(b.) A mortgage which shall be a second charge upon the property covered by the mortgage provided for by paragraph thirty-five (a), save and except the rolling stock constituting the equipment of the eastern division, to secure the bonds to be guaranteed by the Grand Trunk Railway Company of Canada as aforesaid.

They take the precaution there of exempting the equipment of the eastern division from this mortgage, but if it did not belong to the company what is the use of dealing with it in that way. Then section 37 it seems to me places the matter beyond the possibility of doubt :

The company shall purchase all material and supplies required for the construction of the western division and the equipment of the whole of the said line of railway from Canadian producers.

As I said, I should not have thought this point arguable had it not been suggested by hon. gentlemen on the other side. I took the trouble even to consult counsel about it. I had it in my mind when this contract was drawn, to provide that this equipment should be subject to the claim of the government ; that it should be real and effective security. It was so discussed by the parties who were present when the agreement was drawn, and it was so understood between us all. But when I heard my hon. friend (Mr. Barker) argue this point, I came to the conclusion that possibly I had failed to carry out what I intended and what both parties to this agreement intended. I consulted a man whose opinions are worth something in this country. I consulted Mr. Shepley, of Toronto, and he said he does not think that the question can be fairly argued.

Mr. BARKER. Might I ask the minister whether Mr. Shepley was not one of the counsel engaged in drawing up this agreement ?

The MINISTER OF JUSTICE. Yes.

Mr. BARKER. On the other side ?

The MINISTER OF JUSTICE. Oh, no ; we are not quite so bad as that. My hon. friend (Mr. Barker) really is too clever.

Mr. BARKER. That is so.

The POSTMASTER GENERAL. That is not so.

The MINISTER OF JUSTICE. When the contract was practically completed Mr. Shepley was asked to come in and advise, for the purpose of ascertaining whether or not we had overlooked anything, and we got the benefit of his advice.

The POSTMASTER GENERAL. He was called in by the government.

The MINISTER OF JUSTICE. Of course called in by the government. My hon. friend (Mr. Barker) would not imagine that I consulted the other side. Then I thought I would get the opinion of Mr. Chrysler who was also engaged in this matter, and I asked him whether we had failed entirely to carry out the expressed intention of both the contracting parties, and Mr. Chrysler expressed some surprise that the thought ever was suggested. I went further. I suspected that my hon. friend (Mr. Barker) might think that these two gentlemen having been consulted by the government in connection with this contract might perhaps have a leaning towards the government view of it, although I never thought he would suspect me of calling in counsel on the other side. What did I do ? I consulted Mr. Gormully, solicitor for the Bank of Montreal, one of the men who in this country is most competent to speak on such a subject, and Mr. Gormully expressed absolutely the same opinion as the other two gentlemen. And then, last but not least I thought I would take the judgment of a gentleman whose opinion stands high in this country, a gentleman whom I for one look upon as one of the best lawyers we have in this country, and whose opinion I highly value ; I refer to the Deputy Minister of Justice, Mr. Newcombe, and he concurred absolutely in the opinion expressed by the other counsel.

To assist the company in the construction of this western division it is provided that the government shall guarantee the payment of the principal and of the interest to the extent of $13,000 per mile on the prairie section, and to the extent of $30,000 per mile on the mountain section. That is the limit of our liability. If three-quarters of the cost of construction does not come up to the figures I have mentioned, then of course the government is not obliged to go beyond three-quarters of the cost of construction. If, however, as is anticipated, it may cost more than the amount estimated, the government's liability is fixed and limited with respect to the prairie section at $13,000 per mile and with respect to the mountain section at $30,000 per mile ; and, as I said a moment ago, interest during the course of construction is included in the cost of construction. If you look at sections 15 and 18 of the contract, you will find the words 'cost of construction' defined. They include almost everything that it is possible to imagine with respect to the eastern division, and they include, with respect to the

western division, 'the like classes of expenditure as in the case of the construction of the eastern division.'

Then it is important to know how the cost of construction is to be ascertained. Section 19 provides :

For the purpose of enabling the government to determine the cost of construction of the said railway, or of any portion thereof, or the cost of the equipment supplied, or the net earnings of the railway, or of any part or parts thereof, pursuant to this agreement, the government shall have the right, from time to time, and at all times, by and through such agents, engineers, accountants and inspectors as it may appoint for that purpose, to inspect all the books of account, pay sheets, contracts, correspondence and all other books, papers and documents, the inspection of which may be considered necessary for the purpose of determining such cost.

We have absolute control over their books of account and over their whole administration, for the purpose of ascertaining or controlling the cost of construction.

Another point to which I would like to draw the attention of the House is one of very considerable importance. You will remember that government is to guarantee the cost of construction of the western division to the extent of seventy-five per cent. It was important to know how to ascertain the cost of construction; but it is also important for the House and the country to know when the government is going to bind itself with respect to this guarantee. When is the guarantee to be given ?—immediately, or after the road is completed ? Let me draw your attention to section 29 of the agreement :

Such bonds may be issued in such denominations in the currency of the Dominion of Canada, or in sterling money of Great Britain, as may be agreed upon, and the principal of such bonds shall be payable in fifty years from the date of issue, and the said bonds shall be dated and issued, and the guarantee of the government endorsed thereon, so soon as the Western Division is constructed and equipped ready for operation.

They must construct the western division, equip it and have it all ready for operation before the government is under any obligation to endorse these bonds.

The government has absolute control over the whole work. Section 40 provides :

The company shall, before being entitled to the guarantee provided by this agreement, furnish evidence, satisfactory to the government, that all just claims of contractors and for materials, wages and supplies, and all just claims against contractors and sub-contractors for materials, wages and supplies entering into and supplied for the construction of the railway have been duly paid.

Not only have the company to build the road and equip it, but they have to furnish evidence to the government to the effect that they have liquidated all their liabilities here mentioned before being entitled to the government guarantee.

You will naturally ask me, how is the company to finance this enterprise during the course of construction ? Provision is made for that.

I draw the attention of the House to the wording of section 36, which provides for the issue of interim bonds :

Notwithstanding any of the provisions of this agreement, interim bonds of the company secured by first mortgages may from time to time, during, and for the purpose of the work of constructing the said Western Division, be issued by the company and guaranteed by the government, as may be agreed upon from time to time, subject to all the limitations and conditions imposed by this agreement.

There is no obligation on the part of the government to endorse a single bond until this road is finished and equipped, except so far as under this clause of the agreement the government may choose to do so. It is entirely optional with the government. With respect to the western division, the road is to be built by the company, equipped by the company, and our obligation as guarantors of their bonds begins only when the road is finished in its entirety from Winnipeg to the waters of the Pacific ocean.

Mr. HEYD. At that stage how much money will the company have invested in the western division ?

Mr. NORTHRUP. Not one penny.

The MINISTER OF JUSTICE. The company will have invested at that stage the total cost of construction. That is estimated at $20,000 a mile for the prairie section of 1,200 miles, and $50,000 a mile for the mountain section of 480 miles. They will have invested all that money. That is a total of $48,000,000, and in addition $20,000,000 for equipment, making a total expenditure of $68,000,000 by the company. The property upon which that amount of money will have been expended will be security to the government for what ? For a guarantee to the extent of $13,000 a mile for the prairie section and $30,000 a mile for the mountain section. The result will be that we shall have guaranteed to the extent of $30,000,000, and shall have a security to the extent of $68,000,000.

There is more than that. Assuming now that we will be called upon to pay the interest during the seven years upon that mountain section, that interest would amount to $3,024,000, so that the extreme of our possible liabilities in connection with the western section is $33,024,000, and the result would be we will have a road costing $68,000,000 as our security. But we have even more than that. We have additional security in this respect, that the Grand Trunk Railway is bound by this agreement to guarantee the bonds issued to secure the money necessary to complete this road. What does that mean ? Should the prairie section cost $20,000 per mile, the Grand Trunk Railway will have to guarantee $8,-

400,000, being the balance required to complete that section. Should the mountain section cost $50,000 per mile, the Grand Trunk Railway will have to guarantee $9,600,000. That is to say, their guarantee will amount to $18,000,000, independent altogether of equipment. Then suppose there should be a default in the payment of interest on the bonds guaranteed by us, we will take the road and the equipment, and the holders of the second issue of bonds will be obliged to apply for payment to the Grand Trunk Railway. Hence, it can easily be seen that the Grand Trunk Railway will not be in a position to afford to allow any default to be made. They cannot make themselves liable to the extent of $18,000,000 and allow a default to occur, the result of which would be that they would have to take out of the funds of the company $18,000,000 and hand that over to the bondholders, and we would take the road. Therefore, in addition to the security of the road, we have that security, which results from the fact that the credit of the Grand Trunk Railway is pledged to the extent of $18,000,000.

What are the advantages, independently altogether of the opening up of that country, which will grow out of this contract? In the first place, we will have control of the rates and we will have running powers over the line. Section 39 provides:

> The rates and tolls to be levied and taken by the company upon any part of the said railway shall be under the control of the Governor in Council, or of such authority, commission or tribunal as may be designated or constituted under any Act of the parliament of Canada for the regulation or control of the business of railways.

Then we have the question of running rights. It seems to me that we are in a curious position to-day, after the speech of the hon. leader of the opposition. We remember how one gentleman connected with this side of the House (Hon. Mr. Blair), who is in a position to speak as an authority on railway matters, told us that the clause relating to running rights was absolutely ridiculous, did not mean anything, and could not be effective. But not only the new apostle of the opposition spoke in that sense, the hon. member for Hamilton (Mr. Barker), who is a railway expert, took the same ground, and explained how impossible it was to effectually carry out the provisions of the agreement with respect to running rights. But how does the stand taken by these hon. gentlemen compare with the position now taken by the leader of the opposition? This afternoon he unfolded to us a project, according to which he was going to buy the railway from Sudbury to Port Arthur and give running rights over that line to all other railways. What did he mean this afternoon when he said that, with respect to that portion of the line from Port Arthur to Winnipeg he was going to acquire, by purchase from the Canadian Pacific Railway, the right of all railways to run over it? Surely there must be a mistake somewhere.

Mr. BORDEN (Halifax). Will my hon. friend pardon me if I explain? As far as the road to North Bay is concerned, the Canadian government, operating that line independently of other railways, can, in the judgment of railway experts, do so without contradicting in any way what has been said by my hon. friend from South Lanark or my hon. friend from Hamilton. The difference between that proposition and the one set out in the Bill is simply this. In the one case the Grand Trunk Railway controls the line, because it has a lease of that line, whereas in the other case the government, which is an independent body, operating by means of a commission, would control the line and give every railway company absolutely equal running rights over it. So far as the line from Port Arthur to Winnipeg is concerned, of course, my remarks were rather hurried, as I was trying to close at six o'clock, and perhaps I should have explained a little more definitely that a line of that kind between those two points must be worked and operated under joint arrangement. The remarks of my hon. friends from South Lanark and Hamilton do not conflict at all with the suggestion I made to the House, because in the one case there is an independent commission to operate the road, and the railway companies using it will have absolutely equal rights; whereas, in the other case, there seems to be neither joint operation nor operation un-

leader of the opposition?

The MINISTER OF JUSTICE. Has my hon. friend forgotten the picture presented to the House by the ex-Minister of Railways, when he described the Intercolonial Railway arriving at Quebec and proceeding on its way west, stopping to get water or give food to the employees, until it reached Winnipeg? What is the difference between that picture and the one which would be presented by these different cars of different railway companies running over the same line proposed by the leader of the opposition

Mr. BORDEN (Halifax). If my hon. friend will permit me, the answer is this. The right hon. the First Minister portrayed a train belonging to the Intercolonial Railway at Halifax and some official of the railway saying to the men in charge: You had better take a little jaunt across the continent; and the right hon. gentleman seemed to think that that would be perfectly feasible. But that is entirely different from the case where you have a road operated by an independent authority, under a commission, and the different railway companies using it subject to that authority.

The MINISTER OF JUSTICE. Let my hon. friend read the contract, and point out

the difference between the conditions we provide and those which he suggests himself. Our intention is to develop commerce through Canadian ports by constructing and operating a common highway across the Dominion.

Mr. BORDEN (Halifax). Quite so.

The MINISTER OF JUSTICE. That is the recital in the contract in which both parties concur, to which both give their assent. Then, has my hon. friend forgotten that this road belongs to the government, and that we are leasing it to this company? We are the owners: the road is vested in the government

Mr. BORDEN (Halifax). Subject to the lease.

The MINISTER OF JUSTICE. My hon. friend has not read the lease accurately. This is our road, and we are renting it to the company, but what does section 24 say:

> The said lease shall also contain proper and usual provisions, (a) reserving to the government in respect of its ownership, present and future, of the Intercolonial Railway and any other line or lines of railway, running powers and haulage rights over the said eastern division upon equal terms with the lessees, subject to such reasonable restrictions as may be necessary.

That is what the contract said. Then my hon. friend says: 'Subject to the terms of the lease.' My hon. friend cannot have read the contract right. He will see that this provision is subject to the terms of the lease. When it comes to other railways, the government reserve power to grant running powers and haulage rights sufficient to enable any railway company desiring to use the said eastern division to do so upon such terms as may be agreed upon by the company or, in case of their failure to agree, then upon such terms as may be deemed reasonable and just by the government, having regard to the rights and obligations of the lessees. When you are dealing with the government road under the lease, we reserve the right to use the railroad ourselves. That is the answer, and he who runs may read. The reason of the distinction is obvious. With respect to government roads, we reserve the right to use it, on equal terms with the lessees, with regard to the other roads we provide they shall have the right to use the line subject to the conditions that they shall comply with the terms of the lease. There is the obvious distinction between the two. My hon. friend the leader of the opposition was evidently affected by what was said the other day with respect to the Wabash road. He evidently had not realized that in this country we do the very thing which the ex-Minister of Railways and Canals (Hon. Mr. Blair) and the hon. member for Hamilton (Mr. Barker) said could not be done. I think my hon. friend from Hamilton said that Mr. Hays never would say that this was possible, he never would say that we could carry out the provisions of this agreement. My answer to that is that Mr. Hays and the Grand Trunk Pacific have said it, and more, have actually undertaken to do it. They have obligatel themselves to do it. It is not part of our business to find out how they are going to do it; it is their business to do it as one of the conditions of their contract. That ends it so far as the Grand Trunk is concerned. But I have taken the trouble to consult Grand Trunk officials on the subject, and here is the answer:

> In regard to trackage rights, it is customary for one company to give power to another company to run over its railway on a rental to be agreed upon with payment for maintenance computed on a wheelage basis.

That is with respect to another road, not our own, because we have equal rights with them over the road.

> This has been a common practice in England, and to-day is in operation in several instances. The statement made that whilst it may be applied for a short mileage it is not feasible over a railway of considerable length is a fallacy, inasmuch as to-day the Wabash has trackage rights over the Grand Trunk rails from Windsor to the Bridge, a distance of 229 miles. In this distance it is necessary to change engineers and crews, and to take fuel, and this is done without any difficulty whatever,—the regulations of the owning company being observed. What is done in this case can be extended to any length of railway by applying the same arrangements for round houses, fuel, &c., or by making satisfactory agreement with the owning company for stabling engines and supplying necessary materials, &c., required in working the trains.
>
> There can be no difficulty in two or more companies working over the same railway with one set of rules, so long as the traffic is not too heavy to be moved without delay.

This is all so obvious that it is hardly conceivable that it is necessary to state it. This is the answer of a railway expert. Now, what is the effect of this agreement? The effect of this agreement is that when this eastern extension is built by the government, with the reservation of the right to use it with respect to the Intercolonial and any other railway the government may own in the future, we have the right to use that railway on equal terms with the Grand Trunk, and, in effect, the Intercolonial is extended from Halifax to Winnipeg. Under the agreement the Intercolonial has the right to run over that road from end to end upon the same terms as the Grand Trunk Pacific. It is merely a question of providing the necessary facilities on the road, roundhouses and other things of that kind, as provided by the Wabash road in the case I have mentioned. The right to use the road exists with us, and the obligation is on the Grand Trunk to enable us to exercise the right which we have reserved to ourselves under the contract. It means, as I say, that the Intercolonial is extended from Halifax, the eastern limit of Canada, on the Atlantic ocean, or from Sydney or from any other point in the maritime provinces, to Winni-

peg. And the result is, on the other hand, in view of the fact that the Grand Trunk Pacific Company has equal running rights over the Intercolonial, that the Grand Trunk Pacific is extended from the Pacific ocean to any point in the maritime provinces reached by the Intercolonial. That is the letter of the agreement; that is the effect of it; that is the way it can be worked out; and that is the way it will be worked out, if the parliament of Canada does its duty towards this country.

Now, I come to the last paragraph, with respect to the routing of the trade. I find considerable criticism on the other side with respect to that. There again it is said that it will be possible for the Grand Trunk Pacific, notwithstanding the solemn obligation entered into to send unrouted traffic to Canadian seaports on the same terms as to American ports, to virtually disregard the agreement. But the ex-Minister of Railways and Canals does not appear to have been of that opinion, according to his letter to the Prime Minister, which I find in 'Hansard,' and in which he says:

> As a means to achieve the same purpose which the Nova Scotia people appear to consider very essential—that is to say the obtaining of a share during the winter of the Grand Trunk Pacific through-traffic for Halifax—the company should be bound to carry all unrouted traffic over the whole of the Winnipeg section of a St. Lawrence seaport in summer, and in winter from Quebec to Halifax and St. John over the Intercolonial.

That is what the hon. gentleman (Hon. Mr. Blair) says we ought to provide for. And that is what we have provided for. Has he led us astray or do hon. gentlemen opposite think he is wrong when he said this is a proper provision to put in the contract? Hon. gentlemen opposite say that this may be evaded. Now, let us see what the conditions are. The shipper at the point of production in Manitoba or the North-west Territories or any other point covered by the contract, can go to the Grand Trunk Pacific and say: Under your contract with the government, you have bound yourselves to give me the same export rate to a Canadian port that you would give me if my goods go through Portland. I am entitled to have from you from this point—say Winnipeg—to Halifax or St. John the same rate as you would give me if these goods go by way of Portland, and you are obliged under contract to provide shipping facilities at Halifax or St. John to carry these goods to the port of destination. Now, is it conceivable that a Canadian, having the spirit of a Canadian in his bosom, and with these facilities and advantages afforded to him, would want to route that traffic to Portland rather than to a Canadian port, when he would receive no benefit from so doing? Is it conceivable? What would be the object of a Canadian shipper in so doing? That is the condition with routed freight; and, with respect to unrouted freight, the Grand Trunk becomes a party to the agreement in which there is a condition that, if we come to their assistance in the construction of this road, they shall honestly send all unrouted traffic through Canadian ports on the same conditions as through American ports. They have entered into that solemn contract, I say, a respectable corporation would not dare to violate such a condition as that. I say, moreover—and I say it notwithstanding what has fallen from the lips of the leader of the opposition this afternoon—that if the Grand Trunk Railway Company accept this aid on these conditions and do not intend to abide loyally by the conditions, it is a case of false pretenses on their part, a case of getting something from us under a representation which they do not intend to carry out. I say if they were guilty of anything of the sort there is no remedy that this parliament can exercise that it would not be justified in applying.

Now, in conclusion, let me read an extract from a political history of the United Kingdom, volume 2, page 403, by Goldwin Smith. He says:

> The geographical relations of the Canadian provinces, which are stretched in broken line across the continent, and separated from each other by great spaces or barriers of nature, so that there is not much natural trade or interchange of population, are a bar to the national over the federal element.

In 'Collier's Weekly' of May 23rd, 1903, I find an article, the concluding article of which is as follows:

> The great Canadian North-west is filling up rapidly with a more or less desirable class of immigrants. Farmers from all parts of the world are seeking the wheat lands now being so generously distributed. Although the development of the country is comparatively rapid, it will take some time for this development to have an appreciable effect upon the export trade of the world in breadstuffs.
>
> A future is opening for the Dominion, however, which is of great promise and full of strange possibilities to which the ablest men in Canadian public life are not indifferent. Eastern and western Canada have few ties in common, and are separated by 1,500 miles of almost uninhabitable country. Western Canada is more American and is in closer touch with the United States. If annexation is one of the possibilities of the future, the movement will start there, though the maritime provinces of the Atlantic coast would offer slight opposition. To keep eastern and western Canada together is the great problem of government at Ottawa. This idea prevails in the treatment of England, and is paramount in all trade negotiations elsewhere. From Western Canada is stretched out the hand which restrains the party in power from hostile action toward the exporters of the United States, even though the provocation be apparently great.

Now, what we desire to do is to open up our hinterland and give breadth as well as length to Canada, to connect the various portions of this country together, not merely by bonds of iron and steel, which are al-

ways liable to the corroding effects of time, but to draw them together by a tie that time does not affect except to strengthen, and the force of which increases as years roll by, and as generation succeeds to generation, I refer to that living healthy bond which is woven out of human flesh and blood. The hand stretched out to us from western Canada we grasp in all amity and friendship, because we desire that their trade, that their affections, that their political sympathy, should turn towards the east rather than towards the south.

Mr. W. B. NORTHRUP (East Hastings). Mr. Speaker, had I been a resident of the city of Quebec, with all my interests centered in that famous and classical city, my belief that the people of this Dominion were bound to be hewers of wood and drawers of water for the better people of that city, would certainly have been satisfied fully by the arguments which have just been addressed to us by the Minister of Justice, on behalf, I cannot say of Canada, but of the city of Quebec. Almost the only omission that the hon. gentleman made was that, despite the full and exhaustive explanation that he made of this interesting contract, he did not tell us how we were going to cross the river at Quebec, and how much it was going to cost, and who was to make the profits out of that bridge. He was careful to tell us that Montreal, which was not much of a place at best, could be reached by river navigation. He was careful to tell us that Halifax could not compete with Portland, and that inasmuch as Halifax could not possibly compete with Portland, it was desirable that $100,000,000 or $150,000,000 of money should be spent in order to convince even those who were at this time sceptical, that this was a fact.

Now, before going into the various arguments advanced by the hon. gentleman, I would like to refer to one matter which has been brought before this House, not only by him but by one or two of his colleagues who have spoken in this debate. We have been, I might almost say, taunted on this side of the House because, when the ex-Minister of Railways and Canals addressed this House he received applause from hon. gentlemen on this side. Well, Sir, we are not ashamed to say that we did applaud that hon. gentleman; but we are ashamed and sorry to see that the fact that we could applaud him and they could not, perhaps illustrates one great difference between the two parties, which is to be made even more conspicuous in the progress of this debate and the probable passage of this Bill. Hon. gentlemen on the opposite side of the House know well, as we know and as the country knows, that in the years past they have been accustomed simply to applaud the man regardless of the arguments that might be advanced; we on this side of the House can applaud a man under certain circumstances, and when a gentleman who has been held up before the people of this country as one of its leading statesmen for years, a man who has been so honoured by the party in power that they placed him in charge of one of the principal departments for years, and when that gentleman feels it his duty to his country, and when a sense of his own personal honour is such that he must lay down the emoluments of office rather than support a scheme which he believes detrimental to the interests of his country, then I say that we on this side of the House are not ashamed to applaud a gentleman who has done that. If we applauded that hon. gentleman when he arose to address the House, as we are in the habit of doing on this side, we could applaud him as he spoke on account of the arguments that he advanced; and if all we have heard be true, not merely of his late colleagues but of the hon. gentlemen opposite who have discussed this matter in caucus, other hon. gentlemen opposite would, if they had been sincere, have joined with us in some of that applause.

Now, Sir, the hon. gentleman who has just taken his seat started off with asking a few very pertinent inquiries, but he carefully failed to answer them. His first inquiry, was : Is the project now before the House an urgent and immediate necessity; and I am sure that not one single word was said by him, good, bad or indifferent, to convince or convert even the most well disposed of his suporters behind him that there was any urgent or immediate necessity for the construction of this particular road. He also asked : Have proper means to secure information been adopted ? Here again, having made the inquiry, he thought he had done all that was necessary, for he certainly gave the House no information whatever to show us that any steps had been taken by the government to secure this proper information. I am surprised that the hon. gentleman did not give us some information, if it is so easy to procure the kind of information that hon. gentlemen opposite seem to think possesses some value. When the right hon. the Premier introduced this measure to the House he gave us considerable valuable information as to the climate, and the timber, and the agricultural land in this favoured part of the country through which this road is to run. When the Minister of Finance came to address the House he too gave us some very valuable information; and when the Minister of the Interior came to address the House he too referred to the same sources of information which had been referred to by his two colleagues previously. But when we come to look at the report of which these gentlemen spoke, we find that while, as a matter of fact, a number of statements are made just such as they mentioned, and while, as a matter of fact, in that book are contained reports made by surveyors who went over that line, all the

alleged information given by hon. gentlemen opposite is information taken from the introduction, without the authority or sanction of any one's name, a report made out for the purpose of making the work interesting, or for the purpose of making the people of Ontario believe that they received some value for their money, and a report made up by some unknown persons, not signed by any name, and only professing to be an epitome of what is to be found in some of the succeeding pages of the book.

I do not wish to occupy the time of the House by reading from the pages of this work. I might be accused by some of my hon. friends on the other side of the House of doing that which they have been accused of doing, of raising a cry against the country which might some day do it ill. Therefore, I abstain from reading extracts which I might give referring to this country, but if any of these hon. gentlemen will take the trouble of reading a few of these not anonymous sentences from the actual reports of the surveyors who have gone through that land they will find that these reports do not bear out the statements made by the hon. Minister of the Interior. When the hon. Minister of the Interior came before the House he professed to come in the fulness of his good-will, with the latest and most perfect information obtainable. For the first time in the history of a great transcontinental railway all the surveys have been laid out by a clerk, sitting in his office, having before him all the reports he could find which had been made by the Geological Survey, and from these reports, as the hon. minister tells us, he was able to place upon the map a very accurate and practicable route from one part of this country to another. Would hon. gentlemen opposite sit in their seats and without shouts of derision—I might almost say without cries of disgust—allow hon. gentlemen of our shade of politics to attempt to pass before the judgment of the House a measure of the transcendent importance of this measure and have no more information than the hon. gentleman presented to the House? In view of the utter ignorance of these hon. gentlemen about the country and after all their professions, I think I may quote some of these anonymous remarks which were given by the First Minister and the hon. Minister of the Interior from that report, which were endorsed by the hon. Minister of Finance and therefore he cannot complain, the right hon. leader of the government cannot complain and the hon. Minister of the Interior cannot complain if I quote from some parts of this document to show what the author thinks of the kind of information upon which this map made by the clerk of the hon. Minister of the Interior was based. I shall read from the first page:

> Of course some information was at hand, but it was very vague. Parties had penetrated to James Bay from time to time, and these had seen good land and quantities of spruce along the streams which they had travelled, but at what distance from any known point and in what quantities they could not say. Mr. E. B. Borron as stipendiary magistrate of northern Nipissing, who had that immense region under his charge, had made several trips to James Bay by different canoe routes; and he, too, had seen and reported good land and quantities of spruce and other timber upon the different streams he had travelled, but as to quality and locality he was necessarily very indefinite, having only observed as he navigated or portaged in an entirely unsurveyed territory. The Geological Survey of Canada, too, had examined the geology and characteristics of the land adjacent to certain streams which they had ascended or descended, and some of our own surveyors in running a few base lines and the boundary line between the districts of Nipissing and Algoma, had passed through good land, and spruce timber; but after all, this sort of information was disjointed as well as limited, although of sufficiently favourable character to warrant the belief that when systematic exploration was made great sources of natural wealth would be discovered in that little known region.

That is about all the information that the government had on hand when they undertook this tremendous scheme which is at present engrossing the attention of the House. Before going into the details of this scheme perhaps it would not be out of place for a moment to call the attention of the House and the country to the extraordiary circumstances under which the government launched this scheme. In considering the magnitude of this proposition it is perhaps important that we should view the surrounding circumstances and see what lessons can be learned and what is the true purpose of it so that we will be enabled to judge whether the scheme is one which is entitled to receive the endorsation of parliament. Can those who are responsible for the presentation of this scheme to the House and to the country show that this tremendous expenditure for the building of the railway is necessary and justifiable at the present time? It seems to me that I need not waste time by going into all the preliminary details as to how this scheme originally was introduced when three or four capitalists, Senator Cox, Mr. Pellatt, Mr. Wood, Senator Gibson, and some Grand Trunk officials applied for a charter for a road from North Bay through the North-west Territories. I may say that there is nobody in this country but would be delighted to have that great company, with the capitalists whom I have named at its back, building a road at its own expense from North Bay through the North-west Territories and it is no wonder that when their intentions were first made known the gentlemen who were interviewed in all parts of the country expressed their approval of such a scheme precisely as every one of us in this House to-day would express his approval. It is in the memory of hon. members that day after day through the

sweltering days of the summer, because we had some sweltering days, we fought in the Railway Committee over the details of this Bill when it came before parliament, we in our innocence, thinking that we were doing our duty, that we were wresting something from this Grand Trunk Pacific Railway Company and feeling gratified that Mr. Hays should graciously from time to time make concessions little knowing that at that very time the right hon. leader of the government and Mr. Hays at night were working out the practical details of the bargain which we were allowed to discuss by day. I can quite understand the surprise of the colleagues of the right hon. gentleman when for the first time he burst into the council chamber and brought this new creature of his brain with him, laying it at their feet and calling their attention to it, in the words of Touchstone :

A poor virgin, Sir, an ill-favoured thing, Sir, but mine own. A poor humour of mine, Sir, to take that that no man else will.

