powerful stimulus to industry and invention, have paralysed all their energies, and immersed them in poverty, sloth and barbarism. It is surely high time that a different line of policy were adopted. At Naples, a reform may be undertaken without (which is not always the case elsewhere) endangering any thing either useful or valuable. Its political economy is such that no change, be it what it may, can make matters materially worse than they are at the moment. But it would be the easiest thing in the world to lay the foundations of a great and rapid improvement. To effect this, government has only to abolish all duties and restrictions on exportation, to establish the warehousing system, and to reduce the duties on importation to $\frac{1}{2}$ or $\frac{1}{3}$ part of their present amount. If it do this, it will add prodigiously to its own revenue; at the same time that it will do 10 times more to rouse the dormant energies, and to augment the wealth of its subjects, than it is possible to do by any other means.

In compiling this article, we have been much indebted to the carefully drawn up, and generally judicious *Annuaire of the British consuls*, (Mr. Goodwin) to the *Circular Queries to Holland, Comp. d'Etat sur la Royale de Naples*, and to some valuable *private communications*. We have also looked into the works of a good many English and foreign travellers, but seldom with much advantage. They are filled with accounts, a thousand times repeated, of antiquities, Vesuvius, the churches, theatres, lazarettos, &c.; but few among

them communicate any information from which any just idea can be formed of the state of industry and commerce, the financial system of the country, &c. The statistical works of the Neapolitans are equally defective. They are overlaid with insignificant details, while they neglect altogether, or pass slightly over, the more important departments. This may arise from the jealousy of government; but the English traveller can make no such apology for their defects.

NAVIGATION LAWS. These laws form an important branch of Maritime Law. In this country they are understood to comprise the various acts that have been passed, defining British ships, the way in which such ships are to be manned, the peculiar privileges enjoyed by them, and the conditions under which foreign ships shall be allowed to engage in the trade of the country, either as importers or exporters of commodities, or as carriers of commodities from one part of the country to another.

Sketch of the History and Principles of the Navigation Laws.—The origin of the Navigation Laws of England may be traced to the reign of Richard II., or perhaps to a still more remote period. But, as no intelligible account of the varying and contradictory enactments framed at so distant an epoch could be compressed within any reasonable space, it is sufficient to observe, that, in the reign of Henry VII., two of the leading principles of the late navigation law were distinctly recognised, in the prohibition of the importation of certain commodities, unless imported in ships belonging to English owners, and manned by English seamen. In the early part of the reign of Elizabeth (5 Eliz. c. 5.), foreign ships were excluded from our fisheries and coasting trade. The republican parliament gave a great extension to the navigation laws, by the act of 1650, which prohibited all ships, of all foreign nations whatever, from trading with the plantations in America, without having previously obtained a licence. These acts were, however, rather intended to regulate the trade between the different ports and dependencies of the empire, than to regulate our intercourse with foreigners. But in the following year (9th of October, 1651) the republican parliament passed the famous *Act of Navigation*. This act had a double object. It was intended not only to promote our own navigation, but also to strike a decisive blow at the naval power of the Dutch, who then engrossed almost the whole *carrying trade* of the world, and against whom various circumstances had conspired to incense the English. The act in question declared, that no goods or commodities whatever, of the growth, production or manufacture of Asia, Africa, or America, should be imported either into England or Ireland, or any of the plantations, except in ships belonging to English subjects, and of which the master and the greater number of the crew were also English. Having thus secured the import trade of Asia, Africa, and America, to the English ship owners, the act went on to secure to them, as far as that was possible, the import trade of Europe. For this purpose, it further enacted, that no goods of the growth, production, or manufacture of any country in Europe, should be imported into Great Britain, except in British ships, or in *such ships as were the real property of the people of the country or place in which the goods were produced, or from which they could only be, or most usually were, exported*. The latter part of the clause was entirely levelled against the Dutch, who had but little native produce to export, and whose ships were principally employed in carrying the produce of other countries to foreign markets. Such were the leading provisions of this famous act. They were adopted by the royal government which succeeded Cromwell, and form the basis of the act of the 12th Car. 2. c. 18., which continued, to a very recent period, to be the rule by which our naval intercourse with other countries was mainly regulated; and has been pompously designated the *Charta Maritima of England*.

In the statute 12 Car. 2. c. 18., the clause against importing foreign commodities, except in British ships, or in ships belonging to the country or place where the goods were produced, or from which they were exported, was so far modified, that the prohibition was made to apply only to the goods of Russia and Turkey, and to certain articles, since well known in commerce by the name of *enumerated articles*, leave being at the same time given to import all other articles in ships of any description. But this modification was of very little importance; inasmuch as the enumerated articles comprised all those that were of most importance in commerce, as timber, grain, tar, hemp and flax, potashes, wines, spirits, sugar,

the Parliament which much had been done in the preceding year, was mainly. This, however, up the blow aimed, by our jealousy of the nation, we did not hesitate to of fraud, or of clandestine commerce with the 14th Car. 2. prohibited commodities, under at the penalty of seizure.

the Parliament seems, however, to have very speedily come round to the opinion that too much had been done in the way of relaxation; and in the 14th of Charles II. a supplemental statute was passed, avowedly with the intention of obviating some evasions of the statute of the preceding year, which, it was affirmed, had been practised by the Hollanders and Germans. This, however, seems to have been a mere pretence, to excuse the desire to follow up the blow aimed, by the former statute, at the carrying trade of Holland. And such was our jealousy of the naval and commercial greatness of the Dutch, that, in order to cripple it, we did not hesitate totally to proscribe all trade with them; and, to prevent the possibility of fraud, or of clandestine or indirect intercourse with Holland, we went so far as to include the commerce with the Netherlands and Germany in the same proscription. The statute of the 14th Car. 2. prohibited all importation from these countries of a long list of enumerated commodities, under any circumstances, or in any vessels, whether British or foreign, under the penalty of seizure and confiscation of the ships and goods. So far as it depended on us, Holland, the Netherlands, and Germany were virtually placed without the pale of the commercial world! And though the extreme rigour of this statute was subsequently modified, the principal provisions remained in full force until the late alterations.

The policy, if not the motives which dictated these statutes, has met with very general approval. It has been said, and by no less an authority than Dr. Smith, that national animosity did, in this instance, that which the most deliberate wisdom would have recommended. "When the act of navigation was made," says he, "though England and Holland were not actually at war, the most violent animosity subsisted between the two nations. It had begun soon after in the Dutch wars during that of the Protector and of Charles II. It is not impossible, therefore, that some of the regulations of this famous act may have proceeded from national animosity. They are as wise, however, as if they had all been dictated by the most deliberate wisdom. National animosity at that particular time aimed at the very same object which the most deliberate wisdom would have recommended,—the diminution of the naval power of Holland, the only naval power which could endanger the security of England. The act of navigation is not favourable to foreign commerce, or to the growth of that opulence which can arise from it. The interest of a nation in its commercial relations to foreign nations is, like that of a merchant with regard to the different people with whom he deals, to buy as cheap and to sell as dear as possible. But the act of navigation, by diminishing the number of sellers, must necessarily diminish that of buyers; and we are thus likely not only to buy foreign goods dearer, but to sell our own cheaper, than if there was a more perfect freedom of trade. As defence, however, is of much more importance than opulence, the act of navigation is, perhaps, the wisest of all the commercial regulations of England."—(Smith's *Wealth of Nations*, vol. ii. p. 293.)

It may, however, be very fairly doubted, whether, in point of fact, the navigation law had the effects here ascribed to it, of weakening the naval power of the Dutch, and of increasing that of this kingdom. The Dutch were very powerful at sea for a long period after the passing of this act; and it seems natural to conclude, that the decline of their maritime pre-ponderance was owing rather to the gradual increase of commerce and navigation in other countries, and to the disasters and burdens occasioned by the ruinous contests the Republic had to sustain with Cromwell, Charles II. and Louis XIV., than to the mere exclusion of their merchant vessels from the ports of England. It is not meant to say, that this exclusion was altogether without effect. The efforts of the Dutch to procure a repeal of the English navigation law show that, in their apprehension, it operated injuriously on their commerce.* It is certain, however, that its influence in this respect has been greatly over-rated in this country. *Excessive taxation*, and not our navigation law, was the principal cause of the fall of profits, and of the decline of manufactures, commerce, and navigation, in Holland. "Les guerres," says the well-informed author of the *Commerce de la Hollande*, "terminées par les traités de Nimègue, de Ryawick, d'Utrecht, et enfin la dernière par le traité d'Aix-la-Chapelle, ont successivement obligé la République de faire usage d'un grand crédit, et de faire des emprunts énormes pour en soutenir les frais. Les dettes ont surchargé l'état d'une somme immense d'intérêts, qui ne pouvoient être payés que par une augmentation excessive d'impôts, dont il a fallu faire porter la plus forte partie par les consommations dans un pays qui n'a qu'un territoire extrêmement borné, et par conséquent par l'industrie. Il a donc fallu faire enchérir infiniment la main-d'œuvre. Cette cherté de la main-d'œuvre a non seulement restreint presque toute sorte de fabrique et d'industrie à la consommation intérieure, mais elle a encore porté un coup bien sensible au commerce de frêt, partie accessoire et la plus précieuse du commerce d'économie: car cette cherté a rendu la construction plus chère, et augmenté le prix de tous les ouvrages qui tiennent à la navigation, même de tous les ouvrages des ports et des magasins. Il n'étoit pas possible que l'augmentation du prix de la main-d'œuvre ne donnât, malgré tous les efforts de l'économie Hollandoise, un avantage

* In the treaty of Breda, agreed upon in 1667, between the States General and Charles II., the latter undertook to procure the repeal of the navigation law. But the subject was never agitated in either house of parliament.

sensible aux autres nations qui voudroient se livrer au commerce d'économie et à celui de frêt."—(Tome ii. p. 211.)

This extract, which might, were it necessary, be corroborated by others to the same effect from all the best Dutch writers, show that it is not to our navigation law, nor to the restrictive regulations of other foreign powers, but to the abuse of the funding system, and the excess of taxation, that the decline of the commercial greatness and maritime power of Holland was really owing. Neither does it appear that the opinion maintained by Dr. Smith and others, that the navigation law had a powerful influence in augmenting the naval power of this country, rests on any better foundation. The taste of the nation for naval enterprise had been awakened, the navy had become exceedingly formidable, and Blake had achieved his victories, before the enactment of this famous law. So far, indeed, is it from being certain that the navigation act had, in this respect, the effect commonly ascribed to it, that there are good grounds for thinking it had a precisely opposite effect, and that it operated rather to diminish than to increase our mercantile navy. It is stated in Roger Coke's *Treatise on Trade*, published in 1671 (p. 36.), that this act, by lessening the resort of strangers to our ports, had a most injurious effect on our commerce; and he further states that we had lost, within 9 years of the passing of the act of 1650, the greater part of the Baltic and Greenland trade.—(p. 48.) Sir Josiah Child, whose treatise was published in 1691, corroborates Coke's statement: for while he decidedly approves of the navigation law, he admits that the English shipping employed in the Eastland and Baltic trades had decreased at least *two thirds* since its enactment, and that the foreign shipping employed in these trades had proportionally increased.—(*Treatise on Trade*, p. 89. Glasg. edit.) Exclusive of these contemporary authorities, it may be worth while to mention, that Sir Matthew Decker, an extensive and extremely well-informed merchant, condemns the whole principle of the navigation act; and contends that, instead of increasing our shipping and seamen, it had diminished them both; and that, by rendering the freight of ships higher than it would otherwise have been, it had entailed a heavy burden on the public, and been one of the main causes that had prevented our carrying on the fishery so successfully as the Dutch.—(*Essays on the Causes of the Decline of Foreign Trade*, p. 60. ed. 1756.)

There does not seem to be any very good grounds on which to question these statements; and they are at all events sufficient to show, that the assertions of those who contend that the navigation laws had a prodigious effect in increasing the number of our ships and sailors, must be received with very great modification. But, suppose that all that has been said by the apologists of these laws were true to the letter; suppose it were conceded, that, when first framed, the Act of Navigation was extremely politic and proper;—that would afford but a very slender presumption in favour of the policy of supporting it in the present day. Human institutions are not made for immortality: they must be accommodated to the varying circumstances and exigencies of society. But the situation of Great Britain and the other countries of Europe has totally changed since 1650. The envied wealth and commercial greatness of Holland have passed away: we have no longer any thing to fear from her hostility: and, "he must be, indeed, strangely influenced by antiquated prejudices and by-gone apprehensions, who can entertain any of that jealousy from which the severity of this law principally originated." London has become, what Amsterdam formerly was, the grand emporium of the commercial world—*universi orbis terrarum emporium*: and the real question which now presents itself for our consideration is, not what are the best means by which we may rise to naval greatness? but—what are the best means of preserving that undisputed pre-eminence in maritime affairs to which we have attained?

Now, it does not really seem that there can be much difficulty in deciding this question. Navigation and naval power are the children, not the parents—the effect, not the cause—of commerce. If the latter be increased, the increase of the former will follow as a matter of course. More ships and more sailors become necessary, according as the commerce between different and distant countries is extended. A country, circumstanced like Great Britain in the reign of Charles II., when her shipping was comparatively limited, might perhaps be warranted in endeavouring to increase its amount, by excluding foreign ships from her harbours. But it is almost superfluous to add, that it is not by any such regulations, but solely by the aid of a flourishing and widely extended commerce, that the immense mercantile navy we have now accumulated can be supported.

But it is extremely easy to show, that to have continued to enforce the provisions of the old navigation law, in the present state of the world, would have been among the most efficient means that could have been devised for the destruction of our commerce. The wealth and power to which Britain has attained, has inspired other nations with the same envious feelings that the wealth of Holland formerly generated in our minds. Instead of ascribing our commercial and manufacturing superiority to its true causes,—to the comparative freedom of our constitution, the absence of all oppressive feudal privileges, the security of property, and the fairness of our system of taxation,—our foreign rivals contend that it has been entirely owing to our exclusive system; and appeal to our example to stimulate their respective governments to adopt retaliatory measures, and to protect them against British competi-

tion. These represent the legislature passed an act in violation of its own powers threatened to effect, but for timely destroy the trade of called an unjust retri had we continued to n example to others, an should have run a ver sighted and selfish po

The regulatio board all articles, the Atlantic, African or A ample to European po articles from whereve ships might be more this circumstance, wo our consumption into employment of Briti were, in a great mea ability of danger on t required for home cor

tion. These representations have had the most injurious operation. In 1787, the American legislature passed an act, copied to the very letter from our navigation law, with the avowed intention of its operating as a retaliatory measure against this country. The Northern powers threatened to act on the same principle; and would have carried their threats into effect, but for timely concessions on our part. The same engines by which we laboured to destroy the trade of Holland were thus about to be brought, by what we could not have called an unjust retribution, to operate against ourselves. Nor can there be a doubt that, had we continued to maintain our illiberal and exclusive system, and refused to set a better example to others, and to teach them the advantage of recurring to sounder principles, we should have run a very great risk of falling a victim to the vindictive spirit which such short-sighted and selfish policy would have generated.

For these reasons, it seems difficult to question the policy of the changes that have recently been effected in the navigation laws, partly by the bills introduced by Mr. (now Lord) Wallace in 1821, and Mr. Huskisson in 1825, and partly by the adoption of what has been called the *Reciprocity System*. Under the existing law (6 Geo. 4. c. 109, see *post.*) the intercourse with all European countries in amity with Great Britain is placed on the same footing. The memorials of our former animosity, and of our jealousy of the prosperity of certain of our neighbours, have thus been abolished; and the same law is henceforth to regulate our commerce with the Continent. This uniformity, besides giving greater scope to mercantile operations, and extending our traffic with some of our most opulent neighbours, removes a great source of embarrassment and litigation; at the same time that it detracts considerably from that selfish character which had been believed on the Continent, and not without considerable reason, to be the animating principle of our commercial system.

The distinction between enumerated and non-enumerated goods is still kept up under the new regulations; but, instead of confining the importation of the former into the United Kingdom, either to British ships, or ships belonging to the country or place where the goods were produced, or from which they originally were exported, the new regulations permit that they may be imported either in British ships, in ships of the country of which the goods are the produce, or in ships of the country or place from which they are imported into England. This is a very important alteration. Under the old law, when a number of articles, the products of different countries, but all of them suitable for importation into England, were found in a foreign port, they could not be imported except in a British ship, or separately in ships belonging to the different countries whose produce they were. This was obviously a very great hardship on the foreigner, without being of any real advantage to our own ship owners. When the foreign merchant had vessels of his own, it was not very probable he would permit them to remain unoccupied, and freight a British vessel; and there were very few ports of any importance in which foreign bottoms might not be found, in which the article could be legally imported. The real effect of the old law was not, therefore, to cause the employment of British ships, but to oblige foreigners to assort their cargoes less advantageously than they might otherwise have done, and thus to lessen their intercourse with our markets. The new law obviates this inconvenience; while, by restricting the importation of European goods to ships of the built of the country of which the goods are the growth, or to those of the built of the country or port from which the goods are shipped, and which are *wholly owned* by the inhabitants of such country or port, it is rendered very difficult for the people of a particular country to become the carriers of the produce of other countries to our markets.

Another new regulation is of such obvious and unquestionable utility, that it is surprising it was not long ago adopted. By the old law, all articles, the produce of Asia, Africa, or America, could only be imported directly in a British ship from the place of their production. This law had already been repealed in so far as respected the United States, whose ships were allowed to import their produce directly into this country; but it was maintained with respect to Asia, Africa, and South America. And hence, although a British ship happened to find, in South American, African, or Asiatic ports, articles, the produce of one or more of the other quarters of the globe, suitable for our markets, and with which it might have been extremely advantageous for her to complete her cargo, she was prohibited from taking them on board, under penalty of forfeiture and confiscation, not only of the goods, but also of the ship. The regulation has been repealed; and it is now lawful for British ships to take on board all articles, the importation of which is not prohibited, on meeting with them in any Asiatic, African or American port. Lord Wallace originally intended to extend this principle to European ports, or to make it lawful for British ships to import all non-prohibited articles from *whenever they might find them*. But it was supposed by some, that foreign ships might be more cheaply navigated than ours; and that foreigners, taking advantage of this circumstance, would import the Asiatic, African, and American products required for our consumption into the contiguous continental ports, and would consequently restrict the employment of British ships to their carriage thence. We believe that these apprehensions were, in a great measure, visionary. But the law is so contrived as to avoid even the possibility of danger on this head; such of the products of Asia, Africa, and America, as are required for home consumption, being, with a few trifling exceptions, inadmissible from Eu-

rope; and only admissible when they are imported in British ships, or in ships of the country or place of which the goods are the produce, and from which they are brought. The only exceptions to this rule are articles from Asiatic and African Turkey imported from the Levant, and bullion.

Besides the restrictive regulations already alluded to, it had been a part of our policy to encourage the employment of our shipping, by imposing higher duties on commodities imported into our harbours in foreign vessels, than were imposed on them when imported in British vessels; and it had also been customary to charge foreign vessels with higher port and light-house duties, &c. This system was always loudly complained of by foreigners; but we had little difficulty in maintaining it, so long as the state of our manufactures enabled us to disregard the retaliatory measures of other powers. But the extraordinary increase that took place, since the commencement of the late war, in our manufactures for foreign consumption, and the necessity under which we were, in consequence, placed, of conciliating our customers abroad, led to the adoption of the *reciprocity system*. This system was first introduced into the trade with the United States. After the North American colonies had succeeded in establishing their independence, they set about framing a code of navigation laws on the model of those of this country. Among other regulations of a restrictive character, it was enacted, that all foreign vessels trading to the United States should pay \$1 a dollar, which was afterwards raised to a dollar, per ton duty, beyond what was paid by American ships; and further, that goods imported in foreign vessels should pay a duty of 10 per cent. over and above what was payable on the same description of goods imported in American vessels.

This law was avowedly directed against the navigation of Great Britain; though, as it was bottomed on the very same principles as our navigation laws, we could not openly complain of its operation. Under these circumstances, it would have been sound policy to have at once proposed an accommodation; and instead of attempting to meet retaliation by retaliation, to have offered to modify our navigation law, in so far as American shipping was concerned, on condition of the Americans making reciprocal modifications in our favour. A different course was, however, followed. Various devices were fallen upon to counteract the navigation system of the Americans, without in any degree relaxing our own: but they all failed of their object; and at length became obvious to every one that we had engaged in an unequal struggle, and that the real effect of our policy was to give a bounty on the importation of the manufactured goods of other countries into the United States, and thus gradually to exclude both our manufactures and ships from the ports of the Republic. In consequence, the conviction of the necessity of making concessions gained ground progressively; and it was ultimately fixed, by the commercial treaty agreed upon between Great Britain and the United States in 1816, that in future *equal charges* should be imposed on the ships of either country in the ports of the other, and that *equal duties* should be laid upon all articles, the produce of the one country, imported into the other, whether such importation were effected in the ships of the one or the other.

The new States of South America were naturally anxious to establish a commercial marine; and, to forward their views in this respect, they contemplated enacting navigation laws. But this intention was frustrated by the interference of the British government, who, without stipulating for any peculiar advantage, wisely offered to admit their ships into our ports on a fair footing of reciprocity, or on their paying the same charges as our own ships, on condition that they admitted British ships into their ports on a similar footing. Commercial treaties framed on this sound and liberal principle have since been entered into with most of these States.

The principle of the reciprocity system having been thus conceded in the case of the intercourse with the United States, whose commercial marine is second only to that of Great Britain, it was not possible to refuse acting on the same principle in the case of such European countries as might choose to admit our ships into their ports on a footing of equality. The first demand of this sort was made on the part of the Prussian government, by whom an order in council was issued on the 20th of June, 1822, which made large additions to the port dues charged on all ships belonging to those nations which did not admit Prussian ships on a footing of reciprocity. The real object of this order was to injure the navigation of this country; and it was speedily found that it had the desired effect, and that its operation on British shipping was most pernicious.

Under these circumstances, the British merchants and ship owners applied to our government for relief. "We were assailed," said Mr. Huskisson, "with representations from all quarters connected with the shipping and trade of the country, against the heavy charges imposed upon British ships in the ports of Prussia. In such circumstances, what could his Majesty's government take? We felt it to be our duty, in the first instance, to con-

* By the fourth section of the act 6 Geo. 4. c. 1. it is enacted, that his Majesty may, by an order in council, admit the ships of foreign states into our ports, on payment of the like duties that are charged on British vessels, provided that British ships are admitted into the ports of such foreign states, on payment of the like duties that are charged on their vessels.

communicate with the Prussian minister in this country; and our minister at Berlin was, I believe, also directed to confer with the Prussian government on the subject. I myself had a conference with the Prussian minister at this court, and I well recollect the substance of his reply to me:—'You have,' he said, 'set us the example, by your port and light charges, and your discriminating duties on Prussian ships; and we have not gone beyond the limits of that example. Hitherto, we have confined the increase of our port and tonnage charges to ships only; but it is the intention of my government next year,' (and of this he showed me the written proof,) 'to imitate you still more closely, by imposing discriminating duties on the goods imported in your ships. Our object is a just protection of our own navigation; and so long as the measure of our protection does not exceed that which is afforded in your ports to British ships, we cannot see with what reason you can complain.'

"Against such a reply what remonstrance could we in fairness make to the Prussian government? We might have addressed ourselves, it may be said by some, to the friendly feelings of that government; we might have pleaded long usage in support of our discriminating duties: we might have urged the advantages which Prussia derived from her trade with England. Appeals like these were not forgotten in the discussion; but they were of little avail against the fact stated by the consul at Dantzic,—that 'the Prussian ship owners were all going to ruin.'

"By others it may be said, 'Your duty was to retaliate, by increasing your own port charges, and discriminating duties on Prussian shipping.' I have already stated generally my reasons against the policy of this latter course. We were not prepared to begin a system of commercial hostility, which, if followed up on both sides to its legitimate consequences, could only tend to reciprocal prohibition. In this state of things, more prudently, as I contend, we entered upon an amicable negotiation with the Prussian government, upon the principle of our treaty with the United States,—that of abolishing, on both sides, all discriminating duties on the ships and goods of the respective countries in the ports of the other.

"Having concluded an arrangement with Prussia upon this basis, we soon found it necessary to do the same with some other of the Northern states. Similar conventions were accordingly entered into with Denmark and Sweden. Reciprocity is the foundation of all those conventions: but it is only fair to add, that they contain other stipulations for giving facility to trade, and from which the commerce of this country, I am confident, will, in the result, derive considerable advantage."—(*Mr. Huskisson's Speech, 12th of May, 1826, on the State of the Shipping Interest.*)

This statement shows conclusively, that the establishment of the reciprocity system, with respect to which so violent a clamour was raised, was not a measure of choice, but of necessity. In the state in which our manufactures are now placed, we could not afford to hazard their exclusion from a country into which they are annually imported to a very large extent. So long as the Prussians, Swedes, Danes, &c. chose to submit to our system of discriminating duties on foreign ships, and on the goods imported in them, without retaliating, it was no business of ours to tell them that that system was illiberal and oppressive. But when they found this out without our telling them; and when they declared, that unless we modified our restrictions, they would retaliate on our commerce, and either entirely exclude our commodities from their markets, or load those that were imported in British ships with prohibitory duties; should we have been justified, had we refused to come to an accommodation with them? Were we to sacrifice the substance to the shadow?—to turn away some of our very best customers, because they chose to stipulate that the intercourse between them and us should be conducted either in their ships or in ours, as the merchants might think best? Our government had only a choice of difficulties; and they wisely preferred adopting a system which has preserved free access for the English manufacturer to the markets of Prussia, and to the English ship owners an equal chance with those of Prussia of being employed in the traffic between the two countries, to a system that would eventually, and at no distant period, have put an end to all intercourse between the two countries, and which had already subjected it to great difficulties.

It was said by the ship owners, and others opposed to the late alterations, that the Prussians can build, man, and victual ships at a cheaper rate than we can do; and that the ultimate effect of the reciprocity system would, consequently, be to give them a decided superiority in the trade. But, admitting this statement to be true, still, for the reasons already given, it is pretty evident that the policy we have pursued was, under the circumstances of the case, the best. Had we refused to establish the reciprocity system, we must have submitted to be entirely excluded from the markets of the United States, Prussia, &c. grasping at what was beyond our reach, we should thus have lost what we were already in possession of. We should not only have injured our ship owners, by getting them forcibly excluded from the ports of many great commercial states, but we should have done an irreparable injury to our manufacturers,—a class which, without undervaluing the ship owners, is of incomparably more importance than they. Although, therefore, no doubt could be entertained with respect to the statements of the ship owners as to the comparative

ship, unless duly registered and navigated as such: and every British register ship (so long as the registry of such ship shall be in force, or the certificate of such registry retained for the use of such ship) shall be navigated during the whole of every voyage (whether with a cargo or in ballast), in every part of the world, by a master who is a British subject, and by a crew, whereof 3-4ths at least are British seamen: and if such ship be employed in a coasting voyage from one part of the United Kingdom to another, or in a voyage between the United Kingdom and the islands of Guernsey, Jersey, Alderney, Sark, or Man, or from one of the said islands to another of them, or from one part of either of them to another of the same, or be employed in fishing on the coasts of the United Kingdom or of any of the said islands, then the whole of the crew shall be British seamen.—2 12.

Exception in favour of Vessels under 15 Tons Burden, &c.—All British-built boats or vessels under 15 tons burden, wholly owned and navigated by British subjects, although not registered as British ships, shall be admitted to be British vessels, in all navigation in the rivers and upon the coasts of the United Kingdom, or of the British possessions abroad, and not proceeding over sea, except within the limits of the respective colonial governments within which the managing owners of such vessels respectively reside; and all British-built boats or vessels wholly owned and navigated by British subjects, not exceeding the burden of 30 tons, and not having a whole or a fixed deck, and being employed solely in fishing on the banks and shores of Newfoundland and of the parts adjacent, or on the banks and shores of the provinces of Canada, Nova Scotia, or New Brunswick, adjacent to the Gulf of Saint Lawrence, or on the north of Cape Canso or of the islands within the same, or in trading coastwise within the said limits, shall be admitted to be British boats or vessels, although not registered, so long as such boats or vessels shall be solely so employed.—2 13.

British Ships to be as British, in Trade with United Kingdom and Colonies in America.—All ships built in the British settlements at Honduras, and owned and navigated as British ships, shall be entitled to the privileges of British registered ships in all direct trade between the United Kingdom or the British possessions in America and the said settlements: provided the master shall produce a certificate under the hand of the superintendent of those settlements, that satisfactory proof has been made before him that such ship (describing the same) was built in the said settlements, and is wholly owned by British subjects: provided also, that the time of the clearance of such ship from the said settlements for every voyage shall be indorsed upon such certificate by such superintendent.—2 14.

Ship of any Foreign Country to be of the Built of, or Prize to such Country; or British-built, and owned and navigated by Subjects of the Country.—No ship shall be admitted to be a ship of any particular country, unless she be of the built of such country) or have been made prize of war to such country; or have been forfeited to such country under any law of the same, made for the prevention of the slave trade, and condemned as such prize or forfeiture by a competent court of such country; or be British-built (not having been a prize of war from British subjects to any other foreign country); nor unless she be navigated by a master who is a subject of such foreign country, and by a crew of whom 3-4ths at least are subjects of such country; nor unless she be wholly owned by subjects of such country usually residing therein, or under the dominion thereof; provided always, that the country of every ship shall be deemed to include all places which are under the same dominion as the place to which such ship belongs.—2 15.

Master and Seamen not British, unless natural-born, or naturalised, &c.—No person shall be qualified to be a master of a British ship, or to be a British seaman within the meaning of this act, except the natural-born subjects of his Majesty, or persons naturalised by any act of parliament, or made denizens by letters of denization; or except persons who have become British subjects by virtue of conquest or cession of some newly acquired country, and who shall have taken the oath of allegiance to his Majesty, or the oath of fidelity required by the treaty or capitulation by which such newly acquired country came into his Majesty's possession; or persons who shall have served on board any of his Majesty's ships of war in time of war for the space of 3 years; provided always, that the natives of places within the limits of the East India Company's charter, although under British dominion, shall not, upon the ground of being such natives, be deemed to be British seamen: provided always, that every ship (except ships required to be wholly navigated by British seamen) which shall be navigated by 1 British seaman, if a British ship, or 1 seaman of the country of such ship, if a foreign ship, for every 20 tons of the burden of such ship, shall be deemed to be duly navigated, although the number of other seamen shall exceed 1-4th of the whole crew: provided always, that nothing herein contained shall extend to repeal or alter the provisions of an act passed in the 4th year of the reign of his late Majesty King George IV. for consolidating and amending the laws then in force with respect to trade from and to places within the limits of the East India Company's charter.—2 16.

Foreigners having served 2 years on board H. M. Ships during War.—It shall be lawful for his Majesty, by his royal proclamation during war, to declare that foreigners, having served 2 years on board any of his Majesty's ships of war, in time of such war, shall be British seamen within the meaning of this act.—2 17.

British Ship not to depart British Port unless duly navigated, &c.—No British registered ship shall be suffered to depart any port in the United Kingdom, or any British possession in any part of the world (whether with a cargo or in ballast), unless duly navigated; provided always, that any British ships trading between places in America may be navigated by British negroes; and that ships trading eastward of the Cape of Good Hope, within the limits of the East India Company's charter, may be navigated by Lemons, or other natives of countries within those limits.—2 18.

If Excess of Foreign Seamen, Penalty 10l. for each, &c.—If any British registered ship shall at any time have, as part of the crew, in any part of the world, any foreign seaman not allowed by law, the master or owners of such ship shall for every such foreign seaman forfeit the sum of 10l.: provided always, that if a due proportion of British seamen cannot be procured in any foreign port, or in any place within the limits of the East India Company's charter, for the navigation of any British ship; or if such proportion be destroyed during the voyage by any unavoidable circumstance, and the master of such ship shall produce a certificate of such facts under the hand of any British consul, or of 2 sworn British merchants, if there be no consul at the place where such facts can be ascertained, or from the British governor of any place within the limits of the East India Company's charter; or, in the want of such certificate, shall make proof of the truth of such facts to the satisfaction of the collector and comptroller of the customs of any British port, or of any person authorised in any other part of the world to inquire into the navigation of such ship; the same shall be deemed to be duly navigated.—2 19.

Proportion of Seamen may be altered by Proclamation.—If his Majesty shall, at any time, by his royal proclamation, declare that the proportion of British seamen necessary to the due navigation of British ships shall be less than the proportion required by this act, every British ship navigated with the proportion of British seamen required by such proclamation shall be deemed to be duly navigated, so long as such proclamation shall remain in force.—2 20.

Goods prohibited only by Navigation Law may be imported for Exportation.—Goods of any sort or the produce of any place, not otherwise prohibited than by the law of navigation here-in-before contained, may be imported into the United Kingdom from any place in a British ship, and from any place not being a British possession in a foreign ship of any country, and however navigated, to be warehoused

The following Tables give a very complete view of the trade of this great and growing emporium :-

1. Account of the Quantity of the various Articles Imported from the Interior to New Orleans during the Nine Years ending with the 30th of September, 1836. These, of course, form also the Articles of Exportation.

An Ordinance Concerning the Levee Duties in and for the Port of New Orleans.—The General Council of the Municipalities of New Orleans, in conformity with the 20th section of the Act of Incorporation, approved 8th March, 1836, ordain as follows:

Article 1. The levee or wharfage duties on ships and other decked vessels, and on steam vessels arriving from sea, shall be fixed as follows:

On each sea vessel under 75 tons,	-	-	-	-	-	\$12
of 75 and under 100 tons,	-	-	-	-	-	15
100	-	-	-	-	-	20
125	-	-	-	-	-	25
150	-	-	-	-	-	30
200	-	-	-	-	-	40
250	-	-	-	-	-	50
300	-	-	-	-	-	55
350	-	-	-	-	-	60
400	-	-	-	-	-	65
450	-	-	-	-	-	75
500	-	-	-	-	-	85
600	-	-	-	-	-	95
650	-	-	-	-	-	110
700	-	-	-	-	-	120
over 750	-	-	-	-	-	130

Art. 2. The payment of these duties shall be exacted and collected by the municipality within whose limits such vessels may have moored, after their arrival from sea in port; and an extra duty of one third of these rates shall be paid by all vessels which may remain in port over two months, the same to be recovered at the commencement of the third month; and if they remain in port four months, then they shall pay a further additional wharfage of one third of said rates, at the commencement of the fifth month, and be privileged to remain until the expiration of six months from date of original arrival and mooring, without a further charge being imposed on them.

Art. 3. When any vessel shall be removed from that division of the port in which it shall have originally paid duty, to another division of said port, under the jurisdiction of another municipality, said latter municipality shall be entitled to receive from the municipality to which said duty has been paid in the following ratio, viz.:

One half of the duty actually paid or due, if said vessel have not remained longer than fifteen days in that part of the port in which it was first moored; one third, if said vessel have remained longer than fifteen days, but not more than twenty-five days; but if beyond twenty-five days, not any part of said duty shall be recovered. Nevertheless, the municipality in whose limits said vessel shall afterwards be moored, shall have the right to levy and collect the extra duty of one third of the rates mentioned in Article 1, on the conditions mentioned in Article 2; provided, that no further charge or extra duty shall be exacted from any vessel which may have removed from one part of the port to another, for the mere purposes of forthwith proceeding to sea.

Art. 4. All vessels or steamboats coming from sea, which, after their arrival in port shall proceed to, and return from any plantation, or other place, with a cargo, or part of a cargo, of any kind of produce whatever, and shall again enter the port for the purpose of discharging the same, shall pay, on returning from any such trip, a levee duty of eight dollars over and above the duties fixed by the last article of this ordinance, the same to be collected by the municipality within whose limits said vessels may discharge said produce.

Art. 5. The levee duties on steam vessels navigating on the river, and which shall moor and land in any part of the incorporated limits of the port, shall be fixed as follows:

On each steamer under 75 tons,	-	-	-	-	-	\$ 8
of 75 and under 100 tons,	-	-	-	-	-	12
100	-	-	-	-	-	18
150	-	-	-	-	-	20
200	-	-	-	-	-	25
250	-	-	-	-	-	30

Art. 6. All steam vessels employed as packets, and plying regularly between this port and ports in the Gulf of Mexico, including Havana, shall pay no other or higher rate of wharfage than is imposed by this ordinance on steamboats navigating the Mississippi.

Art. 7. The duties specified in the preceding article, shall be paid on the mooring and landing of said steamers in port, by their captains or other agents, to the officer entrusted with their collection by the municipality within whose limits said vessels shall have moored and landed.

Art. 8. After the payment of these duties, said steamers shall be entitled to remain thirty days in that part of the port which may have been designated by the municipality to which it belongs; and any steamer remaining over thirty consecutive days, shall pay an additional duty of two dollars per day, until its final departure from port, the same to be collected daily; and if any steamer leaves in

first landing place, to take duty of two dollars per day removed, whether said

Art. 22. The present ordinance shall be put in force in ten days after its promulgation by the Mayor; and the execution of such dispositions thereof as relate to the police of the port, shall specially belong to the officers appointed by each of the municipalities for this purpose.

Art. 23. All previous ordinances, or parts of ordinances relative to levee dues, and to the police of the port, and which may be at variance with, or opposed to, the provisions of the present ordinance, shall be, and the same are hereby repealed.—(*New Orleans Price Current.*)

The following are the rates imposed on every description of merchandise, by an ordinance of the general council of New Orleans, which was put in execution on the first day of November, 1839.

	Cents.		Cents.
On each bale of cotton, hay, or moss	6	On each box of tin plates	6
On each hoghead of sugar	10	On each bale, box, case, iron, or other package of less weight and dimensions than a bale of blankets, including wool, candles, &c.	6
On each hoghead of molasses	10	On each pipe of wine, brandy, or other liquor, exceeding 60 gallons	6
On each hoghead of tobacco	121-2	On each cask of wine, brandy, or other liquor, of 60 gallons or less	6
On each 1,000 feet of lumber or 1,000 staves	121-2	On each case, basket, or box of wine, cordials, liquors, and oil, containing one dozen bottles	1
On each barrel of flour, whiskey, spirits of any kind, beef, pork, potatoes, onions, lime, or other articles packed in barrels, except lead, iron, or other articles of great weight	6	On each case, basket, or box of wine, cordials, liquors, oil, &c., containing more than one dozen bottles, then in proportion to that excess (say two cents per dozen).	1
On each cask of hams, hams, &c.	6	On bulk pork, per ton of 2,000 lbs.	1
On each ton of pig lead, pig iron, iron and copper nails, iron articles, coal, salt, slates, flag stones, bricks, paving, curb, and gutter stone, stone, bar iron, sand or ballast, or other articles of great weight, computing the ton at 2,000 lbs.	15	On each case of copper	1
On each keg of trest, butter, &c.	1	On each bag of coffee	1
On each firkin of do.	2	On each box of sugar	1
On each piece of bagging, coil hals rope, packing yarn, &c.	21-2	On each empty hoghead, staves, bundle of shims, buckets, &c.	1
On each pack or small truss of skins, sack of corn, corn meal, oats, bran, or stir grain	21-2	On all packages of more value, not particularly described in the foregoing tariff, shall be charged with port or wharfage duty as near as may be in conformity with the provisions of this ordinance, and on the scale specified therein, to wit, at the rate of three cents for every four cubic feet.—(<i>Am. Ad.</i>)	1
On each crate of brilles	6		
On each bale of blankets, or articles packed in bales, or cases of the hulk and weight thereof (say 400 lbs.)	6		

There were in this city, in 1830, 4 banks, with a capital of 9,000,000 dollars, exclusive of a branch of the Bank of the United States, having a capital of 1,000,000 dollars. The aggregate amount of dividends on bank stock during that year amounted to 542,400 dollars. But one of the banks, having a capital of 2,500,000, had only commenced; and as the whole capital of another bank had not been paid up, the dividend was really the produce of a capital of 6,750,000 dollars; being at the rate of 8.03 per cent. thereon. In April, 1835, there were 10 banks in the city having an aggregate paid up capital of 26,422,145 dollars, exclusive of about 6,000,000 to be paid in. There were, in 1830, 6 insurance companies in the city, having an aggregate capital of 2,400,000 dollars.—*Statement by J. H. Goddard, Esq., New York Daily Advertiser, 29th of January, 1831; and Letter by the Secretary of the Treasury, 2d of January, 1836.*

For *Monies, Weights, and Measures*, see *New York*.

NEWSPAPERS. Publications in numbers, consisting commonly of single sheets, and published at short and stated intervals, conveying intelligence of passing events.

Importance and Value of Newspapers in a Commercial Point of View.—It is foreign to the purposes of this work to consider the moral and political effects produced by newspapers: of the extent of their influence there is no doubt, even among those who differ widely as to its effect. Their utility to commerce is, however, unquestionable. The advertisements they circulate, though these announcements are limited in Great Britain by a heavy duty, the variety of facts and information they contain as to the supply and demand of commodities in all quarters of the world, their prices, and the regulations by which they are affected, render newspapers indispensable to commercial men, supersede a great mass of epistolary correspondence, raise merchants in remote places towards an equality, in point of information, with those in the great marts, and wonderfully quicken all the movements of commerce. But newspapers themselves have become a considerable commercial article in Great Britain. In the year 1830, the produce of the stamp duty, deducting the discount levied on newspapers, was 410,930*l.* 6*s.* 6*d.* The gross produce of the sale must have been more than double this sum, without allowing for the papers sold at a higher price than 7*d.*; so that the consumption of newspapers must have amounted, in that year, to nearly 1,000,000*l.* sterling.

Newspapers, in London, are sold by the publishers to newsmen or newsvenders, by whom they are distributed to the purchasers in town and country. The newsmen, who are the retailers, receive, for their business of distribution, a regulated allowance. The papers which are sold to the public at 7*d.*, which form the great mass of London newspapers, are sold to the newsmen in what are technically called quires. Each quire consists of 27 papers, and is sold to the newsmen for 13*s.*; so that the newsmen's gross profit on 27 papers is 2*s.* 9*d.* In some instances, where newspapers are sent by the post, 3*d.* additional on each paper is charged by the newsmen to their country customers. Some of the clerks at the post-office, called clerks of the roads, are considerable news-agents. The stamp duty on a newspaper is, at present, nominally 4*d.*; but a discount is allowed on those papers which are sold at a price not exceeding 7*d.*, of 20 per cent., which reduces the stamp duty actually paid to 3*l.* 1*s.* 6*d.* Each paper being sold to the newsmen at a little less than 5*l.* 3*d.*, the sum which is received by the newspaper proprietors for paper, printing, and the expenses of their establishments, is a small fraction more than 2*l.* 3*d.* for each copy. Advertisements form a considerable source

of profit to newspaper could not support the function of length, wit was 3*s.* 6*d.* In 1832 15,242*l.* 17*s.* 4*d.* in New sum derived from new should under-estimate advertisements are pr The sum received for Newspaper stamps tioners to be stamped advertisements, which monthly; and, for se moderate sums.

of profit to newspapers; and without this source, some of the most widely circulated of them could not support their great expenditure. Each advertisement is now charged, without distinction of length, with a government duty of 1s. 6d.; but until last year (1833), the duty was 3s. 6d. In 1832, the advertisements produced 155,400*l.* 16s. in Great Britain, and 15,248*l.* 17s. 4d. in Ireland. We have no means of ascertaining exactly the portion of this sum derived from newspapers, as distinguished from other publications, but we believe we should under-estimate it by taking it at 3-4ths of the whole. The charges of newspapers for advertisements are proportioned to their length, and to the character of the newspaper itself. The sum received for them may now be taken, inclusive of the duty, at 200,000*l.*

Newspaper stamps are obtained at the Stamp Office, where the paper is sent by the stationers to be stamped. The stamps are paid for before the paper is returned. The duty on advertisements, which is also under the management of the commissioners of stamps, is paid monthly; and, for securing these payments, the printer and 2 sureties become bound in moderate sums.

The London newspapers have become remarkable for the great mass and variety of matter which they contain, the rapidity with which they are printed and circulated, and the accuracy and copiousness of their reports of debates. These results are obtained by a large expenditure and considerable division of labour. The reports of parliamentary proceedings are obtained by a succession of able and intelligent reporters, who relieve each other at intervals of 3 of an hour, or occasionally less. A newspaper cannot aim at copious and correct reports with less than 10 reporters for the House of Commons; and the expense of that particular part of a morning newspaper's establishment exceeds 3,000*l.* per annum.

Regulations as to Newspapers.—The 38 Geo. 3. c. 78. enacts, that no person shall print or publish a newspaper, until an affidavit has been delivered at the Stamp Office, stating the name and place of abode of the printer, publisher, and proprietor; specifying the amount of the shares, the title of the paper, and a description of the building in which it is intended to be printed. A copy of every newspaper is to be delivered within 6 days, to the commissioner of stamps, under a penalty of 100*l.*

The act 39 Geo. 3. c. 79. requires that the name of every printer, type founder, and maker of printing-presses, shall be entered with the clerk of the peace, under a penalty of 20*l.*; and every person selling types or presses must, if required by a justice of the peace, state to whom they are sold.

A printer is bound to print, upon the front of every page printed on one side only, and upon the first and last sheet of every publication containing more than 1 leaf, his name and place of abode. He is also required to keep a copy of every work he prints, on which shall be written or printed the name of his employer; and shall produce the same to any justice, if required, within 6 months.

Persons publishing papers without the name and abode of the printer may be apprehended, and carried before a magistrate; and a peace officer, by a warrant of justice of peace, may enter any place to search for printing presses or types suspected to be kept without the notice required by the act, and may carry them off, together with all printed papers found in the place.

The 1 Geo. 4. c. 9. enacts, that all periodical pamphlets or papers, published at intervals not exceeding 3 days, containing public news, intelligence, or occurrences, or any remarks thereon, and not containing more than 2 sheets, or published for less price than 6d., shall be deemed newspapers, and shall be subject to the same regulations and stamp duties.

Influence of the Tax on Newspapers.—At present it is impossible, without a violation of the stamp laws, to sell newspapers under 7*d.* or 7½*d.*; so that those poorer persons, who cannot afford so large a sum, or who have no means of getting a newspaper, in company with others, are obliged either to be without one, or to resort to those low priced journals that are circulated in defiance of the law. It has been proposed to reduce the duty to 2*d.*; but it may be doubted whether this would be any improvement, and whether the duty be not at present sufficiently low on a paper sold at 7*d.* or upwards. All fixed duties on newspapers seem, however, to be essentially objectionable, inasmuch as, by effectually hindering the free and open circulation of the cheaper sort, they throw their supply into the hands of the least reputable portion of the community, who circulate them surreptitiously, and not unfrequently make them vehicles for diffusing doctrines of the most dangerous tendency. The better way, therefore, would be to assess the duty on newspapers on an *ad valorem* principle, making it, in all cases, 50 per cent., that is, 6*d.* on a newspaper sold at 1*s.*, 1*d.* on one sold at 2*d.*, ½*d.* on one sold at 1*d.*, and so on, proportionally to the price. Several advantages would result from such a plan. It would remove the unjust stigma that now attaches to low-priced papers; and men of talent and principle would find it equally advantageous to write in them as in those of a higher price. Were such an alteration made, it seems probable that the present two-penny papers, than which nothing can be conceived more utterly worthless, would, very soon, be superseded by others of a very different character; and if so, the change would be in the highest degree beneficial. It would also, we apprehend, introduce into newspaper compiling, that division of labour, or rather of subjects, which is found in every thing else. Instead of having all sorts of matters crammed into the same journal, every different topic of considerable interest would be separately treated in a low-priced paper, appropriated to it only, and conducted by persons fully conversant with its principles and details. Under the present omnivorous system, individuals who care nothing for the theatre are, notwithstanding, unable to procure a paper in which it does not occupy a prominent place; and those who cannot distinguish one tune from another have daily served up to them long dissertations on concerts, operas, oratorios, and so forth. The proposed system would give the power of selecting. Those who preferred an *olla podrida*

Note.—This return is founded upon periodical accounts rendered by printers, who procure the stamps at this office for newspapers. The papers marked thus * being the property of 1 person, in whose name the stamps are taken out, the number used for each paper cannot be distinguished.

* We retained the following important paragraph from a note by Mr. Wood, the intelligent chairman of the Board of Stamps, submitted to the Part. Paper, No. 578, Sess. 1835. It shows that the above gives an account of the circulation of country newspapers, and is not such as depended upon. Of course, there are no such inaccuracies in the accounts of advertisements.—

It is to be noted, however, that the returns had been correct transcripts of the books in this office, if it were of remark that they would not have a total accurate information as to the circulation of newspapers. The circumstances hereinafter detailed will show that such returns must be always incomplete and fallacious.

* In the instance of the London newspapers, the account may ap-

proach to invariable correctness, as the stamps are usually obtained by the parties directly from this office; but it may be observed that these papers borrow from each other, and we have also reason to believe that agents of country papers have been seduced by London printers to take out stamps in the name of the latter which were intended for country use; so that, even with regard to the London papers, perfect accuracy cannot be attained.

* But in the case of country papers, still less reliance can be placed on these accounts. The supply of stamps to country papers is effected through London stationers and paper-makers, and sometimes also through country stationers. These persons take out large quantities of stamps, and furnish them, from time to time, to the respective newspapers as required. It is only from the returns made by those stationers that the number of stamps obtained by each country paper are known at this office. The stationers are bound to make these returns, but in general they furnish them with much reluctance and irregularity, and frequently omit them altogether. It is well known

ners (who also
the whole of the

that the Board have no means of detecting or punishing any misstatement, and it is therefore believed that, even when furnished, bills regard a paid to accuracy.
 "The trouble occasioned at this office might not be a consideration, if the returns were really a source of useful and authentic information. But the preceding observations show that no useful re-

ports arise; on the contrary, such returns constitute a needless expenditure from persons whose circulation is under-rated, and on whom pressure is thus inflicted.
 "It is, therefore, worthy of consideration whether similar returns should in future be allowed."
 - J. W. "

IV. A Return of the Number of Stamps issued by the Stamp Office, for the following London Newspapers, in the Years 1833, 1834, and 1835.

N.B. The foregoing are all 4 d. stamps, with the exception of the General Advertiser for Town and Country, and Bell's Monthly Literary Advertiser, which are 2 d.
 Where 2 or more papers appear together, they were published by one and the same party, in whose names the stamps were taken out. The number furnished for each paper could not, therefore, be distinguished.

(An important alteration was made in 1836, in the duties on, and in the regulations relating to, newspapers. The act 6 and 7 Will. 4 cap. 76. has repealed the former duty on newspaper stamps (see ante, p. 221.), and has imposed in its stead the duties specified in the following schedule:—

L. s. d.
 For every sheet or other piece of paper whereon any newspaper shall be printed 0 0 1
 And where such sheet or piece of paper shall contain on one side thereof a superficies, exclusive of the margin of the letter-press, exceeding 1,530 inches, and not exceeding 2,295 inches, the additional duty of 0 0 0 1/2
 And where the same shall contain on one side thereof a superficies, exclusive of the margin of the letter-press, not exceeding 765 inches, exceeding 3/29 inches, the additional duty of 0 0 1
 And provided always that any sheet or piece of paper containing on one side thereof a superficies, exclusive of the margin of the letter-press, not exceeding 765 inches, which shall be published with, and as a supplement to, any newspaper chargeable with any of the duties aforesaid, shall be chargeable only with the duty of 0 0 0 1/2
 And the following shall be deemed and taken to be newspapers chargeable with the said duties: viz.—
 Any paper containing public news, intelligence, or occurrences printed in any part of the United Kingdom to be dispersed and made public:
 Any paper printed in any part of the United Kingdom weekly or oftener, or at intervals not exceeding 36 days, containing only or principally advertisements:
 Any paper containing any public news, intelligence, or occurrences, or any remarks or observations thereon, printed in any part of the United Kingdom for sale, and published periodically or

in parts or numbers at intervals not exceeding 26 days between the publication of any 3 such papers, parts, or numbers, where any of the said papers, parts, or numbers respectively shall not exceed 3 sheets of the dimensions hereinafter specified (exclusive of any cover or blank leaf, or any other leaf upon which any advertisement or other notice shall be printed), or shall be published for sale for a less sum than 6d., exclusive of the duty by this act imposed thereon; provided always that no quantity of paper less than a quantity equal to 21 inches in length and 17 inches in breadth, in whatever way or form the same may be made or may be divided into leaves, or in whatever way the same may be printed, shall, with reference to any such paper, part, or number as aforesaid, be deemed or taken to be a sheet of paper:
 And provided also, that any of the several papers herein before described shall be liable to the duties by this act imposed thereon, in whatever way or form the same may be printed or folded, or divided into leaves or stitched, and whether the same shall be folded, divided, or stitched, or not:
Exemptions.—Any paper called "Police Gazette, or Hue and Cry," published in Great Britain by authority of the Secretary of State, or in Ireland by the authority of the Lord Lieutenant.
 Daily accounts or bills of goods imported and exported, or warrants or certificates for the delivery of goods, and the weekly bills of mortality; and also papers containing any list of prices current, or of the state of the markets, or any account of the arrival, sailing, or other circumstances relating to merchant ships or vessels, or any other matter wholly of a commercial nature; provided such bills, lists, or accounts do not contain in any other matter than what hath been usually comprised therein.

Regulations, &c.—A discount of 25 per cent. is to be allowed on the above duties on newspapers printed in Ireland.—§ 2.
 In order to prevent fraud, in the returns as to newspapers, it is enacted, that, from the 31st of December, 1836, a separate or distinctive stamp or mark shall be used for each newspaper.—§ 3.
 No person is to print or publish a newspaper until after a declaration has been made and lodged at the Stamp-Office, containing certain particulars (specified in the act), as to the names and addresses of the printer, and certain of the proprietors of such paper, &c., under a penalty of 50l. Persons wilfully making a false or defective declaration are, upon conviction, to be deemed guilty of a misdemeanor.—§ 4, 5, 7.
 There are a number of regulations intended to provide for the discovery and liability of the printer and proprietors, the security of the duties, and the prevention of the sale of unstamped papers. A penalty of 20l. is imposed on any person printing, publishing, selling, &c., newspapers not duly stamped, and it is declared to be lawful for any officer of stamps, or any person authorized by the commissioners in that behalf, to seize any such offender, and take him before any justice having jurisdiction where the offence is committed, who shall summarily determine the matter, and upon conviction and default of payment, shall commit such offender to prison for some term not exceeding 3, nor less than one calendar month.—§ 17.
 Penalty for sending abroad newspapers not duly stamped, 50l.—§ 18.
 Justices may grant warrants to search for unstamped newspapers, and to seize presses, &c. used in printing the same; and on refusal of admittance, officers may break open doors, &c. Persons refusing officers liable to a penalty of 20l.—§ 22, 23.

Influence of the Reduction of the Duty.—The duty which formerly amounted, deducting the discount, to 3 1-5d. (see ante, p. 220.), being now reduced to 1d., the price of the great majority of the London newspapers has been reduced from 7d. to 5d. Provincial papers, which are got up at comparatively little expense, are now sold generally at 4 1/2d. or 5d.; and this, also, is the case with one or two of the metropolitan journals. The newspaper's profit on selling a quire, or 27 papers, at 7d., used to be 2s. 9d., it is now on the London papers, 2s. 3d.

The reduction of the price has occasioned a considerable increase in the demand for the established papers; and a considerable number of new weekly papers have also started into existence since the reduction of the duty in the metropolis and throughout the country.

For some curious details with respect to newspapers in Louisiana, see Mr. Stuart's *Three Years in America*, vol. ii. p. 210.—the most instructive and trustworthy of all the recent works on the United States.

Hitherto, however, no new daily paper has been established. The preceding Tables exhibit the circulation of each of the principal papers, and the total consumption of stamps, in each of the three years ending with 1835; and will, consequently, serve as standards by which to measure the precise influence of the late change on the demand for each paper. The general influence of the new system is seen in the subjoined table.

If it were proper to reduce the duty, and to preserve it at a uniform level, the new arrangements are, perhaps, as unexceptionable as any that could be devised. But we are not sure that the better way would not have been to have assessed the duty on an *ad valorem* principle, making it, in all cases, a certain aliquot part of the price.

A Return of the Number of Newspapers to which Stamps were issued, and of the Number of Stamps issued to Newspapers, in the Years ending 15th September, 1836 (when the former System terminated) and 1837, and the Half Year ending 15th March, 1838; distinguishing the Number issued to London Newspapers, to English Provincial Newspapers, and to Irish and Scotch Newspapers respectively, and showing the Total Number and Amount each Year; also, the Amount of Newspaper Stamp Duty received in each of the above Periods.—(Parl. Paper, No. 307, Sess. 1836.)

Virginia, (at Richmond 10) - - - - -	52	Illinois, - - - - -	25
North Carolina, - - - - -	30	Missouri, - - - - -	1,533
South Carolina, - - - - -	20		
Georgia, - - - - -	33		

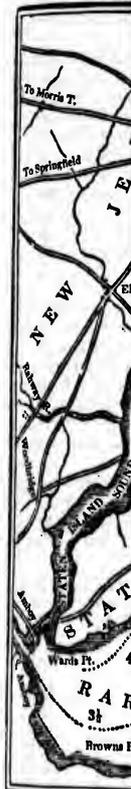

Of the above, 116 are published daily, 14 tri-weekly, 30 semi-weekly, and 91 once a week. The remainder are issued semi-monthly, monthly, and quarterly, principally magazines and reviews. Many of the daily papers also issue tri-weeklies, semi-weeklies, and weeklies. Thirty-eight are in the German language, four in the French, and one in the Spanish: Several of the New Orleans papers are printed in French and Spanish.—*A. W. Ed.*]

NEW YORK, the capital of the state of that name, and the commercial metropolis of the United States, in lat. 40° 42' N., lon. 74° 8' W. It is situated on the southern extremity of Manhattan Island, at the point of confluence of the Hudson river, which separates Manhattan from New Jersey, with East River, which separates it from Long Island. New York bay, or inner harbour, is one of the most capacious and finest in the world; it is completely land-locked, and affords the best anchorage. The entrance to the bay through the Narrows is extremely beautiful. On each side, the shore, though wooded down to the water's edge, is thickly studded with farms, villages, and country seats. At the upper end are seen the spires of the city; and in the distance the bold precipitous banks of the Hudson. From New York to the bar between Sandy Hook Point and Schreyer's Island (the division between the outer bay or harbour and the Atlantic) is about 17 miles. Fortifications have been erected at the Narrows, Governor's Island, and other places, for the defence of the city and shipping. The wood-cut on the opposite page represents the city and bay of New York, and the surrounding country.

The Hudson river was first explored in 1609, by the famous English navigator whose name it bears, then in the service of the West India Company of Holland. In 1612, New Amsterdam, now New York, was founded by the Dutch, as a convenient station for the fur trade. In 1664, it was taken by the English. The Dutch again recovered possession of it in 1673; but it was retaken by the English in the following year, and continued in their occupation till the termination of the revolutionary war.

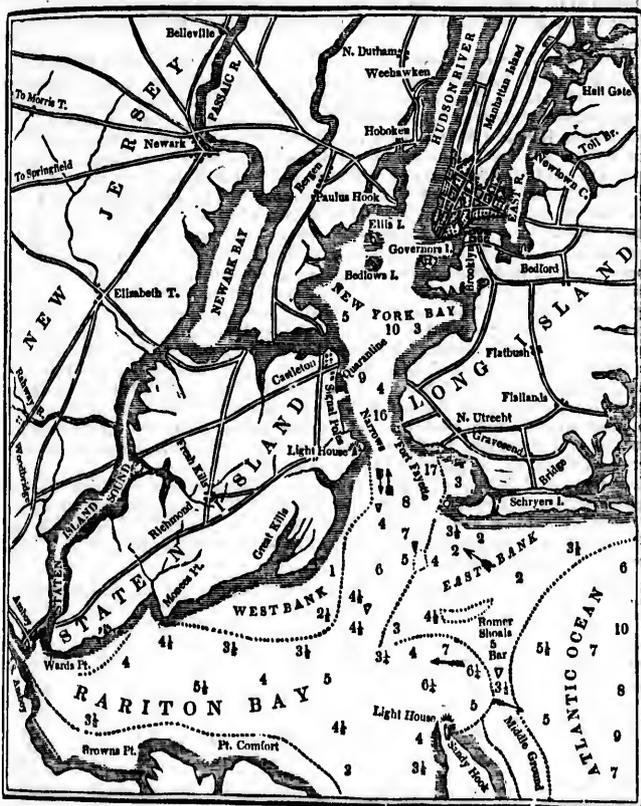

New York has increased faster than any other city in the United States. In 1699, it contained 6,000 inhabitants. In 1774, previously to the commencement of the war of independence, the population amounted to 22,750. During the war, the population continued stationary; but since 1783, its increase has been quite extraordinary. In 1790, the popula-

tion amounted to 33 and in 1830, to above narrow and confined during the last half with brick. The well paved and light were formerly abundant sure that has done however, New York thing as a sink or co pits, of which there thrown into the water great deal of filth is. The yellow fever, by lower and dirtiest pa vated streets. It is to be, that if stonew regulations enforced

Entrance to Harbour, due W. from the outer bay, and then nearly without the bar; for, on insurances, their service near the extremity of the called Sandy Hook, is in Vol. II.—U

tion amounted to 33,131; in 1800, to 60,489; in 1810, to 96,373; in 1820, to 123,706; and in 1830, to above 213,000! Originally the houses were mostly of wood, and the streets narrow and confined. In these particulars, however, a great improvement has taken place during the last half century; most of the old houses having been pulled down, and rebuilt with brick. The new streets, which are broad, and intersect each other at right angles, are well paved and lighted. Broadway, the principal street, is one of the largest and finest in the world. Many of the public buildings are commodious and elegant. The pools, that were formerly abundant in the city and its vicinity, have been completely filled up; a measure that has done much to improve the health of the population. In respect of cleanliness, however, New York is not to be compared with an English town. There is hardly such a thing as a sink or common sewer in the whole city: the night-soil and filth are collected in pits, of which there is one in every house, and, being conveyed to the nearest quay, are thrown into the water; but as these quays are made of timber, with many projections, a great deal of filth is retained about them, producing, in hot weather, an abominable stench. The yellow fever, by which New York is sometimes visited, uniformly breaks out in the lower and dirtiest part of the town; and seldom, indeed, extends to the new and more elevated streets. It is now much less prevalent than formerly; and the general opinion seems to be, that if stones were substituted for timber in the quays, sewers constructed, and proper regulations enforced as to cleanliness, the scourge would entirely disappear.

Entrance to Harbour, Light-houses, &c.—The course in entering the harbour of New York is nearly due W. from the outermost white buoy on the bar, till the buoy on the S.W. point of the east bank be passed, and then nearly due N. The navigation is extremely easy. Pilots generally board while without the bar; for, otherwise, they are only entitled to half fees. Were it not for fear of violating insurances, their services would seldom be required—(See Rates of Pilotage, post.) The light-house near the extremity of the long, low, narrow tongue of land, projecting from the New Jersey shore, called Sandy Hook, is in lat. 40° 28' N., lon. 74° 5' W. It is fitted up with a very powerful fixed light,

which, in clear weather, may be seen by vessels coming from the westward 10 leagues off. But, from its position, it is not readily discovered by ships coming from the S. till too near. To obviate this inconvenience, a floating light was moored about 7 miles E. from Sandy Hook Point. In 1822, however, 2 light-houses were erected on Neversink hills, nearly 4 miles S. by E. from Sandy Hook. They are 300 feet apart; the most northerly being furnished with a fixed, and the other with a revolving light, both of great power. The lights are elevated 250 feet above the level of the sea; and may be seen, in clear weather, in all directions, from 40 to 50 miles. Since they were fitted up, the floating light has been discontinued. Vessels load and unload at the wharfs on both sides the city.

New York is indebted, for her wonderful increase, to her admirable situation, which has rendered her the greatest emporium in the New World. The rise of the tide is about 6 feet; and even at ebb, there is 21 feet water on the bar; and the water in the outer and inner bays, and in the river, is so deep, that ships of the largest burden lie close to the quays, and may proceed to a great distance up the river. The navigation of the bay is but rarely impeded by ice. The great strength of the tide, and the vicinity of the ocean, keep it generally open, even when the Chesapeake and Delaware bays are frozen over. The influence of the tides is felt in the Hudson as far as Troy, 160 miles above New York, affording very peculiar facilities for its navigation. These natural advantages have been vastly extended by a system of canalisation, which has already connected the Hudson with Lake Ontario and Lake Erie; and which, when completed, will connect it with the Ohio river, and consequently with the Mississippi and the Gulf of Mexico! So prodigious a command of internal navigation is not enjoyed by any other city, with the exception of New Orleans; but the reader access to the port of New York, the greater salubrity of the climate, and her situation in the most industrious part of the Union, where slavery is abolished, give her advantages over her southern rival, which, it is most probable, will secure her continued preponderance.

Trade, &c.—The commerce of New York is very extensive. The value of the merchandise annually loaded and unloaded in the port is estimated at from 100,000,000 to 120,000,000 dollars. The number of vessels in the port in the busy season varies from 500 to 750, exclusive of about 50 steam packets. The number of arrivals from foreign ports amounted in 1832 to 1,808; and the coasting arrivals are between 4,000 and 5,000. The total value of the imports into the United States in the year ending the 30th of September, 1832, was 101,029,266 dollars; of which no less than 53,214,402, or more than the half were imported into New York! The customs revenue on the goods paying duties, imported into this city, amounts to about 13,000,000 dollars, while the total customs revenue of the United States seldom exceeds 22,000,000 dollars. The imports comprise an infinite variety of articles. The principal are cottons, woollens, linens, hardware, cutlery; earthenware, brass and copper manufactures, &c. from Great Britain; silk, wine, brandy, &c. from France and Spain; sugar and coffee from the Havannah and Brazil; with tea, spices, cochineal, indigo, dye woods, &c. The value of the exports from New York in the year ending the 30th of September, 1832, amounted to 26,000,945 dollars, being between $\frac{1}{3}$ and $\frac{1}{2}$ part of the total exports from the United States. The exports principally consist of wheat flour, corn, rice, and cotton; beef, pork, butter, dried fish, and all sorts of provisions; furs, tobacco, coarse manufactured goods, lumber, &c. The great excess of the imports into New York over the exports is accounted for by the fact, that, while mostly all articles of export from the Western States are shipped at New Orleans, the greater part of the more valuable articles brought from abroad, and destined for the consumption of Ohio, Indiana, Illinois, and, in some degree, even Kentucky, are principally imported into New York.

