Now, Sir, when the Grand Trunk Pacific Railway submitted their first proposition to this parliament, it was not at all the same proposition as that which we are now called upon to ratify. It provided for the extension of the Grand Trunk Railway from its present terminus at North Bay to the Pacific ocean. But there happened to be another charter in existence, that of the Trans-Canada Railway, held by some Quebec capitalists and other gentlemen; and pressure was brought to bear on the government of the day by these gentlemen and in turn by the government on the Grand Trunk Pacific Company, to extend their eastern terminus to the city of Quebec. The Liberal members from the maritime provinces, seeing the success of these gentlemen from Quebec, thought that their political influence might also be catered to by having the eastern terminus extended further, and located in one of the maritime provinces. But here a difficulty arose. The rival claims of St. John and Halifax loomed up on the horizon, as to which should be made the Canadian port. A solemn conclave was held by the Liberal members from the maritime provinces, to which, by the way, their fellow-members in the House of Commons of the Conservative persuasion were not invited, and a compromise was

effected by which neither St. John nor Halifax, but the inland city of Moncton, was selected as the eastern terminus; which makes it absolutely necessary to use the Intercolonial Railway from that point to reach either St. John on the one hand or Halifax on the other. The government are quite well aware of the fact that during the last few years especially there has been growing up in this country a very strong opinion in favour of government ownership of public utilities. But fearing to grapple with this question, not having sufficient statesmanship to construct a line right through to the Pacific coast under government control, they thought they would cater to this element of our population by seeming to adopt in part this principle, by constructing themselves a line 1,800 miles in length from Winnipeg to Moncton, and handing it over to the Grand Trunk Pacific Company for a period of fifty years, allowing the company to construct the line from Winnipeg to the Pacific coast by the government guaranteeing their bonds and paying a certain amount of interest, which is practically a subsidy on the cost of construction. I venture to say that this scheme, which has been properly called a hybrid scheme, which possesses neither the virtues of government ownership nor those of company ownership, but the evils of both, will satisfy neither those of our people who are in favour of government ownership nor those who believe in leaving such undertakings to private enterprise.

Now, whatever difference of opinion there may exist in our country to-day as to the wisdom or otherwise of a state-owned and controlled railway through Canada from from ocean to ocean, we cannot shut our eyes to this fact, that in this age of rapid progress and advancement, what might to-day receive a half-hearted support at the hands of the people, may in a few years become their unanimous desire. But by this scheme of the government, we put it out of our power to have government ownership in the proper sense of the term in the next fifty years. No matter to what an extent public sentiment may have developed in the meantime, no matter how urgent may be the demand for government control of rates, if we adopt this scheme of the government, we put it absolutely out of our power to obtain relief by government ownership in that long period. We have already a system of government railways extending from the Atlantic coast to the city of Montreal, into which we have put about $70,000,000 of public money. Although that system is not paying its way, notwithstanding the prosperous times, the government now propose to construct another railway to compete with it; and thus, if not to render the expenditure of that amount of capital nugatory, to depreciate it to a considerable extent. A few years ago this parliament was asked to vote several millions of dollars for the purchase of the Drumomnd Counties Railway, in order to make it a portion of the Intercolonial Railway system —for what reason ? In order that the Intercolonial might gain access to the commercial metropolis, the city of Montreal, and get its fair share of traffic—in other words, to make it more than a merely local road. But now it is proposed to destroy it—yes, to condemn it, as is suggested; practically to parallel it and to take away trade from that railway in which we have sunk so much money. So that, in estimating the approximate cost of the Grand Trunk Pacific Railway, we must take into consideration the large amount of loss that will be sustained on account of the future operations of the Intercolonial Railway system, an amount which no one but practical railway men can properly estimate, but which will be a large and serious drain on the public resources of this country.

Now, Sir, the government seem to have rushed into this enterprise without any, or with very little, consideration. The project of constructing a line to the Pacific coast was never mooted until a short time before the opening of the present session; and the proposal to construct the eastern section was never mooted until three months of the present session had rolled by. The government have not given the subject any consideration, as has practically been admitted by the right hon. the Prime Minister. They have rushed into it without any surveys, by which they can approximately estimate its cost, and without placing any information before the House in order that the members may be put in a position to approximately estimate its cost. I was somewhat surprised to hear the hon. member for Welland (Mr. German) state that the government are not bound to go on with this road, but that they are going to have surveys——

An hon. MEMBER. Backing down.

Mr. ROCHE (Marquette). Yes, he is the first hon. gentleman on that side of the House who has spoken in that strain. He states that the government are bound to make the necessary inquiries and to have the country surveyed before they need build a mile of the road. Why did they not do that before signing the contract? They are pursuing practically the same course that they did in connection with the Yukon Railway, when they signed a contract ten days before parliament met, and placed themselves in a position to be mulcted for $400,000 damages. And the hon. gentleman states that the government are not obliged to build a single mile of this railway until they have these surveys. We suggest that they postpone these expenditures until they have the necessary information, instead of taking a plunge in the dark as they are proposing to do. The hon. member for North Norfolk admits that this railway can

never be a grain-carrying road. What, then, becomes of it as a through route to the seaboard? The western section will be constructed, and it will have its connections through American channels to the seaboard. The Grand Trunk Railway Company seem to be providing for this already, because I see by the newspapers that they are purchasing the Wisconsin Central Railway, which is going to be the link to connect with their western division in Canada.

Now, the 1,800 miles of this railway from Moncton to Winnipeg have been estimated to cost about $30,000 a mile. Even at that low estimate, that line will involve a cash outlay of $54,000,000, which must be added to our already large national debt.

I was amused when I heard the right hon. Prime Minister state as one of his reasons why this road should be constructed, that it was necessary to implement a pledge made by a Conservative government twenty years ago. The right hon. gentleman need not have travelled so far afield in quest of pledges that required to be fulfilled. Year after year, session after session, policy after policy, pledge after pledge, principle after principle, have been brought to his attention, made by himself as the head and leader of the government and of the Liberal party, and made by his colleagues in the government, which have absolutely been repudiated or abandoned; and he has to go back to twenty years ago to find one pledge that has not been carried out by a Conservative administration.

On this question of national debt and expenditure, do we not remember when the right hon. gentleman travelled along with the Minister of Trade and Commerce from platform to platform moaning and bewailing the condition of Canada, and lamenting that the people were being ground down and impoverished and were not even able to pay the interest on their national debt. And the expenses of administration were so heavy that if he were in power he would reduce them from $1,000,000 to $4,000,000 per annum. These pledges were not made twenty years ago, but a very few years ago. He need not go back twenty years, he need not go back even six months, to find his broken pledges. If he will take up the speech from the Throne at the beginning of this session, he will find in it the distinct pledge that a commission would be appointed to take into immediate consideration the transportation question. What excuse have hon. gentlemen opposite been able to give why this pledge has not been fulfilled? Not one of them has ventured to explain the reason why. Why go back twenty years to find a broken pledge, when here is one, made solemnly to the representatives of parliament at the opening of this session, and which has had the fate of all the others.

The Minister of Finance, in his speech on the subject before the House, tried a little legerdemain. He called in an actuary, and with the assistance of this actuary he assured the House he was going to pay for this road by simply taking $8,000,000 out of our surplus and putting it to one side. This amount on spot cash, when laid aside for a number of years, would cover the whole cost. If the hon. gentleman would only call in the same actuary and apply the same method in reducing our national debt, he would be doing an important service to the country and carry out one of the pledges of his party. He has here an excellent opportunity of adopting a splendid scheme for rolling off our heavy national debt.

No better evidence could be required than this debate has furnished to show that the right hon. the Prime Minister is much more at home in indulging in word-painting and in giving a display of oratorical fireworks, calculated to stimulate the enthusiasm of his followers and bring them into line, than in discussing coldly and logically a business proposition. Many of his followers are in their hearts opposed to this scheme, and a few weeks ago were very outspoken in expressing their opposition to it; but under the influence of the party lash and their party fealty they are now falling into line and giving this scheme their endorsation, and no better evidence could be required to show that the Prime Minister is more at home when engaged in this, to him, congenial occupation, than in grappling with a business proposition. When the right hon. gentleman declared that these eighteen hundred miles of railway were to be constructed without costing a single dollar to the people, he undoubtedly excited the enthusiasm of his supporters. But where is the money to come from? The Grand Trunk Pacific Railway people do not put it up, and the contractors are not such philanthropists that they are going to build the road out of pure patriotism. On the contrary, they will have no doubt to estimate sufficiently high on their contract to allow them to be milked to supplement the government election fund. When the ex-Minister of Railways (Hon. Mr. Blair) asked why the government were rushing suddenly into this large expenditure without the necessary information, possibly he might have got his answer in the fact that the general elections are looming up in the near future, and the government, having no policy on which to appeal to the electors with confidence, feel compelled to fall back on ways that are dark and tricks that are vain, in which they are past masters.

Clause 24 of the contract provides that the government shall borrow this money, taking power to pay three and one-half per cent, and when the road is constructed, they are to hand it over to the Grand Trunk Pacific Railway to be operated by that company on the payment of three per cent on the cost, or at a loss of one-half per cent. For seven years the company, after the road is constructed and taken over by them, are not called on to pay one

dollar of rent. Estimating the cost at $30,000 per mile for 1,800 miles, the government will have to pay interest on $54,000,000 at three and one-half per cent, which will amount to $13,230,000 for the seven years. In addition they will be called upon undoubtedly to pay interest another three years, should the Grand Trunk Pacific be unable to pay three per cent per annum, which will entail an additional expenditure of $5,610,000. Then the company begins, at the end of the ten years, to pay rental at the rate of three per cent for the balance of the fifty years; and if the government should have to pay three and a half per cent, that would mean a payment by the government of interest amounting to $1,890,000 per year, and a receipt by them of $1,620,000 per year, or a loss of $270,000 per annum, which would make a total loss, on this head alone, of $10,800,000. But that is not all. The government are called on pay interest—and I am taking the expenditure estimated by hon. gentlemen themselves—during the time of construction, and the time of construction will be at least, on this portion of the road, eight years. They allow five years for the western portion, but I think it will be found that in that difficult portion of country, where a great deal of rock blasting, heavy cuttings and bridging will have to be done, 225 miles of construction a year will be a very good average, which will give eight years, and eight years' interest on half the total cost of the 1,800 miles, or on $27,000,000 at three and a half per cent will amount to an expenditure of $7,560,000 during the course of construction. In addition, by clause 16, the government is bound to pay for all betterments and replacements of structure, and so on, for the space of fifty years. This will be added to the cost of construction, but nevertheless it will go to swell our national debt. Then there is the indefinite bargain in connection with the Quebec bridge, which the Finance Minister estimates will cost us $2,000,000. Then the government finds all the terminals which will be necessary in Quebec, Winnipeg and Moncton. How much these will cost we cannot tell, but it will be a very large amount. With regard to that portion of the line west of Winnipeg, the government undertakes to guarantee the bonds to the extent of $13,000 a mile on the prairie section and $30,000 per mile on the mountain section. Estimating the prairie section at 800 miles, this will entail a liability of $10,400,000 on that section for principal, and $312,000 for interest, and estimating the mountain section at 600 miles, it will entail a liability of $18,000,000. This involves payment of interest on the mountain section of $540,000 a year or for seven years, of $3,780,000.

I must say that ordinary members of the House of Commons may be excused if they differ somewhat in the estimate of the mileage and the cost, because you cannot find two cabinet ministers agreeing on either of those two items. I am taking the mileage estimated by the Prime Minister. The Minister of Justice estimates that the mileage on the prairie section will be 1,200, but I am putting it at 800. The Minister of Justice estimates the mountain section at 480 miles, but I am estimating it at 600. So that upon the whole, the Minister of Justice estimates a considerably larger mileage than I do. Six hundred miles at $30,000 per mile would amount to $18,000,000, on which the government will have to pay interest at the rate of $540,000 per year, or in all $3,780,000 for the seven years. This is practically a subsidy. It has been stated that the government is not giving any land grant or cash subsidy. It may be true that, in the wide acceptance of the term, they are not giving a land grant, but they are giving the right of way over all government property for stations and roadbeds, and they are giving as a gift, $3,780,000, which in reality is a subsidy, and for a further term of three years, they also covenant that the government is to pay the interest should the company not be in a position to do so, and I think you will find that the company will have the better of the agreement. This will be an additional $1,620,000 which the government will have to pay, taking the bonds as a security. So that taking the figures of hon. gentlemen opposite themselves, we have this total expenditure:

Cost of line, Moncton to Winnipeg..	$54,000,000
Seven years without rental, government pays interest..	13,230,000
Three years more interest, government pays..	5,670,000
Forty years loss ½ per cent (difference between 3 and 3½)..	10,800,000
Interest during time of construction say eight years..	7,560,000
Total government portion.. ..	$91,260,000
Seven years interest on bonds, mountain section..	3,780,000
	$95,040,000

But mark you, Mr. Speaker, that this does not include the liability on the prairie section or the mountain section, or the interest during the time of its construction. Nor does it include the cost of terminals and of the Quebec bridge. Nor does it include the deficits that will be incurred in the future operation of the Intercolonial. Altogether the cost would amount to considerably more than $100,000,000, which will be left as a legacy for our people to pay many years hence.

In regard to the equipment of the line, I notice that $20,000,000 is set aside for that purpose, but it is a significant fact that of this amount, $15,000,000 goes to the equipment of the western section, and but $5,000,000 goes to equip the eastern section. This rather indicates that the company,

even after the line has been constructed, have no serious idea of extensively operating the eastern section, at least that portion of the line east of the great lakes. The government have not even stipulated that they should have the option of purchasing the line owned by the company west of Winnipeg at the end of the fifty years, so that at the end of that time, if the government are desirous of operating the whole line as a government road from ocean to ocean, either because the company have thrown the line back on their hands, or because it is desired in the interest of the people to operate it as a government road, they would be left with a line whose western terminus would be Winnipeg, and which would have no feeders. We all know that no considerable amount of east-bound traffic originates at Winnipeg. The traffic which goes eastward from Winnipeg originates west of that point, and this line would be left without connections with the west. It is true that the government have the power of expropriation, but, as has been pointed out by the member for East Hastings (Mr. Northrup), it would have to expropriate at the then value of the road, and after taking into consideration the amount of capitalization and not the amount of cash the company shall have put into the enterprise. Therefore, I say that the government should insert in this agreement a clause to the effect that they shall have the right of taking over the road at any time and operating it as a government road by paying a certain amount for it.

No provision is made for the construction of branch lines to the government portion of the road. It is true that the Grand Trunk Pacific Company take power in this charter to construct a branch line to Port Arthur and one to North Bay and one to Montreal, which they may or may not construct. Of these, the first, at any rate, will be absolutely necessary if this road is going to carry any grain at all. Other branches will be necessary to reach the commercial centres of Ontario and Quebec unless this road, because of the want of suitable eastern connections, is going to be seriously handicapped in handling westbound traffic in competition with the Canadian Pacific and other lines.

So far as running rights are concerned, I think it has been demonstrated by gentlemen much more conversant with railway matters than I am, that the exercise of running rights, in the manner suggested by hon. gentlemen opposite, over all this system of upwards of three thousand miles, will not be practicable. There is no parallel whatever between the running rights provided for in the scheme suggested by the hon. leader of the opposition and the running rights that are provided for in this contract. The hon. Minister of Finance (Hon. Mr. Fielding) practically admitted that this is a worthless concession, except in so far as it might be a lever with which to exercise pressure on the company to secure concessions by way of reduction of rates or otherwise. I do not think the Grand Trunk Pacific Railway Company will at all fear such a lever when they are told in advance that if the government should exercise these rights they would do so at a loss. That has been stated, and I do not think the Grand Trunk Pacific Company will ever be frightened by the threat of exercising these running rights or will throw obstacles in the way when they know in advance that these rights can only be exercised by the Intercolonial Railway at a loss.

A few years ago the Minister of the Interior (Hon. Mr. Sifton) told the people of the west that this government, and he, particularly—he took credit to himself—were securing running rights over that portion of the Canadian Northern line then being constructed, called the Rainy River branch, between Winnipeg and Port Arthur. He said they were securing running rights and guarding the interests of the people over that line for the very purpose for which they are now asking this parliament to construct a new line, namely, to allow the Grand Trunk Railway access to the province of Manitoba. I have here a report of a speech delivered by the hon. Minister of the Interior (Hon. Mr. Sifton) in December, 1898. He was given a banquet at Boisevain, and his speech at that banquet is reported as follows :

> The first free railways were built by his friend, Mr. Greenway. No one ever heard of the right of giving the railways running powers over other lines till Mr. Greenway inserted it in charters of Manitoba railways. The Dominion government had insisted that the same conditions should apply to the Crow's Nest Railway, and the same condition had been imposed upon the South-eastern (Canadian Northern Railway) Railway. The government were determined to secure this freedom of equal running powers in every railway charter granted at Ottawa.

The same minister, at the time the question was being publicly discussed, announced with emphasis his intention to resign if the same provision as to running powers that the government insisted on in the Crow's Nest Pass bargain was not secured in the Rainy River charter.

We all remember how Mr. Sifton, in replying to a St. Andrew's rapids deputation, in December, 1898 :

> Introduced the question of the South-eastern-Rainy River road to Lake Superior, and declared that the government would take steps to preserve the independence of the road. He added also—and was applauded for the statement—that the government would take the same precaution that it had taken with the Crow's Nest Railway and reserve to itself the right to grant running powers over the road to any railway company that desired it, so that if the Grand Trunk desired access to Manitoba and the North-west it could have the privilege of placing its trains on the Rainy River and running them directly through to the west.

If the hon. minister had been true to the pledge he then made and had secured these running rights, why go to the trouble and the great expense of building another line through that country in order to gain the very power which he then said he had secured in respect to the Canadian Northern ? Why not exercise those running rights ? I understand, however, that the running rights that he secured over the Canadian Northern are over an intermediate portion of that road, affecting neither the Port Arthur end nor the Winnipeg end, so that they are practically valueless.

The Prime Minister gave as one of the chief reasons for constructing this line the immediate and crying necessity of relieving the wheat congestion of the west, and yet this contract does not provide for a single branch line in the heart of the congested district, in the province of Manitoba. We do not, in fact, know where this road is going to run. It is true that the promoter of the charter, in reply to a question, said that it would run north of the Canadian Northern ; if that is the case, it will not touch the heart of the congested districts at all, in fact, it will not go near the congested district. It will open up a new country, but it will not relieve the congestion. If it is built south of the Canadian Northern line, then, while it will afford that amount of relief that any trunk line will afford to a limited area on each side of the trunk line, it will still have no branch line in the heart of the congested district. When we take into consideration the vast amount of money that is to be put into this road and the liabilities it will impose on this country, the least we could have expected would have been that the government would have secured absolute control of rates ; but this they have not done. They should have secured control of rates in reality and not in name alone. The control of rates secured by this scheme is no greater than that which we already enjoy under the Railway Act of Canada, and we all know by our experience in the past how useless that is.

But in addition to this, because of the large capitalization of this road, $45,000,000 on the portion west of Winnipeg, which, together with the bonding powers of $30,000 a mile on the prairie section and $50,000 a mile on the mountain section, will amount to upwards of $90,000,000, the fixed charges that must be met before the government can exercise control over rates will be so great that we can look for no reduction in rates for many years to come. How different has been the action of the government of Manitoba of recent years : Hundreds of miles of the Canadian Northern have been secured by the government of that province by a bond guarantee of $8,000 per mile.

It is true that the government at the last session of the legislature increased this guarantee to $10,000 a mile, but with this stipulation, that $2,000 of that sum must go towards equipping the road, to purchase more rolling stock in order to prevent a recurrence of that blockade which had existed for a year or two. But owing to the fixed charges being so high on this line, the government have absolute control of the rates, and they have exercised that control. Last year they reduced the rate from 14 to 12 cents per 100 pounds. That is quite a control, they have a control in reality. An Order in Council has been passed to secure another reduction on the 1st of September, of another 2 cents per 100 pounds. That will bring the rate down from 14 cents to 10 cents per 100 pounds from Winnipeg to Port Arthur, giving the 10 cent rate that Mr. Greenway, when premier of Manitoba, declared he would willingly give a million dollars of public money in order to secure, and which has been secured without the cost of a single dollar. The government takes by this contract the power to guarantee the bonds to the extent of $13,000 per mile on the line built through the prairie country, no more difficult of construction, and in return they secure not one single concession by way of reduction of rates.

Now, it has been shown that a very small proportion of our grain exported from the west goes over the north shore line, the all-rail line by the Canadian Pacific Railway, and in the opinion of competent railway men, of grain men thoroughly conversant with the transportation question, the all-rail route cannot successfully compete with the mixed route. So, after this railway is constructed, we will find that the great bulk of the grain will still go by the lake and rail route in preference to the all-rail system, only a small proportion passing over the all-rail system after the close of lake navigation. Now the average rate on grain from Port Arthur to Montreal by rail on the Canadian Pacific Railway, has been about 12 cents a bushel ; whereas the average rate by lake and rail has been about 7 cents a bushel, showing a difference of 5 cents in favour of the lake and rail route. But with the improvement in their waterways, if there is going to be enough money left to improve them after this road is built, if the company improve their gradients on the railway east of the Georgian bay, and make it easier to carry grain with longer trains, we will have this differential rate against the all-rail route still further intensified. I believe it is the intention of this company to construct the branch line from Port Arthur, 150 miles in extent or thereabouts, and if that is done, that will be the route that grain will take and not the all-rail route, and once that grain is in the elevators at Port Arthur or Fort William, it absolutely passes beyond the control of the Grand Trunk Pacific people. There is no provision in this contract that will compel this company to be responsible for the delivery of that grain at a Canadian seaport once it is

in the elevators at Fort William. Naturally the grain will seek an outlet, possibly by the Grand Trunk at Wiarton, Midland and Sarnia, anl there be transferred to the Grand Trunk Railway system to be conveyed where it will pay them best to convey it, namely, to the city of Portland in the state of Maine, where, according to the Minister of the Interior, they have already expended some 25 or 30 million dollars in building up large terminals. The Minister of the Interior stated that after this road is constructed we will see grain carried from Winnipeg to St. John for 11½ cents a bushel over the all-rail route. If the hon. gentleman is so sure of his ground, let him incorporate a provision in this contract pledging the company not to charge higher rates over the all-rail route than will be charged over the lake and rail route, then he will give some tangible proof that he believes in his own statement, and a considerable portion of the objection from the west at any rate, now urged against the construction of the road will be done away with.

Now, it is not my own opinion alone, or of hon. gentlemen on this side of the House, that the all-rail route will never be a great carrier of grain. I am going to quote from an organ that the Minister of the Interior and his friends will not take exception to. I am not going to try, as the Minister of the Interior did, to leave a false impression on the members of this House by making them think that the paper I am quoting from is opposing the railway. The hon. gentleman quoted copiously from newspaper extracts, notably from boards of trade, with the one idea of leaving the impression that they favoured this scheme of getting into the west. If he did not mean that, there was no point in his argument. This Winnipeg 'Free Press' is the mouthpiece of the Liberal party, it is considered as an automatic machine to register the decrees of the Minister of the Interior, whatever they may be, and will support any scheme propounded by this government because of its partisan character. It is true that it has moments of frankness, and in one of these moments of frankness it gave utterance to the following opinion :

> That the new road, when in operation, will be able to quote a lower rate for grain from Winnipeg to the seaboard than the present Canadian Pacific Railway all-rail rate, is probable ; but a fall in the lake-and-rail rates may make it relatively as unprofitable ten years hence as it is now to ship by rail to the sea.

That is quite an admission, but it is not an argument against the Grand Trunk Pacific scheme. Critics of that scheme should not overlook the fact that a line from Port Arthur is an essential part of the undertaking. When Sir Charles Rivers-Wilson was in Winnipeg he was given a dinner by the board of trade, and in a speech he outlined some of the services to the west that the Grand Trunk Pacific would render. He dwelt upon the excellent lake and rail route for the carrying out of the grain in the fall that the projected route would furnish. He pointed out that the Grand Trunk touches the lake at many points, such as Sarnia, Goderich, Wiarton and Midland, and predicted that the Grand Trunk, once it got a properly equippel road, could itself move the entire wheat harvest of the west across the lakes. Then the article goes on :

> It is therefore more than probable that the great bulk of the wheat grown in the west will continue to go out by way of the lakes, despite the new road from here to the Atlantic ports.

That is the argument used by the Winnipeg 'Free Press.' Apparently, Mr. Speaker, this road is designed for the purpose of carrying constituencies rather than for the purpose of carrying grain from the Northwest. I might also quote Sir William Van Horne, but he has been already quoted, to the effect that the all-rail route will never be able to compete with the mixed route. But hon. gentlemen try to minimize Sir William Van Horne's opinion, saying that he is the ex-president of the Canadian Pacific Railway, that his interests are bound up in that undertaking entirely, and he would naturally be opposed to a rival enterprise. But Sir William Van Horne was the very gentleman whom the government considered head and shoulders above any other man in Canada as an authority on the transportation question, and had even asked him to be chairman of the transportation commission, in order to give them the benefit of his experience, and they pledged themselves to be guided by the advice of that commission. So it is too late in the day to minimize Sir Wlliam Van Horne's opinion as an authority on the transportation question. But I see another genial gentleman who has come into the House, and whom I am going to quote for the benefit of hon. members on the other side. They cannot take exception to his opinion, because he is a gentleman whose opinion is deserving of the very highest consideration. . Now, I am not going to try to make out that that hon. gentleman either is opposed to this road, or at least that he will show it by his vote, because I believe that he will be found voting with the government. I find in the Montreal 'Star' of July 6th, an interview held with our good friend from St. Lawrence division Montreal (Mr. Bickerdike) in which he is reported to have said :

> Mr. Robert Bickerdike, Liberal M.P., for St. Lawrence division of Montreal, said on Saturday that he thought the government would be wise to do one of two things, either to continue the Intercolonial from Montreal to the Pacific coast, or else to let some public corporation do it The government should own the whole of the transcontinental line, or should dispose of that portion of it that they

now operate from the Atlantic ocean to Montreal.

'I see,' said Mr. Bickerdike, 'no object whatever in starting, say, halfway and running from Moncton to Winnipeg, if that is the programme at present. I would prefer to see the Grand Trunk Pacific or some other public corporation own the whole line. In one word, it should either be a government road from the Atlantic to the Pacific coast, or it should be owned and operated by the Grand Trunk Pacific or the Trans-Canada, but in any case what is most required at the present time is sufficient roads to carry the grain from the Manitoba district to Lake Superior, and then sufficient Canadian bottoms to bring the grain from Lake Superior to the seaboard.

I think that is very good advice, and I am sorry he did not get his friends to follow it. I think the hon. gentleman has not changed his mind though possibly by his vote the country may imagine so. The hon. Minister of the Interior also quoted a certain gentleman whose advice, or whose opinion was, he said, of great importance. The gentleman I refer to is Mr. James H. Ashdown, of the city of Winnipeg, whom the hon. minister said was one of the wealthiest and best-known business men in Winnipeg, all of which is very true. Mr. Ashdown was the Liberal candidate in Marquette in the election of 1896. Mr. Ashdown, the hon. minister says, gives an unqualified support to this measure. That is a favourite way the hon. minister has of twisting things to suit his own purposes. The hon. minister is very tricky. He has to be watched. I took the trouble to compare the statement of the hon. minister with the original interview given by Mr. Ashdown, and I find on reading Mr. Ashdown's interview that he does not give an unqualified but a very qualified support to the measure. He distinctly states in the 'Free Press,' and his interview appeared before the hon. the leader of the opposition's scheme had been propounded, his preference for government ownership right through, but if he cannot have that he will hold up his hands for the Grand Trunk Pacific scheme. That is not an unqualified approval of the scheme, and I think that when Mr. Ashdown reads and digests the speech made by the hon. the leader of the opposition he will change his opinion and he will be found supporting this scheme, notwithstanding the fact that he is a strong Liberal. The hon. Minister of the Interior quoted from the Winnipeg 'Tribune,' and sought to leave the impression that the paper, which he stated sarcastically was a friend of his, was in favour of the government scheme. The 'Tribune' is not a Conservative paper, but it is one of these old line Liberal papers which have broken away because of the non-fulfilment of the pledges of the Liberal party. I will quote from that journal of the issue of August 7th, as follows:

By the purchase of the Canada Atlantic, the utilization of the lake route and the exercise of the running powers that Mr. Sifton boasts the government possesses over the Rainy River road, the transportation question could be speedily and effectively solved, that is so far as the spout is concerned. The construction of necessary branch lines in the west could follow quickly. But there would be no chance for exploiters in such a scheme, no chance for 'great' spectacular speeches——

Of course we all know what he is driving at there.

——no chance for 'broad' statesmanship, no chance for humbugging the people again. Great is Canadian 'politics.'

It does not look as if the 'Tribune' was an ardent supporter of the scheme. But, I find that the Winnipeg 'Free Press' and several other Liberal journals have been culling what they consider to be gems of the right hon. gentleman's oratory, putting them into conspicuous places, and heading them 'striking sentences.' The Winnipeg 'Tribune' has got together some striking sentences which I shall inflict upon the House:

'Striking Sentences.'

The party press is publishing 'striking sentences' from Sir Wilfrid's 'oration' on the Grand Trunk Pacific Railway deal.

Here are a few 'striking sentences' which Sir Wilfrid might have uttered in view of the bargain about to be consummated:

Another transcontinental railway, every inch of it on Canadian soil, is a grand thing. We intend building one-half of it and handing it over to the Grand Trunk Pacific Railway for fifty years, part of that time for nothing, and for the balance probably at a loss, if money increases in value. For the balance of the road we will guarantee the cost. There is a heap of money in the contracts in sight for the boys. Remember it will be 'all-Canadian, all-Canadian, all-Canadian.' It is a commercial necessity in view of the approaching general elections. It is a corollary of our status as a nation which exists for the enrichment of promoters.

Now is the time for action; the elections are near at hand. The flood tide is upon us that leads on to fortune for the promoters and the politicians who stand in with them. Soak the exporters of the west and the party dupes of the east. If we let it pass it may never recur again. The people are getting on to the game; if we let it pass the voyage of our political life, bright as some say it is, will be arrested in the shallows; and where will it land our dear promoters and their pals? Pray Heaven, or somebody else, that the time is not yet too late.

'We cannot wait, because time does not wait' and the boys are in a hurry.

'The prairies of the North-west, which, for countless ages, have been roamed over by the wild herds of bison, or by the scarcely less wild tribes of red men, are now invaded by the promoters. They will, if we have our way, be in possession for fifty years to come.

'It will not only open territory hitherto idle and unprofitable,' but this gigantic deal will open the treasury, and it will make a big hole in the pocket books of our serfs, the settlers, whom we bind for the next fifty years.

The sum total of the money to be paid by the government for the construction of the entire line from Moncton to the Pacific ocean is some-

thing I don't know anything about. We have had no reports on the cost, but I hope it will be somewhere under $150,000,000. The Grand Trunk Pacific Railway boys promise us to make it as little as possible, consistent with the requirements of the great, progressive age in which we live. Thank Heaven we are alive in this age.

It will open territory hitherto idle and unprofitable, and will keep a lot of kicking farmers busy paying tolls, so that we will hear less of their clamour for tariff reductions, senate reform, civil service reform and such nonsensical things.

This deal will make us free from all bondage save railway bondage for fifty years. The air will be as free as ever.

The new railway will be another link in the chain to bind the producer to high freight rates.

Every one who has in his bosom a stout Canadian heart, and is not yet out of his long dresses, may live to see the day when the country will have public ownership of railways.

We look upon this new deal as a clever scheme to fool the people who have been clamouring for cheaper rates. It won't hurt the present railways very much, as we are bonding the line in such fashion that it cannot bring down rates. The joke is that we almost forgot about a water connection at the lakes, but we intend building a branch line to the lakes.

These are some striking sentences. I do not imagine after reading that paper that it would be considered a very ardent supporter of the government scheme. But if I desired to enter into that subject and to weary the House with extracts, as the hon. Minister of the Interior did, filling up page after page, I might quote, not from Conservative journals, but from such journals as the Montreal 'Witness,' an ardent supporter of this government, the Ottawa 'Journal,' an independent paper with strong Liberal leanings, the St. John 'Telegraph,' a Liberal paper as well; Chatham, N.B., 'Advance'; another Liberal paper, the Forest 'Free Press,' edited by Mr. H. J. Pettypiece, the Liberal member for Lambton in the local legislature, and many other papers, all of which papers strongly denounce the government's proposition. I notice that the hon. Minister of the Interior also quoted the Grain Growers' Association of the North-west Territories as being in favour of the scheme, or he sought to leave that impression on the House. But the hon. minister evidently had not been supplied before he left the House with a resolution passed by the Grain Growers' Association of Manitoba, at a recent meeting. The Grain Growers' Association of Manitoba met in convention on August 5th and 6th and passed the following resolution, which was moved by Mr. Scallion, of Virden, and seconded by Mr. Robinson, of Elva, neither of whom is a Conservative, but both of whom are members of a non-political association of the farmers of the west. The resolution is as follows:

Moved by Mr. Scallion, of Virden, seconded by Mr. W. A. Robinson, of Elva, that:—

Whereas the parliament of Canada and the several provincial legislatures have granted under the heading 'Aid to Railways' donations of money, land grants, bond guarantees, tax and other exemptions, the value of which, especially in the case of roads constructed in Western Canada, amounted to more than the cost of the roads so aided; and

Whereas it is evident that these enormous subsidies have not been applied to the construction and equipment of these roads from the fact that the liabilities standing against them in stock and bonds are much greater than the cost of these properties;

And whereas notwithstanding those enormous subsidies, and the excessive and oppressive rates levied by these railways on the traffic of the territory they are chartered to serve, to pay interest and dividends upon over capitalization, they have utterly failed to meet the transportation requirements of this country, in consequence of which the people have suffered great hardship and loss, and have been compelled to endure a condition of things exasperating in the extreme and very detrimental to the progress and prosperity of Western Canada;

And whereas the government of Canda can finance the construction and equipment of railways at a much less cost to the people than can any private company;

And whereas the only real solution of our transportation problem lies in the ownership and control by the people of such a system of railways as shall ensure ample traffic facilities, and secure rates on the cost of service and the interest on the bonds issued by the government to pay for the construction and equipment of such railways thereby relieving the traffic of this country from the burdensome rates now levied on it to pay dividends on millions of dollars of watered stock issued in the interest of railway promoters;

Therefore the Manitoba Grain Growers' Association in convention assembled respectfully urges the government of Canada that instead of entering into the proposed Grand Trunk Pacific deal, they proceed to build, equip and operate in the interests of the people such lines of railway as the transportation requirements of the country may from time to time demand.

That is an expression of opinion from an association of farmers, Liberals and Conservatives, met in convention since this government scheme was launched upon the public, and you will see that instead of endorsing it they condemn it in no uncertain tone.

The hon. leader of the opposition has shown that he possesses the attributes of a constructive statesman. He has not contented himself with retreating behind the lines of Torres Vedras, or with calmly folding his arms and saying: it is time enough to prescribe when I am called in; as a certain other party leader did, not many years ago on a certain memorable occasion. But Sir, the leader of the opposition is true to the instincts and to the traditions of the great party of which he is the honoured leader, and he is a worthy successor of his great predecessors. He has courageous-

ly and boldly propounded an alternative policy, and a policy which is in the interest of the people of Canada. That policy has been discussed in this House much more ably than I can discuss it. Briefly, it is the extension of the Intercolonial Railway to the Georgian bay, either by the purchase of the Canada Atlantic Railway, or if it is more in the interest of the country, by the construction of an independent line ; it is to connect that line by a line from Scotia Junction, with the town of Sudbury on the Canadian Pacific Railway main line, which will mean the construction of from 100 to 120 miles of railway. It is to nationalize or to acquire by lease that portion of the Canadian Pacific Railway between Sudbury and Fort William, and to have it operated by an independent commission who would give equal running rights over it to the Canadian Pacific Railway, the Canadian Northern Railway, the Grand Trunk Railway, and the Intercolonial Railway. That portion of that line between Fort William and Winnipeg, the leader of the opposition would assist by making its roadbed so that it could handle the grain with greater facility, by reducing the grades and double tracking if necessary, and on this he would secure equal running rights for those other systems of railway and would also secure absolute control of rates. What does that mean ? That means that the prime necessity which the Premier spoke of, of having another railway in there, especially the Grand Trunk Railway, would be accomplished within the next six months, whereas under the proposition of the government it would take five years at the very least to accomplish it. Under the proposal of the leader of the opposition you will have those other roads in the city of Winnipeg within six months, and the Intercolonial Railway would be in Winnipeg within a year or just as soon as that small link was constructed, and the Intercolonial Railway could be extended if necessary so as to give us absolute control of the rates in the west. As regards that portion of the line west of Winnipeg, the leader of the opposition has proposed that if the Grand Trunk Pacific Railway desires to build north of the Canadian Northern Railway through a country sparsely populated, he would assist them by guaranteeing their bonds. But if they decide to go through the country south of the Canadian Northern Railway in a thickly populated district, he would let them do so at their own expense, because there they would have a profitable road from the very first day it is put in operation. As to the mountain section the leader of the opposition suggests—although he does not suggest its construction immediately as the member for Welland says—the leader of the opposition suggests that the mountain section should be constructed by the Grand Trunk Pacific Railway or the Canadian Northern, and as both of them have access over it, that one line only should receive assistance. Failing that, then the government would build the line itself, allowing equal running rights to the Grand Trunk Pacific Railway and the Canadian Northern Railway to the coast. In addition, the leader of the opposition provides for the improvement of our harbours on the Georgian bay, and on ports such as Montreal, Quebec, Halifax and St. John, equipping them in the most modern manner for terminals, and placing them in a position to compete with their American rivals. And, Sir, notwithstanding the calculations indulged in by gentlemen on the opposite side of the House—who apparently have not called in their actuary to estimate the probable cost of the Conservative proposition—as has been shown by the hon. member for Bothwell (Mr. Clancy) to-day, all that is proposed by the leader of the opposition can be accomplished for less than one-half the money that the proposition of the government will cost. And, what is of far more importance, this scheme of the leader of the opposition will meet the requirements of the people of Canada, a thing which the government scheme will not do.

To summarize my objection to this scheme of the government : I object to it because it entails such an immense outlay of public money and a consequent addition to our public debt. I object to it because it provides for no reduction of rates. I object to it because it cannot successfully compete with the lake and rail route, and will never prove to be a grain carrier. I object to it because after the government has constructed this 1,800 miles of road, it is to be handed over to be operated by the Grand Trunk Railway for fifty years, thus perpetuating the evil that our people are complaining of at the present day. I might go on enumerating very many other valid objections. If the government are to construct as a government line the eastern section through the most northerly part of the country, through a country which will afford little or no traffic, why on earth do they not construct that portion of the road which runs through the prairie section, which will have ample traffic and which will pay its way from the very first. Sir, this road should be an all-government road or an all-company road with proper safeguards in the public interest.

This whole scheme has been conceived in haste ; it has been conceived because of political exigencies. The people will suffer through its iniquities, and the government who devised it will be dead and buried, once the people get an oportunity of pronouncing their funeral knell. And, Sir, in the place of this government will once more arise a constructive government, a Conservative government that will give evidence of statesmanship as they have done in regard to so many other national questions in the past, and which in grappling with

these questions in the past have made Canada what she is to-day. I ask the government to accept the challenge which has been thrown across the floor of the House by many hon. gentlemen on this side, and to allow the people of Canada to express their opinion upon this question.

The POSTMASTER GENERAL (Hon. Sir William Mulock). Mr. Speaker, there is a variety in the arguments advanced by the hon. gentlemen opposite which at least lends charm to their speeches. As was correctly stated by one of them a short time ago, each is a free lance, each can advance such views as he thinks fit, and in this connection I observe that there are as many views upon the proposal of the government, and even upon the proposal of the leader of the opposition, as there are speakers on the other side of the House. Just now we have had an interpretation from the member for Marquette (Mr. Roche) of the proposition of the leader of the opposition, which differs entirely from the interpretation put upon it by the hon. member for Bothwell (Mr. Clancy). The view of one gentleman did not harmonize with the view of the other, nor does the view of either, harmonize with the view of the leader of the opposition. I should judge by the remarks of the hon. gentleman (Mr. Roche) that although coming from the North-west, he is not altogether favourable to the scheme proposed by the government.

I should judge also, from his observations, that he is almost equally opposed to that of the leader of the opposition. I should judge, from the opinion expressed by the hon. member for Bothwell (Mr. Clancy) that he also is opposed to the proposition of the hon. leader of the opposition. The situation has undergone a change, Mr. Speaker, since this question was propounded in parliament on the 30th of July last by the Premier of Canada. On that occasion, after the presentation of the case, the hon. leader of the opposition arose; and, although he confessed that he had no knowledge of the scheme, and was utterly unable to understand it, he was quite able to manifest a very marked hostility to it. He spent an hour in abusing and condemning it, from time to time throughout his speech expressing his ignorance of the nature of the contract. Although the government had given many months to its consideration, the hon. leader of the opposition, in a moment, without knowing the scheme, was able to pronounce against it. Well, Sir, as time went on, I think, he learned his mistake. He said that we had manifested undue haste in preparing our scheme, when every one knows that it has engaged the attention of the government and of the country for the best part of a year. He was apparently opposed to our undertaking the construction of the railway, and grew wrathy at the undue haste which he said we had been guilty of. Instead of reserving judgment, he listened, I suppose, for a few days to the voices from without, and eighteen days afterwards came down with a scheme of his own. If there is anything, Mr. Speaker, that commands my admiration, it is that the hon. leader of the opposition, in a period of eighteen short days, should have been able, unaided, except perhaps by the Canadian Pacific Railway Company, to bring forth and submit to parliament a proposition of the gigantic character that is now engaging our attention. The hon. member for Bothwell (Mr. Clancy) did not take long to discover the hon. gentleman's mistake. The hon. leader of the opposition propounded a scheme which every person who analyses it will, I think, pronounce, as the late Minister of Railways and Canals of this government (Hon. Mr. Blair) described some of it, as moonshine. The thinking business public, understanding the scheme propounded by the hon. leader of the opposition, have given a very good indication that it was necessary for the opposition at an early stage to recede from the false position in which their leader had placed them. And so we have the hon. member for Bothwell to-day professing to give an interpretation of the meaning of his leader's proposition. At one time, two or three weeks ago, in the estimation of the opposition, the government scheme to build a railway from old Canada to new Canada was wrong—there was to be no railway built. Eighteen days afterwards the hon. leader of the opposition said there should be two transcontinental railways built. To-day the hon. member for Bothwell says that all that the scheme of the hon. leader of the opposition means is to build a railway from the city of Montreal to Winnipeg. A little later the hon. member for Marquette (Mr. Roche) rises and says that the scheme of the hon. leader of the opposition is even bigger than that described by the hon. member for Bothwell. It is a scheme to construct a railway, as the hon. member for Bothwell says, as far as Winnipeg; but it proposes also to do some other things. It proposes to aid the Grand Trunk Company to build a railway to the mountains, and, I suppose, a railway through the mountains to the coast. He also frankly said that it contemplated some operations in other directions. He was getting nearer to the scheme than the hon. member for Bothwell. He was rasher too, although I am afraid that his friends in the North-west, who are especially suffering for the want of railway communication, and who desire the line proposed by the government to be built, will feel that he has not quite responded to the needs of the great North-west. But inasmuch as these hon. gentlemen differ with the hon. leader of the opposition as to the meaning of his scheme I will take the liberty of going through it as I understand it, and will endeavour to make good my points, if challenged, by

reference to the words of the hon. leader of the opposition himself. Probably those words will be considered as indicating to some extent his true meaning.

Before proceeding to that, however, I would refer for a moment to one or two points sought to be made by the hon. member for Marquette. In seeking to prove what would be the cost of this enterprise as proposed by the government, he said we would lose one-half of one per cent for the term of the lease, being the difference between the rate at which the money would be borrowed and the rate received from the company for the lease of the eastern division ; whereas everybody knows that while we have permission to pay as high as 3½ per cent for borrowed capital, we will not pay more than the market price requires.

Mr. BROCK. Probably 4 per cent.

The POSTMASTER GENERAL. My hon. friend may be right, but the credit of Canada has never been such, since the Liberal party came into office, that we have had to pay 4 per cent. There was a time when we had to pay 4 per cent, when the hon. gentleman's friends were financing, and when this country was still in the condition of stagnation and depression into which they had brought it. If they were in power to-day, we would still have to pay 4 per cent; but thanks to the intelligence of the people of Canada, they called to take charge of their affairs a competent government, so that we do not now have to pay 4 per cent. We will lose nothing in the difference between the interest to be paid on the borrowed capital and the interest we shall receive from the company ; so that that half of one per cent which in the hon. gentleman's mind runs up to millions, may be wiped away as simply a vision of his imagination.

He stated that we would be obliged under the contract to expend large sums of money for the betterment of the road between Moncton and Winnipeg. The hon. gentleman, I am afraid, like the hon. leader of the opposition, has argued without reading the contract. The contract does not oblige the government to spend one brass farthing on betterments after the completion of the line. If any one says that is not correct, I think the hon. leader of the opposition, who is a professional gentleman, if he had seen such a contingency, would have pointed it out.

Mr. BORDEN (Halifax). I would like to ask the hon. gentleman in what respect I misstated the contract ?

The POSTMASTER GENERAL. I have no reference to the hon. gentleman.

Mr. BORDEN (Halifax). Just a moment ago the hon. gentleman said that the hon. member for Marquette, like his leader, had not read the contract. In what respect have I given evidence of that?

The POSTMASTER GENERAL. The hon. gentleman on the 30th of July, explained that he had not seen the contract, but argued against the measure; and the hon. member for Marquette to-day alleges that this contract provides in one of its clauses what I say it does not provide. He says it obliges the government during the currency of the lease from time to time to expend capital upon betterments. Now, section 16 reads as follows :

> In case, after the completion of the said eastern division and the taking possession thereof by the company under the lease thereof, hereinafter referred to, or at any time thereafter during the continuance of the said lease, the government shall deem it necessary to expend any sums of money for the improvement of the said eastern division, the replacement of structures by others more modern, or otherwise upon capital account for betterments, and not being 'working expenditure' payable by the company, the government may expend such sums

And the amounts, if expended, shall be added to the capital cost, and bear interest. If we choose to invest any money in betterments, we can submit to our tenants, the railway company, items of proposed expenditure; and if they consent, we can proceed to make the betterments, and they will become liable to pay rent, which is equivalent to interest, upon that expenditure. But if the government should prefer, it need not make those expenditures. Therefore, when my hon. friend from Marquette (Mr. Roche) builds up a great structure of expenditure on capital account and presents that as indicating another weak point, you will observe that he has read inaccurately the contract and has not seized its true meaning. His statement is about as correct as that of the junior member for West Toronto (Mr. Osler), who estimates that the eastern division alone will cost the people of Canada no less than $560,000,000. I am not surprised that hon. gentlemen opposite should repudiate, as they have done so far, the estimate of their great financier. Even the hon. member for Bothwell (Mr. Clancy) only claimed that this eastern division would cost the country $112,000,000, whereas this financial leader estimates its cost at $560,000,000. I should not be surprised if, after a few more speeches, we will find hon. gentlemen opposite getting better informed and gradually coming down to the actual facts.

However, as it is hardly worth while to seriously discuss figures given with such rashness, I shall confine myself to the text furnished by the leader of the opposition. We have two policies before the House. At first there was but one proposition. It was simply a question whether or not there should be a transcontinental railway. The opposition took side against us, and the issue was a railway or no railway. That was the issue on the 23rd of July, but that is all changed, and every one now appears to agree that we must have a railway and

build it at once. The only question is whether it should be the railway proposed by the government or that proposed by the leader of the opposition. It therefore becomes us to consider which scheme has the more merit. Ours is a very modest one. At one time we had it attacked as being a scheme of great magnitude; but when compared with the proposition of the leader of the opposition, its dimensions are considerably lessened. It only contemplates the building of a railway from Moncton via Quebec to the coast, a part of which is to be operated by a railway company, and which will only cost the people of Canada $13,000,000.

Some hon. MEMBERS. Oh, oh.

The POSTMASTER GENERAL. Hon. gentlemen opposite are so accustomed to big figures that they cannot understand small ones. Their financial leader has given them so large an estimate, $560,000,000, that they are ashamed of anything moderate. And finding that they had made a great mistake in opposing our modest business-like and meritorious scheme, they set to work and brought down a scheme of their own. Ours is so well known that I need not explain its details. But what does my hon. friend the leader of the opposition propose? We are told by the hon. member for Marquette that he has manifested the genius of constructive statesmanship, that he is a constructive statesman. Well, I welcome to parliament any one possessed of this quality, because that is the class of man we require in Canada. If he is possessed of the genius of constructive statesmanship, we will no doubt find proof of it in the scheme that he has propounded. Eighteen days was all he required, in which to bring forth this scheme, and certainly any one who can bring forth a scheme of this magnitude in eighteen days does manifest genius. What is his scheme? It is, first of all, to get a through line from Montreal to the coast by buying up old lines and building new lines. The first part of the line from Montreal to Winnipeg is to be a government line. The intervening section to the mountains is to be a company line, and the mountain section is perhaps to be a government line. Well, we were told that our system is a mongrel one, that we had a line which was neither one thing nor the other, which was neither fish, flesh nor good red herring, that the government was to own part of the line, and that the whole line was to be operated from ocean to ocean by a company. That did not satisfy these hon. gentlemen. Yet, dispite this criticism, we have a proposition that the government should build and operate a line as far as Winnipeg, that a company should then build and operate a line to the mountains, and that the government should build and operate a line from the mountains to the sea.

Sir WILLIAM MULOCK.

Mr. BORDEN (Halifax). The hon. gentleman is not stating my proposition correctly.

The POSTMASTER GENERAL. I think I shall show by the hon. gentleman's ipsissima verba the correctness of what I am saying. I say that his speech on the 18th of August, as reported in 'Hansard,' involved the following scheme: First, to build a railway from Montreal to Coteau. Second, to buy the Canada Atlantic Railway from Coteau to Depot Harbour, a distance of 342 miles, or if that road could not be bought, to parallel it. He did not say to parallel it directly, but it was to terminate at Depot Harbour, and the hon. member for Bothwell to-day interpreted his meaning. He said that the policy of the leader of the opposition is either to buy the Canada Atlantic Railway from Montreal to Depot Harbour or build another railway which would parallel it to Depot Harbour. The hon. gentleman did not use the word 'parallel,' but the road was to begin at the same point and end at the same point. So that while paralleling in one part of the country is objectionable, in another part it is very desirable. The scheme of the leader of the opposition was to build a railway from Montreal to Coteau, to buy the Canada Atlantic Railway from Coteau to Depot Harbour, and then to build a railway from Depot Harbour to Sudbury.

Mr. BELL. No, to Scotia Junction.

The POSTMASTER GENERAL. No, to Sudbury. That is what he said in the speech anyway. What he said was this:

> If we acquired the Canada Atlantic Railway, we could build a line from that point to join the Candian Pacific Railway at or near Sudbury.

I am arguing from what the hon. gentleman said, and if there is any other proposition let us have it. At Sudbury, instead of buying from Sudbury west he proposes to go back on his tracks a little bit and to go easterly and buy the Canadian Pacific Railway from North Bay to Fort William. And he proposes to spend large sums of money in making the line between North Bay and Fort William fit for the work which it is expected to perform. Again he proposes to acquire control over the Canadian Pacific Railway and the Canadian Northern Railway from Fort William to Winnipeg; to aid the Grand Trunk Railway to build from Winnipeg to Edmonton, and to have the government build a line from Edmonton or some point near Edmonton to the Pacific coast, unless the two companies can be induced to do so on joint account. He has thus got to the coast; then he goes back to the east again. He has heard a voice from the east condemning his opposition to the government's scheme of a road from Moncton to Winnipeg and he lays his plans for a second transcontinental line. He proposes to build from Moncton

to Lévis—practically to Quebec as Quebec is on the other side of the river from Lévis—then to extend the Intercolonial from Quebec to Winnipeg and to build a railway from Winnipeg to the coast. That is not enough ; the sea has to be conquered. First of all, he wishes to acquire and operate a railway line from Montreal to the coast, then he proposes to invade the inland lakes, to purchase the Canada Atlantic Transit Company's fleet and to go into the grain carrying trade on our inland waters. He wishes to thoroughly equip the Georgian Bay ports, to thoroughly equip our national waterways, to thoroughly equip the St. Lawrence route, to thoroughly equip our ports on the Atlantic coast, to abolish if necessary harbour dues on the Atlantic coast and harbour dues on the Georgian bay, to improve the harbour facilities at Port Colborne, to exploit the harbour of Montreal, to make Montreal, Quebec, Halifax and St. John national ports, and free ports and to provide, at a nominal charge, storage equivalent to the capacity of 100,000 barns. Now that is the hon. gentleman's scheme as set forth in 'Hansard,' and I will discuss the details of it after eight o'clock.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

The POSTMASTER GENERAL. At six o'clock I had endeavoured to express what I conceived to be the two propositions before the House. I do not understand that at this present date there is any question as to whether there should be a new transcontinental railway, that point appears to be conceded by the leader of the opposition. Instead, however, of accepting our scheme for a transcontinental railway, he propounds another one, meaning in fact two transcontinental railways, together with many other important features involving large undertakings. Before six o'clock I gave to the House in detail the propositions of the leader of the opposition. An hon. gentleman on the other side appeared to question the accuracy of my analysis of the scheme, and I intend to endeavour to defend the leader of the opposition from the attacks made upon his scheme by some of his supporters. What he has done that he should be discredited, I do not know. But some of his supporters are certainly supporting him in a very extraordinary way. He has given us, we are told, a scheme which is the product of a great constructive statesman. Why a scheme coming from such a gentleman should be discredited by those who are bound to support him, who are here to support him, and who applauded his scheme, is something I am at a loss to understand.

Mr. HENDERSON. Or anybody else.

The POSTMASTER GENERAL. Or anybody else. It does seem a most extraordinary thing that the leader of the opposition should propound a scheme, that it should receive the loud applause of his colleagues about him, and that then they should proceed to discredit it—not in so many words, but saying in effect that his whole proposition was absurd and ridiculous. Why they should hit him in this way from the rear, I do not know. Nevertheless it is my duty and my pleasure to come to his rescue, and to show his supporters exactly what he means. If they do not understand it, surely they will permit me to read it to them, and to dwell upon some of its features. I propose to read to them his own utterances, and to explain them to those hon. gentlemen that they may the better understand the true policy of their leader, for they seem to have read but superficially either the government's scheme or that of the leader of the opposition. Let me summarize the propositions of the leader of the opposition. The government's proposition appears to have commended itself to the judgment of the country, and the country is prepared to adopt it unless a better is forthcoming. The leader of the opposition has presented his alternative, and if it is better than ours, it is our duty loyally to accept it. I am sure if we can convince the majority of this House, and if we are satisfied that public opinion is with us in the opinion that the scheme of the leader of the opposition is better than that of the government, it would be our duty promptly to accept his proposition. But let us understand it first. The confusion that seems to exist in the minds of the members of the opposition justifies a little attention to the details of that important scheme, emanating as it does from a gentleman of such gigantic constructive capacity. But remember I approach it with great deference, because, although it took us a year or thereabouts to evolve our modest proposition, the gentleman who leads the opposition evolved his in less than eighteen days. Again let me give you for careful consideration, for prayerful consideration, the details of the scheme that we are now asked to adopt.

The leader of the opposition asks us to adopt the following proposition :

To build a railway from Montreal to Coteau, 37 miles in length.

To buy the Canada Atlantic Railway from Coteau to Depot Harbour, 342 miles in length, or to build another between the same points paralleling the Canada Atlantic Railway.

To build a railway from Depot Harbour to Sudbury, 120 miles in length.

To buy the Canadian Pacific Railway from North Bay to Fort William, and to expend large sums of money in making it fit for its work.

To acquire control over the Canadian Pacific Railway and the Canadian Northern

from Fort William to Winnipeg, 850 miles. This may involve, it does in fact involve, the purchase of both those lines.

To aid the Grand Trunk Railway in building a line from Winnipeg to Edmonton.

The government to build the line from Edmonton to the coast unless the company builds it. I have omitted to give the number of miles on these lines, I will tell you their total in a moment.

Then coming back again to the east, to build a line from Moncton to Quebec, 400 miles in length.

Another from Quebec to Winnipeg, 1,400 miles in length.

Another from Winnipeg to the coast, 1,600 miles in length.

In all, to build 7,041 miles of road—that is all up to date, and that is a small portion of the proposition of the leader of the opposition. It is true, Mr. Speaker, that we have taken over fifty years in Canada to build 17,000 or 18,000 miles of railway. Now we are asked to authorize an expenditure to build 7,000 more, nearly 50 per cent of our present mileage. But this is only the threshold of the scheme.

To equip and operate a line from Montreal to the coast.

To equip and operate a line from Moncton to the coast.

To purchase the Canada Atlantic Railway transport fleet, and to operate it.

To go into the grain carrying trade on our inland waters.

Thoroughly to equip the Georgian Bay ports.

Thoroughly to equip our national waterways.

Thoroughly to equip the St. Lawrence route.

Thoroughly to equip our ports on the Atlantic coast.

Abolish any unnecessary harbour dues on the Atlantic coast.

Abolish any unnecessary harbour dues on the Georgian bay.

Develop harbour facilities at Port Colborne.

Accept the harbour at Montreal.

Make Montreal a national port; make Montreal a free port.

Make Quebec a national port; make Quebec a free port.

Make St. John a national port; make St. John a free port.

Make Halifax a national port; make Halifax a free port.

Provide storage, at a nominal rate of the capacity of 100,000 barns, with the result that the government is to embark in the warehouse business.

Those are the leading features of the scheme of the leader of the opposition.

Mr. DAVIS. They are going to build barns.

The POSTMASTER GENERAL. Yes, and they will be getting under the barns pretty soon. Now, Mr. Speaker, in introducing that scheme, the hon. gentleman declared that it would involve a limited expenditure of money. But what is money for, he asks. Money is made to spend, he tells us. Now I do not want to misquote the hon. gentleman, and I will try to prove step by step what I attribute to his authorship, especially as I do not observe him in the House. On page 9003 of the 'Hansard,' he says:

> The people of this country are not afraid of spending money if it is spent in a sane and reasonable way.

Then he proceeds to give his ideas of sanity. I have myself given you these particulars. He says after referring to some of the government's proposals:

> There is no reason to be afraid of spending money. I am not afraid of spending money and the country is not afraid of spending money.

He tells us that neither he nor the country is afraid of spending money and he asks us to adopt that policy. Now, although the hon. gentleman may not be afraid of spending money, perhaps those who are responsible for the expenditure and perhaps the taxpayers as well would deem it not a waste of time to consider from the standpoint of cost alone what the scheme of the hon. gentleman does involve. Our scheme, limited to an investment with the exception of a few years at the commencement when we pay interest or forego rent, involves a cash outlay by this government, not to be recovered, of not exceeding $13,000,000. That is the cost to the country of the government proposition.

Mr. CLANCY. How does the hon. gentleman know that it is going to be $13,000,000?

The POSTMASTER GENERAL. Well, that is a little over the estimate. The actuarial estimate puts it between $11,000,000 and $12,000,000, but I have given a margin. Thirteen million dollars is all that our little modest scheme involves in the way of money going out that does not come back. I must say that I blush at our modesty when considering what is involved in the magnificent scheme propounded by the hon. leader of the opposition. Let us analyze it. I do not think there will be much difference on either side of the House as to the cost excepting always of course the view of that hon. gentleman, who puts down the cost of our scheme at the trifling sum of $560,000,000. I am surprised at his modesty. But, taking the scheme and trying to actually reach an intelligent idea as to what the scheme of the hon. leader of the opposition involves, I think we can, without much difficulty, arrive at a fair conclusion. For example, we are told that it involves the building of 37 miles of a railway from Montreal to Côteau.

The hon. member for Bothwell (Mr. Clancy) allowed that the cost of that piece of road would be $1,200,000. I am not going to put it that high. I am putting it down at $1,110,000. Probably no exception will be taken to that item. We then proceed to the next link of this railway, that from Coteau Junction to Depot Harbour, involving the purchase of the Canada Atlantic Railway. The Canada Atlantic Railway Company owns, I am told, 400 miles. The hon. leader of the opposition told us that, and I give him as my authority. Of this 400 miles of railway fifty-seven miles of it are in the state of Vermont. If the hon. leader of the opposition proposes to buy the Canada Atlantic Railway system he will have to buy it all. Do hon. gentlemen opposite only figure upon buying 342 miles of railway from Coteau to Depot Harbour, or do they propose to buy it all ?

Mr. CLANCY. The hon. gentleman is quite well aware that there has been an offer open to the world for not only the whole Canada Atlantic Railway, but for the whole system, including steamers and elevators, for $11,000,000. Although I did not include it to-day it has to be included in it.

The POSTMASTER GENERAL. The hon. gentleman says that the whole Canada Atlantic Railway system was at one time offered for $11,000,000. That may be, but we are not speaking of one time ; we are speaking of now.

Mr. CLANCY. That is within twelve months.

The POSTMASTER GENERAL. I am assured that there is no government or person who can acquire the Canada Atlantic Railway for anything like $11,000,000. I understand that the minimum price placed upon the system is not less than $17,000,000.

Mr. BORDEN (Halifax). I have information exactly the opposite.

The POSTMASTER GENERAL. To what extent does the hon. gentleman's information go ?

Mr. BORDEN (Halifax). I have information that it can be bought for $14,000,000 at the outside, and probably for $12,000,000 in cash.

The POSTMASTER GENERAL. The hon. leader of the opposition says $14,000,000 and the hon. member for Bothwell says $11,000,000. I am told that the market price is not less than $17,000,000, if it can be purchased to-day. At all events, between these prices we can put it down as $15,000,000, and that includes this fifty-seven miles of railway in Vermont. What the government of Canada is going to do with fifty-seven miles of railway in the state of Vermont, I am at a loss to understand.

Mr. TAYLOR. How much has the Grand Trunk Railway in the United States ?

The POSTMASTER GENERAL. I am speaking of the government buying railways in the United States ; I am not speaking of private citizens doing so. If it is proposed by the hon. leader of the opposition or by the party supporting him to expend the people's money in the acquisition of railways in the United States, then, a different proposition is involved. If we were going to make such a purchase, I question very much whether the people of the country would consent to their money being used for acquiring such a road. But an alternative is proposed by the hon. leader of the opposition, and if at any stage in my observations I misquote him, I shall be only too thankful to him if he will correct me. I do not wish to delay the House unnecessarily by quoting his exact words in 'Hansard,' but I am prepared to do so in support of anything I may say, if the accuracy of my statement is doubted. The hon. gentleman said that he was prepared either to buy the Canada Atlantic Railway, or to build another line between Coteau and Depot Harbour paralleling it.

Mr. BORDEN (Halifax). That is not correct. I said to a point on the Georgian bay.

The POSTMASTER GENERAL. The whole story of the leader of the opposition had reference to the Canada Atlantic Railway.

Mr. BORDEN (Halifax). I did not confine myself to Depot Harbour.

The POSTMASTER GENERAL. I do not care whether it is Depot Harbour or the Georgian bay. The Canada Atlantic Railway goes to Depot Harbour. The hon. gentleman says :

> The Canada Atlantic Railway extends from Depot Harbour on the Georgian bay to Coteau Junction a distance of 342 miles.

Then he proceeds to point out the possibility of connecting with that point. Having stated that the Canada Atlantic Railway extended from Coteau to Depot Harbour, he proceeded to point out what a magnificent harbour Depot Harbour was, and he said that the tonnage that had come to Depot Harbour, proved that it was a magnificent connection between Duluth, Fort William and the west with the east. Having so described Depot Harbour he proceeds :

> Now, Mr. Speaker, I am not wedded to the acquisition of the Canada Atlantic Railway. I am only propounding a policy which I think ought to be followed, namely, the extension of the Intercolonial Railway to a Georgian Bay port. May be that after expert advice has been obtained some other scheme may be found that would be better than the acquisition of the Canada Atlantic Railway. So let it be. If, however, the Canada Atlantic Railway commends itself to the judgment of experts, and from what information I can obtain with re-

gard to it, I should think it ought so commend itself, and I would think that the extension of the Intercolonial Railway between Coteau and Jacques Cartier Junction, and the acquisition of the Canada Atlantic Railway to Depot Harbour, would place the Intercolonial Railway in a very much better position than it is at present.

The hon. gentleman says he did not pledge himself to build an alternative paralleling line to Depot Harbour. Is that not playing upon words when he is seeking to get to Georgian bay, and to get the traffic that now comes to Depot Harbour? It is not the particular terminal point that is involved; it is the traffic that is involved. The leader of the opposition is prepared to build a competing line to Depot Harbour, or some point on the Georgian bay, to parallel the Canada Atlantic Railway and to destroy it by the expenditure of public money. That may be constructive politics, but I think it is destructive politics, and any way it would cost the taxpayers of Canada at least $15,000,000. Again, the hon. gentleman proposes to build a railway from Sudbury to the Georgian bay and on this point he says:

> I have referred to the extension of the Intercolonial Railway to the Georgian bay. If we acquire the Canada Atlantic Railway, we could build a line from that point to join the Canadian Pacific Railway at or near Sudbury.

And the hon. gentleman says that the mileage would be 120 miles. I think my hon. friend from Bothwell figured it at a higher mileage, but I will be content to put the figures at 120 miles, and then the cost would be $3,600,000——

Mr. CLANCY. I mentioned Scotia Junction and by actual measurement it is 104 miles.

The POSTMASTER GENERAL. There again the hon. gentleman (Mr. Clancy) is at variance with his leader. Scotia Junction is an inland point many miles from the Georgian bay, but the leader of the opposition wants to build from the Georgian bay. When the leader of the opposition makes his connection at Sudbury he looks westward to get to Fort William, and Sudbury is 73 miles westerly of North Bay, and is a point upon the line of the Canadian Pacific Railway. The leader of the opposition proposes to buy the Canadian Pacific Railway from North Bay to Fort William, a distance of 634 miles, and on that point I might as well give his own words, spoken on the 18th of August, as follows:

> I say it would be a proper thing and a wise thing for this government to acquire this railway from North Bay to Fort William.

Not from Sudbury as the hon. member for Bothwell says, repudiating his leader, but from North Bay, which means a few miles more to be thrown into the bill of costs. Thus the leader of the opposition proposes to buy the Canadian Pacific Railway for 634 miles from North Bay to Fort William, and when it is acquired to spend a few millions on it in betterment to make it fit for the traffic which it is supposed it will carry.

Mr. BORDEN (Halifax). The hon. gentleman has not quoted all.

The POSTMASTER GENERAL. What have I left out?

Mr. BORDEN (Halifax). This:

> You could acquire either the ownership of that railway or the absolute control of running rights over it.

The POSTMASTER GENERAL. The hon. gentleman says we could acquire the ownership or absolute control of running powers, and I suppose he would argue that running powers are equal to ownership. His scheme is not merely that the Canada Atlantic Railway should have running powers over the road he is arranging for between Montreal and the west, but that the Grand Trunk Pacific Railway, the Canadian Northern Railway and the Canadian Pacific Railway shall have running powers as well. He proposes in his scheme to secure if possible a national railway highway; one that will be available on fair terms for all railways. now, if I can show that the hon. gentleman's opinion is, that no railway under the control of any one company will meet his expectations in that regard, I am sure he would not for a moment propose to deceive the House by pretending that he did not mean the actual acquisition by purchase of the ownership of that road. You will remember that in the government scheme we propose to own the railway from Moncton to Winnipeg and to reserve authority to enable us to grant running powers, just, and equitable and ample to all-comers. We attach a great deal of weight to that feature of that scheme, and we presented it to parliament with a great deal of confidence, but the leader of the opposition expressed his opinion on that question. The Prime Minister spoke on the 30th of July last, and the leader of the opposition in criticising the Prime Minister's remarks, expressed himself in these words:

> It is well known, not only amongst railway men but to those who are not railway experts, that the company which has the management or control of the line can regulate the running powers granted to other railways in such a way that they are of no practical advantage to the railway having these running rights. I do not think there is any doubt in the mind of any railway man in regard to that, and therefore I think that the running powers which are proposed to be granted over the line from Moncton to Winnipeg are of no real value.

Now, if on the 30th of July it was the opinion of the leader of the opposition that running powers even over a government

road reserved for other lines, were of no value; what does the hon. gentleman wish us to infer from his statement of to-night, that he only proposed to acquire running rights over the Canadian Pacific Railway from North Bay to Winnipeg. Why, Sir, the member for Bothwell (Mr. Clancy) in expounding the proposition of his leader, understood this to mean the actual purchase of the road. The leader of the opposition proceeded to elaborate upon the principle of eminent domain and the right of expropriating railways if needs be in the public interest, and all his followers in giving their estimate of the cost of such scheme figured it out upon having to pay the Canadian Pacific Railway for its railway from North Bay to Winnipeg. But now for the first time to-night the leader of the opposition intimates that he did not mean that.

Mr. BORDEN (Halifax). I beg my hon. friend's pardon; I merely directed his attention to a portion of my remarks that he had not quoted.

The POSTMASTER GENERAL. Very well, if the remarks have any meaning at all, what is the meaning of them? The hon. gentleman advocated his scheme to buy from North Bay to Fort William, because among other reasons, the Intercolonial Railway, the Canadian Pacific Railway, the Canadian Northern Railway, the Grand Grand Trunk Railway should have running rights over that road. But he told us on the 30th of July last that running rights were no good over a company owned road, and, therefore, what good will that line be if the Canadian Pacific Railway owns it and only running rights are acquired in it. The hon. gentleman either means something or he means nothing.

Mr. BORDEN (Halifax). Does the hon. gentleman wish me to answer him?

The POSTMASTER GENERAL. I am willing that the hon. gentleman should do so.

Mr. BORDEN (Halifax). In the one case, there is a lease to the Grand Trunk Pacific giving it control over the road. In the other case, which I have just suggested, the government would have either the ownership of the road or the absolute control of the running powers. In either case the running powers over that road, so far as all the companies are concerned, would be regulated by an independent power.

The POSTMASTER GENERAL. May I read to the hon. gentleman, for his information, a clause in the proposed lease, which he criticised on the 30th of July last? As the hon. gentleman is aware, the government is to own the eastern division, to be the landlord of it, and is to grant to the Grand Trunk Pacific a limited interest in it. This clause says:

The said lease shall also contain proper and usual provisions,—

(a.) Reserving to the government in respect of its ownership, present and future, of the Intercolonial and any other line or lines of railway, running powers and haulage rights over the said eastern division upon equal terms with the lessees, subject to such reasonable restrictions as may be necssary to secure safety and convenience.

And so on. Then, as regards outside companies:

(b.) Reserving power to the government to grant running powers and haulage rights sufficient to enable any railway company desiring to use the said eastern division, or any part thereof, to do so upon such terms as may be agreed upon between the companies, or, in case of their failure to agree, then upon such terms as may be deemed reasonable and just by the government, having regard to the rights and obligation of the lessees.

Under that wording, the government remains in possession to the extent that is necessary to give to all railways such running power as the government deems reasonable and proper.

Mr. BORDEN (Halifax). Having regard——

The POSTMASTER GENERAL. Having regard to the rights of the lessees, and the rights granted are subject to the reservation. The reservation is as large as the rights, and all have to be read together as one scheme, and the government is the tribunal who determines the rights of other companies and the terms upon which other companies shall use the road. And yet the hon. leader of the opposition expressed his opinion on the 30th of July, not only with reference to these words, but generally, that running rights such as these are of no practical value. If so, what is the meaning of his scheme to acquire the Canadian Pacific Railway from North Bay to Fort William, with the few words thrown in, that perhaps running rights might also meet the case? The hon. gentleman's own colleagues all understand his scheme, which contemplates the purchase of the Canadian Pacific Railway from North Bay to Fort William, a distance of 634 miles; and the question is, what will that piece of railway cost? The Canadian Pacific Railway Company is not in the habit, I think, of giving anything away at less than its value. I would not blame them for hanging on to their own; and if the hon. gentleman thought of expropriating—and this is what he hinted at—this line of railway, he will be confronted at once with an estimate of what it cost. The hon. gentleman's own colleague, the hon. member for South Lanark (Hon. Mr. Haggart), speaking no doubt from his experience as Minister of Railways and Canals, stated that the cost of the railway from Fort Wiliam to North Bay had been $60,000 a mile. If we got it at cost, I think we would be very fortunate. I do

not propose to put it higher than cost; but I do say that the hon. gentleman will not succeed in expropriating that piece of railway from the Canadian Pacific Railway at less than its cost, as stated by the hon. member for South Lanark.

Mr. CLANCY. Does the hon. gentleman know what estimate was put upon it by the hon. member for Labelle (Mr. Bourassa) last night, which was less than was put upon it to-day, and that from the authority of an engineer?

The POSTMASTER GENERAL. I only know the estimate put upon it by the ex-Minister of Railways and Canals of the late administration, who, with all the knowledge his office gave him, spoke officially in fact when he told us that the cost was $60,000 a mile. The hon. member for Bothwell (Mr. Clancy) himself told us that he put the cost at $45,000 a mile, in addition to which he was going to allow $5,000 a mile for betterments.

Mr. CLANCY. I want to say to the hon. gentleman that I distinctly said that I did not put any estimate upon it. It was an estimate put upon it by a competent authority.

The POSTMASTER GENERAL. The hon. gentleman, at all events, in trying to satisfy this House what it would cost to carry out the scheme of the hon. leader of the opposition said that the estimate was that this particular railway would cost $45,900 a mile, and that a large sum would have to be spent for betterments, which I think amounted to $5,000 a mile. So that the hon. member for Bothwell put the railway from North Bay——

Mr. CLANCY. No, from Sudbury.

The POSTMASTER GENERAL. The hon. gentleman started from Sudbury, but the hon. leader of the opposition started from North Bay. You see, our hon. friends opposite are not in harmony, and I am defending the hon. leader of the opposition. That hon. gentleman is buying the whole railway from North Bay to Fort Wiliam, and the hon. member for Bothwell puts the price at $50,000 a mile, and it is a question whether we will take his figure or the figure of the hon. member for South Lanark, viz., $60,000. I think it probable that the hon. ex-Minister of Railways and Canals has a more accurate knowledge of the facts. At his figure, then, the 634 miles from North Bay to Fort William will cost us $38,040,000.

We have now reached Fort William. There we meet two railways, the Canadian Pacific Railway and the Canadian Northern Railway. The hon. gentleman proposes to acquire some estate over the Canadian Pacific Railway. His scheme is to get a continuous line of railway from Montreal to Winnipeg available for the Intercolonial Railway and all other railways. He has already told us that running powers are a delusion, that they cannot be acquired so as to be of any value. Therefore, when he proposes to make use of these two roads in a certain way to make them effective, it cannot be under the old scheme of a company owning a line and giving running powers over it to others. He says:

> The third point which I would submit to the consideration of the House, as a sound policy, is to assist in improving the grades of one or both lines from Winnipeg to Fort William, upon the condition that complete control of rates is obtained and that the Grand Trunk Railway as well as the Intercolonial Railway shall have running powers from Fort William to Winnipeg.

His object is to secure a highway available for the Grand Trunk Pacific, the Intercolonial and the Canadian Northern. He has already told us that running rights cannot be acquired where a company owns the lines. How, then, is he going to acquire a proper highway to meet the services he is seeking? He is going to expend public money upon the Canadian Pacific Railway or the Canadian Northern Railway or both between Fort William and Winnipeg. There is only one way, he says, by which the public money expended on those roads will be saved, and that will be by the public owning those two roads. He might as well have said frankly that his purpose was to purchase these roads out and out, and that is practically what is admitted by his friends behind him. But, if he buys only one, which one will he buy? Does he pretend that he could buy the Canadian Pacific Railway from Fort William to Winnipeg and use it in rivalry with the Canadian Northern Railway or vice versa? I question if that would be considered a just arrangement. He must either buy both or none, for each has equal rights, and if he proposes to buy one, that carries the responsibility of buying both or ruining the other. But if he should buy only one, which one? The government of Canada built the Canadian Pacific Railway from Fort William to Winnipeg and paid for its construction $15,638,549. The government then made a free gift of it to the Canadian Pacific Railway. Without adding one penny to the original cost of that line from Fort William to Winnipeg, it would cost us, if we only had to pay what was originally expended upon it, $15,000,000. Then take the Canadian Northern Railway, which runs side by side, that cost $25,000 per mile, and no one will say that that is an over estimate. If that estimate be satisfactory, it means that the purchase of the Canadian Northern Railway from Fort William to Winnipeg will cost $10,625,000. Now, the purchase of these different roads and the construction of two pieces would aggregate in all $841,015,549. And when he has this road to Winnipeg, I presume he pro-

poses to equip it with rolling stock. How much he proposes to expend on rolling stock, I do not know, but if the Grand Trunk Pacific Railway consider $20,000,000 not too much to expend on rolling stock, with which to equip its proposed new line, at least half that would be required to make this extension of the Intercolonial Railway effective. If so, that would mean $90,000,000 odd for bringing the Intercolonial to Winnipeg.

Assuming that the leader of the opposition has carried out his policy, assuming that he has expropriated the Canadian Pacific Railway from Fort William to North Bay, I would like to know what effect that is going to have on the railway system of the Canadian Pacific Railway and our western trade ? Everybody knows that the 634 miles operated by the Canadian Pacific Railway between Fort William and North Bay is about the most unprofitable piece in all Canada. Everybody knows that the Canadian Pacific Railway have an alternative route from Duluth to Sault Ste. Marie, a distance of nearly 400 miles, which they would be only too glad to use if they could get rid of the expensive north shore piece of railway. The hon. gentleman proposes to take out of the Dominion treasury $38,000,000 and hand it over to the Canadian Pacific Railway for the purchase of its railway from Fort William to North Bay. The Canadian Pacific Railway could then turn around and build a short line of railway, 360 miles in length, from Winnipeg to Duluth, side track Fort William and Port Arthur, and divert the whole traffic west through Duluth, going down from and coming back to Canada by the Sault Ste. Marie. The Canadian Pacific Railway is at present maintaining two lines of railway for its western traffic going east, with the exception of a short link between Winnipeg and Duluth of 360 miles. Every day it runs a train from Fort William to North Bay, it loses money. I am not in a position to say how much but an hon. gentleman opposite—speaking with I do not know what authority—suggests that $1,000,000 is the annual loss in operating the railway between Fort William and North Bay. That may or may not be correct. But that line follows a rocky coast, as every body knows, on which there is not sufficient traffic to make it pay, and besides the grades are bad, the curves are severe, and it is altogether an expensive road. Nothing therefore would suit the Canadian Pacific Railway better than to be relieved of the cost of keeping open that road; and were the hon. gentleman's policy carried out and the Canadian Pacific Railway paid $38,000,000 of the people's money to sell out what is a dead horse, namely, the line from Fort William to North Bay, they could take $13,000,000 of that money and build a road from Winnipeg to Duluth. That would be the outside cost, and they would then have complete connection between Winnipeg and the Soo, around the south shore of Lake Superior and could divert all the Canadian traffic over that route from the hon. gentleman's common national highway. The hon. gentleman proposes to give the Canadian Pacific Railway $38,000,000 to divert traffic from Canada to the United States, to destroy our own ports, Fort William and Port Arthur, and to build up Duluth in their stead. We, on the contrary, aim at having a Duluth of our own on the north shore of Lake Superior. The hon. gentleman proposes to Americanize the Canadian Pacific Railway, to rob it of its national character, to divert the commerce of Canada to the United States, and build up the rival city of Duluth as against Canadian ports. What would be the effect of the hon. gentleman's scheme if he could carry it out ? If the grain of the North-west, which the Canadian Pacific Railway carries, were brought to Duluth instead of to Fort William or Port Arthur, Canadian shipping would immediately be made subservient more or less to the laws applicable to the United States, mercantile marine. It would mean the driving away largely of Canadian mercantile marine from the lakes, and all for what purpose ? Can any one tell us what purpose will be served ? Who has been the hon. gentleman's adviser ? Does the hon. gentleman feel proud of this scheme, the products of eighteen days reflection ? It cannot be that it is the outcome of eighteen days reflection. It must have involved long consideration by persons better versed in these matters. As the hon. member for West Toronto (Mr. Clarke) once said, there must have been some gold bricking done; and I submit that on this occasion a very considerable gold brick has been passed on the leader of the opposition by the Canadian Pacific Railway. What are we to gain by spending $54,000,000 to buy up the existing roads between Montreal and Winnipeg ? The expenditure of that money will not open up for settlement one additional square mile of country. It will transfer many millions of the people's money into the treasury of some company, but it cannot possibly be of any service to the people of Canada. It will take $84,000,000 out of the treasury of Canada and put it into the treasury of some railway companies which have already been well subsidized. It will do worse. If will throw upon the country for all time the cost of maintaining an unprofitable section of railway between Fort William and North Bay. In every way, it will be adverse to our interest and yet we are told by our hon. friend from Bothwell (Mr. Clancy) that it is a work of constructive statemanship. The hon. member for Bothwell, in his description of this scheme, stopped at Winnipeg. Why did he go back on his leader ? His leader did not stop at Winnipeg. The hon. member for Bothwell either did not understand the scheme or he is going to repudiate

it all west of Winnipeg. Let me again come to the rescue of the leader of the opposition; his is a larger scheme than that:

The fourth point——

Now, this is the fourth point. It is not a casual observation, it is a point, it is number four; I am quoting the words of the leader of the opposition.

The fourth point on which I propose this policy is this. It will assist the Grand Trunk Pacific Railway on reasonable terms, if they guarantee to build a line north of the Canadian Northern Railway and as far west as Edmonton or some adjacent point.

During this discussion we have estimated the prairie section at 1,000 miles. The hon. gentleman supported a short time ago a guarantee of bonds by this government to the extent of $13,000 a mile, to the Canadian Northern Railway for some eight hundred miles; their line did not cross the whole prairie.

When you get to Edmonton, the point to which he is prepared to help the Grand Trunk Pacific Railway you have reached a point some thousand miles west of Winnipeg. I presume that the hon. gentleman is prepared to aid the Grand Trunk Pacific Company on the same scale as the Canadian Northern was aided, namely, $13,000 a mile. If that is so, $13,000,000 must be added to the cost of his scheme for the aiding of the Grand Trunk Pacific Railway from Winnipeg to the point in question. The hon. gentleman having got west of Winnipeg, the question arises, what next? There he expects a conjunction of the Grand Trunk Pacific and the Canadian Northern and if those two roads are quite agreeable to building a railway from a common point to the coast let them do it, but if they are not prepared to do it, then the hon. gentleman is willing that that railway should be build at once at the cost of the treasury of this country. These are his words:

At some point on this side of the Rocky mountains, there should be a common point a junction between the Canadian Northern Railway and the Grand Trunk Pacific Railway. From that on to the coast there should be one line. That line should be built by these companies, on such an arrangement as would give them joint control. Should there be any difficulty in coming to such an arrangement, the government should build that line itself and maintain control and give these railways for a term of years running powers over it.

Thus, Sir, he is prepared, unless the two railways will build, to build a railway and to give running powers over it. The length of that railway will be 600 miles and no one will estimate the cost of the mountain section at less than $50,000 a mile.

Mr. CLANCY. The hon. the Minister of Finance stated that the length of that section would be 480 miles.

The POSTMASTER GENERAL. I have not the figures of the Minister of Finance before me, but I understand that from this point at Edmonton it will be some 600 miles.

The MINISTER OF FINANCE. I did not say that it would be 480 miles from Edmonton.

Mr. CLANCY. The statement was that the mountain section would be 480 miles.

The MINISTER OF FINANCE. That is not from Edmonton.

The POSTMASTER GENERAL. Taking the length of the line from Edmonton to the coast at 600 miles, and estimating the cost at $50,000 a mile, we will have $30,000,000. Thirty million dollars added to the $84,-015,549 which it has cost to bring his railway to Edmonton makes $114,015,549. That is the cost of the extension of the Intercolonial Railway from Montreal to the coast, including aid to the prairie section of the Grand Trunk Pacific Railway.

Now, the hon. gentleman (Mr. Borden, Halifax) has got one railway to the coast and you would think that that scheme ought to have satisfied the ambition of any ordinary man. But not so on this occasion. The hon. gentleman told us, and he told us particularly, that the country was not afraid of spending money, and the hon. gentleman is not afraid of spending money. I take him at his word, I have not the slightest doubt of the accuracy of that statement, because, having got to the coast, he turns back again to the east with an eye to Moncton and Halifax—and I do not blame him for that. He considers how he is to square himself with the people of the east on the unfortunate position in which he placed himself on the 30th of July last. So he approaches the question a little gingerly but still his meaning is not difficult to discover. On the 18th of August, addressing himself to the subject of a government line, he says:

I say that if there is a better line between Lévis, or Rivière du Loup, or any such port on the Intercolonial, and Moncton, a line the construction of which will give to Halifax and St. John a better fighting chance for western traffic than that which they have at present, I will support the construction of that line. But I will not support it with the object for which this Bill provides. I will tell my hon. friend how I will support it. I will support the construction of that line as part of the Intercolonial Railway.

Therefore, he says, if a better route can be obtained he is prepared to extend the Intercolonial from Moncton to Lévis. It is not a question of cost; it is not a question of paralleling the Intercolonial. He is prepared to build a railway from Moncton to Lévis; he is prepared to take the through traffic or all traffic if needs be off the main line of the Intercolonial which now follows the south shore of the St. Lawrence; he is prepared to incur all the expense if a better road can be obtained. It is not a question of cost, he commits himself up to the handle because every one knows that a better road

than the existing line of the Intercolonial can be obtained if you do not object to the cost. Engineers can get you what you are prepared to pay for. It is a question of a better line and money does not concern him because as he said :

> The people of the country are not afraid of spending money, if it is spent in a sane and reasonable way. . . .
> There is no reason to be afraid of spending money, I am not afraid of spending money. And the country is not afraid of spending money. But let us spend it in a reasonable and proper way.

Every one will concur in the hon. gentleman's statement that he is not afraid of spending money after the words I have quoted from his speech. He is prepared, if a better line can be got, to build from Moncton to Lévis and I am sure the hon. gentleman could not go back to Halifax to-day and say that he was not honestly in favour of the construction of a line between Moncton and Lévis—not only in favour of constructing such a line, but of constructing it at the earliest possible moment, and I expect that before this debate is concluded the hon. gentleman will come all the way over and say that he heartily approves of the immediate construction of a line from Lévis to Moncton.

Mr. BORDEN (Halifax). Will the hon. gentleman permit me to say that he has misquoted my remarks in that he has not given my entire statement, on this point. I said, immediately following the words the hon. gentleman has quoted :

> In all this, act reasonably, survey your country, consider your course, consider the distance to be saved, consider the cost of haulage to be saved. Do not plunge into the thing rashly, do not undertake to build it upon a survey made thirty or forty years ago when railway conditions were different from what they are at present. Go into the enterprise sanely, after having obtained information which would justify you in believing that it would give a better chance for trade to the people of the maritime provinces.

The POSTMASTER GENERAL (Hon. Sir William Mulock). The hon. gentleman has not at all disputed anything that I said. I did not pretend to read all his words. I read the portion of his remarks wherein he said that if a better line can be procured he is prepared to build a line from Moncton to Lévis. The question of cost is a circumstance, but it is not a controlling circumstance with the hon. gentleman, who, I am sure, will not say in this House that he is against the building of a line from Moncton to Lévis, nor for that matter from Lévis or Quebec to the Pacific ocean. The hon. gentleman is prepared to build a line from Ottawa, to put it under contract from Moncton to Lévis if an engineer can tell him that a better line than the existing Intercolonial line can be obtained. That is his position, he has put himself on record and from it he cannot recede. Either that is true or he did not intend to express himself as he did in the language which I have quoted.

Hon. gentlemen have said that it will cost $10,000,000, I think they say $15,000,000 to build from Moncton to Lévis. If that line would be 400 miles long and $25,000 a mile is put down as the cost, it will cost $10,000,000. I am sure there is not an hon. gentleman in the House who will say that this is an unreasonable estimate.

Hon. Mr. ROSS (Victoria, N.S.). Too low.

The POSTMASTER GENERAL. Well, I won't say whether it is too low or not. The Minister of Finance, I think, estimated it at something like that. Now we have to go to Lévis at the south side of the river St. Lawrence, a mile or two from the city of Quebec. What is his policy when he gets to the city of Quebec ? Again, I will read his words :

> So far as the line from Quebec to Winnipeg is concerned, I am not disposed to minimize the possibility of that northern country. Looking at the history of the great west, there may be a great flood of settlement into that country north of Lake Superior, some day or other, at least up to a certain point west, but I do not think we know enough to justify us at present in saying that there will or will not be, because I do not know how far that country is capable of competing, in the early future, with the magnificent country we have in the North-west. I have some doubts as to whether or not that great northern country may compete as early as we would desire with the great western country. But I am not disposed to minimize its importance in any way, and to my mind the rational way of dealing with that road from Winnipeg to Quebec is this. To thoroughly explore and understand it, and then to build that line from Quebec to Winnipeg, as a colonization road, according as the requirements of the people and colonization demand. To build it after you have obtained the fullest possible information and obtain that information with the least possible delay. You may find curious conditions surrounding you when you get into that country. You may find that the road, which is the most direct line to the Pacific coast, will not be the road that will open that country for colonization. You may find the road running one way for colonization purposes and another way direct to the coast.
>
> You may also find that a line running north from the northern part of Ontario will be required for the development of that country. You must go upon information, upon sound and reasonable lines, and when you do that, give to that country all the development which the people require. Not only build that line, but operate it as a government line. A government line, it seems to me, would be peculiarly suitable to that country for colonization purposes, and I see no reason why the problem should not be solved in that way. If within a certain number of years, a practical route be found, then extend that road to the Pacific coast ? Build it as a government road from Quebec to the coast. Be not afraid to undertake that project, but do not undertake it until you have the information, the data which will enable you to deal with it. I am not saying this for the purpose of delay. I

believe in going ahead with the work once you get the information and the data which are necessary.

I have read all that the hon. gentleman has said on that point, and I think the fair deduction from it is this: The very moment you get enough information, go ahead with the road. Surely the hon. gentleman, in this age, is not going to say that the people must go into that terra incognita before there is a railway. To-day railways are the pioneers of settlement. If that country is to be settled, railways must go first. The hon. gentleman says that as soon as there is information obtained about that country, go ahead with the enterprise.

I am not saying this for the purpose of delay, I believe in going ahead with the work once you get the information and the data which are necessary.

Now, if to-morrow the information and the data were forthcoming, then the hon. gentleman would believe in proceeding at once with the work. As the First Minister has explained, there are mountains of information upon this subject.

An hon. MEMBER. Where are they?

The POSTMASTER GENERAL. They are everywhere. There are more on the Table of this House than any hon. gentleman of the opposition has waded through. The library is full of them, the woods are full of them. There are survey parties in every part of that district to-day, and in a few short months, probably, there will be no part of Canada better known than the country between Winnipeg and the city of Quebec. As soon as the snow goes away next spring, I have no doubt that the surveys will be in that forward state that the actual work of construction may be and will be undertaken. Now if the information is forthcoming the hon. gentleman's policy is to build at once, not to wait. Now, we have him on his second transcontinental trip across the continent. We have got him as far as Quebec. Now to Winnipeg the distance is 1,400 miles. I will allow that here he proposes to build a colonization road. I do not know what the hon. gentleman means by a colonization road. I suppose he means a cheap road, a road inexpensive to operate. If so, I would take exception to the wisdom of putting in a cheap road in a country that is about to be settled up. If there is any class of people who are entitled to cheap rates, to the best railway facilities for their commerce, it is those people who are the pioneers of settlement in the unknown solitudes of the north. Why the hon. gentleman will pass upon them a cheaply constructed road, though expensive to them, I am at a loss to understand. However, he proposes to treat these people with a colonization road, a cheap road to the country, a dear road to them. If so, if it costs the government $25,000 a mile to build a first-class road from Winnipeg to Quebec, I will take off $5,000 a mile, and suppose that we can get his cheap colonization road at $20,000 a mile.

Mr. CLANCY. The Minister of Finance put it at $28,000.

The POSTMASTER GENERAL. The Minister of Finance was speaking of a properly constructed road. The Minister of Finance proposed a good trunk line, useful for other purposes as well as for colonization: the leader of the opposition proposes what he calls a colonization road, which I suppose is not a road of this character, but a road of severe grades and many curvatures, a cheap but expensive road for the purpose of supplying traffic. I would not favour that kind of a road; but as the leader of the opposition is now submitting his policy, I am endeavouring to present it fairly to the House. Fourteen hundred miles of a colonization road between Quebec and Winnipeg could be built for $20,000 a mile, amounting to $28,000,000. Then the hon. gentleman proposes to extend that line across the continent. I do not see why, after building a government line from a point near Edmonton to the coast he should build another. Speaking on page 9295, on the 18th of August, the hon. gentleman says:

Not only build that line, but operate it as a government line.

Then he proceeds to say:

Then extend that road to the Pacific coast.

I would have thought it more economical to endeavour to connect that road with the mountain section which he is going to build from Edmonton to the coast, but the hon. gentleman probably had some other scheme in his mind. Therefore, we have to figure this line through to the coast, and if so, we have to allow, I suppose, at least $20,000 a mile for 1,000 miles, costing $20,000,000. Then there is another $30,000,000 for the 600 miles of the mountain section, making in all $93,000,000. So his second transcontinental railway will cost the trifling sum of $88,000,000. His first transcontinental railway has cost $114,115,549. Add to that the cost of his second transcontinental railway, $98,000,000, and his two lines will cost $202,113,549. He is not afraid of spending money. It will have to be equipped with rolling stock, both these lines are to be operated as government roads. The Grand Trunk Pacific undertake to put $20,000,000 on their line, it will take twice that to equip the two lines. I add, therefore, $40,000,000 for equipment of the two lines, and you have the total cost of the two lines as $242,113,549. I am ashamed of our modest scheme involving an expenditure of only $13,000,000. Now, let us leave the railway. There are other features of this scheme. The hon. gentleman proposes to purchase the Canada Atlantic Railway transit fleet. What does that involve? Let me give the hon. gentleman's words. Having pointed

out the great service performed by the Canada Atlantic transit fleet, he proceeds to say :

While there may be some difficulty in the Crown owning steamers which ply in foreign countries, I should suppose, though I did not consider the question very carefully, a difficulty of that kind could be overcome by maintaining the present organization ; or in other words, the legal title to the steamers would remain vested in the company, and the government could own stock in the company in the same way that the British government can own stock in the Suez canal.

He proposes that this government shall go into the grain-carrying trade on the upper lakes. What effect will this action have upon private ventures of the same kind ? There are many millions of dollars of Canadian money at the present time invested in vessels upon our inland waters engaged in the grain-carrying trade. How will the owners of these vessels be able to compete with the government steamers engaged in this same line of trade ? Will it be fair to them that they shall be liable to the competition of the government fleet of steamers ? Why, Sir, it is only necessary to propound that proposition to cause any hon. gentleman to withdraw from it as an unsound policy. Either the government has to engage in the whole grain-carrying traffic on the lakes or nothing at all. The government cannot engage one ship in the grain-carrying trade on the upper lakes in competition with private capital, without being called upon to purchase all the vessels engaged in the traffic and be responsible for the whole traffic. It is either all or none, and as to what it involves anybody can form a fair estimate. It means the government buying up all the vessels now engaged in the traffic, it means putting an end to all private enterprise of this character, it means a system of paternalism in connection with the carrying trade that no business man would seriously propose and yet that is what the hon. gentleman proposes in this scheme. He says :

Thoroughly equip our Georgian Bay ports——

What does that mean ? Everybody is in favour of the equipment of the ports as rapidly as the circumstances of this country will permit. But it cannot all be done at once. The demands upon the treasury of this country are great. I doubt if there is any five millions of people in the world having greater responsibilities and rising more to the occasion than the people of Canada, but we cannot equip our great inland waters all at once. Remembering that we have inland seas and rivers 2,000 miles in extent it is impossible for any government at once to be able to complete the equipment and put everything in a perfect state such as only time and the greatest experience and expenditure will produce. But he says :

Thoroughly equip our Georgian Bay ports, our national waterways——

I sympathize with that proposition.