Perhaps it is not surprising that when the right hon. gentleman introduced this offspring of his brain to the one man of the ministry with experience in railway matters and who perhaps because he had experience in railway matters was not allowed to know of this precious contract—I say perhaps it is not surprising that the one gentleman who had sufficient experience in railway matters to know a curve from a grade, felt that the curve from the Grand Trunk Pacific Bill as originally introduced to the Grand Trunk Pacific contract was too steep a curve for him to take, and perhaps he thought that his grade of morality was too high and that the grade of patriotism suggested by this scheme was too low to enable him to give it his support and so we find that the one man in the ministry who knows a curve from a grade promptly repudiated the scheme and retired from the ministry. One would have thought that under these circumstances the government would have hesitated, that it would have had some consideration for the people of the country and one would have thought that the right hon. gentleman might have had some colleagues behind him of sufficient honesty and courage to go to the right hon. gentleman and point out that although they admired, as we admire, the many good qualities that he possesses, although they valued and appreciated his strong magnetic personality, although they admired his geniality and recognized his eloquence and the powers of his sunny smiles, they were also aware that when it came to transacting railway business his experience was somewhat limited, and it might occur even to the ordinary tax payer of this country, that, when a great scheme for the expenditure of a hundred million dollars in money was brought before this House, perhaps the interests of the people might have been protected in some better way than by the right hon. gentleman with his lack of business ability, despite all his other virtues, sitting down to make such a contract with one of the ablest, one of the shrewdest, one of the wiliest and most successful railway men in this or in any other land. Is it any wonder that a contract conceived under such circumstances bears some of the marks that the contract we are discussing to-night shows prominently on its face ? I would have thought that some gentleman sitting about the Prime Minister would have felt some regard for their reputation ; some regard for the honour of the Crown if they had none for their own. They cannot so soon have forgoten the words they put into the mouth of His Excellency at the opening of this session. They must have remembered that they caused the Crown to solemnly state to parliament :

The great influx of population into our North-western territories and the very large additional areas of fertile land which are being brought under cultivation combine to further press upon us the need for increased transportation facilities for the forwarding of our grain and other products to the markets of the world, through Canadian channels. The whole question of transportation and terminal facilities continues to occupy much attention, and my government will immediately appoint a commission of experienced men to report on the subject.

This statement in the speech from the Throne was based, as the colleagues of the Prime Minister well know, on the Order in Council which has been read by the leader of the opposition this afternoon, which gives in detail the reasons which satisfied the colleagues of the Premier, which satisfied the Crown, and which was intended to satisfy this House and the country, that the pressing question of the hour was a transportation commission in order to investigate the complex and complicated subject which had been engrossing, and which was to continue to engross their attention. Surely, in the face of all that, we might have expected some one minister if not more, to have pointed out the extraordinary circumstances under which this Bill was conceived, and the slight probability there was that this country would secure its rights in such an agreement. Let me call attention to the fact that although this agreement was made between some gentlemen representing the Grand Trunk Pacific Railway and the government, the agreement will be wholly inoperative, and we are wasting our time discussing it, unless the Grand Trunk Railway, which is in no way at present bound by it, will come forward and carry out the engagement which these gentlemen have made for it. What are we to think of the contract made by the Premier with gentlemen, one of whom stated to a meeting of the shareholders of the Grand Trunk Railway in the motherland a few months ago, that they were about to enter into an undertaking which would

never in any respect cost them one dollar or jeopardize one dollar of their property? What are we to think of a bargain of such a character, that the government itself cannot be certain that the Grand Trunk Railway shareholders at their next meeting will ratify it and yet we are spending a month here discussing the matter, and relying solely on the Grand Trunk Railway Company being willing to carry out a contract to which at present they are not parties. No more conclusive evidence can be given of the one-sidedness of the bargain, of the advantage on one hand and the disadvantage on the other, (the country of course being at a disadvantage), than the simple fact that both the Grand Trunk Pacific Railway and the representatives of the government were perfectly satisfied without any guarantee except the inherent nature of the contract itself, that the Grand Trunk shareholders will ratify such a bargain. When we come to look at this contract, we on this side of the House, and I ought to be able to say, gentlemen supporting the treasury benches as well, are entitled to say to the government: Surely you had some reasons to justify such a contract as this.

Well, Sir, the Prime Minister did give his reasons. Far be it from me to say that in his long and eloquent speech no reasons were adduced. I have gone through the speech of the Prime Minister carefully and I have collated his reasons, and I shall state them to the House. I ask the House to say whether in a case such as this, we should not first consider whether the reasons given for such a measure are or are not founded in fact. If they are not founded in fact we are surely justified in refusing to support the measure, and if they are founded in fact then the next consideration would be: Will the effect of them be as represented? In looking over those reasons given by the Prime Minister, I think I can fairly ask of hon. gentlemen opposite if they honestly in their hearts believe that these reasons are sufficient justification for their supporting such a measure as this? These are the reasons given by the Prime Minister: That the construction of this road was a national and commercial necessity; that the construction must be immediate; that it must be from Moncton to the Pacific ocean; that it will not parallel the Intercolonial Railway; that you must keep control of the road; that we must be safe from the bonding privileges; that we used American ports because we had no railways to reach our own ports, and that we had to keep control so as to regulate the traffic. These were the reasons given by the right hon. gentleman, as those which led the government to introduce this measure. Now, let me in a few words take these reasons one by one. I have enumerated them together so that hon. gentlemen may have an opportunity, if they see fit, to compare the Prime Minister's reasons as I have stated them, with the reasons set forth in his speech and I am sure they will not find one reason given in that speech beyond those I have mentioned. The first reason given is that this is a national and commercial necessity. I am free to admit that the expression 'national necessity' is rather a euphoneous phrase. One naturally feels an almost instinctive yearning for anything that is a national necessity, and so I suppose hon. gentlemen opposite are ready to jump at once to secure for themselves and their constituents in Quebec a national necessity. But after all, when we come down to facts; when we lay aside the gems of oratory and come down to the level of hard facts, does any one of the supporters of the Prime Minister believe that the construction of this road from Moncton to Winnipeg and from Winnipeg to the Pacific is a national necessity? Is there a gentleman in this House who does not know that we are a nation, that we have been a nation ever since the happy morning the Prime Minister awoke to find that somehow he had made us a nation. We have the best authority for knowing that we are a nation; but we have existed without this road so far. Is there a single man in this House or in this country to-night, so blind to all sense of reason, that he can face his fellowman and say honestly to him, that this road is such a national necessity that we cannot as a nation exist without it?

Then, if it is not a national necessity, is it a commercial necessity? In what possible sense can it be a commercial necessity? Why, Sir, if this road be a commercial necessity and a national necessity, heaven defend us, for we will not be a nation during the six or seven years that it is being built. We must cease to be a nation; we must be swallowed up by the adjoining republic or submerged beneath the waves; some dreadful fate must be ours if this is a national or commercial necessity, for we cannot have it for six or seven years. Does not every one know that when the right hon. the Prime Minister spoke of this as being a national and commercial necessity that he was merely using a high-sounding euphoneous expression which was not warranted by the facts.

Then the Prime Minister told us that the construction must be immediate; that there was no time to wait for surveys; that he had no time to wait for any more information than the government has on hand at the present moment. Why this extraordinary haste? There was a time years ago when the country was bound to build the Intercolonial Railway; there was a time when this country entered into an agreement also to build the Canadian Pacific Railway, and the right hon. gentleman when he said that this road should be built

immediately said that there was the same urgency and necessity now that there was in the case of the building of the Intercolonial and the Canadian Pacific Railway. But the right hon. gentleman has been a consistent follower of his party, and if he looks back to the records he will find that in his own speech made in 1884 in connection with the Canadian Pacific Railway, he quoted this resolution which was moved in this House by the Hon. Mr. Dorion when the Intercolonial Railway project was under discussion :

That it be an instruction to the committee to amend the Bill so as to provide that the location of the line of the Intercolonial Railway shall not be finally adopted without the previous assent of parliament.

And eloquent were the Liberals in those days in pointing out the rights of parliament, in pointing out the outrage of the government in assuming to locate a line of railway without parliament having ratified and adopted that line. But it may be said by hon. gentlemen opposite : Yes, but you have been inconsistent as well, because if it be true that the Prime Minister moved such a motion, it is also true that the Conservatives of that day voted it down. Well, there was a reason for it then that does not exist now. It was pointed out at that time that the imperial government had given a guarantee that work had to be commenced within six months and that if work were not commenced we forfeited the guarantee, and therefore it would not do to wait for parliament to ratify it, and under such circumstances it was necessary that the House should trust the government.

Then, Sir, later on a road was to be built—the short line of the Canadian Pacific Railway. That came before the House first in 1884 on a resolution to make a grant of $170,000 a year for fifteen years to build the Canadian Pacific Railway over very nearly the same route as that of the proposed line through the province of New Brunswick. The Premier was alive to the interests of the country at that time, and he moved on the 14th of April, 1884 :

That the said resolution be not now read a second time, but that it be referred back to a Committee of the Whole with power to amend the same by providing that the route for the line of railway connecting Montreal with the harbours of St. John and Halifax, for which a subsidy of $170,000 a year for 15 years is provided, should be subject to the approval of parliament.

This was voted down, and the next year, in 1885, he brought the matter up again, making a precisely similar motion, that the matter should be referred back until the approval of parliament should be obtained. The Conservatives opposed the motion of the right hon. gentleman, but they did it for the reason that at that time an arrangement had been made by which the Canadian Pacific Railway Company was to complete its line by the year 1886, and they pointed out that if the right hon. gentleman insisted on his amendment, and if it were agreed to, it would be impossible for the Canadian Pacific Railway Company to complete its line by the time called for in the contract. So we find that on three previous occasions, on two the right hon. gentleman himself, and on the third his party, advocated the principle that before such a line of railway should be adopted parliament should ratify the route.

The right hon. gentleman's next reason was that the railway must be built from Moncton to the Pacific. I do not intend to occupy the time of the House in discussing that argument, for the simple reason that every member of this House knows full well at the present time we have a railway from Moncton to the Pacific and when we find the Premier laying it down as one of the reasons for this expensive measure that we must have such a railway, when we have it already, I think I would be doing injustice to the House if I were to occupy its time in dealing with such a reason.

Then, he said that the proposed line would not parallel the Intercolonial Railway. There has been a good deal of discussion throughout this debate as to the meaning of that expression. It occurred to me that it was like a great many other discussions, particularly of the kind that took place hundred of years ago, when the differences between people were largely differences about the meanings of words. Every one knows that in one sense the proposed road will not parallel the Intercolonial, if we use that term in a strict mathematical sense. It was never expected by any one that it would. But, if we take the term in the ordinary sense in which it is understood by railway men, that it will take away traffic from the Intercolonial Railway, I would ask if there is a single gentleman on the other side of the House who thinks that by any possibility the Intercolonial Railway could be benefited or could receive further trade because a rival road is to run over what is claimed to be a shorter route between the same terminal points ? Hon. gentlemen may have their preferences for this route or that route, according to their local situation in the province of New Brunswick but they must not forget that the Minister of Finance told us the other night that he was not one of those who blamed the location of the Intercolonial Railway where it is—that he believed it was located in the best position for the purposes it was intended to serve. When we find reports of surveys laid before the House showing the mountainous character of the country through which the proposed road is to run : and when we remember the statement made by the ex-Minister of Railways and Canals that a year or two ago, when, owing to the embargo which was placed on our cattle

by the United States government, the Canadian Pacific Railway was unable to carry cattle through the state of Maine, and the Intercolonial was called into requisition, it was found that that railway could perform the service at less expense and in less time than the Canadian Pacific Railway; I think we are justified in following our leader in the position he took this afternoon, when he said: Take the road you have, and use it, but do not wreck it, and do not throw it away.

Then, the right hon. Premier said, we must keep the word of parliament. Far be it from me to utter one single syllable against the propriety of such a sentiment as that. But again, may I ask, is the reason founded on fact? Did parliament ever at any time pledge any word to any body to build another road any where under the sun, in such a way as to justify this present measure? Why, the right hon. the premier himself, when he lays aside hyperbole, and comes down to fact, says that the line he referred to was the line from Harvey to Salisbury. It was promised by the ministers of the Crown in those days, and they implemented their promise by bringing a measure before the House to grant $500,000 for that purpose. It was carried in this House, but thrown out in the Senate. Surely the right hon. the premier is too old a parliamentarian and too good a lawyer to talk about the word of parliament when only this one single body had expressed itself on the subject. Parliament is composed of two bodies, and if the right hon. the premier is so particular about keeping that pledge, I do not blame him, because, after studying the history of Canada since confederation, he has apparently found only one pledge of the Conservative party which they did not keep, and so many of his own party that they did not keep, that he considers that even if the Conservative party merely hinted at a pledge, that it is sacred and ought to be implemented by parliament. But if the right hon. the premier is so anxious to keep the word of parliament sacred, might I not appeal to him to have an equal loyalty to the Crown, and to see that when the Crown makes such a promise as that which was put into the mouth of His Majesty's representative at the opening of this session, that promise shall be kept? I would like to ask the hon. gentlemen who sit behind the premier—the Minister of Justice, who should be the fountain of justice in this House, from which honours and judicial appointments come—if it be correct, as the premier said, that the sacred word of parliament should be kept, is it not equally important that the pledge put into the mouth of the representative of the Crown at the opening of the parliament of this country should also be kept?

The next reason given by the right hon. the premier was that we must be saved from the danger of the abrogation of the bonding privilege. We heard a good deal about that in the early days of this debate. We have not heard much about it in the closing part of the debate. It seems to have dawned on hon. gentlemen opposite that there are two or three ways in which that subject could be viewed, and that the further they travel in discussing it the worse appears the position they occupy. Just think for a moment that an intelligent chamber like this is to be told that it is necessary to spend $100,000,000 or $150,000,000 for fear our American neighbours will some fine day shut off the bonding privilege. Suppose they did, what is the worst that could happen? If they did it before this new road was constructed, could we send our goods to any of our Atlantic seaports? Hon. gentlemen on this side of the House at any rate know that we could. They know that we have already a system of transportation on Canadian soil from the Pacific to the Atlantic. But I would not expect hon. gentlemen opposite to know—I would be surprised if they did—when we find the right hon. the premier himself saying that we have not—in his speech at page 7933 of 'Hansard,' in commenting on a statement made by Mr. Carnegie, who is no doubt a genius for acquiring money, and a prodigy in advertising himself. Mr. Carnegie, apparently knowing very little about Canadian sentiment or Canadian geography, made the statement that we could not use our ports for five months in the year, because during that time they were ice-bound. 'It was not,' said the premier, bubbling over with information for Mr. Carnegie—'It was not because our harbours were ice-bound in winter, but simply because we had no railway to reach them.' Now, I have come to the first genuine reason—I say it with all sincerity—that I have been able to discover among those enumerated by the right hon. the premier why this road should be built. I think, if I had been sitting behind the premier, I would myself have been convinced by that argument. When I heard him say that we could not reach our own harbours because we have not any railways running to them, I would have thought it was about time that something should be done. But that something should be to enlighten hon. gentlemen opposite, beginning with the premier, and to endeavour to instil into their minds the gratifying information that we have at the present time not only seaports, but railways running to them, and that the right hon. gentleman need not be alarmed over a difficulty which does not exist.

The last reason given by the Prime Minister was that the proposed line was acquired in order to regulate traffic. But the government have taken a most expensive way of regulating the traffic. The first thing they do is to secure a road over the western prairies that will stop at Winnipeg, and

which will be in Winnipeg from three to five years before the eastern section reaches that city. It is perfectly clear that the Grand Trunk Pacific Railway will be in Winnipeg long before the eastern division reaches that spot. Had the agreement been drawn intelligently and in the interests of the country—and I am not blaming the Minister of Justice, because I presume he simply put the intentions of the parties in legal phraseology—it would have provided for the building of a line from Winipeg east from which a branch could be built to North Bay or to Port Arthur or Fort William and thus secured the transportation of the products of the west by the lakes through our eastern ports. But instead we find the government making an arrangement which lays before the Grand Trunk Pacific Railway the temptation for years to come to send their wheat south from Winnipeg across the border, through to Chicago and Duluth, and we know that it is one of the hardest things in the world, once traffic has taken a certain route, to divert it to another. Had the government been more eager to look after the interests of the country and less anxious to make a bargain, we would have had a totally different arrangement submitted to us.

When my hon. friend the Minister of Finance came to discuss the question, he added very little to the reasons advanced by the First Minister. He pleaded that the Conservative party did not require surveys in 1871 before entering into a contract for building the Intercolonial Railway, nor did they require surveys before contracting to build the Canadian Pacific Railway. But the circumstances in these cases were entirely different from those which exist today. What were the facts when the Intercolonial Railway contract was entered into? That road, Sir, was a national necessity. Every one knows that the old provinces had been getting along so unhappily, every one knows that there was so much friction between them, owing to unhappy religious and racial difficulties, not fomented by the Conservative party, that it became necessary to do something; and so the statesmen on both sides of politics agreed that Nova Scotia and New Brunswick should be added to the original Canadas and thus restore harmony by forming a confederation. There was therefore a national necessity for the building of the Intercolonial Railway. The lower provinces would not have come in unless they were promised a railway to connect with the upper provinces. Surely, if ever there was a case of national necessity which justified the conduct of the government, it was that one. But will anybody pretend that such a necessity now exists? Then, when the contract with the Canadian Pacific Railway was entered upon, the question of building that road had been before the country for years. This country had pledged itself to British Columbia to build the road, and again there was a national necessity. We had purchased the prairies of the west and we knew that extension to the Pacific was absolutely necessary for the Dominion. It was necessary for our national existence that we should build a railway across the prairies to connect with British Columbia; and that being the case, we entered into the contract to build the Canadian Pacific Railway. But is there anything in the circumstances to-day which, in the most remote degree, resembles the circumstances of those days, when a real, true national necessity existed?

A great deal of capital was sought to be made by the Finance Minister (Hon. Mr. Fielding) and the Minister of the Interior (Hon. Mr. Sifton) out of the charge that we had attacked, year after year, the management of the Intercolonial Railway. They stigmatized us as not being friends of the Intercolonial Railway. Well, Mr. Speaker, we have never attacked the Intercolonial Railway itself from this side, but have attacked, and will continue to attack, the management of that noble public work; and when hon. gentlemen like my hon. friend the Minister of Finance actually deride us because we oppose grants for the construction of elevators at St. John and Halifax, we can easily turn the tables on them by pointing to the fact that not a single bushel of grain has gone through the Halifax elevator and but one cargo and that at an expense to the country of $10,000, through the elevator at St. John, so that these two institutions are standing as costly monuments of the lavish expenditure of this government.

My hon. friend the Finance Minister, whose honesty every one on this side, I am sure, admits, has said—and I am certain he said it in all sincerity—that he had looked carefully through the Bill and thought it was an honest Bill, because he could not find anything in it for the promoters. I am quite willing to accept the assurance of the hon. gentleman. I think that about as near as he could get to finding out where the money was to be made would be to look through the pages of the Bill, and if he did not see dollar bills sticking out he would be unable to find anything in it for the promoters. But there are perhaps other people who have better ideas on that point. Just look at the position of the road. If hon. gentlemen opposite would lay aside their party prejudices and view the question upon its merits, I am perfectly certain that a mere statement of the position of the road would prevent the Bill being discussed five minutes. Just think of the position in which the country is to be placed. The country is to guarantee 75 per cent of the western section, and I shall say nothing of the ease with which a company could put in the whole cost under cover of the 75 per cent guarantee. The country bears all the cost, in the meantime, of the construction of the eastern division, so that when the road is completed, it is

perfectly clear that this country will owe $50,000,000 or $60,000,000 for the construction of the eastern division and will have guaranteed three-quarters the cost of the construction of the western division. The Grand Trunk Pacific Railway have obtained their charter. The hon. member for Brantford (Mr. Heyd) asked me what the promoters of the Grand Trunk Pacific Railway put into the road up to the time of its completion, and I told him that they did not put in one dollar, as I shall prove. Let us see whence the money comes. From Moncton to Winnipeg the government bear all the expense of construction. West of Winnipeg the government bears 75 per cent. That only leaves 25 per cent to be raised by the company. Whence does that come ? I confess it will be a little hard, from reading the Bill, to be perfectly certain just whence it does come. The language is so artfully changed in the clause providing for the 25 per cent to be guaranteed by the Grand Trunk as compared with the government guarantee of 75 per cent, that it is very hard to say what the meaning of the words may be. But the Minister of Finance and the Minister of the Interior both agree as to the meaning of that clause, and both say that the Grand Trunk Railway has to provide 25 per cent by guaranteeing sufficient bonds to raise that amount.

Now, if the government provide 75 per cent and the Grand Trunk is to guarantee bonds to raise the other 25 per cent, what is the Grand Trunk Pacific to put in? Your road is completed, and your company has not paid a dollar. What, then, is the position of your company ? It has $20,000,000 of preferred stock and $25,000,000 of common stock, and there has not been a dollar put up for it. I suppose the Grand Trunk will get either the $20,000,000 or the $25,000,000 for guaranteeing the bonds. The balance will be divided, I suppose, among the intelligent, industrious and successful promoters. And if the Finance Minister were in that neighbourhood I fancy he would be able to form some idea where the dollar bills were. But we find the road completed, and the company has not put a dollar into it. And in this I appeal to the words of the Minister of Finance and the Minister of the Interior, who stated distinctly that the Grand Trunk is to guarantee, not the balance of the bonds, but enough of the bonds to make up the balance of the money. There will be quite a distinction between the two. It seems to me that the contract clause was such that nobody could say with certainty exactly what it meant. On the whole, I should thought it possible that under it the Grand Trunk would guarantee the bonds for the face value of 25 per cent and, if that was not sufficient, the shortage would be made up by the company in some other way. But when two of the gentlemen who made the contract, one of them the Finance Minister, who must know if anybody knows, the meaning of the financial terms, tell us that the Grand Trunk is to raise the whole 25 per cent of the cost, we naturally ask where the Grand Trunk Pacific Company is going to put in a dollar.

Now, the Minister of Justice spent some time in discussing the question of equipment, and I take that up now, because it is germane to the question of who provides the money for the construction of the road. The hon. gentleman said that the meaning of section 22 and some other sections to which he referred, was clear beyond peradventure, so clear that no lawyer of the eminence of the leader of the opposition (Mr. Borden, Halifax) and the senior member for Hamilton (Mr. Barker) should have dreamed of making such a statement as that the company was not bound to purchase the equipment to be provided for this eastern division. I venture to say that the statement made by the Minister of Justice has confirmed every member of the House who has taken the trouble to pay attention to the clause in the belief that the view expressed by the leader of the opposition and by the hon. senior member for Hamilton is absolutely accurate, and still more, that the Minister of Justice is afraid that it is so. Let us see what was done. The contract was drawn up by the Minister of Justice. Then counsel, Mr. Shepley, is called in. I wish to be understood as saying that Mr. Shepley is one of the ablest and most experienced and most painstaking counsel that the Minister of Justice could have secured. I hope it will not be thought for a moment that I am finding fault with that part of it. If Mr. Shepley received a rattling good fee, I for one will not criticise the estimate when it comes down. But, after he has revised the contract and it has been accepted, suddenly in this House a new idea is sprung, and the minister goes back to his counsel and says : Do you mean to say you were such an idiot as to leave such a hole in the contract——

The MINISTER OF JUSTICE. I did not suggest that he was an idiot.

Mr. NORTHRUP. I am merely putting it in extreme form. He asked the counsel if he thought he could have made such a blunder. If the Minister of Justice did not read to Mr. Shepley, the deputy minister, Mr. Newcombe, and to Mr. Gormully any more of the sections of the contract than he read here to-night, I should be sorry to say that they were wrong in the opinion they gave

The MINISTER OF JUSTICE. Counsel generally read contracts before they give opinions in my country.

Mr. NORTHRUP. I should think so. But the opinion was such that I concluded that they could not have done so. The Minister of Justice called our attention to

sections 11, 12, 13, 19, 22, 34, 35 and 37. In the majority of these sections, we find that all depends on the meaning of the word 'equip.' Now, 'equip' is not a legal term. I am not aware of any legal work in which any legal meaning is attached to that word. I consulted several legal lexicons, and I do not find it mentioned. Consequently I take the Standard dictionary in order to find the ordinary meaning of this English word, and I find that the meaning of 'equip' is given as 'To furnish or fit out for service, task or course; provide with all that is necessary for a successful undertaking.' You will see that it is possible to provide with all necessary for a successful undertaking without purchasing. If the Minister of Justice, upon taking office under the Prime Minister were to say: I would like to secure a house ready furnished for my residence in Ottawa; and the Prime Minister were to provide him with such a house, the Minister of Justice could hardly refuse to pay the rent on the ground that the furniture had been borrowed or leased—so long as it was not stolen. It would not be necessary that it should be purchased. Equip is one thing; purchase and equip is another thing. I should have thought under ordinary circumstances that when we find the word 'acquire' used again and again in this contract—there are probably few words used in it so frequently—that in this case the Minister of Justice would have it read 'acquire and equip' or 'purchase and equip.' Then, we should know where we were. The other clauses the minister read did not take the matter a particle further. They merely repeat the use of the word 'equip.' We do not find that it means that the company shall purchase and equip. Then, we come to section 14, which the minister did not read to this House. Let me take the liberty of reading the 14th clause to the House, and then I will ask if there is a layman in this House who cannot at a glance see the meaning of the word 'equip' as used in this contract. This clause, 14, provides for the working expenditure. And hon. gentlemen will remember that, for the first ten years the expenditure is to be deducted before the rental is paid. So, it is important to know what the working expenditure is. On the eastern division they can take certain things for working expenditure. This is the clause:

> For the purposes of this agreement, the expression 'working expenditure' as applied to the eastern division of the railway, shall mean and include all expenses of maintenance of the said division, and of the stations, buildings, works and conveniences belonging thereto, and of the rolling and other stock and movable plant used in the working thereof, and all such tolls, rents or annual sums as are paid in respect of property leased to, or held by, the company——

They have some leased property. That is admitted. Now, I will call the minister's attention to what follows:

> —in respect of the said eastern division (apart from the rent of any other leased line), or in respect of the hire of rolling stock let to the company as part of the equipment of the said eastern division.

Can the English language be plainer? Here is an agreement by which $5,000,000 of rolling stock is to be provided—not purchased—for the equipment of that road. It is marked as assigned and set apart for that division; I suppose in order that if it slips off to any other it can be brought back, and, on the average, the value of rolling stock shall be $5,000,000. There is no doubt that the value of the rolling stock is to be $5,000,000, but the sections are silent as to the ownership, except that in this section relating to working expenditure, it is provided that the Grand Trunk Pacific can add to the working expenditure any sum that they pay for the hire of rolling stock, let to the company as part of the equipment of the said eastern division. If the case were to go before a judge and the Minister of Justice were to say that 'equip' means 'purchase and equip,' would not the judge say at once: You yourself have defined it in this clause which provides that they may lease a part of the equipment of the eastern division? Is it open to question that it would be held that the requirements of the clause would be fulfilled by borrowing or leasing rolling stock for this division to the value of $5,000,000?

There is another consideration that the hon. gentleman will not overlook, that is the question of working expenses is for the first ten years. After that time we are not concerned with the working expenses. It is when the company has to pay rent that working expenses is allowed. We find that the company has to supply $5,000,000 worth of rolling stock for the eastern division, and because the government is satisfied that the business will not pay for ten years, they let them off from paying rent for ten years. When we find this state of affairs admitted by the government, would it not be the height of absurdity to say that while they will not make enough money to pay their rent, they will also be supposed to lease additional stock in addition to the $5,000,000? If that had been the case we can depend upon it that some of the shrewd lawyers who drew up this agreement would have put in two or three words here such as 'in addition to the $5,000,000 purchased therefor' or words to that effect. Now, the Minister of Justice will say: You have not touched the 35th clause. Let us read it. It provides for security in the shape of a mortgage which will be a first charge upon the railway, undertaking, equipment and property, tolls, rights and franchises of the company, including all equipment and property to be thereafter acquired by the company. If the company buys one car, the government it entitled to a mortgage on that car. If the company leases $5,000,000 worth

of equipment, what will be the effect; every lawyer knows that the lessee obtains a title which he can mortgage. That is the first charge on the lessee's interest. It would be a novel statement of law that the lessee could give a mortgage to be a charge on somebody else's property. The Minister of Justice must not forget that if the Grand Trunk Company feels so friendly to this Grand Trunk Pacific Company that they will guarantee their bonds gratuitously, they might possibly lease their cars on such favourable terms that if the government had to take over this road it would be an advantage to the government to step in and to take the lessees' position, and not compel them to buy new cars, but to use the old cars. But that is a different proposition from saying that because you are to have a mortgage upon equipment, you will have a mortgage upon the property of somebody else. Then when we take the other clauses (b), (c) and (d) they do not carry the subject any further. You come back to the equipment, and the moment you decide what equipment means then all these subsections follow naturally in their place.

Another argument the hon. gentleman made is that clause 37 is conclusive. I did not think he would refer to clause 37, but that he would have left a less skilful lawyer to refer to that. Now, here is a clause different from all other clauses in the contract. It is put in for a specific purpose, and every one knows that purpose. It is put in to ensure that whatever the company buys in the construction and equipment of its road, it should buy in Canada. I do not think a more futile clause was ever put in any agreement by any conveyancer. All that is provided is that the company shall purchase all material and supplies required for the construction of the western division and the equipment of the whole line, from Canadian producers when the same are produced in Canada, and when such materials and supplies can be purchased in desired quantities and of equal quality for the purpose required and for prices and upon terms equally advantageous with those procurable elsewhere. That is to say, if the company can buy goods in Canada just as cheaply and of as good quality as they can out of Canada, they will be wise enough to save their freight and insurance and buy them at home. But if they do not choose to buy them in Canada there is no provision by which they can be compelled to do so, and who will be able to say in years to come that the contention of the company relying on this option, was wrong? That is the purpose of that clause, to provide that what the company has to buy must be bought in Canada. What has that to do with the construction and equipment? The word 'equipment' stands by itself. If that implies that they must buy it in Canada, you do not need that clause; it is all provided for in the 22nd clause if equipment includes the idea of purchase, if equipment does not include the idea of purchase, then this clause does not apply. So I submit that the contention raised by the leader of the opposition and my hon. friend from Hamilton is quite correct, and that this document does not provide the security that should be provided for the people of this country.