The tonnage of New York is greater than that of Liverpool, or any other city, with the single exception of London. The registered tonnage belonging to the port on the last day of December, 1831, amounted to 122,458 tons, and the enrolled and licensed tonnage to 163,980 tons; making a grand total of 286,438 tons, being between $\frac{1}{2}$ and $\frac{3}{4}$ of the whole tonnage of the United States.

Account of the Quantities of some of the principal Articles of Native American Produce exported from New York during each of the Three Years ending with the 1st of January, 1833.

The arrivals in 1831, from foreign ports, were, ships, 496; barques, 119; brigs, 886; schooners, 425; sloops, 6; being, in all, 1,932. Of these there were, American, 1,486; British, 303; French, 27; Dutch, Hamburg, and Bremen, 23; Swedish, 28; Spanish, 18; Danish, 11, &c. By far the greater part of the British ships are from our colonies in North America and the West Indies.

Regulations as to Passengers arriving at New York.—On the arrival of passengers, an entry must be made at the Custom-house of their names, clothes, implements of trade or profession (all of which are exempt from duty), and an oath taken respecting them; the form of which, and the entry, may be had at the office gratis. Cabin passengers make this entry themselves, and pay 20 cents each for a permit; on exhibiting which to the officer on board, they are allowed to move their baggage after it has been inspected. Only 1 entry and permit is necessary for a family, and only 20 cents demanded, whatever may be the number of the family. Remains of sea stores, such as tea, sugar, foreign spirits and wines, are liable to pay duties; but unless these are of great bulk or quantity, they are generally allowed to pass free.

An entry is usually made by the master of the vessel of at least passengers and their baggage: they pay each 20 cents for a permit. When entry is made by any person not the owner, he gives bond for payment of duties, if any; and if, after entry is made at the Custom-house, and the oath taken, any article is found belonging to a passenger, liable to pay duty, not specified in the entry, it is forfeited, and the person in whose baggage the article is found subjected in double the value.

Besides making entry at the Custom-house, it is provided by a law of the State, that every master of a vessel arriving from a foreign country, or from any other port of the United States, "shall within 24 hours after entering his vessel at the Custom-house, make a report in writing, on oath, to the mayor, and in case of his sickness or absence to the recorder of the said city, of the name, age, and occupation of every person who shall have been brought as passenger in such ship or vessel on her last voyage, upon pain of forfeiting, for every neglect or omission to make such report, the sum of 75 dollars for every alien, and the sum of 50 dollars for every other person neglected to be so reported as aforesaid."

Masters of ships bringing passengers to New York must also pay a dollar on account of each passenger to the corporation, as commutation money, or give bond that none of them shall become chargeable on the city poor rates for the space of 2 years. They almost uniformly prefer paying the commutation. The number of immigrants arriving at New York from the British Islands, and from all places, is the undermentioned years, was as follows:—

Year.	From England.	From Ireland.	From Scotland.	Total British Isles.	From all Parts.

Lines of Packets.—The establishment of regular lines of packets from New York to foreign ports, and also to every principal port in the United States, has produced a new era in the commerce of the city, and redounded equally to the benefit of the enterprising individuals by whom they were projected, and the public. The principal intercourse is carried on with Liverpool; there being about 20 packet ships, distributed in 4 lines, employed at present (1830) in maintaining a regular communication with that port. A dozen packet ships are also employed in the trade between New York and London; and 15 in the trade between New York and Havre. These ships vary in size from 450 tons, the burden of the smallest, to 800 tons. Their tonnage has lately been increasing; and, at an average, it may now be estimated at about 600 tons. These ships are all American property, and built chiefly in New York. They are probably the finest and fastest sailing merchant vessels in the world; being beautifully modelled, of the best workmanship, and fitted up with every convenience for passengers, and in the most expensive style. The safety, regularity, and expedition with which they perform their voyages is quite astonishing. The average length of a voyage from Liverpool and Portsmouth to New York, may be estimated at about 34 days, and, from the latter to the former, at about 20 days. The Independence, of 730 tons, Captain Nye, made the voyage from New York to Liverpool, in the course of the present year, in 14 days; and the Toronto of 650 tons, Captain Griswold, made the voyage from New York to Portsmouth in the same time. And it is material to observe, that these voyages are not reckoned from land to land, but from port to port.

The packet ships from New York sail from London on the 7th, 17th, and 27th; and from Portsmouth, or rather Cowes, at which place they touch, on the 1st, 10th, and 20th of each month.

Those bound for New York from Liverpool, sail on the 1st, 8th, 16th, and 24th of each month; those bound for New York from Havre sail on the same days as those from Liverpool.

Cabin passage to New York from London and Liverpool 35 guineas; from New York to London and Liverpool 140 dollars; a cabin passage to New York from Havre 140 dollars, from New York to Havre, the same. This includes provisions, wines, beds, &c., so that the passengers have no occasion to provide any thing except personal apparel.

Each ship has a separate cabin for ladies; each state-room, in the respective cabins, will accommodate two passengers; but a whole state room may be secured for 1 individual by paying at the rate of 11 passage, that is, 54 guineas to New York.

Packets for Philadelphia sail from Liverpool on the 8th and 20th of every month throughout the year; and of these ships sail from Philadelphia for Liverpool on the 20th of each month; the others do not

always return direct for Liverpool, but sometimes go to Charleston, Savannah, &c., to bring cargoes of produce to Liverpool.

Cabin passage same as that to and from New York.

These ships, 8 in number, are all American built and owned, and average about 500 tons burden; some of them are as splendid as the New York packets, and are all fitted up with every regard to comfort.

Three American packet ships are employed in the trade between New York and the Clyde; and an American packet ship sails from Liverpool for Boston twice every month.

The rate of *steerage* passage varies, in the course of the year, considerably; depending on the number of ships and the number of passengers going at the time. By the packet ships it fluctuates from 3 to 6 guineas for each full-grown person; and children under 14 years are taken at half-price. By other ships the rate of *steerage* passage varies, at Liverpool, from 1l. 10s. to 5l.; being sometimes reduced, by competition, so low as 30s.; but the average rate may be taken at 4l. For these rates, the ship provides nothing but berths, fire, and water; the passengers provide their own provisions, bedding, &c. The expense of provisions for a poor person, who might wish to be as economical as possible, for the voyage out to the United States, would not be more than from 40s. to 50s.

The *cabin* passage by the common traders (and many of them are quite equal to the packets in equipment and safety) varies from 15l. to 25l.; no wines being provided by the ships at these rates, but provisions, bedding, malt liquor, and spirits.

The rates of *freight* to New York, are—

	By Packets.			By other Ships.

Steam packets.—It has been proposed to establish steam packets between New York and Valentia harbour, on the west coast of Ireland; but as yet little progress has been made in the undertaking, it may be doubted, indeed, seeing how well the intercourse is maintained by the sailing packets, whether the introduction of steam packets would be of material service. [See art. STEAM VESSELS.]

BANKS, INSURANCE COMPANIES, &c.—We borrow from a detailed and authentic statement by Thomas H. Goddard, Esq., published in the *New York Daily Advertiser* for the 29th of January, 1831, the following particulars in relation to the banks, insurance companies, &c. of New York, in 1830, with a view of their progress from 1810 to 1830.

Recapitulation.—There were, in 1830, 16 banks in this city, whose aggregate capital was \$15,150,000. And these made dividends for \$1,037,700. Of these, the Hudson and Delaware made no dividend, in consequence of appropriating their means to the great work of completing the canal between the 2 rivers, which promises a great advantage to the city. The Greenwich had just commenced; so that the dividend accrued upon a capital of 17,830,000 dollars—making an interest of 5-7/8 per cent., as the paper discounted would average 80 days' notes, and 8 per cent. discount deducted; there must have been discounted during the year paper to the amount of \$103,707,968.

Marine Insurance.—During 1830, there were in this city 8 marine insurance companies, with an aggregate capital of \$3,050,000. And these made dividends for \$463,000. But 2 companies, whose capital amounted to 450,000 dollars, divided nothing, so that the dividend really arose out of a capital of 2,600,000 dollars, making an interest of 15-6/7 per cent. The American Company

commenced in 1815, and its dividends to 1830 inclusive were 312 per cent., amounting to \$1,507,000.

The Ocean, with a capital of \$50,000, has, from 1823 to 1830 inclusive, made dividends for 128 per cent. \$41,000.

Fire Insurance.—During 1830, there were in this city 30 fire companies, whose aggregate capital was \$793,000. And these made dividends for \$49,750.

But 2 companies, whose capital amounted to 750,000 dollars, divided nothing, so that the dividend really arose out of a capital of 43,000 dollars, making an interest of 8-6/8 per cent. The Washington commenced 1814, and has made a uniform semi-annual dividend of 4 1/2 per cent., making in all 144 per cent., amounting to \$36,300.

From 1823 to the year 1830 inclusive—

The dividends of the Eagle were 89 1/2 per cent. — 36,300
 Franklin — 44 1/2 — — 19,125
 North River 64 — — 25,125
 New York — 78 — — 36,300

Remarks on Banking at New York.—The reader will find in the article **BANKS, FOREIGN** (vol. i. p. 125), some details as to the banking system of the United States. It seems to be quite as defective in New York as in any other part of the Union. Several banks in that State have failed, and some of those that still exist obtained their charters by resorting to the most disgraceful practices. In the summer of 1826, the grand jury of the city entered upon an investigation of certain circumstances connected with the formation of some of these establishments, which ended in the conviction, as conspirators to defraud the public, of not a few citizens, and even of some members of the legislature, who had previously been deemed highly respectable! The Court of Errors afterwards decided, by a small majority, that these convictions were illegal; but the fact of the most scandalous abuses having prevailed was established beyond all question. We may mention, by way of example, that the United States Lombard Association, incorporated in 1825, was sworn to as having a paid up capital of 300,000 dollars; but the association having failed in 1826, it was ascertained that not more than 30,000 dollars had ever been paid up! There were, we are sorry to say, several other cases quite as bad, or, if possible, even worse than this.—(*Report and Observations on the Banks, &c. of the State of New York*, p. 10.)

With the exception of the branch of the United States Bank, all the other New York banks issue notes of no low a value as 1 dollar. They all discount bills: generally at 6 per cent. In order to protect the public from the mischief resulting from the failure of banks, the legislature of the State of New York enacted a law, in 1829, compelling all banks chartered in future, or getting their charters renewed, to pay from $\frac{1}{4}$ to 1 per cent. of their capital stock to the treasurer of the State, by whom it is invested and accumulated as a guarantee fund. When a bank fails, its debts, under certain restrictions, are to be paid from this fund. Commissioners have also been appointed, having authority to examine upon oath, and to inquire into any particulars as to the management of the different banks subjected to this regulation.

This system has not been established for a sufficient length of time to enable a conclusive opinion to be formed as to its practical operation. We believe, however, that it will be found quite inadequate to eradicate the evils complained of. Even were it otherwise successful, what can be more unjust than to tax the capital of solid and well-managed concerns, to create a fund to pay the debts of those set on foot for the purpose of swindling? The interference of the commissioners, by lessening the responsibility of the directors, must be a good deal worse than useless; and can have no effect other than the multiplication of abuses. We have not, indeed, the least doubt, that it will be found in America, as in England, that banking can acquire no real solidity till a stop be put to the issue of all notes for payment of which security has not previously been given. Nothing short of this can be of any material service. It is mere error and delusion to suppose that it is possible to prevent fraud or mismanagement by any system of official superintendence.

Forgery is extremely prevalent in the State of New York, and, indeed, throughout the Union; a consequence of the low value at which notes are issued, and of their employment even in the smallest transactions. It is not, in truth, easy to imagine that the paper currency of any country can be in a less satisfactory condition than that of the United States. And it will not, certainly, be improved, but much deteriorated, should the president succeed in his efforts to destroy the Bank of the United States.

SALES BY AUCTION.—The practice of selling goods, particularly those imported from abroad, by auction, is of long standing in New York, and is carried to a very great extent. Auctioneers are appointed by the senate, on the nomination of the governor.

Statement of Sales at Auction in the State of New York, from 1810 to 1830 inclusive, from Returns made by the Auctioneers to the Comptroller.

Year.	Amount of Duties.		Amount of Sales dutiable.		Amount of Sales not dutiable.		Total.	
	Dollars.	Cents.	Dollars.	Cents.	Dollars.	Cents.	Dollars.	Cents.
1810	126,404	62	5,609,662	59	510,760	28	6,113,422	87

List of the principal Provisions of the Law concerning Auctions.

- The duties are—
 - On wine and ancient spirits, foreign or domestic, 2 per cent.
 - On goods imported from beyond the Cape of Good Hope, and sold in packages, bales, &c., as imported, 1 per cent.
 - On all other articles, subject to duties, 1 1/2 per cent.
- The following articles are not subject to duties—
 - Ships and vessels.
 - Utensils of husbandry, horses, neat cattle, hogs, and sheep.
 - Articles grown, produced, or manufactured in this state, except distilled spirits.

- All fabrics of cotton, wool, hemp, and flax, manufactured within the jurisdiction of the United States.
- Goods are exempted from auction duties—
 - When they belong to the United States or this State.
 - When sold by the authority of a court, or when seized by a public officer on account of any forfeiture or penalty, or under a distress for rent.
 - The effects of a deceased person sold by executors, or administrators, or by a person authorized by a surrogate.
 - The effects of a bankrupt or insolvent sold by his assignees, appointed pursuant to law, or by a general assignment for the benefit of all his creditors.
 - Goods damaged at sea and sold within 30 days after being landed, for the owners or insurers.

* The returns of sales for 1811, having been mislaid at the comptroller's office, the amounts are stated by estimating the average of the 4 preceding years in proportion to the duties paid, which are exactly correct as stated.

† The amount of real estate sold in 1820 (included in the above not dutiable) was \$2,131,300 67 cents.

Prices at New York.—The following statements of the wholesale prices of some of the principal articles of importation at New York, are taken from the *New York Price Current* for the 17th of September, 1856.

	Dls. cts.				
Corn—import duty, 3 cents per lb.	0 14	0 21			
New Orleans, per lb.	0 13 1-2	0 22			
Indian, do.	0 12 1-2	0 20			
Epokah, do.	0 12	0 18

[The Tables omitted in this article are comprehended in those which have been added to the articles **IMPORTS AND EXPORTS, AND SHIPS.—Am. Ed.**]

New York Canal, 1853.—In addition to the information laid before the reader in vol. I. p. 228, we have now to state, that the total amount of tolls collected on all the canals of the State, for the year ending the 30th of September, 1853, was as follows, viz:—

	Dolls. cts.
Erie and Champlain Canals	1,324,421 58
Cayuga Canal	20,950 23
Cayuga and Seneca Canals	14,783 59
Total	1,360,155 40

The expenses of collection are deducted from the tolls received by the collectors, which add, say

	25,500 0
Total amount of tolls	D. 1,385,655 40

The net revenue of the Erie and Champlain Canal fund, after paying all expenses, amounts to

	1,135,181 33
--	--------------

The debt standing against the State, on the 30th of September, 1853, for the several canals, was as follows, to wit:—

	Dolls. cts.
Erie and Champlain Canal debt	5,522,539 29
Utica do.	427,947 0
Cayuga and Seneca do.	237,000 0
Fleming do.	315,000 0
Crooked Lake do.	120,000 0
Cayuga do.	50,000 0
Total	D. 6,673,006 29

Bills of Exchange.—By a revised law of the State of New York, the following damages on bills drawn or negotiated in this State, and protested for non-payment, are allowed, viz:—

Bills drawn on the States of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New Jersey, Pennsylvania, Ohio, Delaware, Maryland, Virginia, or district of Columbia, 3 per cent. North Carolina, South Carolina, Georgia, Kentucky, or Tennessee, 5 per cent.

Any other State or territory of the United States, or any other place on or adjacent to this continent, and north of the equator, or any British or other foreign possessions in the West India, or elsewhere on the Western Atlantic Ocean, or any port or place in Europe, 10 per cent.

Such damages shall be in lieu of interest, charges of protest, and all other charges incurred previous to and at the time of giving notice of non-payment, but the holder of such bill shall be notified to demand and recover lawful interest upon the aggregate amount of the principal sum specified in such bill, and of the damages thereon, from the time at which notice of protest for non-payment shall have been given, and payment of such principal sum shall have been demanded.—Sect. 19.

If the contents of such bill be expressed in the money of account of the United States, the amount due thereon and of the damages herein allowed for the non-payment thereof, shall be ascertained and determined without any reference to the rate of exchange existing between this State and the place on which such bill shall have been drawn, at the time of the demand of payment or of notice of non-payment.—Sect. 20.

If the contents of such bill be expressed in the money of account or currency of any foreign country, then the amount due, exclusive of the damages payable thereof, shall be ascertained and determined by the rate of exchange or the value of such foreign currency, at the time of the demand of payment.—Sect. 21.

TARIFF OF THE UNITED STATES.—Notwithstanding the unprecedented progress of the United States in wealth and population, their foreign trade was nearly stationary for the 10 years ending with 1830! And yet, considering the spirit of commercial enterprise by which the people, particularly in the New England States and New York, are animated, and their skill in navigation, it might have been fairly presumed that the growth of their foreign trade would, at least, have kept pace with the development of the internal resources of the country. That it did not do so is wholly owing to the policy of government. Not satisfied with the extraordinary advances their constituents had made in numbers and wealth, Congress seems to have believed that their career might be accelerated by means of Custom-house regulations!—by giving an artificial direction to a portion of the public capital and industry, and turning it into channels into which it would not naturally flow!

No one who has the slightest acquaintance with the condition of America—who knows

that she is possessed of boundless tracts of fertile and unappropriated land—that her population is comparatively thin, and wages high—can doubt for a moment that agriculture must, for a long series of years, be the most profitable species of employment in which her citizens can engage. There can be no question, indeed, that such branches of manufacture as are naturally adapted to her peculiar situation, will gradually grow up and flourish in America, without any artificial encouragement, according as her population becomes denser, and as the advantage which now exists on the side of agriculture becomes less decided. But to force, by means of duties and prohibitions, the premature growth of manufactures, is plainly to force a portion of the industry and capital of the country into businesses in which it will be least productive.

Such, however, has been, for a lengthened period, the policy of the American legislature. The exploded sophisms of the mercantile system, though renounced by every statesman in Europe, acquired a noxious influence in congress, and were put forth with as much confidence, as if their soundness neither had been, nor could be, questioned! From 1816 down to 1832, the object of the American legislature was to bolster up a manufacturing interest, by imposing oppressive duties on most manufactured articles imported from abroad. Now, it is obvious even had the articles produced in America through the agency of this plan been as cheap as those they superseded, that nothing would have been gained by it; for, to whatever extent the importation of foreign articles may be diminished, there must be a corresponding diminution in the exportation of native American products; so that the only result would have been the raising up of one species of industry at the expense of some other species, entitled to an equality of protection. But the "American system" was not so innocuous. Instead of the goods manufactured in the States being as cheap as similar ones manufactured in Europe, they were admitted to be, at an average, from 30 to 100 per cent. dearer! The extent of the pecuniary sacrifice that was thus imposed on the Union has been variously estimated by American writers; but we have been assured by those who have the best means of knowing, that it may be moderately estimated at from 50,000,000 to 60,000,000 dollars, or from about 11,000,000*l.* to 13,000,000*l.*! And this immense burden—a burden nearly three times as great as the whole public expenditure of the republic—was incurred for no purpose of public utility, and was productive of nothing but mischief. The whole effect of the scheme was to divert a certain amount of the national capital from the production of cotton, wheat, rice, tobacco, &c., the equivalents sent to foreigners in payment of manufactured goods, to the direct production of these goods themselves! And as the latter species of industry is nowise suitable for America, a tax of 13,000,000*l.* a year was imposed on the Union, that the manufacturers might be enabled to continue a losing business. We leave it to others to determine whether the absurdity of the system, or its costliness, be its more prominent feature. That its influence was not more injurious, is solely owing to the smuggling it occasioned. With a frontier like that of America, and with a half or more of the population hostile to the tariff, it would have been worse than absurd to suppose that it could be carried into full effect. But it had enough of influence to render it in the last degree prejudicial—to occasion a great rise in the price of many important articles—to cripple the trade and navigation of the country—and to throw a considerable part of it into the hands of foreigners, who carried it on in defiance of the law.

It is difficult, however, to say how long this perverse system might have been maintained, but for its political effects. It was principally patronised by the Northern States. We believe, indeed, that it is quite impossible to show that they either did or could derive any benefit from it; but, at all events, it is quite certain that it was highly injurious to the Southern States. Their staple products are cotton, tobacco, and rice, of which by far the largest portion is exported to foreign countries: and the planters speedily found that every restriction on importation from abroad occasioned a corresponding difficulty of exportation. This led to a disunion of interests, and to strong remonstrances against the tariff by the Southern States. These, however, were disregarded. Provoked by this treatment, South Carolina took the decisive step of refusing to enforce the customs acts; and threatened, if coercion were attempted, to repel force by force, and to recede from the Union! This was a death-blow to the tariff. Congress now saw, what all sensible men had seen long before, that it was necessary to recede; that, in fact, either the tariff must be modified, or the integrity of the Union be brought into jeopardy. A law was accordingly passed on the 14th of July, 1832, which directed a considerable deduction to be made from the duties on various articles after the 3d of March, 1833; and a subsequent act, commonly called "Mr. Clay's New Tariff Bill," was passed on the 2d of March, 1833, providing for the future gradual reduction of the duties. These judicious acts restored tranquillity; and, there can be no doubt, will be, in every point of view, highly beneficial to the republic.

We subjoin the act of the 23d of March, 1833, and the explanatory letter of Mr. M'Lane, Secretary to the Treasury.

MR. CLAY'S NEW TARIFF BILL,

To modify the Act of the 14th of July, 1832, and all other Acts imposing Duties on Imports. Be it enacted by the Senate and House of Representatives of the United States of America, in congress assembled, that, from and after the 31st of December, 1833, in all cases where duties are imposed

on American imports by the
imposing Duties on Imports
part of such excess
thereof shall be deduct-
ed; and from and af-
ter the 31st of Decem-
ber, 1832, and from and
after the 31st of Decem-
ber, 1833, and from and
after the 31st of Decem-
ber, 1834, and from and
after the 31st of Decem-
ber, 1835, and from and
after the 31st of Decem-
ber, 1836, and from and
after the 31st of Decem-
ber, 1837, and from and
after the 31st of Decem-
ber, 1838, and from and
after the 31st of Decem-
ber, 1839, and from and
after the 31st of Decem-
ber, 1840, and from and
after the 31st of Decem-
ber, 1841, and from and
after the 31st of Decem-
ber, 1842, and from and
after the 31st of Decem-
ber, 1843, and from and
after the 31st of Decem-
ber, 1844, and from and
after the 31st of Decem-
ber, 1845, and from and
after the 31st of Decem-
ber, 1846, and from and
after the 31st of Decem-
ber, 1847, and from and
after the 31st of Decem-
ber, 1848, and from and
after the 31st of Decem-
ber, 1849, and from and
after the 31st of Decem-
ber, 1850, and from and
after the 31st of Decem-
ber, 1851, and from and
after the 31st of Decem-
ber, 1852, and from and
after the 31st of Decem-
ber, 1853, and from and
after the 31st of Decem-
ber, 1854, and from and
after the 31st of Decem-
ber, 1855, and from and
after the 31st of Decem-
ber, 1856, and from and
after the 31st of Decem-
ber, 1857, and from and
after the 31st of Decem-
ber, 1858, and from and
after the 31st of Decem-
ber, 1859, and from and
after the 31st of Decem-
ber, 1860, and from and
after the 31st of Decem-
ber, 1861, and from and
after the 31st of Decem-
ber, 1862, and from and
after the 31st of Decem-
ber, 1863, and from and
after the 31st of Decem-
ber, 1864, and from and
after the 31st of Decem-
ber, 1865, and from and
after the 31st of Decem-
ber, 1866, and from and
after the 31st of Decem-
ber, 1867, and from and
after the 31st of Decem-
ber, 1868, and from and
after the 31st of Decem-
ber, 1869, and from and
after the 31st of Decem-
ber, 1870, and from and
after the 31st of Decem-
ber, 1871, and from and
after the 31st of Decem-
ber, 1872, and from and
after the 31st of Decem-
ber, 1873, and from and
after the 31st of Decem-
ber, 1874, and from and
after the 31st of Decem-
ber, 1875, and from and
after the 31st of Decem-
ber, 1876, and from and
after the 31st of Decem-
ber, 1877, and from and
after the 31st of Decem-
ber, 1878, and from and
after the 31st of Decem-
ber, 1879, and from and
after the 31st of Decem-
ber, 1880, and from and

foreign imports by the act of July 14, 1832, entitled "An Act to alter and amend the several Acts imposing Duties on Imports," or by any other act, shall exceed 20 per cent. on the value thereof, one-tenth part of such excess shall be deducted; from and after the 31st of December, 1833, another tenth part thereof shall be deducted; from and after the 31st of December, 1837, another tenth part thereof shall be deducted; from and after the 31st of December, 1839, another tenth part thereof shall be deducted; and from and after the 31st of December, 1841, one half of the residue of such excess shall be deducted; and from and after the 30th of June, 1842, the other half thereof shall be deducted.

Sec. II.—And be it further enacted, that so much of the second section of the act of the 14th of July aforesaid, as fixes the rate of duty on all milled and fulling cloth, known by the name of plains, broad cloths, or Kendal cottons, of which wool is the only material, the value whereof does not exceed 35 cents a square yard, at 5 per cent. *ad valorem*, shall be and the same is hereby repealed. And the said articles shall be subject to the same duty of 50 per cent. as is provided by the said 2d section for other manufactures of wool, which duty shall be liable to the same reductions as are prescribed by the 1st section of this act.

Sec. III.—And be it further enacted, that until the 30th of September, 1842, the duties imposed by existing laws, as modified by this act, shall remain and continue to be collected. And from and after the day last aforesaid, all duties on imports shall be collected in ready money, and all credits now allowed by law, to the payment of duties, shall be and are hereby abolished, and such duties shall be collected for the purpose of raising such revenues as may be necessary to an economical administration of the government; and from and after the day last aforesaid, the duties required to be paid by law on goods, wares, and merchandise, shall be assessed upon the value thereof at the port where the same shall be entered, under such regulations as may be prescribed by law.

Sec. IV.—And be it further enacted, that, in addition to the articles now exempted by the act of the 14th of July, 1832, and the existing laws, from the payment of duties, the following articles imported from and after the 31st of December, 1833, and until the 30th of June, 1842, shall also be admitted to duty free from duty; to wit, bleached and unbleached linens, table linens, linen napkins, and linen muslins, and worsted stuff goods, shawls, and other manufactures of silk and worsted, manufactures of silk, or of which silk shall be the component material of chief value, coming from this side of the Cape of Good Hope, except sewing silk.

Sec. V.—And be it further enacted, that from and after the said 30th of June, 1842, the following articles shall be admitted to entry free from duty; to wit, indigo, quicksilver, sulphur, crude saltpetre, grindstones, refined borax, emery, opium, tin in plates or sheets, gum Arabic, gum Senegal, lac dye, madder, rosin, codden, nut and berries used in dyeing, saffron, turmeric, wood or pastel, aloes, ambrogia, saffron, cochineal, camomile flowers, coriander seed, cataup, chalk, cocculus Indicus, horn shavings, glass, lanterns, ox horns, other horns and tips, India rubber, unmanufactured ivory, juniper berries, nut, nuts of all kinds, oil of juniper, unmanufactured rattans and reeds, tortoiseshell, tin foil, shell-lac, all vegetables used principally in dyeing and composing dyes, weld, and all articles employed chiefly for dyeing, except alum, copperas, bichromate of potash, prussiate of potash, chromate of potash, and nitrate of lead, aquafortis and tartaric acid. And all imports on which the 1st section of this act now operates, and all articles now admitted to entry, free from duty or paying a less rate of duty than 20 per cent. *ad valorem* before the said 30th of June, 1842, from and after that day may be admitted to duty, subject to such duty, not exceeding 20 per cent. *ad valorem*, as shall be provided for by law.

Sec. VI.—And be it further enacted, that so much of the act of July 14, 1832, or of any other act, which is inconsistent with this act, shall be and the same is hereby repealed: provided that nothing herein contained shall be so construed as to prevent the passage, prior or subsequent to the said 30th of June, 1842, of any act or acts from time to time, that may be necessary to detect, prevent, or punish evasion of the duties on imports imposed by law; nor to prevent the passage of any act prior to the 30th of June, 1842, in contingency either of excess or deficiency of revenue, altering the rate of duties on articles which, by the aforesaid act of the 14th of July, 1832, are subject to a less rate of duty than 20 per cent. *ad valorem*, in such manner, as not to exceed that rate, and so as to adjust the revenue to either of the said contingencies.

Circular to Officers of the Customs.

Treasury Department, April 20, 1833.

The 7th section of the act of the 14th of July, 1832, entitled "An Act to alter and amend the several Acts imposing the Duties on Imports," provides, that in all cases where the duty which now is or hereafter may be imposed on any goods, wares, or merchandise imported into the United States, shall, by law, be regulated, or be directed to be estimated or levied upon the value of the square yard, or any other quantity or parcel thereof, and in all cases where there is or shall be imposed any *ad valorem* rate of duty on any goods, wares, or merchandise imported into the United States, it shall be the duty of the collector, within whose district the same shall be imported or entered, to cause the actual value thereof, at the time purchased, and place from which the same shall have been imported into the United States, to be appraised, estimated, and ascertained, and the number of such yards, parcels, or quantities, and such actual value of every of them as the case may require; and it shall, in every case, be the duty of the appraisers of the United States, and every of them, and every other person who shall act as such appraiser, by all the reasonable ways or means in his or their power, to ascertain, estimate, and appraise the true and actual value, any invoice or affidavit thereto to the contrary notwithstanding, of the said goods, wares, and merchandise, at the time purchased, and place from whence the same shall have been imported into the United States, and the number of such yards, parcels, or quantities, and such actual value of every of them as the case may require, &c. &c.

The 9th section of the same act provides, "that if shall be the duty of the secretary of the treasury, under the direction of the President of the United States, from time to time to establish such rules and regulations, not inconsistent with the laws of the United States, as the President of the United States shall think proper, to secure a just, faithful, and impartial appraisal of all goods, wares, and merchandise as aforesaid, imported into the United States, and just and proper entries of such actual value thereof, and of the square yards, parcels, or other quantities, as the case may require, and of such actual value of every of them; and it shall be the duty of the secretary of the treasury to report all such rules and regulations, with the reasons therefor, to the next session of Congress."

The 1st section of the act of the 2d of March, 1833, entitled "An act to modify the Act of the 14th of July, 1832, and all other Acts imposing Duties on Imports," declares, "that from and after the 31st of December, 1833, in all cases where duties are imposed on foreign imports by the act of the 14th of July, 1832, entitled 'An Act to alter and amend the several Acts imposing Duties on Imports,' or by any other act, shall exceed 20 per cent. on the value thereof, one-tenth part of such excess shall be deducted," &c.

It is believed that by this provision, and as necessary to the execution of the law, all duties imposed by any act of Congress upon foreign imports are substantially regulated by, and are directed to be estimated and levied upon, the value of the square yard, where that is the form, and upon some other quantity or parcel in cases where the duty is not imposed by the square yard; and that consequently the authority conferred by the 9th section aforesaid must necessarily be exercised, for the more effectual execution of the said act of the 2d of March, 1833.

The following rules and regulations are therefore established, under the direction of the President

Imports.
merica, in con-
ces are imposi

of the United States, for the purpose of securing a just, faithful, and impartial appraisal of all goods, wares, and merchandise imported into the United States from and after the 31st of December next, and for the just and proper entries of the actual value thereof, and of the square yard, parcels or other quantities, as the case may require.

In all cases of *ad valorem* duties under the act of the 14th of July, 1832, or any other act, the regulations at present authorized by law, for ascertaining the actual value, will remain unaltered. With respect to those articles liable to a specific duty, or other duty than that of *ad valorem*, the actual value thereof at the time purchased, and place from which the same shall have been imported into the United States or in the country wherein the same may have been originally manufactured, or produced, as the case may be, will be appraised, estimated, and ascertained, and the number of yards, or square yards, tons, pounds, gallons, bushels, or other parcels or quantities, and such actual value of any of them as the case may require, and just and proper entries thereof be made, in the same manner and according to the same regulations, as are required by the said act of the 14th of July, 1832, and other acts now in force in regard to articles paying *ad valorem* duty; and in all such cases the same verification of invoices and other proofs will be required and produced as are at present authorized in respect to articles liable by previous acts in an *ad valorem* duty. The value of all such articles being thus ascertained, the proportion which the duty now paid by such articles bears to the said value will be calculated, and from the excess thereof beyond 20 per cent, there will be deducted, from and after the 31st of December next, 10 per cent.; that is to say, where such proportion shall be equal to 30 per cent., there shall be deducted 10 per cent., upon 30 per cent., or 3 dollars; and from and after the 31st of December, 1833, the like deduction shall be made from the same excess, or 10 per cent., upon 30 per cent., being 3 dollars more; and in the same manner, at the several periods specified in the said act of the 3d of March, 1833, until the 31st of December, 1841; from and after which, one half of the residue of such excess will be deducted, and the other half thereof from and after the 30th of June, 1842.

From the proportion of the duty thus ascertained upon the wines of France, in addition to the said 10 per cent., there will also be deducted such further per cent. as will be necessary to preserve the discrimination in favour of such wines, stipulated in the convention between the United States and his Majesty the King of the French, concluded at Paris on the 4th of July, 1831, and authorized by law.

It may be proper to observe, that all manufactures of cotton, or of which cotton shall be a component part, will be appraised, estimated, and ascertained, and the number of yards, square-yards, or otherwise, parcel or quantities, and of such actual value thereof as the case may require, will be ascertained, and just and proper entries thereof made, according to the foregoing regulations.

It is believed that the value of foreign imports referred to in the act of the 3d of March, 1833, is not the assumed value on which the duty upon all manufactures of cotton, or of which cotton shall be a component part, is directed to be estimated under the act of the 14th of July, 1832; viz. of thirty cents, if not dyed, coloured, painted, or stained, though valued at less than 30 cents; and of thirty-five cents, if dyed, coloured, painted, or stained, though valued at less than 35 cents the square yard. This value is merely artificial, and assumed by previous laws as a means of augmenting the *ad valorem* rate of duty, imposed for the purpose of protection, upon such articles; and the amount of the duty, although ascertained by the adoption of the minimum principle, in the proportion which the sum collected by the government bears to the actual value of the article; and, therefore, a quantity of such cottons, costing in fact 80 dollars, but valued for the purpose of the act of the 14th of July, 1832, at 240 dollars, really pays a duty of 75 per cent. upon the true value thereof.

The act of the 3d of March, 1833, however, proceeds upon a different principle, and aims at a different purpose. It obviously intends to make an equal deduction from the duty on all foreign imports, and ultimately to reduce it to a rate not exceeding 20 per cent. upon the real, and not an assumed, value of the articles imported. This last purpose is explicitly stated in the last clause of the 5th section, which provides "that all imports on which the last section of this act may operate, and all articles now admitted to entry free of duty, or paying a less rate of duty than 20 per cent. *ad valorem*, before the said 30th of June, 1842, from and after that day may be admitted to entry, subject to such duty, not exceeding 20 per cent. *ad valorem*, as shall be provided for by law." And the last section, which has been already referred to, expressly provides for the deduction, after the 30th of June, 1833, of all excess of foreign imports above 20 per cent. on the value thereof, which shall have been imposed by previous laws, and to which they may then be subject.

The object of thus establishing a general *ad valorem* duty on foreign imports, and of equalizing the rate, can only be attained by calculating the duty on the real instead of the assumed value. This purpose is more particularly manifest from the last clause of the 3d section, which provides, that from and after the 30th of June, 1842, "the duties required to be paid by law on goods, wares, and merchandise, shall be assessed upon the value thereof at the port where the same shall be entered, under such regulations as may be prescribed by law." Each of these clauses relates to the actual value of the foreign import, and they differ only in estimating that value; previously to the 30th of June, 1833, the value in the foreign port being taken, and after that time, the value at the port of entry. The object of neither can be accomplished at any period, by adhering either to the nominal value assumed by previous acts, or in the rate of *ad valorem* founded upon such assumption.

In all importations of manufactures of cotton, therefore, or of which cotton shall be a component part, after the 31st of December, 1832, the value thereof will be ascertained in the manner aforesaid, and from the amount which the rate of duty under the act of the 14th of July, 1832, or any other act, shall exceed 20 per cent. on such value, the deduction required by the act of the 3d of March, 1833, will be made according to the foregoing rules.

Though these rules and regulations will not go into effect until the 1st of January next, they have been thus early adopted and made public, for the purpose of giving timely notice to the manufacturers and merchants, and all others concerned; and especially as to the verification, by the consuls abroad of the invoices of importations to be made after that time.

LOUIS M'LANE, Secretary of the Treasury.

Dzeroback.—All articles subject to duty imported into the United States, not having been landed more than 3 years, are allowed a drawback of the duties, on exportations of the same (except foreign dried and pickled fish, and other salt provisions, and chain cables).

Credits.—When the duty on an article of which wool is not a component part does not exceed 300 dollars, it must be paid in cash without discount; when it exceeds 300 dollars, a credit of 3 months is allowed for the 1st, and of 6 months for the other 1/2, reckoning from the date of the vessel's entry. Duties on wool, and all manufactures of wool, to be paid in cash without discount.

Discount.—When the duties on any article, except wool and woolen manufactures, exceed 200 dollars, and they are paid in cash at the time of entry, the importer is entitled to a discount of 4 per cent.

Leakage and Drerage.—On spirits, 2 per cent. *ad valorem*, and porter, in bottles, 10 per cent.; all other liquors, in bottles, 5 per cent.

Restrictions.—No goods to be imported in vessels less than 30 tons burthen. No beer, ale, and porter, in casks of less capacity than 60

gallons, beer measure; or, if in bottles, in packages less than 6 lbs. No distilled spirits in casks of less capacity than 90 gallons measure, except brandy, which may be imported in casks of any capacity, not less than 15 gallons.

Tonnage Duty.—On American vessels, and the vessels of the West Indies, Central America, Netherlands, Hamburg, Bremen, London, Prussia, Sweden, Norway, Ulsterburgh, Russia, Asia, East Hindoos, Papal Dominions, Portugal, and Barbary, from whatever port or place, and on French vessels coming from Martinique and Guadeloupe, &c. On French vessels from other ports, and all other foreign vessels (except as above enumerated) coming from ports where Americans are permitted to trade, 1 dollar per ton; but from ports where Americans are not permitted to trade, 2 dollars and 50 cents per ton.

On Spanish vessels, coming direct from Spain, 5 cents per ton. **Dye Goods.**—The following, among other articles, are allowed free of duties.—Antimony, alumina, alves, another name, ammonia, argols, arrowroot, arsenic, asphaltum.—Belgium, Berlin, and

and bleaching powder, brimstone, sugar, sugar, cinchona, pepper, saffron, and bark, and shoes, and woollen goods.—From the westward—Coffees, gums of all kinds, and skins, hides, horns, bones, ivory, soap, Lac, dye, liquorice,

The following Table of the principal articles is

NICARAGUA, or PEACH WOOD (Ger. *Nicaragaholz*, *Blutholz*; Du. *Bloedhout*, Fr. *Bois de sang*, *Bois de Nicaragua*; It. *Legno sanguigno*; Sp. *Palo de sangre*; Port. *Pao sanguinho*), a tree of the same genus (*Casalpinia*) as the Brazil and sapan woods, but the species has not been exactly ascertained. It grows principally in the vicinity of the lake of Nicaragua, whence its name. It is said by Dr. Bancroft to be almost as red and heavy as the true Brazil wood, but it does not commonly afford more than a third part, in quantity, of the colour of the latter; and even this is rather less durable and less beautiful, though dyed with the same mordants. Nicaragua or peach woods differ greatly in their quality as well as price; one sort being so deficient in colouring matter, that 6 pounds of it will only dye as much wool or cloth as 1 pound of Brazil wood; while another variety of it will produce nearly half the effect of an equal quantity of Brazil wood, and will sell proportionally dear.—(*Bancroft on Colours*, vol. ii. p. 332.)

The London dealers distinguish Nicaragua wood into 3 sorts, viz. *large*, *middle*, and *small*; the price of the 1st sort (duty included) being from 14*l.* to 20*l.* per ton; of the 2d, from 8*l.* to 10*l.* per do.; and of the 3d, from 7*l.* to 8*l.* per do. The entries of Nicaragua wood for home consumption amounted, in 1831, to 1,485 tons: in 1832, they amounted to 1,890 tons; an increase that was, no doubt, in part at least, occasioned by the duty having been reduced in 1831 from 15*s.* to 5*s.* a ton.

NICKEL, a scarce metal, which occurs always in combination with other metals, from which it is exceedingly difficult to separate it. When pure, it is of a fine white colour resembling silver. It is rather softer than iron: its specific gravity, when cast, is 8.273; when hammered, 8.932. It is malleable, and may without difficulty be hammered into plates not exceeding $\frac{1}{100}$ th part of an inch in thickness. It is attracted by the magnet; and is not altered by exposure to the air, nor by being kept under water. It is employed in potteries, and in the manufacture of porcelain.—(*Thomson's Chemistry*.)

NITRE. See SALTPETRE.

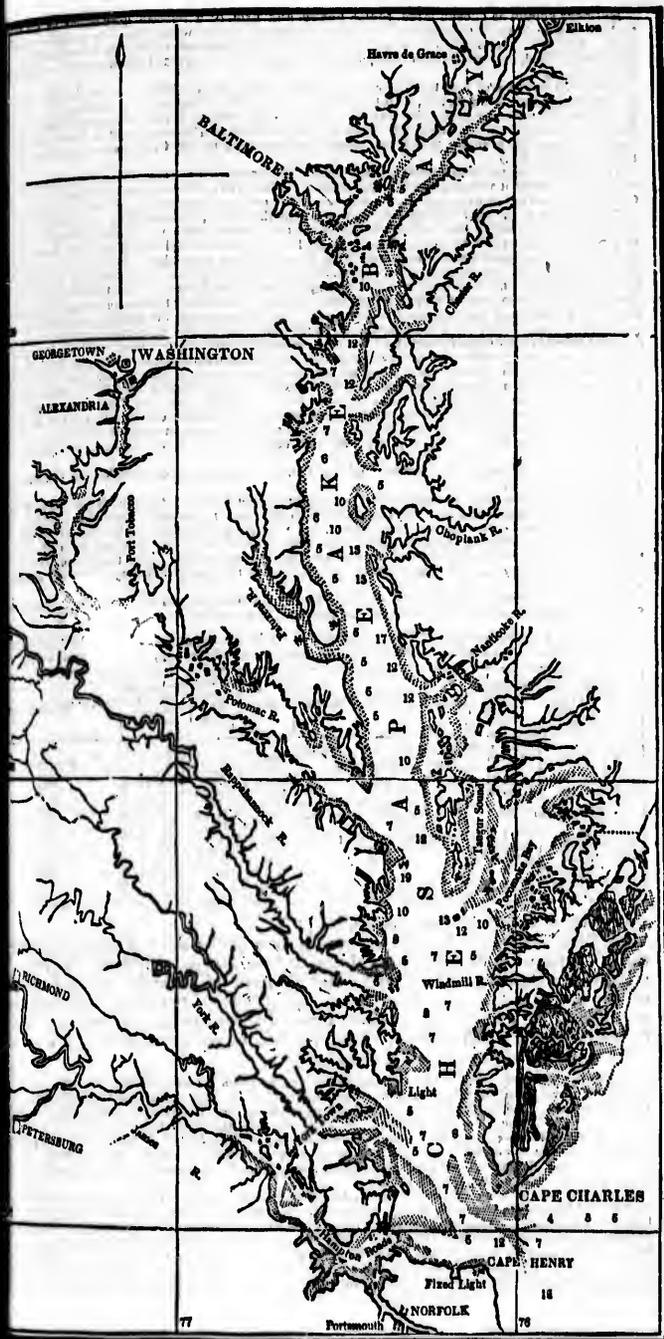

[**NORFOLK**, a seaport situated on Elizabeth river in Virginia, and 8 miles from Hampton Roads, in lat. 37° 12' North, and longitude 76° 42' West. Its harbour is capacious and deep, of easy access, and safe in all weathers. The Roads are formed by an enlargement of James river, at its mouth in the Chesapeake Bay; and they afford an anchorage for vessels, unsurpassed anywhere else in the world. These circumstances, together with the advantages of transportation furnished by the Dismal Swamp canal and the Portsmouth and Roanoke railroad, have rendered Norfolk a place of considerable trade. In this respect it takes precedence of any other place in the state of Virginia. We annex a plan of the Chesapeake Bay. See opposite page.—*Am. Ed.*]

NOTE, PROMISSORY. See BANKING, and BANKS.

NUT, or HAZEL NUT (Ger. *Haselnüsse*; Fr. *Noisettes*, *Avelines*; It. *Nociuole*, *Avelane*; Sp. *Avellanas*; Port. *Avellãs*; Lat. *Avellanæ*), the fruit of different species of *Coryli*, or hazels. The kernels have a mild, farinaceous, oily taste, agreeable to most palates. A kind of chocolate has been prepared from them; and they have sometimes been made into bread. The expressed oil of hazel nuts is little inferior to that of almonds. Besides those raised at home, we import nuts from different parts of France, Portugal, and Spain, but principally from the latter. The Spanish nuts in the highest estimation, though sold under the name of Barcelona nuts, are not really shipped at that city, but at Tarragona, a little more to the south. Mr. Inglis says that the annual average export of nuts from Tarragona is from 25,000 to 30,000 bags, of 4 to the ton. They cost, free on board, in autumn, 1830, 17*s.* 6*d.* per bag.—(*Spain in 1830*, vol. ii. p. 362.) The entries of nuts for home consumption amount to from 100,000 to 125,000 bushels a year; the duty of 5*l.* a bushel producing from 10,000*l.* to 12,500*l.* nett.

NUTMEG (Ger. *Muskatennüsse*; Du. *Muskaät*; Fr. *Muscades*, *Noix muscade*; It. *Noce muscada*; Sp. *Moscada*; Arab. *Jowzaltëib*; Sans. *Jitiphala*; Malay, *Dwab-pala*), the fruit of the genuine nutmeg tree (*Myristica Moschata*), a native of the Moluccas, which has been transplanted to Sumatra, Penang, &c. An inferior and long-shaped nutmeg is common in Borneo; but the fruit nowhere attains to the same perfection as in the Moluccas. Of the several varieties of the tree, that denominated the Queen Nutmeg, which bears a small round fruit, is the best. The kernel, or proper nutmeg, is of a roundish oval form, marked on the outside with many vermicular furrows, within of a fleshy farinaceous substance, variegated whitish and bay. Nutmegs are frequently punctured and bored, in order to obtain the essential oil; the orifice being afterwards closed; but the fraud is easily detected by the lightness of the nutmeg.—(*Thomson's Dispensatory*; *Ainslie's Materia Indica*.)

78

Nutmegs should be chosen large, round, heavy, and firm, of a lighish grey colour on the outside and the inside beautifully marbled, of a strong fragrant smell, warm aromatic taste, and a fat body. They are very subject to be worm-eaten. The best manner of packing them is in dry clean boxes, the oblong kind, and the smaller ones, should be rejected. 15 cwt. are allowed to a ton.—(Jardinier's *Orient. Com.*)

The dried produce of a nutmeg tree consists of nutmeg, mace (which see), and shell. The whole produce to be divided into 100 parts, there are 13½ of mace, 33½ of shell, and 53½ of nutmeg. In the ancient commerce, and down to the establishment of the Dutch monopoly, nutmegs were sold and exported in the shell. The natives, whenever the commerce is left to their management, continue the practice, which is strongly recommended by Mr. Crawford.—(*East Indian Archipelago*, vol. iii. p. 396.)

The jealous and miserable policy of the Dutch has reduced the trade in nutmegs to a mere shadow compared to what it would otherwise have been. They have, in so far at least as it was possible, exerted themselves to exterminate the nutmeg plants every where except in Banda. They have made the native princes of the surrounding islands to root out the trees; and annually send a fleet to see that the work of destruction has been effected, and that the bribes have not been bestowed in vain. They engage in an illicit trade in spices is dear to an inferior person, and banishment to a noble; and notwithstanding these tremendous penalties, it is supposed that about 60,000 lbs. of nutmegs, and 15,000 lbs. of mace, are clandestinely exported each year. In Banda, the aboriginal inhabitants have been expatriated, and the island parcelled among settlers from Holland, under the name of plantations. These persons, who may be turned out of their farms on the most trifling pretext, have about 100 slaves, who cultivate and prepare the nutmegs. The prices paid to the cultivator are all fixed by government; and it deserves to be mentioned, as affording one of the most striking illustrations of the ruinous effects of monopoly, that the fixed price which the government is now obliged to pay for nutmegs is five times greater than the price at which they bought them when the trade was free! Such a rough outline of that monstrous system, which has reduced what used to be one of the most important branches of Eastern commerce so low, that it is unable to afford employment for the capitalist and the wealthy merchant. We cannot conceive how so enlightened and liberal a government as that of Holland should continue to tolerate such scandalous abuses—abuses destructive alike of the rights of those subjected to its authority in the East, and the commerce and wealth of its subjects at home.—(*Modern Universal History*, vol. x. p. 457—467. 8vo ed.; and *Crawford's Eastern Archipelago*, vol. p. 394—413.)

Mr. Crawford estimates the produce of the Banda Islands at about 600,000 lbs. of nutmegs, and 150,000 lbs. of mace. During the period that the English had possession of the Spice Islands, nutmeg plants were carried to Penang, Bencoolen, and some of the West India Islands. In the latter they have altogether failed, at least as far as respects any useful purpose; but very good nutmegs, and in considerable quantities, are now raised at Penang and Bencoolen. Mr. Crawford, however, alleges that the cost of bringing them to market is there so high, that the restoration of a free culture in the native country of the nutmeg would instantly destroy this unstable and factitious branch of industry.—(*Eastern Archipelago*, vol. iii. p. 409.)

The duty on nutmegs was reduced, in 1819, from 5s. 5d. to 2s. 6d. per lb.; and the quantities consumed for home consumption have since rapidly increased. We subjoin

An Account of the Quantities of Nutmegs retained for Home Consumption in the United Kingdom, each Year since 1810, the Nett Amount of Duty received thereon, and the Rates of Duty.

Years.	Quantities retained for Home Consumption.	Nett Amount of Duty received thereon.	Rates of Duty charged thereon.	Years.	Quantities retained for Home Consumption.	Nett Amount of Duty received thereon.	Rates of Duty charged thereon.

[See IMPORTS AND EXPORTS.—*Am. Ed.*]

NUTRIA, or NEUTRIA.—*Am. Ed.* The commercial name for the skins of *Myopotamus beavis* (Commerson), the *Coyou* of Molina, and the *Quoia* of D'Azara. In France, the skins were, and perhaps still are, sold under the name of *raconda*; but in England they are imported as *nutria* skins—deriving their appellation, most probably, from some supposed similarity of the animal which produces them, in appearance and habits, to the otter, the Spanish name for which is *nutria*. Indeed, Molina speaks of the *coyoyou* as a species of water rat, of the size and colour of the otter.

Nutria fur is largely used in the hat manufacture; and has become, within the last 15 or 20 years, an article of very considerable commercial importance. The imports fluctuate considerably, but they amounted to 1,370,103 skins; but they have not in any other year been much more than this number. In 1826, they were only 60,871. In 1831 and 1832, the imports were, at an average, 200,000 skins a year. Those entered for home consumption pay a duty of 1½d. a skin. They are principally brought from the Rio de la Plata. Nutria skins are very extensively used on the Continent. *Troy mentions*, that in certain years, a single French furrier (M. Bechem), has received from 100 to 20,000 skins.—(See FUR TRADE.)

The *coyoyou* or *quoia* is a native of South America, very common in the provinces of Chili, Buenos Ayres, and Tucuman, but more rare in Paraguay. In size it is less than the beaver, which it resembles in many points. The head is large and depressed, the ears small and rounded, the neck long and short, the muzzle sharper than that of the beaver, and the whiskers very long and stiff. The teeth are, as in the beaver, 2 incisor teeth, and 8 molar, above and below—20 teeth in all. The hind feet

* *Annales du Muséum*, vol. vi. p. 89. The figure given is, generally speaking, good; but the history, and contradicts the description.

The fore feet have some number of toes; and the little toe being small, long, crooked, and bare are not numerous. The claws are brownish red, which tips and extremity of which like the beaver, the coyoyou of colour, and the same importance in the habits of the coyoyou as the beaver. In a state of nature, they dig, and burrows in the earth to accompany her. The coyoyou is easily domesticated. We are indebted for the name to W. J. Broderip, Esq. **NUX VOMICA** (Fr.) growing in various parts of the East, accompanied with a smooth crust, several orbicular flat seeds, which has a very bitter, acrid, and is considered a violent poison. A strong emetic; but its medicinal uses are in the *Dispensatory*, &c.)

OAK (Ger. *Eiche*; D. *Eiche*; Port. *Roble*, &c.) there are several varieties of oak, which claims precedence prior to that of this species, especially in compactness, and wedgeable and gnarled (from 60 to 70 years), and is used to render, and some of the best qualities in so great demand for a strain, and no other. A fine oak is one of the strongest and most durable does not take, like that of Lebanon, no true spring from the trunk which is stem and white beauty; and the horizontal idea of its sov-

The fore feet have each 5 fingers not webbed, the thumb being very small: the hind feet have the same number of toes; the great toe and 3 next toes being joined by a web which extends to their sides, and the little toe being free, but edged with a membrane on its inner side. The nails are combed, long, crooked, and sharp. The tail, unlike that of the beaver, is long, round, and hairy; but the hairs are not numerous, and permit the scaly texture of the skin in this part to be seen. The back of a brownish red, which becomes redder on the flanks: the belly is of a dirty red. The edges of the lips not extremely of the muzzle are white.

Like the beaver, the coypou is furnished with 3 kinds of fur; viz. the long ruddy hair which gives it some of colour, and the brownish ash-coloured fur at its base, which, like the down of the beaver, is of much importance in hat making, and the cause of the animal's commercial value.

The habits of the coypou are much like those of most of the other aquatic rodent animals. Its principal food, in a state of nature, is vegetable. It affects the neighbourhood of water, and swims perfectly well, and burrows in the ground. The female brings forth from 5 to 7 at a time; and the young always accompany her.

The coypou is easily domesticated, and its manners in captivity are very mild.

We are indebted for this account of nutria—the first, we believe, that appeared in any English work, to W. J. Broderip, Esq., F. R. S., &c.

NUX VOMICA (Fr. *Noix Vomique*; Hind. *Kaachla*), the fruit of a species of *Strychnos*, growing in various places in the East Indies. The fruit is about the size of an orange, covered with a smooth crustaceous yellow bark, and filled with a fleshy pulp, in which are imbedded several orbicular flattened seeds, about $\frac{1}{2}$ of an inch in diameter. Nux vomica is inodorous, and has a very bitter, acrid taste, which remains long on the palate. It is known as a very violent poison. A suspicion has, however, been entertained, that it has been used in port-wines and breweries; but its introduction into them is prohibited under heavy penalties.—(*Thomson's Dispensatory*, &c.)

O.

OAK (Ger. *Eiche*; Du. *Eik*; Da. *Eeg*; Sw. *Ek*; Fr. *Chêne*; It. *Quercia*; Sp. *Roble*, *Arbollo*; Port. *Roble*, *Carbalho*; Rus. *Dub*; Pol. *Dab*; Lat. *Quercus*; Arab. *Baalul*). There are several varieties of this valuable tree; but the common English oak (*Quercus robur*) claims precedence of every other. The oak timber imported from America is very superior to that of this country: the oak from the central parts of Europe is also inferior, especially in compactness and resistance of cleavage. The knotty oak of England, the "unwedgable and gnarled oak," as Shakspeare called it, when cut down at a proper age (from 50 to 70 years), is the best timber known. Some timber is harder, some more difficult to rend, and some less capable of being broken across; but none contains all the best qualities in so great and equal proportions; and thus, for at once supporting a weight, resisting a strain, and not splintering by a cannon shot, the timber of the oak is superior to every other.

A fine oak is one of the most picturesque of trees: it conveys to the mind associations of strength and duration, which are very impressive. The oak stands up against the blast, and does not take, like other trees, a twisted form from the action of the winds. Except the cedar of Lebanon, no tree is so remarkable for the stoutness of its limbs; they do not exactly spring from the trunk, but divide from it; and thus it is sometimes difficult to know which is stem and which is branch. The twisted branches of the oak, too, add greatly to its beauty; and the horizontal direction of its boughs, spreading over a large surface, communicates the idea of its sovereignty over all the trees of the forest. Even a decayed oak,

" ————— dry and dead,
Still clad with reliques of its trophies old,
Lifting to heaven its aged, hoary head,
Whose foot on earth has got but feeble hold,"

Even such a tree as Spencer has thus described, is strikingly beautiful; decay in this looks pleasing. To such an oak Lucan compared Pompey in his decline:—

"Qualls frugifero quercus sublimis in agro
Eruis veteres pupuli, r. — aque gestans
Dona ducum; nec jam v. — adibus herens,
Pondere fixa suo est; nudoque per æra ramos
Effundens, trunco, non frondibus, efficit umbram.
At quamvis primo nutet cesura sub Euro,
Tot circum silvæ firmo se robore tollant,
Sola tamen colitur."—(Lib. i. lin. 130.)

The oak is raised from acorns, sown either where the oak is to stand, or in a nursery whence the young trees are transplanted.

The colour of oak wood is a fine brown, and is familiar to every one: it is of different shades; that inclined to red is the most inferior kind of wood. The larger transverse septa are in general very distinct, producing beautiful flowers when cut obliquely. Where the septa are small, and not very distinct, the wood is much the strongest. The texture is alternately compact and porous; the compact part of the annual ring being of the darkest colour, and in irregular dots, surrounded by open pores, producing beautiful dark veins in some shades, particularly pollard oaks. Oak timber has a particular smell, and the taste is slightly astringent. It contains gallic acid, and is blackened by contact with iron when it is damp.

The young wood of English oak is very tough, and often cross-grained, and difficult to work. Foreign wood, and that of old trees, is more brittle and workable. Oak warps and twists much in drying; and, in seasoning, shrinks about $\frac{1}{3}$ of its width.

Oak of a good quality is more durable than any other wood that attains a like size. Trevius says it is of eternal duration when driven into the earth: it is extremely durable in water; and in a dry state it has been known to last nearly 1,000 years. The more compact it is, and the smaller the pores are, the longer it will last; but the open, porous, and coloured oak, which grows in Lincolnshire and some other places, is not near so durable.

Besides the common British oak (*Quercus robur*), the sessile-fruited bay oak (*Quercus sessiliflora*) is pretty abundant in several parts of England, particularly in the north. The wood of this species is said by Tredgold to be darker, heavier, harder, and more elastic than the common oak; tough, and difficult to work; and very subject to warp and split in seasoning. Mr. Tredgold seems disposed to regard this species as superior to the common oak for ship building. But other, and also very high authorities, are opposed to him on this point; and, on the whole, we should think that it is sufficiently well established, that for the great practical purposes to which oak timber is applied, and especially for ship building, the wood of the common oak deserves to be preferred to every other species. A well-informed writer in the *Quarterly Review* has the following remarks on the point in question:—

"We may here notice a fact long known to botanists, but of which our planters and purveyors of timber appear to have had no suspicion,—that there are two distinct species of oak in England, *Quercus robur*, and the *Quercus sessiliflora*; the former of which affords a close-grained, firm, and durable timber, rarely subject to rot; the other more loose and sappy, very liable to rot, and not half so durable. This difference was noted so early as the time of Ray; and Martyn in his *Flora Rustica*, and James Smith in his *Flora Britannica*, have added their testimonies to the fact. The second species is supposed to have been introduced some 2 or 3 ages ago, from the Continent, where the oak is the wood of this latter species, especially in the German forests, the timber of which is known to be worthless. But what is of more importance to us, is that *de facto* the imposture abounds, and is propagated vigorously, in the New Forest and other parts of Hampshire; in Norfolk, and the western counties, and about London; and there is but too much reason to believe that the numerous complaints that were heard about our ships being infected with what was called, improperly enough, dry rot, were owing to the introduction of this species of oak into the naval dock-yards; where, we understand, the distinction was not even suspected. It may thus be discriminated from the true old English oak:—The acorn stalks of the *robur* are long, and its leaves short; whereas the *sessiliflora* has the acorn stalks short, and the leaves long; the acorns of the former grow singly, or seldom two on the same footstalk; those of the latter, in clusters of 2 or 3 close to the stem of the branch. We believe the Russian ships of the Baltic, that are not of larch or fir, are built of this species of oak; but if it were not the case, their exposure on the stocks, without cover, to the heat of summer, which, though short, is excessive, and the rifts and chinks which fill up with ice and snow in the long winter, are enough to destroy the stoutest oak, and quite sufficient to account for their short-lived duration."

A great deal of inquiry and discussion has taken place at different periods as to the supply and consumption of oak timber; but the results have not been very satisfactory. In a *Report of the Commissioners of Land Revenue*, printed in 1812, it is stated that, taking the tonnage of the navy in 1690, 776,087 tons, it would require, at 14 loads to a ton, 1,104,663 loads to build such a navy; and supposing the average duration of a ship to be 14 years, the annual quantity of timber required would be 78,904 loads, exclusive of repairs, which they calculate would be about 37,000 loads; making the total about 116,000 loads; of which, however, the commissioners reckon may be furnished 31,341 loads; the annual average of the prizes; and of the remaining 84,659 loads, they think it not unnecessary to calculate on 28,659 from other sources than British oak. "This," they observe, "leaves 56,000 loads of such oak, as the quantity which would be sufficient annually to support, at its present unexampled magnitude, the whole British navy, including ships of war of all sorts; but which may be taken as equivalent together to 20 74-gun ships, each of which, one with another, contains 3,000 tons, or would require, at the rate of 14 loads to the ton, 3,000 loads; making just 60,000 loads for 20 such ships."

Now, it has been supposed that not more than 40 oak trees can stand on an acre of ground, so as to grow to a full size fit for ships of the line, or to contain each 14 loads of timber: 50 acres, therefore, would be required to produce a sufficient quantity of timber to build a 74-gun ship, and 1,000 acres to build 20 such ships; and as the oak requires at least 100 years to arrive at maturity, 100,000 acres would be required to keep up a successive supply, for maintaining a navy of 700,000 or 800,000 tons. The commissioners further observe, that as there are 20,000,000 acres of waste lands in the kingdom, a part set aside for planting would at once furnish the whole quantity wanted for the use of the navy.

According to Mr. Barrow, this calculation is over-rated by about a half. "In the first place," he says, "it is supposed a state of perpetual war, during which the tonnage of the whole navy is contained in more than double of what it now actually is; and, in the second place, it reckons the average duration of the navy at 14 years only; which, from the improvements that have taken place in the construction and preservation of ships of war, with the resources of tank ships built by India, we do not hesitate in assuming at an average of twice the number of years; and if so, the quantity of timber required for the navy will be nothing like that which the commissioners have stated."

"The fact, however, is certain, that long before the conclusion of the late war, a scarcity began to be felt, especially of the larger kind of timber fit for ships of the line; and so great was this want, that if Sir Robert Seppings had not contrived the means of substituting straight timber for that of different forms and dimensions, before considered to be indispensable, the building of new ships would have entirely ceased."

"If, however, the growth of oak for ship timber was greatly diminished during the war, so as to threaten an alarming scarcity, there is little doubt that, from the increased attention paid by individuals to their young plantations, and their great extension, as well as from the measure of allocating portions of the royal forests to those who had claims on them, and including the remainder for the use of the public, this country will, in future times, be fully adequate to the production of oak timber to the demand for the naval and mercantile marine."—(*Supp. Ency. Brit. art. Navy.*)

The bark of the oak tree is very valuable. It is preferred to all other substances for the purpose of tanning, and brings a high price.—(See BARK.)

The foreign oak timber imported into Great Britain is principally derived from Canada and France. The latter is the most valuable—its price being to the former in the proportion of about 9 to 6; the

of a load of Prussian oak timber. The quantity imported from each; the greater part quantities imported during

For further details with respect to the work on Timber, see Tredgold's *Principles of Timber*, p. 61.

OATS (*Ger. Hafer; Lat. Avena; Sp. Avena; Po. Avena*): One of the most common of the cereals of botanists. They are indigenous to Britain, and are well adapted to cold northern climates. They can be advantageously cultivated north of Paris; but, however, cultivated in considerable success. In the north of the people, it is far more extensively cultivated in the northern counties, and particularly in the north of Scotland.

There are 4 leading varieties of oats: the brown or red oat, the white oat, the potato oat is at present the most common in the north of England, and is the most common in the London market than any other. The potato oat is in Cumberland, and produces the stock now employed in some places in the north of England, in Derbyshire, and Somersetshire, in Cornwall.—(*Lo. Ency. Brit. art. 47—52.*)

In 1765, Mr. Charles Blount estimated the value of the Oats in Wales at 623,000.—(*Travels in Wales*, p. 100.) They are very extensively cultivated in the greatest consumption of any grain for business and pleasure. The culture of oats has been introduced into Ireland. Perhaps the produce of the ground is foul and exhausted, and the soil, well managed, will yield, at an average, 10 bushels per acre. For information as to the value of their prices, the quantity of the produce, &c. see the article OATS.