—our St. Lawrence route——

I sympathize with that proposition.

—and our ports on the Atlantic coast.

I sympathize with that proposition. Then he says abolish if necessary the harbour dues on the Atlantic coast and on the Georgian bay. Will the hon. gentleman tell us what is involved in that ? Has the hon. gentleman considered the consequences of abolishing the harbour dues in any harbour in Canada ? Take for instance the harbour of the city of Quebec. The city of Quebec collects dues upon shipping. It is a practice common in all parts to impose dues upon shipping, these dues being funded and expended in improving the harbour facilities, the construction of docks, dredging, elevators and providing other harbour advantages. The harbour commissioners have to incur debts in order to provide these facilities and the only revenue wherewith they can pay their debts is derived from the dues collected from shipping. The hon. gentleman proposes to make free our Atlantic ports, our inland ports, the ports of Montreal, Quebec, St. John and others. It is in the power of parliament to abolish the dues collected by the city of Quebec. The city of Quebec to-day has borrowed and owes for money expended in improving its harbour, $5,803,538, and the only way whereby it can pay that money is by imposing dues upon shipping. The hon. gentleman proposes to abolish those dues. If he abolishes those dues he has to assume the debt of the Quebec harbour. You then have to add to the cost of this scheme the debt of the harbour of the city of Quebec, amounting to $5,803,538. Then, coming to Montreal, the harbour commissioners of Montreal have been doing their best to improve the harbour of that great city, and they have expended and are authorized to expend $8,054,156. If, Mr. Speaker, we carry out the hon. gentleman's policy and wipe out the dues upon the shipping that comes to that harbour, no matter how desirable it would be if the circumstances allowed, how are we to meet the debt of the harbour commissioners of the city of Montreal ? We have to pay that debt as well. Add that debt to the debt of the harbour of Quebec, and add that to the other Bill and we have $255,971,233, as the ascertained cost in giving effect to the hon. gentleman's scheme. Again I deplore the insignificance of our little scheme alongside of this one. That represents the two harbours of Quebec and Montreal, and I am proud to say they are not the only harbours in Canada. There are other harbours that have debts. I need not mention them all. We have harbours on the Atlantic coast. I do not know to what extent they are in debt.

Hon. Mr. ROSS (Victoria, N.S.). There is no debt on the harbour of Halifax.

The POSTMASTER GENERAL. Happy Halifax. Perhaps that was a circumstance that led my hon. friend into this mistake, but there are harbours where there are debts. What about the harbours on the Pacific ocean, and what about the harbours on the inland waters? Are all these to be made free harbours? You cannot make one a free harbour at the public expense without making them all free harbours, and we can contemplate the cost that would be involved in paying the debts of all the harbours of this great broad Dominion. That is involved in the policy of the hon. gentleman. Then, there is one extraordinary enterprise in which he proposes to embark. I do not wish to misrepresent him, and therefore I will again quote from his words. Speaking as to terminals, he goes on to say:

The elevator question in the west, in connection with these terminals, is a very important one, and it is one that will have to be dealt with by the government, and dealt with under the best possible expert advice. We know that in the western states a farmer, on putting his grain in the warehouse, gets a certificate which is guaranteed by the state, and which is practically so much money to the person for whose benefit it is given. He can go to any bank and draw the amount at once. This is a matter that I have not studied or carefully considered——

I am inclined to agree with him.

—but it seems to me it would be a proper subject for this government to fully investigate, with a view to deciding whether some similar system could not be adopted in this country, so that the farmer of the west, putting his grain into warehouse would receive such a certificate, would, if necessary, have the whole faith of the country pledged to the accuracy of the certificate, and be able to realize upon his grain at once.

Well, Sir, there are a large number of people in Canada pursuing the business of warehouse men as a calling. They have their warehouses and their business arrangements, and if this government is going into this business of warehousing grain for hire, what is to become of those who have already invested their capital in it. They could not compete with the government, they would have to retire from business, and so the hon. gentleman proposes to displace the warehouse business in which hundreds of people in Canada are engaged, and to have that business carried on by the state. It may be a forward movevent; it may exist in some places in the world, although I am not aware of any government ever having taken upon itself such a responsibility as that. But most extraordinary of all, the leader of the opposition proposes to go into the business of building barns, and storehouses, and elevators and warehouses, and he goes on to say:

We shall have enormous grain crops in the North-west, and it would be an economic waste, it seems to me, for 100,000 farmers to build 100,000 barns or warehouses, when, by means of proper transportation facilities, their grain could be stored for a merely nominal charge in elevators erected as a common enterprise.

There he proposes to go into the elevator business as a common enterprise, and not as a mere business transaction, but to carry it on at a nominal price. Let us read it again:

We shall have enormous grain crops in the North-west, and it would be an economic waste, it seems to me, for 100,000 farmers to build 100,000 barns or warehouses, when, by means of proper transportation facilities, their grain could be stored for a merely nominal charge in elevators erected as a common enterprise.

That is the policy which the hon. gentleman proposes to us. I wonder if he formed any estimate of what is involved in that proposition to provide elevators for him to store at a nominal charge all the grain that would be stored in 100,000 barns in the North-west. Is he going to provide elevators for other farmers than those of the North-west? There are to-day millions of dollars invested by private capital in elevators and warehouses and is the hon. gentleman prepared to buy these concerns. If he is going to build elevators what becomes of those now existing through private capital and which in order to make them pay have to impose substantial charges, and not merely nominal charges. If he provides elevators and warehouses for 100,000 farmers in the North-west to store their grain at a nominal charge, does he not think that he would have to build as many elevators and barns and warehouses as would be necessary to store all the grain of Canada at a nominal charge. If you build warehouses and barns and elevators for 100,000 farmers in the North-west, why should you not do the same thing for the farmers in other parts of Canada.

Mr. COWAN. That's a barn-yard policy.

The POSTMASTER GENERAL. And although the leader of the opposition takes very little heed of money, this government having that careful regard to the public treasury which has always characterized them, must take note of the cost that such a mad and wild-cat scheme as that proposed by the leader of the opposition would involve the country in. The hon. gentleman proposes to spend $84,000,000 to get the Intercolonial Railway extended to the North-west, although it would be of no public service to the Dominion, and indeed would not be a service but would be a positive injury to the people of Canada. He proposes as part of his scheme to take a portion of the Canadian Pacific Railway line and to force them to divert a large part of their traffic from the north shore of Lake Superior to and through the United States. He proposes to ignore practically, until some period that may suit him—he says when he has had surveys made—the great country

lying between Quebec and Winnipeg. In fact, Sir, in the matter of ignoring Canadian interests his scheme is more in favour of the United States than it is in favour of Canada.

My opinion is that we cannot at too early a moment build this railway, and particularly that portion of it from Moncton to Winnipeg which has most received the active hostility of hon. gentlemen opposite. There is a feature in connection with our scheme that must commend itself to all those who fairly understand it. From the commencement to the end; from Moncton through New Brunswick, Quebec, Ontario, Manitoba, the Territories and British Columbia; from ocean to ocean in addition to being a trunk line it is a colonization line opening up and making valuable millions of acres of productive land which is at present valueless to the people of Canada. A few days ago an hon. gentleman opposite asked: What is this going to do for the province of Ontario, and he argued that a large portion of the cost of the enterprise was going to fall upon that province. I depreciate sectional appeals, but when I am asked what good this railway is going to be to Ontario, I at once remember that we have in that province of Ontario, lying in the track of the line in question, an area of country, an empire in extent and in wealth, 16,000,000 acres of land all of which will be made merchantable and valuable by means of this railway. Suppose this railway would make this land only worth a dollar an acre, these 16,000,000 acres would more than pay the whole cost to the Dominion of this enterprise. There is not a man who regards his status in this country who will say that that property will not be enhanced in value many fold over one dollar an acre by the construction of this line. Why, Sir, if that 16,000,000 acres in Ontario alone, is made to be worth three dollars an acre, there we have a value of $48,000,000 given to what is now a valueless estate. The Minister of the Interior told us that it would also make valuable a large tract of Crown lands in the territories—I think he said some 20,000,000 acres, which at only two dollars an acre would at least be equal to $40,000,000. I say nothing of the province of New Brunswick, because I am not quite so familiar with the geography of that province, but we know from the map that this road will traverse a new district, and that throughout its whole distance it will be from 35 to 75 miles away from the existing railway. Fancy the value it must give to the lands that will be made accessible to the market by the construction of the railway through the provinces of Quebec and New Brunswick.

Mr. HUGHES (North Victoria). Does the hon. minister mean to say that this road will be from thirty-five to seventy miles from any railway existing to-day in New Brunswick or Quebec?

The POSTMASTER GENERAL. From the Intercolonial Railway. It may cross a railway; but it is because it is going to be so productive that we find public opinion in New Brunswick to-day overwhelmingly, unanimously, in favour of this scheme. The voice of New Brunswick speaks for itself. I cannot say from my own knowledge how it will affect the province of British Columbia; but I had a letter put in my hand to-day from a gentleman in Victoria, B.C., who, speaking of this measure, expresses himself as follows:

> With regard to the Grand Trunk Pacific scheme, it is very well received all round. Of course, there are some who would kick anyhow; but, so far as British Columbia is concerned, I think it is a scheme which will be found acceptable to the large majority of people in the country. At any rate, it is one which I think people will be very foolish to pass, now an opportunity of that kind is afforded, and, if knocked on the head, of which I do not think there is the slightest prospect——

Nor does any one here——

—it would be very difficult to get the same scheme again, or one which affects the country so well.

That is from a gentleman in high standing in British Columbia. The name of the writer of this letter is H. G. Helmken, K.C. He is president of the Conservative Association of the city of Victoria.

Mr. Speaker, it has been stated by a number of the members in opposition that we have no mandate from the people to build this railway. A number of them challenge us to go to the country first. We had some challenges of that kind thrown across the floor of the House to-day. The hon. member for East Grey (Mr. Sproule) particularly sought to make the point that the government had no mandate from the people to build a transcontinental railway. If the government twice sustained at the polls has no mandate from the people to build one transcontinental line, may I ask whence the opposition, twice defeated at the polls, derive their authority to build two transcontinental lines? If, according to their reasoning, each defeat carries with it a mandate to build another transcontinental line, perhaps I would not be inaccurate in prophesying that in the not distant future they will receive a mandate to build a third transcontinental line. Why, may I ask, did the people in 1896 summon the Liberal party to power?

Mr. WILSON. God knows.

The POSTMASTER GENERAL. Was it in order, Mr. Speaker, that the country might remain in commercial stagnation, and mark time, as it did for many years under the administration of hon. gentlemen opposite? It was not necessary to have had a change of government in order to maintain that state of affairs. The hon. gen-

tlemen opposite manifested through long years their capacity to keep the country at a standstill. The people doubtless called upon the Liberal party—one hon. gentleman says, Deity knows why. He orders all things well; He and the people of Canada evidently thought alike. The people of Canada, by their decision at the polls, manifested a desire that this country should take on an onward policy, should have an onward Canadian party, and that Canada should enter upon a period of vigorous, robust and healthy growth towards manhood, until she should win for herself her proper place amongst the nations of the earth. Even if I were to take the argument of an hon. gentleman opposite, that we had technically no mandate from the people to build a transcontinental railway at this moment, I submit that events are happening which in themselves amount to a mandate. Before this line can be completed, circumstances will justify, even more than they do now, the wisdom of the course we are pursuing. Magnificent streams of population are pouring into the great North-west. Before this railway is completed, the population west of Lake Superior—a population largely composed of people not of our own race, although they are welcome here—will equal one-half, and by the time the railway is five years in operation, will wholly equal the population of old Canada to-day. Geographically their neighbours will be the people to the south in the American republic; and already we see the most active efforts being made by the enterprising citizens of that country to divert the commerce of our western territories into United States channels. Between old Canada and new Canada, between the west and the east today, there lies extending from the city of Quebec to the city of Winnipeg, a territory nearly 1,300 miles in length, and averaging nearly 300 miles in width, and having an acreage of no less than 240,000,000 acres—240,000,000 acres of land rich in agricultural, mineral and various other kinds of wealth, and ready to yield up this wealth to man if only we will put transportation facilities within its reach. A slight examination of the map of Europe and of the map of Canada will give some idea of the area of this vast country. It exceeds by 175,000 square miles the area of Germany, with its 56,000,000 population. It exceeds by 180,000 square miles the area of France, with her 39,000,000 population. It is 250 per cent bigger than Italy, with her 33,000,000 population. It is larger than thirty Belgiums. It is many times the size of the United Kingdom of Great Britain and Ireland, with its 41,000,000 people. It exceeds by 25,000,000 square miles the total area of the states of Maine, New Hampshire, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Delaware, Maryland, Virginia, North Carolina, South Carolina, Georgia, Florida and Alabama; being the whole of the Atlantic coast states of the United States, extending from the state of Maine, within a few miles of our own River St. Lawrence, down to the coast of Florida, and around to the Gulf of Mexico. That vast solitude is lying to-day as a wedge of separation between old Canada and new Canada.

For my part, I am unable to understand how the millions of people who are to settle in our great North-west, many of them citizens of foreign countries, are going to have implanted in their hearts the feeling that they are living in a united Canada, I fail to understand how we are going to cultivate in them a love for Canada, a determination to stand for all Canada, and to die, if need be, for all Canada, if there is to be continued commercial and social separation between the east and the west. In my opinion, the national life of Canada is involved in this enterprise. We see in the east the consequences of separation. We all deplore, every day of our lives, the circumstance that the state of Maine projects into Canada to a large extent, separating the maritime provinces from their sister provinces in the west, and yet this land of solitude, unpeopled and undeveloped, between Quebec and Winnipeg, is larger in area than a dozen states of Maine. The question before us is whether we are going to have one Canada or two, one people or two peoples. In my opinion, you cannot have one people if you have this hiatus of settlement. In order to have one people you must have a continuous settlement from ocean to ocean, from Quebec to Winnipeg, and on to the waters of the Pacific. We are urged to delay. The First Minister said, and said wisely and rightly—and in saying it he touched the hearts of the people—there is no time for delay. The occasion demands action. We have a tide of immigration flowing into Canada to-day exceeding that flowing into any other country in the world. Let this tide of immigration be checked, and how many years will be lost before the movement can be started again? Now is the time to strike. Hon. gentlemen opposite want us to wait until depression overcomes the land. One would imagine they were praying for depression. Well, we have had depression and may Heaven prevent Canada from its return. Wait, they say, until depression overtakes us. Why, Mr. Speaker, Canada to-day is a country of promise; and it is because it is a country of promise, because our outlook is so bright, we have been able to make such a satisfactory bargain. Now that we have the opportunity, let us clinch the bargain. Let us strike while the iron is hot, get the railway completed at the earliest moment, and give permanency to that prosperity and development which now so happily blesses this country.

Mr. A. C. BELL (Pictou). Nothing could be more gratifying, Mr. Speaker, than the

sentiments expressed by the hon. the Postmaster General. The strong language he used in favour of one Canada instead of two Canadas could not fail to arouse a great deal of kindly feeling, and received a warm welcome on this side of the House. I think that we ought to commend the language of the hon. the Postmaster General. We welcome it, we are delighted to hear it, because it was not always the language of that party to which the hon. gentleman belongs. There was a time when an effort to overcome that great hiatus, which lies between the east and the west of Canada, was being made by a Conservative government. In those days, did the hon. gentleman or his political associates have a word to say in favour of one Canada as against two ? Not one word, Sir. Every effort these hon. gentlemen could make was directed to preventing the unification of Canada, and every word they spoke to the people taught them that the people with whom we should do business, the people who are our proper customers, are the people who live to the south of us. There was a whole school of Grit politicians who spent the best years of their lives doing all they could to prevent the unification of Canada. And now that we hear statements made, with such apparent sincerity, by the Postmaster General on behalf of Canadian unity, for my part, I welcome those sentiments, and hope they are heartfelt. But there is always a danger of a relapse, there is always a danger of backsliding in the case of gentlemen who show their conversion under peculiar circumstances. There was a time in the province of Nova Scotia, when the political associates of the hon. the Finance Minister welcomed the visit of a Governor General of Canada with a very liberal display of Yankee bunting. But when the Liberal party came into power, in 1873, those American flags disappeared, and there were no more loyal people to be found anywhere than those same Grit rebels or pseudo-rebels so long as Mr. Mackenzie remained in power. But our Grit friends' loyalty is not of the right stamp. It is not all wool and a yard wide. It does not wear well in adversity, and the consequence was that when Mr. Mackenzie was defeated and these gentlemen came into opposition again, we found that Farrar and his friends became their advisers. They then had no word for the unification of Canada. They were for continental trade, commercial union, they preferred the American dollar to the British shilling. They were rebels, so far as they could be rebels without danger to their persons ; and when these gentlemen come here now with professions of loyalty while we welcome their professions, they must not expect us to accept them as altogether reliable. We have had experience, and our experience has not been in their favour. However, let us hope that this time they are more sincere, because it would be a dreadful thing if they were to backslide a second time ; and we hope, for their own credit and the good of our common country, that when they go again into opposition, which may be at a very early date, their loyalty will prove to be of the kind that stands adversity, and not simply of that fine weather order which manifests itself only when they have control of the treasury.

I am not going to waste my time in following the hon. Postmaster General through the extraordinary speech he made to-night. My hon. friend the leader of the opposition owes a great deal to the Postmaster General for the very unkind, unsympathetic manner in which he expounded the policy of the leader of the opposition. His criticism was too carping, too biased to affect the judgment of any reasonable person. His intention to be unfair was too manifest. The suppositions he put into the mouth of my leader were too absurd and too remote from those that hon. gentleman stated. He did not attempt to answer the speech of the leader of the opposition, but insisted upon making a speech for him, and as he went along the thing became grotesque. I shall, however, refer to one or two things. The Postmaster General is very much shocked at the idea of our forgiving the debt of the harbour commissioners of Montreal and the harbour commissioners of Quebec. He speaks as though it was a perfectly improper thing that the government of Canada should intervene to relieve the commerce of the country from the burden which is imposed by the exacting from that commerce of the tolls and charges which make up the revenue of those boards. What has the government done during this present session, this same government which now you would think looked upon it as the height of folly to relieve commerce of charges at certain points ? This same government, a few months ago, took off the canal tolls. If it had been the purpose of the Postmaster General to make himself and the government he represents supremely ridiculous I am sure he could not have selected a more effective way to accomplish that result. Why should we not make the harbours of Canada as free as the canals ? Our canals have cost $80,000,000. Who would advise that we should exact from the commerce of Canada to-day, sufficient money to pay the interest on that $80,000,000 ? Not the government of to-day, because as I have said they have during the present session relieved that commerce of this precise charge. Therefore, when my hon. friend the Postmaster General scouts the idea that a premier of Canada should act as our leader suggests and relieve commerce of that imposition, then I say he is making the case he represents, he is making himself and the government supremely ridiculous. The Postmaster General in establishing to his own satisfaction, I hope, for he did not to

the satisfaction of any other person, the allegation that the proposition of the leader of the opposition would cost the people of this country $254,000,000. I think he made that quite as clear as he did the allegation that the proposition of the government would cost just $13,000,000; one is as obvious as the other. There is not one single feature in the scheme propounded by the hon. leader of the opposition which the gentleman who has just criticised it from the government side could successfully attack, and he resorted to the very extraordinary position in his great efforts to find something to challenge, of charging that the proposition of the leader of the opposition would involve the paralleling of some railways. He said that it is unfair that the government should build a road to parallel an existing railway at the same time he is here advocating the building of a railway which is intended to parallel, not only the Intercolonial, but the Canadian Pacific Railway, in so far as it runs from the neighbourhood of North Bay into the city of Winnipeg. To that extent the railway proposed by the government is practically paralleling the Canadian Pacific Railway and depriving it of the business which it at present enjoys. This government not only proposes to construct a road which will, in the east, parallel the Intercolonial in the sense of taking traffic but will parallel the Canadian Pacific Railway in the west. More than that will any one for an instant deny that the proposition now being made to subsidize or to aid with a guaranteed bond issue the construction of the Grand Trunk Pacific Railway west of Winnipeg? The line shown on the map which is displayed in the Railway Committee room to-day, is paralleling the Canadian Pacific Railway west of Winnipeg, there cannot be any doubt of it, the line is drawn through a country already fully occupied. In order to find something in criticism of the proposition of the leader of the opposition the hon. gentleman is compelled to go to the length of condemning the very system that his government is to-day submitting to the people of Canada, because it is open to the charge of paralleling other roads and of instituting an unfair competition with private capital or with the capital of corporations. Thus we may attribute the whole speech of the Postmaster General to a vain and ineffective attempt to find something to say in criticism of the reasonable speech of the leader of the opposition. Now, I shall not for the very obvious reason that it would be absolutely unprofitable, follow the Postmaster General through all his speech, but I have here an estimate made up in the most careful fashion, not by guess work but by information obtained from competent authorities, which shows that the whole scheme as laid down by the leader of the opposition would cost the people of Canada only $60,000,000. That would give to the Intercolonial Railway, would give to the Grand Trunk Railway, and to the Canadian Pacific Railway communication with the city of Winnipeg. It would unite Winnipeg with Halifax by the Intercolonial and with St. John by the Canadian Pacific Railway and with all the points in Ontario and Quebec reached by the Grand Trunk Railway via that railway. It would afford all of that at a cost of $60,000,000 because, as I said, these estimates are not guess work, they are not made by assuming a distance of so many miles at a cost of so much per mile, but are derived from figures compiled by persons of competent knowledge. That being the case, it is not hard to see that when the Postmaster General attacks such a scheme as this it is necessary, not to attack that particular scheme, but to imagine and set up an entirely different proposition against which he could direct his attack. His speech before its conclusion really seemed perfectly absurd. He was not doing himself or the government he represents any credit or any good and was expounding his case very ineffectively. It required no penetration to see that he was criticising in the most unfriendly manner the proposition which has been laid down by the leader of the opposition after the most mature consideration and with the support of his followers. There could be nothing more amusing than to see the solicitude of the Postmaster General to defend the hon. leader of the opposition from the attacks of his supporters. There can be no doubt at all that those gentlemen on this side of the House who cheered the hon. leader of the opposition when he presented his scheme to the House understood what he proposed, that they knew exactly the scope of that proposition, that they knew what it was intended to effect, that they knew all the limitations and the conditions of it and that when that hon. gentleman proposed to the people of Canada a scheme that would cost a sum in the vicinity of $60,000,000 and which in his opinion and in their opinion would at once effect for the people of Canada all that they could hope to effect by the scheme proposed by the government. My hon. friend the Postmaster General when he insisted that the leader of the opposition was pledging the Conservative party and this country to immediate action in connection with the road between Quebec and Winnipeg was simply distorting the language of the hon. leader of the opposition. His attempt was in absolute defiance of the plain and explicit terms in which the leader of the opposition had challenged the government for acting hastily and had laid down the proposition that whatever was commendable in their scheme could best be carried out after full and complete inquiry had placed us in possession of necessary information. I am glad that the leader of the opposition took the trouble to make it perfectly clear to the people of this country

that we as a party, and he as our leader, are not standing in the way of any legitimate expenditure of money required to make our country more progressive, more happy, more prosperous, than it is at the present. We are not afraid to spend money when it is properly spent, we never have been, as a party, afraid to spend money when we thought it was proper to spend it.

There can be no question that this scheme, although it seems large, still so far as boldness is concerned, so far as an effort on the part of the people is concerned, it bears no comparison with the scheme that was propounded to the people of older Canada by Sir John A. Macdonald when, in 1873, we undertook to build the Canadian Pacific Railway. That railway, for the people of that day and for the government of that day, was an infinitely bolder scheme, involving more sacrifices, and throwing a greater strain upon the country than this scheme proposed by the government to-day. The reason we are objecting to their scheme is not because it is going to cost money. You cannot have any results without expending money; you cannot have a prosperous country very long which thinks too much of economy and too little about a legitimate expenditure. The man in private life, the village, the town, the city, the country, which shows itself to be careful about expenditure, which pays too much attention to small economies, is not the wisest man, the wisest community or the wisest country. It is the country which utilizes its resources the best, which most wisely makes liberal expenditures, which will prosper the best. It is not because the scheme of the government is going to cost money that we attack it, it is because it is not an advisable expenditure. Now what do we find when we come to consider the proposal made by the government?

Mr. LOGAN. The hon. gentleman states that the cost of the opposition scheme will be $60,000,000. May I ask if he includes in that the building of a road from Lévis to Moncton?

Mr. BELL. No, that is not included. It will be remembered that it was stated by the leader of the opposition that that would only be built in case full inquiry should show that, for a reasonable cost and with regard to the requirements of the situation, a better road than the Intercolonial could be obtained. It was not a fixed part of the proposition made by the leader of the opposition, it was one to which conditions were attached; therefore there is only included in this estimate what has been proposed to be carried out with reasonable haste. Now the proposal made by the government is one which involves, in the first place, a very regrettable and a tremendous lot of doubt. It is not possible, however anxious one may be, to know what that scheme involves, what is its extent. It is not possible for any one to satisfy his mind upon that subject. We are told by some persons that the road is of this length; we are told by others that it is of another length; there have not been two supporters upon the government side of the House who exactly agree as to the length of the whole road, or as to the length of any part of it. As I do not know the length of the road and the government have not the plans or figures upon the Table that will inform me, I am taking what I suppose to be the fairest estimate, and that is an average of the estimates made by gentlemen who have spoken for the government, by the Prime Minister, by the Minister of Finance and by the hon. member for North Norfolk (Mr. Charlton) who, on this occasion, was put up by the government in such a manner as to make it reasonably fair for us to assume that he was speaking for the government. The fact that he was put up to reply to the ex-Minister of Railways and Canals, and come to his task evidently thoroughly prepared, would seem to justify us in assuming that on this occasion he spoke for the government. Now, taking all these estimates and averaging them, it will be found that the eastern section of the road will be about 1,840 miles in length; the prairie section 1,200 miles, and the mountain section 500 miles. As I say, no two speakers agree exactly, and I am taking an average. Now the 1,840 miles will cost, at the estimate made by the Minister of Finance, and I assume he made a careful inquiry, because in this respect he represents the government—that eastern section of the road will cost $51,520,000; the mountain portion will cost, in guaranteed bonds, $15,000,000, and the prairie section, $15,600,000. Now, what would the cost to Canada be? It would be the cost of the eastern portion of the road, the interest on the bonds, on the cost of construction, because we will assume that the bonds which are guaranteed by the government will be carried forward in the course of time by the company. Now, the interest on these bonds and the interest on the road manifestly have to be paid for ten years; the contract says for seven years, but it makes provision that for three years longer the interest may be paid by the government, and I think it is fair to assume that that will be taken advantage of. Now, that will make about $20,000,000. The interest on the bonds and the interest on the road for ten years will make $20,100,000. The Minister of Finance added as interest during the period of construction $3,309,676. That makes $74,929,676; say $75,000,000. There was an estimate made by the Toronto 'News,' a paper friendly to the government, putting the cost at $79,000,000. Therefore I think we may fairly assume that the cost of this road will be about $77,000,000 or $78,000,000. Now what does this estimate depend on? It depends entirely on the cost of construction,

which is here placed at $28,000 a mile for the section from Quebec to Winnipeg; at $25,000 a mile for the portion of road in New Brunswick between Lévis and Moncton. These are the estimates of the Finance Minister, I am taking them throughout.

Now, I think all the evidence we can secure on the subject goes to show that the road cannot be built for any such figures. The quality of the road must manifestly be the consideration which will determine its cost. Now, what kind of a road is this to be? The hon. member for North Norfolk, whom we may fairly assume was speaking for the government, describes the road as to be of the highest class. But if you are not satisfied with the authority of the hon. member for North Norfolk, I will quote to you what the Minister of Agriculture said, who specified that the road should be one which should have no grade exceeding one-half of one per cent, or 26 feet to the mile. Now I need scarcely say that a road with grades not exceeding one-half of one per cent, if it is to be a first class road, must have curves of an easy degree, must have an equipment of a first rate kind. I will refer again to the authority of the member for North Norfolk, who not only demands a grade of not more than twenty-one feet to the mile, but he insists on 90 pound rails being laid; he insists on locomotives weighing 100 tons, on cars which shall convey fifty tons of load each; he demands bridges which shall not only carry this heavy rolling stock, but which shall be fifty per cent in advance of its requirements, which shall be able to carry a tonnage fifty per cent greater than that I have mentioned; a road in word so equipped as to bear trains drawing loads of 2,000 tons.

Now we are fortified in that idea by another consideration. What is this road being built for? What did the right hon. gentleman undertake to build the road for? What did he tell us? It is built in the first place and mainly to compete with water and rail carriage and to carry wheat from Winnipeg to St. John, in competition with the ports of New York, Boston, Portland and Baltimore. It is very manifest, that, if the right hon. gentleman is to be gratified, if his road is to succeed in carrying wheat and that is a point of as much importance perhaps as its ability to compete, he must carry his 2,000 ton trains and he must carry them on a road that is of the highest possible class; otherwise the object which the right hon. gentleman has will fail of accomplishment. What reason have we to believe that a road can be built of the character that I have just specified for $28,000 per mile through a country which is admittedly one of great difficulty? It is not a prairie country, and it is not such a country as extends between Ottawa and Montreal. It is a country which is manifestly one of some difficulty. If we are to believe what we see described to us as the route of the road it is one that crosses innumerable rivers all of which are making their way to Hudson's bay. It is to have many bridges and they must be costly bridges to carry heavy railway trains bearing a 2,000-ton load. Everything that has been said by the government goes to demonstrate that no such road can be built for $28,000 a mile. We may ask the government to point out to us some roads of equal construction, of equal quality which have been built somewhere for $28,000 per mile. Can the government in all North America find a road 1,800 miles long which will satisfy the conditions laid down by the hon. member for North Norfolk? There is nothing like it either in Canada or in the United States. They may find small portions of the road, such as the road 400 mile in length between New York and Buffalo, but they cannot find any road of this extent that equals in character the description of the road which is exacted by the government as represented by the hon. member for North Norfolk. But, we have a few examples to refer to, and if the right hon. gentleman had not been in such an awful hurry and if time would wait a little while, for him, he could have satisfied himself by looking at the reports which he can find in his own government offices, in which eminent engineers in Canada give good ground for the opinion that a road of that kind cannot be built for $28,000 a mile. In the library the right hon. gentleman could have found the report that Sir Sandford Fleming made upon the Intercolonial Railway, made upon the very road which the right hon. gentleman is contemplating constructing between Lévis and Moncton. What does Sir Sandford Fleming say? He says that the road from Rivière du Loup to Truro upon which he had run fifteen trial lines through central New Brunswick, through the country through which the right hon. gentleman is proposing to construct a road as a betterment of the Intercolonial Railway, would cost $46,000 per mile. Does the right hon. gentleman think that by any witchcraft he can succeed in securing the construction in 1903 for $28,000 per mile of a road which it was estimated in 1864 would cost $46,000 per mile, at a time when the requirements in respect to railways were not at all as exacting as those of the hon. member for North Norfolk, at a time when labour, as the right hon. gentleman is aware, was probably thirty or forty per cent lower than it is to-day in Canada? Still the right hon. gentleman comes before the parliament of Canada and before the people of Canada and tells them that a road of which he has proof cannot be built for less than $46,000 per mile, is going to be built for $25,000 per mile. As represented by the Finance Minister (Hon. Mr. Fielding), he is not even going to give $28,000 per mile; he is going to give $25,000 only to construct a road capable of transporting loads of 2,000 tons over a route by which Sand-

ford Fleming in 1864 said that it would cost $46,000 a mile to build a road.

Mr. CLANCY. And not that kind of a road at all.

Mr. BELL. Of course the road that Sir Sandford Fleming estimated for was not of the class at all that the government demands. The road that Sir Sandford Fleming, as I will show in a short time, estimated for, had grades upon it of one per cent to the mile, or grades of 52·8 to the mile, but the fact is that Sir Sandford Fleming was going to build the road in the country, or expected to build it, while the right hon. gentleman is going to build his road in parliament with words. The difference between talk and deeds is just about the difference between $25,000 a mile and $46,000 a mile. One was an actual business proposition, the other is, to my mind, not an actual business proposition. But, we have other evidence. We know that it has been stated here to-night by the right hon. gentleman's colleague, the hon. Postmaster General (Hon. Sir William Mulock), in his criticism of the policy propounded by the hon. leader of the opposition, that the road built by the Canadian Pacific Railway along the north shore of Lake Superior cost $60,000 per mile. We do not know by what route the right hon. gentleman proposes to carry his road from Moncton to Winnipeg, but we know the two ends of it. We know the road from Moncton to Lévis. We know it from what the engineers have told us, we know it not by guess, but by the statements of thoroughly accomplished engineers. We know the road between North Bay and Winnipeg. We know, although the right hon. gentleman says that it does not exactly coincide with his proposed road—we know the road between Fort William and Winnipeg, and we know that the hon. Postmaster General has, here to-night, standing beside the right hon. leader of the government, stated that that road cost $60,000 per mile. If it be a fact that the Intercolonial Railway at one end cost $53,000 a mile, as shown by the returns given to parliament every year in the report of the Minister of Railways and Canals, and that the Canadian Pacific Railway, at the other end of this proposed system, cost from $50,000 to $60,000 per mile, according to the authority of the hon. Postmaster General, may I ask the right hon. leader of the government upon what extraordinary expectation he bases his hope that he is going to be able to build that road in part for $25,000 a mile and in part for $28,000 a mile, more particularly when the roads to which I have referred are not at all of the class specified by the right hon. gentleman, and why he is going to throw away this Intercolonial Railway, which cost $53,000 per mile in order to supersede it with a better road, which he is going to build for $25,000 per mile through the same country? Therefore, I say there is not one jot, not one tittle of evidence to show that that road can be constructed for $28,000 per mile, and although not an engineer, I do not believe I will be at all departing from strict veracity when I state that a road of the class described by the government, or by the hon. member for North Norfolk, could not be built over that country for $100,000 per mile, unless it were lengthened to such an extent as to make it a perfectly farcical operation. We all know very well that if a railway has to overcome an eminence of 400 or 500 feet and is limited to a grade of twenty-one feet to the mile——

Mr. WADE. What section of the road is the hon. gentleman speaking about?

Mr. BELL. The whole section from Moncton to Winnipeg if built of the quality specified by the member for North Norfolk and kept at a reasonable length. We all know that if a railway has to overcome an eminence of 400 feet, it would take 20 miles approach to get over this 400 feet of eminence at 20 feet to the mile, and we will take 20 feet to the mile instead of 21. The right hon. gentleman would have to lengthen his road by curving—as is done in the mountains of British Columbia, notably on the short road between Trail and Rossland—back and forward to an extent that would lengthen his road over four times that of the air-line which he is going to cover, or else, he has got to construct enormously expensive works of excavation, filling or tunnelling to keep his road within a reasonable limit distance. In one case if he resorts to the policy of lengthening his line so as to overcome these grades, he is going to have a road that would be absolutely out of the question as being of any value as a commercial road. If he is going to take the other course, I can tell him that it would require some of the magicians, the genii of the Arabian Nights to build such a road as he proposes at the price he has set down, of from $25,000 to $28,000 a mile. It cannot be done by engineers. If such a road is to be built, it can be built of course. The Czar of Russia, I am told, if he wants to build a railway draws a line upon the map and says: That road has got to go there; and with the almost inexhaustible resources of an empire at the back of him, an engineer can put it there. But an engineer could not put it there if he was limited to $25,000 a mile. He would be worse off than our old friends, the Jews, when they were expected to make bricks without straw, if he were expected to construct a road capable of drawing trains of 2,000 tons, from Quebec to Winnipeg, to compete with water and rail carriage and to do it at a cost of $25,000 a mile. Now, the Intercolonial Railway, on the authority of the government blue-books, cost $53,000 a mile. The Canadian Pacific Railway, on the authority of the Department of Railways,

cost $52,000 a mile. The Canadian Pacific Railway along the north shore of Lake Superior, cost $50,000 a mile. The Canada Atlantic Railway is stated to have cost $50,000 a mile. But there is a better example still which was quite within the knowledge of the right hon. gentleman, and that is the Grand Trunk Railway road which he is particularly interested in now, and if we can believe the figures that are given to us—not in books which the Prime Minister could not find, but in the report which is published every year on the authority of the Minister of Railways—the Grand Trunk Railway of Canada in all its branches cost $106,000 a mile. This road in which the right hon. gentleman has great confidence; this road to which he is going to entrust his new line; it cost $106,000 a mile, and he is confidently going to bring together the fat and the lean in this case, by adding to the Grand Trunk Railway system of $106,000 a mile a new system of $25,000 a mile. The right hon. gentleman undertakes confidently and coolly to do away with the Intercolonial Railway, to do away with it at a great cost to the people of Canada, and to make what is now not a very profitable asset to the people much worse by giving it competition, and taking away all through-traffic from it. The right hon. gentleman is undoing what his government has done for the last five years, in buying the Drummond County Railway and expending large sums of money to better it in order to enable it to haul through-traffic. He is now deliberately undertaking to wipe the Intercolonial Railway out of existence as a through carrier, and he is going to substitute for it a road to be built at a cost of $25,000 a mile. And, with what kind of a road is he going to supersede the Intercolonial Railway? The maximum gradients on the Intercolonial Railway are few. At Bedford there is a grade of 1·41 miles of 63·8 feet to the mile, and that is in favour of the grain traffic going to Halifax. At Folleigh Lake, where the road crosses the Cobequid mountains for 2·77 miles there is an average grade of 51·6 to the mile. And at the most difficult point on the line where it crosses the range of the height of land between the St. Lawrence and the Restigouche, for a distance of 6·21 miles over an elevation of 299 feet, there is an average of 48·3 feet to the mile. The Intercolonial Railway is a first-class road. There is no other grade on the whole of it which exceeds one per cent, and where that occurs on curves is compensated for curvature. It has cost $53,000 per mile and the right hon. gentleman is going to send it to the scrap heap, and to supersede it with a road to cost $25,000 a mile built through much more difficult country. If the right hon. gentleman had not been in such a hurry; if he could have put a little more confidence in time; if he could have made himself believe that time might wait for a day or two, he could have discovered with very little difficulty that the best pass to be found between the basin of the St. Lawrence and the basin of the Restigouche, is the pass which is used by the Intercolonial Railway where it goes down the Matapedia river. The member for Victoria (Mr. Hughes) gave us figures showing the elevations which have to be crossed at various points between the St. Lawrence and the Restigouche, and in every instance they were very much in excess of the elevation which has to be overcome on the Matapedia. But the right hon. gentleman has not left us in doubt. He has put on the walls of the committee room a plan. It is not much of a plan, and it only shows about 37 miles of the road. It is largely drawn from the imagination of the engineer, and being an honest man the engineer has been careful enough to put a note upon the plan telling us that the real line is a very difficult one, and that the shaded line is one which he has derived from his imagination. He is an honest man; I think the government might do well to employ him; he is careful enough to see that he is not held responsible for any plan which springs from his imagination. And what does that plan of the engineer reveal? It reveals the fact that in place of getting over an elevation of 744 feet, which has to be overcome by the Intercolonial Railway, he has to look around until he has found a level of 1,423 feet somewhere near a place called Lake Pohenegamook. He tells us that after a good deal of difficulty he gets down to this lake with an almost unpronouncable name, which forms the boundary of the north-east angle of Maine and extends for some considerable distance north. Here the right hon. gentleman is going to keep his word in respect to making this an all-Canadian route, and to do it he has got to go to the outlet of that lake and put a trestle over it so as to keep on the sacred soil of Canada, and then he gets across the lower end of that lake at a level of 651 feet above the sea. He has then managed to get from an elevation of 1,423 feet to reach an elevation of 651 feet; 90 feet lower than the very highest summit upon the Intercolonial Railway. This road which is to have grades of 21 feet to the mile and is to carry train-loads of 2,000 tons at a time has to make a descent without a break, of ten miles, at the rate of 76 feet to the mile, so far as I can judge from the plan. The engineer has specified 71·28 feet to the mile as his opinion of the grades, and he must be correct, but judging the distances on the plan there is a continuous grade for ten miles of 76 feet to the mile, or 71·28 feet to take the figures of the surveyor, to get to a point which is only 90 feet lower than the highest summit of the Intercolonial Railway. All this goes to show that when the right hon. gentleman tells us that he is going to build this road to supersede the Intercolon-

ial Railway, to carry a greater traffic at a lower rate than the Intercolonial, he must mean something that we do not understand. There must be some reservation, something held back. His language cannot be reconciled with the facts as they have been submitted to parliament. His statement cannot be reconciled with the plan which the right hon. gentleman has affixed to the walls of the Railway Committee room for the use of the members of parliament. There must be some reservation, some holding back.

But to show in another way how absurd it would be to try to better the work of the Intercolonial Railway between Lévis and Moncton by the system proposed by the right hon. gentleman, I will take another illustration. The Minister of Finance drew an air-line from Lévis to the north-east corner of the state of Maine, and another air-line from the north-east corner of Maine to Moncton. He called attention to the fact that this was not one air-line, but two, having an angle in the middle, and representing a distance of 351 miles. Of course, he first proposed, very generously, to add 10 per cent to that for curvature, making the road 386 miles long. How much is added to that 351 miles by the present despised route of the Intercolonial Railway between Lévis and Moncton? The Intercolonial Railway engineers added 40 per cent to the air-line distance; but then they were building a railroad with picks and shovels, with theodolites and levels, while the Minister of Finance was only talking about a railroad. If he is going to better the grades on the Intercolonial Railway between Lévis and Moncton, he has to do it in either one way or another; he has to add even more than 40 per cent to the length of the line, or he has to resort to an enormous expenditure to cut down those mountains and fill up those ravines or tunnel through some of those rocks, in order to get within the limits he has fixed for himself. The Intercolonial Railway, with an easier route and with 40 per cent added for curvatures, cost $53,000 a mile. Let us knock off $7,000 per mile and call it $46,000 a mile as the estimate of Sir Sandford Fleming. On a route which manifests enormously increased difficulty, the Finance Minister is going to build for the Premier of Canada a road good enough to supersede and to send to the scrap heap the Intercolonial, for $25,000 a mile. The whole thing is, I regret to say, so far as that part of the line is concerned, an absurdity—an irreconcilable contradiction. There cannot be the construction of such a road for the price named. In my estimation, the road can be built if the people want to build it, and if they are willing to pay from $60,000 to $75,000 a mile to do it. But the right hon. gentleman cannot get a competent engineer to say that such a road can be built for $25,000 a mile; and if he cannot, he is not treating the people of Canada fairly in representing that he can build that road for any such money. Everything we know contradicts that statement, and, much as we are disposed to accept everything which the right hon. gentleman says, with that parliamentary courtesy which requires us to do so, there are difficulties in the way of our accepting that opinion of the right hon. Premier which, to my mind, are insuperable. The whole possibility of making that rather surprising statement which the right hon. Premier has made, and which the Finance Minister and one speaker after another has repeated, that this road is going to cost the people of Canada only $13,000,000, depends on the other statement of the government that it is going to build this part of the road for $25,000 a mile. If they frankly admitted what the cost of that road would be, it would be no longer possible for the government to maintain that extraordinary contention that for $13,000,000 they are going to give this country a road of the class spoken of by the hon. member for North Norfolk (Mr. Charlton) and by other hon. gentlemen on the government side of the House.

That is the first condition upon which the whole case of the government depends—that the road can be built for from $25,000 to $28,000 a mile. We have seen that that is exceedingly improbable. There is another condition that must be complied with, even if the road is built for $25,000 a mile, before the right hon. Premier can make good his assertion that he is going to build the whole road for $13,000,000; that is, that the Grand Trunk Railway Company will implement its part of the contract—will take this road when it is built, and pay 3 per cent per year upon the cost of its construction. Now, as the people of Canada are making a very important bargain with the Grand Trunk Company, it is only a matter of common sense and caution to find out as much as we can of the people with whom we are making our bargain. The Grand Trunk Company recently held its semi-annual meeting in London. I find published in all the financial journals a statement of the affairs of that company. I find that its whole capital—not all its capital, but all those portions which the papers think it necessary to enumerate—come to £41,656,364. Turning that into our currency it amounts to a little more than $202,000,000. On the 30th of June, 1902, the Grand Trunk Company paid £253,026 in dividends, and carried £2,609 to the reserve account. Its total net earnings for the half-year were £255,635. At the next half-yearly meeting it declared a dividend of £324,673, and carried forward £4,000, although I see that another and perhaps more authoritative statement represents that these £4,000 are a deficit. For the half-year ending June 30, 1903, the company divided £258,626 among its shareholders and bondholders and other creditors. It declared a dividend upon its 4 per cent guaranteed stock, its first preference stock and its sec-

ond preference stock. In December last it declared for the first time in its history a dividend on its third preference stock, and passed the dividend in the following June. Practically the position of the Grand Trunk Railway Company is this, that it pays interest at the rate of 4 per cent or 5 per cent on one-fourth of its liabilities, while upon three-fourths of its liabilities to its shareholders and the public from which it has obtained its money to carry on its business, it is not paying one cent of dividend. Those who are curious to see the facts for themselves will find it by referring to any of the hand-books issued by any of the investing companies. These give the full particulars, showing that practically this concern, which stands on that lease between the government and the people of Canada, and the necessity of paying interest not only on the cost of the eastern division of this railway, but possibly interest on the bonds on the western division as well, has only paid interest at the rate of 4 per cent on about one-fourth of its capital, or interest at the rate of 1 per cent per annum upon its whole capital.

Now, there is another way of looking at this thing. The Grand Trunk Railway, we are told by its friends, has 3,142 miles of road, and the dividends it has declared amount to about $800 per mile of its system. That system is operated in a good country, largely in the province of Ontario. It has a branch to Chicago, and a large through-traffic over that branch, and it does an important business in Portland. In Ontario its operations are carried on in a country thoroughly settled and filled with wealth. And on that system, on which it owes $202,000,000, and on only one-quarter of which debt it pays interest, it manages to earn $800 per mile. Yet we are told that the First Minister places his full trust in the fact that this Grand Trunk Pacific Railway is going to take off the hands of the government a road which the government estimates will cost $28,000 per mile, but which is more likely to cost $50,000 per mile, and pay 3 per cent on its cost. Should it cost only $28,000 per mile, the Grand Trunk Pacific Railway will have to pay $840 per mile to the government as rental, or $40 per mile more than is earned by that magnificent system concerning which we have heard such laudations. Should that road cost $50,000 per mile, the Grand Trunk Pacific Railway will have to pay a rental of $1,500 per mile. How is that road going to earn that amount of money, when the Grand Trunk Railway, running through a magnificent country, and paying no interest, can only earn $800 per mile? If the Grand Trunk Railway cannot earn more than $800 per mile on its own road, running through a thickly settled country, how can the Grand Trunk Pacific Railway be expected to pay from $840 to $1,500 per mile on a road running through a country which for years will provide very little traffic? The right hon. the First Minister has shown by his speech that he has a great deal of piety and faith in his composition. No one without the most abundant stock of faith could ever put his trust in two such absurd propositions as the propositions that the road from Moncton to Winnipeg could be built for $28,000 per mile, and that the Grand Trunk Pacific Railway, or any other lessee, could take it over and pay $840 per mile for the use of it. Still, in face of these facts, which cannot be controverted, we are assured, from day to day, that the whole programme is to go through, that the road is to be built at a cost of $28,000 per mile, that the lessee will pay 3 per cent on its cost, and that the Canadian people will not be liable for a cent. And side by side with that statement, you have the statement made, and not contradicted, that the Grand Trunk Railway Company exacted from their president, when he met them in London, the promise that not one dollar of liability should be attached to them in connection with this enterprise.

Just see what a programme the government is offering the people. It is very manifest that this is not a commercial, but a political railway. Why, in introducing this question to the country and parliament, neither the First Minister nor any of his supporters was willing that it should be discussed on its merits. No, they defied any one in the opposition to attack it because it was agreeable to the people of this province and the other. In the lower provinces, the scheme could not be attacked. The government could not take the road to St. John, where possibly grain might be taken, although ostensibly the road was built for the purpose of finding a winter port. That, however, would interfere with the political character of the scheme, and the road had to be dragged this way and that, until, in compliance with the demands of the government supporters from the maritime provinces, it was located at a compromise point and brought to Moncton. Was it brought there to cheapen the cost of transporting grain to St. John? No, but it was brought to Moncton in order that the maritime supporters of the government might be able to go back to their constituents and say to them: See what we have done for you, we could not get the road into the province of Nova Scotia, but we got it as near as we could.

Hon. Mr. ROSS (Victoria, N.S.). Is the hon. gentleman opposed to the road going to Moncton?

Mr. BELL. I am criticising this scheme. I say this, that if the hon. gentleman who has just spoken, wants the road to go to Moncton, it is not because he is very anxious to see grain shipped by Halifax or St. John, but because he wants to have some

kind of an excuse to offer his people for supporting such an absurd proposition.

Mr. JOHNSTON (Cape Breton). Then the hon. gentleman is opposed to it ?

Mr. BELL. The hon. gentleman is prepared to stand by the declaration made by his leader. This being the character of the scheme before the House, let us understand the reasons advanced by the First Minister for introducing it. What are these reasons ? I suppose we should take them in chronological order, and begin with that vein of piety which broke out in the hon. gentleman, and his regard for the passage of time ? He could not wait ; there was great urgency. As an hon. gentleman said in this House, there was a crisis somewhere. And I think the suggestion was that somebody had it in his pocket. But apart from that urgency which has such an influence on the right hon. gentleman, there was the danger of the abrogation of the bonding privilege. Well, the right hon. gentleman has been Premier of Canada for seven years, and this urgency never seemed to strike him until now. Was he afraid of the abrogation of the bonding privilege at any other time ? Does he consider that this tide in our affairs never began to flow until the year of grace 1903 ? Have the susceptibilities of the right hon. gentleman received a sudden awakening in 1903 ? Or can it be possible than an election believed to be imminent has anything to do with his sudden zeal ? Well, let me first deal with the question of the bonding privilege, you can fairly estimate the chances of anything happening by experience. You can calculate the chances by what has occurred. What chance is there that the bonding privilege may be interrupted. Has it ever been interrupted ? How long has it been in force ?

Hon. Mr. ROSS (Victoria, N.S.). It has been threatened.

Mr. BELL. Might I ask the First Minister how long the bonding privilege has been in force between the two countries, and when it was put in force ? It has been in force, Sir, between the United States and Canada at least forty-seven years, and has never been interrupted. It has possibly been in force fifty years without interruption. It has been threatened, as my sagacious friend from Victoria says, but he ought to know, as a good Scotchman, that a threatened man lives long. When was it threatened ?

Hon. Mr. ROSS (Victoria, N.S.). By the President of the United States.

Mr. BELL. I am much obliged to my hon. friend for the valuable information. It was threatened by the President of the United States at a moment when an election was imminent. It was rather a remarkable coincidence that just as President Cleveland used the bonding privilege on his side of the line for electioneering purposes, so the Rt. Hon. Sir Wilfrid Laurier uses it on this side for like purposes. And neither of them meant a word he said, I am afraid in this connection. We have very good reason to believe that President Cleveland was not very much in earnest. He played his capers quite frequently when an election came on, and I am quite sure in saying that the right hon. the First Minister never lost any sleep on account of his fear that the bonding privilege might be interrupted, and is not likely to lose any. It has been in force fifty years and never been interrupted, but it has been threatened and idly threatened. We have no need to be afraid. The bonding privilege is quite as valuable to the people of the United States as to the people of Canada. It rests upon our treaty rights with the people of the United States. The right hon. gentleman shakes his head. It is true that the treaty of Washington has been repealed, but there is a much older arrangement between Great Britain and the United States, made in 1830, under which the people of the United States were admitted into the West Indian ports on condition that Canadians should be admitted on equal terms into American ports. There is, therefore, no reason why we should doubt that the bonding privilege is unassailable. If the Americans were to take so unfriendly a course as to refuse us admission into their ports, ipso facto, their ships would be refused admission into the West Indies. And now that the different portions of the empire are drawing a little closer together they might even find that the mother country is not disposed to give up her coasting trade to the Yankee ships if the United States should attempt to treat the people of Canada in an unfriendly way. But apart from that there remains the fact that the bonding privilege is more valuable, if possible, to the people of the United States than it is to the people of Canada. The returns show that in the course of the last year the total amount of Canadian trade that passed through the United States was 98,000 tons, 78,000 tons of foreign merchandise coming or going through the United States between Canada and foreign countries and 20,000 tons of domestic freight that passed from one part of Canada to the other. Why there is crossing over the Canada Southern Railway every year between one part of the United States and another, 4,000,000 tons of freight, a large portion of which unquestionably belongs to the United States. One-tenth of the trade carried on railways in Canada is carried under this bonding privilege, and the United States would certainly make a very great mistake in withdrawing the bonding privilege, and they have not the remotest intention of doing so. The question is raised occasionally in the United States by gentlemen of President Cleveland's stripe, and what do you see? At

once every powerful, intelligent and leading community in New England raises its voice against any such absurd proposition. I venture to say that nothing in the comic papers this year has amused the people of the New England states one-half as much as the Premier's statement as to the bonding privilege being in danger.

Through the Welland canal every year the people of the United States send 200,000 or 300,000 tons of freight each way. They enjoy all the privileges of our waterways. The approach to the great city of Detroit is partly in Canadian waters and might be closed if the people of this country found it necessary to answer unfriendly act with unfriendly act. There is no more danger of the bonding privilege being interrupted than there is of the comet striking the earth and changing the length of the day, and the right hon. the Premier knows it as well as any person in this country. In every case in which an attempt has been made by the United States to act towards us in an unfriendly manner it has failed. An attempt was made to smuggle into a tariff Bill a discrimination against Canadian exports: it was set aside and disallowed by a competent authority in the United States. Our rights rests upon legislation in the United States and that cannot be easily interfered with. If it should be interfered with, why would it hurt us to have to move over our railways 98,000 tons of freight that we do not move to-day.

But in addition to all that we can get in from the sea without depending on bonding privilege. We have the Intercolonial which is capable of handling that 98,000 tons ten times over in the course of a year. In addition to that we have a second road from St. John to Rivière du Loup, tapping the Intercolonial at that point. The construction of 120 miles of railway by the Canadian Pacific Railway from Quebec to Edmundston would give two roads utterly independent of one another from the sea coast through the maritime provinces into Canada. But to avoid this awful danger the right hon. gentleman is going to build 3,600 miles of railway which fortunately, however, will cost only $25,000 a mile. So much in respect to the bonding privilege.

Then there is another very important matter engaging the attention of the Premier and it was in connection with this that he found it impossible to wait. That is the diversion of the trade of Canada through the United States. How am I expected to know the right hon. gentleman's authority for the opinion that we are losing trade to the United States? If he looks at the daily papers, he will find that even more United States grain than Canadian grain came into Midland and Georgian Bay ports this year, and that 20 per cent of the grain that went out of the United States by water came to Canada. We are if anything taking away the trade of the United States. There is one physical factor in the geography of North America that guarantees that we will continue to take it away if we do not abandon our chances, and that is the fact that, as the hon. member for St. Mary's (Hon. Mr. Tarte) said last night if we make Lake Superior the key to our transportation system we are undoubtedly going to take the trade of the United States. We can draw to Lake Superior ports with greater advantage than it can be drawn anywhere else grain, from a distance of 600 miles within the United States and turn it into the St. Lawrence route.

We have in the St. Lawrence river the power not only of holding our own but of taking to the ports of Canada trade from every port and from every tract of country tributary to every port in that great lake system with that magnificent water-way there, the right hon. gentleman would go hundreds of miles north into an unknown country to endeavour to keep the trade of Canada from passing into the United States, overlooking the advantage of the situation. Overlooking the fact that the key of the situation is to be found in these waterways, the hon. gentleman would build this railway through northern wilds where it will have no more effect upon the carriage of grain between the North-west and Europe than if it were built in a straight line towards the North Pole. The line could not compete with the Canadian water-ways. It will never have an opportunity to compete. There may be a small quantity of wheat coming out in the winter brought out by the Canadian Pacific Railway and other lines to be ground at Canadian mills or by the Canadian Pacific Railway to furnish a ballast for their ships, but the great bulk of Canadian trade will go down through the lakes and the St. Lawrence and for a time a certain part of it may take the lake and rail route via the Georgian Bay ports and thence across Ontario to Montreal or Quebec.

A good deal of the discussion during this debate has turned upon the question of railway freight rates versus water freight rates. Most ingenious arguments have been built up by hon. gentlemen opposite to prove that the railway rates can be cheaper than water rates, at least, I presume that is what they are trying to do. The government of the day need not go very far afield, they need not go to any interstate commission for their authority, they may go to their own blue-book in which they will find on this point evidence so clearly and succinctly put by their own officials that I might say the whole matter is put in a nutshell. In the report of the Department of Railways and Canals we are told that for ten years the average cost of water-borne freight has been 1·07 mills and for the last five years ·95 of one mill. The average freight and I think, in this case, the lowest freight rate between New York and Chicago, (the Lake Shore and

Michigan Southern Road being selected on account of the advantageous alignment and good roadbed which it possesses and the great competition and low rates to which it has to submit) was 3·20 mills. Let us take the average water rate as 1 mill and the average all rail rate as three mills, not 3·20 mills but three mills, and there you have the statement supported by the authority of the government officials that it costs three times as much to carry grain by rail as by water. Our North Shore road, away in the north country, a $28,000 a mile road, I do not think can equal the rates of the Lake Shore and the Michigan Southern. The average rate from Chicago to New York for lake and canals is 6·96 against 12·97 as the average by all-rail. This is a matter that seems to have been settled years ago; still, in order to try and make up some kind of an argument to support this preposterous scheme of building a road to haul wheat from Manitoba to Quebec and St. John by rail, it is necessary to disprove the most obvious facts of economic knowledge; and things that have been admitted for years are now denied, and an effort is made over and over again, and sometimes not in the fairest fashion, to disprove them. For instance, what was the Minister of the Interior driven to do ? He quoted to this House a rate of freight from Kansas city to Chicago of five cents per 100 pounds, and he figured that out to be three cents a bushel. Now, the very page of the Inter-state Commerce Commission report from which the hon gentleman was quoting, stated, not what he told the House, but something that I might almost say was the very opposite. Let me read what it says :

> The railway lines from this city, leading to the eastern Atlantic seaboard are the oldest and most powerful. But the distance to the gulf ports is much less, and the railways serving these ports, insist that a considerable portion of this grain should be exported by that route.
>
> The conditon has given rise to the most active competition between rail lines leading in various directions from Kansas city and the result has been a very low rate upon export grain from that section. . . . . During the past summer the open traffic from Kansas city to Chicago has been twelve cents per 100 pounds ; but the actual rate at which wheat has moved has been as low as five cents. The published rate from Kansas city to Lewiston has been fifteen cents for export while the domestic rate for the same service has been thirty-seven cents.

Now, the Minister of the Interior was so desperately driven to try to make an argument for his case that he suppresses all these facts, which he had under his eye and hand, and he culls out of that extract the one statement that wheat has been carried as low as five cents a bushel, an exceptional rate, and he comes to parliament and submits that, as the rate on wheat between Kansas city and Chicago, and argues therefrom that wheat can be carried by this precious new road from Winnipeg to Quebec.

There is another very ingenious argument which the right hon. gentleman has been using with a great deal of force, namely, that one reason why he wants to build this railroad, one reason why time won't wait, is to open up a tremendous tract of country for colonization purposes. That is to a certain extent a very unselfish idea on the part of the right hon. gentleman, because no country that is unsettled has votes. But after all, it was rather a persuasive argument to be adduced by a member of the government, who said that Quebec and Ontario ought to support this scheme because the government was actually going to build colonization roads for them for nothing, an argument that looks very much like an act of wholesale bribery, and which might have some effect in those provinces. In this country we have already a tremendous area of lands open for settlement, lands supplied by many railroads, but which are unable to hold the people that are upon them. The fact is well known in Quebec and in the maritime provinces, and indeed in some parts of Ontario, that the temptation to go to the west, to that garden country where a man can for a comparatively small sum procure a farm already fit for the plough, where the harvest conditions are almost perfect, where the farmer's lot is cast under the most happy circumstances—these conditions, I say, render it almost impossible to keep the people of the older provinces on their farms. Under these circumstances, with provinces that are amply supplied with railroads, with lands upon which it is almost impossible to keep the people to-day, to undertake to transport people hundreds of miles into a new country, no matter how good it may prove to be, where there is neither settlements, nor civilization, nor the conveniences of life, nor the comforts of home, is certainly not a commercial proposition.

Mr. BROCK. They won't go.

Mr. BELL. We are told they won't go. It has been the experience of every country in the world that in settling public lands the best lands are taken first. It is a fundamental idea in economics that so long as there is good land open to a settler he will not go on to inferior land. What reason is there to believe that you are going to stop and direct elsewhere that tide of immigration that is now landing in Halifax and Montreal and pouring past the eastern provinces and going thousands of miles into the west, making for the goal of their ambition, the point they had in view before they left home, those magnificent wheat fields of western Canada ? What reason has the government to suppose that by building this road they are going to stop these people from going into the North-west, and are going to induce them to settle in this abso-

lutely unknown country, a country that we are told is wooded, but to clear which involves a life of labour, hardship and self denial, a life, however, which the pioneers of eastern Canada did not shrink from undertaking? Why should the right hon. gentleman expect any great results from his colonization scheme?

We are told—and it is very singular how hard put some hon. gentlemen are for illustrations—we are told in some of these reports of that northern country that it is very much like the county of Rimouski. That expression occurred in one or two of the reports I heard read in this House. What has been the experience of the county of Rimouski? The county of Rimouski has a railroad, the county of Rimouski has churches and schools. It is a county in which there is no lack of room. It has 3,574,469 acres of land, which would compare not unfavourably with the magnificent tract about which the Postmaster General waxed eloquent. It is pretty large, 5,585 square miles. The population of that county, in 1871, was five to the square mile, or 27,000 in 1881, six to the square mile, 33,000; in 1891, six to the square mile again, 33,430; in 1901, with the assistance of an admirably taken and economical census, the population rose to 7·02 per mile, or 40,000 people. If the county of Rimouski be, as we are told, a fair sample of this country that is proposed to be opened in the north, I would like to know what rational man would leave the county of Rimouski, where there are certainly all the evidences of a railroad, or any other county that is equally fit, and many of them are better off—what rational man would leave that county to go into this northern wilderness? As a colonization scheme, it strikes me that this effort of the Premier may be fitly called a howling success because it is to be carried out in a howling wilderness.

There is no need so far as room is concerned to open up new lands. I take the county of Rimouski as an example of how the people are treading upon one another. It has only 7·2 people to the square mile, which evidently indicates a thronging population. Where is the crowd of people? If it is necessary to make room somewhere, to my mind it would be a very futile undertaking on the part of the government to make room in any of the older parts of Canada so long as the government are in a position to open either for the people of this country or for immigrants from the older countries, such lands as are to be found in the North-west Territories. There are difficulties connected with the building of this road through this country which would seem to be almost inconsistent with its construction for $28,000 per mile. It taps the water at Quebec, at one end, and you can take in supplies from Winnipeg at the other, but how can supplies be taken into those portions of the road that lie from 150 to 200 miles away from anywhere? One of the great difficulties in constructing the Canadian Pacific Railway, notwithstanding the fact that it ran comparatively close to the lake shore, and one which affected the cost of the road was the difficulty of getting supplies in to the road. The hon. member for North Renfrew (Mr. Mackie) informed us here the other night that the very lucrative business of bringing out pine timber could not be carried on very far up the Ottawa, because it costs too much to bring out the wood on account of the cost of getting supplies in. There is no doubt that the cost of getting supplies in is going to form a considerable part of the cost of this proposed road which the right hon. gentleman says can be built for $28,000 a mile. It is a costly undertaking and it will likely eat into the $28,000. The right hon. gentleman submits this scheme to parliament as a colonization scheme, but he at the same time submits it as a great through-traffic road for transporting the grain of the west to the market at the lowest price. Not one foot of the road is located, as far as we know, and a large portion of the evidence laid before the House was the evidence afforded by the Trans-Canada railway promoters, not at all the same road, not at all going where this road goes, a road passing fifty miles from James bay and an average distance of 100 miles from the line along which it is proposed by the government to carry this road south of Lake Abitibi and north of Lake Nepigon. The testimony given by the Trans-Canada Railway promoters does not apply to this country. The project is an entirely different one, and as was very properly observed by the hon. leader of the opposition, if this work is carried out, it may be found that it will be perfectly impossible to reconcile the features of a colonization road with the purposes of a road constructed for through-traffic. I hope that we will be able to undertake the construction of that road. There are features of it which are of the highest importance to the people of Canada. It may be constructed by a line from Quebec to Port Simpson which would constitute the shortest transcontinental railway in North America. If we can believe the engineers' estimates we may be able to secure a comparatively level road, and if it could be carried out in connection with a fast Atlantic service to the maritime ports, with a class of steamers equal to any on the Atlantic, we might hope to get a great volume of passenger travel between the east and Europe, passing over this line. This is a road which might at some day give to Canada a magnificent advertisement, it might be the means of turning a large part of the traffic between the east and Europe across our country and it might have some good effect by giving us greater depth of territory, a greater development of mining wealth, a development of agricultural wealth, and therefore, it is a

work to which I believe the people of Canada should turn their attention. But, I will say that they should turn their attention to it just on the basis which the hon. leader of the opposition has suggested, not by plunging into this undertaking at once, not by saying there shall be such a road going from Quebec to Port Simpson, we know not where and we know not how, but by devoting a sufficiently large portion of the wealth and the resources of Canada to making the people so thoroughly acquainted with that country that they will know where that road ought to be built, and as soon as it can be shown that it is a feasible undertaking, as soon as we can realize that by the construction of the road we will gain these desirable ends, then, I say, this is a proper undertaking for the people to enter upon, and I am glad that I am in this respect as in respect to other matters, in a position to support the proposition of the hon. leader of the opposition.

Now, in conclusion, we reviewed the character of the road to be built, we have reviewed the grounds there are for believing or for not believing the figures which have been given by the government as to its cost, we have dealt with the bonding privilege, we have realized the strength and value of that bogey, we have dealt with the matter of colonization, we have dealt with the matter of freight rates, and from every point of view I say there is no reason, at all events, which has been put before parliament, why parliament should proceed with this work as it has been suggested. There may be other and better reasons. We have been told by one hon. gentleman on the other side of the House that he was in favour of the railway, but not for the reasons which have been stated by the right hon. gentleman. There is one very peculiar suspicious and unsatisfactory feature in connection with this whole matter, and that is the mystery in connection with it. Why did the right hon. gentleman not submit this scheme at an early stage in the session? We are told that they had a whole year to prepare it. The hon. Postmaster General has informed us that the government have dealt with this matter for a year, that they have considered it for a year, and after having considered it for a year they kept parliament sitting here since the 12th of March for some four months, and then they submit their scheme without one vestige of information, without an estimate, without a scrap of a plan, except the few feet of tracing paper which is affixed to the wall of the Railway Committee room, and which represents a railway which is absolutely too ridiculous to discuss, a road with a continuous grade of no less than seventy feet to the mile and bearing upon it the inscription of an honest engineer to the effect that he did not hold himself responsible for the imaginary line there traced. The right hon. gentleman proposed to the people of Canada in the early part of the session, at a time when he must have had this matter under consideration, if the hon. Postmaster General is not misrepresenting matters, that he would submit it to a commission that would deal with all the different details of water routes and rail-routes, improvements to harbours, improvements to waterways, improvements to ports, with every feature of the scheme; yet, the government of Canada, after making a promise to investigate all these matters, have absolutely failed in every jot and tittle of that promise. Criticism is addressed to the scheme of the hon. leader of the opposition because it is manifold, because it deals with all these subjects and because in that respect it carries out in a much greater degree the original programme of the government than does the scheme which the government has proposed. The plan of the hon. leader of the opposition follows closely the details of the submission which was to be made to the commissioners by the decision of the Governor in Council. In that respect it shows very much more regard for what was outlined as the policy of the government than does the programme submitted by the right hon. gentleman. But the right hon. gentleman is disposed to be facetious in dealing with the opposition. He knows very well that parliament has been kept sitting for at least a month past its accustomed time for adjourning, and when he brings down at this late hour of the session a programme so important as this, he is inclined to laugh at us, and when we ask for information he says there are mountains of information in the departments and in the library. And then, in order that the right hon. gentleman might stamp upon the pages of 'Hansard' the contemptuous manner in which he was dealing with the parliament of Canada, and with the people of Canada, he laid upon the Table of the House these mountains of information.

Fleming's Canadian Pacific Railway report, 1873; Fleming's Canadian Pacific Railway report, 1874; Fleming's Canadian Pacific Railway report, 1877; Fleming's Canadian Pacific Railway report, 1878-9; Fleming's Canadian Pacific Railway report, 1880; Marcus Smith, Canadian Pacific Railway survey, 1878; Canadian Pacific Railway maps, 1874; report of Pine River survey by Joseph Hunter, 1878; report proposed short line between Montreal and maritime provinces, 1885.

And that report was as to a line across the state of Maine inconsistent with his all-Canadian route.

Report of survey for most practical route between Montreal and Halifax or St. John, 1885; report Commissioner of Public Works, Quebec, 1871; report Commissioner of Crown Lands, Quebec, 1885; explorations at Lake St. John and James Bay, O'Sullivan, 1901.

That is the last but not the least; it is only two years old—all the rest are old enough to vote. This government has come to

the country absolutely without information on this subject, and the proof of that is in these documents which the Premier has submitted to parliament as those upon which he bases his proposition. The result of the investigation which I have been able to conduct for a short time to-night, goes to show that he did not take the trouble to even read these reports, for his proposal is absolutely inconsistent and absurd in the face of the knowledge that is to be found in these reports. That is a nice way to deal with such a condition of things in this country. There must be some very urgent reason why the people of Canada are asked to decide upon such a question absolutely without information. It is not an unfair challenge that is being made to the government, to submit this matter to the people. It is perfectly evident that the government have not taken the trouble to make themselves acquainted with the facts necessary to form a solid judgment on the subject. The Postmaster General throws back the suggestion that the government should go to the country, and in that the hon. gentleman showed how little comprehension he has of the position in which the government is. The proposition made here by our respected leader is one that must be submitted to the people before we can have an opportunity of putting it into effect. We are not in the position the government is in, of being able to make a hard and fast bargain, with even such a company as the Grand Trunk Railway, and put it through parliament with the power of a majority, and then go to the country and say : there is the contract, and you have to accept it or pay such damages to the company as they can exact in the courts. We on this side have to take the risk of our proposition, and we are ready to do it, because we know that that proposition will commend itself to the people of the country.

Mr. JOHNSTON (Cape Breton). What if we accept that proposition.

Mr. BELL. You dare not do it.

Mr. JOHNSTON (Cape Breton). What would you do if we did?

Mr. BELL. We would decide when we come back from the country in power. There is no trouble about us getting back.

Mr. KENDALL. Lots of it.

Mr. BELL. My hon. friend is not likely to get back, from what I hear. However, I do not care to make personal suggestions of that kind, because they are cheap things, easy to be made and not worth much very often. There is this feature about the thing, and that is the humiliating position in which this parliament and the Railway Committee were placed, on account of the trifling that went on. We sat there week after week discussing the details of the Grand Trunk Pacific Railway Bill, and we met from the general manager of the Grand Trunk Railway the most ready acquiesence. When he was asked: Will you go to Quebec, he answered : Certainly. Will you go to Moncton : Certainly. And if he had been asked to go to Newfoundland, he would have said : Certainly. All the time that he and the gentlemen associated with him were keeping the Railway Committee and parliament playing with the Grand Trunk Pacific Railway Bill, he was busy in the council room negotiating an altogether different arrangement with the government. They were dangling the Bill before parliament and before the committee in order to keep them quiet, because they had to keep us 141 days before the Bill could be submitted by them. They were trifling with parliament, they were trifling with the committee, but they were not trifling with Mr. Hays, without some bad results to the country. Why is it that it took so long to make the bargain ? Perhaps they were trying to make the best bargain they could with the Grand Trunk Railway, but whether or not there must be some very imminent reason for driving them into this bargain in such mad haste. There is no doubt that the best part of it goes to the company, and the probability is that the company just took what it would take. There is very little doubt but the government tried to persuade the company to take the whole road, and the company said : No, thank you. It is probable that the road through the prairies, if we may judge by the experience of the Canadian Pacific Railway, will pay from the start like a mine that will pay from the grass roots down. There is no doubt that the Grand Trunk Railway told the government that they had better keep the eastern section for themselves. They would undertake to operate it and promise after ten years to pay 3 per cent for it, but they would do nothing more. The Grand Trunk Railway took no great risk in making that promise. I am reminded of a story in this connection. There was a wonderful magician at the court of one of the eastern potentates, who could almost bring the dead to life, and do most wonderful things. On one occasion when he had given a very surprising exhibition of his skill, the Sultan said to him : If you don't make that white mule of mine speak within a year I will take your head off ; and the magician said: Certainly, master, I will make that white mule speak in a year. And a friend who had the welfare of the magician at heart said to him: Are you not a crazy man to undertake to make that mule speak in a year; you know you cannot do it. Oh, well, said the magician, I have three chances; in a year the mule may be dead, or the Sultan may be dead, or I may be dead. And so the Grand Trunk Railway had not great difficulty in undertaking to pay 3 per cent in ten years

after the completion of the road (which will probably take 20 years to come about), when they could enter into immediate possession of the valuable franchise of having a road through the prairie section and getting a government guarantee of the bonds on it. Even if at the end of 20 years it were necessary for them to forfeit the $5,000,000, which is the only guarantee the government of Canada has to compel the company to the performance of its agreement, it would not be an extravagant price to pay for 20 years' franchise of a road hundreds of miles long through the prairies. And at the end of 10 years who can tell what may happen. It may be the government would not have built the road; many things may happen before that time, so that the company do not undertake a very great risk. In several other respects it is not hard to see that this guileless Mr. Hays is a good hand at making a bargain. There was one amusing feature in the elaborate speech of the Minister of the Interior, and that was when he told us how the government had protected the interests of the country. First of all, he said, the Grand Trunk Railway wanted to build to North Bay, and that would mean that they wanted to take their trade to Portland, and the government stood up in the defence of Canada's rights, and said, We will make you build a road away north of North Bay, and will allow you to bring a branch into the city of Toronto; which the Minister of the Interior immediately thereafter, forgetting what he had said, informed the House was a shorter route to Toronto than the route he would not let them build; so that this safeguard to prevent the Grand Trunk from diverting its traffic to Portland only resulted in giving it a route more advantageous for that purpose.

The hon. Minister of the Interior told us another wonderful thing. He has made a wonderful departure. He is going to have in a short time millions of acres of the lands of Canada at his disposal, and he has made up his mind how he is going to dispose of them. He deserves a great deal of credit for his decision. You would think it took a great deal of profound thought to decide that he was going to sell those lands. Another unheard of decision of his is that the people who are settled in the country adjacent to those lands will have the first preference of purchasing them. This is a feature which has characterized the administration of the Dominion lands ever since we had any lands to sell—that a man who had a homestead would have the first preference in purchasing the adjoining land. Yet, according to the statement of the Minister of the Interior, you would fancy that this marvellous government had for the first time developed this wonderful scheme of selling the land, and selling it in the first place to actual settlers.

But in the course of that speech the hon. Minister of the Interior gave rather a black eye to the hon. member for North Norfolk. That hon. gentleman, having dragged it out of one of his old speeches, had laboured for hours to inform us that the country had given the Canadian Pacific Railway, in every acre of land granted to it, $3. But the unfeeling Minister of the Interior told us that there were no less than 20,000,000 acres of these lands coming back to the country which were without value because they had no railway near them. If these lands are without value now, with the Canadian Pacific Railway and the Canadian Northern Railway running through the country, and the promise of the Grand Trunk Pacific Railway, how is it that that land, promised to the Canadian Pacific Railway, when there was no line there at all, was worth $3 an acre? There is a difficulty which the hon. Minister of the Interior and the hon. member for North Norfolk may settle between them when they next meet. The fact is that such a ridiculous effort to prove that the land beyond reach of railways was worth $3 an acre, was well worthy of the right hon. gentleman who made it, and it was only an act of poetic justice that he should receive the coup de grace at the hands of the hon. Minister of the Interior.

Then, there has been a tremendous amount of ability displayed about the construction of this scheme. The hon. Minister of Finance had to be reckoned with, and you can see the trace of his cautious hand in the provision that the government shall not pay more than 3½ per cent for money. The hon. gentleman had the pleasure of placing a loan a short time ago at 2½ per cent; and, although he did not get par for his loan, it netted him 2⅞ per cent. But it is possible that fluctuations may occur, so that 3½ per cent is not an impossible rate. The Postmaster General has scoffed at the idea that the credit of Canada would ever fall so low that its securities would be worth 3½ per cent. The Minister of Finance deserves credit for having put in this cautious and safe provision. I suppose that few people would argue that the credit of Great Britain is not as good as the credit of Canada, or that British consols are not as good value as the 2½ per cent subscribed stock of the Dominion of Canada. In the course of the last two or three years Great Britain has been spending a good deal of money. In 1897 the average price of consols was 112⅛. in 1902 they were quoted at 94¼. that is a drop of 18 points. In the course of that time the British government had borrowed £69,000,000 additional of consols, and added 12 per cent to the amount of their consolidated bonds, with the result that there was a drop in the price of consols of 18 points. Would my hon. friend the Finance Minister inform me where the securities of Canada issued at 2½ per cent would be, and what they would pay if the securities of Canada dropped 18 per cent.

The MINISTER OF FINANCE. But they did not.

Mr. BELL. The hon. gentleman has not spent his money yet; he is only talking about it. The people of Great Britain cannot say their securities did not drop. The Finance Minister of Canada proposes to increase the debt of Canada by at least 50 per cent in the course of the next ten years, and would it be surprising if with such an increase our securities dropped 18 per cent? And if they dropped from 89 to 71, what would they pay? They would pay 3½ exactly.

Mr. KENDALL. Will the hon. gentleman allow me to ask him what he understands governs the value of consols?

Mr. BELL. I have no doubt, like everything else, it is governed by the demand for them.

Mr. KENDALL. Certainly, and what makes the demand?

Mr. BELL. I hope the hon. gentleman is not trying to puzzle me with conundrums. I presume that what makes the demand is the presence of buyers.

Mr. KENDALL. If the hon. gentleman will allow me, I will explain that the value of consols depends on the value of money in Great Britain, and the value of money depends on the demand for money for other enterprises.

Mr. BELL. I suppose we might argue that the value of the 2½ per cent inscribed stock of the Dominion of Canada depends on the value of money in Great Britain, because the market for it is in London. So that I think the hon. gentleman is endeavouring to show us that he is very wise to very little purpose.

One feature that has not been very nice in this debate has been the manner in which the Liberal party have seen fit to treat a very recent friend of theirs, the hon. ex-Minister of Railways (Hon. Mr. Blair). A good many gentleman would have acted more becomingly if they had held their peace. Some gentlemen who perhaps owe a good deal to that hon. gentleman, some who owe their presence in this House to him, felt at liberty to score him very freely, and the whole Liberal party seemed to take much relish in that performance. A very profound thinker, speaking of a party not very far from the party I am addressing on the other side of the House, recently spoke as follows:

> Were it needful to dwell on indirect evidence, much might be made of the behaviour of the so-called Liberal party, a party which, relinquishing the original conception of a leader as a mouthpiece for a known and accepted policy, thinks itself bound to accept a policy which its leader springs upon it without consent or warning—a party so utterly without the feeling and idea implied by liberalism, as not to resent this trampling on the right of private judgment, which constitutes the root of liberalism—nay, a party which vilifies as renegade Liberals, those of its members who refuse to surrender their independence.

That is the position in which the Liberal party have chosen to put themselves in reference to an hon. gentleman who recently occupied a very important position in their councils, and, in the opinion of this writer, who is apparently a gentleman of some discrimination, they have not reflected much credit upon themselves in so doing.

One of the most striking features of this debate has been the statement of hon. gentlemen opposite that the whole cost of this railway will not exceed $13,000,000. The Minister of Finance puts it far less—at $8,000,000 or $10,000,000. He does that by anticipating the payments, which he has no more assurance of than the Minister of the Interior has of the sale of his lands. It is true that money out at interest accumulates. If you have to pay a debt next year and will deposit with any reliable banker a sum which, with the interest, will amount in a year to the sum due, you will have in that time the money to pay your debt. There is nothing new about that, and I do not see why the Minister of Finance went to the trouble of introducing it into this question; and I am certain that when he hears what is said in reply, he will find that he will get very little thanks for his pains.

The right hon. gentleman bases his calculation on the supposition that the road will be built for about one half what it will actually cost, and then he pays off this amount, not when it becomes due, but a year or two beforehand, by means of a deposit at 3 per cent interest. That is the very business which the Finance Minister is doing to-day for Canada. By means of a sinking fund, he is accumulating capital and interest in order to pay off the debts of the country as they mature. But is he realizing 3 per cent on his deposits? Let us turn to the blue-books, and we will find that he is realizing 2 per cent, and not 3 per cent, for the people of Canada; and the institution with which he has invested the sinking fund are much better financiers, because they can realize 50 per cent more from the investment. All the members of the cabinet are contributing to this scheme. The hon. the Postmaster General has done a great deal. He has given us a speech, but that is nothing to what he may yet do. And possibly Sir William Mulock, Postmaster General and Minister of Labour, may put out a new issue of postage stamps—not Jubilee stamps this time—but inter-oceanic transcontinental railway stamps, in commemoration of a line of railway which is to be built from ocean to ocean, on all-Canadian territory, built with Canadian material, by Canadian labour, and without the slightest taint of water connection. This

government is not only imitating the example of its opponents, but going back, to a large extent, on its former leader. That policy of Mr. Mackenzie was one which combined railway stretches and water stretches, but water stretches are very obnoxious to these hon. gentlemen now. There are to be no water stretches; they will take it straight. They show not only their admiration of Sir John Macdonald by imitation which is the sincerest kind of flattery, but actually turn their backs upon their great leader, who, to their great discredit, they did depose during his lifetime. The First Minister has been associated with a good many cries in this country. He has instructed his supporters to preach loyalty here to-day, but not many years ago men talked about Laurier, Farrar and commercial union. Within a very recent period it was possible to suggest that 'Laurier, Stratton and purity' might be associated, and now we have the rallying cry of 'Laurier, Cox and caution.' The right hon. gentleman has precipitated his party into this extraordinary contract. Why has he done it? Why has he failed to take ordinary precautions? Why did he not acquaint himself with the details of the Bill he is presenting? Why did he not avail himself of all the information that was lying about him on every hand in the blue-books? He tells us it is because time will not wait, and he pays the English speaking members a very high compliment, when in order to illustrate his position, he quoted from the greatest writer in the English tongue. It was William Shakespeare who said:

> There is a tide in the affairs of men,
> Which, taken at the flood, leads on to fortune;
> Omitted, all the voyage of their life
> Is bound in shallows and in miseries.

It is a compliment to us, but a poet's dream is a very poor basis on which to construct a transcontinental railway. What impelled the right hon. gentleman to go into this measure? Why did he decide to keep parliament sitting over four months and then commit the country to such a scheme? Why has he not faith enough in Providence and time to wait a few months and call an early session and meet parliament with a proposal supported by information on which hon. members could make up their minds? I fail to see any reason except one. The right hon. gentleman feels that he has to improve his opportunities while he is in power. That may not be very long, and he desires to erect to his memory a monument in this great scheme of a transcontinental railway. In everything he has done since coming into power, he has imitated the conduct of his predecessors, and condemned every act and word of his former political life. He has not had a policy of his own, but has adopted that of his predecessors. Although he canvassed the country in favour of free trade, he has adopted the national policy, and now it strikes him, as he expects that the time may not be far distant when he may have to leave the sphere of politics, that this is the opportunity in which he must recant all he ever said or did and imitate these men, who, in the face of every difficulty and obstruction, did build a transcontinental railway to link together the separated parts of Canada. Now, he says, the time is ripe, when I must set my seal of approval on those acts of my great predecessor to which I was opposed. Now I must set the seal of flattery on that great project of that great Canadian, by imitating it, in my own feeble and ineffective fashion. It is true that there is no great necessity for such another railway to-day. It is not a matter of life and death, and it is a comparatively easy thing to do. We know all about the western country. We have companies only too anxious to build railways in that country, but if I can only go down to posterity as having built another transcontinental line, even if it be a poor second edition of the Canadian Pacific Railway, I will have done something to make my name live in the country. If that be the right hon. gentleman's opinion, we must look with a certain amount of charity on his desire; but I sympathize to the fullest extent with a gentleman, one of his supporters, who remarked that while he was prepared to support the government scheme, he found it very hard to swallow the reasons given for its support, and that if he could not divise better reasons for the construction of the railway, if better reasons did not inspire his conduct with reference to that matter, he would not have voted for the Bill before the House.

On motion of Mr. Wade, the debate was adjourned.

ADJOURNMENT—TREADGOLD COMMISSION.

The MINISTER OF FINANCE (Hon. W. S. Fielding) moved the adjournment of the House.

Mr. R. L. BORDEN (Halifax). Before that adjournment I would like to bring to the attention of the House a telegram from Dawson city which I will read:

> Commission refuses peoples solicitors concession; files brought from Ottawa by special official. Put question, ask commissioners be instructed by wire to produce them. Inquiry balked. Mass meeting to-night. People greatly incensed.

Does the hon. gentleman know anything about this matter? I do not know anything about the circumstances beyond what is contained in this telegram.

The MINISTER OF FINANCE. What is the signature.

Mr. BORDEN Halifax). W. A. Beddoe. I do not know anything about the circumstances beyond what is contained in the telegram, but I thought it might be better to bring the telegram to the attention of the government and to make the inquiry.

The MINISTER OF FINANCE. I have no personal knowledge of the matter, but, I will cause inquiries to be made.

Mr. BORDEN (Halifax). I might also mention that the Prime Minster stated the day before yesterday or yesterday, I am not sure, that he would to-day give us the information as to the formation of the Transportation Commission. It may be that the information was given in my absence from the House.

The MINISTER OF FINANCE. A gentleman has been agreed upon to replace Sir Wm. Van Horne, but I would prefer that the Prime Minister should give out the name. If my hon. friend will renew the question to-morrow I have no doubt the Prime Minister will make an announcement.

Motion agreed to, and House adjourned at 12 a.m. Thursday.

HOUSE OF COMMONS.

THURSDAY, August 27, 1903.

The SPEAKER took the Chair at Eleven o'clock.

QUESTION.

FISHERIES PROTECTION SERVICE—OFFICERS' MESS.

Mr. TAYLOR—by Mr. Sproule—asked :

1. Have new regulations been issued for the guidance of the officers and men on board the Dominion government steamer 'Quadra'?
2. If so, when were they issued ?
3. Do they provide, among other stipulations, that the amount allowed for feeding the officers of the vessel is reduced from 50-55 cents per diem to 33 cents a day, or 11 cents a meal ?
4. Is the following the bill of fare for the officers' mess on the 'Quadra'?

OFFICERS' MESS.

(Sunday).

Breakfast—Ham and eggs, baked beans.
Dinner—Soup, roast and boiled meat, boiled ham, roast or boiled poultry, potatoes and vegetables, plum pudding and jelly.
Supper—Cold meats, fried potatoes, preserves.

(Monday)

Breakfast—Porridge, mutton chops, cold ham.
Dinner—Soup, Irish stew, roast beef, potatoes and vegetables, pastry.
Supper—Curry and rice, cold meats, chipped potatoes.

(Tuesday).

Breakfast—Porridge, beefsteak, bacon.
Dinner—Soup, roast mutton, corned beef, potatoes and vegetables, Queen pudding.
Supper—Cold meats, fried potatoes, baked beans.

(Wednesday).

Breakfast—Porridge, salt cod and pork scraps, liver and bacon.
Dinner—Pea soup, corned beef, beefsteak pie, potatoes and vegetables, pastry.
Supper—Fish patties, cold meats, fried potatoes, Washington pies.

(Thursday).

Breakfast—Ham and eggs, baked beans.
Dinner—Soup, roast or boiled poultry, boiled or roast meat, potatoes and vegetables, apple and plum pudding, fruit.
Supper—Haricot meat, cold meat, fried potatoes, tea biscuits and preserves.

(Friday).

Breakfast—Porridge, salt herring, lamb chops.
Dinner—Pea soup, fresh fish, beefsteak and kidney pudding, potatoes and vegetables, blueberry tarts.
Supper—Fish patties, cold meats, doughnuts, marmalade.

(Saturday).

Breakfast—Porridge, beefsteak, boiled eggs.
Dinner—Soup, corned beef, roast lamb, potatoes and vegetables, bread and butter pudding.
Supper—Irish stew, cold meats, chipped potatoes.

5. Have the officers to provide out of their pay the difference between the cost of this bill of fare and the allowance made by the government ?

6. Has the government taken steps to ascertain whether the meals can be furnished at 11 cents.

The MINISTER OF MARINE AND FISHERIES (Hon. Raymond Préfontaine) :

1. No.
2. Answered by No. 1.
3. The existing bills of fare have been in force for many years, and no reduction has been made. The agents are empowered to alter them if articles mentioned cannot be obtained at reasonable prices.
4. Yes.
5. No.
6. Not necessary. Agents report at the end of each season cost of vitualling the crews of the different government ships, which is entirely controlled by the market, and the inspecting officer reports that no complaints have ever been made by any of the officers or crew.

NATIONAL TRANSCONTINENTAL RAILWAY.

House resumed adjourned debate on the motion of Sir Wilfrid Laurier for the House to go into committee on a certain proposed resolution respecting the construction of a National Transcontinental Railway, and the motion of Mr. Puttee in amendment thereto.

Mr. F. B. WADE (Annapolis). Mr. Speaker, there has been so much said on

this question by different hon. members on both sides of this House that it is difficult for one to present any new facts or matters that will be of interest to the House. At the same time I do not feel that I can allow some statements that have been made to pass unchallenged, and I do not care, upon a project of such vast importance to Canada as this is, to give a silent vote. I believe that every man who has taken part in this discussion, that every man who has thereby aided in pressing this scheme forward, that every man who records his vote in its favour, will in the future have cause for congratulating himself that the privilege was afforded him here and that he improved the opportunity. In the first place up to a few weeks ago every person almost through the length and breadth of Canada, not admittel, but contended, that this project was absolutely necessary, and that it was an incumbent duty upon the government to proceed at once with the work. I would like to know what would be said of the government to-day by the opposition press if parliament had prorogued without the government bringing down a scheme for another transcontinental road. The whole country, the whole opposition press would have been up in arms soundly denouncing it, and I believe properly so, because the government would have been recreant to its duty if it had not brought down this measure. The project then was necessary, the people demanded it, the country required it, and the only objection that is now taken is that the government has not delayed long enough, that it has not taken sufficient time to obtain the necessary information. Well, I mean to say, Sir, the hon. gentlemen on this side of the House would be very loth indeed to support this scheme were they not convinced that all the information necessary was at hand. I for one would be loth to do so. Do hon. gentlemen on the other side of the House suppose that we have been sitting quietly by all these weeks and months and years, and that we have not possessed ourselves of sufficient information? I mean to state here that my judgment has been convinced that this road is necessary, and that the government has all the information in its possession for the purpose of entering into the contract that has been made. Now, the hon. leader of the opposition (Mr. Borden, Halifax) asked if ever a company had made a contract to build a railroad with such slight information, or if ever a contract for the construction of a railroad had been entered into before instrumental surveys by engineers had been made. I need not go very far afield in answering that question. Let me refer him to a railway at his own doors—the Halifax and South-western Railway. In 1891 the Premier of Nova Scotia entered into a contract with the South-western Railway Company to build a railway from Halifax to Barrington, connecting with the road to Yarmouth. There had been no survey. There was no such information as we have in regard to this. For years and years the people had been clamouring for the road, and for years and years it had been persistently stated that the road could not be constructed along the south shore of Nova Scotia. When the contract was entered into by the Murray government, what did we find the opposition press and the party, of which my hon. friend is the leader, doing? We found them unanimously denouncing the scheme, we found them stating exactly what the hon. gentleman is stating here, that the government had not sufficient information, we found them stating that the road could not be built, and we found them stating that the engineering difficulties were insuperable. They denounced the scheme as being wild, reckless and fantastic, and all these phrases that we have listened to coming from hon. members on the other side of the House might have been culled from the opposition press of Nova Scotia at that time. The scheme was presented to the people, these statements were made in regard to it, and what did we find as the answer which the people made ? In the province of Nova Scotia there were returned only two gentlemen as the opposition in the legislature, and I understand that in that province the leader of the opposition, who has one man behind him to second his resolutions, is to organize that province in a campaign against that project; and I believe further, if I am informed correctly, that he purposes coming in opposition to the hon. member who spoke to the House last night. That was the position that the opposition took in regard to that railway. What are the facts ? The facts are that the construction is proceeding along the whole line of the road to-day, the facts are that a splendid line has been secured, the facts are that within another year probably the road will be in operation from one end to the other, and that in face of the united opposition of the Conservative party in Nova Scotia, and this road will be built and carried through in spite of their opposition. It is a surprising thing to me when I look back over the history of railroad building in Nova Scotia that we find from the earliest times—and the earliest times were in 1854, when Joe Howe introduced his first railway legislation into the provincial legislature—the Conservative party unitedly denouncing him and denouncing his scheme, and saying that it would bring ruin and destruction to the province of Nova Scotia. Almost continuously from that time forward we have had to meet the opposition of these gentlemen. Let me say in passing, that after this road is built and is successful, I would not be surprised to find these gentlemen on the Conservative benches coming forward and claiming credit for the whole business ; just as they did

after the Dominion coal legislation, which was introduced by my hon. friend the present Minister of Finance (Hon. Mr. Fielding) in the province of Nova Scotia, the result of which was virtually to save that province from serious financial disaster, and after the Conservative party had denounced it in the press and denounced it on every platform throughout the length and breadth of the province of Nova Scotia.

Mr. FRASER. And in this House.

Mr. WADE. Yes, and in this House, and after it became an accomplished fact and a huge success and that province was rescued from its financial difficulties; we had then the hon. Sir Charles Tupper running in Cape Breton county and claiming credit for it all—'me, and Betty, killed the bear,' as the old saying goes.

I think it will be incumbent on me to make a few remarks here with regard to the statement made by the hon. member for Pictou (Mr. Bell) last night. Whom the gods wish to destroy they first made mad; and when a man has no argument and feels the weakness of his position, his temper is very near the surface and he is liable to make statements which in his calmer moments he would regret. The hon. gentleman (Mr. Bell) last night saw fit to premise his argument by the statement that the loyalty of the gentlemen upon this side of the House was not all wool or a yard wide, to use his own elegant expression. He made statements reflecting upon the loyalty of the people of his own province of Nova Scotia. He did not stop there, but he made use of these words :

> They were rebels to all intents and purposes.