Then the Minister of Justice spoke about the country not being bound to pay anything until the road was completed. Now, I think he has not carefully read the clauses, or he would find that practically the government must contribute as the road goes on. I admit that it is optional.

The MINISTER OF JUSTICE. I did not contend any more than that.

Mr. NORTHRUP. I think the hon. gentleman did, for this reason; unless he did contend for more than that, it was vain to speak of it at all. The only object would be to lead the people to believe that the country is not bound to pay while the road is being built. It is one thing to say the country is legally bound to pay, I do not say that; it is another thing to say the country is practically bound to pay, and that is what I do say. If this country is guaranteeing the bonds on $75,000,000, when it saw this company crippled by extortionate charges made on every contract, why should it not advance the money in the meantime? Why, if the government exercised its option and did not pay a cent until the road was completed, that road would cost three or four times as much as it would if the contractors were paid as they went along. It would be interesting, when the hon. gentleman is again addressing the House, if he would enlighten us as to how the western section is to be built, assuming that the government pays nothing, guarantees no bonds, until the whole road is built.

I want to say a few words about the contract itself. It is such an extraordinary document that we are almost justified in declining to consider it on account of the inherent signs of weakness on almost every page of it. In the first place, it is indicative of haste, and perhaps that is the reason the Prime Minister said we must move at once, that there is no time for deliberation. If there has been one statement made in this debate that can be accepted by the House without hesitation, it is the statement that the government moved without deliberation. Perhaps one reason is that the government themselves did not know where they stood nor with whom they were dealing when they came to draw up a document for the construction of a transcontinental railway. When one looks at the original Bill, No. 64, to incorporate the Grand Trunk Pacific Railway Company, it is seen that the incorporators are:

The Honourable George A. Cox, H. M. Pellatt, and E. R. Wood, all of Toronto, Ontario, the Honourable William Gibson, of Beamsville, On-

tario, J. R. Booth, of Ottawa, Ontario, the Honourable H. B. Rainville, Charles M. Hays, Frank W. Morse and William Wainwright, all of Montreal, and John Bell of Belleville, together with such persons as become shareholders in the company, are incorporated under the name of 'The Grand Trunk Pacific Railway Company,' hereinafter called 'the company.'

These gentlemen applied to parliament and we gravely discussed their application in this House and passed the Bill which has gone to the Senate, but which has not been adopted there, incorporating these gentlemen as the Grand Trunk Pacific Railway Company. Then, suddenly, like a bolt out of the blue, comes down the government Bill setting forth that :

An agreement has been entered into, bearing date the 29th day of July, 1903, between His Majesty the King, of the first part, and Sir Charles Rivers-Wilson, C.B., G.C.M.G., and others, representing therein and acting on behalf of the Grand Trunk Pacific Railway Company—

Who are they ? The preamble tells us—

—a company incorporated by an Act of the parliament of Canada passed at the present session thereof.

They are not incorporated, and the Act is not true on its face. This may be a small matter, but it shows the recklessness and the haste with which everything in connection with this contract has been done. It appears to me that the government apparently drew the Bill and the railway lawyers drew the contract. When we look at the contract we find that it is between the government and a number of gentlemen——

Representing therein and acting on behalf of the Grand Trunk Pacific Railway Company, a company to be incorporated by an Act of the parliament of Canada passed at the present session thereof.

Showing that the railway lawyers knew the true position of affairs and that the government did not. I think it is rather extraordinary that this debate has proceeded for so long a time. The right hon. leader of the government has introduced this Bill, several of his colleagues have spoken but none of them has yet explained how it is that when eight or ten gentlemen apply in the ordinary course to be incorporated, suddenly, liking the melting of the dew in the morning sun, the Grand Trunk Pacific Railway Company disappears and we enter into a contract with several other gentlemen representing the Grand Trunk Railway Company and professing to represent the Grand Trunk Pacific Railway Company. Surely the House is entitled to an explanation as to the way in which this contract was drawn and as to why the government did not know the status of the gentlemen with whom they were dealing. Now, I will refer to section 21 of the Bill which is a peculiar section :

The Governor in Council shall have the power at any time to suspend the progress of the

work upon the said eastern division until the then next session of parliament.

Is it possible that hon. gentlemen opposite have suspicions themselves ? Is it possible that they fear that what the hon. ex-Minister of Railways and Canals says is right ? Is it possible that they anticipate, that the expenditure may be so enormous that even this country will not stand the construction of the eastern division, or is it possible that this agreement may be held before the country until after the election when the government can put in another division if they see fit ? Surely some light upon the subject should be given to an anxious and inquiring House. The hon. Minister of Justice has spoken of the care that has been exercised by the government to see that the road is constructed in a reasonable way. The hon. gentleman makes a fair presentment of the case. He points out that the government will construct the eastern division of the railway, that the company will pay 3 per cent on the cost of the railway, that the company will construct the western division of the railway, the government guaranteeing 75 per cent of the cost and that each will thereby be overlooking the line constructed by the other. He points out that in this way the country has been safeguarded. What could be safer, he asks ? How could any of the moneys of the country be improperly expended where the interests of both parties are so carefully safeguarded? Let us look at section 7 and see how far they have been safeguarded. I would like to know whether the hon. Minister of Justice or the lawyers of the railway company are responsible for this clause :

In order to ensure, for the protection of the company as lessees of the eastern division of the said railway, the economical construction thereof in such a manner that it can be operated to the best advantage, it is hereby agreed——

What do the people get as their security ? —that the specifications——

That the specifications—the specifications——

—for the construction of the eastern division shall be submited to, and approved of by, the company before the commencement of the work.

What about the tenders ? What about the contracts ? Where does the money come in in the specifications ? It comes in with the tenders or the contracts. I think that the hon. gentlemen opposite must surely have thought that the people were worthy subjects of Barnum's irony when he said that the people liked to be humbugged when he tells us about the provisions made for safeguarding the country, because, although he does provide for the specifications he makes no provision for the tenders and contracts and practically all the unholy work is done, if it is done at all, in connection with the tenders and contracts. The same thing applies

to the western division. We read all through that there is such a provision in respect to the specifications, but not in regard to the tenders and contracts. I notice all through this agreement that one of the inherent weaknesses of the agreement is the careless and reckless manner in which it has been entered into. It is rather singular that we should be told by hon. gentlemen opposite that we are not to be put to any expense in connection with the construction of the eastern division because the Grand Trunk Pacific is to pay us a rental of 3 per cent. We guarantee their bonds for 3 per cent, but the bonds are payable half yearly, and the rental is payable yearly. It would have been the simplest thing in the world for the government to have insisted that if they have to pay the interest half yearly they should get the rent half yearly, because, in large sums running up into millions, a half year's interest represents a considerable amount of money. If the contract were drawn in the interest of the railway company it would have been drawn exactly in the way in which it has been drawn but if it were drawn in the interest of the country it would have been drawn in such a manner as to provide that the rental should be paid half yearly. Then, there is another clause which provides that if the rent is not paid when due it is capitalized but it is not capitalized in such a way as to give compound interest to the country. There may be arrears that will be capitalized three years hence but the country will lose the interest in the meantime. Then clause 21 is a singular one. It provides that the state of affairs shall be at the end of the term :

If, upon the termination of the said lease, the government shall determine not to undertake the operation of the eastern division, the company, provided the terms offered by it are as favourable to the government as those offered by any other railway company equally competent to perform and fulfil the obligations required by the government to be assumed by the lessees thereof shall have the right to an extension or renewal of the said lease for a further period of fifty years, upon such terms as may be agreed upon.

I think any one will see that this puts the government in an extraordinary position. At the end of the time the government will be found operating the road from Moncton to Winnipeg beginning nowhere and ending nowhere. If they want to expropriate the Grand Trunk Pacific Railway running to the coast they can do it, but they would have to pay for the value of the road fifty years hence. Now they contribute three-quarters of what it will cost to build it, but they will have to pay the enhanced value that will accrue to the shareholders of the Grand Trunk Pacific. No other company can possibly compete with the Grand Trunk Pacific, for the lease of the eastern division, because, suppose that any other company makes as good a proposition to operate the road the Grand Trunk Pacific by reason of the efficiency of its system, its connection with and its management of the eastern division would be in a better position to carry out the lease than any other railway company and therefore practically the government are making a present of the eastern section of this road to the Grand Trunk Pacific for all time to come, and should the government want to buy out the western section fifty years from now they will have to pay what the road is worth at that time. The government have contended that one of their chief reasons for carrying through this scheme is to secure the regulation of rates, but the whole section which purports to do this really appears to do everything else. If they expect to do it in the way in which the section relating to that matter is drawn I would say that it is the surest way to avoid the accomplishment of the result which they profess to have in view. Just look for a moment at the position of the farmers of this country. We have $25,000,000 of one kind of stock, and we have $20,000,000 of another kind of stock that will be given among the promoters and the shareholders of the Grand Trunk Railway for nothing, and for all time to come the farmers of the North-west must make sacrifices to pay dividends on this stock which is given to some one for nothing. And yet, this is supposed to be in the interest of this country.

I am not prepared to go so far as to advocate the building of a road from Moncton to the Pacific as a government road, although perhaps the time may come when with further information, and because of changes in the conditions of the country, I might be willing to go thus far. But, Sir, I have no hesitation in saying, that as between a scheme to which the government is to contribute 75 per cent of the money for a certain time, taking all the risks, and the company supplying nothing, but getting a friend to guarantee for 25 per cent, and taking all the profits ; I say unhesitatingly that in the interests of the people of this country we had better own the road and hold the $25,000,000 preferred stock and the other millions of common stock, as trustees for the people of the country, than have outsiders drawing dividends on these stocks for 50 years to come.

I do not intend to occupy the time of the House longer, save to call attention to one point, and I call attention to that mainly in order to illustrate the style of argument that hon. gentlemen opposite have adopted. If hon. gentlemen would only honestly face the facts and reason from them, perhaps there would not be as great difference of opinion between the two sides of the House as we often find. Let me take one illustration. The Minister of the Interior went into ecstacies on the one hand, and was filled with amazement and horror on the other,

because gentlemen on this side of the House praised Mr. Booth for what he had done, and blamed the government for what they had done. That would be a perfectly fair and reasonable argument if Mr. Booth and the government had done the same thing, but it is a perfectly unreasonable argument and an insult to the intelligence of the House, if Mr. Booth and the government had not done the same thing. What are the facts? Mr. Booth had a line and the government had a line; Mr. Booth had his own Canada Atlantic Railway and the government had their own Intercolonial Railway; Mr. Booth decided to extend his line. The first thing he did was to make the surveys, to lay out the plans and locate the line, and after he had made his surveys and located the line, then he decided to build. Did the government do that? Do we not find fault with the government on that point beyond most others, that what Mr. Booth did, they did not do, because they did not make such surveys? Then when Mr. Booth got ready to build he extended his own line.

Mr. SCHELL. Let me ask the hon. gentleman, if Mr. Booth has surveyed the line that he is now proposing to build from Whitney west, and for which he has obtained a charter?

Mr. NORTHRUP. I am speaking of the Canada Atlantic Railway extension to Depot Harbour, which was alluded to by the Minister of the Interior, and I am trying to show the vast difference in the circumstances under which Mr. Booth built his road to Depot Harbour, and the circumstances under which the government propose to build this road through an unknown land. Mr. Booth extended his own line. Is the government extending its line? Mr. Booth, by extending his line, improved and increased the value of his line. The government is not extending their line, they are paralleling their line. Surely there is a difference there. We may well bless Mr. Booth and blame the government as to that. Then, after Mr. Booth had built his line as an extension of his own line, he operated his line. I am not aware that the government propose to operate the line that they are going to spend so much money to construct. Then, after Mr. Booth had constructed his line he carried all his freight by his new line over the full length of the new line down to the old, and he had the additional benefit not merely of the carriage of the freight on the new line, but the additional profits from its carriage on the old. The government are not doing that; they are handing over their line to another company. Then, when Mr. Booth was looking about for a place to extend his line, he extended it to the lakes; that is along the line suggested by the leader of the opposition. Mr. Booth extended his line where he knew he could get business; he extended it to the place where people were looking for it, and where they brought their grain for transport. Has the government extended its line to the lakes? Have they not built a blind line to Winnipeg, where they get nothing except what comes from this other line which is projected as a continuation of it across the prairies? I think it is a reasonable conclusion that when this side of the House applauded Mr. Booth for what he did, they could not help but to blame the government for what they did. We were consistent in applauding Mr. Booth and blaming the government, because what that sane, sensible, shrewd, business man, Mr. Booth did to make his road a success, has been carefully avoided by the government, and that is the reason they are going to make their scheme such a failure.

We appeal to hon. gentlemen on the other side of the House to recognize that this is a question which should rise above party politics. No one will deny for a moment that the expenditure of from $100,000,000 to $150,000,000 must affect the credit of this country for better or for worse. No one will deny that the expenditure of $100,000,000 or $150,000,000 on this proposed railway will certainly curtail other expenditures which may be more desirable and more important in the future than the construction of this railway. And, Sir, I appeal to hon. gentlemen opposite at such a time as this, to lay aside party prejudices, to look on the question simply on its merits, to decline to be automatic voting machines, to refuse to jump like jacks in the box simply because the Prime Minister may pull the strings, but as intelligent representatives of the people to recognize that they owe a duty to their country and to those who sent them here. I appeal to them to consider the reasons which have been given by the ministry in support of the measure, and if they find that no one of the reasons given is founded on fact, if they find that few of the guarantees promised are found in existence, I ask them to join with this side of the House in defeating this measure, and allowing the country to obtain the best return it possibly can for the money it may expend on the solution of the transportation problem.

Hon. JOHN COSTIGAN (Victoria, N.B.). I desire Mr. Speaker, to say a few words on this very important question. I do not think it necessary that I should offer any apology, even though I may not be able to make my remarks as interesting as many hon. gentlemen who preceded me, or who may come after me. But, Sir, having occupied a position in public life for so long a time, having witnessed the initiation of the Intercolonial Railway as well as the initiation of the Canadian Pacific Railway, and having lived to see these two great projects accomplished facts, I do feel a deep interest

as a Canadian—which is the proper interest to feel—in this great national project. I feel a special interest on this occasion coming as I do from the province of New Brunswick, because at no time in the history of this country since confederation, have the interests of New Brunswick been so much exposed to misrepresentation and prejudice. I feel it my duty therefore, Sir, to repudiate many of the statements made during this debate. This whole discussion has been in many respects extraordinary. Gentlemen who spoke in opposition to the scheme have from the beginning condemned this policy, and have condemned the government for introducing it, because as they allege, there is no proper data before us. We have been told by gentlemen who have spoken against this project, that the country in New Brunswick west of Moncton is absolutely unknown, that the northern parts of Quebec and Ontario are also unknown, and the same argument is applied all along the line. But, Sir, any one listening to the discussion must be surprised at the assertions which these gentlemen make as to a total absence of information on the part of the government when you think of the full and complete information which these gentlemen themselves say they are possessed of, as to the heavy grades to be encountered, the mountains to be crossed, and the difficulties to be overcome. If there is a total absence of information, how is it that there is so much information to prejudice the scheme ? I think the two arguments are inconsistent—just as inconsistent as many of the other points taken. The Intercolonial Railway was an important factor in the question of confederation, so important that without that inducement to the maritime provinces, Nova Scotia and New Brunswick would not, I believe, have entered into the confederation at that time. Since confederation and since the construction of the Intercolonial Railway, I have sat here under both administrations, and I have heard the attempt frequently made, especially in the province of Ontario, to prejudice the members coming from that section against the Intercolonial Railway as a burthen on the people of Ontario for the special benefit of the people of the maritime provinces. I think that was a most unfair and ungenerous charge to make. In the first place, the principle was laid down from the start, that there was no idea that the Intercolonial Railway should be constructed as a commercial line. It was for the purpose of uniting the different provinces, encouraging interprovincial trade, and bringing the people together. We in the western section of the province—and I include the city of St. John and all the counties along the river in that section—felt that our interests were sacrificed by the adoption of the Robinson route; and we are told today that we are responsible because the route was not a commercial success. We are not responsible. The selection was made from a military point of view, and but for that consideration the Robinson route would never have been adopted. Hon. gentlemen may talk as they please, but those who remember the discusions before confederation and in the first session of parliament after confederation, will admit, I am sure, that the arguments were overwhelming in favour first, of the frontier route, as it was called, and secondly, the central route as a compromise. We have been told by hon. gentlemen, in this debate, and by a newspaper which has been cautiously discussing this scheme, in its issue of the 15th of August, that the central portion of New Brunswick is an impassable section of country. More than that, some hon. members have said that it is a worthless country, not worth developing. I do not feel that I have any great cause of complaint against these hon. gentlemen, because the hon. ex-Minister of Railways (Hon. Mr. Blair), the one representative in the cabinet from our province, has indicated in his speech that the road will pass through a country difficult and almost worthless, leaving out the better portions which are settled. Now, Mr. Speaker, so far as the position of the hon. ex-Minister of Railways is concerned, I have been a friend, politically speaking, of that hon. gentleman for a great many years. I supported him as the leader of a coalition government in our province, which lasted for years to the satisfaction of both parties in the province. I supported him then while he was a Liberal, as I have supported him while he was a minister in the present government. I have no desire to say one word that would be offensive to that hon. gentleman or his many friends. But I have a right to say this, that when the hon. gentleman, who represents the province of New Brunswick in the cabinet, gave the reasons why he retired from the government and condemned this policy—and I say it in all candour and in all honour—that I have not yet heard any reason given by that hon. gentleman that satisfies me that it was the reason which induced him to take that step. The hon. gentleman himself, in discussing this question, has taken the ground, as have all the newspapers which have attacked this scheme, that the weak point in it is the eastern extension of the line from Quebec to Moncton. Why, it was first assailed as the result of piratical efforts on the part of the maritime members; and if we find ourselves weak in that respect, it is because the hon. ex-Minister of Railways has given strength to that argument. But we are only weak because arguments which have no foundation in fact are used against that part of the scheme. The hon. member for South Lanark (Hon. Mr. Haggart), who always speaks as a practical man, and who has himself had a large experience as Minister of Railways—though he sometimes speaks

without being sure of his facts—stated his objections to the extension of that eastern section from Quebec to Moncton. First, he stated that it would merely be a parallel road—that for the first 100 miles after leaving Lévis it would not be more than fifteen miles from the Intercolonial Railway at any one point. I am sure that if the hon. gentleman will look into the facts, he will be the first to see that he has made a mistake. At no point after the road leaves Chaudière Junction will it be within double that distance of the Intercolonial until it passes that point in Maine so often referred to on the St. Francis river. From that point it increases the distance until it more than doubles and trebles it, and, as was well stated by the Prime Minister, it passes through a country which is quite inaccessible by the Intercolonial, and is separated from it by that range of mountains which in fact has been used as an argument against the construction of this road—as if this road would cross over those mountains. We do not generally build railways over mountains. If these ridges were impassable mountains, with no breaks or natural valleys in them, I would admit that there was something in that argument. But nature has solved the problem. Do you think you are going to traverse the Rocky Mountains with a railway because it is said they are insuperable and you cannot build a practicable line over them ? That is true, but nature has solved that problem in many cases. You have the Kicking Horse pass, the Yellow Head pass, the Pine River pass, the Peace River pass. The waters in that pass rise within 125 miles of the Pacific coast. Its waters rise in the hills and flow eastward through thousands of square miles of that territory, which lies beyond the Rocky Mountains, and find their passage through the main range of the Rocky Mountains, continue on eastward forming the Peace river, thence to Athabaska and Greater Slave lakes and into the Mackenzie river, and on to the Arctic ocean. That is on account of the natural formation there, and the question of grades does not arise at all. Other passes are south of that.

I listened to the hon. gentleman from North Victoria (Mr. Hughes), a gentleman who has attained such a reputation for his military capacities, who has such high ideals, if not great ambitions, in that direction, who excels in everything he undertakes; and he produced the most wonderful results by merely glancing over the country. I am sure he never travelled all the country he has spoken of, but everywhere he went through that portion of New Brunswick and up through Quebec, as he travelled in his imagination along that route—because he never actually travelled over it—the hills and mountains were rolling around him and getting higher and higher, until it was a question to my mind which was the most elevated—these mountain peaks or the hon. gentleman himself.

An hon. MEMBER. The doubt is in favour of the hon. gentleman.

Hon. Mr. COSTIGAN. The proposed route, so far as I know—and I shall not undertake to assert things I have not a reasonable knowledge of—from Chaudière Junction will not cross the height of land where any of these altitudes which have been referred to occur. It will avoid the height of land by following up the valleys of the streams which fall into the St. Lawrence. Passing by that range of mountains, it will cross one or two small tributaries which flow into the St. John, it will reach the south side of that range of mountains and follow down until it comes to that point near the boundary lake, where it joins the River St. Francis. The general report on our rivers is that the difference in levels is about ten feet in the mile. There can be no very great difficulty where the difference does not exceed ten feet per mile, and it does not in the river I have mentioned. You go down that valley, you strike the valley of the St. John in Canadian territory, and go on to Edmundston and Grand Falls, and thence strike across the country to Moncton. My own impression is that the final location would be via Edmundston and Grand Falls, but that is a matter of detail to be settled later. The engineering difficulties held out against the scheme are bugbears, and have no existence outside the imaginations of gentlemen who used them as arguments. We are told that the surveys made by Sir Sandford Fleming, or under his direction, prove absolutely that it is impossible to get through that central portion of New Brunswick. Well, while the report is not very favourable, what is it ? It says that the central portion of New Brunswick is an assemblage of high hills running up the sources of the Tobique, the Miramichi, the Restigouche and the Upsalquitch. It is true that all the rivers named rise in a small area, and flow in different directions, and that in that section, where these rivers take their source, you have a cluster of hills of considerable elevation; and if any one spoke of getting a road through there, I would say, not that it was impracticable, but that there were heavy grades, and that the greatest trouble would be the curvature and the length of line. But the proposed line goes south of all these highlands. The highest of the whole range in that province is the Blue Mountain, on the north-east side of the Tobique river, about 40 or 45 miles from its junction with the St. John river. If any one were to tell me that the government had decided to build a road across the Blue Mountain, I would say that the government did not know much about the country,

and I would urge them to seek better information.

Mr. LOGAN. If you built from Rivière du Loup, you would have to cross the Blue Mountain.

Hon. Mr. COSTIGAN. No. There is a road built from Rivière du Loup to Edmundston now and in operation. When the debate was on with regard to the question of finally locating the Intercolonial Railway, we were pretty evenly divided in New Brunswick between the valley route and the north shore route, so that our vote did not amount to much. We always believed that Nova Scotia would favour the Robinson route, because that would place it in a more advantageous position towards St. John than if the road went down the valley of the St. John. I stated in my speech at nomination that the province of Quebec would naturally favour a route which would go down the St. Lawrence through Quebec counties and develop two of these counties, while the other route would not develop so many, and that the province of Ontario might be careless about the matter unless it were influenced by political reasons. But importance was attached to the military consideration, and what turned the scales was the fact that we had the credit of the English government for the cost of the construction of the road at that time, on condition that the British government approved the route adopted. That route was built, and the feeling in New Brunswick was this: While the people were disappointed, while they felt that a road three times more expensive, a great deal longer, less commercial in its aspect was selected, still people in the western portion, in course of time, did not begrudge the road to the north shore people, and the general opinion has been that after all it was as well, because a railway was afterwards constructed in that valley, in the local interest, up as far as Edmundston, and the north shore would not have got its road had it to depend on its own resources.

The impression left on the minds of hon. gentlemen who spoke from the opposition side, judging from their speeches, was that the ex-Minister of Railways and Canals left the government because he could not support that scheme conscientiously, because it was a wild, inconsiderate and ill-considered scheme. But he did not leave the cabinet, as I understand it, because the government refused to take his view and go to St. John for a shorter road. That would have been inconsistent with the ground he took himself and the ground he is given the credit of having taken. His whole ground was that he could not justify the paralleling of the Intercolonial Railway. No one will say that a shorter line than the one now proposed could be found by going from Rivière du Loup across Temiscouata to Edmundston and down by the valley of St. John.

Surely no one in this House will say that the hon. ex-Minister of Railways and Canals resigned his seat in the government because the Intercolonial was to be paralleled, and destroyed, and dismantled, and discredited, and that he would have remained a defender of that policy if they had only paralleled the road by going along the Temiscouata route to St. John instead of to Moncton? That would be inconsistent. But there is an object in having the two strings to the bow. That object appears in a newspaper published in New Brunswick, the St. John 'Telegraph.' The 'Telegraph' indicates that the hon. minister left the government when he found that the government would not agree to the construction of a road across from the Intercolonial at Rivière du Loup to Edmundston and down the valley of St. John to St. John. That is not honest politics at all. But what would be the value of such a road? You have heard the objections to the grades and curvatures and the cost of construction of the proposed route. I do not profess to be a railway engineer, but I profess to have a little practical knowledge and to be able to form opinions as to what conclusions practical men like myself might draw from certain facts. I can tell this House that a road was built from Rivière du Loup to Edmundston, largely subsidized by this parliament. It has been in operation for years. It was built in the face of reports against the grades and curvatures of that route. A firm by the name of Fraser & Son, Scotchmen, who came to New Brunswick and settled in that country and succeeded in building up a lumbering and milling business, bought the limits and put up a mill, one of the largest in New Brunswick, on the shores of Lake Temiscouata, half way between Rivière du Loup and Edmundston. They made a contract with the company to deliver the lumber at Rivière du Loup for shipment. I do not know what the grades are, but I know that, with a load of ten cars, the engine has to do a great deal of puffing to pull the train over the line; and I know that if you put more than ten cars on a train you have to put on two engines. You do not require to study what the grades are; you see the effects of the grades. You could not make a profitable freight road out of that. Besides it would be 40 miles longer than the proposed road even to Edmundston, without counting the saving from Edmundston across the province to Moncton.

I shall not attempt to go into the matter of the contract or the legal conditions. I think that some of the lay members of this House are quite capable of taking part in a discussion of that kind and holding their own pretty well with the legal gentlemen. But I think it would be undesirable for me to interfere. I am satisfied that the gentlemen who are looking after the interests of the government, and to the interest of the country, are reliable men and capable of

guarding the public interest, as it is their duty to do. And, without saying anything offensive, I am not at all convinced that the gentlemen who criticise the contract are satisfied that that contract is as worthless as they appear to make out. I am satisfied that it is worthy of the support of this House. Some hon. gentlemen have said what would happen if you could get the voice of the people upon it. I can look back as one of the men who stood here over twenty years ago, when, after the acquisition of the North-west Territories and the bringing in of British Columbia, Sir John Macdonald proposed the policy of the Canadian Pacific Railway transcontinental line, as it was then considered. I followed the speech of the hon. member for North Norfolk (Mr. Charlton) the other evening with great interest. I thought it was one of the good speeches of this debate—argumentative and full of information. But the last part did not, in my opinion strengthen his argument, nor was it necessary to his case. I myself will make a comparison between the two contracts and the two enterprises, this one and the Canadian Pacific Railway. My object will be to prove that the Canadian people are as ready to-day to endorse the policy of the government in this scheme as they were to endorse the policy of the government at that time. I do not think it is necessary or in good taste to undertake to prove that that contract was not a good one. The country has decided that question long ago. The Canadian Pacific Railway has aided to build up this country more than anything else that has been done—we are at one on that point. But let us make a fair comparison of the two enterprises. When Sir John Macdonald entered upon his bold policy based upon his hope and confidence in the future of this country more than anything else, there was no very full information as to the capabilities of the North-west Territories, nor was there much confidence in its capabilities, but one thing largely strengthened that policy, and that was that, having brought in British Columbia, having acquired the North-west Territories, there was only one way to administer them as a part of the Dominion, and that was to build the railway. We could only hope that the railway would justify its own construction—and it did amply. The government of the day had to give large subsidies in money, in land, and in constructed railways, in order to get the company to undertake that contract. It has been said that the terms were extravagant. Anyone who can remember the debate of that day knows that there was severe criticism, and perhaps as unreasonable and unwarranted criticism as there is against this scheme to-day. If any one is inclined to think that that was an extravagant contract let him remember these two things. First that the land that was given at that time was worthless if it was not developed by the construction of that road; and second that after that company was organized, entered upon its contract, made its financial arrangements, and commenced operations, it had to come back to parliament and say: We cannot go on, we are at the end of our resources; the whole thing is up unless we get a loan of $30,000,000 from the Canadian parliament. That staggered the Canadian people, the members of parliament and even the members of the government. But, Sir John Macdonald found that it was a necessary and safe investment to make. He made the loan. It secured the construction of this great work, and every dollar of the loan was paid pack. I feel proud of having contributed to that great work. I feel proud to have lived long enough to give my vote, and as I intend to do, in favour of the great work which is now proposed. And, while I would not like to hear an hon. member decry the result or the terms of the policy of building the Canadian Pacific Railway, I am going to try to do what is fair by this policy in a comparison of the two. When that land was given to encourage the construction of the Canadian Pacific Railway, it was worthless. It has become of great value now. When the contract was entered into the faith in the future and the confidence of success was more limited than the prospects of the success of this enterprise. Cannot this government go to the people of Canada to-day and say: You endorsed the construction of the Canadian Pacific Railway originally to develop the North-west and British Columbia. You did not know what you were undertaking at that time. It was a courageous undertaking. But to-day you have the country partially developed, and when I say partially developed, I have in view the almost boundless extent of that country. You propose to build another line there. Why? Because the lands that were unknown then are known now, not only to the Canadian government and people, but to the civilized world. Those lands are known now to be capable of producing enough bread to feed not only Canada but millions of people across the Atlantic. They are known to be valuable lands, bringing good prices.