ODESSA, a flourishing city, situated on the coast, between the rivers Dnieper and Pruthi. It was founded by order of the Empress Catherine II. for the commerce of the Black Sea, and has in a great measure supplanted the ancient city of Caffa. A great fire, dated the 7th of August, 1792, comprehended the city, and the bottom being fine sand, which renders it less safe than other ports, one of which projects to the sea, and is 2000 ships. It has also the advantage of that of Marcellin, and the inhabitants, which conveys an air of salubrity, which has, in consequence,

A load of Prussian oak timber brought 4l., a load of Canada ditto would not bring more than about 3l. The quantity imported varies; but may, at an average, amount to about 10,000 loads, of 50 cubic feet each; the greater part from Quebec. Oak plank is almost wholly imported from Prussia. The quantities imported during the 6 years ending the 5th of January, 1833, were—

Year.	Loads.	Year.	Loads.	Year.	Loads.
1827	5,470	1829	1,434	1831	2,525
1828	2,449	1830	1,542	1832	1,789

For further details with respect to the importation of oak, its price, duty on, &c., see WOOD.—See *Tredgold's Principles of Carpentry*; art. *Navy*, Supplement to *Encyc. Brit.*; the very interesting work on *Timber, Trees and Fruits*, in the *Library of Entertaining Knowledge*; *Rass's Cyclopaedia*, &c.

OATS (Ger. *Hafcr*; Du. *Havre*; Da. *Havre*; Sw. *Hafre*; Fr. *Avoine*; It. *Vena*, *Avena*; Sp. *Avena*; Port. *Avea*; Russ. *Oves*; Pol. *Owies*), a species of grain, the *Avena sativa* of botanists. There are innumerable varieties of this grain, some of which are said to be indigenous to Britain. It is the hardiest of all the cereal grasses, growing luxuriantly in the cold northern climates, and in coarse mountainous districts, where neither wheat nor barley can be advantageously cultivated. It thrives best, and is, indeed, chiefly raised, in latitudes north of Paris; being, but little cultivated south of France, Spain, or Portugal. It is, however, cultivated in Bengal, so far as the 22d degree of latitude, and, in the East Indies, with considerable success. In Scotland, where it has long formed a principal part of the food of the people, it is far more generally cultivated than any other species of grain. It is also very extensively cultivated in Ireland. In England it is grown principally in the northern counties, and in the fens of Lincoln, Huntingdon, Cambridge, and Norfolk; but the oats of Northumberland and Scotland are reckoned superior to those raised farther south.

There are 4 leading varieties of this grain, cultivated in England, viz. white, black, grey, and brown or red oats. The sub-varieties of the white are numerous. That denominated the potato oat is at present almost the only one raised on land in a good state of cultivation in the north of England and the south of Scotland, and usually brings a higher price in the London market than any other variety. It was accidentally discovered growing in a field of potatoes in Cumberland in 1788; and from the produce of that single stalk has been introduced the stock now in general cultivation. Black and grey oats are little cultivated, except in some places in the north of Scotland. The red oat is chiefly confined to Cheshire, Derbyshire, and Staffordshire. A species of naked oat, provincially called *pillar*, is raised in Cornwall.—(*Loudon's Encyc. of Agriculture*; *Brown's Rural Economy*, vol. ii. pp. 47—52.)

In 1765, Mr. Charles Smith estimated the number of consumers of oats in England and Wales at 623,000.—(*Tracts on the Corn Trade*, 2d edit. p. 140.) ; but at present we believe they are very considerably fewer. The feeding of horses has at all times occasioned the greatest consumption of oats in this part of the kingdom; and as the number of horses kept for business and pleasure has been vastly increased within the last 30 or 40 years, the culture of oats has been considerably extended, notwithstanding the increasing imports from Ireland. Perhaps the produce of no species of grain varies more than that of oats. Where the ground is foul and exhausted, not more than 20 bushels an acre are obtained; but on rich soils, well managed, 64, 72, and sometimes 80 bushels and upwards have been reaped. Oats yield, at an average, 8 lbs. meal for 14 lbs. corn.

For information as to the laws regulating the importation and exportation of oats, and their prices, the quantities imported and exported, &c., see **CORN LAWS AND CORN TRADES**.

ODESSA, a flourishing sea-port of Southern Russia, on the north-west coast of the Black Sea, between the rivers Dniester and Bug, in lat. 46° 28' 54" N., lon. 30° 43' 22" E. Population said to amount to 40,000. The foundations of Odessa were laid so lately as 1792, by order of the Empress Catharine, after the peace of Jassy. It was intended to serve as an entrepot for the commerce of the Russian dominions on the Black Sea and the sea of Azoff, and has in a great measure answered the expectations of its founders. By an Imperial ukase, dated the 7th of February, 1817, it was declared a free port, and the inhabitants exempted from taxation for 30 years; since which period its increase has been extremely rapid. The bay or roadstead of Odessa is extensive, the water deep, and the anchorage good, the bottom being fine sand and gravel; it is, however, exposed to the south-easterly wind, which renders it less safe in winter. The port, which is artificial, being formed by 2 moles, one of which projects to a considerable distance into the sea, is calculated to contain about 200 ships. It has also the advantage of deep water. There is a convenient iszaretto, on the model of that of Marseilles. The want of fresh water used to be the greatest disadvantage under which the inhabitants laboured; but this has been obviated by the construction of a canal which conveys an abundant supply of water into the town. There are no trees in the vicinity, which has, in consequence, a bleak and arid appearance.

articles which occur on the eastern coast of Spain, at which periods wheat is allowed to be lawfully imported, and, it is said, from the facility of its introduction by contraband, when not legally allowed, Mareilles has been a great depot for the wheat of the Black Sea.

From thence, as also from Gibraltar, where there is generally some in store, it can easily be transported to Spain, to Sardinia, to Corsica, to Tunis, to Tripoli, or wherever scarcity has created a beneficial market.

The coast of Barbary, though often having a surplus of wheat, much of which occasionally assists to feed Portugal, in some seasons have been affected with most deficient harvests. This was recently the case in a remarkable degree. Tripoli and Tunis experienced, in the year 1820, a harvest most miserably short, and were supplied from other countries.

Charges on Shipping Corn.—In 1816, the expense of delivering a chetwert of wheat free on board, including commission, warehouse rent, and shipping charges, amounted to upwards of 5 roubles; but at present (1836) it does not exceed 2 roubles. The duties per chetwert are as follow:—

Export duty	91 3/4 sh. cop.	Other grain 11 cop.
Quarantine	1-4	1-4
Town and harbour duties	7-4	2
Lycium duty	9	2
	98 1-4	24 1-4

The warehouse rent of corn at Odessa is from 8 to 10 copecks per chetwert per month. M. De Hagenmeter supposes that Turkey, and the different ports of the Mediterranean require, at an average, an annual supply of 1,400,000 chetwerts, or about 1,050,000 quarters, of which 1,000,000 chetwerts, or 750,000 quarters, are furnished by Southern Russia, and principally shipped from Odessa. Wallachia and Moldavia are both very fertile in corn; and were tranquilly and good order introduced into them, and the free navigation of the Danube secured, Galatz and Brailoff would be two of the principal European grain shipping ports. (See the excellent report of Hagenmeter on the Trade of the Black Sea, pp. 98—114. Eng. Trans.)

Wheat exported from Odessa pays an export duty of 8 roubles per 10 pods.

Exclusive of corn, the other articles mentioned as being exported from Odessa, find their way to the different markets in the Mediterranean. Those shipped for Turkey are iron, tallow, sail-cloth, cordage, anchors for ships of war, butter, &c. The exports to Italy and other European countries are similar.

The importation of all foreign articles into the Russian dominions on the Black Sea and the Sea of Azoff is confined to Odessa, Theodosia or Kaffa, and Taganrog. The import trade is, however, of inferior importance when compared with the export trade. The principal articles are sugar and coffee; dry woods, wine and brandy, cotton stuffs and yarn, woolen and silk manufactures, spices, cutlery; eggs, lemons, figs, and other fruit; lemon juice oil, tin and tin plates, dried fruits, paper, silk, specks, &c.

Principal Articles imported into Odessa in the following Years:—

The previous statements, for which we are indebted partly to the Report of M. De Hagenmeister, and partly to official and private sources, show the effect of the war between Russia and Turkey on the trade of Odessa; but it has again resumed its former activity; and will, doubtless, continue progressively to increase with the improvement of the vast countries of which it is the principal entrepôt. Several American merchantmen appeared, for the first time, in the Black Sea, in 1830.

A tribunal of commerce was established at Odessa in 1824, the jurisdiction of which extends over all disputes connected with trade. There is no appeal from its decision, except to the senate. Its institution is said to have been productive of considerable advantage.

There are 12 sworn brokers, approved and licensed by the Tribunal of Commerce, who have deputies appointed by themselves. They receive 1/2 per cent. from each party as commission. They are bound to register the various transactions in which they are employed.

A discount or loan bank was established at Odessa in 1823, which discounts bills, not having more than 4 months to run, at the rate of 6 per cent. interest; and makes advances upon the security of goods. Two institutions for marine insurance, and one for fire insurance, have been established within the last 4 or 5 years.

Most articles of provision are very cheap. Beef may be bought for 1/2 or 1/3 per lb., a quarter of lamb for 5s.; and poultry at proportionally low prices. Fish costs almost nothing, and is excellent. Water is an expensive article; and firewood is for the most part scarce and dear. Lately, however, the inhabitants have begun to supply themselves with coal from Bakhmut, in the government of Ekaterinoslov. A good deal of English coal has been taken to Odessa as ballast, and sold at a fair price.—(Morton's Travels in Russia, p. 262, &c.)

Monies, Weights, and Measures, same as at Petersburg; which see.

Odessa has a considerable and increasing trade with Redout-kalé, at the mouth of the Phasis, and with Trebisond and several ports on the south coast of the Black Sea. Georgian and Armenian merchants are already considerable purchasers at the Leipsic and other German fairs; and civilisation is beginning to strike its roots throughout all the extensive countries between the Black Sea and the Caspian. It is probable that, at no very remote period, the Phasis will be frequented by British ships; and that our merchants, without any enchantress to aid them, and depending only on the superior cheapness and excellence of their goods, will be hospitably received in the ancient Colchis, and bear away a richer prize than fell to the lot of Jason and his Argonauts.

Account of Imports at Redout-kalé from Odessa, from 1825 to 1830, both inclusive.

For some further details as to the trade of the Black Sea, see the article *SINOPE*.

Epochs in the Trade of the Black Sea. Depth of Water. Difficulty of Navigation, &c.—The trade of the Black or Euxine Sea was of great importance in antiquity. The shores of the Crimea, or Taurica Chersonesus, were settled by Milesian adventurers, who founded Panticapsum and Theodosia. The exports thence to Athens were nearly the same as those which are now sent from Odessa and Taganrog to Constantinople, Leghorn, &c.; viz. corn, timber, and naval stores, leather, wax, honey, salt fish, caviare, &c., with great number of slaves, the best and most serviceable that were anywhere to be met with. The Athenians set a very high value upon this trade, which supplied them annually with about 400,000 medimni of corn; and to preserve it, they carefully cultivated the alliance of the Thracian princes, and kept a garrison at Sestus, on the Hellespont.—(See the authorities in Anacharsis's Travels, c. 55.; and in Clarke's Connexion of the Saxon and English Coins, pp. 54–64.) During the middle ages, the Genoese acquired an ascendancy on this sea, and laboured

I. VOLATILE OIL often almost as liqu

with pretty considerable success to monopolise its trade. Their principal establishment was at Caffa, which was the centre of a considerable commerce. But the conquest of Constantinople by the Turks, in 1453, was soon after followed by the conquest of Caffa, and the total exclusion of European vessels from the Black Sea, which became in a great measure unknown. This exclusion was maintained for about 300 years, or till it was opened to the ships of Russia by the treaty of Kainardgi in 1774. The Austrians obtained a similar equality of privileges in 1784; and British, French, &c. ships were admitted by the treaty of Amiens. There were, however, some restraints still kept up; but these have been abolished by the late treaty between the Turks and Russians in 1829; and, for commercial purposes at least, the Black Sea is now as free as the Mediterranean.

Notwithstanding the number of English and other European ships that have visited this sea within the last 20 years, its geography is still very imperfectly known. A notion seems to have been long prevalent, that it was not only stormy, but also infested with numerous shoals. Polybius, indeed, contends, that, owing to the vast quantities of alluvial deposits brought down by the Danube and other large rivers that fall into the Black Sea, it was gradually filling up, and would become, at no very remote period, an immense morass! Dr Clarke seems to have espoused the same theory. But, how probable soever it may appear extremely little progress has hitherto been made towards the consummation described by Polybius. Instead of being shallow, the water is for the most part remarkably deep; with a bottom, where soundings have been obtained, of gravel, sand, and shells. A strong current sets from the Black Sea, through the Bosphorus, or Canal of Constantinople, into the Sea of Marmara, and from the latter through the Dardanelles, which it requires a fresh breeze to stem. This current is said to be sensibly felt in the Black Sea, 10 or 12 miles from the Bosphorus; and it may probably carry off some of the mud brought down by the rivers.—(See *Tournefort's Voyage du Levant*, Lett. 15, 16.; Art. 9. in No. I. of the *Journal of the Geographical Society*; *Macgill's Travels in Turkey*, vol. i. p. 245., &c.)

The navigation of the Black Sea has been represented, by most modern and all ancient writers, as exceedingly dangerous. We believe, however, that there is a good deal of exaggeration in the greater number of the statements on this subject. It is said to be particularly subject to dense fogs, and to currents; but the former are prevalent only at particular seasons, and the influence of the latter is not greater than in many other seas which are not reputed dangerous. Tournefort, one of the best and most accurate of travellers, considers the navigation of the Black Sea as safe as that of the Mediterranean:—"Il n'a rien de noir, pour ainsi dire, que le nom: les vents n'y soufflent pas avec plus de furie, et les orages ne sont gueres plus frequens que sur les autres mers." (Tome ii. p. 164. 4to ed.) Dr. Clarke (*Travels*, vol. ii. p. 387. 8vo ed.) affects to doubt this; but he assigns no grounds for his opinion; and who would think of putting his authority in competition with that of Tournefort! The truth is, that any sea would be dangerous to the Greek and Turkish pilots, by whom the Black Sea is principally navigated. If the progress of navigation were to be estimated by its state amongst them, we should have to conclude that it had been stationary from the era of the Argonauts. They seldom venture to get out of sight of the coasts; they have neither charts nor quadrants; and hardly even know that one of the points of the needle turns towards the North!—(*Tournefort, in loc. cit.*) There is not, certainly, much room for wonder at shipwrecks being frequent among vessels so navigated. On leaving the Black Sea, the greatest difficulty is in making the Bosphorus. "The mountains," says Mr. Macgill, "are all so much alike, that it is difficult to determine which of them is at the entrance, until you are within a very few miles of the coast: then, with a fair wind, you are on a lee shore with a lee current; and if you make a mistake, destruction is almost inevitable. The Turks have two light-houses at the entrance; but unless you see them before sunset, they are of little use: in the forests, on its borders, great quantities of charcoal are made, and the lights from it bewilder, and often mislead, the unhappy mariner."—(Vol. i. p. 245.)

From the vast quantity of fresh water poured into the Black Sea, the saline particles are so much diluted, that, with a slight frost, the surface becomes covered with ice; hence, during a great part of the year, hardly any navigation is attempted. The vessels that resort to Odessa seldom arrive at that port before the latter end of May; and those whose cargoes are not completed before the end of October, more frequently wait the return of spring, than adventure to encounter the dangers of an autumnal or winter voyage.

At Taganrog the frost commences earlier, and continues longer, than at Odessa; so that there are scarcely more than 4 or 5 months in the year, during which the Sea of Azoff can be safely navigated.

OIL (*Fr. Huile*; *Ger. Oel*; *It. Olie*; *Lat. Oleum*; *Rus. Maslo*; *Sp. Aceite*.) The term oil is applied to designate a number of unctuous liquors, which, when dropped upon paper, sink into it and make it semi-transparent, or give it what is called a greasy stain. These bodies are very numerous, and have been in common use from time immemorial. Chemists have divided them into two classes; namely, *volatile* and *fixed* oils. We borrow from Dr. Thomas Thomson the following statement with respect to these bodies:—

1. VOLATILE OILS, called also *essential oils*, are distinguished by the following properties:—1. Liquid, often almost as liquid as water, sometimes viscid; 2. Very combustible; 3. An acrid taste and a strong

fragrant odour; 4. Volatilised at a temperature not higher than 212°; 5. Soluble in alcohol, and imperfectly in water; 6. Evaporate without leaving any stain on paper.

By this last test it is easy to discover whether they have been adulterated with any of the fixed oils. Let a drop of the volatile oil fall upon a sheet of writing paper, and then apply a gentle heat to it; if it evaporates without leaving any stain upon the paper, the oil is pure; but if it leaves a stain upon the paper, it has been contaminated with some fixed oil or other.

Volatile oils are almost all obtained from vegetables, and they exist in every part of plants—the root, the bark, the wood, the leaves, the flower, and even the fruit; though they are never found in the substance of the cotyledons; whereas the fixed oils, on the contrary, are almost always contained in these bodies.

When the volatile oils are contained in great abundance in plants, they are sometimes obtained by simple expression. This is the case with oil of oranges, of lemons, and bergamotte; but in general they can only be obtained by distillation. The part of the plant containing the oil is put into a still with a quantity of water, which is distilled off by the application of a moderate heat. The oil comes over along with the water, and swims upon its surface in the receiver. By this process are obtained the oil of peppermint, thyme, lavender, and a great many others, which are prepared and employed by the perfumer; others are procured by the distillation of resinous bodies. This is the case in particular with oil of turpentine, which is obtained by distilling a kind of resinous juice, called turpentine, that exudes from the Juniper.

Volatile oils are exceedingly numerous. They have been long known; but as their uses in chemistry is but limited, they have not, hitherto, been subjected to an accurate chemical investigation. They differ greatly in their properties from each other; but it is impossible at present to give a detailed account of each.

1. The greater number of volatile oils are liquid; many, indeed, are as limpid as water, and have none of that appearance which we usually consider oily. This is the case with the following; namely, oil of turpentine, oranges, lemons, bergamotte, roses.—Others have the oily viscosity. It varies in them in all degrees. This is the case with the oils of mace, cardamom, saffron, cloves, cinnamon.—Others have the property of becoming solid. This is the case with the oils of parsley, fennel, aniseed, hair.—Others crystallise by slow evaporation. This is the case with oil of thyme, peppermint, marjoram.—The oil of nutmegs has usually the consistence of butter. This is the case also with the oils of hops and of pepper.

2. The colour of the volatile oils is as various as their other properties. A great number are limpid and colourless; as oil of turpentine, lavender, rosemary, savine, aniseed; some are yellow; as spike, bergamotte; some are brown; as thyme, savory, wormwood; others blue; as camomile, motherwort; others green; as milkfoil, pepper, hops, parsley, wormwood, cajuput, juniper, sage, valerian; others, though at first colourless, become yellow or brown by age; as cloves, cinnamon, saffron.

3. The odours are so various as to defy all description. It is sufficient to say, that all the fragrance of the vegetable kingdom resides in volatile oils. Their taste is acid, hot, and exceedingly unpleasant.

4. Their specific gravity varies very considerably, not only in different oils, but even in the same oil in different circumstances. The following are the specific gravities of several of the volatile oils, as ascertained by Dr. Lewis:—

Oil of Sassafras	1.094	Oil of Tansy	.846
Cinnamon	1.035	Caraway seeds	.823
Cloves	1.034	Oritanium	.840
Fennel	.997	Spike	.936
Hill	.984	Rosemary	.834
Pennyroyal	.978	Juniper berries	.911
Cumin	.975	Orange	.848
Mint	.975	Turpentine	.792
Nutmegs	.948		

When the volatile oils are heated in the open air, they evaporate readily, and without alteration diffuse their peculiar odours all around; but there is a considerable difference between the different oils in this respect. When distilled in close vessels they do not so readily assume the form of vapour. Hence they lose their odour, become darker in colour, and are partly decomposed. Oils do not seem very susceptible of assuming the gaseous form, unless some other substance, as water, be present.

If Fixed Oils are distinguished by the following characters:—1. Liquid, or easily become so when exposed to a gentle heat; 2. An unctuous feel; 3. Very combustible; 4. A mild taste; 5. Boiling point not under 600°; 6. Insoluble in water, and nearly so in alcohol; 7. Leave a greasy stain upon paper.

These oils, which are called fat or expressed oils, are numerous, and are obtained partly from animals and partly from vegetables, by simple expression. As instances, may be mentioned whale oil or train oil, obtained from the blubber of the whale and from cod; olive oil, obtained from the fruit of the olive; linsed oil and almond oil, obtained from linsed and almond kernels. Fixed oils may also be extracted from poppy seeds, hemp seeds, beech mast, and many other vegetable substances.

All these oils differ from each other in several particulars, but have also many particulars in common. 1. Fixed oil is usually a liquid with a certain degree of viscosity, adhering to the sides of the glass vessels in which it is contained, and forming streaks. It is never perfectly transparent; has always a certain degree of colour, most usually yellowish or greenish; its taste is sweet, or nearly insipid. When fresh, it has little or no smell.

There exist also in the vegetable kingdom a considerable number of bodies which, at the ordinary temperature of the atmosphere, are solid, and have hitherto been considered as fixed oils. Palm oil may be mentioned as an example. The various substances used in India and Africa as substitutes for butter, and as arguments, may likewise be mentioned.

2. All the fixed oils hitherto examined are lighter than water; but they differ greatly from one another in specific gravity. The same difference is observable in different samples of the same oil. The following Table contains the specific gravity of such oils as have been examined:—

Oil of Palm	.908	Oil of Beech nuts	.923
Hazel nuts	.941	Ben	.917
Popples	.960	Olives	.913

Fixed oil, when in the state of vapour, takes fire on the approach of an ignited body, and burns with a yellowish white flame. It is upon this principle that candles and lamps burn. The tallow or oil is first converted into a state of vapour in the wick; it then takes fire, and supplies a sufficient quantity of heat to convert more oil into vapour; and this process goes on while any oil remains. The wick is necessary, to present a sufficiently small quantity of oil at once for the heat to act upon. If the heat were great enough to keep the whole oil at the temperature of 600°, no wick would be necessary, as obvious from oil catching fire spontaneously when it has been raised to that temperature. When oil is used in this manner, either in the open air or in contact with oxygen gas, the only new products obtained are water and carbonic acid.

The drying oils are used as the vehicle of paints and varnishes. Linsed, nut, poppy, and hemp-seed oils, belong to this class. These oils in their natural state possess the property of drying oils, but

imperfectly. To put time in an iron pot their unctuous quality hence it is followed by ink, which requires. Nut oil has been acquires during but next after nut oil is freed from their use in the hands of the yellow.

imperfectly. To prepare them for the use of the painter and varnish-maker, they are boiled for some time in an iron pot, and sometimes burnt till they become yield. When they burn for some time, their unctuous quality is much more completely destroyed than by any method that has been practiced. Hence it is followed frequently in preparing the drying oils for varnishes, and always for printers' ink, which requires to be as free as possible from all unctuousity.

Nut oil has been found preferable to all other oils for printers' ink; though the dark colour which it acquires during boiling renders it not so proper for red ink as for black. Linseed oil is considered as next after nut oil in this respect. Other oils cannot be employed, because they cannot be sufficiently freed from their unctuousity. Ink made with them would be apt to come off and smear the paper while in the hands of the bookbinder, or even to spread beyond the mark of the types and stain the paper yellow.

For the regulations with respect to the importation and exportation of train oil, see p. 124.

OLIBANUM (Fr. *Encens*; Ger. *Weiranch*; It. *Olibano*; Arab. *Looban*), a gum-resin, the produce of a large tree (*Libanus thurifera*) growing in Arabia and India. It is imported in chests, containing each about 1 cwt. from the Levant and India; the best comes from the former, and is the produce of Arabia. Good olibanum is in semi-transparent tears, of a pink colour, brittle, and adhesive when warm; when burnt, the colour is very agreeable; its taste is bitterish, and somewhat pungent and aromatic; it flames for a long time with a steady clear light, which is not easily extinguished, leaving behind a black (not, as has been said, a whitish) ash. Olibanum is the frankincense (*thus*) of the ancients; and was extensively used by them in sacrifices.—(*Plin. Hist. Nat. lib. xii. c. 14.*) It has also been used in the ceremonies of the Greek and Roman churches.—(*Ainslie's Mat. Indica*; *Thomson's Chemistry*; *Kippingii Antig. Rom. lib. i. c. 11.*)

OLIVE, OLIVES (Ger. *Oliven*; Fr. *Olives*; It. *Ulive*, *Olive*; Sp. *Acitunas*; Port. *Azeitonas*; Lat. *Olivæ*), a fruit yielding a large quantity of oil, the produce of the *Olea*, or olive tree. The wild olive is indigenous to Syria, Greece, and Africa, on the lower slopes of Mount Atlas. The cultivated species grows spontaneously in Syria, and is easily reared in Spain, Italy, and the south of France. It has even been raised in the open air in England, but its fruit is said not to have ripened. The fruit is a smooth oval plum, about $\frac{2}{3}$ of an inch in length, and $\frac{1}{2}$ an inch in diameter, of a deep violet colour when ripe, whitish and fleshy within, bitter and nauseous, but replete with a bland oil; covering an oblong, pointed, rough nut. Olives intended for preservation are gathered before they are ripe. In pickling, the object is to remove their bitterness, and to preserve them green, by impregnating them with a brine of aromatised sea salt; for this purpose various methods are employed. The wood of the olive tree is beautifully veined, and has an agreeable smell. It is in great esteem with cabinet-makers, on account of the fine polish of which it is susceptible.

OLIVE OIL (Ger. *Baumöl*; Fr. *Huile d'olives*; It. *Olio d'uliva*; Sp. *Acetite de acitunas*; Lat. *Oleum olivarum*). The olive tree is principally cultivated for the sake of its oil. This is an insipid, inodorous, pale greenish yellow coloured, viscid fluid, unctuous to the feel, inflammable, incapable of combining with water, and nearly insoluble in alcohol. It is the lightest of all the fixed oils; and is largely used, particularly in Greece, Italy, Spain, and France, as an article of food, and in medicine, and the arts. It is also very extensively used in this country, particularly in the woollen manufacture.

The ripe fruit is gathered in November, and immediately bruised in a mill, the stones of which are set so wide as not to crush the kernel. The pulp is then subjected to the press in bags made of rushes; and by means of gentle pressure, the best, or *virgin* oil, flows first; a second, and afterwards a third, quality of oil is obtained by moistening the residuum, breaking the kernel, &c., and increasing the pressure. When the fruit is not sufficiently ripe, the recent oil has a bitterish taste; and when too ripe, it is fatty. After the oil has been drawn, it deposits a white, fibrous, and albuminous matter; but when this deposition has taken place, if it be put into clean glass flasks, it undergoes no further alteration; the common oil cannot, however, be preserved in casks above 1 $\frac{1}{2}$ or 2 years. It is sometimes adulterated by the admixture of poppy oil.—(*Thomson's Dispensatory*.)

The best olive oil is said to be made in the vicinity of Aix, in France. That which is brought from Leghorn, in chests containing 30 bottles, or 4 English gallons, is also very superior; it is known in our markets by the name of Florence oil, and is used mostly for culinary purposes. Olive oil is the principal article of export from the kingdom of Naples.—(See *NAPLES*.) Apulia and Calabria are the provinces most celebrated for its production. The Apulian is the best, and is preferred by the woollen manufacturers, by whom it is extensively used. By far the largest portion of the olive oil brought to England is imported from Italy; principally from Gallipoli, on the east coast of the Gulf of Taranto, in lat. 40° 3' N., lon. 18° 25' 55" E., whence it is commonly known by the name of Gallipoli oil. But, besides Italy, Spain sends us a large quantity; and we derive smaller supplies from Malta, Turkey, the Ionian islands, &c. Thus, of 3,791,057 gallons of olive oil imported in 1830, 2,034,237 were from Italy; 635,485 do. from Spain; 52,004 do. from Malta, partly at second hand; 21,467 from Turkey; 11,300 do. from the Ionian islands; about 30,000 do., at second hand, from the Netherlands and Germany.

The price of olive oil, duty paid, in London, in January, 1834, was as follows:—

		L.	s.	d.
Gallipoli	50 to 60	0	0	0
Spanish Calabria	55	0	0	0
Crete, Greece, and Provence, 1st	75	0	80	0
Barbary	53	0	to 64	0
Lucca, in jars	6	16	0	0
Florence	1	1	0	0

The duty of 8l. 8s. a tun (252 wine gallons) amounts to about 20 per cent., or 1-5th of the price. But as olive oil is an article much used in the household economy, and of essential importance in the arts, particularly the woollen manufacture, such a duty seems to be quite oppressive. Were it reduced to 2l. 8s. a tun, we believe it would be very little, if at all, less productive than at present, while the fall of price consequent upon such a reduction would have many beneficial consequences. Nothing can

larly from the tree on the ground, where they are picked up chiefly by women and children, and carried to the mill.

"The machinery employed in expressing the oil is of the rudest kind, and, no doubt, numerous improvements might be introduced, not only into this branch, but into that of cultivating the olive tree. The peasantry, however, and, in the kingdom of Naples, those who stand higher in the scale of fortune and rank, are too often but bores in intellect, are obstinate in their attachment to old practices, and are apt, when any of these are reprehended, to stop discussion by saying—*Faccio come faceva la mamma di mio padre, e cito basta.* (I do as my father of blessed memory did before me, and that's enough.)"

"The poor people of the country make culinary uses of the same oil that is exported, and which in England is only used in manufactures or burnt in lamps; but in the houses of the gentry I have often tasted oil prepared with more care, which was truly delicious, being equal to that of Sorrento, Vico, and Massa, or even to the best oils of Tuscany or Provence."—(Pp. 200—204.)

The *caricatori* of Bari and Monopoli furnish oils for the consumption of Upper Italy and Germany, through the medium of Venice and Trieste. They also draw supplies from Brindisi and Otranto.

The *caricatori* of Taranto, of Eastern Calabria or Retromarina, and of Western Calabria, the principal of which is Gioje, furnish supplies for Marseilles, &c. But the *caricatori* now mentioned, having no conveniences for clarification, produce only the thick oils used for soap-making.

The oils of Sicily, like those of Tunis, are too thin to be used singly in the making of soap; and being used only for mixing, are less valuable than most others.

The oil trade in the provinces is in the hands of respectable houses, which purchase by retail of the general planters. The oil thus collected is sold in Naples at a profit equal to the difference between the size of the measures by which it is bought and those by which it is sold. To facilitate transactions, orders or *redoles* are circulated, representing quantities of oil deposited in the provincial *caricatori*. These orders are negotiable, like bills of exchange, and are endorsed by the intermediate holder, who receives their value in cash, without, however, becoming liable for their due satisfaction. The only responsible parties are the drawer and drawee. The latter is obliged to deliver the oil at sight of the order, or to hold it, at the bearer's disposal, till the 10th of November for the *caricatori* of Apulia, and till the 31st of December for those of Calabria. If the contract be for time, that is, from one year to another, the oil is usually placed at the purchaser's command on the 1st of March. Purchases for time are effected by means of a contract, wherein the vendor undertakes to deliver the oil by the end of January, on receiving payment of the money; but the oil, as observed above, is not really at the purchaser's disposal before the beginning of March. Hence, in time bargains, the payment of the money precedes the delivery of the oil more than a month; scarce an instance is on record of an engagement of this sort having been broken, and the order is as readily negotiable as any other security.

In purchases of oil at command, payment likewise precedes the delivery of the article; but in this case the advance is confined to the 5 days necessary to transmit the order to the *caricatori* where the oil is kept for delivery.

The oil remains in the *caricatori* under the care and responsibility of the vendor, to be delivered on demand to the bearer of the order, free of all costs and charges whatever for the first year; but for every successive year from 25 to 30 grains per salma are charged for keeping, and for renewal of warranty.—(We are indebted for these details to a brochure of M. Millenet, entitled *Coup d'œil sur le Royaume de Naples.* Naples, 1832.)

(In consequence of petitions and representations from the woollen manufacturers, setting forth the serious injury they sustained from the oppressive duty of 8*l.* 8*s.* a tun laid on olive oil (p. 253), it has been reduced 50 per cent., or to 4*l.* 4*s.* a tun.—(4 & 5 Will. 4. c. 89. § 15.) The reduction does not, however, extend to oil brought from Naples or Sicily; but her Majesty is empowered, if she see cause, to reduce the duty on such oil to 4*l.* 4*s.* a tun, by an order in council. This exception is understood to have been made in the view of facilitating the negotiation now in progress with the King of Naples for a reduction of the exorbitant duties laid on pilchards and other British articles imported into his dominions. It is to be hoped that these negotiations may be speedily brought to a satisfactory conclusion; for the largest portion by far of the olive oil made use of here being brought from Naples (Gallipoli, see p. 254.), the continuance of the high duties on it goes far to nullify the measure. Those who take into view the importance of olive oil in the arts, particularly in the woollen manufacture, and are aware that the revenue derived from it has not exceeded 50,000*l.* a year, will probably join with us in opinion, that the duty should either be repealed, or reduced to, at most, 2*l.* 2*s.* a tun.—*Sup.*)

OMNIUM, a term used at the Stock Exchange to express the aggregate value of the different stocks in which a loan is now usually funded.

Thus, in the loan of 38,000,000*l.* contracted for in June, 1815, the omnium consisted of 130*l.* 3 per cent. reduced annuities, 44*l.* 3 per cent. consols, and 10*l.* 4 per cent. annuities, for each 100*l.* subscribed. The loan was contracted for on the 14th of June, when the prices of the above stocks were—3 per cent. reduced, 54; 3 per cent. consols, 55; 4 per cents., 70; hence the parcels of stock given for 100*l.* advanced, were worth—

	£	s.	d.
130 <i>l.</i> reduced, at 54	-	-	-
44 <i>l.</i> consols, at 55	-	-	-
10 <i>l.</i> 4 per cents., at 70	-	-	-
Together,	£101	8	0

which would be the value of the omnium, or 1*l.* 8*s.* per cent. premium, independently of any discount for prompt payment.

ONION (*Ger. Zwiebel; Fr. Oignon; It. Cipolla; Sp. Cebolla; Rus. Luk*), a well known bulbous plant (*Allium Cepa* Lin.) cultivated all over Europe for culinary purposes. The Strasburgh, Spanish, and Portuguese varieties are the most esteemed.

ONYX (*Ger. Onyx; Fr. Onix, Onice; Sp. Onique; Lat. Onyx*). "Any stone exhibiting layers of 2 or more colours strongly contrasted is called an *onyx*; as banded jasper, chalcodony, &c., but more particularly the latter, when it is marked with white, and stratified with opaque and translucent lines. But the Oriental onyx is considered a substance consisting of 2 or more layers or bands of distinct and different colours. A sard, or sardoine, hav

ing a layer of white upon it, would be called an onyx; and according to the number of layers it would be distinguished as an onyx with 3 or more bands. Some of the antique engravings are upon onyxes of 4 bands."—(Mawe's Treatise on Diamonds, &c.)

OPAL, (Ger. *Opal*; Fr. *Opale*; It. *Opalo*; Sp. *Opalo*, *Piedra iris*; Port. *Opala*; Lat. *Opalus*), a stone, of which there are several varieties, found in different parts of Europe, particularly in Hungary, and in the East Indies, &c. When first dug out of the earth it is soft, but it hardens and diminishes in bulk by exposure to the air. The opal is always amorphous; fracture conchoidal; commonly somewhat transparent. Hardness varies considerably. Specific gravity from 1.958 to 2.54. The lowness of its specific gravity in some cases is to be ascribed to accidental cavities which the stone contains. These are sometimes filled with drops of water. Some specimens of opal have the property of emitting various coloured rays, with a particular effulgency, when placed between the eye and the light. The opals which possess this property are distinguished by lapidaries by the epithet *Oriental*; and often, by mineralogists, by the epithet *nobilis*. This property rendered the stone much esteemed by the ancients.—(Thomson's Chemistry; see also *Phil. Hist. Nat. lib. lxxviii. c. 6.*, where there are some very curious details as to this stone.)

Mr. Mawe gives the following statement with respect to the precious opal, or opal nobilis.—"The colour of the opal is white or pearl grey, and when held between the eye and the light is pale red, or wine yellow, with a milky translucency. By reflected light it exhibits, as its position is varied, elegant and most beautiful iridescent colours, particularly emerald green, golden yellow, flame and fire red, violet, purple, and celestial blue, so beautifully blended, and so fascinating, as to captivate the admirer. When the colour is arranged in small spangles, it takes the name of the baricque opal. Sometimes it exhibits only 1 of the above colours, and of these the most esteemed are the vivid emerald green and the orange yellow. When the stone possesses the latter of these colours, it is called the golden opal.

"The precious opal is not quite so hard as rock crystal: it is frequently full of flaws; which greatly contribute to its beauty, as the vivid iridescent colours which it displays are occasioned by the refraction and refraction of light, which is decomposed at these fissures. It is never cut in facets, but always hemispherical. It is generally small, rarely so large as an almond or hazel nut, though I have seen some specimens the size of a small walnut, for which several hundred pounds were demanded. At present, a pretty opal may be bought at from 1 to 3 or 4 guineas, sufficiently large for a pin or ring stone. It requires great care and judgment in the cutting, as it is fragile and easily spoiled.

"The opal, in all ages, has been highly esteemed; the history of the Roman senator, who preferred death rather than give up his opal ring to the Emperor Nero, is familiar to every eye. Among the Eastern nations, the opal ranks higher than in Europe.

"A spurious substance is sometimes sold for black and green opal, and often set in jewellery; it occurs of the size of a small almond, but more commonly not larger than a lentil or pea. This precious gem is nothing more than the cartilage of the hinge of a large shell. Glass, and even acrid, having an iridescent appearance, have also often been sold for opal."—(Treatise on Diamonds, &c. 2d ed. pp. 123—125.)

OPIUM (Ger. *Mohnsaft*; Fr. *Opium*; It. *Oppio*; Sp. and Port. *Opio*; Lat. *Opium*; Arab. *Ufyoon*; Hind. *Ufeem*; Turk. *Madjoon*), the concrete juice of the white poppy (*Papaver somniferum*), which is most probably a native of Asia, though now found growing wild in the southern parts of Europe, and even in England. Opium is chiefly prepared in India, Turkey, and Persia; but the white poppy is extensively cultivated in France, and other parts of Europe, on account of its capsules, and of the useful bland oil obtained from its seeds. It has also been cultivated, and opium made, in England; but there is very little probability of its ever being raised here to any considerable extent.

The poppy is an annual plant, with a stalk rising to the height of 3 or 4 feet; its leaves resemble those of the lettuce, and its flower has the appearance of a tulip. When at its full growth, an incision is made in the top of the plant, from which there issues a white milky juice, which soon hardens, and is scraped off the plants, and wrought into cakes. In India, these are covered with the petals of the plant to prevent their sticking together, and in this situation are dried, and packed in chests lined with hides and covered with gunny, each containing 40 cakes, and weighing 2 maunds or 149½ lbs.; they are exported in this state to the places where the opium is consumed. Turkey opium is in flat pieces, covered with leaves, and the reddish capsules of some species of *rumez*; which is considered an indication of its goodness, as the inferior kinds have none of these capsules adhering to them.

According to Dr. A. T. Thomson, Turkey opium has a peculiar, strong, heavy, narcotic odour, and a bitter taste, accompanied by a sensation of acrid heat, or biting, on the tongue and lips, if it be well chewed. Its colour when good is a reddish brown, or fawn colour; its texture compact and uniform. Its specific gravity is 1.336. When soft, it is tenacious; but when long exposed to the air, it becomes hard, breaks with a uniform shining fracture, is pulverulent, and affords a yellowish brown powder.

East Indian opium has a strong empyreumatic smell; but not much of the peculiar narcotic, heavy odour of the Turkey opium; the taste is more bitter, and equally nauseous, but it has less acrimony. It agrees with the Turkey opium in other sensible qualities, except that its colour is blacker, and its texture less plastic, although it is as tenacious. Good Turkey opium has been found to yield nearly 3 times the quantity of *morphia*, or of the peculiar principle of the drug, that is yielded by East Indian opium.

Opium is regarded as bad, when it is very soft, greasy, light, friable, or of an intensely black colour, or mixed with many impurities. A weak or empyreumatic odour, a slightly

bitter or acrid, or a sweetish taste, or the power of marking a brown or black continuous streak when drawn across paper, are all symptoms of inferior opium.—(*Dispensatory*.)

The raising of opium is a very hazardous business; the poppy being a delicate plant, peculiarly liable to injury from insects, wind, hail, or unseasonable rain. The product seldom agrees with the true average, but commonly runs in extremes; while one cultivator is disappointed, another reaps immense gain; one season does not pay the labour of the culture; another, peculiarly fortunate, enriches all the cultivators. This circumstance is well suited to allure man, ever confident of good fortune.—(*Cole's Ooke's Husbandry of Bengal*, p. 119.)

In England, opium is little used, except as a medicine. In 1831 and 1832, the quantity entered for home consumption amounted, at an average, to 28,997 lbs. a year. The principal part of our supply is brought from Turkey. Opium from the latter was worth, in the London market, in December, 1833, 16s. to 17s. per lb. The duty is 4s.

Consumption and Trade of Opium in China.—Opium is pretty extensively used, both as a masticatory and in smoking, in Turkey and India; but its great consumption is in China and the surrounding countries, where the habit of smoking it has become almost universal. The Chinese holi or seethe the crude opium; and by this process the impurities, resinous and gummy matter, are separated, and the remaining extract only is reserved for use. Thus prepared, the drug loses its ordinary strong and offensive aromatic odour, and has ever a fragrant and agreeable perfume. A small ball of it inserted in a large wooden pipe with some combustible matter, is lighted, and the amateur proceeds to inhale four or five whiffs, when he lies down and resigns himself to his dreams, which are said to have no considerable resemblance to the sensations produced by inhaling the oxide of azote. Those who do not carry the indulgence to excess, do not, it is said, experience any bad effects from it.

The supplies for the Chinese market are derived from India and Turkey, but principally from the former. The government of China has issued edict upon edict, forbidding the importation and consumption of the drug, but without effect. Most part of the authorities openly connive at the proceedings of the smugglers, while the few who might be desirous to enforce the law are wholly without the power; so that the trade is conducted with the greatest facility, and almost perfect security. It was at first carried on at Whampoa, about 15 miles below Canton; next at Macao, whence it was driven by the exactions of the Portuguese; and now the principal entrepot is in the bay of Lintou. The opium is kept on board ships, commonly called receiving ships, of which there are often 10 or 15 lying together at anchor. The sales are mostly effected by the English and American agents in Canton, who give orders for the delivery of the opium; which, on producing the order, is handed over to the Chinese smuggler, who comes alongside at night to receive it. Frequently, however, the smuggler purchases the opium on his own account, paying for it on the spot in silver; it being a rule of the trade, never departed from, to receive the money before the drug is delivered. When it is landed, the laws are equally set at defiance in its conveyance throughout the country; and public smoking houses are said to be every where established.

The consumption of opium in China is rapidly extending. During the first 10 years of the present century, the exports from India to China were about 2,500 chests (of 100 lbs. each). In 1821-22, after the introduction of Malwa opium into the markets of Calcutta and Bon-hay, the exports increased to 4,685 chests; and, owing, no doubt, to the greatly increased supply and lower price of the article, the exports in 1831-32 exceeded 20,000 chests, worth above 13,000,000 dollars!—(See vol. i. p. 209.) The whole of this immense trade is in the hands of private individuals; the Company not choosing to engage in a business prohibited by the Chinese government. The imports of Turkey opium into China are believed to amount at present to about 1,000 chests. Smyrna is the principal Turkish port for the export of opium.—(See *SMYRNA*.)

Cultivation of Opium in India.—Monopoly.—The cultivation of opium in India is a government monopoly, and is confined to the provinces of Bahar* and Benares, and Malwa in Central India. Every one within the prescribed limits may engage in the opium cultivation; but the drug, when prepared, must all be sold at a fixed price to the Company's agents. The price is very far below the price at which it is afterwards sold for exportation; and the circumstance of its being fixed and inadequate deprives the cultivators of most part of the favourable chances in the lottery previously alluded to by Mr. Colebrooke. Indeed, Mr. C. distinctly tells us (*Hind. Bengal*, p. 118.) that, except in few situations that are peculiarly favourable, its cultivation is unprofitable. The peasants engage in it with reluctance; and are tempted only by the immediate advances the government agents are obliged to make to enable them to carry on the business.

The monopoly has sometimes produced a net revenue of about 1,600,000*l.* a year. Latterly, however, this revenue has been materially diminished. This has been occasioned, partly by the conquest of Malwa, and the impossibility of extending the same sort of monopoly into that province that was established in Bahar and Benares, and partly to the introduction of Turkey opium into the Chinese market by the Americans.

The system under which the Indian opium trade has been conducted, has been the theme of much enquiry, and has been supposed to afford the only example of an *unexceptionable monopoly*. By confining the cultivation of the plant to particular districts, and taking care that the whole produce raised there shall be exported, we prevent, it is said, the use of this detestable drug from gaining ground in India; while the high price at which it is sold produces a large revenue to the Company's treasury. It is affirmed, too, that even the interests of the Chinese are consulted by the system; that they obtain the drug in a state of purity, which would otherwise be adulterated; and that the high price they are obliged to pay for it merely acts as a wholesome restraint on their vicious propensity to indulge in what is so very injurious. We doubt, however, whether there be much foundation for these enquiries. There can be no question that opium is a very excellent subject for taxation; and the higher the duty can be raised on it, without encouraging smuggling, the better. It is not, however, so clear, that the monopoly system be the best way of accomplishing this; and, though the system had been originally a good one, it is no longer possible to enforce it. To imagine, indeed, that the illicit cultivation of, and traffic in, opium can be prevented, now that it is raised in most parts of the extensive country of Malwa, is altogether ludicrous. As to the supposed influence of the monopoly in insuring the purity of the drug, it is sufficient to observe that Malwa opium, which is produced under a comparatively free system, has been rapidly improving in its quality, and now very often fetches a higher price than the opium of Bahar and Benares, where the strictest surveillance is kept up. The latter, indeed, has sometimes been nearly unobtainable, from the careless way in which it has been prepared, and the extent to which it was adulterated.—(Crawford on the *Monopoly of the East India Company*, p. 55.) It is needless, however, to say more on this point, than that Turkish opium maintains, in respect of purity and careful preparation, a decidedly higher reputation than any produced in India.—(*Thomson's Dispensatory*.)

* The opium of Bahar is known in commerce by the name of Patna opium.

We doubt, too, whether the use of opium, when taken in moderate quantities, be really so injurious as has been represented. That it may, like spirits and wine, be abused, is abundantly certain; but it has not been shown that it is more liable to abuse than either of these articles. No one doubts that the Chinese, by whom it is principally consumed, are a highly industrious, sober, frugal people; but though it were otherwise, we really do not see that the East India Company are warranted in subjecting a profitable article of cultivation in India to the fetters of monopoly, that the morals of the Chinese may be preserved! It is unnecessary, however, to dwell upon this view of the matter. The Turks and Americans have no scruples of this sort; and the only effect of the Company's attempting to force up the price of opium to an extravagant height, would be to throw a still greater proportion of the trade into the hands of their active competitors, to the great injury of the Indian cultivators.

Neither must the interests of the cultivators in India be lost sight of, who are materially injured by the existing system. Even were it in other respects proper, their allowances are far too small.

Upon the whole, therefore, we do not see any solid grounds for supposing that this monopoly forms an exception to the common rule; and we agree with those who think that the better way would be to establish the same system, as to the trade in opium, that is established with respect to the spirit trade in this country; that is, to allow every one to cultivate it upon taking out a license, and to lay an excise duty on the prepared article. Such a plan would put an end to some most oppressive regulations; and while it would open a new source of wealth to the cultivators, the revenue derived by government would be materially augmented.

Besides the works previously referred to, we have consulted, in compiling this article, *Asiatick's Mat. Indica; Milburn's Orient. Com.; Bell's Review of the Commerce of Bengal; Evidence on East Indian Affairs, before the Parliamentary Committee, in 1830 and 1831, &c. &c.*

[In March, 1839, a special commissioner was appointed by the Emperor to cause the laws prohibiting the importation of opium into China to be rigidly enforced. By means of stopping for a time the whole commerce of Canton with foreigners, as well as by imposing restraints on the personal liberty of the foreign merchants then in that city, the latter were obliged to deliver up to the commissioner, it is said, no less than 20,283 chests of opium, valued at £3,000,000, or near \$15,000,000. And the opium trade has, in consequence, been entirely discontinued.

Much stress has been laid by the Chinese government on the injurious and even destructive effects on the human system of the use of opium, in justification of the course which has been pursued by it in relation to this article. But

"The export of sycee silver," we quote the words of a petition of certain British merchants resident at Calcutta, in the East Indies, to the Queen's Privy Council in England, "is also prohibited in China, and as bullion was always received in payment for opium, it is to this fact that the recent violent proceedings of that government may be chiefly attributed. The export of silver, by the law of China, is death. Like other half civilized nations, which understand not the principles of political economy, the Chinese consider the export of bullion as injurious to their well-being, and thunder edicts against the 'leakage of sycee' and 'the oning out of dollars,' although such exports were actually a loss to the State. It is necessary to say but little in proof of this fallacy. China possesses silver mines of immense value, but which are worked only to a limited extent, and the circulation of whose products the government would find restricted exclusively to the imperial domains. These mines are inexhaustible, save in the fear of their government, whose proceedings in prohibiting the export of bullion are truly lamentable. As reasonable would be for the British government to prohibit railroads and steam vans, because the one might exhaust the iron, and the other the coal mines, of Great Britain. The export of opium from India, which has thus defeated the restrictive policy of the Chinese government, and which has caused the mines of that empire to be wrought far more extensively than would otherwise have been the case, in order to replace the vacuum in circulation created by the continued export of sycee from China, has thus been of essential benefit to commerce; for it has drawn forth the resources of the most fertile and populous empire in the world, and the bullion thus brought back in exchange for opium, has covered vast tracts of British India with smiling fields and flourishing population; it has enormously extended the import of British manufactures throughout Hindoostan; has increased largely the shipping and general commerce of these seas; has brought into the British Indian Treasury a revenue exceeding the land revenue of an entire Presidency—that of Bombay; and has thus paid in London the dividends of the proprietors of India Stock, amounting to 830,000l. per annum, if not indeed the whole surplus of 2,000,000l. sterling, required for the expenses of the home government of India."

"The extent to which the trade had been carried on will be understood from the undermentioned extract from the custom-house books of Calcutta, where the proportion of opium shipped to China direct, and that sent to all other places whatever, is separately specified.

Year.	China.	All other places.	Total.
1832-33	7,598	1,810	9,408
1833-34	10,216	1,790	12,006
1834-35	9,485	1,530	10,993
1835-36	13,094	1,757	14,851
1836-37	10,393	2,213	12,606
1837-38	16,297	3,303	19,600
Total	67,083	13,208	80,291

It appears from this table, that of an aggregate of 79,446 chests actually despatched from Calcutta in 6 years, 67,083 chests were exported to China direct."

The opium trade upon the coast of China east of Canton began to be of importance in the years 1822-3, since then it has rapidly increased, and bids fair to exceed that carried on at the Lintin station. Fractions of chests and of dollars in fine are rejected, which would make the table appear incorrect if critically examined.—*Am. Ed.*

OPOBALSAM. See BALSAM.

OPOPONAX (Ger. *Opoponax*; Fr. *Opopanax*; It. *Opoponasso*; Sp. *Opoponaca*; Arab. *Jawsheer*), a gum-resin, obtained from the *Pastinaca Opoponax*, a species of paraneop. It is a native of the south of Europe and Asia Minor. The stem rises to the height of 4 or 5 feet, with a thick branched yellow-coloured root. The roots being wounded, a milky juice flows from them, which, being dried in the sun, is the opoponax of the shops. It is in clumps of a reddish yellow colour, and white within. Smell peculiar. Taste bitter and acrid. Specific gravity 1.62. It is imported from Turkey. Being used only to a small extent in medicine, the consumption is inconsiderable.—(*Thomson's Chemistry*; *Ainslie's Mat. Medica*.)

OPORTO, or PORTO, a large city and sea-port of Portugal, situated on the north bank of the river Douro, about 2 miles from its mouth, in lat. 41° 10' 30" N., lon. 8° 37' 18" W. It is a beautifully situated, well-built city; and is supposed to have contained, before the late calamities, 70,000 inhabitants.

Harbour.—The harbour of Oporto is a bar harbour, and can only be entered, at least by vessels of considerable burden, at high water; and it is seldom at any time practicable for vessels drawing more than 16 feet. On the north side of the entrance is the castle of St. Jago de Foz, whence a ledge of rocks, some of which are at all times above water, extends in a south-west direction. The outermost of these rocks, named Figueira, which is always visible, is left on the left or larboard side on entering. Cabedelo Point, forming the southern extremity of the entrance, is low and sandy. The bar being liable, from the action of the tides, and of sudden swellings or freshes in the river, to perpetual variations, it is exceedingly dangerous for any vessel to attempt crossing it without a pilot. Pilots are always on the alert, and ready to offer their services when a vessel comes in sight, unless the weather be so bad that they cannot go off. On some few occasions of this sort, vessels have been detained for 3 weeks off the port, without having an opportunity of entering. The channel of St. Catherine in a line with that of St. Michael leads over the bar. The ordinary rise of spring tides is from 10 to 12 feet, and of neaps from 6 to 8 feet. A light-house with a fixed light is erected on a hill about 600 yards N. N. W. of St. Jago de Foz.

The swellings of the river, or freshes, as they are called, most commonly occur in spring, and are caused by heavy rains, and by the melting of the snow on the mountains. The rise of water at such times is frequently as much as 40 feet; and the rapidity and force of the current are so very great, that no dependence can be placed on anchors in the stream. Fortunately, a fresh never occurs without previous warning; and it is then the practice to moor with a cable made fast to trees, or stone pillars erected on the shore for that purpose.—(For further information as to the harbour of Oporto, see Mr. Purdy's valuable *Sailing Directions for the Bay of Biscay*.)

Trade.—Oporto is the emporium of a large portion of the kingdom of Portugal, and enjoys a pretty considerable foreign commerce. The well known red wine, denominated port, from its being exclusively shipped at that city, forms by far the largest article of export. The exports vary in different years, from about 16,500 to above 40,000 pipes. England is the largest consumer of port. The high discriminating duties on French wine originally obtained for it a preference in the British market, to which, though an excellent wine, it had no natural claim; and its long continued use has so confirmed the taste for it, that it is probable it will maintain its ascendancy notwithstanding the late equalisation of the duties. At an average of the 10 years ending with 1833, there were shipped from Oporto for England 22,121 pipes a year; but exclusive of the port shipped from Oporto, a considerable quantity of red wine is now brought from Figueira. Next to England, Brazil, Russia, and

the north of Europe in general, are the principal consumers of port. The other exports are oil, oranges, and other fruits, wool, refined sugar, cream of tartar, shumac, leather, cork, &c. The imports are corn, rice, beef, salt fish, and other articles of provision; sugar, coffee, &c. from Brazil; cotton, and woollen goods, hardware, tin plates, &c. from England; hemp, flax, and deals, from the Baltic, &c.

Besides the British manufactured goods imported into Portugal for the use of the natives, a considerable quantity is destined for the consumption of Spain; being smuggled into that country through Braganza and other towns on the frontier.

Monies, Weights, and Measures same as those of Lisbon; which see.

We subjoin an account, obtained from the Portuguese Custom-houses, of the wine shipped from Oporto during the 10 years ending with 1833.

N. B.—It was not till 1826, that the exclusive privilege possessed by the Oporto Wine Company, of shipping wine for Brazil, was put an end to, previously to which period the shipments for that country were not given.

It is hardly possible to form any estimate of the value of the wine shipped from Oporto; the price varying from 5*l.* to 50*l.* per hoghead. The export duty on wine approved for exportation, (*crata d'embargo*), is about 6*0* 500*rs.* per pipe, or, at the present (January 1834) rate of exchange, *li. 9*s.** per pipe. Separated wine (*vinho separado*) is not generally allowed to be exported; but at present it may be shipped on paying 16*0* 500*rs.* more, or 5*l.* 9*s.* 2*d.* a pipe. The other expenses are trifling. Freight to this country varies from *li.* to *li. 1*l.** 6*d.* per pipe.—(For an account of the Oporto Wine Company, see *WINE*.)

Sometimes wine is purchased from the farmer in the wine country. In this case, the casks are sent about 60 miles up the river, in boats, to be filled. Owing to the miserable state of the roads, the expense of carriage is very considerable; the carriage from and to the river side frequently costing from *li.* to 2*l.* per pipe. The freight from the upper country down the river to Oporto is about equal to that from the latter to England. There is also an internal duty of about *li. 2*s.** per pipe on all wine brought down the river. Inasmuch, however, as these charges are perpetually varying, it is not possible to lay before the reader any *pro forma* account of the cost of wine bought in the Upper Douro. The Oporto Wine Company have the monopoly of the brandy as well as of the wine trade of the Douro. The consequence is, that brandy costs at this moment, at Oporto, about 36*l.* per pipe; while equally good brandy may be bought in Lisbon, and much better in Cognac, for about 15*l.* per pipe. The abolition of this company would certainly be one of the most desirable reforms that could be accomplished, even in Portugal.—(*Private information*.)

ORANGES (*Ger. Pomeranzen; Du. Orangen; Fr. Oranges; It. Melaarance; Sp. Naranjas; Rus. Pomeranzii; Hind. Narunge; Malay. Simao-manis*), the fruit of the orange tree. The common, or sweet orange (*Citrus sinensis*, or *Citrus nobilis*), and the Seville, or bitter orange (*Citrus aurantium*), are natives of China; and the Portuguese are entitled to the honour of having transferred the plant to other countries. Particular species of *Citrus* seem to be indigenous to various Eastern countries; but the birth-place of the proper orange may be distinctly traced to China. It is now to be found in our green-houses. Oranges are imported in chests and boxes, packed separately in paper. The best come from the Azores and Spain; very good ones are also brought from Portugal, Italy, Malia, and other places.

The orange trade carried on by this country is of considerable value and importance. Oranges are not much more expensive than most of our superior domestic fruits, while they are, perhaps, the most refreshing and wholesome of those of warmer climates. The entries for home consumption in 1823 and 1832 amounted, at an average, to 270,000 boxes a year; and assuming each box to contain 20 oranges and lemons, the number entered for consumption will have been 189,424,000! The duty produced, at an average of the above years, 61,030*l.* a year. The number of persons employed in the importation and sale of oranges must be very considerable. The policy of charging any duty on oranges seems questionable. They are very apt to spoil; and as no abatement is made from the duty on account of any damage, its influence on their price is much more considerable than might at first be supposed.

ORCHILLA WEED, ORCHELLA, OR ARCHIL (*Ger. Orseille; Fr. Orseille; It. Oricello, Orcella; Sp. Orchilla*), a whitish lichen (*Lichen orcella*) found in the Isle of Portland; but that which is used, is imported from the Canary and Cape de Verd Islands, Barbary, and the Levant. From it is obtained the archil, or orchal, of commerce, which

yields a rich purple tincture, fugitive, indeed, but extremely beautiful. The preparation of orchilla was long a secret, known only to the Florentines and Hollanders; but it is now extensively manufactured in this country. Archil is generally sold in the form of cakes, but sometimes in that of moist pulp; it is extensively used by dyers; and in times of scarcity, the weed or lichen has sold as high as 1,000*l.* per ton!—(*Thomson's Dispensatory.*) At this moment (January, 1834), Canary orchilla fetches, in the London market, 320*l.* a ton, while that which is brought from Madeira fetches only 200*l.*, and Barbary not more than from 10*l.* to 25*l.* The total quantity imported in 1829 amounted to 1,813 cwt., or 90½ tons.

ORGOL. See **ARSOL.**
ORPIMENT (Ger. *Operment*; Fr. *Orpiment*; It. *Orpimento*; Sp. *Oropimente*; Lat. *Auripigmentum*), the name usually given to sulphuret of arsenic. When artificially prepared, it is in the form of a fine yellow-coloured powder; but it is found native in many parts of the world, particularly in Bohemia, Turkey, China, and Ava. It is exported from the last two in considerable quantities; and is known in the East by the name of hartal. Native orpiment is composed of thin plates of a lively gold colour, intermixed with pieces of a vermilion red, of a shattery foliaceous texture, flexible, soft to the touch like talc, and sparkling when broken. Specific gravity 3.45. The inferior kinds are of a dead yellow, inclining to green, and want the bright appearance of the best specimens. Its principal use is as a colouring drug among painters, bookbinders, &c.—(*Thomson's Chemistry; Mitchell's Orient. Com.*)

ORSEVAD, ORSIDUE, MANHEIM OR DUTCH GOLD (Ger. *Flittergold*; Du. *Klatergoud*; Fr. *Oripeau, Oliquant*; It. *Orpello*; Sp. *Oropel*), an inferior sort of gold leaf, prepared of copper and zinc. It is sometimes called *leaf brass*. It is principally manufactured in Manheim.

OSTRICH FEATHERS. See **FEATHERS.**
OWNERS OF SHIPS. Property in ships is acquired, like other personal property, by fabricating them, or by inheritance, purchase, &c.

No ship is entitled to any of the privileges of a British ship until she be duly registered as such, and all the provisions in the Registry Act (3 & 4 Will. 4. c. 55.) be complied with.—(See **REGISTRY.**)

A British ship may belong either to one individual or to several individuals. It is ordered by the act just cited, that the property of every vessel of which there are more owners than one, shall be divided into 64th shares; and that no person shall be entitled to be registered as an owner who does not, at least, hold one 64th share. It is further provided by the same statute, that not more than *thirty-two* persons shall be owners of any one ship at any one time. Companies or associations holding property in ships, may choose *three* of their members to act as trustees for them.

Neither the property of an entire ship, nor any share or shares in such ship, can be transferred from one individual to another, except by bill of sale or other instrument in writing; and before the sale is valid, such bill or instrument must be produced to the collector and comptroller, who are to enter the names, residences, &c. of the seller and buyer, the number of shares sold, &c. in the book of registry of such vessel, and to indorse the particulars on the certificate of registry.—(See the clause in the statute, art. **REGISTRY.**)

But, though compliance with the directions in the statute accomplishes a complete transference of the property, when the transaction is not in its nature illegal, it gives no sort of security to a transference that is otherwise bad. The purchaser should in all cases endeavour to get possession of the ship, or of his share in her, as soon as his title to her or it is acquired, by the registration of the particulars of the bill of sale; for though all the formalities of sale have been completed, yet, if the sellers continue as apparent owners in possession of the ship, their creditors may, in the event of their becoming bankrupt, acquire a right to it, to the exclusion of the purchasers. In the case of a sale or agreement for a part only, it is enough if, the sale being completed, the seller ceases to act as a part owner.—(*Lord Tenterden on the Law of Shipping, part i. c. 1.*)

Property in ships is sometimes acquired by capture. During war, his Majesty's ships, and private ships having letters of marque, are entitled to make prizes. But before the captors acquire a legal title to such prizes, it is necessary that they should be condemned in the Admiralty or other court constituted for that purpose. When this is done, the captors are considered to be in the same situation, with respect to them, as if they had built or purchased them.

The act 3 & 4 Will. 4. c. 55. has ruled, that no person having the transfer of a ship, or a share of a ship, made over to him as a security for a debt, shall be deemed an owner, or part owner, of such ship. And when such transfer has been duly registered according to the provisions of the act, the right and interest of the mortgagee are not to be affected by the bankruptcy of the mortgagor, though he be the reputed owner, or part owner, of such ship.—(See **REGISTRY.**)

 commerce, which

owners of ships for the acts of the masters. But it has been attempted to encourage navigation by limiting the responsibility of the owners, without, however, depriving the freighter of a ship of an adequate security for the faithful performance of the contract. To effect this desirable object, it has been enacted, that the owner or owners shall not be liable to make good any loss or damage happening *without their fault or privity*, to any goods put on board any ship or vessel belonging to such owner or owners, further than the value of such ship or vessel, with all its appurtenances, and the freight due, or growing due, during the voyage that may be in prosecution, or contracted for, at the time when the loss or damage has taken place.—(53 Geo. 3. c. 159.)

This limitation was first introduced into our law by the 7 Geo. 2. c. 15. But it had previously been adopted in the law of Holland, and in the justly celebrated French Ordinance of 1681. In the Ordinance of Rotterdam, issued in 1721, it is expressly declared, that "the owners shall not be answerable for any act of the master, done without their order, any further than their part of the ship amounts to." Independently, however, of this general agreement, the expediency of the limitation appears, for the reasons already stated, sufficiently obvious.

It was also enacted in 1786 (26 Geo. 3. c. 60.), that neither the master nor owners of any ship or vessel shall be liable to answer for or make good any gold or silver, diamonds, watches, jewels, or precious stones, lost or embezzled during the course of the voyage, unless the shipper thereof insert in his bill of lading, or declare in writing to the master or owners, the true nature, quality, and value of such articles.

The responsibility, at common law, of a *master* or *mariner* is not affected by the first mentioned limitation, even though such master or mariner be owner or part owner of the vessel; neither does the limitation extend to the owner or owners of any lighter, barge, boat, &c. used solely in rivers or inland navigation, nor to any ship or vessel not duly registered according to law.

When several freighters sustain losses exceeding in the whole the value of the ship and freight, they are to receive compensation thereout in proportion to their respective losses; and any one freighter, on behalf of himself and the other freighters, or any part owner, on behalf of himself and the other part owners, may file a bill in a court of equity for the discovery of the total amount of the losses, and of the value of the ship, and for an equal distribution and payment. If the bill be filed by or on behalf of the part owners, the plaintiff must make affidavit that he does not collude with the defendants, and must offer to pay the value of the ship and freight, as the court shall direct.