I wish to tell the hon gentleman now, that those were unwise words. He has stigmatized the majority of the people of Nova Scotia as no better than rebels. He has spoken of the people of Pictou county, the Liberals of Pictou county, as no better than rebels, and yet, Sir, I am informed that every Liberal in the county of Pictou has at one time or other voted for the hon. gentleman (Mr. Bell). Who was it that first brought forward charges like this in this House and in this country ? The hon. Sir Charles Tupper was the first I believe to start the cry. A more unfounded; a more cowardly statement was never made in any place. While he was High Commissioner in England, he induced the people there to believe that the great Liberal party of the Dominion of Canada were absolutely disloyal to the Crown, and at the time this government assumed power in 1896; at the time when the right hon. Sir Wilfrid Laurier made his celebrated speech in Montreal, the English papers next morning announced surprise to find that he was loyal to the empire. Why did they express that surprise ? It was because our paid agent in London had been over there slandering us.

Now Sir, I ask, who is the meanest kind of a traitor ; who is the most contemptible kind of a traitor, if it be not the man who charges his fellowmen; who charges the majority of the electors of the Dominion of Canada with being traitors and disloyal. The statements made by Sir Charles Tupper have followed him into oblivion. The position he took in that connection, I believe, has done more to destroy him politically than anything else. And, I wish to say to the hon. gentleman who represents Pictou (Mr. Bell) that I believe that in uttering the words to which I have referred, he was sounding his own political death knell. I will say no more upon that subject. The hon. gentleman (Mr. Bell) smiles, but he does not feel happy.

I wish now to address myself to a few of the remarks which were made by my hon. friend (Mr. Bell) with regard to this scheme. It was mighty difficult to find out just where he stood in the matter. He was certain as to all expenditures west—all these gentlemen yonder are satisfied about that; there is no difficulty in their minds about spending millions and tens of millions of dollars all along through the west, through British Columbia, through the wilds of Lake Superior, and even down to North Bay. But then their consciences begin to prick them. They will, some of them, permit expenditure as far as Montreal, and a few of them will go to Quebec, but not a living soul of them will permit one dollar to be expended beyond Quebec. The hon. gentleman (Mr. Bell) spoke very strongly in favour of the project of the leader of the opposition, until it came down to Quebec. Then he commenced to hedge, but he gave us from his brief facts and arguments which if correct would make it appear that it is absolutely impossible to construct a road from Quebec to Moncton. That is his argument; that was his array of facts.

Mr. BELL. He did not say so.

Mr. WADE. Well, if he did not say so, then my ears misunderstood him entirely.

Mr. BELL. He said the very opposite.

Mr. WADE. He pointed out the difficulties of grades, and said that no such road could be built to Moncton because of these grades and these curves, and because of other reasons that I will refer to later. He then quoted or rather misquoted from the report of Sir Sandford Fleming, a report which does not touch this road at all, which was a report upon the building of a road from River du Loup to Truro; and we are not going to River du Loup, and we have been saying that you cannot go to River du Loup. But, Sir, when the hon. gentleman was asked a plain question; when it was put to him fairly and squarely; do you approve of building from Quebec to Moncton; did he answer ? Did this valiant loyal

gentleman make his answer to that question in the interest of the maritime provinces ?

Mr. BELL. Yes he did.

Mr. WADE. What was his answer.

Mr. BELL. His answer was——

Mr. WADE. I will tell him his answer; he need not interrupt me.

Mr. BELL. I must be allowed to state my answer. I answered that I supported the proposition of the leader of the opposition, and that is a straight enough answer.

Mr. WADE. The answer that the hon. gentleman gave was this : I will support the proposition of my hon. friend and leader.

Mr. BELL. Exactly.

Mr. WADE. The hon. gentleman (Mr. Bell) need not have become restless about this thing. I was not going to quote him incorrectly. I am not intentionally stirring him up.

Mr. BELL. I want to keep you right.

Mr. WADE. He said : I adopt the policy of my leader.

Mr. BELL. Exactly.

Mr. WADE. Now, what is the policy of his hon. leader with regard to Moncton ? As far as I can gather it was that some time in the dim and distant future, when the walking is good around River du Loup, he will go there and see whether there can be a good line obtained, but he has first convinced himself that a good line cannot be obtained, and the whole burden of his argument was to aid and strengthen the contention that a good line cannot be obtained. Therefore, the leader of the opposition does not propose to carry out any such proposition as that, but, as a representative of the lower provinces he dare not take a position flatly and honestly against the construction of the road from Quebec to Moncton. Now, there was a statement made by the Minister of the Interior (Hon. Mr. Sifton) that this road should have been built long ago from Quebec to Moncton. We have a similar statement from Sir Charles Tupper away back in 1884. We have statements from scores of public men to the same effect, and there is no doubt that the Minister of the Interior was perfectly correct when he said, if the government had to deal with western members instead of members from the maritime provinces, that road would have been built long ago.

I believe that is correct. The hon. leader of the opposition took him to task on this point, and undertook to show that he had cast some reflection on the members from the maritime provinces. Nothing was farther from his mind. What he meant, and what we understood him to mean, and what the country will understand him to mean, is this : That if there is a matter of importance or of interest to the west, say to the province of Manitoba—something that is going to build up that part of the Dominion—we would find all the Manitoba members standing together as a unit, and claiming and demanding it. But, Sir, when we are endeavouring to obtain this matter of vital importance to the maritime provinces, do we find all the members from the maritime provinces standing together ? No, Sir ; we have the sad spectacle of the hon. leader of the opposition, who represents the city of Halifax, and the hon. member for Pictou (Mr. Bell), doing their utmost to discredit that portion of the scheme, and to prevent this road being built to the maritime provinces, though it will be the salvation of the situation so far as those provinces are concerned. That is what the hon. Minister of the Interior meant, and these are the cold, clean facts as demonstrated before this House during the progress of this debate. I wonder why it is that there is such a deadly antipathy on the part of some members on the other side of the House towards the maritime provinces.

Mr. CLANCY. Hear, hear.

Mr. WADE. 'Hear, hear,' says that delightful member from Bothwell. He knows what the reason is—will he be kind enough to tell us some day ? That that feeling does exist we know. I want to tell the hon. gentleman that the maritime provinces have a population of about a million. That they are among the older provinces of the Dominion of Canada ; that they have interests to be conserved and looked after ; and I want him and those of his ilk who have this feeling against the maritime provinces, to understand that we of the maritime provinces are determined to protect our rights and to look out for our interests, and that when there is any great scheme before the public for the up-building of Canada, we wish to be in that scheme. We want to be benefited and developed and increased to the same extent as the other parts of the Dominion, if we can.

Now, I did not take any sectional view of this scheme when it came before the Railway Committee and was discussed there. The position the maritime members took was this, that if a railway was to be built from the Pacific ocean to Quebec, that road railway should be extended through the lower provinces to a maritime province port. We did not ask that any burden should be placed on the western farmer ; we did not ask that he should be compelled to pay one dollar more freight on his grain. But we did say this : If we do not interfere with the routing of your grain, if we do not add an additional fraction of a cent on the wheat you sent to market, but if at the same time we can cause the shipping of that grain or a portion of it through maritime province ports, we do not think

you should object. That was the proposition.

Let me refer for a few moments to the history of this movement—and I will be as brief as I possibly can. For years there has been talk of another transcontinental railway. Last year that was crystallized to a certain extent. The hon. leader of the opposition, speaking from his place in parliament, declared that he would support any reasonable scheme for the purpose of providing an outlet for the grain grown in the Canadian North-west. These were his words :

> When the hon. gentleman brings down any reasonable scheme for increasing the means of Canadian transportation, any scheme by means of which the grain grown in the Canadian North-west, will be assuredly carried over Canadian lines to Canadian ports, and shipped thence to Europe, he will have my support, and I believe the support of every other man on this side of the House.

That was the declaration made by the hon. leader of the opposition upon the floor of this House last session. Now, the scheme has been brought down, but he seems to think that scheme is not worthy of his support. The first authoritative utterance which we had upon the project was from the hon. ex-Minister of Railways and Canals (Hon. Mr. Blair), who was the first man apparently on the government side who originated the scheme of another transcontinental railway ; and where did he first launch his determination on that subject ? Speaking in Vancouver last October, he said that we not only wanted another transcontinental road, but we wanted it right away—almost that evening, he was so much in earnest. Further than that, he said that he was doing his all in order to secure that road, and he led the people to believe, and properly so, that the scheme would be before this parliament at its coming session. All over the Dominion the question of a second transcontinental railway was spoken of, and the newspapers were full of it.

The next thing that I pause to note is the introduction of the charter of the Grand Trunk Pacific Railway Company, and its reference to the Railway Committee. That Bill was presented to the Railway Committee in April, and the first day for the discussion was set for May 7. On that day Sir Charles Rivers-Wilson and Mr. Hays made their statements before the committee. Upon the 13th day of May there was a strong discussion, in which the maritime members took the position that the railway should be extended from Quebec to Moncton. Reference has been made to the fact that the Grand Trunk Pacific people did not want to build further east than North Bay, and that the extension of the road to Moncton was forced upon them by the government. If that is the case, I say all credit to the government. If they did not allow the Grand Trunk Pacific to go into the wheat fields of the North-west, and bring the grain down to North Bay and thence divert the bulk of it to American ports, then I say all hail to the government that prevented them doing that. The position the maritime members took on the 13th of May was this, that if Quebec were made the terminus of the road, that port would be closed for five months in the year. It would be a splendid port for seven months ; but for five months there would be no port at all ; therefore we asked that the road should be extended to a winter port in the maritime provinces. Was this a reasonable proposition or not ? Would any sensible railway man build a railway across the continent from the Pacific and stop at Quebec ? I say he would not. This is a transcontinental railway, for the purpose of connecting the Atlantic and the Pacific. All these things must be taken into consideration. At the next meeting of the committee the company themselves proposed an amendment to the Bill making Moncton the eastern terminus of the railway. The hon. ex-Minister of Railways and Canals stated here the other day that that amendment was proposed by somebody who wanted to kill the scheme. Surely the hon. gentleman should not have made that statement, because he was sitting next beside the chairman of the Railway Committee at the very time the company moved the resolution themselves to extend the line down to Moncton.

I want to draw attention to the position taken by my friend from Pictou (Mr. Bell) before the Railway Committee. I find him reported in the St. John ' Sun ' to have said, and the report corresponds with my recollection with what took place :

> Mr. Bell insisted on the Bill being placed in such a form so as to meet the wishes of the maritime provinces, who were almost unanimous in the opinion that the road must have its terminal at a Canadian port.

My hon. friend I suppose will not doubt the accuracy of this report. That was his position before the Railway Committee. What was the position of some others ? Let me refer to the hon. member for King's (Mr. Fowler) and the hon. member for Carleton (Mr. Hale) while that project was before the Railway Committee, they sent this telegram to the St. John Board of Trade :

> Important that civic bodies take immediate united and strong action re Grand Trunk Pacific Railway. Apparent intention is to make Portland winter terminus, and if maritime provinces are to reap the reward for past sacrifices, a fight to the finish must be made.

That was the position taken by these two hon. gentlemen, and I believe that it was in consequence of that position the Board of Trade of St. John send the following telegram, or rather the mayor of St. John :

St. John, N.B., May 13.

Charles S. Hyman, M.P.,
Chairman Railway Committee,
Ottawa.

The following resolutions were unanimously adopted by the common council of the city of St. John this morning :

Resolved, that the city of St. John has heard with regret that the Grand Trunk Pacific Railway Company indicate an intention to build its line from the Pacific to the city of Quebec only and do not propose to construct and extend the same so as to have during the winter season a terminus at the open sea on Canadian soil. Which means that the company will do all its transatlantic business in winter through United States ports. And further resolved that such a course of procedure would do great injustice to the 'maritime provinces' and would be applying the money and resources of Canada to the upbuilding of a foreign city and port.

And still further resolved that this city respectfully, earnestly and most strenuously urges the representatives in parliament from the city and county of St. John and from the province of New Brunswick and the maritime provinces generally to do all in their power to protect the interests of their provinces in the matter of preventing the injury that would be done if the proposed wrong should be carried out. And further resolved that the necessary protection against this impending injustice should be placed in the Act incorporating the company, should any such be passed.

And still further resolved that this city requests the representatives of Quebec, Ontario, and the other more western provinces and territories to so act in securing such protection that the road to be built by the company shall pass from ocean to ocean through Canadian territory in both winter and summer and that such measures may be taken as will ensure the carrying through Canadian ports only of all freight originating or desired for any part of the Dominion of Canada.

WALTER W. WHITE,
Mayor.

That is what the city of St. John thought of the matter. On the 26th of May, my hon. friend the leader of the opposition, who had for some time been periodically questioning the government as to when they were going to bring down their scheme, again interrogated them. Everybody knew that there was a government scheme to come as a corollary to the charter which went through the House, and frequently my hon. friend claimed the right to know when this scheme was coming forward. On the 26th of May he had become so impatient that he impressed this House with the idea that the moment a scheme would be launched for the construction of a transcontinental railway, so earnest was he in his desire to have that work carried forward that he would leave his place in parliament, seize a pick and shovel, and hasten to work on the construction of the road itself. Let us see what he said on the 26th of May. He put his question to the First Minister, and premised it by quite a long speech. In that speech he told us that the whole country was clamouring for this railway, that the boards of trade, city councils and so forth all over the Dominion, from one end to the other, had passed resolutions demanding the building of this road, and he proceeded to read a resolution which had been passed by the board of trade of the city of Halifax. That resolution was as strong as any resolution could be in favour of building this road and in favour of Moncton. He also stated that the then Minister of Railways and Canals (Hon. Mr. Blair) had received a strong telegram from the St. John Board of Trade to the same effect. I shall just cite a few words from the speech of the hon. gentleman :

Now, there is a strong feeling in the country, and particularly in the maritime provinces, and one that the government should especially keep in mind, that the government should insist on guarantees that the termini of any road to which government assistance is given shall be within the limits of the Dominion of Canada. Public meetings have been held, boards of trade have passed resolutions, municipal bodies have passed resolutions, not only in the maritime provinces, but throughout the length and breadth of Canada, insisting on this condition. Indeed, I am led to mention this matter to the House now because of a resolution which has just been placed in my hands passed by the Halifax Board of Trade, and which I will take the liberty of reading to the House.

I shall not read the whole of the resolution, but here is a part of it :

And further resolved, that this board protests against government assistance of any kind being granted to any transcontinental railway unless a distinct and binding condition is enforced that said railway shall be built entirely on Canadian territory, and its export and import traffic shall be through Canadian termini, and that the rates of freight charged by said railway shall be as low via the ports of St. John, N.B., and Halifax, N.S., as rates charged via any port on the Atlantic seaboard.

And further resolved, that if aid is asked from the Canadian government by the Grand Trunk Pacific Railway the interests of the maritime provinces should be safeguarded by compelling this railway company to commence the construction of the eastern portion of its line at Moncton, N.B., and complete it as far as the city of Quebec.

That is the resolution of the board of trade of the city of Halifax, in the county represented by the leader of the opposition, and in presenting that resolution, he prefaced it by remarks which showed that it had his entire sympathy, and I believe that at that time he was in sympathy with the purpose of that resolution and with the building of a road to Moncton.

An hon. MEMBER. He is now.

Mr. WADE. Perhaps he is, I cannot tell, but the exigencies of party have made him give other utterances. Upon this occasion he also read a telegram, which he said the then Minister of Railways and Canals (Hon. Mr. Blair) had received from St. John. I do not know how it comes that on the 26th of May, the hon. the leader of the opposi-

tion was in a position to know the contents of a telegram to the then Minister of Railways and Canals. But he says that the ex-minister did receive this telegram, and I am prepared to take his word for it. Here it is :

Unless the Grand Trunk Pacific build their line through to some maritime province port we believe the export business will continue to go through an American port as in the past.

Mr. Hays rightly says shippers can route freight as they please and if the Grand Trunk are interested in route via Portland, shippers can be easily influenced to route practically every ton of export freight that way.

We cannot believe that any arrangement can be made——

Here is the important part of it :

—between Intercolonial and Grand Trunk which will prevent this.

We urge in the strongest terms that no governmental assistance be granted to any transcontinental railway that does not undertake to build their line through to some maritime province port.

And, Sir, in the face of all these things, in the face of the declarations of the leader of the opposition, in the face of the speech made by the ex-Minister of Railways in Vancouver, in the face of all these representations from municipal councils and boards of trade, we had the ex-Minister of Railways standing in his place in parliament, declaring there was no one who wanted this road to Moncton except the people who hoped to make money out of its construction. It was a very strong remark to make against the province of New Brunswick, and I do not wonder that the hon. member for Westmoreland (Mr. Emmerson) resented it, as he did properly resent it in making his speech. I have only a few words more to say with regard to this Moncton business, and then I have finished. The ex-Minister of Railways contends that he left the cabinet because he believed that the construction of this part of the road would destroy the Intercolonial, and we have heard hon. gentlemen on the other side, taking their cue from him, declaring in the most pitiful tones that we are going to slaughter the people's railway. Have you heard one solitary member on this side of the House say anything against the Intercolonial or say that the Intercolonial would be injured by this road ? Not one. And I mean to say here that not only will the Intercolonial not be injured by the construction of this road to Moncton, but it will be benefited. And I will take occasion, before I resume my seat, to prove that to the satisfaction of every hon. gentleman present. But because the ex-minister is so convinced, he says, on that score, he resigned his seat in the cabinet. It is fair for me to see what he has said on other occasions. A few years ago, a charter was given to construct a railroad from St. Charles Junction at Lévis, to Connor station, near Edmundston, and a subsidy was granted to this road. Subsequently, in the year 1901, there was a change desired in the western terminus of the road, and a resolution was introduced to allow the road to go either to St. Charles Junction or to Chaudière. A discussion arose over this Bill. Be it remembered that this road runs substantially over the route of the proposed Grand Trunk Pacific from Chaudière to Connor, near Edmundston. There is no doubt about that. It has been surveyed ; the plans and profiles are in existence, and we know all about the country. Now it is well to see what position the ex-Minister of Railways and some other hon. gentlemen on the other side took with regard to that road. The first I will refer to is the hon. and valiant member from North Victoria (Mr. Hughes). Some hon. gentlemen had taken the position that this road would parallel the Intercolonial and interfere with the traffic. What does the hon. member for Victoria say ?

This will be another through Canadian Pacific Railway line, and when the new bridge is completed at Quebec the Canadian Pacific Railway will then be able to use its line on the north shore in connection with this line as an additional through-road to the sea.

But, though this was the hon. gentleman's position in 1901, to-day we have him telling us that it is impossible to build a road through that country, and, if it were built, the grades would be so tremendous that it would be impossible for it to carry any through-traffic. He spent hours and hours perusing the geological survey reports, and he has discovered that there are mountains in that country. He shows us that there are scores of hills there. Well, I suppose he has seen some hills and mountains elsewhere, and he has seen railways running along the base of those hills. This just shows the inconsistency of these hon. gentlemen. Last year or the year before, they were all in favour of building this road, but to-day, when it is part of the government policy, they change their minds. The next man I will refer to is the hon. member for King's (Mr. Fowler), who said :

While it is important that nothing should be done to interfere with the Intercolonial Railway, it is more important we should find the shortest means of communicating to the west and the seaboard.

Now, let us see what the ex-Minister of Railways (Hon. Mr. Blair) said on that occasion. Referring to the speech of the hon. member for East York (Mr. Maclean), who had said that this road would interfere with the Intercolonial, the hon. ex-Minister of Railways said :

Solicitous and all as he is, and solicitous as I would naturally be, in relation to anything that would be harmful to the Intercolonial Railway, I would not hesitate to give support and assistance to this project, and in doing so would not feel that I was infringing in the slightest de-

gree on the interests of the Intercolonial Railway. These people have no railway communication. They have a very fine country, as I understand it, and they ought to have railway communication. They have been left practically out in the woods. Why should we refuse to give them the ordinary aid traversing a fertile country, as this railway does, because we might interfere with the local traffic which might be taken up and which might be diverted from the Intercolonial Railway ?

That was the sentiment of the ex-Minister of Railways when, in 1901, he was proposing to subsidize a road to run over the very route of the proposed Grand Trunk Pacific from Chaudière to Connor station, near Edmundston. I am only citing him against himself. I believe that he spoke the truth then. I am obliged to believe he spoke the truth the other day. But I am in a queer fix with regard to it. I have pointed out the situation, and I will allow somebody else to wrestle with it.

Now, Sir, we got to the position of our Bill being before the committee and passing that committee. And still there was impatience on the part of hon. gentlemen opposite to have the government scheme. On the 30th of July, the government scheme was placed before them. And even then they were not happy. They had wanted it so badly, they had declared they could not wait, that the country could not wait ; and they had clamoured for the Premier to bring down his proposal. And when the Premier brought down that scheme, and as he unfolded, one by one, the advantages it would bring to the Dominion of Canada, it was interesting to see the changes that came over the countenances of hon. gentlemen opposite. After the right hon. gentleman (Rt. Hon. Sir Wilfrid Laurier) had finished the leader of the opposition (Mr. Borden, Halifax) sprang to his feet in a somewhat petulant and angry manner. What was the substance of his speech? He found fault with the fact that he had not been given a copy of this Bill. He made some criticism of the provisions of the Bill, which he has virtually taken back since. And then he informed this House that, notwithstanding the fact that the matter had been before the people of Canada for all this time, and discussed by all these bodies, he, on that thirtieth day of July, was not in a position to tell this House whether he was in favour of government ownership of railways or not. He came here on the 18th of August, and he told us that he had been studying this question about four or five weeks, and then he proposed the scheme that he has proposed.

In the meantime, while he was away preparing this scheme, this great measure, this great act of constructive statesmanship as it has been termed, his followers were left here alone, and they supposed that they would be doing the correct thing in following the lead of the hon. ex-Minister of Railways and Canals (Hon. Mr. Blair), and they did so, and for this they should not be blamed by the leader of the opposition. They followed the hon. ex-Minister of Railways loyally, echoing his every sentiment. But when the leader comes back and finds out what has been going on he immediately proceeds to cast down the idol that they have reared in his absence, and he gives them his policy, he compels them to come into line and gives them to understand that the ex-Minister of Railways and Canals will have some trouble before he can mount the horse of the hon. leader of the opposition. We have the two propositions before the country to-day, and it is between them that we have to decide. The government have announced their proposal, they have entered into this contract, and either this House must ratify that contract, or the government must go out of power ; that is the position. If the government should go out of power the hon. leader of the opposition would be called upon to form a new government, and then the country would have before it as a government proposition the scheme which he has placed before parliament. Therefore the question for us to decide is which shall we have, the scheme proposed by the government or the scheme proposed by the hon. leader of the opposition, and I now wish to contrast these two propositions.

The scheme proposed by the government has been so fully discussed that I shall refer to it only in the briefest possible manner. The first stipulation in connection with it is that the company shall deposit with the the government $5,000,000 in cash. Now, do hon. gentlemen suppose for one moment that business men would deposit $5,000,000 in the hands of the government, where they might lose every cent of it, simply for amusement ? Do these gentlemen, who have now become experts in railway management, railway operation and steamship operation, and who would have us believe that they know worlds about the freight rates and the tolls and the combinations—would these gentlemen set up their judgment against the judgment of the manager of the Grand Trunk Railway. If we were to listen to them we would conclude that that man is a lunatic and does not know what he is doing. He talks about hauling the freight from the west over his railway but these gentlemen say it cannot be done; the leader of the opposition says that it cannot be done. The leader of the opposition says that not six per cent of the grain carried by the Canadian Pacific Railway goes over the road to the north of Lake Superior. Well, if that be true, I must ask him to go to the debates of 1881, and read the speech of Sir Charles Tupper and the speeches of others on his side. Sir Charles Tupper then told the country, and he justified his bargain with the Canadian Pacific Railway by stating, that that road could carry all of the wheat produced in that vast

country of some two hundred odd million acres. That was the position which he assumed and that was the position assumed by all the supporters of that measure at the time. The government of that day desired to make use of the water stretches but Sir Charles Tupper said that could not be done. And a greater man than Sir Charles spoke on that occasion. The hon. member for East Grey (Mr. Sproule) was in the House then, and I would ask you, Mr. Speaker, if you know how many speeches he made in that session. They were happy days then, he only spoke three times, and the longest speech is the one from which I am going to quote, and that covers only two and a half pages of 'Hansard.' No wonder they were jolly in those days! What did the hon. member for East Grey say? As I was leaving the House the other day, I heard him say: 'The idea of carrying freight over 2,800 miles of railway!'

In 1881 he said:

The question is one of the utmost importance to the country from whatever point of view it be considered. If we consider the fact that the road will be a great commercial thoroughfare through a country that is over 4,000 miles long, that it will carry the trade of an area of country that consists of over 250 millions of acres of land, we cannot fail to regard the subject as of surpassing interest to the people of this country.

Then he justifies his not putting it before the electors. He said it was not necessary to put it before the electors and goes on to say:

The people finally concluded that the water stretches were only a sham. In every instance, when I have been able to take the sense of the people, I have invariably found that it was their desire to have the railway built by a company, and not by the government.

And so on. But I think the richest part of his whole speech is where he says that the building of this road was most important, because it would double the debt of the Dominion.

Now, the hon. member for East Grey upon this occasion followed the lead of all the others in saying that the waterways were a sham and could not be utilized. To-day we have him coming back here and saying that we must revert to the waterways.

Another witness has been brought forward here, I refer to Sir William Van Horne. It seems that the Canadian Pacific Railway are taking some interest in this question. One of the directors of that company has made a speech in this House, to which I am going to refer in a little while, but Sir William Van Horne, speaking in New York last year in regard to the Trans-Canada line said:

Canada, he said, has been adding sides to her hopper for a long time, but has neglected to enlarge the spout. She has for many years been spending millions generously in the development of the interior, and her railways, but has neglected her outlet at the Atlantic. Her crops and industries have grown, and her hopper is full to overflowing, and the outlet at Montreal is not large enough. Her exports take the easy routes by the great lakes and the Erie Canal to Boston and New York, simply because Canada sits comfortably by and does not see what she is losing.

He approves the Trans-Canada line in these words. He was asked what effect the building of the Trans-Canada line would have on the Canadian Pacific Railway and he replied:

TRANS-CANADA LINE.

The position of the Canadian Pacific Railway is absolutely unassailable. For that reason it is our policy never to oppose anything. The Trans-Canadian road has started with better prospects than the Canadian Pacific had once. When the Northern Pacific road was built, every body thought it was away up north beyond nowhere. Then the Great Northern was built and people promptly forgot thinking of the Northern Pacific as far north. Then came the Canadian Pacific, and that seemed to run through the Arctic regions. We would hail with delight a parallel route from the Atlantic to the Pacific to help us develop the country. There is enough of it up here for us all.

That was the position taken by Sir William Van Horne in this interview in New York. Let us see what he had to say the other day. In a recent interview he says:

Neither the Canadian Pacific Railway, the Grand Trunk Pacific Railway nor any other all-Canadian route,' said Sir William, 'will ever voluntarily carry a carload of wheat by the all-railway route around the great lakes to an eastern Canadian port for shipment abroad, for the simple reason that it will never pay any road to do so. Nor will the transportation problems in the west ever be solved by the construction of an all-Canadian route from coast to coast.'

Continuing, Sir William stated:

The Canadian Pacific Railway shipped every carload of wheat that it was possible to ship by their steamship line on the great lakes from Fort William to Owen Sound, and thence east by rail, or else by way of Buffalo and the Erie Canal.

In the first place, he stated in this interview that he would hail with delight a second transcontinental railway, and in the second interview he says that such a line is not necessary, and tells us that they cannot haul wheat around the north shore of Lake Superior. If Sir William Van Horne would content himself to speak of his own road, I would not quarrel; he would be quite right. The Canadian Pacific Railway, as constructed around the north shore of Lake Superior, could not and cannot carry grain. Why? Because the grades are too heavy. It is not a heavy freight carrying road. It cannot be built for such a purpose. That is the reason. Let me refer the hon. gentleman for a moment to this question of gradients and show what an important part it

plays. I am referring to 'The Economic Theory of Railway Location,' by A. M. Wellington. Here we will find a table which shows the relative resistance of gradients. A locomotive which would draw 250 tons on the level would, with a four-tenth gradient, only be able to draw 125 tons, with a 1 per cent gradient it would only be able to draw 71·43 tons, and with a 1·20 per cent gradient it would only be able to draw 62·50 tons. That shows how important these gradients are, and I assume that the government and the Grand Trunk Pacific Railway Company, in constructing this road, will have that in view. It is a matter of mutual agreement between them as to the kind of road that is to be built, but the purpose has been determined upon, and that is to provide a road that will bring out the grain from the west. If that is done, it will be a road with what is known as normal gradients of four-tenths of one per cent as the maximum gradient. There may be short places on the road where you may get a stiffer grade than that, and where the momentum of the train would carry you over it, but where there is a long gradient, it should not be greater than four-tenths of one per cent. I believe that under this project of the government a line with the maximum gradient of four-tenths of one per cent can be secured. It may be a surprise to some hon. gentlemen opposite to know that in the course of two or three weeks there will be an instrumental survey completed from Winnipeg to Lake Abitibi, and that the engineers will report having secured a line with that maximum gradient. If a road is built of that description from Winnipeg to Moncton, I cannot believe any man would stand here and say that grain cannot be carried to the maritime seaports. I believe that it can be carried there, I believe it will be carried there, and Mr. Hays, the manager of the Grand Trunk Railway Company, believes that it will be carried there. At any rate, representing a constituency in the maritime provinces, I think I am justified in giving him an opportunity to try the experiment of building that road there. I do not believe it is an experiment, all the same. I think it is a fact, a certainty, that if you build the road from Winnipeg to Moncton of the nature and character that I have described the grain of the west will be brought down to the maritime ports. I believe that the bulk of the grain will be shipped from St. John, and I believe that Halifax will get her compensations in the manner which I will state hereafter. This is the contract which has been entered into between the government and the Grand Trunk Pacific Railway Company. I shall not go over the different provisions of it, because I dare say hon. gentlemen are tired of it, but I will refer to the scheme which has been propounded to the House by the hon. leader of the opposition as an alternative scheme. Many of the figures in connection with this have been given to the House, but I will find it necessary to go over them, as mine are somewhat different, and proceed upon a somewhat different basis. In order that there may be no mistake about the phraseology of the remarks made by the hon. leader of the opposition, I will quote his exact words:

> If, however, the Canada Atlantic Railway commends itself to the judgment of experts, and from what information I can obtain with regard to it, I should think it ought so commend itself, and I would think that the extension of the Intercolonial Railway between Coteau and Jacques Cartier Junction, and the acquisition of the Canada Atlantic Railway to Depot Harbour, would place the Intercolonial Railway in a very much better position than it is at present.

First of all, I would like to know how that will place the Intercolonial Railway in any better position? The Canada Atlantic Railway to-day is doing a certain business. It is doing that business well. What grain it gets it gathers up in a way that I will describe. What amount of that grain goes east to Montreal and would any more go east of Montreal if the government got this road? Would the road be as well managed under government ownership as it is at the present time? The hon. gentleman says he will either buy that road or build another. Let us say that he will build it. The first thing he has to do is to build 37 miles of road from Coteau to Jacques Cartier Junction, which will cost $1,295,000. To purchase the Canada Atlantic Railway I have put it down as $17,000,000. There has been some question of that being the fair price of the road. There has been the statement made that this road was offered cheaper than that. I believe it was offered for a less sum than that. I believe the road to-day is held at a much higher figure than it was a year or two ago. I have been informed upon the best authority that the road cost the company upwards of $17,000,000, and if the government wanted to get the road they would have to pay that for it. Would the hon. gentlemen expect to pay less than what the road cost?

Mr. HEYD. It cost $20,000,000.

Mr. WADE. An hon. gentleman says that it cost $20,000,000, and there have been considerable betterments made since then. It would cost nearer $20,000,000 than anything else, but let us say $19,000,000. It would cost him to extend the Intercolonial Railway to Depot Harbour $20,295,000. Then he says, at page 9000 of 'Hansard':

> I have suggested the extension of the Intercolonial to the Georgian bay. If we acquire the Canada Atlantic Railway, we could build a line from that point to join the Canadian Pacific Railway at or near Sudbury. . . . By that means the Intercolonial, besides being extended to the Georgian bay, could be joined by a

line about 120 miles in length to the Canadian Pacific Railway running north of Lake Superior.

This section, estimated by the hon. leader of the opposition to be 120 miles in length, would cost $30,000 per mile, making $3,600,000, so that it would require $23,895,000 to get the Intercolonial Railway to Sudbury. Then, at page 8999, he says:

I say it would be a proper thing and a wise thing for this government to acquire that railway from North Bay to Fort William, and make it a national highway of Canada, ... giving to the Grand Trunk Pacific, the Canadian Northern and the Intercolonial as well as the Canadian Pacific Railway running powers over it.

I have figured out the cost of this, getting my information from people who are in a position to judge as to the cost of acquiring that piece of railway, and I find that it will amount to $24,570,000, or to extend the Intercolonial Railway as far as Fort William, we have an expenditure of $48,465,000. Then he says:

The third proposal which I would submit to the consideration of the House, as a sound policy, is to assist in improving the grades of one or both lines from Winnipeg to Fort William, upon the condition that complete control of rates is obtained and that the Grand Trunk Railway as well as the Intercolonial Railway shall have running powers from Fort William into Winnipeg.

It is estimated that to reduce the grades on the Canadian Pacific Railway between Fort William and Rat Portage it would cost $3,000,000, and that to reduce the grades on the Canadian Northern from Fort Wiliam westward would cost $1,500,000.

The leader of the opposition then proposes in this scheme to go to the Canadian Pacific Railway and purchase from them the lean and profitless part of their road. I can now understand why one of the directors of the Canadian Pacific Railway, the hon. member for West Toronto (Mr. Osler) comes here and makes the extravagant statement he has made in order to induce the House to uphold that scheme, and to relieve his company of the burden of operating this expensive piece of road, while securing for them this large amount of money out of the public treasury. But this hon. gentleman from West Toronto; this director of the Canadian Pacific Railway is not satisfied with that. He wants $3,000,000 spent upon the other part of the Canadian Pacific Railway towards Winnipeg, and in return for that he will give running powers. And the most striking statement is, that the leader of the opposition proposes also to say to the Canadian Northern: we will spend $1,500,000 upon your road. The leader of the opposition is very anxious to find opportunities for spending money. Here is the striking part of that proposition: Forty-five miles of that road is in American territory, and that forty-five miles is the section which is in the most need of having money spent on it. Therefore, the leader of the opposition would go into an American territory and would spend Canadian millions in the building up of the Canadian Northern Railway. But it has never entered into his head to consult the Canadian Northern Railway as to what they thought of such an arrangement as this, and whether they wanted to give running powers over their road. I cannot conceive, for my part, of them wishing to do so—why, they should want to be troubled with the Grand Trunk Railway and the government road coming over their line, I cannot understand; but that is part of the hon. gentleman's policy. The next point of the hon. leader of the opposition was:

At some point on this side of the Rocky mountains there should be a common point, a junction between the Canadian Northern Railway and the Grand Trunk Pacific Railway. From that on to the coast there should be one line, and that line should be built by these companies. By such an arrangement we should give them joint control; there should be no difficulty about it, &c.

Now, the cost of building that road, say from Edmonton to Dunvegan, 250 miles at $28,000 a mile would be $7,000,000; from Dunvegan to Port Simpson, 555 miles at $48,000 a miles, would be $26,640,000; the terminals at Port Simpson would be say $1,500,000 making $35,140,000. The leader of the opposition says further that running east from Depot Harbour to Madawaska, a distance of 133 miles the grades are about one per cent, and of course that is an impossible grade for a grain carrying road. The hon. gentleman (Mr. Borden) says he proposes to reduce those grades to a normal grade and this would cost $10,000 a mile or $1,330,000. It is quite evident that to accommodate the traffic, the line between North Bay and Port Arthur would have to be doubled tracked. That is, if you are going to get the business he contemplates, he would have to double track that road, but if he does not get the business he contemplates, namely, the Canadian Pacific Railway business, and the Canadian Northern Railway business, he has got to expend an enormous amount on that section of the road between North Bay and Fort William in order to put it in proper condition for his own use. Suppose he does get the traffic, he will have to double track, and the double tracking would cost him $8,190,000. He will also have to double track the Canada Atlantic Railway, and the double tracking of the Canada Atlantic Railway and putting it in proper condition would cost $4,560,000. Now, I have not figured on one cent for all these elevators, or for the deepening of the canals, or anything of that sort, but we find that the hon. gentleman (Mr. Borden, Halifax) has expended $102,185,000—and how much are we benefited? What has he accomplisned thereby? He has not accomplished any-

thing with the exception of allowing another road to be built from Winnipeg to Port Simpson. Let us see how this scheme of his would work out; let us see whether in the ordinary course of events, applying our common sense to the situation, he would reap the reward he expects. If he buys out the Canadian Pacific Railway he will expect them to use the road he has bought out, and has doubled tracked, and has put in good condition. I make bold to say, that they will not do anything of the sort. They will do one thing or the other, they will either use their Sault line and their waterways, or they will build another line where they should have built this line, namely: where the Grand Trunk Pacific Railway is surveying. That is what they will do, and they will leave the government themselves to operate that piece of road. Will the Canadian Northern Railway come over it? Certainly not. They have their own connections, and if they were going to make any other connections these connections would be in the direction of the United States, rather than that they should be compelled to carry their grain over this road located as it is. I am informed upon the very best authority, that no matter how much money you may expend, it is impossible to make the Canadian Pacific Railway north of Lake Superior a good freight carrying road. The leader of the opposition then has got nothing from the Canadian Northern Railway; he has got nothing from the Canadian Pacific Railway; and who is his other customer? His other customer is the Grand Trunk Railway. He is allowing the Grand Trunk Railway to go into the wheat fields and getting there, the Grand Trunk Railway will get their freight out of the wheat fields—because they have running powers, mark you, over to Lake Superior—they will bring part of it by the lakes, and the balance of it they will bring by rail, but how far? They will bring it to North Bay and to North Bay only, where they will divert it upon their present system, and it will seek shipment from the American ports just as they are doing at the present moment. Then the hon. gentleman (Mr. Borden) is maintaining this road for the use of the Grand Trunk Railway as far as North Bay, and for the use of himself. He is kind enough to the Grand Trunk Railway to maintain 79 miles of the road east of Sudbury, and between Sudbury and North Bay, which he cannot use for any purpose whatever.

Let us look to his other connections, and what he is going to do west? Why should the Grand Trunk Railway want to build a road from Edmonton to the coast under a scheme of this sort. They would not want to build it, and they would not want to operate it. Neither would the Canadian Northern want to do it under a system of this kind. He would build the road. Who would use it? He would have to use it himself. What is he to carry upon it? He has no connections with the prairies—the Canadian Northern Railway and the Canadian Pacific Railway and the Grand Trunk Railway are in there, but they have their connections east—and therefore he would have to operate his road from Edmonton to Fort Simpson as a government operated road.

Now, let us look at the business which the hon. member (Mr. Borden, Halifax) is going to do east. He comes to Winnipeg with his road extended at this immense cost I have spoken of, and when he gets to Winnipeg where is he going to get his freight? He is not going to get it from the Grand Trunk Railway, because they have their connections east. He is not going to get it from the Canadian Northern Railway, because they have their connections. He is not going to get it from the Canadian Pacific Railway, because they have their connections. Then, I ask hon. gentlemen to pause for a moment, and consider where he is going to get the traffic for the Intercolonial Railway extended to Winnipeg; where he is going to get traffic sufficient to pay for the grease upon the axles. It is a most mad and ridiculous scheme, when you come to analyze it. He has expended a hundred odd million dollars, and he has landed us just where we are to-day, with the exception of the betterment of some of these roads.

The hon. gentleman (Mr. Borden, Halifax) has not criticised that portion of the government scheme from Winnipeg to the coast. He does not say that the amount we are giving to the company is too great. The only difference between his scheme and our scheme is this: that in building the mountain section he is going to pay the whole of the cost of it, and we are guaranteeing three-fourths of the cost only. In our case we have a company that must operate that heavy section—in his case he would have to operate it himself. His project west of Winnipeg certainly cannot bear comparison with ours.

I must now look to his project, after this expenditure of over $100,00,000 has been made. Now he has got us down to Quebec, with the present Intercolonial Railway and the present facilities. But, he says, I am going now to improve these water-ways; first, I am going to buy out the steamboats of the Trans-Canada Transport Company. This is a very peculiar proposition, and one that should engage the attention of hon. gentlemen on the other side of the House. In the first place, the Canada Atlantic Railway has connections in the United States. For some fifty odd miles that railway runs down to Swanton in the United States, where it gathers up a large portion of the business carried on its line and on its boats in the shape of package freight, from Portland, Boston and other New England ports. This freight is carried on the boats from Depot Harbour to Duluth, Milwaukee and

Chicago. The company, in order to get over the United States coasting laws, are obliged to have a part of their fleet of American bottoms. Therefore the hon. gentleman's proposition would require the government to engage in this enterprise of operating a railroad running into the United States, a distance of some fifty miles, and a line of steamships, a part of which must be American bottoms, carrying on a coasting trade between Chicago, Milwaukee, Duluth and Depot Harbour, and carrying this parcel freight from Swanton, in the United States, up to these points. That is the proposition. The government of Canada is to go into this enterprise, running railroads in the United States, running steamboats in the United States, and owning United States bottoms for the purpose of evading the coasting law. I wonder how long this would continue. Where does the Canada Atlantic Railway derive the bulk of its grain traffic from to-day ? It gathers it up at Chicago, Milwaukee and Duluth. Rob it of that business, and the business of its steamers is virtually gone.

Here is another significant feature of the hon. gentleman's proposition. My hon. friend proposes to run a railway north of Lake Superior, and he proposes to run a line of steamships on the lakes in competition with his own railway. He is running a railroad to carry freight through a territory where hon. gentlemen opposite say it is impossible for it to pay ; and, to further damn it, he is going to run a line of steamships over the lakes for the purpose of competing with that very line. That is the proposition he makes to us.

But that is not so unreasonable as something I will refer to later. The hon. gentleman tells us this is not all of his scheme. He is going to improve the water-ways and the ports so as to enable them to compete with the water-ways and ports of the United States. If he does that, he has first to deepen the Welland canal. Has he estimated the cost of that ? Has anybody been able to estimate the cost of deepening the Welland canal, in order to make it a competing canal with the American canals ? I have not. The amount of money necessary to do that would be enormous. In addition to that, he is going to deepen the Canadian channel of the St. Lawrence river to an extent that will permit deep-draught grain vessels to come down all the way to Montreal. Will any hon. gentleman on the opposition side be good enough to tell me what in his judgment it will cost to deepen the Canadian channel of the St. Lawrence river to an extent to permit vessels of 20-feet draught to pass through that channel ? That question is so hard that I do not think any of them will attempt to answer it. They do not attempt to answer it, because they cannot answer it. No man living has pretended to make an estimate of what that would cost. But my hon. friend in eighteen or nineteen days, has evolved a scheme by which he proposes to do it. My hon. friend would also have to deepen and equip the harbours. Suppose he equipped Depot Harbour like the harbours on the other side of the lake. I do not know what that would cost. I know that the authorities spent $4,000,000 or $5,00,000 on the harbour of Buffalo without reference to the approaches. Suppose my hon. friend deepened all these channels and equipped and deepened all these harbours by the expenditure of an immense amount of money, what would it all amount to ? He is operating the railway from Quebec to Winnipeg for the purpose of making it a great carrier, and at the same time he is operating a competing line by water all the way from Quebec to Lake Superior. This is his proposition. Which is he going to favour ? What part of this scheme does he want to be a success ? Is it the water part or the rail part ? One thing must be certain, that the hon. gentleman could not have considered the effect of what he was saying. That is the true outworking of his proposition, and I will leave it to the judgment of the hon. gentlemen present, and I appeal to the judgment of men who are posted on the transportation question.

Now, the hon. gentleman has got to Quebec. What have we to hope from him beyond Quebec ? He tells us that he will go and look over this route from Moncton to Rivière du Loup and to Lévis, and if he finds it, in his judgment, feasible, he will build this road for us, and will go into the paralleling business again. The hon. gentleman is not satisfied unless he has got two strings to his bow all the time. In speaking on this subject of transportation, I am appealing to the people of the country who have a knowledge of this question. This is transportation, according to the new light that has arisen before us—paralleling your road with water carriage; or, if you cannot parallel it with water carriage, then parallel it with another road, built and operated by yourself. He says it would be a bad thing to have the Grand Trunk Pacific Company operate the road to Moncton, because it would parallel the Intercolonial Railway ; but it would be a splendid thing to have the Intercolonial parallel itself over the same distance. That is the position. I do not know that it is necessary for me to say any more on that part of the scheme.

I want to say something now about colonization, and in that connection I wish to refer to a speech made by the hon. member for Pictou at a dinner given at the Garrison Club in Quebec this spring. See how the minds of great men change. The hon. gentleman made a speech at that dinner in connection with the Trans-Canada Railway, which he thought was the scheme of all schemes that should be carried through. Last night, after he had delivered himself as he did, it occurred to him that he had

made this speech, and he said something that would show the difference between it and the colonization scheme of his leader. The colonization scheme of his leader consists in this, that he would look over this country from Quebec to Winnipeg, and according as he finds it desirable, he will build a colonization road—forty, fifty, perhaps a hundred miles a year—but he will jog along at his own rate. And that is the scheme, which the hon. member for Pictou (Mr. Bell) is now upholding. But he did not entertain this view after he had been dining and wining so well at the club—I withdraw, Mr. Speaker, the wining. The 'Chronicle' of Quebec says:

With the exception of one, all the members were Liberals. Mr. Bell of Pictou is a Conservative of fine physique,——

This is very flattering.

—agreeable manners and a presence of commanding importance. He has a resonant and captivating voice. He possesses the attributes of a leader of men. He is a man of scholarly attainments, and he at once impressed his hearers. He warmly espoused the cause of the Trans-Canada project. The commoners were fairly well represented on this occasion. No fewer than two representatives from the extreme portion of Canada were present. Mr. MacPherson represented the extreme west. Ontario and Quebec were well represented. He regretted the absence of ministerial representation. But as a member of the opposition he hoped to be in a position to help forward the aims of those present. He was glad to meet the gentlemen present. He was proud of being a Canadian. He wanted to see a real Canadian people. Since 1867 we had become a nation. He stood for nationalism instead of provincialism. He took great interest in the Trans-Canada scheme from early years of his life. He had a keen recollection of General Hewson's famous pamphlet, the route now adopted by the Trans-Canada people, which is really a real colonization route, from ocean to ocean. General Hewson proved that by going further north that we had the opportunity of developing the best resources of the country. From a national point of view, we should have another route, which meant the compacting of our country and an increase of our population. Quebec people had shown a strong national feeling in this matter. Quebec must eventually be the greatest port of Canada—a port which is unrivalled in the whole world. The largest ships afloat can ride safely in the harbour of Quebec. And then Quebec is hallowed ground. It is endeared all round the globe by its historical associations. French and English people have united in making this city strong, historical and national. We want to see the traffic of Canada increase and become the great transportation centre of this country. Quebec should rival New York. In this hope the people of the maritime provinces joined heartily. We must have population. We must have depth, we must have a back country. We are a people of undeveloped resources.

That is pretty good talk, and that is the talk of the hon. member for Pictou, speaking in the interests of Canada, speaking in the interests of the maritime provinces, speaking in the interests of the county he represents, and before the party whip was snapped over him, after the leader of the opposition brought down his scheme.

Mr. BELL. If the hon. gentleman will allow me, he will find that what I did say then coincides almost precisely with what I said last night.

Mr. WADE. It coincides with the explanation which the hon. member attempted to make last night, but in which he failed utterly. What is the difference between the location of the Trans-Canada Railway, as contemplated at the moment he made that utterance, and the location of the Grand Trunk Pacific Railway as contemplated at present.

Mr. BELL. About 150 miles.

Mr. WADE. About 150 miles, the hon. gentleman says. I do not think he is in a position to tell whether it is 50 or 150; but suppose it is 150, it is that many miles further up in this wilderness they have been talking about, and it is carrying that road back of Lake Winnipeg through an uninhabited country from Quebec all the way across.

An hon. MEMBER. Sub-Arctic.

Mr. WADE. Sub-Arctic was the expression used. These gentleman, when they first started out against this scheme began to belittle and abuse the country; and when the Finance Minister went on to prove that this was a good country and to make use of certain official reports, the hon. member for Centre Toronto (Mr. Brock) said that these reports were cooked.

Mr. BROCK. I said that the summaries were incorrect

Mr. WADE. We will not go to the summaries, but we will see if the reports were cooked or not I turn up page 36 and I find a summary of the character of the soil made by an explorer:

As regards the soil of this whole area south of Lake Abitibi and extending in a south-westerly direction to the Black river, we can say that it is excellently suited to agriculture, being a fine sandy clay loam, just sandy enough to be easily workable.

This report is signed by M. B. Baker. I would ask the hon. member for Centre Toronto if he knows Mr. Baker. He does not know him. Well, Mr. Baker has sworn to this report as being true before Mr. J. A. G. Crozier, commissioner, can he say anything against that gentleman? Let me turn to another report by Mr. J. M. Bremner and Mr. James M. Milne, who have examined 3,840,000 acres of land. Does the hon. member know Mr. Bremner and Mr. Milne? He is silent. Does he know anything against them? Does he know anything to their discredit? They have sworn to the truth

of their report. In what particular is it wrong? I would refer next to the report of Mr. E. L. Fraleck, does the hon. member know this gentleman or anything to his discredit? Mr. Fraleck tells us about the railway facilities, is there anything the hon. member can say against him? Is he a man who would swear to a lie? Will he tell the truth or not? Would he put a statement on paper which is false and swear to it and let it be published throughout the world? Here is the report of Mr. Daniel Proctor, does the hon. gentleman know anything against him or not? He has appended his name to a report in this book. It is a sad spectacle that in opposing this scheme these gentlemen find it necessary, not only to decry their country, but to abuse and slander public officials.

Mr. BROCK. Will the hon. gentleman allow me to interrupt? I defy him or anybody else to show that I have attempted to defame any officer connected with the whole thing. I merely spoke of the summary read to the House. I did not allude to a single individual; and did not intend to do it, as the hon. gentleman well knows.

Mr. WADE. I am glad the hon. gentleman sees the error of his ways. Repentance may be late, but not too late. When the Finance Minister quoted this report and said it was a report emanating from the King's Printer at Toronto, an official report, what did the hon. gentleman say? He used these words: 'The whole thing is a humbug.' These gentlemen, when out of office, are dangerous parties to deal with? They abuse every public official almost in every province. They have abused and slandered the judges upon the bench. Truly, as has been said of them, when they are out of office, they are like a she-bear robbed of her cubs the she-lion, robbed of her whelps. They can see no good in any body or anything. If it be necessary to gain their end that they should decry their country and abuse this that or the other man, they do not hesitate a moment to do it. They started out first to assert that the country traversed by this railway was valueless. It has been shown beyond question that it is magnificent country all the way down from Winnipeg to Quebec. The hon. gentleman shakes his head. But we have a mass of testimony to show what kind of a country it is. Is it patriotic on the part of these gentlemen to circulate throughout the world the statement that this great portion of Canada is a wilderness, that it is not fit for cultivation or habitation? Is that a patriotic thing to do? Is that the way they are aiding the building up of Canada? What are they doing it for? Simply for more party exigencies. I know that the common sense of the Conservative party does not commend this course. I know that hon. gentlemen take this course reluctantly. I know it is sad for them to be compelled to adopt it.

Mr. CLANCY. If the hon. gentleman (Mr. Wade) will permit me—he has made a pretty strong statement with regard to some hon. gentlemen on this side. Will he give the name of any hon. gentleman on this side who has indicated the course he speaks of or who has said one sentence in the direction of which he has spent some minutes in describing?

Mr. WADE. Certainly. I would not make a statement of that sort if it were not borne out by facts. The first gentleman to speak on that side after the leader of the opposition on the 30th of July last, the hon. member for South Lanark (Hon. Mr. Haggart), told us that this country was a series of muskegs and granite ridges, that there was no timber and that the region was unfit to habitation. That was virtually repeated by the hon. member for Centre Toronto (Mr. Brock). The hon. member for Hamilton (Mr. Barker) took the same position. I would ask my hon. friend from Bothwell (Mr. Clancy) to read the earlier speeches of hon. gentlemen on his own side before their Moses returned from Mount Sinai and cracked the party whip over them. Let the hon. gentleman read those speeches and cull from the remarks made derogatory to the character of the country through which this road is to run, and he will find that he has scores of pages of such statements. I am reminded that the hon. leader of the opposition from the province of Quebec (Mr. Monk) stated that this was a sub-artic region. The hon. member for South Lanark said it was a wilderness, and speaking of the country traversed by the road between Quebec and New Brunswick, he said it was a wilderness and a worthless country. But these hon. gentlemen have found it necessary to abandon that position. They were driven from it; they became ashamed of it. And now they undertake to say that they never said these things. They will wish they had never said them when they get before the people. As to this country between Quebec and Moncton, I refer to the statements of the ex-Minister of Railways when he said that this was a splendid country. But this was in the days before the hon. gentleman had commenced to dicker with gentlemen on the other side. He always spoke the truth in these days. He said then that this was a splendid country and a grand place for a railroad. And we say so to-day.

Now, I wish to make a statement with regard to the building of the road from Quebec to Moncton. The hon. leader of the opposition made some sneering remarks about Moncton being the terminus and the port for this road. These remarks were quite unnecessary. Nobody contemplates Moncton as the end of the road. But Moncton is the objective point, and from Moncton it can run to Halifax over the Intercolonial, and from Chipman it can run to St. John over a line to be built down to

Norton. I wish to make a statement with regard to this. There has been a great deal of disputing here as to whether this would shorten the line or not. Hon. gentlemen on the other side say it will shorten it by forty or fifty miles. It is contended on our side that it will shorten it by from 120 to 140 miles. I will take this position, and I am ready to demonstrate it to any competent railroad authority, that even if this project does not shorten the road one mile, it is necessary, first in the interest of the country, and second in the interest of the project itself, that this railway should be carried to Moncton and should not stop at Quebec. We are told that there is no security for the operation for the extension of this road. If we compel the company to build their road to Moncton and make a through connection to St. John and Halifax, that is the strongest kind of security that we can have that the road will be operated over the whole eastern division, because when we have got them there and obliged to operate their trains, they must bring their business that way in order to make the line pay, and it will be profitable for them to do so.

In the maritime provinces, we are a million of people, we are the older provinces. We are ready to help all other parts of the Dominion, but we want to share in all national movements. And we have a right to do so. We in Nova Scotia did not seek to get into this confederation; we were pitch-forked into it without being consulted. It was unwise for the hon. member for Pictou to refer to the strained feeling at that time. I venture to say that if any other part of the Dominion had been treated as Nova Scotia was treated when it was brought into confederation there would have been a rebellion. The fact that there was not a rebellion in the case of Nova Scotia is proof of the extreme loyalty of the people of that province. We were forced into confederation, but, having obtained better terms we have accepted confederation; we are here to stay and to take our part in working out the future of this country loyally and to the best of our ability. We are prepared to spend money for the development of the great west, for we know that from the great west we have a right to expect a large measure of the prosperity and success of this Dominion. We are prepared to spend money on our waterways and on every other desirable public work. But, while we are prepared to do that, we feel that we have a right to demand to be taken into account in any national scheme that is formulated. Not a mile of this proposed road will be in Nova Scotia, not a mile of it comes within twenty-four or twenty-five miles of our border. But we see the advantages that will accrue to us from the operating of the road, and we have a right to demand those advantages. There was an attempt made in this discussion to foment jealousy between St. John and Halifax. It failed. Members from the province of Nova Scotia, from the province of New Brunswick and from the province of Prince Edward Island, came together and agreed that here should be no jealousy and no bickering, but that we should all unite in promoting the welfare of our maritime ports.

An hon. MEMBER. The Liberal members.

Mr. WADE. Yes, the Liberal members, but we were aided to a certain extent by the Conservative members. Now, I wish to make a declaration. I expect that when this road is built to Moncton it will be necessary to double-track the Intercolonial into Halifax. That would be of enormous value to the city of Halifax, for in its wake will come, if it does not come before, the much-desired fast Atlantic service. A part of the project is to build from a point on this line near Chipman to Norton on the Intercolonial, so as to connect St. John. And I, for one, as a representative of the province of Nova Scotia, will refuse to accept the advantage of the Halifax connection unless the St. John connection is provided at the same time. Let there be absolute fairness between us. We are working together for the common good of the lower provinces, and I believe that there is an honest intention on the part of every member from the maritime provinces to do so. And I make this public declaration that I will stand by my agreement with regard to the city of St. John. Will any man rise and tell me that if we build this road down to Moncton and get the connection from Chipman into Norton and so to the east side of the Harbour of St. John, that that city is not going to be greatly benefited by it? I believe the bulk of the heavy freight trade will go to the city of St. John. I have never been one of those who decried that port, nor am I going to. We have two splendid ports in the maritime provinces. Shall we close them, or fail to take advantage of them? Or shall we shape our national policy so as to develop these ports and bring to them the traffic of Canada? We have in Halifax a harbour capable of receiving the united fleets of the world, a harbour fifteen miles in depth. Is that not a heritage worthy of our pride? Is it not an advantage to the Dominion government to have it there? In St. John we have a harbour nearer to the producing parts of Canada by some miles, and capable of doing an immense business. All she wants is the facilities, and by this project we shall give her the facilities. We are going to give both these cities a chance to live. We shall not give them as the hon. leader of the opposition suggested, a 'fighting chance.' He said that if the road he proposed should be built, it should give them a 'fighting chance.' We are going to give them more than a fighting

chance; we are going to insist on their having an equal chance with the other parts of the Dominion.

Now, let us look to the province of Nova Scotia; how are we to be benefited? Halifax will be benefited by an increase in her population, an increase in her commerce, an increase in her business, an increase in every way. We have within a few miles from our province, St. John, which will certainly advance with rapid strides if this scheme is carried out. We will have these two cities doubling in population, in communication with the outside world, with lines of steamers running from both of them as this contract provides. Let me refer to the county which I represent. Annapolis is forty-five miles from St. John, one of our natural markets and like all of the counties of western Nova Scotia it is in sympathy with St. John. We want to see St. John built up and we will do anything we can to build it up, because it will give a larger market to the people of these counties than it has done in the past. Halifax, too, will give an increased market to the farmers in the county I represent. To-day we are about to build a railway from Middleton, connecting with the south shore system to a point on the Annapolis basin which will give closer connection between St. John and Digby, Yarmouth, Shelburne and Queens counties. These counties will all be benefited by the upbuilding of St. John as well as by the upbuilding of Halifax. Then we are building on the railway along the south shore to Halifax and we are about to build one along the same shore to the eastward. Think of the advantage this road will be in the connection it will give to the fishermen along the shores. To-day the products of the fisheries of Nova Scotia are worth about $8,000,000 a year and they are increasing rapidly from year to year. But where do we sell? We have no market at home and we cannot get into the west now because the rates are prohibitive. We have to send our fish to the West Indies and to South America, we have to seek markets abroad, and these markets are failing. We desire another market and this will be given to us by the Grand Trunk Pacific. As feeders for this line we will have, going west from Halifax, the Halifax and South Western, and the Dominion Atlantic Railways, and the Middleton and Victoria Beach Railway connecting with it, and we will have the other road which is projected eastward to Guysborough. Thus we will have the whole fishing district of the province of Nova Scotia brought at once in touch with this line that runs through into the west. To-day we are not selling any of our fish products to the west at all. Why? Because the freight rate is prohibitive. A member of the other chamber told me that he had paid freight on fish from St. John to the territories $3 a hundred pounds. $3 a hundred!. Almost the first cost of the fish. It is prohibitive. We now get only a small quantity of our dried fish into the western markets and that is the only fish we can sell in those markets. If this road is constructed, it will open an enormous market and we can send one-half our fish products into the west. This will give mutual trade and will provide the railway with freight to carry westward. Heretofore the trade has been all jug-handled, it has been coming from the west to the east, the people of Ontario and Quebec have been sending freight to Nova Scotia, but they have taken scarcely anything from us in return as the figures will show. When this road is completed we purpose changing that condition of affairs to a certain extent and propose sending our products into the west in fair exchange.

At one o'clock, House took recess.

House resumed at three o'clock.

Mr. WADE. Mr. Speaker, before the House rose for recess, I was speaking of the advantages to be derived by the province of Nova Scotia from the operation of this railway, and referring particularly to the fishing industry, which is such an important one in that province. I did not finish saying quite all that I intended saying in regard to the fishing trade. The products of our fisheries at the present time do not bring the returns that they will bring when this scheme is perfected and when the western trade that I have spoken of is developed, because fresh fish will be shipped west in refrigerator cars and the produce of the fishermen will bring very much higher prices. This trade has already started in a small way with the limited amount of refrigerator cars we have on the Intercolonial Railway. Of course, the trade has not been carried as far west by any means as we anticipate, but I know that at a single station in the county of Guysborough during the first year the refrigerator cars were put on, the amount collected on the freight traffic from fresh fish alone was $17,000. The trade is one capable of enormous development, and we have a right to expect that with this scheme we shall be put in the position to take advantage of it. I will say in regard to my own county—while I take a general and broad view of these things I have a right to look to the interests of the county that I represent—that we have a great fruit trade growing up in the Annapolis valley. It is increasing by leaps and bounds. During the present year, I believe there will be a shipment from there of 500,000 barrels of splendid apples, and in the course of five or ten years that will be increased to a million. A great drawback to the industry is the lack of adequate transportation from the province to the London market. That is owing to the fact that they have not the proper steamship accommodation. With this scheme perfected and with the com-

pany running lines of steamships from St. John and Halifax, as they are obliged to do under the terms of this contract, this difficulty will be removed. I could go on and enumerate numerous other things that will be of advantage to the province of Nova Scotia. They were detailed at great length and with carefulness by the hon. member for Cumberland (Mr. Logan), and I will not delay the House further on that subject.

Now, I wish to say a word about the line of this road from Quebec to Moncton and to show how everything has been perverted by the other side. It has been represented that we propose to build a line which is to run up over the mountains to Rivière du Loup. We do not contemplate anything of the sort. The ex-Minister of Railways and Canals (Hon. Mr. Blair) has stated in the House and the newspaper controlled by him has led the people to believe that we are going to run an air-line from Edmundston to Moncton. We do not intend to do anything of the sort. Nobody has ever said anything of that kind, and the figures and distances which have been presented to the House show quite differently. The course of the road as proposed will carry it through the following counties in New Brunswick: Madawaska, Victoria, Carleton, York, Sunbury, Queen's and Westmoreland to Moncton, and then with the branch from Chipman to St. John, it will traverse the counties of King's and St. John. Thus, it will traverse nine out of the fifteen counties of New Brunswick. That is the course that is adopted. Hon. gentlemen opposite have cited Sir Sandford Fleming as giving an opinion in his report and in his conversation against that line. I say that Sir Sandford Fleming has never reported against it and that no line can be found in his report against it, and further than that, I say that the hon. member for Hamilton (Mr. Barker), who has had a conversation with Sir Sandford Fleming, as he says, entirely misunderstood that gentleman. He does not know the locality, and he is not in a position to understand what Sir Sandford Fleming does say. I have had conversations with Sir Sandford Fleming. I do not feel at liberty to give these conversations here in the House without consulting him, but I can say this much, that Sir Sandford Fleming never expressed an opinion against that line and I will undertake to say that he never will express an opinon against it, and further I would say that if he is consulted about the line I have pointed out he will give it his entire and absolute approval. The distances presented by the hon. member for Westmoreland (Mr. Emmerson) show conclusively the line we are going to take. The line will start at Chaudière Junction and go to Connors Station, from Connors to Edmundston, from Edmundston to St. Leonard, from St. Leonard to Plaster Rock, from Plaster Rock to Boiestown, from Boiestown to Chipman, and from Chipman to Berry's Mills, on the Intercolonial Railway, with the alternative of going from Chaudière Junction to Connors Station, from Connors Station to Edmundston, from Edmundston to the Nashwaak bridge, from the Nashwaak bridge to Chipman, and from Chipman to Moncton and St. John, both of the routes going down the valley of the St. John river, the only question being as to where the road should turn off to go to the eastward. The distance that would be saved by this route would be over 120 miles. I believe that a line of railway can be secured with these distances, and as I said before, if the distance was only 50 miles less, as a matter of railroading, as a matter of transportation, it is absolutely necessary that this road should be built down to Moncton with a dividing of the line at Moncton, from Moncton to Halifax, and from Chipman to St. John, in order to perfect the scheme. But, let us look now at other distances in connection with this line. When this road is completed, with steamers on the Atlantic Ocean and with steamers on the Pacific Ocean, we shall then have a distance from Liverpool to Yokohama of 10,135 miles. By the Canadian Pacific Railway the distance is 10,445 miles, and by New York, 10,830 miles, so that we are making a saving in the distance between Liverpool and Yokohama by way of Halifax of 700 miles over that of the route by way of New York. The distance upon the Atlantic must be taken into consideration in connection with this matter. From Liverpool to Halifax the distance is 2,450 miles, from Liverpool to St. John 2,700 miles, and from Liverpool to New York 3,050 miles. While I am upon the question of distances, let us look at the distances in connection with the scheme of the hon. leader of the opposition. From Quebec to Winnipeg by this proposed line the distance is substantially 200 miles greater than from Quebec to Winnipeg by the Grand Trunk Pacific line. If we save 200 miles in the distance between Quebec and Winnipeg and save 120 miles between Quebec and Moncton, then we save 320 miles between Winnipeg and the ocean ports. Now, there was a statement made here that the Intercolonial Railway was going to be destroyed, that it was going to be put out of business. The hon. leader of the opposition went out of his way to try to twist and pervert the words of the hon. member for Hants (Mr. Russell), and he stated that the hon. member for Hants had stated in effect that we would either have to give away or sell the Intercolonial Railway. The hon. gentleman was not in the House when the hon. member for Hants made his able speech here. If he had been, no doubt he would have heard the hon. member for Hants for ten or fifteen minutes ably demonstrating that this scheme would not injure the Intercolonial Railway in the slightest, but on the contrary would be a benefit to it. That was the position that

the hon. member for Hants took. Now, let us look at this question of injuring the Intercolonial Railway, I mean to say here that this scheme is entirely separate and distinct from the Intercolonial Railway in the purpose for which it was designed and in the purpose which it will serve. It has nothing to do with the extension to the Georgian bay and the Intercolonial Railway one way or the other. Neither has it anything to do with deepening the waterways or the Georgian Bay canal scheme. It does not interfere with any of these projects in the slightest degree. It is an enterprise standing by itself. I want to draw hon. gentlemen's attention for a short time to some figures which I have here in regard to the Intercolonial Railway, obtained from the manager, Mr. Pottinger, in regard to traffic returns, which are as follows :—

	I.C.R. Earnings.
Traffic originating in Montreal and vicinity, and between that and Lévis.. .. ..$	563,177 37
Traffic originating in Lévis and vicinity..	128,959 92
From maritime provinces destined for Montreal and vicinity or points west of Lévis..	304,975 20
From maritime provinces destined Lévis and vicinity..	56,326 39
(A.) Traffic from Drummond and joint section, including Montreal, and from Lévis, Point Lévis and Quebec to maritime provinces.. ..	374,101 00
(B.) Traffic from maritime provinces to Drummond and joint section, including Montreal, and to Lévis, Point Lévis and Quebec..	361,301 59
(A.) Traffic from Ontario from west via Montreal, G.T.R..	671,740 87
From west via Ste. Rosalie, C.P.R.	29,307 08
From west via St. John, C.P.R...	79,938 07
(B.) Traffic to points in Ontario and west via Montreal, G.T.R..	154,694 66
To west via Ste. Rosalie, C.P.R..	71,407 18
To west via St. John, C.P.R... ..	11,115 69
Total.. .. ..$	2,807,045 02

Now, I make bold to say that the only portion of that traffic which will be affected by the Grand Trunk Pacific Railway will be that portion emanating and terminating in the vicinity of Lévis. That is all. All the freight that is gathered up at Montreal, or which is delivered to the Intercolonial at Montreal by the Grand Trunk Railway, will, when received by the Intercolonial Railway, be carried on the Intercolonial Railway to its point of distribution at the maritime provinces, and not one dollar's worth of that freight will be affected by the new road. All the freight that is gathered up on the Drummond County section of the Intercolonial Railway will be retained upon the Intercolonial Railway and carried to the point of distribution, which is also true of the freight coming back. Therefore, the only traffic of the Intercolonial Railway which we will have interfered with at all will be the portion of the traffic at Lévis, which emanates there and which terminates there, and which is comparatively very small. Now, as a compensation for that to the Intercolonial Railway, let us see what we have. I say that in my judgment the building of this road is going to materially increase the traffic upon the Intercolonial Railway. Nobody on this side of the House has any idea of putting the Intercolonial Railway out of business, or of destroying its efficiency in any way. We hope to see the Intercolonial Railway go forward and progress and become a paying institution, instead of being a drag upon the country. Let us see then what advantages the Intercolonial Railway will get by the scheme that is being propounded. In the first place, we will have a rental from the Grand Trunk Pacific Railway for the running rights over the Intercolonial Railway from Norton to Halifax and from Norton to St. John. That will be a very considerable item, and that is something that will not cost the country a cent ; it is like that much money found. Then we will have all the traffic emanating upon the new line which is carried to Lévis and is destined for Montreal and points in the west, because this road cannot touch that. This new road will have to deliver to the Intercolonial Railway at Lévis or Chaudière all the freight which it has gathered up from or down to the maritime provinces and which is destined to points upon the Intercolonial Railway and the Drummond County section of it, for Montreal and other points west of Montreal, and vice versa. Then all the traffic that emanates upon the Grand Trunk Pacific Railway for a long distance west of Quebec upon this through line—and it will be large—and which is destined to points on the Intercolonial Railway along the River St. Lawrence or around the north shore of New Brunswick, and up from Lévis towards Montreal ; all that traffic going and coming must be delivered to the Intercolonial Railway, and the Intercolonial Railway will get the advantage of it. The great theory in railway business at the present time is that the more railways you have the more traffic is created, provided, of course, that railways are not in actual competition with each other. In addition to this, if this scheme accomplishes what I expect it will —and we have a fast Atlantic service coming into Halifax, and we have the lines of steamships I have spoken of—by how much would that increase the business that will be carried on the Intercolonial Railway ? I think it is safe to predict that when this road has gone into operation that the business of the Intercolonial Railway from the start will be increased very, very largely, indeed, and that that increase will continue. The talk of the new road injuring the Intercolonial Railway, or putting the Intercolonial Railway out of business, is to my mind ridiculous.

There is one striking thing about this whole matter, and that is, that it is not the friends of the Intercolonial Railway who are talking about any trouble of this sort. That talk comes from the very gentlemen who have been raving against the Intercolonial Railway for years and years. These gentlemen never had any love for the Intercolonial Railway, and they have no love for it now, but they insincerely profess this love in order that they may base on it an argument against the government scheme.

I would like to say a word, Sir, concerning what will be accomplished for the province of Ontario by the construction of this road, so far as its extension to the maritime provinces is concerned. To-day these provinces by the sea are the best markets that the people of Quebec have for their manufactured goods and other commodities. Go to the freight sheds in the city of Halifax and see the immense quantities of material that come down from the province of Ontario—agricultural implements and machines of all descriptions; mowing machines, reaping machines, carriages, carts and everything in the shape of manufactured goods. In addition to that, the provice of Ontario ships down to us enormous quantities of hams, and bacon, and beef, and pork, and butter, and flour, and pease, and beans, and other such products. We are the great market, and we have always been the great market for Ontario. If, Sir, by this scheme the maritime provinces are made more prosperous and their population is increased, is not that market made much larger for Ontario, and will not Ontario be benefited to that extent? That is a simple proposition, and it is a matter of surprise that any man living in the province of Ontario and interested in that province should not be anxious, and deeply anxious, to have the maritime provinces prosper so that the market for Ontario may be extended.

I shall have now, Mr. Speaker, to refer, for a few moments, to some criticisms on this Bill, but before proceeding to that, I would be doing an injustice to my hon. friend from King's (Mr. Fowler) and to my hon. friend from Colchester (Mr. Gourley), if I did not cite them as authorities in connection with this proposition to build to Moncton. When this Grand Trunk Pacific Railway charter was before the House on the 22nd of June, the hon. member for King's (Mr. Fowler) delivered himself. These two gentlemen were anxious then to have a provision put in the charter compelling the Grand Trunk Railway to commence the work at Moncton at the same time as they commenced at Quebec and the west. Nobody at that time ever thought of proposing Moncton, except these gentlemen from the maritime provinces, and here is what the member for King's (Mr. Fowler) said:

> I have no objection whatever to the extension down to Moncton. I am in perfect accord with that, but I want something more than a mere provision in the charter to show me that it is going to be built. That may suit the hon. gentleman for Annapolis but it does not suit me.

He wanted to make it perfectly sure and certain; he wanted to have a cast-iron provision put in; he wanted it put in the charter that the company must build to Moncton, and that they must build to Moncton at the very same time that they were building west of Quebec. That was his position then.

Now I must cite another celebrated authority on the other side of the House to show what his ideas were in regard to this matter. I refer to the hon. member for Colchester (Mr. Gourley). Hon. gentlemen will remember a discussion which came on in the House over this charter, when an attempt was made to change the terminus from Moncton to St. John. A similar discussion had previously taken place in the Railway Committee, and an amendment was moved to that effect. The hon. ex-Minister of Railways and Canals voted for that resolution to build a railroad to St. John, although he now so violently opposes building on to Moncton. The arguments were so strong against his position in defending St. John Harbour that I found it necessary to go to his rescue to a certain extent, and I stood beside him and upheld St. John as a good port, which could do good business for this Dominion. After I had finished and had spoken of our right to have the road to Moncton, the hon. member for Colchester rose and said:

> I have been delighted with the remarks of the hon. member for Annapolis (Mr. Wade). They have the right ring. I think a maritime province man should be big enough to say: Let any port in the maritime province win in the game; bring your route to the maritime provinces and let God and nature determine the port. People are easily caught by catch phrases. Start a catch phrase up in this country and it takes away all the argument you can make in a year. One hon. gentleman deprecates paralleling the Intercolonial. Why, we want railways in this country paralleling every eight or ten miles. Parallel railways every eight or ten miles and you bring in population, you bring in industry, and you produce wealth.

That was the position of the hon. gentleman at that time. He went on to say further:

> I do not want to have to argue that the Intercolonial Railway is a disadvantage to Nova Scotia or an advantage to Ontario, but I want the people of Ontario to understand that we in Nova Scotia regard it more as a national necessity in favour of Ontario than in favour of Nova Scotia.

Let me cite another authority in this connection, an authority which we usually respect, and which I think hon. gentlemen on the other side of the House respect. On this memorable 26th day of May, when the hon. leader of the opposition presented and

endorsed the resolution passed by the Board of Trade of Halifax, the hon. member for South Lanark (Hon. Mr. Haggart) made use of this language :

As I said before, we have a choice of deciding between two companies for the building of this road. My opinion is that if the government should decide to give any assistance for that purpose, the company which is entitled to the preference is the Grand Trunk Railway Company. That company has done a great deal to open up this country, they have spent a great deal of money, and have received very little return for it. It may be the fault of the management of the company, but the fact remains that for the vast sums of money which that company has invested and which have had the effect of developing this country more than any other railway except the Canadian Pacific Railway, it has received very little return in the way of profits. I think the policy of the government should be to have this road built as far north as possible, to pass as near as possible to the height of land in order to tap a region of country which has not been opened up at present.

Now, may I be permitted to refer to some criticisms of this contract ?—and I will deal with them just as briefly as I possibly can. One great criticism made is that the capitalization of the company is too great; and the argument is advanced that the freight rates will be based on the capitalization. This fallacious theory has been put forward in this House on several occasions, and also in the Railway Committee. The only authority ever adduced in support of that argument is that is was advanced before the board of railway commissioners somewhere in the United States. But there cannot be found a solitary word or line to show that the decision of any board or tribunal fixing the tolls on a railway has ever been based on its capitalization. How ridiculous that would be. For my part, I would not care what the capitalization of the railway was. If anything enters into the determination of the tolls, of the railway, it is the actual cost, and not the capitalization ; and with the provisions in this contract, by which the government can ascertain to a cent exactly what the road cost, they have full control over the fixing of the rates. There is where government control comes in. So long as you have the company under the control of the government, not only by the general laws of the Dominion, but by a special contract their rates will be under the control of the government. One of the greatest hardships which have existed in the west in the past has been the fact that the Canadian Pacific Railway Company were given a free hand to charge any rates they saw fit until their profits amounted to ten per cent, not upon their capitalization or upon what the railroad had cost them, but upon its whole cost, both the portion built by the company and the portion built by the government and given to the company.

I find that the rate of freight by rail and water at the present time from Chicago to Montreal is 3½ cents per bushel, and that the rate from Winnipeg to Montreal by rail and water is 13½ cents per bushel. Now, I am beginning to believe that these gentlemen from the North-west who have been contending about these rates for so long knew what they were talking about. It is a very anomalous condition that grain can be carried from Chicago to Montreal for 3½ cents, while it costs 13½ cents to carry it from Winnipeg to Montreal. I do not pretend to be able to discuss these different freight rates, and I shall not attempt to do it. I think it would have been as well if some of the gentlemen on the other side of the House had been as modest about that matter as I am.

Mr. MURRAY. The Georgian Bay canal would help that.

Mr. WADE. The Georgian Bay canal, as I have explained, is a scheme that stands by itself. It is not affected by this project in the slightest degree. The mere fact that the proposed railway will be constructed does not injure the prospects of the Georgian Bay canal any more than it affects the question of deepening our waterways and ports. We are simply building an all-rail highway across the continent, to connect with two lines of steamships on the two oceans.

Another criticism brought forward was by the hon. member for North Victoria (Mr. Samuel Hughes). He says the grain cannot be carried over this railway. Well, the company are willing to undertake to carry it. They are willing to undertake to build the railway and operate it, and to give security that they will do that. It is a matter for the company; they have to accomplish this. But there is a peculiar fact in connection with the speeches made by some hon. gentlemen from Ontario. Why, the valiant member for Victoria declared that it was impossible to carry grain by rail to the lower provinces; but he showed that it was the most feasible thing in the world to carry it to the Pacific coast, and then put in on vessels and take it around Cape Horn and so on to Liverpool or to divert it to the United States, and take it by way of the Mississippi to Liverpool. It seems that these gentlemen are possessed with the idea that if they can only get the grain out of that country in some way so that it will not go to the maritime provinces, their purpose is accomplished. I do not see why they feel that way about it.

The next criticiser of this contract to whom I wish to refer is the ex-Minister of Railways and Canals (Hon. Mr. Blair), and we will see what his criticism amounts to. I wish to refer to the speech which he delivered on the 11th of August. He has referred to the section of the contract regarding running rights. He spoke as follows :

If it were possible to produce the most conclusive and striking evidence that some features of this contract were framed without consultation with and without the advice or the opinion of anybody who knows anything at all about railroading, these clauses in the contract and this clause in the preamble afford that evidence. A more absolutely unworkable, and, in the opinion of every railway man in the country, a more senseless suggestion it would be difficult to make. The idea of commencing a scheme involving all the millions of expenditure which it is proposed that this scheme shall involve, and then saying you will do it in order to establish a common railway highway, so that 'a' company, 'b' company, 'c' company and 'd' company may travel thousands of miles over this railway. I have endeavoured to urge the view, but without the slightest success, that that was not railway usage or practice or possibility; but it is here all the same.

In other words, he said that this idea of allowing running rights was impossible and impracticable, and he went on to state that the dominant railway would impose on the servient railway and there would be all sorts of trouble. Some hon. gentlemen on this side suggested that there was a railway right in Ontario, over which two railway companies had joint running rights. Of course we do not presume to know all about railways, but the hon. the ex-Minister of Railways and Canals evidently does not either, for he was not aware that there are two railways right here in Canada operating the same line jointly. I refer to the Wabash Railway Company and the Grand Trunk Railway. Some question was raised here as to how the railway is operated by these two companies, and I have taken the trouble to get a copy of the contract between them. I find that this is the agreement between the parties. They operate 229 miles in common. The trains of both companies run over that road. There is but one train despatcher, who is the joint officer of both companies. The station men and the permanent employees at the stations are joint officers of both companies. The trains of both companies are given the same privileges, and there is one despatcher for all the trains. Stallage is rented to the Wabash Company for its engines, and the Grand Trunk Railway sells coal to it at cost and charges if it wishes to buy, or it can buy its own coal. Here is a line 229 miles long, with two divisions, and it is operated by both these railway companies in harmony. The hon. member for Hamilton (Mr. Barker) undertook to say the other night that the Wabash was not interested in the local freights. He is entirely wrong. I have the contract under my hand, and under that contract, the local freight is carried on joint account, both companies getting the advantage. The working out of this arrangement is as simple as it can possibly be and has been going on for years without the slightest trouble. If you can operate 229 miles of railway in the way I have indicated, why not a thousand? What is the difference? The hon. the ex-Minister of Railways and Canals (Hon. Mr. Blair) drew a most ridiculous picture here of a train starting from Moncton or Halifax for Winnipeg. He supposed that the same train hands went all the way through to Winnipeg. Whoever heard tell of a railway being operated in that way? This railway will be operated by divisions, just the same as any other road.

Mr. COWAN. The hon. gentleman, I understand, has the contract between the Grand Trunk Railway and the Wabash for running rights over the southern division of the Grand Trunk Railway between the Detroit and the Niagara rivers?

Mr. WADE. I have.

Mr. COWAN. It was stated by the hon. member for Hamilton that the Wabash is not interested in the local freights, in which he was contradicted by the hon. member for North Norfolk (Mr. Charlton) at the time.

Mr. WADE. Here is the agreement:

The local freight traffic originating and terminating on the joint section, as described in subsection 'a' of this clause, shall be done by joint freight trains, the employees of which shall be joint employees, and all revenues shall be the joint revenues of both the parties thereto.

That is the arrangement. If hon. gentlemen would read the provisions of this contract, they would get rid of some of the notions put into their heads by the ex-Minister of Railways and Canals. I am ready to yield all deference to the ex-minister as regards his railway knowledge, but I cannot close my eyes to the fact that he has only been in the railway business some six or seven years; and I am speaking mildly when I say that the school in which he has been educated can scarcely be called a modern one. Any one who is going to operate a great railway system at present, must not be a man who acquired his knowledge some fifty or sixty years ago. He must be up to modern methods and ideas. If he is, he will have no more trouble operating a railway line under a joint running arrangement than is experienced by the Grand Trunk Railway and Wabash company.

I now come to the other great critic, the hon. member for West Toronto (Mr. Osler). I wish to deal, first, with some remarks he made regarding the 17th clause of this contract. This clause, which appears to have disturbed that hon. gentleman's peace of mind, reads as follows:—

No addition shall be made to the cost of construction or the capital of construction account in respect of customs duties in cases where there is direct importation of materials or supplies by the government.

From that section, the hon. gentleman argued that all the material which would enter into the construction of this eastern

division from Winnipeg to Moncton would come in free of duties, and he went on to say further that one result of this would be that there would not be a rail rolled in the Dominion for the next five years. I wonder how he worked that out. I would ask some hon. gentlemen opposite to tell me how it can be possible, when there is no duty on rails over 45 pounds in weight, that the importation of such rails without duty will prevent the rolling of rails in this country? Is there any one of them who can explain that?

Mr. BENNETT. That was not the argument of the hon. member for West Toronto. The First Minister said there was to be a great development in the iron and steel rail industry, and the hon. member for West Toronto pointed out—and it is a pity the hon. gentleman could not grasp it, because he made it very plain—that there was no benefit to the Canadian industry at all under that contract.

Mr. WADE. I did not quite catch what the hon. gentleman said.

Mr. BENNETT. I said that it was not the argument of the hon. member for West Toronto that there was any customs duty on rails from the United States. But what he pointed out is this, that the right hon. the First Minister had declared, with a great flourish of trumpets, that the Canadian rail industry would be benefited owing to the fact that there was a clause in the contract—as the First Minister said, but who nobody believed—that they would have to purchase those rails in Canada. The hon. member for West Toronto pointed out that in this he was entirely incorrect, because it was entirely optional on the part of the railway company whether they purchased in the United States or not.

Mr. WADE. I am much obliged to the hon. gentleman for his explanation, that was not the argument of the hon. member for West Toronto at all. That had nothing to do with the contention he was making. What the hon. member for West Toronto said was that because of this clause, which permits rails to come in free of duty, there would be no rails rolled in Canada.

Mr. BENNETT. No.

Mr. WADE. I do not wonder the hon. gentleman does not believe that the hon. member for West Toronto could have said anything so ridiculous. But he did say it all the same.

Mr. INGRAM. Will the hon. gentleman quote what the hon. member for West Toronto did say?

Mr. WADE. Well, I have not much time to hunt it up; but if you wish, I will try and find it. This is what he said, in concluding his argument:

Therefore, for fifty years all the supplies that come into Canada in connection with this road will come in free of duty.

And so on.

Mr. TAYLOR. Read on.

Mr. WADE: (reading.)

If we take twenty-five years only of this lease, and say that the capital account will be increased three and a half times during that time, we shall have a capital account at the end of twenty-five years of $280,000,000. The hon. member for Cumberland (Mr. Logan) drew a glowing picture of what this great railway building was going to do for the merchants, manufacturers and people of this country. Let me tell you what it will do for the merchants and manufacturers. I have jotted down a few of the ordinary supplies that are necessary for the building of a railway, and for its continuous betterment. Apparently the section to be built by the Grand Trunk Pacific Railway is not to be exempt from the duties on the materials and supplies used in its construction, showing very clearly what the intention is, so far as the government road is concerned. I may say here that when the Canadian Pacific Railway was built, as I recollect it, they were to bring in free of duty for the original construction of the road the steel rails and fastenings and certain supplies, but we made no steel rails in this country in those days, and that was a reasonable proposition. But under this contract, we bring in steel rails and everything to be used in the construction of the railway free; yet, the hon. member for Cumberland says that if this contract be carried out the rolling mills of this country will be so full of orders that they will treble their capacity. Let me tell him that if this contract is carried out, there will not be a steel rail rolled in Canada for fifty years.

Now I could go on and read a lot more.

Some hon. MEMBERS. Go on, go on.

Mr. WADE. I hope the hon. gentleman will not get excited. I have something more to say to them on this point. I want to show them that when the hon. member for West Toronto spoke thus he did not know what he was talking about. In the first place, the Act which confirms this contract makes it necessary that this road should be built by a commission. The government is not building the road. It is to be built by a commission who cannot build it themselves, but will have to give contracts to parties to build the road, either as a whole or in sections. Now, is there any provision in clause 17 that when a party accepts a contract to build this road or any part of it he shall be exempt from the payment of duty? There is not a word. My hon. friends have shown in more than one instance that they have not read the contract intelligently or in a way that they understand it. Now, this clause 17 has reference to the preceding clause; you must read it with the context, with the preceding clause, section 16 of the contract is as follows:

In case, after the completion of the said eastern division and the taking possession

thereof by the company under the lease thereof, hereinafter referred to, or at any time thereafter during the continuance of the said lease, the government shall deem it necessary to expend any sums of money for the improvement of the said eastern division, the replacement of structures by others more modern, or otherwise upon capital account for betterments, and not being 'working expenditure' payable by the company, the government may expend such sums, and the amount thereof shall be added to the capital of the construction account at the end of the year in which such expenditure takes place, and shall thereafter be considered as part of the cost of construction, upon which interest, by way of rental, is to be paid by the company; provided that no such expenditure shall be entered upon without the consent and approval of the said company.

Now section 17 comes in:

No addition shall be made to the cost of construction or to the capital of construction account in respect of customs duties in cases where there is direct importation of material or supplies by the government.

That is, if the government import materials and supplies for the purpose of making betterments upon that road, and do the work themselves instead of by contractors, then they shall not charge any duties upon these materials and supplies. That is what these sections mean and I am astonished to hear any hon. gentleman attempt to argue anything else.

Mr. SPROULE. Do I understand the hon. gentleman to say that this exemption does not apply to the original construction?

Mr. WADE. No, it does not apply to the original construction. If the hon. gentleman reads the contract and the Act confirming it he will see that it does not; the original construction is to be by tender and contract. Suppose the government calls for tenders for the building of the section from Quebec to Winnipeg and asks contractors: For how much per mile will you build and complete that road, and I suppose a tender is put in to build the whole section for $30,000 a mile, would the hon. gentlemen opposite say that the contractor could come to the government and say: I am not going to pay duties on materials and supplies imported for use in the construction of this road? Surely they would not contend anything of that sort, and when this section 17 is read in connection with section 16, which speaks of the betterments to the road which have to be made from time to time, and provides that the cost of the betterments is to be added to the cost of construction for the purpose of charging a rental upon that amount surely they see that what I say is absolutely correct and that there can be no other interpretation of the section.

Mr. SPROULE. Do I understand the hon. gentleman to say that this section, which speaks of 'capital of the construction account,' and 'cost of construction,' does not apply to the original cost of construction?

Mr. WADE. Certainly I do, and if the hon. gentleman had listened to clause 16 he would have seen that my statement is correct. We have interpretation sections in this contract defining 'cost of construction,' and under section 16, which provides that the government may from time to time, if they see fit, with the consent of the company, go upon the road and expend money for betterments, then they are entitled to add their cost to the amount of the capital of the construction account and charge interest upon it, but in adding that amount it is provided by section 17 that they shall not make any charge on account of duties on articles brought in from abroad by the government.

Mr. SPROULE. Am I right in understanding that the hon. member contends that a contractor, when making an offer to build the road, would not take into account the reduction which he would be likely to receive by virtue of bringing in these articles free of duty?

Mr. WADE. Most assuredly; there could be no such reduction. How could you work it out? The commissioners are appointed and told that they must build the road, not build it themselves but build it by tender and contract. They ask for tenders for the construction of the whole or a part of that road and the contract calls for the construction of the road by the contractor whose tender is accepted.

Mr. SPROULE. Does the hon. gentleman say that in the construction of the Intercolonial Railway, where the same principle is involved, contractors who build the road are not allowed to bring in material free of duty?

Mr. WADE. I would answer the hon. gentleman in this way: With regard to the Intercolonial, the law permits the government to import materials from abroad without paying duty.

Mr. SPROULE. So it does in this case.

Mr. WADE. Certainly, but, if a man takes a contract to do a certain work on the Intercolonial, the government does not allow him any rebate for duties.

Mr. SPROULE. I think it does.

Mr. WADE. We should speak about these things with knowledge. It is all very well for a gentleman in Toronto to look over a contract, which has passed the legal ordeals that this contract has, and to give his statement that a certain section of it means a certain thing. If the hon. gentleman would be a little more careful before making a statement of that kind, he would not put himself in such a position as he has done.

Mr. HEYD. Did I understand the hon. gentleman to say that section 17 does not

apply until the railway has passed into the hands of the lessees ?

Mr. WADE. That is exactly what I say. It does not apply until it has passed into the hands of the lessees, and until there has been a necessity for betterments which will be, I presume, a matter of at least fifteen years. And in this connection, be it remembered the government is not obliged to spend a dollar in betterments. And, under the terms of the contract the company has not only to maintain the road but to maintain it in accordance with the altered and advanced requirements of railway operation as time rolls on.

Mr. SPROULE. Will the hon. gentleman allow me to ask him a question ? I do not wish to interrupt him.

Mr. WADE. Certainly ; that is all right.

Mr. SPROULE. Would the hon. gentleman, as a lawyer say that, in his opinion the courts, if appealed to, would not hold that under a proper construction of the contract, the estimate of the cost of construction should be reduced by the amount of the duty ?

Mr. WADE. As a lawyer—and I speak in the hearing of lawyers and my words will go on record to be read, if they desire, by the lawyers of the whole Dominion—I say that in arriving at the cost of construction of the eastern division under the provisions of this contract, the Grand Trunk Pacific will not be entitled to have any rebate given or deduction made on account of the articles which have been brought in and which have paid duty. I do not believe a lawyer can be found in the whole Dominion who would give an opinon to the contrary.

Mr. SPROULE. Suppose the articles do not pay duty ? Suppose the contractor takes the position that they are brought in for the government ?

Mr. WADE. There is no authority under the Customs Act, under which that can be done. The only party that can import free of duty is the government itself. Every man who has a contract under the government takes that contract under the liability to pay duty on imported articles used in this contract. It would be just as reasonable to say that a man who has a contract to build a lighthouse on the shore and who has to import material, might say : I am building this for the government and need not pay duty. I wish to assure the hon. gentleman (Mr. Sproule) that I am in earnest in this matter.

Mr. SPROULE. The hon. gentleman (Mr. Wade) is on record, and the future will determine whether he is right or not.

Mr. WADE. Yes, the future will show. Now, I want to refer for a moment to the matter of subsidies. The hon. member for West Toronto (Mr. Osler) said there should be no more subsidies granted to railways. I think that is a very unkind remark coming from him, with his province traversed in every way by railroads which have been subsidized and aided by the government and the road of which he was a director subsidized to a greater extent than any other road in Canada ever was or ever will be. Why, he comes away with his coat pockets stuffed full of subsidies, with his waist-coat pockets stuffed full of subsidies, with his trouser pockets stuffed full of subsidies, with his boot-legs stuffed full of subsidies, and when he has got all that he can carry away, he turns around and says : Stop it ; it is time to bring this thing to an end ; no more subsidies must be granted and no more railroads built.' That is not a position that the people of the other provinces will stand. We want railroads constructed whatever they are necessary for the development of the country, and we are not going to allow him to prevent us from giving proper assistance to these roads. Why what was his own project ? He is assisting in formulating a scheme by which the government would be compelled to pay over to his company $24,000,000 or $25,000,000, to take off their hands an unprofitable portion of his road and also to expend $3,000,000 in betterments of the line. This hon. gentleman (Mr. Osler) said that we had no security under the contract that the Grand Trunk Pacific Company would operate the eastern division. And he told us that he had consulted one of the best lawyers in the province of Ontario. With a good deal of reluctance he gave us that gentleman's name as Mr. James K. Smith. I have looked up Mr. Smith. I must confess that I was so ignorant that I had never heard of him as a celebrated lawyer, or as a lawyer at all, until his name was brought up in this House. I find that he is a very estimable gentleman living in Toronto, who has considerable means and deals in real estate loans and so on. But I am told that he has never been in active practice and is not in active practice to-day, except in foreclosing mortgages and other things of that kind pertaining to his personal business.

Mr. LANCASTER. Would the hon. gentleman (Mr. Wade) permit me to tell him that Mr. Smith is the editor of the Ontario Law Reports.

Mr. WADE. I would like to know how far that goes towards proving that he is an eminent lawyer.

Mr. LEMIEUX. Quite right. Law editors do not practise very much.

Mr. WADE. I do not think, that, if I wanted to employ a lawyer to give me an opinion on a railway contract, I would go to a Law Reports editor, but to an active practitioner who is dealing with the matters to be considered. But what does this gentle-

man tell us ? He tells us in effect, that the only way by which the government can enforce the operation of the eastern division by this company is by selling out the five million dollars worth of rolling stock. Well, I could not imagine that a lawyer would have made that statement until I heard his letter read, and until I had a copy placed in my hand. I have the letter, with the statement referred to over Mr. Smith's own signature. Now, I give my opinion against that of this gentleman, that if the Grand Trunk Pacific fails to operate that eastern division in strict accordance with the terms of the contract and lease, which is to be drawn, the government will be in a position to do one of three things : They can seize, under their mortgage, the five million dollars worth of rolling stock and sell it ; or, they can bring action against the company for the amount of loan and damages, and the measure of damages would be the cost of operation of the road by the government; or, they can, under the terms of an Act which has gone through this parliament this session, and which the learned gentleman was evidently unaware of, go to the Exchequer Court as an ordinary creditor and asked for a decree to have the whole system of the Grand Trunk Pacific put in the market and sold. This gentleman does not seem to keep posted on what is going on.