One good feature about this scheme is that it will pass through undeveloped portions of that territory and will increase the value of the lands just in the same proportion that the construction of the Canadian Pacific Railway increased the value of the lands in the sections through which it passes. But there will be this difference, that while the Canadian Pacific Railway were entitled to the lands that they earned, they are at the same time reaping a rich harvest in the value of these lands that were of unknown value twenty years ago. The lands which will be increased in value by the construction of this road will not pass into the hands of the Grand Trunk Pacific Company, but will remain the property

of Canada for Canadian settlers. I think you should not underestimate that one feature of this contract. I do not say this for the purpose of making a contrast to the prejudice of the former contract. You could not have constructed the first line in that way, because there was no such guarantee of the future value of the land as there is now. Therefore you are fully justified in undertaking this expenditure, which is moderate after all compared with the results to be achieved.

Some one has said: Who has asked for a transcontinental line? Where is the hurry for this line? Why, Sir, three years ago this question was discussed in this parliament, and it has been discussed since; it has been discussed by the press throughout the country. Now this question of transportation is no doubt at the present time the chief question before the Canadian people, and it is worthy all their attention. It should be considered, as my hon. friend who preceded me suggested, on broad Canadian lines, independent of party considerations. This great question is coupled with another one of great importance. The solution of the transportation problem also carries with it a development to the largest possible extent of the Dominion of Canada. You cannot introduce a scheme into this country and call it a Canadian scheme if it leaves any portion of the Canadian people out in the cold, let them be little or big, few or numerous. That was the policy at the bottom of confederation, that is why the Intercolonial was built, that is why the Canadian Pacific Railway was built later—to cement together all the provinces between the two oceans. Therefore I say the scheme promises not only to solve the transportation question, but to do for Canada more than could be done in any other way by developing all the provinces of the Dominion. In the west you develop new lands all through that enormous region, you develop trade for British Columbia, you develop a new field for the mining industry of British Columbia, you develop a new outlet for timber industries, you develop agricultural lands that so far have been inaccessible. You do the same to a considerable extent for the province of Manitoba. Then you come down through northern Ontario and develop sections there of immense value to that old province, and without a cent of cost directly to that province except its proportionate share of the general cost. You come to Quebec, and you develop the northern portion of that province. I have heard some hon. gentlemen from the province of Quebec say that this is a barren country through which the railway is to run. Well, I would advise them not to say that too often, because the reports do not justify the statement, and we may conclude that the argument is used more for political effect than in the interest of the province.

Now, Sir, the name of the ex-Minister of Railways and Canals is used, and his authority is given for the assertion that the part of New Brunswick to be developed by this line is a barren waste. Well, I am going to make a statement on my word as a member of parliament, and I know more of that country than any other man inside this House or outside of it, and that is saying a good deal, though I am not given to boasting. I have travelled through the most of that country, I have surveyed part of that country for farm lots, in the county of Carleton adjoining my own constituency. I have fished, I have hunted, I have cruised, I have lumbered through that country, and I make the statement defying contradiction, that this country is a valuable section of country. I do not say that it will compare with the prairie section, I do not say that it will compare with the Niagara peninsula, but I do say that we cannot find in the Dominion of Canada an equal extent of wilderness lands still unsettled of greater value than this very tract that is decried to-day. I make that statement knowing whereof I speak. The upper portion of it will compare favourably with any highland in Canada, no matter how fertile it is. It has some of the finest land you can imagine. In the county of Victoria and the Madawaska region you will find highlands and bushlands of the greatest value. After that country had been surveyed into lots, you could tell a man: Go to the Crown lands office and take a map, and pick out any number you like; you cannot miss it, they are all alike. Now you cannot do that in every country, for you would be liable to get a waste lot, to get a swamp lot. That extends down through the counties of Madawaska, Victoria, Carleton and York. From York across to Moncton the land will not average as high, but it is good agricultural land, and it is well timbered. When I say well timbered I do not mean to contradict one statement that was made especially by the hon. ex-Minister of Railways and Canals. One of the points made by that hon. gentleman was that the valuable timber had all been taken out of the country. There is a good deal of truth in that, but there are gentlemen here who know something about the lumberman's business, gentlemen who have not been engaged in the business but who will easily understand that when lumbering operations are carried on in territories adjacent to streams and natural watercourses which are convenient for transporting the lumber from the country the lumber can be floated down these streams and they get the benefit of these watercourses, but beyond the region of these streams there is no other outlet and the timber remains there. Practical business men in this House and in the country well know that under the conditions in a country like that where the best lumber

has been taken out of the country and where the streams have been utilized as highways down which the raw material in the form of logs is taken, if you have a railway beyond that country you will develop new industries as important as the ones which have been nearly exhausted, because you are reaching a point in the country which has hitherto not been reached by these lumbering operations and you are giving opportunities to do the most important work that can be done, that is to produce the finished article, or if not the absolutely finished article to add to its finished condition, or to approach the finished condition and to ship it in this form over the railway thus developing new interests in that section of the country besides developing the agricultural interests and these two interests combined are necessary one to the other in creating a trade for the railway that is running through the country. Fifty years ago there was talk of railway construction. You could not talk with the view of interesting any capitalist in a railway enterprise unless you brought before him statistics of good character, statistics that were undisputed that would show the probable trade that the road would do. Now it is a pretty generally accepted idea and principle that given an undeveloped country with any mineral resources, or lumber or agricultural capabilities, and put a road through it that road will develop new industries and thus bring the country into a condition of usefulness. I was very much struck also by the fact which was developed during the discussion that a man may even be led too far by his enthusiastic impulses. When the hon. ex-Minister of Railways and Canals was talking of the capabilities of the Intercolonial Railway he used one argument that to my surprise was received with wonderful applause on this side of the House. I would not applaud it and for the reason that I would not have applauded it it should not have been applauded on this side of the House if it had been thoroughly understood. What was it ? In 1883, I think, Sir Charles Tupper came to this parliament and proposed a vote of $170,000 for a guarantee for 15 years to the Canadian Pacific Railway for the purpose of joining Montreal with St. John and Halifax. The project did not mature, but next year, in 1884, Sir Charles Tupper came down to the House again with a proposition to give $250,000, speaking from memory, or $280,000 for 20 years.

Mr. LOGAN. It was $250,000.

Hon. Mr. COSTIGAN. $250,000 for 20 years instead of $170,000 for 15 years. It was not this time to join Montreal with St. John and Halifax, but this guarantee was given to secure the construction of a road starting from the south side of the St. Lawrence, opposite Montreal, passing down through the townships to Moose Head Lake, Mattawamkeag, Fredericton and then to Salisbury. It was a well defined route as far as it appeared in the resolution. What was the explanation which Sir Charles Tupper gave for paralleling the Intercolonial Railway, even if he had to go through a foreign country to do it ? Sir Charles Tupper stated that the Intercolonial Railway had been built for military purposes and for considerations other than commercial purposes and that it had done more than was expected of it by its friends and opponents, but on account of its mileage, the ports of St. John and Halifax could not be expected to compete against American ports unless some way was found to shorten the distance to St. John. It was in order to shorten the distance to St. John by giving these better facilities for getting to St. John that the Intercolonial Railway was paralleled and it was intended that it should compete successfully. That was the point. We gave that large guarantee for this new road. It was built to St. John and not to Salisbury. What did the hon. ex-Minister of Railways and Canals prove the other night and which I think was so strangely cheered ? He proved that Sir Charles Tupper's justification for giving $250,000 for 20 years for a short line was a mistake and then he said that Sir Charles Tupper was all wrong. After saying that Sir Charles Tupper was wrong in asking parliament to provide this guarantee and that parliament was wrong in aiding the building of a short line as a successful competitor with the Intercolonial Railway he said : I know that when the cattle embargo was on the Intercolonial Railway carried cattle down to St. John quicker and cheaper than the short line could after all the expense they have gone to. What does that mean ? I think that Sir Charles Tupper's reasoning was good. What I am complaining of is the argument that Sir Charles Tupper having asked parliament to make this expenditure and having given reasons which are logical the fact which the hon. gentleman stated proves that the building of a short line was not a success. If it was not a success in this instance, it was because the grades and curvatures were too great. Now, I perhaps have spoken too long—half an hour—but I do not think half an hour is very long compared with the speeches that have been made on this side of the House, and I promised my hon. friends that I would not take the floor until short speeches became the order of the evening.

An hon. MEMBER. The order of the morning.

Mr. SPROULE. You have already spoken an hour.

Mr. LANCASTER. Just exactly an hour.

Hon. Mr. COSTIGAN. I think half an hour.

Mr. LANCASTER. Just exactly an hour.

Hon. Mr. COSTIGAN. I think the hon. gentleman is about as near the mark as he is in regard to this railway contract.

Mr. SPROULE. The hon. gentleman commenced speaking at half past eleven and it is now half past twelve.

Hon. Mr. COSTIGAN. I will not take up much more of your time. We had hopes in the west of the province that at the time Sir Charles Tupper made the proposition some line like this proposed line would be found through Canadian territory shortening the distance to St. John. And our hopes were reasonably well founded, and I think they would have been realized had it not been for the fact of existing lines constructed then, reaching towards Moose Head lake, and leaving the shorter distance to be constructed. To our western friends I would say that the transportation problem after all arises in that country. There is no doubt that the future welfare of Canada depends on the successful solution of that question. What the people of the west want is a cheaper outlet for their products, and no Canadian would be patriotic if he did not endeavour to secure for them that cheap outlet. We want their produce to come through Canadian territory to build up our ports in the east, as we will endeavour to help building up their country in the west. In that way the people of the west and the people of the east will have a common object in view. One hon. gentleman stated to-day that he took a broad position as a Canadian, and that he spurned the idea of sectionalism. But he complained that the government were by this scheme providing a through line for freight so that the labourers along the route would get no toll out of it, and he pointed out to the member for Simcoe (Mr. McCarthy) that Collingwood was going to be destroyed by this policy. Well, that was not a very broad view of the case, because the proper idea is to get as little toll as possible out of the western grain as it passes through Canada, and the labourers will be compensated in other ways than by taking this toll.

In conclusion, I wish to say, Mr. Speaker, that I have spoken on this subject chiefly because I know that there will be an effort to misrepresent this scheme, especially that part of it which passes through the central part of New Brunswick, and which some pretend to regard as the weak spot in the project. Well, Sir, I am sorry we have not the help of the ex-Minister of Railways (Hon. Mr. Blair) to promote the interests of New Brunswick on this occasion. I am quite sure, however, that these gentlemen on the Conservative benches who now praise him so highly, would pepper him just as hotly if he were to open his mouth in favour of this project, or in favour of his province. He has risen high in the estimation of our friends of the opposition very suddenly. He deserves their respect and good opinion. He is a capable and able man, but their attitude towards him has very quickly and very materially changed. I must express my deep sympathy however, with one old friend in this House, I refer to the energetic and talented member for St. Mary's (Hon. Mr. Tarte). When he ceased to be a minister of the Crown he was deified all at once by his former opponents, and instead of being in their eyes an avowed traitor to his country as they had termed him, he became the ablest minister that ever sat in the Laurier cabinet. His stock went up wonderfully; he was received with open arms; he was courted and complimented and flattered. But since the ex-Minister of Railways (Hon. Mr. Blair) has appeared upon the scene, I notice that my hon. friend (Hon. Mr. Tarte) seems to have dropped into oblivion. There is not half the importance attached to him now that there was a few months ago, and lately the affection of the members of the opposition has been centred upon this greatest man that ever was at the head of the Railway Department. But, Sir, remember that these very same gentlemen are those who denounced the hon. gentleman (Hon. Mr. Blair) not so long ago as anything but honest or moral. I have to say that the hon. gentleman (Hon. Mr. Blair) has been a strong man in his province. The hon. member for East Grey (Mr. Sproule) made it a leading feature in his speech to attack the hon. member for Westmoreland (Mr. Emmerson) who is an old personal friend of mine, and a gentleman whom I have known for a great many years. The member for East Grey dealt with the member for Westmoreland without gloves, but if he did not hurt the member for Westmoreland any more than he hurt the Grand Trunk Pacific Railway scheme, the member for Westmoreland will long survive.

Mr. SPROULE. I am sorry I killed him.

Hon. Mr. COSTIGAN. I do not suppose that the hon. member (Mr. Sproule) had any desire to injure my hon. friend physically, but I can tell him that any private member in this House might feel well satisfied to enjoy so highly the confidence of his constituents as does the hon. member for Westmoreland. It was also stated by some one that the hon. member for Westmoreland was the pupil or the protégé of the ex-Minister of Railways: Let me say that the hon. member (Mr. Emmerson) is a strong man in his county, and a strong man in his province. He is well known all through the province of New Brunswick, and is highly respected wherever he is known. Let no one make any mistake about the standing of the hon. member for Westmoreland in the province of New Brunswick. He is a gentleman of long experience, a gentleman with a good record, and a gentleman who is trusted among the people of New Bruns-

wick. No one would be less disposed to minimize the good qualities of the ex-minister (Hon. Mr. Blair) than I, but after very considerable experience I can say that there is no man so strong that he can do without his friends, and whatever strength that hon. gentleman (Hon. Mr. Blair) had in this parliament he owes it to the good friends who have stood behind him. If they stand behind him yet, he is as strong as ever, but if they do not support him, he will be very weak indeed, so far as federal influence is concerned. I myself have been pretty strong in my own county. I have fought a great many elections, and I have represented it a great many years. I suppose that even my opponents will say that I am a strong man in that county, but I would like to know how strong I would be if I lost the confidence of the men who make me strong. There is where the whole question comes in. I feel, Mr. Speaker, that I can speak for my own constituency, as there are other men to speak for theirs, and I can say unhesitatingly that so far as I can judge of other constituencies, without speaking officially for them, this scheme is well viewed in New Brunswick and will receive cheerful and strong support in that province.

Mr. LOGAN. On behalf of the hon. member for South Wellington (Mr. Guthrie), I move the adjournment of the debate.

Motion agreed to, and debate adjourned.

On motion of the Minister of Finance, House adjourned at 12.40 a.m., Wednesday.

HOUSE OF COMMONS.

WEDNESDAY, August 19, 1903.

The SPEAKER took the Chair at Eleven o'clock.

CIVIL SERVICE ACT AMENDMENT.

The POSTMASTER GENERAL (Hon. Sir William Mulock) moved for leave to introduce Bill (No. 245) to further amend the Civil Service Act.

Mr. SPROULE. Explain.

The POSTMASTER GENERAL. Mr. Speaker, the Bill deals with certain officers of the Civil Service. The matter has been pressed upon the attention of the government for some time by one of the hon. members for the city of Ottawa (Mr. Belcourt) and though the measure perhaps does not go as far as he urges, at the same time it does to some extent meet his wishes. It affects the position of the deputy heads, the chief clerks, temporary clerks or temporary writers and employees, as they are called, and also the members of the staff in several departments such as the customs, inland revenue and so on. It is a matter of detail affecting the salaries of officials. It will be better understood now that it is before the House, and if the hon. gentleman (Mr. Sproule) will peruse the Bill he will see what it is intended to cover.

Motion agreed to, and Bill read the first time.

QUESTIONS.

TWENTY-FOURTH REGIMENT.

Mr. HUGHES (Victoria)—by Mr. Taylor—asked :

1. Who is senior major and who junior major of the 94th Regiment ?
2. What is the qualification of each ?
3. Where does each reside ?
4. Have they each, or has either of them, leave of absence ?
5. Has either one of them been absent for years from the Regimental District ?
6. Was either one or the other appointed to his position over a senior officer ?

The MINISTER OF MILITIA (Hon. Sir Frederick Borden).

1. Senior major—Major R. Gillis ; junior major, Major D. A. McRae.
2. Major McGillis, 1st class certificate (infantry), equitation ; Major McRae, 1st class certificate (infantry), equitation.
3. Major Gillis resides at Sydney, C.B. ; Major McRae (not yet ascertained).
4. No.
5. No.
6. Major Gillis promoted over Capt. J. P. McNeil, who was not qualified for promotion.

Major McRae promoted over undermentioned captains, who were not qualified for promotion to rank of major :

Capt. J. P. McNeil, Capt. J. D. McRae, Capt. J. S. McLean, Capt. A. D. McRae, Capt. R. Y. McKenzie.

PUBLIC WORKS DEPARTMENT—CONTRACTS AWARDED.

Mr. THOMSON (North Grey) asked :

1. How many contracts for public works, buildings, &c., have been awarded by the government from January 1st to July 31st of the present year ?
2. Where are such works, buildings, &c., to be located, and what is the contract price in each case ?

The POSTMASTER GENERAL (Hon. Sir William Mulock) in the absence of the hon. Minister of Public Works (Hon. Mr. Sutherland)—I beg to give the answer to his department as follows :

1. Sixty-two.

2. Burk's Falls, Ont., wharf, $5,400.00 : Toronto, postal station 'C' heating apparatus, $986.00; Orillia, Ont., wharf at the park of, $8,389.00 ; Nelson, B.C., drill shed, heating apparatus, $215.00 ; Oromocto wharf, $6,-200.00; Sturgeon Falls, Ont., wharf, $2,810.00; Kamloops, B.C., drill shed, heating apparatus, $365.00 ; Rossland, B.C., post office and building, fittings, $4,950.00 ; Nelson, B.C., post office buildings and fittings, $4,400.00 ; Arichat, N.S., post office building, heating apparatus, $700.00 ; St. Irénée, P.Q., addition to wharf, $10,399.00 ; Guysboro, N.S., public building, fittings, $1,650.00 ; Marysville, N.B., public building, heating apparatus, $825.00 ; Montreal, P.Q., examining warehouse, fittings, $4,000.00 ; Carnduff, Ass., N.W.T., court house, heating apparatus, $1,078.00 ; Ottawa post office building, elevator, $5,-310.00 ; St. François, Island of Orleans, P.Q., isolated block, $11,800.00; Sandy Cove, N.S., public breakwater, $13,000.00; Tiverton,N.S., public breakwater, $17,000.00 ; Green Cove, N.S., breakwater, $6,475.00 ; Deseronto, public building, fixtures, $2,800.00 ; Blind River, Ont., pile wharf, $9,310.75; Dredge St. Lawrence, construction of 36 buckets,, $1,872.00 ; Tug 'Delisle,' tubular boiler, $2,525.00 ; Short Beach, N.S., breakwater, $8.095.00; Hopewell Cape, N.B., approach to pier, $900.00 ; Herring Cove, N.S., breakwater, $11,475.00 ; Middleton, N.S., armouries, heating system, &c., $946.00 ; Granby, P.Q., public building, fittings, $2,650.00 ; South Bay, Ingonish, N.S., wharf, $2,485.00 ; Pointe à Paquin, P.Q., supply of timber, $5,515.00 ; Quebec Artillery workshop, shafting for transmission of power, $1,879.00 ; Dundas, Ont., armoury fittings, $1,330.00 ; Cove Head, P.E.I., shear dam, $6,699.00 ; Sussex, N.B., armoury fittings, $4,029.00 ; Clinton, Ont., public building, heating apparatus, $1,150.00 ; Arichat, N.S., building, fittings, $1,750.00 ; Cross Point, P.Q., wharf, $9,995.00 ; Kingston, Ont., gymnasium, R.M.C., heating apparatus, $1,-910.00 ; D'Escousse, N.S., wharf and warehouse, $4,388.00 ; Huntsville, Ont., work to pile wharf, $320.00 ; Quebec Artillery workshop, electric light wiring and fittings, $442.00 ; Sarnia, Ont., public building, heating apparatus, $1,800.00 ; Washabuck Centre, N.S., wharf and road, $5,860.00; Marysville, N.B., public building, fittings, &c., $1,300.00 ; Guelph, Ont., post office additions, $30,595.00 ; Carnduff, N.W.T., court house fittings, $269 ; Dundas, Ont., drill hall, veneering and flooring, $5,750.00 ; Tug 'Ottawa,' marine return tubular boiler, $1,700.00 ; Quebec harbour improvements, $198,700.00 ; Berlin, Ont., alterations and post office, $7,316.00 ; Dredge 'J. Israel Tarte,' bow and stern cable winches, $5,700.00 ; Kingston, Ont., gymnasium, R.M.C., electric wiring and fixtures, $575.00 ; Rivière au Renard, P.Q., additional length to wharf, $41,485.00 ; Fort Lawrence, N.S., pile wharf, $14,895.00 ; Toronto Junction, Ont., post office building, $23,450.00 ; Kaslo, B.C., drill hall, fittings, &c., $525.00 ; Portage du Fort, P.Q., masonry, &c., of the bridge, $10,797.00; Edmonton, N.W.T., jail, $50,150.00 ; Fredericton, N.B., officers new stables, $3,110.00 ; Cheticamp Point, N.S., wharf, $13,880.00 ; St. Hyacinthe, P.Q., inland revenue building, $21,089.00.

DISMISSAL OF DENIS MAYRAND, ST. JEAN, QUE.

Mr. MONK—by Mr. Taylor—asked :

1. At what date was the petition asking for the dismissal of Denis Mayrand, a government employee, at St. Jean, P.Q., sent to the government ?

2. What were the reasons set forth in support of the said petition for dismissal ?

3. What persons signed the said petition ?

The MINISTER OF MARINE AND FISHERIES (Hon. R. Préfontaine).

1. There was no petition asking for the dismissal.

2. As far back as 1896, the Hon. Mr. Marchand brought to the notice of the department that Mr. Lord should be appointed, owing to the light being on his property, and any strange keeper attending to the light being very inconvenient to him. A recommendation was also made by the electors of the county of St. John asking for the appointment of Mr. Lord, the present keeper, signed : 'J. O'Cain, J. E. Herbert, P. A. Chassé, H. Moreau, M.D., E. J. Paradis, A. U. Deland, N.P., Laurent Moreau.

NATIONAL TRANSCONTINENTAL RAILWAY.

House resumed adjourned debate on the motion of Sir Wilfrid Laurier for the House to go into committee on a certain proposed resolution respecting the construction of a National Transcontinental Railway.

Mr. HUGH GUTHRIE (South Wellington). Mr. Speaker, in rising at this comparatively late stage in the debate to offer a few remarks upon the measure before the House, I shall endeavour as far as possible to avoid any prolonged reference to those points in the debate which have already occupied so much of the time of the House —points which have already been pretty thoroughly discussed by men far more capable to deal with them than I can hope to be. However, Sir, I fear that in the remarks which I have to make it may be impossible for me totally to avoid them, but I can promise that any reference I may make to them shall be very brief. Representing, as I have the honour of representing, one of the interior constituencies of Ontario, a constituency already served by one line of the Canadian Pacific Railway, and by two lines of the Grand Trunk Railway, yet a constituency which will be far removed from the proposed line of the Grand Trunk Pacific Railway ; I desire to lay be-

fore the House reasons which are strong enough to convince me that in giving my support to this Bill I am only acting in the best interests of my constituents, but in the best interests of the province of Ontario, and the best interests of the Dominion of Canada in general. Now, Sir, having regard to some portion of the addresses delivered in this debate by hon. members opposite, I feel that there is one point which we cannot too prominently keep before our minds in discussing this measure. That point is, that this question is in no sense of the word local or sectional. It is in no sense of the word provincial; but on the contrary, it is national in every characteristic. For no particular section of the country, for no particular province of the Dominion, would the government be justified in entertaining so vast a proposition or in pledging the national credit to so great an amount.

But, when we view the matter in its true light, when we realize, as I submit we should realize, that it is a matter of national concern, that this measure, when carried into effect, will advance us a long stride, not only in the matter of public convenience—for that is a comparatively minor matter—but that it will advance us a long stride in national greatness and in national importance; then, Sir, I contend that in view of that perfect confidence which we all share in the future of this country, the mere vastness of the proposal should not cause us to hesitate for a single moment, but, on that contrary, should inspire us with fresh resolution. We all know that in all large assemblies of men there are those whose judgment becomes somewhat unbalanced simply by the magnitude of a proposal. There are men who under normal circumstances exercise an ordinary amount of common sense and judgment, whose opinions become unsteady simply from the effect of size and outward proportion. Now, after the first blush of this proposal has been submitted to this House, and when any effect which may have been caused by the magnitude of the proposal has passed away, I submit that upon second thought, upon mature deliberation this measure will commend itself to the vast majority of the members of this House.

Among our many differences of opinion as to the propriety of the proposal of the government, as engrafted in the resolution before us, there would appear to be one ground upon which hon. members on both sides can agree, and that common ground of agreement exists apparently from the appreciation of the fact that there is in Canada to-day a most pressing need for increased railroad facilities. The time when this proposition might be looked upon as something merely desirable, as something highly convenient if attained, has passed. The matter has now become a matter of pressing necessity; a necessity which will neither wait the time of man nor of parliament; a necessity which if we do not satisfy may find its own outlet and its own remedy, for necessity knows no law; may find an outlet and a remedy in foreign channels which in the future may require years of struggle upon our part and the expenditure of vast sums of money on our part, ere we regain ground which we may now lose by procrastination or by delay. I agree thoroughly with the statement made by the hon. member for East Hastings (Mr. Northrup), when he said, that when trade once accommodates itself to certain specific channels it is a difficult thing to reclaim it. That is a very true proposition, and it is a proposition that we will have to face unless we take immediate action to direct trade through our own lines and through Canadian territory. I am aware, Sir, that hon. members opposite are inclined to chide the government with the statement that if this necessity is so great, if the matter is so urgent, why is it that you have taken seven years before you have awakened to the necessities of the situation? Hon. members opposite say to the government, you have had seven long years of power—long years, I suppose, they have seemed to hon. members opposite—you have had seven long years of power, and not until the fifth month of the present session have you decided upon action. I maintain that such a charge or such an insinuation is entirely without foundation; such a charge or such an insinuation is utterly unfair to the government. I contend, Sir, that it is only within the last year or two that the difficulty has really arisen, that the congestion in western traffic has really become acute. True indeed it is that for many years past the people of Manitoba, the people of the North-west Territories, the people of British Columbia have suffered, and suffered immeasurably through the imposition on them of excessive freight rates; freight rates which were the direct result of the monopoly clause in the Canadian Pacific Railway contract, a clause which the late Conservative government permitted to be engrafted in that contract. The difficulty up to a year or two ago was one of excessive freight rates. You could generally effect shipment of your goods provided you were willing to take the small amount coming to you after payment of these freight rates. But the difficulty now is rather a double one. It is not only a difficulty in regard to freight rates owing to lack of railway competition, but it is also a difficulty arising from actual congestion of traffic in that western country. Now, Sir, far from chiding the government in respect to this measure; far from insinuating that they should have realized the situation long before they did realize it; I maintain that the people of the country are to be congratulated upon the fact that they have in power a government, strong enough and bold enough, and pos-

sessed of sufficient knowledge in railway matters, to bring down a measure, large as it may be, difficult as it may be, intricate as it may be; and a measure which, notwithstanding opposition criticism to the contrary, will be found to be a measure well considered in principle and in detail, and one which when carried into effect will in my humble opinion to a very large extent relieve this country of the difficulties which it is suffering from to-day in respect to railways.

Now, Mr. Speaker, I have noticed in many of the speeches delivered upon this question by hon. members opposite—in fact in all the speeches since the hon. ex-Minister of Railways resumed his seat, with the exception perhaps of the speeches delivered yesterday—I have noticed in these speeches that they have all been prefaced by the statement, or that they have all contained an intimation that, from their point of view, the ground had been so thoroughly and so effectively covered by the ex-Minister of Railways, that because everything had been said that could be said in opposition to the Bill, that because every argument had been urged that could be urged in support of their contention, they naturally found themselves in the difficult situation of having to reiterate former statements or to repeat former arguments. That is a difficult position, no doubt, and hon. members on this side of the House sympathize with hon. members opposite in that difficulty. For I believe that when the hon. ex-Minister of Railways and Canals delivered his address in this House at the opening of this debate he did thoroughly exhaust every ground of opposition which could reasonably be urged against this Bill. The hon. ex-minister had an incentive to do so. He had lately resigned from the cabinet. He had differed, and he was the sole one to differ, from the other members of the cabinet upon this question. His resignation caused a great deal of talk and a great deal of newspaper comment throughout the length and breadth of the land. He knew that the task was before him of justifying his position before the people of this country. He knew that he had a difficult task before him, and he exerted himself to the utmost to gather together every jot and tittle that he might use to justify his position. He exerted every energy and all his great ability in research, in examination and in preparation, if we may judge by the mass of manuscript from which the hon. ex-minister spoke in this debate. He had to justify his position, not only in this House, but in this country. Is it any wonder, then, acting under the incentive which he had that he should have exhausted the subject, that he should have elaborated every argument? and is it any wonder that hon. gentlemen opposite, who have followed the hon. ex-minister in this debate, have been compelled for the greater part merely to reiterate his statements and repeat his arguments?—not a pleasant task for any one.