It is usual in most countries, where the part owners of a ship disagree as to her employment, to give those possessed of the greater number of shares power to bind the whole. But in this country, while the majority of the owners in value have authority to employ the ship as they please, the interests of the minority are secured from being prejudiced by having their property engaged in an adventure of which they disapprove. For this purpose the Court of Admiralty has been in the practice of taking a stipulation from those who desire to send the ship on a voyage, in a sum equal to the value of the shares of those who object to it, either to bring back and restore to them the ship, or to pay them the value of their shares. When this is done, the dissentient part owners bear no portion of the expenses of the outfit, are not entitled to a share in the profits of the voyage; the ship sails wholly at the charge and risk and for the profit, of the others.—(Abbott, part i. c. 3.)

For the statutory enactments as to the sale and transfer of ships, see REGISTER.

OYSTER, OYSTERS (Ger. *Austern*; Fr. *Huitres*; It. *Ostriche*; Sp. *Ostras*; Lat. *Ostræa*). This well known shell-fish is very generally diffused, and is particularly plentiful on the British coasts, which were ransacked for the supply of ancient Rome with oysters. They differ in quality according to the different nature of the soil or bed. The best British oysters are found at Purfleet; the worst, near Liverpool. The nursing and feeding of oysters is almost exclusively carried on at Colchester, and other places in Essex. The oysters are brought from the coast of Hampshire, Dorset, and other maritime counties, even as far as Scotland, and laid on beds or layings in creeks along the shore, where they grow, in 2 or 3 years, to a considerable size, and have their flavour improved. There are said to be about 200 vessels, from 12 to 40 or 50 tons burden, immediately employed in dredging for oysters, having from 400 to 500 men and boys attached to them. The quantity of oysters bred and taken in Essex, and consumed mostly in London, is supposed to amount to 14,000 or 15,000 bushels a year.—(Supp. to Ency. Brit. art. Fisheries.)

The imports of oysters fluctuate very much. From 1824 to 1828, both inclusive, none were imported. But, at an average of 1831 and 1832, the imports amounted to 52,665 bushels a year.

The stealing of oysters, or oyster brood, from any oyster bed, laying, or fishery, is larceny, and the offender, being convicted thereof, shall be punished accordingly; and if any person shall unlawfully and wilfully use any dredge, net, &c. for the purpose of taking oysters, or oyster brood, within the limits of an oyster bed or fishery, every such person shall be deemed guilty of a misdemeanour, and, upon being convicted thereof, shall be punished by fine or imprisonment, or both, as the court may award; such fine not to exceed 20*l.*, and such imprisonment not to exceed 3 calendar months. It is provided, that nothing in the act shall be construed as preventing any one from catching oysters within the limits of any oyster fishery, with any net, instrument, or engine adapted to the catching of such fish.—(7 & 8 Geo. 4. c. 29. § 36.)

PACKAGE, SCAVAGE, BAILLAGE, AND PORTAGE, were duties charged in the port of London, on the goods imported and exported by aliens, or by denizens being the sons of aliens.

During the dark ages, it was usual to lay higher duties upon the goods imported or exported by aliens, whether in British or foreign ships, than were laid on similar goods when imported or exported by natives. But according as sounder and more enlarged principles prevailed, this illiberal distinction was gradually modified, and was at length wholly abolished, in so far at least as it was of a public character, by the 24 Geo. 3. c. 16. This act, after reciting that "the several duties and restrictions imposed by various acts of parliament upon merchandise are, by the alterations of the trade now carried on between this kingdom and foreign states, in some cases become an unnecessary burden upon commerce, without producing any real advantage to the public revenue, and that it is expedient they should no longer continue," enacts, that the duty commonly called "the petty customs," imposed by the 12 Car. 2., and all other additional duties imposed by any act upon the goods of aliens above those payable by natural-born subjects, should be no longer payable. The act then goes on to provide, that nothing contained in it shall "alter the duties due and payable upon goods imported into or exported from this kingdom in any foreign ship, nor the duties of *package*, and *scavage*, or any duties granted by charter to the city of London;" and then follow provisions to prevent the city being defrauded of such duties by false entries of aliens' goods in the name of a British subject.—(*Chitty's Commercial Law*, vol. i. p. 160.)

The duties thus preserved to the city were not very heavy: but the principle on which they were imposed was exceedingly objectionable, and their collection was attended with a great deal of trouble and inconvenience. Not being levied in other places, they operated to the prejudice of the trade of the metropolis. For these reasons, we observed, in the former edition of this work, that "if the funds of the corporation will not admit of their following the liberal example of the legislature, by voluntarily abandoning this vexatious impost, it would be good policy to give them a compensation for relinquishing it." And we are glad to have to state this suggestion has since been carried into effect. The act 3 & 4 Will. 4, c. 66, authorized the Lords of the Treasury to purchase up the duties in question from the city. This has been done, at an expense of about 140,000*l.*, and the duties are now abolished. There is a Table of the duties in the former edition of this work.

PACKETS. See **NEW YORK, PASSENGERS, AND POST-OFFICE.**

PALERMO (anciently **PAΛΕΡΜΟΣ**), a large city and sea-port, the capital of the noble island of Sicily, on the north coast of which it is situated, the light-house being in lat. 38° 8' 15" N., lon. 13° 21' 56" E. Population, 170,000.

The bay of Palermo is about 5 miles in depth, the city being situated on its south-west shore. A fine mole, fully 3 of a mile in length, having a light-house and battery at its extremity, projects in a southerly direction from the arsenal into 9 or 10 fathoms water, forming a convenient port, capable of containing a great number of vessels. This immense work cost about 1,000,000*l.* sterling in its construction; but the light-house, though a splendid structure, is said to be very ill lighted. There is an inner port, which is reserved for the use of the arsenal. Ships that do not mean to go within the mole may anchor about 3 miles from it, in from 16 to 23 fathoms, the mole light bearing N.W. $\frac{3}{4}$ W. A heavy sea sometimes rolls into the bay, but no danger need be apprehended by ships properly found in anchors and chain cables. In going into the bay, it is necessary to keep clear of the nets of the tunny fishery, for these are so strong and well moored, as to be capable of arresting a ship under sail.—(*Smyth's Sicily*, p. 70. and *Appen.* p. 4.)

Since 1818, the coins of Sicily have been the same as those of Naples, their names only differing.—(See **NAPLES**.) The *ducat*, = 3*s.* 5*d.* sterling, is subdivided into 100 *bajocchi* and 10 *piccioli*: but accounts are still generally kept in *oncie*, *tari*, and *grani*: 20 *grani* = 1 *taro*; 30 *tari* = 1 *uncia*. The *oncia* = 3 *ducats*; and 1 *carlino* of Naples = 1 *taro* of Sicily. The Spanish dollar is current at 12 *tari* 6 *grani*.

Weights.—These are the *cantaro grosso*, subdivided into 100 *rotoli grossi* of 33 ounce, or into 110 *rotoli sottili* of 30 ounce; and the *cantaro sottile*, subdivided into 100 *rotoli sottili* of 30 ounce, or 250 *lib.* of 12 ounce. The *rotolo* of 33 ounces = 1*q* 3 *lb.* avoirdupois = 2*q* 34 *lb.* Troy = 8*q* 73 hectogrammes = 17 *lb.* of Amsterdam = 1*q* 8 *lb.* of Hamburg. The *rotolo* of 30 ounces = 1*q* 73 *lb.* avoirdupois = 2*q* 13 *lb.* Troy = 7*q* 94 hectogrammes = 1*q* 6 *lb.* of Amsterdam = 1*q* 61 *lb.* of Hamburg. 100 Sicilian pounds of 12 ounces = 70 *lb.* avoirdupois = 85*½* *lb.* Troy = 31*q* 76 *kg.* = 64*q* 23 *lb.* of Amsterdam = 65*q* 58 *lb.* of Hamburg.

Measures.—The *salma grossa* = 9*q* 48 Winch. bush; the *salma generale* = 7*q* 62 Winch. bush. The principal liquid measure is the *tonna*, divided into 4 *barili*, each equivalent to 91 of wine gallons. 1 *barile* = 2 *quartara*; 1 *quartara* = 20 *quartucci*. The *caffaso* of oil = 4*q* 3 Eng. gallons.

The *yard* or *canna* = 8 *palmi*; 2*½* *palmi* = 1 yard Eng.—(*Nelkenbrecher*; *Smyth*, p. 62 App.)

Duties.—Coffee, indigo, pepper, and dye woods, 3 per cent. and weight of package. Cinnamon, 6 rotoli per scro, with 1 wrapper, or 6 rotoli, with 2 wrappers; cocoa, 2 per cent. weight of package, and 3 per cent. for duty; cod-fish, 3 per cent.; herrings, 12 per cent.; tin, 13 rotoli per barrel; wax, weight of package, and 3 to 4 per cent. extra allowance; Havannah sugars, 16 per cent.; Brazil do. in short cases, 18 per cent., and in long cases, 20 per cent.; crushed sugar, weight of cask, and 3 per cent., or 13 per cent. in all, at the option of the buyer; East India do., in bags, 8 rot. to 10 rot. per bag. *Trolo* taken as weight of bag, for coffee and cocoa in bags.

Charges on Goods.—The regular charges on the sale of goods consigned to Palermo, are—commission, 3 per cent.; brokerage, $\frac{1}{2}$ per cent.; warehouse rent, $\frac{1}{2}$ per cent.; and portorage and boat hire, with 2 per cent. *del credere*,—imports being almost always sold on credit. The charges may occasion-

ally very $\frac{1}{2}$ to 1 per cent., and imports are frequently sold duty paid; the prices, however, so obtained, fully compensate for the trifling increase of charges.

The charges on goods exported are—3 per cent. commission; brokerage, so much per *centena salina*, &c., generally amounting to about $\frac{1}{2}$ per cent., except on fruit, on which it is equivalent to from 2 to 3 per cent.

Imports and Exports.—The great articles of export from Sicily are—grain, particularly wheat and barley; beans, wine, brandy, oil, barilla, lemons and oranges, lemon juice, almonds, salt, shumac, salt-fish, cheese, with brimstone, argol, manna, liquorice, pumice stone, rags, skins, honey, cotton-wool, nuts, linseed, saffron, &c. Wheat is largely exported. It is of a mixed quality, hard, and is generally sold from the public magazines, or *caricatori* (see post), by measure, without weight. But the best hard wheat, grown in the neighbourhood of Palermo, is sold by the *salina* of 872 rotoli = 436 lbs. Eng.; the difference between weight and measure being made good by the seller or buyer, as the case may be. Wine is principally shipped from Marsala; lemons, oranges, and lemon juice, from Messina; salt, from Trapani; and barilla, from the southern coast. But all the articles to be found on the coast may, for the most part, be had at Palermo; unless, however, the quantity required be small, it is usually best to ship them from the outports, the expense of their conveyance to Palermo being very heavy. The crops of barilla and shumac come to market in August; but brimstone, salt, oil, wine, rags, &c. may generally be had all the year round. The first shipments of lemons and oranges may be made in the beginning of November. Purchases of produce are always paid for in cash, generally $\frac{1}{2}$ on making the purchase, and the other $\frac{1}{2}$ on delivery, when in Palermo, and on receiving order for delivery, on the coast.

The imports consist of sugar, coffee, cocons, indigo, dye woods, spices, iron, tin, hides, Newfoundland cod, cotton and woollen stuffs, timber for building, &c. We have no means of forming any estimate either of the quantity or the value of the principal articles of import and export. Silk is a staple produce of the island; but its exportation in an unwrought state, except to Naples, is prohibited. (We have gleaned these details principally from private communications. The best account of the trade of Sicily, though now a little antiquated, that we have met with in any English work, is contained in *Seisburne's Travels in the Two Sicilies*, 4to ed. vol. ii. pp. 401—413. See also the article NAPLES in this work.)

Remarks on the Trade, &c. of Sicily.—This noble island contains about 10,500 square miles, being the largest in the Mediterranean, and one of the most fertile and best situated in the world. Its population is about 1,900,000. In ancient times, Sicily was celebrated for the number, magnitude, and opulence of its cities; and, notwithstanding its population was then, at least, treble its present amount, it obtained, from its furnishing vast supplies of corn and other articles of provision for the use of Rome, the appropriate epithet of *horreum Romanorum*. When the Roman power had been overthrown, Sicily was occupied, first by the Saracens, then by the Normans, and after them by the French. The Sicilian Vespers put a fatal period to the dominion of the latter; and a prince of the house of Aragon having been called to the Sicilian throne, the island became, in course of time, a dependency, first of the crown of Spain, and more recently of that of Naples.

It is to this dependence that we are induced to ascribe the backward state of Sicily. The multiplied abuses which grew up in Spain, under Ferdinand the Catholic, and his successors of the Austrian line, flourished with equal luxuriance in Sicily, and have produced no less destructive of the industry and civilisation of its inhabitants than those of Spain. The Bourbon or Neapolitan régime has been equally pernicious. "The government of this island," says a recent and most intelligent observer, "seems to unite in itself nearly all the defects, both theoretical and practical, of which political institutions are susceptible. It is a model in its way. We find here a system of laws quite barbarous, and the administration of them notoriously corrupt; high taxes, levied arbitrarily and unequally; and the land generally held on such a tenure as makes it unalienable, so that few can ever be proprietors; and farming leases, for church land at least, are binding on the farmer only, and not on his landlord. For want of roads, produce cannot be exported from one part of the island to another; the consequence of which is, that a scarcity and a glut may and frequently do exist at the same time in different parts of the island, without the means of timely and effectual communication."—(*Simond's Italy and Sicily*, p. 529.) But the grand curse of Sicilian, as well as of Sardinian, industry—(see *CARLIARI*)—is the restriction on the exportation of corn. It is true that the difficulties in this respect are not so great now as formerly, but they are still such as to oppose an invincible obstacle to the spread of improvement, and to the development of the national resources. No exportation of corn can take place without leave of the *real patrimonio*—a tribunal that pretends to take a yearly account of the crop, and of the supply required to meet the home demand. When this body has determined that an exportation may take place, it issues (or rather, we believe, sells) its licences to export certain specific quantities, to a few favoured individuals*, who, in consequence, are able to regulate the price; so that they, and not the corn growers, reap all the advantage! Thus, says M. Simond, "neither scanty nor plentiful crops affording a chance of gain, farmers are discouraged, and corn is frequently scarce in a country once the granary of Imperial Rome, although its own population be now reduced to 1-6th of what it was at that period.† Such is the system of minute and vexatious regulations, that a man cannot go in or out of town with a loaf of bread or a joint of meat without special permission. The revenue laws in England are sufficiently vexatious, but they at least answer their fiscal purpose. Here the

* The late Queen is said to have been a great dealer in corn on her own account!

† We cannot help looking upon this as an exaggeration. There do not seem to be any good grounds for thinking that Sicily ever contained more than 6,000,000 inhabitants,—that is, a little more than 1-3rd as many as at present.

vention is gratuitous; for little or nothing comes of it ultimately, drained as the little sources of revenue are, in their way to the treasury, by malpractices of all sorts."—(p. 530.)

There are only certain ports from which corn can be exported. This limitation has given rise to the establishment of public magazines or *caricatori*, where the corn may be deposited till an opportunity occurs of shipping it off. Provided it be of good quality (*mercantibile* or *recevibile*), and provided it be brought in immediately after harvest, or, at farthest, in August, it is warehoused free of expense; what it gains in bulk after that period (about 5 per cent.) being sufficient to defray all expenses. The receipt of the *caricator*, or keeper of the magazine, is negotiable like a bill of exchange, and is the object of speculative purchases on the exchange at Palermo, Messina, &c. according to the expected rise or fall in the price of corn. The depositor of a quantity sells it in such portions as he pleases, the whole being faithfully accounted for. The public magazines, in some parts of the island, are either excavations into calcareous rocks, or holes in the ground shaped like a bottle, walled up, and made waterproof, containing each about 200 salme of corn, or about 1,600 English bushels. The neck of the bottle is hermetically closed with a stone fastened with gypsum. Corn may be thus preserved for an indefinite length of time; at least, it has been found in perfectly good order after the lapse of a century.—(*Simond*, p. 540.; *Swinburne*, vol. ii. p. 405. For an account of the oil *caricatori* of Naples, see *OLIVZ ORL.*)

Hemp grows very well in Sicily; and when the English were there, their ships were abundantly supplied with that article; but its exportation being no longer permitted, its culture is now, of course, neglected.—(*Simond*, p. 539.) Sugar canes were, at one time, pretty extensively cultivated in Sicily; but their culture has been long declining, and is now nearly extinct.

Were the bounty of nature towards Sicily not counteracted by vicious laws and institutions, she would undoubtedly be one of the richest and finest of European countries. All that she requires is security of property and freedom of industry. Let but these be given to her, and a few years will develop her gigantic resources, and elevate Girgenti, Termini, and Sciacca, to a very high rank among corn-shipping ports.

PALM OIL. (*Ger. Palmol*; *Fr. Huile de palme, Huile de Senegal*; *It. Olio di palma*; *Sp. Aceite de palma*) is obtained from the fruit of several species of palms, but especially from that of the *Elais Guineensis*, growing on the west coast of Africa, to the south of Fernando Po, and in Brazil. When imported, the oil is about the consistence of butter, of a yellowish colour, and scarcely any particular taste: by long keeping it becomes rancid; loses its colour, which fades to a dirty white; and in this state is to be rejected. It is sometimes imitated with hog's lard, coloured with turmeric, and scented with Florentine iris root. The inhabitants of the coast of Guinea employ palm oil for the same purposes that we do butter.—(*Lewis's Mat. Med.*; *Thomson's Dispensatory.*)

The price of palm oil (duty paid) varies from 33*l.* to 34*l.* a ton.

Almost all the palm oil made use of in this country is brought from the western coast of Africa, south of the Rio Volta.

PAMPHLET, a small book, usually printed in the octavo form, and stitched.

It is enacted by 10 Ann. c. 19. § 113., that no person shall sell, or expose to sale, any pamphlet, without the name and place of abode of some known person, by or for whom it was printed or published, written or printed thereon, under penalty of 20*l.* and costs.

It is enacted by 55 Geo. 3. c. 185., that every book containing 1 whole sheet, and not exceeding 8 sheets, in 8vo, or any lesser size; or not exceeding 12 sheets in 4to, or 20 sheets in folio, shall be deemed a pamphlet. The same act imposed a duty of 3*s.* upon each sheet of one copy of all pamphlets published. This duty, which was at once vexatious and unproductive, hardly ever yielding more than 1,000*l.* or 1,100*l.* a year, was repealed in 1833.

PAPER (*Ger. und Du. Papier*; *Fr. Papier*; *It. Carta*; *Sp. Papel*; *Rus. Bumaga*; *Lat. Charta*; *Arab. Kartus*; *Pers. Kaghas*). This highly useful substance is, as every one knows, thin, flexible, of different colours, but most commonly white, being used for writing and printing upon, and for various other purposes. It is manufactured of vegetable matter reduced to a sort of pulp. The term paper is derived from the Greek *πάπυρος* (*papyrus*, see *post*), the leaves of a plant on which the ancients used to write. Paper is made up into sheets, quires, and reams; each quire consisting of 24 sheets, and each ream of 20 quires.

Historical Sketch of Paper. Difference between ancient and modern Paper.—It has often been a subject of wonder with those learned and ingenious persons who have written
Vol. II.—Z

concerning the arts of the ancient world, that the Greeks and Romans, although they possessed a prodigious number of books, and approached very near to printing in the stamping words and letters, and similar devices, should not have fallen upon the art; the first rude attempts at typography being sufficiently obvious, though much time and contrivance have been required to bring the process to the perfection in which it now prevails. They ought rather, perhaps, to have wondered that the more civilised nations of antiquity did not invent paper, which must precede the invention of printing, as may be easily shown. The rocks, pillars of stone or of marble, and especially the walls of edifices, supply fixed surfaces, upon which, were we unprovided with more convenient tablets, much valuable information might be preserved; and were all our public and many of our private buildings thickly covered with inscriptions, the memory of divers historical facts, and other matters of importance, might be handed down to posterity. Men wrote thus in very remote ages; and the old usage is still retained in many instances, particularly in our churches and cemeteries. In very remote ages, also, we read that they were accustomed to write upon portable surfaces of various kinds: and if it were possible to deprive us of our ordinary means of fixing and communicating our thoughts, modern ingenuity would speedily reinvent numerous expedients which have long been superseded; and we should have recourse to plates of metal of various dimensions, sometimes, probably, as thin as foil; to slices of soft, light wood, not thicker than those of which band-boxes are sometimes made; to cloth, leather, and the like. These materials would often be primed like the canvass of painters, that they might more readily receive, and more plainly show, the ink or paint that formed the characters. It is evident that, in the course of time, large libraries might be gradually composed of books constructed in this manner; and the whole amount of human learning might still be very considerable. The substances which we have enumerated are all somewhat costly: it would be desirable, therefore, to find one that was cheaper; and we should doubtless direct our attention very early to that which has served the office of paper in all times, and is used as such in some countries of the East at this day,—we mean the leaves of trees. Some of the palms, and other vegetables, that are natives of hot countries, furnish the Orientals with books that are not incommodious: the leaves of the indigenous plants of Great Britain are not so well suited for the purpose; but by care in the selection and skill in the preparation, some might certainly be chosen, which would, in some degree, be fit to receive writing. Leaves, when they are dry, are apt to split in the direction of the fibres; it has commonly been found expedient, therefore, to glue others at the back in an opposite direction; and by thus crossing the fibres at right angles, the texture is strengthened; and when it has been pressed and polished, the page is less unseemly and inconvenient than might have been supposed. Such, in the main, was the structure of the ancient paper. In Sicily, and in other countries on the shores of the Mediterranean Sea, but principally in Egypt and in the Nile, or rather in the ponds and ditches that communicate with that river, grows, in the nineteenth century after the death of the last of the Ptolemies, as of old under that illustrious dynasty, and under their predecessors the Pharaohs, a lofty and most stately reed or rush, the *Cyperus Papyrus* of modern botanists. It has been introduced into the hot-houses of some of our botanical gardens, where it may be seen conspicuous with its long, drooping, and graceful plume. A description of the various purposes to which the ancients applied this useful plant, would fill a volume; we shall speak of that only from which it has earned an immortality of renown. The inner bark was divided with a needle into very thin coats; these were placed side by side longitudinally, and the edges were glued together; similar layers were glued across these behind, at right angles, to give the page the requisite strength; and the sheets were pressed, dried, polished, and otherwise prepared for use. Ancient writers have described the process, and especially Pliny, (*Hist. Nat.* lib. xiii. c. 11, 12, 13.). From that naturalist, and the notes of Hardouin and his other commentators, it may be fully traced; and Mr. Bruce has collected the authorities, and has added his own observations, in the 7th vol. of the 8vo edition of his *Travels*. That remarkable person even attempted to make paper from the papyrus; in which, however, he was not very successful; and he imputes his failure to the erroneous directions of Pliny; for it seems not to have occurred to him, that, had he endeavoured, trusting to written directions, without experience and traditional art, to make modern paper, or even a pair of shoes, he would, most probably, have been equally inefficient. Alexandria was the chief seat of this valuable manufacture; but in later periods much was also made at Rome, where an article of superior beauty was produced. Pliny enumerates the various kinds of paper that were composed, from the coarsest, which was used, like our brown paper, for packing, to the most expensive and finest. The consumption of paper was very considerable; it seems to have been tolerably cheap; and since the principal part was made at Alexandria, it was an important article in the commerce of that city—furnishing employment for many workmen and much capital. Flavius Vopiscus relates, that in the 3d century, the tyrant Firmus used to say there was so much paper there, and so large a quantity of the glue or size used in preparing it, that he could maintain an army with it:—“*Tantum habuisse de chartis, ut publicè sæpe diceret, exercitum se alere posse papyro et glutinò*.” We may doubt whether the value of the paper which any single city now contains would be

the like. Learned men have probably concluded that in a poem of that time, and not to compare ancient paper was white was not suited for the ink from the type, that it would have paper in its structure: (*“viscera nivea videra”*) across them behind; extraordinary of humors with lime or clay, and draw off gently, and represent faithfully throughout; for an troubled water over water is turbid with ferred to subside slowly, and is raised general passage of the water by it, and, remaining between felts, to each and undergoes various show that the result of sediment at the bottom nothing in common with. The application of rot results been less astonishing the cistern of turbid vessel, receives the deposit transfers it uninjured, thus an endless web water charged with putresting; for we desire is constructed. the like. Learned men have discussed the antiquity of this manufacture. It is not improbable that an earlier date ought to be assigned to it than is commonly given: nor ought we readily to conclude that it was unknown at a particular period, because it is not mentioned in a poem of that time; for the poet sought to celebrate the achievements of gods and heroes, and not to compose an Encyclopædia, or a Dictionary of the Arts and Sciences. Ancient paper was white, smooth, durable, and well adapted in all respects for writing; but it was not suited for the printer: by reason of the closeness of the grain, it would not receive the ink from the types more kindly than shavings of wood, &c.; and so brittle was its texture, that it would have shivered into pieces under the press. Nor did it resemble modern paper in its structure: it was, in truth, an artificial mass; leaves, or rather strips of bark ("*Nidæra nivea virentium herbarum*"), being pasted together by the edges, others were laid across them behind; whereas the paper which we now use is, perhaps, the most subtle and extraordinary of human inventions. If a cistern or other vessel be filled with water turbid with lime or clay, and the earth allowed to subside slowly, the water being evaporated, or drawn off gently, and the sediment left to dry, the calcareous or argillaceous deposit will represent faithfully the formation of paper; and it will be smooth, and of an equal thickness throughout; for an equal portion of the earth of which it is formed was suspended in the troubled water over each point in the bottom where it finally lodged. In making paper, the water is turbid with the pulp or paste of triturated rags, and the suspended pulp is not suffered to subside slowly; but a sieve or frame of wire gauze is dipped equally into the cistern, and is raised gently to the surface, and agitated in a level position, which facilitates the passage of the water through the wires, while the fibres of rag are in some degree interwoven by it, and, remaining on the surface of the sieve, form the sheet of paper. This is pressed between felts, to exclude the water, and to render its texture closer; it is dried and sized, and undergoes various operations, which it is unnecessary to enumerate, as we seek only to show that the result of this wonderful invention is as much an aqueous deposit as the earthy sediment at the bottom of a cistern, although it is obtained more rapidly. Modern paper has nothing in common with the ancient, save the vegetable fibre which is the basis of both. The application of rotary motion has effected wonders in many of the arts; nor have the results been less astonishing in the paper-mill: instead of dipping the sieves or frames into the cistern of turbid water, a circular web, a round towel of woven wire, revolves under the vessel, receives the deposit, conveys it away, and, by an adjustment of marvellous delicacy, transfers it uninjured, although as frail as a wet cobweb, to a similar revolving towel of felt: thus an endless web of paper is spun, as long as the machine continues to move, and the water charged with pulp is supplied. We are unable to pursue the process, however interesting; for we desire merely to explain the general principle according to which our paper is constructed. It is to this admirable material that we owe the invention of printing, which could not subsist without it: its pervious and spongy texture imbibes and retains the ink, and its toughness resists the most violent pressure; and, in a well-bound book, under favourable circumstances, its duration is indefinite, and, for all practical purposes, eternal! It is true that legal documents are sometimes printed on parchment, which is less liable to be torn, or injured by rubbing; and the luxury of typography occasionally exhibits a few impressions of a splendid work upon vellum; and that these two substances were known to the ancients: but they are necessarily expensive, and the cost of either far exceeds the price of the best penmanship; so that it would be altogether unprofitable to cast types, to construct presses, and to incur the various and heavy charges of an establishment for printing, unless we possessed a cheaper material.

We owe the introduction of paper into Europe to the Arabians or Moors. There is some uncertainty as to the precise era of its first appearance; and we are unable to trace the origin of the precious invention, or even to imagine by what steps men were led to it. We cannot conceive how any one could be tempted to pound wet rags in a mortar, to stir the paste into a large body of water, to receive the deposit upon a sieve, to press and to dry it. The labour of beating rags into pulp by the hand would be as hopeless as it would be tedious and severe. It is true that paper was originally made of cotton,—a substance less obstinate than linen rags, which are now commonly used. At present, the fresh rags are torn in pieces by a powerful mill: formerly, it was the practice to suffer them to rot; to place them in large heaps in a warm and damp situation, and to allow them to heat and ferment, and to remain undisturbed until mushrooms began to grow upon them; so that, being partially decayed, it might be less difficult to triturate them. Nevertheless, the invention of paper is a mystery. The Chinese possess the arts of making paper and of printing; but we know not how long they have had them, nor whether the Mohammedans learned the former from them. The illiterate inhabitants of some of the islands in the South Seas were able to compose a species of paper, which they used in fine weather for raiment, of the bark of trees. The basis of paper being the vegetable fibre, it has been made of various substances, as straw, as well as of rags.*

* We are indebted for this valuable historical sketch to our learned friend, T. J. Hogg, Esq., barrister-at-law. The reader may resort, for farther information as to the history of paper, to the article on it in *Rees's Cyclopædia*.

Manufacture of Paper in England.—The application of paper to the purposes of writing and printing, and the fact of its being indispensable to the prosecution of the latter, render its manufacture of the highest utility and importance. But, even in a commercial point of view, its value is very considerable. France, Holland, and Genoa had, for a lengthened period, a decided superiority in this department. The finest and best paper being made of linen rags, its quality may be supposed to depend, in a considerable degree, on the sort of linen usually worn in the country where it is manufactured; and this circumstance is said to account for the greater whiteness of the Dutch and Belgian papers, as compared with those of the French and Italians, and still more the Germans. The rags used in the manufacture of writing paper in Great Britain, are collected at home; but those used in the manufacture of the best printing paper are imported, principally, from Italy, Hamburg, and the Austrian States, by way of Trieste.—(See RAOS.) We believe, however, that it was owing rather to the want of skill, than, as has sometimes been supposed, to the inferior quality of the linen of this country, that the manufacture of paper was not carried on with much success in England till a comparatively recent period. During the 17th century, most part of our supply was imported from the Continent, especially from France. The manufacture is said to have been considerably improved by the French Refugees who fled to this country in 1685. But it is distinctly stated in *The British Merchant* (vol. ii. p. 266.), that hardly any sort of paper, except brown, was made here previously to the Revolution. In 1680, however, the manufacture of white paper was attempted; and within a few years, most branches were much improved. In 1721, it is supposed that there were about 300,000 reams of paper annually produced in Great Britain, which was equal to about two thirds of the whole consumption. In 1783, the value of the paper annually manufactured was estimated at 780,000*l.* At present, besides making a sufficient quantity of most sorts of paper for our own use, we annually export about 100,000*l.* worth of books. We still, however, continue to import certain descriptions of paper for engraving from France, and a small supply of paper hangings. The duty on both amounts to about 2,800*l.* a year.

In 1813, Dr. Colquhoun estimated the value of paper annually produced in Great Britain at 2,000,000*l.*; but Mr. Stevenson, an incomparably better authority upon such subjects, estimated it at only half this sum. From information obtained from those engaged in the trade, we incline to think that the total annual value of the paper manufacture in the United Kingdom, exclusive of the duty, may at present amount to about 1,200,000*l.* or 1,300,000*l.* There are about 700 paper-mills in England, and from 70 to 80 in Scotland. The number in Ireland is but inconsiderable. Of these mills, we believe very few have lately been employed. About 27,000 individuals are supposed to be directly engaged in the trade; and, besides the workmen employed in the mills, the paper manufacture creates a considerable demand for the labour of millwrights, machinists, smiths, carpenters, iron and brass founders, wire-workers, woollen manufacturers, and others, in the machinery and apparatus of the mills. Some parts of these are very powerful, and subject to severe strain; and other parts are complicated and delicate, and require continual renovation. Owing to this, the manufacture is much greater in importance, as a source of employment, than might at first be supposed, or than it would seem to be considered by government, who have loaded it with an excise duty amounting to more than *three times as much as the total wages of the work-people employed!*

The modern discoveries in chemical science have not only materially facilitated the manufacture, but have greatly enlarged the supply of materials from which paper may be made. Until within these few years, the sweepings of cotton mills, owing to the grease and dirt with which they are mixed up, were of no value whatever, except as manure. But means having been discovered of rendering them white, they are now made into very good paper; and the neighbourhood of Manchester has, in consequence, become a principal seat of the manufacture.

During the present century, so remarkable for improvements in the arts, this manufacture has been signally promoted, notwithstanding the excise regulations, by the application of machinery to the conversion of pulp into paper. The first idea of this originated in France: a model of the machinery was brought to this country by a M. Didot, which, though very far from giving assurance of success, was yet sufficient to induce English capitalists and engineers, particularly Mr. Donkin, to follow up the scheme; and in the course of a few years they have brought it to a high degree of perfection. Mr. Dickinson, of Hertfordshire, one of the most intelligent mechanists and extensive paper manufacturers in England, has invented a machine of a different construction for the same purpose, and has also introduced various subsidiary improvements into the manufacture. The result is all but miraculous. By the agency of a great deal of complicated machinery, so admirably contrived as to produce the intended effect with unerring precision and in the very best manner, a process, which in the old system of paper-making occupied about *three weeks*, is performed in us many minutes! A continuous stream of fluid pulp is, within this brief space of time, and the short distance of 30 feet, not only made into paper, but actually dried, polished, and every separate sheet cut round the edges, and rendered completely ready for use! The paper manufactured by

this wonderful combination of intelligence and power is, at once, moderate in price, and for most purposes superior in quality to that which was formerly made by hand. The sample before the reader, though not the finest that is made, will warrant what is now stated. Mr. Dickinson has very recently made an important improvement in the paper manufacture, on the principle of veneering in cabinet work. He makes two webs of paper, each by a separate process; and by laying them together while in an early stage, they are rendered inseparable by the pressure to which they are subjected. This paper is used in copperplate printing; and by adopting a peculiar method of preparing the pulp, and selecting a finer rag for the web which forms the face of the paper, it is much better calculated for taking a fine impression. This admirable invention has put nearly a total stop to the importation of French paper, which was formerly used in considerable quantities by copperplate printers.

Duty on Paper. Excise Regulations.—It is difficult to say whether the duty on paper, or the regulations under which that duty is collected, be the more objectionable. All writing, coloured, or wrapping paper, card-boards, and pasteboards, are denominated 1st class paper, and pay 3d. per lb. duty (2s. a cwt.); unless manufactured wholly of tarred ropes, without the tar being previously extracted, in which case the paper is denominated 2d class, and pays 1½d. per lb. (1s. a cwt.). Millboards and scale-boards, made of the same materials as 2d class paper, pay 2½d. per lb. (2½s. a cwt.) duty.

The duty on the various descriptions of 1st class paper varies from about 25 or 30 per cent. on the sheet, to about 200 per cent. on the coarsest! A duty so oppressive has led to the commission of very great frauds, which all the vigilance of the officers, and the endless multiplication of checks and penalties, have been unable to prevent; the real effect of such miserable devices being to injure the honest manufacturer, and to give those of a different character greater facilities for carrying on their fraudulent schemes.

But, laying out of view for a moment the oppressiveness of the duty, can any thing be more preposterously absurd, than to interdict the manufacturer of wrapping paper (for it is to him that the regulation applies) from using any other material than tarred ropes? If there must be a duty on paper, let it be assessed upon the finished article on an *ad valorem* principle; but do not let the plans and combinations of the manufacturer be interfered with. Were it not for the existing regulation, wrapping paper of equal strength and better appearance than what is now manufactured, might be made of much less costly materials. Since the peace, and the very general introduction of iron cables, tarred ropes have advanced considerably in price; but as the use of any other material whatever would occasion an increase of 14s. a cwt. of duty, advantage cannot be taken of this circumstance; so that the excise regulation, without putting one shilling into the pockets of government, obliges the public to pay an increased price for an inferior article! Neither is this its only effect: a good deal of the refuse thrown out in sorting rags, which might be used in the manufacture of coarse wrapping paper, is at present sold by the manufacturers for about 3s. a cwt.; while a good deal that might be used in the same way cannot be sold at all, but is absolutely lost. It is plain, therefore, that this regulation has a two-fold operation: first, in adding to the cost of wrapping paper, by compelling it to be made from a comparatively expensive article; and, secondly, in adding to the expense of fine paper, by preventing the refuse of the rags used in its manufacture from being beneficially employed.

The other regulations in the excise acts (43 Geo. 3. c. 20, and 42 Geo. 3. c. 94.) as to paper, are of a piece with that now brought under the reader's notice. Every step of the manufacture must be conducted under the surveillance of the excise; and the provisions as to entries, folding, weighing, sorting, labelling, removing, &c. are not only exceedingly numerous, but are in the last degree vexatious, at the same time that compliance with them is enforced under ruinous penalties. That this is not an exaggerated statement will be obvious from the following extracts from the statements of manufacturers, given in Mr. Poulett Thomson's admirable speech on the taxation of the empire, 26th of March, 1820.

"We are bound," says a manufacturer on whose accuracy and honour I (Mr. P. Thomson) can rely, "to give 24 or 48 hours' notice (according to the distance the excisemen live), before we can change any paper, and to keep it in our mills for 24 hours afterwards before we send it to market, unless it has been reviewed by the supervisor; to have the different rooms in our manufactories lettered; to have our engines, vats, chests, and presses numbered; and labels pasted on each ream: should we lose one label, the penalty is 200l. I generally write a request for 500 labels to the excise at one time; and should any person get into my mill, and steal or destroy them, the penalty would be 100,000l. I believe there is not any kind of paper pays more than 20s. per ream duty. If the penalty were 40s. it would be quite sufficient to answer every purpose for the security of the revenue. We are obliged, also, to take out a yearly licence; and a mill with 1 vat pays as much as one that has 10."

Another says,—"It is no slight aggravation of the evil, that the laws are so scattered and confused as to render it almost impossible for any body to have a knowledge of them; and frequently, what is a great annoyance to an honest man, is no check to a rogue. It is true, the excise laws are seldom, or perhaps never, acted upon to their utmost rigour; but still they confer almost unlimited power on those who have the administering of them, over the property of all who come under their influence; and I am persuaded that they never could have existed, if they had effected the whole of the community."

It is singular that nothing should hitherto have been done to amend regulations so justly complained of. In point of fact, they are good for nothing but the oppression of the trade. It has not been shown that their maintenance is indispensable to enable the duty to be assessed and collected; but if such be the case, it is, of itself, a sufficient ground for the repeal of the duty. Our condition is not, fortunately, such as to require that one of the most important manufactures carried on in the empire should be subjected to a system of oppressive regulations for the sake of 700,000l. a year.

But, though it were possible to assess and collect the duty so as to prevent fraud, without interfering with the manufacture, we should very much doubt, considering the purposes to which paper is applied, the policy of subjecting it to any duty whatever. Printers, stationers, bookbinders, type-founders, artists, copperplate and lithographic printers, card-makers, paper-stainers and paper-hangers, &c. are all injured by the duty on paper. But the greatest evil of all is its influence in increasing the price, and hindering the publication of books. "This places a great obstacle in the way of the progress of knowledge, of useful and necessary arts, and of sober, industrious habits. Books carry the production of the human mind over the whole world, and may be truly called the raw materials of every kind of science and art, and of all social improvement."—(See the admirable work of Sir H. Paollet, on *Financial Reform*, 3d ed. p. 30.)

At all events, the existing duties, varying as they do from 30 to 200 per cent. *ad valorem*, are quite exorbitant; nor can there be a doubt that they would be more productive were they adequately reduced, and assessed on reasonable principles. But, as we have shown in the art. Books, it is not possible to lay a duty on the paper intended to be used in printing, without committing injustice. No one can foresee, with any thing approaching to certainty, whether a new book, or even a new edition of an old book, will sell; and the fact is, that one third of the books, and nineteen twentieths of the pam-

phlets published, do not pay their expenses. Now, we ask whether, under such circumstances, any thing can be more obviously unjust, more utterly subversive of every fair principle, than the imposition of the same heavy taxes upon all publications,—upon those that do not sell, as well as upon those that do? Upon a successful work, the duty may only be a reasonable deduction from the profits of the author and publisher; but when (as is the case with 1 out of 3 books, and 19 out of 20 pamphlets) the work does not sell, there are no profits from which to defray the duty, which has, of course, to be paid entirely out of the capital of the author or publisher! Such is the encouragement given to literature, such the facilities afforded to the diffusion of useful information, by the popular government of England! All other businesses meet with very different treatment. Dealers in gin or brandy, for example, may lodge their goods in bonded warehouses, and are not obliged to pay any duty upon them until they are sold for home consumption; but such privilege is denied to the bookseller, though the article in which he deals be a thousand times more capricious. He must pay the duty on the whole impression of every book, before bringing a single copy of it to market; so that he not infrequently pays duty upon 1,000 volumes, though unable to sell above 150 or 200, except as waste paper! Even this is not the whole injury done him; for upon an advertisement announcing the sale of a 6d. pamphlet, as heavy a duty is charged as if it announced the sale of an estate worth 100,000*l*.

There are but two ways of putting an end to this scandalous injustice; viz. either by entirely repealing the paper duty, or by putting publishers under the surveillance of the excise, and assessing the duty on works according to the number sold at the publication price. The former would be the simple method; but if the state of the finances will not allow of the sacrifice of the paper duty, there are no insuperable difficulties in the way of the latter alternative. And were it adopted, and the duties reduced and simplified, justice would be done to authors and publishers, and a very great stimulus given to the paper manufacture, without any loss of revenue.

An Account of the Quantities of the different Sorts of Paper charged with Duties in each of the 2 Years ended the 5th of January, 1835; the Rates of Duty on such Paper; the Gross and Net Produce of the Duties; the Drawbacks on Paper exported, and the Cost per Cent. at which the Net Revenue is collected, separating the Accounts of England, Scotland, and Ireland.

Note.—The cost per cent. at which the duty on paper is collected, cannot be stated with any degree of accuracy, the officers being employed in charging excise duties generally; but the sum which would probably be saved to the revenue, under the head of "Salaries to Officers," if the duties on paper should be repealed, may be estimated at 5,500*l*; and for stationery supplied by the revenues for purposes connected with the paper duties, a further saving of 750*l*., making altogether 6,250*l*., which is about $\frac{1}{2}$ per cent. on the net revenue of the last year.

(In the edition of this Supplement issued in October, 1835, we stated, "The Commissioners of Excise Inquiry have made a very important suggestion with respect to the duty on paper. They recommend that the existing distinction between first class and second class paper should be put an end to; and that a duty of 1*½*d. per lb. be charged indiscriminately on all descriptions of paper. Were this recommendation adopted, a half would be deducted from the duty now charged on all paper used for writing and printing; and the manufacturer of inferior or wrapping paper, would be allowed to make use of whatever materials he pleased. This judicious suggestion will, no doubt, be adopted. The stimulus to consumption that would be given by the fall in the price of paper consequent to a reduction of this sort, makes it abundantly certain that the revenue would lose little or nothing by the change; at the same time that the manufacturer would be relieved from several vexatious regulations, and that the gross injustice inflicted on authors and publishers by the paper duties (see vol. i. p. 197.) would be materially mitigated. To suppose that, under such circumstances, the duty should not be reduced, would be to suppose that government was not anxious to encourage, but to discourage, the manufacture; and that it preferred dealing unjustly by authors and publishers!"—(See 14th Report of Commissioners of Excise Inquiry.)

We are glad to be able to say, that we have not been disappointed in this anticipation. The duty on all writing and printing paper has been reduced a half or from 3*d*. to 1*½*d. per lb., which is now the rate charged on all paper, millboard, pasteboard, &c. The oppressive

duty of 1*½*d. the square ordinary duty on such a measure, in reduction. The abolition of such a larger class of productive, not only of cleanliness.—Sup

duty of 13d. the square yard, charged on paper, when printed or stained, over and above the ordinary duty on such paper, has been wholly repealed. The effect of this wise and judicious measure, in reducing the price of paper used in printing, has already been very sensibly felt. The abolition of the discriminating duty on stained or printed paper promises, also, to be of very material importance. The reduction of price it has occasioned, has enabled a much larger class of persons to get their apartments papered; and it will in this way be productive, not only of a great additional demand for paper, but of a great increase of comfort and cleanliness.—*Sup.*)

PARCEL, a term indifferently applied to small packages of wares, and to large lots of goods. In this latter sense, 20 hogsheads of sugar or more, if bought at one price, or in a single lot, are denominated "a parcel of sugar."

PARCELS, BILL OF, an account of the items composing a parcel.
PARCHMENT (Ger. *Pergament*; Fr. *Parchemin*; It. *Cartapeccora*; Sp. *Pergamino*), the skin of sheep or goats prepared in such a manner as to render it proper for writing upon, covering books, &c. It is an important article in French commerce; besides being largely exported, the home consumption is very considerable. The name is derived from Pergamus, the city where it is said to have been first manufactured.

PARTIAL LOSS. See INSURANCE (MARINE).
PARTNERSHIP, the association of two or more individuals for carrying on some business or undertaking in common; each deriving a certain share of the profits, and bearing a corresponding share of the loss arising therefrom.

The term partnership is usually applied to those smaller associations in which the partners personally conduct their joint affairs: the term company being applied to those great associations conducted by directors and servants appointed by the body of the partners to act for them; the latter having no direct concern in the management of the affairs of the company. —(See COMPANIES)

The advantages of partnerships are obvious. Many businesses could not be successfully carried on without a larger command of capital than usually belongs to an individual; and most of them require the combination of various species of talent. An individual may have capital sufficient to undertake a particular business; but he may not be thoroughly versed in any of its details, or he may be familiar with certain parts of it and not with others; so that it might be for his advantage to assume one or more individuals as his partners, supposing them to be without capital, provided they possessed the skill and other qualifications required in prosecuting the business. Associations of this sort enable capital and talent to derive all the assistance that each is capable of lending to the other. And as the gains of each partner usually consist of a certain proportion of the total profits made by the company, each has the most powerful motive to exert himself for the benefit of the concern. It is not, indeed, to be denied, that associations of this sort are occasionally productive of mischievous consequences. The public interest requires that the whole partners in a firm should be bound by the acts of any one of their number; so that the folly or fraud of a single partner may detail very serious consequences upon those associated with him. Generally, however, this is not an evil of frequent occurrence; and there can be no question that, both in a private and public point of view, partnerships are highly beneficial.

To enter into any thing like a full discussion of the law of partnership would very far exceed our limits. We shall, therefore, merely state a few of those leading principles with respect to it, as to which it is of importance that mercantile men, and the public generally, should be well acquainted.

Formation of Partnerships.—The mere consent of the partners, fixed and certified by acts or contracts, is quite sufficient to constitute a private copartnership, so that if two or more merchants, or other persons, join together in trade, or in any sort of business, with a mutual, though it may be unequal, participation in the profit and loss of the concern, they are in every respect to be considered as partners. No particular form or words of proceeding is necessary to constitute a partnership. It may be entered into either by an express written agreement, or by a merely verbal one. The former ought in almost all cases to be preferred. The contract of copartnership should state the parties to it, the business to be carried on, the space of time the partnership is to continue, the capital each is to bring into the business, the proportion in which the profit and loss are to be divided, the manner in which the business is to be conducted, the mode agreed upon for settling accounts at the dissolution of the partnership, together with the special covenants adapted to the circumstances of each particular case.

To constitute a partnership, there must be a participation in uncertain profits and losses; and the true criterion to determine, when money is advanced to a trader, whether the individual making the advance is to be looked upon as a partner or not, is to ascertain whether the premium or profit be certain and defined, or casual, indefinite, and depending upon the accidents of trade. In the former case he is a lender merely; in the latter he is a partner. The mere participation in the profits of any business or adventure, without a participation in the losses, constitutes a partnership, so far as to render the individual so participating

partnership is formed for a single dealing or transaction, the moment that is completed it is at an end. Partnerships may also be dissolved by death, agreement, bankruptcy, outlawry, &c. A court of equity will interfere to dissolve a partnership, in cases where a partner so misconducts himself as to be injurious to the firm, or to defeat the object for which the partnership was formed; or when a partner becomes insane, or is in such a state of mind as to render him permanently incapable of transacting the peculiar business of the firm; or where the partnership is formed for an impracticable purpose. Indeed, in all cases, where even a partnership may be dissolved without the interference of a court of equity, it may be most prudent, if the dissolution be opposed by one of the partners, to file a bill, praying a dissolution and account, and an injunction against using the partnership name.

When a partnership is dissolved by agreement, or one of the partners withdraws from it, public notice of the dissolution must be given in the *London Gazette*; and a specific intimation of the circumstance must be sent to ALL individuals accustomed to deal with the firm. Where such intimation has not been sent, the individual withdrawing from the firm may be made liable to third parties after he has ceased to have any thing to do with it. A dormant partner, whose name has never been announced, may withdraw from a firm without making the dissolution of partnership publicly known.

When the joint debts of the firm are paid, and the property duly distributed among the partners, the dissolution may be said, in a general sense, to be accomplished. If any one of the firm be guilty of a breach of duty, in misapplying the effects before the concern is finally wound up, the proper course is to apply to the Court of Chancery to appoint a manager.

Within a reasonable time after the death of one partner, the survivors must account to the representatives of the deceased; and if not willing to do so, a court of equity will compel them. In taking partnership accounts at the death of a partner, they must commence with the last stated account; or, if there be none such, with the commencement of the partnership; and they must end with the state of the stock at the time of the partner's death, and the proceeds thereof until it be got in.

No notice is necessary to third parties of the death of a partner; the partnership is dissolved, and all liabilities for subsequent acts cease. The surviving parties are to be sued alone for the partnership liabilities and obligations, for which they are liable to the full extent. But they are not liable for the separate debts of the deceased partner, unless, after payment of all the joint debts, they have a surplus of the partnership effects in their hands.

Upon a dissolution by death, if the joint effects be insufficient to pay the partnership debts, the separate estate of the deceased partner, if he have any, is liable for the deficiency.

The statements now made will, probably, be sufficient to give our readers a tolerably distinct notion of the formation of partnerships; and of the more important rights, duties, liabilities, &c. arising out of such institutions. Those who wish to go deeper into the subject, may consult the treatises of *Watson and Montague on the Law of Partnership*; *Chitty's Commercial Law*, vol. iii. pp. 225—269.; *Woolrych on Commercial Law*, pp. 298—317, &c.

[See *Ken's Commentaries on American Law*, Lecture 43.—*Am. Ed.*]

PASSENGERS, in commercial navigation, are individuals conveyed for hire from one place to another on board ship. **Passage ships** are those peculiarly appropriated to the conveyance of passengers.

Regulations as to the Conveyance of Passengers.—The conveyance of passengers between Great Britain and Ireland is regulated by the act 4 Geo. 4. c. 68, which provides, that no vessel employed in the conveyance of passengers, of less than 200 tons burden, shall carry more than 20 persons as passengers, unless a license to that effect has been obtained from the Custom-house. A licensed vessel is not to take, exclusive of the crew, more than 5 adult persons, or 10 children under 14, or 15 children under 7 years of age, for every 4 tons burden; and if such vessel be partly laden with goods or wares, not to take more than the above proportion of passengers for every 4 tons that remain unladen, namely for carrying more than twenty without license, 50L; and for a licensed vessel carrying more than the above proportion for each 4 tons burden, 5L for each passenger. Merchant vessels of not more than 100 tons, not to carry more than 10 persons, or of not more than 200 tons, not more than 15 persons; under a penalty of 5L each person.

The conveyance of passengers to North America is regulated by the 9 Geo. 4. c. 21. This act provides, that no ship shall sail from the United Kingdom for any port or place in His Majesty's possessions on the continent or islands of North America, with more than three persons on board for every ton of the registered burden of such ship, the master and crew being included; and no ship to carry passengers, unless of the height of 5½ feet, at least, between decks: 2 children under 14, or 3 under 9, or 1 child under 12 months with its mother, to be reckoned as one person. Good and wholesome provisions to be provided, at the rate of 50 gallons of pure water for every person on board, and 50lbs. of bread, biscuit, oatmeal, or bread-stuffs for every passenger. Ships that have their full complement of passengers are prohibited from carrying any part of their cargo or stores between decks. Before starting out, the master is to deliver to the collector a list of the passengers, specifying as accurately as may be their names, ages, professions or occupations, and the name of the port or place at which the ship is contracted to be landed. Masters of ships compelling passengers to land at any other place than that agreed upon, shall forfeit to every such passenger so landed a sum of 20L. Masters who carry a greater number of passengers than allowed by law, or do not provide the requisite quantity of water and provisions, or stow them or any part of the cargo between decks, or furnish false bills to the collector, shall be deemed guilty of a misdemeanour. A bond for 1,000L, with one good and sufficient surety, shall be given by the master of every ship clearing out for British North America with passengers on board, that such ship is seaworthy, and that all and every the rules and regulations of this act shall be well and truly performed. Such bond may be without a stamp. This act does not extend to Post-office ships, nor to the Bahama Islands, nor to the West Indies.

It is enacted by the 9 Geo. 4. c. 47., that the master of any packet or vessel employed in carrying passengers from one part of the United Kingdom to another is to be licensed by the commissioners of excise to retail foreign wine, strong beer, cider, perry, spirituous liquors, and tobacco. Such licence to be annually renewed, and to be transferable by endorsement. Duty to be paid by the owners on obtaining such a licence, &c. Penalty for selling wines, &c. without a licence, for every offence, &c.

It is enacted by 9 Geo. 4. c. 76., that every steam vessel which is of the registered tonnage of 100 tons, shall be deemed to be a vessel of 300 tons at least.

The act 6 Geo. 4. c. 115., which regulated the conveyance of passengers to foreign parts, was repealed by 7 & 8 Geo. 4. c. 19.

In some respects, passengers may be considered as a portion of the crew. They may be called on by the master or commander of the ship, in case of imminent danger either from tempest or enemies, to lend their assistance for the general safety; and in the event of their declining, may be punished for disobedience. This principle has been recognised in several cases; but, as the authority arises out of the necessity of the case, it must be exercised strictly within the limits of that necessity.—(*Boyce v. Bacliffe*, 1 Campbell, 58.) A passenger is not, however, bound to remain on board the ship in the hour of danger, but may quit it if he have an opportunity; and he is not required to take upon himself any responsibility as to the conduct of the ship. If he incur any responsibility, and perform extraordinary services in relieving a vessel in distress, he is entitled to a corresponding reward. The goods of passengers contribute to a general average.—(*Abbott on the Law of Shipping*, part iii. c. 10.)

Return of the Number of Persons who have emigrated from the United Kingdom to any of the Colonies of Great Britain in each Year since 1820, and to the United States of America since 1825; distinguishing the Colonies to which they have emigrated.—(*Parl. Paper*, No. 650. Sess. 1830, and No. 696. Sess. 1833.)

1832	66,330	-	196	3,733	32,572

The foregoing statement, founded upon special returns transmitted from the various ports of the United Kingdom by the local officers of customs, exhibits the number of persons of both sexes, and of all ages, who have emigrated to the colonies in each of the last 10 years, as far as the same can be ascertained. The officers report that they have not the means of distinguishing males from females, or adults from children, in these returns; and in some cases they state that the distinction cannot be drawn with accuracy between emigrants and passengers of other descriptions.

For the regulations as to the landing of passengers in New York, see New York.

PATENT, a privilege from the Crown granted by letters patent (whence the name), conveying to the individual or individuals specified therein, the sole right to make, use, or dispose of some new invention or discovery, for a certain specified period.

The power to grant patents seems to exist at common law; but it is limited and defined by the famous statute 21 Jac. 1. c. 3., which enacts, "That any declaration before-mentioned shall not extend to any letters patent or grants of privilege for the term of 14 years or under, thereafter to be made, of the sole working or making of any manner of new manufactures within this realm, to the true and first inventor and inventors of such manufactures, which others at the time of making such letters patent and grants shall not use, so as also they be not contrary to the law, nor mischievous to the state, by raising prices of commodities at home, or hurt of trade, or generally inconvenient. The said 14 years to be accounted from the date of the first letters patent, or grant of such privilege therewith made; but that the same shall be of such force as they should be if that act had never been made, nor none other."

Policy of Patents.—The law with respect to patents is unavoidably encumbered with several difficulties. The expediency of granting patents has been disputed; though, as would seem, without any sufficient reason. Were they refused, the inducement to new discoveries would, in many cases, be very much weakened; at the same time that it would plainly be for the interest of every one who made a discovery, to endeavour, if possible, to conceal it. And notwithstanding the difficulties in the way of concealment, they are not insuperable; and it is believed that several important inventions have been lost from their secret dying with their authors. On the other hand, it is not easy to decide as to the term for which the patent, or exclusive privilege, should be granted. Some have proposed that it should be made perpetual; but this would be a very great obstacle to the progress of improvement, and would lead to the most pernicious results. Perhaps the term of 14 years to which the duration of a patent is limited in England, is as proper a one as could be suggested. It may be too short for some inventions, and too long for others; but, on the whole, it seems a pretty fair average.

Specification.—Previously to the reign of Queen Anne, it was customary to grant patents

without any condition was then introduced, by an instrument describe and ascertain performed, and also rally a month), the shall utterly cease an invention from being profit by it.

Mode of Granting the Crown, setting to gain discovery, which that he is the first who is separately attain their projects the inventions of two It would seem, that stated in applications cation of mechanical knowledge is not deemed to what patents should be no responsibility parchment, indictment were established. All enrolled.

Considering the number that have been have given rise?

Expense of Patent Ireland, if it be interest stamps, fees, &c. is invention, the opposition it may be estimated at his valuable evidence

Conditions as to Patent patent; if it can be shown utility, it will be void. "by the hands of man."—nor capable of being so, and which, till applied to inventors, be applied to words of Lord Tenterden by man from the matter practically his art and skill had been ruled that "having suggested that "to be carried on by knowledge producing some other known been adopted.

A patent for a machine different parts is new, no specification must clearly explain) and not lay claim to

A patent may be granted condition or improvement, the patent include the give no right to the thing

A void patent may be previously practised in a A patent is void: if it be The specification must be exactly. The terms need not what is unnecessary proceed state known to the will be void. Any inaccurate constitute the whole.

Copy.—It is not necessary who are afraid lest they which general; that is, enters it, whenever any a general terms. The entry mention is nearly complete preference may be given An injunction may be obtained the copyright acts. Patents have been some round that that term was

without any condition, except that they should be for really new inventions. But a condition was then introduced into all patents, and is still retained, declaring that if the inventor do not, by an instrument under his hand and seal, denominated a specification, *particularly describe* and ascertain the nature of his invention, and in what manner the same is to be performed, and also cause the same to be enrolled in Chancery within a certain time (generally a month), the letters patent, and all liberties and advantages whatever thereby granted, shall utterly cease and become void. This was a very judicious regulation. It secures the invention from being lost; and the moment the patent expires, every one is in a situation to profit by it.

Made of Granting a Patent.—Letters patent are obtained upon petition and affidavit to the Crown, setting forth, that the petitioner has, after great labour and expense, made a certain discovery, which he describes, and which he believes will be of great public utility, and that he is the first inventor. The petition is referred to the attorney or solicitor general, who is separately attended by the applicant and all competitors, if there be any. They explain their projects to him, and he decides on granting or withholding the patent. When the inventions of two or more conflicting applicants coincide, he rejects all the applications. It would seem, that to decide upon such difficult questions in mechanics as are often agitated in applications for patents, a familiar knowledge of the principles and practical application of mechanical science would be indispensable. But by the law, as it now stands, such knowledge is not deemed necessary. The legal officers of the Crown are the sole judges as to what patents should or should not be granted; their award is *final*, and they are subject to no responsibility, other than the common remedies against public officers by impeachment, indictment, &c.—none of which would be entertained, unless a corrupt motive were established. After approval by the law officers, the grant is made out, sealed, and enrolled.

Considering the authority under which patents are granted, can any one wonder at the number that have been overturned in the courts of justice? or at the litigation to which they have given rise?

Expense of Patents.—Separate patents have to be taken out for England, Scotland, and Ireland, if it be intended to secure the privilege in the three kingdoms. The expense of stamps, fees, &c. is in all cases very heavy. It varies according to the intricacy of the invention, the opposition (if any) to the patent being granted, &c. According to Mr. Farcy, it may be estimated at 120*l.* for England, 100*l.* for Scotland, and 125*l.* for Ireland.—(See his valuable evidence in the *Commons' Report on Patents*, p. 17.)

Conditions as to Patents.—The novelty and utility of the invention are essential to the validity of a patent; if it can be shown to have been in use previously to the grant of the patent, or to be of no utility, it will be void. It must also be for something vendible—something "material and useful made by the hands of man."—(*Lord Kenyon*, 8 T. R. 99.) A philosophical principle only, neither organized, nor capable of being so, is no ground for a patent; because it is an element and rudiment of science, and which, till applied to some new production from these elements, cannot, with justice to other inventors, be applied to the exclusive use of any one of them. In all patents there is required, in the words of Lord Tenterden, "something of a *corporeal* or *substantial* nature, something that can be made by man from the matters subjected to his art and skill, or at the least some *new mode of employing* practically his art and skill."—(*Godson on the Law of Patents*, p. 81.) Previously to Lord Tenterden, it had been ruled that a new process or method was not the subject of a patent. But his Lordship having suggested that "the word manufacture (in the statute) may, perhaps, extend to a *new process* to be carried on by known implements, or elements acting upon known substances, and ultimately producing some other known substance, &c."—(*Godson*, p. 83)—this principle of interpretation has now been adopted.

A patent for a machine, each part of which was in use before, but in which the combination of the different parts is new, and a new result is obtained, is valid. But, in order to its being valid, the specification must clearly express that it is in respect of such new combination or application, and of that only; and not lay claim to original invention in the use of the materials.

A patent may be granted for an addition to an old invention. But the patent must be confined to the addition or improvement, that the public may purchase it without being encumbered with other things. If the patent include the whole, it will be void; for the property in the addition or improvement: can we not right to the thing that has been improved.—(*Godson*, p. 71.)

A valid patent may be obtained for an invention, "*new in this realm*," though it may have been previously practised in a foreign country.

A patent is void, if it be for several distinct inventions, and any one of them fall of originality.

The specification must be prepared with *great care*. It should set forth the invention fully and completely. The terms used must be clear and unambiguous; no necessary description must be omitted, nor what is unnecessary be introduced; and the invention must be described in the *best and most improved state* known to the inventor. If any one of these conditions be not complied with, the patent will be void. Any inaccurate or defective statement, *were it even inserted through inadvertency*, will vitiate the whole.

Caveat.—It is not unusual for inventors who have not brought their inventions to perfection, and who are afraid lest they be anticipated by others, to lodge a caveat at the offices of the attorney and solicitor general; that is, an instrument by which notice is requested to be given to the person who enters it, whenever any application is made for a patent for a certain invention therein described in general terms. The entry of a caveat is, therefore, nothing more than giving information that an invention is nearly completed; so that, if any other person should apply for a patent for the same thing, the preference may be given to him who entered it.

An injunction may be obtained for the infringement of a patent, in the same way as for a violation of the copyright acts.

Patents have been sometimes extended by act of parliament beyond the term of 14 years, on the ground that that term was too short properly to reward the inventor.

Total number of patents in force in May, 1829, 1,855.

The reader will find a great deal of curious and instructive information with respect to patents, in the *Report of the Committee of the House of Commons* on that subject (No. 332, Sess. 1829), particularly in the evidence and papers laid before the Committee by Mr. Farey. The treatise on the *Law of Patents and Copyrights*, by Mr. Godson, is clear and able.

(The reader will find in the article *PATENTS*, in the *Dictionary*, some remarks on the grounds on which they are granted, and on the difficulty of legislating on the subject. The object in giving a patent is twofold. In the first place, it is intended to stimulate and reward invention; and, in the second place, it is intended to prevent an invention from being lost, by obliging the inventor, when he takes out a patent, to describe it accurately. The difficulty in legislating on the subject is to hinder real *bona fide* inventors from being harassed by unfounded actions, and at the same time to prevent quacks and pretenders from appropriating discoveries already made, to the injury of the public. To be useful, any law on such a subject must be drawn up with great care and circumspection. But such certainly has not been the case with the act as to patents (5 & 6 Will. 4. c. 77), passed in 1833, of which a copious abstract is subjoined. It is altogether one of the crudest and most bungling attempts at legislation that has ever come under our notice. It gives to the patentee a right to make constant alterations in his specification; so that it will be next to impossible to learn from it what the invention really is for which the patent is granted. Under the old law, a patentee, who made any material improvements on his invention, was entitled to get a new patent for the improvements, so that no injury was done him by obliging him to make his specification quite accurate, at the same time that the public interests were secured. But every one naturally wishes to conceal his inventions; and, instead of counteracting this principle, the new law really offers a bonus on inaccurate specifications, by enabling the patentee to disclaim some parts and to amend others; and he may do this over and over again, provided he obtain leave from the attorney or solicitor general, to whose "good pleasure" the most important interests would thus seem to be left! It is not easy to imagine any thing more absurd. But we have little doubt, that the inconveniences that will result from it will lead to its speedy repeal or amendment. Some of the other clauses seem also to be highly questionable.

Any person having obtained Letters Patent for any Invention may enter a Disclaimer.—Any person who hath obtained or shall hereafter obtain letters patent, for the sole making, exercising, &c. of any invention, may, if he think fit, enter with the clerk of the patents of England, Scotland, or Ireland, respectively, as the case may be, having first obtained the leave of the attorney-general, or solicitor-general in case of an English patent, of the lord advocate or solicitor-general of Scotland in the case of a Scotch patent, or of the attorney-general or solicitor-general for Ireland in the case of an Irish patent, a disclaimer of any part of either the title of the invention or of the specification, stating the reason for such disclaimer, or may, with such leave as aforesaid, enter a memorandum of any alteration in the said title or specification, not being such disclaimer or such alteration as shall extend the exclusive right granted by the said letters patent; and such disclaimer or memorandum of alteration, being filed by the said clerk of the patents, and enrolled with the specification, shall be taken to be part of such letters patent or such specification in all courts whatever: provided that any person may enter a caveat, or caveats are now entered, against such disclaimer or alteration; which caveat shall give the party entering a right to have notice of the application being heard by the attorney-general, solicitor-general or lord advocate respectively; provided also, that no such disclaimer or alteration shall be receivable in evidence in any action or suit (except in any proceeding by *scire facias*) pending at the time when it was enrolled, but in every such action or suit the original title and specification alone shall be given in evidence, and taken to be the title and specification of the invention for which the letters patent have been granted; provided also, that it shall be lawful for the attorney-general, solicitor-general or lord advocate, before granting such fiat, to require the party applying for the same to advertise his disclaimer or alteration, as to the said attorney-general, &c. shall seem right, and shall, if he require such advertisement, certify in his fiat that the same has been duly made.—(21.)

