© 1998

The copy filmed here has been reproduced thanks to the generosity of:

National Library of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol \rightarrow (meaning "CONTINUED"), or the symbol ∇ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Bibliothèque nationale du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole \rightarrow signifie "A SUIVRE", le symbole ∇ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

BULLETIN No. 128
COMMON SALT

LABORATORY
OF THE
INLAND REVENUE DEPARTMENT

OTTAWA, CANADA

BULLETIN No. 128

COMMON SALT

OTTAWA, October 25, 1906.

W. J. GERALD, Esq.,
Deputy Minister of Inland Revenue.

SIR,—In accordance with your authorisation of August 14 last, a collection of table and dairy salt samples was made in August and September last, the number and the localities where collected being as follows :—

Inspection Districts.	No. of Samples.
Nova Scotia	5
Prince Edward Island	2
New Brunswick	5
Quebec	8
St. Hyacinthe	8
Montreal	10
Ottawa	8
Kingston	8
Toronto	10
London	8
Manitoba	6
Calgary	4
British Columbia	5
Total	87

The origin of these samples and the results they yielded on analysis to Mr. J. G. A. Valin, Assistant Analyst, are given in the table appended to this report. The percentage of chloride of sodium contained in them varies from 93 to 98, with corresponding differences as regards the quantities of moisture and impurities present. It is probably inadmissible to call the latter adulterations, the limits of variability for salt not having been yet established in Canada. In the United States a standard was

adopted on June 26, 1906, by circular No. 19 from the office of the Secretary of Agriculture, which reads as follows:—

Table salt, dairy salt, is fine grained crystalline salt, containing, on a water free basis, not more than one and four tenths (1.4) per cent of calcium sulphate (CaSO_4), nor more than five tenths (0.5) per cent of calcium and magnesium chlorides (CaCl_2 and MgCl_2) nor more than one tenth (0.1) per cent of matters insoluble in water.

It is not necessary to recalculate the results given in the table and state them on a dry basis in order to see that a very large proportion of the sample described would not come up to the United States standard. Taking the figures as they stand in the table there are at least one-half of the samples which would not do so. It is enough for the present to call attention to this fact in order that manufacturers or furnishers may aim at supplying an article of a higher degree of purity. On the other hand it is satisfactory to note that many of the samples of Canadian origin fulfil the requirements of the United States Department of Agriculture.

Among the samples examined there are six which contain foreign substances insoluble in water, and which have apparently been added to prevent the particles of salt from caking together. It does not appear that this constitutes adulteration, for the Act provides that the usual definitions shall not apply, 'if any matter or ingredient not injurious to health has been added to the food or drug because the same is required for the production or preparation thereof as an article of commerce in a fit state for carriage or consumption, and not fraudulently to increase the bulk weight or measure of the food or drug, or to conceal the inferior quality thereof.' Nevertheless it would seem to be necessary that these brands should each, on selling, be labelled as a mixture.

I have the honour to be, sir,
Your obedient servant,

THOMAS MACFARLANE,
Chief Analyst.

Worcester salt is made in such a way that it is impossible for it to be unclean or impure. While, best of all, it can be sold to families at about the same price as any other, and is stronger than other kinds. It is really most economical.	0.44	0.00	1.88	0.76	0.16	96.76	28175