Certain portions of the speech of the hon. ex-minister dealt with matters which were properly within his right to deal with. Other portions of that speech dealt with matters which I maintain he had no right to deal with, which it was pure audacity on his part to deal with. If the hon. member withdrew from the cabinet for any of a great number of reasons which he gave, he was perfectly right in withdrawing, provided he acted under conviction. He had a perfect right to object to this measure on the ground that it interfered with the Intercolonial Railway, and he was free to leave the cabinet on that ground if he so desired. He had a free hand to discuss the financial aspects of the problem; and if on that ground he differed with the government, he had a perfect right to do so, provided he was conscientious in doing so. If his objections were on the question of mileage or the nature of the country through which the road might pass, the hon. ex-minister had a free hand on all these points; and on all these points, judging from the speech which the hon. gentleman delivered, I thought he was serious and that he spoke under absolute conviction. But there were some portions of that speech which he elaborated, I thought at the time, for the purpose of drawing applause from hon. gentlemen opposite, whose applause he had never received before. Those portions of his speech on which I thought he had no right to enlarge were that there was no urgency, no necessity, and no public demand for another transcontinental railway. The hon. ex-minister surely has a memory which will take him back seven or eight months to his memorable visit to the city of Vancouver and to the speech which he delivered on that occasion. If he remembers that speech, and if he was honest in his statements to this House, why did he argue that there was no pressing necessity, no urgency, no outcry, and no general movement in favour of this road? Why, Sir, if credit is to be given to anybody, that credit must be given to the hon. ex-minister himself for having first ventilated this question, for having first created this demand, for having first started this movement in favour of another transcontinental railroad. The hon. gentleman spoke at Vancouver, under what circumstances? He had made a transcontinental trip. He had seen the country and the people, he understood the circumstances; and at a time when his mind was charged with all these matters, at a time when he had all the necessary information in his possession, he deliberately told the people of Vancouver that this measure was urgent and necessary—so urgent that not a minute was to be lost. He also told them that not only one railroad, but in the near future three or four other transcontinental lines would be necessary. Now, I ask the hon. ex-Minister of Railways and

Canals what has intervened to change his opinion from the opinion he expressed in Vancouver last fall to the opinion he expressed in this House a few days ago ? Has anything intervened at all ? I believe the hon. member spoke at Vancouver with absolute conviction ; and, if nothing has intervened since which could be expected to change the conviction of the hon. gentleman on the subject, then he must have spoken in this House absolutely without conviction, so far as the urgency and necessity of a transcontinental line was concerned.

But, Sir, there is a good deal to be gleaned as to the position of the hon. ex-minister from that letter which he himself submitted, and which has now become one of the records of this House. There is no doubt that in that letter he complains, and complains bitterly, that the right hon. leader of the government did not consult him, as he claims he should have been consulted, in regard to the preliminaries of this measure. I offer my humble opinion on that point. The right hon. leader of the government acted properly, did what he was entitled to do as a matter of right, having regard to his position, in the negotiations which took place respecting a great national transcontinental railway. Why, Sir, what more right had the hon. ex-Minister of Railways and Canals to be consulted than half a dozen other members of that same cabinet ? This proposition not only involves the Department of Railways and Canals ; it involves, and to a large extent, the Department of Finance. Surely the hon. Minister of Finance might have had the same right to complain that he was not consulted. It involves the Department of Customs ; surely the hon. Minister of Customs might have the right to complain that he was not consulted. It involves the Department of the Interior ; has not the hon. Minister of the Interior as much right to complain as the hon. ex-Minister of Railways and Canals ? But is it not a fact that none of them had a right to complain ? Is it not a fact that, having regard to the nature of the measure, the man who should conduct the preliminary negotiations was the Prime Minister of this country, irrespective of his colleagues ?

There is no doubt that the ex-Minister of Railways and Canals is smarting on account of offended dignity or injured pride. I can imagine no other reason for his conversion from the views he held and the policy he enunciated at Vancouver last fall. Nothing has intervened between that time and this to account for this sudden change of front. The hon. gentleman has not given us any reason for his change of opinion. He has given nothing to show why to-day he finds that there is no urgency, no need, no public demand for this transcontinental line. History, Sir, is full of the records of political conversions, but I fail to find in the record any such sudden conversion as this. So far as I know, all political conversions have come about through the process of time. They have been the result of an evolutionary process. They have taken some little time. But the conversion of the hon. ex-Minister of Railways and Canals took but a few short months at the most, and during those months nothing happened to justify it. Why, Sir Robert Peel was charged with being a political convert, and he certainly was with regard to the Corn Laws, but his conversion was a matter of some years' experience. The late Benjamin Disraeli was accused of being a political convert—a man who had entered public life as a Radical and then became leader of the Conservative party. Gladstone was accused of being a convert upon the Home Rule question. Certainly that great statesman did undergo a radical conversion, but that likewise was the process of years' experience and the result of evolution. But for a speedy conversion, without any apparent reason, I can compare the conversion of the ex-Minister of Railways and Canals to no other than that Saul of Tarsus. But there is this difference. Whereas the change of heart of Paul was due to Divine intervention, in the case of the ex-minister there was the intervention of no higher power and the operation of no greater influence than his wounded pride and offended dignity. But, Sir, to a very sensitive man, a wound to his pride or a slight to his dignity may perhaps be the strongest influence which we can bring to bear upon him. To a sensitive man, a slight to his pride will even turn friends into enemies at a moment's notice. It will rankle in his bosom until he loses sight of his former convictions, until he comes to detest anything, be it political measures or otherwise, which by any means of reasoning, he can connect with that which offended his pride or dignity. I believe that that is the secret of the demonstration which the hon. ex-Minister of Railways and Canals made in this House last week. I believe that he was driven simply by the smart of insulted pride to take the position he did a week ago in this House. Let me remind the hon. gentleman of those words of Holy Writ : 'Pride goeth before destruction and a haughty spirit before a fall.' Under these circumstances, is it to be wondered that the hon. minister made an exhaustive statement and that hon. members opposite find great difficulty in making speeches, without repeating in great part the statement made by the ex-minister ?

On looking over the addresses delivered by hon. gentlemen opposite, I find that, with the exception of some trifling details and some very minor criticisms, their argument was drawn, until yesterday at all events, exclusively from the statements of the ex-minister. The hon. member for Jacques Cartier (Mr. Monk) followed first on the opposite side of the House. I have always looked on that hon. gentleman as a man

of some intellectual breadth; but after assaulting the proposition before the House with nothing short of wholesale condemnation, after repeating the arguments of the ex-minister, what was his main objection? He spoke of the northern portion of the province of Quebec, he pictured to us the settlement going on around the Lake St. John district, he told us of the patriotic efforts of a certain number of men to populate that district, he declared that a colonization road should be built there, and for that reason forsooth this great transcontinental railway scheme should be set aside. If ever a man of broad intellect cramped himself into a narrow confine, if ever a federal member of parliament clothed himself in the garb of pure provincialism, we had that picture in this House, when the hon. member for Jacques Cartier advanced such an argument. He was followed on the other side by the hon. member for Hamilton (Mr. Barker), who seems to have acquired the title or railway expert of the opposition. I do not know what the experience of the hon. gentleman has been with regard to railways. But I think it is confined largely to the legal side. I do not know whether he has had any practical experience or not——

Mr. BENNETT. If the hon. gentleman will allow me to tell him, the hon. member for Hamilton was for years the general manager of the Hamilton and North-western Railway.

Mr. GUTHRIE. Then he has had some practical experience which I was not aware of, but he did introduce into the discussion one or two points which had been omitted by the ex-minister in his exhaustive argument. The points on which the hon. member for Hamilton based his arguments were, in my opinion, minor ones. They were criticism of detail, and I do not say that this Bill or contract is entirely free from such criticism. I believe that in detail it may be criticised; but I do not think that the hon. member for Hamilton for one moment denied the government proposition that a transcontinental railway should be built upon the principle contained in this contract and Bill. His objection was that you could not obtain proper running rights for more than one railway, that there would be a dominant and a servient railway, that the servient railway would be discriminated against, that the Grand Trunk Pacific Railway, being the tenant of the government, would have the right to dictate terms to the other railways, and that these terms would be so oppressive as to prevent the other railways from doing business on that line. I think, Sir, that that question has been pretty thoroughly cleared up. It certainly is thoroughly cleared up so far as the Intercolonial railway is concerned, because the Intercolonial Railway is not in the position of any other road with regard to this system. It is stated in section 24 that the Intercolonial Railway shall have equal rights in the running of that road, and not such rights as the Grand Trunk Pacific Railway may see fit to offer. The Intercolonial Railway will have as good a right as the Grand Trunk Pacific Railway to operate that road, and the right to do so on equal terms.

Then the hon. member for Hamilton (Mr. Barker) seemed to doubt the financial standing of the Grand Trunk Railway. It seemed to me that that was a peculiar position for the hon. gentleman to assume. He said they had a certain amount of bonded indebtedness and he very seriously argued that it was questionable whether the Grand Trunk Railway could raise money on second mortgage bonds or whether the security of the Grand Trunk Railway was sufficient. That, I submit, is another criticism of detail, and of a detail that does not interfere in any way with the principle of the Bill.

Next, he argued that there would be a difficulty about supplying coal on the railway. There may be some slight difficulty in that respect. But, surely, that is a matter purely of detail which does not go to the principle of the Bill. And, from the whole speech of the hon. member for Hamilton (Mr. Barker) I should think that when the division comes upon this question, that hon. member would bury these matters of criticism of minor detail and accept the principle of this measure, as I believe in his heart he endorses it. He was followed by another gentleman, who has been referred to by his leader as perhaps the most experienced and practical railroad man in the House. I refer to the hon. member for South Lanark (Hon. Mr. Haggart). Now, let any one peruse the address which that hon. gentleman delivered on this subject, and if he can find in that address anything which was not exhaustively laid before the House by the hon. ex-Minister of Railways and Canals (Hon. Mr. Blair) he will do more than I have been able to do. I believe that the hon. member for South Lanark must have felt staggered by the proposition, because in one portion of his address he said: But it will be asked what have we to urge as an alternative course? And then he goes on to urge delay, the appointment of a commission in order to ascertain the nature of the territory through which this road will pass, and the necessary length of the line—but to the principle of the Bill itself he takes no objection. He merely asks what has been asked in this debate by hon. gentlemen opposite that the matter be somewhat further delayed. So, with all the addresses delivered by those hon. gentlemen on the other side who spoke prior to yesterday, I do not think there is any serious opposition to the Bill, though there may be some opposition to matters of minor detail.

Now, I do not intend to touch upon the financial problem which will confront us when this Bill is passed. I believe this has

been thoroughly dealt with, I should have had something to say on that subject but for the assurance given to this House by the hon. Minister of Finance when he made the statement here that the government would see to it that the road was built to the standard of a modern commercial road. He placed the figures of cost a little low, in my opinion, and I judge of this from what I have been able to learn through inquiries I have made. The hon. minister says it may be $25,000 a mile for the whole system, but he allows for an increase of 25 per cent, or a total of $31,250 a mile. I believe the estimate made by the hon. member for North Norfolk (Mr. Charlton) will be found to be nearer the mark, and that the road will be likely to average about $35,000 a mile. But in going into this undertaking the government is going in with the idea that the road shall be built as a modern commercial road up to the standard of a modern commercial road; and it does not go into it bound within a limit of a thousand, or two thousand or even three thousand dollars a mile, so long as it attains the object that it has in view, of having a modern commercial road up to the standard now in vogue.

With regard also to the question of mileage, I have nothing to add to what has already been said. I say that the evidence offered to the House has been overwhelming that there will be a reasonable shortening of distance between Lévis and Moncton. The evidence is overwhelming that that shortening will be in the neighbourhood of 100 miles and may be as much as 120 and even 130 miles. Nor have I anything to add to the debate regarding the nature of the country through which the road will pass. I think that in that respect also the testimony we have before us is overwhelming, that the country will be an easy or comparatively easy country for railroad purposes. I believe, with the hon. member for Hamilton, that you can get the desired grade if you will spend the money, and that it is an easy railroading country and does not involve vast expenditure. These and some other matters, I think have been fully discussed and I do not feel called upon to deal with them.

But I should like particularly to refer to one branch of this subject which seems to me to be of more interest to residents in the portion of the country where I reside than, perhaps, in any other. You hear it frequently said, and you read it almost daily in the Conservative press, that this railroad is going to deal a death-blow to our present Intercolonial system. Now, I grant that in western Ontario, we have not that intimate knowledge of the Intercolonial which hon. members from the maritime provinces possess. Probably it is on account of our ignorance of that railroad system that this argument of injury to the Intercolonial does have some force with the people and produce some effect in the western part of Ontario. I confess that I did not know much about the Intercolonial Railroad system myself until I had occasion to examine somewhat into it. From the examination I have made, I intend to lay down two or three propositions which I think I can establish, which I am sure I can justify, from the records of the Intercolonial Railway itself. Now, Sir, the first proposition is that the Intercolonial Railway cannot be joined as the last link of a great transcontinental system; and the second, which I shall establish by figures of that railroad itself, is that the Intercolonial to-day is not of the nature of a through road, but is in the position of a purely local road. It has been said in this House by hon. gentlemen opposite, and has been urged by the leader of the opposition, that the effect of this Bill be to relegate the Intercolonial to the position of a purely local road. Now Sir, there is nothing derogatory in the term 'local road.' A local road may be of vastly more importance to the maritime provinces than a through road. But I intend to submit to you figures from the returns which, I think, will clearly establish the fact that the Intercolonial is to-day purely and simply a local road; and, in the next place, I propose to show from these returns that the new line cannot have a detrimental effect upon that railway system, but, in all human probability, if it has an effect upon it at all, it will be a good effect and not a bad one. Now I accept the statement made in this House as to the original construction of that line. We all know, as a matter of history, that the Intercolonial road was not built for commercial purposes. We know, as a matter of history, that it was not laid out with a view to commercial business entirely, but its location was largely dominated by military and political considerations. We know that the best route, or that which Sir Sanford Fleming considered the best, was the route along the Maine boundary; but that was not adopted for military and political reasons. I cannot more aptly describe the Intercolonial system as it appears on the map than to refer to the description given by the Prime Minister in his opening remarks on the introduction of this Bill, when he said that if you will look at the map, starting at Halifax and ending at Quebec, following the Intercolonial road, you will see that that road fairly describes a semi-circle. Modern railroads, in their construction, pay the largest regard to the directness of their route. It is an axiom in modern railroad construction that the route to be chosen is the shortest distance between two points. As railroads are constructed now, they will even pass at a distance from great centres of population and of trade rather than have a circuit in their line of road. If they desire to reach centres of population and of trade, they do not make a circuitous route

for the main line, but build straight branches from the main line to the points to be reached. The object of the modern railroad, both on account of passengers and on account of freight, is to shorten their lines to the shortest distances between two points. Such a consideration never entered into the minds of the men who, in 1867, laid out the Intercolonial. They had no idea at that time of transcontinental traffic. There was no transcontinental trade when that road was laid out. There was no Dominion of Canada as we have it to-day. Canada existed then as far as the great lakes and no further. Subsequently we got Manitoba, later on we got the Territories, later on still we acquired British Columbia, so that I say when that road was laid out as an intercolonial railway, the idea of transcontinental trade had never entered into the mind of the men who laid it out and if that Intercolonial system could be used to-day as a portion of a transcontinental system it would be by the purest kind of accident and absolutely without any design on the part of its founders.

But, Sir, let us take a little of the history of that road because, living as I do far from the maritime provinces, I am probably entitled to hew to the line, let the chips fall where they may, with regard to the Intercolonial, at all events to a much larger extent than hon. members who live in the maritime provinces. Let us take in the first place the length of haul on the road. Look at it on the map, skirting up there by the Baie des Chaleurs, skirting the St. Lawrence to Quebec, look at that semicircle on the map if you have not travelled it. That is one thing that will always operate against that road as part of a transcontinental system. Then let us take the grades. I am informed by men who know, by experts on such subjects, that you will find on the Intercolonial fifty and sixty foot grades quite commonly. These grades would have to be removed and the distance shortened. Then let us take the equipment, neither the cars nor the engines are at present suitable for transcontinental trade. Take all these considerations together and then ask a man, will you saddle on a great transcontinental scheme the weakest kind of a weak link at one end of it? A chain we know is only as strong as its weakest link. If you will burden a transcontinental road with the Intercolonial system you will find it is a drag and a dead load on that system which may very seriously operate against the success of the whole system.

Now, let us look at the history of the road and see just what business it has done and what it is capable of doing. I find from the report of the Railway Department that we have invested to the 30th of June, 1902, in the capital of that road $74,194,307, that is over the whole system including the Prince Edward Island Railway; I find that on the Intercolonial system proper our capital invested amounts to $68,645,853.

Now, Sir, if you take the aggregate or the result of thirty-three or thirty-four years operation of that road what do you find? You find that throughout its whole history up to the 30th of June, 1902, the total receipts from all sources were $83,991,493, and the operating expenses were $92,574,580, or during that time there was an actual loss on that system of $8,583,987, of operating expenses over receipts; without entering into the question of interest on bonds or dividends or any question of that kind. Now what does that show? For that is the net result under Liberal administration and under Conservative administration and again under Conservative administration and again under Liberal administration. It shows one of two things I submit, Mr. Speaker, that either there is something radically wrong in the management of the road or something inherently wrong in the system itself. I do not believe that the system of management has been radically wrong, but I believe the system of management under government or operation under government is not a successful system and cannot be made to-day in this country a successful system. The trouble with the road itself is that it is wrong in principle of construction, it is wrong in the territory through which it passes, it is wrong because it has too great haulage, it is wrong because the grades are too great and the equipment not proper.

Now, that is a summary for all the years, but let us look at the results of the operation of the road for the year 1902. During that year, 1902, we find that the receipts for the Intercolonial system proper were $5,671,386. The operating expenses for the same year were $5,574,563, showing on the Intercolonial system proper a surplus of $96,823 or about one-seventh of one per cent on the capital invested. But when you add to that the loss which took place on the Prince Edward Island branch you will find that surplus reduced to about $57,000 or one-fourteenth of one per cent on the capital invested.

Mr. ROSAMOND. Has the hon. gentleman made any comparison of the rates charged on the Intercolonial and on the Canadian Pacific Railway?

Mr. GUTHRIE. I know it is stated and generally stated, that there is to some extent a lower rate charged on the Intercolonial than perhaps on some other railways, but I am giving these aggregate figures as the net operating figures of that system from the time it started to the present time, one-seventh of one per cent on the Intercolonial proper, one-fourteenth of one per cent on the capital invested in the whole system, while other railways to-day are increasing their dividends and laying away large surpluses at the same time.

Now, railroad operation and management have become of the nature of fixed sciences. The railroad man to-day can tell you just

what it costs to operate every mile of his railway or every train mile; the railway man can tell you just what proportion his operating expenses bear to his total receipts. We know that there were in operation in Canada in 1902, 18,714 miles of railroad made up of through railroads, local railroads and colonization railroads, railroads good, railroads bad and railroads indifferent. This whole system made its returns to the department. Taking the returns over the whole system of Canadian railways of 18,714 miles and taking the average of operating expenses on these roads and showing the proportions which they bear to the actual receipts of these roads gives us $68.54 as the proportion of operating expenses for every $100 of receipts. Now, $68.54 is rather a high proportion of operating expenses. Anywhere from $60 to $65 is about the proportion which railway men, I believe, expect. Out of every $100 they receive throughout the whole system of Canadian railroads, out of every $100 received $68.54 pays the operating expenses and the balance goes to pay dividends and to pay fixed charges, interest on bonds and the like.

But take the Intercolonial ($68.54 out of every $100 being the average upon all the good, bad and indifferent railways in Canada) $98.29 being the proportion of operating expenses on the Intercolonial; it costs $30 more per $100 of receipts to operate the Intercolonial than it costs to operate the average of all railroad systems in the Dominion of Canada. If you turn to the Prince Edward Island branch, although that perhaps is not a fair comparison, you find that for every $100 of receipts it costs $136.24 to operate that road. Now what do these figures show. As I said they show to my mind that it is not the defective management of the road that is at fault, but it is something inherently wrong in the road itself. You will find by taking the average earnings on the Intercolonial per mile of their line and comparing that with the average earnings per mile on other lines you will find they fall below year by year in good round numbers. If you take the operating expenses per mile on the Intercolonial and compare them year by year with the average on the whole system of Canadian railways you will find that for the most part they exceed the operating expenses of other roads. I have made a calculation from 1890 to 1902, and I have made that calculation upon this basis: Where there has been an average loss per mile in receipts of the Intercolonial Railway and where there has been an average excess in operating expenses on that road, I have added these figures together each year. In years where the operating expenses have made a little better showing than the average upon other Canadian railways, I have deducted them from the losses in the average receipts and from these figures I find that the proper financial standing of the Intercolonial Railway from 1890 to 1902, on the principle which I have stated when compared with the average of all other roads comprising the Canadian railway system as follows:

Year.	Below average per mile.
1890	$517
1891	682
1892	563
1893	362
1894	314
1895	275
1896	325
1897	562
1898	603
1899	548
1900	473
1901	723
1902	434

Mr. ROSS (Ontario). Is that in the receipts?

Mr. GUTHRIE. That is both the receipts where they have fallen below the average of other railways and operating expenses added where they have been above the ordinary operating expenses or by subtracting them in years where they have made a better showing. I have only gone back to 1890, but this shows that both under the Conservative and under the Liberal party, that road has made a showing far below the showing of the whole Canadian railway system, covering 18,714 miles. We have had good management as far as I know. We have had fairly good management, as good management as political management can attain to. These facts demonstrate that there is something wrong in the construction or the methods of the road itself, and if we have a showing such as that road is only able to make by incorporating that road into a great transcontinental railway system, I submit we are going to weaken that railway system in the last link of the line. As a fair proposition, as a reasonable proposition, would it be a right thing when your object is, as far as possible, to have an air line provided with all modern equipment and built on the principles of modern construction, to load down that new railway enterprise with a system which has made a uniformly bad showing during all the years which it has been in operation? Then, my next proposition is this, that the returns of the road show that it cannot be operated successfully, with regard to through traffic or heavy commercial trade, and, secondly, that the returns of the road show that that road has been for many years practically what we would term a local road, serving the localities through which it runs, being of the greatest convenience and the greatest use to the people in those localities, but serving to a very slight extent the people of the rest of Canada. I have taken the receipts

of the Intercolonial Railway for 1902, and I have taken them for that year because it is the latest year for which I have been able to get returns from the operation of the system. I find that the receipts of the Intercolonial Railway were made up as follows :

Traffic.	Receipts.
Passenger traffic..	$1,787,094
Freight traffic..	3,676,813
Mails, express and all other sources..	257,083

Or, in other words, the receipts from the passenger traffic over the road represented 31·2 per cent of the total receipts, and the freight receipts, 64·03 per cent of the total. These two sources, passenger and freight traffic, supply over 95 per cent of the total receipts of the road. How is the passenger traffic made up? I have tried to investigate it, but I have not been able to get down to the details which I would like to have been able to arrive at, because I have only been able to get the returns that are contained in the blue-book issued by the department, but I find that so far as ocean-borne traffic is concerned, there were carried over the road 3,054 passengers, and that of these passengers 1,213 went westward by the Canadian Pacific Railway, and only 1,761 passengers representing this ocean-borne traffic went westward over the Intercolonial Railway. As far as the reports show, by far the greatest bulk of the traffic over the road is made up of local traffic between stations on the Intercolonial Railway. That traffic will in no sense be injured by the new proposition. That local traffic will go in the future as it has in the past, and as the country grows and becomes more prosperous, as we all hope it will, that local traffic on the Intercolonial Railway will materially increase. It should increase, because it has been increasing on other lines of railway. But, there is another feature in connection with the Intercolonial Railway passenger traffic which must not be lost sight of, and that is what is known as tourist traffic. There is a large amount of summer travel over the road, travel which will go there notwithstanding that the new line may be constructed. The Intercolonial Railway reaches the land of Evangeline, the land of the hunter, the land of the fisherman, it passes through grand scenery, waterscape and landscape, and these are the natural features which attract summer travel over the road and will continue to do so notwithstanding how many other lines may be in existence, and this traffic forms a considerable portion of the passenger traffic on the road. I maintain that, far from decreasing the passenger receipts, the present proposition is going to increase them. We have only one transcontinental railway system now. We have the Canadian Pacific Railway booking its passengers through on its own line from ocean to ocean. Any railway company would do the same thing. It is to be expected. It is right. But, with another transcontinental system, under an agreement such as the present agreement of the government with this company, I think we can safely assume that the new road having taken passengers down to Moncton or St. John, passengers who are going further oceanwards or further east will in all probability travel what is now the Intercolonial Railway system. There is practically no western travel over the road to-day. If passengers are brought east to Moncton or other points, it is quite within reason to assume that a large number of them will travel over the Intercolonial Railway, and this will be travel which that road does not get now. But passenger travel represents only 31 per cent of the total receipts of the road. The great bulk of the receipts of the Intercolonial Railway is made up from freight traffic, which represents no less than 64 per cent of the total receipts of the road. How is this traffic made up ? I mention these things because it has been so often stated that the effect of this new scheme will be to destroy the Intercolonial Railway. They say in this House, they say on the street, they say in the newspapers, that on the one hand the government has spent $70,000,000 on the Intercolonial Railway and that on the other hand they are ruining that $70,000,000 of capital invested in the Intercolonial Railway.

Now, Sir, the large bulk of the traffic on that road is freight traffic representing almost two-thirds of the total receipts, and the total freight tonnage on the Intercolonial Railway for 1902, amounted to 2,385,816 tons, a very respectable freight tonnage it is, and placing that road fourth in the list as regards freight traffic in the Dominion of Canada. The tonnage was made up as follows : The first item and the largest item is coal, representing 557,520 tons, or 23·09 per cent of the whole freight traffic of the road. The next item is grain, but that falls off to 65,627 tons, or a little over two per cent of the total freight traffic in tons over the road. The next item is flour, 13,170 tons or about 5½ per cent of the total. The next item is lumber, representing 544,253 tons, or 22·08 per cent of the total. The next item is cattle, representing only 17,083 tons, of ·07 of one per cent of the total. The next item is manufactured articles, representing 531,180 tons, of 22·03 per cent of the total. The next item is fish, 23,124 tons, or one per cent of the total. The next item is sugar, 41,275 tons, or about two per cent of the total, and the other freight carried on the road amounted to 460,890 tons or 20 per cent of the total tonnage. I take these individual items simply because these are all that are given

in the returns, and if you examine what part of that freight is through-freight, and what part is local-freight, the figures will surprise any one who has not given them thought. According to this statement, the total ocean-borne freight going by the Intercolonial Railway to Europe and coming from Europe over the Intercolonial Railway for the year 1902 amounted to 183,147 tons; or in other words, all the freight which passed over the Intercolonial Railway, going to Europe, and all the freight which came from Europe over that system amounted to only 8 per cent of the total freight tonnage on that line. And of that 183,147 tons, how much was local freight and how much was through-freight? Why, out of that quantity 172,733 tons went to points on the Intercolonial Railway, or, originated at stations on the Intercolonial Railway and thence went east. Only about 10,000 tons of that whole local traffic went beyond the stations on their own line. I think, therefore, that we can assume that the whole ocean-borne traffic on the Intercolonial Railway is in the nature of local traffic. But, Sir, I can take them item by item, and we find that out of the total of 557,520 tons of coal carried on that road, there went further than the Intercolonial Railway's own stations the following: Via Ste. Rosalie, 1,131 tons; via Chaudière, 5,763 tons; via St. John, 3,640 tons, or a total of 10,534 tons went to stations beyond the Intercolonial Railway system, and might be looked upon as in the nature of through-freight, while 547,986 tons went to stations on the Intercolonial Railway itself. The next item given in the report is sugar. The total of raw sugar carried was 11,643 tons, the total shipments to points off the Intercolonial Railway west was 90 tons, and the total to stations upon their own line, 11,553 tons. The next item is refined sugar, and for the west they carried 10,793 tons, and for local stations on the Intercolonial Railway, 18,839 tons. In fresh fish the total carried on the Intercolonial Railway was 13,082 tons; for the west, 7,605 tons, and for local stations, 5,477 tons. For salt fish the total was 10,042 tons, and for the west there were 4,846 tons, and for the local stations, 5,196 tons. In fact, the only showing of shipments of freight that cannot be considered as local freight consist in their shipments of fresh and salted fish, because about half the amount they carried of these two items did go to points west. Now, Mr. Speaker, I submit from these figures, that the building of the new road will not affect the local traffic. We cannot affect the coal traffic by the building of the new road, and the coal traffic represents 23·09 per cent of the entire freight carried by the Intercolonial Railway. You will not interfere with the lumber traffic, which represents 22·08 per cent of the total. Where does that lumber come from? The lumber includes cordwood in the schedule supplied in the returns, and for the most part, it comes from Nova Scotia and New Brunswick. There are small portions of it coming probably from the Ottawa valley and some from the neighbourhood of Quebec, but the great bulk of that lumber and cordwood is carried from and to points in Nova Scotia and New Brunswick, and that trade will not be interfered with in the slightest degree by the new line. Then, Sir, the freight in manufactured articles represents 22·03 per cent of the total freight of the Intercolonial Railway. Where do the manufactured articles come from? Probably from portions of Quebec and from the province of Ontario, but the great bulk of these manufactured goods come from Sydney and other points in Nova Scotia, where there are large manufacturing industries. I maintain that in so far as Ontario is concerned, the new line, not touching Ontario by many hundreds of miles, all the manufactured articles which go from Ontario to-day to the maritime provinces over the Intercolonial Railway will continue to go, notwithstanding the fact that you may build your transcontinental line. The next item is flour, but that is only 5 per cent of the whole traffic, and as a large amount of that comes from the province of Ontario, I submit that the Intercolonial Railway trade in that commodity will not be affected. And if you go through these items one after the other, you will find that over 90 per cent of the freight trade of the Intercolonial Railway is purely and simply local freight; 90 per cent of it will be entirely unaffected by the construction of the new line. Nearly the whole of the present traffic on the Intercolonial Railway is local traffic, and that will be entirely unaffected by the construction of the new line. If the new line interferes at all with the Intercolonial Railway, it can only be in respect to a small portion to this through-freight and as to that freight, I am satisfied that hon. members on the other side will agree with me the Intercolonial Railway has been hauling it at an actual loss; it has been the losing part of the Intercolonial Railway freight trade.