Mode of Proceeding where Patentee is proved not to be the real Inventor.—If in any suit or action it shall be proved or found by the verdict of a jury that a person who has obtained letters patent for any invention, or supposed invention, was not the first inventor thereof, or of some part thereof, by reason of some other person or persons having invented or used the same, or some part thereof, before the date of such letters patent, or if such patentee or his assigns shall discover that some other person had, unknown to such patentee, invented or used the same, or some part thereof, before the date of such letters patent, it shall be lawful for such patentee or his assigns to petition II. M. in council to confirm the said letters patent or to grant new letters patent, the matter of which petition shall be heard before the judicial committee of the privy council; and such committee, upon examining the said matter, and being satisfied that such patentee believed himself to be the first and original inventor, and being satisfied that such invention or part thereof had not been publicly and generally used before the date of such first letters patent, may report to II. M. their opinion that the prayer of such petition ought to be complied with, whereupon II. M. may, if he thinks fit, grant such prayer; and the said letters patent shall be available to give to such petitioner the sole right of using, making, or vending such invention; provided that any person opposing such petition shall be entitled to be heard before the said judicial committee; provided also, that any person party to any former suit or action touching such first letters patent, shall be entitled to have notice of such petition before presenting the same.—(22.)

If in any Action or Suit a Verdict pass for the Patentee, the Judge may certify, &c.—If any action at law or suit in equity shall be brought in respect of any alleged infringement of such letters patent heretofore or hereafter granted, or any *scire facias* to repeal such letters patent, and if a verdict pass for the patentee, or if a final decree or order be made for him, upon the merits of the suit, it shall be lawful for the judge who tried such action or certify on the record, or the judge who shall make such order to give a certificate under his hand, that the validity of the patent came in question before him, which record or certificate being given in evidence in any other suit or action touching such patent, if a verdict pass, or order be made, in favour of such patentee, he shall receive treble costs in such

or action, to be taxed order, or trying such *Mode of Proceeding* or shall hereafter obtain papers, and 3 times in any manufacture of a case be carried on no factory, or where he to apply to II. M. in council office; and if shall first be by him by his counsel and heard by their counsel further extension of H. M. is hereby authorized for a term of extension shall be the expiration of the *In case of Action, &c.* defendant on pleading patent the plaintiff shall at the trial of such action plaintiff at such trial, shall be lawful for the plaintiff or defendant whereof notice shall him shall seem fit.—(23.)

Costs in Actions for in taxing the costs the be certified by the judge has succeeded or failed the declaration, and *Penalty for using, &c.* or mould, cast, or making or selling of of any other person without leave in writing having been purchased license in writing of the words "letters patent" or import, with a patentee, he shall for debt, bill, &c. in any court, one half to II. Mode of Proceeding in case of Application for the Prolongation of the Term.—If any person who hath or shall hereafter obtain letters patent shall advertise in the London Gazette 3 times, and in 3 London papers, and 3 times in some country paper published in the town where or near to which he carried on any manufacture of any thing made according to his specification, or near to or in which he resides in case he carried on no such manufacture, or published in the county where he carries on such manufacture, or where he lives in case there shall not be any paper published in such town, that he intends to apply to H. M. in council for a prolongation of his term of sole using and vending his invention, and shall petition H. M. in council to that effect, it shall be lawful for any person to enter a caveat at the council office; and if H. M. refer such petition to the judicial committee of the privy council, and notice shall first be by him given to any person who has entered such caveat, the petitioner shall be heard by his counsel and witnesses to prove his case, and the persons entering caveat shall likewise be heard by their counsel and witnesses; whereupon the judicial committee may report to H. M. that a further extension of the term in the said letters patent shall be granted, not exceeding 7 years; and H. M. is hereby authorised and empowered, if he think fit, to grant new letters patent for the said invention for a term not exceeding 7 years after the expiration of the first term: provided that no such extension shall be granted if the application by petition be not made and prosecuted with effect before the expiration of the original term in such letters patent.—(Q 4.)

As case of Action, &c.—Notice to be given.—In any action brought for infringing any letters patent, the defendant on pleading thereto shall give to the plaintiff, and in any scire facias to repeal such letters patent the plaintiff shall file with his declaration a notice of any objections on which he means to rely at the trial of such action, and no objection shall be allowed to be made in behalf of such defendant or plaintiff at such trial, unless he prove the objections stated in such notice: provided always, that it shall be lawful for any judge at chambers, on summons served by such defendant or plaintiff on such plaintiff or defendant respectively to show cause why he should not be allowed to offer other objections whereof notice shall not have been given, to give leave to offer such objections, on such terms as to him shall seem fit.—(Q 5.)

Costs in Actions for infringing Letters Patent.—In any action brought for infringing any letters patent, in taxing the costs thereof regard shall be had to the part of such case proved at the trial, which shall be certified by the Judge, and the costs of each part of the case shall be given according as either party has succeeded or failed therein, regard being had to the notice of objections, as well as the counts in the declaration, and without regard to the general result of the trial.—(Q 6.)

Penalty for using, unauthorised, the Name of a Patente, &c.—If any person shall write, paint, or print, or mould, cast, or carve, or engrave or stamp upon, any thing made, used, or sold by him, for the sole making or selling of which he hath not obtained letters patent, the name or any imitation of the name of any other person who hath obtained letters patent, for the sole making and vending of such thing, without leave in writing of such patentee or his assigns, or if any person shall upon such thing, not having been purchased from the patentee or some person who purchased it from him, or not having the license in writing of such patentee or his assigns, write, paint, or otherwise mark the word "patent," the words "letters patent," or the words "by the king's patent," or any words of the like kind, meaning, or import, with a view of imitating or counterfeiting the stamp, mark, or other device of the patentee, he shall for every such offence be liable to a penalty of 50*l.*, to be recovered by action of debt, bill, &c. in any court of record at Westminster or in Ireland, or in the court of session in Scotland, one half to H. M. and the other to any person who shall sue for the same: provided, that nothing herein contained shall be construed to extend to subject any person to any penalty in respect of stamping or in any way marking the word "patent" upon any thing made, for the sole making or vending of which a patent before obtained has expired.—(Q 7.)—*Sup.*

[See *Kent's Commentaries on American Law*, Lecture 34.—*Am. Ed.*]

PATRAS, or PETRASSO, a sea-port in the N. W. corner of the Morea, near the entrance of the Gulf of Lepanto, in lat. 38° 14' 25" N., lon. 21° 46' 20" E. Population variously estimated, from 5,000 to 10,000.

The port lies a little to the northward of the town; but the part fronting it is unsafe, and exposed to heavy seas, particularly in winter. Vessels, therefore, go a little further up the gulf, where there is a mole or quay, and where they can lie close to the wharf. Patras has a more extensive trade than any other part of Greece. The principal exports are currants, oil, valonia, wine, raw silk, raw cotton, wool, skins, wax, &c. Of these, currants are by far the most important. The fruit is superior, and free from sand and gravel, than that of the Ionian Islands. They are shipped in casks of various sizes; but, as the weight of the cask is included in that of the fruit, it is said to be, for the most part, made heavier and stronger than necessary. Morea currants are preferred in most countries, except England; but here the currants of Zante are held in equal, or perhaps greater, estimation. The exports of currants from Patras, at an average of the 3 years ending with 1831, amounted to about 50,000 cwt. a year, worth about 33,000*l.* More than half the quantity shipped in 1830 and 1831 was for England. The value of the exports of valonia and oil may, together, amount to from 7,000*l.* to 10,000*l.* a year. The imports at Patras, as at the other Greek ports, consist principally of sugar, coffee, and other colonial products; plain and printed cotton stuffs, woollen goods, salted fish, iron, tin plates, hardware, cordage, hemp, deals, &c. Imported articles are brought principally from the Ionian Islands, Malta, Venice, Leghorn, Marseilles, and Trieste; but, from the unsettled state of the country, it is quite impossible to form any accurate estimate of their amount, either as respects Patras, or any other Greek port:—

The **Tarif** established by the government, in March, 1830, is in force, according to which all articles may be imported and exported on payment of the duties therein fixed, without distinction of foreign or native flag. The rate of duty is 10 per cent. *ad valorem* for imports, and 6 per cent. *ad valorem* for exports.

Money.—Since the revolution, the Greeks have established a system of coinage in imitation of that of France. The phoenix is a silver coin, that should contain 9-10ths of pure metal, and 1-10th of alloy, or 4.029 grammes of the former, and .448 do. of the latter, being worth about 81d. sterling. The lepta is a copper coin, being 1-100th part of the phoenix. But the silver coins are already in much disuse, that they have been refused even by the officers of government.

Weights and Measures.—The quintal is divided into 44 okes, or 132 lbs. Hence, 100 lbs. of Patras = 80 lbs. avoirdupois. Silk weight is 1-3rd heavier.

A sack of currants weighs 140 lbs. of the common weight, or about 123 lbs. avoirdupois.

The stero, corn measure, = $\frac{1}{2}$ Winch. bushels.

The long pic, or plik, used in measuring linens and woollens, = 27 English inches. The short pic, used in measuring silks, = 25 ditto.

We have derived these details, partly from the *Answers* made by the Consul at Patras to the *Circular Queries*; partly from the *Archives du Commerce*, tome ii. pp. 236-242; and partly from other sources.

Commerce of Greece.—Considering the favourable situation of Greece, the number and excellence of her ports, the hardy enterprising character of the people, and the progress they have already made in navigation, nothing seems to be required to insure her rapid advancement in commercial industry, but the establishment of good order and internal tranquillity. We trust that this *sine qua non* of prosperity will now be realised; and that the newly constituted government will be strong enough to curb the factions into which the population has been split, and to put down and punish every species of outrage. If they succeed in this, and abstain from all attempts, by prohibition or otherwise, to force manufactures and commerce, we have no doubt that the progress of Greece will be all that her most sanguine friends could wish. It appears from a report presented to the congress at Napoli, in January, 1832, that Greece was at that time possessed of 2,941 vessels of all sorts, of which 614 were of the 1st class, that is, of more than 150 tons burden. The value of the imports into Greece, in 1831, are estimated in the same document at about 1,100,000*l.* sterling. It must, however, be observed, that a large proportion of these imports is carried to Syra, which has now become an important *entrepôt*, merely that they may be sent at convenient opportunities to the Turkish provinces in Europe, Asia Minor, &c.—(See *Archives du Commerce*, tome ii. p. 239.)

It is deeply to be regretted, that Candia, or Crete, was not either added to the new kingdom of Greece, or made independent. We cannot help considering it as disgraceful to the Christian nations of Europe, that this famous island, where European civilisation first struck its roots, should be consigned to the barbarians by whom it is now laid waste. It is as well entitled to the favourable consideration of England, France, and Russia, as any part of Continental Greece; and we do hope that measures may yet be devised for rescuing it from the atrocious despotism by which it has been so long weighed down.—(See *GREECE*.)

PATTERNS, are specimens or samples of commodities, transmitted by manufacturers to their correspondents, or carried from town to town by travellers, in search of orders. Patterns, if not exceeding 1 ounce weight, shall be charged with only an additional penny of postage, provided they be sent under cover, open at the sides, and without any letter or writing, except the name of the person sending the same, the place of his abode, and the price of the article or articles.—(52 *Geo.* 3. c. 88.)

PAWNBROKERS AND PAWNBROKING. A pawnbroker is a species of banker, who advances money, at a certain rate of interest, upon security of goods deposited in his hands; having power to sell the goods, if the principal sum, and the interest thereon, be not paid within a specified time.

1. **Advantages and Disadvantages of Pawnbroking.**—The practice of impledging or pawning goods, in order to raise loans, is one that must necessarily always exist in civilized societies, and is, in many cases, productive of advantage to the parties. But it is a practice that is extremely liable to abuse. By far the largest proportion of the *bona fide* borrowers of money on pawn consist of the lowest and most indigent classes; and were the lenders not subjected to any species of regulation, advantage might be taken (as, indeed, it is frequently taken, in spite of every precaution) of their necessities, to subject them to the most grievous extortion. But, besides those whose wants compel them to resort to pawnbrokers, there is another class, who have recourse to them in order to get rid of the property they have unlawfully acquired. Not only, therefore, are pawnbrokers instrumental in relieving the pressing and urgent necessities of the poor, but they may also, even without intending it, become the most efficient allies of thieves and swindlers, by affording them ready and convenient outlets for the disposal of their ill-gotten gains. The policy of giving legislative protection to a business so liable to abuse, has been doubted by many. But though it were suppressed by law, it would always really exist. An individual possessed of property which he may neither be able nor willing to dispose of, may be reduced to a state of extreme difficulty; and in such case, what can be more convenient or advantageous for him than to get a loan upon a deposit of such property, under condition that if he repay the loan, and the interest upon it, within a certain period, the property will be returned? It is said, indeed, that the facilities of raising money in this way foster habits of imprudence; that the first resort for aid to a pawnbroker almost always leads to a second; and that it is impossible so to regulate the business, as to prevent the ignorant and the necessitous from being plundered. That this statement, though exaggerated, is to a certain extent true, no one can deny. On the other

hand, however, means of measuring the security of property to one of the must be born poor and uni great sacrifice less chance of by a private veniences, wit to no purpos property will money upon persons from property nor to abolish wh from abuse, by ignorant and of stolen prop

and for every sum of 5*l.* or more, the pawnbroker shall be bound to receive the money for the same within 14 days after the expiration of the first calendar month from the time of the pawn being made, and if the pawn is not repaid within that time, the pawnbroker shall be bound to receive the money for the same within 14 days after the expiration of the second month. When goods are put into pawn, the pawnbroker shall be bound to receive the money for the same within 14 days after the expiration of the first calendar month from the time of the pawn being made, and if the pawn is not repaid within that time, the pawnbroker shall be bound to receive the money for the same within 14 days after the expiration of the second month. When goods are put into pawn, the pawnbroker shall be bound to receive the money for the same within 14 days after the expiration of the first calendar month from the time of the pawn being made, and if the pawn is not repaid within that time, the pawnbroker shall be bound to receive the money for the same within 14 days after the expiration of the second month.

hand, however, the capacity of obtaining supplies on deposits of goods, by affording the means of meeting pressing exigencies, in so far tends to prevent crime, and to promote the security of property; and it would seem as if the desire to redeem property in pawn would be one of the most powerful motives to industry and economy. At the same time, too, it must be borne in mind, that it is not possible, do what you will, to prevent those who are poor and uneducated from borrowing; and that they must, in all cases, obtain loans at a great sacrifice, and be liable to be imposed upon. But the fair presumption is, that there is less chance of any improper advantage being taken of them by a licensed pawnbroker, than by a private and irresponsible individual. Although, however, the business had all the inconveniences, without any portion whatever of the good which really belongs to it, it would be no purpose to attempt its suppression. It is visionary to imagine that those who have property will submit to be reduced to the extremity of want, without endeavouring to raise money upon it. Any attempt to put down pawnbroking would merely drive respectable persons from the trade, and throw it entirely into the hands of those who have neither property nor character to lose. And hence the object of a wise legislature ought not to be to abolish what must always exist, but to endeavour, so far at least as is possible, to free it from abuse, by enacting such regulations as may appear to be best calculated to protect the ignorant and the unwary from becoming the prey of swindlers, and to facilitate the discovery of stolen property.

2. *Obligations under which Pawnbrokers should be placed.*—For this purpose it seems indispensable that the interest charged by pawnbrokers should be limited, that they should be obliged to give a receipt for the articles pledged, and to retain them a reasonable time before selling them; that the sale, when it does take place, should be by public auction, or in such a way as may give the articles the best chance for being sold at a fair price; and that the excess of price, if there be any, after deducting the amount advanced, and the interest and expenses of sale, should be paid over to the original owner of the goods. To prevent pawnbrokers from becoming the receivers of stolen goods, they should be liable to penalties for making advances to any individual unable to give a satisfactory account of the mode in which he became possessed of the property he is desirous to pawn; the officers of police should at all times have free access to their premises; and they should be obliged carefully to describe and advertise the property they offer for sale.

3. *Law as to Pawnbrokers.*—It may appear singular that pawnbrokers should hardly have been named in any legislative enactment till after the middle of last century. It was enacted by the 30 Geo. 2. c. 24., that a duplicate or receipt should be given for goods pawned; and that such as were pawned for any sum less than 10*l.* might be recovered any time within two years, on payment of the principal and interest; but the rate of interest was not fixed. This defect was supplied by the 25 Geo. 3. c. 48.; but the act 39 & 40 Geo. 3. c. 99. contains the latest and most complete regulations on the subject.

Every person exercising the trade of a pawnbroker must take out a license, renewable annually, 10 days at least before the end of the year, for which he shall pay, within the cities of London and Westminster, and the limits of the two petty parishes, 1*l.*; and everywhere else, 5*s.* 10*d.* No person shall keep more than 1 house by virtue of 1 license; but persons in partnership need only take out 1 license for 1 house. All persons receiving goods by way of pawn or pledge for the enjoyment of money lent thereon, at a higher rate of interest than 5 per cent., to be deemed pawnbrokers.

And for every sum exceeding 40*l.*, and not exceeding 10*l.*, at the rate of 5*l.* in the pound, by the calendar month, including the current month, and so on in proportion for any fractional sum.

Pawnbrokers are to give receipts in exchange. Persons applying to redeem goods pawned within 7 days after the first calendar month after the same shall have been pledged, may redeem the same without paying any thing for the first 7 days; and, upon applying before the expiration of 14 days of the second calendar month, shall be at liberty to redeem such goods, upon paying the price payable for 1 calendar month and the half of another; and in all cases where the parties are entitled, and applying as aforesaid, after the expiration of the first fourteen days, and before the expiration of the second month, the pawnbroker is allowed to take the interest of the whole second month and the same regulations and restrictions shall take place in every subsequent month. When goods are pawned for more than 5*l.*, the pawnbroker, before advancing the money, shall immediately enter in his books a description of the pawn, the money lent thereon, the day of the month and year, the name of the person pawning, and the name of the street, and number of the house, if the person be a lodger, and the letters H K, if a housekeeper; and also the name and abode of the owner of the property making such pledge; and if the money lent shall exceed 5*l.*, such entry shall be made within 4 hours after the goods shall have been pawned; and the pawnbroker shall, at the time of taking the pawn, give to the person so pawning a duplicate, corresponding with the entry in the book, which the party pawning

shall take in all cases; and the pawnbroker shall not receive any pledge, unless the party so pawning shall receive such duplicate.

Rates payable for Duplicates.

The duplicate to be produced to the pawnbroker before he shall be compelled to redeliver the respective goods and chattels, except as herein after excepted. The amount of profits on duplicates shall be added on pledges redeemed, and such duplicates shall be kept by the pawnbroker for 1 year.

Persons pawning other people's goods without their consent, may be apprehended by the warrant of 1 justice, and convicted in a penalty not exceeding 5*l.*, nor less than 20*s.*, and the full value of the goods pawned; and if the forfeiture be not immediately paid, the justice shall commit the party to the house of correction, to be kept to hard labour for 3 calendar months; and if within 3 days before the expiration of the commitment the forfeiture shall not be paid, the justice may order the person to be publicly whipped, and the forfeitures shall be applied towards making satisfaction to the party injured, and defraying the costs; but if the party injured shall decline to accept such satisfaction and costs, or if there be any overplus, such forfeitures or overplus shall be paid to the poor of the parish.

Persons forging or counterfeiting duplicates may be seized and delivered to a constable, who shall convey them before a justice; and, upon conviction, such persons shall be committed to the house of correction for any time not exceeding 3 calendar months.

Persons offering pledges, not giving a satisfactory account of themselves, or of the means by which they became possessed of such goods, or wilfully giving any false information, or if there shall be reason to suspect that such goods are stolen, or illegally obtained, or if any person not entitled to redeem goods in pawn shall endeavour to redeem the same, they may be seized and delivered to a constable, to be carried before a justice; and if there should appear ground for a second examination, they shall be committed in the common goal or house of correction, to be dealt with according to laws or where such proceedings are not authorized by the nature of the offence, the party shall be committed for any time not exceeding 3 calendar months.

Persons buying or taking in pledge unfinished goods, linen, or apparel, intended to others to wash or mend, shall forfeit double the sum lent, and restore the goods, or restore the goods to the owner. Peace officers are empowered to search for unfinished goods which shall be come by unlawfully.

When goods are unlawfully pawned, the pawnbroker is to restore them; and their houses may be searched during the hours of business, by a warrant from a magistrate for the discovery of such property.

Persons producing notes or memorandums are to be deemed the owners of the property.

Where duplicates are lost, the pawnbroker, upon affidavit made by the owner of such loss before a magistrate, shall deliver another duplicate.

Goods pawned are deemed forfeited at the end of a year; but, on notice from persons having goods in pledge, 3 months further are to be allowed beyond the year for redemption; such notice to be given before the twelfth month is expired.

All goods pawned may be sold at the expiration of one whole year; and all goods so forfeited, on which above 10s. and not exceeding 100s. shall have been lent, shall be sold by public auction, and not otherwise; notice of such sale being first given, at least 3 days before the auction, in a public newspaper, upon pain of forfeiting to the owner of the goods not more than 5s. nor less than 2s.

All pictures, prints, books, brooms, stanzas, busts, carvings in ivory and marble, canoes, statigions, musical, mathematical, and philosophical instruments, and shims, shall be sold by themselves, and without other goods, 4 times only in every year; viz. on the 1st Monday in January, April, July, and October, in every year.

Pawnbrokers are not to purchase goods while in their custody, nor take in pledges from persons under 12 years of age, or intoxicated; nor take in any goods before 9 in the forenoon, or after 7 in the evening between Michaelmas-day and Lady-day, or before 7 in the forenoon or after 7 in the evening during the remainder of the year, excepting only until 11 on the evenings of Saturday, and the evenings preceding Good Friday and Christmas-day and every fast or thanksgiving day.

Such is the present state of the law with respect to pawnbrokers. On the whole, the regulations seem to be judiciously devised. Perhaps, however, the rate of interest on small deposits might be advantageously lowered. The law allows interest at the rate of $\frac{1}{2}$ d. per month to be charged on loans of 2s. 6d., which is at the rate of 20 per cent.; but the same sum of $\frac{1}{2}$ d. per month is exigible from all smaller loans; and as very many do not exceed 1s. 6d., and even 6d., the interest on them is exceedingly oppressive. No doubt there is a great deal of trouble with respect to such loans; but still, considering the vast number of advances under 2s. 6d. it would seem that the interest on them might be somewhat reduced. Perhaps, too, it might be advisable, still better to secure compliance with the statute, to enact that no one should be licensed as a pawnbroker without producing sufficient security for a certain sum to be forfeited in the event of his knowingly or wilfully breking or evading any of its provisions. This would prevent (what Dr. Colquhoun says is not an uncommon practice) swindlers from becoming pawnbrokers, in order to get the means of selling stolen goods.—(*Treatise on the Police of the Metropolis*, 2d ed. p. 156.)

It would be a useful regulation to oblige pawnbrokers to insure against losses by fire. Much mischief has been occasioned by the neglect of this precaution.

An Account of the Number of Pawnbrokers licensed in the Metropolis, and in the Country, with the Rate respectively charged on their Licences, and the Duty received on the same, in each of the Five Years ending the 5th of January, 1830.—(*Part. Paper*, No. 681. Sess. 1830.)

The produce of each rate of duty not being distinguished in the distributors' accounts until the year ending the 5th of January, 1829, the number of licences cannot be given prior to that date for the country.

4. *Notices of Pawnbroking in Italy, France, &c.*—The practice of advancing money to the poor, either with or without interest, seems to have been occasionally followed in antiquity.—(*Beckmann*, vol. iii. p. 14. 1st Eng. ed.) But the first public establishments of this sort were founded in Italy, under the name of *Monti di Pietà*, in the 14th and 15th centuries. As it was soon found to be impossible to procure the means of supporting such establishments from voluntary contributions, a bull for allowing interest to be charged upon the loans made to the poor was issued by Leo X. in 1521. These establishments, though differing in many respects, have universally for their object to protect the needy from the risk of being plundered by the irresponsible individuals to whom their necessities might oblige them to resort, by accommodating them with loans on comparatively reasonable terms. And though their practice has not, in all instances, corresponded with the professions they have made, there seems no reason to doubt that they have been, speaking generally, of essential service to the poor.

From Italy these establishments have gradually spread over the Continent. The *Monte di Pietà*, in Paris, was established by a royal ordinance in 1777; and after being destroyed by the Revolution, was again opened in 1797. In 1804, it obtained a monopoly of the business of pawnbroking in the capital. Loans are made, by this establishment, upon deposits of such

An account of the sale of pledges for more than 10s. to be carried by pawnbrokers in a book, and the surplus is to be paid to the owner of the goods pawned, if demanded within three years of the sale, under penalty of 10s. and treble the sum lent.

Pawnbrokers are to place in view the table of profits; and their name and business is to be placed over the door, or nearby it.

Pawnbrokers injuring goods, or selling them before the rate specified, shall, upon application to a magistrate, be compelled to make satisfaction for the same; and if the satisfaction awarded shall be equal to or exceed the principal and profits the pawnbroker shall deliver the goods pledged to the owners without being paid any thing for principal or profit.

Pawnbrokers shall produce their books before a magistrate; or, refusing so to do, shall forfeit a sum not exceeding 10s. nor more than 2s.

Pawnbrokers offending against the act shall forfeit for every offence not less than 40s. nor more than 100s.

It has been held by the Court of King's Bench, that a pawnbroker has no right to sell unredemmed pledges, after the expiration of a year from the time the goods were pledged, if, while they are in his possession, the original owner tender him the principal and interest due.—(*Waller v. Smith*, 22d of January, 1805.) On a motion for a new trial, Lord Tenterden said, "I am of opinion, that if the pledge be not redeemed at the expiration of a year and a day, [and in every case] 3 months further are to be allowed for its redemption; the pawnbroker has a right to expose it to sale so soon as he can consistently with the provisions of the act; but if at any time before the sale he actually repays the owner of the goods the principal and interest, and expenses incurred, he has a right to his own, and the pawnbroker is not injured; for the power of sale is allowed him merely to secure to him the money which he has advanced, together with the high rate of interest which the law allows to him as his character of pawnbroker."

goods as can be procured other than gold and silver, more than 3 francs (2s. 6d.) the engagement.

The *Mont de Piété* at Paris has a capital of 20,000,000 to be at the disposal of the poor.

The *Mont de Piété* at Lyons has a capital of 280,000 francs, of which 125,000 being the principal is pawned.

The articles in pawn are continued in part.

Money, so preserved, are sold, subject to the law.

There are no means possible to make it much greater.

In some respect, vigilance exercised to advantage over the pawnshop, whether it is, on the whole, to 3 francs would be France; nor is to be ready to assist poor individuals anxious in Paris only, but in confined to a few already suggested by PEARL-ASH.

PEARLS (Du.) *Stemtschug, Perle* known globular compound of pearl oyster (*Conchostrea*) translucent silvery largest are of course pear; and when the pearls are most esteemed.

Pearl Fisheries.—The coast of Ceylon; at Maldiva Islands, in the Indian, or Pearl Islands of Panama, in the South Sea, and in other places.

goods as can be preserved, to the amount of *two thirds* of the estimated value of all goods other than gold and silver, and to *four fifths* of the value of the latter. No loan is for less than 3 francs (2s. 6d.). The advances are made for a year, but the borrower may renew the engagement. Interest is fixed at the rate of *one per cent.* per month.

The *Mont de Piété*, receives annually about 1,200,000 articles, upon which it advances from 20,000,000 to 21,000,000 francs; it has generally from 600,000 to 650,000 articles in its possession. The expense of management amounts to from 60 to 65 *centimes* for each article; so that a loan of 3 francs never defrays the expenses it occasions, and the profits are wholly derived from those that exceed 5 francs. At an average, the profits amount to about 280,000 francs, of which only about 155,000 are derived from loans upon deposit, about 125,000 being the produce of other funds at the disposal of the company.

The articles in pawn are returned in the proportion of $\frac{1}{3}$ in number and $\frac{1}{3}$ in value.
 Are retained in pawn by a prolongation of the loan $\frac{2}{3}$ $\frac{2}{3}$ —

Items are preserved to their proprietors of articles pawned $\frac{2}{3}$ in number and $\frac{2}{3}$ in value.
 Are sold, subject (as in England) to a claim for surplus any time during 3 years $\frac{1}{3}$ $\frac{1}{3}$ —

$\frac{2}{3}$ $\frac{2}{3}$
 (Bulletin des Sciences Géographiques, Avril, 1830.)

There are no means of making a statement of this sort with respect to London; but, were it possible to make it, the proportion of forfeited pledges would be found, we have no doubt, much greater.

In some respect, particularly the lowness of interest upon small loans, and the greater vigilance exercised with respect to the reception of stolen goods, the *Mont de Piété* has an advantage over the pawnbroking establishments in this country. It may be doubted, however, whether it is, on the whole, so well fitted to attain its objects. The limitation of the loans to 3 francs would be felt to be a serious grievance here, and it can hardly be otherwise in France; nor is it to be supposed, that the servants of a great public establishment will be so ready to assist poor persons, having none but inferior articles to offer in security, as private individuals anxious to get business. And such, in point of fact, is found to be the case, not in Paris only, but in all those parts of the Continent where the business of pawnbroking is confined to a few establishments. And hence it would seem that, were the modifications already suggested adopted, our system would be the best of any.

PEARL-ASH. See POTASH.

PEARLS (Du. *Paarlen*; Fr. *Perles*; Ger. *Perlen*; It. *Perle*; Lat. *Margaritæ*; Rus. *Shemtechug, Perli*; Sp. *Perlas*; Arab. *Looloo*; Cyng. *Mootoo*; Hind. *Mootie*.) are well known globular concretions found in several species of shell-fish, but particularly the mother-of-pearl oyster (*Concha margaritifera* Lin.). Pearls should be chosen round, of a bright translucent silvery whiteness, free from stains and roughness. Having these qualities, the largest are of course the most valuable. The larger ones have frequently the shape of a pear; and when these are otherwise perfect, they are in great demand for ear-rings. Ceylon pearls are most esteemed in England.

Value, &c. of Pearls.—Pearls were in the highest possible estimation in ancient Rome, and bore an enormous price.—(*Principium culmenque omnium rerum pretii, margaritæ tent.*—Plin. *Hist. Nat.* lib. ix. c. 35.) Their price in modern times has very much declined; partly, no doubt, from changes of manners and fashions; but more probably, from the admirable imitations of pearls that may be obtained at a very low price. According to Mr. Milburn, a handsome necklace of Ceylon pearls, smaller than a large pea, costs from 170l. to 300l.; but one of pearls about the size of peppercorns may be had for 15l.: the pearls in the former sell at a guinea each, and those in the latter at about 1s. 6d. When the pearls dwindle to the size of a small shot, they are denominated *seed* pearls, and are of little value. They are mostly sent to China. One of the most remarkable pearls of which we have any authentic account was bought by Taveruier, at Catifa, in Arabia, a fishery famous in the days of Pliny, for the enormous sum of 110,000l.! It is pear-shaped, regular, and without blemish. The diameter is .63 inch at the largest part, and the length from 2 to 3 inches.

Much difference of opinion has existed among naturalists with respect to the production of pearls in the oyster; but it seems now to be generally believed that it is the result of disease, and is formed in the same manner as bezoar—(see *BEZOAR*)—pearls, like it, consisting of successive coats spread with perfect regularity round a foreign nucleus. In fact, the Chinese throw into a species of shell-fish (*mytilus cygneus*, or swan muscle), when it opens, 5 or 6 very minute mother-of-pearl beads strung on a thread; and in the course of a year they are found covered with a pearly crust, which perfectly resembles the real pearl.—(*Milburn's Orient. Com.*; *Ainslie's Nat. Indica*, &c.)

Pearl Fisheries.—The pearl oyster is fished in various parts of the world, particularly on the west coast of Ceylon; at Tutulcoren, in the province of Thinnevelly, on the coast of Coromandel; at the Bahrein Islands, in the Gulf of Persia; at the Soolon Islands, off the coast of Algiers; off St. Margarin, off Pearl Islands, in the West Indies, and other places on the coast of Colombia; and in the Bay of Panama, in the South Sea. Pearls have sometimes been found on the Scotch coast, and in various other places.

The pearl fishery of Tuticoreen is monopolized by the East India Company, and that of Ceylon by government. But these monopolies are of no value; as in neither case does the sum for which the fishery is let equal the expenses incurred in guarding, surveying, and managing the banks. It is therefore, sufficiently obvious that this system ought to be abolished, and every one allowed to fish on paying a moderate licence duty. The fear of exhausting the banks is quite ludicrous. The fishery would be abandoned as unprofitable long before the breed of oysters had been injuriously diminished; and in a few years it would be as productive as ever. Besides giving fresh life to the fishery, the abolition of the monopoly would put an end to some very oppressive regulations, enacted by the Dutch more than a century ago.

Persian Gulf.—The most extensive pearl fisheries are those on the several banks not far distant from the island of Bahrain, on the west side of the Persian Gulf, in lat. 26° 50' N., lon. 51° 10' E.; but pearl oysters are found along the whole of the Arabian coast, and round almost all the islands of the gulf. Such as are fished in the sea near the islands of Karrak and Congo contain pearls said to be of a superior colour and description. They are formed of 8 layers or folds, whilst others have only 4, but the water is too deep to make fishing for them either very profitable or easy. Besides, the entire monopoly of the fishery is in the hands of the sheik of Bushire, who seems to consider these islands as his immediate property.

"The fishing season is divided into two portions—the one called the short and cold, the other the long and hot. In the cooler weather of the month of June, diving is practised along the coast in shallow water; but it is not until the intensely hot months of July, August and September, that the Bahrain banks are much frequented. The water on them is about 7 fathoms deep, and the divers are much inconvenienced when it is cold; indeed, they can do little when it is not as warm as the air, and it frequently becomes even more so in the hottest months of the summer. When they dive, they compress the nostrils tightly with a small piece of horn, which keeps the water out, and stuff their ears with bees'-wax for the same purpose. They attach a net to their walrus, to contain the oysters; and aid their descent by means of a stone, which they hold by a rope attached to a boat, and shake it when they wish to be drawn up. From what I could learn, 3 minutes may be considered as rather above the average time of their remaining under water. Although severe labour, and very exhausting at the time, diving is not considered particularly injurious to the constitution; even old men practise it. A person usually dives from 12 to 15 times a day in favourable weather; but, when otherwise, 3 or 4 times only. The work is performed on an empty stomach. When the diver becomes fatigued, he goes to sleep, and does not eat until he has slept some time.

"At Bahrain alone, the annual amount produced by the pearl fishery may be reckoned at from 200,000*l.* to 240,000*l.* If, to this, the purchases made by the Bahrain merchants or agents at Aboullah Siarga, Ras-ul Khymack, &c. be added, which may amount to half as much more, there will be a total of about 300,000*l.* or 360,000*l.*; but this is calculated to include the whole pearl trade of the gulf; for it is believed that all the principal merchants of India, Arabia, and Persia, who deal in pearls, make their purchases, through agents, at Bahrain. I have not admitted in the above estimate much more than one sixth of the amount some native merchants have stated it to be, as a good deal seemed to be matter of guess or opinion, and it is difficult to get at facts. My own estimate is in some measure checked by the estimated profits of the small boats. But even the sum which I have estimated is an enormous annual value for an article found in other parts of the world as well as here, and which is never used in its best and most valuable state, except as an ornament. Large quantities of the seed pearls are used throughout Asia, in the composition of majoons, or electuaries, to form which all kinds of precious stones are occasionally mixed, after being pounded, excepting, indeed, diamonds; these being considered, from their hardness, as utterly indigestible. The majoon, in which there is a large quantity of pearls, is much sought for and valued, on account of its supposed stimulating and restorative qualities.

"Bahrain pearl fishery boats are reckoned to amount to about 1,500, and the trade is in the hands of merchants, some of whom possess considerable capital. They bear hard on the producers or fishers, and even those who make the greatest exertions in diving hardly have food to eat. The merchant advances some money to the fishermen at cent. per cent, and a portion of dates, rice, and other necessary articles, all at the supplier's own price; he also lets a boat to them, for which he gets a share of the gross profits of all that is fished; and, finally, he purchases the pearls nearly at his own price, for the unhappy fishermen are generally in his debt, and therefore at his mercy."—(*Manuscript Note communicated by Major D. Wilson, late Political Resident at Bushire.*)

The fishery at Algiers was formed by an English association in 1826, but we are ignorant of their success.

The pearl fisheries on the coast of Colombia were at one time of very great value. In 1587, upwards of 697 lbs. of pearls are said to have been imported into Sevilla. Philip II. had one from St. Margaria, which weighed 250 carats, and was valued at 150,000 dollars. But for many years past the Colombian pearl fisheries have been of comparatively little importance. During the mania for joint stock companies, in 1825, two were formed;—one on a large scale, for prosecuting the pearl fishery on the coast of Colombia; and another, on a smaller scale, for prosecuting it in the Bay of Panama and the Pacific. Both were abandoned in 1830.

The best fishing ground is said to be in from 6 to 8 fathoms water. The divers continue under water from a minute to a minute and a half, or at most 3 minutes. They have a neck or lug fastened to the neck, in which they bring up the oysters. The exertion is extremely violent; and the divers are unhealthy and short-lived.

Pearl Shells, commonly called *Mother-of-pearl shells*, are imported from various parts of the world, and consist principally of the shells of the pearl oyster, from the Gulf of Persia and other places, particularly the Sooloo Islands, situate between Borneo and the Philippines, the shores of which afford the largest and finest shells hitherto discovered. On the inside, the shell is beautifully polished, and of the whiteness and water of pearl itself; but the same lustre on the outside, after the external laminae have been removed. Mother-of-pearl shells are extensively used in the arts, particularly in inlaid work, and in the manufacture of handles for knives, buttons, toys, snuff boxes, &c. The Chinese manufacture them into beads, fish, counters, spoons, &c.; giving them a finish to which European artists have not been able to attain. Shells for the European market should be chosen of the largest size, of a beautiful pearly lustre, thick and even, and free from stains. Reject such as are small, cracked, or broken, or have lumps on them. When stowed loose as dunnage, they are sometimes allowed to pass free of freight.—(*Milburn's Orient. Com.*) The imports during the 3 years ending with 1832 were—1830, 465,591 lbs.; 1831, 519,492 do; 1832, 721,527 do.—(*Park Paper*, No. 425. Sess. 1833.)

PEAS (Ger. Erbse). The pea is considered to be indigenous to the latter of which the common garden pea, are the most common in the country, particularly in the culture of the pea as a vegetable. Sometimes, however, it is given to the admission of air into the soil, for the purpose of the country; but the latter is never.—(*Loudon* on account of the law of Leguminosae from Calcutta, PECK, a dry measure, or 554.55 cu. Weights and Measures, PELLIOTRY, the name of a Barbary, and the finger, with a brooch, from which it seems at first to be derived, on account of the resemblance on the top with a short resinous stick black shining polychromatic.—(*Thomson* on the 2s. 6d. per lb. PENICILS (Ger. Pinsel) the instruments used in the manufacture of various materials, the down of swans, PENICILS, BLACK PENKNIVES (Cane knives, too well known. The best are made at Sheffield. PENNY, formerly in England by our S. was about 22½ grains. PENS (Fr. Plume), well known as one of our birds. It is in some way begun to be largely given to his pen, metallic pens previously brought crowds of irregularities, and of a very considerable expense, is able to give easy writing. PENNYWEIGHTS. PEPPER (Fr. Poivre; Lat. Piper). extremely hot, pungent, and is in commerce: I. BLACK PEPPER, the plant (*Piper nigrum*). It is cultivated in support of other trade said to bear best w

PEAS (Ger. *Erbsen*; Fr. *Pois*; It. *Piselli*, *Bisi*; Sp. *Pesoles*, *Guisantes*; Rus. *Go-rsni*). The pea is one of the most esteemed of the leguminous or pulse plants. It is supposed to be indigenous to the south of Europe, and was cultivated by the Greeks and Romans, the latter of whom probably introduced it into Britain. There are many varieties; but the common garden pea (*Pisum sativum*), and the common grey or field pea (*Pisum arvense*), are the most generally cultivated; being reared in large quantities in all parts of the country, particularly in Kent. But since the introduction of the drill husbandry, the culture of the pea as a field crop has been to a considerable extent superseded by the bean. Sometimes, however, it is drilled along with the latter; for, being a climbing plant, it attaches itself to the bean, so as to admit the ground being hoed; at the same time that the free admission of air about its roots promotes its growth. It is not possible to frame any estimate of the consumption of peas. The field pea is now hardly ever manufactured into bread for the purpose of being made into bread, as was formerly the case in many parts of the country; but there is reason to think that the garden pea is now more extensively used than ever.—(*Loudon's Encyc. of Agriculture*; *Brown on Rural Affairs*, vol. ii. p. 72. For an account of the laws regulating the importation, &c. of peas, see *COX'S LAWS AND COX'S TRADING*.) Leguminous crops are very extensively cultivated in India. The exports of peas from Calcutta, in 1830, exceeded 1,300 tons.

PECK, a dry measure for grain, pulse, &c. The standard, or Imperial peck, contains 2 gallons, or 554.55 cubic inches. Four pecks make a bushel, and 4 bushels a coomb.—(See *WEIGHTS AND MEASURES*.)

PELLITORY, the root of a perennial plant (*Anthemis pyrethrum*), a native of the Levant, Barbary, and the south of Europe. The root is long, tapering, about the thickness of the finger, with a brownish cuticle. It is imported packed in bales, sometimes mixed with other roots, from which, however, it is easily distinguished. It is inodorous. When chewed, it seems at first to be insipid, but after a few seconds it excites a glowing heat, and a pricking sensation on the tongue and lips which remains for 10 or 12 minutes. The pieces break with a short resinous fracture; the transverse section presenting a thick brown bark, studded with black shining points, and a pale yellow radiated inside. It is used in medicine as a stimulant.—(*Thomson's Dispensatory*.) The price varies, including the duty, (6d.), from 2s. to 2s. 6d. per lb.

PENCILS (Ger. *Pinsel*; Du. *Pinseelen*; Fr. *Pinceaux*; It. *Pennelli*; Sp. *Pinceles*), the instruments used by painters in laying on their colours. They are of various kinds, and made of various materials; some being formed of the bristles of the boar, and others of camel's hair, the down of swans, &c.

PENCILS, BLACK LEAD. See **BLACK LEAD PENCILS**.

PENKNIVES (Ger. *Federmesser*; Fr. *Canifs*; It. *Temperini*; Sp. *Corta plumas*), small knives, too well known to need any particular description, used in making and mending pens. The best and most highly ornamented penknives are manufactured in London and Sheffield.

PENNY, formerly a silver, but now a copper coin. This was the first silver coin struck in England by our Saxon ancestors, being the 240th part of their pound; so that its weight was about 22½ grains Troy.

PENS (Fr. *Plumes à écrire*; Ger. *Schreibfedern*; It. *Penne da scrivere*; Rus. *Pera* (*Stovki*)), well known instruments for writing, usually formed of the quills of the goose, swan, or some other bird. Metallic pens have been occasionally employed for a lengthened period; but it is only within these few years that they have been extensively introduced. They first began to be largely manufactured by Mr. John Perry, of London. Mr. P. having succeeded in giving to his pens a greater degree of softness and elasticity than was possessed by any metallic pens previously in use, they speedily obtained a very extensive sale. This success brought crowds of rivals into the field; so that metallic pens are now manufactured in vast quantities, and of an immense variety of forms. But though they have superseded, to a very considerable extent, the use of quills, and have some peculiar advantages, it does not appear possible to give them the elasticity of the quill, nor to fit them so well for quick and easy writing.

PENNYWEIGHT, a Troy weight, being the 20th part of an ounce, containing 24 grains.

PEPPER (Fr. *Poivre*; Ger. *Pfeffer*; Du. *Peper*; It. *Pepe*; Sp. *Pimienta*; Rus. *Peper*; Lat. *Piper*), the berry or fruit of different species of plants, having an aromatic, extremely hot, pungent taste, used in seasoning, &c. The following sorts of pepper are met with in commerce:—

1. **BLACK PEPPER** (Fr. *Poivre*; Ger. *Schwarzen Pfeffer*; It. *Pepe negro*; Sp. *Pimienta*; Sans. *Mercha*; Hind. *Gol-mirch*; Malay, *Lada*; Jav. *Marika*), the fruit of a creeping plant (*Piper nigrum*), one of the pepper genus, of which there are upwards of 80 species. It is cultivated extensively in India, Siam, the Eastern islands, &c. It requires the support of other trees, to which it readily adheres. It climbs to the height of 20 feet; but is said to bear best when restrained to the height of 12 feet. It begins to produce at about the

3d year, and is in perfection at the 7th; continues in this state for 3 or 4 years; and declines for about as many more, until it ceases to be worth keeping. The fruit grows abundantly from all the branches, in long small clusters of from 20 to 60 grains; when ripe, it is of a bright red colour. After being gathered, it is spread on mats in the sun, when it loses its red colour, and becomes black and shrivelled as we see it. The grains are separated from the stalks by hand rubbing. That which has been gathered at the proper period shrivels the least; but if plucked too soon, it will become broken and dusty in its removal from place to place. The vine produces two crops in the year; but the seasons are subject to great irregularities.

Pepper should be chosen of a pungent aromatic odour, an extremely hot and acrid taste, in large grains, firm, sound, and with few wrinkles—for of these it always has some. Reject that which is shrivelled, or small grained, or which on being rubbed will break to pieces.

In point of quality, the pepper of Malabar is usually reckoned the best; but there is no material difference between it and that of Sumatra, and the other islands. In the market of Bengal, where they meet on equal terms, the produce of Malabar is generally about 2 per cent. higher than the other. In Europe, there is generally a difference of $\frac{1}{4}$ d. per lb. in favour of Malabar; but in China they are held in equal estimation.

Black pepper sold ground, is said to be often adulterated with burnt crust of bread.

II. WHITE PEPPER is made by blanching the finest grains of the common black pepper, by steeping them for a while in water, and then gently rubbing them, so as to remove the dark outer coat. It is milder than the other, and is much prized by the Chinese; but very little is imported into England.

III. CAPSICUM PEPPER is the produce of several varieties of the *Capsicum*, an annual plant, a native of both the Indies. The best, which is brought home from the West Indies ready prepared, is made from the *Capsicum baccatum* (bird pepper). It has an aromatic, extremely pungent, acrimonious taste, setting the mouth, as it were, on fire, and the impression remaining long on the palate. It is sometimes adulterated with muriate of soda; and sometimes with a very deleterious substance, the red oxide of lead; but this fraud may be detected by its weight, and by chemical tests.—(See CHILLIES.)

IV. LONG PEPPER.—This species is the produce of a perennial (*Piper longum*), a native of Malabar and Bengal. The fruit is hottest in its immature state; and is therefore gathered while green, and dried in the sun. It is imported in entire spikes, which are about $\frac{1}{2}$ inch long. It has a weak aromatic odour, an intensely fiery pungent taste, and a dark grey colour. The root of long pepper is a favourite medicine among the Hindoos.

The quantities of the last 3 species of pepper imported are quite inconsiderable, compared with the quantity of black pepper.—(*Milburn's Orient. Com.; Ainslie's Mat. Indica; Thomson's Dispensatory, &c.*)

Trade in Pepper. Consumption of, and Duties on, in England.—Pepper is extensively used, all over Europe and the East, as a condiment. It was originally imported into this country by way of the Levant (see vol. i. p. 617.); and for many years after the establishment of the East India Company, it formed the most important article of their imports. In nothing has the beneficial effect of opening the India trade been so unequivocally displayed as in the instance of pepper. The private traders have resorted to new markets, and discovered new sources of supply which had hitherto been wholly unexplored; so that there has been not only a very great increase in the quantity of pepper brought to Europe, but also a very great fall in its price, which does not now exceed a third of what it amounted to in 1814!

The quantities in the following Table are taken from the *Parl. Papers*, No. 22. Sess. 1830, and No. 425. Sess. 1833; the prices have been supplied by Mr. Cook.

Amount of the Total Quantity of Pepper Imported from the East Indies into Great Britain, with its Price in Bond in London, each Year, from 1814.

Pepper is one of the most grossly over-taxed articles in the British tariff. Until 1823, the duty was 2s. 6d. per lb.—a duty so exorbitant, that one would be inclined to think it had been imposed in order to put a total stop to the use of the article. In 1823, the duty on pepper from a British possession was reduced to 1s. per lb.; but even this duty, as compared with the price of the article (3d. to 4d. per lb.) is quite enormous, amounting to no less than from 400 to 300 per cent. It will be seen from the subjoined Table that the reduction of the duty, in 1823, has increased the consumption from about 1,400,000 lbs. to 2,225,000 lbs. a year; and were the duty reduced, as it ought to be, to 2d. or at most 3d. per lb., so that pepper might become accessible to the lower classes, to whom its free use would be of infinite importance, we have not the slightest doubt that in a very short period the consump-

tion would amount to 5,000,000 or 6,000,000 lbs. There would either be no loss of revenue by such a measure, or none worth mentioning; and it is not to be endured that the bulk of the people should be deprived of so useful a commodity, and the trade of the country seriously injured, by keeping up oppressive duties, which serve no purpose whatever, unless it be to keep alive the remembrance of the ignorance and rapacity of those by whom they were imposed. We have already shown (see vol. i., p. 639.) the difficulties under which the dealers in pepper labour, in consequence of the absurd regulations as to the warehousing of commodities from India.

Amount of the Quantity of all Sorts of Pepper retained for Home Consumption in the United Kingdom, the Rates of Duty thereon, and the Total Revenue derived from the same, in each Year since 1809.

Supply of Pepper.—The following instructive details with respect to the supply of pepper are taken from the *Singapore Chronicle*; to which they were contributed by John Crawford, Esq.—than whom there can be no more competent authority as to such subjects. Of all the products of the Eastern Islands, and of the countries immediately in their neighbourhood, the most demanded among strangers, black pepper is the most important, both in value and quantity. The pepper countries extend from about the longitude of 96° to that of 115° E., beyond which no pepper is to be found; and they reach from 5° S. latitude to about 12° N., where it again ceases. Within these limits we have Sumatra, Borneo, the Malayan peninsula, and certain countries lying on the east coast of the Gulf of Siam.

The whole produce of the island of Sumatra is estimated not to fall short of 168,000 piculs, of 133½ lbs each; the south-west coast being said to produce 150,000, and the north-east coast 18,000 piculs. The pepper ports on the north-east coast of Sumatra are Lankat and Delli, with Sardang. The first produce 15,000 piculs, and the latter 3,000 annually. The cultivation is carried on by the Battas in the interior.

The ports on the south-west coast, and the amount of their produce, as given in a recent estimate, are as follow: viz. port and district of Trumah, 40,000; district of Pulo Dua, 4,000; ditto of Cluat, 2,000; coast from Tampat Tuan to Suan, 33,000; port of Suan, 1,000; Kuala Batia, 20,000; Analu, 2,000; districts to the north of Anelabu, 20,000; making in all, 150,000 piculs.

Here it is of importance to remark, that the culture and production are extremely fluctuating. During the last pepper season, there obtained cargoes on the west coast of Sumatra, 27 American ships, country traders, 4 large French ships, besides the ships belonging to the East India Company, which generally take away 500 tons. Nearly the whole of this trade is in the hands of Europeans or Americans; the pepper finds its way to Europe, to America, and in a small proportion to China.

The north-east coast of Sumatra, from Pedler down to the Carimons, is estimated, as already mentioned, to produce 18,000 piculs. Prince of Wales Island is the principal *depôt* for this, from whence the greatest part is exported to India and China. The produce of Prince of Wales Island itself is about 10,000 piculs.

Of the islands at the mouth of the Straits of Malacca and Singapore, Bintang, on which Rhio is situated, and adjacent islands, produce 10,000 piculs; and Lingga about 2,000. A large proportion of this is brought to Singapore, which exported last year about 31,000 piculs; some part to Bengal and China, but principally to Europe direct, in free traders.

The west coast of the Malayan peninsula produces no pepper, with the exception of about 4,000 piculs afforded by the territory of Malacca.

On the east coast of the peninsula, the production of pepper is very considerable. The ports of Pagan and Calantan—chiefly the latter—yield about 10,000 piculs annually, and Tringau about 8,000. A portion of this is brought to Singapore and Penang; but we believe the greater proportion goes direct to China in junks, of which 3 large ones frequent Tringau annually, and 1 Calantan. The Americans, too, occasionally visit these ports. In the year 1821, 3 vessels of considerable burden obtained cargoes.

The east coast of the Gulf of Siam, from the latitude of 10½° to that of 12½° N., affords an extensive produce of pepper. This coast is scarcely known, even by name, to the traders of Europe. The principal ports here are Chantibun, Tungyal, Pongsoom, and Kampop; the first 3 being under the dominion of Siam, and the latter under that of Kamboja. The whole produce is estimated at not less than 60,000 piculs, 40,000 of which are brought at once to the capital of Siam as tribute to the king, and the whole sent its way to China in junks. It remains only to estimate the produce of the island of Borneo. The whole produce of Borneo is estimated at about 30,000 piculs; of which a large share is carried to China

or 4 years; and the fruit grows abundant; when ripe, it is eaten, when it is green, the grains are separated; proper period should be removed from plants are subject to great hot and acrid taste; ye has some. Rejected break to pieces; but there is no. In the market generally about 2 per cent. per lb. in rust of bread. Common black pepper, so as to remove the Chinese; but very *picum*, an annual from the West Indies; it has an aromatic, fire, and the impurities of soda; and this fraud may be *longum*), a native therefore gathered in about 1½ inch a dark grey colour. considerable, compared *lie's Mat. India*; pepper is extensively imported into the establishment. In nothing displayed as in the and discovered new there has been not also a very great No. 22, Siam book. East Britains, with its Prices. Per lb. 3 1/2 - 3 3/4 3 1/4 - 3 1/2 2 1/2 - 3 1/4 2 1/2 - 3 1/4 3 1/2 - 3 1/4 3 1/2 - 3 1/4

direct in junks, some by Portuguese vessels; and about 7,000 piculs are now annually brought by the native craft of the country itself to Singapore in the course of that free trade, which is happily flourishing at this settlement. The data which have been stated, will enable us to estimate the value of the production of the Malayan Archipelago, including that of the peninsula of Malacca, and that of the east coast of the Gulf of Siam, as 308,000 piculs; and as there is no other part of the world that affords pepper, excepting the western coast of the peninsula of India, and this affords but 30,000 piculs, or less than 1-10th part of what the places we have enumerated produce, we have, accordingly, at one view, the whole production of the earth, being 338,000 piculs, or 45,066,666 lbs avoirdupois. The average price of pepper has been lately about 9 Spanish dollars a picul; so the whole value drawn into India from Europe, China, and the New World, on account of this single commodity, is 3,045,000 dollars. The quantity given in this statement may appear enormous; but if meted out to the whole population of the globe, or to 1,000,000,000 of people, it would be found that the average annual consumption of an individual would amount to no more than 323 grains.

Mr. Crawford has very recently supplied us with a revised estimate of the production of pepper as follows:—

Sumatra (west coast) - - -	30,000,000	Siam - - - - -	8,000,000
Do. (east coast) - - -	8,000,000	Malabar - - - - -	4,000,000
Islands in the Straits of Malacca	3,600,000		
Malay peninsula - - -	3,733,333		
Borneo - - - - -	2,666,667		
		Total - - - - -	50,000,000

The localities in the previous estimate are quite correct; and we, therefore, did not think it would be right to suppress it. But, though this may be depended upon as being a fair statement of what has been, till a comparatively late period, the average supply of pepper, the extreme depression of price has occasioned a very considerable decline in the production of some of the places mentioned above, within the last 4 or 5 years. The late advance of price will, however, probably, check any further diminution of production. But though prices were to rise still more considerably than they have done, the effect on the supply, owing to the plant requiring a few years to come to maturity, may not, at first, be so great as might be supposed.

(The duty on pepper, has been reduced from 1s. to 6d. per lb.; a reduction that will doubtless lead to a very material increase of consumption.—(6 & 7 Will. 4. cap. 60.)—Sup.)

[See IMPORTS AND EXPORTS.—Am. Ed.]

PERCH, a long measure, 16½ feet in length.—(See WEIGHTS AND MEASURES.)

PERMIT, a licence or instrument, granted by the officers of excise, authorizing the removal of goods subject to the excise duties.

It is enacted by the 11 Geo. 3. c. 30., that no person shall demand or receive a permit for the removal of brandy, arrack, rum, spirits, and strong waters, coffee, tea, and cocoa nuts, without the special direction in writing of the person out of whose stock they are to come, on pain of forfeiting 50l. and in default of payment, to be imprisoned 3 months. Persons taking out a permit, and not removing the goods within the prescribed period, nor returning the permit to the officer, forfeit ~~twice~~ the value of the goods mentioned in such permit. By the 37 Geo. 3. c. 133., persons selling, lending, or making use of a permit for any other purpose than that for which it was granted, forfeit 500l. By the 4 Geo. 4. c. 4. s. 116. it is enacted, that any retailer of spirits sending out more than one gallon without a lawful permit; any rectifier, compounder, or dealer, receiving into his stock any spirits without a permit; or any carrier, boatman, or other person, assisting in the removal or transportation of any spirits without a permit; shall forfeit 200l. every and above every other penalty, together with all such spirits; the packages, carts, horses, &c. employed in the removal of such goods shall also be forfeited, and may and shall be seized by any officer of excise. The 9 Geo. 4. c. 44. s. 25. dispenses with the necessity of a permit for the removal of coffee and cocoa. The commissioners of excise provide frames or moulds for making the paper used for permits, which has the words "Excise Office" visible in the substance of it. It is a capital offence to make such frames, or to have them in one's possession without a lawful excuse.

These regulations will, it is most probable, be speedily modified; the commissioners of excise inquiry, of whom Sir Henry Parnell is chairman, having recommended the abolition of permits in case of the removal of tea, and some other articles.

PERRY, a fermented liquor made from pears, in the same manner as cider from apples. The pears best fitted for producing this liquor are exceedingly harsh and tart; but it is itself pleasant and wholesome.—(See CIDER.)

PETERSBURGH, the modern metropolis of the Russian empire, situated at the confluence of the river Neva with the eastern extremity of the Gulf of Finland, in lat. 59° 37' 23" N., lon. 30° 18½' E. Population (including military) 480,000.

This flourishing emporium was founded by Peter the Great, whose name it bears, in 1703. In the same year, the first merchant ship that ever appeared on the Neva arrived from Holland; and the czar, to mark his sense of the value of such visitors, treated the captain and crew with the greatest hospitality, and loaded them with presents. In 1714, 16 ships arrived at Petersburg; in 1730, the number had increased to 180; and so rapid has been the progress of commerce and civilization in Russia since that period, that, at present, from 1,500 to 1,500 ships annually enter and clear out from Petersburg!

It is much to be regretted, that, although favourable to commerce, the situation of Petersburg is, in other respects, far from being good. The ground on which it stands is low and swampy; it has, on different occasions, sustained great injury from inundations; and the country round is, generally speaking, a morass and forest, so that almost every thing required for the subsistence of the inhabitants must be brought from a distance. No one so bold and daring than Peter the Great would have thought of selecting such a situation for the metropolis of his empire; and none possessed of less power and resolution could have succeeded in overcoming the all but insuperable obstacles which the nature of the country opposed to the completion of his gigantic schemes.

Cronstadt, situated on a small island about 20 miles W. of Petersburg, may, in some measure, be considered as the port of the latter. Almost all vessels bound for Petersburg

much here; and those drawing above 8 feet water load and unload at Cronstadt; the goods being conveyed from and to the city in lighters, the charges of which vary according to the demand at the time. The merchants' harbour at Cronstadt is fitted to contain about 600 ships; but it is exposed to the westerly winds. Cronstadt is strongly fortified, and is the principal station of the Russian fleet. Vessels bound for Petersburg must pass by the narrow channel to the south of the island, commanded by the fortifications of Cronstadt on the one side, and of Cronstot on the other. The woodcut on the next page, taken from the official survey published by the Russian government, gives a better idea of the situation of Petersburg, Cronstadt, &c. than could be derived from any description.

Trade, &c.—Petersburgh has the most extensive foreign trade of any city in the north of Europe. This arises from its being the only great maritime outlet on the Gulf of Finland, and from its vast and various communications with the interior of the country. Few countries have such an extent of internal navigation as Russia. By means partly of rivers, and partly of canals, Petersburg is connected with the Caspian Sea. Goods are conveyed from the latter to the capital, through a distance of 1,434 miles, without once landing them! The iron and furs of Siberia, and the teas of China, are received at Petersburg in the same way; but owing to the great distance of those countries, and the short period of the year during which the rivers and canals are navigable, they take 3 years in their transit. Immense quantities of goods are also conveyed during winter upon the ice, in sledges, to the different ports, and to the nearest *pristans*, or places in the interior, where barks are built for river or canal navigation. They are put on board in anticipation of the period of sailing, that the barks may be ready to take advantage of the high water, by floating down with the current as soon as the snow and ice begin to melt. The cargoes carried up the river into the interior during summer are principally conveyed to their ultimate destinations by the sledge roads during winter. The conveyance by the latter is generally the most expeditious; and it, as well as the internal conveyance by water, is performed at a very moderate expense.

The barks that come from the interior are mostly of a very rude construction, flat-bottomed, and seldom drawing more than 20 or 30 inches water. When they arrive at their destination, they are sold, or broken up for fire-wood. Those that leave the ports for the interior are of a superior description, and are comparatively few in number; the commodities imported being, at an average, of much greater value relatively to their bulk and weight than those that are exported.

Principal Articles of Export and Import.—The principal articles of export are tallow, hemp and flax, iron, copper; grain, particularly wheat; deals and masts, potashos, squirrels, linseed and hemp seed, linseed and hemp seed oils, furs, leather; fox, hare, and squirrel skins; canvass and coarse linen, cordage, caviare, wax, isinglass, tar, &c. Tallow, both for candles and soap, is more largely exported from this than from any other port in the Baltic, and is an article of great commercial importance.—(See TALLOW.) The hemp is of good quality, though inferior to that of Riga: it is assorted, according to its quality, into *clean hemp*, or *firsts*; *outshot hemp*, or *seconds*; and *half-clean hemp*, or *thirds*. The first sort should be quite clean, and free from spills; the second is less so; and the third, or *half-clean*, contains a still greater portion of spills, and is, besides, of mixed qualities and colours. Russian flax is much esteemed for the length of its fibre; it is naturally brownish, but becomes very white after the first bleaching. Three qualities are distinguished; viz. 12 head, 9 head, and 6 head.—(See HEMP AND FLAX.) Iron is of very good quality, and is preferable to that from the other Russian ports: there are two kinds, old and new sible; the former is the best. Leather is largely exported; it is divided into many different sorts.—(See the details with respect to it in the art. RUSSIA LEATHER.) The grain trade between this country and Petersburg has, within the last 7 years, become of very considerable importance; and Russia will, probably, continue henceforth to be one of the principal sources of supply to this country. The *Russian wheat*, so called to distinguish it from the *azemaia*, or soft wheat, and the *kubanka*, or hard wheat, is the lowest description of wheat shipped from Petersburg. It is very small-grained and dingy coloured; being, though sound, unfit for the manufacture of fine bread. The *azemaia* is of a larger, though still not a large grain, and better colour, and has of late been extensively imported into England. The *kubanka*, or hard wheat, is a large semi-transparent grain. Its hardness has nothing of the flinty character of the Spanish hard wheat, which it most resembles. When first brought to London, the millers objected to it, on account of the difficulty experienced in grinding it; but it is now much esteemed. All the Russian wheats are well calculated for keeping, either in granary, or when made into bread: but the *kubanka* has this quality in a peculiar degree; and is in great demand for mixing with other wheats that are old, stale, or out of condition. A shipment of 100 chetwerts of wheat in Petersburg is found, when delivered here, to yield about 72 Imperial quarters. The principal imports are sugar, especially from the Havannah (the importation of refined sugar was prohibited in 1822); coffee, but not in large quantities; madder, indigo, cochineal, and dye woods; cotton stuffs and yarn,—the latter being by far the principal article sent from this country to Russia; woollens, oils, spices, salt, wine, lead, tin, coal, fine linen from Holland and Silesia, &c.

Rapid as has been the increase of Russian commerce, its progress has been materially retarded by restrictions on importation. Considering the immense variety of valuable natural productions with which Russia abounds, the thinness of the population, and the slovenly and ignorance of the great bulk of the people, nothing can be more absurd than the attempts to render them, by dint of Custom-house regulations, rivals of the English and Germans in manufacturing industry! However, it must be confessed, that in enacting prohibitions and restrictions, they are only following a line of policy which we have not yet entirely aban-

References to Plan.—A, Cronslot; B, Man-of-war haven; C, Tolboken light-house, 68 feet high, furnished with a fixed light. Soundings in fathoms. It appears from the above plan, that the depth of water between Cronstadt and Petersburg does not, in some places, exceed 6 or 7 feet; but it is increased about a foot by continued westerly, and is diminished about as much by continued easterly, winds. Cronstedt is, therefore, as already observed, in reality, the port of Petersburg; and has, indeed, a separate Custom-house or jurisdiction. The transfer of goods between the two places by means of lighters has of late years been materially facilitated by the employment of steam tugs.

known, though it has been quite as injurious to us as it can be to them. We had hoped that sound commercial principles were beginning to get an ascendancy at Petersburg, inasmuch as the ukase of the 26th of March, 1830, materially modified several of the previous restrictions. But more recently a new ukase made its appearance, enacting a considerable increase of duties on several articles. It is, we are afraid, pretty clear, that the Russian government has profited little by the admirable work of M. Storch (*Cours d'Economie Politique*), though written for the special use of the present emperor of Russia, and his brother the Grand Duke Michael, and published by order of the late emperor.