Mr. TAYLOR. Will it sell for the amount of the bonds ?

Mr. WADE. I will talk about selling for the amount of the bonds in a minute. This new law to which I refer says :

The Exchequer Court of Canada shall have jurisdiction, as regards any railway not wholly within one province, or as regards any section of a railway not wholly within one province, or as regards any railway otherwise subject to the legislative authority of the parliament of Canada,—

(a.) At the instance of the Minister of Railways and Canals, or of any creditor of any person or company owning or operating such railway or section, to order or decree in such manner as it may prescribe, the sale of such railway or section of railway, and of all the rolling stock, equipment and other accessories thereof, whenever such company has become insolvent, or has for more than ten days failed to efficiently continue the working or operating of such railway or section or any part thereof, or has become unable so to do.

First it goes on to provide for order of sale. Then, there is the provision to show when the company shall be considered insolvent. It is considered insolvent in all cases which constitute insolvency under sections 5 and 6 of the Winding Up Act. I have not the exact wording as it left the committee of this House and cannot state just how it was finally worded. But one thing is certain, that if it suffers judgment to go against it and execution to remain in the hands of the sheriff for a period of thirty or sixty days (I think) that is an act of insolvency, and, that act of insolvency having been performed, the government can, as a creditor, go to the Exchequer Court and ask for an order to sell the whole railway. If that is done what is the result ? In the first place the Grand Trunk Pacific has to lose the $20,000,000 which it has put in for rolling stock. The result is that the Grand Trunk Railway is going to lose 25 per cent which they guarantee towards the construction of the prairie and mountain sections. That is all gone. The government can step in and buy that road and they would have the road, plus the $20,000,000 of rolling stock, for the cost of the road less the rolling stock. Perhaps it may be said that the Grand Trunk Railway would bid the price of the road up so as to cover the cost of the bonds that they have guaranteed. Granting that they did that, and they had to pay the bonds, then the government would pay no more and no less than what the road actually cost and they would have $20,000,000 in rolling stock for nothing. I would ask the hon. gentleman what further security could we have than that ? Is not that ample security and does this justify him in making the statement he has made ? These are about all the criticisms of this contract that I have seen made and which I deem it necessary to reply to.

I must apologize, Mr. Speaker, for detaining the House so long, but this subject is a vast one and one that cannot be considered in a moment. There has been a great deal of time taken up in the discussion of this measure, but I think it is time well spent. It is cerainly time well spent in the interest of the government, because every day that this matter is under discussion it is being demonstrated with more certainty that this is a marvellously good contract in the interest of the Dominion of Canada. While it is a good contract in the interest of the Dominion of Canada, I believe it will be a good contract in the interest of the Grand Trunk Pacific Railway Company. It would not be a good contract if they were going to run a small, picayune business, but if they are going to inaugurate the system they promise us, they will then have a contract which will be profitable and beneficial to them. One of the effects of this scheme is that the capital that is going into it is British capital, capital that is content with a moderate earning and that is a matter of very great importance. I heard one of the best railway men in Canada make the observation the other day, and mark you he is opposed to this scheme for personal reasons, that it was useless to talk in this day about operating a transcontinental railway unless you have ocean connections. What would the Canadian Pacific Railway do to-day if it had not its connections on the Pacific coast and if there is going to be no profit in the hauling of grain, if there is going to be no benefit derived by the Canadian Pacific Railway in

the running of their road out into the Northwest Territories, I would ask hon. gentlemen why did the Canadian Pacific Railway within the last two months acquire a line of steamships upon the Atlantic? They only acquired that line because they could not operate that road without it. They must have their line of steamships there just the same as they have their line of steamships on the Pacific Ocean. We cannot tell, we can only imagine the increase of the trade that is going to take place on the Pacific coast, and I believe that this Grand Trunk Pacific Railway Company is destined to have a brilliant future.

At all events, Mr. Speaker, I have faith in this Canada of ours. We are all working together with a common purpose, we are feeling in these days the pulsations of nationhood, we are no longer satisfied to occupy a lesser and meaner position. We have in this country determined to work together to develop our great resources which God has blessed us with, and I say it is the duty of every Canadian to put aside for the moment his party politics and to come forward and assist in carrying through this great work. Some hon. gentlemen have stated that this is the crowning act in the life of the right hon. leader of the government. I cannot agree with that. It is a crowning act, no doubt about that, it is a great accomplishment on his part, but to my mind the crowning act in his life, as I believe history will show, was when he broke down racial and religious barriers; when he united Canadians in the province of Quebec, in the province of Ontario, and in the provinces down by the sea and the west, in a common brotherhood; and when he taught them by his example to go forward and develop this country and give it the place in the galaxy of nations forming the British empire that God and nature intended it should occupy.

Mr. W. R. BROCK (Centre Toronto). Mr. Speaker, rather an unfortunate circumstance to myself in rising to reply to the speech that we have listened to for the last three hours or more is the very important fact that to reply to the lengthy speeches that we have had on both sides of the House during the last ten days would require some one with a great deal more physical strength and ability than I possess. The hon. member who has just resumed his seat (Mr. Wade) has given us an exhibition of his desire to have good feeling prevailing from one end of this Dominion to the other. The first hour of his speech, and I leave it to the House to decide as to whether I am correct, was taken up in a deliberate attempt to create those very feelings which he says the right hon. the Prime Minister has attempted to allay. To work up the enthusiasm of the maritime provinces he tells us that whenever the maritime provinces made a demand for anything it was resisted by the provinces to the west, that the residents of the maritime provinces have never had anything but resistance, and that the rest of the Dominion has always opposed them. I contend that such is not the case. I contend that there is no feeling throughout the rest of Canada as against the maritime provinces. I have lived as long in this country as the hon. gentleman has. I have met as many residents of Canada as he has met, I have lived among the citizens of the province of Ontario, I have gone in and out amongst them, I have been doing active business amongst them during the last forty years, and I can assure this House and this country that the statement made by the hon. member for Annapolis is absolutely incorrect. He speaks of the crowning act of our Premier's life. Nobody will be more delighted, nobody will be more pleased than I if the right hon. Premier would crown the various good acts of his life by doing now what he promised to do a few weeks ago; that is, that he would place this whole matter in the hands of a transportation commission, which would take into consideration the wants of this country in the matter of transportation by water and by land. It was promised that they would take the whole matter into consideration, that they would receive expert evidence, that they would report the result of their investigations, that the report would be laid before the House and that we would then act upon it. I am told the right hon. the Prime Minister has made the appointments to this commission. I merely see it in the newspapers. We asked across the floor of the House yesterday as to whether these appointments had been made, but the acting leader of the House at the time stated that he would rather leave the matter to the right hon. Prime Minister.

The PRIME MINISTER. Does the hon. gentleman (Mr. Brock) refer to the transportation question?

Mr. BROCK. Yes.

The PRIME MINISTER. I am sorry that I was not in the House this morning when the routine business was discharged; otherwise I would have informed the House that we have appointed a commission, to be composed of Mr. John Bertram of Toronto, Mr. Reford of Montreal, and Mr. Fry of Quebec.

Mr. SPROULE. That is locking the stable after the horse is stolen.

Mr. BROCK. We are not, from this side of the House, going to offer one objection to the composition of the commisison. It is my pleasure to know two of the gentlemen very well. I have every confidence in them, and if the Prime Minister will now place this great matter of transportation in the hands of that commission, and let them receive evidence and report upon it, I think I can say that they will get every assistance from this side of the House, and

the Prime Minister will get every assistance from us in having the report of that commission carried out. I do not think that is an unfair proposition. These gentlemen were appointed by the government and if the matter is now referred to them they will take evidence and report upon it, and this side of the House will join with hon. gentlemen opposite in carrying out the report they make.

The hon. gentleman (Mr. Wade) who has held the attention of the House for the last three hours, endeavoured during the first hour of his speech to make it as unpleasant as he possibly could for us on this side of the House. After trying to create difficulties between the two provinces, he then attacked individuals; he attributed motives—motives that if true would be most unworthy. He made the statement that when the leader of the opposition announced this scheme of his through-connections for a transcontinental road, Mr. Osler, a director of the Canadian Pacific Railway had used his influence with the leader of the opposition to get him to relieve the Canadian Pacific Railway of an unprofitable part of their system. The hon. gentleman (Mr. Wade) had no right to say anything of the kind. Mr. Osler is known and favourably known from one end of this Dominion to the other. No greater insult could be offered to the friends of Mr. Osler who know him well—and I believe gentlemen on the other side of the House know Mr. Osler well—than to say that he ever used his influence in any manner whatsoever for such a purpose. If the hon. gentleman (Mr. Wade) had a good case, why was it necessary for him to impute such motives to gentlemen who stand high, not only in this House, but throughout Canada. Then the hon. gentleman (Mr. Wade) paid a little attention to myself. It appears that when a certain statement was made from the other side of the House, I referred to it as a humbug. Well, I am going to stand by that; I don't make statements unadvisedly.

Mr. CLARKE. It is parliamentary too.

Mr. BROCK. I suppose it is. When I used the expression the Finance Minister was reading a survey of the exploration of northern Ontario which he called a report. Now, we are discussing a great transcontinental railroad to be built from Moncton to the Pacific coast, a most important undertaking, and the Finance Minister after reading from the introduction of this report, went on to speak of this country as having been explored and having been examined, and he argued that such a road as that described by the member for North Norfolk (Mr. Charlton) could be built through this country at a reasonable price; I think he said $25,000 or $30,000 a mile. I said that was humbug. Those who went into that part of northern Ontario did not do so to survey for a railroad from east to west, and they have made no report about such a project at all. In fact, if we had such a report I feel confident that the government would change the location of their railway and adopt the plan of the leader of the opposition. The hon. member for Annapolis denounced me in strong terms, but with these remarks I leave him in the hands of the House.

There has been some little talk about loyalty and some little talk about disloyalty. Well, people can be disloyal without being personally disloyal. They can be disloyal to the best interests of Canada without being personally disloyal. We have gone through strange changes in this country. I am old enough to have listened to some magnificent speeches from Liberal leaders favouring unrestricted reciprocity. But now, their cry is: We must have this road built right away, there is no time to be lost or the Americans will jump upon us and do away with the bonding privilege. But when the right hon. the Prime Minister advocated unrestricted reciprocity with the United States, what was he doing? He offered to pour the whole wealth of this country of ours over the border; he offered that the Americans should pour into this country their manufactured goods to the utter ruin of every manufacturer in Canada. That was the meaning of unrestricted reciprocity, and he advocated it with his eyes open. Don't let him talk any more about disloyalty. There never was a more disloyal scheme sprung on this country, but fortunately the people of Canada knew their own interests too well to endorse it.

The member for Annapolis said amongst other things, that this project of the government was absolutely necessary to maintain this country in its present condition; that we were two disjointed sections, separated by a hiatus of 1,000 miles. Well, Sir, the day has gone by when Lake Huron and Lake Superior can be called separating barriers. I say on the contrary that they join us together. We have the best kind of communication with that country every day over these great inland waters, and when members on the other side say that we are separated by these waters they are making a big mistake. You will excuse me, Sir, if I give my views in a somewhat disjointed way, because I have not had that legal training that would place me in a position to answer such an eminent legal light as the member for Annapolis. The hon. gentleman told us that the possibility was that the people of our Canadian west might join their fortunes with the people to the south of us. Well, I don't believe that there was ever any possibility of that. Better British subjects than those in the North-west do not exist anywhere in Canada; they are not only thoroughly loyal to Canada, but what is more, they are thoroughly loyal to their own interests. They know

that the whole Dominion is just as much bound up in their prosperity as they are themselves. They will have no cause to complain of our conduct towards them, and there is no object in gentlemen on the other side trying to raise issues of that kind to bolster up a bad case. I think I heard some call this proposition of the government an hysterical scheme, which was rushed into without proper consideration. But, Sir, when I heard the contract read, I could see that there was a guiding hand to it, and I could understand the wisdom of Mr. Hays refusing either to build the railway proposed by the government, or to pay any rent for it, for seven years at any rate. He did consent, and I do not think it required much pressure to make him consent, to build a road from Winnipeg west, and to accept from the government a guarantee of $13,000 per mile. I do not think he refused to do that. But somebody has said that the days for bonuses to railways have gone by. They have. The days for granting bonuses for railways through the wealthy and settled parts of these provinces have gone by. If you are going to grant any assistance, it should be to open up new country. Now, let us see what was the first project sprung upon this country—I think it was through the 'Globe' newspaper—by the Grand Trunk Company; the hon. Finance Minister rose upon his toes and said to the old Grand Trunk. Let us see what the old Grand Trunk were going to do for the country. They were going to connect their system via North Bay with the great west, opening up a country north of Lake Winnipeg, and thence to the Pacific. The hon. Minister of the Interior was hunting about for authorities to show who were advocating the Grand Trunk Pacific, and he read several interviews, one by my hon. friend from West Toronto (Mr. Clarke), and another by myself. Mr. Clarke can take care of himself. The hon. Minister of the Interior quoted me as saying that I was delighted that the old Grand Trunk were going to continue their system through the west, north of Lake Winnipeg and on to the coast. He quoted my approval of that scheme as an approval of the present scheme of the government. True he had to take it back; but it showed his animus; it showed what he wanted to do. I may again have to quote the hon. Minister of the Interior, and I am very sorry he is not here.

Now, this matter has been before this House and before the country for a great many days. We have now two schemes before the House and the country. We have that of the hon. leader of the opposition, a scheme which somebody has said he developed in eighteen days. Well, I consider that he has done good work in that time. He has merely outlined a scheme, and that scheme will commend itself to a man of business, who honestly sits down and studies the situation, taking into consideration the conditions and the wants of Canada. One of the great needs of the day is to place ourselves in the position to bring the grain of the west as far east as we can, through Canadian waterways and over Canadian railways to Canadian ports. That is the project placed before the country by this side of the House; and, mark you, if the country spends its money upon that project, the country is going to own it. We are not going to wait for eight years before we get any return. We have not got to pay the expenses of these roads for seven or eight years; we have not to lie out of our interest for that time. From the very day the arrangement is made, and these railways are taken over, they will pay their way. There is no doubt about that. With regard to the much talked of line between North Bay and Fort William, over which one railway is running at present, it is said that that piece of road cost $60,000 a mile. The present government propose—may I say to parallel it?—to build a railway some fifty or one hundred miles north of it, which also they will find will cost them $60,000 a mile. Then there will be two railways there which will have cost $60,000 a mile each. The owners of the Canadian Northern system want to bring that railway down to the eastern part of Canada. If they do, they will have to build another railroad at a cost of $60,000 a mile; and the Grand Trunk Pacific, or the old Grand Trunk, wanting to get into that country, would also have to build a railway at the same cost. So you would have four railroads running through that country, all of them costing about the same amount of money. The proposition of the hon. leader of the opposition is to combine these four railways, giving them all an equal right to run over that road, and thus to diminish to each the expense of haulage. Do you mean to tell me that is impossible? Railroad corporations are business corporations. When the Canadian Pacific Railway Company undertook to build a railway from Toronto to Hamilton, how were they met? They were met by the Grand Trunk Company, who said: Cannot we make an arrangement and save you something and save ourselves something? And the Grand Trunk and Canadian Pacific Railway Companies, by a friendly arrangement, both used the tracks of the Grand Trunk from Toronto to Hamilton without any difficulty. And yet, it is said that the Canadian Pacific cannot make a satisfactory arrangement to allow these other railways to run over their line. I believe the Canadian Pacific Railway Company might not be able to do so. The plan of this country is not to let the Canadian Pacific Railway Company have all the say, as the government are allowing the Grand Trunk Pacific Company to have all the say. The plan of this country is, either by expropriation or by fair terms agreed upon,

to make the proposed arrangement. It is just as much in the interest of the Canadian Pacific Railway Company to have the expenses of that line divided up among the other railways as it is for the other railways to have running powers over it; and it is all in the interest of Canada that all these railways shall be controlled by the government of Canada.

There is a matter in connection with the country from Quebec to Winnipeg which I think is worthy of examining for a little while. We have heard some reports upon it quoted. I may say that some five years ago I had the honour of being appointed by the mayor and corporation of the city of Toronto as one of a commission to have an investigation made of the capabilities of that very country. Mr. Lyman Melvin Jones, the present senator, was another, along with Mr. Herbert Mason, Mr. Robert Davies and Mr. George Gooderham. We came to this House and got a charter in our own names on behalf of the city of Toronto. We sent an exploring party of surveyors up to investigate that country. Have you heard of a road being built since by the wealthy city of Toronto? Some of our friends speak of Toronto as 'Hogtown'; if it were going to be such an advantage to us to open up that country, if there was such a magnificent clay belt there, and if it was so rich in minerals and timber, why did not the city of Toronto have a railway built into it? I believe the time will come when it will be built for a certain distance; that is, a colonization road. That is the only way you can colonize that country—you have to aim at the fertile spots. It is no use to build a railway 1,800 miles long to wabble about through that country to find its fertile spots. You cannot even locate your stations in the morasses up there. I know the kind of treatment given to any one who wants to tell the simple truth about that country. One of the worst services you can render it is to deceive the people about it. Many people who went to northern Ontario to settle have returned. I do not say they have returned from the best parts of it. They may have been disappointed, and got bad land; but they came back telling sad stories about the winter they passed in northern Ontario. There is, I believe, very good land westward from Lake St. John; but this projected road does not go within 100 or 150 miles of that land. Remember that this is north of the height of land. This is not on the south side where there is any timber, but you have to go north of the height of land; and I was rather surprised to hear the hon. member for Annapolis (Mr. Wade) speak of its being in the Artic region himself this morning. The hon. member for North Norfolk (Mr. Charlton), understands all about timber and timber limits. He knows how closely people investigate timber limits. Would the hon. gentleman put $100,000 into a timber limit in that country on information which the right hon. gentleman the First Minister deemed sufficient to warrant the building of this 1,800 mile railway? Would he, supposing there were any timber limits up there send up $100,000 to buy a timber limit, without any investigation? Would he change his mind in going from one room to the other with regard to timber limits as he did with regard to this scheme when he suddenly became converted from an opponent into a strong supporter of it?

Mr. CHARLTON. I shall be happy to answer the hon. gentleman. He asks if I would be willing to put $100,000 into a timber limit in the country though which this road is to pass without examination. I answer no. But I am satisfied, with the information I have, that this road will open up a great many timber limits worth more than $100,000; and as soon as that road is projected and well advanced in construction I shall go in there and buy timber lands.

Mr. BROCK. The hon. gentleman is perfectly willing that the country should spend $50,000,000, $60,000,000 or $70,000,000 on information on which he would not buy a timber limit. There is no doubt about that. The hon. member for North Renfrew (Mr. Mackie) also endorsed this scheme. He has travelled through that country, he has been in a great many parts of it, but not as a railway builder, not with the view of investigating whether we could get there these magnificent grades, without which the hon. member for North Norfolk told us the road would not be any good. Twenty-one feet to the mile or four-tenths of one per cent, I think, was his idea of the grade. Unless they could get that grade, unless it was a first-class road, unless it could carry 2,000 tons to the train, it would be no good. On my responsibility as a member of parliament, and as one who has obtained everything he has in this world in this Dominion and in this province, I say that a worse scheme has never been devised. It has been called a mad scheme. I have no right to impute improper motives, and have no intention of doing so, but I will say this, that if it be a good scheme, I am strongly in favour of government ownership. The government money is going in to build that road from Moncton to Winnipeg. The government are building that road through a country concerning which we have very little information. When the hon. member for Annapolis (Mr. Wade) says that a grade can be got in that country such as the hon. member for North Norfolk makes compulsory, he says that a grade can be found which no engineer has ever yet discovered there. The engineers may find such a grade; but if they do, as my hon. friend from Pictou (Mr. Bell) has said, they will, in order to go a distance of three miles, have to cover twenty-two miles. But I have not got through with that North-west country yet.

I have here the report of a gentleman given as to the quality of that country. He says it is 400 miles in extent. That is a pretty good length to build a railway through. Then he proceeds to say :

> Then we have sections 10, 11 and 12 at the other end of the line, which do not constitute a country which we can call an agricultural country. The last 300 miles, or probably 400 miles, of the line is in a country which it cannot be successfully asserted is likely to be a country which will amount to very much as an agricultural country. There are occasional patches of good land along the water courses, but they are not large in extent.

This is not the language of an opponent of the government. It is not the opinion of a man who is looked upon as unfriendly to the government. It is a statement made by the hon. the Minister of the Interior (Hon. Mr. Sifton). I do not think that the right hon. the Prime Minister can possibly have looked into this matter as he should have done before launching it on the public.

The government started out this year early with another proposition which the Prime Minister did not propose off his own bat, but after deliberation. They started out with a scheme to solve the great transportation problem by land and water. They were going to appoint a commission of experts who would take evidence. There was no talk then of building this road at once. There was no talk about the abrogation of the bonding privilege ; they were going to take time to deliberate and report. In what position is that commission ? In what position is the government at present ? They surely have not appointed men in whom they have no confidence. Should we not take it for granted that the men they have appointed are men in whom they have every confidence ? I know two of them, and will bank upon them myself. I believe that they will do what is right and honest. I would like to have those three men investigate this scheme from Moncton to Winnipeg and submit a report to this House, and I know that they will not bring in a favourable report unless the scheme is a good one. We should have their investigation and report before committing ourselves to this project. Let the government hasten slowly, and have confidence in its own commission. The opposition do not ask to be represented on that commission. The right hon. gentleman must show his confidence in his own commissioners, or how can he expect the country to have any confidence in them or him ? Let this project go before that commission, let the commissioners take evidence and report, and let the right hon. gentleman, if necessary, call an extra session to receive and consider that report. Let the government place plenty of money at their disposal for surveys, and let these commissioners find out whether we can build such a road through this country as the hon. member for North Norfolk says we must, or if not wipe the thing out altogether.

Mr. CHARLTON. Suppose we find out in the meantime, within the next month perhaps, that we can get just such a line as we want, with four-tenths of one per cent grade ?

Mr. BROCK. This scheme, we are told, is very intelligible ; and to show how intelligible it is, the government have placed a map on the Table. This map was brought down here to show that the scheme is feasible and practicable, but I defy anybody to make anything out of that map. All the lines run north and south. There are none running east and west to show that the country has been examined from a railway point of view. The great difficulty about the whole thing, I am afraid, is that our respected Premier has not given it the attention he should have. Internal trouble in the cabinet and quarrels in the Council Chamber have probably urged him forward. I do not mean to say he did it to get rid of any of his ministers, but that he was urged into hasty and ill-considered action by the troubles he found rising about him. And I believe he will live to seriously regret what he has done. We have had a good deal of detraction by some hon. gentlemen opposite of very important members of this House who sit on their own side, including efforts to impute motives to these gentlemen. Members of this House who, for years have applauded the ex-Minister of Railways, now get up and find fault with the members on this side because, after being silent all these years we did applaud that hon. gentleman. We did applaud him, and this country is applauding him for the position he took. But it comes with very bad grace from those whom, in many cases he has almost made, to speak of him as they have done. I cannot forbear to refer to one gentleman particularly. He came into this House with a great flourish and was spoken of as an acquisition to our membership. His scholarly attainments were praised in advance and we were led to hope great things of him. I refer to the hon. member for Hants (Mr. Russell). This hon. gentleman sought to belittle the ex-Minister of Railways. The hon. gentleman ought to know that he does his own side no good by attempting to belittle one who has acted with them all these years. Suppose that a merchant had a man in his employment, who, after twenty years of service decided to make a change, would that merchant raise himself in the estimation of others by seeking to belittle the man who had been with him so long ? After having approved him for twenty years, would he win approval by speaking of him as unfit to tie his shoes ? Nothing of this kind was required from the hon. member for Hants. We will not impute motives, but we will watch and see what the result will be.

I wish to draw attention to one matter in connection with this new commission. It is fair to do that, so that it may be known where we are. One member of this commission is strongly committed to the scheme of the Prime Minister now before the House. I do not know whether he would have been appointed if he had opposed it. If the commission will investigate and promise to report on the schemes on their merits notwithstanding all that has been said, we on this side are perfectly prepared to place ourselves and the interests of the country in the hands of this commission. I think that under the circumstances it will be an evident sign of weakness, or obstinacy, which is very often weakness, if this offer is refused. But if it is not accepted I think the duty of the Prime Minister, as soon as he can get through with the business of this House is to give us an appeal to the country. We are prepared for it. We are prepared to go before the country and let the people choose between the schemes placed before them. I know what the result will be. Efforts are made to show that public opinion has expressed approval of the government's scheme. The Minister of the Interior showed that certain resolutions had been passed by boards of trade, or rather by councils of boards of trade. I have been a member of the council of a board of trade for twenty or thirty years, and I know that most extraordinary things have got through that council. All you have to do is to have a friend or two advised to attend the meeting, and it is wonderful what you can get through. Of course, you must take good care to bring the matter up in the absence of those who are opposed to it. Somebody once said that he could get petitions signed to have the signers' grandmothers hanged. And so you can arrange to have almost anything approved by councils of boards of trade. Those who passed this resolution probably did not have these two schemes before them. And, like some other people, in the innocence of their hearts, no doubt, they placed some dependence on the statement of the Prime Minister that he had mountains of information about the country through which this road is to run. They supposed, not that he had read a few old reports, but that he had something reasonable in the way of definite information to show we could build a road through that country. It is of no use to tell us that carrots and cabbages grow at a certain point in that northern country or that oats will ripen in some portions of it. The proposition is to build a railway, and to build a railway such as was described by the hon. member for North Norfolk (Mr. Charlton), who spoke with authority as to the character of the road required. You need to tell us something more than that cabbages can be grown in that country before you can convince the people of Canada that they ought to build that road.

I must draw these disjointed remarks to a close. I wish they could have been stronger; I wish they could have been strong enough to impress the minds of hon. gentlemen on the other side. I have only to do the best I can, but I think I may fairly say that in making any statements, I have not made them for political effect, or to benefit any political party or any province or section. There has been a little too much of that kind of thing in this debate from the very first. I was in the committee room when this road from Quebec to Moncton was forced on Mr. Hays and upon theh committee. The hon. member for Cumberland (Mr. Logan) made a most eloquent appeal and let the government know pretty plainly that this road must be made a part of the scheme. So it was that we got to Moncton. In the first place, Mr. Hays did not want even to build the line from North Bay to Quebec. The fact that Mr. Hays accepted these propositions one after another naturally arouses suspicion that he was looking to work something in by which he would be made pretty safe. And I think that when the contract comes to be carefully analyzed in this House it will be shown where Mr. Hays will be able to slip out and let the government in. Of course, I won't set up my opinion against those of the clever lawyers who have spoken. But opinions have been asked, and I believe, given, and by pretty clever lawyers too, pointing out just how this can be done. I do not wish you to think, Mr. Speaker, that I am by any means attempting to explain the scheme of the leader of the opposition. That hon. gentleman and other members who are better aware than I am how matters can be arranged in connection with the legal difficulties that may arise, will lay the matter fully before you and before this House. But it seems to me a feasible scheme. As I said, the roads are now in operation, and directly the government takes them over they become a paying proposition. We are not to keep running these roads for seven years and lie out of our money during that time before we get any return. Therefore, deliberately and with the best knowledge I have, I give my preference to the scheme which has been presented by this side of the House rather than to this most extraordinary proposal which is being pressed upon this House by the government.

Mr. A. MALOUIN (Quebec Centre). (Translation.) Mr. Speaker, at this stage of the debate, I do not propose to speak at any length. I only wish to offer a few suggestions and to give my reasons for supporting the railway policy submitted by the government. This scheme for the building of a transcontinental railway, which is now before the House, has, I think, been considered with care and is worthy of our approval. In the first place, it has, from its inception, met with general commenda-

tion throughout the country. We all remember that in October and November last, when the Grand Trunk Pacific made public its intention of forming itself into a company for the building of a railway to the coast, the whole press of the country, in giving the news, stated that the undertaking was one of absolute necessity and which would be of the greatest service to Canada. However, two companies were in existence at the time requesting help from the government for the carrying out of such an undertaking. When the scheme for the building of a transcontinental railway was brought forward, all admitted that the plan was a good one and should be carried out. It was recognized by all that before long we should have another railway across the continent.

Subsequently, came the opening of this session ; and the promoters of the proposed Grand Trunk Pacific Railway Company came before parliament and asked for a charter authorizing them to carry out the undertaking. So, the matter was brought up before the House, and later on before the Railway Committee.

When the scheme was first made known to the public, the starting point was to be North Bay, that is it was to run from North Bay westward to the coast. Then, it was decided to alter the location for the purpose of meeting the wishes of the people of the maritime provinces and of Quebec. In submitting the matter to the Railway Committee, the promoter of the Bill (Mr. McCarthy) thought proper to move an amendment providing that the proposed road should be extended in direct line to Quebec, and from Quebec to the maritime provinces. That amendment was carried. In accordance with that amendment, the road was to be built wholly on Canadian soil, thereby benefiting all the provinces of Canada. At the time, the scheme was received with pleasure, not only by the Liberal members, but by the Conservatives as well. We are all aware of the discussion which took place on that Bill before the committee, and which lasted for three long weeks. I remember that those who exerted themselves the most to secure the passing of the Bill, which was finally agreed to, and is now known as a Transcontinental Railway Bill, were members of the opposition, and among others, the hon. member for Montmorency (Mr. Casgrain), who was very tenacious on behalf of the scheme. Before the committee, the hon. member for Montmorency, thinking that the motion made by the hon. member for North Simcoe (Mr. McCarthy) had solely for its object to deceive those who were in favour of the extension of the road eastward, urged that the various sections of the railway should be constructed simultaneously.

The hon. member for Annapolis, as we all remember, introduced a motion which has since been designated as the Wade motion. That hon. member, in common with the other representatives of the maritime provinces, believed, at the time, that the intention was to frustrate their expectations, and accordingly this famous motion was drafted. As I have just stated, the hon. member for North Simcoe had moved an amendment providing that the said transcontinental railway should start from Winnipeg and run by way of Quebec and Moncton. With a view to ensuring the construction of that part of the road, Mr. Wade moved :

> Provided, however, that the work of construction on the Quebec section and east of Quebec be commenced at or near Quebec, and carried on simultaneously east and west, and that the said sections be operated at the same time, and no such section shall be operated without the other.

So that the desire of the hon. member for Annapolis was that the Quebec section and the Moncton section should be built simultaneously.

In the course of the debate, the hon. Minister of Finance suggested that it was not customary to lay down such terms in granting charters to private companies. He added : Should the government decide to grant some help or other towards building the road, they would be careful to lay down conditions which would ensure its construction. The hon. member for Annapolis complied with the request of the Minister of Finance and agreed to withdraw his motion ; but the hon. member for Montmorency, who was posing as the champion of the interests of Quebec, took exception to the withdrawal of the motion and a vote was taken. The member for Montmorency, and the member for Laval and Nicolet voted in support of the Wade motion. By that vote they have given their assent to the principle that the railway should be built, not only to Quebec, but as far as Moncton. As for us, representatives of the province of Quebec, we voted against the motion on the ground that we did not wish to lay a heavy burden upon the company before it had received any help from the government. We said : When the government will have made up their minds to help the company, it will be time then to exact terms ; but until then the company should not be interfered with. The hon. members for Montmorency, Laval and Nicolet said : On the contrary, the company should be bound at once. These gentlemen laid down the principle that the line should be built immediately and an exceedingly heavy burden put on the shoulders of the company, a burden to which it is not customary to subject them. But the Conservative papers of the province of Quebec did all in their power to make it clear that the undertaking in question was of vital importance for the whole province ; and at the same time, they taunted the members

from the district of Quebec for not having voted in support of the Wade motion.

In the course of this debate, the views expressed by newspapers in Ontario and various other provinces have been quoted to show what public sentiment was in the various localities. Let me quote, now, from the Quebec 'Evénement' to show what was the sentiment of the press there at the time. But, before I give these extracts, let me state that the 'Evénement' is the chief organ of the Conservative party in Quebec. It holds the same position in the district of Quebec as the 'Mail' and 'Empire' in Ontario. It is the property of Senator Landry and of Mr. L. P. Pelletier, who was recently selected as organizer of the Conservative party in the province of Quebec. Let us see what views that paper expressed in regard to the Grand Trunk Pacific Bill; for it should not be forgotten that the scheme submitted to the Railway Committee is identical to that brought before this House by the government and which is now under discussion. Neither should it be forgotten that it was distinctly understood with all the members that the government was to grant help to the Grand Trunk Pacific scheme. Now, Sir, what happened? The Wade motion was negatived by the committee. Immediately the 'Evénement,' on June 6, published the following article intituled: 'Where are our representatives?'

> We urgently draw the attention of our readers to the report of yesterday's meeting of the Railway Committee.
>
> Where are our representatives?
>
> Once more, where are they?
>
> Mr. Casgrain fought valiantly, but who supported him? No other name is mentioned from Quebec.
>
> It is obvious that the Grand Trunk Pacific intends to deceive us.
>
> Why should they reject amendments intended to protect Canadian ports, if they really wish to build a national line?
>
> Sir Wilfred Laurier said the other day that great corporations easily evade legislative enactments.
>
> That is a further reason for making these stronger, and requiring additional security.
>
> Quebec will be left aside once more, if the company is not bound to carry on the work simultaneously eastward and westward from the city.
>
> That is the object of the Wade amendment, and we are thankful to Mr. Casgrain for eneré getically upholding our claims. The member for Montmorency stated that should the committee reject that amendment, he would submit it once more to the House.
>
> We notice with pleasure the courageous stand taken by the representatives of the maritime provinces, who, heedless of party allegiance, insist on their rights being recognized. Their interest is the same as ours. What force would they not have altogether if the members from the Quebec district joined them. We have twenty representatives, and Mr. Casgrain is the only one to fight our battle.

Those are the words of the 'Evénement,' the chief organ of the Conservative party in the district of Quebec. As regards ourselves, we deemed it inopportune to subject the company to unusually burdensome conditions before the government had decided what measure of help they would extend. But, Sir, is it not obvious that hon. members who, like the member for Montmorency, supported the Wade motion, concurred at the same time, and without reservation, in the principle which lies at the very foundation of the scheme submitted to this House? In the same issue of that paper, its Ottawa correspondent, who was no other than the member for Montmorency himself, or Senator Landry, wrote as follows:

> Since the last meeting of the committee, the representatives of the Grand Trunk have met a certain number of members from the maritime provinces, and agreed to the line being built from Quebec to Moncton, and from that point connect with St. John and Halifax, by way of the Intercolonial.
>
> But that has not given satisfaction to the other members from the east, and Mr. Wade has moved an amendment, with a view to bind the company to build its line from Quebec to Moncton and from Quebec to Manitoba simultaneously.
>
> Mr. Casgrain has gone over the history of the Grand Trunk Pacific, and shown that the company intends to extend its line outside of Canada, and have its winter port at Portland. It was only after a great deal of agitation in Quebec that the location was changed from North Bay to Lake Nepigon and thence to Quebec. That last link passed through an impracticable country, and he did not believe the company were in earnest, even if they should start building the section east from Quebec. He has in hand information which goes to show that the people in the east will be deceived. The Dominion government should not vote one dollar before the company gives indisputable pledges of its good faith. Mr. Casgrain adds that should the committee reject Mr. Wade's amendment, he will introduce a motion on similar lines in the House, so as to have a vote on the question.

That is what the member for Montmorency or Senator Landry wrote in the 'Evenement,' as that paper's correspondent.

To carry out his promise, the hon. member for Montmorency gave notice, that same day, that, on the Grand Trunk Pacific Bill being called for its third reading, he would move as follows:—

> Provided that in the event of the company receiving from the Government of Canada any assistance, either by way of subsidies, moneys, land grants, guarantees, loans, or in any other manner whatever, the work of construction on the Quebec section be commenced simultaneously with the work on the woodland and prairie sections, and be completed and put in operation simultaneously therewith and before the Company exercise any of the powers conferred upon it by section 33 of the present Act in respect to 'lease and running powers over other railways.'

So, the hon. member for Montmorency was exceedingly anxious that this part of the road should be built. He threatened to move that the company should build the Quebec

section at the same time as the woodland or prairie section.

The campaign carried on by the 'Evenement' may, I think, be of use later, when elections are on (I know not when). In the meantime, let us look into the statements made by that paper, in the name of its party.

On June 4, the 'Evenement' stated :

THEY ARE AGAINST US.

Yesterday, we put the question : 'Where are our representatives ?' The answer came to us yesterday afternoon :

THEY ARE AGAINST US.

Mr. Casgrain did not flinch to the last. He kept his word. He insisted on the Wade amendment being put, whereby the Grand Trunk would be forced to build from Quebec eastward at the same time as elsewhere ; and three members only from Quebec district voted with him.

Here is the vote as regards the province of Quebec :

FOR THE RIGHTS OF QUEBEC

Casgrain, Pope, Morin, Talbot, Bickerdike, Fortier, McIntosh and Léonard.

Sir, all the members were at one with the 'Evenement' on thinking that the Grand Trunk Pacific scheme was the only good one for Quebec and that, should it fail, the welfare of the province would be imperilled. After giving the names of those who voted against the Wade motion, among whom I was, the 'Evenement' goes on to say :—

Let us not forget these names.

We say : The rights of Quebec, and we are justified in so saying.

Who went to the pains of showing that the location running through Quebec is not the best in the general interest of Canada ? Not one. If what is required is a national route favouring Canadian ports, in winter and summer both, it will be felt by all that the Quebec route is the right one. Verbally, the Grand Trunk agrees to this location. But Mr. Laurier has warned us that great corporations easily avoid fulfilling their pledges. It was in order to prevent such an occurrence that an effort was being made to bind the Grand Trunk as tightly as possible. And our representatives have not even had the courage to safeguard our interests.

At that time we were lacking in courage because we would not vote in favour of the Wade motion ; but if these gentlemen have any courage themselves, they will support this scheme of the government, since it is practically the same as that submitted to the Railway Committee.

The 'Evenement' has a further reference to the matter on June 9. But the hon. member for Montmorency, judging that that paper was not going far enough in support of his position, wrote to the 'Journal,' of Montreal. In that article he gave himself as favourable to the scheme and severely criticised the members of the province of Quebec who had not supported the Wade motion. Some time has elapsed since, and the hon. member for Montmorency, for some months, has disappeared from the political arena.

Before proceeding further, I must say that the hon. member for East Grey (Mr. Sproule), always takes such an active part in the debates of this House, was on the alert when the discussion I have referred to took place before the committee. He followed the debate on the Bill and voted against the Wade motion, on the ground that it was not comprehensive enough, referring only to the Quebec and Moncton sections. After the vote had been taken, the hon. member moved the following amendment :—

The company shall build simultaneously all the sections east of Winnipeg, until they are wholly constructed.

That is to say, the hon. member for East Grey also approved of the scheme under discussion by moving that all the sections east of Winnipeg be built simultaneously. How is it that to-day he has such a poor opinion of the scheme propounded by the government, whereby they propose to build that very road referred to in the Bill in accordance with the McCarthy motion. The only difference of opinion which existed between us at the time, was that we did not think it fair to force the Grand Trunk to build simultaneously the various sections from Winnipeg to Moncton, but we did not object to these works being carried out.

Pressed from all quarters by resolutions voted by the boards of trade of all the cities in Canada, the government decided to undertake themselves the construction of that road. There were three plans to select from. First, the Grand Trunk Pacific scheme; then, that of the Trans-Canada, and also that of the Canadian Northern. After duly considering these various plans, the government, and rightly so, I believe, decided that the Grand Trunk Pacific scheme was the most advantageous of the three, and that the Grand Trunk Pacific Company was the one which gave the country the best assurances as to the construction and running of the road.

But there are one or two points which came up in the course of the debate before the Railway Committee. an almost endless debate, I may say. Should the Grand Trunk Pacific build the line from Winnipeg to Moncton ? That was the question which had to be solved. The government deemed it in the public interest that this part of the road should be built at the expense of the country, so as to enable us to make of it a trunk line, 'a common highway' for all railways. I believe that move was a wise one, and rejoiced with all those who wished this undertaking success. All the friends of the scheme are happy to see that the government has taken charge of this work.

Now, how was the government's proposal received ? It was thought at first that all would be satisfied, that the Conservative party would greet this measure as a public

benefaction, and would consider it as the best thing that could be done. It was a mistake ; for in the minds of the Conservatives there is one thing that supersedes public interest, and that is partizanship, the interest of their party. Partizanship must have come out foremost and induced these gentlemen to reject the wisest scheme which has ever been submitted to parliament. These gentlemen are combatting to-day an undertaking which they themselves pronounced to be essentially of a national character, but above all and primarily in the best interest of the province of Quebec. The 'Evénement,' which I quoted a moment ago, antagonizes this scheme and approves of that submitted by the leader of the opposition. Such are the ways of these gentlemen. Nevertheless, I am convinced that in their inner conscience, they cannot approve of the plan of the leader of the opposition.

Now, Sir, the Trans-Canada has also been mentioned ; it has been stated that such a road as that would have fulfilled the expectations of the province of Quebec. I am free to admit that this road would have been of great benefit to our district ; but I think the proposed road will be of still greater benefit, for instead of stopping at Roberval, it will come right down to Quebec. The hon. member for Jacques Cartier (Mr. Monk), the recognized leader of the opposition in the province of Quebec, has opposed this scheme of the government on the ground that it will not be a colonization road, and that for the time being a colonization road is of greater import. Well, the reasons given by that gentleman are not very weighty. It is obvious that if we have such a transcontinental road, the northern parts of the provinces of Quebec and Ontario will thereby be opened up for settlement ; it will be an easy matter to build branch lines starting from the main road. That is exactly the answer given by the hon. Minister of the Interior (Hon. Mr. Sifton), in his speech the other day. He said : 'We are not opposed to the buildng of railways for colonization purposes. In Manitoba, for instance, as he pointed out, these roads are numerous, being ten or twelve miles apart. When you come before us, he said, with commendable proposals, the government will certainly grant help wherever necessary. I think that answer of the hon. minister is entirely to the point, and it is likely the hon. member for Jacques Cartier will have reason to regret having taken that position when he comes before the people.

A great deal has been said about the character of that road. Will it be a colonization road, or will it be used for the transportation of grain ? I think it will serve both purposes. As a colonization road it will render great success not only to Quebec, but to all the provinces through which it will pass. The North-west Territories will also profit by it, as they need railways for the carrying of their grain. The province of Quebec will be benefited, since a large tract of fertile soil will be opened up to settlement. It will thereby contribute to the greatness and prosperity of the country.

As regards the transportation of grain, it is apparently a difficult matter to settle. Some who pretend to know contend that this road will not be convenient for the haulage of grain. All that I can say is based on the reports of experts ; but I am inclined to think that on the whole there is some exaggeration in the contention of those who assert that not a bushel of grain will be carried by that roal. We are being told all the time that traffic in the west is congested ; that the means of transportation for grain are insufficient. If that is the case, new outlets should be provided, and that new road will provide an outlet for a certain quantity.

The hon. Minister of the Interior, in the course of his practical and able address delivered a few days ago, showed that railways, at the present time, carried at least one-thirteenth of the wheat crop. But we may expect further improvements from the application of science to railways. To compete with the water route, railways should be as perfect as possible, that is to say, the grades should be very low, rails very heavy, so that trains may haul loads twice or three times as heavy. Under those conditions, we may be sure that the proposed road will secure a certain part of the grain trade, and that before long it will be one of the most prosperous in the country. I think that in this respect, without being too sanguine, we may safely follow the advice of wise men, of those who believe this railway will benefit the various provinces of Canada.

The hon. gentlemen opposite have not only criticised the scheme (it was their right to do so), but one hon. member called it a hybrid scheme. Criticisms have been numerous. After listening to the numerous views expressed by his followers on the subject, the hon. leader of the opposition deemed it expedient to make a proposal, in order to relieve the situation. He thought, no doubt, that he would thereby bring all his followers into line, and offer a compact front to the enemy. Hence, the scheme which everybody knows. I shall not undertake to criticise it ; hon. members of greater ability than myself have already shown that this plan is the most laughable, preposterous one that could be devised ; that it is utterly impracticable. But the hon. leader of the opposition must have satisfied himself that it is an easier matter to find fault than to do right. With these two plans before us, we may well say that if the government plan is not perfect, that of the leader of the opposition is still less perfect.

I notice that the Conservative members from the province of Quebec (the hon. member for Dorchester, Mr. Morin, excepted),

are not in the House. They who, some months ago, posed as saviours of the nation, who pretended to be the protectors of the country, and especially of the province of Quebec have disappeared. The hon. member for Montmorency, who made such an uproar, represents a constituency in the vicinity of Quebec. At the time he assumed he was representing not only the interests of Montmorency, but those of the city of Quebec. And in the 'Journal' which I mentioned a moment ago, he devotes a special article to me, under the heading : 'Mr. Malouin's letter,' in which he states that if I had voted for the Wade motion, thousands of men would be seen at work in Quebec, and east and west of that city.

One fact must have struck the House : when the Grand Trunk Pacific scheme was launched, it was to go to North Bay and from there to Winnipeg. At that time, several members from Ontario approved of it. Interviews given by them appeared in the papers at the time. Since the government has undertaken to build the sections from Winnipeg to Moncton, these gentlemen have changed their minds, and condemn the scheme. Would it be, perchance, because that road passes through the province of Quebec ? Do the Ontario members, and among others the hon. member for Toronto Centre, prefer to see Northern Ontario remain a closed country rather than let the province of Quebec have the benefit of the transcontinental railway ? I might well draw that inference from the views expressed by themselves and in their newspapers. I regret it exceedingly. As for us, in the province of Quebec, our policy is broader ; we wish to see all parts of the country have the benefit of public works. We wish to see all the provinces of the Dominion thrive and increase in number. We wish to see Ontario increase its population ; but on the other hand, we would like the province of Quebec have its share of prosperity and greatness. Let the sun shine for all of us.

It has been stated that this road would be going through unexplored parts of northern Ontario and northern Quebec. For how long a time have the hon. gentlemen opposite been satisfied that these parts are unknown ? Only since the government has taken the matter in hand. They never stated so when the Bill came up before the Railway Committee. But the Prime Minister and the Minister of the Interior have quoted from reports of geologists and engineers which give us concerning that country a knowledge almost equal to that we possess in respect to southern Quebec and southern Ontario. But the scheme did not suit them, because it was going to benefit Quebec.

Now, the hon. members on the other side have brought forward a certain number of arguments against the proposed scheme. lel the Intercolonial. I think the road in lows :—The country does not at present require another transcontinental railway. That contention has been shown to be entirely without foundation by hon. members on this side of the House. The hon. Minister of the Interior, among others, communicated to the House resolutions voted by the various boards of trade throughout the country, as well as the views of the press and of leading business men. But at a certain time, the leader of the opposition himself undertook to confute that argument by introducing a plan of his own making, a plan much more costly and less reasonable than the present one. That is the best evidence of the necessity of this road.

It has also been stated that the country had not expressed and does not now express a wish for a transcontinental railway; that the government were too hasty in deciding to build such a road, that they had not sufficient information as regards the character of the country through which this railway is to run ; that it will not be used for the carriage of grain as the grain will be shipped by the water route on account of the lower rate ; that the part extending from Quebec to Moncton will parallel the Intercolonial. These are some of the reasons brought forward against the government scheme. I shall refer briefly to the last argument only, as the others have been peremptorily disposed of by hon. members on this side of the House. Opinions have been quoted which cannot be contradicted. As regards the point raised in connection with the paralleling of the Intercolonial, that objection is childish, and for this reason. Because a railway starts from a certain point and reaches some other point, which two points are already connected by a railway, it does not follow that these two roads are parallel to the extent of injuring one another. The proposed road will not parallel the Intercolonial ; it will go through rich and thriving parishes, which to-day have no means of communication with large centres. I shall not enter into details, as I think my hon. friend from Bellechasse (Mr. Talbot) has given on this point all the required information. But I wish to draw the attention of the House to the fact that there has been in existence for some years past, since 1899, I believe, a charter authorizing the construction of a railway from Quebec to New Brunswick. And, if I am not mistaken, the government has granted a subsidy towards the carrying out of this scheme. Now, no exception was taken at the time to this measure ; it was not objected that this road would parallel the Intercolonial, that it would be contrary to public interest to build it ; and if the ex-Minister of Railways and Canals (Hon. Mr. Blair) had no objection to subsidizing that road, I fail to see why he should have thought it unwise to approve of the present scheme on the ground that it would parallel the Intercolonial. I think the road in

question is a very desirable one and in the best interests of the country.

Before taking my seat, I wish to say a few words of the contract passed with the Grand Trunk Pacific Company. After they had decided to build the road from Moncton to Winnipeg and to grant a substantial subsidy to the Grand Trunk Pacific Company, towards the building of the road from Winnipeg to Port Simpson, the government entered into an agreement with the Grand Trunk Pacific Company, whereby the latter undertook to lease and operate the eastern section. After looking into that agreement, I believe the government could not possibly have entered into a more satisfactory agreement or one giving greater security.

The contract, Sir, starts by stating what are the obligations of the company. I shall refer to them as briefly as possible. Clause 8 of the Bill provides that the eastern section shall extend from Moncton to Winnipeg. I make this observation because it has been stated somewhere that the Grand Trunk Pacific, under the contract, are not bound to operate the part from Quebec to Moncton. I believe it was the hon. member for Toronto West (Mr. Osler) who made that statement, and I think he backed it up with the opinion of a lawyer (Mr. Smith). Well, the hon. member must be wrong; there cannot be any difference of opinion on that point. The section which the Grand Trunk Pacific is to operate is the eastern section, which comprises the whole of the road from Winnipeg to Moncton. There cannot be any doubt as to that.

Now, what are the obligations of the Grand Trunk Pacific? (1) The company agrees to lease the road, to keep it in repair and to make renewals when necessary; (2) To operate the road, to repair it if necessary and to make of it a first-class road; (3) To give a regular service to the satisfaction of the government; (4) To carry freight by that road to Canadian seaports, unless otherwise routed by shipper; (5) To favour that road in the largest possible measure; (6) Rates not to be higher than on United States roads; (7) To operate lines of steamers on the Atlantic and Pacific oceans; (8) Lastly, the government will have the right to name a director on the board of managers.

Such are the requirements which the Grand Trunk Pacific Company has agreed to fulfil. They are those usually found in leases; they are as complete and perfect as possible. Should the company not comply with them, as stated in the deed, the latter may be cancelled.

Now, the question is raised whether the securities offered by the company are sufficient to warrant us in hoping that they will fulfil their obligations. Well, I think the securities are as good or even better than those which are attached to ordinary contracts.

As regards the rolling stock of this railway, the contract states that it should represent a sum of $20,000,000, of which $5,000,000 should be on the eastern section. These $5,000,000 worth of rolling stock are security for the payment of the rent as well as for the fulfilment of the other obligations of the company. Should the payment of the rent be withheld, or should the company fail in fulfilling their other obligations towards the government, the latter has a recourse against the company and may force them to fulfil their pledges. But, more than that, the contract contains a very wise clause in virtue of which the government may insert in the deed all provisions required to ensure the carrying out of all the obligations agreed to by the company, and that to the satisfaction of the government. The amount payable for damages may be indicated in the lease. I believe the government have taken all necessary precautions to ensure the operation of the eastern section. Besides all these pledges, we have the machinery of parliament, which may be set in motion to confer on the government all the powers required to bring the company to time. For instance, what could there be to prevent the government, in case the company refused to fulfil their pledges, from cancelling the lease and operating the road direct, or making arrangements with other companies, the Canadian Northern, for instance. What could there be to prevent parliament from stepping in and forcing the company to fulfil their pledges, or enacting a penalty that would ensure their fulfilment?

I do not think there can be any doubt as to that, as it should not be assumed beforehand that the company are in bad faith. If they are in good faith, as we have reason to believe, the contract will be carried out faithfully and the country benefited thereby.

The suggestion has been made that the company should have an interest in the building of the eastern section, so as to ensure its operation. But after duly considering the matter, I think it is preferable that the Grand Trunk Pacific Company should not have any interest in that undertaking, and for this reason: If the company were to have an interest in that way, they would be part owners, and we would not be at liberty to evict them. For that reason, I am of opinion that the scheme as submitted by the government is worthy of our approval.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

Mr. MALOUIN (Translation). Mr. Speaker, when the House took recess, I was referring to the contract passed by the government with the company in connection with the operation of the eastern section. I stated, at the outset, what are the obligations of the company, and what means the government have of exacting their fulfilment. I

for one have no doubt that the clauses contained in the deed are quite sufficient to enable the government to enforce on the company the carrying out of their obligations. Of course, it should be assumed that the government of the time will endeavour to bring about the faithful carrying out of the contract. I understand perfectly well that if the government and the company are conniving in the non-fulfilment of the terms of the contract, the company may evade fulfilling them. But assuming that the government are in good faith, as I think they are, I believe the company will abide by the contract, or else the government have all the means required for exacting its carrying out. Thus, the government have, in the first place, an action for damages on account of failure to carry out the contract. They have also the power to cancel the lease, to take possession of the road, to run it themselves or to have it operated by another company. No other conclusion can be arrived at, if the contract is looked into in a spirit of fairness. Consequently, the company cannot do otherwise than carry out the terms of the contract. The government are free to run the road direct or have it operated by another company. The contract is quite clear and cannot be transgressed unless both parties are in collusion.

It has been stated (and the statement has been peremptorily confuted by the Minister of Justice) that the company instead of buying rolling stock, as required by the contract, might merely rent it. To my mind, that objection is totally unfounded for the reason that if the company borrow the rolling stock instead of buying it, they are not fulfilling their contract, and the government may step in and force them to fulfil their obligation, or confiscate the five millions which the government will have in hand as security. As already stated, the company have to supply $20,000,000 worth of rolling stock, of which $5,000,000 are applicable to the eastern section.

The Grand Trunk Pacific are in good faith; there are clauses in the lease which show this clearly. One of the clauses says that the Grand Trunk Pacific reserve their right of supervising the construction of the eastern section. Why should they reserve that right, if not in order that the said section be built in the most economical way ? And if they are anxious that the utmost economy should be exercised in the carrying out of this work, the reason is that they intend to pay the rent, as agreed. Is it reasonable to assume that the company have given such close attention to all the clauses of the contract with the intention of laying it aside after signing it ?

There is one other clause which may be looked upon as evidence of the company's good faith ; it is that in virtue of which they reserve for themselves an option in case a second fifty-year lease should be granted. In accordance with that clause the government have the right to operate the road themselves if they think fit ; but should they decide not to do so, and to pass a new lease, the Grand Trunk Pacific have reserved their right to take the lease on the terms offered by the government. Is not that an indication of the good faith of the company ?

Then the Grand Trunk is interested in seeing that the Grand Trunk Pacific should operate that part of the road, as laid down in the contract. The Grand Trunk Company guarantees the payment of one-fourth of the cost of construction in the western part. The government will have a first lien on the road on account of the guarantee on the other three-fourths of the cost of construction. The Grand Trunk will then have a second mortgage only to answer for their guarantee on the remaining fourth. Should the Grand Trunk Pacific neglect to operate the eastern section, and should the government, who are surely in earnest, apply the means at their disposal to force the company to fulfil its obligations, the Grand Trunk, having only a second charge on the road, would be the loser. Is it not a fact that the Grand Trunk would suffer loss, in case the Grand Trunk Pacific Company did not operate the eastern section, and as a consequence was sued by the government and turned over to a receiver ? For all these reasons, we are bound to come to the conclusion that the company with whom the government have been dealing are in earnest and anxious to carry out the agreement.

Now, as to the price, I shall say a few words only. The amount of money which this country will have to pay for the building of this transcontinental road is exceedingly small ; and those who are in a position to know, can hardly believe that the government of Canada has made such a good bargain. But the contract is there all the same, and the railway will be built.

There is no doubt that the mortgage secured by the government on the western section of the road will ensure the full recovery of the government's outlay, should the company be unable to pay. It is admitted by all that the western part of the road will be paying. There is a certainty, as a consequence, that the government will have absolutely nothing to pay. Now, as regards the eastern section, the amount of three per cent to be paid at the expiry of seven or ten years will represent the interest to be paid by the government. So, the government will have to pay seven years' interest on the eastern section, and seven years' interest on the Rocky Mountains' section. As stated by the Prime Minister and the Minister of the Interior, the whole amount will come to thirteen or fourteen million dollars. To build a transcontinental road at an expenditure of thirteen or fourteen millions, seems to me quite a feat, and I am confident the whole country will endorse such a transaction. But reference is made to

liabilities to be met at the expiry of fifty years, on the bonds guaranteed by the government. It is true that the government will have to pay for the debentures issued on the eastern section; but it should not be forgotten that in fifty years from now the population of Canada will have reached the twenty or twenty-five million mark; that the revenue will be much larger than it is to-day; that the road will be a paying one, and that instead of receiving three per cent, the government will be getting six or eight per cent, and the difference between the two rates of interest will be used as a sinking fund during the fifty years to follow. I may add that the road will remain the property of the government.

There are other clauses on which I shall not dilate, but which it will suffice to mention in order to show the advantages ensured by this scheme. Thus, the government have reserved over that part of the road which is leased running rights for themselves and for other railway companies. Nor should we lose sight of the other clause which states that the material required for the construction of the railway shall be purchased in Canada whenever the company are able to secure them on terms as advantageous as in foreign countries. Let me also recall the right which the government have reserved of controlling the rates. That is an invaluable concession, and of great benefit to the country. In conclusion, let me say this: It is the opinion of fair-minded people, of those whose views are not biassed by a spirit of partisanship, but who are rather inclined to consider the scheme on its merit, that this arrangement is an admirable one. I for one, do not hesitate to say that the government have succeeded in making a great bargain, such as is seldom concluded, especially by governments. As against the views of papers who are interested in finding fault with the policy of the government whatever it be, we have those of persons whose minds are not influenced by party spirit. The other day, I was reading the following item from the New York 'Journal,' reproduced in the 'Canada.'

A railroad is to be built in Canada parallel to the Canadian Pacific Railway, and which is to be called the Grand Trunk Pacific. The new road will in no way interfere with its old competitor, but will only help in developing the country, and bringing about good results for both roads. Within the next ten years the development of the Dominion of Canada will astonish the whole world. The products of the farms, the fisheries, the forests and the mines have increased by 283 per cent, and the manufactured goods by 738 per cent, under the Liberal rule.

Let me, Sir, draw your attention, in passing to the views expressed by the 'Moniteur du Commerce,' published in Montreal. That paper frankly supports the scheme propounded by the government. Such utterances have more weight than criticisms from opponents of the cabinet.

As regards the amendment submitted by the hon. member for Winnipeg (Mr. Puttee), urging that the government should acquire and operate the railways, and should build and run the proposed road, I believe that principle is a wrong one. It is a good plan for the government to grant help towards building railways or to take charge of such work, but I consider the operation of railways by the government a source of danger. For that reason, I shall vote against that amendment.

The proposed road, to my mind, will be a benefaction to the whole of Canada. I am satisfied, Sir, that the province of Quebec, like the other provinces, will be benefited thereby. In my opinion a transcontinental railway that would have its terminal at North Bay, would not be of much good, and we from the province of Quebec would not have supported such a proposal. The province of Quebec and the maritime provinces contribute liberally to the expenditure made to ensure the development of the North-west. We do not object to that; but when a transcontinental railway is being built, we want all the provinces to be benefited thereby. We rejoice at the government having decided to build a railway that will run through all the provinces of Canada.

Under the circumstances, I believe, Sir, that every member of this House who is anxious to help on conscientiously the interests of the country, heedless of party, should support this Bill. It is a bold undertaking, perhaps, but worthy of the progressive government which control the affairs of the country. It was conceived in a lofty spirit of public interest, and let us hope that it will be carried out in the same spirit. And if it is, we may rest assured that the whole country will greatly profit by it, and that it will be one of the most efficient means of development for the next fifty years.

Mr. A. F. MACLAREN (North Perth.) Mr. Speaker, I have one great regret, and that is that I cannot answer in the French language the hon. gentleman who has just taken his seat. His speech will not be criticised very much by me because I do not understand a single word he has said.

Mr. MALOUIN. I am very sorry for you.

Mr. MACLAREN (North Perth). I do not think I would have said a word on the proposition which is now before the House had it not been for the fact that last session I spoke at some length upon the transportation question, and I feel it incumbent upon me to make a few remarks now upon the Grand Trunk Pacific project, which has formed the subject of this debate. Before proceeding further, I wish to present to the House resolutions passed by the board of trade of the city of Stratford and other parties. This is a copy of a resolution adopted by the Stratford board of trade at a meeting held on the 3rd of April, 1903:

Moved by Mr. Wm. Preston, seconded by Mr. W. J. Mooney—

Whereas the Grand Trunk Pacific Railway Company have made application to the Dominion parliament for power to build a transcontinental line of railway from Quebec city to a point at or near North Bay, and thence to the Pacific coast, and

Whereas the said company have expressed their intention to ask for a cash subsidy to enable them to carry out the proposed work, and

Whereas the new railway will open up a very large and important section of Canada not at present available for settlement, or served by any railway, thus contributing largely to the growth, development, and general welfare of Canada, and

Whereas it is desirable that these lands should be opened up and settled as soon as possible, therefore

Be it resolved, that in the opinion of this board, while not expressing any views on the general principle or railway subsidies, we believe it to be in the interests of the Dominion of Canada considering the magnitude of the new railway, and to insure its rapid completion, and the early settlement of our unoccupied lands, that a reasonable subsidy be granted to the Grand Trunk Pacific.

That a copy of this resolution be presented to the House of Commons, through our representative, A. F. MacLaren, M.P.

J. STEELE,
Secretary.

That is the first resolution which I wish to present to the House. Then, I have another from the Brotherhood of Locomotive Firemen, which is as follows :

Stratford, May 6, 1903.

Dear Sir,—I beg to forward you in behalf of the membership of the Brotherhood of Locomotive Fireman, resident in Canada, east of St. Clair river, the following resolution.

Whereas, the Grand Trunk Pacific Railway Company has made application to the Dominion parliament for power to build a transcontinental line of railway from Quebec city to a point at or near North Bay and thence to the Pacific coast

Whereas, the said company expresses their intention to ask for a subsidy to enable them to carry out the proposed work.

Whereas, the new railway will open up a very large and important section of Canada not at present available for settlement or served by any other railway which if built, will thus contribute largely to the growth, development and general welfare of Canada.

Whereas, it is desirable that these lands should be opened up and settled as soon as possible.

Therefore be it resolved that in the opinion of the membership of the Brotherhood of Locomotive Fireman, resident in Canada, while not wishing to express any views on the principle of railway subsidies, we believe it to be in the interests of Canada, considering the magnitude of the new railway and to insure its rapid completion and the early settlement of our unoccupied lands, that a reasonable subsidy be granted to the Grand Trunk Pacific Railway Company.

In conclusion, we sincerely invite you to accept this resolution because we earnestly believe the Grand Trunk Pacific Railway will open up a section of new country that will develop so rapidly that many deserving young men and women will find homes and employment in that portion of undeveloped Canada.

I remain,

Yours respectfully,
H. M. PATON,
Secretary.

I have another resolution signed by Mr. M. D. Hunter, from the joint general committee of adjustment of conductors and brakemen of the Grand Trunk system east of the St. Clair river, which is in the same terms as those which I have already presented, and I shall not, therefore, trouble the House by reading it. Now, the House will see by these resolutions that they were dated away back in April and May, at a time when the bodies from which these resolutions come had no thought whatever of such a tremendous project being brought before parliament as that which has been presented by the right hon. leader of the government. At that time they thought it was simply a case of connecting the present ends of the Grand Trunk Railway with the two oceans, and they had no thought, as I have said, of such a tremendous undertaking as that which has been proposed. As far as I am personally concerned, I would have supported the granting of any reasonable assistance to the Grand Trunk Railway Company, and particularly assistance in extending the road west of Lake Superior into the great wheat fields and ranches in Manitoba and the North-west Territories and to the mines, the fisheries and the forests of British Columbia. I certainly would have been willing to grant any reasonable assistance to the company for this purpose, and as far as I am concerned, I would be inclined to support the building of all the railways that are necessary to open up and develop the country west of Lake Superior. I spoke last year at some length on the developing of the waterways from the head of Lake Superior down to points along the Georgian bay and Lake Huron, such as Collingwood, Owen Sound, Midland, Sarnia, Goderich and Windsor, and I still hold the views which I expressed then. I have not changed my mind as to that. I think these waterways should be improved, and I think, as many hon. members on this side of the House have said during the last few days, that the ports on our inland waters should be built up, that we should have first-class elevators constructed on modern principles, that we should have properly equipped warehouses and in some parts cold storage where perishable goods could be unloaded, stored and then shipped by rail. As I said last year, I think it would be well if some assistance were granted to the parties who hold charters for the construction of a road from Collingwood to Toronto. If such assistance were granted it would enable shippers to utilize the waters from the head of Lake Ontario, because, if there was a sufficient

freight supply from the west we would have steamers running from the head of Lake Ontario to the seaboard. If some of the traffic from the North-west could be secured for such a route we could have a magnificent fleet of steamers sailing from Toronto to the sea. I think the sooner the government go to work and improve the waterways, while at the same time lowering the rates, the better it will be for the people. I may say here, Mr. Speaker, that I have not changed the views which I expressed here last year, and I still think that the government should do something for the manufacturer and for the horny-handed sons of toil, who have hewed down the forests of this country and who have spent their lives in building up this country. They are the men to whom this government should first look and for whose benefit they should spend some of their money before opening up too much new country at such a tremendous outlay as that which is proposed in this measure. My idea is that if the government spent one-tenth of the amount of money in improving our waterways, more good would be accomplished than if they expended the $150,000,000 or $200,000,000 involved in this project. I do not think the country is ripe for such an expenditure or that it is prepared to assume liability for so many millions of dollars. I certainly think, as a business man, that the people who have built up the different provinces should receive some consideration. I do not say Ontario particularly, because I take a broad view of these questions. I would like to see every province prosper and I want to see every province derive its share of benefits from the expenditure of public money. I do not want to take a narrow view or to say that one province is jealous of the other. I never had any feeling against any province in the Dominion of Canada. On the contrary, I have the most kindly feeling towards all the provinces, and I would be sorry to see any hon. member of this House attempting to stir up any feeling between the different provinces. We are all one. As far as the maritime provinces are concerned, I am very glad to know that we have a magnificent market in that part of the country for many of our manufactured goods and agricultural products, and I think the maritime provinces have a kindly feeling towards the province of Ontario. I am glad to know that the province of Ontario reciprocates any such feeling and I think hon. members on both sides of the House will agree with me when I say that such a feeling should exist all along the line.

Now, a great many people talk about making Winnipeg a great centre, and they say that Winnipeg is going to become a great manufacturing centre. It certainly is a great city to-day, but I think that Port Arthur and Fort William will become very important distributing points in the near future. At the present time when the steamers arrive there, they unload their goods through the freight sheds into the cars, the goods are hauled by rail to Winnipeg, unloaded there, carted up town, warehoused; the goods are sold by the wholesale men, then carted to the station again and shipped to different points all over Manitoba and the North-west Territories. I think it would be a wise step on the part of the government to assist in the building of warehouses at Port Arthur and Fort William and making these places the great forwarding points for the west. It would be a great saving in time and labour. It would save extra handling, extra haul and extra labour generally. I think that would be an important question for the people of the west to work out and I do not think it would do the city of Winnipeg much harm.

Now, in regard to the proposed road from Collingwood to Toronto, there are people who express the view that it would not pay, but as Collingwood is 300 feet higher than Toronto the grain could be shipped across very cheaply and if the most modern type of elevator were used it could be handled in the most economical way. There are only about six or seven miles upon which a serious grade would be encountered, but two engines could be employed at this place to haul the trains and a good speed could be maintained.

Since the government has so much money, I would like to see some of it expended in utilizing the water-powers and in building electric roads through that part of the province of Ontario lying west of Toronto, where, I believe, there are already twenty-one charters for electric roads. On these roads cheese, butter, grain, cattle, hogs, anything at all produced or manufactured in that district could be brought to Toronto. They could be stored in Toronto and shipped by boat in the summer time, or if they were not shipped by water, a lower rail rate could be obtained. In this way freight rates could be materially reduced. We all know that the rates are very high in the Ontario peninsula and in the west, and I would like to see warehouses, cold storage plants and elevators of the largest and most improved style, such as are to be found in Duluth, Chicago, Boston and Philadelphia, erected for the storage of produce. If the Americans can do this kind of work, there is no reason why we should be behind them and why we should not, by these means, get as low a rate of freight as do the people to the south of us. I think that it is much more important that relief should be given to those who are doing all this great and good work for the development of the country now than to spend money to open up an unknown and uninhabited country, which, as one hon. gentleman said the other day, is now known only by the birds.

If these great waterways were utilized, we could not only ship our produce clean down to the sea, but we could bring back as return cargoes, coal and iron and also secure for Canadian lines that great foreign trade which now comes into New York and Boston and is brought west via Niagara, whence it is sometimes sent right through to Winnipeg and to all points in western Ontario. These goods we could haul up through our own country and we could have them distributed from Toronto, Owen Sound, and different points in the North-west. This, I think, is another strong argument in favour of utilizing our own waterways. Why wait one moment to relieve the people who have done all this good work? Talk about waiting to open up this new country! A year ago I asked the government to do something to reduce these high rates of freight throughout the western country. At that time we were promised a commission; we have been promised that commission for many years, and I understand it has now been appointed. The first thing that this commisison should do is to look into the possibility of lowering the rates of freight charged the people who are doing business now, not wait for those people who may be doing business in that new land when this railway is built, but to secure lower rates for our present producers, so that they will be able to compete with the rest of the world. The Prime Minister says: We cannot wait, we cannot wait. There is no one in this new land to wait. But the great manufacturers of our older and thickly settled portions of this great Dominion can wait. These can wait, and then when this great road is built through an uninhabited land, it will not relieve the people or lower the rates on freight one cent as far as such commodities as butter, cheese, lumber, furniture, coal, &c., are concerned. I believe in giving now. If you have anything to give give it to the people who have done so much for the development of Canada, and do not wait to bring in new people and then help them. Give it, as I have said, to the people who have developed this country.

We have heard a good deal about an all-Canadian route and about shipping our goods through Canadian ports. I fully agree with every bit of that, and would like to ship everything that I buy in Canada and ship to the old country through Canadian ports. I hope the day will come when it will be possible to ship it all in that way. But is is useless to talk about that when the Americans give better rates. For instance, when I buy cheese in the west, the first thing I do is to wire to Montreal, Boston, New York and other ports asking the lowest rate for the goods to London, Liverpool, Bristol, Glasgow, or whatever point I want to ship to, and I, of course, ship all things by the route which gives the cheapest rate of freight, and the lower the rate I obtain the higher price I can pay to the farmer for what I buy from him. Let us make our Canadian railways and waterways right and then we can get cheaper and lower rates by a Canadian route. Then, and not till then, will goods be shipped by an all-Canadian route. Such a route could be secured, an all-Canadian route, cheaper than any American route, for one-sixth the money it is proposed to spend upon this great Canadian transcontinental railway.

The hon. the Minister of Agriculture (Hon. Mr. Fisher) talked a great deal about the cheap railway haul from Chicago to New York. I would ask permission to submit to the House a statement from the record of the Chicago board of trade of the shipments of wheat and corn at that port for the season of 1901, of the average freight charges per bushel between Chicago and New York by lake and rail, and all-rail routes, and a statement of the summer traffic between Chicago and ocean ports. That statement is as follows:

From the records of the Chicago Board of Trade, the shipments of wheat and corn at that port for the season 1901, were:

Receipts from all sources. Bushels.	Shipments by lake. Bushels.
Wheat, 51,197,000	31,521,000
Corn, 84,136,000	34,000,000
Wheat entered into consumption	9,000,000
Corn entered into consumption	18,000,000

The balance of the receipts of these two cereals not here accounted for were distributed eastward by the railways, some for export, but mostly internal domestic consumption.

Average freight charges per bushel, season 1901, Chicago to New York.

	By Lake and Canal. Cents.	By Lake and Rail. Cents.	By all Rail. Cents.
Corn	4·61	5·16	9·21
Wheat	5·11	5·54	9·88

Season, 1901.

Grain for export, all-rail from Chicago to following points:—

The summer tariff from June 1st to October 21st, as follows:—

	Per Bushel.
Boston, 16 cents per 100 pounds, i.e.	9·60
Portland, 16 cents per 100 pounds, i.e	9·60
Montreal, 16 cents per 100 pounds, i.e.	9·60

Thus, you see by these figures that a great deal of freight is shipped from Chicago to New York, some by water and rail and some all-rail, but in every case, the water transportation is very much cheaper. I would also like to read to the House the rate of freight from Buffalo to Liverpool in 1901. That rate was 11½ cents from Buffalo, while from western Ontario it was 21 cents per 100 lbs. What I am trying to explain to the House and to the country is that by cheapening transportation a great deal of money may

be made for the farmers, the producers and the manufacturers of this country, if we were to improve these waterways so that we could get the same freight rate enjoyed by the people to the south of us. Last year it was stated that if the Americans had had to pay as high a rate of freight on goods shipped in the United States as we had to pay in Canada, they would have to pay on the amount of freight they shipped over $200,000,000 more than they did pay. That, Sir, would build the Grand Trunk Pacific in one year if we had as much freight to ship as they have. May I call attention to the comparative rate on cattle from American and Canadian points to the seaboard. From Toronto to Portland the rate on cattle is 28 cents; from Chicago to Portland, 800 miles greater distance, the rate is the same, 28 cents; from Chicago to Montreal the rate is 25 cents; and from points in the county of Perth, Bruce or Huron to Montreal it is 33 cents, or 8 cents more than it is from Chicago to Montreal. You can see for yourself, Mr. Speaker, that is a very important, a very serious matter, not for the people who are going to come in and inhabit this new country seven or eight years hence, but to the people who are now here, and that is why I am so anxious to see a reduction in freight rates. To give a concrete case, Sir, the rate on cattle from the town of Listowel, in the constituency which I represent, is $1.25 per head higher to Montreal than from Chicago to Montreal, although from Chicago the haul is 400 miles longer than from Listowel.

In 1901 the United States shipped 500,000 head of cattle to England. If they had paid the same rate of freight that we pay in Canada, it would have cost them $500,000 more.

I might talk for hours along these lines, illustrating the need of reform in this direction, but I do not intend to take up much more of the time of this House. There is one thing, however, that I wish to speak about. Hon. gentlemen talk about running freight by train through to the Atlantic coast from Portage la Prairie, Brandon, Indian Head, and all the great grain-producing centres of the North-west. But when a car leaves any of these points in the fall it does not return to the west for a month and that is one reason why I say it is necessary to have proper elevators built at the head of Lake Superior. You can run a car many times between Brandon and the head of Lake Superior while it is making one run through to the coast and return.

It would require an immense amount of rolling stock to handle that trade in that way. I hope the time is not far distant when the government will build these elevators. There are immense elevators in Minneapolis and St. Paul. I saw one a few days ago in Minneapolis built entirely of cement, and this material could be utilized by the government in building elevators at the head of Lake Superior. The farmers could ship their grain to these elevators, and receive in return warehouse receipts, upon which they could obtain money from the banks. If the government would do something of this kind, and drop this expensive scheme, involving an expenditure of $150,000,000, they would better serve the real interests of the country.

Mr. JACQUES BUREAU (Three Rivers and St. Maurice). Mr. Speaker, I do not intend to make a long speech, which I think would be out of place at this stage of the debate. A great many members have been trespassing upon your kindness and upon the kindness of the House by taking advantage of this debate to introduce all sorts of subjects which are not relevant to the question before the House. I am going to follow the example of the hon. gentleman who has preceded me, and make my remarks very short. I think by this time the members of the House have made up their minds which way they are going to vote. There are sufficient facts and figures before the House to enable any man who takes the trouble to look into them, to form a judgment, and a sound judgment on the question. Therefore, I have agreed with the whip on the other side of the House not to speak more than ten minutes, and if the hon. members who follow me will do the same, we shall get through this debate all the sooner, for your good, Mr. Speaker, for the good of the members and for the good of the country.

The principle of having a transcontinental railway line is admitted, so much so that the hon. leader of the opposition himself announces that the policy of the Conservative party is to have a transcontinental line. The discussion then, comes down to the method to be adopted for the building of that line. We have a proposition submitted by the government and a kind of proposition submitted by the opposition. As I do not want to give a silent vote, I desire to state in a few minutes why I favour the one scheme rather than the other.

This question of a transcontinental railway involves a question of transportation, a question of colonization, and, as the right hon. leader of the government has said, also a patriotic question—a question of transportation by attempting to relieve the congestion in the western plains, to regulate the rates, and to give the farmers the benefit of low rates; a question of colonization, by opening new fields, and bringing in settlers to develop the natural resources of the northern country: and a patriotic question by having an all-Canadian line to carry Canadian products over Canadian territory to Canadian ports, and that, Sir, not only for six months in the year, as the scheme of the hon. leader of the opposition proposes, but for twelve months in the year.

In dealing with this question of transportation, some hon. members seemed to think that the only thing we have to transport from the western fields to the Atlantic seaboard is wheat. They do not take into consideration that there are ranchers on our western plains who raise cattle. They do not take into consideration the fact that though during the last few years we have had good crops in the North-west, there are other years when the crops are not so good. I remember, when I was in the North-west in the late eighties and the early nineties, and when the crops failed, the general advice given to the farmers was to go into mixed farming. What does that involve? It involves the raising of cattle, and that the dairying industry will develop. It has been admitted by the ex-Minister of Public Works (Hon. Mr. Tarte), who professes to have made a special study of the transportation question, that cattle cannot be properly transported by being carried by train to Port Arthur, and there put on vessels and carried down the lakes and the St. Lawrence, but that they must be shipped by railway.

Now, what is the scheme proposed by the hon. leader of the opposition? He proposes to buy from the Canadian Pacific Railway Company a portion of their line which is most unprofitable, a line which is mostly curves and grades, and which runs through a country where you can see, in place of vegetation, only burnt trees sticking out of rocks. He proposes to buy that line and pay millions of dollars for it. How is that going to relieve the congestion in the North-west and help to bring the trade of the west to our Atlantic seaports? The hon. gentleman proposes to make that line a common highway, over which the Grand Trunk Railway will obtain an entrance into the North-west. He also proposes the purchase of the Canada Atlantic Railway, and by that means run the Intercolonial over this common highway. What would be the result? The result would be that all these lines would be able to carry traffic to Port Arthur and Fort William during the summer months, where the traffic would be transshipped to barges and sent down the lakes and the St. Lawrence to the Atlantic ocean. But what would be done in the winter? The Grand Trunk Railway would take part of the traffic, and, instead of carrying it to Canadian ports, when it reached Montreal, it will go on to Portland. Consequently the scheme of the hon. leader of the opposition involves this result, that for six months in the year the Grand Trunk Railway would carry Canadian produce through Canadian territory down to American ports. The proposal of the hon. leader of the opposition adds absolutely nothing to the transportation facilities of the country, but it involves handing so many millions of dollars over to the Canadian Pacific Railway Company to put into their pockets, and so many millions to the Canada Atlantic Company.

The scheme evolved by the government, on the other hand, proposes to open up a new territory, to develop the natural resources of the country, to induce immigration to come in. The hon. ex-Minister of Railways and Canals (Hon. Mr. Blair) the other day answered this argument by saying that he had from a reliable source the information that the territory now opened up in the west and covered by railways could accommodate 5,000,000 people. Well, Sir, it may accommodate 5,000,000 people, but it will not do so except on one condition. If a settler goes into a country that is already pretty well settled and where he has railway facilities, he must have a certain amount of capital to establish himself. He has to pay higher for the land, perhaps from $5 to $8 an acre; he won't live in a sod house when he sees his neighbour occupying a substantial residence, and he must have better stock and better surroundings generally, than he would think of procuring were he settling in a new country. Now, when a pioneer settles in these newly opened up regions, the first year he can cut cord-wood, and haul logs, and make a little money, and gradually he finds that he has his farm cleared and ready for cultivation. These are some advantages of settling in a new country, which favour the poorer settler, and they are not to be despised. I was also surprised to hear the leader of the Quebec Conservatives (Mr. Monk) speaking in the name of his province, say, that the line proposed by the government would run through sub-Arctic regions and through a barren and desolate country. Let me tell him that north of the St. Lawrence in the province of Quebec, in the counties of Portneuf, St. Maurice, Maskinonge, Berthier, Joliette and Montcalm through which this railway will run, the hon. member (Mr. Monk) makes a big mistake when he refers to them as sub-Arctic regions or barren lands. There is no richer region in the Dominion of Canada than is this particular region I have spoken of. We have there vast water-powers, which are to-day neglected. Members of this House remember that when they visited Shawinigan Falls a couple of years ago, they saw for themselves some of the enormous water-powers of the St. Maurice river and the further you go north the more abundant these water-powers become. I am told by experts who have gone into that country for the Quebec government, that the La Tuque Falls which are 60 miles north east of Grand-Mère can develop unlimited power. Our friends opposite are talking about high tariff, and about the bringing in of manufactured products from the United States; but let me tell them that manufacturing will go where it gets sufficient and cheap power to operate it. South of the

St. Lawrence river, where the leader of the opposition wants to run a railroad, you hardly have a water-power at all, but on the north, on the Gatineau river, the Lièvre river, the River St. Maurice, and the Mattawin, there is sufficient water-power to drive the wheels of industry of every manufacturing concern that can possibly settle in Canada. If you open up that country to the north, then instead of sending your trade to the United States as the scheme of the leader of the opposition would do, you will see settlers going in there, you will see manufacturing industries being developed there, and you will see that country the home of a numerous and a contented people. Five years ago the Shawinigan Falls and Grand-Mère were in a wilderness —to-day Grand-Mère has a population of 5,000 and Shawinigan Falls, after four years, a population of 3,000. I have no doubt that six years ago the member for Jacques Cartier would describe both Shawinigan and Grand-Mère as being in a sub-Arctic and barren country. Let me say that there have been $5,000,000 invested in these two great water-powers on the St. Maurice river within the last four years. I felt somewhat ashamed to hear an hon. gentleman of the position and standing of the hon. gentleman (Mr. Monk) belittle the northern part of the province of Quebec, in order to try and justify himself for opposing a scheme which he knows to be in the best interest of Canada. Now, Mr. Speaker, my ten minutes are nearly up and as I will not break my word to you I have but a few sentences to add. By building this transcontinental line we will open up fertile regions through new Ontario. We have 16,000,000 acres there and we will develop them and bring them under cultivation. In Quebec a splendid territory will be developed by this railway which will be the home of manufacturing for Canada, just as New England is for the United States. We have in that country cheap water-powers sufficient to drive the wheels of industry and manufacture, and we will have availing of these water-powers thriving industries which will produce for the western farmers all the manufactured goods they are able to consume. I need not refer to the fertility of the Peace River district, for we are all agreed as to that. I am in favour of this scheme proposed by the government because it is a patriotic scheme. I am in favour of this scheme because it will carry Canadian trade through Canadian territory twelve months in the year, I am in favour of this scheme because it will develop the resources of our own country and attract settlers to us, I am in favour of the scheme because it is a grand national scheme promulgated by a wise government headed by a great statesman.

Mr. E. A. LANCASTER (Lincoln and Niagara). I congratulate my hon. friend (Mr. Bureau) upon the brevity with which he has stated all that can be said in support of this scheme, and I do so all the more heartily because he has done in ten minutes which it took the Finance Minister and the Minister of the Interior each five hours to accomplish. Hon. gentleman on both sides must realize that the speech of the hon. member (Mr. Bureau) has been a very useful contribution to the debate, when we remember the lengthy speeches we were forced to listen to from members on the Liberal side, who knew no more about the question than the hon. member for Three Rivers does. I must, however, say that the hon. gentleman (Mr. Bureau) has made the same argument as that used by all of the government supporters, including the ministers of the Crown who have spoken on this question. He told us that this scheme is a patriotic scheme, and that it is needed for transportation purposes, but he did not refer at all to the resolution now before the House; which as most hon. gentlemen seem to have forgotten, I shall read. This is it:

> That it is expedient, in connection with the Bill now before this House, respecting the construction of a national transcontinental railway, to ratify the agreement set forth in the schedule to the said Bill, entered into on the 28th of July, 1903, between the government and certain persons on behalf of the Grand Trunk Pacific Railway Company, a company to be incorporated by parliament at the present session thereof, and to authorize the government to do whatever is necessary to give full effect to the said Bill and agreement.

Now, Sir, I have not heard from the government or their supporters one word to prove that it is expedient to ratify this agreement. They seem to assume that because they allege it is a patriotic scheme and that we need transportation facilities, that therefore no matter what the price, the money shall be taken out of the pockets of the people to provide these facilities, and that it follows as a consequence that it is expedient to do so. I should consider that this expediency was similar to the expediency which the executor of an estate would adopt if he had in mind the conserving of that estate in the best interest of those to whom it belongs. I would consider expediency, that care which would dictate to the trustee that he should see that the bargain he is making is a good one, and that he is paying no more for what he gets than he ought to pay. I have listened attentively to this debate and I have heard little indeed as to why this scheme is expedient in the sense in which I understand the proper meaning of the term. It is my duty to draw the attention of gentlemen opposite to the fact that if this bargain is not a good bargain for the people of Canada, the patriotic side of it is not one which we should consider very seriously. We Conservatives do not need any lesson in patriotism from gentlemen on the other side. There was a time when we did not hear so much from

these gentlemen about a scheme being a Canadian scheme, or about a scheme freeing us from the bondage of the United States. There are gentlemen on the Liberal benches to-night who occupied seats here when blue ruin was the talk of the Liberal party, and when they contended that Canadian affairs would better be regulated from Washington. Things of that kind were said by the Liberals until the people of Canada became disgusted, and while we may congratulate these politicians that at last they have come to recognize that national questions must be dealt with from a Canadian standpoint, yet we must remember that the people sent us here to make the best bargain we can in their interests, and in the interest of the country. In every speech made on that side of the House we have had this menace of the abrogation of the bonding privilege repeated over and over again. This, if it were not an insult to Canadian manhood, I would call a red-herring drawn across the trail in order to conceal from us the fact that the bargain is a mighty bad one.

On this resolution itself we did not hear from the right hon. the First Minister. He was probably within his rights when he nodded his head as you, Mr. Speaker, put the resolution to the House; and we have therefore to hark back to what he said on the Bill itself in order to find out the reasons he gave why this agreement should be ratified. Naturally, before deciding whether this was a wise and prudent bargain or not, the first thing we would ask of the right hon. gentleman is, where is your evidence of its acceptability? What have you got to show that this is a good bargain for the people? Well, after the right hon. gentleman had stated his case, we found a former colleague of his—one under whose particular administration this project would have naturally fallen, but who preferred to resign his seat in the cabinet rather than give it his endorsation—rising in his place and, in an argument which covered the whole ground, and which lasted some two hours and a half, putting the right hon. gentleman out of court. We found his former colleague proving that it was a most dangerous, improper, unsafe and absolutely foolish bargain. So convincingly did he state the case against the government, that the government have found it necessary to prolong this debate, in order to give every one of their supporters, on whom they could possibly count to make any kind of a plea in support of this scheme, an opportunity to reply to the strictures of the hon. the ex-Minister of Railways and Canals. The ex-minister was the first witness to prove that this was a most expensive bargain. He told us, and his figures have not been controverted, that this projected road was going to cost us in the neighbourhood of $120,000,000 or $130,000,000. It is true that the hon. member for North Norfolk (Mr. Charlton) who was put up by the government to reply, undertook to show that an expenditure of $70,000,000 would cover the cost, but he did not go into the details, and he did not cover the whole of the project at all when he gave those figures. Contrast these estimates. We have first the estimate of the right hon. the First Minister, made upon the introduction of the Bill connected with this resolution, that the road was going to cost $13,000,000 and not a cent more. It is rather a striking commentary on the administrative ability of the First Minister, that the first witness against him was his former colleague, the ex-Minister of Railways and Canals, a gentleman who was high in his counsels and respect until he disagreed with him upon this question. And we had the ex-minister—whose experience and knowledge in railway matters would entitle his opinion as an expert to much greater value than that of the right hon. gentleman—declaring that the cost, instead of being $13,000,000, would be $120,000,000 or $130,000,000. This was rather hard testimony for the right hon. gentleman to refute; and it is evident how hard pressed he was when he had to solicit the aid, in order to bolster up the case of the government, of the hon. member for North Norfolk (Mr. Charlton) who, as this House well knows, is prepared to argue convincingly on either side of any question, just as his interests of the moment dictate. Well, the hon. member for North Norfolk (Mr. Charlton) estimated the cost at $68,000,000 or $70,000,000—considerably less than that of the ex-Minister of Railways and Canals, but considerably greater than that of the First Minister. Then we had the hon. the Finance Minister brought to the rescue, and that hon. gentleman went the Premier one better, and reduced the cost from $13,000,000 to $8,000,000. Could we require any better proof than these contradictory estimates, furnished by the principal supporters of this bargain, by the promoters of it, to show that the government are really rushing into this vast undertaking without having the faintest idea of what it is really going to cost the people. Following the Finance Minister, we have had any number of gentlemen on the government side giving us estimates varying from $120,000,000 down to $8,000,000. Of the lot, the hon. the Finance Minister is the most penurious, the most anxious to make the figures as small as possible, and we are expected to find our way out of all this maze and come to a decision on which we can rely with any degree of certainty. All we have to go by is what evidence and information we can glean from the present debate; and if this discussion were to last three months instead of three weeks—aye if it were to last three years instead of three weeks—the people would be better satisfied than to let the contract go through with no other than the meagre information submitted to us. The opposition, Sir, would be false to their

duty if they did not keep up this debate, if for no other reason than to obtain every possible scrap of information we can possibly secure before committing the country to this extravagant project. In the course of three weeks which this debate has lasted, we have been given no reliable information as to what this project is going to cost. We are still completely in the dark as to the amount of liability we are about to impose on the country. For that reason alone my constituents—those who voted against me as well as those who voted for me—would consider that I had done wrong if I did not make every effort to obtain for the country more information before allowing this resolution to go through. Even those who voted against me at my election would be justified in saying: 'Although we did vote against you, we expected, when you did go to Ottawa, that you would find out what you are called upon to vote for, before giving your vote, and if you cannot do that we will get somebody who will. And they would be quite right. For my part I cannot understand how any hon. gentleman can take the position taken by the hon. gentleman who preceded me (Mr. Bureau), of declaring that as this resolution was proposed by the government he was supporting, he was going to vote for it without any regard for its merits or the consequences. That is not the position we on this side take. We want to find out all about a question before casting our votes either for or against any proposition submitted to us.

The right hon. the First Minister gave us four reasons why this scheme should go through. First, he said, he wanted it to carry grain. It seems to me, however, that my hon. friend from Marquette (Mr. Roche) rather gave the real reason when he said that it was not to carry grain the Premier wanted the road but to carry the elections. But for my part, I am confident that the elections will not be carried, as the hon. the First Minister intends they shall, and the people will once more put the Conservative party back into office, because that is the party which is willing to do what is right. I do not believe that the few millionaires, which the right hon. gentleman hopes to construct out of this scheme at the expense of the people, will be powerful enough to carry the elections. I have too much faith in the integrity and independence of the people to believe that all the millions which can be raised out of this scheme by the half a dozen millionaires it is going to create will be able to carry the election. It is an insult to the intelligence of the people to suppose that they will not see through a scheme of this kind and that they will be carried away by such corrupt and clumsy devices in this year of grace, 1903.

The second reason which the First Minister gave for asking this House to pass this resolution was that the scheme would only cost the people $13,000,000. I have shown how he has been put out of court by his own witness on that point and will not trouble the House by further discussing it. And he gave a third reason, that with regard to the bonding privilege. I feel like apologizing for even mentioning that matter in this House. It was a trashy argument to be put forward by anybody, and it has been exploded by every speaker on this side who has dealt with it, and has been dropped by hon. gentlemen opposite like a hot iron or—well, I hardly know what comparison to offer, because it has been a quicker and more impulsive letting go than anything I can think of in ordinary life. I notice hon. gentlemen opposite have not referred to the bonding privilege question since the address of the hon. member for Hants (Mr. Russell). That hon. gentleman has courage far greater than his stature. I must say this for the hon. gentleman—he can speak for four or five hours, and in ten minutes he can use more words than most of the rest of us can use in twice the time. But that hon. gentleman did so thoroughly explode the arguments of those on his own side with regard to the bonding privilege that I feel sure that none of the others will deal with it. I do not think, for instance, that the Minister of Customs (Hon. Mr. Paterson), who is the only member of the government present and the only one who seems to think it necessary to pay any more attention to this debate—on which I congratulate him—will try to revamp this bonding privilege argument. If he is to speak in this debate, I should be glad indeed if he, as a man of business experience, and one who must know a great deal about the shipping and handling of freights on railways, steamboats and in every other way that goods are transhipped, would corroborate, if he can, some of the arguments of the hon. member for Hants when speaking on this question. I think the country also would be very glad to receive his views upon it. No doubt, the hon. gentleman will say that the bonding privilege has nothing to do with the question. The right hon. Prime Minister quoted a statement made by the President of the United States—he did not say when, but I think it was fourteen or fifteen years ago—a statement evidently made for election purposes. It was just like any one of the many efforts in the United States to twist the British lion's tail made just before the election, in order to please a certain element and win its votes. In the same way, President Cleveland, seeking to be re-elected, made his threat as to what he was going to do to us poor Canucks with regard to the bonding privilege, I thought the fact of the Prime Minister referring to this utterance was very suggestive. For, just after talking this kind of nonsense, Mr. Cleveland went to the country and was overwhelmingly defeated. I think that when the Prime Minister appeals to the people and they see that this bonding

privilege talk is all that he knows about the expediency of the contract he asks them to confirm, they will tell him he had better accept the same verdict that Mr. Cleveland got, as he seems to know just as much about the bonding privilege and the transportation business as Mr. Cleveland did. As to the speech of the hon. member for Hants, I think that those who heard it—though I could hardly blame any hon. gentleman who did not hear it at all, because it took up half of one day and pretty nearly the whole of the next until evening—will agree with me that if that speech is printed and circulated it will convince the people that they ought to vote for the party who oppose this legislation, and not for the party on whose behalf the hon. gentleman (Mr. Russell) was speaking. He gave some very strange arguments in support of the resolution. He acknowledged the fact—as will be found on referring to page 9235 of the current 'Hansard'—that the building of this line from Quebec to Moncton would probably have the effect of turning the Intercolonial Railway over to the scrap iron heap. Referring to that point, he said that a new invention or appliance took the place of the old, and the change is beneficial to the community at large. He instanced certain manufactures, and said that one manufacture took the place of another, and so, as one railway became inefficient another would have to be constructed; and if the construction of the new road—and there he was referring to the Quebec and Moncton line—had the effect of reducing the Intercolonial to the scrap iron heap, it did not make any difference, because we should have a better road. There was a distinct admission that the seventy millions of dollars spent on the Intercolonial are of no account.