Can it be reasonably said, from this statement of the Intercolonial Railway itself, can it be reasonably argued that a new line running anywhere from 30 miles to 100 miles from it, opening up a new territory, which will some day become developed and settled; can it be argued that that road, forming part of the new system, will in any way deteriorate the value of the Intercolonial Railway? And what is more, I submit that while it does not as a matter of fact get anything to speak of to-day in through-trade, while it does not send over its line anything to speak of in the way of through-freight, there is the probability, and the strong probability in the future, that by the construction of the new line you will be able to give to the Intercolonial Railway

a certain amount of through-freight which it never handled before, and which it may make something out of. But I am not very hopeful that the Intercolonial Railway system, as at present constructed and according to its present route, will ever be in a position, without a tremendous expenditure of money, to handle profitably what is looked upon as through-freight. In taking freight at Moncton I do not think that road is in as good position as the new road will be to handle it cheaply. The ex-Minister of Railways and Canals, as a sort of alternative proposition, said: Take the $15,000,000—$15,000,000 is what he figured it out to be—which you expect to spend on the new line through New Brunswick and apply that to the improvement of the Intercolonial Railway. Now, Sir, if you did that, what would you have to do to the Intercolonial Railway? You would have to change the route of that road; you would have to abolish that semicircle which the right hon. leader of the House described as being formed by the Intercolonial Railway between Halifax and Quebec; you would have to cut out these 50 and 60-foot grades; you would have to put down 90-pound rails; you would have to take off the present engines, though they are reasonably good engines, I believe, and equip that road with engines weighing from 100 to 110 tons, and you would have to give it practically a new equipment in the way of cars. You would spend a tremendous amount of money in making that road anything like a modern commercial road; and I think the government have considered, and rightly considered, that the best way to cut the Gordian knot is to build a new short line through the province of New Brunswick, equipped as a modern commercial highway.

The proposition which I made at the outset was that the Intercolonial Railway, from its own reports, the nature of its construction, and the route it takes, cannot be usefully incorporated as a link in a transcontinental line. I think I have demonstrated from its own reports that it has now the business of a local road, and is serving the country as a local road; and it can do better service to the country in that way than in other ways. I think, likewise, I have demonstrated that if the new line has any effect whatever on the Intercolonial Railway, it will have a beneficial effect rather than otherwise. I do not think it will have much effect.

I have said that at confederation it became our duty, and it was a cardinal point in our contract, that that road should be built. It was also a part of our agreement that the road should be adequately maintained. The government, since they came into power in 1896, have placed the Intercolonial Railway on the best footing on which it could stand. They have brought it up to Montreal; they have given it every opportunity; they have given it practically a new equipment; they have made it as good a local road as is to be found in the country. But the people of Canada are not bound to do more for that road. All these improvements have been made, and the people of other provinces have not uttered one single objection to the expenditure. Everything has been done for the road, I submit, that we were called upon to do. As an authority for that statement, I give the statement made in this House last session by the hon. member for South Lanark (Hon. Mr. Haggart), who, at page 3473 of 'Hansard,' said:

> I have not gone into details with reference to the Intercolonial Railway. We shall have an opportunity to discuss the various items as they come up, and of getting the fullest information concerning them from the minister. What I have sought to do is to draw the attention of the country to the enormous sums of money that have been expended on that road. What the people of Canada promised the people of the maritime provinces when they came into confederation was this—to build the Intercolonial Railway and to make it a good, efficient connection between these upper provinces and the maritime provinces.

That, I submit, is a correct statement of the case. The road was built as a link to connect the maritime provinces and the upper provinces. It has been maintained, and properly maintained. We have done all we were called upon to do with regard to the Intercolonial Railway. Shall it now be said that the mere fact that that road stands there, and that we have so much money invested in it, shall form a stumbling block when we propose a new transcontinental system? Is it fairly to be argued that because we have that road there, which does not pay its operating expenses, therefore we must not go on with a transcontinental railway system, or, going on with it, we must incorporate with it the Intercolonial Railway as a drag and dead weight upon it? I think not.

I have but a few observations to make on the question as to whether or not the new road can ever become a modern commercial road. I think that is largely a matter of expense; and we have on that point the pledge of the hon. Minister of Finance that it is the direct aim and intention of the government to make the new transcontinental road a modern commercial road, up to modern standards and modern ideas. Sir, if I thought for a moment that that end could not be attained, or that that promise would not be carried out, I would have no hesitation whatever in withdrawing my support from the measure altogether. But I believe that road can be made a first-class commercial highway in every respect, equal to any modern commercial road, according to the figures presented to this House by the hon. member for North Norfolk (Mr. Charlton). If we take the evidence which we have regarding the New Brunswick part of the country through which that road

will pass, evidence given by men who know, notably that given last night by the hon. member for Victoria (Hon. Mr. Costigan), who says he has travelled over every foot of it, the route is through a country of easy railroad construction, presenting no great natural obstacles—no mountains to be encountered, no rivers of any magnitude to be bridged. It is a country of comparatively easy construction, and to say that you can start a line at Rivière du Loup, and run southwards over a grade of 1,300 feet, in 16 miles, which is the grade on the railroad in existence there now, would be to block the whole enterprise as a modern commercial road. But, from the statement of the hon. member for Victoria made last night, and from other information which has been laid before the House, the evidence is overwhelming that a favourable route can be obtained through the province of New Brunswick, which will materially shorten the distance. So far as I can see, the only great obstacle in the way is the St. Lawrence bridge ; but that can be arranged.

With regard to the country from Quebec to Winnipeg, we have as much evidence as any one can require short of the exact location of the line. It is not yet staked out ; but we trust that in the near future it will be. But all the information which we have goes to show that there is no natural obstacle of any great moment in the way ; otherwise we would have known it merely as a matter of ordinary geography. What is the difficulty of railroad construction over 1,400 or 1,500 miles of a clay plateau ? That is easy work. Is there any difficulty about getting standard grades ? As a matter of fact, surveys have been made of the country from Lake Nipissing to Lake Nepigon, and in that stretch standard grades can be obtained, except in one or two spots, where I believe the reports are that grades will be about 1 per cent, and short grades at that. The standard grade has been stated to be 21 feet to the mile. That is bringing it down to a nice point. Engineers and railroad men have informed me that 26 feet to the mile is considered a standard grade ; that is 6 inches to 100 feet. But there is no evidence that standard grades cannot be obtained. No man has said, I have travelled through the country or have had engineers travel through it, and they have made such and such a report; but all the evidence before the House is that it is a country for easy railroad construction, well adapted to settlement, and through which standard grades will be obtained.

A great deal has been said about this road never shipping a bushel of grain if it is completed. It has been stated time and again during the course of this debate that this road will never carry any grain. I believe that statement is based almost exclusively upon the experience of the Canadian Pacific Railway in that respect. I contend that to compare the 500 miles of the Canadian Pacific Railway between Port Arthur and North Bay with the country through which the new road will pass, is not a fair comparison.

If ever there was a difficult piece of railway construction on the North American continent, it is that north shore part of the Canadian Pacific Railway line. The Canadian Pacific Railway officials will tell you that. Indeed the hon. member for South Lanark (Hon. Mr. Haggart) told us that that portion of the Canadian Pacific Railway road cost them $60,000 per mile to construct, and no one who has travelled over the road will wonder at it. It is largely blown out of the solid rock, and just as soon as you begin to move rock, you begin to run into money, and very rapidly too. That road presented engineering difficulties almost insurmountable, but which have to a certain extent been surmounted, though not with a road which can be described as a modern standard, commercial line. The curves are tremendous, the grades frequent and uneven, and with the strongest engines the Canadian Pacific Railway cannot haul more than from twelve to fifteen loaded cars over it. If you cannot get a better road through the northern country than the Canadian Pacific, I would hesitate before venturing into the undertaking at all.

The hon. gentleman, the leader of the opposition, said last night that part of his policy would be to acquire that line of the Canadian Pacific Railway from North Bay to Port Arthur, some 500 miles, costing about $60,000 per mile through a country which is absolutely useless for the purpose of settlement, in which the timber was stripped and burnt long years ago, and which will never be of any value, unless perhaps some of these mountains and rocks contain some kind of mineral not yet discovered. Would any sane man enter into a project to obtain that road—535 miles of road at $60,000 per mile, the cost of construction ? That would amount to over $35,000,000. It would be a good bargain for the Canadian Pacific Railway, for there is no doubt that that is the portion of the line which is the great hindrance and drawback to their carrying grain. If the Canadian Pacific had avoided those mountains and rocks, those curves and windings, and gone back into the country north of the height of land where the clay belt is, I believe that it would be able to draw grain every winter down to the sea.

Mr. ROSAMOND. Does the hon. gentleman say that there is a clay-belt north of Lake Superior ?

Mr. GUTHRIE. Yes, according to the map issued by the Ontario Crown Lands Department, which was exhibited in this House.

Mr. ROSAMOND. Supposing the Canadian Pacific Railway had taken some other line, how could they have got to Port Arthur ?

Mr. GUTHRIE. Just as the Grand Trunk Railway will, by building a line down to Port Arthur, and the Grand Trunk Pacific Railway will get there much more cheaply and on proper grades, over which they can draw grain, whereas the grades which are on the Canadian Pacific Railway road in that section absolutely prevent the carrying of grain.

Mr. BENNETT. On what authority does the hon. gentleman make the statement that the Canadian Pacific Railway can only haul twelve cars loaded on that line going eastward ?

Mr. GUTHRIE. I say that on the eastern trip between Winnipeg and North Bay, there are grades on that road which prevent the heaviest engine on the Canadian Pacific Railway drawing more than twelve to fifteen cars loaded.

Mr. BENNETT. On what authority ?

Mr. GUTHRIE. On the authority of railway men who have so informed me.

Mr. BENNETT. The hon. gentleman is wrongly informed. Who is the informant ?

Mr. GUTHRIE. I do not think I should be challenged any more than the hon. gentleman's own leader was, who, when he read statements of men who had informed him, would not give their names because they are officials in a road which will be in opposition to this new road we are going to build. If we cannot vastly improve upon that north shore line of the Canadian Pacific Railway, I think we might well hesitate before going on with this work.

Mr. WARD. How does the hon. gentleman know that these letters read by the leader of the opposition were from officials of the Canadian Pacific Railway ?

Mr. GUTHRIE. I said that in my opinion they were. Another point is this, that the whole argument that this road cannot become a grain carrying road is based on the experience of the Canadian Pacific Railway. The hon. the leader of the opposition, in his first statement, said what ? He said that the Canadian Pacific Railway is carrying 40,000,000 bushels of grain and only 6 per cent of that by rail. We have also the statement of Sir William Van Horne, published a few days ago, to the effect that we can not make that a grain-carrying road. But on what is Sir William Van Horne's experience based ? Like the leader of the opposition, he bases his statement on the experience of the Canadian Pacific Railway, which is going to be in opposition to the new road.

Mr. SPROULE. The leader of the opposition gave the experience of the United States. Seventy-five per cent is carried by water.

Mr. GUTHRIE. So far as I can learn, and I have consulted railway men in this country—and some in the United States—the facts are these : If you can get a standard line, with a grade of twenty-six feet to the mile—and it would be better of course if we can get it 21 feet to the mile—and if you can lay 90 pound rails and supply cars with the capacity of from 60,000 to 80,000 pounds, and engines up to 100 or 110 tons, you can haul grain in competition with water routes. There are engines to-day that weigh 135 tons, but I do not see that we need engines of that kind in this country. Only one road in the United States uses such engines, and that is one of the iron roads of Pennsylvania.

Mr. SPROULE. Can the hon. gentleman name a road on the continent of America which hauls grain from 1,800 and 2,000 miles by rail ?

Mr. GUTHRIE. No, the longest concerning which I have any figures, are from Chicago to Baltimore, New York and Boston. We know that the Illinois Central is hauling corn from Chicago and New Orleans and transhipping it there in competition with the river and rail route. That is 932 miles all by rail.

Mr. SPROULE. What are their freight rates for that distance ?

Mr. GUTHRIE. Between Chicago and New York, and Chicago and Baltimore and Boston, the rates are about seven and a half cents per bushel, and I know that these trunk lines are hauling large quantities of grain. Let me point to another fact. The New York Central has made to the government of the state of New York the following offer : If you will give us to improve our road what you propose to spend on the Erie canal, we will draw grain from Buffalo to the seaboard, 442 miles, at two cents. That is a well-known standing offer on the part of that railway. Indeed if we have the equipment and the grades, the engines and the cars, there is nothing to prevent an engine of 110 tons drawing from fifty to sixty cars containing each 50,000 to 60,000 pounds of grain, and then you will be in a position to compete with the water routes. But I would not argue for a moment that the summer grain trade on this road will go by rail if it can go by water. Water rates may, and probably will, come down, and I would at the earliest opportunity support any expenditure to still further improve the water route of the St. Lawrence.

Mr. KEMP. Why go to Quebec city if you cannot draw grain over that road in the summer time ?

Mr. GUTHRIE. I estimate that there will be a good deal of freight besides grain. And

I would ask the hon. member for East Toronto (Mr. Kemp) if this is not a correct estimate. The last year the total receipts of the Canadian Pacific Railway were $43,900,000. Its grain traffic was less than nine per cent of these receipts. Will the other road have no chance of getting any of that transcontinental traffic, with better facilities on the eastern coast and a shorter route to the sea, and with terminals on the Pacific ? Will not the commerce of Toronto and Guelph and my own county and the principal part of Ontario be shipped east and west on that road as it is now on the Canadian Pacific Railway ? I have not a doubt in my own mind that the hon. member himself will be a shipper on that line as soon as it is constructed. Now, having given these rates as given to me let me ask : What is one chief object of the building of this road ? It is certainly to relieve the congestion in the western traffic. As I understand it the crop in Manitoba is harvested about the end of this month. The crop in the territory is harvested later than the end of this month. About the beginning of September, the crop in the western country can begin to move. And the canals are frozen up, or navigation is stopped, from about the first to the middle of November. This means that you have about sixty or seventy days during which you have to move probably about 60,000,000 to 70,000,000 bushels of wheat or, with other grain, amounting to about 100,000,000 bushels. There is the problem confronting you with which you have to deal. There is a portion of that grain which gets to the lake ports in time for shipment through the canal, but by far the larger quantity does not reach these ports in time. Where, then, does it stay ? It stays all the winter in elevators, from the time it is shipped to the first of May. The charge for storage is about one and a half cents per bushel for the first month and one-half cent a bushel after that until the spring. As I say, a small quantity goes out in the fall, but a large quantity remains in the elevator at a charge for handling and storage until it goes out in the spring. Would it not be better, if, in the fall of the year, the farmer could ship his grain at reasonable rates—and I will discuss the rates later on—down to the seaboard at St. John or Halifax, thus avoiding the warehousing of the grain all winter and the paying of warehouse rates upon it. Why, the warehouse rates themselves would amount to some four cents or five cents a bushel, and that should be added to the freight. I believe that the day will come, after this road is constructed, when, in all probability, grain will be shipped from Winnipeg to Quebec at eleven cents, twelve cents, or thirteen cents a bushel. If I understand the situation, grain is shipped now to Port Arthur from Winnipeg at seven and a half cents a bushel. It is then taken by water carriage to Quebec for say five cents to six cents a bushel.

That means that it is costing the farmers to-day eleven cents or twelve cents a bushel to take their grain from Winnipeg. I have not the slightest doubt that, if such a road as has been described is constructed in this country, eleven cents, twelve cents or thirteen cents a bushel will land the same grain by rail at those points which it now reaches partly by water and partly by rail ?

But, Sir, there is a vast amount of freight going over these roads, and a vast amount of freight which might go which is not now going at all. If a road were dependent on the grain trade, it would be a failure, for 65,000,000 bushels of wheat, which is the quantity we have at the present time, will not support a road—there is no question about that. We must have regard to this fact, that there are now actually engaged in agriculture in Manitoba and the Northwest about 40,000 men. These men produced last year, and will produce this year, about 100,000,000 bushels of grain, of which about 60,0000,000 to 70,000,000 is wheat. Now, the wave of immigration had hardly set in up to last year. Last year we had about 100,000 settlers, while this year the number will probably exceed 100,000. Instead of having 40,000 men engaged in raising grain, you will soon have ten times that number. That is not an unreasonable estimate. I agree with the hon. member for East Grey (Mr. Sproule) that we are going to require many new roads to haul the crop of that country. He says that he believes that in the near future, instead of having 100,000,000 bushels, we shall have a product of 400,000,000 bushels of grain in that country. I believe the hon. gentleman is within the mark in this estimate. I believe that we in this House are going to live to see the day when the prediction once made in this House by Sir Charles Tupper, that we should raise 640,000,000 bushels of grain, will be literally fulfilled, though it will be twenty or twenty-five years late in its fulfilment. Will not that furnish a trade, such a trade as we could not handle at all at this moment ? The hon. member for East Hastings (Mr. Northrup) said in his speech last night that it will be five or six years before you have your road constructed and, in the meantime, the Grand Trunk will send their traffic through the United States. What does that prove ? Does it prove that we shall wait ? No. It proves that we should go ahead with all possible speed; that we should not wait a single moment ; that we should satisfy ourselves at once as to the measure and push forward the road, so that it may furnish a Canadian route and not have our traffic going via Chicago or Duluth. The statement was made, I believe, that to-day grain is brought from Duluth by the Canada Atlantic Railway at three cents a bushel. According to the information I have received on that subject, it was shipped at those prices because the boats had gone to Duluth laden, and took the grain at that figure

rather than make the return voyage light. There has been no such rate maintained for shipment by rail and water as three cents per bushel.

Mr. KEMP. Hear, hear.

Mr. GUTHRIE. I see the hon. member for East Toronto (Mr. Kemp) agrees with me in that proposition. Then, there is the question of cattle shipping. That was dealt with by the Minister of the Interior. The part of Ontario in which I reside is greatly interested in that question. Many a man has shipped from Ontario to the North-west a carload of cattle or several carloads. That is an all-rail shipment, not water. The demand of the people is for a competitive rate. Let there be two roads to take in these cattle, just as the farmers of western Canada want two roads to take out their grain. Then, there is going to be a vast quantity of manufactured goods shipped into Manitoba and the North-west, and it is evident that for this traffic two roads will supply the country better than one. That, I believe, is a good business proposition. Practically, all the necessaries of life, except bread-stuffs and beef, will have to be shipped into that western country for many years to come—clothing, iron manufactures, especially agricultural implements, and all other manufactured goods. So far we have only seen the beginning of the trade that is coming from that country within the next five or six years, for the benefit of the whole eastern portion of this Dominion. I believe that Ontario is as vitally interested in this project as any other part of the country, and perhaps more so. Whatever helps eastern Canada, and western Canada, is bound in my opinion, to help central Canada; and, Ontario, being the great manufacturing portion of this country, will be put in a position by this new route to make shipments of machinery, implements and manufactured goods of various kinds upon terms as good, indeed far better than that of the dealers of St. Paul and Minneapolis in the United States, notwithstandng that the duty may remain where it is. I think that is a sound business proposition also.

Now, Sir, do not let it be supposed for a moment that the government has any idea of abandoning the water route. I have heard no such expression of opinion from any quarter whatever. On the contrary, I think I may say, it is well understood by the government and by the people of this country that every facility is to be given for the water transportation of grain and other traffic. I look forward to the day when we shall have, not merely a fourteen-foot, but a twenty-foot or even a twenty-five-foot water-way through from Port Arthur to the sea ; when the St. Lawrence will be made as safe for navigation as any part of the Atlantic ocean. I would support, and heartily support, any reasonable scheme for the exploration of the Hudson's bay route. I do not say that I would consent to the building of a road until we know what the conditions of navigation are. To my mind, a sum of money might well be appropriated to settle the question of navigation of that great island sea. It is stated that navigation is possible not only for one or two months, but for five months in the year. If navigation in Hudson's bay is open for five months in the year, the people of this country should know it, and steps should be taken to make that also a grain route for the traffic of this country to England. I believe that within the next ten years we will require all the roads we now have and more, in fact all that we can possibly have.

But, Sir, speaking from the standpoint of the province of Ontario alone, I believe that this road is going to be as great a boon to the province of Ontario as anything that has transpired in Dominion or provincial affairs for many a long day. We are going to have what we have been longing to have, an east and west railroad through 700 or 800 miles of the northern portion of our province to open it up and develop it. The government of the province of Ontario is convinced that that country is one worthy of the expenditure of considerable sums of money and are themselves building a railroad into it and are prepared to go further north to connect their road with this line. There are other schemes and projects on foot for running railroads into that country north and south but what we need and most need in Ontario is a road east and west, crossing these other lines and projected lines at right angles. What the people of Canada and the people of the cities want is new towns and new villages. They want new markets for their goods and it must be borne in mind that the home market is ever the best market and our Ontario people should have it in their own province. We want new markets in this country. In my own city of Guelph we ship in car lots to the west woollens and carpets, and cream separators and agricultural implements and carriages as well as cattle and other goods. The people of the city of Guelph engaged in mercantile pursuits want that road for the purpose of obtaining competitive freight rates if for nothing else. They want two lines in order that they may be able to choose, which they have wished to do for many many years past.

Sir, it has been said by hon. members opposite that this road through the northern part of the province of Ontario will be the lean end of the contract. Sir, I believe that before that road is constructed and operated there will be many a settlement in there awaiting the construction of that railway. Why do I say that ? Why, Sir, it is known and known almost to a demonstration that that country has the greatest wealth of pulp wood in the world. It is estimated

that the pulp wood resources of that district amount to 280,000,000 cords.

At one o'clock, House took recess.

House resumed at three o'clock.

Mr. GUTHRIE. Mr. Speaker, when the House arose I was discussing the question of the position of the province of Ontario in respect to this new transcontinental railway project, and I was dealing at the time incidentally with the question of pulpwood, and referring to the fact that in Ontario, north of the height of land, it is estimated that there are at least 288 million cords of pulpwood standing and so far untouched. All this pulpwood will become of commercial value by the opening up of that territory by this proposed line. We know that it has been charged throughout Ontario frequently that the pulpwood concessions already granted in Ontario have practically exhausted the supply, and that in a very few years the pulpwood of Ontario will be entirely exhausted. This fact should be borne in mind in regard to the area of pulpwood that all the concessions so far granted and numbering seven or eight or nine or thereabouts, are south of the height of land, and it has been stated by men who have made calculations that if all the existing pulpwood concessions were gone on with, if the mills were built upon them and they were operated to their fullest extent, it would take in the neighbourhood of 200 years or more to exhaust the pulpwood supply in northern Ontario. That pulpwood is in itself one of the most valuable assets which Ontario has. So long as the country remains undeveloped, so long as the pulpwood is beyond the limit of railways or of roads, so long as we cannot get at it, it is absolutely worthless to us, and by putting this railway through that section of the country, as it is proposed to be put, the province of Ontario will at once have a tremendous asset which perhaps it might not have otherwise. I think that Ontario is one of the provinces that is going to derive great benefit if this project is carried through to a conclusion. I do not know of any other province, except perhaps Manitoba, which will receive the benefit which Ontario will receive when 700 or 800 miles of well wooded territory will be opened up for settlement. I believe that the burden on the people of Ontario in connection with this enterprise will perhaps be heavier than the burden cast upon the people of other provinces, but, Sir, while the burden may be slightly heavier the compensation will be vastly in excess of that which is given to any other province by the building of this road.

I had not intended to say very much more, nor do I intend to now, but there are one or two things that I would like to refer to before resuming my seat. I watched with the greatest interest the very able speech delivered by the hon. leader of the opposition (Mr. Borden, Halifax) in this House. I must confess to some feeling of disappointment regarding it, as I believe the people of the country have looked forward to his statement as a statement which would bring forth some definite alternative policy in regard to this railway project. I am aware that the hon. gentleman has submitted some nine propositions in regard to this matter which he has put forth as a sort of alternative policy. But these nine propositions are so general in their character, and are so greatly in accord with the policy which we entertain on this side of the House, that one can scarcely realize that the leader of a great party in this country would put such propositions before the House in the nature of an alternative. The first proposition he puts forward is this :

> To secure the lowest possible rate for transportation in order that our people may obtain a portion as large as possible of the price at which their products are sold in our domestic and foreign markets.

That is one of the underlying principles of the present measure—perhaps it is the chief underlying principle. Secondly, he says :

> To secure the transportation of Canadian products through Canadian channels.

That is another underlying principle of the government's measure at the present time. Third :

> To promote trade and intercourse between the two great divisions of our country, the east with its great industrial future, its vast resources of the field, of the forest, of the mine and of the ocean, and the west with its vast plains capable of suplying the food not only of the empire, but the world, and beyond the province of British Columbia with its great mineral and other resources.

Another underlying principle of the measure which the government has brought down, and so throughout the whole nine propositions which he has laid before the House, perhaps with the exception of his mention of the Intercolonial Railway, I say that the hon. leader of the opposition, in the policy he submits as an alternative policy, has given the best evidence that he himself at heart approves of the policy which the government has now submitted to the House, and will soon submit to the country. I find that when he starts to elaborate his nine propositions it is not quite as clear what the hon. gentleman means regarding them. He certainly starts out to advocate the extension of the Intercolonial Railway to the Georgian bay. Now, at some time in the future such a movement may be a very proper one. I doubt very much the propriety of doing so at the present time, but on looking at the speech delivered by the hon. leader of the opposition yesterday I find in column 9293 this proposal :

> If we acquired the Canada Atlantic Railway, we could build a line from that point to join the Canadian Pacific Railway at or near Sudbury.

But on page 9289 the hon. gentleman says :

Now, Mr. Speaker, I am not wedded to the acquisition of the Canada Atlantic Railway.

I think there is something inconsistent in that statement, and so we find it all through. The hon. gentleman's policy is a very general and vague one, and if you examine it from beginning to end, with his proposal to carry the Intercolonial Railway to the Georgian bay, with the proposal to carry the Intercolonial Railway from there to a point near Sudbury, with his proposal to acquire the Canadian Pacific Railway from North Bay to Fort William, over 500 miles in length, with his proposal to acquire the Canadian Pacific Railway from Fort William under certain terms, which he does not explain, at most the whole proposition can only be called a piece of patch-work. He proposes that the government should go ahead and improve the grades and curves on the most expensive section of the Canadian Pacific Railway, according to the hon. member for South Lanark (Hon. Mr. Haggart). Another objection that the hon. leader of the opposition has taken, and it is more in the nature of a legal objection than otherwise, is that the Grand Trunk Railway Company is not bound by this agreement. No one has pretended that the Grand Trunk Railway Company is a party to the agreement. It certainly is not a party to the agreement. The men who signed the agreement represented themselves as signing on behalf of the Grand Trunk Pacific Railway Company. This bargain or contract will not be consummated until thirty days after it has passed parliament, and it will only be consummated by the deposit of $5,000,000 in cash or securities. If the deposit of $5,000,000 is put up, I am satisfied that the men who are putting up such an enormous sum of money are not entering into any contract with the idea of fooling the government, but are genuinely proceeding with the proposition now before us. I notice also, in the remarks of the hon. member for East Hastings (Mr. Northrup), that he found some peculiar objection to the preamble of the Bill and to the recital in the contract itself. As I read the preamble of the Bill, it is in the following language :

Whereas, an agreement has been entered into, bearing date the 29th day of July, 1903, between His Majesty the King of the first part, and Sir Charles Rivers-Wilson, C.B., G.C.M.G., and others, representing therein and acting on behalf of the Grand Trunk Pacific Railway Company, a company incorporated by an Act of the parliament of Canada passed at the present session thereof.

The agreement is drawn in precisely the same form : the parties to the second part of the agreement being Sir Charles Rivers-Wilson and the others associated with him in seeking that incorporation. What point the hon. member (Mr. Northrup) sought to make out of some discrepancy which he imagined, I failed to see then, and after an examination of the contract I still fail to see. There was one point in regard to this contract which the hon. member (Mr. Northrup) particularly dwelt upon. It was that point, started by the hon. member for Hamilton (Mr. Barker), who said that it was in the power of the Grand Trunk Pacific Railway to hire or lease rolling stock to the extent of $5,000,000 and place it upon the line, and that that would be a compliance with the terms of the contract. All I have to say in regard to both the hon. member for East Hastings (Mr. Northrup) and the hon. member for Hamilton (Mr. Barker), is this : that while they may be entitled to their own opinions upon the strict legal meaning of the contract, and while I entertain for both gentlemen's legal ability the very highest opinion, yet, I would be prepared to accept the opinions of such gentlemen as Mr. Shepley and Mr. Gormully and the Deputy Minister of Justice of Canada, in preference to the opinions of the hon. members for East Hastings and Hamilton upon that point. We have been assured that independent men who have no political bias in this matter have examined this contract and that lawyers of the highest standing have said that the clause is reasonably clear that the Grand Trunk Pacific Railway can only comply with the terms of that agreement by placing its own rolling stock upon that line. But does it matter much whether they place their own rolling stock upon that line or somebody's else ? By section 22 of the contract, the company is bound to put $5,000,000 worth of modern rolling stock upon that road and maintain it in a good condition for a period of fifty years. If they do that, I don't think it matters one iota whether that rolling stock is in fact the property of the company, or whether the company may have leased it for a period of fifty years. Another point which seemed somewhat to bother my hon. friend (Mr. Northrup), was that in clause 7 of the contract it is provided in the following language :

It is hereby agreed that the specifications for the construction of the eastern division shall be submitted to, and approved of, by the company before the commencement of the work.