Inspection of Goods.—At Petersburg, Riga, and other Baltic ports, when goods are brought from the interior to be shipped, they are inspected and classified according to their qualities, by officers (*brackers*) appointed by government for that purpose, and sworn to the faithful performance of their duty. All sorts of timber, linen and canvass, flax and hemp, ruseed and hemp seed, ashes, wax, &c. are subject to such inspection. They are generally divided into three qualities: *Krohn* (crown), or superior; *Brack*, or middling; and *Bracks-brack*, or inferior. This classification is said to be, in most cases, made with considerable accuracy. A factor or commission agent in Russia, instructed to buy on account of his correspondent in England or Holland, a specified quantity of any description of produce subject to the official visit, is not liable to any action in the event of the article being found, upon delivery, to be of inferior quality, provided he produce a certificate to show that it had been officially inspected, or *bracked*. But a factor is at liberty, should any article delivered to him be manifestly defective, to name 1 or 2 other *brackers* to decide whether the article be merchantable or not.

Native and Foreign Merchants, &c.—Every Russian carrying on trade must be a burgher, and have his name registered in the burghers' book; he thus acquires an unlimited freedom of trade. All whose names are in the burghers' books, are either townsmen who have property within the city, or members of a guild. There are three guilds. Those belonging to the first, must possess from 10,000 to 50,000 roubles; these may follow foreign trade, are not liable to corporal punishment, and may drive about the city in carriages drawn by 2 horses. Those belonging to the second guild declare themselves possessed of from 5,000 to 10,000 roubles; they are confined to inland trade. A capital of from 1,000 to 5,000 roubles enables its owner to admission into the third guild, which comprises shopkeepers and petty dealers. The rates paid by the members of these guilds amount to 1 per cent. upon their declared capital, the "statement of which is left to the conscience of every individual." Burghers are not obliged to serve in the army, but may provide a substitute, or pay a fine. The *guests*, or foreign merchants, who enrol themselves in the city register, on account of their commercial affairs, enjoy privileges nearly similar to those enjoyed by the members of the first guild.

None but native Russians are allowed to engage in the internal trade of the country; and since a foreigner, who imports goods into Russia, must sell them to Russians only, and at the port where they arrive. A few foreigners, indeed, settled in Russia, and having connections with the natives, do carry on a trade with the interior; but it is contrary to law, and the goods are liable to be seized.

The merchants engaged in foreign trade are mostly foreigners, of whom the English are the principal. The peculiar privileges formerly enjoyed by the latter are now nearly obsolete; and their rights, in common with those of other foreigners, are merely those of *guests*. The English factory is, at present, little more than a society formed of some of the principal English merchants, several of whom, however, do not belong to it: its power extends to little more than the management of certain funds under its control.

Purchase and Sale of Commodities, &c.—Owing to the scarcity of capital in Russia, goods, the produce of the country, are frequently paid in advance; and foreign goods are not commonly sold upon credit. From the month of November till the shipping season in May, the Russians who trade in flax, hemp, tallow, bristles, iron, &c. either come themselves to Petersburg, or employ agents to sell their goods to foreigners, to be delivered, according to agreement, in May, June, July, or August. The payments are made according to the circumstances of the sellers and buyers; sometimes the buyer pays the whole amount, in the winter months, for the goods which are to be delivered in the summer or autumn; and sometimes he pays a part or excludes the contract, and the remainder on delivery of the goods. The manufacturers and dealers in linen usually come to Petersburg in March, and their goods for ready money.

Foreign goods were formerly almost entirely sold at a twelvemonth's credit, and some at a still longer term; but of late years several articles, as coffee and sugar, are sold for ready money; still, however, the great bulk of foreign goods for the supply of the interior is sold on credit. Most of the Russians who buy goods on credit of foreigners, for the use of the interior, have no other connection with Petersburg, than merely coming there once or twice a year to make purchases; which being accomplished, they set off with the goods, and the foreigner neither sees nor hears of them till the bills become due.

It is obvious, from this statement, that experience and sagacity are nowhere more requisite in a merchant than here. He has nothing, in fact, but his own knowledge of the native dealers to depend on; and it is highly creditable to the Russians, that foreigners do not hesitate to trust them with immense sums on such a guaranty. A foreign merchant carrying on business in Russia, must also

Wool Goods Imported.—The following are some of the rates specified in the tariff:—

Wool in bales and chests	17 per cent.	Coatings must be weighed in the sacks after being taken from the chests for every sack of from 4 to 7
Wool in bales and chests—rare	40	pieces
Wool in bales and chests—rare	30	sacks of from 2 to 3 1/2 pieces
Wool in bales and chests—rare	17	pieces
Wool in bales and chests—rare	30	Englis in pieces—every sack of from 1 1/2 to 7
Wool in bales and chests—rare	30	pieces

Molst Goods Imported.—The following are some of the rates specified in the tariff:—

Wool in sacks	17 per cent.	Cochineal must be weighed in the sacks after being taken from the sacks; for every sack of from 4 to 7 poods	9 lbs.
of flax, in flax and straw	20	sacks of from 2 to 2 1/2 poods	1
of French, in flax and earthenware	40	Ladje in serons; every seron of from 5 1/2 to 7 poods	24
in barrels	36	in 1/2 serons, 2 1/2 to 4 poods	20
and generally on all molst goods in barrels in glass and earthenware	17	of Guatemala	20 per cent.
	20	in boxes	20
Miscellaneous Goods.	8		
in boxes	15		
in chests and barrels			

Bills drawn in Russia, and payable after date, are allowed 10 days' grace; but if payable at sight, 3 days only; Sundays and holidays are included in both cases. The Julian calendar, or old style, is retained throughout Russia. This is twelve days later than the new style; and in leap-years, 13 days, after the month of February.

Port Charges payable on British Ships at the Port of Petersburg.

1833 & increase of					185					124				

Remarks on Tables.—It would appear from the above Tables, that the trade of Petersburg has increased with extraordinary rapidity since 1812. But though its increase since that epoch has been very considerable, it has not been by any means so great as might be inferred from the previous statements.

* Of these, 155 ships brought coals.

The reason is, that the returns are all made in paper rubles; and that they have borne a much lower value, as compared with silver, since 1812, than they did previously. Since 1826, however, the value of the paper rouble has been pretty constant; and in the interval there has been a considerable increase of trade. We have no doubt, indeed, that the commerce of Russia has yet only in its infancy; and that it will continue to increase according as the increase of population and the slow but gradual progress of civilization develop the gigantic resources of this great country. It is reasonable, I would suppose that this development will be accelerated by the adoption of a more liberal system of commercial policy.

TRADE AND NAVIGATION OF THE RUSSIAN EMPIRE IN 1834.

Account of the Total Values, as per Price Currents, of the different Articles exported from Russia to Foreign Countries in 1834, and of those imported by her from the same; specifying the Exports to and Imports from each Country.

Regulations of the Port.—If any master or captain of any ship or vessel, or other person, shall refuse or neglect to comply with the regulations of the harbour master, in matters within the jurisdiction of the district, such person shall, for each and every such offence, severally forfeit and pay any sum not exceeding 100 dollars. And the harbour master, when in full communication for his services be called to have, recover, and receive from the master, captain, or owner, or consignee of each and every ship or vessel arriving at the wharf in Philadelphia (except vessels not exceeding the full ton of 75 per cent) the sum of 1 dollar for each and every voyage by such ship or vessel performed, and no more.

Every ship or vessel that may arrive in this harbour, and that shall anchor in the stream any where between Almond and Vine Streets, having previously caused her gunpowder, if any she had on board, to be landed as the law directs, may remain in that situation here, to be loaded as she may be, or to be taken to the island or wharf, as she may be consistent with their safety. But if, from the circumstances of a vessel having servants on board, or from any other cause, it may be thought necessary or convenient to lie a longer time than is in an, then, and in every such case, the owner, master, pilot, or other person having the charge or direction of such vessel, shall be at liberty to move, to the northward of Vine Street, with 1 anchor and cable up, and 1 anchor and cable down the stream; and in both the above-mentioned situations, the regulation contained in the next succeeding article to be duly attended to.

If any vessel properly moored in the stream shall have her anchor or cable overlaid by any other vessel in anchoring or mooring, the master or person having the care or direction of such last-mentioned vessel shall immediately, or as soon as may be after application made in this behalf by the party aggrieved, cause the said anchor or cable so overlaid to be taken up and cleared. When any ship or vessel shall be bound to say wharf or dock, or alongside of another vessel, that any vessel may have the command, care, or direction of her, shall have her anchor made fast, and if outside of another vessel, shall get her good fast from each end of the vessel to the shore, with sufficient ladders between them and the hoise vessel; and shall cause the ladders of their anchors to be taken in board, and, within 24 hours thereafter, cause her jibboom, spritsail yard, main boom, spanker and rigging boom, if any they have, to be rigged in, and their lower ports opened up, in such a manner as least to interfere with vessels moored.

If the hull of vessels when moored at a wharf shall extend across the dock, so to obstruct the passage or repairing of shallops, lighters, or other craft or vessel, the master or other person having the command of such ship or vessel shall, upon the first application, immediately cause such part of the hull to be cut off or stacked down.

No outward-bound vessel, putting off from a wharf, shall lie longer in the stream between Vine Street and Almond, in the district of both ways above mentioned, than 24 hours. And if vessels lying at the end of a wharf so much interlock with each other as to prevent vessels hauling in and out of docks, the master, owner, pilot, or other person having the charge of the same, shall, immediately on application from any person so wanting to haul his vessel in or out of docks aforesaid, have the vessel or vessels so interfering, moved in such a manner as to accommodate the one applied for; in which case the vessel making room for another to haul in or out shall have liberty to make her ways fast to the most convenient place adjacent, for a reasonable time; and all sea vessels, when transporting or waiting to haul into a wharf or dock, or to make sail, in order to proceed to sea, shall have the same privilege.

When any ship or vessel may be lying alongside any wharf, and making in or discharging, she shall make way for and permit any vessel that wants to unload or load, to come inside, near the wharf, until she discharges or loads her cargo; and the said vessel, when so discharging or loading, shall haul outside and give way to the vessel that first occupied the wharf; provided that, from the 10th of December to the 1st of March, no vessel be compelled to move from her berth (only those at Gloucester Point pier), excepting to let vessel in and out of docks.

No ship or vessel loading or discharging hemp at any wharf, or within any dock, shall be allowed to have any fire on board; neither shall any vessel lying outside or near her be permitted to have fire on board, while it may be considered dangerous. And no tar, tur-

peniles, resin, or pitch, shall be heated on the wharf, or on board any vessel lying at any wharf within the limit of the city.

Rate of Pilotage.—Inwards, up to 12 feet, at 2 67 dollars per foot; above 12 feet, at 3-33 dollars.
Outwards, up to 12 feet, at 2 dollars; above 12 feet, at 2-67 dollars.

Every vessel arriving from, or bound to, a foreign port, is required by law to receive a pilot, or to pay half pilotage in the warder's office, where the master of every such vessel is required, under the penalty of 10 dollars, to make a report within 36 hours after his arrival, and again before his departure, signing his name to said report in the warder's book.

Every vessel of 75 tons and upwards arriving from, or bound to, any port within the United States, and the master of all such vessels, are bound as above.

The pilot of every vessel is required to inform the master of his having to report at the warder's office. As vessels obliged to receive a pilot are required to pay 10 dollars in addition, as winter pilotage, from the 30th of November to the 10th of March, both days inclusive.

Foreign vessels, i. e. French, Spanish, Portuguese, Neapolitan, Danish, Russian, South American, and Italian, to pay 2 dollars 67 cents in addition to other pilotage.

Every pilot detained more than 24 hours by any master, owner, or consignee, is entitled to 2 dollars per day for every day he is so detained. Every pilot detained more than 48 hours by the ice, after he has conducted his vessel to a place of safety, is entitled to 5 dollars per day for every day he is so detained.

Every pilot compelled to perform quarantine is entitled to 2 dollars per day, for every day he is so detained, and cannot be discharged in less than 8 days, without his consent.

Every pilot obliged by the ice or stress of weather to proceed to another port, in which there is no pilotage, and if there discharged, to 6 cents a mile for every mile he has to travel home.

Every pilot is required, under a penalty of 12 dollars, to make report, within 48 hours, at the warder's office, of every vessel he con- ducts to the city.

Rates of Commission recommended for general Adoption, and allowed by the Philadelphia Chamber of Commerce, when no Agreement subsists to the contrary, established at a stated Meeting on the 10th of March, 1823.

Purchase	1-1/2	1-1/2	1-2	1-2	on cost and charges.
Collecting dividends on public stock	1-2	1-2	1-2	1-2	on amount collected.
Advance in money, or by coming under acceptance, in all cases	2-1/2	2-1/2	1-2	1-2	on amount advanced.
Accounts, collecting disputed or litigated accounts, or claims on insolvent estates	5	5	1-2	1-2	on amount recovered.
Money, receiving, from which no other commission is derived	1-2	1-2	1-2	1-2	on amount received.
Pay ditto	1-2	1-2	1-2	1-2	on amount paid.
Paying and receiving ditto	1-2	1-2	1-2	1-2	on amount received.
Quarantine, in all cases	2-1/2	2-1/2	1-2	1-2	on the amount guaranteed.

On bills remitted for collection under protest for non-acceptance or non-payment, 1-2 commission to be charged.
On consignment of merchandise withdrawn or re-shipped, full commission to be charged to the extent of advances or responsibilities incurred, and 1-2 commission on the current value of the residue.
On sales of merchandise originally consigned to another house, but withdrawn, and where no responsibilities are incurred, only 1-2 commission to be charged on the current value.

The current value in all cases to be settled by certificate of 2 respectable merchants, auctioneers, or brokers.
The above commissions to be exclusive of guarantee, brokerage, storage, and every other charge actually incurred.
The risk of loss by fire, unless insurance be ordered, and of robbery, theft, and other unavoidable occurrences, if the usual care be taken to secure the property, is, in all cases, to be borne by the proprietor of the goods.

[The following table exhibits the Number of Vessels which arrived in the port of Philadelphia from the 1st of January 1787, to the 1st of January, 1840.

Note.—Subject to a reduction of 3-10ths of the excess between the value of the articles at 90 per cent., and the amount at the different rates as stated.

There are now, 1840, 16 banks in Philadelphia, with capitals amounting, exclusive of that of the Bank of the United States, to \$18,050,000.

The number of marine insurance companies amounts to 10, with an aggregate capital of \$3,330,000; and there are 9 fire insurance companies, with a capital of \$3,450,000; besides 3 associations for mutual assurance against fire, operating without any specified capital.—Am. Ed.]

PHOSPHORUS, a substance of a light amber colour, and semi-transparent; but, when carefully prepared, nearly colourless and transparent. When kept some time, it becomes opaque externally, and has then a great resemblance to white wax. It may be cut with a knife, or twisted to pieces with the fingers. It is insoluble in water; its specific gravity is 1.77. When exposed to the atmosphere, it emits a white smoke, and is luminous in the dark. When heated to 148° it takes fire, and burns with a very bright flame. When phosphorus is inflamed in oxygen, the light and heat are incomparably more intense; the former dazzling the eye, and the latter cracking the glass vessel.—(Thomson's Chemistry.)

PIASTRES, or DOLLARS, Spanish and American silver coins in very extensive circulation. Value, at an average, about 4s. 3d. sterling.—(See COINS.)

PILCHARDS (Ger. *Sardellan*; Du. *Sardynen*; Fr. *Sardines*; It. *Sardine*; Sp. *Sardinas*; Rus. *Sardeli*; Lat. *Sardinæ*), fishes closely resembling the common herring, but smaller, and at the same time thicker and rounder. They are rarely found on the British shores except on the coasts of Cornwall and Devon, particularly the former, where they are taken in great numbers from the month of July to September, both inclusive. It is a saying of the Cornish fishermen, that the pilchard is the least fish in size, most in number, and greatest for gain, taken from the sea.

Pilchard Fishery.—This is carried on along the coast of Cornwall and Devon, from the Belt Head in the latter, round by the Land's End to Padstow and Bossley in the former. Its principal seats are St. Ives, Mount's Bay, and Newgatesey. The fish usually make their appearance in vast shoals in the early part of July, and disappear about the middle of October: but they sometimes reappear in large quantities in December. They are taken either by *seams* or by drift nets, but principally by the former. A seam is a net, varying from 200 to 300 fathoms in length, and from 10 to 14 ft. in depth, having cork buoys on one edge and lead weights on the other. Three boats are attached to each seam, viz. a boat (*seam boat*), of about 15 tons burden, for carrying the seam; another (*followers*), of about the same size, to assist in mooring it; and a smaller boat (*arker*), for general purposes. The number of boats employed in these 3 boats varies from about 13 to 18, but may be taken, at an average, at about 10. When the shoals of fish come so near the shore that the water is about the depth of the seam, it is employed to enclose them; the fishermen being directed to the proper places for casting or shooting the nets by persons (*seamers*) stationed for that purpose on the cliffs.* The practice is to row the boat with the seam on board gently round the shoal; and the seam being, at the same time, thrown gradually into the water, assumes, by means of its buoys and weights, a vertical position, its lashed edge being at the bottom, and the other floating on the surface. Its 2 ends are then fastened together; and, being brought into a convenient situation, it is moored by small anchors or grapnels. At low water, the enclosed fish are taken out by a small seam or *tack net*, and carried to the shore. A single seam has been known to enclose at once as many as 3,000 hogsheds of fish! But the quantity taken depends on so many accidental circumstances, that while one seam may catch and cure in a season from 1,000 to 2,000 hogsheds, others in the neighbourhood will not get a single pilchard. In some places, the tides are so strong as to break the seams and set the fish at liberty. When the quantity enclosed is large, it requires several days to take them out, as they must not be removed in greater numbers than those who salt them can conveniently manage.

Drift nets are usually about a mile long, by about 4½ fathoms deep; they are shot in the open sea, and entangle the fish in their meshes in the same way as the herring nets. The fish thus taken are said to be superior to those taken by the seams.

As soon as the fish are brought to shore, they are carried to cellars or warehouses, where they are piled in large heaps, having a sufficient quantity of salt interspersed between the layers. Having remained in this state for about 35 days, they are, after being carefully washed and cleaned, packed in hogsheds, each containing, at an average, about 2,600 fish; they are then subjected to a pressure sufficient to extract the oil, of which each hogshed yields about 3 gallons. This oil usually sells for from 12 to 15 per cent. under the price of brown seal oil. The oil, blood, and dirty pickles that drain from the fish while they are piled up, are collected in reservoirs, and sold to the curriers. The broken and refuse fish and salt are sold to the farmers, and are used as manure with excellent effect. The skimmings which float on the water in which the pilchards are washed, are called *garbage*, and are sold to the soap-boilers.

The pilchard fishery has been rather declining of late years. This has been ascribed partly to the failure of the catch, partly to the withdrawal of the high bounty of 8s. 6d. per hhd. formerly paid on exportation, and partly to the relaxed observance of Lent in the Mediterranean, and the imposition of a heavy duty on the importation of the fish into Naples, which has long been their principal market. The following is

An Account of the Exports of Pilchards during the Three Years ending with 1832; specifying the Places in which they were exported, the Quantity shipped for each, and their Price at the Port of Shipment.

Year.	Leith.	Naples.	Genua.	Ancora.	Venice.	Trieste.	Malta.	Messina.	C. Vezia.	Total.	Prices.
1830	2,473	6,761	1,405	1,587	4,569	1,653	-	301	-	21,194	35 to 43
1831	4,031	10,276	2,100	5,266	4,205	530	01	-	618	27,152	33 - 40
1832	3,784	11,612	3,116	5,073	5,781	1,000	237	-	610	31,018	23 - 45

Of the 27,112 hhd. exported in 1831, St. Ives furnished 12,141, and Mount's Bay 9,013; the remainder being furnished by Newgatesey, St. Austle's Bay, St. Mawes, Povey, &c.

Pilchards are not used in England, except in Cornwall and Devon, where about 3,000 hhd. a year may at present be made use of. We believe, however, that their consumption in these counties has been to increase with considerable rapidity.

The seam fishery employs from 2,700 to 3,000 hands, and about 180 or 190 seams; but exclusive of

* The tunny fish in the Archipelago was caught in a similar way—"Ascendebat quidam (Anglicè *Auer*, *Green's* *thunoscopus*) in altum promontorium, unde innumeri gregem spectabantur, quo vias, signum piscatoribus dabat, qui retibus totum gregem includebant."—(Bishop of London's *Notes on the Price of Eschylus*, quoted by Dr. Paris, in his *Guide to Mount's Bay*, p. 156.)

† Mr. Pennant inadvertently states the number of fish in a hogshed at 35,000.—(British *Zoology*, vol. iii. p. 54. ed. 1770.) Trusting to his authority, we fell into the same error in the first edition of this work.

ports, London, and at the Custom-houses of the ports for which they are licensed, and are to be published in the *London Gazette*.—§ 7.

No person shall take charge of any ship or vessel as a pilot belonging to the *Cinque Ports*, before he be examined by the master and two fellows, or by four wardens of the society or fellowship of pilots of Dover, Deal, and the Isle of Thanet, touching his abilities, and shall be approved and admitted into the said society by the Lord Warden of the Cinque Ports, or his lieutenant; and any person pretending to act as a pilot, belonging to the said society or fellowship, without having been so examined, approved, and admitted, shall for the first offence forfeit 10*l.*, for the second 20*l.*, and for every other offence 40*l.*.—§ 15.

No person licensed by the aforesaid society or fellowship is to take charge of any ship or vessel drawing more than 11 feet 6 inches water, until he has acted as a pilot for 3 years; nor of a vessel drawing more than 14 feet water, till he has acted as a pilot for 5 years; nor of a vessel drawing more than 17 feet water, till he has acted as a pilot for 7 years; when he is to be again examined; and if he shall be approved of and licensed upon such second examination, he may take charge of ships of any draught of water.—§ 16.

The number of *Cinque Port* pilots used to be fixed at 140; but during peace, no more than each alternate vacancy is to be filled up, unless the number be reduced below 120.—§ 24.

All bodies politic and corporate, and all persons authorised to appoint or license pilots for any port or place in England shall, upon any such appointment being made, forthwith transmit to the Trinity House, London, and to the commissioners of customs, London, the Christian name and surname, age, and place of residence, of every pilot so appointed, distinguishing the limits in which he is to act, and by whom appointed. And the said bodies politic, &c. are to transmit lists, corrected up to the 31st day of December in each year, either on that day, or within a month after, to the said Trinity House and commissioners of the customs, of the names and residences of all the pilots within their respective jurisdictions; stating also the alterations that may have been made within the year in the rates of pilotage charged, and in the rules and regulations for governing pilots within their respective districts.—§ 25.

The commissioners of the customs are to transmit to their principal officers, at the different ports, the names and places of residence of all the pilots residing within the limits of each port, as far as they are acquainted with the same; and every pilot is to be furnished with copies of all proclamations and orders in council respecting the performance of quarantine.—§ 36.

A particular description of the person of every pilot is to be written upon the back of his licence; and no person shall take charge of any ship or vessel, or in any manner act as a pilot, or receive any compensation for acting as a pilot, until his licence shall have been registered by the principal officers of the Custom-house of the place at or nearest to which such pilot shall reside, (which officers are hereby required to register the same without fee or reward), nor without having his licence at the time of his so acting in his personal custody, and producing the same to the master of any ship or vessel, or other person, who shall be desirous of employing him as a pilot, or to whom he shall offer his services, on pain of forfeiting a sum not exceeding 30*l.*, nor less than 10*l.*, for the first offence; and for the second or any subsequent offence, a sum not exceeding 50*l.*, nor less than 30*l.*; and upon further pain, as to any person licensed as aforesaid, of forfeiting his licence, or being suspended from acting as a pilot, by and at the discretion of the corporation or other authority from which such pilot's licence was derived, either for the first, second, or any subsequent offence.—§§ 65, 66.

2. *Government of Pilots.*—All persons licensed to act as pilots by the Trinity House, are subject to the government of the said corporation, which is empowered to make by-laws, rules, &c. specifying what sums shall be paid by such pilots to the sub-commissioners of pilotage for their examination, and for granting, or renewing, or confirming their licences from time to time, and annexing such reasonable penalties and forfeitures for the breach of such by-laws as to them shall seem expedient. But no such by-laws, regulations, &c. shall have any force till they have been examined, sanctioned, and approved by the chief justice of the Court of King's Bench, or the chief justice of the Court of Common Pleas.—§ 11. (*N. B.*—The by-laws of the Trinity House, Deptford Strand, sanctioned by Lord Tenterden, are annexed to this article.)

Copies of any proposed by-laws are to be transmitted to the privy council and the commissioners of customs, 3 months before they are submitted to any chief justice for approval; and the commissioners of customs are to cause such proposed by-laws to be hung up in the several Custom-houses of the principal ports of Great Britain, for the inspection of all parties having an interest therein. And when such by-laws shall have been sanctioned, they shall be hung up in the several Custom-houses within the limits of which the pilots respectively shall be licensed, and also at the Trinity House in London.—§§ 12, 13.

The *Cinque Port* pilots are to be subject to the rules and regulations framed by the Lord Warden of the said ports, or his deputy, with the assent of the majority of the commissioners of *Lochnawing* (master and wardens of the fellowship of pilots of Dover, Deal, and the Isle of Thanet). The privy council may, however, amend, correct, or enlarge such rules or regulations, if they shall appear to them, upon the representation of any person having an interest therein, to be in any material point erroneous, insufficient, or defective.—§ 21, 22.

The Trinity House Corporation are authorised and required to establish, vary, and alter, from time to time, as circumstances may require, the rates of pilotage performed by pilots licensed by the said corporation, according to the size and draught of water of the vessels, the distance piloted, the detention and responsibility of the pilot, and such other circumstances as they may think fit to take into account.

Tables of these rates are to be hung up at the several Custom-houses of the ports to which they apply; and no greater or less rates, or other reward or emolument for such pilotage, shall, under any pretence whatever, be demanded, solicited, paid, received, or offered, on pain of forfeiting 10*l.* for every such offence, as well by the party offering as by the party accepting or soliciting the same. Ships returning by stress of weather, contrary winds, or on account of accident, into ports in the district of the Isle of Wight, Plymouth, and Falmouth, shall be subject to pay half the common pilotage in such ports.—§ 8.

If the majority of the pilots licensed by the Trinity House Corporation in any port or place, or any shipowner in the same, be dissatisfied with the rates, they may appeal to the privy council, who may decide upon the matter as they think fit.—§ 9.

Every person applying for a licence to act as a pilot, shall, before any such licence be granted to him execute a bond in a penal sum, at the discretion of the Trinity House Corporation, or of the Lord Warden of the Cinque Ports, to an amount not exceeding 100*l.*, for the better securing his due obedience to the by-laws, rules, regulations, &c., to be made by competent authority.—§ 27.

Licences may be annulled, suspended, or adjudged forfeited, at the pleasure of the aforesaid corporation and Lord Warden; but pilots, whose licences are so annulled, suspended, &c. may appeal to the privy council, who are authorised to make such adjudication in the premises as they may think fit.—§ 29, 30.

3. *Licensing of Pilot Boats.*—The Trinity Corporation and the fellowship of the Cinque Port pilots are authorised to license pilot vessels of such size and description as may appear to them to be proper for having pilots constantly in attendance in such vessels at sea; and the licensed pilots are authorised

Pilots are to qualify themselves for conducting vessels in and out of Ramsgate harbour, and the harbours of Dover, Sandwich, and Margate, and shall be entitled to and receive for such pilotage at the rate of 5s. for every foot of the draught of water of every vessel so piloted.—§ 39, 40.

Ships bound to the Thames, repairing to Standgate Creek, or other places appointed for the performance of quarantine, are to pay the full charges of pilotage to such place, and a further sum of 5s. for each day the pilot shall be obliged to remain on quarantine.

Any boat or vessel running before a ship or vessel, not having a licensed pilot on board, when such ship or vessel cannot be boarded, for the purpose of directing her course, the pilot on board such boat or vessel, or, if no pilot be on board, the person having the command thereof, and who shall run before such ship at the request or by direction of the master, shall be entitled to full pilotage for the distance run.—§ 34.

All the sums which shall become due to any licensed pilot for the pilotage of foreign ships or vessels trading to or from the port of London may be recovered from the owners or masters of such ships or vessels, or from the consignees or agents thereof, who shall have paid, or made themselves liable to pay, any other charge for the ship or vessel in the port of her arrival or delivery as to pilotage inwards, or in the port whence she shall clear out or sail as to pilotage outwards; and may be levied in like manner, according to the amount, as any penalty may be recovered and levied by virtue of the act, demand thereof being made in writing at least fourteen days before such levy. And the master or other person having the charge of ships or vessels, not having British registers, which shall enter into the port of London, and which are by law required to be piloted by persons licensed by the Corporation of the Trinity House, or the consignees or agents thereof, are to pay at the Trinity House, in London, to persons appointed by the corporation of the Trinity House, the full pilotage inwards and outwards; viz. as to pilotage outwards, the amount for the distance which the ship is by law required to be piloted; as to pilotage inwards, where a pilot shall have been on board, the amount for the distance piloted by him, if greater than that which she shall be required to be piloted; if less, or if no pilot shall have been on board, the amount for the distance which she was by law required to be piloted: the pilotage inwards may be levied, &c. upon the master or other person in charge, consignee, or agent, in the same manner as in the case of ships having British registers, if such pilotage inwards be not paid within fourteen days from the day of the ship's reporting inwards.—§ 41, 46.

The pilotage outward upon foreign vessels is to be calculated according to the scale or amount of tonnage upon which such ships or vessels are rated in the port of London for payment of light and other dues, or according to the draught of water thereof, as the Trinity House may think most proper.—§ 40.

In order to prevent controversies with respect to the draught of water of ships not having British registers, the Trinity House is empowered to appoint an officer to measure the draught of water of ships with respect to which there is any controversy, such officer receiving 1l. 1s. for his trouble if the ship be below the entrance to the London Docks, and 10s. 6d. if above such entrance, from the party against whom he may decide. If arriving inwards, application for such officer must be made within three hours after the ship has come to her moorings, and before she begin to unlash; and before quitting her moorings, if clearing outward.—§ 50.

The Trinity House are empowered to take measures for the relief of foreign vessels coming to the port of London with fish, corn, and other provisions on board, either from the whole or part of the charges on account of pilotage that would fall upon them under this act.—§ 51.

No foreign vessel shall be cleared outwards until a certificate, signed by the person appointed for that purpose by the Trinity House, that the pilotage has been paid, has been produced; and the corporation pay the pilot employed, on proof that he has duly performed his service, the pilotage, after deducting the 6d. duty.—§ 47.

The consignees or agents of any ship or vessel are authorized and empowered to retain in their hands respectively, out of any monies which they may have received or shall thereafter receive for or on account of such ship or vessel, or the owner or owners thereof, so much as shall be sufficient to pay and discharge such pilotage, and any expenses attending the same.—§ 45.

Responsibility, &c. of Masters.—Ships coming from the westward, bound to any place in the river Thames and Medway, not having a duly qualified Cinque Port pilot on board, shall, on arriving at Dun-
gerness, and until they have passed the south buoy of the Brake, display and keep flying the usual signal for a pilot to come on board; and the master shall heave to and shorten sail, so as to facilitate the entry of the pilot. Persons not displaying such signal, &c. shall forfeit and pay double the amount of the sum that the charge for pilotage would have amounted to. And it is further provided, that all masters of vessels acting themselves as pilots, or employing any unlicensed person as such, or any licensed person out of the limit of his qualification, after any licensed and qualified pilot shall have offered to come on board, or made a signal for that purpose, shall forfeit double the sum that would have been legally demandable as pilotage, and an additional penalty of 5l. for every 50 tons burden of the ship, if the Trinity House or Lord Warden of the Cinque Ports, as the case may be, shall think it proper to certify the same.

But the master of any of the following vessels may pilot the same, so long as he is not assisted by any unlicensed pilot or other person than the ordinary crew: viz. the master of any collier, or of any ship or vessel trading to Norway, or to the Cattegat or Baltic, or round the North Cape, or into the White Sea, on their inward or outward voyages, or of any constant trader inwards, from the ports between Boscawen inclusive, and the Baltic (all such ships or vessels having British registers, and coming up by the North Channel, but not otherwise), or of any Irish trader using the navigation of the river Thames and Medway, or of any ship or vessel employed in the regular coasting trade of the kingdom, or of any ship or vessel wholly laden with stone from Guernsey, Jersey, Alderney, Sark, or Man, and being the production thereof, or of any ship or vessel, not exceeding the burden of 60 tons, and having a British register (or not exceeding the burden of 60 tons, and not having a British register, if authorized so to do by an order of the privy council), or of any other ship or vessel whatsoever, whilst the same is within the limits of the port or place to which she belongs, the same not being a port or place in relation to which particular provision hath heretofore been made by any act or acts of parliament, or by any charter or charters for the appointment of pilots.—§ 50, 50.

The master or mate of any vessel, being the owner or part owner thereof, and residing at Dover, Deal, or the Isle of Thanet, shall not be liable to any penalty for conducting or piloting his own ship or vessel up or down the river Thames or Medway, or into or out of any place within the jurisdiction of the Cinque Ports.—§ 62.

This act shall not extend, or be construed to extend, to subject the master or owner of any ship or vessel to any of the penalties of this act, for employing any person or persons whomsoever, as a pilot or pilots, in and for the assistance of such ship or vessel, whilst the same shall be in distress, or in any other circumstances, or under any circumstances which shall have rendered it necessary for such owner or master to avail himself of the best assistance which at the time could be procured.—§ 61.

No owner or master of any ship or vessel shall be answerable for any loss or damage which shall happen to any person or persons whatsoever, from or by reason or means of no licensed pilot or of no duly qualified pilot being on board thereof, unless it shall be proved that the want of such licensed or

of such duly qualified pilot respectively shall have arisen from any refusal to take such licensed or qualified pilot on board, or from the wilful neglect of the master of such ship or vessel in not heaving to, or using all practicable means, consistently with her safety, for the purpose of taking on board thereof any pilot who shall be ready, and offer to take charge of the same.—§ 53.

Nothing in this act shall extend, or be construed to extend, to make the owner of any ship or vessel liable in any such case, for any loss or damage beyond the value of such ship or vessel and her contents, and the freight due, or to grow due, for and during the voyage wherein such loss or damage may happen or arise.—§ 54.

No owner or master of any ship or vessel shall be answerable for any loss or damage which shall happen to any person or persons whomsoever, from or by reason or means of any neglect, default, incompetency, or incapacity of any licensed pilot acting in the charge of any such ship or vessel, under or in pursuance of any of the provisions of this act, where and so long as such pilot shall be duly qualified to have the charge of such ship or vessel, or where and so long as no duly qualified pilot shall have offered to take charge thereof.—§ 55.

Nothing in this act shall be construed to extend to deprive any person or persons of any remedy or remedies upon any contract of insurance, or of any other remedy whatsoever, which he or they might have had if this act had not been passed, by reason or on account of the neglect, default, incompetency, or incapacity of any pilot duly acting in the charge of any such ship or vessel, under or in pursuance of any of the provisions of this act, or by reason or on account of no pilot or of no duly qualified pilot being on board of any such ship or vessel, unless it shall be proved that the want of a pilot arises from a refusal on the part of the master to take such pilot on board, or to heave to for him.—§ 56.

All masters or other persons having the command of any ship, who shall report, or be privy to any one reporting, a false account of the draught of water of such ship, shall, besides the full pilotage, be held to be liable to double the amount thereof; and any master or other person having any interest, share, or property in any vessel, who shall fraudulently alter any marks on the stem or stern post thereof, diminishing the draught of water, or shall be privy or consent thereto, shall for every such offence forfeit and pay the sum of 500*l*.

7. *Recovery of Penalties.*—Penalties incurred under this act, not exceeding 20*l*, are to be recovered before a justice by prosecution within six months; and penalties above 20*l*, by action of debt in any of the courts of record at Westminster, to be commenced within twelve months; but if it shall be made to appear, as soon after as the circumstances of the case will admit, that the commencement of the prosecution or action has been delayed by reason of the absence of any party or parties, whether offending or complaining, or of any necessary witness, then, upon such circumstances being stated by affidavit, made before any judge of any of his Majesty's courts of record at Westminster, any such judge may order or authorise the commencement of the prosecution or action within such further time as he shall think fit to limit.

It is, however, provided that nothing therein contained shall affect or impair the jurisdiction of the Court of Loadmanage, or High Court of Admiralty, nor the right of the city of London, nor (in general) any separate jurisdiction established under any act of parliament or charter.—§ 57, 58, 59.

BY-LAWS, REGULATIONS, AND ORDINANCES AS TO PILOTS, framed by the Trinity Corporation, and sanctioned by Lord Tenterden, 19th of April, 1826.

I. Annul the previous regulations.

II. It is ordained, that every pilot who shall be ordered to proceed on his Majesty's service, by any order signed by the deputy master or secretary of the said corporation, or by the officer for the time being for the said corporation at Yarmouth, or elsewhere, duly authorized to act in matters of pilotage, or who shall be so ordered, in writing or otherwise, by any officer in his Majesty's service, shall immediately proceed thereon; and every pilot who shall fail so to do, or shall evade the receipt of any such order, or who shall quit or decline such service, shall for the first offence forfeit 5*l*, and for the second and every subsequent offence 10*l*, each.

III. It is ordained, that every pilot engaged in the charge of any ship employed by government in the transport service, shall observe particularly if any unnecessary delay take place on the part of the master in proceeding towards his destination; and if any delay does take place, such pilot shall, upon return, report the same to the secretary of the said corporation, and upon going on board, such pilot shall give notice to the master that he has orders so to do.

IV. It is ordained, that no pilot having the charge of a merchant ship shall stop the same at any of the moorings of his Majesty's ships at Deptford, or elsewhere, or between the Round Tree and Bathing-house, Gravesend (except in either of such cases there be an extreme necessity for so doing, or leave be obtained for that purpose from the proper officer or officers in that behalf), and all pilots licensed by the said corporation are at all times to be particularly careful to steer clear of the King's ships in passing them.

V. It is ordained, that every pilot, when called upon or required to pilot any ship or vessel, shall, of under engagement to any other ship, forthwith make known such engagement, and specify the particulars thereof truly and faithfully to the person calling for or requiring such pilot's service; and in case of any concealment, misrepresentation, or falsehood, in respect of such allego, previous appointment, the pilot offending shall forfeit 10*l*.

VI. It is ordained, that every pilot who shall have taken charge of any ship from the river Thames to the Downs, or elsewhere, shall, without any additional compensation in that behalf, wait on board for the space of 3 complete days while such ship may be detained at Gravesend, or else where, for want of seamen, or by any other casualty; nor shall he at the end of 3 complete days be at liberty to quit such ship, or receive any additional compensation, if she shall be further detained by winds, waves, or tides; and should the ship be detained beyond 3 complete days on any other account except such weather, or tides, the pilot having the charge thereof shall nevertheless still (if required so to do) remain in the charge of her, provided a compensation of 6*s*. per day be offered to him in that behalf by the master or owner.

VII. It is ordained, that every pilot shall in all cases demean himself civilly and respectfully towards all persons who may require his service, and towards all officers in his Majesty's navy, and shall maintain a strict temperance and sobriety in the exercise of his office, and shall use his utmost care and diligence for the safe conduct of every ship which he shall be intrusted with the charge of, and prevent her doing damage to others.

VIII. It is ordained, that every pilot who shall undertake the charge of any ship downwards shall, before his departure, leave, or cause to be left, notice thereof, in writing, at the proper office at the Trinity House in London, with one of the clerks there attending, and shall be considered as being engaged until he shall have done so; and upon such pilot's return, he shall immediately, in his own person, attend at the said office, and make and sign such entry, in a book there kept for that purpose, of the said corporation shall from time to time direct or require.

IX. It is ordained, at all such times, in the secretary thereof, at such time at the use of their courts, by-bills in London; and that from sub-commission or place for which at sub-commissioners, or or left as aforesaid, or for the purpose of any public use, every pilot so subsequent offence 5*l*.

X. It is ordered, a corporation, upon the use, shall, for such use the said sub-commissioners, also, for the renewing of pilotage for the annual sums following: ports of Plymouth, Po licensed or to be licensed the pilot at or for such lot class are to pay the of 1 guinea each.

XI. It is ordained, a amendment thereon.

XII. It is ordained, that any of the buoys, shall forthwith the said corporation for the

XIII. It is ordained the settings of the tide a man or other object to fall in therewith, under the same.

XIV. It is ordained, with his boat or servants, seamen from any merc for the same.

XV. Besides conforming to the said regulations, the pilot shall observe and obey the act of parliament made copy of which act has

* The following Tables have been published, and depended upon.

IX. It is ordained, that every pilot licensed by the said corporation shall, from time to time, and at all times, in obedience to the order or summons of the said corporation, under the hand of the secretary thereof for the time being, duly delivered or offered to such pilot, or left a reasonable time at the usual or last known place of residence of such pilot, attend the said corporation, at their courts, by-boards, or committees, or their secretary for the time being, at the Trinity House in London; and that every pilot licensed by the said corporation, upon a certificate of qualification from sub-commissioners of pilotage, shall, in like manner, attend the sub-commissioners of the port or place for which such pilot shall be so licensed, in obedience to the order or summons of the said sub-commissioners, under their hands, or the hands of the major part of them, duly delivered, offered, or left as aforesaid, to answer to any charges brought against such pilots respectively, or for the performance of any public service, or for any other purpose whatsoever; and in default of such attendance, every pilot so offending shall forfeit for the first offence 40s., and for the second and every subsequent offence 5*l.* each.

X. It is ordered, and hereby directed, that every pilot licensed or to be licensed by the said corporation, upon their receiving a certificate of examination by any sub-commissioners of pilotage, shall, for such examination, and for granting the licence thereon, pay the sum of 2 guineas to the said sub-commissioners of pilotage by whom he shall be examined, or to one of them; and shall also, for the renewing or confirming such licence from time to time, pay to the sub-commissioners of pilotage for the time being, at or for the port or place specified in such licence, or to 1 of them, the annual sums following; (that is to say), every pilot so licensed or to be licensed as aforesaid, for the ports of Plymouth, Portsmouth, or Cowes respectively, the annual sum of 2 guineas; and every pilot licensed or to be licensed as aforesaid, for any other port or place, the annual sum of 1 guinea, unless the pilots at or for such port or place shall be divided into 2 classes; and in that case the pilots of the 1st class are to pay the annual sum of 2 guineas each, and pilots not of the 1st class the annual sum of 1 guinea each.

XI. It is ordained, that no pilot shall add to or in any way alter his licence, or make or alter any endorsement thereon, nor shall he be privy to any such licence or endorsement being altered.

XII. It is ordained, that every pilot who shall observe any alteration in any of the sands or channels, or that any of the buoys or beacons of the said corporation are driven away, broken down, or out of place, shall forthwith deliver or send a correct statement thereof, in writing, to the secretary of the said corporation for the time being.

XIII. It is ordained, that every pilot shall, whenever he comes to an anchor, carefully observe the settings of the tide, and the force of the stream; and if it shall happen that he comes near to a sand or other object or cause of danger, and there be any other ships or ship in company likely to fall in therewith, such pilot shall immediately give notice thereof to the captain or principal officer of the ship under his care, that he may make a signal to such other ship or ships for avoiding the same.

XIV. It is ordained, that no pilot shall, on any pretence, aid or assist, either in his own person or with his boat or servants, or by any other means whatever, the landing, removing, or secreting any seaman from any merchant ship or vessel, to avoid serving in his Majesty's navy, or escape the impress for the same.

XV. It is ordained, that every pilot shall from time to time conform himself strictly to all directions which shall be given to him by any of the harbour masters authorised by act of parliament, under the operation of the city of London, touching the mooring, unmooring, placing, or removing of any ship or vessel under his charge, as long as such ship or vessel shall be lying and situate within the limits of the authority of such harbour master.

XVI. It is ordained, that each and every pilot belonging to a licensed pilot vessel shall be at liberty to entertain one apprentice and no more.

XVII. It is ordained, that for any work done on the rivers Thames or Medway by men in boats, so long as the work for the whole tide, the pay shall be, for half a tide's work, 4*s.* to each man, and so in proportion for any time less than a whole tide, the pay for which is settled by the said act of the 6th year of the reign of his present Majesty at 8*s.*

XVIII. It is ordained, that in all cases where pecuniary penalties and forfeitures are annexed to the breach of the foregoing by-laws, rules, orders, regulations, and ordinances the said corporation of Trinity House may mitigate and reduce the same to 1-4th part at their discretion.

XIX. It is ordained, that every pilot who shall offend against any or either of the foregoing by-laws, rules, regulations, and ordinances, shall, for every such offence (whether the same shall subject him to any pecuniary penalty or not, and in addition to such penalty if any), be liable to have his licence annulled and forfeited, or suspended, at the discretion of the said corporation.

X. B. Besides conforming themselves diligently to the above by-laws, rules, orders, regulations, and ordinances, the pilots licensed by the corporation of the Trinity House are, of course, in all things to observe and obey the same enactments and provisions relating to such pilots contained in the said act of parliament made and passed in the 6th year of the reign of his Majesty King George the Fourth, copy of which act has been delivered to each of the said pilots.

*. * The following Tables of the charges on account of pilotage, &c. are the most complete that have hitherto been published. They have all been derived from official sources, so that their accuracy may be depended upon.

For putting a Pilot on Board, and for Piloting of Ships and Vessels to the Anchorage in the Downs.	60 Tons, and under 150.	150 Tons, and under 350.	350 Tons, and under 400.	400 Tons, and under 600.	600 Tons, and upwards.
	L. s. d.	L. s. d.	L. s. d.	L. s. d.	L. s. d.
From of Dungeness to off Folkestone; the church bearing N. N. W. by compass	8 0 0	3 0 0	3 10 0	4 0 0	5 5 0
From off Folkestone to the South Foreland, the lights to one	1 10 0	2 0 0	2 10 0	3 0 0	4 4 0
From off the South Foreland to the Downs	1 5 0	1 5 0	1 10 0	2 0 0	3 3 0

For a boat of a class carrying an anchor of above 4 cwt. with a corresponding tow-line L. s. d. 2 2 0
 Do. do. 3 cwt. 1 1 0
 Do. do. under 3 cwt. 0 15 0
 And for each man's service in those boats, 8s. per tide.
 Per trip for the whole distance from Gravesend to London; and in proportion for any part of that distance.

RATES CHARGED FOR THE PILOTAGE OF VESSELS, WITH AN ACCOUNT OF OTHER CHARGES AFFECTING THEM IN SOME OF THE UNDERMENTIONED PORTS.

Basmeys District, viz.—From Bagrove to a line drawn from Great Ormes Head to Folkestone; and to and from, and into and out of all ports and places within those limits.
N. B.—No master of a vessel is compelled to take a pilot within the District, unless making into or going out of port; but if he do take a pilot, it must be one of the district pilots, if one offer.

Rate of Pilotage, for Piloting Ships within the Basmeys District.

Inwards.	Under 100 tons	L. s. d.
From the outside of the Sound - into the Bay	100 to 200	0 15 0
	200 - 300	1 1 0
	300 and upwards	1 11 6
From the inside of the Sound - into the Bay	Under 100 tons	0 10 6
	100 to 200	0 15 0
	200 - 300	1 1 0
	300 and upwards	1 11 6

Ships not having British registers are to pay 1-4 more than is stated in the above Table.
 Should the pilot be landed at Great Ormes Head—extra L. s. d. 2 2 0
 If taken out of the limits of his licence, to Chester or L.L. report 3 3 0
 In case the pilot should happen to have charge of the vessel in either of the said places the sum of 7s. 6d. per day is to be allowed to the pilot for every day such pilot may be detained on board in consequence of the ship not performing quarantine, or detained under any other restrictive circumstances such ship may be liable to.

Refusal.
 Foreign Rate. L. s. d. 0 0 3 per ton
 British Rate. L. s. d. 0 0 2 per ton

Dartmouth.—Pilotage for the Buoys at Brightelmston, Hastings, or Bezzid.

1 foot and under.	8 to 10 Feet.	Above 10 Feet.
1s. 3d. per foot.	1s. 6d. per foot.	2s. per foot.

The above rates for the harbours and beaches are due both inwards and outwards; but on charge whosoever is to be made for the use of pilot boats.
 Ships making into the harbours of Rye and Shoreham, and unloading near the harbour's mouth, are subject to 1-4 pilotage only; but if such ships are afterwards removed by pilots to any dock or wharf within the town, where such ships may be for the purpose of taking to sea, in that case the full pilotage is due.
 Ships taken charge of in distress are to pay according to circumstances, to be settled by the sub-commissioners.
 Ships not having British registers are to pay 1-4 more of the rates of pilotage for the harbours and beaches, than stated in the above Table.

Bristol.

	Foreign Rate.	British Rate.
Pilotage from Lundy Island or the westward thereof to Kingroad, under 100 tons	3 18 0	3 3 0
100 and under 200	5 5 0	4 4 0
200 - 300	6 11 3	5 5 0

From Portlehead, Kingroad, Hungrood, or Broad Pill, to either of them, under 100 tons	0 12 6	0 10 0
100 and under 200	0 18 9	0 15 0
200 - 300	1 5 0	1 0 0
300 and upwards	1 11 3	1 5 0

Dartmouth District.—From Bob's Nose to the Start, and vice versa; and to and from, and into and out of, all ports and places within those limits.

N. B.—No master of a vessel is compelled to take a pilot within the district, unless going into or coming out of port, within a line drawn from the Newstones to the Blackstone; but if he do take a pilot between Bob's Nose and the Start, it must be one of the district pilots, if one offer.

Rate of Pilotage, for Piloting Ships within the Dartmouth District.—All British ships, if boarded within the run of the Newstones East, or the Blackstone West, are to pay as follows: viz.—

	Per Foot.
Drawing 10 feet of water and under	2 6
10 to 12 feet	3 0
12 to 14	3 4
14 to 16	4 0
16 feet and upwards	5 0

All British ships, if boarded within that line, are to pay 1-4 part less.
 All British ships, boarded within the Castle, are to pay only 1-2 pilotage, subject to the consideration of the weather, which is to be settled by the sub-commissioners.

In carrying ships out of the harbour, the pilotage is to be in all cases 1-3 less than the inward pilotage.
 All ships not having British registers are to pay 1-4 more than the rates above stated.

Masters of ships taking a pilot at sea; viz. 2 leucues or more from the harbour's mouth, are to pay according to circumstances attending the hazard run, assistance required, &c., which is to be regulated, in case of dispute, by the sub-commissioners. The pilot is to provide a proper tow-boat and crew consisting of at least 4 men; for whose services he shall be entitled to charge 2s. 6d. per man per day, in addition to the rate of pilotage; and, in case of dispute, to be settled by the sub-commissioners, and the assistance rewarded according to the risk, time, and trouble.

Doune to the Isle of Wight.—Rate of Pilotage.

	L. s. d.
Ships drawing 7 feet and under	2 15 0
8 -	4 7 6
9 -	5 0 0
10 -	5 15 6
11 -	6 4 0
12 -	6 15 0

* When the pilot is put on board by a boat from the shore, one seventh to the pilot, and the remaining six sevenths to the boat and crew

PILOTS AND PILOTAGE.

313

General Rates for Ships boarded without the entrance of the Harbour.

	L. s. d.
From a line drawn from Lenny Point to Skokam Island, a distance of 100 fms.	0 2 0
From a line drawn from St. George's Head, ditto	0 1 0
From a line drawn from the westward of the Westward of the Gables, or 5 leagues without Lenny Point, in a straight line to the harbour pilotage	3 3 0
From a line drawn from the westward of the Gables, or 5 leagues without Lenny Point, in a straight line to the harbour pilotage	4 4 0
From a line drawn from the westward of the Gables, or 5 leagues without Lenny Point, in a straight line to the harbour pilotage	6 6 0

The fourth part is to be added to the harbour rates for ships not having British registers.

Notes for Services and Assistance performed in the Harbour.

For a boat carrying an anchor of above 6 cwt., with a corresponding hammer—

	L. s. d.
If at Hubbervine Roads	2 3 0
Each man in the boat, each tide	0 3 0

If at Hubbervine Roads, a line drawn from the E. point of Gillivick, to the E. point of Angle Bay and above the Stack Rock—
 Each man in the boat, each tide 0 12 6
 If at the Head, and the anchor is brought from Millport—
 Each man in the boat, each tide 0 12 6
 If at the Head, and the anchor is brought from Millport—
 Each man in the boat, each tide 0 6 0

For a boat carrying off an anchor of 3 cwt. and not exceeding 3 cwt., with a corresponding hammer, the boat and man to have 3-4 of the said above specified sums.

For a boat with an anchor of 3 cwt. and not exceeding 3 cwt., with a corresponding hammer, the boat and man to have 1-2 of the said above specified sums.

For securing a ship drawing 14 feet water, and upwards, and lying up her alongside the quay, or into Hubbervine Pill—
 From the situation, 1st or 2d, before mentioned—

	L. s. d.
For the pilot	1 1 0

If with a boat an additional sum of 0 10 6
 Each person employed 0 5 0

From the 3d station specified
 For the pilot 1 11 0

If with a boat, an additional sum of 0 10 6
 Each person employed 0 5 0

And for taking a ship of 14 feet draught of water and upwards, from the quay, or Hubbervine Pill, to moorings in any of the situations before mentioned, the like sums above specified.

Ships under 14 feet draught of water, to or from the situations before mentioned, 3-4 the sums for the pilot; the boats and man as above specified.

For a new securing a ship drawing 14 feet water, in either of the situations before described—

	L. s. d.
For the pilot	0 10 6
If with a boat, an additional sum of	0 10 6
Each person employed	0 5 0

Penance.

Harbour Pilotage.—New Haven.—8 feet draught and under, per foot, 1s. 6d.; 9 to 10 feet, 1s. 6d.; above 10 feet, 2s. 6d.

Rye.—5 feet draught and under, per foot, 2s. 6d.; 8 to 10 feet, 3s.; above 10 feet, 4s.

Shoreham.—8 feet draught and under, per foot, 2s. 6d.; 8 to 10 feet, 3s.; above 10 feet, 4s.

North Channel, &c. upwards from Orfordness to London.—Of the pilots within this district, some are licensed from the Dudgeon Light-vessel to Orfordness, and thence to the Downs; others are further licensed from Smith's Keel to Orfordness. But the taking of pilots along the coast, to the northward of Orfordness, is optional to masters of vessels; though, if a pilot be employed, he must be licensed as above, if one offers.

Licenses are given for the northward of Orfordness do not authorize the pilotage into or out of Yarmouth Roads or Harbour, except as may be requisite in the passage to the Downs or river.

Penance District, viz.—From the Lizard to Cape Cornwall and vice versa; and to and from, and into and out of, all ports and places within those limits.

N.B.—No master of a vessel is compelled to take a pilot within this district, until he comes within a line drawn from St. Clement's Isle to Trowavas Head, for Mount's Bay and Penzance; but if he does take a pilot between the Lizard and Cape Cornwall, it must be one of the district pilots, if one offers.

Rate of Pilotage, for piloting Ships within the Penance District.

From	To	10	11	12	13	14	15	16	17	18	19	20	
Sea, and vice versa	Either of the creeks or piers in Mount's Bay	10	16	21	30	35	40	45	50	55	60	67	
All roads, & vice versa	Either of the different piers in Mount's Bay	1s. 6d.	per foot of the draught of water.										

Ships not having British registers are to pay 1-4 more than stated in the above Table.

Boats and vessels boarded by pilots at a distance southward of the bay—

For putting a pilot on board without a line drawn from the Lizard to Tol Pedan Penwith—

Ditto, within a line drawn from the Lizard to Tol Pedan Penwith, and without a line drawn from Carn Dew to Penwinion Point—

Ditto, within a line drawn from Carn Dew to Penwinion Point, and without a line drawn from St. Clement's Isle to Trowavas Head—

And within those limits to be charged inwards.

Plymouth District, viz.—To the westward as far as Looe, and eastward as far as the Start and to and from, and into and out of, all ports and places within those limits.

N.B.—No master of a vessel is compelled to take a pilot within this district, except going in or coming out of the port, within a line drawn from the Ram Head to the Mewstone; but if he do take a pilot between the Start and Looe, it must be one of the district pilots, if one offers.

Rate of Pilotage, for piloting Ships within the Plymouth District.—1. All British ships of 14 feet water and upwards except East Indianers, if boarded without the land off Penice Point or the Mewstone, which must be known by the western land being open off the Ram Head, shall pay 5s. per foot pilotage, if carried into the Harbour of Hamoaze, Catwater, or Sutton Pool.

2. British ships under 14 feet water, down to 8 feet, boarded as above stated, are to pay 4s. per foot for the like service.

3. Ships above 14 feet, within that line, are to pay only 4s. per foot; and ships under 14 feet, boarded as above, only 3s. per foot, for the like service.

4. All ships under 8 feet water, are to pay as above stated, as if the vessel was of that draught.

5. All the above rates are to be paid in proportion for every 1-2 feet of water, but no allowance is to be made for any draught of water less than 1-2 foot.

6. In carrying ships to sea from the said harbours, the pilotage is to be, in all cases, the same as the inward pilotage.

7. All ships which may anchor on their arrival, either in Cawand Bay or Plymouth Sound, are to pay only 1-2 of the before-mentioned rates of pilotage.

8. All pilots employed to carry ships from any one of the harbours to another, are to be paid the same pilotage as if the said ship had been boarded within the headlands coming from sea.

9. Should any ship above 17 feet water be boarded while the western land is open off the Ram Head by one of the 3d class pilots, and he runs the ship as far as either of the buoys on the Panther or Stone, and is there superseded by one of the 1st class, he shall be entitled to 1-3d of the pilotage.

10. Masters of ships taking a pilot at sea—

	L. s. d.
8 leagues without a line drawn from the Ram Head to the Mewstone, are to pay	3 3 0
6 leagues ditto	4 4 0
10 leagues ditto	6 6 0

and proportionately for intermediate distances.

11. Ships not having British registers are to pay 1-4 more of the rates of pilotage than is stated in the above Table.

12. If a master choose to retain or employ a pilot whilst at anchor the rate for the lay days is to be 7s. 6d. a day, not including the day coming in or going out.

there being commonly a loss in weight of $\frac{1}{4}$ in curing; but this, like many other of the minor productions, is exceedingly uncertain, and perhaps a very plentiful crop occurs but once in 5 years. The price in the British market, as may be supposed, fluctuates accordingly; but I believe its average for some years past may be set down at 7d. per lb., exclusive of the duty (3d.)."—(Vol. II. p. 372. ed. 1814.)

The price of pimento in bond, in the London market, has varied of late years from 4d. to 5 $\frac{1}{2}$ d. per lb. At the period when Mr. Edwards's work was published, the annual imports of pimento from Jamaica amounted to about 673,000 lbs., and were decreasing every year—(loc. cit.). But at an average of the 3 years ending with 1832, the annual imports were 2,349,668 lbs., the annual exports 1,927,731 lbs., and the annual entries for home consumption 316,348 lbs. There has been, however, a considerable falling off in the imports of 1831 and 1832, which do not amount to much more than the half of those of the previous 4 years. The duty of 5d. per lb., being more than 100 per cent. on the price of the article, produces, at a medium, about 7,000l. a year. It ought to be repealed altogether. Jamaica furnishes more than 9-10ths of the pimento brought to England.

PINCHBECK (Ger. *Tombak*; Du. *Tombak*; Fr. *Tambac*, *Similor*; It. *Tombacco*; Sp. *Tambac*, *Tumbaga*), a name given to one of the many imitations of gold. By melting zinc in various proportions with copper or brass, some alloys result, the colours of which approach more or less to that of gold. This composition is frequently employed as a substitute for gold, in the formation of watch-cases, and various other articles of a like description. Pinchbeck is sometimes called *Tambac*, and sometimes *Similor* and *Petit-or*.

PINE, or **FIR**, a species of forest tree, next, if not superior, to the oak, in point of utility and value. There are above 20 species of pines. They do not bear flat leaves, but a species of spines, which, however, are real leaves. They are mostly, though not all, evergreen; but the appearance of the tree, as well as the quality of the timber, varies with the species, and also with the situation in which it grows. Generally speaking, the timber is hardest and best in exposed cold situations, and where its growth is slow. We shall only notice those species, the timber of which is most in use in this country.

1. **SCOTCH FINE** (*Pinus Sylvestris*), is a native of the Scotch mountains, and of most northern parts of Europe; being common in Russia, Denmark, Sweden, Norway, and Lapland. It is straight, abruptly branched, rising in favourable situations to the height of 80 or 90 feet, and being from 3 to 4 feet in diameter. It is at perfection when 70 or 80 years old. The colour of the wood differs considerably; it is generally of a reddish yellow, or of a honey yellow, of various degrees of brightness. It has no larger transverse septa, and it has a strong resinous odour and taste. In the best timber, the annual rings are thin, not exceeding $\frac{1}{16}$ th of an inch in thickness; the dark parts of the rings of a bright reddish colour; the wood hard and dry to the feel, neither leaving a woolly surface after the saw, nor filling its teeth with resin. The best Norway is the finest of this kind, and the best Riga and Memel are not much inferior. The inferior sorts have thick annual rings; in some, the dark parts of the rings are of a honey yellow, the wood heavy, and filled with a soft resinous matter, feels clammy, and chokes the saw. Timber of this kind is not durable, nor fit for bearing strains. In some inferior species, the wood is spongy, contains less resinous matter, and presents a woolly surface after the saw. Swedish timber is often of this kind.

Scotch fir is the most durable of the pine species. It was the opinion of the celebrated Mr. Brindley, "that red Riga deal, or pine wood, would endure as long as oak in all situations." Its lightness and stiffness render it superior to any other material for beams, girders, joists, rafters, &c. It is much used in joiners' work, as it is more easily wrought, stands better, is much cheaper, and is nearly, if not quite, as durable as oak.

Scotch fir is exported from Norway and Sweden, under the name of *redwood*. Norway exports no trees above 18 inches' diameter, consequently there is much sap wood; but the heart wood is both stronger and more durable than that of larger trees from other situations. Riga exports a considerable quantity under the name of masts and spars; pieces from 18 to 25 inches' diameter are called *masts*, and are usually 70 or 80 feet in length; those of less than 18 inches' diameter are called *spars*.—(See RIGA.) Yellow deals and planks are imported from various parts of Norway, Sweden, Prussia, Russia, &c. Tar, pitch, and turpentine, are obtained from the Scotch fir.—(See these titles.) When the tree has attained to a proper age, it is not injured by the extraction of these products.

2. **SPRUCE PINE**.—Of this there are 3 species: the Norway spruce, or *Pinus abies*; white spruce, or *Pinus alba*; and black spruce, or *Pinus nigra*. These are noble trees, rising in straight stems from 150 to 200 feet in height. They yield the timber known by the name of *white fir*, or *deal*, from its always being imported in deals or planks.

Deals imported from Christiania are in the highest estimation.—(See CHRISTIANIA.) The trees are usually cut into 3 lengths, generally of about 12 feet each; and are afterwards cut into deals by saw-mills, each length yielding 3 deals. The Norway spruce thrives very well in Britain, and produces timber little inferior to the foreign: it is somewhat softer, and the knots are extremely hard.

The white spruce, or *Pinus alba*, is brought from British North America. The wood is not so resinous as the Norway spruce: it is tougher, lighter, and more liable to twist in drying.

The black spruce, or *Pinus nigra*, is also an American tree; but it is not much imported into this country. The black and white spruce derive their names from the colour of the bark; the wood of both being of the same colour.

The colour of the annual ring of the American and hard, the other kinds are often seasoned. White

3. **WYOMING** and is imported in the largest and durable, nor fit for

4. **SILVA FIR** Switzerland, and burch turpentine, carpentry and shingles; the softer in bend much under nearly level. It is the water; and, the

PIRACY, committed if committed upon Pirates hold them to attack assassins. The hostes omnium, imitate them without trial, committed before

The colour of spruce fir, or white deal, is yellowish or brownish white; the hard part of the annual ring a darker shade of the same colour; it often has a silky lustre, especially in the American and British grown kinds. Each annual ring consists of two parts; the hard, the other softer. The knots are generally very hard. The clear and straight-grained kinds are often tough, but not very difficult to work, and stand extremely well when properly seasoned. White deal, as imported, shrinks about $\frac{1}{10}$ th part in becoming quite dry.

3. **Weymouth Pine, or White Pine** (*Pinus strobus*), is a native of North America, and is imported in large logs, often more than 2 feet square and 30 feet in length. It is one of the largest and most useful of the American trees, and makes excellent masts; but it is not durable, nor fit for large timbers, being very subject to dry rot. It has a peculiar odour.

4. **Silva Fir** (*Pinus picea*), is a native of the mountains of Siberia, Germany, and Switzerland, and is common in British plantations. It is a large tree, and yields the Strassburgh turpentine. The wood is of good quality, and much used on the Continent both for carpentry and ship building. The harder fibres are of a yellow colour, compact, and resinous; the softer nearly white. Like the other kinds of fir, it is light and stiff, and does not bend much under a considerable load; consequently, floors constructed of it remain permanently level. It is subject to the worm. It has been said to last longer in the air than in the water; and, therefore, to be fitter for the upper parts of bridges than for piles and piers.

5. **Larch** (*Pinus larix*). There are 3 species of this valuable tree; 1 European, and 2 American. The variety from the Italian Alps is the most esteemed, and has lately been extensively introduced into plantations in Great Britain. It is a straight and lofty tree, of rapid growth. A tree 79 years of age was cut down at Blair Athol, in 1817, which contained 252 cubic feet of timber; and one of 80 years of age, at Dunkeld, measured 300 cubic feet. The mean size of the trunk of the larch may be taken at 45 feet in length, and 33 inches diameter. The wood of the European larch is generally of a honey yellow colour, the hard part of the annual rings of a redder cast; sometimes it is brownish white. In common with the other species of pine, each annual ring consists of a hard and a soft part. It generally has a silky lustre; its colour is browner than that of the Scotch pine, and it is much tougher. It is more difficult to work than Riga or Memel timber; but the surface is better when once it is obtained. It bears driving bolts and nails better than any other species of resinous wood. When perfectly dry, it stands well; but it warps much in seasoning.