I know—and I have been aware of it, perhaps, longer than some hon. gentlemen on the other side—that, taking them as a whole, the people of Canada are not a stingy people. The people of Canada are ready to pay and pay pretty well, for anything they require in the interest of the country. But when an hon. gentleman representing a constituency in this House tosses aside seventy million dollars of their money as of no account, says that it may be thrown in the scrap heap, and calls the institution on which the money has been spent a mere 'raft in the shipwreck'—those were his words when he said that the Intercolonial as compared with the whole transportation question was a mere 'raft in the shipwreck'—I think the people of Canada will say to him that it seems to be a pretty dear raft, that it is made of the most expensive kind of timber, and that the pieces, instead of being fastened together with iron bars, are fastened together with gold plate. On this road we are asked this session to vote $3,000,000, for what? The other day the Governor General consented to a Supply Bill covering one-fifth of the estimates for the current year, these having been passed by arrangement between the leaders in this House. The remaining four-fifths of these various items still remain for discussion. And this total of $3,000,000 to be spent on the Intercolonial is for what? It is for betterments. The government propose to spend this amount of money to put the road in more perfect condition than it is in to-day. The right hon. Premier gave the key note for the chorus of his followers with regard to the Intercolonial when, in introducing this Bill, he said that the Intercolonial was built for military purposes and not for purposes of transportation. The hon. member for Hants took courage from that, and went on to call the Intercolonial a 'raft in a shipwreck.' Yet this is the road upon which this government in its seven years of office has spent $20,000,000. And now, we are told the weeds should be allowed to grow up on the Intercolonial, and the rails, perhaps, be sold as scrap iron, and the whole institution allowed to go to waste. Yet, while this is looked to as the result of that policy they propose to spend $3,000,000 to still further improve the Intercolonial.

It seems to me, Mr. Speaker, that the ex-Minister of Railways and Canals (Hon. Mr. Blair) when he considered the improvidence and outrageousness of the scheme used very mild language when he talked about hysterical frenzy or temporary madness as having surely had something to do in dictating this policy. How could any hon. gentleman who had the least respect for himself, who valued the good opinion of those whom he met day by day, and joined with the Minister of Finance and other hon. gentlemen supporting the government in voting these millions every year, including the part of this $3,000,000 already voted this session, thus declaring that the Intercolonial should be kept with the top notches railways—how could he at the same time support a scheme which involved the idea that the Intercolonial was not fit for the purposes of a railway and was so regarded by the government.

What are the facts, Mr. Speaker? Does any one doubt that the Intercolonial is fit for the purpose? Is it not doing all the business that it can do or that can be done by any railway? Is it not reasonable that the hon. leader of the opposition (Mr. Borden) should urge that the Intercolonial should be used as far as it goes and that it should be extended, as he suggests, up to the great lakes in order to afford the transportation facilities that are there required. Is it not reasonable that we should avoid the absolute waste of paralleling the road which we already own, paralleling it and paralysing it by building a commercial enemy. That is the proposition of the government, and it is one that should be condemned, while I submit that the alternative proposi-

tion of the leader of the opposition, so far as the Intercolonial is concerned, is one that must commend itself to this country.

The hon. member for Hants (Mr. Russell), one of the principal supporters of the government, also distinctly said that it did not matter to him whether the ex-Minister of Railways and Canals (Hon. Mr. Blair), in leaving the government, was actuated by high conviction or by resentment. Let us look at the state of political morality which this indicates. It mattered not to him whether it was from honest conviction that a matter was wrong and ought not to be forced upon the country, that the hon. ex-minister abandoned his office, gave up its emoluments, and left the cabinet councils of the country, or whether he did it in a pet, angry at some imaginary rebuff he had received. What conditions are we coming to in this House? Are we going to vote things simply because the right hon. the Prime Minister says we are to do so? Because he bows to you, Mr. Speaker, as much as to say: Enough said; that is my resolution; I desire it to pass; what right has the country to know what my evidence is in support of it? I am Premier, I bow to you as a token that I want that to pass; that settles it—it must be passed, and the people of this country and the opposition are not entitled to know any more than I choose to tell them as to whether it is expedient or not.

As representing a somewhat prominent constituency, one with over 30,000 people, I protest. I want some evidence in justification of the expenditure of this money before I can bring my conscience to consent or before I believe the consciences of the people I represent would consent to this deal—for it is nothing but a deal—going through.

The fourth reason, and the Premier touched a good many times on it—and with all respect, I wish to say I was astonished at his hardihood—that this railway must be built was because the Conservative party once made a pledge that they would do something of the same kind, and that he thought he should redeem the pledge of the Conservative party. Charity begins at home, and if there is any charity in a Reform government, it should begin there too. We do not ask the Premier to pay our debts; we have had no claims filed against the Conservative party and proved in the ordinary way, to show that there are any debts of this kind against the Conservative party. We know, however, that there are a good many claims to be satisfied by the Reform party, who in 1896 turned out of office better men than they are, by making pledges they did not intend to carry out. To show how callous this government are in the matter of broken pledges, I would remind the House that in the speech from the Throne, placed in the mouth of His Excellency by this government, a pledge was made that this question would be dealt with in a very different way, and we have heard no apology as to why that pledge was not carried out. I would advise the right hon. gentleman to pay his debts, so recent and so fresh in the minds of the people, before he talks such nonsense as he has talked about the debts of the Conservative party. I tell him, without fear of contradiction, that the Conservative party does not owe a single debt on account of broken pledges and does not want any advice from any Premier of any so-called Reform government.

To do the hon. Prime Minister credit he said that it was for patriotic reasons that it was essential that this railway should be built. If I understand my constituency and the province of Ontario, and in fact all the constituencies of the Dominion of Canada—for I do not understand that one Canadian is different from another in his knowledge of patriotism and of his business duty—I believe thoroughly that the people of Canada want the business which we are sent here with a solemn trust to conduct, dealt with on its merits and without any such nonsense as patriotism being used as a reason for a bad Bill going through. What patriotism is there in making five or six millionaires at the expense of the people? Have we to constitute Morgans and Vanderbilts and Rockfellers, five or six of them, before we can call ourselves a nation, before we can wake up and find ourselves a nation? Has the Premier to go to sleep again and have another dream and find that we are not a nation because we have no multi-millionaires? We are sent here as the representatives of the people to look after their interests, and it is not fair to take from every family of five what this scheme will take. It will cost in round numbers $150,000,000, with no interest and no return, and it is not fair to thus assess every poor man's family $150 in order to make five or six millionaires.

No case has been made out in support of this scheme. The Conservative party does not stop short at criticism. They would be justified in saying: Because you have not proved to this House that this measure is expedient, therefore we must assume it is not expedient. The Conservative party have investigated the facts; they have said to themselves and to the people, If the government will not ascertain the facts and take the trouble to have surveys and plans made and to see what they are doing, we will do it, although we have not such facilities as the government have, although the expenses we make will come out of our pockets and not out of the public exchequer, although every telegram we send and every engineer and every explorer we employ, must be paid out of our own pockets—although all this is so, still, in the interest of the country, we will ascertain what this is going to be. And so at considerable expense, and at the cost of a great deal of

time and energy, we have shown to you and to the House and to this government—if they will be good enough to open their ears wide enough to take it in—what this is going to amount to.

What does it amount to? It is going to cost $150,000,000, and the canals of the country are going to be rendered useless if the argument of hon. gentlemen opposite is good. I do not think their arguments are good in that respect. I think the canals will still do business, but I do not think this railway will do the business that hon. gentlemen opposite pretend it will do. If their arguments are good this road ought to be able to handle all the traffic and the canals are to be put out of business. The scores of millions of dollars which have been spent in the building of our canals are to be wasted the moneys spent on the Georgian bay are to be wasted, the moneys spent on the St. Lawrence canal system are to be wasted, if their arguments are good, because according to these hon. gentlemen this railway is going to do more than any other railway can do. It is pretended by hon. gentlemen on the other side of the House that this railway will be able to carry the grain from the west and that another railway cannot do it. It is a strange thing that this railway should possess a supernatural power to do that which these hon. gentlemen say other railways cannot do. If these hon. gentlemen are correct in what they say, then the canals and the existing railways are all bad, and if they are not, this particular railway will be no good. The Canadian Pacific Railway is not able to carry, according to their argument, any such quantities of grain from the west as this railway is going to carry under similar conditions, though the trains are hauled by the same kind of engines and through the same kind of country. The argument of these hon. gentlemen is that unless this particular railway is constructed the grain cannot be carried out of the country, because hon. gentlemen say that this railway can do what other railways cannot do. The proposal of the hon. leader of the opposition has all the advantages that the government scheme assumes to possess and at one-third of the expense. There is no question but that all the grain can be brought out and that the fruit from the eastern provinces can be sent up to the west. I was amused to hear the hon. member for Annapolis (Mr. Wade) talk about shipping his apples and other fruits to Great Britain. Does he not know that we cannot send our apples and other fruit from the Niagara district to Winnipeg because the freights are too high to allow us to do it ? The miller in the North-west Territories gets his barrel of flour carried to St. Catharines for less than one-half the freight that the fruit-grower has to pay to get his barrel of apples carried up to Winnipeg. Do the people in the hon. gentleman's county want to send their fruit to Great Britain or to the west ? If they want to be national in their ideas let them start to build up a trade at home. Does the hon. gentleman not think that hon. gentlemen who sit in this House, that the friends and relations of hon. gentlemen who sit in this House, and that the people of Canada should be considered a little in this question as well as himself and those he speaks for ? I am not going to say that because the farmers of Ontario had to build granaries in the pioneer days, that because they had to take care of their grain until the railways were built, that because they had to hold it for months and months ; that because in the early days of Ontario the farmers did not have the advantages that are now afforded to the people of the west, we should not give these advantages to the western people. The section of the country which I have the honour to represent is not stingy and it does not object to any proper bargain that is entered into in regard to railways, but if the country is going to build railways, build them on a sensible plan ; do not build them and then hand them over to a corporation at the expense of the people who get no benefit from them.

I want to say one word in regard to the right hon. Minister of Trade and Commerce (Rt. Hon. Sir Richard Cartwright). The right hon. gentleman made a speech upon this question the other day. Of course, if the hon. ex-Minister of Railways and Canals (Hon. Mr. Blair) does not agree with the scheme, the next best man to appeal to is the hon. Minister of Finance (Hon. Mr. Fielding), because it is a money question. The hon. gentleman said that the whole cost would be for the interest, which amounts to $8,000,000, but he did not tell us what it would cost for the payment of the prinicpal. The next hon. gentleman that we would be apt to call upon to give us some information in regard to this project is the right hon. Minister of Trade and Commerce. The right hon. gentleman addressed a long speech on this question to this House, or rather to the other side of the House. During the course of this debate I have noticed that when cabinet ministers undertake to address the House on the subject they turn their backs upon you, Mr. Speaker, and upon the people of the country as represented by the opposition, and they devote their attention to trying to convince their own followers that they had better vote for this scheme. It is quite evident that the cabinet ministers from the right hon. Premier down are afraid to trust the fidelity of hon. gentlemen sitting behind them, and therefore, whilst endeavouring to convince their own supporters, they turn their backs upon you, Mr. Speaker, and upon us, because they think it does not make any difference about us if they can only hold the fifty majority which they have had since 1900. The right hon. Minister of Trade and Commerce tried to convince the hon.

gentlemen behind him. He told us nothing whatever about the present project, but he said that if the late Hon. Alexander Mackenzie's scheme had gone on the country would have been more prosperous in 1885 than it is now. I do not know. I may be stupid, but if that is the case I do not know why it is that we have not 15,000,000 or 20,000,000 people here now, although I am sure this country has enjoyed a large measure of prosperity since 1878, when Mr. Mackenzie was put out of power because he was considered by the people not to be able to carry on the affairs of the country in such a way as to promote its prosperity. I am sure it has prospered since and if the same proportion was to be given effect to we would get ourselves into that same maze that the hon. gentlemen on the other side have got themselves into when trying to show us that this is a good scheme. He did tell us he was afraid that in the face of our record we would not be able to make it go down with the people that this was not a good thing for the country. I recall the time three years ago next November when the right hon. Minister of Trade and Commerce came over to St. Catharines to defeat me and to endeavour to have the present Senator Gibson elected by a good majority. He made a speech in the Opera House in St. Catharines and he undertook to speak in regard to the fiscal policy. His speech on that question was about as applicable to the fiscal policy as his speech in this House the other day was applicable to this railway project. He made about the same kind of a speech in comparison as he made here the other day, and the result was that a majority in 1896 of 119 was converted into a majority in 1900 of 396. I can assure the hon. minister that if he comes over at the next election he will save me a lot of trouble and a lot of election expenses. If he will come over to the Opera House in St. Catharines and deliver the same kind of a speech upon the railway policy that he delivered in regard to the fiscal policy on the occasion to which I have referred, I think he will increase my majority from 369 to probably 1,069.

I was going to speak for a moment in regard to the hon. member for Welland (Mr. German), who addressed the House upon this question yesterday. He said that he had listened very carefully to the speeches delivered during this debate, that he had read 'Hansard' containing what he had not listened to, and that he had not heard one word uttered by any hon. gentleman on this side of the House taking any exception to the paralleling of the Intercolonial Railway. Here is an hon. gentleman speaking in this House trying to belittle the arguments of the opposition and stating that no hon. gentleman on this side of the House has found fault with this road because it is paralleling the Intercolonial Railway. The hon. member for Hants (Mr. Russell), who spoke a little while before him, had taken up an hour or more with his argument in respect to the bonding privilege and he had devoted another hour and a half in trying to convince the House that the paralleling of the Intercolonial Railway was not in reality a paralleling of the Intercolonial Railway, but a paralleling of the Grand Trunk Pacific by the Intercolonial Railway. That is about the way he left the matter when he got through with it, and then he said that the effect of it was that if the Intercolonial Railway were turned into scrap iron it would not make any difference.

I would advise the hon. member for (Welland) Mr. German to consult the hon. member for Hants (Mr. Russell) as an eye and ear specialist, so that when he reads 'Hansard' again and listens to the debates in this House, he will understand better what has been said. The hon. gentleman (Mr. German) could not give any reason to the people of Ontario as to why $60,000,000 or $70,000,000 should be wasted in paralleling the Intercolonial Railway, towards the construction of which the ratepayers of that province have contributed largely. He knew that if the new line paralleled the Intercolonial Railway it should not be built, and then he resorted to the device of saying that he heard no one on this side of the House making objection to the paralleling. Well, if he listened he would have heard it. As the hon. gentleman (Mr. German) comes from the Niagara district—although not as good a part of it as I come from—it might be thought that if I did not refute what he said I had acquiesced in it. I am bound in the interests of the honest reformers and the Conservatives of that district to refute his statements at the first opportunity. He told us that he understood in the Railway Committee that no substantial assistance was to be given to the Grand Trunk Railway. I was in the committee when the Grand Trunk Railway Bill was being discussed, and I know that we had all we could do to keep gentlemen opposite from pledging the government that there would be no financial aid given to the company, if a charter were passed. They were afraid that the government would give financial assistance, and on the very preamble of the Bill, and all through its clauses they endeavoured to provide that there would be no financial assistance given to that company. We have heard from the Minister of the Interior, and we have heard from other gentlemen from the west, that the great cry in the North-west is that they cannot get trains enough to take the products of that country to the seaboard. If that be true, and I suppose it is, it would seem that a railway should give a bonus to the country for granting permission to enter that region. When a railway builds there, it is not a case of taking chances. Subsidies are paid to railways when they un-

dertake a venture which looks doubtful, but which if successful may add to the prosperity of the country. Subsidies are paid to railways to open up countries so that crops may be grown and hauled out. But here is a country in which the trouble is that the existing railways cannot handle all the freight that is offered to them. Is that not a good reason why this railway in the prairie section, should not be subsidized, but on the contrary that it should be thankful to get permission to enter that country and to do the business which is waiting for it. The hon. gentleman from Welland (Mr. German) also told us that there was nothing in the contention that this new road would parallel the Intercolonial Railway, because if the government did not parallel the Intercolonial the Grand Trunk Railway would step in and do it itself. Well, I would point out to him that the Grand Trunk Railway could not build one foot of road to parallel the Intercolonial Railway unless parliament gave them a charter to do so. What idleness it is for the member for Welland to say that unless the government built this section of the road, the Grand Trunk Railway Company would build it and themselves parallel the Intercolonial Railway. Why, the Grand Trunk Railway cannot do any such thing unless they get a charter. They cannot build a foot of road unless they get a Dominion charter where it is to the general advantage of Canada or a provincial charter with respect to a portion of the road which affects only a particular province. The member for Welland says that we are at the mercy of the Grand Trunk Pacific Railway in this matter, when as a matter of fact the Grand Trunk Pacific Railway must and should be at the mercy of parliament for any favours which they may get, or for any permission to build roads which they may obtain. Sir, the ex-Minister of Railways and Canals was absolutely correct when he talked about the hysterical frenzy of the government. You would imagine that they believed that the Grand Trunk Railway could take the people of Canada by the throat and say: Unless you build this railway from Quebec to Moncton, we will build it, and we will put your Intercolonial Railway out of business. That is the sort of argument that comes from the hon. member for Welland. Then the hon. gentleman told us that we had the advantage of government ownership in the road from Moncton to Winnipeg, because we will build the road ourselves. What is ownership in a railroad or in a House, or in a barn, or in anything else if it is not the right to use it; and has not the government of this country handed over the right to use that road and the practical ownership for fifty years? What good is the title if we have not the user? If the scheme of the leader of the opposition were adopted we would have the right to use the roads acquired, and therefore we would have all the attributes of ownership; but in this case you build the road and for half a century you hand over what is practically its ownership to the Grand Trunk Pacific. It is not my habit to say what any man's constituency will stand from him, but if I know the people of Welland, I doubt very much if they will not resent the action of the hon. gentleman (Mr. German) in underestimating their intelligence to such an extent as to suppose that the arguments he has advanced to this House would appeal to any reasonable man.

The hon. member for Welland (Mr. German does not care what will happen fifty years hence and the member for Hants (Mr. Russell) told us that he was tired of hearing people talk of fifty years hence when he would be in his grave. Well, I should have thought that the Prime Minister would have given a little attention to this matter before he entered into this scheme. You cannot convince any business man in this country, nay, you cannot convince any schoolboy, that in a matter of national concern you must not look forward for fifty years. Why, Sir, this road will have made millionaires of its promoters or it will be found to be an utter failure in the next fifteen or twenty years. We know that railways which were constructed fifty years ago are not doing business in the same way to-day as when they were first operated. How does any gentleman know in this age of scientific research and invention what the conditions will be fifty years hence? I notice that charters which this government have passed speak about steam and electricity as being possibly set aside and their place taken by an atmospheric pressure or other discoveries as motor power. It may be that in handing this railway over to the Grand Trunk Pacific for fifty years we are handing it over for the time that it will be of any profit whatever. That can be obviated by owning the whole line now, and by controlling it now, or, it can be obviated by adopting the scheme of the leader of the opposition which will cost one-third the money that the government project will cost, and be more advantageous to the country.

The hon. member for Welland also claimed that this road should be built because it would bring freight to the Intercolonial Railway from the North-west. The Intercolonial Railway is not in the hands of a receiver; it is owned by the people; it is doing business at the old stand, and carrying a great deal of freight. Is it not getting freight from the North-west now? If the scheme of the hon. leader of the opposition is carried out and the Intercolonial Railway is extended to the North-west by the amalgamation he proposes, will not the freight come down over the Intercolonial Railway as well as over others? Is it going to be turned away or sent to the North Pole or to Chicago or anywhere else?

Does not the scheme of the hon. leader of the opposition give us all the benefits of the scheme of the government itself, and at one-third of the expense, while at the same time the people have the whole control ?

I want to mention another matter. The government, by the solid vote of their party two or three months ago, voted down the proposition made by the hon. member for Hamilton (Mr. Barker) and seconded by myself, to bring the Intercolonial under the terms of the Railway Commission Bill. They gave as a reason for voting down that proposition that the Intercolonial Railway should have a little more power than the other railways. If that is the case, why do they want now, to throttle the Intercolonial and go back on their vote of two or three months ago ? Why do they not protect their own business ? Why do they give to strangers, or at any rate to people doing business in opposition to the people they represent, the advantages which they claimed for the Intercolonial Railway three months ago ? The question was whether the Intercolonial Railway should not be allowed more control over freights, so that it could relieve the situation, even if the railway commission did not succeed in doing so, it being understood that the railway commission must prevent discrimination, and give the same chance to all railways carrying to the same points and under the same conditions. It was thought that the Intercolonial Railway might be treated as an exception. If there was any merit in the opposition of the government to the proposition made on this side of the House, it was that the government, being actuated by proper motives, not by political motives, but only anxious to relieve an improper and hazardous situation, would in some special case create a disposition of freight and transportation for the benefit of the people. The Intercolonial would perhaps carry freight cheaper and in a less formal way than the other railways. If hon. gentlemen opposite voted against that proposition on the ground that the Intercolonial Railway should be strengthened, being the people's road, if they were sincere in that position, and if there is any consistency about them, why not apply the same view to the present case, and carry out the proposition of the hon. leader of the opposition, which is to strengthen and increase the powers of the Intercolonial Railway ? And if there is any benefit to be conferred on the people by the Intercolonial Railway not being under the railway commission, then, so far as you increase the powers of the Intercolonial, so far you increase that benefit.

I must pay the compliment to the hon. member for Victoria, N.B. (Hon. Mr. Costigan) of saying that I was very glad the other night to hear him say that he had fished and trapped and hunted over that part of New Brunswick through which the supposed railway is to run, and that, although he would not dare to compare it with the fertile lands of the Niagara district or other parts of the province of Ontario, it was not bad land, and that he thought the railway might be built through that country. I suppose as soon as the railway is built the bad land will be turned into good land, the muskegs will be filled up, and joy and happiness will reign. I was very much pleased, however, to hear the hon. gentleman, because it was the first speech I have heard him make into which he did not drag the religious question. The hon. gentleman spoke with more evident anxiety about the result than he usually does, probably because he thought the proposition before the House was fraught with a good deal of anger to the government which since 1896 he so ardently supported. I was also glad to hear him say, that though the hon. ex-Minister of Railways and Canals had left the government on this question and was not going to be so strong, yet his friends were not going to leave him. I agree with the hon. gentleman's conclusion, but not with his preamble. I do not think that because the hon. ex-minister left the government on this question that his friends are going to leave him, nor do I think that the fact that he left the government was any sign that he was weak. Almost every man who spoke on this question in support of the proposition of the Premier, made three-fourths of his argument in abusing the ex-Minister of Railways and Canals; but if that hon. gentleman has not their support, he has strengthened a code of morality in this country which says that if you do not think a thing is right you should not vote for it. I think the people of this country will want a better argument than abuse of the hon. ex-Minister of Railways and Canals to convince them that the government are right and that he is wrong. Let the hon. gentlemen on the government side who are putting this scheme through tell us where the hon. ex-minister is wrong. Please do not call him names ; he is a Canadian as well as the rest of you. The row has cost him, and not you. So far as we know, he has been actuated by proper motives. When the people come to vote on this scheme at the polls, I think they will vote disapproval of the government and not of him, or else they will require more substantial arguments than have been addressed to this House in support of the government scheme. They will not, I think, conclude that because a man has voted against the government in power and because he has voted against the extravagant project now submitted to us, he is therefore everything that is vile, and worthy of the severest censures.

I want for a moment, before concluding, to refer to the hon. member for Cumberland (Mr. Logan). That hon. gentleman waxed quite eloquent and patriotic. In fact every time this government proposes to do something, their followers become patriotic and

indulge in windy screeds about Canada being a large country and about our being all Canadians, and so forth. He even became prophetic, and predicted what was going to happen to the two political parties in the coming election. He was not so indiscreet as the hon. member for South Wellington (Mr. Guthrie), who told us that we were going to have general elections this fall. He was more careful—probably he had been cautioned not to be too explicit—and he said that whether the general elections came off this fall or two years hence—and they must, under the constitution, be held inside of two years—the banners of the Liberal party would wave triumphantly at the head of the poll. On these banners, he told us, would be inscribed the words 'Laurier, Progress and Victory,' and on the banners of the opposition would be found the motto 'Borden, Blue Ruin and Gamey.' I wondered what in the world was the matter with the hon. gentleman; I wondered who had been talking blue ruin to him; and on trying to find some cause for his language, I noticed that his arms were stretched out exultingly towards that seat on this side which used to be occupied by the Minister of Trade and Commerce when in opposition, and when he was wont to preach the gospel of blue ruin. The hon. gentleman imagined for the moment that he was addressing the Minister of Trade and Commerce, and was really confounding with that hon. gentleman the leader of the opposition. But I can assure the hon. member for Cumberland that he is mistaken about the banners of the two parties. Although I am not in possession of the secrets of the Liberal caucus, or in the confidence of the leaders of the government, I think I can venture the assertion that on the Liberal banners we will find emblazoned these words: 'Laurier Millionaires at the Expense of the People,' and on the Conservative banners 'Borden and the People's Rights'; and as soon as the people are given the opportunity, they will vote for the Conservative candidates and the Conservative leader, who has done more for the people's rights in the three years he has been leading his party in this House than any Reform leader has done in the past forty years.

Mr. W. ROSS (South Ontario). I feel somewhat diffident, Mr. Speaker, in occupying the time of the House at this late hour of the session, especially as we shall by next week have had the longest discussion on record in the history of this confederation. But on this occasion I feel impelled to speak, for two reasons. First, that I do not care to give a silent vote upon this great question, one of the greatest that has ever occupied the attention of parliament. And, secondly, because, from a careful attention to this debate, I find that the more the proposition before the House is discussed, the better it commends itself to my support.

And although I am the sixty-first speaker to address the House on this resolution, and although it has been fully debated in all its details, I am sure that its merits will still bear further discussion, and that therefore I may be pardoned if I give what little aid I can to the promotion of this project, which I consider will be of immense advantage to the people of Canada.

Notwithstanding what has been said by the hon. member for Lincoln (Mr. Lancaster) who has just sat down, I am confident that the people will show by their votes at the next election, whenever that may be, that they heartily approve of this measure and are convinced that it is in the interest of the country at large. The hon. gentleman stated that this measure would simply create millionaires and ruin the country. That is not how I understand it. I have studied the Bill very thoroughly, and even at the risk of wearying the House, I wish to give some of my reasons why I think the scheme a good one. So much has been said by those who have preceded me that it is almost impossible to introduce any new matter into this discussion; but this is one of the many good things which will stand repetition. Let me read the resolution which the right hon. the Prime Minister moved when he brought down this Bill:

> Resolved, that it is expedient, in connection with the Bill now before this House, respecting the construction of a national transcontinental railway, to ratify the agreement set forth in the schedule to the said Bill, entered into on the 28th of July, 1903, between the government and certain persons on behalf of the Grand Trunk Pacific Railway Company, a company to be incorporated by parliament at the present session thereof, and to authorize the government to do whatever is necessary to give full effect to the said Bill and agreement.

We have also an amendment moved by the hon. member for Winnipeg (Mr. Puttee) in favour of government ownership.

Let me say briefly that I can well understand the earlier movements in connection with the introduction of this Bill. During the earlier part of the session the Grand Trunk Railway asked for a charter to extend their road from North Bay westward, and they wanted a subsidy of $6,400 and 5,000 acres per mile. The Canadian Northern Railway were also asking for bonuses. These matters were all engaging the attention of the government. Indeed, this parliament itself, in the interest of the Mackenzie & Mann syndicate, who are the head of the Canadian Northern Railway, voted a very substantial bonus for the prairie part of the road. All these matters were pressing upon the government, and the government scarcely knew what to do with the tremendous demand upon them for subsidies, which would take millions and millions out of the people of the country. And, apparently, they did not see their way clear to satisfy all these demands, but they brought down this Bill which they present

to the House. Let me read the title and preamble of the Bill :

BILL No. 235.

An Act respecting the construction of a National Transcontinental Railway.

Whereas, by reason of the growth in population and the rapid development in the productiveness and trade of Canada and especially of the western part thereof, and with a view to the opening up of new territory available for settlement, both in the eastern provinces and in the west, and the affording of transportation facilities for such territory and for other reasons, the necessity has arisen for the construction of a national transcontinental railway to be operated, as a common railway highway across the Dominion of Canada, from ocean to ocean and wholly within Canadian territory; and whereas an agreement has been entered into bearing date the 29th day of July, 1903, between His Majesty the King of the first part, and Sir Charles Rivers Wilson, C.B., G.C.M.G., and others, representing therein and acting on behalf of the Grand Trunk Pacific Railway Company, a company incorporated by an Act of parliament of Canada passed at the present session thereof, of the second part, making provision for the construction and operation of such a railway, a copy of which agreement forms the schedule to this Act ; and whereas it is expedient that parliament should ratify and confirm the said agreement, and should grant authority for the construction in manner hereinafter provided of the eastern division of the said railway between the city of Moncton in the province of New Brunswick, and the city of Winnipeg in the province of Manitoba.

Now therefore His Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows :—

There we have the matter before us. We have had the subject dealt with by sixty members of the House, including the Prime Minister, who presented all the points in connection with the Bill so well and forcibly. It will be noticed that the preamble begins : 'Whereas by reason of the growth in population.' We are quite sure that in the early eighties and up through the early nineties the growth of population in this country was very slow. It was very slow for various reasons. We, as Liberals thought that the fiscal policy of the Conservatives, then in office, had a tendency to retard the growth of the country. We saw that the industries which had been promised did not spring up, and we attributed this fact to the fiscal policy which had been adopted. We saw that our young men had gone to the other side of the line, that a large population from French Canada had gone into the eastern States, that everywhere our people were leaving us and that our growth in population was not at all satisfactory. But I am glad to assure you, Sir, that since the advent of the Liberal party to power the growth has been rapidly increasing. We have had a natural growth of the country and have also had an immigration into Canada which has been a surprise to everybody. We have talked about the matter in the House and the records show that the immigration into the country has been far and above anything ever known here, and that it is likely to increase. Indeed, the immigration into this country during the last fiscal year was about 125,000 people. That is very significant, when you remember that for many years the immigration did not exceed 5,000 or 6,000 per annum. That immigration is likely to increase. Why ? Because we have the country to attract them; because the country is well governed and has a policy which is suitable to immigrants making life pleasant and easy for them. Under these circumstances, we are sure the immigrants will come into this country and will come in very fast. The second portion of the preamble says : 'And the rapid development in the productiveness and trade of Canada and especially of the western part thereof.' Let us consider, for a moment or two, the growth of trade which is the second reason why we are asked to vote for the Bill. When the Premier puts forward this resolution he does not say to us : You are my servile followers; vote for this. He gives us reasons. And the second of these reasons is the rapid development of our trade. We find that in 1882, when the first transcontinental road was built, our total trade amounted to $221,356,703; and in 1902, twenty years later—just two decades, the lifetime of one individual—it had increased to $467,000,000. That is, it has doubled in the last twenty years and most of that increase, I am assured, has come in the last seven years. The total revenue of the country in 1882 was $33,383,455, and the revenue for 1902 was $66,500,000. We find a great increase in the bank assets also. The government are not by any means the only people to whom the increased business of the country is to be credited. There are the business people besides. The banks have a hand in practically all the business of the country, and they get a rake-off for the work they do. The total bank assets in 1882 were $227,426,835. In 1902, the total bank assets had grown to $641,985,372, more than keeping pace with the growth of the trade of the country. And if hon. gentlemen say that the government did not do it all, we quite agree with them; we say that the country grew independently of the government. The money in the savings banks including the post office savings banks in 1882 amounted to $21,786,661. This has grown until in 1902 it amounted to $59,147,226. These figures show the growth and expansion of our trade generally. But we know, independently of the figures that all our industries have been growing. In my own riding we have a smart little town. The industries of my own riding have grown rapidly. We can see them grow. New additions are being put upon factory buildings, more men are being hired, and new stuff being turned out. We have enormous factories in our town now, and what we see there is only indicative of what is going on

all over the country. In my travels I meet with gentlemen engaged in the manufacturing industries. They tell me that business was never better; their trade in many cases, is overdone; they cannot get the hands to do the business that offers. Our mines have been very productive. We have heard the hon. members for British Columbia telling us of the productiveness of their mines. The coal mines and other mines operated in the east have been operated largely, as also have the coal mines in the west on this side of the Rocky mountains. The price of lumber has advanced, the enormous cut of logs has produced a great quantity of lumber and not only has the home trade in lumber been good, owing to the activity in the building trade, but the export lumber trade has also been highly satisfactory.

The agricultural and live stock industries have felt this prosperity, and the farmers in the county of Ontario, which I have the honour to represent, are doing well to-day. They receive high prices for their live stock, good average prices for their grain, and they have large crops. Only the other day I had a letter from one of my constituents who said he had been farming for thirty-five years and that this was the best crop that he had ever had; he had oats running as high as 100 bushels to the acre.

These are the things that tell the growth in trade. This government have observed this growth all over the country. We see an enormous development of trade in the North-west. A few years ago they grew ten million or fifteen million bushels of No. 1 hard wheat; to-day they grow sixty to seventy-five million bushels and some of us who are here will live to see them grow hundreds of millions of bushels. These things show that the trade of the country is growing.

The next reason we are asked to vote for this is that it will open up a new territory which is available for settlement. We are not asked to vote blindly; reasons are given why we should vote for it. Is this country peopled as it should be, this enormous country with three and a half million square miles of territory? We have opened up simply a fringe of our country along the United States border, but it is now proposed to go farther in and open up the country and say to the people: Come and take the resources that lie here.

This railway will pass in its progress of 3,500 miles across the continent through one territory and five provinces. It passes through the province of New Brunswick with 28,200 square miles of territory, through Quebec with 298,900 square miles, through Ontario with 222,000 square miles, through Manitoba with 73,956 square miles, through British Columbia with 383,300 square miles, and through the North-west Territories, through a very rich and fertile part of them, with 906,000 square miles of territory. This is a vast area of country to be opened up. There is not much more to be opened up except Nova Soctia and Cape Breton and the unorganized districts which are estimated at about one and a half million square miles of territory.

As you think of the vast extent of this country you wonder why the attention of the world has not been turned to Canada before this, Canada with its enormous territories of valuable arable land. Are they productive these territories and provinces? What have the members who represent them said? What did the hon. member for Westminster (Mr. Morrison) tell us of the enormous development and riches of his territory in British Columbia? What did the hon. member for Vancouver (Mr. Macpherson) say with regard to the wealth of the district from which he comes? These two members have spoken for British Columbia; they have said that there is a practically inexhaustible supply of minerals in that country; that the forests of that country, which some of us have seen and know to be of immense wealth and size, will be sources of wealth for many years to come; that they have great fisheries, while the valleys although small, lying between the enormous hills that reach into the skies, are wonderfully productive. Then there are the territories. In previous sessions we have heard more than one member tell of the boundless resources and vast wealth of their districts and we know the productiveness of the fertile prairies. The member for Alberta (Mr. Oliver) has spoken of that during this debate; he has told us of the resources and the needs of that country—and its greatest need is a new railway.

The hon. member for North Renfrew (Mr. Mackie) who is a practical lumberman and has gone through a great part of northern Ontario, told us the other day, and I have it from his own lips, that it is not by any means all water and rock; that there is a great deal of arable land there and that it is not impossible to run a railway across the route projected. The hon. gentleman I may say as a lumberman keeps a man employed constantly to bring him reports of that country so that the information which he gives to the House is of additional value. We know too from the result of the explorations made by the Ontario government that north of the height of land, between that and James' bay, there is a large section of arable land, estimated at anywhere from sixteen to twenty million acres, which is very favourably situated and through which this railway will run. Besides that, does not New Ontario contain a vast amount of minerals? Gold, which is one of the most valuable minerals in the world, is found there. Iron of all kinds is found in great abundance on the north shore particularly in the section of the country which was stated by the hon. Minister of the Interior (Hon. Mr. Sifton) and again by one of the members to-day, to be practically not a farming

country. This then will be a mineral country. We had a report in the newspapers the other day that the explorers who are working in that country have found a vein of lignite coal. This would be a wonderful boon to the great manufacturing province of Ontario.

We have heard also from the province of Quebec. The hon. member for Gaspé (Mr. Lemieux) and the hon. member for Bonaventure (Mr. Marcil) have told about the wonderful resources of Quebec and we know that the northern sections of that province are very similar to the northern sections of Ontario. This northern part of Quebec must indeed be very rich, not only in farming lands, but in timber. There is a crop there now all ready to cut, a crop of fir, spruce, pine, birch and the various woods ready to be manufactured into lumber and into pulp.

The hon. member for Victoria, N.B. (Hon. Mr. Costigan) said in this House a few nights ago that this railway will pass through his county, the county of Victoria, N.B., and he has told us about the wealth of the section of the country through which it will pass in that province. He tells us it will not be by any means through a mountainous country, that it will be through a rolling country and that it will have streams and rivers; that it will be rich when it is opened up and that the reason it has not been settled before is simply because it is inaccessible. To secure settlement you must have a railway; that is the thing to attract people and if you put a railway in there, he is sure that the country will be filled up in good time. He says that this is a feasible route for a railway and that there is timber there. It is true that this has been cut over but there is still a great deal of it left besides the new crop. He also stated that there are minerals there and a little further down large quantities of coal. But of these we have heard from the hon. member for Westmoreland (Mr. Emmerson). Then we have here an important reason. He tells us about the wonderful riches of that country and he tells us that in his capacity of commissioner of roads he had to travel over a large part of the country and that he knows its wealth. If time would permit I would be prepared to present to this House any quantity of information that I have had from books which I have read upon the various sections of this country, the reports of botanists, reports of geologists, reports of engineers, reports of exploring parties, reports of hunters and reports of travellers who have travelled over the route which this railway proposes to traverse and they say it is a good country.

Mr. WILSON. Give us the reports.

Mr. ROSS (Ontario). I do not have them here. I have been in the library reading them.

Mr. WILSON. I did not mean to interrupt the hon. gentleman, but I understand him to say that he would give us these reports if we wanted them, but that he did not want to take up the time of the House in reading them. It would be very interesting if we could have them.

Mr. ROSS (Ontario). I will not give them to you just now. I would rather do something else. I prefer to take the statements of men who represent these constituencies, of men who know something of the country of their own personal knowledge and when they upon their honour and standing in their places as members of this House report these things to me, I am in honour bound to believe that they are so. That satisfies me of the productiveness of the country through which this railway is to pass. The next reason why I am going to vote for this measure is that it will afford necessary transportation facilities. Have hon. members asked for this? Has the country asked for this? Yes, the members of this House have demanded it. The hon. member for Saskatchewan (Mr. Davis) has had a motion on the Order Paper for two years to say that he believes that it is in the interest of this country that more transportation facilities should be given the people of the west, and other western members have voiced that need time and time again. We have listened to them very patiently as they have told of the needs of the country as they exist to-day. Now, you will find that settlement has gone in advance of the railway in many cases. The railway should go in some respects in advance of settlement, but in this case settlement has gone in advance of the railway. Of the 125,000 settlers who have gone into that western country this year as immigrants, some thirty odd thousand are Americans. These people have come from a country where they know what railways are, they have come from a country that has been served by railways, and to ask them to go into the North-west without railway facilities is not a wise thing to do. If they do not have railway facilities they will become discontented, and if they become discontented they will look again to their homes in the south, and if they do get railways from that country connecting with the sections of the country where they are now located they will exchange their trade with the people of the south, while, on the other hand, if this railway is built the trade of these people will naturally be drawn down towards eastern Canada. They will be able to ship their grain down over this line. I need not state here the advisability of encouraging the development of such a trade as that. The point has been already ably argued in this House. With this railway these settlers will be able to trade with the great industrial provinces of Ontario and Quebec. Their national sentiment would draw them

to the south, but if they can make use of this road then we shall overcome that great difficulty of the settlement of New Ontario and bring these people into touch with the industries of Ontario and Quebec. The Grand Trunk Pacific Railway Company are in the best position to handle this scheme because they already have their feeders in eastern Ontario, they already have their trunk line and I believe these people can handle this scheme better than any one else. We have by our vote in parliament given large sums to different parts of the country to remove the congestion in trade. We have done wonderful things in connection with providing facilities for the people. We have built the Intercolonial railway at a cost of $75,000,000, which does not practically pay its way, according to the records which have been given to this House by different hon. members. In the construction and deepening of the canals and waterways we have expended $80,000,000 in round numbers and we do not collect a dollar from them. They do not bring us any revenue, but it costs us $450,000 a year to keep them up. This is what has been spent in the interests of the country. We have spent $150,000,000 or $160,000,000 to aid and assist in the development of this eastern section of the country, and besides that there has been the large expenditure of the Dominion upon the Canadian Pacific Railway, to which I shall not advert at the present time. This being the case, it shows that the necessity is very great for the construction of a national transcontinental railway. This government took the first step and resolved to help Canada. That was its resolve. I believe it to be an honest resolve notwithstanding what others may say to the effect that it is an election dodge, or that it is in the interest of certain senators, or that it is in the interest of a certain clique. I cannot bring myself to believe that fourteen or fifteen men in the cabinet council would consent to support a scheme such as that and practically take their lives in their hands in order to present it to this parliament. Hon. gentlemen may say that I am simple, that I am gullible, but I ask them to bring on the evidence before I shall believe it. I have confidence in the government of this country. Hon. gentlemen may say what they like regarding it, but until they bring the evidence to the contrary I for one shall not believe it. What manner of agreement have they made ? They have set forth the various reasons why they think we should build this railway. They have stated that they think the railway is necessary. They say to us : If you think with us, kindly consent to this agreement. Here is the agreement which is given to us attached to this Bill. Suppose we examine this agreement. Whom are they dealing with ? Are they dealing with promoters, are they dealing with men of straw ? Who is the president of the Grand Trunk Pacific Railway Company ? Is Sir Charles Rivers-Wilson a man of straw ? I looked up his record the other day in the library. I found that in 1856, the year I was born, he was appointed as a clerk in the treasury. He was private secretary to two secretaries of the treasury, he was private secretary to the Earl of Beaconsfield when he was Chancellor of the Exchequer. He was afterwards appointed controller of Great Britain and he held that position for many years. During this time he was appointed on the International Coinage Commission in the interest of Great Britain. When the British government had important matters to be attended to in Egypt they chose Sir Charles Rivers-Wilson, controller of the national debt, to go to Egypt. He went to Egypt and took the position of finance minister, being associated with a French gentleman from Paris, who, in the interests of the French government, acted as minister of public works. Sir Charles Rivers-Wilson held that position for three years. He then returned to England and took his position again as controller of the national debt. He afterwards went back to Egypt, and if any hon. members have read the history of the recovery of Egypt from its financial distress under the guidance of the British government, they will know that this was in a great measure due to the financial genius of Sir Charles Rivers-Wilson. This gentleman has also been on one of the Royal Commissions to make a treaty between England and France. You would not call a man like that an adventurer, you would call him a distinguished financier and a gentleman to whom it would be safe to entrust a scheme of this kind. Sir Rivers-Wilson, I need hardly say, is now the president of the Grand Trunk Railway. I am not acquainted with all the members of the board, but we all know the name of Chas. M. Hays as one of the greatest railway men in the world to-day. We have railway men in Canada of whom we are proud. We have Sir Wm. Van Horne, and we have Sir Thomas Saughnessy who have done wonderful things for the Canadian Pacific Railway, but perhaps a greater accomplishment than any they achieved, was when Mr. Hays succeeded in bringing the Grand Trunk Railway to the high position it occupies to-day. We who live upon the line of the Grand Trunk Railway knew its condition when Mr. Hays took hold of it. He has completely reorganized its forces, and its credit which was then very low has to-day been established on such a firm basis that the securities of the Grand Trunk Railway have been enhanced in value on the market to the tune of $75,000,000. That is the kind of man whom the government presents to us as an associate in the carrying out of this national project. Then connected with the Grand Trunk Railway we also have Mr. Wainright. Mr. Wainright occupies a position of responsibility in connection with this

railway company and he has in the past done excellent service. Mr. Wainwright is known to every one in this House, and I am safe in saying that we all have confidence in his opinion on any railway question. He is not heard of a great deal, but his judgment is good and his counsel will be valuable. The government did not submit to us a lot of adventurers as their associates, but they gave us a contract signed by men of ability and responsibility. For my part, I think all the more of the contract that it bears such names. I desire to keep my remarks within reasonable limit, Mr. Speaker. If I entered into all the details which a study of the subject has placed at my disposal I might speak for hours as some other gentlemen have done, but I shall be brief. With another member of this House I went through the contract the first day it was issued, and we both came to the conclusion that no better contract under the circumstances, could be offered for the approval of the Canadian people. For myself, I do not see how the government could make a better contract without tying up the hands of the other party altogether. Let me run briefly over the provisions of this contract which parliament is asked to approve of. The government and the Grand Trunk Pacific Railway will build a standard road from Moncton to the Pacific coast which shall be upon Canadian territory. Does that not appeal to the sentiment of every Canadian. The company shall deposit $5,000,000 in cash or bonds as security for the faithful fulfilment of their contract. The western section shall be commenced forthwith and built in five years. The government will build the eastern section and lease it to the company. The company will maintain and operate the whole road. The government will guarantee the bonds of the company's western division, the prairie section to the amount of three-quarters of $13,000 per mile and the mountain section to the extent of three-quarters of $30,000 per mile. The company shall have $45,000,000 capital, and shall equip the whole road, and under sections 14 and 15 the cost of construction and the working expenditure on the eastern division are defined so that there shall be no friction at all between the two parties to the contract. Should the company default in interest, the government alone pays it and that is important, because as it is to be an all-Canadian road, if the company defaults in paying its interest coupons, the government steps into their place. The Grand Trunk Railway of Canada shall guarantee the extra cost of the western section, and the company shall give the government a mortgage on all its interest in the property. The company shall buy all their materials and supplies in Canada where possible and shall see that all just claims against them are paid. The company shall operate the road to the satisfaction of the government and all rates and tolls shall be subject to government control. That is a most important thing in connection with this great transcontinental road. Ever since I have been in this House I have heard the members from the west complain that in the case of the Canadian Pacific Railway there is no government control over the rates which they charge. In the present instance this government has taken precaution that the rates of the Grand Trunk Pacific Railway shall be under their control. Then the company contracts to do their best to keep Canadian trade in Canadian channels, and encourage shipment through Canadian ports. The company shall provide terminal facilities on both the Atlantic and the Pacific oceans, and provide vessels for the transport of the traffic. Then again the company shall allow a director on their board to be appointed by the government. That is the practice in all great financial institutions. You find that where an industry has borrowed money from a bank the bank puts a representative on the directorate, and that is what the government is doing in this case. The company shall in all cases of dispute submit to arbitration. Now, Sir, I think that every public interest is guarded in this contract. I am not a lawyer, I am only an ordinary layman, but I know what a contract means. I believe that there are many laymen in this House who can read a contract sometimes just as well or perhaps a little better than a lawyer, not denying lawyers all the credit that is due them. The contract I maintain is a good one. Its provisions are all properly hedged and surrounded with safeguards in the public interest. It is a wise provision in this Bill that no member of either House shall have a contract on this railway. Now, amongst other things, it has been urged against this project that we do not know the country through which the railway is going to run. For myself I am satisfied that we have a general idea of the country, sufficient at all events for our purposes until we actually commence the work of construction. It is said that we have no information on record, but any one who wishes to go to the library may find any amount of information there. At any rate, hon. gentleman opposite say there is no necessity for haste ; in fact, it is all wrong, and there is nothing good in it at all. That is about the size of their argument. I have not heard anybody say outright that this is not a good scheme. I have listened to nearly all the sixty speeches which have been delivered in this debate, I have heard the arguments pro and con, I have tried to take them in, and I have heard absolutely no serious objection to the scheme of the government. True, the hon. leader of the opposition has put up an alternative scheme ; but he does not father it. He does not present it to this House in the shape of a motion. I do not wish to impute motives to any man in this House. I have tried to find a motive, however, for

that proposition. It seems to me that if that alternative scheme were so good a scheme as it is heralded by hon. gentlemen opposite, the leader of the opposition should put it in the form of a motion. But we have no motion from the opposition at the present time. We have the motion moved by the hon. member for Winnipeg (Mr. Puttee). This motion is :

> That all the words after 'that' be struck out and the following substituted :—
> By reason of growth in population and the rapid development in the productiveness and trade of Canada, and especially the western part thereof, the time is opportune for the adoption of a definite policy of government construction and operation of railways, under a properly safeguarded civil service system, put entirely beyond the influence of partisan politics.

The hon. member for Winnipeg in this motion speaks of the growth and development of the country. Western men never forget that the west is growing. Talk to a western man, and he will give you fifty reasons in five minutes why you should go and live in the west. Some of our eastern people think that the western people are a little too free. We have a good country in the east. I do not give up old Ontario for any other province ; I was born there, and I love it. But we have many good provinces, and I like to hear western people talk well of their own country. Then, the hon. member for Winnipeg says in his motion that the time is opportune. I think it is opportune that this railway should be built as proposed by the government, and the motion does not express any serious objection to it. But I do not know how it is possible in this country to carry on a government railroad or anything else entirely beyond the influence of partisan politics. You cannot eliminate politics from the business of this country. Some party must do that business, and there will be another party opposed to their policy. The question of operating railroads by commission is not yet settled. Indeed, there are many people who are opposed to that policy, and I am one of them. I could not vote for that resolution, because I do not think the country is ready at the present time for the government ownership of railways. I may change my views on that question, because I have advanced views. My conviction for some time has been that the government had better get ready to own the telegraphs and telephones. These have become a pressing need in this country, as much so, especially the telephone, as the post office. But I cannot favour the government ownership of railways at the present time.

The scheme of the hon. leader of the opposition was discussed so fully by the hon. Postmaster General last night that it would be useless for me to spend much time in showing that it is not as good a scheme as that proposed by the government. I do not think it is, mainly for this reason, that it will not open up or develop any new country. That is, I believe, the strong feature of this new government railway, that it will open up a new section of country for settlement, which will be of very great advantage to the people of Canada. The hon. leader of the opposition is not afraid to spend money, and he said that the people of this country were not. I am glad he said that, because I sometimes think that hon. members of this House are afraid of spending money. I am not. I think the money of this country, as rapidly as it comes in, should be spent in the interest of the people of Canada.

It has been said that the scheme of the government is a gigantic and monstrous scheme which will plunge this country in debt and ultimately in ruin. I do not think so. Since I have been in this House I have followed with a great deal of confidence the hon. leader of this government, and only once have I been compelled to vote opposite to him—I will not say against him. I am not sorry that I have followed him, because I believe that on every occasion I was right. He comes down with this scheme and practically fathers it. He says : I commend this scheme to the House as a good one, for the reasons I have advanced ; and I have no reason to go back on his judgment on this occasion, though I also use my own judgment.

There is another member of the government in whom I have always felt and placed a good deal of confidence, as he has never been mistaken in his statements regarding the financial affairs of the country. I refer to the hon. Minister of Finance. He has told us what the cost of this railway will be—that the surplus of this government for one year would pay the total cost of this railway to the people of this country. I am not denying the fact that the national debt will be increased ; but if you increase the national debt, you will have a national asset to set off against that increase ; and is it not reasonable to suppose that if the Canadian Pacific Railway has almost doubled in value in twenty years, this other transcontinental railway, including that part of it which belongs to the government, will also double in value in twenty or twenty-five years ? If it does, our asset will be worth, not one hundred cents on the dollar, but one hundred and fifty or two hundred cents on the dollar. Under these circumstances, I am satisfied that the money will be properly spent, and that the amount stated by the Finance Minister is the proper one.

Mr. SPROULE. Does the hon. member pretend to say that the amount stated by the Minister of Finance, $13,000,000, is to be actually the cost of this railway ?

Mr. ROSS (Ontario). Yes, that is all the outlay. I am prepared to back my reputation on the Finance Minister. That has no

reference to the maturity of the bonds ; but when you take up the bonds you own the railroad.

Mr. SPROULE. But if you buy something, don't you pay some consideration for it ?

Mr. ROSS (Ontario). Certainly, you pay some consideration for it.

Mr. SPROULE. Is not the consideration which you have to pay for it standing against you ?

Mr. ROSS (Ontario). If I buy a farm and mortgage it for all it is worth, I do not own the farm until I pay off the mortgage; but when I pay off the mortgage, do I not own the farm ?

Mr. SPROULE. If the hon. gentleman borrows $2,000 to buy a farm, does he not owe the $2,000.

Mr. ROSS (Ontario). But when I pay the $2,000, do I not own the farm ?

Mr. BENNETT. But if the farm is no good ?

Mr. ROSS (Ontario). Well, I think that we know something about finances on this side as well as members of the opposition. I am prepared to take the statements made by the right hon. leader of this House and many members on this side, who have spoken in connection with this matter. I think, Sir, that I have gone as rapidly as I could over the main features of the subject before the House, but of course I did not expect to convince hon. gentlemen opposite, who have already made up their minds against it. I have simply given the reasons and the facts as they have presented themselves to my mind, and what I have said to-night has been the subject of mature consideration and the outcome of my honest conscientious convictions, and under these circumstances I am prepared to support this resolution.

Nations, as well as individuals, should have the courage to grapple with great problems. In this connection, I am reminded of a quotation from Lord Macauley, which appeared on the outside of the transportation building at the World's Fair : 'Of all inventions, the alphabet alone excepted, those that have bridged distance have done the most for mankind.' That truth is particularly applicable to transcontinental railways. Look around and see what the world has been doing in that connection. Look at Russia, which for twenty-five years has been building a railway 3,600 miles long, across a country exactly similar to this country, which hon. gentlemen opposite term a sub-arctic region. Russia has built this railway through the region of Siberia. It was an undertaking which practically staggered the empire at first, but it has been successfully accomplished, and Russia has now her sea-ports on the Indian ocean. She accomplished it many years before it was absolutely necessary, but her policy is to-day justified. People are flocking into that country, rich in hard woods, farm lands, water powers and all these things, and they have practically reduced the distance from London to Shanghi, so that when they put on fast trains they expect to shorten the time of travel between these two cities by ten days, which is half the time taken by the fastest vessels. I am told that railway magnates on this continent are looking particularly into that question and are fearing the competition they will have to meet in that direction. Look at South Australia, offering 75,000 acres per mile to build a road 1,200 miles long, so that they will be giving 90,000,000 acres for the construction of 1,200 miles of railway over a country which is not the equal of this country, which is noted perhaps more for its minerals than anything else, but more particularly for its drought. What are they doing on the continent of Africa ? The British government are building a railway practically from Egypt to Cape Town, all the way down through dense forests of jungle. They are doing this to help the country and the individuals that are going to it. Shall we be behind in the race ? I say no. I am a Canadian, I feel the national blood tingling in my veins, I feel that this country shall not remain a nation of five million people, I look to see the day when this will be a nation of twenty-five million, yes, fifty million people. We have the country, we have the resources, we have our vast prairies, we have our mountains filled with minerals, our rivers, our water powers, our lakes, which this great transcontinental railway which we are about to build will open up to commerce, and give this country that greatness and prominence which are its manifest destiny; and when this great enterprise is brought to a successful completion, I shall be glad that I was one of those who had some share in its inauguration and promotion.

Mr. D. HENDERSON (Halton). Mr. Speaker, the hon. member for South Ontario opened his speech with the well known remark that the trade of Canada is growing. I wonder did it occur to him that the trade of China is growing perhaps in larger proportions than even the trade of Canada ? But what that had to do with the subject before us is something I am utterly at a loss to understand. The hon. gentleman told us that the revenues of the country were increasing. I can see the connection between the Bill before us and the growth of our revenue, because, from the very nature of the question with which we are dealing, very large revenues indeed will be required. But when under the fiscal policy of this government, we have a system of hign taxation and low protection, how can we expect that the revenues of the country will do otherwise than increase. The people of

Canada to-day, notwithstanding anything which the hon. gentleman has told us, are paying higher taxes than were paid during the last six or seven years of Conservative regime, comparing the term of seven years of Liberal rule with the previous five or six or seven years of Conservative rule. The hon. gentleman attempted to congratulate himself that the exodus was decreasing and that immigration was increasing. He was glad that a large number of agriculturists were coming into this country to engage in farming. I should rather think that he would have regretted that the artisans, the workingmen, those who are consumers and not producers, were leaving the country, because, had he taken five minutes to investigate, he would have found in the Trade and Navigation Returns a very large amount of settlers effects going out of this country to the United States, proving conclusively that the people were going along with them.

It is not my intention to follow the hon. gentleman through the somewhat interesting speech—interesting to himself no doubt from his own standpoint—which he made, and I congratulate him on having made a very nice speech but a harmless one I am sure. There was not much in it to encourage the government in the course it is taking. He did not put forward any very strong reasons why this railway should be constructed through what has been called an unknown country.

Mr. Speaker, when we came to this House on the 12th day of March last, we were delighted to learn from the government, through the speech from the Throne, that they had determined upon a policy of better transportation facilities for this country. His Excellency informed us, through the speech from the Throne, that a commission of experienced men would be appointed for the purpose of looking into this whole matter. Special reasons were given why that was necessary, and I propose to read to you from the speech from the Throne what these special reasons were. For I shall endeavour to keep close to the subject that we are dealing with. I want to state these reasons in order that I may build an argument upon them. His Excellency said :

> The great influx of population into our North-western territories and the very large additional areas of fertile land which are being brought under cultivation combine to further press upon us the need for increased transportation facilities for the forwarding of our grain and other products to the markets of the world, through Canadian channels. The whole question of transportation and terminal facilities continues to occupy much attention, and my government will immediately appoint a commission of experienced men to report on the subject.

When this House was asked to concur in the resolution, it was urged upon us that the most important question was to afford railway facilities for the new settlers, and for the old setlers, for that matter. We were told by the hon. gentleman who moved the address in reply to the speech from the Throne that this was the great question before the House. He said:

> To what end the raising of 200 million bushels of wheat in the west unless the farmers there can get that wheat to market in reasonable time and at a reasonable expense to them.

Note the words, 'in reasonable time and at reasonable expense.' And, as I proceed, I wish you to apply these words and see whether the scheme propounded by the government will serve to take the products of the west to the markets 'in reasonable time' or 'at reasonable expense.' If not, then this great scheme would fail to meet the purpose that His Excellency had in view when he presented us with the speech from the Throne. The mover of the address also told us :

> And the very same remarks apply to the mixed farmers of older Canada. These men must get their varied products to the seaboard quickly and inexpensively, or forfeit the markets of Britain and Europe. Therefore it is with great pleasure indeed that we heard the announcement in the speech from the Throne, that the government of His Excellency will immediately appoint a transportation commission to deal with this very intricate question, for the purpose of its betterment.

For a considerable time, however, this important matter was lost sight of, as we all remember. It was not until the 19th of May last that we heard any more about this commission which was to investigate the question of better transportation facilities. Then an announcement was made that the commission was appointed, to be composed of Sir William Van Horne, John Bertram and Harold Kennedy, to report on questions affecting the transportation of Canadian products to the markets of the world through and by Canadian ports, &c. In this announcement it was also stated—and I read now from the Order in Council which has been placed on record in 'Hansard' more than once, but some portions of which, I think, well deserve further attention :

> That the development of North-western Canada has manifested the inability of existing Canadian transportation agencies to take care of Canadian products.
>
> That our agricultural exports can only command the prices over seas to which their natural excellence entitles them when they cease to be confounded and confused with the inferior and often adulterated articles produced elsewhere ; and to preserve their separate identity they must go through Canadian channels.

Further, the Order in Council says :

> That the questions to be considered are complicated and involved, including among the objects to be sought the transportation of western products from place of production to the markets of the world involving the consideration of their transportation :—
>
> From place of production to Canadian seaports.

From place of production to the western ports of Lake Superior.

From the western ports of Lake Superior to Canadian seaports.

This Order in Council especially declares—

That in making such investigation attention should not be confided to routes and facilities which are at present utilized, but, if necessary, new surveys should be made to determine whether any more economical and satisfactory channels of transportation by land or water can be opened up.

I would ask if the new surveys have been made? If so, where are the maps and reports? Or, is the government simply taking a leap in the dark, regardless of the interests of the people of Canada, either in the east or in the west? We have been told that there are 'mountains of information.' Where are these mountains of information? I have failed in my efforts to put my hands upon anything at all that would give me the particular information that I would require before being able to decide the question as to the feasibility of the project that is before us. True, we have been told that some two hundred years ago Champlain crossed this country. I think La Salle, another celebrated explorer, was referred to by the Prime Minister, and Alexander Mackenzie also—not he whose monument we see on the grounds to the west of this building, but a man who died a hundred years ago, long before railways were thought of, and whose explorations were made at a time when it could hardly be said the question of whether a railway from Moncton to Winnipeg would carry the products of the west cheaply to market had been taken up for consideration. These are parts of the 'mountains of information' to which we are referred. Then, we are told by this Order in Council:

That in these circumstances it devolves upon the Dominion government to consider and adopt the best possible means of promoting such measures as may enable Canada to control the transportation of its own products, and it is thought that the most efficient method of conducting such an inquiry and obtaining the required information is by means of a commission of competent and experienced experts.

Very true. Then, as if to complete the solemn farce—for this commission had never met (it was not completed until to-day), and I cannot call it anything but a farce—the minister recommends the appointment of a commission composed of Sir William Van Horne, Mr. John Bertram and Mr. Harold Kennedy, of whom Sir William Van Horne is to be chairman and convener, for the purpose of making any such inquiries, obtaining such information and making such reports and recommendations as, in their opinion the exigencies of the case may require.

My object in reading these extracts from this Order in Council is to show where the government have been derelict in their duty towards this House and towards the people of this country. Here we have an emphatic declaration by the government of their own absolute want of information. They were in search of information; they knew nothing more about the country, according to their own declaration than did hon members of this House outside of the government. They were in absolute want of information concerning the country and its needs, the best means of affording relief, whether by a new railroad, an all-rail route or by improving existing routes by rail and lake and river or by other means. The mind of the government was a blank on this question and they were in search of information according to their own declaration. They were in fact utterly helpless. A government of business men confessed their absolute inability to cope with the whole situation. Very early in July the House was informed that Sir William Van Horne, an able and competent man, was not able to act upon the commission, and I may here say that we on this side of the House join with the government in expressing regret that so able a man was unable to give attention to such an important question. Notwithstanding the lack of information, no new appointment was made by the government and on the 19th of May as I said, we find the government with their minds still an absolute blank, without hope as it were—hope was abandoned—and they did not appear to be able to secure another man to act upon the commission. On the 30th of July, notwithstanding the declaration they had made that information was necessary, that they could not proceed without it and that they were in search of it, they launched at once this gigantic scheme. The scheme was launched by the Prime Minister who made a solemn declaration that there was no time for deliberation, and this was done in the face of the solemn protest of the minister of the Crown whose duty it was to take charge of every matter pertaining to railways. He was the member of the government above all others who was best able to judge as to what was right and proper. He entered his protest, he declared against the mad haste with which the First Minister was proceeding to waste public money. I shall read his own words:

I am not in favour of impetuously rushing into the construction of a transcontinental line from Quebec, through an unknown country to Winnipeg and the west, until we know something about it—until we have the fullest information about it. The project is one of very great magnitude, and should be dealt with only after the maturest deliberation.

The hon. ex-Minister of Railways and Canals (Hon. Mr. Blair) sealed his protest by placing his resignation in the hands of his leader, surrendering office, surrendering emoluments, surrendering social position, surrendering as I believe promotion, because I have regarded the ex-Minister of Railways and Canals as one of the

ablest men, if not the ablest man, in that government, and a man who was destined, had he remainel in the government to play an important part in the future of this country. But since his resignation, members sitting on your right, Sir, have one after the other had nothing but ridicule and condemnation to offer to the ex-minister who dared to act on his own conviction and to do what he considered right. Why, they say, should he have been consulted. Only a few days ago the hon. member for South Wellington (Mr. Guthrie) in a lofty voice, said: Why should the ex-Minister of Railways and Canals have been consulted any more than any other member of the government? What right had he to be taken into the confidence of the Prime Minister? The Prime Minister did not think it beneath his dignity to take into his confidence certain senators and railway projectors who are not responsible to the people of this country for their actions. And yet, Sir, hon. gentlemen tell us that the Prime Minister was justified in refusing to accept the advice of the minister, who was better able than he was himself or than any other of the colleagues who surrounded him, to decide this matter. I say this is an important matter, when we consider that we are dealing with a project which might launch this country into an expense of anywhere from $100,000,000 to $150,000,000. The hon. gentleman approved of the fact that this man was ignored, that he was kept in blissful ignorance and I say it was unfair to that hon. gentleman (Hon. Mr. Blair) and we on this side of the House and hon. gentlemen on that side of the House need not be surprised at all that a man of the feelings of the ex-minister of Railways and Canals should under such circumstances consider it his duty to withdraw from the government of which he had so long been a member. The hon. ex-minister said:

> I think I might justly complain that so important a matter of policy, arising within the sphere of my own department, should have been adopted and continued in this way behind my back and without my knowledge.

And such, Mr. Speaker, is liberalism, the boasted policy of hon. gentlemen to your right.

Well no report from the commission had been obtained; in fact the commission had not met as I said before. The opinion of Sir William Van Horne had been obtained notwithstanding the fact that he had declined to accept a position on the commission. We find that on August 5th he made known to a 'News' reporter in Toronto his views on this question and although these views have been cited here time and again, I think it is a proper thing for me, even at this late hour, to occupy a few extra minutes to again cite these views, because they have had weight, and will have weight, not only with the members of the opposition but with supporters of the government. Sir William Van Horne when interviewed in Toronto, said:

> The Canadian Pacific Railway, the Grand Trunk Pacific Railway, or any other all-Canadian route will never voluntarily carry a carload of wheat by the all-railway route around the great lakes to an eastern Candian port for shipment abroad, for the simple reason that it will never pay any road to do so. Nor will the transportation problems in the west ever be solved by the construction of an all-Canadian route from coast to coast.

Now, this is the advice of the very gentleman whom the government sought to place at the head of their commission. Notwithstanding the fact that he did not find it convenient to accept that position, why should they refuse to accept the information, to accept the advice which he has tendered even though not a member of the commission?

> Sir William Van Horne stated that the Canadian Pacific Railway shipped every carload of wheat that it was possible to ship by their steamship line on the great lakes from Fort William to Owen Sound, and thence east by rail or else by way of Buffalo and the Erie canal. The long haul around the great lakes was dreaded, because it was unprofitable, and the bulk of the grain brought by that route was carried during the winter months, and used by the millers of Ontario to keep their mills in operation during the cold season. There was altogether too much talk of an all-Canadian route by people who were entirely ignorant of the situation.

And he added:

> I state this emphatically that no all-Canadian line, I care not by whom it is built or run, will voluntarily draw a single carload of wheat east of Port Arthur over its tracks. We occasionally take one when the traffic by boat is congested, in the winter, when any special need arises.

Had the government accepted the advice of Sir William Van Horne, I fancy that today we would not be sitting here in the sixth month of a long session considering a project which Sir William Van Horne says can never profitably carry a bushel of wheat from the North-west Territories to a seaport. Of course, we will be told that Sir William Van Horne is an interested party, but his standing in this country is such that notwithstanding his close alliance with the Canadian Pacific Railway, his advice would be accepted, his counsel would be accepted, his opinion would be accepted by the people of this country. Well, we are told this is not a time for deliberation. The right hon. Prime Minister was emphatic upon this point. Why not? We are spending $100,000,000 or $150,000,000. Why not deliberate? An hon. gentleman on my left says more than that. I am inclined to agree with him. Why not deliberate? Are the government afraid of public opinion? Do they want to rush this mad scheme through the House and crystallize it into law before the people become seized of its enormity, when for ever it will be impossible to re-

voke it? Is this why the government are not anxious to deliberate? I fail to find practically any other good reason for this extraordinary desire to rush the Bill through the House at the present time. In fact, the right hon. gentleman, in his address, grows frantic over his desire for immediate action, and invokes the aid of heaven to avoid disaster and delay. Let me read his prayer:

It is not of to-morrow, but of this day, of this hour and of this minute. Heaven grant that it be not already too late; heaven grant that, by reason of delay, the trade of Canada is not deviated to other channels, and that an ever vigilant competitor does not take to himself the trade that properly belongs to those who acknowledge Canada as their native or their adopted land.

Only last week I took up a reliable Montreal paper and I found this report. It showed me how quickly the answer to the right hon. Prime Minister's prayer had been given. The report is this:

Chicago, Ill., August 21.—Lake shipments of corn for the port of Montreal have aggregated 1,000,000 bushels during the past few days. The gain of the Montreal ports is due entirely to the action of the government in making the Canadian canals free.

In making the Canadian canals free. Why then should we stop at the canals? Why not make the port of Montreal free, and increase the business of that port? I visited the port of Montreal a short time ago in company with many hon. members of this House. I went on board the vessel and after going over this port and viewing its surroundings, if there was one single thing that I became convinced of more than another during my visit there it was the fact that the port of Montread should be a free port.

Grain can now be shipped from Chicago to Montreal for export to Liverpool three cents a bushel cheaper than it can be routed by part-rail, part-lake, through Boston. When it is known that a fraction of a cent a bushel will divert all the grain that can possibly go through a port, the advantage that Montreal has over American ports will be readily seen.

Then comes an important announcement as to trade.

During the first seven months of the present year over 9,000,000 bushels of wheat, and almost 4,000,000 bushels of corn have passed through the port of Montreal, as against a trifle over 1,000,000 bushels of wheat, and 4,000,000 bushels of corn through the port of Boston.

What are we to be alarmed about? If we utilize our water-ways, if we utilize our ports and run them properly we can command the trade of the country, and we need not be alarmed about the Americans taking it from us. Lake Superior is the key to the whole situation. What was Lake Superior put there for? Was there no object? Why was it not a rocky promintory or why was it not an agricultural country? Lake Superior is there for a purpose. It is the key to the whole situation between the great west and the east, and it will be the means of regulating transport for all time to come and of levelling the rates charged from the west to the east.

Has the government a mandate from the people to construct this road, and this is an important question? We know now that those who criticised most severely at that time, now acknowledge the wisdom of the men who constructed the Canadian Pacific Railway. I only wish we could hope, that twenty-five years hence the same commendation will be given to the men who will construct this new transcontinental road, if ever it should be constructed. Is there any immediate demand for another transcontinental road? Is there an immediate demand for it, and will the proposed road fulfil the requirements of increased transportation facilities? These are grave questions. Let us hear from those who are interested and those who have knowledge on that point. We have not been able to hear from the transportation commission, but we have heard from others who have studied the question and who are able to speak from practical knowledge. The ex-Minister of Railways has spoken with no uncertain sound in condemnation of this scheme. He says it will not meet the requirements of the case and that therefore the country should not be plunged into a huge expenditure in order to secure this road. Sir William Van Horne has voiced his opinion that the road will be no good for the purpose for which it is designed. It is not sufficient that that road shall carry pulpwood from Lake Abitibi to Shawinigan Falls and Grand-Mère, and carry pulpwood from Grand-Mère and Shawinigan Falls back again to Lake Abitibi. I submit that is about all that those gentlemen tell us is the local trade that will be found in that country. They are simply proposing to carry coal to Newcastle and then carry it back again. Premier Roblin, a man now of railway fame; a man who has made railway transportation a successful study, because he has done more for the people of the North-west in railway legislation than all the governments that preceded him in Manitoba; he is not backward in pronouncing his opinion, and he says:

The people of Manitoba and the west are strongly opposed to the Canadian government granting one dollar of public money or an acre of land to the construction of the Grand Trunk Pacific Railway as an all-Canadian route from coast to coast because they do not see any material advantage in its construction to the people of western Canada.

Later on he says:

Where is the demand for the construction of this road? I fail to find it anywhere. Manitoba to-day needed no more railways, for the average distance from the farmer to the railway in Manitoba was but five miles. The Canadian Pacific Railway and the Canadian

Northern Railway would be quite able for the next twenty years to supply all the railway necessities, whereas what was wanted was an increased equipment especially in rolling stock.

These opinions are worth their weight in gold at this juncture. Men who have made this question a study, men who are able to give an opinion to those who only two months ago, or just before launching this scheme on this country acknowledged that their minds were a blank upon the whole question; they condemn the scheme. We were told that the government could not wait a day, nor even an hour, nor even a minute. But it is the government alone that insists upon hasty action. The Prime Minister told us that Canada is commercially dependent on the United States, and that to secure our independence we must have a new transcontinental railway. I confess it was news to me to hear that we were not commercially independent of the United States. I admit that had the Liberals led by the First Minister to-day, had their way in 1891, we would not be commercially independent of the United States to-day. But thanks to the loyalty of the Canadian people, we maintained our commercial and political independence and we will maintain that independence to the end. I will read an extract from the speech of the Prime Minister, because I think it is proper that the minds of the members in this House should be refreshed from time to time on what leading members of the administration have said. The right hon. gentleman said this :

What are your minds running to when you have facts staring you in the face which show you that at this moment Canada is not commercially independent of the United States. What is our position to-day ? From the early days of railway development in this country we have been dependent on American good-will for the transportation of our goods across American territory. From the early days of Canadian railway development we have been allowed to make use of American territory and harbours ; the American government granted us the bonding privilege, they granted us the privilege of using their harbours for our imports and exports without paying them tolls and customs duties.

Again he said :

We cannot take steps to better our position, to improve our trade, but we are told from the American side that we had better look out because forsooth the bonding privilege will be taken from us.

Then he quotes Andrew Carnegie, and the President of the United States and the New York 'Sun,' to show that these threats were held out to us dating from the year 1888. Let me say to the Prime Minister of this country, that there is an old adage which says : barking dogs never bite, and that is as true to-day as it was a hundred years ago. The Prime Minister need not be afraid of the barking of the United States with reference to the bonding privilege, because they have no intention of biting. The Prime Minister knows well that we too can abrogate the bonding privilege. We have just as much power in that matter as the United States has, because for many years we have had an all-Canadian railway on Canadian soil. You can to-day get on board the Canadian Pacific Railway at Vancouver, transfer to the Intercolonial Railway at Montreal, and you are landed in Halifax without touching anything but purely Canadian soil. When this Grand Trunk Pacific transcontinental railway is constructed what better off will we be ? Why, you will be landed at Moncton, but still you would have to transfer to reach the seaboard. To-day we are just as independent of the United States as we can possibly be when this new railway is built. If we are interfered with at any time, then, to paraphrase the words of the Prime Minister, we can say :

Take off your bonding privilege whenever it suits you, we are commercially independent.

Here is another statement which was made by the Prime Minister :

We consider it the duty of those who sit within those walls by the will of the people to provide immediate means whereby the products of these new settlers may find an exodus to the ocean at the least possible cost.

To move the products of the west to the east seems to be the primary object of this new government railway, according to the Prime Minister.

The smallest cost and the immediate necessity—these are two points which I desire hon. members to keep in mind. An immediate and cheap grain route is what we are seeking to bring about. Will the Grand Trunk Pacific Railway from Winnipeg to Moncton be immediate ? Will it be cheap ? Will this all-rail route be as cheap as rail and water ? There is one thing certain—it cannot be immediate ; because five years is the shortest time which the government have given us any assurance of that it will take to construct that road. Consequently the right hon. First Minister is defeated in his first proposition ; it cannot give immediate relief to the congestion of the west. It will not be as cheap as rail and water, which I shall show you very conclusively before I sit down, and which has been demonstrated time and again by hon. members on this side of the House. This is the crux of the whole matter. If this road will not at once give us relief, and give it to us cheaper than it can be obtained at the present time, it will accomplish the purpose which we have in view. Why not, then, extend and improve the existing system if by so doing we can furnish a route that will accomplish the purpose that we have in view ? Let us proceed to extend our existing system of railways in the east, to improve our water-ways, and to extend all our great existing railway systems into the west with as convenient speed as possible.

That, associated with our water-ways, will to my mind accomplish the purpose. It will be the means of providing us with an immediate outlet for the crops of the west and a cheaper route than can be provided in any other way. In this way we shall be able to utilize the Intercolonial Railway, the Grand Trunk Railway, the Canadian Pacific Railway and the Canadian Northern Railway. Let us utilize to the fullest extent all the railway systems which we have at the present time, by bringing them into connection with each other and into connection with the great water-ways of this country, and we will solve the problem of transportation, concerning which this commission was founded to give us the fullest information. We have now plenty of railway lines from the west to the east; I am convinced of that. What is wanted is more complete equipment. There is no question in my mind, and I think in the mind of any hon. member of this House, that the two railways running at the present time between Winnipeg and Port Arthur, will carry all the products of that western country for the next ten, fifteen, or twenty-five years. But these railways require to be more fully equipped. They must be provided with more haulage power; they must be provided with more cars; elevator accommodation must be increased. If all this is done it will provide a means of taking all the grain of the western country from the hopper that was spoken of by Sir William Van Horne through the spout, which I understand to be the country lying between Winnipeg and Port Arthur. Enlarge the spout, and you accomplish your purpose, and in the easiest possible way.

The hon. leader of the opposition has outlined a scheme which to my mind will meet what is desired at the present time very much better than the proposition made by the government. I desire to refer to that scheme, because I think it has not been discussed by hon. members at your right in a fair spirit; and, in order that I may make no mistake, I propose to read the language of the hon. leader of the opposition, so that it may again go on record and be read to the people of this country. The hon. leader of the opposition, referring to his plan, and contrasting it with that of the government, says:

1. It combines prompt action with deliberation and caution.

2. It developes and does not throttle the Intercolonial.

3. It takes account of the expenditure upon the Intercolonial and upon the inland waterways, and brings those great national highways in harmony with our project. The lake route, the St. Lawrence and other canals are joined by the policy I propose in one harmonious whole, whereas the policy of the government, which cuts off the water-ways, which cuts off the lake communication—cuts off the very Intercolonial Railway on which this country has spent $70,000,000—and on which this government have spent $15,000,000 for the purpose of doing the very thing which I am advocating in this House.

4. It develops transportation along the lines of least resistance, that is to say, by water and by water and rail.

5. While connecting at the same time all the great railway systems in Canada, it controls in the only effective way the carriage of Canadian products through Canadian channels, by enabling the people's railway to compete for this traffic.

6. It affords immediate relief to the congestion of the west by bringing the Grand Trunk Railway into Winnipeg without delay. And

7. It insists that further railway development in the west shall not only give necessary competition in settled districts, but shall open and develop new country.

I do not desire to enlarge upon that scheme. The language is clean-cut and speaks for itself. I leave it to the House to judge as to the plan which he has propounded. It refers to the immediate action that is called for at the present time. The cry comes from the west for better equipment, more haulage power, more cars, more elevators, more rapid transit from the place of production. I believe this scheme will furnish all these requirements. But another important factor must be combined with it, that is, the factor of cheapness. I care not what route you may construct or devise, unless it includes the element of cheapness, you will find it impossible to force grain or any other product over it. Now, can an all-rail route combine all these qualities that I have mentioned—cheapness and immediate results.

Let us look elsewhere to see how the traffic rates compare. From Chicago to New York by rail is 900 miles. By lake and rail it is 1,400 miles. Rail competition is keen from Chicago to New York, because there are fully half a dozen railways running between these two points, provided with extra good haulage power, running through a well settled country and able to pick up freight along the way—just the very kind of railway that would be able to produce the best results, so far as cheapness of rates is concerned. But let us compare the two. I take my figures from the Chicago Board of Trade reports. In 1890 the lake and rail rate from Chicago to New York per bushel was 8·52 and the all-rail rate was 14·30 on wheat, or an increase of 70 per cent. In 1895 the lake and rail rate was 6·96 against an all-rail rate of 11·89, or an increase in the latter of 70 per cent. In 1901, the last year of which I am able to find any report, the lake and rail rate was 5·54 and the all-rail rate 9·88, showing an increase in the latter over the former of 78 per cent. The average increase of all-rail over lake and rail rates, during the periods I have mentioned, was from 70 to 78 per cent, although the rail and water route is much longer than the all-rail route. I propose to take some actual rates, because we can find actual charges to guide

us. From Winnipeg to Fort William, on the 1st day of September next, the rate on the Canadian Northern will be 6 cents per bushel. From Fort William to Montreal, by way of Depot Harbour, we are informed—and the statement has not been contradicted—that wheat was carried for 3¾ cents, making the rail and lake rate from Winnipeg to Montreal 9¾ cents per bushel for wheat. From Winnipeg to Fort William the rate is 6 cents per bushel ; and we are told that with proper elevators at Port Colborne and other ports grain could be carried from Fort William to Montreal by rail, lake and canal at 3 cents per bushel, or at a total cost of 9 cents per bushel. The average rate for the past five years, I am informed, by rail from Fort William to Montreal is 12 cents and from Winnipeg to Fort William it is proposed to make it 6 cents, so that the all-rail rate route from Winnipeg to Montreal, per bushel of wheat, will be 18 cents. If we take the evidence of Mr. Wainwright, to whom the hon. member for South Ontario (Mr. Ross) referred to-night, given before a committee of this House in 1898, we will find that he then said that one-half of one per cent per ton per mile was a satisfactory rate on long distances, such as 500, or 600, or 1,000 miles. If you make the calculation, you will find that the rate on a bushel of wheat from Winnipeg to Montreal or Quebec on this new transcontinental railway will be 21 cents. We are told that there is a company which will carry wheat at present, or has been carrying it, from Duluth to Montreal for 3½ cents. Taking the rate from Winnipeg to Fort William as 6 cents, and taking the comparative distance, the rate from Winnipeg to Montreal or Quebec by the transcontinental line would be 20 cents. To my mind that is conclusive evidence of the absolute impossibility of discovering an all-rail route which will convey the products of the west to the ports in the east anything like as cheaply as they can be carried by lake and rail route or rail, lake, river and canal route, or any route that combines water and rail. In the face of these facts, can we conclude that the congestion in the west can be relieved by the proposition submitted to us by the government. The hon. the Minister of the Interior, in order to demonstrate the possibility of carrying grain from Winnipeg to Montreal for about 11½ cents, gave a case where grain had been carried from Kansas city to Chicago, a distance of about 500 miles, for 5 cents per 100 pounds. I draw attention to this fact, because I think it is unfair for the hon. minister to build up an argument on what the hon. member for Peel (Mr. Blain) so well designated as a bargain-day rate, a rate that might never be repeated, and which to-day is not in force, but instead of which there is a rate in force of about 14 cents per 100 pounds. I say it was not fair on the part of the hon. minister to base an argument on such a frivolous and unsatisfactory foundation in order to convince the people that we are doing right in voting $100,000,000 or $130,000,000 for this scheme.

With reference to the character of the country through which this road is to pass, I propose to say a word. I have nothing of my own to say that will discredit the country. Should I say anything that does not present the country through which this road is to pass in such a favourable light as we would like, I shall not use my own, but the language of others. I hope that we have a fine country to the north of us. It is a large country but is not yet required for the purpose of colonization, and I say now—and I say in all good feeling towards the government and in perfect good faith—that the government are making a fatal mistake. I say it is a shame to induce young men to go from Ontario and Quebec to settle in northern Ontario or northern Quebec, so long as we have the prairies in the west waiting simply for the plough to be put in and the crop to be reaped the following year.

Why, Mr. Speaker, it would simply be consigning a man to prison as compared with going to the North-west. If a man undertakes to hew out a home in northern Ontario or Quebec, be the country ever so good, he would not find himself so well off in twenty years as the man who goes to the prairies of the west will find himself in from three to five years. And I say that the government will make a sad mistake if they induce the young men of this country to settle in the northern regions of these older provinces. Retain that country for the future, it will be time enough to colonize it when it is wanted. Why should our sons go into the forests while the immigrants from the old land come in and reap of our very best ? If a man wants to move from Ontario or Quebec and build up a new home, let him go to Manitoba or the North-west Territories. But do not advise him to go, do not spend a dollar for the purpose of inducing a man to go into New Ontario or New Quebec at the present time. We have heard glowing accounts of that country and I would be only too glad if they were all absolutely true. I am referring now to the country through which this road is to pass from Moncton to Winnipeg. We are told of the vast stretches of agricultural land in these two provinces, rich in spruce and poplar and with fine, arable soil. The report of the exploration and survey of northern Ontario in 1900 has been profusely read from. I am going to read something from it too. What I do regret is that hon. gentlemen opposite, yes, and even Ministers of the Crown read part and left out part. I propose to supplement their selections with something which they did not feel at liberty to read to this House. I think we ought to be perfectly honest and fair in this matter. I do not say they were dishonest

I would not attribute that to them. Perhaps their attention was not drawn to it by the president or manager of the Grand Trunk Pacific Railway, or perhaps this scheme might not have gone through. I will take this little extract and the hon. gentleman will find it in exactly the same volume from which they were reading. This is where it makes reference to a tract of 6,000 square miles, 'sixty per cent of which would cut five cords of spruce wood to the acre.' I need not ask you, Mr. Speaker, what kind of land it is that would produce five cords of spruce to the acre. Would you like to live on it? Or induce your son to go and settle on it? There is only one conclusion we can arrive at as to the character of land that grows five cords of spruce wood to the acre. I do not think that this fact indicates a high degree of fertility. We were told the other day that the government has mountains of information with regard to this country, and the Prime Minister said that from 1872 to 1880, twenty-eight exploration parties had been sent into that country. This was about the time the Canadian Pacific Railway was to be built and he told us that $5,000,000 had been spent at that time in exploring this country. Surely all that ought to make some mountains of information, even if only small ones. I am going to give you the opinion of a gentleman who had access to these reports, a gentleman who had the honour of a seat in this House and took part in the discussion when a charter was granted for the construction of the Canadian Pacific Railway, the gentleman who now occupies the high and honourable position of Prime Minister of Ontario. And I am going to ask you what you think of his opinion of that country after he had investigated these mountains of information. He spoke in this House on the 10th of January, 1881, and he not only spoke with reference to Ontario, but also with reference to Quebec, New Brunswick, and, I believe, Prince Edward Island, and if I am not mistaken, Nova Scotia as well—a large portion of the country through which this road is to pass. The 'clay belt' of 15,000,000 acres of land existed there as it exists now. It should be worth more now than it was then, but perhaps the difference would not be very much. Let us see what Hon. G. W. Ross thought of this country after he had perused this $5,000,000 worth of information about it. He said:

> Sir, I look upon the North-west as the right arm of this Dominion. The other portions of this country are tolerably well occupied now. We have a very small portion of land in Ontario for sale. There is a small area of good land in Quebec for sale, and with regard to the provinces of Nova Scotia, New Brunswick and Prince Edward Island there is very little cultivable land for sale. Now, the increase of our population requires that so far as agricultural pursuits are concerned, room should be found for our surplus population. Where are these homes to be found? Not in Ontario, because in order to provide homes for young farmers, somebody else must be bought out.

This is his opinion as to whether it would be better to send our young men to the northern regions of our older provinces or send them to our North-west. He said further:

> I say this contract involves the immediate construction of that length of road, which is not required in the interest of colonization or settlement. We certainly are not building the Lake Superior end of the road, what is called the eastern section, for the purpose of colonization. We have no evidence that the land is of great value; we know the climate is unfavourable, we know the soil is somewhat barren. True, there may be some valuable timber in that country, but we do not require to build a railway into it for the sake of timber.

He was lumberman enough to know that we bring timber by way of the river. That is the country of which we have heard so much. I have not said a word to discredit it; I am simply telling hon. gentlemen opposite what their friends say about it. And I hope that, even at this late date, the question may be reconsidered whether the country is worth the immense expenditure of $100,000,000 to $150,000,000 to colonize it. I think we are driven to the conclusion that the Grand Trunk Pacific will not be a grain route. Then if it is not to be a colonization railway, what, under heaven, are we spending the money for?

But there is one other phase of this question that I would like to refer to, and I shall do so as briefly as I can. It is not at all the most unimportant part of the whole matter—the cost of the road to the country. The Prime Minister told us it would cost exactly $13,000,000 and no more. The Minister of Finance was a little more extravagant, and he raised that sum to $13,725,703—just see how exact he was to the dollar. That was to be the entire cost that this country would have to meet for the road from the Pacific Ocean to Moncton. The Winnipeg to Moncton section I understood from the hon. gentleman is to cost this country only $8,853,502. The hon. member for North Norfolk (Mr. Charlton), no doubt desirous of pleasing the First Minister, exactly coincided with him, there was not a whit of difference between the two gentlemen. That is not always the case, but they generally come together.

An hon. MEMBER. Pre-arranged.

Mr. HENDERSON. Pre-arranged, I dare say. And then, Sir, the Minister of Trade and Commerce, the man who was expected to be the custodian of Ontario's interests, who was to watch the public chest when he came down here and to see that no harm was done to it, did not seem so confident as the First Minister, but he was perfectly satisfied that $14,000,000, and not one dollar more, would be all the country would be

required to pay. The Postmaster General sticks to the $13,000,000; you see how closely he keeps to the First Minister. He does not want to deviate one-eighth of an inch. Does he hope that after this road is built and after this monument is erected to the present Prime Minister, he is going to occupy that position? At any rate, he feels it safest for him to stand by the Prime Minister at $13,000,000 and nothing more.

I wonder if hon. members of the government think the country is going to take these statements seriously. I do not think for one moment that the members of the government are serious. The veriest school boy on a back concession of any county could tell any of these gentlemen that they cannot accomplish any such thing, I do not care if they do it by an actuary or by capitalization or what system they employ. The ex-Minister of Railways and Canals made an estimate and said it would cost $138,850,000. I would rather accept the wisdom of the man of experience in railway construction and railway matters than the opinion of the Postmaster General or the Minister of Trade and Commerce, who never had anything to do with the construction of a railway. Others have made estimates ranging from $65,000,000 to $150,000,000. My hon. friend from Bothwell (Mr. Clancy) has made an estimate, and, to my mind, he has made the most careful estimate of any that I have seen. He says that from Winnipeg to Moncton will cost $112,350,000. But the Minister of Finance is not going to make these payments himself; he has evolved another scheme—and I am sorry indeed he left the chamber, because I was going to make a suggestion to him by which, I think, he would be able to reduce the amount very much below the $8,500,000. I think the hon. gentleman must be taking lessons from the Hon. G. W. Ross, of Toronto, who is an adept at deceiving the people in matters of Finance. Why, Sir, for ten or fifteen years Mr. Ross declared from one end of the province of Ontario to the other that the money that he borrowed on forty-year annuities to pay railway subsidies, was not a debt of the province, because these annuities were not presently payable. You would be surprised how many of the people of Ontario believed that this was the case until, a year or two ago, the people became educated along these lines. They saw through the whole matter and through sheer force of public opinion Mr. Ross was compelled to issue a different statement the next year and to acknowledge that he had been wrong for ten years before, and that the debt created by borrowing on forty-year annuities to pay railway subsidies was a debt which had to be deducted from the surplus. The point to which I wish to draw attention is this: The Minister of Finance tells us, and I do not wish to be unfair, that this road can be constructed for $13,000,000, and so does the Postmaster General. They all drop into the same line. I think the hon. member for South Ontario made the same statement to-night, I hope he will never do it again. They all forget one thing, that the $13,000,000 only pays the interest for the time while the road is under construction and until it is handed over, and that the whole cost of construction has to be paid outside of that. If it costs $150,000,000 to construct this road, the government will have to borrow $150,000,000 and every dollar of that has to be paid by the people of this country. They may say it is not presently payable when they are borrowing it for fifty years. That makes no difference. If we do not pay it our children or our children's children will have to pay it. Why should we leave such a legacy unless the whole scheme is a sound one? Do not let it go down to our children and our children's children that we imposed on them a scheme of this kind, claiming it was not a debt of the country simply because we were throwing it on a future generation. The Minister of Finance speaking on this question the other day, was drawn out by the hon. member for South Brant (Mr. Heyd). The hon. member for South Brant even became a doubting Thomas; he was not sure that the minister could build this road for $13,000,000, and he asked: 'Will that include the bonds at the end of the fifty years? The minister was compelled to give him an answer and he said: No, at the end of the fifty years we, of course, pay the bonds. That is his own language, it is not mine, the minister has admitted it. He said: What I am dealing with is the interest. If he was dealing only with the interest, why under heaven would they, one man after the other, get up and tell us that $13,000,000 and not a dollar more will construct this line. Why not be honest enough to tell us that it would take $13,000,000 and the whole cost of construction besides. That is what they should have told us and have told the people of this country, because that is the actual fact. As the Minister of Finance has left the House for a moment I do not intend to deal with the system of annuities. Yesterday, in answer to the hon. member for Bothwell (Mr. Clancy), the Minister of Trade and Commerce rather declined to be responsible for handing over $13,000,000 to any actuary or insurance company for the purpose of providing means to pay the interest.

One word with reference to the plan which has been proposed to this House by the hon. the leader of the opposition. I desire briefly to place it on record so that it may be read from 'Hansard.' Already we have the Intercolonial Railway from Atlantic ports to Montreal and consequently we want nothing further in that matter at present, but from Montreal to Coteau Junction the hon. leader of the opposition proposes to build 30 miles of road, costing $40,000 per mile, or $1,200,000 in all. Then from Cot-

eau Junction to Depot Harbour, 342 miles, he proposes to acquire either by purchase or in some other way, but by purchasing if necessary (or by construction of another road) the road known as the Canada Atlantic Railway with all its equipment, which he believes can be bought for $12,000,000. Then from Scotia Junction he proposes to construct a railway 104 miles in length to Sudbury at a cost of $40,000 per mile, which with interest on the investment during the course of construction, would cost about $4,360,000.

Mr. SCOTT. Is that not 120 miles ?

Mr. HENDERSON. I believe that the distance is given by actual survey.

Mr. CLANCY. And the plans are made.

Mr. HENDERSON. This is no unexplored part of the country. This has been explored and is well known. I am informed by the hon. gentleman who made that statement here yesterday that 104 miles is the correct distance from Scotia Junction to Sudbury.

Mr. SCOTT. I think 120 miles was the distance named by the hon. leader of the opposition.

Mr. HENDERSON. It is not what the hon. gentleman (Mr. Scott) thinks. I will take the positive statement of the hon. member for Bothwell (Mr. Clancy) a hundred times before I will take what any hon. member thinks.

Mr. SCOTT. I am quoting the words of the hon. leader of the opposition.

Mr. HENDERSON. The hon. gentleman said 'I think.' My hon. friend from Bothwell assures me that he knows what the figures are. However, it is not a matter to quarrel over. It is a matter of detail but I feel assured in giving these figures to the House that I am giving the correct figures. Then from Sudbury to Fort William, 555 miles, the hon. leader of the opposition said that that portion of the road could be acquired for the sum of $25,000,000. He proposes that $3,000,000 shall be expended upon the betterment of the road so as to bring it up to a proper grade and to make it a grain carrying road of the best quality. He then proposes to acquire by purchase if necessary—it is possible that it may not be necessary—the Canadian Pacific Railway from Fort William to Winnipeg, 426 miles in length, at $30,000 per mile, or $12,780,000 in all and for betterments to make it a more complete railway for the purpose of carrying large trains he proposes to expend $2,100,000, making a total of $60,440,000 as the entire cost of providing this railway system over which all the existing railway systems of this country at the present time can move and over which they can all carry traffic and which, by permitting the use of this road by all the railway systems, would enable the government, if they adopt this plan, to find a means of relieving the country of the congestion that is complained of at the present time and providing a means for years and years to come and not only that but of providing an immediate means of bringing out of that country the vast crops that are produced there. The benefit of this will be in the fact that the effect will be immediate, not five years hence, not ten years hence, but within six months from now, and practically I see no reason why it should not be accomplished this year if necessary to relieve the congestion in the west.