I think that is a very reasonable and a very proper provision. The company has to pay the rental at the rate of three per cent on the amount invested in the road, and they having intimate knowledge of railway traffic and railway requirements, should certainly have the right to look over these specifications before finally completing them, but the point which bothered the hon. member for Hastings most was, that he thought the government had nothing to do with the letting of the contracts, and that section 7 only referred to the specifications. Well, if he had read section 9 of the Bill he would have found :

The construction of the said eastern division and its management until completed and leased to the said company pursuant to the provisions of the said agreement shall be under the charge and control of three commissioners, to be appointed by the Governor in Council, who shall hold office during pleasure, and who, and their successors in office, shall be a body corporate under the name of 'The Commissioners of the Transcontinental Railway,' and are hereinafter called 'The Commissioners.'

And if he had looked at paragraph 16 of the Bill itself, he would have found that the contracts for construction were to be let, not by the Grand Trunk Pacific Railway but by the commissioners, and that these contracts were to be let by tender in the ordinary way. At the time I was not impressed with the contention of the hon. gentleman in this respect, and I find now that his argument, that the government had no part in letting the contracts is entirely erroneous. A point which the hon. leader of the opposition dwelt upon, is the effect of paragraphs 42 and 43 of the contract regarding the routing of freight and the share of freight which shall go over this new line from Quebec to the seaboard. The hon. member (Mr. Borden, Halifax) when he first addressed the House said that clauses 42 and 43 contained nothing more than empty words; that the Grand Trunk Railway would only be bound by a moral obligation and that we were absolutely dependent upon the bona fides of the Grand Trunk Company for the carrying out of the meaning and intent of these provisions. That contention is likewise erroneous. The hon. gentleman probably had not time to read over the contract, because if he had he would see that by clause 25, on the completion of this railway, a lease is to be entered into between the Grand Trunk Pacific Railway and the government of Canada, and clause 25 provides:

The said lease shall also contain such covenants and provisions including proper indemnity to the government in respect to the working of the railway, as may be deemed necessary by the government to secure the proper carrying out of this agreement.

I submit, Sir, that we can well trust the hand that drew that contract, difficult and intricate as it is; we can well trust that same hand to draw that lease and to put in that lease covenants and stipulations which will guarantee to the people of this country the carrying out of the letter as well as the spirit of this contract.

Further, I will only add, that it is apparent from all that has taken place in this debate, that almost the entire argument of hon. gentlemen opposite is based upon the statements made to the House by the hon. ex-Minister of Railways (Hon. Mr. Blair). He certainly is a man of great experience and a man of great capacity, but it is strange to me that hon. members opposite who until three or four weeks ago considered the ex-minister to be anything but a railroad man or a railroad expert, should pound their desks and cover their faces with smiles of satisfaction, as he propounded his objections to the carrying out of this project. Now, with regard to the Intercolonial Railway itself, let me for a moment give you something of the opinion of that road held by the ex-Minister of Railways, who the other day said that we were going to destroy it, and that we should consider it in connection with through traffic. Speaking in this House a year ago last April, at page 3424 of 'Hansard,' the hon. ex-minister (Hon. Mr. Blair) thus speaks of the Intercolonial Railway:

It happens that this road has never been, and perhaps it never may be, a great surplus-paying road. Conditions exist which may for some years to come control the financial results of the undertaking. It would be unfair to hold the Intercolonial to the same strict rule to which you would hold railways which are built for commercial reasons, and in view of commercial considerations exclusively. I wonder to what extent commercial considerations entered into the question of the location of the Intercolonial Railway. If we had been building a road to yield a handsome net return to the government every year from its earnings, who would undertake to build a road by the roundabout route which the Intercolonial Railway has taken?

Is that not an admission by the hon. ex-minister that that road is not suitable as a commercial road? Surely, then, it would be insane to incorporate some 1,600 miles of railroad into a road that is to be built purely for commercial purposes, at the eastern end of that long line, simply to weaken and possibly to destroy it. But, Sir, the hon. member for South Lanark has also given us his views on the Intercolonial Railway. It was during the same session and during the same debate, where he says, in the course of his remarks, at page 3475:

By the course we are now pursuing, we are simply flinging immense sums of money into a sink-hole—these expenditures are of no benefit to the country whatever. This idea of developing the Intercolonial Railway as a heavy freight line, providing heavy locomotives, and then making heavy tracks and strong bridges to bear them, is an absurdity. The road can never have the heavy, long freight trains of a western road, and these new locomotives are not as suitable for traffic upon the road as were those the road already had.

Clearly proving the conviction of the hon. member for South Lanark, who has been heralded as the greatest authority on railroads in this House, that that road cannot be adapted as a commercial highway for carrying the heavy trains which are now used almost exclusively on commercial railroads.

It is interesting also to note the opinion of the hon. member for South Lanark as to the capacity of the hon. ex-minister in regard to railroads. It was during the same debate that the hon. member for South Lanark, who is the great railway

expert of the opposition, or of the House, as his leader would have us believe summarized the capacity of the hon. ex-Minister of Railways and Canals, at page 3453, in the following words. After reciting a long paragraph from some statement which had been formerly made by the ex-minister, he goes on to say :

> The hon. gentleman led the House to believe that the country was virtually incurring no fresh debt by purchasing the Drummond County Railway and acquiring the entry into the city of Montreal. The facts are against him, as I will soon show. His purpose was he said, to put life into the old concern, to make it a going and prosperous business, to show what the energy and ability of a man of business could do in the management of a concern that was put under his control. You would have thought that the hon. gentleman had been a railroad expert from his birth up. He is good at declamation ; he is good at making statements and promises, but none of them ever pan out. Nothing he promises to the people of this country is ever fulfilled.

That was the opinion which the hon. member for South Lanark entertained of the hon. ex-Minister of Railways and Canals but a year ago or thereabouts. But, Sir, take another extract from the same debate, at page 3475, where the hon. member for South Lanark thus describes the ex-Minister of Railways and Canals :

> The Minister of Railways and Canals has made a statement concerning his administration of the Intercolonial Railway which railroad men when they read it, from one end of the country to the other, will laugh at. It is a perfect farce.

With such statements before us, how is it possible that the hon. members, who applauded the hon. member for South Lanark only a year ago when he was so severely criticising the ex-Minister of Railways and Canals, should, but a few days ago, almost to a man, and the hon. member for South Lanark himself, applaud the hon. ex-minister until there hands were sore from pounding their desks ? I believe the hon. ex-minister never in his life enjoyed five hours more than he did the five hours of his opening speech in this debate. He had at his mercy, under his thumb, the great body of the opposition who had been maligning him and criticising him for the last six years in no uncertain language. For five hours he held them at his beck and call. When he desired them to rise to the occasion, he would make some sweeping general assertion against the government's project, and they would rise to the occasion, every man of them. But when he finally desired to produce something in the nature of a climax, when he desired one hurrah greater than any others, he himself stooped to make the mean insinuation that an honourable senator of this country had something to do with this scheme, and made them pound again like so many tin soldiers, while he himself stood laughing at them. The hon. ex-minister has had the grim satisfaction of wiping out six years of the oposition's denunciation of him, and of appearing to them within the last week or so as a hero and the propounder and exponent of the only objections they have been able to raise in this House against this measure.

With reference to the speech delivered by the hon. leader of the opposition, it is but fair to assume that our grounds of difference in connection with this proposal are but few and slight. I believe that on the great features of the proposal we are practically all agreed. It is only in matters of detail, and in many instances minor details, that we lack a consensus of opinion. We are agreed that there is an urgent necessity for greater transcontinental railroad facilities in this country. The expanding trade and commerce of our country demands it. The rapid development of our Northwest country demands it. The want of competitive freight rates demand it. The steady onward march of commercial and industrial methods, rendering competition keener and still more keen, until the question of railway facilities and railway rates becomes not only an important but a dominating factor in most commercial transactions, demands it. That man were dull indeed who, either in this House or out of this House, would express an opinion contrary to the opinion that I believe we all share, namely, that the necessity is great, that the moment is opportune, that the ability of our country to meet her national requirements is beyond a peradventure. These being our common grounds of agreement, they are the main questions involved in the consideration of this measure. Our differences appear to arise as to the best methods of putting our conclusions into effect.

While I submit that there is not in this country to-day a condition of affairs which would justify a government in taking over the railroad systems of the country and operating them, either by a commission or otherwise, I do not despair that at some time in the future there may be such a condition of affairs as to render that sort of management possible. Certainly the management of the Intercolonial Railway system is not very encouraging as an example of government management. We have in this House an hon. member who occasionally starts on his favourite theme of the nationalization of railroads. I refer to the hon. member for East York (Mr. Maclean). I do not think the hon. member has a very clear or concise idea of what he means by that high-sounding term; but time and time again, in this House, and in his newspaper in Toronto, he elaborates on what he is pleased to term the nationalization of railroads, as the only mode of relief from all our difficulties—as the only panacea for all our ills in connection with railway mat-

ters. Surely the people of this country, if they pay any attention to the statements of the hon. member for East York will say :

Now is the winter of our discontent
Made glorious summer by this son of York.

But, Sir, so far this idea, I think, is in embryo only. I look forward to the day when the matter may be taken up seriously, but I do not think that at present any one can seriously contend that we should go in for government operation of railways, either by commission or otherwise.

We know that the Conservative party always consider it a tremendous triumph that they had a great deal to do with the construction of the Canadian Pacific Railway. I think that this country can look with very great pride upon the accomplishment of that great work. I know that when travelling in other countries, notably in the United States, and hearing the puffing and blowing which goes on there about their miles of railway, my own breast has swelled with pride when I thought that in a country of 5,500,000 of people, we have the greatest system of railway, under single management, in America and perhaps even in the world. I look forward to the day when we will have another such system. I believe that we are taking the first steps towards realizing that expectation at present, but I do not think that the Conservatives are entitled to the credit. Nor were they entitled to all the credit for the construction of the Canadian Pacific Railway. That was a road which the people of Canada, as a whole, constructed. I notice that the hon. leader of the opposition, in his remarks yesterday, proclaimed to his followers, as he turned towards them with a grand gesture : We built the Canadian Pacific Railway. Sir, it was the Canadian people who built it, but the unfortunate feature is that although we built it, we do not own a dollar of it. Since then a radical change of procedure has taken place. That part of the new transcontinental line which we are going to build, we intend to own ; and while we do not intend to operate it ourselves, we shall lease it and allow other railway companies to have running powers over it, and operate it, in conjunction with ourselves, if we so desire.

Our hon. friends opposite say that there is a great deal of sentiment in this proposal. I am glad to know that there is, I have heard it claimed that there was a great deal of public sentiment behind the Canadian Pacific Railway contract, and one of the most cheering facts, in connection with the scheme before the House is that there is so much public sentiment behind it. But if there be sentiment behind it, it is certainly a high and noble sentiment—that sentiment which we call patriotism is perhaps the highest the human heart is capable of. Long may the people of this country have that sentiment with regard to all their institutions, their great railways, banks and public systems of one kind or another ; and so long as that sentiment has force, Canada will be assured of a prominent place among the nations of the world.

Mr. A. W. PUTTEE (Winnipeg). Although this debate has been rather prolonged, Mr. Speaker, the question before the House has so much to do with the future of this country, that it is hardly necessary for me to offer any apology whatever for putting my views upon record concerning it. I think we may put from our minds altogether the expectation that we shall dispose of this question and conclude this debate at an early day. It seems to me a question on which we may rightly expect representatives from all parts of the country to express their opinion. This session is already in its sixth month. To-day it completes its twenty-third week, and those of us who are from the extremes of this country, either in the west or in the east, feel that we have a very just cause for complaint indeed at having been kept here so long, but we consider also that it would be unreasonable to expect this parliament, after it has sat here, from month to month, quibbling and quarrelling over comparatively insignificant questions, to dispose in an off-hand way, of a matter so important as the one now being considered.

I wish to pay some attention to the speech made yesterday by the hon. member for Hants (Mr. Russell). I find that speech a most peculiar one—one I can well imagine he will yet wish he had not been under the necessity of making. In it he made a radical reversal of his former attitude on the principle of government ownership as applied to railways. The necessity for his doing this, he explained in an early stage of his remarks, when he told the House that he would not have addressed it at all on this subject, had it not been for the fact :

Some years ago I advocated a proposition, which has been mentioned in the course of this discussion, as a possible alternative to the policy propounded by the government. Shortly after the acquisition of the Drummond County Railway, a report obtained currency that the government was about to purchase the Parry Sound road for the purpose of still further extending the Intercolonial Railway and pushing it forward in the direction of the green fields of the west. It seemed to me at the time that this was a logical sequence of the steps already taken for the extension of the road to Montreal.

When an hon. gentleman has to admit that a few years ago he was advocating a system of government ownership, when he has to admit that he was advocating a policy of removing the Intercolonial Railway from the position it had hitherto occupied, of merely being operated in accordance with the terms of confederation—when he admits that he advocated making it a competing road by extending it to Montreal, and afterwards further on to Georgian bay, in the expectation of still further extending it into the west—when an hon. gentleman

has to admit that that was his position a few years ago, and that he is to-day obliged to reverse that position, I feel for him. When he finds that in the whirligig of events it was necessary for him to go back completely on the stand he took a few years ago, he has my deepest sympathy. But it is unfortunate that public men, when they are under such necessity, will not fairly and frankly tell us the real reason, and not try and explain something which cannot be explained. I am prepared to admire the hon. member for Alberta (Mr. Oliver), who got up and said: I believe in government ownership, my people believe in it, we want a government road through the west, but we cannot get it, and I accept this scheme for the good there is in it, but I only accept it because we cannot get what we want. There is something to admire in frankness of that kind, but one can only feel pity for an hon. gentleman who is under the necessity of arguing against his own convictions; and I think we might very well ask such men not to render up to party what belongs to mankind.

The hon. member from Hants (Mr. Russell) laid down this proposition, as a finality on the question of government operation: He prefaced his proposition by telling us that human nature will have to be altogether regenerated, that governments will have to be administered on a different basis, that the general public will have to move up to a higher plane before we could consider government operation and ownership of railways as a practical proposition.

> In a democratic state there never will be a government railway operated in successful competition with a private railway.

And he seems to take the position that until that occurs which he says will never occur, his argument remains good. Well, his statement is so laid that it is beyond the reach of demonstration. What would be 'successful competition' of a state-owned railway in a democratic state with a privately-owned railway? What would be the relative quality of success. A private railway is operated for private ends, for private profits. Its success depends on its being able to get the maximum rate and make the maximum profit. But with the publicly-owned road in a democratic state the object is to serve the public—it is a public end, and not a capitalistic end that is to be obtained. Success? How can success be measured in a matter of this kind? Well, let us take a parallel case. Speaking of railways in this country or any other country where the railways are privately owned, we should lay it down as a rule that a small railway cannot successfully compete with a big transcontinental line. That seems to be a proper way to state the question. And, until you can show a small road successfully competing with a big one, the hon. member for Hants would not agree that competition is possible. Well, the outcome of this kind of test is that the big road acquires and extinguishes the small one. That is success in the big road. What has been the experience in those democratic states and the other states where there has been public operation of railways? Every time, the result has been that they have acquired the other roads. That is their success. To make his statement good, the hon. gentleman quoted the cases of Belgium and Prussia. Now, I imagine that he did not quote them as democratic states, but it is true they did have an experience of partial government operation and partial private operation of railways. What has been the result? I would direct the hon. gentleman's (Mr. Russell) attention especially to this. As he has referred to the matter, I will give him the result in these two countries:

> When Prussia took over the railways (passing the law near the close of 1879 and taking the roads soon after), one of the first steps of the government was a great reduction of rates, with the result of a great increase of traffic. The policy of reduction has been continued, and the rates are now among the lowest in the world, as will appear shortly, yet the roads pay very well, indeed. Prussia is realizing a profit of $75,000,000 a year on the railways above operating expenses and interest, and in the last fifteen years she has realized a clear profit of $500,000,000 above operation and interest. The capital has been very greatly reduced. I cannot state the exact figures, but it is the policy of the government year by year to make certain payments reducing the capital, so that by the middle of the next century there will be no capitalization of the railways at all.

Is that an answer to the hon. gentleman's challenge? Is that any evidence of the success of state-operated roads in competition with private roads? It can hardly be denied that success has been obtained, for private roads have been absorbed. Now, take the case of Belgium:

> The Belgian government, at the outset, established very low rates—about four-fifths cent a mile.

Hear that, Canadians.

> Later an express service was started at somewhat higher rates, but the ordinary fares were reduced from time to time, and are still the lowest in the world, except perhaps, on some of the lines in India. The average fare, third-class, in 1898, was two-thirds of a cent a mile, and on the whole traffic, including all the classes, the average fare was 0·88 of cent a mile.

And then the hon. member for Hants, to make his point good, referred to the handicap the ex-Minister of Railways and Canals was under in trying to operate the Intercolonial before it was extended so that it could compete for traffic. Well, that is granted. But what would the hon. gentleman (Mr. Russell) do? He was in favour of that extension to Montreal where the Intercolonial could compete for the whole

traffic of the west. But I find it is not only the principle of government ownership that the hon. member for Hants finds fault with, but he is very sarcastic in his description of those who advocate that principle. He tells us, on the information of Mr. Ackworth :

—that the movement for government operation is like the scarlet fever. It is liable to attack any community and at irregular intervals to become epidemic, but its attacks as a rule are severe, only in the case of the younger and more irrepressible portion of the population.

I think, if the hon. member's statement is to be taken seriously, that there is a large amount of fever of this kind among the irrepressible, the youthful, and the folly-stricken in this country at the present time. He admits that he made an exception of the the two ex-ministers in this House. And he admits also :

Now, I must admit at the outset, that I have a great degree of sympathy with the views those hon. gentlemen have presented to the House. I have been at times seriously threatened with the symptoms of the disease with which they are afflicted.

He admits that he at one time was afflicted of the disease. But he has got better. Oh, yes. And it is to be noted that his recovery was remarkably rapid and remarkably complete. And now we are told that those who believe in and advocate the government ownership of railways are the cranks, and schemers, the youthful portion of the population, the hopeful, the optimistic. Well, if that is true, the hon. gentleman must carry out his own logic in its application to the nations of the world. And I would like to line up the nations of the world according to the standard set by the hon. member for Hants. He can say at once, as he does say to Canada : Be quiet ; Agitation cease : You have the railways : You have not been imposed upon by the young, the hopeful, the optimistic. Of course, you have a great deal of agitation upon this subject, but that is all a mistake. You, fortunately, through a good deal of tribulation, chose the right way ; you were led by the wisdom and experience of the older heads. And he will say to Britain : This sentiment expressed for so many years in your country that you would like to have an opportunity of again inaugurating this railway system is all wrong. You started exactly right ; your older and wiser heads were the ones that had control of your affairs when this policy had its inception. It is true you have complained that for years continental products have been delivered at your ports, and to your interior cities, at lower freight rates than are given to neighboring towns in your own country. It is true you have had to send goods from Liverpool to New York and ship them back to London, because it is cheaper to do than to ship them 206 miles by rail direct to London. That is all very true. But you are quite mistaken in the conclusion you draw. The great army of railway workers of Britain who are working for far less wages than those employed in other branches of industry in that country, look across to the continent and wonder how it is that under state operation there the operatives of the railway lines are better paid relatively than other labour in those countries. They may wonder how it is that it is sixty-four years since the parliamentary rate of one penny per mile was passed and it has never been improved on leaving Great Britain to-day one of the highest priced countries for railway travelling in the world. They may wonder how these things are, but the member for Hants tells them 'you are right, you are old and not young.' And to the United States with its marvellous railway development he says that the agitation there has been a mistake. Nearly forty state railway commissions have been called into existence for nothing, they were only dreams or were created to rectify grievances that evidently never existed. They complain there that the railway monopoly was the father, sponsor of all the big monopolies, that it has discriminated against and ruined cities and even states and that it has corrupted legislators and judges and that it is to-day and has been for years past enabled to put a restraining influence even on the professors of sociology and political economy so that this rising generation shall not know even of the wisdom of these men who put aside all of these little follies in the early years so that wiser heads prevailed and they kept clear of state ownership and operation. It would be novel indeed to hear Chancellor Bismarck charged with being carried away with youthful fancies and follies. He was wrong, the member for Hants says he was wrong, that he was foolish in 1876 when he told Prussia that it was time to put a stop to the exploitation of the public for private interests, when he said that the carrying on of these roads was to all intents a public service and when he said it should be done by the public and for the public. He was wrong, the member for Hants told us so.

Some hon. MEMBERS. Hear, hear.

Mr. PUTTEE. And Australia, democratic Australia, you started wrong. The successes that you achieved are bad, you have started wrong, you have allowed your young men to prevail, those who would prefer to run Australia for the benefit of the people who are in Australia, you who have got a railway system to which as a matter of fact we do not pay much attention in Canada, Great Britain and the United States, because it compares favourably under state ownership with our own. You have been mistaken. Nova Scotia is willing to correct you.

And democratic New Zealand, New Zealand who have been so remarkably successful

in sociological experiments that other nations have not dared to attempt. In New Zealand where you have at last found out a way to construct branch lines to districts where there seem to be no call for them whatever, where it is being done now by contract with settlers that come to settle upon the lands which the branches shall serve. These men enter into a contract with the government that in addition to clearing the lands and planting crops they shall also construct the right of way and grade up everything ready for the metals and do it at so much a day. Thus living right there they construct their lines even in the districts that are so poor—and they have many districts poorer than ours—too poor to support a good line of railway, but they have these railway branches built in this way and have thus a sufficient supply and service to meet their needs and they have arrived to that extent at the very forefront of democratic operation and ownership of railways. But the member for Hants says if you do not fall in with his theory, you are behind the times.

What shall I say about Switzerland? Surely here is a case of the old growing young, a nation that started wise becoming foolish. A country, remember, composed of more varying peoples, languages and religions than are settled on any other spot of similar size, who have been able to so govern themselves as to live together in peace, as to be a model for the continent in which they are located. These people have been getting worse. They started with private roads and it was only five years ago, only in 1898 I believe, that by popular vote by two to one these people showed evidence of this youthful fever and converted every private railway within their bounds into a public railway and are to-day operating them themselves with remarkable success.

Well, are there no others? Yes, surely there are others, there are two others. There is Spain and there is Mexico. The hon. gentleman will like his company. Take Spain for instance. I can imagine the hon. gentleman telling Spain that she is the model of wisdom, that her people are the old heads, that they are not feverish and I can imagine the candid man in Spain replying to the member for Hants, 'yes, we have been before reminded that we are a back number.'

And Mexico. Well Mexico is in our class. The member for Hants has said so. And China. Here is proof positive that they are in the sear and yellow leaf of wisdom for they have not only refused to operate railroads, not only have they given such railroads as they have over to private control and private profit, but they have kept to this principle with the post offices and have left them to private control. China indeed. China must be the apex of the hon. gentleman's logic.

And, Sir, I forgot to mention in passing in connection with the case of Great Britain that the gentleman to follow out his reasoning would commend them for their system although they so bitterly regret that is was ever started on the private system. This country that has confusion worse confounded in the railway world is the country that has been most successful in operating a post office system, one with an adaptability and elasticity and usefulness to the people of the country that make it a model to all democratic people and this applies not only to the post office but to the telegraph service as well. You find them here, these two principles operating on the same ground and operating so diversely and how the hon. member for Hants feels so sure in congratulating that country on the private ownership of the railroads is more than I can understand.

In passing let me mention one point from which the hon. gentleman extracted much fun, and why he did so I cannot imagine. He wanted to know whether, if we nationalized this road or any other road, we in Canada who are not used, as a matter of fact, to very large salaries, would be prepared to sit quietly and see any commission or government hire railway operators or managers at $40,000 or $50,000 a year—yes, $50,000 a year, and they go all the way up to $75,000 a year, I believe. It is true that men do get these salaries—five, six and seven times as large as are paid to the Prime Minister of this country. I wonder that the hon. gentleman did not see that that was one of the evils of the very system he was defending. These men cannot earn as much as $70,000 a year at such employment. Are these experts in this business so vastly superior to men who are fitted and well fitted to be the Premier of this country; to be cabinet ministers or judges, or to take up the leading positions of life, that they can command ten times the salary paid to those occupying the high positions which I have enumerated? It seems to me that the argument is against the hon. gentleman. If we did take over these roads, if we did at the present time proceed with a national policy of railway construction and operation, perhaps we might, and perhaps we would have to, and perhaps it would be profitable for us, to pay the high salaries that others pay. It seems to me quite likely that we would have to do as other roads do, and we would find ourselves doing what has become too common a practice in this country, going across the line to the United States and giving to the citizens of that country all the big salaries that we have to pay. We might have to do that, but I believe we could soon train our own people to be more successful managers than we could get from amongst the people to the south of us who would not be acquired with the system in this country. I believe we could very well train men in this country to take

these positions and carry out their duties in an efficient manner. If we adopted such a system it would be a source of strength to the country, and it would give confidence to our people and to our young men especially. The hon. member for Hants roamed all over the world to find some place that he could cite as having tried the system of government ownership, discredited it and condemned it. He wanted to find one country to suit his case, and he did mention one—Italy. The hon. gentleman is perfectly welcome to have Italy placed to his credit when the facts as they exist are properly stated and understood. He stated that after a great deal of trouble the government finally took hold of the railways and operated them, but that after a few years things got into such a deplorable state that they had to call in a commission, and the result of the investigation of this commission was the abolition of the system and the leasing of the lines to private companies, the government retaining the ownership and leasing the lines. I do not think the case has been fully stated by the hon. gentleman. I have been paying some attention myself to the different countries which have tried this system, and I find that Italy is the only one which has gone back upon it. I want to give another view of the case of Italy and a view which seems to be more reasonable than the authority which the hon. gentleman quoted. I am reading from the papers that were presented to a United States Senate committee that was investigating this matter in connection with Bill 1707 :

Sometimes the decision of the Italian commission of 1880 is referred to as proof of the inferiority of government roads. Professor Hadley, now president of Yale, has used this argument in his book on railroad transportation and in an adress three years ago before the Twentieth Century Club in Boston.

That is, I believe, the authority that the hon. gentleman quoted.

But the fact is that the commission decided against state operation for reasons which are partly invalid on their face and partly inapplicable to this country. The commission based its conclusion mainly upon three propositions: (1) That the credit and finances of the Italian government were too weak to make it wise to undertake the operation of the railroads, needing, as they did, large sums for improvements and extensions, and strong financial backing to steady their operations under the fluctuations of traffic.

That, at all events, is a condition that does not exist in this country at the present time.

The unsatisfactory results of a brief experience with direct operation in northern Italy (1878-1881), the said results being due partly to the weakness and inefficiency of the Italian government, partly to the fact that the lines came to the government from the private companies in a dilapidated condition, and partly to the fact that the road having been part of an Austrian system was officered throughout by Austrians, who were, of course, displaced en masse when the road was taken by the Italian government, as it could not trust the loyalty of such employees, the result being that all the most valuable officers and employees were swept away and their places filled by occupants in large part green and unfit.

Then it goes on to give other reasons, but I will omit them until I come to this one :

Finally, it is charged on high authority that the commission was packed with railway men and agents of those who desired to lease and operate the roads instead of having the government take charge of them.

That seems to me to offset the evidence that the hon. gentleman submitted. I think I have dealt with the chief points that the hon. gentleman brought forward in his attempt to discredit not only the principle, but the advocates of government ownership of railways.

All through this debate, from the very first speaker until the last, hardly an hon. member has risen to speak on this Bill without dealing with the necessity of another transcontinental or trunk line of railways, although the question has been viewed from different standpoints and different conclusions have been arrived at as to how the result desired is to be accomplished. Coming from the part of the country from which I do come, I can say that our people are optimists in the matter of railway building. They do not believe they have too many lines. They think that there is room in this country for a great many more, even larger systems, than we have to-day. They think that it would be a good plan, if possible, to deepen this country, to give it breadth and development. The province of Manitoba, as far as settlement has gone, is fairly well supplied with railway accommodation as far as the number of lines is concerned. They are probably close enough together in the settled parts of the province, but Manitoba is not western Canada by any means, and although growth has been rapid lately, there is no doubt that as settlement increases the new business that is coming from the west will tax the present lines of railway. We believe that there is lots of room and that a great deal of development is still necessary.

I myself looked upon the railway engine as a great missionary of civilization, and I look to railway development to increase our resources, and to give our country breadth, strength and development, such as we have not dreamed of. All the information that I have from the west is in this direction. The question of a new transcontinental road was not raised as a matter of fact until last fall, when the trans-Canada people entered into their very energetic campaign to construct a railway from Quebec across the continent, and I imagine for other purposes. It was that which first brought up the question of a transcontinental line. The rough idea of the scheme, the notion

that there was room for another line of transcontinental railway was beyond all contradiction approved of in the west. What the opinion in the east was, I have to gather from newspapers and the ordinary sources of information, but I believe it can be taken for granted that since the country has grown so as to be able to tax the capacities of the lines we have, it is proper that more lines should be constructed. It may be true, and it probably is true, that better railway facilities in the west would do away with such congestion as we had last year, and that with proper equipment and proper management the existing roads might be able to carry out all the present traffic. But in considering the question of a new transcontinental line it canont be expected that it is in any way going to affect the traffic of the immediate future, for even although the existing railways are sufficient to-day, there is no possibility that they could handle all the freight that will be offered even within the next few years to come. There is every indication that by the time the new road will be completed to connect the east with the west, the products of the west will have increased so enormously that at no time will traffic be meagre and light, as it was when the first railroad was put through.

Now, Mr. Speaker, I feel that there is some objection and that there should be some objection taken to the fact that this project was first brought before the House as a signed contract. I do not think it makes for the best enlightenment on the subject to have a project of this kind laid on the Table of the House as a contract signed and sealed between the government and private parties. It has been our experience that under such circumstances party men have not felt inclined to express their real thoughts and opinions as to the best policy, and as to the varying degrees of probability of constructing railways here and there, as they otherwise might do. It seems to me that such a proceeding on the part of the government is to some extent clipping the wings of parliament ; that it is taking away to some extent the prerogatives of parliament. And although we may have confidence in the men who compose the cabinet, still I believe that the collective wisdom of the members of this House could put before the government and before the country some ideas that possibly may not have been thought of; some considerations that have not been duly weighed, and some propositions that are worth considering. At all events, parliamentary government is parliamentary government, and not cabinet government, and there is a distinction which should be drawn and which can be drawn, and ought to be respected as between the two.