It is in all situations extremely durable. It is useful for every purpose of building, whether external or internal; it makes excellent ship timber, masts, boats, posts, rails, and furniture. It is peculiarly adapted for flooring boards, in situations where there is much wear, and for staircases: in the latter, its fine colour, when rubbed with oil, is much preferable to that of the black oaken staircases to be seen in some old mansions. It is well adapted for doors, shutters, and the like; and, from the beautiful colour of its wood when varnished, painting is not necessary.—We have abstracted these particulars from *Mr. Tredgold's* excellent work, *The Principles of Carpentry*, pp. 209—217.

PINE-APPLE, or ANANAS, though a tropical fruit, is now extensively cultivated in hot-houses in this country, and is well known to every one. When of a good sort and healthy, it is the most luscious, and, perhaps, the best fruit that this country produces; and when carefully cultivated, is equal in point of quality to that produced in the West Indies. A pine-apple raised at Stackpool Court, Pembrokeshire, and served up at the coronation dinner of George IV., weighed 10 lbs. 8 oz.—(*Vegetable Substances*, p. 379., *Lib. Entert. Knowledge*.)

PINT, a measure used chiefly in the measuring of liquids. The word is High Dutch, and signifies a little measure of wine. The English pint used to be of 2 sorts; the one for wine, the other for beer and ale. Two pints make a quart; 2 quarts a pottle; 2 pottles a gallon, &c. The pint, Imperial liquid measure, contains 34.659 cubic inches.

PIPE, a wine measure, usually containing 105 (very nearly) Imperial, or 126 wine gallons. Two pipes, or 210 Imperial gallons, make a tun. But, in practice, the size of the pipe varies according to the description of wine it contains. Thus, a pipe of port contains 138 wine gallons, of sherry 130, of Lisbon and Bucellas 140, of Madeira 110, and of Vidonia 120. The pipe of port, it is to be observed, is seldom accurately 138 gallons, and it is usual to charge what the vessel accurately contains.

PIPE-CLAY, a species of clay abounding in Devonshire, and other parts of England, employed in the manufacture of various sorts of earthenware, and in bleaching.

PIRACY, consists in committing those acts of robbery and violence upon the seas, that, if committed upon land, would amount to felony.

Pirates hold no commission or delegated authority from any sovereign or state, empowering them to attack others. They can, therefore, be only regarded in the light of robbers or assassins. They are, as Cicero has truly stated, the common enemies of all (*communes hostes omnium*); and the law of nations gives to every one the right to pursue and exterminate them without any previous declaration of war; but it is not allowed to kill them without trial, except in battle. Those who surrender, or are taken prisoners, must be brought before the proper magistrates, and dealt with according to law.

By the ancient common law of England, piracy, if committed by a *subject*, was held to be a species of treason, being contrary to his natural allegiance; and, by an *alien*, to be felony only: but since the statute of treasons (25 Edw. 3. c. 2.), it is held to be only felony in a subject. Formerly this offence was only cognisable by the admiralty courts, which proceed by the rules of the civil law; but it being inconsistent with the liberties of the nation that any man's life should be taken away, unless by the judgment of his peers, the statute 28 Hen. 8. c. 15. established a new jurisdiction for this purpose, which proceeds according to the course of common law.

It was formerly a question whether the Algerines, and other African states, should be considered pirates: but, however exceptionable their conduct might have been on many occasions, and however hostile their policy might be to the interests of humanity, still, as they had been subjected to what may be called regular governments, and had been admitted to enter into treaties with other powers, they could not be treated as pirates.

Pirates having no right to make conquests, or to seize upon what belongs to others, capture by them does not divest the owner of his property. At a very early period of our history, a law was made for the restitution of property taken by pirates, if found within the realm, whether belonging to strangers or Englishmen: but any foreigner suing upon this statute must prove that, at the time of the capture, his own sovereign and the sovereign of the captor were in mutual amity; for it is held that piracy cannot be committed by the subjects of states at war with each other.

Piracy was almost universally practised in the heroic ages. Instead of being esteemed infamous, it was supposed to be honourable.—(*Latrocinium maris gloria habebatur*.—*Justin.* lib. xliii. c. 3.) Menelaus, in the *Odyssey*, does not hesitate to inform his guests, who admired his riches, that they were the fruit of his piratical expeditions.—(lib. iv. ver. 90.); and such, indeed, was the way in which most of the Greek princes amassed great wealth.—(*Goguet, Origin of Laws*, vol. i. p. 383. Eng. trans.)

The prevalence of this piratical spirit in these early ages may, perhaps, be explained by the infinite number of small independent states into which the country was divided, and the violent animosity constantly subsisting amongst them. In this way ferocious and predatory habits were universally diffused and kept alive; and it is not to be supposed that those who were at all times liable to be attacked by hosts of enemies, should very accurately examine the grounds upon which they attacked others. According, however, as a more improved system of government grew up, Greece, and a few states, as Athens, Corinth, &c. had attained to distinction by their naval power, piracy was made a capital offence: but though repressed, it was never entirely put down. Cilicia was at all times the great stronghold of the pirates of antiquity: and in consequence of the decline of the maritime forces of Athens, Rhodes, &c., which had kept them in check, they increased so much in numbers and audacity as to insult the majesty of Rome herself; so that it became necessary to send Pompey against them, with a large fleet and army, and more extensive powers than had been ever previously conferred on any Roman general.

During the anarchy of the middle ages, when every baron considered himself a sort of independent prince, entitled to make war on others, piracy was universally practised. The famous Hanseatic League was formed chiefly for the purpose of protecting the ships of the confederated cities from the attacks of the pirates by which the Baltic was then infested. The nuisance was not finally abated in Europe till the feudal system had been subverted, and the ascendancy of the law everywhere secured. In more modern times, some of the smaller West India islands have been the great resort of pirates: latterly, however, they have been driven from most of their haunts in that quarter. They are still not unfrequently met with in the Indian seas east of Sumatra.

Besides those acts of robbery and depredation upon the high seas, which, at common law, constitute piracy, some other offences have been included under that term. Thus, by the stat. 11 & 12 Will. 3. c. 7., if any natural-born subject commits any act of hostility upon the high seas against others of his Majesty's subjects, under colour of a commission from any foreign power, this, though it would only be an act of war in an alien, shall be construed piracy in a subject. And further, any commander or other seafaring person betraying his trust, and running away with any ship, boat, ordnance, ammunition, or goods, or yielding them up voluntarily to a pirate, or conspiring to do these acts; or any person assaulting the commander of a vessel, to hinder him from fighting in defence of his ship, or confining him, or causing or endeavouring to cause a revolt on board, shall for each of these offences be adjudged a pirate, felon, and robber, and shall suffer death, whether he be principal, or merely accessory by setting forth such pirates, or abetting them before the fact, or receiving them, or concealing them or their goods after it; and the stat. 4 Geo. 1. c. 2. expressly excludes the principals from the benefit of clergy. By the stat. 8 Geo. 1. c. 24., the trading with known pirates, or furnishing them with stores or ammunition, or fitting out any vessel for that purpose, or in any wise consulting, combining, confederating, or corresponding with them; or the forcibly boarding any merchant vessel, though without seizing or carrying her off, and destroying or throwing any of the goods overboard, shall be deemed piracy; and such accessories to piracy as are described by the statute of King William are declared to be principal pirates, and all pirates convicted by virtue of this act are made felons without benefit of clergy. To encourage the defence of merchant vessels against pirates, the commanders and seamen wounded, and the widows of such seamen as are slain in any engagement with pirates, are entitled to a bounty, to be divided among them, not exceeding the *one fifth* part of the value of the cargo saved; and the wounded seamen are entitled to the pension of Greenwich Hospital.—(11 & 13 Will. 3. c. 7.; & *Geo.* 1. c. 24.) The first of these statutes also enacts, that if any mariner or inferior officer of any English ship decline or refuse to fight when commanded by the master, or shall utter any words

to discourage the other seamen with such good words.

The 6 Geo. 4. c. 49. declares that the ships of war of any power shall not be liable to be seized for every other vessel at sea. The same statute (2 Geo. 4. c. 24.) relates to any of his Majesty's ships, as salvage, &c.

(See *Ken's Com.*)
PISTACHIA or Pistachio, *Ficus* kind of turpentine which the nuts are round shape of a filbert or reddish skin. The almonds; their bitterness, accompanied imported from the East.

PITCH (Ger. *Pe*)
residuum which remains in ship building in Britain. The duty on it must have been as a stowance is to be each day, and 56 lb

PLANE, a forest tree, and the Occident. The Oriental plane is one of the first to exceed 8 feet in diameter and such is one of the largest of the wood of the Occident.

The tree known as *perado-platanus*, most trees. The timber splinter or warp. It is a very beautiful tree, but its variety of articles by worms, it is a pretty good, p. 196.)

PLANKS (Ger. *Planken*); Rus. *Talst* oak and pine. Imported in large quantities from Christiania, Dantzic from several parts of the Baltic.

PLANTAIN, a plant, extensively cultivated, like most other articles of subsistence, in various varieties, the fruit is above 2 or 3 in sweet, and of a flavoured kind are, for the most part, in the sun, in which in Mexico, the sweet while they are not

"I doubt," says Mr. DeMeunier, "the utility of nutritive substances to develop the chestnut there is always found being 2.3da the height perpetuates itself, the fruit has a (pene) ground of 100 square this same piece of ground

to discourage the other mariners from defending the same, he shall lose all the wages due to him, together with such goods as he hath in the ship, and be imprisoned and kept to hard labour for 6 months.

The 6 Geo. 4. c. 49. enacts that a bounty shall be paid to the officers and crews of such of his Majesty's ships of war as may be engaged in the actual taking, sinking, burning, or otherwise destroying any vessel or boat manned by pirates, of 20*l.* for each pirate taken or killed during the attack, and of 5*l.* for every other man of the crew not taken or killed, who shall have been alive on board the said private vessel at the attack thereof.

The same statute (23.) enacts that vessels and other property taken from pirates, proved to have belonged to any of his Majesty's subjects, are to be delivered up to them, on their paying a sum of money, as salvage, equal to 1-8th part of the true value of the same.

(See *Kent's Commentaries on American Law*, Lecture 9th.—*Am. Ed.*)

PISTACHIA or **PISTACHIO NUTS** (Ger. *Pistaschen*; Du. *Pistaches*; Fr. *Pistaches*; It. *Pistachi*, *Pastucchi*; Sp. *Alfocigos*; Lat. *Pistacie*), the fruit of the *Pistachia vera*, a kind of turpentine tree. It grows naturally in Arabia, Persia, and Syria; also in Sicily, whence the nuts are annually brought to us. They are oblong and pointed, about the size and shape of a filbert, including a kernel of a pale greenish colour, covered with a yellowish and reddish skin. They have a pleasant, sweetish, unctuous taste, resembling that of sweet almonds; their principal difference from which consists in their having a greater degree of sweetness, accompanied with a light grateful flavour, and in being more oily. Pistachias imported from the East are superior to those raised in Europe.—(*Lewis's Mat. Med.*)

PITCH (Ger. *Pech*; Fr. *Poiz*, *Brai*; It. *Pece*; Sp. *Pez*; Rus. *Smola gustaja*), the residuum which remains on ineffectuating tar, or boiling it down to dryness. It is extensively used in ship building, and for other purposes. Large quantities are manufactured in Great Britain. The duty on pitch, which is 10*d.* a cwt., produced, in 1829, 418*l.*, so that 10,752 cwt. must have been entered for home consumption.

An allowance is to be made for tare on pitch, of 93 lbs. each on Archangel casks, 36 lbs. each on Swedish do., and 56 lbs. each on American do.

PLANE, a forest tree, of which there are 2 species; the Oriental plane (*Platanus Orientalis*), and the Occidental plane (*Platanus Occidentalis*).

The Oriental plane is a native of the Levant, and other Eastern countries, and is considered one of the finest of trees. It grows to about 60 feet in height, and has been known to exceed 8 feet in diameter. Its wood is much like beech, but more figured, and is used for furniture and such like articles. The Occidental plane is a native of North America, and is one of the largest of the American trees, being sometimes more than 12 feet in diameter. The wood of the Occidental plane is harder than that of the Oriental. It is very durable in water.

The tree known by the name of plane in England is the sycamore, or great maple (*Acer pseudo-platanus*). It is a large tree, grows quickly, and stands the sea spray better than most trees. The timber is very close and compact, easily wrought, and not liable either to splinter or warp. It is generally of a brownish white or yellowish white colour, and sometimes it is very beautifully curled and mottled. In this state it takes a fine polish, and bears varnishing well. It is chiefly used in the manufacture of saddle trees, wooden dishes, and a variety of articles both of furniture and machinery. When kept dry, and protected from worms, it is pretty durable; but it is quite as liable as beech to be attacked by them.—(*Tredgold*, p. 196.)

PLANKS (Ger. and Du. *Planken*; Da. *Planker*; Sw. *Plankor*; Fr. *Planches*, *Bordages*; Rus. *Tolstulle olosku*), thick strong boards, cut from various kinds of wood, especially oak and pine. Planks are usually of the thickness of from 1 inch to 4. They are imported in large quantities from the northern parts of Europe, particularly from the ports of Christiania, Dantzic, Archangel, Petersburgh, Narva, Revel, Riga, and Memel, as well as from several parts of North America.

PLANTAIN, or **BANANA**, the pulpy fruit of the *Musa paradisiaca*, an herbaceous plant, extensively cultivated in most intertropical countries, but especially in Mexico. It is not, like most other fruits, used merely as an occasional luxury, but is rather an established article of subsistence. Being long and extensively cultivated, it has diverged into numerous varieties, the fruit of which differs materially in size, flavour, and colour. That of some is not above 2 or 3 inches long, while that of others is not much short of a foot; some sorts are sweet, and of a flavour not unlike nor inferior to that of a good mellow pear; but the larger kind are, for the most part, coarse and farinaceous. The latter are either used fresh or dried in the sun, in which latter state they are occasionally ground into meal and made into bread. In Mexico, the sweeter sorts are frequently pressed and dried, as figs are in Europe; and, while they are not very inferior to the last mentioned fruit, they are infinitely cheaper.

"I doubt," says M. Humboldt, "whether there be any other plant that produces so great a quantity of nutritive substance in so small a space. Eight or 9 months after the sucker is planted, it begins to develop its cluster. The fruit may be gathered in the 10th or 11th month. When the stalk is cut, there is always found, among the numerous shoots that have taken root, a sprout (*pimpollo*), which, being 2-3ds the height of its parent plant, bears fruit 3 months later. Thus a plantation of bananas perpetuates itself, without requiring any care on the part of man, further than to cut the stalks when the fruit has ripened, and to stir the earth gently once or twice a year about the roots. A piece of ground of 100 square metres of surface will contain from 30 to 40 plants. During the course of a year this same piece of ground, reckoning the weight of the cluster at from 15 to 20 kilog. only, will yield 2,000

kilog., or more than 4,000 lbs., of nutritive substances. What a difference between this product and that of the cereal grasses in most parts of Europe! The same extent of land planted with wheat would not produce above 30 lbs.; and not more than 90 lbs. of potatoes. Hence the product of the banana is to that of wheat as 133 to 1, and to that of potatoes as 44 to 1."—(Essai sur la Nouvelle Espagne, tom. II. p. 288. 2d ed.)

The banana forms a principal part of the food of the people of Mexico; and the apathy and indifference of the natives in the *tierras calientes*, or hot regions, has been ascribed, and probably with good reason, to the facility with which it supplies them with subsistence. It is by no means in such extensive use in tropical Asia; and comes nowhere in it into competition with corn as an article of food.

PLATE, the denomination usually given to gold and silver wrought into articles of household furniture.

In order partly to prevent fraud, and partly for the purpose of collecting a revenue, the manufacture of plate is placed under certain regulations. Those who carry it on are obliged to take out a licence, renewable annually on the 31st of July.—(See ante, p. 137.) Assay offices are established in different places; and any one selling any article previously to its having been assayed and marked, forfeit 50*l.*—(24 Geo. 3. c. 53.) No plate is passed at the assay offices, unless it be of the fineness of the old standard, or 11 oz. and 2 dwts., or of the new standard of 11 oz. and 10 dwts. Gold plate, with the exception of gold watch-cases, is to pay a duty of 17*s.* an oz., and silver plate a duty of 1*s.* 6*d.*; but watch-cases, chains, gip-pirrs, mountings, collars, bottle tickets, teaspoons, &c. are exempted. The 5*o.* Geo. 3. c. 143, made the counterfeiting, or the transference from one piece of plate to another, of the marks, stamps, &c. impressed on plate by the assayers, felony without the benefit of clergy. But the offence is now punishable by transportation or imprisonment only.—(1 Will. 4. c. 66.)

In his able speech on the state of the country, 18th of March, 1830, Mr. Huskisson said, "The rate of duty upon silver wrought plate, in 1804, was 1*s.* 3*d.*, upon gold 1*s.* an ounce; it was afterwards raised to 1*s.* 6*d.* upon silver, and 17*s.* on gold. But what has been the increase in the net produce of the duty? It has risen from less than 5,000*l.* in 1804, to 105,000*l.* in 1826; a rise of more than twenty-fold notwithstanding the greatly diminished supply from the mines, and the consequent increasing value of the precious metals. It may be further remarked, that this augmentation shows how large a portion of gold and silver is annually diverted from the purposes of coin to those of ornament and luxury."

A Return, showing the Annual Net Produce of the Duty levied on wrought Gold and Silver Plate, in each Year from 1806 to 1833, both inclusive; distinguishing, as far as possible, Gold from Silver and also the Rate of Duty in each Year.—(Parl. Paper, No. 216. Sess. 1833.)

Years ending 31st of January.	Rate of Duty.				Duty not distinguishable.

Note.—The produce of the duties on gold and silver plate cannot be distinguished for the country prior to the year ended 31st of January, 1819, the same not having been distinguished in the accounts of the distributors.

We endeavoured to show, in the former edition of this work, that Mr. Huskisson had been deceived by trusting to false or defective information; and that, instead of the increase of the duties, and, consequently, of the consumption of plate, being nearly as great as he had represented, it fell far short of what might have been fairly expected from the increasing wealth and population of the country. The preceding Table shows that our criticism was well founded. The stationary amount of duty may, perhaps, be accounted for by the facility with which the duties are evaded. The increase of duty in 1830 is a curious phenomenon.

PLATINA, a metal which, in respect of scarcity, beauty, ductility, and indestructibility is hardly inferior to gold, was unknown in Europe till about the middle of last century, when it began to be imported in small quantities from South America. It has since been discovered in Estremadura in Spain, and, more recently, in the Ural Mountains in Asiatic Russia, where it is now raised in very considerable quantities.

Platina is of a white colour, like silver, but not so bright, and has no taste or smell. Its hardness is intermediate between copper and iron. Its specific gravity is about 21.5, that of gold being 19.3; so that it is the heaviest body with which we are acquainted. It is exceedingly ductile and malleable; it may be hammered out into very thin plates, and drawn into wires not exceeding 1-10th of an inch in diameter. In these properties it is probably inferior to gold, but it seems to surpass all the other metals. Its tenacity is such, that a wire of platina 0.078 inch in diameter is capable of supporting 6

weight of 274.31 lbs. av. pieces of it may be we smallest degree altered. The late Dr. Wollast easily available in the of 3, 6, and 20 all when I pond 33 lbs. were piece of native platina. Statements published by

PLATTING, slips (See Mats, Straw.) PLUMS, the fruit. They were introduced into parts of the country.

PLUMBAGO. POMEGRANATE, *Melagrani*; Sp. This tree, which grows in the north-western parts of Asia, and even the size of an orange, colour, and a pleasant smell and the largeness of its fruit, is imported into India. The tree thrives in the East. The pomeloes are very inferior.

POPULAR (Ger. *Pappel*; Lat. *Populus*) described; of these, *Aspen* or trembling poplar, the most favourable situation, north shoots 16 feet long kept dry; but it is lig-

hardly poplar grows rather differ materially from adapted for the manufacture of *Trudgold's* Principle.

POPULATION. regulate the progress of this work. It may be it is frequently of commercial interests, and, we believe we are following the results of Britain and Ireland,

wright of 7491 lbs. avoirdupois without breaking. It is one of the most infusible of all metals; but pieces of it may be welded together without difficulty when heated to whiteness. It is not in the same degree altered by the action of air or water.—(Thomson's Chemistry.)

The late Dr. Wollaston discovered a method of fusing platinum, and consequently, of rendering it easily available in the arts. The Russians have, within these few years, issued platinum coins of the value of 3, 6, and 20 silver roubles. Platinum first began to be an object of attention in Russia in 1824, when 1 pond 33 lbs. were collected. In 1850, the produce amounted to 303 pounds 14 lbs. In 1851, a piece of native platinum was discovered at Demidoff's gold mines, weighing 20 lbs. 2½ zoll.—(Official Statements published by the Russian Government.)

PLATTING, slips of bast, cane, straw, &c. woven or plaited for making into hats, &c.—(See HATS, STRAW.)

PLUMS, the fruit of the *Prunus domestica*, are too well known to require any description. They were introduced into England in the 15th century, and are cultivated in all parts of the country. There are said to be nearly 300 varieties of plums.

PLUMBAGO. See BLACK LEAD.

POMEGRANATE, POMEGRANATES (Ger. *Granatäpfel*; Fr. *Grenades*; It. *Granati*, *Magrani*; Sp. *Granadas*), the fruit of the pomegranate tree (*Punica granatum*). This tree, which grows to the height of 15 or 20 feet, appears to be a native of Persia, whence it has been conveyed, on the one side, to Southern Europe, and on the other, to the tropical parts of Asia, and eventually to the New World. The fruit is a pulpy, many-seeded berry, the size of an orange, covered with a thick, brown, coriaceous rind. The pulp has a reddish colour, and a pleasant subacid taste. The value of the fruit depends on the smallness of the seed and the largeness of the pulp. The finest, called by the Persians, *badana*, or seedless, is imported into India from Caubul and Candahar, where the pomegranate grows in perfection. The tree thrives all the way to the equator; but, within the tropics, the fruit is hardly fit for use. The pomegranates brought to England from the south of Europe and the West Indies are very inferior to those of Persia.—(Private information.)

POPLAR (Ger. *Pappel*, *Pappelbaum*; Du. *Popelier*; Fr. *Peuplier*; It. *Pioppa*, Sp. *Alamo*; Lat. *Populus*). Of the poplar (*Populus* of botanists), there are about 15 species described; of these, 5 are common in England; viz. the common or *White*, the *Black*, the *Aspen* or trembling poplar, the *Abele* or great white poplar, and the Lombardy poplar. In most favourable situations, the white poplar grows with great rapidity, sometimes sending forth shoots 16 feet long in a single season. The wood is soft, and not very durable, unless kept dry; but it is light, not apt either to swell or shrink, and easily wrought. The Lombardy poplar grows rapidly, and shoots in a complete spire to a great height; its timber does not differ materially from that of the white poplar. It is very light; and is, therefore, well adapted for the manufacture of packing-cases. None of the species is fit for large timbers.—(Trautsohl's Principles of Carpentry; Veget. Sub., Lib. of Entert. Knowledge.)

POPULATION. To attempt giving in this place any explanation of the laws which regulate the progress of population, would be quite inconsistent with the objects and limits of this work. It may, indeed, be thought that the word has no business here. However, as it is frequently of importance in commercial questions, and in others materially affecting commercial interests, to be able to compare the consumption of an article with the population, we believe we shall gratify our readers by laying before them the following Tables, showing the results of the different censuses that have been taken of the population of Great Britain and Ireland, [and of the United States.

Population of the United States.

PORCELAIN, or CHINA WARE, a very fine species of earthenware. The first specimens of this fabric were brought to Europe from China and Japan. The best Chinese porcelain is of a very fine texture, white, semi-transparent, and sometimes beautifully coloured and gilt; is infusible, and not subject to break by the sudden application of heat or cold. The Chinese term for the article is *tsé-ki*. But the Portuguese, by whom it was first brought in considerable quantities into Europe, bestowed on it the name of porcelain, from *porcella*, a cup.

Common earthenware, sometimes of a very good quality, is manufactured in Canton, Fokien, and several other provinces of China. But it is a curious fact, that the beautiful porcelain imported into Europe is made only in the town of Kingteing, in the province of Kwangsi. Its manufacture is fully described by Dabaille, in his account of China, under the head "Porcelain and China ware." The porcelain of Japan is decidedly inferior to that of China; very little is imported, and it is valued only as a curiosity.

After porcelain began to be imported, its beauty soon brought it into great request, notwithstanding its high price, as an ornament for the houses and tables of the rich and the great. The emulation of European artists was in consequence excited. Very little information was, however, obtained as to the mode of manufacturing porcelain till the early part of last century, when the process was developed in a letter from a French Jesuit in China, who had found means to make himself pretty well acquainted with the subject. The knowledge thus transmitted, and the investigations of Reaumur and other chemists, prepared the way for the establishment of the manufacture in Europe. It was first commenced at Dresden, which has been famous ever since for the beauty of its productions; but the most and most magnificent specimens of European china have been produced at Sévres, in France, in the factory carried on at the expense of the French government.

British Porcelain Manufacture.—This, though unable to boast of such fine specimens of costly workmanship as have been produced at Sévres and Dresden, is of much greater national importance

* N. B.—Not enumerated in 1813.

neither docks nor quays to assist these operations. The harbour is perfectly safe, except during hurricanes, which may be expected from August to November.

Hayti is, next to Cuba, the largest of the West India islands. It was discovered by Columbus, on the 5th of December, 1492. Its greatest length is estimated at about 100 leagues, and its greatest breadth at about 40. Its superficies is estimated at about 2,450 square leagues. Three principal chains of mountains (from which emanate smaller mountain arms) run from the central group of Cibao. The whole of these are described as fertile and susceptible of cultivation, even to their summits; affording great variety of climate, which, contrary to what is the fact in the plains, is remarkably healthy. The soil of the plains is, in general, a very rich vegetable mould, exceedingly fertile, and well watered. There are several large rivers, and an immense number of smaller streams, some tributary and others independent. The ports are numerous and good. The harbour of Cape St. Nicholas, the fortifications of which are now in ruins, is one of the finest in the West Indies; being inferior only to the Havannah. Timber of the finest description is most abundant; and mines of gold, silver, copper, tin, iron, and rock salt, besides other natural productions, are said not to be wanting. The French are, therefore, fully justified in designating this magnificent island, *La Reine des Antilles*. The principal towns, besides Port-au-Prince, are Cap Haïtien, formerly Cap François, on the north coast, St. Domingo on the south, Les Cayes, and Jacmel.

Previously to the revolt of the blacks, Hayti was divided in unequal portions between the French and Spaniards; the former possessing the west, and the latter the eastern and larger portion of the island. The revolution began in 1789; and terminated, after the most dreadful massacres, and the destruction of a vast deal of property, in the total abolition of slavery, and the establishment of an independent black republic. The Spanish part of the island and the French were finally consolidated in 1822.

Population.—In 1789, the French part of Hayti was by far the most valuable and flourishing colony in the West Indies. The population was estimated at 524,000; of which 31,000 were white, 27,500 people of colour, and 465,500 slaves. The Spanish part of the island was much less densely peopled; the number in 1785 being estimated at 152,640; of which 122,640 were free people of all colours, mostly mulattoes, and the rest slaves. The population of the entire island, in 1827, was estimated by M. Humboldt at 820,000 of whom 30,000 were whites; but there are good grounds for thinking that this estimate is exaggerated.

Imports.—The principal articles of import are provisions; such as flour, rice, mess and cargo beef, fish, &c. and timber, from the United States; cotton goods of all sorts, Irish and Scotch linens, earthenware, cutlery, ammunition, &c. from England; wines, satins, liqueurs, jewellery, toys, haberdashery, &c. from France; and linens, canvass, gin, &c. from Holland and Germany.

Exports.—There has been an extraordinary decline in the quantity and value of the articles exported from Hayti since 1789. Sugar, for example, has fallen off from 141,000,000 lbs. to almost nothing; coffee from about 77,000,000 lbs. to a little more than 32,000,000 lbs. in 1820; cotton from 7,000,000 lbs. to 620,000 lbs. in do.; indigo, from 758,000 lbs. to nothing, &c. Mahogany is almost the only article, the exports of which have rapidly increased of late years. The following Table illustrates what has now been stated:—

A General Table of Exports from Hayti, during the Years 1789, 1801, and from 1818 to 1826, both inclusive.

Year.	Cloyed Sugar.		Muscovado Sugar.		Coffee.		Cotton.		Cacao.		Indigo.		Mosses.		Ivy Woods.		Tobacco.		Castor Oil.		Mahogany.		Cigars.

Om Guaiacum, in 1822, 7,338 lbs.—1823, 13,036 lbs.—1824, 68,692 lbs.

The destruction caused by the deplorable excesses which accompanied the revolution explains a part of this extraordinary falling off: but the greater part is to be accounted for by the change in the condition of the inhabitants. It could not reasonably be expected that the blacks were to make the same efforts in a state of independence they made when goaded on by the lash to exertions almost beyond their powers. It may, however, be fairly anticipated that they will become more industrious, according as the population becomes denser, and as they become more civilised, and acquire a taste for conveniences and luxuries. Hitherto industry in Hayti cannot be said to be free. It is enforced and regulated by the *Code Rural*, which is, in fact, a modification of the old French regulations as to slavery embodied in the *Code Noir*. "The provisions are as despotic as those of any slave system that can be conceived. The labourer may almost be considered *adscriptus glæbæ*; he is deemed a vassal, and liable to punishment, if he venture to move from his dwelling or farm without notice; he is prohibited from keeping a shop; and no person can build a house in the coun-

the hair, cotton wool, cocoa, raw and clayed sugar, rum, molasses, casia, whips, and umbrellas, containing lead, arsenic, or other articles, books, and other works, opposed to the law.

As to the export, there is also territorial duty levied equally on the produce of the soil, whether exported in national or foreign ships. The export of the following articles is strictly prohibited—Gold and silver coin, and fine arms, munitions, and other articles of war, iron, brass, and copper; bones, brood mares, mules, asses, and all other articles.

The country trade is entirely confined to Haytian citizens.

The commerce of Port-au-Prince is carried on by various classes of people. The imports from Europe and America are principally shipped to European and North American commission houses, and to the Haytian establishments. The capital is one of the ports which has been overhauled by the law of patents; but it is not at least now during the business. Of course they cannot deal with the customers, but with the native retailers, who are chiefly engaged in the country, and the markets, and give an account of their transactions to their employers, either every evening, once a week, or once a month, according to their character for integrity.

As the payments of the importer are generally in money, and there is not an important article of export—coffee—the purchases for retail can only be made after the crops have been gathered; and these are sold by brokers, who often bargain with a class of unskilled and often unscrupulous, and either sell to the best advantage, or fall victims themselves to the same.

Among the respectable marchands there is said to be much good faith; but with the great body of the customers, I believe, the merchants are obliged to use the utmost circumspection.

All the ordinary tradesmen, such as tailors and shoemakers, and even a water-proof hat manufacturer, are to be found at Fort-au-Prince. And I confess I was struck with the respectable appearance of several book-sellers' shops, having looked in vain for such things both in Havannah and Antigua. The books are generally elementary, French publications, and romances. The works of Voltaire, Rousseau, and others of the same class, abound. There are also two printing presses; one at which the government Gazette *Le Tyrographe* is printed, and the other from which the *Feuille de Commerce* issues. The former rarely contains more than the documents issued by the government; the latter occasionally some spirited papers, and is conducted by M. Courtois, who was for a short time director of the post office.

The apothecaries' shops are numerous, as they ought to be in such a horrible climate, and are well supplied with all the contents of the French Pharmacopoeia. There are also some tanneries, in which the bark of the mangrove is used as the tanning material. As far as I could ascertain, the great bulk of the border people were either of that class of Europeans called in the French time "petits blancs," or people of colour. The labourers in town and country are generally black.

With the exception already referred to, we have derived these details with respect to Hayti partly from the communication to government, and the published *Voyage de Charles Mackenzie Esq.*, late consul in that island; and partly from Mr. Consul Courtois's *Annales* to the *Circular Quaker*.

PORTERS AND PORTERAGE. Porters are persons employed to carry messages or parcels, &c.

In London, they are divided into different classes. It is enacted by 25 Geo. 3. c. 56, that the following shall be the maximum weight to be carried by any parcel not exceeding 56 lb. weight, in London, Westminster, Southwark, and the suburbs; viz.—

For any distance not exceeding 1-4 of a mile	s. 0	d. 3
Not exceeding 1/2 mile	0	4
Not exceeding 3/4 mile	0	8
Not exceeding 1 mile	0	8
Not exceeding 1 1/2 miles	0	8
Not exceeding 2 miles	0	10

And in like manner the additional sum of 3d. for every further space not exceeding 1/2 a mile.

Parcels to be made out at the inn, and given to the porters, who are to deliver them with the parcels; and any innkeeper not making out such tickets to forfeit not exceeding 40s. nor less than 5s.; porters not delivering or delaying the same, to forfeit 40s. and if they make any bargain they are to forfeit 20s. Parcels brought by coaches to be delivered within six hours, under a penalty not exceeding 20s. nor less than 5s. Parcels brought by waggon to be delivered within twenty-four hours, under a like penalty. Parcels directed to be left till called for, to be delivered to those to whom the same may be directed, on payment of the carriage, and 2d. for warehouse room, under like penalty. If parcels be not sent for till the expiration of a week, 1d. for every warehouse rent may be charged. Parcels not directed, to be left till called for, to be delivered on demand, under the above penalty. If a quantity of porters may be punished by a fine not exceeding 20s. nor less than 5s. The piers of London have the exclusive privilege of taking up and carrying goods within the city, and the employment of any one else may be punished by fine.

Porters (Tackle-Houses), are regulated by the city of London. They have the privilege of performing the labour of unshipping, loading, carrying, and lashing the Goods of the South Sea Company, the East India Company, and all other goods, except from the East country, the produce of the British plantations and Ireland, and goods consigned. They give bond for 500l. to make restitution in case of loss or damage, and are limited to rates fixed by the corporation.

Porters (Ticket), are persons appointed by the city of London, and have granted to them the exclusive privilege of unshipping, loading, and housing pitch, tar, soap, ashes, wainment, fir, poles, masts, deals, oars, chests, tables, fax and hemp, brought to London from the East country also, iron, cordage, and timber, and all goods of the produce of Ireland and the British plantations, and all goods consigned, except lead. They are freemen of the city, give security in 100l. for fidelity, and have their names and number engraven on a metal badge. They are called the ticket porters; who may, in performing the business of the port, employ other labourers, if ticket porters be not at hand. — (*Montfleur's Dictionary*.)

Any person may bring goods into the city of London; but he is liable to a fine if he either takes up, or carries, any within the city. It is enjoining that such several regulations should be still kept up; why should not the merchants of London, as well as those of Manchester, be allowed to employ any one they please in the conveyance of goods? Does any one doubt that competition would, in this, as in every thing else, be productive of the greatest advantage? The regulations in question merely tend to keep up oppressive practices, injurious to the public interests, and disadvantageous even to those to whom favour they are enacted.

PORT LOUIS, ON NORTHWEST PORT, the capital of the Mauritius, in lat. 20° 9' 56" S., lon. 57° 28' 41" E. It is situated at the bottom of a triangular bay, the entrance to which is rather difficult. Every vessel approaching the harbour must hoist her flag and fire 2 guns; if in the night, a light must be shown; when a pilot comes on board, and steers the ship to the entrance of the port. It is a very convenient port for careening and repairing; but provisions of all sorts are dear. In the hurricane months, the anchorage in Port Louis is not good; and it can then only accommodate a very few vessels. The houses are low, and are principally built of wood. The town and harbour are pretty strongly fortified. Almost all the foreign trade of the island is carried on here.

The Mauritius was so called by the Dutch in honour of Prince Maurice; but it was first settled by the French in 1720; and is indebted for most part of its prosperity to the skilful management of its governor, the famous M. de la Bourdonnais. It was taken by the English in 1810; and was definitively ceded to us in 1814.

Exports and Imports, &c.—Mauritius is pretty fertile, a considerable part of the surface being, however, occupied by mountains. Its shape is circular, being about 150 miles in circumference. The climate is healthy, but is very subject to hurricanes. The principal product of the island is sugar, which is now cultivated to the almost total neglect of every thing else; but it also produces excellent coffee, indigo, and cotton. The blackwood or ebony of the Mauritius is very abundant, and of a superior quality. Very little corn or grain of any kind is raised in the island; most articles of provision being imported. Previously to 1825, the sugar and other articles brought to Great Britain from the Mauritius were charged with the same duties as the like articles from India; but in the above-mentioned year this distinction was done away, and it was enacted (6 Geo. 4. c. 111, § 44.), that all goods of the growth, produce, or manufacture of the Mauritius, should, upon importation into any port of the United Kingdom, be subject to the same duties and regulations as the like goods being of the growth, produce, or manufacture of the British colonies in the West Indies; and that the trade with the Mauritius should be placed as nearly as possible on the same footing as that of the West India islands.

This was a great boon to the Mauritius, and the exports of sugar from it, have since rapidly increased. According to Mr. Milburn (*Oriental Commerce*, vol. li. p. 568.), they amounted, in 1812, to about 5,000,000 lbs. In 1818, they amounted to about 9,000,000 lbs.; and in 1824, to 23,333,553 lbs. They have since been as under:—

1826	-	42,489,416 lbs.	1830	-	54,899,520 lbs.
1827	-	40,618,254	1831	-	57,965,926 "
1828	-	48,838,780	1832	-	59,049,872 "
1829	-	33,371,906			

The cultivation of sugar being found more profitable than that of coffee, the exports of the latter, though of excellent quality, have declined so far, that in 1832 we only obtained from the Mauritius 26,648 lbs. The exports of cotton are also inconsiderable. The exports of ebony in 1828 amounted to 2,002,783 lbs., of the estimated value of 9,017l. The value of the tortoise-shell exported in the same year was also estimated at about 9,000l. Considerable quantities of Indian piece goods are exported. The principal imports consist of provisions, particularly grain and flour; the supply required for the use of the island being almost entirely derived from the Cape of Good Hope, Madagascar, India, Bourbon, &c. Earthenware, machinery, furniture, hardware, piece goods, wine, &c. are also largely imported. The total estimated value of the imports in 1831 amounted to 705,383l.; the estimated value of the exports for the same year being 606,684l. In 1831, 348 ships cleared outward, of the burden of 93,468 tons; of which 22 ships, of the burden of 5,337 tons, were for Britain.

In 1828, the population of the Mauritius amounted to 91,624 souls; of which 8,111 were whites (exclusive of the king's troops), 15,444 free blacks, 69,070 slaves, 1,736 troops, and 237 resident strangers. The population of the Seychelles—small islands dependent on the Mauritius—amounted at the same time to 7,665, of whom 6,325 were slaves.

Monies, Weights, and Measures.—According to the regulations of government, the franc is deemed equal to 10*s.*, and the Spanish dollar to 4*s.* 4*d.* The government accounts are kept in sterling money; but merchants, shopkeepers, &c. keep their accounts in dollars and cents, and dollars, livres, and sols.

The measures and weights are those of France previously to the Revolution. 100 lbs. French = 105 lbs. English; the French foot is to the English foot as 100 to 93.89, but in practice they are supposed to be as 10 to 15. The *voile* = 1 gallon 7.8 pints English; but in commercial transactions it is always taken at 2 gallons.

Duties, &c.—A duty of 6 per cent. *ad valorem* is laid on all goods imported for consumption in British vessels from all quarters of the world. The duties on the goods imported in foreign ships are, for the most part also, 6 per cent. A duty of 25 cents, or 1*s.* 1*d.* per cwt. is laid on all sugar exported in British bottoms, to all places except Bourbon; and an additional duty of 8 per cent. *ad valorem* is laid on all goods exported in foreign bottoms. The charges for pilotage, wharfrage, &c. are fixed by government, and may be learned at the Custom-house. For the most part they are very moderate.

Finance.—In a financial point of view, the Mauritius does not seem to be a very valuable acquisition. During the 15 years ending with 1825, the expenditure of government in the island exceeded the revenue by no less than 1,026,204*l.* According to the estimate of the commissioners of inquiry, the probable future revenue of the Mauritius may be estimated at 184,233*l.* a year; but the commissioners state that the expenditure in the island in 1828 amounted to 160,509*l.*, and the expenditure a Great Britain on account of the island to 77,537*l.*; making together 244,368*l.*—(*Parl. Paper*, No. 164, Sess. 1831.) It appears from the accounts published by the Board of Trade, that the total revenue of the colony in 1831 amounted to 232,438*l.*, and the expenditure to 249,524*l.*—(Vol. i. p. 246.) We believe, however, that, by enforcing a system of unparliamentary retrenchment, this unfavourable balance might be considerably diminished; at present, both the number of functionaries and their salaries seem quite excessive.—(This article has been almost entirely compiled from official documents.)

PORTO-RICO, the capital of the valuable Spanish island of the same name, in lat. 18° 29' 10" N., lon. 66° 13' 15" W. It is situated on the north side of the island, on a peninsula joined to the main land by a narrow isthmus. The fortifications are very strong; the town which stands on a pretty steep declivity, is well built, clean, and contains from 20,000 to 30,000 inhabitants.

Harbour.—The harbour of Porto-rico has a striking resemblance to that of the Havannah, in which it is but little inferior. The entrance to it, about 300 fathoms in width, has the Morro Castle on its east side, and is defended on the west side by forts erected on 3 small islands. Within, the harbour expands into a capacious basin, the depth of water varying from 5 to 6 and 7 fathoms. On the side opposite to the town there are extensive sand banks; but the entrance to the port, as well as the port itself, is unobstructed by any bar or shallow.

The island of Porto-rico lies in the same latitude as Jamaica. Though the smallest of the greater Antilles, it is of a very considerable size. Its form is that of a parallelogram; being about 115 miles in length from east to west, with a mean breadth of about 35, containing an area of 4,140 square miles. The surface is plentifully diversified with hills and valleys, and the soil generally fertile. It has, however, suffered much from hurricanes; those of 1742 and 1825 having been particularly destructive. Since the breaking up of the old Spanish colonial system, the progress of Porto-rico has hardly been less rapid than that of Cuba. Her population, which in 1778 was estimated at 80,650, amounted, according to a census taken in 1827, to 288,473, of which only 28,408 were slaves. A large proportion of the free inhabitants are coloured: but the law knows no distinction between the white and the coloured *roturier*; and this circumstance, as well as the whites being in the habit of freely intermixing with people of colour, has prevented the growth of those prejudices and antipathies that prevail between the white and the black and coloured population in the United States, and in the English and French islands.—(*Bulbii, Abrégé de la Géographie*, p. 1175; *Poinsett's Notes on Mexico*, Lond. ed. pp. 4—11.)

Trade.—Sugar and coffee are by far the greatest articles of export. Next to them are cattle, tobacco, molasses, rum, cotton, &c. The imports consist principally of flour, fish, and other articles of provision, lumber, &c. from the United States; cottons, hardware, machinery, &c. from England; wines, silk, jewellery, perfumery, &c. from Spain and France; linen from the Italian Towns; iron from Sweden, &c. Large quantities of rice, maize, &c. are raised in the island.

Monies, Weights, and Measures, same as those of Havana, which see.

The Custom duties collected at the different ports of the island in 1830 amounted to 684,980 dollars. The city of Porto-rico has from 146 to 148 part of the trade of the island. The other principal ports are Mayaguez, Ponce, Aguadilla, Guayama, and Pinar. (These amounts have been taken from the Balance Merchants, published at Porto-rico, 20th of June, 1831.)

PORTS. See HARBOURS.

POSTAGE AND POST-OFFICE. Postage is the duty or charge imposed on letters or parcels conveyed by post; and the Post-office being the establishment by which such letters or parcels are conveyed.

1. *Establishment of Post-offices.*—Regular posts or couriers were instituted at a very early period, for the safe, regular, and speedy transmission of public intelligence. Herodotus informs us (lib. viii. c. 98.) that in Persia, men and horses, in the service of the monarch, were kept at certain stations along the public roads; and that the despatches, being given to the first courier, were by him carried to the second, and so on, with an expedition that neither snow, nor rain, nor heat, nor darkness could check. A similar institution, under the name of *curvus publicus*, was established at Rome by Augustus, and was extended and improved by his successors. Horses and carriages were kept in readiness at the different stations along the public roads, not only for the transmission of despatches, but also for the conveyance of official personages, or others who had obtained an order from authority allowing them to travel post. By this means government was speedily apprised of whatever took place in the remotest corners of the empire; and instructions or functionaries could be sent to, or recalled from, the most distant provinces, with a celerity that would even now appear considerable.—(Bergier, *Histoire des Grands Chemins*, liv. iv. c. 4.; *Bouchaud sur la Police des Romains*, pp. 136—151.)

Posts appear to have been established, for the first time, in modern Europe, in 1477, by Louis XI. They were originally intended to serve merely, as the ancient posts, for the conveyance of public despatches, and of persons travelling by authority of government. Subsequently, however, private individuals were allowed to avail themselves of this institution; and governments, by imposing higher duties or rates of postage, on the letters and parcels sent through the Post-office than are sufficient to defray the expense of the establishment, have rendered it productive of a considerable revenue. Nor, while the rates of postage are confined within due limits, or not carried so high as to form any serious obstacle to correspondence, is there, perhaps, a more unobjectionable tax.

English Post-office.—The Post-office was not established in England till the 17th century. Post-masters, indeed, existed in more ancient times; but their business was confined to the furnishing of post-horses to persons who were desirous of travelling expeditiously, and to the despatching of extraordinary packets upon special occasions. In 1635, Charles I. erected a letter office for England and Scotland; but this extended only to a few of the principal roads, the times of carriage were uncertain, and the post-masters on each road were required to furnish horses for the conveyance of the letters at the rate of 2½d. a mile. This establishment did not succeed; and at the breaking out of the civil war, great difficulty was experienced in the forwarding of letters. At length a post-office, or establishment for the *weekly* conveyance of letters to all parts of the kingdom, was instituted in 1649, by Mr. Edward Pridaux, attorney-general for the Commonwealth; the immediate consequence of which was a saving to the public of 7,000l. a year on account of post-masters. In 1657, the Post-office was established nearly on its present footing, and the rates of postage that were then fixed were continued till the reign of Queen Anne.—(Black. Com. book i. c. 8.)

From the establishment of the Post-office by Cromwell, down to 1784, mails were con-

* This does not mean a coasting trade from port to port in the island; but the trade carried on under the Spanish flag with St. Thomas and other foreign colonies.

belonging to any company, American provincial bill of credit, goldsmiths' or bankers' letter of credit, or note relating to the payment of money, or other bond, warrant, draft, bill, or promissory note whatever, for payment of money; or shall steal and take out of any letter, with which he shall have been entrusted, or which shall have come to his hand, the whole or any part of any such bank note, bank post-bill, &c. he shall be guilty of felony without benefit of clergy.

Any person stealing or taking away from any carriage, or from the possession of any person employed in conveying letters sent by the post, or from any receiving-house for the Post-office, or from any bag or mail sent or to be sent by the same, any letter, packet, bag, or mail, shall suffer death without benefit of clergy.

And all persons who shall counsel, command, hire, persuade, promise, aid, or abet such persons, or shall with a fraudulent intention buy or receive any such securities, instruments, &c., shall suffer in like manner: accessories may be tried before apprehension or trial of principals. Trials may be in the county where offences are apprehended.

Exemptions from postage, franking, &c.—The statutes for regulating the rates of postage, and the exemptions from postage, from the 9th of Anne to the 53d of Geo. 3., are too numerous to be inserted, but the principal regulations are as follows:—

The king, the person filling the principal offices of government, the public Boards, and the Post-office may send and receive letters duty free.

Also all members of either house of parliament during the sitting of the same, or within 40 days before or after any summons or prorogation, not exceeding 1 ounce in weight, on condition that the names of the member, and the post town from which sent, the day of the month at full length, and the year, shall be endorsed thereon; also that the member directing it shall be at, or within 20 miles of the post town, on the day, or day before, the letter is put into the post-office; and also on condition that no member send more than 10, or receive more than 15, letters in one day.

Printed votes of parliament, and newspapers in covers open at the sides, &c. are exempted from postage.

But the post-masters may search to see if any thing else be contained in the cover; and if there be any such found, it shall be charged treble postage.

Persons altering the superscription of franked letters, or counterfeiting the handwriting of members on them to avoid postage, guilty of felony, and to be transported for 7 years.

But nevertheless, members who from infirmity are unable to write, may authorize and depute another to frank for them, sending notice thereof under hand and seal, attested by a witness, to the post-master general.

Bills of exchange, invoices, merchants' accounts, &c. written on the same piece of paper with a letter, or several letters written to several persons on one piece of paper, to pay as one letter.—(7 & 8 Geo. 4. c. 21.)

By writs or other legal proceedings.

Papers and samples of goods in covers open at the sides, without any writing inside, to be charged as single letters. But by 55 Geo. 3., if not open at the sides, and weighing only 1 oz., an additional rate of 1d.; but if less than 1 oz. and open at the side only, the additional rate of 1d.

Foreign letters suspected to contain prohibited goods may be opened in the presence of a justice, or magistrate, of the place, or district, on oath of person suspecting. If contraband goods found, to be destroyed, and the letter sent to the commissioners of customs; if none found, the letter to be forwarded with an attestation of the circumstances by the justice or magistrate.

By 9 Anne, c. 10, no person except the post-master, and persons authorised by him, shall carry or convey any letters, on pain of 5s. for every offence, and a penalty of 100l. per week besides, to be recovered in any court of record. And by 5 Geo. 4. c. 20., no person shall send or tender, or deliver to be sent, otherwise than by the authority of the post-master or his deputies, or to the nearest or most convenient post town to be forwarded by the post, any letter or packet, on pain of 5s. for each letter so sent, to be recovered in any court at Westminster.

Except letters concerning goods to be delivered with such goods, sent by a common carrier; letters of merchants, owners of ships or merchant vessels with cargoes to be delivered; such letters being carried without hire or reward; any commission or return thereof; process or return thereof out of any court, or any letter sent by any private friend in their way of journey; or by any messenger sent on purpose concerning private affairs.

Post-masters may make private agreements with persons living in places (not being post towns), for the receiving and sending to them respectively, letters to and from the post town; but for the delivery of letters within the limits of the post town, he is entitled to no remuneration.

CONVEYANCE OF LETTERS BY POST.

RECEIVING AND DESPATCHING OF LETTERS.—Speaking generally, letters may be put into the receiving boxes of the different post-offices throughout the country at all hours of the day, and mostly, also, of the night. The mails for particular places are made up at certain specified hours, of which public intimation is given; and letters put in after those hours are not of course despatched till next mail.

General Post-Office, London.—Letters to be despatched that day are received at the general post receiving houses till 6 p. m.; by the letter-carriers ringing bells, on payment of 1d. with each letter or newspaper, from 5 to 6 p. m.; at the Branch post-offices, at Charing Cross, Vere Street, Oxford Street, and Borough, till 7 p. m.; and at the General Post-office, in St. Martin's-le-Grand, and the Branch Post-office, Lombard Street, till 7 p. m.

Sundays.—The date shows when the letters were received at the General Post-office.

The circular stamp of black ink, when the postage is to be paid on delivery. Dito of red ink, with the word "Paid," when the postage has been paid at the time of posting the letter.

Dito of red ink, with the word "Free," when letters are franked.

Overcharged Letters.—Overcharges returned, on presenting the letter at the window in the hall at the office, St. Martin's-le-Grand; or the letter may be sent to the office by the letter-carrier, and the overcharge will be returned with the letter in 2 days. When single letters are charged double, or double letters treble, if they are opened in presence of the letter-carriers who deliver them, that part having the directions and tax upon it will be sufficient to obtain return of the overcharge; but in cases of single letters being charged treble, such letters must be shown at the Post-office before return of overcharge can be made.

Ship Letter Office.—The postage for letters forwarded through this office, to the Cape of Good Hope, New South Wales, Isle of France, Bombay, Ceylon, Madras, Bengal, Singapore, and Prince of Wales' Island, is the full inland rate of postage to the port where the ship may be, and 2d. sea postage in addition, for every letter not exceeding 3 ounces, and 1s. per ounce for every letter above that weight.

Letters from the country for the above places are charged with the full inland postage to London, and 2d. sea postage in addition, for every letter not exceeding 3 ounces, and 1s. per ounce for every letter above that weight.

All letters from abroad, except the Cape of Good Hope, Isle of France, New South Wales, Bombay, Ceylon, Madras, Bengal, Singapore, and Prince of Wales' Island, are liable to a sea postage of 6d. single, and 1s. 4d. double, and so on over and above all inland rates whatever; but those from the

Cape of Good Hope, Isle of France, Bombay, Ceylon, Madras, Bengal, Singapore, and Prince of Wales' Island, are liable to the full inland rates, and a sea postage of 4d. for every letter not exceeding the weight of 3 ounces and 14. per ounce for every letter exceeding that weight.

N. B.—All letters forwarded through this Office must be paid for at the time they are put into the office.

Seamen's and soldiers' single letters are forwarded through this office to the East Indies and New South Wales, on payment of 1d. at the time of putting in; and such letters from the East Indies are chargeable with 1d., or 3d. if the post-office have to pay the gratuity of 2d. to the commander when landed in the United Kingdom.

Seamen and Soldiers, within any part of his Majesty's dominions, to and from which there are regular mails, can send and receive single letters on their own private concerns only, while they are employed on his Majesty's service, for 1d.

Letters coming from a Seaman, or from a Sergeant, Corporal, Trumpeter, Fifer, or private Soldier.—The penny must be paid at the time it is put into the post-office. The name of the soldier or sailor, his class or description, and the name of the ship or regiment, corps, or detachment, to which he belongs, must be specified on the letter. And the officer having the command must sign his name, and specify the name of the ship or regiment, corps, or detachment, he commands.

Letters going to Seamen or Soldiers.—The penny must be paid at the time it is put into the post-office.

Printed votes and proceedings in Parliament sent from Great Britain and Ireland by packet boats to any of his Majesty's colonies are to be charged with a rate of one penny half-penny per ounce, and so on in proportion, in lieu of any sum payable under any former act, to be paid on putting the said votes and proceedings into the Post-office. Colonial legislative proceedings may be sent from the colonies to the United Kingdom by packet boat at the same rate.

Pamphlets, magazines, reviews, &c. may be sent by packet boat from Falmouth to any of His Majesty's colonies at the rate of 1s. if not exceeding six ounces in weight, and 3d. per ounce above that weight.

N. B.—If such printed vote, proceeding, pamphlet, magazine, &c. be not sent without a cover, or in a cover open at the sides, or if any writing be thereon, other than the superscription, or any other paper or thing be enclosed therein, the packet will be liable to the full rates of postage as a letter.

Bank Notes and Drafts.—Persons wishing to send bank notes or drafts by post, are advised to cut such notes or drafts in halves, and send them at two different times, waiting till the receipt of one half is acknowledged before the other is sent.

Money, Rings, or Lockets, &c.—When money, rings, or lockets, &c. are sent by the post from London, particular care should be taken to deliver the same to the clerk at the window at the General Post-office, and when any such letter is to be sent from the country, it should be delivered into the hands of the post-master: but it is to be observed, that this office does not engage to insure the penny from loss.

Cautions to Masters of Vessels.—Masters of vessels opening sealed bags or letters intrusted to them, or taking thereon letters, or not duly delivering the bags at the post-office of the first port of arrival, forfeit 200l. Masters or others having letters in their possession after the master's delivering the letters at the post-office, forfeit 5l. for every letter found on board.—(55 Geo. 3. c. 153.)

Masters and commanders of vessels are required to deliver their ship's letters to the person appointed by the post-master general to demand the same; and if any letters not exempted by law, not exceeding the weight therein mentioned, be found on board after any such demand, the same penalty is incurred as on masters and commanders in whose possession letters are found after delivering their letters at the post-office.—(7 & 8 Geo. 4. c. 81.)

Masters and commanders of vessels are bound to deliver at the post-office of the first port at which they arrive, all letters on board not exempted by law, if they shall not have been previously demanded by some person specially appointed for that purpose by the post-master-general.

RATES OF POSTAGE, GREAT BRITAIN AND IRELAND.

Rates of Postage to be taken in the Currency of the United Kingdom for the Post and Conveyance of Letters and Packets by the Post, from any Place in Great Britain to any Place in Ireland, or from any Place in Ireland to any Place in Great Britain.

Distance.	Single Letter.		Double Letter.		Trible Letter, or other weight or other than an Ounce Weight.		For every Ounce Weight, and for every Packet not exceeding an Ounce in Weight.	
	s.	d.	s.	d.	s.	d.	s.	d.
If the distance of such places shall not exceed 15 miles, British measure	0	4	0	8	1	0	1	4
Exceeding 15, and not exceeding 30 such miles	0	6	0	10	1	3	1	8
30	0	6	1	0	1	6	2	0
30	0	7	1	0	1	9	2	4
60	0	8	1	4	2	0	5	8
80	0	9	1	6	2	3	6	8
120	0	10	1	9	2	6	7	4
170	0	11	1	10	2	9	8	8
230	1	0	2	0	3	0	4	0
300	1	1	2	3	3	3	4	4
400	1	2	2	6	3	6	5	0
600	1	3	2	6	3	9	5	0
800	1	4	2	9	4	0	5	4
700	1	5	2	10	4	3	5	8
Letters and packets conveyed by packet boats between the ports of Portpatrick and Donaghadee, a packet postage over and above all other rates	0	4	0	8	1	0	1	4
Letters and packets conveyed by packet boats from or to Holyhead or Milford Haven, to or from any port in Ireland, a packet postage over and above all other rates	0	9	0	4	0	6	0	5
Letters and packets conveyed by packet boats to or from Liverpool, from or to Dublin, or any other port in Ireland, a packet postage over and above all other rates	0	8	1	4	2	0	2	9
Provided that no letter sent by way of Liverpool shall be chargeable with a higher rate of postage than if it were sent by way of Holyhead.								
Letters and packets to and from any part of Great Britain or Ireland, by way of Dublin and Holyhead, in addition to all other rates (Menai Bridge)	0	1	0	9	0	3	0	4
Letters and packets to and from any part of Great Britain or Ireland, by way of Conway and Chester, in addition to all other rates (Conwy Bridge)	0	1	0	9	0	3	0	4
And so in proportion in all the several cases for any other letter or packet of greater weight than an ounce.								

Letters containing enclosed letters containing more than one chargeable with 3 single letters or 4 of an ounce above 14. per ounce.

POSTAGE AND POST-OFFICE.

Letters containing 1 enclosure are chargeable with 2 single rates. Letters containing more than 1 enclosure, and not exceeding 1 ounce, are chargeable with 3 single rates. Letters exceeding 1 ounce, whether chargeable with 3 single rates, or with 4 single rates; and for every 14 ounces above that weight, an additional single rate is payable in addition to the above.

Letters to settlers and sailors, if single, and in conformity to the act of parliament, are chargeable with 1 penny only.

Great Britain.

Denmark	0 8	The Azores	3 2	Cuba	3 6
Sweden	0 8	The Canaries	3 2	Portugal and Gibraltar, via France	1 7
Norway	0 8				

Persons sending letters from the United Kingdom to any part of France may, and, send them prepaid, allowing the whole postage to be paid by the receiver; or, send, they may pay the whole postage in advance; or, send, they may pay the British postage only to the frontier of France. But the full postage must be paid in advance, on all letters for other countries passing through France, and on all letters sent to any of the places and parts specified, above, (except the West India colonies and British America) otherwise they will not be forwarded.

No letter addressed to any part in France will be chargeable with more than a single rate of British postage, whatever the number of enclosures may be, if it do not exceed 1 1/4 of an ounce weight; or double postage from 1 1/4 oz. and not exceeding 1 1/2 oz., and treble postage from 1 1/2 oz. and not exceeding 1 3/4 oz.

The postage in France is charged solely by weight, without reference to the composition of the letter, and is at the rate of a single penny under 1 1/4 oz., and so on in proportion. A single sheet of paper, weighing more than 1 1/4 oz. is therefore liable in France to additional charge.

Registered Letters.—Persons desirous of registering letters and notices for France, and passing through France, may have them entered in the letter-office; such letters will be liable to a registration fee of 2s. 6d. each, in addition to the ordinary British rates, and to

double the French postage, according to weight. The whole payment to the place of destination must be made in advance, and such letters must be brought to the General Post-office, for the purpose of being registered, before 8 o'clock in the evening on ordinary post-days, and before 10 o'clock on Tuesdays and Fridays.

Mails made up in London as follows:

France, daily.
Belgium, Ostend, Monday, Tuesday, Thursday, and Friday.
Holland, Hamburg, and Sweden, Tuesday and Friday.
America, first Wednesday, monthly.
Matritia, Brazil, and Buenos Ayres, first Tuesday, monthly.
Lisbon and Madeira, every Saturday.
Gibraltar, Malta, Spain, Greece, Corfu, Egypt, and India, 1st of every month.
Mexico and Havannah, 15th of every month.
Jamaica, Hayti, Leeward Islands, and Carthagena, 15th of every month.
Letters for Portugal, Brazil, and other foreign ports, will in future be received until the hour for closing the boxes for inland letters.

CONVEYANCE OF NEWSPAPERS BY POST.

The former act relating to this department of the Post-office have been repealed and consolidated by the 6 & 7 Will. 4. c. 84., of which the following official abstract has been published:—

United Kingdom.—Printed newspapers liable to the stamp-duty, and duly stamped, sent by the General Post, within the United Kingdom, will be delivered free of all charges, being no longer subject to penny or temporary post rates as heretofore.

Newspapers not having passed, or to pass, through the general post, but which are put into and delivered through the penny or two-penny post of any city, town, or place, will be charged 1d. each on delivery.

British Colonies and Possessions.—Printed newspapers, duly stamped, addressed to any of his Majesty's colonies and possessions beyond seas, sent by his Majesty's packets, will be forwarded free of charge.

Foreign Parts.—In the former impressions of this work, we had occasion to point out and censure the objectionable practice that had long prevailed in the Post-office, of charging out the salaries of the clerks in the foreign department by allowing them to charge heavy sums on the newspapers transmitted to and received from foreign parts. To such an extent was this practice carried, that, while the annual cost of a daily London paper amounted (previously to the late reduction of the stamp-duty) to any part of Great Britain, to 9s. 1s. a year, it could not be had at Calais or Boulogne for less than 12s. 1s., the clerks in the Post-office being allowed to charge 4s. 4s. for their trouble in conveying it to the place of destination. The fees charged on the French papers brought to England were similar. It is not going too far to say, that this preposterous system opposed a far more serious obstacle to the diffusion of intelligence than any that could have grown out of the fears and efforts of the most arbitrary and powerful monarchs. Luckily, however, it is now wholly abolished; French papers being received in all parts of the United Kingdom on payment of 4d. of postage, and British papers being transmitted to all parts of France, subject only to a charge of 4 centimes on delivery. The regulations are as follows:—

Printed newspapers, duly stamped, addressed to the under-mentioned countries and places, may be forwarded by his Majesty's Packets free of charge, viz.—

France	Buenos Ayres
Hamburg	Colombia
Denmark	Caraccas
Greece	Carthagena
Corfu, and Ionian Islands	Bogota
	Hayti, or St. Domingo.

If sent by private ships, 1d. each must be paid on putting them into the post-office.

Newspapers published in any of the afore-mentioned countries and places, brought by his Majesty's packets, will be delivered free of charge, except those from France, which are liable to 1d. each on delivery; if brought by private ships, they will be charged 1d. each on delivery.

Printed newspapers, duly stamped, and sent by his Majesty's packets, or by private ships, to other foreign countries and places not enumerated in the preceding list must be charged 2d. each when put into the post; newspapers from such countries, brought into the United Kingdom by his Majesty's packets, or by private ships, will be charged 2d. each upon delivery.

Newspapers intended to be sent either to the British colonies and possessions, or to foreign parts, must be put into the post within 7 days after the day on which they were published; and foreign newspapers must be printed in the language of the country from which they have been forwarded. On failure of either of these provisions, they will be charged as letters.

If the person to whom a newspaper from the British colonies or foreign parts is directed, shall have removed from the place to which such newspaper shall be addressed prior to the delivery thereof at the place of its address, it may (provided it has not been opened or used, but not otherwise), be redirected and forwarded to any other person at any other place within the United Kingdom, free from any additional charge; but if it shall have been opened or used, it will, on re-direction, be charged with the rate of a single letter from

charge; if to be sent by private ships a postage of 1d. each must be paid on putting them into a post-office.

Newspapers sent to India, the Cape of Good Hope, New South Wales, &c. will no longer be charged by weight, but 1d. each.

Newspapers printed in the British colonies and possessions, brought to the United Kingdom by his Majesty's packets, will be delivered free of charge; if brought by private ships they will be charged 1d. each on delivery.

Newspapers may be sent from one British colony to another, via the United Kingdom, by his Majesty's packets, free of postage.

Newspapers intended to be sent either to the British colonies and possessions, or to foreign parts, must be put into the post within 7 days after the day on which they were published; and foreign newspapers must be printed in the language of the country from which they have been forwarded. On failure of either of these provisions, they will be charged as letters.

If the person to whom a newspaper from the British colonies or foreign parts is directed, shall have removed from the place to which such newspaper shall be addressed prior to the delivery thereof at the place of its address, it may (provided it has not been opened or used, but not otherwise), be redirected and forwarded to any other person at any other place within the United Kingdom, free from any additional charge; but if it shall have been opened or used, it will, on re-direction, be charged with the rate of a single letter from

been so high as to force recourse to other channels, the revenue must have been decidedly greater now than at the end of the war. Were the rates moderate, the greater despatch and security of the post-office conveyance would hinder any considerable number of letters from being sent through other channels. But, in the estimation of very many persons, the present duties more than countervail these advantages; and the number of coaches that now pass between all parts of the country, and the facility with which the law may be evaded, by transmitting letters in parcels conveyed by them, renders the imposition of oppressive rates of postage quite as injurious to the revenue as to individuals.