Now, the government plan gives us an all-rail route from Winnipeg to Moncton for $112,352,000. The plan of the hon. leader of the opposition provides, first, an all-rail route, but it provides also from Winnipeg to Montreal the means of making the most complete rail-route and water-route to ocean ports. The government plan takes wheat from Winnipeg to ocean ports for 20 cents per bushel. The alternative plan proposed by the hon. leader of the opposition will accomplish the same thing, for from 9 to 9¾ cents per bushel. The hon. Minister of Agriculture (Hon. Mr. Fisher), whom I am pleased to see in his place at the present time, told us the other day that in the course of a few years, not many years, five years, or ten years at the outside, this road would not be required so much for the purpose of carrying wheat as it would be for the purpose of carrying cattle and other products of that country. Well, I am glad to assure the hon. Minister of Agriculture that he will be provided with a better route for carrying cattle from that western country to ocean ports if he adopts the plan suggested by the hon. leader of the opposition than he would be if he sent them through this back country over a longer route possibly at a time of the year in the winter season when the road would be blockaded and transportation would be stopped. The hon. minister shakes his head. I do not know why he should do so. He must be a little more dull of comprehension than I take him to be. I think this a very simple problem. Will he tell us any reason in the world, why, if he can ship a carload of cattle from Winnipeg over the Grand Trunk Pacific Railway running hundreds and hundreds of miles north of civilization through the province of Ontario and Quebec and away down to an ocean port, the same train of cattle cannot be shipped the other way from Winnipeg to Port Arthur, from Port Arthur to Sudbury, from Sudbury to Scotia Junction, and from there over the Canada Atlantic to Coteau Junction and to Montreal ? I can assure him without going into any very complex calculation that his carload of cattle will be on board the ship in Montreal long before it would reach its destination over the Grand Trunk Pacific Railway.

Mr. SCOTT. Would the hon. gentleman permit me to ask him a question ?

Mr. HENDERSON. Well, the hon. gentleman may do so, although, whilst I am occupying the floor, I do not know that any hon. gentleman has a right to, but I shall grant him the privilege. I desire to close my remarks, but before doing so I desire to say that my honest conviction is that if the government pursue their scheme and construct this railway they will find out to their sorrow that after the whole road has been completed from Winnipeg to Moncton and the resources of this country have been exhausted for the purpose of constructing the road, the demand from the people of the western country will be as strong as ever for the removal of the congested state of the traffic there. I do not believe the road is going to accomplish that purpose. It certainly will not do so immediately. I believe it will not do so effectively. There is another advantage in the plan that the leader of the opposition has suggested. It will at once put the railway system of the western country in direct communication with all our large commercial centres. It will connect it with Halifax, St. John, Moncton, Quebec, Montreal, Toronto, Hamilton, London, Peterborough and all other manufacturing centres throughout the provinces of Ontario and Quebec. How could you connect the Grand Trunk Pacific Railway with all these commercial centres ? I hope and trust that the government may yet see their way to withdraw this proposal, and to adopt the wiser and speedier and better plan that has been suggested by the leader of the opposition, under which the wheat fields of the west will be brought in direct connection with the Atlantic seaboard within six months or a year at most.

Mr. GEORGE STEPHENS (Kent, Ont.). Mr. Speaker, the hour is so late that I shall not occupy the time of the House for more than a few minutes. The member for Halton (Mr. Henderson) said, that the scheme proposed by the government was a mad scheme, and, of course, he claimed great merit for the scheme propounded by the leader of the opposition. However, he will have considerable difficulty in making the House and the country believe that the proposition of the leader of the opposition is a better one than that submitted to us by the Prime Minister. The hon. gentleman has quoted Sir William Van Horne as an authority, but we must remember that Sir William Van Horne has some prejudices, because he is interested in the Canadian Pacific Railway, and to say, as he does, that a bushel of wheat will never be carried over this road, is simply nonsense. Against the statement of the hon. member for Halton (Mr. Henderson) that there are sufficient railways at the present time in the North-west, we have the statement of the member for Selkirk (Mr. McCreary) that last year the farmers of the North-west lost $6,000,000 for lack of better transportation facilities, and as it is needless to say that the hon. member (Mr. McCreary) who lives in the North-west knows more about that country than does the hon. member for Halton, the House will I am sure be disposed to accept the word of the former hon. gentleman. The hon. member for Halton also told us that the road proposed by the government will cost the country from $100,000,000 to $150,000,000, but the member for West Toronto (Mr. Osler) told us that this road would cost $560,000,000, and I leave these two gentlemen to reconcile their differences between themselves. I regret that the member for Halton has such a poor opinion of this Canada of ours. I am optimistic of the future of this country, and I believe that there are vast areas yet untilled in the provinces of Quebec, Ontario and New Brunswick, which when this railway is completed will be brought under cultivation by a happy and prosperous population. The hon. gentleman (Mr. Henderson) contends that this will not be a colonization road, but all the evidence goes to show that not only will it be a colonization road, but that it will be as well a great transcontinental highway through Canadian territory. Starting at Moncton the line passes through valuable agricultural lands which are well timbered, and which the young men of that province will remain at home to cultivate rather than go to the United States, as they are doing to-day. This railway opens up a tract of country nearly 300 miles long in New Brunswick, and if that country is settled for ten miles on each side of the line over 3,000,000 acres will be brought into cultivation. Here is a statement which recently appeared in the newspapers :

St. John, N.B., August 21.—The rush of harvest excursionists from the maritime provinces to the North-west is unprecedented. The Canadian Pacific Railway announce to-night that they have ticketed 2,400. Then there are 1,600 more along the line of the Intercolonial Railway in the maritime provinces, who will pass through here to-night or to-morrow. The Canadian Pacific Railway has been unable to get enough cars and this is causing delay.

This would tend to show that the young men of New Brunswick need employment, and are moving to the west or to the United States to find it. Would it not be better that they should remain at home to settle along this new line, take out the timber, and develop the resources of their own province ? The hon. gentleman from Halton stated that this would not be a transcontinental road, but as it shortens the distance from Quebec to Moncton 125 miles, there is no doubt that it will secure the through traffic and take the products of the west to the seaports of the maritime provinces. I believe that if this road never carried a bushel of wheat, it will be worth every dollar of its cost as a colonization railway. As to the contention of hon. gentlemen op-

posite, that this railway will parallel the Intercolonial Railway, I cannot see how that can be, when it is from 30 to 70 miles distant from the Intercolonial Railway throughout its entire length. I might mention that in the county of Kent, which I have the honour to represent, we have four lines of railways paralleling each other, and from Lake St. Clair to Lake Erie the distance is not more than twenty miles. Nevertheless all these roads seem to be doing well and paying dividends. This new road traverses the province of Quebec for about 450 miles and in that province it will create a new Quebec, opening up to settlement about 6,000,000 acres of land, which is well timbered, and as the report shows, fit for agriculture. For 1,000 miles the road will pass through the clay belt of Ontario, and if it is settled along its course for fifteen miles on each side, then we will have 15,000,000 acres of land brought within the reach of those who wish to occupy it. I am informed that this land in Ontario is good agricultural land, that it is heavily timbered, and in some places rich in minerals. Here is a report of Mr. Robert Bell, Civil Engineer, which will give some idea of the possibilities of the country :

Farming and gardening have been successfully carried on by the officers of the Hudson Bay Co., at their posts on Lakes Mattagami and Missinibi. At the latter, Mr. John McIntyre, now of Fort William, has informed me : That he found spring wheat to ripen well. At Moose Factory, although the soil is a cold wet clay with a level undrained surface, farm and garden produce, in considerable variety, are raised every year. Among other crops harvested in 1874, were 1,700 bushels of good potatoes. Oats, barley, beans, peas, turnips, beets, carrots, cabbages, onions, tomatoes, &c., are grown without any more care than is required in other parts of Canada, and I was informed that some wheat which had got accidentally sown one year was found to ripen, but no experiments so far as I could learn, have ever been made to ascertain whether this cereal might be regularly cultivated or not. Upwards of 80 head of cattle are kept at Moose Factory, besides horses, sheep and pigs.

The climate in going northward from the height of land towards James' bay does not appear to get worse, but rather better. This may be due to the constant diminution in the elevation more than counterbalancing for the increasing latitude since in the these northern regions, a change in altitude affects the climate much more than the same amount of change would affect it in places farther south. The water of James bay may also exert a favourable influence, the bulk of it being made up, in the summer time of warm river water, which accumulates in the head of the bay and pushes the cold sea water farther north. The greater proportion of day to night during the summer months may be another cause of the comparative warmth of this region. I have referred to some of these points in previous reports, careful notes were kept in regard to the timber of the districts passed through, but the details would be unsuited to the present report, I may however, mention that the species of the most importance, namely, the red and white pine, were common all the way from Lake Huron to Mattagami lake.

This goes to show that there are large tracts of land in that country fit for cultivation, and large areas of timber.

This road from Winnipeg to Quebec, I am told, will be about as short as the Canadian Pacific Railway from Winnipeg to Montreal. If that be the case, that is another argument in its favour as a transcontinental railway. I believe there are large tracts of timber in Northern Ontario. In the year 1902 we exported $4,383,182 worth of pulp and pulpwood. This was shipped mostly to Great Britain. Then we only supplied eight and a half per cent of the amount used. In 1902 we also exported $35,000,000 worth of wood and manufactures of wood. This is a large item, and it brings a great deal of money into our country. If the proposed railway is built through New Ontario, it will keep our population in Ontario. There will be farming, lumbering, pulp mills, elevators, saw mills, flour mills, oat mills, and ranching in operation along the line of that railway. There will be railways built from old Ontario intersecting this road, and they will be busy taking up machinery for the mills and the elevators and other supplies. The farmers of Ontario and Quebec will supply the requirements of the people who build the road. They will take up horses, beef, butter, eggs, tools of all kinds, steel manufactures to supply structural work, cars, locomotives, rails, telegraph and telephone supplies; and they will bring back lumber and other natural products. Wages all over this country will be enhanced, and men will be kept busy.

Then, we pass on from Winnipeg to Fort Simpson, through a long stretch of prairie, where the railway will open up millions of acres of wheat lands and grazing lands. Then we pass through a fine mineral district of British Columbia, where thousands of miners will go, and where thousands of miners would have been to-day if they could have got in the machinery and the supplies required in their business. This road will be busy in taking in their supplies and bringing out minerals, lumber, and so forth. In the year 1902 this country exported $33,948,708 worth of coal and other minerals. Mr. Selwyn, in a report made in the year 1875 says, that the climate of the Peace River district, compares favourably with that of the Saskatchewan or Montreal. He says, to give some idea of the value of a tract of generally fertile country such as that now described, let us assume, as above, that the area of actually cultivatable land is 23,500 square miles or 15,140,000 acres. Let us suppose for simplicity of calculation that the whole area were sown in wheat, the yield at the rate of twenty bushels to the acre would be 300,800,000 bushels This road will provide a home market for the farmer. The farmers of old Ontario, the province of Manitoba and the province of Quebec, will ship their produce over it. It will take lumber into the prairies and farmers' products to the mines. Then, the

shipping facilities which the company have contracted to supply at Port Simpson will make it a short route to the markets of Japan, China and Australia. The company will have to pay out a great deal of money for running expenses.

Canada has 18,868 miles of railway, on which the running expenses last year amounted to $57,000,000. Taking that as a criterion, this company will pay out annually about $10,000,000 for the running expenses of the road. The road will advertise Canada as much as a great many thousand of dollars would do. It will cause immigration to come into the country. Branches will have to be built. Revenues will flow into the treasury. We get all these advantages, and what do they cost us ? I take the figures of the hon. Finance Minister, and I believe there is no one on whom we can more safely rely. He has never yet, to my knowledge, deceived us in any way. He says that if $13,725,706 were set aside at the present time, it would pay the interest on the government's investment in this railway for the seven years. He does not pretend to say that $13,000,000 is going to build the road ; but what he does say is that it will pay the interest which the government will have to pay. At the end of the fifty years, he concludes that the road will be worth fully as much, if not more, than it will be when completed. If there is any truth in the statement of the hon. member for West Toronto (Mr. Osler), it surely will be worth more. He says : It will take fifteen years to bring up the best road you can build to the Grand Trunk standard of to-day. He also says that the Intercolonial Railway cost to build $21,500,000, and that after twenty-six years it is worth $71,000,000 or $72,000,000, or nearly three and a half times the original cost. If the Grand Trunk Pacific Company are going to spend any such amount of money on this road, it will certainly be worth more at the end of fifty years than it will be at the date of its completion; and when the fifty years will have expired, the road will revert back to the government, and they can then either sell or re-lease it. If they sold the road, and they got as much as it cost originally, then the figure of the hon. Minister of Finance would be right.

Now, as to the proposition which the hon. leader of the opposition brings down to the House. I would like every voter in the riding I represent to examine carefully into the bargain which the leader of the opposition proposed and that which the government have made, and also to compare carefully the bargain made with the Canadian Pacific Railway in 1881 with that which the government have concluded with the Grand Trunk Pacific Railway. Such a comparison would not fail to convince any one who is open to conviction that the proposition submitted to the House is, in every respect, deserving of support. By it the government do not tie up 25,000,000 acres of the best land, as the late government did in its contract with the Canadian Pacific Railway, nor does it put our farmers to the expense of keeping up the roads in the school section and the alternate sections, which has been so great a drawback to the North-west, and which is one of the pernicious clauses in the contract with the Canadian Pacific Railway.

I shall not take up the time of the House by going into the legal aspects of this contract. Having every faith in the men who made this bargain and who drew up this agreement, I am confident that the interests of Canada are safeguarded on every hand. In my opinion, this road cannot be built too quickly ; and when built, the development of this country will be such that in four or five years after its construction the railway facilities then provided will be scarcely sufficient to carry expeditiously the grain of the west to our seaports. While supporting this great transcontinental project, I am also in favour of our water-ways being improved, for I believe that there will be ample traffic for all our water-ways as well as all the railways we can build into that country. For these reasons, Mr. Speaker, I am prepared to vote for this resolution. In the course I have taken, I am confident that many members of the opposition sympathize in their hearts, and would vote as I intend to do did not party exigencies compel them to do otherwise. Many of them, I am convinced, believe in their hearts that this scheme proposed by the government is very much better in the interest of the country than the one suggested by the leader of the opposition, and would vote for it if they could. At this late hour, Mr. Speaker, I shall not take up further time of the House, and I must apologize to hon. members for having delayed them so long and thank them for the kind attention they have given my remarks.

On motion of Mr. Ingram the debate was adjourned.

On motion of the Minister of Finance (Hon. Mr. Fielding), House adjourned at 1.15 a.m. Friday.

HOUSE OF COMMONS.

FRIDAY, August 28, 1903.

The SPEAKER took the Chair at Eleven o'clock.

SALMON INDUSTRY ON FRASER RIVER, B.C.

Mr. THOMAS EARLE (Victoria, B.C.). Before the Orders of the Day are called, there is a matter which very seriously

affects the salmon canning industry of British Columbia to which I would wish to direct the attention of the government. Of course, as we know, the canning industry of my province is one of the most important industries on the Pacific coast. I express my regret incidentally that the Minister of Marine and Fisheries (Hon. Mr. Préfontaine) is not in his seat this morning. However, I would ask the Minister of Finance, who is now leading the House, to call the attention of the Fisheries Department to the matter which I am about to mention, and to urge upon the minister immediate action in the line which is indicated by the following telegram, which I received from the Canners' Association of British Columbia :

Vancouver, B.C., 26th.

Thos. Earle, M.P.,
Ottawa.

Following message sent to-day to Hon. R. Préfontaine. The Fraser River Canners' Association, in view of the lamentable short run of sockeyes on the Fraser river and the entire absence of salmon from the spawning grounds, respectfully pray that your department will prohibit all fishing on the Fraser river from August 29 to September 12 inclusive, in order that the balance of sockeyes remaining outside may be enabled to reach the spawning grounds, and the hatcheries get some supply of spawn. If close season not ordered future of industry seriously threatened. Immediate consideration and favourable reply by wire is earnestly requested in the interests of the canners and fishermen. Your energetic support most earnestly requested.

When we find that last year the output of salmon was not much over one-half what it was the previous year, and that this year it is scarcely one-third of last year, it is evident that there is reason for the canners becoming very greatly alarmed that the Fraser river may be depleted of its fish. The canners make the request contained in the telegram in the hope that if their prayer is granted the fish will have an opportunity of getting up to the spawning grounds, and thus the supply of fish maintained by increased opportunities for breeding. This is becoming a necessity to the existence of the industry. I take this opportunity of calling the attention of the Finance Minister, who now leads the House, to the matter, and I ask him to bring it before the proper department with a recommendation that the Minister of Marine and Fisheries should see his way clear to grant this request for a close season, which I believe to be in the interest of the salmon industry of British Columbia. If there is anything in the idea these gentlemen have in regard to the breeding of the salmon, it certainly will be in the interest of the industry to grant this protection, and it can, at all events, do no harm, because it will inflict no injury upon any class of the community.

Mr. R. L. BORDEN (Halifax). Might I be permitted to say a word in connection with the same matter. A telegram of the same purport as that read by my hon. friend (Mr. Earle) has been placed in my hands, and I have been asked to draw the attention of the government to the matter. This telegram is very much on the same lines as the telegram received by my hon. friend from Victoria (Mr. Earle), and it reads as follows :

Vancouver, B.C., August 27, 1903.

Fraser River Canners' Association have petitioned department for close season from 29th instant to September 12 inclusive. Situation here extremely critical, as I can certify. Future of industry absolutely threatened, as no salmon have yet reached spawning ground and the run is practically over. Act with British Columbia members and senators, urging upon the department imperative necessity of prompt action. A few days now may save the industry.

This telegram was handed to me by my hon. friend from Hastings (Mr. Porter) to-day, as he was obliged to leave to catch a train, and it is at his request that I bring it to the attention of the government. If the situation is as disclosed in the telegram, then the Minister of Finance, who is leading the House will no doubt admit that it should demand the immediate and earnest consideration of the government.

The MINISTER OF FINANCE (Hon. W. S. Fielding). I shall call the attention of the Minister of Marine and Fisheries to the matter. I assume, from the terms of the telegram, that the subject has already been communicated to the department, and I have no doubt that it is engaging the attention of the minister.

Mr. AULAY MORRISON (New Westminster, B.C.). I think it is very reprehensible indeed that hon. gentlemen should, as it were, get hysterical over a matter of this kind. My hon. friend from Victoria has read one telegram, as has also the leader of the opposition, from the same parties.

Mr. SPEAKER. It would appear as if there were going to be a discussion on this question, and there is no motion before the House.

Mr. MORRISON. I shall conclude my remarks, Sir, with the usual motion to adjourn. The hon. member for Victoria has read one telegram which only gives one side of the case. It is only from one concern interested in this vast and important industry in the province of British Columbia, and it asks that all fishing operations shall cease because, in their opinion, there are no fish getting to the spawning ground. That is a matter which is almost impossible to determine, because the fish, in any event, cannot and do not get to the spawning ground until some time in the fall.

Mr. BORDEN (Halifax). My hon. friend (Mr. Morrison) has stated that these telegrams are from the same person. They are not from the same person.

Mr. MORRISON. I understood they contained almost precisely the same wording.

Mr. BORDEN (Halifax). They are not from the same person. I said that the telegram which I had in my hand was along the same lines as the one read by the hon. member (Mr. Earle), but they are not from the same person at all.

Mr. MORRISON. From whom did the telegrams come ?

Mr. EARLE. Mine is from the secretary of the Canners' Association, Mr. Burdis.

Mr. MORRISON. May I ask from whom the other telegram comes ?

Mr. BORDEN (Halifax). There is not the slightest objection ; it is from Mr. Charles Corby.

Mr. MORRISON. I do not know who Mr. Corby is, and from my knowledge of that industry in British Columbia, I do not know any one of the name engaged in it. We have all received these telegrams from the British Columbia Canners' Association asking that the fishing be prohibited, which means that there shall be a total suspension of this vast and important industry for a month or so, on the assumption that the fish are not getting to the spawning grounds. Nobody can possibly determine that, because the fish never get to the spawning grounds till the fall, or in a month or two hence ; and although according to these despatches the salmon are not at the present time running in such large quantities as usual, at the same time I have despatches from very reputable people which go to show that the fish are running. For instance, on the 26th of August, the day before these other telegrams were sent, Mr. James Anderson, of the St. Mungo Cannery, on the Fraser river, wires that the salmon are running decidedly good, and that it would be unfair if the department should stop the fishing on the Fraser river. We have not heard yet from the fishermen, men who are also affected largely by this. As a representative of the constituency in which the fishing industry is engaged, I have great concern for that industry, but at the same time I think it would be very reprehensible indeed on the part of the department to take cognizance of a despatch which comes from one source alone, however reputable that may be. I may say that there are despatches the other way showing that the fish are running, and that is the statement of the fishermen, who are the people most interested in this matter. I think myself that the department should hesitate. In fact, so far as I am personally concerned, I would urge upon the department not to take any step until they had absolute confirmation of the statement contained in the telegram, and even then I think it would not be a proper policy to suspend fishing. Why should they do so ? In my opinion, the department should lend a deaf ear to the suggestion made by the hon. member for Victoria, as well as the suggestion made by the leader of the opposition. There is no material before the minister to warrant him in taking any such step at all. If there is any doubt ; if there is a conflict of evidence as to whether the fish are running or not, then the proper course for the department to take is to let the matter alone, and it will adjust itself. I move the adjournment of the House.

Mr. JOHN CHARLTON (North Norfolk). When I was in British Columbia a short time ago, I made some inquiries into the important salmon fishing industry of the Fraser river. I notice that these telegrams state that there is a very marked diminution in the quantity of salmon caught ; that the catch last year was very much less than that of the preceding year, and that the catch this year is very much less than last year. My hon. friend from Westminster (Mr. Morrison) takes objection to the statement placed before the House, and says that it emanates only from the canners. Well, I suppose that the canners, having a large investment there, are more deeply interested than any other class of persons engaged in the business. It seems to me, from a knowledge of the way that nets are placed on the Fraser river, that it would be utterly impossible for salmon to get up the stream.

Mr. MORRISON. That is nonsense.

Mr. MACPHERSON. Nonsense.

Mr. CHARLTON. Perhaps it is nonsense, but at all events the river is completely set with nets for a long distance up and down, and whether it is impossible for salmon to get up or down as it is alleged, it is evident from the results of the canning of salmon that the run of fish is very greatly impeded thereby. This is a very important industry, and while the government should avoid taking any steps that would be unjust to any of the parties interested, it would be well to preserve this industry for future years. The recklessness of American fishermen on the Columbia river has nearly destroyed a salmon industry on that river, which at one time was one of the finest salmon streams in the world. That has been the result of lavish fishing and the wanton destruction of the fish. The run of salmon is so reduced that I understand the industry is practically paralyzed. The same process is in operation on the Fraser river, beyond question. The catch is largely reduced from year to year——

Mr. MACPHERSON. No, no.

Mr. CHARLTON. It cannot be otherwise ; and the leaving of that river open for a few days for a free run of salmon in my judgment would be in the highest degree

advisable. I do not think that it is proper to jeopardize that industry in the interest of those who want for the time being to make a larger catch. I do not think any suffering will be entailed upon any one by following the course I suggest. It strikes me, from what I know of the matter, from investigation on the ground, that the mode of fishing in that river is certain to destroy the industry in a short time unless some course of this kind is taken.

Mr. EARLE. In reference to my bringing this telegram to the attention of the government, I do not think I was doing anything reprehensible at all. The telegram is from the secretary of the Canners' Association, which represents forty-five or fifty canners ; and they should understand, I think, what is in the interest of the industry as well as either myself or the hon. member for New Westminster (Mr. Morrison). They certainly are of opinion that the Fraser river is being depleted owing to the extensive manner in which it is fished, and that unless something is done, and done immediately, their industry will be destroyed. The fact is there—they are not putting up the fish this year. Although there is an apparent sign of a run of fish coming up the straits, it is a mixed run, which indicates that the good run of fish is gone—the run of sockeye, which is the fish they can for the English market, and which also brings the highest price in the Canadian market. I cannot see what injury it can do to any one to give them a close season such as they have always had until the last two or three years. The conditions formerly were different. The catches were coming up, and they thought there was no danger ; but now the catches are going down, and they realize that there is danger ; and, in order to avoid it, they ask for this concession. As the hon. member for North Norfolk (Mr. Charlton) has stated, it is in the interests of those who are more largely interested in that industry than any other people. They have an immense capital invested in it, and they surely would not suggest anything being done that would not be in the interest of that industry. I hope that the minister will yet see his way clear to agree to the suggestion made in this telegram. In regard to the truthfulness of what I have said, or any one else, the minister is able in an hour or two to get reliable information from his fishery commissioner on the ground, and I would be willing to abide by any representation he made on the subject, knowing him to be a man of good character, strictly honourable and honest, and knowing that he would not recommend anything that would not be in the interest of the industry, being on the spot and knowing the conditions that exist. If the minister has not already that information, I suggest that he immediately apply to that officer for information as to whether the statements made here are correct, and, if he finds that they are, that he act upon the suggestion that has been made.

The MINISTER OF MARINE AND FISHERIES (Hon. Raymond Préfontaine). The department has not neglected this matter at all. As sooon as the first telegram came, addressed to the deputy minister or to myself, I began inquiry about the matter. It stands to reason that the department is not going to decide on such a matter on the representations of one side only, and without inquiry from the proper officers in British Columbia as to whether the demands made are just and fair and reasonable. That is what I have done. As soon as the first telegram came, I began inquiring, and the information which I have, not only from the officials, is very contradictory indeed. If the department had come to a conclusion without getting a complete report from our officers in British Columbia, that is to say, from the fishery agent there, Mr. Sword, we would have run the risk of doing a great deal of harm to the industry and the fishermen. The fishermen are the most numerous class of people, and their rights must be protected. If I am well informed, there is something extraordinary about this matter. I just give the information as I have received it indirectly.

Mr. EARLE. Have you a report from Mr. Sword ?

The MINISTER OF MARINE AND FISHERIES. Not yet.

Mr. CLARKE. From whom did you receive this information ?

The MINISTER OF MARINE AND FISHERIES. I am not in a position to state. But the information which I have received is this, that the canners were under the impression at the beginning of the season that the run of salmon would not be very great. Under the circumstances they made contracts with the fishermen at a very high price, and the fishermen got very little, because the run was very small. But since the run has begun to be good, the fishermen are now getting a lot of money, and are making up for the time they have lost. The canners are not satisfied with that state of affairs, and if they could stop the fishing, they would break their contracts with the fishermen. So there are two interests to be considered.

Mr. ROSAMOND. Does that mean they would stop their own business in order to get lower prices from the fishermen ?

The MINISTER OF MARINE AND FISHERIES. They would buy the fish on the other side from American fishermen, who use traps.

Mr. EARLE. On the other side they are in the same condition—they have not fish enough to keep the canners going.

The MINISTER OF MARINE AND FISHERIES. That is not my information. My information is that the canners would get all their supply of fish on the other side from Americans, who are using traps, while traps are not allowed to be used in Canadian waters. Whatever may be the contentions on both sides, the department certainly would not do justice to itself if it were to come to a decision upon such an important matter as this without having a report from the proper officers in charge, who are responsible to the department for the carrying out of the law and the administration of the fishery regulations in British Columbia.

Mr. EARLE. In regard to the statement made by the minister that the canners are buying their fish on the American side, I may say that the American canners were coming over to the Fraser river and buying fish and putting up the price; and the canners had come to an understanding with them to cease doing so, or they would go over and buy fish from the traps on the American side. So there is nothing in that. Referring to what I said——

Mr. SPEAKER. I must call the hon. gentleman's attention to the fact that he has already spoken twice.

Mr. EARLE. With the permission of the House, I would like to say that this is a very important matter to the province of British Columbia. It is a matter which I have pressed on the attention of the department year after year, in the time of the previous government as well as the present. I have pointed out that the trouble with the whole Department of Fisheries in British Columbia is that instead of being run departmentally, it is run politically.

Mr. MACPHERSON. Not now.

Mr. EARLE. The hon. gentleman may say what he likes. I had reports to that effect from the late representative of Burrard, who said to the late Minister of Fisheries that no man should get the right to fish unless he got his consent. That was stated to the late minister by one of the largest canners in British Columbia, and a Liberal of the city of Vancouver. I have no objection to mention his name——Mr. Bell Irving.

Mr. MACPHERSON. When did he become a Liberal?

Mr. EARLE. He was always a Liberal. He may not have supported the school of Liberals to which my hon. friend belongs, but he is a Liberal of the old school, and always has been. Aside from that, if the Department of Marine and Fisheries is to to be run on these lines, the minister might as well throw it up and leave it to be run by the members representing the district. The way it is run now is simply a farce. No time should be lost by the hon. minister, but he should act at once in this matter. He can get official information on which he can rely.

Mr. MACPHERSON. In view of the fact that I am pretty well interested in this matter myself, I would like to say a word or two in contradiction of the hon. gentleman who has just spoken. When he makes the statement that the salmon business is run on the Fraser river by politicians, he makes a statement which I cannot qualify as being other than ridiculous. What the politics of Mr. Bell Irving are I do not know. The hon. gentleman says he is a strong Liberal, but he is reputed to have put up a good deal of money to defeat the Liberal candidate in the last general election, and a man who would do that cannot be a very sincere Liberal. I have had several telegrams in connection with this matter, which show that the canners are not at all unanimous. Here is one which I have received:

> Canners not unanimous. If season closed will injure small canners and fishermen. Memorial not based on facts. Scheme to affect English market. Have written fully. Get Minister wait until properly posted.
>
> FRANK BRUNETT.

Mr. EARLE. He is one of the gentlemen referred to by Mr. McCraney.

Mr. MACPHERSON. I can assure my hon. friend that he who steals my purse steals trash, but he who filches me of my good name robs me of that which not enriches him and makes me poor indeed. It is easy enough to sling mud, but the hon. gentleman should be the last man to get up and throw mud at anybody else. People who live in glass houses should not throw stones. When the man is not here to defend himself, the hon. gentleman ought, in common decency to reserve what he has to say against him for a future occasion, when he can say it to his face. The minister has acted perfectly right, and should not, under the circumstances, follow the advice of the hon. member for Victoria. It is well known that the people of Centre Victoria have been doing all they could to get the canning industry down there during the last five years. In the city of Vancouver there are some hundreds of fishermen, not one of whom is in favour of having the season closed. The hon. minister should not do anything until he knows all the facts. The hon. member for North Norfolk (Mr. Charlton) said that the nets were so closely placed in the Fraser river that they would not allow the fish to go up, but I know as a fact—and my statement can be proved by the papers—that the fishing industry in British Columbia has increased by leaps and bounds. This year is an off season, but I see by the Montreal 'Star' that there are this year 170,000 cases packed in the river, and there are 300,000 in the

Columbia river. The Skeena river has been a failure, also the Naas, Rivers Inlet, and the Alaskan pack. If the canners get a good pack of sockeyes from now out, they will make money, because the pack is small in other places and will be next year as well, next year being an off year. It is always small every four years. When Sir Charles Hibbert Tupper was Minister of Marine, a howl was made to get him to extend the season, and the thing was done at the request of the canners. It satisfied everybody, the canners, the fishermen and the public generally. We found no request then to close down the season, but the reverse. I do not think it would be advisable for the minister to take the stand which the hon. member for Victoria has taken. I am prepared to stand or fall by the position I take. I do not think that this thing should be considered until the other side of the question is heard from—the fishermen as well as the small canneries.

Mr. BORDEN (Halifax). The hon. member for New Westminster (Mr. Morrison) must have misunderstood what I said when he desired that the government should turn a deaf ear to any remarks I made on the subject. If he had paid attention to what I did say, he would have observed that I asked the government to give consideration to the subject. I do not know that there is any particular reason why the government should turn a deaf ear to a suggestion of that kind. If this is a matter which really involves the preservation of the fishery industry of British Columbia, the Minister of Marine should act promptly.

The MINISTER OF MARINE AND FISHERIES. Surely not without information ?

Mr. BORDEN (Halifax). If my hon. friend had waited a moment he would have understood that I agree entirely in that suggestion. He should get all the information from his officers, and that as speedily as possible. But if he should dilly dally many days longer, and if there be any truth in these telegrams, the time to act will have expired. I entirely agree with the minister that if there is really an attempt to coerce the fishermen or small canners, the government should not listen to it for a moment. But he should carefully consider whether there is any foundation for that statement. It may be a difficult situation, but an administrative officer in his position has to deal with difficult situations and deal with them very quickly. I would suggest to him that there is the greatest possible need to urge expedition upon his officers in British Columbia, so that he may have the requisite information to deal with what is alleged to be a very serious situation. It is in the interests of the small canners and the fishermen themselves that this industry should be preserved.

Mr. MORRISON. What I meant to characterize as reprehensible is the giving of serious consideration to telegrams sent to individual members on either side of the House. We have an inspector of fisheries out there, Mr. Sword, a very reputable officer, who is right on the ground, and readily accessible to these people who are sending those telegrams. They could very easily consult Mr. Sword and have him communicate with the government. The hon. member for Victoria gets a telegram from somebody, I get a telegram from another and the hon. member for Vancouver gets a telegram from a third, and they are conflicting, and we come here and bother the minister, and there is not a word from Mr. Sword. Mr. Sword is keeping away from these squabbles. The very fact that the inspector of fisheries has not sent in any communication, warrants the minister in not taking any notice of telegrams read from either side of the House. That is what I meant when I said that it was reprehensible for members on either side, in a matter of such importance, to ask that action should be taken on telegrams sent by interested parties.

Mr. CLARKE. Surely the hon. gentleman does not mean to say that, in view of the conflicting telegrams received by hon. gentlemen on both sides, the Minister of Marine should do nothing ?

Mr. MORRISON. He has done something.

Mr. CLARKE. He has not advised us yet what he has done. I rose for the purpose of asking the hon. gentleman what he has really done. I understand that the fishery commissioner is on the ground. Has the minister communicated with that gentleman ?

The MINISTER OF MARINE AND FISHERIES. I said I had. As soon as I got the first telegram I made inquiry of Mr. Sword, I telegraphed him again yesterday to make a report to me by wire. I thought he might suppose that I wanted a report by mail, so I telegraphed him to send a report by wire.

Mr. CLARKE. If the hon. minister had enlightened the House in the first place——

The MINISTER OF PUBLIC WORKS. He made that statement.

Mr. CLARKE. The hon. gentleman (Hon. Mr. Préfontaine) made no such statement.

The MINISTER OF MARINE AND FISHERIES. Of course I did.

Mr. CLARKE. I am not deaf, nor was I inattentive. I listened carefully to everything the hon. minister said ; and I am in the judgment of the House when I say the hon. minister made no such admission.

Mr. MORRISON. Surely the hon. gentleman (Mr. Clarke) will not say that the

hon. minister did not tell the House that he had communicated with Mr. Sword by wire. I certainly understood him to say so.

Mr. CLARKE. I listened attentively to the discussion that has taken place, and, in my hearing, the minister did not advise us that he had wired to Mr. Sword and had asked Mr. Sword to wire his report.

The MINISTER OF MARINE AND FISHERIES. I will have to say it in French next time, so that I may be understood.

Mr. CLARKE. I shall be glad to stand corrected if the hon. gentleman made that statement. I did not hear it, though I was paying close attention to every thing that was said.

The MINISTER OF PUBLIC WORKS. The hon. gentleman (Hon. Mr. Préfontaine) says he said it, and we here certainly so understood him.

Mr. CLARKE. I rose only to express my astonishment that, in the face of the information that had been furnished and of the urgency of the case, the propriety of calling the matter to the attention of the minister should be questioned by the hon. member for New Westminster (Mr. Morrison). I hope that, if the hon. minister receives a reply to his telegram he will lay it before the House.

Mr. T. S. SPROULE (East Grey). I have just one word to say in connection with the contention of the hon. member for New Westminster that it is improper for any individual to wire a member of parliament with regard to a grievance and ask it to be brought to the attention of the House.

Mr. MORRISON. Under the circumstances.

Mr. SPROULE. I enter my protest against it. Every citizen has a right to appeal to parliament for the redress of grievances in matter under the control of parliament, and he has the right to appeal to his own member or any member known to him; and a member of parliament is doing the proper thing in bringing such a grievance to the attention of the government. That is their right, and their undoubted right.

TREADGOLD COMMISSION.

Mr. R. L. BORDEN (Halifax). Before the Orders of the Day are called, I would like to ask whether the government has any information to give with respect to the telegram which I read the day before yesterday on the adjournment of the House, with regard to the alleged action of the commissioners who were appointed to investigate the Treadgold concessions. I read the telegram, which I will repeat for the benefit of the right hon. gentleman (Rt. Hon. Sir Richard Cartwright) who is leading the House.

The MINISTER OF TRADE AND COMMERCE (Rt. Hon. Sir Richard Cartwright). I would ask the hon. gentleman (Mr. Borden, Halifax) to bring this matter forward when the Prime Minister (Rt. Hon. Sir Wilfrid Laurier) is in his place. He will be here in a few minutes.

Mr. BORDEN (Halifax). The Minister of Finance (Hon. Mr. Fielding), who was leading the House when I first called attention to the matter, said he would make inquiry and would give me any information the government might have at a later date, I bring the matter forward now to remind the government that the information was asked for.

The MINISTER OF TRADE AN DCOMMERCE. I will call the attention of the Prime Minister to it as soon as he comes in.

NATIONAL TRANSCONTINENTAL RAILWAY.

House resumed adjourned debate on the motion of Sir Wilfrid Laurier for the House to go into committee on a certain proposed resolution respecting the construction of a National Transcontinental Railway, and the motion of Mr. Puttee in amendment thereto.

Mr. ROBERT D. WILMOT (Sunbury and Queen's). Mr. Speaker, we are confronted with one of the most important questions that have ever come before the Dominon parliament. Certainly, in my experience here, covering some fourteen sessions, nothing has been brought before us comparable in importance with the great question we have now to consider. And, with my inability to deal with important subjects, I feel the very greatest embarrassment in attempting to address you to-day. I approach this question with feelings of awe at the enormous amount involved, the unknown millions that we are liable to be called upon to spend on this enterprise. I am also amazed, considering the small amount of information that is before us, that we are called upon to decide finally as to the merits of this question. Had we been experts in the professions of civil engineering, we might have given our opinion with some confidence. We are practically at sea. We have fragmentary information concerning one section of the country that this road is supposed to follow, and fragmentary information concerning another section. Yet, in the face of the insufficiency of information, we are called upon to say whether this country shall burden itself with liabilities for the great expenditure that will be necessary in order to carry out the proposed work. It is urged on the part of the government in forwarding this scheme that it is a matter of, I was going to say, urgency. I suppose that between urgency and emergency there is a distinction without any very great difference. I do not think, in

view of the past history of our friends who are in power, that they are exactly well fitted to deal with emergencies. It is well within rememberance of every one who hears me that a critical time in the affairs of our empire occurred, when the government was faced with a duty that devolved on them, a duty near to the heart of the whole empire, at all events to the heart of Canada—the duty of acting in defence of the empire. That was an emergency, and how did the government meet it ? The Prime Minister went off on an entertainment tour to attend some banquet, I understand in Chicago. But public opinion was so strong that the government felt that they were in an emergency, and, after some time had elapsed they repaired the mistake they had made. They acted, I may say, in response to the demand of the leader of the Conservative party. Moreover, Mr. Speaker, so far as we are concerned, I think there was something said about emergency rations during that campaign. They did not come out of that controversy with any great credit to themselves. Now we are face to face with a great emergency and from appearances I do not think they are going to come out of it with any great credit to themselves or to the country.

Now, Mr. Speaker, if a man goes to build a house he adopts the scriptural plan of sitting down and counting the cost before he begins. No such proceeding of that kind appears to have been undertaken by our friends on the other side of the House. We know that is done by business men—and there are business men in the Liberal party, as good as any that can be found in Canada, shrewd business men who would not make any mistake in their private affairs, and how they can bring themselves to act as the government wish them to act on this occasion is more than I can comprehend. It must be an emergency. Where is the emergency ? It is not apparent on the surface. We are told that that great country of which we are all proud, that great country north of Quebec and north of Ontario, is the country which the government are going to open up by their railroad policy as propounded by the right hon. the Premier. Well, Mr. Speaker, far be it from me to deny the facts of history. No one can charge the Conservative party wth having endeavoured by word or deed to prevent the developments of this great country. In the lives of every one of us, a great many duties will sometimes present themselves to us at the same time, and it is the part of wisdom to endeavour to perform those which press upon us the most strongly at the time. Now, when we look at our great west, the extraordinary conditions that prevail there, the almost inexhaustible quantity of arable lands that are singularly fitted for producing all that man requires, lands that the world is beginning to recognize as the most fruitful for producing all the necessaries of life, is it not to our advantage, is it not our first duty, to turn our attention to them ? Immigration is coming into that country in a manner that every Canadian is proud to see. That country is becoming settled up. We are all proud of it, and we give our friends, the government, credit for doing their best in the direction of inducing immigration. Large sums of money have been spent and are being spent for the purpose of filling up that great North-west, and I give the Liberal party the credit that is due them in that respect. Of course, we all recognize, we cannot be blind to the fact, that our friends on the other side who are governing this country have enjoyed an extraordinary run of good luck. The commerce of the world was never in so prosperous a condition, money never was so plentiful. The crowded contres of Europe are turning their attention our way as never before. The agricultural lands of the United States similar to our own are all being taken up, and the consequences is that immigration is now coming our way. Let not our friends of the Liberal party take to themselves all the credit for these fortunate circumstances. There are some things for which they can take credit, but they are in no wise responsible for the good times that prevail generally all over the world. They are only a small body of men controlling a comparatively small portion of the world, so far as population is concerned. Their influence is not so extended as that they have been able to bring prosperity to the neighbouring republic, they have had no part in enriching the commerce of Europe. But all the same, Mr. Speaker, I am willing to give those gentlemen the credit that they deserve.

Now, Sir, we must all acknowledge that that great country in our North-west would no more than be known at the present time were it not for the policy pursued in the past by the Conservative party. The history of the past points plainly to the fact that not only does the Conservative party deserve credit for having opened up that country, but it also points to the past that our friends of the Liberal party placed every impediment that they could devise in the way of the Conservative party in carrying out their policy. We all know—I was not a member of this House at the time, but I know well, when that great scheme of building the Canadian Pacific Railway was presented to the House and to the country, how great a strain was laid upon the country in carrying out that policy, and how arduous were the efforts made in pushing that great enterprise to a conclusion. The difficulties of nature were great, but not greater than the difficulties that were placed in their way by the Liberal party. Those difficulties brought the enterprise almost to the breaking point when the company called for further assistance, and at that time where did we find the Liberal party ? We

found them, as it were, step by step fighting against the advancement of this country, endeavouring to prevent the passage of that great measure which proved to be so beneficial to the Dominion of Canada. Who did we find allied with them at that time? We found the Grand Trunk Railway, a powerful factor aiding and abetting the Liberal party. When I say 'powerful factor,' I mean that they made representations in the money centres of the world, particularly in London, decrying the credit of the men who were working for the success of the enterprise that has proved to be of such vast benefit to this country. Happily, Sir, the combination of the Liberal party with the Grand Trunk Railway Company failed. When the difficulties appeared to be almost insurmountable, when the Canadian Pacific Railway Company were also in extremes, and were obliged to come to this parliament and ask for a loan of $30,000,000, that proved to be almost the breaking point in the enterprise, but the men who governed the country at that time had faith in the future, and proved to be equal to the situation.

We all know as a matter of history that the money was advanced, credit was given to them at that time and that that great enterprise was carried to success. We all know the rest, and in spite of the influences then brought to bear that country was opened up and now I hope that the Liberal party do not take to themselves the whole credit for the success that has attended it. The same Grand Trunk Railway Company, whose action at that time was most ungrateful, are very much in evidence in this case. They were indebted to this country for aid in the construction of their own system to the extent of many millions of dollars, and they should have had a more kindly feeling for the welfare of Canada than to take the action they did at that time. Now they are again allied with the Liberal party, and I think that in view of past events we have strong grounds to look, if not with suspicion, with precaution, at the progress of events. I know that in the lower provinces, when it was rumoured that the Grand Trunk Railway Company were behind this scheme and were going to extend their railroad to the North-west that rumour was received with grave suspicion. It is well known that their eastern terminus is at Portland and that the distance to Portland, as compared with the Canadian Pacific Railway line to the port of St. John, is nearly 170 miles in favour of Portland. Our people in the maritime provinces also knew that the affiliations of the Grand Trunk Railway are very largely with the United States, and this knowledge created a feeling of further uneasiness when we learned later that they were the support of the strength and power of the government of this country. It then became a serious matter.

As I said before, I must protest against the onus being cast upon the Conservative party of opposing the development of this country.

I wish for a few moments to attract attention to the proposed road so far as it concerns the province that I know better than any other, and which plays an important part in this scheme—the province of New Brunswick. Now, it is proposed by the scheme as outlined by the right hon. Prime Minister to carry the line through the centre of the province. We have, I will not say a great deal of information, but we have sufficient information, to understand what sort of a country that is. As an example, I shall read an extract from the report of Sir Sandford Fleming, submitted to the Canadian Legislature in 1865, in which the obstacles of the central route were concisely stated as follows:

> In seeking to avoid the great military objection to any line in close proximity to the American boundary, Sir Sandford stated, 'we unfortunately increase the engineering difficulties; as, in looking for a line sufficiently distant from the frontier, unless we at once go to the other side of the province, and thus considerably increasing the length, we are driven into a section of the country characterized by great irregularities of surface and difficult to penetrate.'

The difficult country from Rivière du Loup to Edmundston is described in the report. Next, the peculiarities of the Restigouche river headwaters, not far from Edmundston, are noted.

As early as 1849 the country was reported upon by Major Robinson. His estimate was equally unfavourable. He wrote:

> The fourth obstacle is the broad and extensive range of highlands which occupies nearly the whole space in the centre of New Brunswick, from the Miramichi river north to the Restigouche. Some of these mountains rise to an altitude exceeding 2,000 feet.

Further he states that:

> The Tobique river runs through them, forming a deep valley or trough, which must be crossed by the direct line, and increases greatly the difficulty of passing by them. The lowest point of the ridge overlooking the Tobique river, at which any line of railway must pass, is 1,216 feet above the sea. Then follows a descent to the river of 796 feet in eighteen miles, and the summit level on the opposite ridge or crest between the Tobique and Restigouche waters 920 feet above the sea, or a rise of 500 feet above the point of crossing at the Tobique water.

The line down the St. John river valley does not present these formidable difficulties. In 1860, Mr. T. S. Rubidge reported on the route along the river above Woodstock. He wrote:

> From Edmundston the line will continue down the valley of the St. John, at very favourable grades, passing through a comparatively well-settled, fertile and level part of the country. And long straight lines and curves of large radius may also be obtained here.

He further noted that:

The streams to be crossed are unimportant, but their valleys are sometimes very broad, necessitating heavy embankments

I do not want to weary the House by reading extracts because I suppose there is a limit to our powers of endurance, and that limit must have been pretty nearly reached during this debate. However, if I read a short extract I can easily find a precedent, because I believe extracts have been read before. Although this article which I am about to read is the opinion of a Winnipeg paper, yet it is very appropriate to the country through which the line will pass in New Brunswick. There do not seem to be any politics in the article; it seems to rise above the level of mere party politics, and it says:

One of the chief reasons, and, under the circumstances, one of the most absurd that could possibly be given for the construction by the Dominion government of a line from Quebec to Moncton, paralleling the Intercolonial, is that it will effect a saving between the two cities of about one hundred miles, as compared with the Intercolonial route. In the first place there is nothing to show that any such saving will be effected. The Hon. Mr. Haggart, formerly Minister of Railways, has said that the saving will be only about fifty miles.

Granting, however, that the distance by rail between Quebec and Moncton is to be reduced one hundred miles by the building of this line, does this saving justify the condemnation to unproductiveness of the Intercolonial for all time, so far as interest on its cost, $68,000,000, is concerned. The interest at 3 per cent, on this sum is $2,040,000, to which must be added the rental of the Intercolonial's terminals at Montreal, amounting to $140,000 per year, making a total of $2,180,000, which the government is willing to pay annually to effect a saving of one hundred miles between Quebec and Moncton for the Grand Trunk Pacific. Surely such a saving does not warrant such an expenditure.

But there is another phase to this question. If the saving of one hundred miles to the Grand Trunk Pacific is worth $2,180,000 annually to the government, then Halifax is completely out of the race with St. John as a freight port, for it is one hundred miles farther from Moncton to Halifax than from Moncton to St. John, and this difference cannot be in any way lessened. That being the case, what is the object of building across New Brunswick from Edmundston to Moncton in order to secure a point from which lines run both to St. John and Halifax. Why not proceed direct from Edmundston to St. John, instead of running across the province from the extreme west to Moncton, which is almost in the extreme east, and then having to run back westward nearly ninety miles to reach St. John. St. John is some miles nearer to Edmundston than is Moncton, so that at least a hundred miles would be saved by building direct from Edmundston to St. John. If the saving of one hundred miles between Quebec and Moncton is worth $2,180,000 per year, surely a similar saving between Edmundston and St. John is worth an equal amount.

If to put St. John and Halifax on an equal footing for the securing of traffic, as will have to be done, the through rates to the two ports are the same although the haul to Halifax is one hundred miles longer than to St. John; why cannot the freight to these ports be hauled an additional hundred miles over the Intercolonial at the same price as will be charged over the shorter line that the government is talking of building. It will be as short by the old Intercolonial to St. John as by the new Grand Trunk Pacific to Halifax. If a one hundred mile haul makes no difference in the one instance, why should it in the other? The traffic which would thus be secured for the Intercolonial would put that line on its feet and enable it to pay interest on its cost, instead of being as it is now, operated at an annual loss.

The government will have to find a better excuse than the saving of one hundred miles in order to justify the building of the line from Quebec to Moncton for the Grand Trunk Pacific.

Now, Mr. Speaker, in advocating and endorsing the opinions that have been very clearly and convincingly expressed by members on this side of the House, I must repeat that I believe the proper way and the most direct way to get to the seaboard is down through the valley of the St. John river. The figures were quoted by my hon. friend from Victoria (Mr. Hughes), and I may be pardoned for giving them to the House again. The Grand Trunk Pacific Railway scheme from Lévis to Edmundston via Connors is 166 miles, from Connors to Chipman 135 miles, and from Chipman to St. John 76 miles, making a total of 377 miles.

Mr. KAULBACH. What is the distance between Chipman and Moncton?

Mr. WILMOT. In the neighbourhood of 60 miles in a straight line, and it is an easy country through which to build a railway. Now, from Quebec, via the St. John valley the distances are as follows: Lévis to Edmundston via Connors, 166 miles; Edmundston to Fredericton, 180 miles; Fredericton to St. John, 65 miles, making the total from Lévis to St. John via the St. John valley, 411 miles. I shall take the distances as mentioned by the right hon. gentleman, the Prime Minister. From Edmundston to Moncton, following an air line, it would be somewhere in the vicinity of 200 miles, but in going to St. John I recognize that we stop at Chipman, and from Edmundston to Chipman it is 135 miles; from Chipman to St. John is 76 miles—that is, going from Edmundston to St. John partly by the government route and the Chipman route to the Intercolonial Railway, and it is 135 miles, making a total of 377 miles.

Now, while the distance down the valley of St. John is 411 miles as compared with 377 miles, we must recollect that the northern part of the road as proposed by the government runs through a country such as has been described by Sir Sandford Fleming, and which is a most difficult country for railway construction. If we take into consideration the grades that will be encountered, and the detours that will have to be taken by the government road, it will,

I believe, be a longer line of railway in the end than if it were built through the valley of the St. John. The route by the valley of the St. John is nature's route. It is through a level and fertile country, it is traversed by a railroad the entire distance, and its grades are all well known. The grades are not particularly heavy, although for a transcontinental road, no doubt, they could be improved at a very moderate cost. I strongly advise the government, if they persist in this policy of extending the transcontinental railway from Quebec to Moncton, that they take that course.

Now, Mr. Speaker, in calling Moncton a terminus, it seems to me that we are asked to stultify ourselves. It is not a terminus. It is a point on the Intercolonial Railway overlooking a small tidal river, which is practically muddy ground when the tide is out. It is altogether insufficient for the purpose of shipping produce of any kind in large quantities that might come from the western country or elsewhere. It is, in fact, altogether out of the question as a point of shipment. As this paper says, why go off there? It is a mere sentiment. To use a common expression, there is nothing in it—nothing of a practical nature. It does not help Halifax, while it injures St. John. Why go off there, for the sake of suiting the political sentiments of the representatives of a certain portion of the province of Nova Scotia? They must have a strong influence with the government when they can induce them to adopt that line. It is a mistake. If the object of this transcontinental railway is to pass from ocean to ocean by the shortest route, why take the long route? Why divert the line for any purpose, except to avoid some natural difficulty? Why not go to the seaport nearest at hand? The proposal which I make to our Nova Scotia friends is this, to bring the line down by nature's route, the valley of the St. John, which is the most thickly settled portion of our province, to a common point at Fredericton, and from Fredericton branch off to Chipman and Moncton.

Mr. KAULBACH. What distance would it be from Fredericton to the Canadian Pacific Railway?

Mr. WILMOT. Twenty-three miles. The distance from Fredericton to Moncton could be shortened by having a short branch from the Canadian Pacific Railway to Fredericton. That would avoid the necessity of going down to Fredericton Junction, where the Fredericton branch meets the Canadian Pacific Railway. The adoption of this route would overcome the difference of opinion that exists, would do away with the proposed compromise, and would meet the requirements of the most direct and shortest line through the province of New Brunswick to the sea.

With regard to the central route, through the heart of New Brunswick, I am ready and willing to acknowledge that while great natural difficulties present themselves to the carrying of the line through that section of country, such as the height of the mountains and the fact that the rivers have to be crossed at right angles, yet as a farming section it is one of the best in the province of New Brunswick. Aroostook county, in Maine, adjoining New Brunswick, is celebrated throughout the United States for its fertility. The large cities between Boston and the province line are to a great extent supplied by the products of that Aroostook country. I mention that to show that the same fine quality of land extends easterly, well across the province of New Brunswick to the Restigouche river. No man in that province knows better than does the hon. gentleman who has represented the county of Victoria in this House ever since confederation, the correctness of what I say as to the fertility of the soil of that country.

It is almost useless for me to advocate the claims of the valley of the St. John river as the shortest route to the sea, because those claims are amply justified. But I consider it my duty to advocate them, because at present we are like people beating the air—we do not know whether the proposal of the government is going to be carried out or not. The air is thick with rumours that strong influences are being brought to bear upon the government, even within the last few hours, to abandon the whole project. Whether there is any truth in those rumours or not, I am not prepared to say. I will, however, quote from a journal which stands very close to those who support the government's proposal. I cannot define the politics of this paper, which is called the Toronto 'News'; but I will quote from an article in yesterday's issue:

> The most doubtful feature of the government's transcontinental railway policy is the projected extension of the air line from Quebec to Moncton. There is no doubt that construction over this route will be costly. It is not at all clear that satisfactory grades can be obtained. It is possible that the new road will hardly excel the Intercolonial in carrying efficiency and that years will elapse before it develops any considerable local traffic. In the meantime we impair the revenues of the Intercolonial, discredit public ownership, and obtain in return neither local nor national advantages at all commensurate with the expenditure which must be shouldered.

It goes on to say:

> It seems, therefore, to be clear that the government's policy would be improved, although at some additional cost to the country, if the Moncton extension were abandoned, and the Intercolonial carried to Parry Sound. The fact that Mr. Borden has suggested Intercolonial extension should not cause the government to reject the proposal without consideration. The object of debate in parliament, and of discussion in the newspapers, is to find the strong and weak points in such propositions as are submitted and finally to evolve the plan which best serves the national interest. The government's policy

is bold and progressive, and thoroughly meritorious in many of its features, and we are satisfied that if Sir Wilfrid Laurier would now so far revise his bargain with the Grand Trunk as to abandon the Moncton section, and declare for Intercolonial extension to the lakes, his action would be taken as an evidence of strength, rather than as a confession of weakness, and he would then present to the country a transportation policy which could not be successfully opposed.

In conjunction with that article, I was very much impressed with the speech delivered by the ex-Minister of Public Works (Hon. Mr. Tarte). He evidently has carefully studied the question, and is without doubt the most interesting figure in parliament on either side of politics. I was particularly impressed by the very temperate manner in which he appealed to the First Minister regarding the extending of this proposed line of railway from Quebec to Moncton. It was difficult for the right hon. gentleman not to be impressed with the very temperate yet strong manner in which the ex-Minster of Public Works urged him not to incur this great liability but to use the money on pressing public works where it would be much better spent than on this extension from Quebec to Moncton. That money, the ex-Minister pointed out, could be much more profitably spent in opening up and equipping our lakes, ports, and seaports and our water routes. He also pointed out that by extending the Intercolonial Railway up to our lake ports and further on to Winnipeg, the maritime provinces would profit as well as the others. They would profit much more largely by the development of our great western country and the transport of the product of that country to the sea coast than by the present scheme. While not decrying the opening up of our great northern country, it would be better for us to put our hands to what is best in our interest for the time being, and then we will be in a better position to go and develop that northern country. I believe that the day is nearer at hand than many realize when that great Asiatic trade between Asia and Europe will be largely developed. Possessing, as we do, geographical advantages over every other portion of the world, for sending the products of the orient across our Dominion to European ports, that time will soon arrive, and then will be the time when the road now projected will be required. How long will it be with our present prospects before a second transcontinental road will be required ? No man can say that at this moment it is required. What we require to do is to develop our most available resources to the fullest extent, and then we will be in a position to develop other portions of our country. In the maritime provinces there is very naturally considerable jealousy and suspicion regarding the affiliations of the Grand Trunk Railway with our neighbours to the south. We who are interested in the welfare of the port of St. John have good ground to be jealous of our rival American ports, and that feeling is warranted by statements from Portland and other American newspapers declaring that the people of Portland feel very confident that they will get the traffic of this new Grand Trunk Pacific Railway. When the leader of the Conservative party made his speech on this question, he referred to some quotations from a Portland newspaper declaring that a prominent official of the Grand Trunk Railway had stated that that port was going to be the outlet of the Grand Trunk Pacific Railway.

Mr. HOLMES. Will the hon. gentleman allow me a question ? With regard to the Portland extract, could he gives us the date?

Mr. WILMOT. Unfortunately, I have lost it.

Mr. HOLMES. Is the hon. gentleman aware that it was back in July last, before the present scheme was before the House ?

Mr. WILMOT. That does not alter the fact that the Grand Trunk will use every energy to maintain their interest in Portland. The Portland, Maine 'Advertiser'—I have not the date—has an interview with a prominent Grand Trunk official. This gentleman appears to have a view of the situation from the point of view of his company, and his view will therefore be of some interest :

All this talk about Montreal and St. John being able to handle the Grand Trunk terminal business all the year round is wearisome. St. John has not the harbour facilities to do it, and the expenditure of $5,000,000 would not make the harbour equal to Portland's. Montreal is nothing but a summer port anyway. Portland has no need to worry, for the Grand Trunk people are going to stay where they can get adequate accommodation.

Just notice that President Charles Rivers-Wilson and General Manager Hays, in their replies to the queries of the legislators in Montreal (Ottawa) did not for a moment admit that they had any intention of leaving Portland. Sir Charles put it point blank when he said that the port of Montreal had proven inadequate to handle the business, and Mr. Hays did the square thing when he said that the port of Montreal had proven inadequate to handle the business, and Mr. Hays did the square thing when he said that the Grand Trunk had not expended all the money at Portland, but that the people of Portland had provided the most of it.

The fact is that Portland is really going to be the great terminus of the new transcontinental railway line that will equal in importance any in the world. Portland has the natural facilities to do the business and St. John has not.

That is a foul slander on St. John. I deny the accuracy of this statement most emphatically.

St. John may get a small share of the traffic, but, mark me, Portland is destined to be the

place where the great bulk of the business will be transacted.

That was subsequent to the time when Sir Charles Rivers-Wilson and Mr. Hays met the Railway Committee of this House. That reminds me, Mr. Speaker, of my experience as I sat there, a silent witness of what went on when Sir Charles Rivers-Wilson and the other magnates of the Grand Trunk came before the committee. We saw a map extending nearly the whole width of that big room on which a red line indicated the route as they intended it should be. Those members who sat in the back seats could not understand the course of the lines of railway indicated there without the use of binoculars. There was nothing of an instructive nature in that map with regard to the lines of railway. The young gentleman, the hon. member for North Simcoe (Mr. McCarthy) was the promoter of this great scheme. And it struck me that he was almost breathless in his anxiety that the committee should adopt his proposals right off. It was a sort of——

Open your mouth and shut your eyes,
And I'll give you something to make you wise.

It is a scene I shall never forget. Here was this great committee of this great House assembled to consider that scheme, yet there was practically no information brought before it. The hon. members of the committee looked from one to the other, hardly understanding what was required of them. 'What,' they said, 'endorse such a great scheme with only that map and the proposals of the promoters before us?' I sincerely hope that when next a measure of like importance is brought before this House, it will not be submitted in this most unsatisfactory form. I feel sure that members of this House who are supporting the government, away down in the bottom of their hearts are not satisfied. I know they are built as I am; I know they are reasonable men, as we all are. Only to very few of us is genius given, but we all have about an average bit of common sense. And I know that no man dealing with a proposition in his own business relatively as important as this is to the public affairs with which we are entrusted would do such an unreasonable thing as to adopt the proposition with so little information to support it.

Now, Mr. Speaker, I have done. Before resuming my seat, I have only two words to say. One of them is that I have been deeply interested and much entertained by this debate. I have been astonished and delighted at the ability that has been displayed on both sides of the House in discussing this question. I have been pleased also by the urbanity displayed and the lack of rancour which has characterized the debate. The great measure before us has been discussed in a temperate manner, and ably discussed by those who have spoken. I think it but fair to say that the happy state of affairs that has existed, the decorous, pleasant intercourse between party and party, and between member and member, is mainly attributable, I believe, to the conduct and deportment of the leaders on either side, the right hon. leader of the government (Rt. Hon. Sir Wilfrid Laurier) and the worthy leader of the Conservative party (Mr. Borden, Halifax). I think their manner is such as would grace any deliberative body, and I think that the debate we have had on the question before us would be creditable to the highest parliament of any land. I will not make any exception. I was going to, but I will refrain. There was a prominent gentleman who pursued a course different from that of the other hon. members, but let that pass. My second word is that it is not too late, and I hope the government will consider well the step which they are taking. Our honoured leader, the hon. member for Halifax (Mr. Borden) has laid down a policy that has evidently been acceptable to the great majority of this House. I hope that the government, in reconsidering any part of their scheme will adopt, if only in part, the scheme laid down by our leader. If they do so, we shall all rejoice, for I feel sure that it will be a benefit to the country at large if they do so.

Now, Mr. Speaker, I will draw my remarks to a close. I have not gone into the financial bearings of the case, as that part of the question has been sufficiently well dealt with by others more able to do so than myself. I will say this in conclusion, that if the government decide to make any modification in their proposals if not in their policy, in the direction indicated by the leader of the opposition, it will not be the first time that they have taken a leaf out of our book.

Mr. JOSEPH GIRARD (Chicoutimi and Saguenay). (Translation.) Mr. Speaker, while realizing how precious is the time of the House at this late period of the session, I deem it my duty to explain—and I shall do so as briefly as possible—my position on this very important question which is submitted to our consideration. I shall take advantage of the British fair-play to address the House in my native tongue, counting that my English speaking colleagues will soon find my remarks translated in the revised edition of 'Hansard.'

As the various aspects of the government's policy have already been dealt with in the numerous and able speeches previously delivered, I shall confine myself, in order to avoid repetition, to making some observations of a general character.

For eleven years past I have taken an active part in politics, I have followed closely public affairs, and it struck me that we were confronted with a great problem. For three years back, I have had the honour of attending the debates of this House,

and here also I noticed that this same problem, which is that of our means of transportation throughout the country, was being frequently discussed by the leading men and by the great papers of Canada, in connection with the enormous increase in our production, in our trade in general and in the needs of colonization. Everywhere, public opinion was awaiting impatiently the solution of this ever increasing difficulty.

Various plans were being discussed, the most important of which, to my mind, were the improvement of our inland water routes, the building of our canals, the proposed extension of the Intercolonial to the great lakes with a view to constructing a new transcontinental road, and the scheme for the building of a second Canadian Pacific Railway, all undertakings of a costly nature, requiring millions of dollars to be carried out. I followed closely the discussion which took place on that subject, both by listening to the speeches and by reading 'Hansard,' as I was anxious to obtain a full grasp of the question. Speakers on both sides of the House have taken great pains, and I think I am in a position to decide knowingly, intelligently and conscientiously on that great issue now before us.

In 1901, the charter of the Trans-Canada was revised by the House, with some amendments and subsidies granted for the first sixty miles west of Roberval.

The hon. member for Saskatchewan, during the session of 1902, expressed himself as follows as regards the difficulties in the way of transportation of western products eastward :—

> What we want is a continuous line of railway, which can be operated twelve months in the year, and double track if necessary. Last year four hundred thousand people in the west produced 100,000,000 bushels of grain. We are going to get people in there at the rate of 100,000 per year, and in eight or ten years the production of that country will be increased to 400,000,000 or 500,000,000 bushels. Wheat will have to be carried to the seaboard, and that cannot be done over our canals when they are frozen up six months in the year. What we want is to be able to put our wheat on the car and run it through to the seaboard. There has been too much money spent trying to create an artificial port—trying to make an ocean port out of something that was never intended to be so by nature. If half that money had been spent on the port of Quebec in providing proper facilities there—where we have a port that can float the largest ship that will be built in the next twenty years—and if we had a railway running from the centre of the territories right into the port of Quebec, from where our produce could be shipped twelve months in the year, you would not hear anything about the car shortage we hear so much about at present.
>
> What we want is a continuous line of railway from the west to some ocean port, and Quebec is the proper place.

A prophecy which events are carrying out to-day. In the course of last year, the promoters of the Trans-Canada railway decided to form a company and laid before the country the question of the expediency of building in the northern part of the Dominion a new road from Port Simpson, on the Pacific coast to Quebec, Ha Ha bay and Chicoutimi, in the east, as summer ports, and the maritime province ports as winter terminals, by means of the Intercolonial. Quebec and St. Catharine's bay, near Tadoussac were also contemplated as winter ports at some future date. Once the winter navigation of the St. Lawrence has been made practicable, which, I hope, will be pretty soon.

The road as projected, ran from one end to the other, through entirely new districts of the west, Ontario and Quebec districts abounding in wealth of various sorts. By means of branch line to Winnipeg, it gave the whole country the benefit of the shortest route, of the lowest gradients, and besides an all-Canadian route both as regards its location and its terminals. We were thus made entirely independent of our good neighbours to the south, who, under present conditions in Canada, profit immensely by the improvements we carry out, without ever showing us any gratitude.

Important meetings were held at Quebec attended by the leading men of both parties for the purpose of considering the scheme, which was unanimously pronounced to be superior to all others heretofore laid before the public. It was decided to start a movement in Canada to spread the idea and have it accepted if possible.

Then it was that a further scheme for the building of another transcontinental railway was launched before the people. It was to be undertaken by the Grand Trunk Railway, to have its starting point in Ontario and to reach the west by way of Winnipeg. In the eastern part of the province the present system of the Grand Trunk was to be utilized.

I had the honour of being one of a delegation of the Trans-Canada sent to the maritime provinces to discuss both schemes with business men there. We met the boards of trade of St. John, Moncton, Truro and Halifax ; also members of this House and men of high financial standing.

The discussion which took place was a business-like one ; the feeling seemed to be general in favour of building at once, a new transcontinental railway, farther north, along an all-Canadian route both as regards its terminals and its location. Some boards of trade, particularly that of Halifax, passed very strong resolutions in that sense. At these meetings the expediency was discussed of building another line from Quebec to the maritime provinces, the Intercolonial being too long to enable the ports in those provinces to compete successfully against Portland. That idea appeared to be accepted generally.

About the same time, the hon. member for Bellechasse (Mr. Talbot) visited the west, meeting a great number of business men in

various cities ; and from newspaper reports and other sources, the idea was gathered that there also public opinion was unanimous as to the necessity of a second transcontinental, provided it was all-Canadian.

Such was the state of public opinion at the opening of this session, and I arrived here firmly convinced of the immediate necessity of a new transcontinental further north. The Trans-Canada scheme was, to my mind and to that of many others, the most practical. While public opinion was thus concerning itself with this important question, and while some were favouring the construction of a Canadian transcontinental railway, and others favouring the improvement of inland navigable routes and the building of new canals ; and others still favouring the extension of the Intercolonial, the government were discussing the same question in their secret councils. From time to time utterances of some prominent men would give us an inkling of what was going on. On certain days reference was made to the extension of the Intercolonial westward, while on other days, the question under discussion was that of a common trunk line for all the railways from Quebec to Winnipeg : hints thrown out to the public as to what the government were doing. The request for a charter on the part of the Grand Trunk Pacific for the construction of a transcontinental was the first step towards feeling the pulse of the House. The Trans-Canada stepped in ; the struggle between the various interests was often a hot one ; but the north and east gained ground, and the original scheme was amended to meet their views. The plan of building a transcontinental railway through the northern country was accepted, and both the public and the House were awaiting anxiously the action of the government.

Finally, the government have come to a decision, and having satisfied themselves as to the necessity of a second railway throughout Canada, they requset the House to sanction the decision they have come to as a result of their investigation ; that is to say the building of a new all-Canadian route, as demanded by public opinion, part of which to be built by the government and to be free of access to trade generally, and the remainder to be built by a company, with the idea of utilizing it both as a colonization road and a trade route.

The question is put.

At one o'clock House took recess.

House resumed at three o'clock.

Mr. GIRARD. (Translation.) Mr. Speaker, I would have been glad to get through with my remarks before the House took recess ; however, at the risk of wearying hon. members, I wish to lay before them a few more facts in connection with this matter.

In the first part of my address, I was endeavouring to show that the idea of building another transcontinental through unsettled territories was not a new one ; that it had been discussed for some time past, and that if the government propounded such a scheme it was in response to the urgent demands of the people. The cabinet is charged with undue haste, for entering into this agreement without sufficient information on hand. But, if I am not mistaken, the location of the road is not yet settled, and the government will have to order surveys for which they will be wholly responsible. After considering the data supplied by these various surveys, they will be in a position to select the most suitable location as regards colonization and trade, which it is the object of this road to promote.

As for the section from Winnipeg to Quebec, the most direct line between the two points passes north of Lake Abitibi, whose waters empty into Hudson bay. By following exactly the height of land, the chances are that you would meet the poorest farming lands, and those that are the least favourable for lumbering operations, as in the vicinity of the sources of streams, these cannot be utilized either for the floating of the timber or the generating of power. Besides, the steepest grades would likely be found along that route, and the object it is proposed to attain would be lost. On the other hand, by locating the road further north, all these drawbacks are avoided.

As regards the section from Quebec to Moncton, the great objection is that the government is to parallel the Intercolonial. If my information is correct, there are at present two or three charters granted to private companies to do exactly the same thing, presumably with the assistance of the country. Moreover, as I stated a moment ago, at the time the Trans-Canada was being advocated in the maritime provinces, I got the endorsation and unanimous support of the business men down there in favour of the building of that line. I fail to see what difference it makes for the Intercolonial that it should be paralleled by a government-owned line, or by a company line subsidized by the country. The reduction of the mileage is the all-dominating principle in the matter. Besides, such a road will open up for settlement new districts, well adapted to agricultural pursuits, and which, otherwise, in Quebec, at least, will never be cleared.

It has been stated that the wiser course to follow would be to improve our inland waterways, as they afford the cheapest means of transportation. I followed the discussion on that point with the utmost interest. The arguments brought forward were based mainly on the experience of the United States, and to my mind, the results are not conclusive, but rather contradictory. Certain advocates of that idea laid before the House series of figures going to show that in some parts of the United States the bulk of the traffic goes by way of the water route and not by rail. Other hon. members

have given figures showing that in other parts of the United States with access to the water routes the bulk of the traffic is carried by rail. So that the contention set forth in the first place, although sound apparently, is only partially true as regards the movement of trade in the United States. In order to arrive at a true estimate of the comparative values of the water and all-rail routes, it will be well to observe what is going on in our own country. I refer hon. members to 'Hansard' as evidence of the truth of my statements.

Advocates of the water route contend that railways cannot possibly compete with it. At the same time they tell us that the Canada Atlantic, a road which parallels the St. Lawrence river, and the bulk of whose traffic will, we are told, consist this year of 20,000,000 bushels of United States grain, is a paying concern, so much so that the suggestion is made that the government should acquire it and utilize it for extending the Intercolonial. Surely, these two propositions cannot be made to agree. If the Canada Atlantic is in a position to haul grain so profitably at the rate of two cents a bushel, despite the competition of the famous water route, the proposed route from Winnipeg to Quebec, taking into account their comparative mileage, could carry the same traffic at the rate of nine cents a bushel. Well then, what does the alleged superiority of the water route amount to ? Wherefore I say, let us consider what is going on in our own country ; we will learn more thereby than from any information gathered from the experience of the United States, which may be applicable to their conditions but not at all to ours.

Things have been so managed in the past that the hundreds of million dollars applied to the development of the country's trade have been expended for the especial benefit of southern Quebec, Ontario and the west. The city of Quebec, with its natural advantages, its ideal port, its three railways converging into it, has not received the attention which it should. She is waiting patiently that her children cease to consider her as a stranger, and that common sense be allowed to prevail.

Nobody complains ; the whole country rejoices ; the western country is growing by leaps and bounds ; everything is done that can be done towards its development. In this connection, one remark I heard seemed to me most regrettable. An hon. gentleman on the other side, discussing the scheme under discussion, exclaimed : What is the province of Ontario going to get out of this government scheme ? In answer to that question let me put another : What did the province of Quebec get out of our past policy ? I could hardly believe that a representative of Ontario would take such a narrow view of the question. For it should not be forgotten that the future of the whole country is now at stake, and local interests should not be in the way of the general progress of the Dominion. As a result of the old policy, Ontario has been riddled with railways and improvements of all kinds, and the province of Quebec left, so to speak, to go barefooted. The people of Ontario should in the future show as much patriotism as the people of Quebec have shown heretofore. The prosperity of the country as a whole will ensure that of every province.

The results of the last census are now before us. Ontario and the maritime provinces will lose ten representatives, who will be replaced by ten new members from the west ; and yet for only five or six years past have emigrants begun to pour into that country. Where has the missing population of the older provinces gone to ? The west has received a goodly number. However, Ontario praises its northern country, its 'New Ontario' as a paradise on earth. Quebec speaks in the same strain of the Lake St. John, Gaspé and north of Montreal regions. Are we not face to face with a most entrancing problem to solve ? Should we not urgently adopt a broad policy which, while not interfering with the present system, will enable the older provinces to keep abreast with the increase of population in the west, and to retain in the administration of the public affairs of the country the position to which they are entitled. The government answers : Yes. I believe they are right. The piecemeal policy of colonizing followed in the provinces is not satisfactory. We have the proof before us ; it is necessary that the Dominion government should step in to give a new impetus to the settlement of the country ; a great artery of commerce is required at the right place, to supply all parts of the body with proper nourishment, in order that they may form a well balanced whole. That is apparently the aim of the government scheme.

Information is sought, doubts are raised, as to the character of the land in our northern country. At all events, it is contended that they cannot compete with the lands of the west. The inference would be, I presume, that we shall have to wait until the west is filled up before we think of colonizing the northern parts of Ontario and of Quebec. To my mind, Sir, if I may be permitted to say so, that principle is false and almost unpatriotic.

What information is required to convince people in good faith that our lands in the north, are good, equal to those in the west ? Have not accounts of them been given for two hundred years past by missionaries who roamed over this whole area ? Have not official reports been published by direction of the governments of Ontario and Quebec? Is it assumed that explorers like the Bells, the Sullivans, the Dumais, the Bignells, and others, like McKenzie, of Montreal (who has just returned after discovering there rich deposits of asbestos) is it assumed that all those men have written jokingly, without

leaving their desk, works of imagination as it were ? Have we not the oral testimony of our trappers and hunters, and even of Indians, handed down from generation to generation and preserved in our homes ? All that is sufficient information to me ; it is good evidence of the fertility of the soil, of the wealth of the forests, of the suitability of the climate, not to speak of the mineral resources of the country, of the fisheries of Hudson bay, which our neighbours to the south seem to appreciate better than we do.

Now, when the scheme for the building of the Canadian Pacific Railway was brought forward, was there laid on the Table of the House information as complete as what is required to-day from the government ? So that, to my mind, these data are sufficient to satisfy the government that the construction of a railway through that region is quite feasible, and practicable. I extend to all skeptically inclined an invitation to visit the country I have the honour to represent. We are there, due north of Quebec, on the brink of the great north-western table-land, with the Laurentian range to the south and east of us, and the limits of the province to the north and west. You will find there lands that give wealth and happiness to the settler within a period of a few years. You will find that the crop returns for that district are greatly in advance of those for the rest of the province, equalling at times those for the west, and last year surpassing them. You will find there a small farming community—grouped around the towns of Chicoutimi and Roberval, two new stars of the north—whose numbers have increased fifty per cent within the last decade, a result observed in no other part of the province. That is due to the construction of the short line of railway built from Quebec to Lake St. John and which has been fully operated since 1893 only. But at the time, despite the natural advantages of the country, and on account of the distance, the want of means of communication, the people were losing heart. In some localities the parish census has not even shown the average increment. In 1901, eight years later, the Dominion census shows, in that same district, the increase I have just stated. That small community of settlers exported last year six million pounds of cheese, five hundred thousand pounds of meat, two hundred thousand bushels of grain, besides what quantity of those products was consumed on the spot. If a short line of railway from Quebec to Lake St. John has, in the space of eight years, accomplished so much, what may we not expect from a great government railway opening up all at once this whole region ? We are only a few people down there yet ; we have only a few acres under cultivation ; and there are still 70,000,000 acres of that land, covered with virgin forest, drained by large rivers, whose roaring water-falls of incalculable power await impatiently to be turned to advantage by the hand of man. As regards education, the seminary of Chicoutimi, the convents, the school of domestic economy, of Roberval—the only one of its kind in the country—and the numerous parochial schools will show that in no respect are we lagging behind the times.

To return to the great water powers, let us see what is going on on the rivers of Chicoutimi, Jonquières, Ouiatchouan and Peribonka. The four pulp mills built on those streams have a capacity of 520,000 tons of manufactured pulp, present output ; and the quantity of barked pulp wood shipped out is just as large, making a total of 1,040,000 tons.

The lumber trade is just as large, though the population is only 30,000, and there only four small rivers operated. What enormous business will be developed when the rivers Ashuapmachouan, Peribonka, Mistassini and others will be put to use with the great forests they drain. Not only will these products of the forests be available for export, they may be shipped to supply the needs of the western country, and by themselves would provide enough freight to sustain the railway. Official data confirming what I have just stated concerning this district were received on the day before yesterday at the Department of the Interior.

By the way, Mr. Speaker, let me say one word in reference to some unfavourable comments made on our lands as compared with those of the west. My contention is that our lands are just as valuable, provided they are not beforehand despoiled of their natural wealth. Of course, if in this district which is to be opened up, the present provincial laws were to be enforced, the settler would go west, and rightly so, as he would have a better chance there. But let the Dominion government and the governments of Ontario and Quebec have a conference before taking any action ; and let them study together the best means of putting to advantage this projected railway, and all will come out right.

If, in accordance with the present practice, the timber and the water powers are turned over to outsiders, who despoil the land of all the settler needs to make a living for himself at the outset ; if, moreover, the mineral resources are also reserved, then we may expect the same failure there as the returns for the last decade show to have been the lot of the older provinces. But if pains are taken to find out the adaptibility of the various districts to farming or to lumbering operations, if agricultural belts and forest belts are located along the line, and if the farming lands are sold to the settlers in their natural state, with all the riches they may bear or contain, then our lands will be as valuable as those in the west. The settler will take them up with the assurance that he will not at the outset suffer from want, for he will have at his

door the raw material of a great industry which he can put on the market at any time to supply his needs.

Put up the selling price of these lands, if you wish, retain the fees, that will not interfere in any way; you will not have lost anything, and you will see the settlers come in great numbers as in the west, each township having its period of lumbering at the outset, while farther on, in the parts not suited or not reserved to farming, the lumbermen will carry on their business on a larger scale, but all together working hand in hand for the general welfare of the community. You will see no more of those disputes between the settler and the lumberer, disputes of which we hear so much and which are so harmful; and the danger of forest fires breaking out will be minimized, as the settler will be just as interested as the merchant in protecting the forest, as well as his buildings, both equally precious to him.

But under present conditions, the settler, especially in those parts where the pulp industry has been carried on, having on his farm only stumps and wood of no value, is anxious to get rid of them as soon as practicable, and his best means of doing so is fire.

Now, if, in the west, the government before selling them to the settler, leased the lands to companies or individuals who robbed them of their original wealth and left them to the settler minus seventy-five per cent of their value, do you think that the tide of immigration towards the west would be as strong? Why not deal with our wooded lands in the same manner as we deal with our prairie lands? The time is no longer when the settler meekly believed his lot was to suffer. We shall have to look to him, Mr. Speaker, in our northern country, to render us absolutely independent, commercially speaking, from the neighbouring states. Sir, I lay that suggestion before those in authority; it is worthy, I believe, of their serious consideration.

Now, on going over the data supplied for the Trans-Canada, as did my hon. friends the members for Gaspé and Bellechasse, and others, I am led to believe that it is in that direction that the grades are the easiest for heavy traffic. The greatest difference of level between Roberval and the western boundary of Quebec is 1,200 feet, spread over a perfectly smooth table land, where there is not a single mountain in sight, not even towards lake Abitibi,—and that according to surveys made especially to ascertain differences of level. With that in view, the promoters of the Trans-Canada had offered to carry all the grain from the west, whatever the loading point (even along the Winnipeg branch) to the port of Quebec or to Ha Ha bay, at the rate of nine cents per bushel. They could afford to do that, as their route would be a direct one, without transhipment, without the use of elevators and the delays they involve. Besides, the offer was made to carry the settlers free of charge. Under those conditions, there was to be a net profit of $1,416 per train of 30 cars, or 52 per cent. Is it necessary that a railway should bring such large profits to be a paying concern. I do not think so. And those figures were obtained by a capable engineer, Mr. Doucet, and verified by men of weight, such as Messrs. Wm. Price, J. G. Scott, Tanguay and others.

The hon. Minister of the Interior has given as possible a rate of 11 cents per bushel along the road which they propose to follow across the country. These two estimates are of a nature to convince us that, in the absence of a transcontinental water route, inland navigation is not and will not be in a position to compete with the all-rail route, especially when we take into account the reduction in mileage and greater speed secured by following the latter route. Now, since the government have the same object in view as the promoters of the Trans-Canada, and will run their railway through the same country, will they not be in a position to offer as low a rate? Let them follow the same route, and that will settle it.

I give herewith the distances from Winnipeg to various ports by the proposed line:

Summer ports: (by proposed line).	Miles.
From Winnipeg to Ha Ha bay	1,319
" " Quebec	1,385
" " Portland, via Quebec.	1,735
" " Saint John	1,785
" " Halifax	1,951

A difference in favour of Ha Ha bay:

	Miles.
Over Quebec	66
" Portland	416
" Saint John	462
" Halifax	632

Now, from Ha Ha bay to Liverpool, the distance is, 2,642 miles.

	Miles.
From Quebec to Liverpool	2,686
" Saint John to Liverpool	2,700
" Halifax to Liverpool	2,300
" Portland to Liverpool	2,789

And if you figure the total distance from Winnipeg through to Liverpool, you get the following results:

	Miles.
From Winnipeg to Liverpool, via Ha Ha bay (Trans-Canada)	3,961
From Winnipeg to Liverpool, via Quebec (gov. route)	4,065
From Winnipeg to Liverpool, via St. John	4,481
From Winnipeg to Liverpool, via Halifax	4,251
From Winnipeg to Liverpool, via Portland	4,524

Consequently, Ha Ha bay and Quebec have the enormous advantage over the other ports of four hundred or five hundred miles.

Now, if you wish to compare these distances with those obtained by the famous water route, here they are:

	Miles.
From Winnipeg to Liverpool, via St. John, C.P.R.	4,689
From Winnipeg to Liverpool, via Halifax, C.P.R.	4,548
From Winnipeg to Liverpool, via St. John, I.C.R.	4,948
From Winnipeg to Liverpool, via Halifax, I.C.R.	4,654
From Winnipeg to Liverpool, via Portland, G.T.R.	4,594

A difference of six or seven hundred miles in favour of Quebec and Ha Ha bay.

If the Grand Trunk Pacific is in a position to haul grain to Quebec at the rate of nine cents a bushel, it should have a goodly share of the grain crop to carry, besides other freight supplied by the cattle trade, the cheese and butter industries, the lumber industry, and other traffic special to it and which does not pass through the elevators. My conclusion is, therefore, that, on business basis, that undertaking rests on a solid foundation. So much for the summer traffic. But the winter traffic has its exigencies, and what will become of the navigable routes? As soon as the winter navigation of the St. Lawrence has been proven to be practicable, Quebec will retain the year round the position it now possesses as a summer port. St. Catharine's bay, at the mouth of river Saguenay, facing Tadousac, will also be benefited in that way. That port, which is never closed, is already provided with wharfs to a depth of thirty feet at low tide. They were constructed by that energetic Wm. Price, at his own expense, for his present requirements and in view of future developments. That seaport, open the year round, would save the risk of one hundred miles of river navigation. Sixty-two miles of railway would connect it with the Quebec and lake St. John at Ha Ha bay, whereto the company owning that road is soon to extend it, thus taking advantage of the subsidies which are at its disposal and fulfilling its pledges to the Quebec government and the people of that district.

The advocates of the river route, with all their calculations, seem to lose sight altogether of the winter trade. The advocates of the Intercolonial are just as forgetful. Allow me, Sir, to lay before you the following statement which seems to me very instructive. After the close of navigation, here is the position of Canada as regards transportation.

Via Canadian Pacific Railway:	Miles.
Winnipeg to St. John, N.B.	1,989
" Halifax, N.S.	2,264
Via Intercolonial Railway:	
Winnipeg to Saint John, N.B.	2,248
" Halifax, N.S.	2,346
Via Grand Trunk Railway:	
Winnipeg to Portland	1,805

A difference in favour of Portland, varying from two hundred to five hundred miles. Under present conditions the winter export traffic divides at Montreal: it may go to a Canadian port by way of the Intercolonial or the Canadian Pacific Railway, or it may go, by the shorter route, to Portland. Portland has the advantage. Just at this juncture, the proposed new line will relieve the situation by bringing St. John as near to us as is Portland. That is where the action of the government is felt and shows its patriotism.

In spite of all that has been said, I fail to conceive how the longest and slowest route can be the easiest and cheapest. I stick to the belief that the most direct route is the shortest and the cheapest. Moreover, I am of opinion, that nations, as well as individuals, should, under all circumstances, unless radically prevented from doing so, control their affairs the year round, independently of their neighbours. Hence the necessity of our taking at once the proper means to overcome the difficulties in our way towards attaining that end.

As regards winter navigation, the observations of residents on the northern coast, which I visited, last year, seem to point out clearly to the fact that the river St. Lawrence is easily navigated the year through from Tadousac to Blanc Sablon. If I may be allowed, I would suggest to the government that, in order to complete their present scheme, they should see to the settlement of that much controverted point: the winter navigability of the St. Lawrence to Quebec. It would be a good plan to establish at once observation stations along the north shore and at Belle Isle, to ascertain from day to day the condition of the river in winter time. That question should be taken up at once by the government. The practicability of the scheme is being denied. I contend, with a great many others, that it is quite feasible. But the point should be settled at once, and I trust the government will not delay doing its share towards settling it. The experiments carried on between Murray bay and River Ouelle, and between St. Catharine's bay and Tadousac, on a small scale, are a beginning; but there is need for more.

I think I have shown by statistics that the future of the country is dependent on the northern country; in that country lies our hope.

In that way, Sir, do I appreciate in a general way the scheme which the government has just laid before this House. I would have preferred the Trans-Canada. I did all my power to gain my point with the government; they deemed it their duty, in the interest of the country at large, to propose something else. I must give them full credit for acting in good faith; I am satisfied that they were moved under the circumstances by very serious reasons. At any rate it is much better to accept the present proposal than to bring the Trans-Canada scheme before the House, with chances of having it rejected. The Trans-Canada may fairly claim the credit of having helped on the passing of the present

scheme to a great extent. Their prospectuses have several times been quoted from before this House. The country reaps the benefit of the work effected and money expended by the promoters of that scheme. It is a satisfaction to those who devoted their time and energy to ensure its success. That scheme is not dead ; it is only postponed. If it was necessary that twenty years should elapse before the Canadian Pacific Railway be paralleled, at the rate things are going, within ten years from now, the Trans-Canada will have to be built.

My district may have benefited in a greater measure from the Trans-Canada scheme than from the one under discussion; but the government are aware of what is going on there. They know that within two years, the stream of settlers which is pouring into that district, and which they have helped to such an extent for the last seven years, will come to a standstill if railway is not extended from Roberval westward. Already we have settlers 70 miles away from the railways. The government are aware that an important company is awaiting a decision in the matter to begin utilizing the enormous water power of St. Félicien. They know that it is necessary the railway should be pushed on from Chicoutimi to St. Alphonse to open up for general trade the magnificent seaport of Ha Ha bay to which I have referred. They are satisfied that the river Saguenay should be deepened as far up as Chicoutimi, or even Shipshan, in order to promote the great industries of Chicoutimi and those in course of creation at the point I have just named, and at the Grande Décharge. The government know that it is proper to provide a winter steamboat service on the Saguenay, from St. Catharine's to Tadousac. They are aware that the extension of the Roberval road to James bay, in connection with the present line, would almost be equivalent to the Trans-Canada. They realize all that, when undertaking the construction of the proposed line. They assume the whole responsibility. We are awaiting their action with confidence. On the other hand, I recognize,—and I wish to say so now,—considering all the government have done for my district in the last three years that I have been here co-operating with them for the promotion of colonization, agriculture and dairying, I recognize that they are favourably disposed towards my constituents and that they are not lacking in the means to forward their interests.

In a quiet way, millions of dolllars are at stake just now between Seven Islands and Peribonka. With men, such as our millionaire, Wm, Price, generous and able successor of Price Brothers & Co., who were the founders of my district in conjunction with the first settlers ; with the Chicoutimi pulp works, those of the Ouiatchouan and Peribonka ; with Mr. Wilson, a son of Ontario, who has such a faith in the future of our district that he has gone thither to lay the foundation of a great carbide, iron and pulp industry ; with Mr. B. A. Scott, lumberman of Roberval, and the Seven Islands, Portneuf and Escoumains companies, who together control millions of British, United States and Canadian capital; the government will find it an easy matter to build a road that will meet the requirements of that country to the north of Quebec and ensure its prosperity and wealth.

So, I thrust that this policy will give satisfactory results. At any rate, I see that the leader of the opposition has also declared in favour of building a line of railway from Winnipeg to Quebec, on the same plan as the government, with this difference that he would use it rather as a colonization road, while the government have in view both a colonization road and a trade route. Both agree in ignoring the proposal of the Trans-Canada. The leader of the opposition did not even find fault with the government for having discarded it. The inference is that he approves of the government having done so, and that he would have acted similarly under the circumstances.

The hon. member for South Lanark (Hon. Mr. Haggart) referring to the Trans-Canada and the Grand Trunk Pacific on the 26th of May last, said :

> It is a road from Quebec, I gather—for we get pamphlets about it every day—and it is to run through to Manitoba and the Northwest. I do not know who the promoters are or anything about it. But, if the Grand Trunk Railway propose to build a road into that section of the country that is another matter. The Grand Trunk Railway has done a great deal towards the development of this country, and the stockholders of that concern have had but meagre return on the money they have invested. Anything the Canadian people can do in return for the great benefits that that company has yielded to this country ought to be done, other things being equal. If they propose to build a road which will open up a new territory in the North-west, and make a connecting line with Quebec, I would rather see it assisted than any other scheme I hear proposed. (3446 of Debates.)
>
> As I said before, we have a choice of deciding between two companies for the building of this road. My opinion is that if the government should decide to give any assistance for that purpose, the company which is entitled to the preference is the Grand Trunk Railway Company. That company has done a great deal to open up this country, they have spent a great deal of money, and have received very littlte return for it. (3448 of Debates.)

Should that hon. member, an ex-Minister of Railways, were in power to-day, would he think otherwise ? In the Senate, Sir Mackenzie Bowell, leader of the Conservative party seconded the motion to grant the charter of the Grand Trunk Pacific. All that goes to show that that company has powerful supporters on all sides.

I am satisfied that the time has come for northern Quebec to have its equitable share. I am convinced that the northern country

is the corner stone of our country's commercial independence, and that the plan of the government is the most practical means of maintaining the present political balance in the country and increasing our prospects of trade in the future. I consider that the scheme laid before us is a good one, and on the whole is deserving of the country's approval. One of the promoters of the Trans-Canada, a Conservative of Quebec, wrote to me, last week: 'From the national standpoint, there is no doubt in my mind that the policy of the government for the building of a road from Quebec to Winnipeg is a good one and will greatly benefit the province as well as the whole of Canada.'

Mr. J. G. Scott, the leading promoter of the Trans-Canada, in the 'Morning Chronicle,' of Quebec, expresses the same views. Mr. Doucet, engineer of the Trans-Canada, stated to me a few days ago that the government scheme, as regards Quebec, was on the same lines as that of the Trans-Canada, according to which the railway was to run direct to Quebec from the north of Lake Winnipeg, with one branch line to Winnipeg city, and another from James bay to Ha Ha bay and St. Catharines. So, I am not alone of that opinion: the engineer of the Trans-Canada scheme believes that the government scheme is an equivalent one as regards Quebec.

It has been stated that the projected line will not have any traffic and that its usefulness will be nil. I have heard it said, especially this year, as a cardinal principle, that trade, like water, has its natural channels. If that be so, in accordance with the figures I have quoted, the western and the general traffic, once the projected line is built from Winnipeg to Quebec, will naturally take its course that way. So that apart from the local trade which will be considerable, traffic will not be wanting, provided the line is rightly located.

Some express fear at the heavy expenditure entailed by this undertaking: $100,000,000 and more, it is alleged. The government put down the expenliture at $13,000,000. There must be a mistake somewhere; the discrepancy cannot be so great. I understand the government to mean, that the only amount expended that will not bring in a return, is the interest during the first few years, as the road will remain ultimately the property of Canada, the company, in the meantime, paying interest on the capital invested. In fact, our public debt will be increased by those $13,000,000 or so, and no more.

Now, in projecting to build the Trans-Canada, we were prepared to expend $100,000,000, and that, to build a road through an entirely desert country, where everything had to be provided. What would these same people have thought of such an undertaking when they fret at the thought of engaging into the building of a road which can expect for its first train as much traffic as it can haul?

What would be the cost of the alternative scheme proposed by the hon. leader of the opposition? The same amount. He stated that the people of Canada are not afraid to spend their money for useful improvements. What would it cost to improve our waterways, as proposed? Millions and millions of dollars.

So, we are confronted with various proposals, all of which entail, let us say, to avoid quarelling, all the same expenditure. I think the proposal of the government is the best because it benefits all the provinces in a more equitable way than does the proposal of the leader of the opposition, which would strengthen still more the present system of providing for the requirements of one part only of the country, and besides would leave us at the mercy of the United States.

Praise has been bestowed on the system of local or branch colonization railways. Sir, we have had enough of that system to know what it is worth. It took twenty-five years to build 170 miles of railway from Quebec to Lake St. John; and for eleven years past, the company has not found the means of building the remaining ten miles to connect Chicoutimi with Ha Ha bay, in accordance with its charter and its most solemn pledges to the government and the public. They cannot be prevailed upon to extend their road west of Roberval, although warranted by the requirements of the settlers and the prospective establishments of large industries at St. Felicien.

And see the Gaspé peninsula which has remained stationary, notwithstanding its natural advantages, awaiting those vaunted colonization roads. See the country to the north of Montreal, the Nominingue, the St. Maurice valley. Why not admit it at once, that system is too slow, surrounded by two many difficulties.

Times have changed; we have no more that old-time settler who believed himself destined by Providence to a life of privation and suffering, his sole reward to be the honour of having founded a new colony. The struggle for life has changed: the poor as well as the rich strive now only for comfort. Hence that unfortunate desertion of the country, that aversion of the settler for our forest lands, in recent times, and that wild rush towards the western prairies to the detriment of the older provinces. Since, therefore, it is necessary to build railways in advance to ensure the success of colonization, and since the provinces heretofore have been unable to do better with their railways than follow at a distance in the footsteps of the backwoods settler. I consider it our duty to accept and to further the proposal that is made of providing a great central railway through the finest forest territory remaining to us. I speak from experience. I have partaken of the settler's life in the backwoods; I know

its difficulties. I know what are the views in this respect of the community I represent; and I think I am the faithful interpreter of every settler in the province of Quebec when I say they rejoice in finding a government providing for them through the forest a royal road which will do away with the misery of old.

Not very many years ago, a man who is no longer with us, laid on the Table of this House the Bill for the first transcontinental road through Canada. What a surprise. What dark forebodings. What conflict of opinions. Millions to be spent, insufficent data, and what not. None, Sir, are better acquainted with that phase of our history than those of my colleagues who were then members of this House. Sir John A Macdonald and his supporters persisted; the Bill was passed as being a good measure on the whole, nothwithstanding imperfections of detail. Twenty years have since gone by. That scheme has been found so beneficial, that even his political opponents are prone to say that Sir John A. Macdonald was a great statesman; and following in his footsteps, request to be authorized to build a second transcontinental. The new scheme is criticised in the same way as the former; but the parts are interverted.

History repeats itself and I trust it will do so in this case. Some day Laurier will disappear. Ontario will pride itself in having given birth to Sir John Macdonald and in having his remains; Quebec will pride itself as to-day in having given birth to Sir Wilfrid Laurier, and the country will honour the graves of these two eminent men each with its brazen crown; the one bearing the letters, C.P.R., the other G.T.R. Around these two graves two great races who have founded Canada will feel themselves more tightly bound one to the other by a common sentiment of national pride.

Sir, I realize that the vote I am about to give will be the most important act of my political life. I represent here enormous interests; I was elected by an intelligent community to whom I honestly promised to support the government whenever possible. I am favourable to the principle involved in the measure, and I believe it to be superior to all others which have been discussed in this House, as it decentralizes the commerce of the country, and is more equitable to all its parts. At the same time, the rejection of the Trans-Canada scheme, whereby my best and most devoted personal friends felt greatly aggrieved, might have induced me to oppose this Bill. But, after closely following the debate I am satisfied that the Conservative party would have dealt with the Trans-Canada in the same mood as the cabinet. Besides, I recognize the substantial assistance which this government has given to my county on all occasions, as well as the courteous treatment I received at the hands of its members. I am confident that the Prime Minister is taking an ever increasing interest in the welfare of my district, and I would, for all those reasons, deem myself greatly failing in faithfulness and in honour, should I in such a solemn circumstance of his life, refuse to uphold his views. In so doing, I believe I am fulfilling my duty conscientiously towards my country, my province, the constituency I represent, and towards my friends, and I entertain the hope that all will be benefited in a large measure by this policy.

Mr. H. A. WARD (East Durham). I regret very much, Mr. Speaker, that I am not sufficiently well versed in the French language to have understood the arguments of the hon. gentleman (Mr. Girard) who has just taken his seat, which I have no doubt have been very able and interesting. It may be quite true that nearly all the arguments that can be advanced, either for or against this scheme now propounded by the government, have been brought forward; at the same time there are people in every constituency who have a right to know where their representative stands on an important measure of this kind, and therefore it is that I shall address the House on this occasion. I realize that hon. members on both sides are becoming impatient at the prolonged nature of this debate, and I can assure them that it is my purpose to make my remarks brief. I am strongly in favour of the development by railway of those parts of this Canada of ours that have not yet been opened up, but I desire to see measures for such development undertaken by the government only after serious inquiry, and on the basis of the very best information that can possibly be obtained, and in a manner which shall be found in the best interests of the country. I am willing that money should be freely spent by the administration of the day on any railway that will have the effect of improving our transportation facilities, in opening up unsettled districts, and generally in drawing the provinces of this confederation more closely together. But I believe that this scheme propounded by the present administration, coming as it does without that information that we on this side of the House consider necessary to have been obtained by the government, has been conceived in reckless haste, and is not one that should appeal to the country. Since this debate commenced, arguments have been brought forward on this side of the House which ought to lead the government seriously to reflect before deciding to embark in an expenditure of such an immense sum of money without the necessary information which would justify them in doing so. I believe that the Grand Trunk Pacific should be afforded every facility for getting into the North-west, and should be granted liberal assistance for that purpose, under reasonable and safe conditions.

I consider the proposal that has been brought forward by the government to be

defective in many ways. I desire to call attention to a few arguments that have no doubt been previously given in this House, but which I think can bear a little repetition. In the first place, I would call the attention of the government to this fact, that now for the first time in the history of the country a great railway corporation is to be bound to the government, and the government is to be bound to that corporation for the period of fifty years. Fifty years, Mr. Speaker, is a long time, and the results may be very serious to the country. I desire to call attention to some points in clauses 7 and 16 of the contract entered into by the government with the Grand Trunk Pacific. In clause 7 it is provided:

> In order to insure for the protection of the company as lessees of the eastern division of the said railway, the economical construction thereof in such a manner that it can be operated to the best advantage, &c.

As I desire to shorten my remarks as much as possible, I will only read the portion of the clause I wish to refer to. Clause 16 provides that the government are bound to consult the Grand Trunk Pacific as to the amount of money that shall be put into the eastern division, and that it shall be economically constructed. Then clause 16 provides for betterments. Now it is well known in railway construction in this and other countries that the first construction is not usually intended to be a durable one. I contend therefore that the clause leaves it open to the Grand Trunk Pacific to secure the construction of that eastern division in such a way, in so economical a manner, that every year thereafter betterments will be called for and the government will have to provide them. Now, this is clearly shown by these two sections, that in each year a large sum will probably have to be spent for betterments, and I have no doubt, in my own mind, that the amount that must be spent in this way will come to even more that the interest that the Grand Trunk Pacific Railway Company will have to pay on the cost of this road.

A good deal has been said about the security that the Grand Trunk Pacific Railway Company are giving to the government for the payment of the 3 per cent interest upon the cost of construction of the eastern division. I was rather amused not very long ago by hearing a gentleman who came from a western Ontario constituency, represented by an hon. gentleman on the government side of the House, state that the government had a perfect 'cinch,' as he elegantly expressed it, in the contract with the Grand Trunk Pacific Railway Company; that they were secured for the payment of all they would expend in building that portion of the line by a mortgage on all the rolling stock on the whole line. I asked him if he was quite sure about that, as it was not the manner in which I had read the contract. He said: Oh, yes, the member for my county told me so. I should think that hon. members should be careful about what they say to their constituents in reference to this contract, and should really stick to the truth when they undertake to instruct them upon this very important question.

I shall deal very briefly with the cost of construction of the eastern division. So many different estimates of this have been made, that really any hon. member could be excused if he had not a very lucid or clear idea as to what that division is really going to cost; but there can be no doubt in my mind that it must cost somewhere in the neighbourhood of $75,000,000 to $100,000. If that is so, as the security given is only a second mortgage upon the $5,000,000 worth of rolling stock which are ear-marked, I believe, for that division, what security can there possibly be after the rolling stock on that division has commenced to depreciate? The hon member for Pictou (Mr. Bell) brought forward what I thought was one of the most conclusive arguments as to the danger this country is incurring in constructing that eastern division. The argument which he brought so clearly before the House has not been answered by any hon. gentleman opposite who has followed him. He argued that as the earnings of the Grand Trunk Railway itself, on its roads in the thickly settled portions of this country, only amounted, after paying working expenses, to $800 per mile, that in this sparsely portion of the country through which the eastern division of the Grand Trunk Pacific will run, they would have to earn even a larger amount per mile in order to pay the interest on the cost of construction, even taking this as the amount which the government admit it will cost. It seems to me that this contract which has been entered into by the government was stamped as unbusinesslike at the very outset; if we are to believe what we have heard in connection with the negotiations with the Grand Trunk Pacific Railway people, they absolutely and entirely refuse to undertake the construction of that portion of the work. That being so, it seems to me that the project is stamped at once as being an unbusinesslike one for the government to enter into.

The right hon. gentleman who brought down this scheme, and he did so in very eloquent language, used that expression which I suppose has now become historic: 'We cannot wait.' It seems to me, with all due respect to the right hon. gentleman, that the reasons he gave to the House and to the country for the undue haste with which this project is being carried out were not of a very serious character—in fact, I might almost say that they were flimsy. The right hon. Prime Minister, in excusing the haste with which this contract was entered into, expressed great fear that the bonding privileges would be taken away from us; and in connection with this excuse,

I will read a short extract from the Minneapolis 'Journal.' It is as follows:

> The Grand Trunk Pacific scheme has caused a strange twist in the attitude of the Canadian parties toward the United States. The Liberals have generally been supposed to be the party of those who had no ill-will for or special fear of the republic, but Sir Wilfrid Laurier is advocating a Grand Trunk Pacific on the ground that there must be an all-Canadian route which cannot be affected by the withdrawal of the American bonding privilege. The Conservatives are now answering that there is no danger that the United States will ever withdraw that privilege. And they are right. Uncle Sam is not prone to cut off his nose to spite his face, and with the growing sentiment in the United States in favour of freer trade with Canada, there will be no tendency to get rid of such encouragement to trade as we now have.

This is an expression of opinion from the Minneapolis 'Journal,' and it seems to me that from what we know of the American people, that there is not the slightest danger of this bonding privilege being withdrawn. It is not at all likely that the American people, and the American government, entered into this arrangement with Canada years and years ago, unless they were going to reap from it at least as much advantage as the Canadians would. It has been a general feature of our dealings with the Americans that they generally get a little the best of the bargain; that they derive the greater advantage, and I am quite sure that we have nothing to apprehend in the danger of this bonding privilege being removed.

Several hon. gentlemen have spoken of the congestion of freight that has taken place in the North-west in the last two years. That congestion, I believe, has existed with the two last crops grown in the North-west, but such arrangements have since been made by the railways already in existence in the west as to enable them to cope with the difficulties in a much better manner than in the past. Now, I wish to call attention to the estimate of the crop yield for the last two or three years:

Year.	Estimated Yield.
1898	31,450,000
1899	34,830,000
1900	17,055,000
1901	63,300,000
1902	67,000,000
1903 (highest estimate)	58,000,000

Thus, the estimated crop for this year is nearly 10,000,000 less than that of last year. Of course, that is a matter to be regretted, but it shows that there is not the necessity for haste, so far as the moving the crops in the North-west is concerned, as the right hon. gentleman would lead us to suppose. The project might, in my opinion, very well have waited for another year, and the country would not have suffered in consequence. The commission which has just been appointed by the right hon. gentleman's government was, as I supposed, a commission to take into consideration the very points which have led the government to introduce this scheme to the House.

Now as the government have decided upon this great transportation scheme, that commission seems only of use to register the decree of the government already issued. We always imagined that the commission was appointed for the purpose of trying to solve the transportation problem, and it seems unfortunate that the government should have rushed this matter before parliament with unseemly haste before the commission had an opportunity to tender its advice upon it. Let me read an extract or two from a speech of the Prime Minister delivered some years ago, to show what a change of heart has come over him. On the 21st December, 1880, Mr. Laurier, as he was then, had this to say with regard to the Canadian Pacific Railway contract then before parliament:

> The policy of the Liberals was that it should be built gradually as the wants of the country require and its resources permit.

The policy of Sir Wilfrid Laurier to-day is not to build his railway gradually and as the resources of the country require, but to rush into it without knowing what he is doing. Again the Mr. Laurier of that date said:

> Honourable gentlemen opposite will remember that they received ample warning not to create that state of things which would bind this country to the immediate completion of the road. They were reminded that if they did so they would be putting a burden on this country too heavy for its strength to bear; but they did not heed these warnings, they forced their followers to vote for this policy, and now, as a crowning consequence of that policy, their followers are asked to consent to enormous sacrifices involved in this contract. . . . In my humble judgment it was a crime, though I might say without severity it was a political crime—at all events it was a fault to bind this country to the immediate construction of the road.

I read that to show that the right hon. gentleman at that time believed in making haste slowly, and did not believe in rushing wildly to construct a railway as he is doing in the case of the Grand Trunk Pacific Railway.

The Liberal party in Canada seem to have realized lately that the Conservative government made no mistake when they built the Canadian Pacific Railway, and, as they built it. The hon. the Finance Minister told us the other night that he did not refer to the Canadian Pacific Railway contract with the intention of casting any reproach whatever upon the men who framed it and who constructed that railway. That was a considerable admission for the Finance Minister, a leader of the Liberals, to make, and I commend him for it. We of the Liberal-Conservative party have always contended that the proper system to adopt was to build the Canadian Pacific Railway as a harmonious whole, and not a thing of shreds and

patches, as the Hon. Alexander Mackenzie proposed ; and, Sir, subsequent events have abundantly shown that the Conservative government was right. The policy of Mr. Mackenzie was to build the road in four sections, and after giving the contractors $10,000 a mile and 20,000 acres per mile, to hand each section over to them to be thereafter owned by these contractors. That would have given us four different sections of railway running between Lake Nipissing and British Columbia, while the Conservative administration by sticking to the original scheme, have given to Canada a national highway of which every Canadian is proud.

The Minister of Trade and Commerce when speaking to this motion, told us that the remarks of the Finance Minister met with his entire approval, and so he did not devote much of his time to the consideration of the question, but applied himself to one of his old time speeches in condemnation of the railway and fiscal policies of the Conservative party. I am glad the right hon. gentleman (Rt. Hon. Sir Richard Cartwright) has come into the House at this opportune moment. Here are his words :

> However good the record of the Canadian Pacific Railway may be looked at as a commercial undertaking and I think the future historian of Canada would largely bear me out when I say that no possible combination of blunders could be conceived or could be more injurious to Canada than those which marked the initiation of that enterprise. I say in the first place that the bargain which they made in 1871 with the people of British Columbia by which, without knowing the smallest circumstances or the smallest fact that they ought to have known, they bound themselves within ten years by a treaty with that state, unasked for by them, to construct that railway was a fatal mistake, a mistake which resulted in very great injury and very great loss to the people of Canada and which seriously affected the permanent usefulness of the road.

But the right hon. gentleman did not tell us in what way the interests of the country had suffered, nor did he in any manner show how the permanent usefulness of the Canadian Pacific Railway has been impaired by the policy followed by the Conservative administration. I desire to call the attention of the House to his word, 'unasked for by them," which I would take to mean that the province of British Columbia did not ask for the construction of the Canadian Pacific Railway. The right hon. gentleman must have forgotten the history of the time, or, he would not have made such a statement. I quote from the memoirs of Sir John A. Macdonald, by Joseph Pope, an extract which I take to be correct :

> In June, the death of Governor Seymour gave to the imperial government an opportunity of showing their appreciation of Sir John Macdonald's judgment. Mr. Musgrave was immediately transferred from Newfoundland to British Columbia. Through his influence, aided by the efforts of the Hon. (now Sir) Joseph Trutch, and other friends of the union, an agreement was entered into, the principal condition of it being the construction by Canada of the Canadian Pacific Railway. In the autumn of 1870, the people of British Columbia approved this arrangement, at a general election. On the 20th of the following January it was ratified by the legislature, and on the 20th of July the waters of the Pacific ocean marked the western limit of the Dominion.
>
> The government of the Dominion undertake to secure the commencement simultaneously within two years from the date of the union, of the construction of a railway from the Pacific towards Rocky mountains, and from such point as may be selected, east of the Rocky mountains, towards the Pacific, to connect the seaboard of British Columbia with the railway system of Canada ; and, further, to secure the completion of such railway within ten years from the date of the union.

That, I apprehend, conclusively answers the hon. gentleman when he says that the Canadian Pacific Railway was not asked for by British Columbia.

The MINISTER OF TRADE AND COMMERCE (Rt. Hon. Sir Richard Cartwright). Does my hon. friend want to know the facts ?

Mr. WARD. I only know the fact that the hon. gentleman has stated what is not correct.

The MINISTER OF TRADE AND COMMERCE. The hon. gentleman is very much misinformed.

Mr. WARD. In addition to that, I wish to show that the Liberal party of that time were distinctly against the construction of the Canadian Pacific Railway, more especially the British Columbia section. On the 16th of April, 1880, the Hon. Edward Blake moved the following amendment to a motion of Sir Charles Tupper in regard to the Canadian Pacific Railway :

> To leave out all the words after 'that' in the said motion, and to insert the following instead thereof : 'The public interests require that the work of constructing the Canadian Pacific Railway in British Columbia should be postponed.'

The Hon. Edward Blake, in concluding his very able speech on that occasion, made use of these words :

> Complete the railway to Red river, go on with the prairie section as far as settlement demands. For that risk something, since the die is cast. But in order to succeed in that, in order that you may have a chance later to do more, deal with that alone now. Bend to that great effort your undivided energies, your whole available resources. Postpone meanwhile the western work, and do not by your present action, based on airy dreams and vain imaginings, risk the ruin of your country.

That was the position of the Liberal party at that time. Their policy was simply to build the railway as the necessities of the country required it ; to drop off settlers, I supposed at the western end of the road, and only build into the prairies towards British Columbia as in their opinion the

necessities of the country required. It seems to me, Mr. Speaker, that if that policy had been carried out the Canadian Pacific Railway would not have been completed to this day. It seems to me that with the lack of energy which characterized the administration at that time, they would have simply gone on building small portions of the railway, and Canada would not have been in the position she is in to-day, to enable these hon. gentlemen to pose as the administrators par excellence of this country. That is one of the colossal blunders which my hon. friend referred to as having characterized the policy of the Conservative administration of that day. The completion of the Canadian Pacific Railway. The hon. gentleman also referred to the arrangement which the government of that day entered into with British Columbia as a colossal blunder. I leave it to the good sense of the House to say whether or not the hon. gentleman's charge is correct. He went on to state that he had an interview or correspondence with Sir Stafford Northcote, the chancellor of the exchequer. This is what the hon. gentleman said :

I very well recollect that when I came to lay my proposition before Sir Stafford Northcote, while he admitted the substantial truth of my suggestion that the road was of imperial concern, that its construction would be a great benefit to the whole British empire ; he told me nevertheless in so many words ; that although he believed that my request would have been acceded to at once at the time that the union of British Columbia was affected, yet, that as we had chosen to bind ourselves by treaty to the people of British Columbia to build that road within a certain period of time, it was out of his power under the circumstances to propose to the British parliament to grant us any further assistance.

The hon. gentleman evidently had no confidence in the resources of the country at the time the Hon. Alexander Mackenzie's administration was in power. He was afraid to launch out into the building of the Canadian Pacific Railway without assistance, and therefore he made this frantic appeal to the British government to help him over the difficulties which he seemed unable to overcome himself. It seems to me that that was rather a humiliating position for the hon. gentleman to take, after the courageous policy that had been enunciated and partly carried out by the Conservative administration.

The hon. gentleman also had his usual fling at the Conservative administration for the small number of immigrants that came to the country during the eighteen years that Sir John Macdonald's government was in power. That argument of the hon. gentleman's is so old that it hardly needs any answer. But I would call his attention to this fact, that while the government of which he was the Finance Minister was in power, the exodus to the United States went on just the same. It is a matter of congratulation to all the people of this country, on both sides of politics, that we are now getting large numbers of immigrants from the United States, instead of our young men leaving our shores and going to that country. But surely the hon. gentleman can not claim that as a result of the present government being in power. Surely he understands, or he ought to understand, that the United States, being a very much older country than Canada, has been attracting immigrants for many years ; and that the stream of immigration, having once set in, in any particular direction, it is a most difficult thing, I imagine, to stem the tide, and divert it in other directions. That has been, in my opinion what we have had to contend with. Every immigrant who went to the United States was an immigration agent for that country, and used his influence to bring his friends there. I am very glad to say that the tide is turning in our direction, and I am sure that no one rejoices over that more than the Conservative party.

The Hon. Mr. Tarte, in the speech which he delivered to the House the other day, remarked that he regarded the debate which has been in progress for the last three weeks, as a peculiar one, in this respect. He said :

One thing is cheering ; we have not heard anybody during this long and interesting debate talking blue ruin or talking about the absence of the credit of this country. On both sides hon. members of the House have expressed the fullest confidence in the future of Canada and in its ability to grapple with the biggest problems.

That is in strong contrast with the conduct of the present government when in opposition. As everybody knows, who has studied the proceedings of parliament at that time, especially when the Canadian Pacific Railway was being built and the National Policy was being introduced, a great many blue ruin speeches were delivered by these hon. gentlemen. But no similar accusation can be established against this side. No hon. gentleman on the government benches can prove that the present opposition have ever adopted any such course as was followed in the days I referred to by hon. gentlemen opposite. Judging by the criticisms, Mr. Speaker, indulged in by the supporters of the measure before the House, it would seem that they either do not understand, or wilfully misunderstand the policy enunciated by the hon. the leader of the opposition. In my opinion that policy is a broad and courageous one. It is, I believe, becoming every day more popular with the people, and I should not be surprised if the government, before this resolution is voted, were to adopt some of the suggestions made by my hon. leader. Were they to do so, they would be acting in the interests of the country. The policy enunciated by the leader of the opposition offers an attractive alternative to the vicious

policy enunciated by the government. In every line it suggests that we should not blindly rush into any scheme without counting the cost, and if the leader of the opposition should be returned to power at the next general elections—which we are told are very close—it would not even then be too late to modify this contract with the Grand Trunk Pacific Railway, so as to make it more acceptable in the interests of the country. The Grand Trunk Pacific Railway themselves, I believe, are not altogether in love with the scheme, so far as the eastern division is concerned, and would be quite willing to modify it; and if that were done, it would save millions of money to the country.

Hon. members on this side have been charged by hon. gentlemen opposite with unpatriotic conduct, because they are opposing the measure before the House, but no accusation of preaching blue ruin has been or could be possibly made against us. The Conservative party rejoice in the fact that, in spite of the infliction of having its affairs conducted by a Liberal government, the country is prosperous. We take pride in the thought that, by reason of the foundation of prosperity having been so firmly laid by the much abused administration of the late Sir John Macdonald, the country is able to stand even the reckless expenditure of the present administration. We look forward to the time when hon. gentlemen on the treasury benches will be relegated to that political obscurity they are so well qualified to adorn. The day is not far distant when the hon. leader of the opposition will be called on to put into force the policy to which he so ably drew the attention of the House. We have an abiding faith in the future of this great Dominion, and notwithstanding the strictures of hon. gentlemen opposite, we will always be found, in power or out of power, doing our utmost to assist in the up-building of this young nation.

Mr. T. O. DAVIS (Saskatchewan). I am sorry, Mr. Speaker, that I had not the pleasure of listening to all of the speech with which we have just been favoured, but as no doubt it was on pretty much the same line as the other speeches already delivered on that side, I am probably not very much the loser, so far as concerns replying to the strictures of speakers on the opposite side, who preceded the hon. gentleman, and who went over the same ground. In dealing with this question, I intend, Sir, to be very brief. I do not intend to thresh over again the old straw which has been so well threshed by hon. gentlemen opposite, but to confine myself as much as possible to that portion of the Bill which interests the people I represent.

This discussion has now lasted some weeks. When the proposition of the government was first submitted to the House by its right hon. leader, in an eloquent speech, we had no reply for some time from the hon. leader of the opposition. But that hon. gentleman, after brooding in silence a long time, came down with an alternative proposition. Previous to that his supporters, who had been attacking this project, attacked it on the ground that the proposed railway was not wanted, that there was nobody asking for it, that the country which it was to go through was not fit for settlement, and that the operating of the line between Moncton and Winnipeg by different railway companies, with joint running powers, was impracticable. But as soon as the leader of the opposition, after his long period of silent incubation, brought down his alternative proposition, his supporters began to change their tune; and that alternative proposition, I must say, bears very strongly the stamp of an hon. gentleman who made a trip here from Manitoba some time ago. I refer to Premier Roblin. That he had something to do with formulating the policy of the leader of the opposition is shown by the fact that that policy comprises the buying or establishing of barns and warehouses for the people of the west. Then again, I am under the impression that a red headed boy has something to do with it. We have heard of one red headed boy, but apparently there is another, because a considerable portion of the policy proposed by the leader of the opposition would certainly tend to benefit a certain corporation with which this red headed boy has a good deal to do. That policy is before the House now, and I intend to discuss it as briefly as possible. But I wish first to give some attention to a few of the statements made by the hon. member for Marquette (Mr. Roche), and I do not know that I would have trespassed on the good nature of the House at all had it not been for those statements. It is well known that the people of the west are anxious to have this road constructed. We hear hon. gentlemen opposite say that there is no demand for it, but we know, as a matter of fact, that the question of building this line has been brought up in this House during the last seven years, in season and out of season, by supporters of the government. Then again we have pointed out the disabilities under which our settlers are labouring on account of not being able to get their produce to market in an expeditious manner, and also on account of the exorbitant freight charges which they have to pay to the railway corporations which is practically in control of the transportation in that part of the country. Not longer ago than last year, this question was brought up, and I remember that on that occasion many members opposite took part in the debate, amongst others the leader of the opposition and the hon. member for Marquette. This is what the hon. member for Marquette said, as will be found on page 917 of the 'Hansard' of 1902 :

We are bound to require additional facilities, because our crop will be increased each year. To-day we find this condition of affairs—not only are the terminal elevators at the head of navigation full, but so is every elevator in Manitoba and the North-west. Every elevator and flat warehouse, every place where grain can be stored is full to overflowing. And not only that, but we find that at each little station, not only along the main line, but on the branch railways, are piles of grain in bags standing out exposed to the weather for two months past.

It is over a year ago that that statement was made by the hon. member for Marquette, who now tells us that we do not need further transportation facilities in that country. On the same occasion the hon. member for Centre Toronto (Mr. Brock)—page 942 of 'Hansard' of 1902—said:

The hon. gentleman who has just spoken (Hon. Mr. Ross), with the distant voice of the past, remembering old things, forgetting that this country is moving, cannot possibly have listened to the voice we heard this evening from our great North-west. No government can disregard that voice and continue in office.

Further on, at page 944, the hon. gentleman was discussing the question of canals, as to whether the water route was sufficient to meet the requirements, and he came to this conclusion:

This is an all-the-year-round country. We cannot bring our grain that is grown in the North-west, if we work only in the summer time. We must hold out inducements to the railway companies and great transportation companies to move the grain all the year round—and it will take the whole year to move it. In the interest not only of the farmers of the North-west, but of the great financial institutions that are putting their money into moving the grain crop, it must be kept moving continually, and not only for the few months of canal navigation.

But notwithstanding this statement made by the hon. member for Centre Toronto, when the government, following his advice and that of other hon. gentlemen on that side, brings down a proposition that nobody can say anything against, we find the hon. member for Centre Toronto, because he wishes to assist his political friends, saying that the proposition should not be accepted, but that we should use the waterways. On the same occasion the leader of the opposition (Mr. Borden, Halifax) said:

And when the hon. gentleman brings down any reasonable scheme for increasing the means of Canadian transportation—any scheme by means of which the grain grown in the Canadian North-west shall be assuredly carried over Canadian lines to Canadian ports and shipped thence to Europe—he will have my support and I believe the support of every other man on this side of the House.

Yet, when this proposition was brought down, we were told that there was no demand for it. I see the leader of the opposition smiling. He need not smile, for if he will read the speeches of his followers he will find that time after time they demanded to be told who was asking for this new road. Why, the demand for it came from the leader of the opposition and his followers, as well as from the people of the country generally.

Now, the hon. member for Marquette made a few remarks the other evening discussing the subject now before the Chair, to which I would like to refer for a few moments. He referred us to the railway policy of the Manitoba government. He said that this Dominion government was giving $13,000 a mile by way of guaranteeing the bonds to subsidize the prairie section of this road, but the Manitoba government got a road built through a large portion of the province of Manitoba for a guarantee of $8,000 a mile. He said, it is true, that a little later on they increased that to $10,000 a mile, but it was with the understanding that the extra $2,000 a mile was to be used for the purpose of buying rolling stock. But he forgot to tell the House and the country that that same road had been granted a subsidy of 6,400 acres per mile by the late Conservative government of the Dominion, and also that it had been given, by way of subsidy for the carrying of mail, something like $80,000 a year. So that, before the $2,000 a mile was given by the government of Manitoba, that company had received no less than about $30,000 a mile, allowing a fair valuation on the grants and mail subsidy. It must not be forgotten, too, that the road to which this extra $2,000 a mile was given had been in operation for years and years. The hon. gentleman seeks to justify this additional subsidy by saying that it was for the purpose of increasing the rolling stock of the road. The people of the western country know what 'increasing the rolling stock' means. That stock rolled around the constituencies, in the shape of dollars and cents, in the last election, and a portion of it to-day, no doubt, has found its way into the form of carriages to be used by the Minister of Public Works for the province of Manitoba. The less hon. members on the other side representing Manitoba say about that bargain the better. The hon. gentleman went on to say that the Minister of the Interior (Hon. Mr. Sifton) had quoted some statements made by the Grain-Growers' Association of the North-west Territories, and he went on to read a resolution passed at some meeting of the grain-growers of Manitoba, at which they condemned this proposition. But what did they condemn? They condemned the granting of assistance to any railroads at all, even the guaranteeing the bonds. After the Manitoba government had guaranteed the bonds on this railway to the extent of $5,000,000 or $6,000,000, no doubt the members of this grain-growers' association went to the polls and voted for Roblin's candidates. But when his government was returned to power and this gov-

ernment comes down with the proposition to guarantee bonds, these gentlemen get up and resolute, actuated, no doubt, by a desire to assist the friends of hon. gentlemen opposite. The grain-growers of Manitoba appear to be under the control of Roblin and Rogers. They seem to have resolutions on tap. Whenever resolutions are wanted they are turned on.

Discussing the bonding privilege, the hon. member for Marquette raked the leader of the House over the coals for having introduced that question at all. He said there was nothing in it. It is easy to say: 'There's nothing in it'; but what argument did he give to sustain his statement? Why, he said, and I have it here in his speech, that a man could get on the train at Halifax and could travel through to the Pacific. I wonder if he thought that what was wanted was to send passengers through in bond. As a matter of fact, we have a lot of cattle to send out of the country, and they must come through in bond. If we had not a railway built into the west over Canadian territory we would have to send the cattle through in bond or keep them. Only last autumn the Canadian Pacific road was unable to take out all the stock we had in that country. Our ranchers had to drive the cattle three hundred miles into the United States and there take advantage of the bonding powers to send the cattle through to an ocean port. And after they had driven them three hundred miles over the prairie they saved $3 a head on the cattle by doing that. This is another thing that demonstrates the need of a railway in that country.

The hon. gentleman went on to make a statement with reference to the Intercolonial. He said the system is not paying, notwithstanding that this is a prosperous time. Yet the government propose to construct another railway to compete with it, and, if not render the expenditure on the Intercolonial nugatory, yet to depreciate it to a very considerable extent. Has the hon. gentleman read the proposition brought down by his own leader? The leader of the opposition proposes to parallel the Intercolonial. He proposes to build another road through that country. If this road that the government proposes to build, and that the Grand Trunk proposes to operate, is going to injure the Intercolonial in the way of diverting traffic, I am of the opinion that the road the leader of the opposition proposes to build would have the same effect. That is the kind of argument the hon. member for Marquette used in this House.

Now, as to the necessity of this road, as I said before, I do not not think it needs any argument whatever. The people of that country have farmed on shares, so to speak, with the Canadian Pacific Railway Company for twenty-three years. Those hon. gentlemen who make speeches in this House on this question allude to the grand scheme that was put through by the Conservative party, and the hon. member for Marquette alluded to it as the pioneer of progress in that country. Pioneer progress! Why, Sir, that scheme has had the effect of keeping that country back for twenty-three years, and I say here without fear of contradiction that if the advice of the Liberal party, when that scheme was put through this House, had been taken, and the road had been laid out as proposed by the Liberal party through the northern portion of that country, and built where this road is going at the present time, in place of the 300,000 people in that country, we would now have two or three millions; I say that without fear of contradiction. When this bargain was going through that these gentlemen talk so much about, the Liberal party then, as they are to-day, were well seized of the people's needs; and if their advice had been followed we would have seen a different state of things in the North-west, and there would not have been such a crying necessity for this road as there is at the present time. The Liberal party foresaw all that took place, and they placed themselves on record by resolutions. I am going to read some of those resolutions, and I challenge hon. gentlemen on the other side to get up and say that these resolutions were not what the country needed at that time, and that they should not have been accepted at that time. Here is one of the Liberal resolutions concerning the Canadian Pacific Railway contract, providing that the Governor in Council should have the same control over the Canadian Pacific Railway rates and over the rates of other railways. Will any hon. gentleman on the other side of the House say that that resolution was not right? Will any of them say it was not right for us to have control over the rates on that railway? In the light of history, will they get up now and say that this country would not have been benefited, that the people of the North-west Territories would not have been benefited, if this parliament had taken control of the rates? I do not think they will say that. I do not think you will find any hon. gentleman from the west, at least, who will get up and say that. Here is a resolution moved by Mr. Guthrie, I believe the father of the hon. gentleman of that name now having a seat in this House:

That by the Consolidated Railway Act, 1879, it is provided that every by-law fixing and regulating the tolls to be taken by a railway company shall be subject to revision by the Governor in Council from time to time after approval thereof;

That the exercise by the Governor in Council of the power of reducing tolls under the said Act is by the contract respecting the Canadian Pacific Railway limited as regards said company to such extent that the tolls when reduced shall not produce less than ten per cent per annum profit on the capital actually expended in the construction of the railway, and that the net income of the company from all sources shall not be less than ten per cent on the capital so expended.

That the said contract thus limits in favour of the Canadian Pacific Railway Company the powers given to the Governor in Council in the case of other railway companies and gives to the company whose road is to be built so largely at the public cost an extraordinary privilege, and withdraws from the public the protection provided for them in the case of other railways which may be built solely out of private resources.

That the Governor in Council should have in the case of the Canadian Pacific Railway Company the same unrestricted power which is possessed in the case of such other railways of revising from time to time as the public interest may require any tariff of tolls and that the contract is in this particular objectionable.

Will any hon. gentleman opposite tell me that resolution was not right, and that it should not have been accepted at that time? Is there any person in this country who thinks now that it was a good thing to exempt the Canadian Pacific Railway from the provisions of the Railway Act, and to allow them to build up a monopoly in that country to allow that great corporation to suck the blood out of the settlers without the settlers being able to come to the government for any relief? I do not think you will find any hon. gentleman opposite who will get up and say that that resolution was not on the right lines, and that if the government of that day had had the sense to accept it, it would not have been in the interests of the whole country and particularly of the people of the North-west Territories. Now here is another resolution re the Canadian Pacific Railway contract, attacking the provision authorizing the monopoly. I wonder if any hon. gentleman on the other side will get up and say that that monopoly provision was a good provision, giving the Canadian Pacific Railway a monopoly for twenty years of the whole country also an exemption from taxation. Why, we have seen the leader of the opposition standing up in this House one or two sessions ago, and advocating the buying off of the Canadian Pacific Railway. He understood and he felt that the settlers were being oppressed by this exemption from taxation provision, and he advocated buying them off. Well, if the resolutions moved by the Liberal party had been accepted by his predecessors, if they had had sense enough to have done so, it would not have been necessary for the government to buy them off, and the settlers in the North-west would not have suffered for the last twenty years. This is the resolution moved by Mr. Mills with reference to the monopoly clause:

That the contract for the construction of the Canadian Pacific Railway while it gives to the company the absolute and perpetual right to build branch lines of railway from any point or points along their line to any point or points within the territories of the Dominion and cedes to the company free all government lands required in connection with such branches provides that for twenty years no line of railway shall be authorized by the Dominion parliament——

I am not going to read the whole of the resolution, but I say that that is a resolution which I think would commend itself at the present time to any hon. gentleman on either side of this House, for he must feel that it was a resolution on the right lines. Here is another resolution protesting against the exemption of the land from taxation. Now, when that measure was put through this House it was supposed by the government in power, and by the opposition at that time, that the clause in that agreement provided for exemption from taxation of those lands for only twenty years. But what do we find to-day? We find that there is no possibility of the people getting any relief for years to come; we find the Canadian Pacific Railway Company maintaining that the word 'grant' in that contract means the issue of patents, and the government had not issued any patents. These hon. gentlemen sat in their seats for eighteen years and they never issued patents, and it is a question in my mind whether they did not know at the time that by not issuing patents they were extending that exemption, for it has had that effect, and I believe we will have to suffer for another twenty years unless the land in the meantime passes into the hands of other parties. This is the resolution moved by Mr. Trow:

That the contract respecting the Canadian Pacific Railway exempts twenty-five millions of acres of choice lands of the company from Dominion, provincial and municipal taxation——

Just think, exempting them from Dominion, provincial and municipal taxation.

—until such lands are either sold or occupied for twenty years——

Now it is forty years. We find now that, either by their stupidity or for some other reason, it is forty years in place of twenty years.

—after the grant thereof from the Crown; that such exemption is unjust and will impose undue burdens on the settlers on the alternate sections who will be obliged to make improvements and incur expenses enhancing the value of the company's lands without receiving their fair share of the cost of such improvements and expenses; that such exemptions by freeing the company from the burdens of taxation will reduce the inducements to the company to sell their lands early and will enable the company free of expense to hold their lands till their value has been greatly enhanced by the labours of the adjoining settlers and that the said contract is in this respect objectionable.

Will any hon. gentleman on the other side of the House tell me that that was not a good resolution, that it was a resolution that should not have been adopted, that it was not on the right lines, that it was not in accordance with the modern policy of to-day, although moved over twenty years ago? I do not think any hon. gentleman opposite will get up and say that that reso-

lution should not have been accepted at the time, inasmuch as it sought to relieve the settlers from this liability, for it is a liability on the settlers of that country for forty years. To force them by their labours to increase the value of the adjoining lands, and to allow the company to hold these lands until they can get $6 or $7 or $8 an acre, I think that is an injustice, and that nobody on the other side who has heard that resolution read would like to get up and say that it was not on the right lines, and should not have been accepted by the late government. Here is another resolution protesting against the exemption in regard to the government control of rates until a ten per cent dividend is earned. I do not think anybody will say that that is a resolution that should not have been accepted, that it was not on the right lines. The resolution was moved by Mr. Ross of Middlesex :

That the contract respecting the Canadian Pacific Railway provides that parliament shall not have power to interfere with the toll charged by the company unless the same produce, first the working expenses of the whole line, including the British Columbia and Lake Superior sections which working expenses comprise all expenses of maintenance of the railway and of the stations, buildings, workshops and appurtenances belonging thereto, and the rolling stock and other stock and movable plant used in the working thereof, and also hire of engines, rents, charges, and interest on lands not paid for, and all expenses incidental to working the railway and the traffic thereon, including stores and all consumable articles and also all rates, taxes, insurance and compensation for accidents or losses, also all salaries and wages of persons employed in connection with the railway or traffic

Now, just listen to that. By the wording of that contract perpetual exemption is granted. Owing to the great number of these charges you can never interfere with the rates because it is only after all the expenses that are mentioned in that contract are met that the rates can be reduced by a commission.

All office management and expenses, including directors fees——

There is another thing.

—agency, legal and other like expenses, and thereafter a profit at least of ten per cent on the capital expended on the construction of the railway which includes the public money and the proceeds of the public lands.

When are you ever going to get rid of that ten per cent clause ? The only way to get rid of it is to build another railway, a railway on which the rates are controlled by the government and by means of which the Canadian Pacific Railway can be forced to bring down their rates. That is another resolution which I do not think any hon. gentleman opposite will say was not on the lines of public policy at that time and should not have been accepted by their predecessors. Here is a resolution protesting against the omission of running rights. Twenty years ago, the Liberal party foreseeing that running rights would be a good thing to have so as to enable other railways to use the tracks which were built with the public money of this country, introduced this resolution in the House. Had it been adopted, the necessity for the construction of this railway at the present time would not be as great as it is. There is not an hon. gentleman on the other side now who would not say that it was a good and proper resolution to adopt, for, while some of the lieutenants of the leader of the opposition objected to the running rights as not being practicable, the opposition leader himself acknowledges that they are practicable, and can be used.

Here is another resolution which I would like to hear any hon. gentleman on the other side of the House, at least any member representing a western constituency, say, would not have been a proper resolution and a good thing had it been accepted at the time it was proposed. This is a resolution protesting against the perpetual exemption from taxation of that railway and all station and station grounds, workshops, building yards and other property, &c. Is there any hon. gentleman opposite who today would not support a resolution of that kind ? The Liberal party twenty-three years ago could see far enough ahead to know that this exemption was not a proper thing and moved a resolution against it, but the predecessors of hon. gentlemen opposite lined up under the party lash and every one of them voted practically to put shackles on the people of the west. The hon. member for North Norfolk (Mr. Charlton) who made the first Liberal speech on this proposition moved this resolution which showed that he, over twenty years ago, had a grasp of public affairs not possessed at the present time by hon. gentlemen opposite. The resolution was as follows :

That the contract respecting the Canadian Pacific Railway exempts perpetually the railway and all stations and station grounds, workshops, buildings, yards and other property, rolling stock and appurtenances required for the construction and working thereof and the capital stock of the company from taxation by the Dominion or by any province to be hereafter established or by any municipal corporation therein ;

That the property of the corporation will be in substance a gift from the public ; and its exemption from taxes is unjust, creates an unfair incidence of taxation and gives an undue advantage to the company over other railway companies, calculated to prevent the construction of competing lines and the contract is in this respect objectionable.

Or, in other words, we gave them the station grounds, we gave them the road and the rolling stock, and then by this stupid legislation we exempted them from taxation for ever. That is what the Liberal party protested against twenty-three years ago, and I would like any hon. gentleman opposite to say that they were not right in

doing so. Not a western man could do it and go back to his constituency and be elected. I think every one will agree that that resolution was on proper lines and was a resolution that should have been accepted by the gentlemen who occupied the treasury benches at that time. This country from the Atlantic to the Pacific has suffered in consequence of their stupidity in not accepting that and the other resolutions and therefore I say, in the light of history, that any one reading these resolutions must conclude that the Liberal party to-day are better judges of what is required by this country than hon. gentlemen opposite and can be better trusted with the affairs of the people. Over twenty years ago the Conservatives refused to accept this proposition; their action has put shackles on the people of the west, and for the last seven years we have been demanding, in this House, that these shackles be struck off. The only way to strike them off is to build another railway, an all-rail route from the Atlantic to the Pacific.

I have pointed out that we pay freight rates twice or three times as high as the freight rates that are paid in the east. Now we are getting people into that country and hon. gentlemen opposite are trying to to take credit for it; they say that thanks to the policy of the Conservative party immigration is coming into the country. Think of it. For eighteen years, until 1896, the people there were on the verge of starvation and when we brought a few people into the country by one railway they dodged out by another until the leaders of the Conservative party who were then in power went to the west to find out what was the matter. Hon. Mr. Foster, who was then Minister of Finance, surveyed the ground and advised the people to go in for mixed farming. Hon. Mr. Angers, who was then Minister of Public Works, went to the province of British Columbia and, forgetting that the miners in British Columbia did not farm at all, did not raise potatoes and cucumbers and carrots, advised them to go into mixed farming as a panacea for all the evils of the west. And to-day they will tell you that they brought about prosperity that now prevails there. The hon. member for Marquette (Mr. Roche), for instance, in an eloquent peroration referred to the buffalo and the red men that once roamed on the western plains. If these gentlemen had been kept in power another seven years we would have had the red men back on the plains—the buffalo are extinct practically and could not be got on the plains but the red men would have possession. The other settlers would have been starved out. The idea of these gentlemen talking about their having assisted to bring about the prosperity we enjoy at the present time in western Canada. They had as much to do with it as they had in creating the universe. I said before that we have been farming on shares with the Canadian Pacific Railway and I shall point out how that is. I have here a statement in which I have made a comparison of what the people in older Canada and the people west of Lake Superior are paying in local rates. I have gone further, because we are getting a large stream of immigration from the United States, most of it from the state of Iowa, and I have looked up the freight rates in Iowa, because people coming from there will know what they have been paying on that side and will feel the injustice of having to pay twice as high rates on this side of the line. The statement is as follows :

Freight rates charged in the state of Iowa, fixed by commission, compared with rates charged on the Canadian Pacific Railway, western division, showing increase of Canadian rate over United States rate.

Iowa. 1st class rate.		C.P.R., western division.		
Miles.	Rate.	Miles.	Rate.	Increase.
30	16	30	27	11
50	20	50	35	15
100	24	100	54	30
200	40	200	80	40
450	.63	400	1.33	70

Do you mean to tell me that we can get immigrants to go into the country and stay in it while such a difference in freight rates exists? I take this as one example, but I could fill pages with such. These people come from a country where there are commissions controlling railway rates, and when they come to Canada, where owing to the policy of the wiseacres who were in power 20 years ago, there is no control, they say : If something is not done to help us out of the grip of the railways we will not stay here. The leader of the opposition wants to buy the Canada Atlantic Railway. I don't think the people of Canada have anything to complain of with regard to the Canada Atlantic Railway. That line is doing good work for the country and if the government purchased it to-morrow it could not do much better work, or give lower rates. The money you would pay to buy the Canada Atlantic Railway you might as well throw into the Ottawa river. Here are the Canada Atlantic Railway first-class freight rates : 56 miles, 26 cents; 102 miles, 34 cents ; 200 miles, 46 cents ; 363 miles, 46 cents. Let us compare these with the rates on the Canadian Pacific Railway western division. The first-class rate on the Canadian Pacific Railway (western division) for 30 miles is 27 cents; and you will notice that the Canada Atlantic Railway carry freight 56 miles for 26 cents. The Canadian Pacific Railway charge, for 50 miles 35 cents, whereas the Canada Atlantic Railway carry freight 102 miles for 34 cents. The Canadian Pacific Railway charges 92 cents for 250 miles, while the Canada Atlantic Railway carries it 363 miles for 46 cents, and for 451 miles the Canadian Pacific Railway charge $1.33. The first-class rate on the Canadian Pacific Railway to-

day is $3.85 a hundred for about 2,000 miles, and if you take the long haul into consideration that is equal to $2 a hundred for 1,000 miles. Now, the Intercolonial Railway, as I am informed by the Department of Railways and Canals, carries first-class freight 1,000 miles for 80 cents, and from Chicago to New York, which is about 1,000 miles, the rate is 75 cents per hundred, and yet hon. gentlemen opposite tell us that we are not suffering in the west. Now, the grain rate on the Canadian Pacific Railway from Winnipeg to Port Arthur, which is 431 miles, is 7¾ cents per bushel. It was over 8 cents a bushel, but they reduced it. On the New York Central Railway from Buffalo to New York, which is 440 miles, the average rate is 4½ cents a bushel, or about one-half what the Canadian Pacific Railway charge us. From Prince Albert, my home, to Fort William, which is about 1,000 miles, we pay 20 cents a bushel, but still these gentlemen will tell you that we cannot haul grain to the seaboard on this new line for less than 17 cents a bushel. Well, if that line can haul it for 17 cents a bushel, it would be a great boon to the people of the west. They would sit up all night making bonfires so glad would they be. Let me tell these gentlemen opposite that we do not want this new road simply as a grain road; we want it as a general highway connecting the older provinces of the east with the western country. The Grand Trunk Railway has a network of railways covering the whole of Quebec and Ontario, and when the Grand Trunk Pacific Railway is constructed, it will bring every little manufacturing and commercial centre, in fact, every man, woman and child in old Canada, into touch with the people of the west. Suppose you bought the Canada Atlantic Railway tomorrow and carried out the scheme of the leader of the opposition, what would be the result? You would have the Canadian Pacific Railway and the Grand Trunk Railway picking up the traffic along their own lines in the older provinces and carrying it on their own lines and the Grand Trunk having no connections at all with the west. That would leave Mr. Borden's road without feeders, it would be like a tree without roots, where would it get its traffic. The only people that can build this road into the west and make it pay are the Grand Trunk Railway people. They are in touch with all the industries of the older provinces, and they will bring the people of the west and the people of the east together. If we did not build this line and build it at once, the result would be that the Grand Trunk Pacific Railway or some other road would build from Chicago to the plains, and all our western trade would go through United States channels, and we would not get a dollar out of it. The revenue of the people of the west last year was $50,000,000, and the most of that $50,000,000 was spent in your industries down here, and went to pay your artisans, and Canada and Canadians got the benefit of it. Would any sane man advocate that all this western trade should go south of the boundary line. Well, if that should happen, you would have empty workshops in the east, and you would have blue ruin indeed. Now, is the time to build this transcontinental line, and if any blame is attached to the government at all, it is that they did not build it long ago. I myself have suffered in connection with freight rates. I have been in business in the west, and know whereof I speak. I have paid thousands and thousands of dollars to the Canadian Pacific Railway, at least half of which should be at the banks to my credit at the present time, if things were honestly done, and if it were taken into consideration that the people of Canada built the Canadian Pacific Railway and furnished the rolling stock, and made a lot of millionaires, who are trotting around giving money to institutions at the present time. Let me give you an instance of how we suffer in the matter of freight rates out there. It is an old story, but it is worth repeating. I purchased a car-load of apples, 190 barrels, in Seaforth, Ont., and I sent them home. In the innocence of my heart, I thought I would have to pay $150 freight, and I was figuring my profits on that basis. But lo and behold you, when I asked the Canadian Pacific Railway station agent at Prince Albert what the freight was, he blushed, because he had a little more modesty than the managers of the road, and he told me the freight was $518. My profits vanished into thin air, and went into the pockets of the Canadian Pacific Railway, to help them to pay 6 per cent dividend on a lot of water. And yet we are told that we have no grievance in the North-west. I could understand such a statement made for political effect by some one in the east, but coming from a member who represents a western constituency, I fail to understand it. Why, Sir, the government that are to-day in power in Manitoba would never have got into power in the world had it not been for the feeling that exists there against the Canadian Pacific Railway. Four years ago the idea got abroad that Mr. Greenway had made some kind of an arrangement to assist the Canadian Pacific Railway to build branch lines, and had refused to assist the Northern Pacific. That settled Mr. Greenway, and out he went. The Roblin government came into power in Manitoba because of that feeling, and they promised to give relief from the monopoly of the Canadian Pacific Railway, but the people asked for bread and they got a stone. Because they are carrying a lot of bonds, they say they have control. They have no more control than I have. These railways will all be under the control of the railway commission. The hon. member for Marquette (Mr. Roche) says, You are gauranteeing $13,000 a mile, and you have no control, whereas we have

given our guarantees, and we have control. What control have they? The same control as will exist over this railway when it is built, and the same control as exists on the Canadian Northern—the control of rates by the government through the railway commission when it is appointed. That is what is going to control the rates, and no flimsy thing in the shape of an order in council passed two days before an election. The Manitoba government said they were going to take two cents a bushel off the rate on wheat. They said that just before the election, but I do not think they have got it off yet. Even if they do take off two cents a bushel, the people will have to pay for it. It will be taking two cents out of one pocket and putting it into another.

Hon. gentlemen opposite talk about the Canadian Northern as a competing through line. It is a good railway; it is going to open up a first-class section of country, and serve a good purpose. But it is only a competitor for six months in the year. It will only run to Lake Superior. It has no connections, and it cannot collect traffic anywhere except on its own line. It is just a road fit to carry wheat to the head of the lakes for six months in the year, and perhaps to carry back a little merchandise to Winnipeg, if any one sends it up to the head of the lakes. If the Canadian Northern ever does any more than that, it must make its connections and build feeders in the east like the Grand Trunk or the Canadian Pacific Railway in the eastern provinces, in order to get freight.

Hon. gentlemen opposite say it is complained that there is not half enough traffic for that part of the Canadian Pacific Railway which runs north of Lake Superior, and which the hon. leader of the opposition wants to purchase. If that is the case, how is it that the company operate that and other portions of their railway, and pay 6 per cent dividends on stock which is half water? At least 50 per cent of the railroads in the United States do not pay anything on their ordinary stock. Here is a piece of road which we are told does not pay, and still the company pays 6 per cent dividend. There is a nigger in the fence somewhere. The people of the west know where it is; they are the ones who pay the piper. The only way we can get relief from the monopoly which was imposed on that country by the party of hon. gentlemen opposite when they were running the affairs of this Dominion, is to get another railroad constructed right through from the Atlantic to the Pacific, so that we shall have a road under government control on which the government can fix the rates. You cannot force the Canadian Pacific Railway Company by law, but you can force them by competition, to bring down their rates. Hon. gentlemen opposite tell us there is no such thing as railway competition. The hon. leader of the opposition, referring to the speech of the Minister of the Interior, tried to make out that there was no competition between railways and quoted as proof the high rate between Kansas City and Chicago. Now, I want to show you, from the report of the Interstate Commerce Commission, wherein the hon. leader of the opposition was mistaken. The annual report of the Interstate Commerce Commission for 1901 says:

> During the past summer the open tariff from Kansas city to Chicago has been 12 cents per 100 pounds, but the actual rate at which wheat was moved has been as low as five cents.

That goes to show that while the rate was fixed and published at 12 cents per 100 pounds, and that rate was quoted, the actual rate paid by the people shipping wheat was 5 cents per 100 pounds, which was brought about by competition.

Now, I want to deal with something that the ex-Minister of Public Works (Hon. Mr. Tarte) has been hammering at in and out of season, as well as hon. gentlemen opposite, with reference to canals. They say that canals regulate the traffic. I want to read from the report of the Interstate Commerce Commission for 1900, which goes to show that the Erie canal between Buffalo and New York does not regulate the traffic, but that it is competition between railways that does so. That report says:

> It has generally been understood that the canal from Buffalo to New York city, while it carried a comparatively small amount of the grain traffic, determined the rate at which the railroads should carry the balance, but Mr. Harriott testified that this was not true; that the canal was not now a factor, either in the carrying of the traffic or the making of the rate; that if the railway lines advanced their rates, the canal promptly followed; that the controlling factor was competition between these railroad lines, and that if this competition could be eliminated, advances in rate would only be limited by market conditions at home and abroad.

There is the statement made by the Interstate Commerce Commission, composed of gentlemen who ought to know, that the Erie canal at the present time is not a factor in regulating rates, but that the railroads are. With reference to rates in the west, we expect that this new railway, when built, will regulate them. We are looking forward to that.

We expect that this road will be built through a good country for colonization purposes, notwithstanding what hon. gentlemen opposite say. They state that the country is only a lot of rocks and water. What have they given to back up this statement? The government have answered them by producing reports of qualified surveyors and engineers and clergymen who have travelled over that country, and who had nothing to gain by making rosy reports about it. Against these reports what have hon. gentlemen opposite put? Their own statements. Well, Mr. Speaker, what are their state-

ments worth ? Imagine these people going to meet the electors. They say that country is no good, that it is all rock and water. The electors say : But the government have quoted from reports of surveyors and engineers that it is a good country. These gentlemen answer : But we say it is not, it is all rock. The electors say to them : You are not infallible ; we have heard your statements before. When Mr. Fielding brought down his first budget, you said that the country was going to ruin, that the factories would be closed, and that the people were going to starve. That was six or seven years ago, and the factories are not closed and the people are all right. Your statements must therefore be taken with a grain of salt. But, they say, our statements are all right now. The electors will answer : What about the Teslin and Yukon Railway ? You said that the land the government were going to give for the construction of that railway was worth a hundred million dollars ; but to-day no man will give a thousand dollars for it. Therefore, we cannot accept your statement; you must give us proof. The idea of supposing that the electors will take the unsupported statements of these gentlemen after their record ! When they go before the electors, they will be asked for proof, and they have no proof to offer. They expect that the people will take their word without proof, but they will be very much mistaken.

Now, I want to say a word about the proposition of the hon. leader of the opposition. If he had brought down that proposition earlier in this debate, what a lot of wind, what a lot of trouble, it would have saved. These gentlemen got up and talked hour after hour about running rights being of no use. They said we were going to waste a hundred million dollars. By and by the hon. the leader of the opposition, after having consulted the redheaded boy and the gentleman from Manitoba, came down with the scheme involving an expenditure of over $300,000,000. And in outlining that scheme, he declared emphatically, we are not afraid to spend money, return us to office and see what we shall do. Had he only brought down that proposition a little earlier, what a relief it would have been to some of his friends; what a flood of talk it would have saved. There is one thing that strikes me in connection with the two propositions, and that is this : When the right hon. the First Minister submitted his scheme, we had it explained by himself and his colleagues. We had the financial part of it gone into thoroughly by the hon. the Minister of Finance. We had every point made by hon. gentlemen opposite, during the two weeks they had been attacking the proposition, replied to. Well, when the hon. the leader of the opposition brought down his alternative scheme, we naturally expected to have it explained in all its details by hon. gentlemen opposite. But no, they all steered clear of it. They would not touch it. We did not hear any of them telling us what a fine proposition it was. But have we not a right to approach this alternative scheme of the leader of the opposition with an open mind just as well as hon. gentlemen opposite ? If they would only explain the merits of their scheme, they might convert us. Let them explain how much it is going to cost, what benefits will accrue from it to the country, and in what particlars it is better than the scheme of the government. But none of them will do that, they steer clear of its details, and they keep whacking away at the same old straw about the country back there not being fit for settlement, and about all the money we are going to spend. Their own scheme, however, they avoid as they would the plague. But just consider what a beautiful proposition it is. It will stand as a monument to the leader of the opposition who propounded it, and the redheaded boy and some others. They are going to build another line through New Brunswick, which will parallel the Intercolonial Railway and which will cost something like $10,000,000. Then they will build a piece of road from Montreal to Coteau, which will cost $1,200,000; after that they will buy the Canada Atlantic Railway. But I would ask : What do we want with the Canada Atlantic Railway ? Is that road not doing good work for the people now ? Is it not doing everything it can to relieve the congestion ? Is it not bringing to Canadian ports, not only traffic of our own country, but the traffic of the United States. Do these hon. gentlemen say, judging by our experience in the past, that the government could operate that road and haul freights over it at less rates than the Canada Atlantic Railway is charging ? I say no. Would the purchase of that road open up any new territory ? No. Why then should we throw away some $18,000,000 in purchasing the Canada Atlantic Railway ? The scheme is a beautiful one. I have here a map of it which was published in the Montreal 'Star,' and I wish it could be cut out and shown to every elector as a monument of constructive statesmanship. I would want no more convincing argument against the folly of this proposal. They are going to build from Depot Harbour to Sudbury. But what do they know about that country ? Yet they are prepared to go on and build that road. Then here is where the redheaded boy comes in, and that is the road along the north shore of Lake Superior. It is about as crooked as a dog's hind leg, it runs in and out, this way and that, in one place you start at a certain point and after you go seven miles you find yourself back within 200 yards of your starting point. That is the kind of road they want to buy. I do not blame the Canadian Pacific Railway for having constructed it

that way. I do not blame the engineers for having laid it out that way, because they had to use the water transportation in order to get supplies to build the road. It runs along the shores of the lake, with tortuous curves and heavy grades, and is of no use as a commercial road, and the redheaded boy would be glad to unload it on somebody. We built the road and paid for it and handed it over to the Canadian Pacific Railway, and now they want to sell it back to us just as they sold us back the lands that we gave them. If that road is such a good one, let them keep it. I would like to ask these hon. gentlemen, who are always professing loyalty, if that road is to be the only connection we are to have during the next twenty-five years between our eastern and western countries. What would happen, should unfortunately any trouble arise between us and our neighbours ? How long would it take them to send a steamer across and tear that road up, and where would we be then ? Our western country would fall like a pear into the mouth of the United States and we could not help ourselves.

Any one who will take the trouble to compare the government policy with that propounded by the leader of the opposition will find that ours is vastly superior and will have the effect of building up and populating the great plains in the west in a way we never anticipated up to the present. Talk about a hundred thousand people, why we have room there for millions. Here is the little province of Manitoba, about 65,000 square miles. That province is producing at present, although only one-sixth of it is under cultivation, something like 100,000,000 bushels of grain. Take the two provinces of Alberta, Assiniboia and Saskatchewan, where you have close upon 300,000 square miles of territory. What can they produce ? Their lands are equally fertile and the climate just as good as in Manitoba. What will they produce in the near future if you give the people proper railway facilities. But they will never be properly developed so long as we have to submit to a monopoly such as has controlled that country the last few years. I pointed out at one time that position of the stock raiser. If a stockman has a hundred steers that he had raised about three years old, he could drive them into a pen and divide them. He could put fifty to one side for the transportation company and the other fifty for himself. When he got the other fifty to market he would have to divide again and give twenty-five more to the company to bring back the commodities he has to purchase, so that out of his hundred steers, he only got twenty-five. We must have relief from that condition of affairs. As was pointed out in this House a short time ago, a great part of that trade will, in the near future, go down to the Pacific coast. The Chinese are awakening up and will eat flour after a while, the Japanese also will consume our flour, and in the course of a few years you will find that the railways will carry the products of the west as far as the third meridian, near Regina, and at that point that traffic will go both ways—to the Pacific coast and to the Atlantic seaboards, and every section of this railway will have all the freight it can handle. See how the cattle trade of that country is increasing, as the hon. Minister of Agriculture showed us a few days ago. It is only a drop in the bucket now compared to what it will be in the near future, if we get a proper system of transportation ? The government are acting wisely in bringing down this proposition, and will be supported by the people of the west. It is what the people have been looking to for years; and when the people of the east come to understand it, they will conclude that it is a good thing for them too.

The ex-Minister of Railways said in a jeering tone that Cox could not wait. The ex-Minister of Railways told us in a jeering way, 'Senator Cox cannot wait.' Why, Mr. Speaker, Senator Cox and the ex-Minister of Railways, too, are only flies on the wheel of this proposition. The people of the west say they cannot wait. They have said that for years. They cannot wait and they are not going to wait any longer. And the people of older Canada cannot wait. In the interests of this part of the country, it is absolutely necessary to have communication with the people of the west. And it is absolutely necessary, if they are going to hold their place in confederation, that they shall open up new fields of settlement, so that they may have a place to send their sons and also attract immigration as we are doing. That applies to Quebec, and, no doubt to New Brunswick and other parts of eastern Canada. This is a great national undertaking, an undertaking which will stand for ever as an evidence of the sagacity of the Liberal party. 'Senator Cox can't wait'—why, this whole country can't wait. The wheels of progress are moving on by leaps and bounds. Hon. gentlemen opposite need not think to stop them. And if they do not get out of the way, so much the worse for them. They will be like the cow that George Stephenson told about. When Stephenson built his first locomotive he was called upon to explain it to the committee of the House of Lords. And one old gentleman, putting on his spectacles, said : 'Mr. Stephenson, if your locomotive was going along its track and a cow stood in the way, what would happen ?' Stephenson's reply was : 'It would be bad for the coo.' It will be bad for hon. gentlemen opposite if they do not get out of the way. The hon. leader of the opposition was sagacious enough to see that. He knows that the public demand that something should be done. And so he comes forward with his own scheme. The scheme of the government has been called a hybrid

scheme. If that is so, this scheme of the opposition is a mongrel, piebald scheme. It is simply a thing of patches. There is a piece of government ownership here, a piece of private ownership there, and so on, all the way through. The fact is, the hon. gentleman went out fishing, and he arranged his bait for the fish he hoped to get. Something for the Canada Atlantic on one hook—he hoped to catch them ; another bait, a fat one, the finest of all, for the Canadian Pacific Railway—he hoped to catch them ; another for the Canadian Northern—he hoped to catch them ; another for the people of Montreal—he would give them a free port ; then the farmers of the west. Ah, he baited the hook with barns and warehouses—that, he thought, would catch them. But he will find that none of the fish will come to his hook. The people of the west understood this question. They want to use the water-ways, and will do so as long as the water-ways are open. But I have pointed out on a previous occasion in this House that something must be done in view of the fact that the water-ways are closed a great part of the year, and the further fact that our production is increasing very rapidly. If we are dependent upon the water-ways we shall have to store a great portion of our products at the head of the lakes during the winter, to await the opening of navigation, for harvesting and threshing are late with us, and the winter comes before the crop is out. I pointed out that it would cost about five cents a bushel to store grain for the winter, pay storage and insurance, allow for loss of interest, and so on. And when the grain is there, it must stay until navigation opens. Wheat may go to $2 a bushel but the farmer with his grain stored at the head of the lakes cannot take advantage of the improvement of the market. We are going to produce hundreds and hundreds of millions of bushels of grain. We cannot possibly store 200,000,000 bushels of wheat at the head of navigation. For, if we were to put that quantity on the markets of the world in the spring, the certain effect would be to depress the market and so the farmer would lose not only the five cents a bushel for storage, but, perhaps ten cents per bushel on the value of the product. If you add to the freight rate what it costs to store the grain all winter, you can make a rate that will successfully carry it to the seaboard by rail. When this is done, you will not needs the barns that my hon. friend the leader of the opposition proposes to build. I was amused when he mentioned barns. I wondered why he did not suggest furnishing the farmers with threshing mills. Then he might as well go on and furnish them with steam ploughs and wind-mills—he could furnish the wind-mills from his own side ; he would not need to buy them. I can tell the hon. gentleman the farmers are not looking for government assistance to build their barns. What the farmers and the settlers of the west are asking for is what they have a right to—fair and reasonable means of reaching the market with their products, and freedom from monopoly. Hon. gentlemen opposite cannot catch the people with the baits they offer. The numbers of hon. gentlemen opposite are few now, but I am afraid that after the next election their numbers will be beautifully less. If they keep up this amusement in which they are now engaged, the people will not send so many of them here.

I support the government's proposal for the reasons I have given. I did not want to give a silent vote, nor do I want to occupy too much of the time of the House. In closing I have only to say that I believe this project is one of the greatest things ever done for this Dominion. It is not only for the western part, for we are all Canadians, and we are all looking for the benefit of the whole country. Are we to remain for ever a mere fringe of settlement along the rivers and lakes ? That is what the policy of the leader of the opposition would condemn us to. I say, No. We are beginning to have some idea of the greatest wealth in the country to the north of us, wealth in forest, mines and fertile lands. The policy that will develop that country is the policy that will make a nation of Canada, will make this country the greatest colony of the British empire.

Mr. M. K. RICHARDSON (South Grey). Mr. Speaker, in attempting to address the House on the theme which has been the subject of debate for three weeks past, I do not suppose I shall be able to add either argument or information to what has been already said in the many speeches which have been delivered on both sides. Neither shall I attempt to follow the hon. member for Saskatchewan (Mr. Davis) in the rambling and discursive address he has given the House. In speaking to-day, he has dwelt upon his favourite theme, one that, I suppose affords him some satisfaction in addressing his constituents in the North-west. Abuse of the Canadian Pacific Railway seems a favourite form of discourse on the part of the hon. gentleman. I suppose it gives him the same satisfaction that that form of oratorical exercise so often practiced in the United States and known as 'twisting the lion's tail' gives to some politicians over there. And I suppose they are both intended to have the same effect in the elections. Whatever I might have to offer on this occasion, if there be no other merit in my address it will at least have the merit of brevity. Even if I had information and argument of great value to bring to the House, I feel that I have not on this occasion, sufficient command of my voice to address the House at any length.

I had the privilege and pleasure of listening to the very able, interesting and elo-

quent address made by the right hon. the Premier, in laying this scheme before the House. For, Mr. Speaker, I am ready to admit that however I may differ from the right hon. gentleman in some of his opinions, however I may differ from him in the reasons which he gave for his policy, I am not insensible to the charms of oratory, and I will concede that his speech had at any rate the charm of oratory. It had all the polish of diction, all the beauty of rhetoric which could be brought to bear upon a subject of that kind, and the right hon. gentleman certainly acquitted himself in a very pleasing manner so far as the form of his address was concerned. He dwelt for two hours in the realms of romance. But we are not able to endure long flights of oratory, we cannot soar at such great heights for any length of time, we have to come down at last to terra firma; and when we get down to solid facts and examine closely into the proposition laid before us, we find that after all the speech of the right hon. gentleman was of a decidedly romantic and imaginative character. When he was about finishing that speech and came to his peroration, after drawing a vivid picture of all the glory of the great North-west, of the bright fields of waving grain, of the immense population that would flow into that country as a consequence of the construction of this railway, and when he said: Gentlemen, all this you can have for the small sum of $13,000,000—well, it did appear to be cheap, I acknowledge that it did appear to be what you might call a bargain. We have heard addresses of that kind before. It recalled to my mind the experience of my boyhood when I saw flaming posters announcing the coming of some great circus. When the day came and I beheld all the outward splendour of the decorations, and heard the orator outside the tent telling us of all the wonders that had been gathered together from the four corners of the globe, and after I had parted with all the pennies that I had saved up, to go inside and see these wonders, I remember how great was my disappointment when I found that the reality was almost a blank. There was about as much relation between the outside show and the inside reality as there was between the grand and beautiful picture which the right hon. gentleman presented to us as his scheme, and the reality that we found when we came to examine it in detail.

The right hon. gentleman told us that there was a feeling throughout this country, that it was universal in every Canadian heart, that the time had come when Canada must have another transcontinental railway. Now that was a big thing. I do not know, however, that I have been sensible to that feeling. I do not know that the people generally whom I meet throughout the country have been conscious of any such want. I know there is a feeling throughout the country which has been expressed time and again, which I think is a universal sentiment, that the time for bonusing great corporations in this country has gone by, that the time for giving away great land grants or money grants for the construction of railways, is pretty well past in this country. There might have been a time, I think there was a time, when necessity did exist for assisting railway enterprises that were designed to open up new territory. There may be even at the present day occasions and circumstances that would justify parliament in granting such assistance, but no reason has been given to show that the present occasion is one of that kind.

Now, certain reasons were given by the right hon. the Premier why this scheme should be presented to the people. It was a surprise, I believe, to a great many members of this House. When we met here in the month of March there was no intimation that a transcontinental railway from ocean to ocean was in contemplation. We did know that there was talk of the Grand Trunk Company wanting to get access to the grain fields of the great west, and we were not surprised at it. It would indeed have been surprising if that company had not desired to enter into competition with other railway companies which were exploiting the great North-west. We were not surprised at that, and we were quite ready to believe that they would ask for some assistance, because we know that railways without exception are always ready to ask, and to take anything they can get out of the government, whether in land or money. But many members on both sides of the House thought that if the Grand Trunk Railway wished to get access to the grain fields of the North-west there was sufficient inducement for them to build a railway into that country with their own capital, with their own means, without seeking any substantial aid from the government.

Now, when we make a comparison between this enterprise, as a means of opening up that country, and the old Canadian Pacific Railway enterprise, we find that the conditions are altogether different. We remember that even after that company was formed, even after the country had to some extent been opened up, capital was still very charry about taking any risks in it. We remember that the stock of the company was sold at as low a figure as twenty-five cents on the dollar; and that it was a long time before it rose to anything like the ordinary market price of railway stocks, showing that it was regarded as a risky enterprise. Therefore it was an enteprise which required and deserved the support of the government, and I think this country has no reason to regret having given that support. Occasionally we find men like the hon. member for Saskatchewan (Mr. Davis), who, perhaps, owes all the material prosperity that he enjoys to the privi-

leges that have been provided for him by the Canadian Pacific Railway, who will still condemn the government of that day for having made liberal grants of land and money to that railway corporation. But I believe that there is, deep down in the hearts of all the people of this country, a conviction that the government did what was necessary under the circumstances, and that the consequences have fully justified its action.

Well, Sir, there is another very widespread feeling in this country, and that is against subsidizing railways. There are other cries also that are coming up to parliament from the people of this country. One of them comes from the manufacturers, who are asking for more protection, from the workingmen in the shops, in the factories, in the mine, in the fields, asking from this paternal government protection of some character. The government have turned a deaf ear to these requests, but when approached by a great moneyed interest like the Grand Trunk, they are quite ready to listen to it. Now we know that when any great project is launched in this country the first question asked is: Is there any money in it? Well, I say there is money in this enterprise: there are millions in it. But for whom? Not for the farmers of this country, not for the miners of this country, not for the fishermen of this country; but there are millions for the exploiters, for the grafters, for the speculators. These are the men who are coming to this government to see what they can get out of it.

Now, let me ask where did this idea originate? What was the genesis of the idea of another transcontinental railway? Not with the masses of the people of this country, not with the farmers of Manitoba or the Northwest Territories. They do not call for another transcontinental railway from ocean to ocean. It is true, we are told there was a congestion, and I believe there was in some parts of the country, and the people were asking for relief. But it has been pointed out over and over again that the congestion was caused, not so much by want of new railways, as by want of sufficient rolling stock, by want of better equipment on the lines that are already in existence in that section of the country. I believe that there is a very faint idea in Canada of the extent to which railway building is being carried on at present throughout our north-western country. There is now a great mileage of railway under construction; a great mileage already in operation is newly constructed with the ballast scarcely settled on it, and now we are projecting another great railway enterprise that will come into competition with them all. The congestion of which so much has been said, has already been provided for to a very great extent, although perhaps not entirely, because there were causes for it over which the railway companies, the Canadian Pacific Railway and others, had no control. They had difficulty, for instance, in getting all the rolling stock which they required; industrial centres are sometimes hampered in their operation, and there was a difficulty in obtaining the rolling stock which they had ordered, and for which they were ready to pay. But, I understand, and believe, that this year there will be a very great improvement in that regard.

I say that the demand for the building of this railway did not originate with the farming class of the country; it did not originate with the mercantile class; it originated first with the Grand Trunk Railway—but their proposal was not for a scheme of this kind. It was undertaken by the government after coming into contact with some large moneyed men who thought: Here is an opportunity to add to our millions. The suggestion no doubt was given to the government in that way, and has been taken by them. It is a very taking suggestion, and came at an opportune time, for it was necessary perhaps to divert the attention of the country from some other matters that should press upon it. I do not say that this session has been barren of legislation; some very important measures have been put through. But still the government were ready to seize hold of this for all it promised them, for all there was in it to them. It is not a commercial enterprise; it has far more of a political character than any great enterprise ever before projected in this country.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

Mr. RICHARDSON. When the House took recess at six o'clock, I was speaking of the reasons adduced by the government to excuse their great haste in pushing through this measure. The Prime Minister told us that a great crisis was upon the country, and that we could not wait, but he kept the House in the dark as to the nature and origin of that crisis. It certainly is not to be found in the alleged congestion of traffic in Manitoba or the Northwest Territories. It certainly is not to be found in anything which a man of ordinary information can discover, and therefore we have a right to ask: Why this mad haste on the part of the government; why this haste in absolute disregard of the statement put in the mouth of the Governor General at the opening of the session, that a transportation commission would be appointed to get light on the subject? We have been told in an off-hand way that there are mountains of information bearing on this government scheme, but nevertheless nothing tangible has been laid before parliament. Another excuse given for building this road

in such a hurry was that the bonding privilege might be abrogated, but that has been so exploded that no government supporter now attempts to resurrect such a bugaboo. It could only have been stated to the House by the Prime Minister in the hope that a lame reason and a poor pretense was better than no reason at all. Then, again, we had it stated from the treasury benches that if the scheme were not gone on with now, the Grand Trunk Railway might not be open at a future date to accept such a deal as the government is giving them at the present time. Well, Sir, it is not at all credible that the Grand Trunk Railway would at any date be simple enough to refuse the benefits which they are getting under this scheme. They are not going out of business in Canada ; they are likely to stay in the country, and they will be just as ready for a good deal with the government next year or the year after as they are to-day. As to this government road relieving the congestion of freight traffic in the west, that is an absurd proposition, because a scheme that will take at least seven years to carry into operation is not going to relieve the congestion of traffic in the near future. It is said also that it is necessary to have this railroad to open up new areas for settlement. Well, Sir, it must be evident to all that it is the greatest folly to open up larger territories for settlement than we already have, seeing that millions of acres already opened up are crying out for settlers. We have railways sufficient to accommodate 10,000,000 more people, if those railways were properly equipped and properly supplied with all the accessories that are needed to the successful operation of modern railways. When you have settlements at great distances apart you have to encounter great disadvantages, socially, municipally and educationally. Man does not live by bread alone ; he needs a larger life than the merely animal ; he needs social intercourse and all that it implies in culture, refinement and development. Isolation tends to barbarism, and one of the greatest difficulties we have to overcome in the settlement of our great North-west is that people coming from the larger social life of the closely settled districts of Europe become disheartened in a sparsely settled country. We need regular settlement to build up the country methodically, wisely and regularly. We need it for the culture, refinement and development of our settlers ; all of which are brought about by education, by religion, and by all those things that elevate the mind. We need regular settlement to furnish traffic to roads already built, to establish communities and to attract the best class of settlers to that country. It is a bad policy to build railways into new areas of territory that will not and cannot be settled for many, many years to come. It would be far better that we should have regular, consecutive settlement in our country. Again, I hold that it is not necessary to have another transcontinental railway as a means of communication with our great North-west. Nature has given to us lakes and rivers which afford an easy and a cheap means of transportation, and nothing that is known to science, nothing that is known to civilization up to the present day, can equal our noble waterways as a means of transportation. The facilities for transportation by these natural water routes are developing wonderfully. It seems but yesterday since the traffic was carried in comparatively small boats, but now these modern whale-backs take such immense quantities of grain that no system of railway yet devised can compete with them in cheapness of transportation. We are not opposed, as a party, to any necessary expenditure for the development of Canada, if it be carried out on proper and in methodical lines. The history of the Conservative party in the past in regard to transportation, and to commerce, and to manufacturing, is a record of the development and the extension of this country. The Canadian Pacific Railway is a monument to the transportation policy of the Conservative party. To-day we hear Liberals acknowledge that they were mistaken when they decried the Canadian Pacific Railway in days gone by, and that they are now willing to cheerfully admit that this great enterprise has brought honour on its promoters and upon the country. It would appear as if the Reform party, looking back on the history of the past and regretting their want of foresight, were now anxious to make a history for themselves ; were anxious to build themselves a monument to show that they have lived and worked for something. And so, Sir, they conceived this mistaken idea that another transcontinental railway was necessary. We on this side of the House are opposed to all hasty, ill-considered measures. We believe that the sentiment of government ownership is growing in this country, and so far as railway construction is concerned, this scheme of the government will retard the realization of that idea for at least fifty years. The experience in government ownership of railways and telegraphs and telephones in other countries seems to point in favour of government ownership in this country. We cannot attempt, and it would not be wise for us to attempt, to bring it about at once in Canada, but we should aim at it. We have the beginning of government ownership in the Intercolonial Railway, and it would be a wise policy for us to experiment on it further, and to see if we cannot make the Intercolonial Railway a success in a larger measure, and thus fully test the principle. The best value that the people of Canada get for their money comes to them through the postal service, and although it may have its faults as administered, it is the very best and the very cheapest service that is given to the people of this country, and it is managed by government. Not only in various coun-

tries in Europe, but in India, we have an object lesson of what government ownership is doing. Railways which have probably been built in that country for military purposes are now operated successfully and so as to pay reasonably well; and all over India there is a railway service, with fair accommodation, at the rate of half a cent a mile for passenger traffic, though, of course, there is a higher rate for some of the higher classes of people. The government of India holds the telegraph service, the telephone service and the postal service, all operated satisfactorily and all very cheap.

Now, I will touch for a short time upon the supposed cost of the government's project, and the absurd statement about $13,000,000 being the total amount which this enterprise will cost this country. In what sense do we own what we have not paid anything for? $13,000,000 would appear to be the amount that is to be thrown away, absolutely wasted, in the initiation of this scheme—something for which there will not be any asset in the way of service or property; nothing to show for it at any time from the beginning to the end. I know that the hon. member for South Ontario (Mr. Ross) asserted that he believed that that is all it would cost. He believed it, he said, because the Premier had said so.

Mr. CLARKE. What about the Finance Minister?

Mr. RICHARDSON. I fear that there may be other people who may be willing to take it on the ipse dixit of the ministers. It was a mischievous statement, I think, and one which will bear a little looking into. The hon. member for South Oxford (Rt. Hon. Sir Richard Cartwright) used an illustration to explain it. He said that if in buying a farm he mortgaged it for all he had to pay for it, it was not costing him anything; he had borrowed the money which he was going to pay for it. But if he got no service from it, or was renting it for nothing for fifty years, I think he would feel that he was making a very bad bargain. I would put a question to the hon. member: Suppose he said to his son: John, I have an opportunity of buying a farm for $5,000, and I can borrow the money to pay for it at 3 per cent, so that all the farm will cost us will be the interest that we will have to pay on that money; that is everything the farm will cost us. The proposition seems very fine to begin with; but it is a different thing when he adds: John, I am renting that farm for ten years for nothing, and you must work hard to earn the money to pay the interest on it, and perhaps in fifty years it may come into our possession when we pay the full price for it. It is evident, I think, to the most shallow thinker in this country that to construct that road from Winnipeg to Moncton we shall have to pay the cost of the construction, whether we pay it out of the supposed surplus or borrow the money to do so. We have to pay for it, or we do not own it. But the first cost of $13,000,000 is that which is absolutely lost—for which there is no pretense that there is anything had in the shape of service or possession.

But this is only like some of the other hollow pretensions made for this contract. The Prime Minister, when speaking of another part of the contract, said: 'There is something in this which I think will commend itself to the hon. member for Stormont and Cornwall (Mr. Pringle)'; and he read this provision:

> The company shall purchase all material and supplies required for the construction of the western division and the equipment of the whole of the said line of railway from Canadian producers, when the same are produced in Canada, and when such material and supplies can be purchased in the desired quantities and of equal quality suitable for the purpose required, and for prices and upon terms equally advantageous with those procurable elsewhere.

Is not that something magnanimous? It is equivalent to saying to the producers of Canada: In connection with this great and costly enterprise you shall have the privilege of tendering and competing with the producers of other countries for the furnishing of supplies. And yet this is held up as a great preference given to the manufacturers and producers of Canada in connection with this great public work. I say these are hollow pretensions, unworthy of a great government. The cost is enormous, a tax upon the efforts of the workers of this country, which will be felt for a lifetime. We paid cheerfully for the costs incidental to confederation. The farmers of this country were quite willing, in order that the great North-west should be developed and the terms of confederation carried out, to create a great competition with their own products, and to pay for that competition in the form of taxes. There has not been much grumbling about that. There has been a magnificent national spirit displayed. But there is no necessity for imposing such burdens upon them to-day. Will there be no let-up to this enormous taxation for the opening up of new territories? The confederation has been satisfactorily completed; the terms of confederation have been grandly and loyally carried out. By no parity of reasoning is there the same claim on the taxpayers of this country for this enterprise that there was for the building of the Canadian Pacific Railway. It may be said, what matters to us what the result will be fifty years hence? We will not be called on to pay more than the first ten years' interest; let future generations look after themselves. I think the framers of the Ashburton treaty on the British side may have felt an indifference something like this. They may have said: It is possible that this patch of Maine run-

ning up into Canada, and which ought to belong to Canada, may make a difference to the country in the future; but it will make no difference in our lifetime. Men who are nation builders do not act like this. This is not the method of the great men who build for the future welfare of their country. The pioneers of the older provinces built for the future; they bore burdens and hardships such as we have not to experience. Men in the west, with overflowing plenty to-day, not knowing anything of the struggles of the pioneers of other days, or realizing what they owe to them, are impatient of results. We do not begrudge them having all the facilities possible. I believe the counter proposition made by the hon. leader of the opposition is one that will work far better for the well-being, prosperity and immediate relief of the settlers in the great North-west than the proposition of the government. It works in harmony with the natural resources of the country and with our great lake and river transportation system; it points to the extension of the principle of government ownership; it means the saving of fully $50,000,000 to this country. This is a wise and statesmanlike proposition, whereas the proposition of the government is one which bears the imprint of haste, rashness and extravagance, and which suggests the warning contained in the old Latin proverb: Whom the gods would destroy, they first make mad.

Mr. R. HOLMES (West Huron). I do not expect, Mr. Speaker, that I shall be able to say much that is new in connection with this very much discussed subject, but I shall endeavour to express, as briefly as I can, my views upon it. The hon. member for South Grey (Mr. Richardson), who has just taken his seat, was exceedingly complimentary to the leader of the government. In his opening remarks he admitted that he had listened with considerable interest and a certain amount of pleasure to the charming oratory of the right hon. gentleman. He admitted that he himself was almost convinced by the right hon. gentleman's persuasive eloquence of the propriety and wisdom of this policy; and I wish to pay my hon. friend from South Grey this compliment, that I think he is the only one on that side who has spoken in complimentary terms of the leader of this government, or of any hon. gentleman on this side who has addressed the House on the subject before us. But let me here say that it is not by the charm of oratory alone, for which the right hon. gentleman is noted, that he, as leader of this government, has won his way to the hearts and sympathies and affections of the people of Canada; it is not alone by his sunny ways that he has won their esteem, but by his sterling integrity of character, and the fact that he has given this country the best administration it has ever had. And let me add, that whenever he goes before the people, be that time near at hand or distant, the people will express their confidence in himself and his administration, and in the proposition which he has submitted to this House.

The hon. member for South Grey told us that although delegations had come here asking for protection for various interests, although representatives of the labouring classes had come asking for more protection, this government had turned a deaf ear to their appeals. Representatives of the farming and other interests, he said, had come to the government seeking for the protection they desired, but the government had paid no heed to their complaints. But when politicians had come down with a large scheme on hand, for which they wanted government assistance, the government were quite willing to accede to their demands. Let me say to the hon. gentleman that the best and the only protection that can be given the labouring classes is to give them a market where there is a good demand for their labour at remunerative prices; and that is what this government is giving them to-day to a greater extent than ever before under any previous administration. And to our farmers, who are raising crops, not alone for the home market, but for foreign markets as well, who are producing a great deal more than the people of Canada can possibly consume, the best protection which the government can give is to provide them with abundant means of transportation by which they can send their products to the markets of the world with the least possible delay, and at the least possible cost. I would remind the House further that it is not true that our farmers and labourers have been calling on the government for protection in connection with their interests. I have no desire to take up the time of the House at any length in discussing the trade question, because it is not directly relevant to the matter before the House, but I wish merely to refer to it incidentally, in order to meet points which have been raised by my hon. friend and others in that connection. And in reply to my hon. friend, I wish to point out that not only did our farmers and labourers not send delegations to this government asking for protection to their interests, but, on the contrary, they sent delegations protesting against any increased protection being given in certain directions, and insisting that the government should look after the interests of the farming and labouring classes as well as those of the manufacturers by not generally raising our taxation any higher.

My hon. friend said that there were millions in this project. Well, one can hardly expect a transcontinental railway to be constructed from end to end of this Dominion without there being millions in it. But evidently what prompted this remark was

the idea in his mind, conveying the insinuation that there were millions in this scheme for somebody who would not give any return to the country. That suspicion has prevailed to a certain extent in the remarks of a number of the speakers on the other side, but has no foundation in fact. Where did this idea of a transcontinental railway originate, the hon. gentleman went on to ask. There was no demand, he said, for a transcontinental line. Let me inform the hon. gentleman, for his benefit, that, as far as the ex-Minister of Railways (Hon. Mr. Blair) is concerned, the idea of a transcontinental railway originated in his mind when in Vancouver. It had already been spoken about, but at Vancouver the ex-Minister of Railways expressed his thorough approval of the policy of building such a line, and of doing so with the shortest possible delay. The hon. gentleman went on to argue that the congestion in the west has been provided for, that there is now no special urgency for the construction of this road, that there was a time when there was urgency and special need for this road, but that that time had gone, and there is no longer any pressing necessity for its construction. Well, assuming that the position he takes is a good one, it is in direct condemnation of the proposal of his own leader, who desires that we should accept the scheme he has put before the House.

I shall not endeavour to touch on all the different points which have been raised in connection with this subject, but shall merely take up two or three as they present themselves to my mind. My hon. friend then alluded to what he termed the bugaboo of the bonding privilege. Evidently hon. gentlemen opposite have taken the cue from their leader, to ridicule the argument advanced in connection with this privilege by the government. But any one who is at all familiar with the history of this country knows well that the Americans have on several occasions alluded to the bonding privilege as only enjoyed by the Canadian people at the good will of our American friends. If he will look at 'Harper's Weekly' of one or two weeks ago—which can be had in our library—he will find in that journal an article dealing with this question. The writer of that article asks: What is the menace to the good-will now existing between the United States and Great Britain? And he replies to his own question by saying that the menace which exists to the continued good-will between the American and English nations is the presence of Canada on the North American continent, and until Canada is brought into the American Union by annexation, there will be no assurance of continued friendship and good-will on the part of the American republic towards Great Britain. Or, in other words, the abrogation of the bonding privilege is the weapon which the Americans are prepared to use against Canada. So long as Canada remains a British colony and a competitor with our American neighbours in trade and commerce, so long will it be a menace to the good-will that should prevail between Great Britain and the United States.

My hon. friend also alluded to the disadvantage of scattered settlement. Well, Mr. Speaker, it is rather late in the day for our hon. friends opposite to bring forward an argument of that kind. If they will look up the political history of this country and the records of this House, they will find that during the regime of the late Mr. Mackenzie, one of the very principles he advocated was that we should in those days build the transcontinental line then contemplated, according as settlement and development required. But our Conservative friends pooh-poohed that argument as a ridiculous one. They did not believe in the utilization of the water stretches; they did not believe in building the railways as the development of the country might call for it; but they did believe, and subsequently put in practice that belief, that the transcontinental line should be built through from end to end, regardless of whether settlement was sparce or otherwise. And now my hon. friend talks of the disadvantages of sparse settlement. There are undoubtedly great advantages in having settlements close together. There are great advantages in compact communities particularly in a country like the North-west where the privileges and comforts that go with many years of settlement cannot be enjoyed as we enjoy them in the older provinces. Close settlement is advantageous in a variety of ways which I need not enumerate. But in dwelling upon these advantages hon. gentlemen opposite are taking a course directly opposed to that which their party took a few years ago and have accepted identically the platform laid down by the Liberal party in connection with the building of the first transcontinental line. If it were possible for the spirit of the late Hon. Alexander Mackenzie to visit these halls he would be astonished to find that his principle and his policy and his platform had been adopted by those who in his lifetime so bitterly denounced him.

The hon. gentleman (Mr. Richardson) said it was not necessary to have another transcontinental line—not only that there was no urgency in it, but that there was no necessity for it. Well, if a transcontinental line is not necessary, what does he think of the plan proposed by his leader? What does he think of the alternative proposition laid before the House, I presume in all seriousness by the leader of the opposition? It is quite apparent from the speeches not only of my honoured and esteemed friend from South Grey, but from others as well, that the leader of the opposition did not discuss

with his followers the drafting of his policy, because they are all at sixes and sevens with regard to it.

Mr. CLANCY. Where ?

Mr. HOLMES. In the statement I have just referred to, to the effect that another transcontinental line is not necessary. That is one thing, and if that is not satisfactory to my hon. friend (Mr. Clancy) I can give him others. I could quote from the speeches of hon. gentlemen opposite showing how in many ways they disagree with their leader. The hon. member for East Grey (Mr. Sproule) in the earlier part of the debate spoke most vigorously against other railways getting running privileges over this road. He said it was an absurdity——

Mr. SPROULE. I repeat it—it is an absurdity.

Mr. HOLMES. Then the hon. gentleman (Mr. Sproule) disagrees with his leader.

Mr. HUGHES (Victoria). Not at all.

Mr. HOLMES. Either the member for East Grey, or the hon. member for South Lanark (Hon. Mr. Haggart), I am not sure which, stated that running powers. as provided for in the plan of the government were an absurdity and——

Mr. HUGHES (Victoria). Hear, hear.

Mr. HOLMES. The hon. member for North Victoria (Mr. Hughes) says hear, hear. Well, he may have other railway interests in mind at the same time that he is thinking of this.

Mr. HUGHES (Victoria). I wish to point out to the hon. gentleman (Mr. Holmes) that he has not put the case properly. No statement made by any hon. member here as showing the absurdity of the plan for running rights proposed by the government conflicts with the statement of the leader of the opposition. He pointed out the utter absurdity, we only pointed out the absurdity of such a scheme.

Mr. HOLMES. The explanation made by the hon. member for North Victoria may be satisfactory to himself, but I am sure it is not satisfactory to any other members of this House. Hon. members on this side will not accept as literally true—I am not suggesting that the hon. gentleman has wilfully misstated his statement of the case, for the hon. member for South Lanark, the hon. member for East Grey, and the hon. member for Hamilton (Mr. Barker) said that the scheme for running powers over this road was an absurdity. Let me quote from the leader of the opposition to show that that hon. gentleman took a view different from theirs :

It is difficult to give to one railway effective powers over a line under the control of another and competing railway. But if the government acquires the railway from North Bay to Fort William, it can maintain control over it and give all these railways running powers over it.

Some hon. MEMBERS. Oh, oh.

Mr. HUGHES (Victoria). Better tackle something you understand.

Mr. HOLMES. This is from the leader of the opposition himself :

The third point which I would submit to the consideration of the House, as a sound policy, is to assist in improving the grades of one or both lines from Winnipeg to Fort William upon the condition that complete control of rates is obtained and that the Grand Trunk Railway as well as the Intercolonial shall have running powers from Fort William into Winnipeg. This arrangement will bring the Grand Trunk Railway with all its great systems in Ontario and Quebec into direct touch with the railway system and industrial life of the west, inside of six months or a year.

There is clear confirmation of the statement I have made that hon. gentlemen opposite are at sixes and sevens among themselves and do not approve of what their leader proposes. The hon. gentleman from South Grey eulogized, as others on his side have done, the attitude of the leader of the Conservative party towards the Canadian Pacific Railway and have deprecated the attitude of the Liberal party towards that great institution. I have no quarrel with the Canadian Pacific Railway in any manner, shape or form; and I am willing to attribute to that company not only enterprise but engineering skill and ability of a very high order in the construction of its line. But I say and say without fear of successful contradiction, that every forecast made by the Liberal party when denouncing the concessions that were made to the Canadian Pacific Railway Company has been verified by our experience since that time.

Mr. SPROULE. Including the one that it would never pay for the axle grease for the wheels ?

Mr. HOLMES. The Liberal party as a party, never said that. Some individual member may have said so.

Mr. SPROULE. The hon. member (Mr. Holmes) is not a reader of the debates, of that time, or he would know better.

Mr. HOLMES. The hon. member (Mr. Holmes) is a reader of the debates—not as long as the hon. member for East Grey (Mr. Sproule) has been, perhaps, still, I have been in public life for a pretty long while for a young man. Some members of the Liberal party may have made that statement, but the Liberal party as a party never said that the Canadian Pacific Railway would not pay for the grease for the wheels. What does my hon. friend from East Grey think of the proposal made by his leader to buy the line from Fort William eastward ? Will that pay for the axle grease ? I am not saying it will not do so. But it certainly is not a paying proposition at the present time. My hon. friend from

East Grey was strongly in favour of government ownership. Hon. gentlemen on the other side seem to be of methodistical inclination. They evidently believe in sudden conversion. I am afraid they would not practice the principles favoured by that denomination. But their belief in the principle of government ownership is certainly a case of sudden conversion. During the sessions I have been in this House the members on the other side have denounced with all the ability they could command not only the management of the Intercolonial but the government ownership of that road. And when it was proposed to extend the government ownership by buying the Drummond County Railway to give the Intercolonial an entrance to Montreal, did these hon. gentlemen show themselves to be the friends of the principle of government ownership? There was not a man of them who was in favour of government ownership at that time.