The gross produce of the post-office revenue of Great Britain, exclusive of Ireland, in the under-mentioned years, has been as follows:—

Year.	Duty.	Year.	Duty.	Year.	Duty.	Year.	Duty.
	£		£		£		£
1782	201,604	1810	1,675,076	1828	2,048,042	1832	2,034,603
1785	110,663	1814	2,005,987	1829	2,024,418	1833	
1775	345,321	1820	1,993,985	1830	2,053,720	1834	2,079,509
1793	745,238	1825	2,160,390	1831	2,064,334	1835	2,107,677
1800	1,083,950						

The progress of the Scotch branch of the post-office revenue has been quite extraordinary. In 1698, Sir Robert Sinclair of Stephenson had a grant from William III. of its entire produce, with an extra allowance of 300*l.* a year, on condition of his keeping up the post; but, after trial, he abandoned the undertaking as disadvantageous. In 1709, the Scotch post-office revenue was under 2,000*l.*; its amount in 1835 was 209,307*l.* gross, and 197,988*l.* nett; having increased nearly a hundred fold, in little more than a century! In 1781, the Glasgow post-office produced only 4,341*l.* 4*s.* 9*d.*, while its revenue is at present nearly 40,000*l.*—(*Stark's Picture of Edinburgh*, p. 144; *Glasgow's Statistics of Glasgow*; *Finance Book for 1835*, &c.)

The expenses of collecting the post-office revenue amount, at an average, to from 24 to 30 per cent. on the gross receipt. In 1835, they were, for Great Britain, 582,509*l.*, being at the rate of about 27 per cent. After all deductions on account of collection, over-payments, drawbacks, &c., the total nett payments into the exchequer, on account of the post-office revenue of Great Britain, in 1835, amounted to 115,000*l.*

The British post-office is admitted on all hands to be managed with great intelligence. But there are several departments in which it is believed that a considerable saving of expense might be effected. In 1835, the packet service cost, freights deducted, 57,949*l.*; and the mileage to mail coaches, and the payments to gisrds, tolls, &c., amounted to about 90,000*l.* The conveyance of mails in Canada, Nova Scotia, and Jamaica, was an item of above 12,672*l.*

There may, in all, be about 3,000 persons employed in the carriage and distribution of letters in Great Britain only; besides about 180 coaches, and from 4,000 to 5,000 horses.

Irish Post-office.—The most gross and scandalous abuses were long prevalent in every department of the Irish post-office. The commissioners of Revenue Inquiry exerted themselves to abate the nuisance; but, as it would appear from the evidence of the Duke of Richmond before the committee of the House of Commons on public salaries, without much effect. His Grace, however, laboured with laudable activity and zeal to introduce something like honesty, order, and responsibility into this department. The gross revenue of the Irish post-office amounted, in 1835, to 245,665*l.*; the expenses of collection were 96,238*l.*; and the nett payments into the exchequer, 122,300*l.*

(Postage of Letters.)—We stated in our last Supplement that it was probable that the Post-office regulations with regard to the postage and transmission of letters, would speedily be placed on an entirely different footing; and in that anticipation we have not certainly been disappointed. It was obvious, indeed, to any one at all acquainted with what has been going on for these few years past, that the late rates of postage could not be much longer maintained. The fact that the Post-office revenue had continued nearly stationary during the twenty years ending with 1838, notwithstanding the vast increase in that period of population and of the intercourse between the different parts of the empire, was a conclusive proof that the rates of postage had been carried to a vicious excess; and that in the arithmetic of the Post-office, as well as of the Customs, two and two, instead of always making four, sometimes make only one. The effectual reduction of these rates was, therefore, urgently required, not only because of the importance to a commercial and manufacturing community

of having the charge for the conveyance of correspondence fixed at a moderate amount, but because it was all but certain that moderate rates of postage would be more productive of revenue. It did not however follow, that because an average charge of 7d. or 7½d. each, on all letters conveyed by post, was very decidedly too much, that an invariable charge of 1d., whether the letter were conveyed 1 mile or 1,000 miles, was the precise limit that should be adopted! This was to rush from one extreme to another, and to endanger a considerable amount of revenue without any equivalent advantage. It must, no doubt, be admitted that the proposal for a uniform penny rate of postage had many recommendations in its favour. Being calculated at once to obviate trouble and save expense, it could not fail to be acceptable (what reduction of taxation is not?) to a large portion of the public, particularly to persons engaged in business. We believe, however, that the scheme was more indebted for its popularity to the oppressiveness of the old rates of postage than to any intrinsic merits of its own. Had these been reduced four or five years ago to a reasonable amount—that is had letters of 1 oz. weight coming from Scotland or Ireland to London been reduced to 6d., and other letters in proportion, and mercantile circulars been allowed to pass under covers open at the ends at 1d. or 2d. each, we venture to say that the clamour for a uniform rate of penny postage would not have made any way. But in this, as usually happens on similar occasions, those who delay to make reasonable and necessary concessions, at the outset, are, in the end, compelled to concede a great deal more than would at first have been satisfactory. This, at all events, has been eminently true in this instance. The clamour for a uniform penny rate became too powerful to be resisted; and parliament, whether it were so inclined or not, was obliged to lend its sanction to the measure. The act 2d and 3d Victoria, cap. 52., for regulating the duty on postage, did not indeed enact that the charge for conveying letters of a given weight should, in all cases, be reduced to 1d.; but it was introduced for the avowed purpose of enabling the Treasury to take the necessary steps to bring the charge about with the least inconvenience to all parties. In this view it gave the Treasury power to alter and reduce the rates of postage, without reference to the distance which letters may be conveyed, according to the weight of the letters, and not to the number or description of their enclosures: it also gave them power to adopt such regulations as they might think expedient as to stamped covers or envelopes; to suspend parliamentary franking, &c.

In virtue of the powers so conveyed, the Treasury have issued regulations by which all inland letters, without regard to the number of enclosures or the distance conveyed, provided they be paid when posted or despatched, shall,

If not exceeding 1 oz. weight be charged 1d.; 1 oz. 2d.; 2 oz. 4d.; 3 oz. 6d.; and for every additional ounce up to 16 oz., beyond which, without the weight exceeding 16 oz., no packet, whether subject to postage or not, is received—

1. Parliamentary petitions and addresses to her Majesty.
2. Parliamentary proceedings.
3. Letters and packets addressed to or received from places beyond sea.
4. Letters and packets to and from public departments, and to and from public officers that formerly franked by virtue of their offices.
5. Deeds if sent open, or in covers open at the sides. They may be tied with string and sealed, in order to prevent inspection of the contents, but they must be open at the sides, that it may be seen that they are entitled to the privilege.

With these exceptions, all packets above the weight of 16 oz. will be immediately forwarded to the Dead Letter Office.

But all letters not paid when they are posted or despatched are charged double the above rates. All parliamentary and official franking has been put an end to; but members of either house of parliament are entitled to receive petitions to parliament free of charge, provided such petitions be sent in covers open at the ends, and do not exceed 6 oz. weight.

N. B. The regulations as to the postage of foreign letters depend to a considerable degree on the varying regulations of foreign states, and could not, therefore, be advantageously noticed in this place.

An important part of the new plan, suggested by Mr. Hill, of enclosing letters in stamped envelopes, has not yet come into operation. But it is in a forward state; and when it is carried into effect, it will, by affording an opportunity for purchasing envelopes beforehand, obviate the trouble that is now occasioned by the payment of letters when they are posted.

Such are the more prominent features of the new system; and none can deny that it has the recommendations of simplicity and cheapness in its favour, and that it will greatly facilitate correspondence. But it may notwithstanding be doubted, whether its adoption was expedient. It is no doubt very convenient for merchants, bankers, middlemen, and retail dealers to get letters for 1d. that previously cost them 7d. or 7½d.; but their satisfaction is not the only thing to be attended to in forming a fair estimate of the measure. The public exigencies require that a sum of above fifty millions a year should be raised, one way or other; and so long as we are pressed by an unreasoning necessity of this sort, it is not much to say in favour of the repeal or diminution of any tax, that those on whom it fell with the greatest severity are delighted with the reduction. Sugar has in England become a necessary of life; and its consumption, to say the least of it, is quite as indispensable to the bulk of the people, and especially to the labouring classes, as the writing of letters. But would it, therefore, be a wise measure to repeal the duty on sugar, or to reduce it to 1s. a cwt. It has been alleged, indeed, that taxes on the transmission of letters are objectionable on principle, and should therefore be repealed, independently altogether of financial considerations! But it is easier to make an allegation of this sort than to prove it. All taxes, however im-

posed, if they be carried within the limits are objectionable, as the food of the writer.

It has, however, been said that the increase so vast as fully to be increase in the number for short of this. Now here that letter-writing does not follow, who are proportionally in short to allow of any far as the experiment advocates.

The following was commenced.

The total gross charges and returns to the establishment for the Post-office will be less in all but certain, from materially increased will require the end of the Post-office to do letters would be required passing through the first of these amount to half the second.

Taking the return through the Post-office appears that, in the

Vol. II.—2 F

ceed, if they be carried (as was the case with the old rates of postage) beyond their proper limits are objectionable; but provided these be not exceeded, we have yet to learn why a tax on a letter should be more objectionable than a tax on the paper on which it is written, on the food of the writer, or on fifty other things.

It has, however, been contended, that in this instance there will be no loss of revenue, and that the increase of correspondence growing out of the reduction of the postage will be so vast as fully to balance the reduced rate of charge. That there will be a very large increase in the number of letters posted is abundantly certain; but, we apprehend, it will fall far short of this. Notwithstanding all that has been said about the *furor scribendi*, we believe that letter-writing is generally looked upon as a duty rather than a pleasure; and it does not follow, when the expense of postage is reduced, that the occasions for writing letters are proportionally increased. The period since the new system was introduced is much too short to allow of any fair estimate being formed of its results; though we believe that, in so far as the experiment has been tried, it has not realised the anticipations of its more sanguine advocates.

The following statement of the probable results of the new system was drawn up before it was commenced. Perhaps it will turn out not to be very wide of the mark.

The total gross receipt of the Post-office revenue of the United Kingdom, deducting overcharges and returned letters, amounted, in 1837, to 2,339,739*l.*: the expenses of the establishment for the same year amounted to 681,259*l.*, leaving a *net* revenue of 1,658,480*l.* It is almost needless to say that there is no probability whatever that the expenses of the Post-office will be lessened by the rate of postage being reduced to *1d.* On the contrary, it is all but certain, from the greatly increased number of letters, that these expenses will be very materially increased. Supposing, however, that the Post-office expenses remain constant, it will require the enormous number of 163,502,160 penny letters annually to pass through the Post-office to defray the cost of the establishment; and no fewer than 561,537,360 such letters would be required to prevent any loss of revenue. But though the number of letters passing through the Post-office under the penny rate may be fairly expected to exceed the first of these amounts, it is probable that a pretty long period will elapse before it comes up to half the second.

Taking the return published by the Postage Committee, of the number of letters passing through the Post-office in the week ending with the 22d of January, 1838, for a basis, it appears that, in the course of a year, the

General post letters in Great Britain and Ireland amounted, under

the old system, to	-	-	-	-	-	48,945,624
Penny post letters	-	-	-	-	-	7,320,093
London twopenny and threepenny letters	-	-	-	-	-	12,058,800
Franked or privileged letters	-	-	-	-	-	6,390,204

Total letters - - - - - 74,714,720

Now the question is, what will be the annual increase in the number of letters sent by post, under the new or penny rate? All answers to this question must, of course, be nearly hypothetical; and the following is precisely of this description:—

	Old System.	New System.
General post	48,945,624 letters per annum.	
Add for probable amount of those sent clandestinely	11,034,376	
Total	60,000,000	Supposed increase on general post letters 2½ times - - - say 150,000,000
Penny post letters	7,320,093	say 10,000,000
London twopenny and threepenny letters	12,058,800	30,000,000
Privileged letters and packets same as at present	-	7,000,000
New classes of advertisements, circular letters, &c.	-	60,000,000
Increase in commercial travellers' letters	-	10,000,000
		267,000,000

Which, at *1d.* per letter, would produce a gross revenue of 1,112,500*l.*; from which deducting 680,000*l.* for expenses, there remains a *net* revenue of 432,000*l.*, being more than 1,200,000*l.* under its late amount.

But it is material to observe that the falling off in the revenue will not be so great as this, inasmuch as a very considerable number of letters exceed ½ oz. weight. The facility, under the new system, of transmitting small parcels by post, instead of, as formerly, by mail, has made great numbers of them be so conveyed; and their postage will, in so far, contribute to increase the amount of revenue. It appears from the parliamentary papers, No. 129, session 1840, that the total number of letters passing through the Post-office in the United Kingdom during the week ending the 24th of November, 1839, when the old system was in force, was 1,585,973; and that the number passing through the Post-office in the week ending the

23d of February, 1840, under the new system, was 3,109,637, being an increase of about double. But, as already stated, the new system has been too recently introduced to allow of its being subjected to the test of experience. Six months will be necessary, even after the country has been saturated with envelope and stamps, to enable a fair experimental estimate to be formed of its merits. It may, also, be certainly anticipated, whatever be the amount of the Post-office revenue under the new system at the outset, that it will increase with the rapidly increasing commerce, wealth, education, and population of the country. But that does not show that the new plan has any peculiar merit; the revenue would have increased under any reasonably well-contrived system. All taxes on articles in general use are sure, provided they be not excessive, to increase with every increase of population and wealth.

Had there been a surplus revenue of one or two millions, the loss that will be occasioned by the adoption of the new postage system would have been of less importance; though, if we estimate the loss at a million, it may be matter of doubt whether it would not have been more advantageous to have repealed those duties that bear hard on the great branches of national industry, as those on glass, raw cotton, &c. But the reduction has been forced upon the government, when the revenue is unequal to the expenditure, and when, consequently, the deficiency that it will occasion must be otherwise provided for. We, however, incline to think that by a judicious reduction and modification of some of the more oppressive and impolitic duties that still continue to disgrace our tariff, the whole, or, at all events, the greater part of the existing deficiency in the revenue may be made good without the imposition of any new tax, and without adding any thing to any one of the existing taxes. Any proposal for a new tax to meet the deficiency occasioned by the falling off in the Post-office revenue, will not tend much to increase the popularity of the uniform penny system.

The abolition of franking is a very great improvement. Franked letters were generally addressed to those who could best afford the expense of postage, and who thus escaped a burden that fell with its full weight on their less opulent and less known neighbours.—(Sup.)

UNITED STATES.—We subjoin an account of the number of post-offices, the extent of post roads, the rates of postage, &c. in the United States.

Post-offices and Postage.	
Post-offices in 1790	75; extent of post roads in miles 1,876
— 1803	833 30,817
— 1810 2,309	36,406
— 1820 4,500	72,492
— 1828 8,004	115,000

Rates of Postage.	
For Single Letters, composed of One Piece of Paper—	
Any distance not exceeding 30 miles, 6 cents.	
Over 30, and not exceeding 80 — 10 —	
— 80 — 150 — 12 1/2 —	
— 150 — 400 — 18 3/4 —	
— 400 miles — 25 —	

Double letters, or those composed of 2 pieces of paper, are charged with double the above rates.
 Triple letters, or those composed of 3 pieces of paper, are charged with triple the above rates.
 Quadruple letters, or those composed of 4 pieces of paper, are charged with quadruple the above rates.
 All letters weighing 1 ounce avoirdupois, or more, are charged at the rate of single postage for each 1/4 of an ounce, or quadruple postage for each ounce, according to their weight; and no letter can

be charged with more than quadruple postage, unless its weight exceeds 1 ounce avoirdupois.
 The postage on ship letters, if delivered at the office where the vessel arrives, is 6 cents; if conveyed by post, 2 cents in addition to the ordinary postage.
 Newspaper Postage.—For each newspaper, not carried out of the State in which it is published, or if carried out of the State, but not carried over 100 miles, 1 cent.
 Over 100 miles, and out of the State in which it is published 1 1/2 cent.
 Magazines and Pamphlets.—If published periodically, cannot not exceed 1 1/2 miles, 1 1/2 cent per sheet.
 — over 100 — 2 1/2 —
 If not pub. period, distance not exceeding 100 miles, 4 cts. per sheet.
 — over 100 — 6 —
 Small pamphlets, containing not more than 1 1/2 sheet paper, are charged with 1/2 the above rates. Eight pages quarts are rated as one sheet, and all other sizes in the same proportion.
 The number of sheets in a pamphlet sent by mail must be printed or written on one of the outer pages. When the number of sheets is not truly stated, double postage is charged.
 Every thing not coming under the denomination of newspapers or pamphlets is charged with letter postage.

Account of the Postage received at the Post-offices of some of the principal Towns of the United States, during the Year ended the 31st of March, 1832.

Towns.	Dollars.	Towns.	Dollars.
New York	160,373	Richmond	18,775
Philadelphia	106,430	Cincinnati	15,400

Charleston	30,423	Augusta	11,661

The post-master general of the United States stated, in a letter to a committee of Senate, 19th of May, 1833, that it was almost of daily occurrence, that a ton weight of newspapers was carried in one mail for hundreds of miles together. The total post-office revenue of the United States, in the year ended the 31st of March, 1832, amounted to 1,471,871 dollars; of which the newspaper postage made about 254,000 dollars.—(American Almanac for 1834.)

[The number of Post-offices in the United States, on the 1st of May, 1840, was 13,376. The revenue of the Post-office department for the year ending the 30th June, 1838, was \$12,233,077. The expenditures were 4,621,567.10

Excess of expenditures, 266,509.10
 The revenue of the year ending on the 30th of June last, was \$1,476,895.50
 The engagements and liabilities of the department for the same year, were 4,621,417.90

Excess of engagements and liabilities, 147,522.40

*Exclusive of the conveyance of letters and newspapers by steamboats on Long Island Sound, and Lakes Erie, Huron, and Michigan, under the 5th and 6th sections of the act of 1825, the aggregate length of which is about 1,229 miles, and the amount paid for which is about \$16,000 for the year preceding the 1st of July, 1838.—Am. Ed.]

POST ENTRY. When goods are weighed or measured, and the merchant has got an account thereof at the Custom-house, and finds his entry, already made, too small, he must make a post or additional entry for the surplussage, in the same manner as the first was done. As a merchant is always in time, prior to the clearing of the vessel, to make his post, he should take care not to over-enter, to avoid as well the advance, as the trouble of getting back the overplus. However, if this be the case, and an over-entry has been made, and more paid or bonded for customs than the goods really landed amount to, the land-waiter and surveyor must signify the same, upon oath made, and subscribed by the person so over entered, that neither he nor any other person, to his knowledge, had any of the said goods over-entered on board the said ship, or anywhere landed the same without payment of custom; which oath must be attested by the collector or comptroller, or their deputies, who then compute the duties, and set down on the back of the certificate, first in words at length, and then in figures, the several sums to be paid.

POSTING, travelling along the public road with hired horses, and with or without hired carriages. Duties are charged upon the horses and carriages so hired.—(For the duties on the latter, see vol. l. p. 351.) The duties on post horses are regulated by the 4 Geo. 4. c. 62.

Duties.—Every post-master to pay 5s. annually for a licence. For every horse, mare, or gelding, let for hire by the mile, 14d. For every mile; if let to go no greater distance than 8 miles, 1-5th part of the sum charged for such letting, or 1s. 9d.; if let to go no greater distance than 8 miles, and not to bring back any person, nor deviate from the usual line of road, 1s.; if let for any time less than 28 successive days, or in any other manner than by the mile, or to go no greater distance than 8 miles, in either case, 1-5th part of the sum charged on every such letting; or the sum of 2s. 6d. for each day not exceeding 3 days; and the sum of 1s. 9d. for each day exceeding 3, and not exceeding 13 days; and the sum of 1s. 3d. for each day exceeding 13, and less than 28 days. If let for 28 successive days, or for any longer period, and returned in a less period of time than twenty-eight successive days, and not exchanged for another horse, mare, or gelding, in continuation of the same hiring, 1-5th part of the sum agreed to be received for such letting, or the sum of 2s. 6d. for each day not exceeding 3 days; and the sum of 1s. 9d. for each day exceeding 3, and not exceeding 13 days; and the sum of 1s. 3d. for each day exceeding 13, and less than 28 days, during the time every such horse, &c. shall have been under the direction of the person hiring the same.

The duties imposed by the act do not extend to horses used in stage or hackney coaches duly licensed; nor to any mourning coach or hearse, where the same is hired to go no greater distance than 10 miles from Temple Bar; nor to any cart or carriage kept for the conveyance of fish. Persons letting any horse, mare, or gelding, for hire, without licence from the commissioners of stamps, are subject to a penalty of 10l. No post-master to keep more than 1 horse by virtue of a licence, under a penalty of 10l.; and the words licensed to let horses for hire to be painted in legible characters on the front of their houses, under a penalty of 5l. Postmasters are to give security by bond, to be forfeited on the expiration of 3 years. The commissioners or collector of stamps to furnish blank tickets and certificates to postmasters, and exchange and check tickets to the toll-gate keepers; the former containing the name and abode of the post-master, the number of horses, whether let for a day or longer period; the latter, the name of the toll-keeper, the place where he lives, and the places the horses hired are going to. When horses are returned within the period for which they were hired,

check tickets are to be delivered up to the collector; penalty 20l. Improperly using a check ticket subjects to a penalty of 50l. Travellers are to deliver up their tickets at the first toll-gate, and to ask for and receive the necessary exchange and check tickets in return.

Letting of Duties to farm.—The commissioners of stamps, by authority of the Lords of the Treasury, are authorized to let the post-horse duties to farm for any period not longer than 3 years, either in whole, or divided into divisions or districts. The biddings are conducted under regulations issued by the commissioner; at least a month's notice being given of the time and place of letting the duties. The highest bidder being preferred, must forthwith execute a contract, and give bond with three or more securities for payment of the yearly rent contracted for at the head office of stamps in equal portions by eight several annual payments. The commissioners have also the power to appoint a time for making a deposit, and the amount thereof; and in case any bidder fail of making such deposit, or of executing a proper contract and giving security, the duties to be again put up. Duties not to be farmed by persons licensed to let post horses.

An Account of the Produce of the Duties on Posting, in each of the Eight Years ending the 1st of January, 1833.—(Parl. Paper, No. 669. Sess. 1830, and Annual Finance Accounts.)

POTASH (Du. *Potaske*; Fr. *Potasse*; Ger. *Pottasche*; It. *Potassa*; Pol. *Potaz*; Rus. *Potashk*). If vegetables be burned, the ashes lixivated, and the solution boiled to dryness in iron vessels, the mass left behind is the *potash* of commerce—the impure carbonate of potash of chemists. It is intensely alkaline, solid, and coloured brown by the admixture of a small portion of vegetable inflammable matter, which generally becomes moist. When potash is calcined in a reverberatory furnace, the colouring matter is destroyed, it assumes a spongy texture, and a whitish pearly lustre; whence it is denominated *pearl-ash*. The latter generally contains from 60 to 83 or 84 per cent. of pure carbonate of potash.—(See vol. i. p. 29.)

The ashes of those vegetables only which grow at a distance from the sea, are employed in the manufacture of potash. Herbaceous plants yield the largest portion, and shrubs more than trees. It is principally manufactured in America, Russia, and Poland, the vast forests of which furnish an inexhaustible supply of ashes.

Potash is of great importance in the arts, being largely employed in the manufacture of flint glass and soft soap, the rectification of spirits, bleaching, making alum, scouring wool, &c. At an average of 1831 and 1832, the entries of pot and pearl ashes, for home consumption, amounted to 188,477 cwt. a year. Of 228,757 cwt. imported in 1831, 169,891 cwt. were brought from the British possessions in North America; 15,835 from the United States; the remainder being almost entirely furnished by Russia. The ashes of the United States are the purest, and bring the highest price.

The prices of pot and pearl-ash in the London market, in December, 1833, was as under:—

	£	s.	d.	£	s.	d.	£	s.	d.	£	s.	d.				
Canada, pot, 1st	-	-	1	4	6	0	0	0	0	United States, pearl, 1st	-	-	1	4	0	0
pearl, 1st	-	-	1	5	6	0	0	0	0	Russia, do. do.	-	-	1	3	0	1
United States, pot, 1st	-	-	0	0	0	0	0	0	0							

ashes from Canada are duty free; and those from Russia and the United States pay a duty of 5s. a cwt.

POTATOES (Ger. *Kartoffeln*; Du. *Aardappelen*; Fr. *Pommes de terre*; It. *Potato*; Pomi di terra; Sp. *Patatas manchegas*; Rus. *Jablaki semenie*) the roots of the *Solanum tuberosum*, of innumerable varieties, and too well known to require any description.

1. **Historical Notice.**—The potato, which is at present to be met with everywhere in Europe, and forms the principal part of the food of a large proportion of its inhabitants, was entirely unknown in this quarter of the world till the latter part of the 16th century. It is a native of America, but whether of both divisions of that continent is doubtful.—(Humboldt, *Nouvelle Espagne*, liv. iv. c. 9.) Some authors affirm that it was first introduced into Europe by Sir John Hawkins, in 1545; others, that it was introduced by Sir Francis Drake, in 1573; and others, again, that it was for the first time brought to England from Virginia, by Sir Walter Raleigh, in 1586. But this discrepancy seems to have arisen from confounding the common, or Virginian potato (the *Solanum tuberosum* of Linnaeus), with the sweet potato (*Convolvulus batatas*). The latter was introduced into Europe long before the former, and it seems most probable that it was the species brought from New Granada by Hawkins. Sweet potatoes require a warm climate, and do not succeed in this country; they were, however, imported in considerable quantities, during the 16th century, from Spain and the Canaries, and were supposed to have some rather peculiar properties. The kissing comfits of Falstaff, and such like confections, were principally made of batatas and ensip roots. On the whole, we are inclined to think that we are really indebted for the potato (as well as for tobacco) to Sir Walter Raleigh, or the colonists he had planted in Virginia. Gerarde, an old English botanist, mentions, in his *Herbal*, published in 1597, that he had planted the potato in his garden at London about 1590; and that it succeeded there as well as in its native soil, Virginia, whence he had received it. Potatoes were at first cultivated by a very few, and were looked upon as a great delicacy. In a manuscript account of the

household expenses proceeded to have been mentioned at the extension of their 1684, they were raised and planted, for they have long been very

Potatoes, it is computed that a quantity was sent by Youghal. Their produce was estimated at 3 to 4 to the acre.

Potatoes were not introduced into the open fields by James VI. at Edinburgh in 1719. The extension of the potato in the year 1720. The quantity raised was great as it was not

very common in the year 1720. It was now very common in the Irish, the Swiss, and the

India some 60 or 70 years ago. It was introduced into the common potato does not grow above 4,000 feet above the level of the sea in these regions. It was introduced into the potato portion of the food of the people of the taste for, and will

kind.—(For further particulars see the *State of the Potato in the State of the Potato*, pp. 460—465. 2. *History of Cultivation*

2. *Influence of the Potato on the People.*—There is a number of individuals compared with those of the proportion as high as 1 lb. of whole potatoes are, under Newenham, who have

Population of Ireland, however, that the difference in favour of the potato in Ireland is equal to 22,960 lb. of nutritive produce of wheat, but 480 lbs. gives in all of potatoes.—(Tour

however, be somewhat better adapted to the potato as that here, "an acre of potatoes is an acre of wheat."

It is clear, therefore, that the potato in this country may be cultivated, and would have been, had it not been for the

whether an increase of potatoes is desirable. Its effects—producing a more abundant and inestimable advantage as a food, and a hardy and productive soil for making

2 r 2

household expenses of Queen Anne, wife of James I., who died in 1618, and which is supposed to have been written in 1613, the purchase of a very small quantity of potatoes is mentioned at the price of 2s. a pound. The Royal Society, in 1663, recommended the extension of their cultivation, as a means of preventing famine. Previously, however, to 1684, they were raised only in the gardens of the nobility and gentry; but in that year they were planted, for the first time, in the open fields in Lancashire,—a county in which they have long been very extensively cultivated.

Potatoes, it is commonly thought, were not introduced into Ireland till 1610, when a small quantity was sent by Sir Walter Raleigh to be planted in a garden in his estate in the vicinity of Youghal. Their cultivation extended far more rapidly than in England; and have long furnished from $\frac{2}{3}$ to $\frac{3}{4}$ of the entire food of the people of Ireland!

Potatoes were not raised in Scotland, except in gardens, till 1728, when they were planted in the open fields by a person of the name of Prentice, a day labourer at Kilsyth, who died at Edinburgh in 1792.

The extension of the potato cultivation has been particularly rapid during the last 40 years. The quantity that is now raised in Scotland is supposed to be from 10 to 12 times as great as the quantity raised in it at the end of the American war; and though the increase

is not nearly so great as in Scotland, it has been greater than during any previous period of equal duration. The increase on the Continent has been similar. Potatoes are now very extensively cultivated in France, Italy, and Germany; and with the exception of the Irish, the Swiss have become their greatest consumers. They were introduced into India some 60 or 70 years ago; and are now successfully cultivated in Bengal, and have been introduced into the Madras provinces, Java, the Philippines, and China. But the common potato does not thrive within the tropics unless it be raised at an elevation of 3,000 or 4,000 feet above the level of the sea, so that it can never come into very general use in these regions. This, however, is not the case with the sweet potato, which has also been introduced into tropical Asia; and with such success, that it already forms a considerable portion of the food of the people of Java, and some other countries. So rapid an extension of the taste for, and the cultivation of, an exotic, has no parallel in the history of industry; it has had, and will continue to have, the most powerful influence on the condition of mankind.—(For further details with respect to the history of the potato, see *Sir F. M. Eden on the State of the Poor*, vol. i. p. 508.; *Humboldt, Essai sur la Nouvelle Espagne*, tome iii. pp. 460—465. 2d ed.; *Sir Joseph Banks on the Introduction of the Potato*; *Phillips's History of Cultivated Vegetables*, vol. ii. art. *Potato*.)

2. *Influence of the Cultivation of the Potato on the Number and Condition of the People.*—There is a considerable discrepancy in the statements of the best authors as to the number of individuals that might be supported on an acre of land planted with potatoes, as compared with those that might be supported on an acre sown with wheat; some stating the proportion as high as six to one, and others at only two to one. According to Mr. Arthur Young, 1 lb. of wheat is about equal in nutritive power to 5 lbs. of potatoes. But Mr. Newenham, who has carefully investigated this subject, states that "3 lbs. of good mealy potatoes are, undoubtedly, more than equivalent to 1 lb. of bread."—(*Newenham on the Population of Ireland*, p. 340.) and his estimate is rather above Mr. Wakefield's. Supposing, however, that 1 lb. weight of wheat is fully equal to four pounds of potatoes, still the difference in favour of the superior quantity of food derived from a given quantity of land planted with the latter is very great. According to Mr. Young, the average produce of potatoes in Ireland may be taken at 82 barrels the Irish acre; which, at 20 stone the barrel, is equal to 22,960 lbs.; and this being divided by four, to bring it to the same standard, in point of nutritive power, as wheat, gives 5,740 lbs. Mr. Young further estimates the average produce of wheat, by the Irish acre, at 4 quarters; which, supposing the quarter to weigh 480 lbs., gives in all 1,920 lbs., or about $\frac{1}{3}$ part of the solid nourishment afforded by an acre of potatoes.—(*Tour in Ireland*, Appen. pp. 12. 24. &c. 4to ed.) This estimate must, however, be somewhat modified when applied to Great Britain; the soil of which, while it is better adapted to the growth of wheat, is generally supposed not to be quite so suitable for the potato as that of Ireland. But it notwithstanding admits of demonstration, that even here, "an acre of potatoes will feed double the number of individuals that can be fed from an acre of wheat."—(*General Report of Scotland*, vol. i. p. 571.)

It is clear, therefore, on the most moderate estimate, that the population of a potato feeding country may become, other things being about equal, from 2 to 3 times as dense as it could have been, had the inhabitants fed wholly on corn. But it is exceedingly doubtful whether an increase of population, brought about by a substitution of the potato for wheat, be desirable. Its use as a subordinate or subsidiary species of food is attended with the best effects—producing both an increase of comfort and security; but there are certain circumstances inseparable from it, which would seem to oppose the most formidable obstacles to its advantageous use as a prime article of subsistence. The discussion of this subject can hardly be said properly to belong to a work of this sort; but its importance may, perhaps, excuse us for making a few observations with respect to it.

It is admitted on all hands, that the rate of wages is principally determined by the species of food made use of in a country. Now, as potatoes form that species which is produced at the very least expense, it may be fairly presumed, on general grounds, that wages will be reduced to a minimum wherever the labouring classes are mainly dependent on potatoes; and the example of Ireland shows that this conclusion is as consistent with fact as with principle. It is clear, however, that when the crop of potatoes happens to be deficient in a country thus situated, the condition of its inhabitants must be in the last degree unfortunate. During a period of scarcity men cannot go from a low to a high level: if they would elude its pressure, they must leave the dearer and resort to cheaper species of food. But to those who subsist on potatoes this is not possible; they have already reached the lowest point in the descending scale. Their wages being determined by the price of the least expensive sort of food, they cannot, when it fails, buy that which is dearer; so that it is hardly possible for them to avoid falling a sacrifice to absolute want. The history of Ireland abounds, unfortunately, in examples of this sort. Nothing is more common than to see the price of potatoes in Dublin, Limerick, &c. rise, because of a scarcity, to 5 or 6 times their ordinary price, and the people to be involved in the extreme of suffering; and yet it rarely happens, upon such occasions, that the price of corn is materially affected, or that any less quantity than usual is exported to England.

It may be said, perhaps, that, had potatoes not been introduced, wheat, or barley, or oats, would have been the lowest species of food; and that, whenever they happened to fail, the population would have been as destitute as if they had been subsisting on potatoes. It must, however, be observed, that the proportion which the price of wheat, or any species of grain, bears to the price of butcher's meat, tea, beer, &c. is always decidedly greater than the proportion which the price of potatoes bears to these articles: and it therefore follows, that a people who have adopted wheat, or any species of corn, for the principal part of their food, are much better able to make occasional purchases of butcher's meat, &c.; and will, consequently, be more likely to have their habits elevated, so as to consider the consumption of a certain quantity of animal food, &c. as indispensable to existence. And hence it appears reasonable to conclude, that a people who chiefly subsist on corn would, in most cases, subsist partially on butcher's meat, and would enjoy a greater or less quantity of other articles; so that it would be possible for them, in a period of scarcity, to make such retrenchments as would enable them to elude the severity of its pressure.

But, though the population in corn-feeding countries were dependent on the cheapest species of grain, not for a part only, but for the whole, of their food, their situation would, notwithstanding, be less hazardous than that of a population subsisting wholly on potatoes.

In the *first* place, owing to the impossibility, as to all practical purposes at least, of preserving potatoes, the surplus produce of a luxuriant crop cannot be stored up or reserved as a stock to meet any subsequent scarcity. The whole crop must necessarily be exhausted in a single year; so that, when the inhabitants have the misfortune to be overtaken by a scarcity, its pressure cannot be alleviated, as is almost uniformly the case in corn-feeding countries, by bringing the reserves of former harvests to market. Every year is thus left to provide subsistence for itself. When, on the one hand, the crop is luxuriant, the surplus is of comparatively little use, and is wasted unprofitably; and when, on the other hand, it is deficient, famine and disease necessarily prevail.

In the *second* place, the general opinion seems to be, that the variations in the quantities of produce obtained from land planted with potatoes, are greater than the variations in the quantities of produce obtained from land on which wheat, or any other species of grain, is raised.

And *lastly*, owing to the great bulk and weight of potatoes, and the difficulty of preserving them on shipboard, the expense of conveying them from one country to another is so very great, that a scarcity can never be materially relieved by importing them from abroad. In consequence, those who chiefly depend on potatoes are practically excluded from participating in the benevolent provision made by nature for equalizing the variations in the harvests of particular countries by means of commerce, and are thrown almost wholly on their own resources.

We should, therefore, be warranted in concluding, even though we were not possessed of any direct evidence on the subject, from the circumstances of the potato being a crop that cannot be kept on hand, from its natural fickleness, and from the incapacity of importing it when deficient, or of exporting it when in excess, that the oscillations in its price must be greater than in the price of wheat; and such, in point of fact, is the case. The oscillation in wheat is thought great when its price is doubled; but in a scarce year the potato is not unfrequently six times as dear as in a plentiful one!—(*Minutes of Evidence taken before the Agricultural Committee of 1821*, p. 212.) And the comparatively frequent recurrence of scarcities in Ireland, and the destitution and misery in which they involve the population, afford but too convincing proofs of the accuracy of what has now been stated.

It is, therefore, of the utmost consequence to the well-being of every people, and to their

protection in years of scarcity, that they should not subsist principally on the potato. In this country, the pressure of a scarcity is evaded by resorting to inferior species of food, such as potatoes, and a lower standard of comfort; but if our people were habitually fed on the potato, this would be impracticable. The chances of famine would thus be vastly increased; while, owing to the low value of the potato as compared with most other things, the labourers would have less chance of preserving or acquiring a taste for animal food, or other necessaries and luxuries; and, consequently, of changing, at any future period, their actual condition for a better.

It is not easy to form any very accurate estimate of the profit and loss attending the cultivation of potatoes to the farmer, as compared with other crops. This is a point as to which the statements of those best qualified to give an opinion differ very considerably. Mr. Loudon says, "they require a great deal of manure from the farmer; while, generally speaking, little is returned by them; they are a bulky, unhandy article, troublesome in the sowing and carrying processes, and interfering with the seed season of wheat,—the most important one to the farmer. After all, from particular circumstances, they cannot be wanted unless when raised in the vicinity of large towns; hence they are in most respects an unprofitable article to the agriculturist. To him, the real criterion is the profit which potatoes will return in feeding beasts; and here we apprehend the result will be altogether in favour of turnips and rutabaga, as the most profitable articles for that purpose."

It seems difficult to reconcile this statement with the rapid progress of the potato cultivation; but those who assent to what has been previously advanced with respect to the mischievous consequences that arise from the mass of the population becoming dependent on the potato as a principal article of food, will not regret though it should turn out to be accurate.

Dr. Colquhoun estimated the entire value of the potatoes annually consumed in Great Britain and Ireland at the end of the late war at sixteen millions sterling. But it is needless to say that there are no materials by which to form an estimate of this sort with any pretensions to accuracy. The one in question has been suspected, like most of those put forth by the same learned person, of exaggeration: and we incline to think that, had he estimated the value of the yearly produce of potatoes in the empire at twelve millions, he would have been nearer the mark. But on a point of this sort it is not possible to speak with any thing like confidence.

POUND, a money of account, = 20s.

POWDER, GUN. See GUNPOWDER.

PRECIOUS METALS, a designation frequently applied to gold and silver. We have given, under the articles GOLD, and SILVER, a short account of each metal; and we now propose laying before the reader a few details with respect to their supply and consumption.

To enter fully into this interesting and difficult subject would require a long essay, or rather a large volume. Mr. Jacob has recently published an "Historical Inquiry into the Introduction and Consumption of the Precious Metals," in which he takes up the subject at the earliest period, and continues it to the present day. This work, though neither so complete nor satisfactory as might have been expected, contains a good deal of valuable information, and deserves the attention of all who take an interest in such inquiries. We confess, however, that several of the learned author's statements and conclusions seem to us to be not a little wide of the mark. We shall notice one or two of them in the course of this article.

1. *Supply of the Precious Metals.*—Since the discovery of America, the far greater part of the supplies of gold and silver have been derived from that continent. Previously to the publication of Humboldt's great work, *Essai Politique sur la Nouvelle Espagne*, several estimates, some of them framed by individuals of great intelligence, were in circulation, of the quantities of gold and silver imported from America. They, however, differed widely from each other, and were all framed from comparatively limited sources of information.* But these have been wholly superseded by the more extensive and laborious investigations of M. Humboldt. This illustrious traveller, besides being acquainted with all that had been written on the subject, and having ready access to official sources of information unknown to the writers already alluded to, was well versed in the theory and practice of mining, and

*Humboldt has brought these estimates together as follows:—

Author.	Epochs.	Dollars.	Author.	Epochs.	Dollars.
Castriz	- - 1492—1724	- 8,530,000,000	Gerboix	- 1724—1800	- 1,000,000,000
Solorzano	- - 1492—1628	- 1,500,000,000	The Author of the <i>Recherches sur le Commerce, Aniat.</i> 1770.	1402—1775	- 5,072,000,000
Moncada	- - 1492—1595	- 2,000,000,000			
Navarrete	- - 1519—1617	- 1,536,000,000			
Raynal	- - 1492—1700	- 5,151,000,000			
Robertson	- - 1492—1775	- 8,800,000,000	(Essai sur la Nouvelle Espagne, tome II. p. 412.)		
Necker	- - 1763—1777	- 301,000,000			

There are so many sources of error attached to all investigations of this sort, that these results, though deduced from what may be reckoned good authority, cannot be altogether depended upon. The consular returns contain no account of the produce of the Peruvian mines, except in so far as they come under the head of Buenos Ayres; and in this respect they differ very widely from the statements given by Mr. Jacob, who estimates the produce of the mines of Peru and Buenos Ayres, during the 20 years ending with 1829, at about 18,500,000! We also incline to think that the mines and washings in Colombia are not quite so neglected as they are said to be by the consul. It will be observed, too, that the above account does not include the produce of the Brazilian mines. They are supposed to have yielded, since 1810, about 1,500,000 dollars a year; but this is not more than adequate for the wants of the country. The produce of the Russian mines were comparatively trifling till 1810; but it has since increased, and is continuing to increase with considerable rapidity.

Adding to the produce of the American, that of the Russian mines, and separating the gold from the silver, their total produce, according to the consular returns, during each of the 4 decennial periods ending with 1829, has been about—

Ten-year ending	Gold.	Silver.	Both.
	L.	L.	L.
1799	3,995,000	66,260,000	62,585,000
1809	4,160,000	85,367,000	89,547,000
1819	8,955,000	26,851,000	35,806,000
1829	6,752,000	23,712,000	31,464,000

This gives 3,146,000L for the average annual supply of the American and Russian mines during the 10 years ending with 1829. But the returns show that the produce of the Mexican mines had begun materially to increase in the latter years of this period; and we have to add to the above the produce of the Hungarian and Saxon mines. Hence, allowing for the increase that has taken place since 1829 in the productiveness of the Mexican and South American mines, exclusive of Brazil, and adding to their produce that of the Russian and other European mines, we may safely estimate (assuming the consuls not to have underrated the American returns) the present annual supply of gold and silver from these sources at considerably more than 4,000,000L.

Exclusive of the sources now mentioned, the United States have recently begun to afford considerable quantities of gold. It was first discovered in North Carolina, in 1804; and from that period till 1829, about 109,000 dollars had been found. It has since been discovered in other States. The following Table exhibits the value of the gold annually produced in the United States since 1829.—(*American Almanac* for 1834.)

States.	1829.	1830.	1831.	1832.
Virginia	Dollars, 2,500	Dollars, 24,000	Dollars, 26,000	Dollars, 24,000
North Carolina	134,000	204,000	294,000	418,000
South Carolina	3,500	26,000	22,000	45,000
Georgia	176,000	140,000
Alabama	1,000	..
Tennessee	1,000	1,000
Total	140,000	469,000	620,000	678,000

This Table shows a considerable increase; the produce in 1832 being above 135,000L. It is principally obtained by washing the soil in the valleys. Taking this new supply into account, and including, as was done by M. Humboldt, the produce of the Brazilian mines; and further adding 500,000L to the sums given in the consular returns, to cover the deficiencies which they certainly involve;* we may safely estimate the entire annual produce of the American, European, and Russo-Asiatic mines, as amounting, at this moment, to about 6,000,000L a year; being 6-10ths of their annual produce when greatest.

2. *Consumption of the Precious Metals.*—Gold and silver are supplied either to serve as coin, or are made use of in the arts. There are no means whatever by which to discover the proportion in which they are applied, at any given period, to these purposes; and the proportion is perpetually varying with the varying circumstances of each country; as, for example, with the greater or less abundance of paper money, and the degree in which the use of coins is saved by the various devices resorted to by means of banking and otherwise for economising currency, the greater or less wealth of the inhabitants, the fashion as to plate, the feeling of security at the moment, and a thousand other circumstances,—all of which are liable to great and sometimes sudden changes.

According to Mr. Jacob, the value of the precious metals annually applied to ornamental and luxurious purposes in Europe may be estimated as follows: viz. Great Britain, 2,457,221L; France, 1,200,000L; Switzerland, 350,000L; remainder of Europe, 1,605,499L; making in all, 5,612,711L. And adding to this the sums directly applied to the same purposes in America, the whole will be about 8,900,000L.

The data upon which this estimate has been founded, are in the last degree vague and

* Even with this addition, their produce is materially under the sum mentioned by Mr. Jacob.

(*Bornier, Voyage de Mogol*, Amst. 1710, tome i. p. 209.; *Serafton on the Government of Hindostan*, p. 16. &c.) But it is not confined to that quarter. Wherever property is insecure, it is invariably resorted to. Mr. Wakefield tells us that it is common in Ireland.—(*Account of Ireland*, vol. i. p. 593.) It has always prevailed to a considerable extent in Russia and France; and in the latter, during the revolutionary anarchy, immense sums were buried, of which it is abundantly certain a large proportion will never be resuscitated. The wars and convulsions by which Europe was desolated for more than 20 years extended the practice to all parts of the Continent; withdrawing in this way from circulation a very considerable part of the increased produce of the mines.—(*Storch, Economie Politique*, tome i. p. 221 Paris, 1823.)

2. *Exportation of the Precious Metals to the East.*—It must be well known to all our readers, that from the remotest era down to a comparatively late period bullion has always formed one of the principal and most advantageous articles of export to the East. Humboldt estimated that, of the entire produce of the American mines at the beginning of this century, as already seen, to 43,500,000 dollars, no less than 25,500,000 were sent to Asia—17,500,000 by the Cape of Good Hope, 4,000,000 by the Levant, and 4,000,000 through the Russian frontier.—(*Nouvelle Espagne*, tome iii. p. 443.) Latterly, however, this immense drain has not only entirely ceased; but the current has, in fact, begun to set strongly in the opposite direction. Thus it appears that the total imports of gold and silver from Europe and North and South America into Bengal, Madras, and Bombay, during the 3 years ending with 1830-31, amounted to 479,388*l.*; whereas the total exports of the precious metals from these 3 presidencies to Europe and America during the same 3 years were 1,119,973*l.*, being an excess of 640,585*l.*: so that India, instead of importing, as formerly, very large quantities of bullion from the Western World, supplied, during the period in question, about 213,000*l.* a year to its markets!—(*Parl. Paper*, No. 390. Sess. 1833.) The same is the case with China. During the year ending the 31st of March, 1832, silver was exported from Canton to England to the amount of 1,976,930 dollars, or 380,000*l.*, besides about as much more exported to India!—(*See* vol. i. p. 361.) A considerable part of this large export consists of native silver, of which there are mines in several provinces. China has also mines of gold; and in some late years her export of that metal have been considerable: she is, however, an importer as well as an exporter of gold, having for a lengthened period drawn considerable supplies of that metal from Borneo, Celebes, and the Malay peninsula. It appears, too, that the efflux of bullion from Russia to China has ceased; and that there, also, the current is setting the opposite way.—(*Jacob*, vol. ii. p. 320.) And if there be any sums still exported by way of the Levant, which is doubtful, they are certainly quite inconsiderable.

4. *Influence of the diminished Productiveness of the Mines on Prices.*—It has been customary in this country to ascribe almost the whole fall that has taken place in the price of most commodities since the peace, to the diminished supply of bullion from the mines. But we doubt whether this circumstance has not been fully counterbalanced by others, and whether it has had any influence in the way now mentioned. The cessation of the drain to the East, even admitting that M. Humboldt has somewhat over-rated its amount, would of itself have gone far to counteract the decreased productiveness of the mines; but we have just seen that it has not merely ceased, but that we are, in fact, deriving considerable supplies from that very quarter. In addition to this, the greater security and tranquillity enjoyed on the Continent since the peace, has not only checked that burying of money, formerly so prevalent, but has caused the bringing to light of a good many of the subterranean hoards. The institution of savings' banks, now so common everywhere, has also, no doubt, tended to prevent hoarding, and to bring a good deal of coin into circulation, that would otherwise have been locked up. These circumstances, coupled with others that might be mentioned, such as the cessation of the demand for military chests, the greater employment of bills in mercantile transactions, &c., afford the best grounds for doubting whether the quantity of the precious metals annually applicable to the purposes of circulation be not as great at present, as in 1809 or 1810. It is further to be observed, that the falling off in the produce of the mines has been in silver only; and that the supply of gold, instead of being diminished during the last 10 years, has been very materially increased: and as gold is the standard of our currency, it is obviously false to affirm that its value has been increased from its being less abundant than formerly.* It is contended, indeed, that in estimating the value of the precious metals, we cannot separate gold and silver; and that the fall that has taken place in the prices of all commodities since 1815, proves that the value of money has sustained a corresponding advance. But the value of gold is in no way dependent upon, or connected with, the value of silver. The exchangeable worth of each metal is wholly determined by the peculiar conditions under which it is supplied; and the circumstances of gold falling in value when silver is rising, is no more to be wondered at, than that lead should fall when iron rises, or conversely. Neither is it true that the fall in

* This fact shows the reliance to be placed on the information and opinions of those who recommend the adoption of a silver standard as a means of diminishing the public burdens!

the value of commodities since 1815 has been universal. We admit it has been very general; but we venture to affirm that there is not, without any exception whatever, a single commodity that has fallen in price since 1814, the fall of which may not be satisfactorily accounted for without reference to the supply of gold and silver.—(See vol. i. p. 81.) Multiplied proofs of what is now stated, will be found in various articles throughout this work. And we have little doubt that those who investigate the matter with any degree of care, will agree with us in thinking, that, even without distinguishing between gold and silver, were the influence of the decreased productiveness of the mines on prices estimated at from 3 to 5 per cent., it would be very decidedly beyond the mark. We believe its influence has been hardly perceptible.

5. *Probable future Supply of Gold and Silver.*—Nothing but conjectural statements can be made as to the probable future supply of the precious metals. On the whole, however, we should think that a very considerable increase may be fairly anticipated. The anarchy, in which the new South American States have hitherto been involved, will come to a close; and, with the increase of population and capital, renewed attention will, doubtless, be paid to the mines. It is reasonable also, we think, to anticipate that the supplies from the Russian mines will continue to increase.

[For the value of the gold received at the mint from the gold region of the United States, see article COINS.—*Am. Ed.*]

PREMIUM. See INSURANCE.

PRICES. By the price of a commodity is meant its value estimated in money, or simply, the quantity of money for which it will exchange. The price of a commodity rises when it fetches more, and falls when it fetches less money.

1. *Price of freely produced Commodities.*—The exchangeable value of commodities—that is, their power of exchanging for or buying other commodities—depends, at any given period, partly on the comparative facility of their production, and partly on the relation of the supply and demand. If any 2 or more commodities respectively required the same outlay of capital and labour to bring them to market, and if the supply of each were adjusted exactly according to the effectual demand—that is, were they all in sufficient abundance, and no more, to supply the wants of those able and willing to pay the outlay upon them, and the ordinary rate of profit at the time—they would each fetch the same price, or exchange for the same quantity of any other commodity. But if any single commodity should happen to require less or more capital and labour for its production, while the quantity required to produce the others continued stationary, its value, as compared with them, would, in the first case, fall, and in the second, rise; and, supposing the cost of its production not to vary, its value might be increased by a falling off in the supply, or by an increase of demand, and conversely.

But it is of importance to bear in mind, that all variations of price arising from any disproportion in the supply and demand of such commodities as may be *freely produced in indefinite quantities*, are *temporary* only; while those that are occasioned by changes in the cost of their production are *permanent*, at least as much so as the cause in which they originate. A general mourning occasions a transient rise in the price of black cloth: but supposing that the fashion of wearing black were to continue, its price would not permanently vary; for those who previously manufactured blue and brown cloths, &c. would henceforth manufacture only black cloth; and the supply being in this way increased to the same extent as the demand, the price would settle at its old level. Hence the importance of distinguishing between a variation of price originating in a change of fashion, or other accidental circumstances—such, for example, as a deficient harvest—and a variation occasioned by some change in the cost of production. In the former case, prices will, at no distant period, revert to their old level; in the latter, the variation will be lasting.

When the *price* of a freely produced commodity rises or falls, such variation may evidently be occasioned either by something affecting its value, or by something affecting the value of money. But when the generality of commodities rise or fall, the fair presumption is, that the change is not in them, but in the money with which they are compared. This conclusion does not, however, apply in all cases; and we believe that most part of that fall in the price of commodities, which has taken place since the peace, and which has been so generally ascribed to a rise in the value of money, occasioned by a decline in the productiveness of the mines, has been caused by the increased productiveness of industry, arising from the abolition of oppressive restraints on commerce, the opening of new and more abundant sources of supply, and the discovery of new means, and improved methods of production.—(See PREVIOUS METALS.)

2. *Price of monopolised Commodities.*—Exclusive, however, of the commodities now alluded to, there is a considerable class, whose producers or holders enjoy either an *absolute* or a *partial* monopoly of the supply. When such is the case, prices depend entirely or principally on the proportion between the supply and demand, and are not liable to be influenced, or only in a secondary degree, by changes in the cost of production. in small quantities in particular situations; and a few other articles; exist under what may be called absolute monopolies;—their supply cannot be increased; and their price must, therefore, depend entirely on the competition of those who may wish to buy them, without being in the slightest degree influenced by the cost of their production.

Monopolies are sometimes established by law; as when the power to supply the market with a particular article is made over to one individual or society of individuals, without any limitation of the price at which it may be sold; which, of course, enables those possessed of the monopoly to exact the highest price for it that the competition of the buyers will afford, though such price may exceed the cost of production in any conceivable degree. Monopolies of this sort used to be common in England, particularly in the reign of Elizabeth: but they were finally abolished by the famous act of the 21 Jac. 1. c. 3.—an act which, by establishing the freedom of competition in all businesses carried on at home, has been productive of the greatest advantage.—(See *MONOPOLY*.)

The corn laws establish a partial monopoly of the supply of Great Britain with corn in favour of the agriculturists; but, as competition is carried to as great an extent in agriculture as in any other business, this monopoly does not enable them to obtain a higher price for their produce than is sufficient to pay the expenses of its production: though, owing to the peculiar circumstances under which this country is placed, this price is higher than the price in the surrounding countries. Hence it results that the monopoly is injurious to the public, without being of any advantage to those engaged in the business of agriculture. Neither, indeed, can it be truly said to be advantageous to the landlords.—(See vol. i. p. 495.)

The rights conveyed by patents sometimes establish a valuable monopoly; for they enable the inventors of improved methods of production to maintain, during the continuance of the patent, the price of the article at a level which may be much higher than is required to afford them the ordinary rate of profit. This advantage, however, by stimulating invention, and exciting to new discoveries, of which it is the natural and appropriate reward, instead of being injurious, is beneficial to the public.—(See *PATENTS*.)

There are also partial monopolies, depending upon situation, connection, fashion, &c. These, and other inappreciable circumstances, sometimes occasion a difference of 30 per cent., or more, in the price of the same article in shops not very distant from each other.

Generally speaking, the supply of monopolized commodities is less liable to vary than those that are freely produced; and their prices are commonly more steady. But there are various exceptions to this rule, and of these the corn monopoly is one. The great variations in the harvests of particular countries, and their average equality throughout the world, exposes a nation which shuts foreign corn out of its ports to destructive vicissitudes of price, from which it would enjoy a nearly total exemption were the ports open.—(See vol. i. p. 493.) Sometimes the expiration of a monopoly—a patent, for example—has occasioned a sudden and extraordinary increase of supply, and consequent fall of price; entailing, of course, a serious loss on the holders of large stocks of goods produced under the monopoly.

3. *New Sources of Supply.*—The effects on prices produced by the opening of new markets, or new sources of supply, are familiar to every one. The fall that has taken place in the price of pepper, and of most sorts of commodities brought from the East, since the opening of the trade in 1814, is a conspicuous proof of what is now stated.

4. *Influence of War on Prices.*—The effect of war in obstructing the ordinary channels of commercial intercourse, and occasioning extreme fluctuations in the supply and price of commodities, is well known. In this respect, however, the latter part of the late war is, perhaps, entitled to a pre-eminence. We had then to deal with an enemy who had extended his sway over most part of the Continent; and who endeavoured, by every means in his power, to shut us out of the Continental markets. Mr. Tooke has given, in his elaborate and valuable work on *High and Low Prices*, a variety of details which strikingly illustrate the effect that the regulations then adopted by the belligerent powers had on prices. "Among the means," says Mr. Tooke, "devised by the ingenuity and enterprise of adventurers to evade or overcome the obstacles presented by the decrees of the enemy, one in particular, which was resorted to on an extensive scale, deserves mention, as illustrating in a striking manner the degree in which those obstacles were calculated to increase the cost to the consumer. Several vessels laden with sugar, coffee, tobacco, cotton twist, and other valuable commodities, were despatched from England at very high rates of freight and insurance to Malacca, where the goods were landed, and thence conveyed on mules and horses through Serbia and Hungary to Vienna, for the purpose of being distributed over Germany, and, possibly, into France. Thus it might happen that the inhabitants of that part of the Continent most contiguous to this country could not receive their supplies from us, without an expense of conveyance equivalent to what it would be, if they were removed to the distance of a sea voyage twice round the globe, but not subject to fiscal and political regulations." And in consequence of these, and other causes of the same sort, Mr. Tooke mentions that the price of sugar in France, and other parts of the Continent, during the latter years of the war, was as high as 6s. and 6s. a pound; that coffee rose to 7s.; indigo to 18s., and so on.

But the sums charged for freight and insurance were the most extraordinary. Mr. Tooke states, that he has known instances in which the licence, freight, and other charges on account of a vessel of about 100 tons burden, making a voyage from Calais to London and back, have amounted to the almost incredible sum of 50,000*l.* A ship of which the whole cost and outfit did not amount to 4,000*l.*, earned, during the latter period of the war, a gross freight of 80,000*l.* on a voyage from Bordeaux to London and back! The freight of indigo from London to the Continent does not at present exceed 1*d.* a pound; whereas it amounted, at the period referred to, to about 4*s.* 6*d.*—(*High and Low Prices*, 2d ed. p. 212.)

5. *Influence of Taxes on Prices.*—It is unnecessary to dilate on a topic so familiar to every one. When a tax is laid on a commodity, its price necessarily rises in a corresponding proportion; for otherwise the producers would not obtain the ordinary rate of profit, and would, of course, withdraw from the business. The rise in the price of several of the articles in the annexed Table, is principally to be ascribed to the increase of taxation.

These statements will probably suffice to give our readers a general idea of the principles which determine the value of commodities. To go deeper into the subject would involve us in discussions that belong to political economy, and are among the most intricate in that science. The influence of speculation on prices must not, however, be passed over in a work of this sort.

6. *Influence of Speculation on Prices.*—It very rarely happens that either the actual supply of any species of produce in extensive demand, or the intensity of that demand, can be exactly measured. Every transaction in which an individual buys produce in order to sell it again, is, in fact, a speculation. The buyer anticipates that the demand for the article he has purchased will be such, at some future period, either more or less distant, that he will be able to dispose of it with a profit; and the success of the speculation depends, it is evident, on the skill with which he has estimated the circumstances that must determine the future price of the commodity. It follows, therefore, that in all highly commercial countries, where merchants are possessed of large capitals, and where they are left to be guided in the use of them by their own discretion and foresight, the prices of commodities will frequently be very much influenced, not merely by the actual occurrence of changes in the accustomed relation of the supply and demand, but by the anticipation of such changes. It is the business of the merchant to acquaint himself with every circumstance affecting the particular description of commodities in which he deals. He endeavours to obtain, by means of an extensive correspondence, the earliest and most authentic information with respect to every thing that may affect their supply or demand, or the cost of their production; and if he learned that the supply of an article had failed, or that, owing to changes of fashion, or to the opening of new channels of commerce, the demand for it had been increased, he would most likely be disposed to become a buyer, in anticipation of profiting by the rise of price, which, under the circumstances of the case, could hardly fail of taking place; or, if he were a holder of the article, he would refuse to part with it, unless for a higher price than he would previously have accepted. If the intelligence received by the merchant had been of a contrary description—if, for example, he had learned that the article was now produced with greater facility, or that there was a falling off in the demand for it, caused by a change of fashion, or by the shutting up of some of the markets to which it had previously been admitted—he would have acted differently: in this case he would have anticipated a fall of prices, and would either have declined purchasing the article, except at a reduced rate, or have endeavoured to get rid of it, supposing him to be a holder, by offering it at a lower price. In consequence of these operations, the prices of commodities, in different places and periods, are brought comparatively near to equality. All abrupt transitions, from scarcity to abundance, and from abundance to scarcity, are avoided; an excess in one case is made to balance a deficiency in another, and the supply is distributed with a degree of steadiness and regularity that could hardly have been deemed attainable.

It is obvious, from what has now been stated, that those who indiscriminately condemn all sorts of speculative engagements, have never reflected on the circumstances incident to the prosecution of every undertaking. In truth and reality, they are all speculations. Their undertakers must look forward to periods more or less distant; and their success depends entirely on the sagacity with which they have estimated the probability of certain events occurring, and the influence which they have ascribed to them. Speculation is, therefore, really only another name for foresight; and though fortunes have sometimes been made by a lucky hit, the character of a successful speculator is, in the vast majority of instances, due to his only who has skilfully devised the means of effecting the end he had in view, and who has outstripped his competitors in the judgment with which he has looked into futurity, and appreciated the operation of causes producing distant effects. Even in the securest businesses, such as agriculture and manufactures, there is, and must be, a great deal of speculation. An unlooked for change of season frequently disappoints the apparently reasonable expectations of those who undertake the former; while the equally capricious variations of fashion have to be encountered by those engaged in the latter; and each is, besides, liable to be affected

by legislative enactments, by new discoveries in the arts, and by an endless variety of circumstances which it is always very difficult, and sometimes quite impossible, to foresee. On the whole, indeed, the gains of the undertakers are so adjusted, that those who carry them on obtain, at an average, the common and ordinary rate of profit. But the inequality in the gains of individuals is most commonly very great: and while the superior tact, industry, or good fortune of some enable them to realise large fortunes; the want of discernment, the less vigilant attention, or the bad fortune of others, frequently reduces them from the situation of capitalists to that of labourers.

The great cotton speculation of 1825 took its rise partly and chiefly from a supposed deficiency in the supply of cotton, partly from an idea that there was a greatly increased demand for raw cotton in this country and the Continent, and partly from a belief that the stocks on hand were unusually low. Now it is obvious, that the success of those who embarked in this speculation, depended entirely on two circumstances; viz. first, that they were right in the fundamental supposition on which the whole speculation rested, that the supply of cotton was no longer commensurate with the demand; and second, that their competition did not raise the price so high as to diminish the consumption by the manufacturers in too great a degree to enable them to take off the quantity to be actually brought to market. If the merchants had been well founded in their suppositions, and if their competition had not raised the price of cotton too high, the speculation would certainly have been successful. Not, indeed, of being well founded, the hypothesis on which the whole thing rested was perfectly visionary.—There was no deficiency in the supply of cotton, but, on the contrary, a great superabundance; and though there had been such a deficiency, the excess to which the price was carried must have checked consumption so much as to occasion a serious decline. The falling off in the imports of cotton from America, in 1824, seems to have been the source of the delusion. It was supposed that this falling off was not accidental, but that it was a consequence of the price of cotton having been for a series of years so low as to be inadequate to defray the expenses of its cultivation. The result showed that this calculation was most erroneous. And besides, in entering on the speculation no attention was paid to Egypt and Italy,—countries from which only about 1,400,000 lbs. of cotton were obtained in 1824, but from which no less than 23,800,000 lbs. were obtained in 1825! This unlooked-for importation was of itself almost enough to overturn the combinations of the speculators; and, coupled with the increased importation from America and other countries, actually occasioned a heavy glut of the market.

The risk to which merchants are exposed, when they either sell off any commodity at a reduced price in anticipation of a fall, or buy at an advanced price in anticipation of a future rise, is a consequence principally of the extreme difficulty of ascertaining the true state of the fact with respect to the grounds on which an abundant or a deficient supply, or an increasing or decreasing demand, may be expected. Rules can here be of no service; every thing depends upon the talent, tact, and knowledge of the party. The questions to be solved are all practical ones, varying in every case from each other; the skill of the merchant being evinced by the mode in which he conducts his business under such circumstances, or by his sagacity in discovering coming events, and appreciating their character and the extent of their influence. Priority, but, above all, accuracy of intelligence, is, in such cases, of the utmost consequence. Without well authenticated data to go upon, every step taken may only lead to error. The instances, indeed, in which speculations, apparently contrived with the greatest judgment, have ended in bankruptcy and ruin, from a deficiency in this essential requisite, are so very numerous, that every one must be acquainted with them. Hence the importance of selecting acute and cautious correspondents; and hence, also, the necessity of maturely weighing their reports, and of endeavouring, by the aid of information gleaned from every authentic accessible source, to ascertain how far they may be depended upon.

When a few leading merchants purchase in anticipation of an advance, or sell in anticipation of a fall, the speculation is often pushed beyond all reasonable limits, by the operations of those who are influenced by imitation only, and who have never, perhaps, reflected for a moment on the grounds on which a variation of price is anticipated. In speculation, as in most other things, one individual derives confidence from another. Such a one purchases or sells, not because he has any really accurate information as to the state of the demand and supply, but because some one else has done so before him. The original impulse is thus rapidly extended; and even those who are satisfied that a speculation, in anticipation of a rise of prices, is unsafe, and that there will be a recoil, not unfrequently adventure, in the expectation that they will be able to withdraw before the recoil has begun.

It may, we believe, speaking generally, be laid down as a sound practical rule, to avoid having any thing to do with a speculation in which many have already engaged. The competition of the speculators seldom fails speedily to render an adventure that might have been originally safe, extremely hazardous. If a commodity happen to be at an unusually reduced price in any particular market, it will rise the moment that different buyers appear in the field; and supposing, on the other hand, that it is fetching an unusually high price, it will