Mr. CLANCY. Does the hon. gentleman (Mr. Holmes) say that any member on this side of the House had expressed himself as opposed to the principle of government ownership, or was what we said merely a fair criticism of the management of the Intercolonial?

Mr. HOLMES. If my memory serves me well, these hon. gentlemen were opposed not merely to the management of the road, but to government ownership and the extension of the Intercolonial to Montreal.

Some hon. MEMBERS. Oh, oh.

Mr. SPROULE. That is as near correct as the other statement that the hon. gentleman (Mr. Holmes) has made.

Mr. HOLMES. Hon. gentlemen opposite, to use a common phrase, do not like to take their own medicine. They like to rub it into this side, and we try to take it with as good a grace as we can. But when their disagreements and inconsistencies are referred to, they grow very uneasy and very sensitive.

It has been stated, stated more than once, and stated always with a sneer, that 'Senator Cox cannot wait.' I hold no brief for Senator Cox; I know nothing about him and do not feel called upon to defend him. But the fact that a senator happens to be identified with a project of this kind is not to his discredit, but very much the reverse. And, while hon. gentlemen opposite may sneer and throw out insinuations, I do not think they can place a finger upon anything of a discreditable character, so far as Senator Cox's public record is concerned. But I want to say this, that if there is one man on the other side of the House who, to my mind, should have remained in his seat while this discussion is going on and should not have taken any part in it, it was the hon. member for West Toronto (Mr. Osler) I think it is exceedingly bad taste for a gentleman who is interested to the extent that the hon. member for West Toronto is supposed to be interested in the Canadian Pacific Railway, to offer any criticism of this project. I notice also that when any reference is made to that hon. gentleman the members of the opposition act as if they were sitting on hornets' nests. No one on this side can allude to the member for West Toronto without two or three of them jumping to their feet and taking us to task.

In the course of the speech made by the hon. member for South Grey, I did not hear him make any specific allusion to the plan proposed by the leader of the opposition. If I am doing him an injustice it is not intentionally, but I tried to pay close attention to his remarks, and I failed to hear him make any general reference to the plan proposed by the leader of the opposition. While he was condemning the government proposal, I certainly expected that he would mention the plan of the leader of the opposition, and refer in eulogistic terms to the constructive statesmanship of that hon. gentleman who has put before the House a proposal which even members on the other side have been very careful in referring to. They have been exceedingly guarded in any specific allusions to it. While we have referred to it in very general terms they have abstained from going into a general dissection of the proposal of the leader of the opposition, because they knew perfectly well that the more it was dissected the less there would be found in it. Now let us look briefly at one or two features of the plan proposed by the leader of the opposition and compare it with that proposed by the government. The plan proposed by the leader of the opposition, if I may use a term that they have used in other connections, is a sort of hit and miss combination. It is like driving over a snow road in winter, full of pitch holes. Once in a while you hit a pitch hole and you get a jolt, and so it is up and down, as you pass from one to another. The plan proposed by the govtrol of rates; while that proposed by the ernment involves the construction of a line of railway from one coast to the other. In a word, you have there the two plans side by side. The plan proposed by the opposition will be to a certain extent an anti-Canadian policy, because it involves running through American territory, while on the other hand the plan proposed by the government is an entirely Canadian line.

Mr. CLANCY. Where does the plan of the leader of the opposition involve running through American territory?

Mr. HOLMES. Does not the Canadian Northern run through American territory?

Mr. CLANCY. What has it to do with the Canadian Northern?

Mr. HOLMES. Because he proposes to accept a portion of it as part of his system.

Mr. CLANCY. Does not the Grand Trunk run through American territory ?

Mr. HOLMES. Yes, but the Grand Trunk Pacific won't run through American territory.

Mr. CLANCY. Neither will the Intercolonial.

Mr. HOLMES. Well, when the Grand Trunk Pacific is built my hon. friend from Bothwell will no doubt enjoy the privilege of riding over it from one coast to the other. Then the plan proposed by the leader of the opposition provides for no government control of rates ; while that proposed by the government does. The plan proposed by the leader of the opposition means a joint operation, the company operating part of it and the government operating part of it; while the plan proposed by the government involves single control. The plan proposed by the leader of the opposition provides for the opening up of no new territory. The member for South Grey said we did not require to open up any new territory, that we had sufficient for all our needs at the present time. That may be true. We have a great deal of territory that is not occupied, it is open for settlement, and it is very encouraging to see that settlers are pouring into that territory by the thousands. The plan proposed by the leader of the opposition does not look to the opening up of one solitary acre of new territory ; while on the other hand, the plan proposed by the government opens up hundreds of miles of new territory which are, according to the reports laid before the House—though unfortunately our friends disagree with that—good for settlement and contain a great deal of undeveloped wealth. Then the plan proposed by the leader of the opposition provides for little or no development of the country; on the other hand, the plan proposed by the government proposes to develop the country for its entire distance. Anybody who knows what railway construction means knows that it involves an immense development of the country contiguous to it, and that will be the result of the construction of the Grand Trunk Pacific.

Then another very material difference between the two plans is in respect of the mileage. The mileage of the plan proposed by the leader of the opposition from Winnipeg to Quebec is 1,654, that proposed by the government is about 1,400, showing a difference of nearly 300 miles in that one stretch in favour of the government plan. From Winnipeg to St. John over the Intercolonial, as proposed by the leader of the opposition, is a distance of 2,232 miles; the distance of the road proposed by the government is 1,802 miles; showing a difference of 430 miles in its favour. Therefore, if the difference in mileage is of any importance the advantage is decidedly with the government proposition.

Now, the question may be asked. How is this new railway going to benefit old Ontario ? It passes through the newer portion of Ontario, but of what interest is it to old Ontario ? Well, I believe it is of vital importance to nearly all the towns of any importance in western Ontario. It is of importance to the towns that have connection with the Grand Trunk Pacific, because it will give them better access and better facilities of transport into the great Northwest. It is of importance to the exporters and to the manufacturers in all those towns, and I am more than surprised that our friends who are generally so much concerned about the welfare of the manufacturers, should be short-sighted as not to see that their opposition to this line means opposition to the extension of manufactures. A couple of weeks ago, on going home to my own town after this proposal had been laid before the House, I met a Conservative who has gone into manufacturing industries. I may say that they have been started since this government came into power. This firm have started within the last two years a manufacturing industry in my own town which did not exist previously, and it is to-day employing between 75 and 100 hands. One of the proprietors is a Conservative and a personal friend of mine—he told me that he thought this was one of the best schemes that was ever put before the country ; and that so far as he was concerned he would be very glad to endorse it. I believe, Sir, the feeling of that gentleman is the feeling of a great many others. Then this scheme is important to the portions of western Ontario, especially those portions contiguous to the waterways of which the hon. member for South Grey spoke, because if their plan is carried out in the building of branches and in increasing the traffic, I believe that in the years to come there will be so great a development in the North-west that even the Grand Trunk Pacific, the Canadian Pacific Railway, the Canadian Northern and all the other lines running into the North-west, will not be equal to the demands that will be made upon them. The productions of that country will be so enormous that I do not think all the transportation facilities that we are providing will be adequate, and it will be necessary to make use of the waterways. Therefore, it is of importance to the western towns, especially those that are situated upon the lakes, because they will derive a very direct benefit by virtue of this road.

Now, Mr. Speaker, it has been said by some hon. gentlemen opposite that this proposal was being put through regardless of the interest of the people of Canada. Well, who are the judges of what is to the interest of the people of Canada ? Is it our friends on the opposite side, or is it the government who best represent the people

of Canada ? As the Postmaster General asked, who should be the judges of whether it was in the interests of Canada or not, a party who had twice appealed successfully to the electorate, or a party who had been twice defeated ? I believe that when the people of Canada have an opportunity of expressing an opinion upon this project they will show their approval in no unmistakable terms, that they will do as they did on two previous occasions, express their confidence in the general policy of the government, and in what I might call for convenience, the special policy of the government in regard to the transcontinental line. Our friends on the other side of the House are very fond of throwing out the challenge : Appeal to the country ! Dissolve parliament and appeal to the country ! I well remember that prior to the general election of 1900 our friends uttered the same challenge : Appeal to the country and we are sure the people will condemn you. Well the government appealed to the country, and surely the government were not dissatisfied with the result ; and I am sure that when the government again feels called upon to appeal to the country the answer will be the same and that the experience of 1900 will be repeated, only perhaps to a greater extent. Our friends on the other side who have prided themselves for a great many years on being the party that endorsed the principle of 'Canada for the Canadians,' have in a certain measure abandoned that principle. They do not stand up for it with quite the same zeal and enthusiasm and earnestness as in the days that are passed. Perhaps they do not find the same political advantage in so doing. At any rate, it can be said without fear of successful contradiction, that the policy of the government is a policy of Canada for the Canadians, and as such it will appeal to the sentiments of the people of this country and will be endorsed by them. If the proposal made by the government is not one that will appeal to the good judgment and to the good sense of the people at large then I am at a loss to understand what proposal can be brought before this House that would appeal to their judgment. I do not for one moment think that the policy proposed by the hon. leader of the opposition (Mr. Borden, Halifax) is one that will appeal to the good sense and judgment of this country. I do not think that he himself believes it will do so, and if the policy proposed by the government is not one that will appeal to the judgment of the country then I do not think that it would be possible to frame a policy that would obtain their support. In this policy, the government have safeguarded all the interests of the people, they have not granted the concessions that were granted in previous charters, they are not granting an acre of land outside the right of way on the part that is built by the government, they are not granting any exemption from taxation or any concessions such as were granted under the previous administration. The government has taken the wise precaution of safeguarding and looking after the interests of the people ; and the people will appreciate that fact. Hon. gentlemen opposite have tried to justify their opposition by saying that if some other plan or proposal had been introduced they would have felt disposed to support it. That is an easy thing to say, but it has no meaning. The government are not asking support for some other plan or proposal but for this plan and for this proposal. And my experience in this House convinces me that no matter what proposition might be brought down by the government our friends on the other side would find an easy way to avoid supporting it.

Sir, I believe we are entering upon a new era so far as our railway policy is concerned. We are entering upon a policy that is a commendable one, which will be approved of and endorsed by the people at large, endorsed not alone by our political friends and political sympathizers of the government, but which will win to it the support and the good-will of many who have formerly voted on the other side. One cannot look on this great and wonderfully developing country of ours without realizing the urgent necessity of, as soon as possible, providing additional railway facilities for the vast and ever expanding production that will take place in the near future, and I am satisfied that when this proposition has been placed before the people it will meet with their cordial and warm endorsation and approval.

Mr. GEO. A. CLARE (South Waterloo). Mr. Speaker, it is not my intention to make any lengthy remarks on this very important question, for I know that I cannot do it justice, and that anything I may say will be said in a very imperfect manner. The hon. member for West Huron (Mr. Holmes) made the remark that the farmers of this country had never asked the government for protection. He said this in reply to what was said by the hon. member for South Grey. I wish to state that I was with a deputation of farmers of this country who interviewed the government to ask for protection for the beet-root sugar industry. The hon. gentleman says that the farmers are free traders and do not want protection. Let me say to the hon. gentleman that to-day there are, at all events, ten times as many farmers in this country who are protectionists as there were twenty years ago. Let me say to him too that the farmers of South Waterloo who have found a home market by the establishment of manufacturing industries and consequent growth of the towns in that constituency, are protectionists to-day, so much so that this government has seen fit to gerrymander South Waterloo to prevent the farmers of that

county electing a Conservative member to this House. The hon. gentleman himself not long since performed a balancing feat, in this House, by supporting the tariff introduced by the Finance Minister and claiming that it was a good and a heaven-born tariff; but at the same time asking for an increased protection on salt, and there are many other members too on that side of the House who while they praise this heaven-born tariff have asked for protection for the particular industries carried on in their counties. The questions of transportation and the tariff are, I claim, the most important that can be discussed at this time, and therefore the long discussion we have had has been an education, not only to the members of this House, but to the country at large. In my opinion it is unfortunate that a question of this kind should be discussed as a party question. The government left no chance to their supporters to express an honest independent opinion upon this question. They made the bargain, signed the contract with the Grand Trunk Pacific, and forced their supporters to vote for it. This may be party government, this may be as it should be, but in my opinion, so important a question should first be discussed in the House, or at any rate the government should discuss it with their supporters before signing or adopting the contract. Instead of this the government first made the contract, they then held caucus after caucus, forcing their followers to support it, and to-day, when it is being discussed in this House, members, who in caucus opposed this Bill are supporting it. When the right hon. the Premier brought down this Bill he was, as might be expected, received with great applause. When he talked of a great transcontinental road from the Atlantic to the Pacific he was applauded by his supporters, but when he talked of the bargain actually made with the Grand Trunk Pacific Railway, the House was silent and nothing but his own voice could be heard. It was not until he sprang the bonding privilege panthom and pictured the dangers which might arise from an abrogation of the bonding privilege, did his supporters enthuse, and I firmly believe they applauded because at first sight they thought there had been discovered an excuse, flimsy as it was, which they could give to their electors for supporting the perpetration of such an outrage upon the country. We saw a smile of relief cross their faces, and they cheered; but when the bonding privileges were explained to them, when it was shown by gentlemen on this side, that if the bonding privileges were abrogated, Portland would not do the business it is doing to-day, and that the result would be to bring trade to Canadian ports, a benefit not a loss to Canada, then these gentlemen became so afraid of the bonding privilege argument that they have not resurrected it in this House for many days. Why, the vey best thing that could happen for the eastern provinces would be the abrogation of the bonding privileges, for then the freight from the west which did not come over the St. Lawrence route to Montreal or Quebec, would have to go by rail to St. John, or Halifax, or Sydney, thus building up these Canadian ports. To hear the Prime Minister talk about the abrogation of the bonding privileges, one would think that there was no Intercolonial Railway.

I am not opposed, Mr. Speaker, to supporting at some future time a great transcontinental railway, if there is necessity for it. I believe that it is proper to help the Grand Trunk Railway to enter the fertile plains of the North-west Territories. I believe that we should give our settlers railway facilities to ship their goods eastward. But, Sir, before we build a railway from Winnipeg to Moncton we should know what the country is like, we should know what the difficulties of railway construction are likely to be in that country, and we should know the approximate cost of the railway to the people of Canada. This information we have not obtained, simply because the government have not such information to give us. Why was the hon. member for North Renfrew (Mr. Mackie) put up to tell us what that country is like? Why, because the government have no adequate information. He is the only man who has given us information about the northern part of Ontario and Quebec, and he claims that there are timber limits there and some lands suitable for agriculture. I am glad, and I believe every Conservative is glad, to hear that we have good farming and timber lands in that region. But what kind of information is this, to warrant the government in building a railway there. The hon. member (Mr. Mackie) saw good land and good trees there, but he knows nothing about the difficulties of railway construction in that territory. He tells us that he knows more about it than the engineers sent out by the Ontario government, who, he says, were never in the vicinity where this railway is to be built. If that be so, then the information given by the hon. member (Mr. Mackie) is the only information which the government has, and that is exceedingly poor information upon which to risk the expenditure of millions and millions of dollars. Accurate scientific explorations and surveys are the only source of such information, and these we have not got. For this among other reasons I am opposed to the line between Winnipeg and Moncton at present.

In contradistinction of this policy of the government we have before us the proposition of the leader of the opposition. His policy is to extend the great Intercolonial Railway from Montreal to Depot Harbour; to build a connecting link from Scotia Junction to Sudbury; to nationalize the

road between Sudbury and Port Arthur and to improve the line between Port Arthur and Winnipeg. This scheme of our respected leader will not only allow the Grand Trunk Railway to enter Winnipeg within the next six months, but it will also permit the Intercolonial Railway to enter the prairie city. It will also give eastern connection to the Canadian Northern Railway, and if it is adopted, the Grand Trunk Railway would be enabled, and the Intercolonial Railway as well, to help in carrying out the crop of the year 1904. But, Sir, the most important thing of all is that these roads will be under government control. That is of untold importance in a new country like ours. The Minister of Agriculture, in the course of his speech a few days ago, made this statement:

> If we do not provide a means by which the Grand Trunk corporation may be able to get an entry into the North-west Territories, through our own country and under our own flag, we all know that the Grand Trunk Railway has its connections with the railroads of the western states of America, and that it will obtain an entry by means of those roads into our North-west, and will bring down a large portion of the traffic of that country through American territory and by American lines of communication instead of through Canadian channels of communication. It is the duty of the government of this country to see that an evil of that kind shall not arise in the near future; because we know that the interests of the people follow the channels of export traffic; and if a large portion of the people of our North-west Territories are looking to the great railroad corporations of the American union in alliance with the Grand Trunk Railway of eastern Canada, they will be looking towards the American union for other purposes; they will be buying their necessities in that country instead of buying them in eastern Canada, who can rightly and properly supply them. With this in view, it is a crying and immediate necessity that the government of Canada, supported by the parliament of Canada, should immediately arrange that the Grand Trunk Railway corporation should have an entry into the North-west Territories, and that in doing that we should provide a new and better line, the shortest and the cheapest means of communication for these territories, not only with eastern Canada but with other seaports so that their produce may be carried to the natural market of our food products, the mother country.

The hon. gentleman surely knows that the Grand Trunk Pacific, if the Bill receives the sanction of this House, will not be built for five or six years; he knows that the Grand Trunk Pacific, however, will be ready within one year to carry freight from at least a part of the province of Manitoba into the city of Winnipeg; and I ask him if, by the argument he has laid before this House, he is not providing a way by which the Grand Trunk can send its freight through American territory to the seaports? If, however, the plan submitted by the hon. leader of the opposition is adopted, the Grand Trunk Company will be able to carry freight from the west over their own road in the eastern provinces within six months. Yes, Mr. Speaker, they will be able to carry the supplies and the materials for building their own road through Canadian territory to the North-west.

But the hon. Minister of Agriculture was not always so careful to have the crops of the North-west go through Canadian channels. Did he not, and did not the party which he supports, oppose the building of the Canadian Pacific Railway north of Lake Superior? Did not he and the party with which he is allied oppose the policy of protection introduced by the Conservative party into this country? I claim that these two acts of the Conservative party saved the provinces of the North-west to the Dominion of Canada. I ask again, Mr. Speaker, if the Canadian Pacific Railway had not been built in the North-west, and if hon. gentlemen opposite had had the opportunity of introducing free trade or commercial union into this country, would the grain of the North-west come east through the provinces to the sea-coast, or would it go to the south, which the hon. member for North Norfolk (Mr. Charlton) said in this House this session was the natural market fot it? Would the western provinces now be a part of this great confederation if that policy had been carried out? I claim, and I believe a great many members on the other side of the House agree with me, that the confederation of Canada would have been disrupted long ere this if such a policy had been carried out.

The hon. Minister of Agriculture, in his address to the House on this question a few days ago, made an estimate of the probable crops of the North-west in 1906 and in 1911. He had an arithmetical way of reckoning them which I have not time to follow. I will take his word, for once at any rate, and admit that he was correct. The hon. gentleman calculated the number of cars that would be required to take the amount of grain which this country would have for export in 1906 and 1911, and he left his calculation there. It is my intention to carry the calculation a little further, and to show how many trains it will take to carry the grain from the North-west to the eastern provinces and the seaboard. He calculated that we would have for export in 1906 60,000,000 bushels of wheat and 28,000,000 bushels of other cereals, and 15,600 head of cattle. This would be equal to 88,000 cars of wheat and other cereals, 9,750 cars of cattle, taking 16 head to each car. To move this crop would require 1,955 trains of 50 cars each, or six trains a day. Now, 50 cars to a train may be a large estimate; but under the policy advocated by the Conservative party, the gradients on the railways are going to be made perfect. A train of 50 cars would be considered a very small train on the New York Central Railway. A

train would not be sent out on that railway unless it had more cars than that. Now, all this crop could be shipped in six months by 12 trains a day of 50 cars each over one road, or in three months by one train every hour. The hon. minister estimates that in 1911 we shall have for export 100,000,000 bushels of wheat and 40,000,000 of other cereals, and 250,000 head of cattle. This would be equal to 140,000 cars of wheat and other cereals and 15,625 cars of cattle; that is, 3.112 trains a year, or 8½ trains a day of 50 cars each. All this crop could be shipped in six months by 17 trains a day of 50 cars each, or in three months by one train of 50 cars every forty-three minutes. But we have two lines, the Canadian Pacific Railway and the Canadian Northern Railway, to Port Arthur, and if the proposition of the hon. leader of the opposition is carried out, we will have also the Grand Trunk and the Intercolonial Railway. But leaving these two railways out, I will show you how long it will take the two roads which we have to carry out that crop. In 1906 the whole estimated crop could be moved in three months by each road running one train every two hours. If they took six months to move it, they would have to run a train every four hours. In 1911 the whole estimated crop could be moved by each road running one train of 50 cars every one hour and twenty-six minutes in three months. Mr. Speaker, the congestion is in the west not in the east, and the hon. leader of the opposition and the members on this side of the House are prepared, as they have been in the past, to assist in building railways through the west, where they will be especially beneficial to the people of Canada as a whole.

But it is true that the farmers of the North-west have not sufficient granaries, and have to ship direct to the cars as soon as the grain is threshed. More elevators should be built, as stated by the hon. the leader of the opposition, and more elevators will be built if his policy is carried out. Even without any assistance from any government, the farmers and other interests of the North-west are building this year over fifty elevators, which will be completed before the crop is brought in, and these elevators will be capable of storing over 54,000,000 bushels.

The Minister of Agriculture a day or two ago in his defence of the Grand Trunk Pacific scheme advanced the argument that western wheat would before long be ground in the west altogether and shipped eastwards as flour and that this flour would be carried by rail. The argument is not sustained by the facts and is absolutely misleading.

Minneapolis is the greatest milling centre of the continent, shipping in 1901, 15,995,421 barrels of flour. The entire export of flour in 1901, from Atlantic ports, including Canadian as well as American ports, was 16,484,400 barrels. Deducting from this total the shipments via New Orleans and other gulf and southern ports (1,251,900 barrels) which were outside of the sphere of influence of the great lakes, leaves a total of 15,223,500 barrels exported from Atlantic ports. Minneapolis shipments therefore exceed the entire export trade of the continent for which a new route could compete. Several million barrels of these shipments were consumed in the west. The thing is to see what became of the east-bound portion of the traffic. Duluth shipped via the lakes in 1901, 5,634,225 barrels; Milwaukee, 2,238,778 barrels; and Chicago, 918,763 barrels, making a total water-borne traffic from these three ports of 8,791,766 barrels, equal to 57 per cent of the entire export trade of the continent from Atlantic ports, exclusive of the gulf. Shipments from other western ports brought the total receipts by lake at Buffalo up to 11,053,439 barrels. Other ports including Cleveland, Erie, Oswego, Ogdensburg, Montreal, Kingston, Midland and Depot Harbour received a considerable additional quantity of flour by lake, bringing the total of lake shipments to over 12,000,000 barrels. In other words if we consider the export trade alone, and that is all that can be considered in the present connection, the volume of traffic in flour carried by the lakes was four-fifths of the total export business of the continent. This would leave about 3,000,000 barrels of export trade to be accounted for and presumably carried by all-rail. Now if we deduct from this the flour carried east by railroads from the region south of the zone influence of the lakes it will be readily seen that a very small percentage of export flour is carried east by all-rail routes.

It is true that the total rail shipments by eastern lines out of Chicago amounted to 6,791,184 barrels, but the greater proportion of these were domestic flour for distribution through Indiana, Ohio, Michigan, Pennsylvania and other states where lake competition does not come directly into play. It is worth noting, too, that while the total rail shipments from Chicago eastward including an enormous domestic distribution as above stated) amounted to 6,791,184 barrels, the lake shipments from Duluth alone were 5,634,225 barrels in 1901, and increasing in 1902 to 8,703,330 barrels.

The actual fact is that in the carriage of flour as well as of wheat the water-ways are handling more and more of the traffic, and the hope that the Grand Trunk Pacific may be able to carry flour if it cannot carry wheat is utterly delusive.

In this connection I wish to address the House for a few moments on our natural system of transportation, namely, our waterways—a question of immense and immediate importance.

We have within Canada from Fort William and Port Arthur to the ports of Georgian bay, an inland 'water-highway' which

properly equipped will surpass any commercial highway by land or sea in the world.

But without the expenditure of a dollar we can, to-day, lay down the products of the West in Liverpool, by our existing railways and water-ways as cheaply as we can by the proposed all-rail route, carry these products to Quebec alone.

It is established by the best known experts upon transportation questions that bulky commodities are carried by water for one-tenth the ordinary railway rates. In the United States with their magnificent railway equipment, their almost perfect gradients, return cargoes, and fierce competition the best result yet attained in railway freightage is an average of eight-tenths of one cent per ton per mile. On the other hand, the 28,000,000 tons of freight which passed through the Canadian and American Soo canals in 1901 were moved at the rate of eight-tenths of one mill per ton per mile—being one-tenth of the lowest average railway rates. In 1902, this freightage increased to upwards of 35,000,000 tons. Owing to higher wages and increased cost of fuel the water rate was almost nine-tenths of a mill per ton per mile in 1902, but, as the same conditions affected the railways, the proportion above stated still holds good.

I do not, however, propose to adopt these figures for the proposition just stated, namely, that it will cost as much to take the western produce as far as Quebec by the new all-rail route as it will cost to deliver it at its ultimate destination in Liverpool, if we utilize our waterways; as for this proposition, I need only adopt the figures and the argument of the hon. member for Burrard, and other hon. members supporting the government.

The member for Burrard said :—'The best transportation authorities have stated that freight can be carried four and a half miles by water for every one mile by land.' My hon. friend then proceeds to show that with the Panama canal completed, produce can be carried from Moosejaw west, by rail, to the Pacific, 960 miles, and thence via Panama canal to Liverpool, in all a distance 9,480 miles, as cheaply as it can be carried from Moosejaw, east, by an all-rail route to St. John, 2,124 miles, and thence to Liverpool (2,700) in all 4,824 miles—in short by water double the distance for the same money.

Now, taking the figures and the system of the hon. gentleman we have this startling result. The distance all-rail by proposed line from Winnipeg to Quebec is 1,500 miles. Assume that the road is made equal in all respects to American competing lines. The cost of carriage for this part of the journey is equal to 4½ times the same distance by water, namely, equal to water freightage for 6,750 miles. Add the distance, per steamer from Quebec to Liverpool, 2,632 miles, making a total distance in water mileage from Winnipeg to Liverpool via new road of 9,382 miles; and with this clear financial result that the grain and products of the west counting from Winnipeg only will cost as much landed in Liverpool as similar products of other countries carried by an all-water route will pay for a transport of 9,382 miles. We are thus 9,382 water-rate miles from Liverpool on every shipment made by the government's all-rail, all-Canadian, transcontinental route, via Quebec, and doubly worse if carried to Moncton.

Can we shorten the distance, is a practical question? Ocean freightage is the same from Montreal, as it is from Quebec to Liverpool. Quebec is nearer to Liverpool than New York by 418 miles, and the ocean rate being the same from Montreal as from Quebec; Montreal is for freightage purposes, 418 miles nearer than New York.

Make Montreal then our objective point. If we are to successfully compete with New York it will be by utilizing our magnificent waterways. Talk of American gradients. It is level—and where it is not level, it is down grade—by water, from Fort William to Montreal and Quebec.

The distance from Fort William, and not only from Fort William, but also from Duluth, Marquette, Milwaukee, Chicago, and the American Soo, to Liverpool, is shorter by way of Depot Harbour and Montreal or Quebec than by way of New York. Develop our waterways—nay take these great highways as they are and only equip them with proper transports and terminal facilities—equip them as the Minister of Agriculture, only last session, claimed they should and must be equipped—and we have the transportation problem solved, not only to the complete relief of the west, but in a way that will divert to Canadian channels an important share of the traffic east and west of 30,000,000 of Americans whose transport trade is tributary to the great lakes. This is the key to the situation—the key to the solution of a great transportation problem—and the key to national wealth.

Hope in the future of Canada. Why, Sir, already, history has written the Conservative party as the pioneer of Canadian hope, the founder of Canadian faith, the mainspring of Canadian progress, and the architect of Canadian fortune. Faith? Why, Sir, Providence has marked the way and nothing short of culpable ignorance and criminal incompetence can stem the flow of the mightiest stream of commerce, the world will ever witness through this great central continental channel. Why, already, Sir, more freightage passes through the Soo locks in their 240 to 260 days of navigation than passes through the Suez canal in the whole year, and it should be the ambition of every Canadian to secure, as we can secure, not only the carriage of our own produce but, in addition, the carriage

of an important share of American traffic, through Canadian channels, as nature designed it should flow.

I have shown that freightage from Winnipeg to Quebec has to be carried for what is equal at a water mileage to a distance of 6,750 miles to Quebec, and a total of 9,382 miles to Liverpool, and that as far as cost of ocean carriage is concerned it is the same from Montreal as Quebec. I propose to show that a saving of 2,632 water-miles or twenty-eight per cent of the total cost can be effected by adopting the rail and water system of carriage from Winnipeg to Montreal. First take route via Depot Harbour :

	Water Miles.
Distance from Winnipeg to Fort William 426 miles converted to a water rate, 426 x 4½..	1917
From Fort William to Depot Harbour said to be 444 miles, say..	491
From Depot Harbour to Montreal, 380 miles converted to a water rate, 380 x 4½..	1,710
Making a total from Winnipeg to Montreal, mixed water and rail, converted to a water mileage of....	4,118
To this add the distance from Quebec (and from Montreal the cost is the same) to Liverpool..	2,632
Making a total distance at an all-water rate from Winnipeg to Liverpool of, not 9,382 miles as it is if carried by all-rail to Quebec, but a total to Liverpool of..	6,750

In other words a saving of the total cost of carriage from Quebec to Liverpool, a distance of 2,632 miles, giving us a total carriage of 6,750 as against 9,382 water miles.

Other Georgian Bay routes.

Distance—by existing railways.

	Miles.
From Owen Sound to Toronto.. ..	120
" Meaford & Midland to Toronto..	118
" Penetang to Toronto	105
" Collingwood to Toronto	97

These distances can be shortened—particularly in the case of Collingwood. All these Georgian Bay ports are within a range of about 500 miles from Fort William, so that, although we have only a 14-foot channel through the St. Lawrence canals to Montreal the loss on this will probably be more than made up by the shorter railway haulage, and as has been shown in the route via Depot Harbour, it will be found, that, by these routes too the western output can be landed at Liverpool for the same money as it can be taken to Quebec by the proposed Grand Trunk Pacific Railway.

Three causes and three causes only, have barred our way to complete success in the past.

1. The lack of consumers in the west, preventing the possibility of large return cargoes.

2. The lack of transports or lake carriers sufficient to secure rapid concentration of the western products at Georgian Bay ports and at Montreal and Quebec, as well for immediate carriage to Liverpool as for the purpose of being forwarded in winter to our maritime ports.

3. The lack of adequate terminal facilities both in the matter of dockage and rapid handling.

The first obstacle is being overcome by the steady and rapid influx of settlers in the west, and this in itsef will go a long way towards creating the fleet of vessels we require ; and the third difficulty is one for the careful and immediate consideration of a competent administration.

I have, Mr. Speaker, particularly within the last few months, given a great deal of thought to our transportation needs, and I have come to the conclusion that I cannot support the proposal of the government. There are no means of ascertaining the extent to which the country is being committed by the proposed line. I believe it will cost the country over 150 million dollars. Mr. Roblin, the Premier of Manitoba, who has made the question of transportation a study, and who should know more about it than any other living man in the province of Manitoba or possibly as much as any man in the Dominion of Canada, is opposed to this scheme. Sir William Van Horne, the first choice of the government, as judge of this very question, is opposed to this scheme. It affords no solution of the great transportation problem. It postpones for fifty years government ownership of railways. These, Mr. Speaker, are some of the reasons which lead me to oppose the government scheme.

On the other hand, I can and do heartily endorse the policy so ably and clearly outlined by the leader of the opposition, and for the following reasons :—

1. It will give the people a chance to vote upon it before the country is finally committed to it, and the means of obtaining such information which will enable them to form and pronounce an intelligent judgment upon the question.

2. It will afford immediate relief to Manitoba and the west, stimulate and perpetuate the tide of immigration to Canada, and rapidly develop the resources, promote the industries, and mulitply the wealth of all sections of the country.

3. And I am prepared to support this policy not only as a means of so extending and completing our great national railway—the people's line—as to make it immediately remunerative, but also, working as it will, in harmony with our magnificent waterways and constituting a new bond of union, as a policy calculated to blend and unify the interests of the west and east, facilitate and increase interprovincial trade, and secure by a practical scheme, over nature's highway, the carriage of Canadian

products through Canadian channels to Canadian ports.

4. I support it as the only satisfactory proposal yet made for effective control and reduction of rates; affording as it does, immediate and effective competition of four rival railways east and west, and the complete utilization of the great lakes, our canals and the St. Lawrence.

5. I support it as the only feasible plan by which the vast and increasing output of the west can be carried cheaply to the sea and by which our people of the maritime provinces are secured in the enjoyment and benefit of a fair share of the transport trade of Canada east and west.

6. And I support it, with abounding confidence, as the statesmanlike policy of the great Canadian statesman of to-day—the worthy successor of Canada's greatest statesman—I support it as the fourth great step in the progressive history of Canada—(a) confederation (b) the construction of the Canadian Pacific Railway, (c) the national policy, and (d) the completement of these, the Conservative policy of to-day—Canada for Canadians and the empire,' 'Canada a nation within an empire.'

Mr. J. E. ARCHAMBAULT (Bertheir). (Translation). Mr. Speaker, I shall not undertake to deal exhaustively with the national transcontinental railway scheme; but the question is such an important one that I consider it my duty to point out to the House the advantages which the construction of this road would ensure to the province of Quebec as a whole, and more especially to the constituency which I have the honour to represent. I shall take up the matter without further preamble.

One of the main reasons brought forward by the government in support of the measure under discussion is the necessity of promoting settlement in the province of Quebec and of providing further means of transportation and of access. As regards my own constituency and the neighbouring counties, that reason is a most serious one. The county of Berthier is 75 miles long, extending from Berthierville to St. Michel des Saints, and is traversed by two railways: the Canadian Pacific and the Great Northern. The Canadian Pacific Railway crosses the lower part of the county, at a distance of about six miles from the villages of Lavaltrie and Lanoraie, on the riverside, and passing two miles away from the town of Berthier, one mile from the village of St. Barthelemi, and three miles from that of St. Cuthbert. There is also a branch line running from Joliette to St. Gabriel de Brandon, which is 21 miles from Berthier and 54 miles from St. Michel des Saints, and has no other connection with these parishes except the highway. As regards the Great Northern Railway, it croses the parishes of St. Norbert, St. Cuthbert and St. Berthelemi, about three miles to the north of the Canadian Pacific Railway. Is it a wonder that the progress of settlement in the upper part of the county should be slow in spite of the efforts of the local authorities and of the liberal government of Quebec to promote it? Indeed, the worthy minister of Public Works and Colonization in the province of Quebec is tirelessly working to forward settlement in the county of Berthier as elsewhere. The proof is, that last year as well as this, Father Morin, who is connected with that department, and one of those most intent on developing colonization in our province as well as in other parts of the Dominion, caused a survey to be made of two townships forming part of the counties of Joliette and Maskinongé and situated opposite St. Michel des Saints. The official returns are not yet published, the reports and plans in that connection not being ready yet. However, we know that there are to be found in those parts marvellously rich lands, covered with a dense forest growth, well watered by rivers and pleasant lakes abounding in fish of all kinds. Who among us has not heard of the Mantawa country, that land so marvellously rich, covering, to the north of St. Michel an area of about 120 square miles already known as exceedingly fertile?

Let me quote from a book published in 1883 by Father T. S. Provost, at the time parish priest of St. Esprit, and intituled: 'La Bourse et la Vie.' The writer gives a fine description of the parishes of the northern end of my county: St. Gabriel de Brandon, St. Damien, St. Zénon and St. Michel des Saints.

At page 124, chapter 8 of his book, he writes:

> That immense valley to which I refer in this chapter runs 46° 45′ lat. N., and from 74° 30′ long. on the west up to its confluence with the river St. Maurice, in the east, with an average width of 75 or 90 miles. The valley is irregular in width, the heights which inclose it on either side by no means following a straght line, but in places approaching and in others receding from the banks of the river Mantawa. This river has its source on the same table land as the Red river, tributary of the Ottawa. On leaving Lake Bourget to ascend towards its source, we soon reach a point at the north end of a wide bay, where the river forks. The south-west branch is the main one; and about two miles further it divides again; a third, a fourth and a fifth branch are met with at distances from one another of a mile each. Lastly, a sixth point is arrived at, where several streams converge from all directions, especially from the south-west, the west and the north. It is the meeting point of the great valleys of the Red and Mantawa rivers which coalesce, offering the widest field for colonization.

At page 127 of his book, Father Provost, who was taken up with the idea of colonizing by land (that was in 1883) exclaims:

> Let a railway be built and parishes will spring into existence as if by enchantment.

At page 129:

> One word about Lake Bourget and vicinity. Six miles away from St. Michel des Saints, as-

cending the river Mantawa, above the rapid of the Three Firs.

There also fine, fertile, land is to be found.

At page 132 :

The whole south shore of the river Mantawa, for a width of about six miles from lake Bourget up to the table land, is a plain with an excellent soil, covered with fine forest growth. The same may be said of the opposite shore, with this difference that the plain on that side is not limited to only five or six miles ; it extends to the great Laurentian range, 75 or 90 miles distant, as we have seen. Let us take here, for purposes of settlement, the same width as we have on the opposite shore, and we shall have room for eight fine parishes.

And Father Provost adds (page 133) :

In order not to be accused of supplying, though unintentionally, incorrect data, I shall quote from a report of surveyor Laurier, who, no doubt, thoroughly went over the territory which he describes. 'The river Mantawa, he says, runs from south-west to north-east. Its average width is about 180 feet. Its waters are pure, palatable, and abounding in fish. The valley it runs through is wide and even, with only here and there low hills such as are not seen on the shores of the St. Lawrence.'

That report was written in 1864. At page 132, Father Provost quotes, in support of his contention, from a report made to the minister of Agriculture in 1869, and he winds up as follows :

I am therefore in a position to assert once more, and with greater assurance than ever, that the country of the Mantawa is a fertile one, and worthy of attention on that account.

I may be permitted to mention, by the way, that surveyor Laurier who, in 1864, surveyed the country of the Mantawa was the father of the man who, in 1903, as Prime Minister of Canada, submitted to parliament the scheme for the building of a railway through that region.

Father Provost also refers to lake Clair, Post river, Pike river, &c., &c. ; and at page 152, he goes on :

How often have we not heard people say : If a railway were built through the mountains, I would certainly settle in the Mantawa.

You will please observe that this book was written in 1883. The Canadian Pacific Railway did not then extend beyond Joliette ; the road to St. Felix and St Gabriel was not in existence.

Let us listen further to Father Provost. He is not prompted by political interest, but solely by priestly devotion to his people, love of colonization and of his country. At page 170, he deals with the aversion of people to settle at a distance. It seems as if he had foreseen what was going to happen. When the transcontinental passes through that country, his dream will be fulfilled :

Under what conditions were the eastern townships of Quebec opened up to colonization? What chain of setttlements led up to that country ? What prospects were there at the time of a railway running through those parts, rather than along the banks of the river St. Lawrence, either north or south ? Now, just go up to the first of those settlers of the townships you happen to meet and put the question : ' Are you sorry you came here ? ' With the marvellous progress which had taken place even before railways were built, and which has taken place since, we may well dispense with asking this man whether he is sorry he went there. Let us instead put the question to those who refused to follow him, saying : You know not what you are about ; you will be ruined.

Can it be conteded that a railway running through the northern portion of Quebec would not be of any use ? I have spoken only of the counties of Berthier, Joliette and Maskinongé ; but what I have said applies to all the others. I have ascertained on the spot the correctness of the statements made by Father Provost, when, in 1901, I was with him, Father Morin and some others on a trip to the country of the Mantawa. That trip was a most pleasant and useful one ; and the 'Presse', of Montreal, gave at the time a full account of it.

But that is not all, Mr. Speaker. An idea of the forest wealth of the upper parts of the counties of Berthier, Joliette and Maskinongé may be gathered from the fact that between St. Gabriel and St. Zenon only, on the three branches of the Mastigouche river, limits were sold recently to the amount of $240,000 ; and the Grand'-Mère Company controls several in that region which are worth quite as much. These facts speak for themselves ; they show the utter fallacy of the statements to the effect that the proposed road is useless, and that northern Quebec is worthless.

What, useless a road which will ensure the operation of these immense limits I have just referred to and which will cause twenty parishes or so to spring into existence ? Useless, a road which will open up for the settler that marvellous country ? Sir, I for one entirely approve of the scheme referred to and of the terms of the contract which ensures its carrying out. According to an old saw, pleasant things cannot be repeated too often. That is also evidently the feeling of the House. What fine, eloquent, powerful speeches have we not listened to for some time past in this House in favour of the scheme or against it. Notes of warning, loud protests on the part of the gentlemen opposite ; expressions of faith in our future, cogent reasons, incontrovertible arguments on the part of supporters of the government. At the risk of spoiling the harmony of this fine concert, I shall sound a few notes.

The Conservatives have not always lived in the cold shades of the opposition, where, as the poet says, they are painfully dragging on their miserable life. They were in power from 1878 to 1896, that is for 18 years, and they undertook then, themselves, to build a transcontinental railway. That scheme and its financing gave rise to what is known as the Pacific scandal. Nevertheless, these gentlemen take advantage of

every opportunity to boast of having constructed that road. I shall not delay discussing the expediency of constructing the Canadian Pacific Railway ; I may say, however, that it cost the country a great deal. The granting of $35,000,000 in cash, and $25,000,000 in land, with exemption from taxation, and no security, was more than sufficient to show the extravagance of the then government.

On the other hand, a glance at the contract under discussion will convince one of the great advantages it confers on the country. Thus, the government undertake to construct the Moncton-Winnipeg section ; they will be the owners of it. The whole road will not cost the government $13,000,000, and the reimbursement of the moneys lent or advanced by them is perfectly guaranteed.

It is not to be wondered at, therefore, if the opposition, though their part is on all occasions to find fault with the government, know not what to say against this scheme and this contract whose excellence is manifest. On listening to them, one after the other, we are inclined to ask ourselves whether they still have a chief and subchief in whom they have some faith.

The hon. member for St. Mary's himself spoke for two hours without being able or willing to say whether he was in favour of or against the scheme.

That is more than is needed to show how important and necessary it is. Hoping that these few remarks will suffice to make clear the position I take, I now state that I shall vote in favour of the scheme and against the amendment of the hon. member for Winnipeg (Mr. Puttee), to whom, however, I give credit for his courage and good intentions.

I would not approve of the government undertaking to look after the details of the building or the administration of the railways. Experience is such a good teacher. We know what the construction and operation of the Intercolonial have cost us since 1867. Deficits have piled up from 1867 to 1896, under Conservative rule, and the Liberal government who, since 1896, have brought down so many reforms, have not yet succeeded in spite of the co-operation and high administrative ability of the ex-Minister of Railway and Canals (Mr. Blair), in demonstrating the advantages of government ownership and operation.

Sir, I repeat it, the rule of the liberal party since 1896 has been characterized by a spirit of progress and improvements of all kinds. They have introduced a new order of things ; agriculture, manufactures, commerce have enjoyed untold prosperity, which the carrying out of this undertaking will increase immensely. The building of the national transcontinental railway will have been the greatest achievement of the liberal party, and in itself it will suffice to perpetuate the name of the illustrious leader of that party, who will have been its prime mover.

Mr. N. BOYD (Macdonald). Mr. Speaker, I hope I shall not be considered discourteous if I do not reply in full to the hon. gentleman who has just taken his seat ; and I am sure that he will not consider me so as he knows that I am not familiar with his language. That I regret, as I would very much like to be able to reply to him in the manner which I have no doubt his speech deserves.

I do not think any apology is necessary for taking part in this debate. Under ordinary circumstances, after the number of very able speeches that we have listened to on both sides of the House in which this question has been so fully discussed, it would seem as though we might refrain from further consideration of it and be prepared to vote. But, Sir, coming as I do from that portion of the country for whose benefit we are led to believe this great enterprise has to a very great extent been undertaken, I feel that I need not apologize for discussing this question which is to us in the west a very important one. In fact, Sir, I think I am justified in finding fault with the government for the late hour at which they have introduced this important measure to the House, and I have again to protest against the unseasonable time at which this House was called. It is true the hon. the Prime Minister has given his reasons for calling the House at that late date—his own illness—but, Sir, if we may judge from what has taken place in regard to the health of that gentleman—and I am as pleased at the improvement as any person here—I think it would have been better for him had he called the House together earlier, for it would seem that between the internal troubles that he has had in the cabinet and his followers, no doubt pressing him as they did, the leader of old who said that he had to sleep on his arms to protect the treasury of this country, it would have been a great deal better for that right hon. gentleman had he called the House at an earlier date. Then he would have been fighting gentlemen on this side of the House who would have fought him face to face and he would have understood exactly what they were doing. Therefore that excuse I think is not very good. We protest and have cause to protest at the House being called together at that very unreasonable time—the 12th of March. There is no excuse for it and there is no reason why parliament should be brought together at such a very late day. This important project which had been a matter of discussion all over the country and in the public press ; which was mentioned also in the speech from the Throne ; a proposition equal in importance to any that has been brought to the attention of this parliament or any other parliament since the time of the Cana-

dian Pacific Railway, was not introduced in this House until nearly six months after the calling together of the House. I say that it is treating the opposition most unfairly; and that the government is deserving of the censure of the people of Canada under the circumstances.

As I said a moment ago there is no portion of the Dominion to which this question is of such interest as to Manitoba and the North-west Territories. That is very easily understood, because our success has depended in the past and will in the future depend, largely upon our transportation facilities. Situated as we are, and with the conditions under which we are labouring to procure our livelihood, the success of that country depends on the cheapness with which we can export our products to the markets of the world. In considering that question, there are two propositions involved, as far as it affects the North-west, and I shall try as far as possible to discuss that question in a broad sense, and not in a sectional sense. The first question to be settled is—is any further railway construction necessary in this country? I unhesitatingly answer, yes, there is undoubtedly great opportunity for further development in railway construction in Manitoba and the North-west Territories. Manitoba itself is fairly well served at the present time, as has been shown by the right hon. the Premier, who has said that the average distance of the ordinary settler in Manitoba from a railway is five miles. Notwithstanding that, however, the people of Manitoba would be quite prepared to accept any further railway construction that may come to them. That remark might be applied not to Manitoba alone but to any other part of the country, for it has been said by the hon. the ex-Minister of Public Works (Hon. Mr. Tarte) you can put a railway any place, and the people will be glad of it. You might start a railway to the north pole and a certain amount of business would be developed; but the point is—will it be profitable to do so.

The next point is—is this the best proposition which we might expect for the relief, and the benefit, of that great western country? I have no hesitation in saying that I do not think it is. I shall quote a statement of the Premier, who in his speech said:

> We consider that it is the duty of all those who sit within these walls by the will of the people, to provide immediate means whereby the products of these new settlers may find an exit to the ocean at the least possible cost.

Now, Mr. Speaker, I claim that this proposal does not fulfil the promise held out to the people in that statement of the Premier. It must have been most conclusively proven to any open mind in this House that this railway is not going to take the products of the settlers of the west to the markets of the world at the least possible cost. In fact, Sir, it has been shown that it will give no relief in that respect whatever. I may say in passing, that if this appeared to be the best proposal that could be submitted to the people, if this was to my mind a project that is going to give to the settlers the cheapest possible outlet for their products, I for one, would have supported it. But it is not the best, as I shall endeavour as briefly as possible to show, this scheme does not fulfil, as I said the hope for the promise held out by the Premier. We have heard a great deal about this proposal. We all remember how it was considered in the Railway Committee, and the manner in which it passed through that body. The leading papers made reference to it before the House met. One of the earliest refrences was made on this subject more than a year ago in the city of Winnipeg, and the Winnipeg 'Telegram' of August 24th says editorially:

> A little more than a year ago, on July 23, 1902, the following article appeared in a Manitoba paper:
>
> The Toronto 'Globe' Hatching Again.
>
> The Toronto 'Globe' is publishing a series of articles on the railway traffic which for some mysterious reason it choses to believe is so great on Manitoba branch lines that the grain on those lines cannot be hauled out for want of more tracks. It says nothing about the lack of cars and engines which every one here knows was the cause of the blockade.
>
> Those who are familiar with the ways of the 'Globe' seem to be universally of the opinion that this is not merely a case in which the 'Globe' is drawing a herring across the track. Looking back over the preliminary symptoms it has manifested for some years, whenever a deal was hatching, they have come to the conclusion that another deal of some sort is in the incubator.
>
> Messrs. Jaffray and Cox, whom Mr. Sifton assisted to get hold of the Crow's Nest coal lands are, it is understood, in control of the Toronto 'Globe.' They are, also mixed up in a western railway transaction with 'Jim Hill' of the Great Northern and of the Morgan railway group. The question people are now asking is whether there is some Jaffray-Cox deal requiring legislation from parliament, for which the 'Globe' is to pave the way, and which their other domestic employs, Mr. Sifton, is to shove along.
>
> Whereupon Mr. Sifton's loyal organ (the 'Free Press') promptly asserted that this suspicion was absurd, and that the deal surmised was purely imaginary.

Now Sir, remember that that article was written over a year ago. It was written by a gentleman who at one time held a very high place in the ranks of the Liberal party, and who thoroughly understood what was the meaning of the articles that were appearing in the 'Globe.' You will observe Sir, that what has transpired in the Railway Committee and in this House, conclusively proves that the prophetic surmise of that experienced gentleman was absolutely correct. We first had a request for a railway charter by the Grand Trunk Railway to run from North Bay to the west.

Then the Liberal members from Quebec, and those associated with the Trans-Canada asserted themselves. Although Mr. Hays had led us to believe and had actually stated, that he had no intention whatever of constructing that road; much to our surprise he came back in a day or two and he was perfectly prepared to go to Quebec. Then, Mr. Speaker (Mr. Logan being in the chair) the success of the Quebec gentlemen became apparent to you, and in the interest of your constituents you stood up in the committee, and I well remember that cheerful and sonorous voice of yours demanding of Mr. Hays: Is it your intention to carry your railway to the eastern sea-board. If my recollection is correct, Mr. Hays answered: Certainly not. And you, Sir, came out most emphatically and you said: In that case I shall oppose your Bill, and you sat down heroically. The size of you Mr. Speaker, towering over Mr. Hays, and the manner in which you asserted yourself, supported as you were by other worthy supporters from the eastern provinces, and no doubt by the Minister of Justice as well——

The MINISTER OF JUSTICE. Oh, no.

Mr. BOYD. Yes, the Minister of Justice came to your assistance Mr. Speaker, and much to our surprise in the committee, back Mr. Hays came the next day and he was ready to swallow the mountain, or for the matter of that, all the mountains between Winnipeg and Moncton. But, what I cannot understand about it is that the Liberal members from Prince Edward Island did not assert themselves. If there had been any life in them; if some of the old warriors of the Liberal party from Prince Edward Island in days gone by were present, they would ask Mr. Hays: Do you propose to build a tunnel to Prince Edward Island, and Mr. Hays would no doubt say: Certainly not; but he would return to the committee the next day and he would declare: Why, certainly I will build a tunnel for you. A small matter of that kind did not amount to anything with Mr. Hays, especially when the government would build the tunnel for him as they are building the railroad. I believe that Mr. Hays is the man behind the machine, but no doubt the Minister of Justice saw him and persuaded him to come back to the committee the next day to tell us that he would build to Moncton. However, as I said before, I do not understand why the Liberals from Prince Edward Island did not get him to promise a tunnel. I do not wonder at Mr. Hays promising to build through Quebec, or through New Brunswick, or up to the North Pole, for it was quite immaterial to him so long as the country was going to do the building, and to give him the road to manage for his benefit, although we may have it in fifty years from now if it does'nt pay the Grand Trunk Railway to keep it any longer. Of course, Mr. Speaker, these few trifling matters were arranged between you and the gentlemen behind the scenes, and so six months after the House met—against which delay I again protest—we had this scheme launched on an unsuspecting public. Well, we have heard a good deal about it for the last three weeks in this House, and we are going to hear more about it for some time, and when we get to the country we will hear more about it still. It is astonishing the amount of information we will be able to give to the electors from both sides of politics, when the proper time comes. But, perhaps the most astute part of the whole thing was the speech of the Minister of Finance when he told us that it was going to cost $13,000,000.

An hon. MEMBER. What about the Prime Minister?

Mr. BOYD. Well, the Prime Minister said that too, but the Minister of Finance with his actuary settled the whole thing. However, that $13,000,000 story has been so exploded, that like the bonding privilege we have not heard much about it recently. But, Sir, fallacy of the calculation was so apparent that I did not expect it from the Minister of Finance, because I have a good deal of respect for him, and I did not expect that a gentleman occupying his position would try to delude the people of the country. Now, Mr. Speaker, I have had an actuary to work also on these figures, and I propose to engraft them into my statement so that they may be handed down to posterity, bound in that volume containing the speeches of this debate, which I have no doubt will be published so that in years to come posterity may see the fallaciousness of the men who now occupy the treasury benches. I will estimate that this government road from Winnipeg to Moncton will cost $48,900 per mile, which the Grand Trunk Railway in the little book which has been published by them says is the cost of the Intercolonial Railway, and therefore the 1,800 miles from Winnipeg to Moncton at $48,900 a mile, will, according to my actuary, cost in the neighbourhood of $88,020,000. There are 1,000 miles of prairie section at $13,000 per mile, making $13,000,000, and 625 miles of mountain section at $30,000 per mile, making $18,750,000; or a total of $119,770,000. Add interest during construction, $10,080,450, and at the end of the construction period you have a total of $129,850,450. Add interest for seven years, $29,885,603, or another total of $159,736,053. Add three years interest if the company do not pay any actual in the three years—and I do not expect they will, and I do not believe that any man in this House expects, they will when they are not bound to; that would be $14,374,357; or a total of $174,110,410.

In making up these figures, Sir, I have procured the services of as accurate an actuary as did the Minister of Justice; and

the Minister of Finance, no doubt, associated with the Minister of Justice. All that the gentleman asked was that his name should not be divulged owing to the position he occupies; but he could vouch for the accuracy of these figures, which I place on 'Hansard,' and I defy contradiction of them. That is the position the people of this country will find themselves in if this railroad is carried to the position where the government seem to think they are going to take it.

Mr. Speaker, the Grand Trunk Railway Company did not want this scheme. They showed it in every move they made before the Railway Committee. They are not anxious to get it even as a present, as my hon. friend says. What they did want they have got. They wanted a guarantee of their bonds to carry them across the profitable prairies of the west, where they did not need it and should not have got it, at any rate so far as the province of Manitoba is concerned. They have also got a guarantee of the mountain section. That, Sir, is what they sought when they came to this parliament; and what they did not want the government of this country has proposed to give them for nothing, and to saddle this country with the enormous debt that I have mentioned.

Now, where is the business of that railroad going during the time this road is under construction?—because if this Bill passes this House, in one year from the time it passes, the company, if they exert themselves to the extent that they should be able to, can have 500 or 600 miles of the producing portion constructed across the prairies. Before the government have the surveys made of the eastern division, they will have the total length of the line across the prairies completed. Where is the produce of that constructed line going? Has there been any arrangement made by the government? Have they placed anything in that contract to say that the produce shall pass through a Canadian channel? There is no clause of that kind. There is nothing to prevent the company sending the freight just where they intend to send it, and that is across the American boundary to their own American system. It has been reported in the papers that they have acquired the Wisconsin Central Railway, which brings them to the city of Duluth or within a few miles of it. It is well understood who is associated with the gentlemen who have managed to manipulate this matter through this House—Mr. Hill, who was, I think, connected with the Crow's Nest Pass matter, in which fortunes were made for a number of people; and it would be very easy to make arrangements with that gentleman whereby the business which the Grand Trunk Company procure in the prairies of Manitoba and the North-west Territories will pass over his system to Superior City, whence it will be shipped to Chicago. They will take the wheat to the lakes and carry it across to Georgian bay ports, and pass it on over the Grand Trunk system to Portland or wherever they see fit to take it; and there is no provision in this contract to prevent them doing so. I contend that some clause should be inserted to provide that during the time of construction the produce of the prairies shall pass through Canadian channels, and I think it is the duty of the opposition to see that a clause to that effect is inserted in the Bill.

We all remember the action of the Liberal party when they gained power in the province of Manitoba. One of the first things they did was to make an arrangement to bring an American system of railways into that province. They held an election on it. They said: We have made an arrangement that is going to be very beneficial to the people of Manitoba. They had a portion of the line built, and when the legislature forced the premier to lay on the Table of the House what that arrangement was, what do you suppose was the great concession they had obtained? That the American railway would not charge any more than the Canadian Pacific Railway charged. That was the great concession the Liberals in the province of Manitoba gave to the farmers of that province for saddling them with a debt of close on $1,000,000, and they had absolutely no control of rates. However, when the Conservative party removed them from power, they very readily got rid of that incubus, and succeeded in buying back that portion of the American system for the people of Manitoba. They have leased that to a Canadian system, and it has been a success from that day to the present. We have the Liberals in Ottawa introducing legislation into this House, which, if they succeed in carrying it through, will saddle Manitoba and the North-west Territories with another system leading into the United States. That is what the Grand Trunk Railway Company wanted when they came to this House, and that is what they have got; and there is where the business is going during the ten years that you will be constructing your railroad. I say, Mr. Speaker, and I speak with some experience, that the railway between Moncton and Winnipeg—if it should ever be completed—will not be completed inside of ten years and during that time this system which you are bonusing to carry the products of that western country down to the United States will have become so well established that you will have great difficulty—if you ever do it—to bring it back to Canadian channels. The grain will go to Duluth and the ordinary frieght will go down over the Grand Trunk Railway to Chicago.

Let me give a few moments, Mr. Speaker, to the consideration of this line which the government is going to build—what the ex-

Minister of Railways and Canals calls the lean portion—and they will find it very lean before they get through with it, politically as well as commercially. The Canadian Pacific Railway is built, some people say, too close to the shores of Lake Superior, and this will be a disadvantage in case of trouble with the Americans. Well, that is not a matter worth mentioning. But the building of a line close to the shores of Lake Superior has been a great benefit to the Canadian Pacific Railway. It has given them several coaling stations. Jackfish, Fort William, and another place, Peninsula Harbour, I think it is, are ports where they bring in large quantities of coal and freight and supply the railway system up and down on the north shore of Lake Superior. But what port will this road have at which to procure anything of the kind? The government will have to haul all that freight and other stores and material back to this proposed line, 150 miles north of Lake Superior. Then, what is the arrangement about building this branch from Port Arthur back? Who builds that? The Grand Trunk Railway will have that, and if at any time there should be any trouble, who will own the branch that will carry the grain from Winnipeg to the waters of the lake? That is another question which has not been considered as thoroughly as it should. I say that this road to be built by the Dominion government will be at a very great disadvantage indeed, being built so far back, during the time of construction, and even after it has been completed. How or where is the company going to get its coal? Every one who knows anything about it can readily understand what it will cost to handle coal two or three times in order to get it back 150 miles away from the lakes as against the Canadian Pacific Railway, which has three or four coaling stations along that lake. And not alone that, but if any trouble should arise, that very important portion of this road will be held by the Grand Trunk Railway themselves. Then we come to the question of the cost of the road. That, I think, is a very important part, or at least it is going to be with the people of the North-west, because the cost of that road is going to come very largely into consideration. I want to be fair, and I propose to quote from the speech of the hon. member for North Norfolk (Mr. Charlton), who was put up, as the mouthpiece of the government, to reply to the ex-Minister of Railways anl Canals, and the government is consequently bound by his utterances in this respect, and none of the ministers have repudiated them. On page 8481 of 'Hansard,' you will find these words:

> No road can claim to be a first-class road with grades more than ont-half per cent or twenty-six feet to the mile. In the construction of this short line and in the construction of the line from Quebec to Winnipeg it should be an absolute condition that the road should be first-class in point of grades, in point of construction and in point of weight of rails. The rails should not be less than ninety-pound rails, and the grades should not be more than four-tenths per cent, and if these conditions are complied with this road will compete with a water-route or anything else.

I would like the government to produce a contract from some practical contractor on the information given to this House. I would like some practical contractor to be asked what he would construct a railway of that kind for. When the hon. gentleman speaks of building a road like that for $28,000 per mile, he shows his total ignorance of the subject. I say that we cannot get any practical railway man who has any reputation or any money to lose, who will agree to build a railway such as that for $28,000 per mile—no, nor for fifty thousand a mile. I question if you can get any man to build such a road as has been described by the mouthpiece of the government, for $60,000 per mile. I speak with some experience. I spent some years in railway construction. I was a contractor myself; I spent two years upon the construction of the Canadian Pacific Railway, as assistant to Mr. M. J. Haney, building a portion of the road which the contractor had failed to complete between Rat Portage and Winnipeg—building a portion of the road that cost, not $26,000, not $50,000, but a great deal of it $85,000 per mile.

Mr. EARLE. Ninety pound rails?

Mr. BOYD. No, and no such grades and curves as the mouthpiece of the government says this road must have. Why, the thing is an absurdity. No man who has a reputation, no man who knows anything at all about it, no man who has any money to lose, would agree, upon the information laid before this House, to build such a road even for $60,000 per mile. It cannot be done. We have to look at the cost of other railways. Here is the Intercolonial Railway, which cost $53,000 per mile and over, the Canadian Pacific Railway, which cost $52,000 per mile, the Canadian Pacific Railway on the north shore of Lake Superior, which cost $50,000 per mile, the Canada Atlantic Railway, which cost $50,000 per mile, the Grand Trunk Railway, which cost $106,000 per mile. Are any of these such roads as the mouthpiece of the government says this road shall be? No. Why, the mouthpiece of the government, this prospective minister, says that the grades on those other roads will not do at all. They are away behind the times, totally unfit to meet the present requirements of the country, and this road is to be built up to the latest requirements. Mark what I tell you, if you build such a road as that between Winnipeg and Moncton it will cost nearer $60,000 than $28,000.

An hon. MEMBER. What will it cost to buy the Canadian Pacific Railway?

Mr. BOYD. That is a point I propose to touch on a little later. As was shown by the hon. member for Pictou (Mr. Bell), the Grand Trunk Railway has paid only one and a quarter per cent on its capital. It has never paid a dividend on its ordinary stock of about $110,000,000, although its prospectus promised the exact figure of 11½ per cent, to say nothing of the $74,000,000 or $75,000,000 which it owes the people of Canada. Even the actuaries of the present day cannot figure it out any more nicely than does the prospectus of the Grand Trunk . They were to make 11½ per cent. And the Grand Trunk has 3,142 miles. It has paid a dividend of about $800 per mile. That road runs through a first-class country, Ontario and down to Chicago. It owes $202,000,000, and it manages to pay dividends on only one-quarter of the said debt, or $800 per mile. Yet it is expected to pay interest on $28,000 a mile, at 3 per cent, which would make $840 per mile—more, mark you, than it paid on its mileage last year. Or on say $50,000 per mile—and it will be a great deal nearer $50,000 than it is $28,000—they would pay $1,500 per mile. Now, I would like any man on that side of the House to show how the people of Manitoba and the North-west are going to get the relief that the hon. member for Saskatchewan (Mr. Davis) was apparently pleading for, through the building of this road under these conditions. Sir, it is an impossibility—it cannot be expected, and it will not be done.

Mr. SCOTT. Would it be given by buying the Canadian Pacific Railway line around the north shore of Lake Superior ?

Mr. BOYD. I will deal with that in due order. In the meantime, I may tell the hon. gentleman (Mr. Scott) that I am prepared to discuss that phase of it with him here or in any other place he may select to have it done. Now, Mr. Speaker, the Minister of the Interior (Hon. Mr. Sifton) with all his astuteness—and he has no superior, no equal, in fact among the members of this House in that respect—could not figure out a better rate on this new line than 10.85 cents per bushel on wheat from Winnipeg to the seaboard, and in making this rate he was most unfair taking what the member for Peel designated a bargain day rate between Kansas City and Chicago to get even that rate. But look at the rate that exists to-day. From Winnipeg to Port Arthur, six cents per bushel ; Port Arthur to Depot Harbour, one cent per bushel ; Depot Harbour to Montreal, 2¼ cents per bushel, or a total from Winnipeg to Montreal of 9¼ cents per bushel. Thus, the rate actually charged to-day is 1.60 cents per bushel less than the very best that the Minister of the Interior could figure out as possible on this new line. This applied to the Minister of Agriculture's figures, 200,000,000 bushels, would make the saving to the farmers of Manitoba and the North-west of $2,200,000 by the use of the present route as compared with what would be charged if this new line of the government were in use and were carrying the grain at the rates estimated by the Minister of the Interior.

Now, is this project going to work out to the interests of the people in Manitoba ? Is it going to be a benefit to the grain growers of that province, and will it give them relief in respect to transportation facilities ? We find, as I have shown, that if grain is carried over it, it will cost 1.60 per bushel more than is charged by the rail and water route at the present time. By the time this new road is constructed, ten years hence, it is hard to say how much lower the freights by rail and water will be. It has been shown in this House over and over again that, as rapidly as the railroad rates fall those on the rail and water route go down equally. If the Minister of the Interior could do no better than he did, and if this road is being built as a grain-carrying road——

Mr. SCOTT. Was that not a winter rate entirely ?

Mr. BOYD. The minister's quotation was on the all-rail route as against the rail and water route. He estimated from Port Arthur, and he has no roads to Port Arthur and there is no provision made for a railroad to that point under control of the government. If they are to get to Port Arthur it will be by the grace of the Grand Trunk and the Grand Trunk will charge what they please. This is an all-rail rate ; that is what he wanted——

Mr. SCOTT. Certainly.

Mr. BOYD. If that is the best that can be done, this is not a proposition that would recommend itself to the people of Manitoba and the North-west. It will not give them the relief that has been spoken about. As a colonization road, to open up a new portion of the country as a means of creating more railway competition in Manitoba and out into the territories, and as a means of affording railway facilities for those who have none now, why, of course it will be acceptable. Such railways are always acceptable, one or twenty of them. Now, what is the local trade that we may look for on that north shore of Lake Superior ?

Mr. BENNETT. Christmas trees.

Mr. BOYD. Yes, as the hon. member (Mr. Bennett) suggests, Christmas trees and woodpeckers, as it was stated by the hon. member for Saskatchewan (Mr. Davis) in speaking of the immigration agent of the Ontario government. There is a crop of these almost all the time. The building up of any other business, however, is problematical. The possibility of settling these

lands while thousands, hundreds of thousands and millions of acres of good land in Manitoba and the North-west remain untilled, is very remote indeed. I do not believe that any man would be the friend of his son or his neighbour and advise that son or that neighbour to go into these wilds to make a home when he might direct him to the prairies of the west. But, suppose that the timber of which the hon. gentleman speaks is in existence to the north of us here, why should settlers be sent in there at this late date in the history of Canada to destroy that timber by cutting it down and burning it and so losing it to the country? Our timber, if of merchantable quality, is the most valuable asset we have in Canada to-day. Why, then, should it be burned up and destroyed, it must be if settlers are to go in there and make farms for themselves? The probability of these lands being settled by people who will make a business for the road is very remote indeed. It seems to me strange that the government of Ontario did not discover these lands years ago, especially strange when you consider how near they are to the city of Toronto. It is also strange to me why the government of Ontario did not give the volunteers their grants in these valuable agricultural lands instead of placing them, as they did, upon the rocks a mile square apart and with the pine timber reserved.

Mr. CLANCY. Where there was any.

Mr. BOYD. Yes, as the hon. gentleman (Mr. Clancy) remarks, where there was any. When they wished to recompense these men for the sacrifices they had made it is strange that they did not give them these agricultural lands. It looks very much—and subsequent events have indicated the same thing—as if all this was due to the approach of an election. We do not hear so much about it now, at any rate. I could quote from page 23 of the pamphlets that the Grand Trunk Railway has issued and sent to members of the House the description of the country and of the business they expect to do there. As there will be no business done there possibly within the life of the present generation, what benefits are we likely to derive, we people in the west, from this road passing through the wilderness such as that will be at such an enormous cost as will be involved in the construction and operation of this road.

Now, Sir, I have shown that you cannot construct that road at any such price as the government has intimated. No man knows the distance, no man in this House can tell the cost per mile, no man can tell where it is to be located, and no man can tell what benefit it is going to be to the people, especially to the people of the west. Under these circumstances, why this hurry, why this anxiety? After sitting here for seven years, what has occurred to make this departure necessary? We are told that there was great congestion in that country in 1901 and 1902, but the government did nothing then. Now, Mr. Speaker, when there is no likelihood of congestion this year, or possibly next year, owing to the great increase in the rolling stock of these two railways, why this hysteria on the part of the government? Well, some hon. gentlemen say that time won't wait. I think the extract I read from that paper printed over a year ago explains the whole reason, as showing the manner in which the Grand Trunk Railway Company expects to handle this business. The whole question is wrapped up in uncertainty. There has been nothing but 'perhaps' and 'ifs' presented to this House as reasons for voting away $174,000,000. That seems to be the only certain thing that we know in regard to it. According to the statement of the mouthpiece of the government who was put up to reply to the ex-Minister of Railways and Canals, there is no possibility that the government will get any return for their money, there is no possibility of any lowering of rates, in fact it is almost certain that no lowering of rates will take place under these conditions.

Now, Sir, I have always been a believer in the extension of the Intercolonial across the continent, and I still believe that it would be a governor of the rates, and as such it would certainly be a great benefit to all the people of the country. It is bound to be a great benefit to the railway itself. If it is removed from political control—and it will have to be removed from political control, it can be removed from political control—when that is done, I am satisfied that if this road were constructed across the continent it would be a great national benefit. In this connection I may say that I would like to see a branch built to the Hudson's bay. When this road reaches across the continent the country may well look for some control of rates; for some relief from high freight rates. I am not prepared to go so far as the hon. member for Winnipeg (Mr. Puttee) and to purchase the whole railroad system of this country. At the same time, I would like to see the Intercolonial cross this continent, and if that proved a success, then the extension of the principle of government ownership would follow in the natural course of events. Now the proposition of the leader of the opposition is the extension of the Intercolonial Railway to Georgian bay, and I am in favour of that idea. But what may we expect from that? We have absolute control of rates in the province of Manitoba, we control the rates over almost every portion of that province, and in a few years I expect the extension of the Canadian Northern into the Territories, when the same control will I presume apply. It has been shown repeatedly in this House that one cent a bushel carries grain across Lake Superior, then when it

comes to the Georgian bay and passes into the hands of a government road, any person will readily see that we have in that case almost absolute control of the carriage across the lakes. Competition will keep the rate at the lowest possible point and in that way the people would have almost absolute control of rates. You can readily see what benefit that will be to the farmers in Manitoba and to the people in the east, because the managers of the Intercolonial in that case will be able to say where the freight should go ; and they will take it undoubtedly to Canadian ports, to Montreal in the summer season, and to Quebec and the maritime province ports in winter.

We are told by the Minister of the Interior that the Intercolonial Railway has not paid in the past. Why has it not paid ? The ex-Minister of Railways and Canals told us when he was at the head of that department, and he was loudly applauded by the hon. gentlemen who then sat around him, why it did not pay. If I charged, said he, the same rates as are charged by the Canadian Pacific Railway and the Grand Trunk Railway, I could make one or two millions a year. It has not paid because the rates have been low. Another reason why it has not paid is because it is located, as I understand, in Montreal where it receives no through freight from any railroad ; or if it receives any, it is a very small amount, and practically it has to depend upon its local freight business ; what it may pick up in the city of Montreal, and along its line. When you come to carry that railroad to the shores of the inland seas, and place it in a position to compete with traffic across the lakes, when you place that railroad in a position to receive a great portion of the business from Manitoba and the North-west Territories, then you will find a magnificent business for that road ; you will be doing good to the west and good to the east, and you will be building up your whole system. I think that will mean a great deal more business for the lower provinces, a great deal more business for the winter ports in which the hon. member for Cumberland (Mr. Logan) is so deeply interested. Because you cannot carry wheat down there, and if you are not going to carry wheat on your proposed Grand Trunk Pacific, what business are you going to do ? I am told on very good authority that the average freight movement over the Canadian Pacific Railway north of Lake Superior, is one train and a half per day.

Well, if that is all that the Canadian Pacific Railway has now in the carriage of freight, then when the Grand Trunk Pacific is running around, as it will, by Duluth and Chicago, what are you going to carry over your road, even admitting that the great increase which we expect and hope for takes place ? Where is the business in ordinary freight that is to accumulate around our winter ports ? You cannot haul wheat ; that has been conclusively shown. Therefore, I claim that by constructing this road to the Georgian bay—and a modern road 380 miles long could be constructed with easy grades, a road on which you would be able to haul trains of 60 or 70 cars—you would be doing something that would be profitable to the people of the west, profitable to the Intercolonial, and profitable to the winter ports. That road would be bound to secure business, and I am satisfied that when the proposal of the leader of the opposition has been studied and weighed and considered by the people of Canada, it will appeal to their better reason. The closing words of the hon. member for Annapolis (Mr. Wade) were that no road without a paying connection is any good. The Intercolonial Railway has not a paying connection at the present time, but it would have a paying connection if it were extended to the Georgian bay and thence on across the continent. In order to support the position that was taken by the hon. leader of the opposition, I wish here to quote a portion of an interview with Mr. Meighen, president of the Lake of the Woods Milling Company, one of the largest shippers of heavy freight from the province of Manitoba. This interview was given on August 6th, before the proposal of the leader of the opposition had been submitted to this House, and it bears out almost to the letter what the leader of the opposition said. This gentleman has had as much experience in this matter as any man in Canada, because the whole business of the Lake of the Woods Milling Company is a matter of freights, the grinding of flour and the passing of their goods on to the market. This interview appeared in the St. John 'Telegraph' on August 6th, and is headed 'All-rail route no good for grain.' It is as follows :—

> You will never bring the products of Manitoba or the North-west, either by the Canadian Pacific or the Grand Trunk Pacific, or an all-rail route around the north of Lake Superior to our Canadian ports ; neither will you ever bring but a small portion by our Canadian canals, east of the Soo.
>
> These are the words of Robert Meighen, president of the Lake of the Woods Milling Company, who arrived in St. John yesterday, to attend the annual meeting of the New Brunswick Railway Company.
>
> Mr. Meighen is emphatic in his declaration that the lakes must be taken into account in any scheme of transportation for the grain of the great west. Only a portion, he says, of the products of our western prairies will ever be handled through Canadian ports by an all-rail route north of Lake Superior, or even through the canal system.
>
> What are needed, he says, are double-track railways from Montreal to Georgian bay, and ample elevator space there to store grain for shipment by rail to St. John and Halifax—when navigation is closed to the St. Lawrence. If wheat is purchased in Brandon, or west of that point after October 25, the shipper cannot get it through the canals. He has only two alternatives—he can store it in the elevator, or send

it forward to Fort William, and from there to Buffalo, and on by rail to an American winter port. For it can be taken from Fort William to Buffalo until early in December.

Now, said Mr. Meighen, what Canada needs is facilities on Georgian bay for receiving grain, and railways to carry it on via Montreal to St. John and Halifax. It could be shipped from Fort William to Georgian bay ports up to the 12th of December, and elevators there could be filled to provide trainloads of grain for the whole winter, to be shipped from our own winter ports. At present a large amount of our grain goes by way of Buffalo.

You can get ports on Georgian bay that will give you a grade to Montreal over which eighty cars of grain could be hauled in a single train.

With sufficient elevator capacity at Georgian bay ports, and railway from there to Montreal, you can cut out Buffalo, and give the Canadian grain trade to Canadian ports. You can freight wheat across the lake from Fort William to Georgian bay ports for one cent, and from there to Montreal for three and a half cents, or less, per bushel winter and summer.

Our canals are closed for six months in the year. With elevators at Georgian bay you can store there all the grain that is too late to be forwarded by the St. Lawrence route, and with proper railway facilities from those elevators to Montreal you can send this grain on to St. John and Halifax.

'When the foregoing is accomplished,' said Mr. Meighen, 'our western prairies will ship their products by an all-Canadian route, and only a portion of them will ever be handled through Canadian ports under our canal system or an all-rail route north of Lake Superior.'

Mr. Meighen is very emphatic in his declaration that Canadian ports should get the western trade in winter as well as in summer. St. John and Halifax, he says, are a part of Canada, and their claims deserve support.

Asked if he favoured extending the Intercolonial Railway to Georgian bay, Mr. Meighen replied that he had no suggestion to offer on that point, further than what he had already stated. Railways and elevators were needed, and should be in some way provided.

This is the statement of a gentleman who has possibly given that aspect of the transportation question more consideration than any other man in Canada, and, as I have said, this statement was made some days, or even weeks, before the proposition of the leader of the opposition was laid before this House. I think, Sir, that these are words which should recommend themselves to the people of this country ; and I believe that they will. I have also a quotation from Mr. Ashdown, who in Winnipeg said :

I, personally, would have preferred the government not only to have owned the eastern section, but owned and operated the whole.

And Mr. Ashdown is one of the gentlemen quoted by the hon. Minister of the Interior (Hon. Mr. Sifton) during his remarks.

Then, here is the opinion of Mr. Fisher, who for many years was president of the Liberal Association of Manitoba and who has stood high in the ranks of the Liberal party. He is a Liberal to-day, a gentleman who is no political friend of the Conservative party, and whom I have found opposed to me in nearly every political campaign I have been engaged in in Manitoba. Here is what he says :

I confess I entertain some doubt as to whether the proposed route will be a valuable competitor in the near future, owing to the location. What Manitoba needs above all things is the shortest and cheapest route to Lake Superior. I doubt if much of our wheat for a long time to come, will be carried all-rail. That is, I doubt if for a long time to come any road can afford to carry it all-rail. It strikes me that the proposed line is so far north as not to give so favourable a route as either the Canadian Pacific Railway or the Canadian Northern. Perhaps the most valuable addition to our transportation facilities at the present time would be the double tracking of the Canadian Pacific Railway to Lake Superior, because it is, I believe, the shortest exclusive Canadian route to the great lakes, and will continue for many years to come the great funnel through which our grain will pass outward to the east ; and my doubt is that whether with a line so far north, the cost of operating through a country little known and in which the local traffic is not a measurable quantity the cost will not be so heavy as to make the rates excessively high.

There is the opinion of a gentleman who is no friend of the Conservative party, no friend of the leader of the opposition ; a gentleman who has spent a quarter of a century in the province of Manitoba ; a man of ability and of intelligence and discernment ; a gentleman who was selected by the Greenway government to represent them on the expedition that went to the Hudson bay ; that is the opinion of that gentleman on the western portion of the scheme of the leader of the opposition. I have given you the opinion on the eastern portion of that scheme, by one of the largest shippers in Canada. We cannot overlook these opinions. There is no place in the Dominion of Canada where the people are giving, day by day, the question of transportation such consideration as they do in the city of Winnipeg and the province of Manitoba generally. When you get such an opinion as that from a gentleman who is not a political friend of ours, it ought to cause the government supporters to pause. I fear they will not be impressed by anything that might be said from this side of the House, but an opinion such as this is worthy of their serious consideration. A great deal has been said about the routing of freight over the government road. Well, if you want to control the routing and the rating retain the railroad in your own hands. That is the only way to do it. Not a gentleman on the other side of the House has yet proven that the Grand Trunk Railway is bound to send one dollar's worth of its freight to any eastern port in this country.

What we in the west want is cheaper freight rates, especially for our cattle and our grain. I claim that the proposition submitted by the government will not secure that for us. I claim that under the conditions on which this road is to be constructed

the settlers of the west cannot hope for cheaper rates. The Grand Trunk Pacific Railroad is to be capitalized west of Winnipeg at $56,660 per mile. That capitalization is as high as the present capitalization of the Canadian Pacific Railway. The capitalization of the Canadian Northern Railway, controlled by the Manitoba government is $12,500 a mile. How can you charge cheap freight rates on a road capitalized so high as the Grand Trunk Pacific Railway? And who is going to get that $20,000,000 of common stock. No one has yet told us where that portion of the $56,000 per mile is going. I have no doubt that is some of the watered stock that the hon. member for Saskatchewan (Mr. Davis) referred to. I have tried, Mr. Speaker, to lay before the House my views on this subject. I am opposed, Mr. Speaker to this scheme which you are largely instrumental in giving to this country. The leader of the government pleaded for immediate relief for the traffic of the west. We will get no immediate relief from this road, which will not be constructed for the next ten years at least. The member for Saskatchewan (Mr. Davis) spoke for an hour and the only advantage he could claim for the road was that it would give additional railway facilities and consequently competition. It has not been shown yet and it cannot be shown that this road will give cheaper freight rates. If you go ahead with this enterprise you will involve the country in enormous expense. That expenditure being such a heavy burden on the country it will prevent us grappling with other schemes which are an absolute necessity for Canada.

On the other hand the scheme submitted by the leader of the opposition will commence to pay immediately. If we acquire the Canada Atlantic Railway and make it a portion of the Intercolonial Railway, it will commence to pay at once. The plan of the government is uncertain as to its completion, and it is bound to be expensive. By our plan we will own the road, but by the government plan the Grand Trunk Pacific Railway owns the road and have control of the rates. But, Sir, there is one thing certain about the government scheme, and that is its enormous cost. It would seem as if the government and those who were pressing them on are more anxious as to what the results will be at the approaching elections than they are as to what benefits their project will confer on the people of the North-west and Canada generally. The member for West Huron (Mr. Holmes) told us that no one on this side had given information as to the cost of the proposal of the leader of the opposition, and the member for West Assiniboia (Mr. Scott) followed him in that assertion. Well, if they had listened to the hon. member for Bothwell (Mr. Clancy) they would have had full information on that point, but when a member on this side speaks hon. gentlemen opposite get out. They don't want any information or any enlightenment. When one of their own side speaks, they pile into the chamber and start hammering their desks..

An hon. MEMBER. We are here now.

Mr. BOYD. Yes, there are a quorum of you here, but if you could do with less you would not be here.

The MINISTER OF FINANCE. My hon. friend (Mr. Boyd) is not very successful amongst his own friends.

Mr. BOYD. It is Friday night, we all know what that means.

The MINISTER OF FINANCE. So it is on this side.

Mr. BOYD. Well, I am making the same retort as was made by the member for West Assiniboia (Mr. Scott). Now, Sir, we already have the Intercolonial Railway from Halifax to Montreal and the distances and cost involved in the scheme proposed by the leader of the opposition have been given by the member for Bothwell (Mr. Clancy) as follows :

Montreal to Coteau Junction, 30 miles at $40,000 a mile	$ 1,200,000
Coteau Junction to Depot Harbour, 342 miles, with equipment	12,000,000
Scotia Junction to Sudbury, 104 miles at $40,000	4,160,000
Interest during construction	200,000
Sudbury to Fort William, 555 miles	25,000,000
Betterments	3,000,000
Fort William to Winnipeg, 426 miles at $30,000	12,780,000
Betterments	2,100,000
Total	$ 60,440,000

Against this you have the government project, which I have shown will cost $174,000,000. With the plan of the hon. leader of the opposition we give immediate relief to the people of the west; we give the people of Canada immediate control of rates not only in the west, but in the east; we give business to the Intercolonial Railway, and we make the property profitable. For my part I want to see the Intercolonial extended further than is proposed. I hope the day is not far distant when we shall see it across this continent controlling the rates. There is no question about the success that is bound to attend this proposition. Before we leave this House, we shall very likely be able to bring the government around to our way of thinking. I am prepared to make this challenge: Let this House submit the proposal of the leader of the opposition and the proposal of the leader of the government to three or five of the best expert, practical railway men in America; and if they do not say that the proposal of the leader of the opposition is a better solution of the problem than the one that has been submitted by the government, they can have my support. But they are not likely

to receive for their proposal the endorsement of any practical and experienced railroad men.

I claim that this government has no mandate from the people on this question. It was never discussed by the people and they have had no opportunity of expressing their opinion upon it. I claim that they should have an opportunity of expressing an opinion upon it before it is made law, and I do not think the opposition will be fulfilling their duty in this House if they permit this measure to pass until the people of this country have that opportunity. If my views are entertained in the councils of the opposition, they will not permit this measure to pass in the form in which the government expect to carry it, regardless of what time it may take in order to give the public an opportunity of expressing an opinion upon it. It is an enormous expenditure and an enormous undertaking—an undertaking that very few people in this country know anything about, that very few men in this House know anything about; and before asking us to vote such an enormous amount of money to build a railroad through what is practically a wilderness, so far as we are able to learn, and thereby leave it impossible for us to undertake the many other great enterprises required for the benefit of the country for possibly fifty years to come, it is the duty of the government to give the people of this country an opportunity of expressing their opinion upon it. If the government and their supporters are as sanguine as they claim to be, and as much in earnest as they pretend to be when applauding their speakers, they should be willing to say: We are so certain of the merits of this scheme that we will let it stand, and after the session we will go to the country and fight it out. As the hon. member for Annapolis (Mr. Wade) said, let us all act as Canadians, and let us work in the best interests of the country. Sir, I am prepared to say if the government will submit this question to the people, and the people say yes, it is the best proposal, and we want you to go ahead with it, we on this side of the House will say, all right, we will join with you and push it to a success as fast as we possibly can; and we will not act as the Liberal party acted during the time of the construction of the Canadian Pacific Railway. We will not decry the road and the country through which it passes, and make it embarrassing for the people who are carrying on the work, to finance it; but you will find the opposition, if we are in opposition, after the people have an opportunity of expressing their opinion, giving your great scheme, as it would then be, but as it is not now, our full approval and support.

As I said at the beginning of my remarks, there is no place in the Dominion of Canada where this matter has such vital interest for the people as it has in the west. I have made a study of this question to the best of my ability, as every other man in the west has done. Our way of making money, in the meantime, at least, and our way of spreading money through eastern Canada, has largely been by raising and shipping wheat. We have spent throughout Canada between $35,000,000 and $40,000,000 which we received for last year's crop, and we spent nearly as much the year before; and that money has been realized largely from the wheat that we have raised. We will do a good deal more in the future. This is a matter that the government should think very seriously about, and before this measure is made law, I trust that they will satisfy themselves that they are acting in a manner that is going to be in the best interests of the people of the west and of the whole of Canada. I have no hesitation in saying that their scheme is not, in my opinion, going to give immediate relief. I do not believe it is going to give relief at any time in the matter of the haulage of that wheat which has made the millions which we have circulated in the country and which will make the millions which we hope to circulate throughout Canada in the future. A very serious responsibility rests upon the people who are governing this country at the present time, as a false step now may have very serious results in the future.

I have said that I am not in favour of the proposal of the hon. member for Winnipeg (Mr. Puttee), who proposes that we should take charge of all the railroads of this country; but I am in favour of the extension of the government system, and I propose, Mr. Speaker, with your permission, to close my remarks by moving an amendment to the amendment. I beg to move:

> That all the words in the amendment after the word 'policy' in the third line be left out and the following substituted: 'of extending and developing our system of government railway and of placing the operation thereof entirely beyond the influence of party politics.'

Mr. T. G. JOHNSTON (Lambton). At this late hour, Mr. Speaker, I shall take up but a very few moments; but before speaking to the subject, I would like to ask hon. gentlemen opposite what authority they have for constantly taunting us with dissenting and disagreeing among ourselves. Evidently, in their case the wish is father to the thought. But let me inform these hon. gentlemen that when, by any chance, dissensions or disagreements do take place on this side, either a resignation occurs or is asked for. We are not given to backbiting or going out on strike, and in that respect the present cabinet is in striking contrast with its predecessor. The present cabinet has completely changed the aspect of Canadian government and Canadian public life. The low standard of public life. the unseemly strife, the undermining, the

corruption and all that sort of thing which formerly prevailed, and of which the last Conservative administration was so striking an example, have all disappeared and been replaced by a spirit of confidence and honour among public men and an aggressive policy on the part of the government, which command the admiration and confidence of the country. As this debate goes on from day to day the policy of the government gains in strength. The reasons given in support of that policy are in marked contrast with the chaotic argument furnished by the opposition, who seem to have no idea of union among themselves except the union of opposition, who seem to be guided by no particular principles, who lay down contradictory policies, and who fail utterly to agree, not only in their attacks on the government policy, but in their support of the position taken by their own leader. As these hon. gentlemen address the House one after another, we are more and more at a loss to know what it is they really do want, except to get back into office at any price and by any possible means.

I do not propose, Mr. Speaker, to go into any details regarding the cost of the road, because that has been thoroughly gone into by speakers on both sides who have preceded me. But I wish to put myself on record as thoroughly and as strongly in favour of the project submitted to us by the government. This road proposed by the government will pass from the Atlantic to the Pacific all through Canadian soil.

Mr. SPROULE. Does the hon. gentleman mean to say that he is at the Atlantic when he reaches Moncton ?

The MINISTER OF FINANCE. Certainly ; Moncton is on the Atlantic.

Mr. SPROULE. I am afraid it will be a poor ocean port.

Mr. JOHNSTON (Lambton). I say that this road will go from the Atlantic to the Pacific on Canadian soil and will serve a threefold purpose. In the first place, it will be a colonization road, which will promote settlement and local development, passing from the north-west to the south-east. Through New Brunswick it will open up a most fertile country, heretofore undeveloped, and in doing this, it will not parallel the Intercolonial Railway, but, on the contrary, by developing new resources which have hitherto lain dormant and thus increasing traffic generally, it will be an advantage to the Intercolonial Railway. Through the province of Quebec it will develop magnificent water powers and mineral regions, which will, in all probability, in the comparatively near future, become manufacturing centres of this great continent. Going through Ontario, it will develop an immense extent of arable and timber land and mineral resources of the extent of which we can now form no adequate idea. Through Manitoba and the territories it will go over the old Mackenzie route, now recognized to be the one which should have originally been taken by the Canadian Pacific Railway, and will pass through a section of country which is the home of the finest hard wheat in the world. Then, in British Columbia it will develop a country which is blessed with a climate and soil and resources that are unequalled. It will be a national road, which, by creating a certain amount of interdependence among the provinces, will strengthen confederation. It will be further a national highway and a link in the commerce around the world. We all know the extent of the commerce upon the Orient that has been developed by the Canadian Pacific Railway, and we may reasonably expect a much greater development to take place in that commerce on the completion of this road.

So far as the agreement made by the government with the Grand Trunk Pacific is concerned, I cannot see how a firmer and tighter contract could have been made. I do not see how the interests of the people could have been better safeguarded than they are by this agreement. In fact, what strikes me is that the contract is such a hard and fast one, looking at it from the standpoint of the people, that I am surprised at the company accepting it. In every possible respect the interests of the public have been guarded. That cannot be said of the proposition submitted by the hon. leader of the opposition. What he would have us do is to buy up the existing railways which are running through a developed country, buy up roads that have already been subsidized by the government. On the contrary, our idea was to go on and develop a new country, almost a new Canada, with resources in timber, mines and agriculture as yet unknown and undeveloped, which, when completed will more than ever emphasize the fact that we are a growing young nation. Lying to the south of us is a nation with a population fourteen times our own. The constant tendency of our young men is to leave home and engage in various occupations in that country. When our policy is carried out, as I say, it will enlarge our working territory, it will increase our advantages in every possible way, it will keep our young men at home, and will develop the country that we are all so proud of. Of course, it is absolutely necessary that a policy of some sort should be announced by the opposition, and we have had one presented, composed of all sorts of immature propositions such as might be presented by any irresponsible person utterly incapable of accomplishing or carrying out what he proposed. The policy of the government has been described as a hybrid policy. It would be fair to characterize the policy of the opposition as the same.

Mr. SCOTT. Only more so.

Mr. JOHNSTON (Lambton). Yes, probably, a little more so. Now, in all seriousness, several members of the opposition have asked for an appeal to the country on these two rival policies. I have no doubt whatever that, if the truth were known, they, in their hearts are not honest in their expressions of opinion. To a very great extent, they agree with us in our line of action, and it is only party exigencies and not patriotic motives that influence them in the course that they have taken. I heard with great pleasure the hon. member for South Lanark (Hon. Mr. Haggart) express the wish that the young men of our country should be better and more properly educated and inspired. I can suggest no better way for their education and their inspiration than for them to realize that we who are the descendants of those who preserved Canada to the British Crown, thoroughly appreciate the responsibilities we are undertaking and are willing still further to incur responsibility in the worthy cause of our country's development. I say we are the descendants of those who preserved Canada to the British Crown. And this is true. In 1776 our French Canadian compatriots resisted the invaders, and in 1812, at Chateauguay and Lundy's Lane, men of both races co-operated towards the same good end. It is for us to prove ourselves no mean descendants of those ancestors and to leave to those who come after us a worthy and lasting heritage.

Now, I must say, I have been a little perturbed by the lateness of the hour, and have not made the remarks I intended making. Let me say briefly that I believe in the construction of this road, and my reasons for doing so are these: The policy of the government appeals to me because it is patriotic. It will develop our country and keep our young men within our own borders, will increase our commerce and make us a nation. It is based upon a strong and earnest belief in the magnificent and certain future greatness of our country. It is practicable. It will have the further effect of strengthening confederation. As I said before, it will give a certain amount of provincial independence without having any tendency to decrease provincial inter-dependence. It will have an elevating effect on national thought and aspiration. It will promote immigration, settlement and commerce and conduce to the maintenance and furtherance of prosperity in every sphere. It is within our means. We are financially able to stand it without feeling the burden. It is thoroughly in accord with the energetic, go-ahead, optimistic spirit which has permeated this country ever since the quickening influence of Liberal rule was felt. And, when Canada becomes a nation, a great nation, as she assuredly will, the building of this transcontinental road will be found to have been no mean factor in her growth and advancement.

On motion of Mr. Vrooman, the debate was adjourned.

On motion of the Minister of Finance, House adjourned at 12 o'clock, midnight.

INDEX.

THIRD SESSION—NINTH PARLIAMENT, 1903.

Abbreviations of well known words and Parliamentary expressions are used in the following :—1°, 2°, 3°, First Reading, Second Reading, Third Reading ; 3 m. h., 6 m. h., 6 w. h., Three Months' Hoist, Six Months' Hoist, Six Weeks' Hoist ; *, without remarks or debate ; Accts., Accounts ; Adjn., Adjourn; Adjd., Adjourned ; Amt., Amendment ; Amts., Amendments ; Amalg., Amalgamation ; Ans., Answer ; Ass., Assurance ; B., Bill ; B.C., British Columbia ; Can., Canada or Canadian ; C.P.R., Canadian Pacific Railway ; Com., Committee ; Co., Company ; Conc., Concur, Concurred, Concurrence ; Consd., Consider ; Consdn., Consideration ; Cor., Correspondence ; Deb., Debate ; Dept., Department ; Depts., Departments ; Div., Division ; Dom., Dominion ; Govt., Government ; His Ex., His Excellency the Governor General ; Hse., House ; H. of C., House of Commons ; Incorp., Incorporation ; Ins., Insurance ; I.C.R., Intercolonial Railway ; Man., Manitoba ; Mess., Message ; M., Motion ; m., moved.