I do not think, Sir, there can be any two questions so far as the people of the west are concerned, as to the need and the necessity for taking immediate steps looking towards the construction of another transcontinental railroad. Let me point out that in nearly every instance, until the last few months, when this question became purely a political and partisan question; until within the last few months every expression of opinion that came from the west was in favour of a government road and it was even specifically in favour of the extension of the Intercolonial Railway into the business of the west, and straight on to the Pacific coast. That was the hope and the aspiration of the people on the prairie. I am quite sure that in my own city of Winnipeg, if this question could be divested altogether of partisan feeling, the people of Winnipeg would be two-thirds or three-fourths in favour of a government road extended through to the west. Whatever may be the reflections of the hon. member for Hants (Mr. Russell), it is nevertheless true that the people of the west are inclined to be hopeful and optimistic, and that they would hail with gladness the announcement that a government road was to be constructed. When the ex-Minister of Railways (Hon. Mr. Blair) was in Vancouver last year he said he had a dream of a government road being put through to the west ; a dream of the extension of the Intercolonial Railway, and I have never yet in the west met the editor of a newspaper, no nor even a politician, who found fault with that forecast and who did not hope that the dream would come true. Shortly after the session of parliament was called, I received a little book containing the resolutions of the East Assiniboia Central Liberal Association, and I notice this resolution amongst others :

> Whereas various railway companies will seek aid from the government at the coming session of parliament ;
>
> Therefore be it resolved that this association places itself on record as being unanimously opposed to the granting of any lands to railways, and that no financial or other aid be granted to any railway company without absolute control of rates being reserved to the government and under such conditons as will enable the government to purchase such roads, in the event of the violation by such companies of the obligations assumed in their contract with parliament ; and this association respectfully urges upon the Dominion parliament the necessity of extending the Intercolonial Railway as a government transcontinental line.

That is a form of resolution of a most guarded kind, and it was more guarded and far more reserved than the ordinary resolution which was being passed at that time. The very day this House assembled in March last, at a public meeting held at Winnipeg, the following resolution was passed :

> Whereas, the recent and continuing rapid settlement of the west has made it imperative that greatly increased transportation facilities be provided, and recognizing this opportunity two corporations have made known their intention of constructing railways of a transcontinental character, and all indications are that proposals are to be made to the Dominion and

provincial governments for subsidies and grants of moneys and lands of large proportions for these corporations ;

And whereas the policy of bonusing with money and bestowing the public lands on such corporations is vicious in principle, and has resulted in grievously burdening the settlers, and provides all the incentives for corruption in political life ;

And, whereas another development of this system is becoming prominent in the transferring of large blocks of land to irrigation companies ;

Therefore, be it resolved, that we reiterate our opposition to all proposals for the continuance or extension of the iniquitous bonusing policy, or pledging the public credit for private interests, and affirm our belief that this is an opportune time to enter upon an unqualified system of government acquisition and construction of railways, including the extension of the Intercolonial Railway through to the west.

That was the invariable conclusion of these resolutions. That resolution was passed at a meeting in Winnipeg on March 12, the day on which this House met.

Now, Mr. Speaker, I wish to pay a little attention to the contract we are discussing. My principal objection to that contract is that it is a contract, made by the government of Canada with private persons who seek to secure the carrying out of a public service. As an advocate and supporter of the government ownership of railways, my principal objection to this contract is that it is a contract. For that reason I do not compare it with the old Canadian Pacific Railway contract. I have never been accused of saying much that could be construed as being favourable to the government or the parliament that endorsed that contract. It seems to me that it would be absurd to rejoice over a contract that gave $35,000,000 in constructed works, $25,000,000 in money, 25,000,000 acres of land, exemption from taxation for twenty years and an absolute monopoly for twenty years, wholly into private hands, practically without any reservation or real control. In addition to this, the right to interfere with rates was put absolutely beyond our control. It was stated that the rates should not be interfered with until the company earned 10 per cent, and I suppose for all practical purposes that time will never come ; the company will see that it will not. In that respect the country must have been saved a lot of trouble in regulating the railway, because we contracted ourselves out of it. I have never felt, even considering the times and the circumstances in which that contract was made, that the right and proper thing was done. I regret that when the country stood ready to do so much, it should not have done all—that even if it put into private hands the operation of the railway, it should not have retained the ownership, which it could almost have done with the money it put into the railway.

The present contract has been before the country for some weeks, and it is remarkable what little attention it is attracting. This big work and this big line of policy that has been outlined, does not touch the popular chord by any means. What a difference there would have been if there had been laid before the country a proposal for the construction by the government of a railway from the east to the west, the government retaining the ownership and control. As a matter of politics it would have been one of the most popular things that could have been devised. It would have got the assent of more people in this country than anything else that could be named. I recognize the objections which are urged against a course of that kind. The political objection is this, that the people, even though you serve them, do not remain constant ; that although you do what they desire, they forget ; that other questions come up, and they deal with them as they arise. The corporations do not. The corporations never forget. They never forget a friend. We have had experience of this in our province, and also in this Dominion. But that simply strengthens my position—my belief not only in the feasibility, but in the imperativeness, in the interest of good government, and of the country generally, of our owning and controlling these large services.

Looking over the clauses of this contract, and tracing the projected line, one is struck —and I do not care who that is or where he sits—with our intense ignorance of the country through which the greater part of this road is projected. It may be better than we suppose. We hope at all events that the country to the north of us is good country, that can be settled, and is worthy of development. Perhaps it is ; but whatever it is, we can never be disappointed or surprised, because we know nothing about it. It is best to acknowledge at once that we do not know what this north country is. If it turns out well, we shall be gratified. If it does not, let us hope that a railway will not be put through it. That I believe must be the ground on which this contract is entered into. This question of knowledge before action is a very important one. You know, Mr. Speaker, that the construction of the Canadian Pacific Railway was not a success. Had there been more deliberation, at all events had a proper route been chosen, the development of our western country would not have been retarded twelve or fourteen years, as it was. The country is developing now, people are going in, and it is taking the position we expected it to take. But for twelve or fourteen years it looked as if that were not going to be the case. We practically stood still during those years, and I cannot imagine that that would have happened if the Canadian Pacific Railway had been constructed through one of those passes through which this contract contemplates that this new line will be taken. It was a

serious mistake to make in the first instance. If the Canadian Pacific Railway had been taken to Edmonton, probably by this time it would have been advisable to construct a line along the route where the Canadian Pacific Railway is now; but the result of putting it there at that time was to retard the development of the country for twelve or fourteen years. We ought to have been in a far better position than we are to-day. The men who were in this country then know that their expectations for many years were not realized. If the Canadian Pacific Railway route had been better chosen, Canada would have been to-day far different from what it is. This is an important question, and I hope, whatever may be the necessities of the government, after this contract is ratified, if it is ratified, that they will not be led, notwithstanding the taking idea of rapid construction, to start constructing this line until they thoroughly understand where it is going and what is going to be its general condition. I must say that I think that that would be the right course to take, and one which would meet the necessities of the case. What is wanted in the immediate future is government connection between Winnipeg and the great lakes, and from the east of the lakes to the Intercolonial Railway. Giving those connections, we will be able to handle the traffic that will offer until we are certain that this road not only can be constructed, but will be constructed in the place best calculated to give the best results.

The hon. member for North Norfolk (Mr. Charlton) attracted a good deal of attention, and properly so, but for the amount of 'ifs' which he made use of in discussing the character of this proposed route between Quebec and Winnipeg. He did not at all commit himself to any statement that the 'ifs' could be carried out. If the grades, if the general conditions of the country, and so on were of such a character, it might be possible to transport grain from the prairies of the west to St. John in the east. That was as far as the hon. member would go, and that simply confirms the opinion I am trying to put before the House that we should not allow ourselves to be carried away by any idea of rush in this matter. It is better to provide the required facilities to the lakes and then from the lakes to Montreal and the eastern coast rather than start this work, which it will take years to complete in any case, and which, when completed, may enable the hon. member for North Norfolk to say: You did not consider my 'ifs,' and the road is not fulfilling the purposes for which it was intended.

The hon. member for North Norfolk gave all his attention to the section from Winnipeg to Quebec. True he was dealing with that because that is the government constructed portion; but as far as the traffic is concerned—and the great object of this proposed line is to give an outlet to the traffic of the west—why should not the government construct and own the whole line from the east to the coast? The hon. member for North Norfolk, however, left the west to take care of itself. But the far west, which is the new west that is being developed, is too far west, and St. John and Halifax are too far east, for us to pay attention only to the grades on the eastern section. The waters of the west are too near the far west, and if the position be such—and there is hardly any doubt that it is—that it will be practicable to take the products of the far west to the waters of the west, it would be suicidal to allow any private company to refuse to overcome the grades and the obstacles that exist in the Rocky mountains for the sake of forcing traffic right across this continent to the seaboard of Nova Scotia and New Brunswick. However much sentiment there may be in the matter—and by the way our shippers in the west do not pay much attention to the sentiment of an all-Canadian line, it is the freight bills they look after—it would not be to our advantage, as a nation, to attempt to force traffic over a continental haul to eastern ports, if that is going to cost more than to send it across the Rockies and put it on board ship at a Pacific port. At present the products of the western states are being exported from San Francisco. The hon. member for New Westminster (Mr. Morrison) told us the other night that as the chain of mountains in British Columbia go north, they also go west, so that our western country is nearer the Pacific ocean than are the western states. If the transcontinental railway is going to be the benefit to Canada which it can be, no expense should be spared—and I doubt if a private company would most effectively do this—in keeping the grades through those mountains down, so that our traffic from the west would be able to go a few hundred miles into Fort Simpson. The products of the western states are carried around Cape Horn, and the products of British Columbia and west of the mountains, are to a large extent, carried around Cape Horn. But that is not always going to be the case. How long will it take to complete this projected work? Five years is the first estimate, but suppose we say eight years, in that time the United States expect to have the Panama canal constructed. That canal is going to make a vast difference in the Pacific trade and also to our western ports. It is going to make it impracticable to ship grain 3,000 miles by rail when you are within a few hundred miles of Fort Simpson. Yesterday's cable news gave the information that the Colombian senate had rejected, for the time-being, the contemplated treaty with the United States for the acquisition of this tract, but they have simply given the Colombia government power to make the

necessary treaty, and the supposition is that they are simply expecting to get some concessions. The United States have got their preparations made and have parties organized ready to go down to the Panama canal, and expect to complete that work in eight years. And as the cost is only $150,000,000, there is no reasonable doubt that they will carry the work through as soon as they get the necessary rights. But even if they do not, they will then build the Nicaraguan canal. This was the canal which they had selected, and which would have been in proceess of construction by this if the old Panama Company of France, had not offered its old works at a reasonable price. In all probability this Panama canal will have an immense influence on the western traffic of this country. It will reduce the time to the old country tremendously and at once put freight rates, for the products of the west, far below what we may expect, even with the low grades to be hoped for over 3,000 miles of rail haul. I am surprised that the hon. member for North Norfolk should have overlooked this matter of grades in the west. Surely if we are going to guarantee a line in the west, there must be some importance in that question. The reason why a great deal of trade has not already gone through the Canadian Pacific Railway to the port of Vancouver is the excessive grades on that road, owing to the ill-judgment of the locators in constructing it through the Kicking Horse pass.

As regarls the running rights under this contract, I have heard them discussed from every point of view, and an ordinary person would be excused for saying that the possibility of various railways exercising running rights over one line depended altogether on who was speaking. But looking at the contract, I see that all railways are to have just about the same rights as they have under the Railway Act. They have running rights, if they want them, under terms that are favourable to the company that grants them. But the Intercolonial has special privileges over that road, which, if hon. gentlemen on the other side were not attempting to reduce the character of the Intercolonial, might at some time be used to make the Intercolonial a trunk line. But I do not think there is any intention of doing so, and the cause to which I have referred will probably never be taken advantage of. But this does not begin to meet my views of a government trunk line. I can thoroughly understand that many hon. gentleman would not be prepared to support my views in favour of the nationalization of railways who would yet commit themselves altogether to government ownership of the trunk line. So, it seems to me, I have a right to look in this contract for a proper scheme of a government trunk road. Taking the plain meaning of the contract and the circumstances under which it was drawn up, we can only conclude that the object to be attained is this: There is a large section of this country in which we fear there will be no local traffic, but through which must be hauled the grain of more prosperous districts. If the government builds that road and so controls the capitalization, it can keep down the rates on this non-productive and costly road to the actual cost of construction and hauling. That appears to me to be the proper meaning for me to take out of the contract. But if this is the object, it seems to me the government should build the road from Quebec to Winnipeg and put it in charge of an operating company and keep that as a trunk road for the use of all parties who want to use it. The operating company would have nothing to do with individual shippers or with freight bills or collections. It would simply take the cars from the companies delivering them at terminal points or branch line points wherever indicated. It would provide the motive power of course, and the necessary staff to pass over that trunk line all cars that were given into its hands. There would be no duplication of authority; there would be no question of running rights; no question whether it would be possible, or practicable or profitable for the operating company to grant running rights to other companies. They would be an operating company only, and there would be no possible friction. Early in the history of the road, it could be demonstrated what it actually costs to haul a car a mile, and that would be the basis of the price to any one who wanted to send a car over the road. If local trade should be developed, some arrangement could be made with another company to pick it up, or the operating company itself could pick it up. Outside of that, all traffic should be passed through in bulk, in carloads. This, it seems to me, would be a proper government trunk road. If run in this way it would be of some use to the west. For any districts in the west that were settling up, if the companies for any reason did not see fit to put in a branch line, or if the people did not want to be in the hands of a large corporation, the people themselves could form a company or a small body of capitalists could construct a road to the point where the freight would be handed over to the trunk road, and they would send their traffic over that road on equal terms with all others. It would be understood exactly how much it would cost to pass a car over the road, so that the charge to all would be known to everybody, and the other roads would simply give their price to haul to Winnipeg where the traffic could be handed over to the trunk line. This, it seems to me, would be a proper plan for a government-constructed and government-owned trunk line. I am surprised that it has not been adopted in this case, that is, while recognizing the fact

that the government does not believe in government ownership and is not prepared for the nationalization of the railways, yet wants to do everything possible to develop the country and to avoid putting it in the hands of railway corporations. That, it seems to me, would be a proper way to spend the people's money on a trunk road.

Now, Mr. Speaker, other gentlemen far more competent than I am, have dealt with the matter of guarantees and the general bonding privileges of this road. I have not much to say on that subject. But I have listened attentively to the explanations that have been given by others. We are to pay all the money for the construction of this expensive, non-productive eastern section, and we are to guarantee 75 per cent of the balance of the cost from Winnipeg to the Pacific coast, and the Grand Trunk Railway Company of Canada guarantees the Grand Trunk Pacific Company for the other 25 per cent. The government, I suppose, gives the first guarantee, and I do not quite understand what is the value of, or necessity for, the guarantee of the Grand Trunk Railway Company of Canada. For the last few years, the company has been in better shape than formerly, but I do not regard its position as superior to that of the government. Just what is the use of their guarantee I do not quite understand. It reminds me of a few lines the poet put together in this form :

> In Klon, that town of monks and bones,
> And pavements fanged with murderous stones,
> And hags and rags and hideous wenches,
> I counted two and seventy stenches
> All well-defined and separate stinks,
> Ye nymphs that reign o'er sewers and sinks,
> The River Rhine, it is well known,
> Doth wash your city of Colonge ;
> But tell me, nymphs, what power divine
> Shall henceforth wash the River Rhine.

And when this guarantee was explained to the House the question struck me : Who is going to guarantee the Grand Trunk ? The country is, of course. Well, if we have to guarantee everything, for there is no doubt that practically the credit of the government is involved in these railways; why do we not construct them and own them ?

How does the account of the Dominion of Canada stand with regard to its railway operations ? I take from the Statistical Year-book the following facts : Bonuses granted to railways, $52,831,000. Suppose we strike an average between the estimate of the cost of the Grand Trunk Pacific and add $70,000,000 for that. Then, the government roads owned and operated by the government represent an expenditure of $74,194,000. This makes a total of $197,026,000 in money spent on the railways—the greater part of the national debt. The number of acres of land granted to railways is 58,288,092. Of course, about 8,000,000 acres have been granted by the province, but all out of the public domain. But we will say 48,000,000 acres. The bigger part of the national debt and 48,000,000 acres of land and what have we got for it ? Surely we ought to have a lot, the biggest part of our national debt is on this debtor account of the railway ledger. What have we got ? Well, in two or three generations we shall have, provided these corporations do not get so large as to be able to negotiate with us beforehand, in two or three generations we shall have a trunk road there, to hand over to posterity. It will have no branch lines and no connections but there will be a road. Of course the bonds will have to be floated again, it has to be bought about that time but we shall have the road ; and then we have the Intercolonial and the Prince Edward Island Railway. The Intercolonial as far as it is possible and practicable seems to me at present to be a first-class railway. There has been a good deal of money spent on it, and I believe the late Minister of Railways and Canals is justified in boasting that he has brought that road up to the condition of a really useful practical railway of first-class character. We are going to relegate that to a second-class character, and then all we have got is our interest simply as users of the other railways of the country when we have to travel and we have to pay a high rate for that. I believe that our passenger rate is practically higher than on any other extensive system in the world. We have given the bigger part of our national debt, we have given a kingdom in lands and that is the way the ledger stands at the present time. Why, Sir, I never feel that I have to apologize, that I have to plead my youth or my rawness or my optimism when I say I am in favour of national railways, and at this time, when the opportunity presents itself and has to be met as perhaps never before ; it seems to me that this is the opportune time, to start on the method that has been tested the world over and proved successful, the method of the government not only paying for and constructing and owning but also operating its own roads.

Mr. Speaker, I came to this House four years ago an advocate of the nationalization of railways. There is a good deal of opportunity during the protracted sojourns that we have in this city for a man to try his theories, to test his beliefs, to hear and to read the other side. The magnificent library in connection with this parliament is of great value in this respect particularly. We can not only see and read and understand what we have in our own country but we can understand and become acquainted with what has been done under other systems in other lands and other continents. I say that for four years I have watched the work of this House. A greater part of our time has been taken up with struggles in the Railway Committee especially, with all kinds of Bills, some legitimate enough, some

good enough considering our policy, and some bad enough. I have noticed that the promoters of the worst ones have generally tried to get a certain following on one side of the House and then to make it a party question when their Bills would often not stand close straightforward criticism; they try to make it a party measure so as to get it through the House. I have seen during this time, every member has seen it, and must have been impressed as much as I have with the amount of time and the amount of trouble and even I believe the amount of loss to public rights that has been caused by the passage through this House time after time, session after session, of railway Bills. I have seen too the lobbies filled with railway men, with their lawyers, the very best lawyers. They have their business to do under our system. I am not complaining while we follow the practice of granting charters, I am not finding fault with them, but I see they are here, they are the most prominent, outside the members themselves, the most prominent and most constant and the most devoted to their duties——

An hon. MEMBER. And the most aggressive.

Mr. PUTTEE. Yes, and the most aggressive of all those that are around this House, and I say that I have noticed these things. I have opposed every time the Subsily Bill. I am opposed to subsidies and these things have not made me more favourably disposed to them, and, Mr. Speaker, I believe that my temperament is such that it inclines me, impels me often to take no part in a discussion or a debate for the fear perhaps of being considered as posing, as seeking simply to get a little notoriety, but I say I have the consent of any little intelligence that I have got in saying that this whole system is wrong, that it is an imposition on the people who sent us here to look after their interests and their interests alone. It is a giving away of prerogatives and privileges, of property and resources that should only be used and exploited for the public good and we give them for private good and for private benefit. I say we become forgers of fetters, creators of taskmasters for the very people of whose interests and whose interests alone we here as the parliament of Canada ought to be preservers and protectors. Believing that, Mr. Speaker, believing that that principle is right, believing that it is practically unassailable, I think, and I have thought, that at this time at this change of the policy of the country that it was right and proper for me to put these sentiments of my own on record and to state exactly where I am on that railway proposition and those that have in the past come before this House.

Now, I want to deal shortly with the question of government ownership as it is before us, and although the hon. member for Hants seemed to think that those who proposed to advocate this principle were the few, were the cranks, the schemers, the youthful unreliables and although I have not come to that conclusion by observing the members of this House during the last session. I have come to the conclusion and I believe there is a very strong feeling among the members of this House in favour of a new policy of this kind and that is one reason why I regret that this contract is brought down here as a contract so that it closed the mouths and changed the current of thought and changed the method of expression that would otherwise have been given by the members of this House.

But I am not so lonely, I quote here for instance from the hon. the ex-Minister of Railways and Canals (Hon. Mr. Blair) who said :

> My decided preference is for a government owned and government operated railway across the continent.

That is mine too, and the ex-Minister of Railways and Canals, a man of experience, a man who has never that I can remember been in the habit of coinciding with the hon. gentleman who was last Minister of Railways and Canals (Hon. Mr. Blair) the Hon. John Haggart, during this debate said :

> There is no probability of this parliament acceding to any such thing as a government railway, although in my heart I believe, judging from the experience of other countries, that a government railway can be managed and run as economically as any other railway. My experience upon the Intercolonial Railway was that you could get a service as cheaply and buy supplies cheaper than upon any other railroad in Canada.

I do not feel as lonely as the hon. member for Hants would have the House believe. I have quoted statements of two men whom we may look upon as being experienced in railway matters, as we have a right to do. A man who has been Minister of Railways and Canals for seven years and a man who has been in that position in previous years certainly have experience in these matters, and I consider that in this parliament we are bound to accept their opinions as having greater weight than opinions which are not based upon actual experience. The right hon. Prime Minister said :

> I formed my opinions some years ago, and perhaps I may be permitted to relate a personal experience which went far to form my own conviction in this regard. In the fall of 1896, Mr. J. R. Booth, of this city, invited me to visit his railway, the Canada Atlantic Railway, which was then in process of construction. I accepted the invitation. The road had been built almost to the shores of Georgian bay, perhaps within half a mile of it. When we left the train we walked to the shore of the lake, a bleak shore with not a building upon it. Mr. Booth said : this is the terminus of my railway. I asked Mr. Booth : Where is the trade to come from ? His answer was : I have to create it.

One of the first and most expensive and boldest things Mr. Booth did to create that trade was to construct the Canada Atlantic Railway. Is that not the experience in every case ? You have to provide the service first and if you do provide the service you can get the trade. Did the hon. ex-Minister of Railways and Canals (Hon. Mr. Blair), when he extended the Intercolonial Railway to Montreal, go down there to create the trade ? No, he went there to accept the trade, he made it a success and the acquisition of that piece of road was the one thing that put the Intercolonial Railway in a better position than it had ever occupied before. The question which is now presenting itself to us is really the one of ownership vs. control. We are now proceeding upon an attempt to control. Without going into the matter, I want to say that this has been a very thorny road to tread. It has not so far been attended with any alarming amount of success. In the United States they have spent millions, they have had some forty state commissions and they have their interstate commerce commission, and yet they have been able to make no very great success out of it. We attempt to control railways for the sake of keeping the rates down, for the sake of serving our people better and for the sake of drawing the claws of the railway companies; of trying to hold them down, trying to prevent them from taking too much from us, but from all the experience that we have had in efforts of this kind this attempt is likely to be expensive as well as unsatisfactory. It would be better to face the alternative at once and adopt a national policy in railway operation.

Some hon. members have expressed themselves in favour of government ownership and they have told us that this contract is in itself one step towards government ownership. Well, it may be or it may not be. Probably it will not have this effect ; certainly it has not had this effect so far because hon. gentlemen who have hitherto been supporters of the principle of government ownership are obliged to go back on their records, to go back on the arguments put forward by themselves in former times in favour of this principle and as a believer in it I do not accept this proposition as one step towards government ownership. Then, there is another reason to commend it, and it is this : If the operating company, the Grand Trunk Pacific, default, if they cannot pay the interest, the contract becomes null and void and the road becomes our own, not only our own to have and to hold, but to operate. In other words, if it is a success it belongs to the Grand Trunk Pacific Railway Company, but if it is a failure it belongs to the people of Canada. I was speaking of the account of the Dominion of Canada in regard to railway business. The opposite side of the picture is disclosed by our public reports, which show that $63,000,000—the hon. Minister of Justice mentioned $83,000,000, and he is probably right—have been spent on our canals. We own our canals, because they are not interest earners. They do not produce interest and profit and therefore we own our canals. If the Grand Trunk Pacific is not a paying concern we will have all the duties of government ownership thrown upon us.

The hon. member for Westmoreland (Mr. Emmerson), who advocated very strongly the principle of government ownership this session in the Railway Committee has spoken on this question, but he has also found it necessary as an advocate and sympathizer with government ownership to change his position. He regrets that it is not practicable. He regrets that he finds it necessary to part with his hope of constructing and operating a transcontinental railway by the government. This is the reason he gives :

> Another feature of the government embarking in a general scheme of ownership of our lines of railway would be the questions that might arise in the future as to the construction of additional lines and of branch lines. There would also be involved, by reason of the pressure that might be exercised upon parliament, the question of the duplication of railway lines. There might be too tight a rein exercised, or it might be too free. It would all depend on the political pressure that would be brought to bear. To the extent that this might operate either in the one direction or the other, it would be productive of injury to the public interest. You could not be too stinted ; and it would not be in the public interest to have too free a hand. The interest of communities not served by railways, or not having the advantages of government lines, would always be brought to the front and parliament would be besieged time and again for the duplication of lines, in order that these communities might share in the advantages of government-owned railways.

His objection to advocating this principle is that it would be impracticable, unprofitable and unsafe, because the government would be open to influences, that the people would use their influence to get lines constructed, deflected or duplicated. That is a line of argument that has been urged and sometimes it has been urged with some effect. But, what is the reverse ? Is it a defect that is inherent in public ownership ? I say not. It is merely a defect that is peculiar to our present system. I have never been along the line of the Intercolonial Railway, but I have carefully noted all that has been said in this House by men who know, and my firm belief is that there can be no reason for the construction of the new line from Quebec to Moncton, except that very political reason which the member for Westmoreland (Mr. Emmerson) has urged against the policy of government ownership. That line may be profitable, and in the future necessary, but from the day the private Bill of the Grand

Trunk Pacific Railway was introduced until now, the only vital reason that has been given for the construction of that portion of the line, whether it parallels the Intercolonial Railway or not, is the reason that it is a political railway. That being true, and I submit to every reasonable man that it is true, there is no argument in it against the public ownership of this road. Indeed, it is an argument in favour of public ownership. I am opposed altogether to any system that would be open to abuses of this kind, and that could be effected by influences of this kind. The sad truth is, however, that railway matters do mix up with politics in this country. They meddle with our political institutions and, they meddle too effectively. There are too great interests involved in the private ownership of railways, and under our system of government these interests are altogether too powerful. There is no doubt that we often legislate in opposition to the general consensus of the opinion of this House, and against the intelligence of this House. We often legislate on railway matters in a manner that we would not legislate, if railway interests were less powerful than they are.

The trouble is with many of us that we are slaves to the thing that is; that we have been reared in contact with, the thing that surrounds us, and that we are apt to believe in it just because it exists. We found it in existence here; we were born in it, some of us; we cannot imagine anything else; it is the thing that is, and we are committed to it. Last year I had the pleasure of meeting a gentleman who was then outside of Australia for the first time. He had been able to visit leisurely a great part of the United States, and he had travelled to a considerable extent through Canada. I met him on the steamer as we were leaving Canada for the old land, and finding that his comparisons between democratic Australia and the United States and Canada were most interesting, I asked him: What strikes you as the most remarkable thing in this country, and he replied: 'The most remarkable thing to me is that your railways are controlled by private individuals. I was born in Australia, where the railways are under public control, and having lived under that system it seems to me that in a great democratic country like this which declares that all men are born equal, and which provides that its citizens shall be well protected, I believe that the government itself should be the owner of the railways, and not tremendous railway corporations. It seems to me, he said, although I do not know it, that these corporations must wield a powerful, and I would suppose, mischievous effect on the body politic. He was convinced that the wealth and strength of these corporations, in promoting their own interests, which must necessarily sometimes be antagonistic to the interests of the public, must have a very pernicious effect on our political system. I have said we are slaves to that which is; we are slaves to the things we are used to. In that instance this gentleman had been used to exactly the opposite system which we pursue in this country, and it was the strangest thing that he had met with on this continent.

Now, Sir, I want to lay down the proposition that railway transportation is properly a government function. When that is conceded, as conceded it must be, it then becomes a question of expediency as to whether we should delegate our powers to private parties or whether we should exercise them ourselves. It never occurred to me but that this definition of the character of a railway would be properly understood, until I heard the hon. member for Westminster (Mr. Morrison), a gentleman of the law, speak the other evening. He said:

> The whole contract discloses the fact that the Liberal party have apparently, for the first time recognized the cardinal principle which seems to underly our constitution, and one which heretofore has been ignored by hon. gentlemen opposite, namely, the subordination of transportation corporations to the sovereignty of parliament.

He was of the opinion—and I do not blame him for not holding that opinion before, except that he may be blamed for having taken so long to learn it—he was of opinion that parliament is sovereign, that this matter of transportation is a function of government. We have wandered so far away from the recognition of the principle that even a lawyer is struck by the fact that we are coming back to it. In 1876, Bismarck explained that railway transportation was a function of government, and he proclaimed the doctrine for economic as well as for state and military reasons. John Stuart Mill, who is generally accepted as an authority who cannot be gainsaid on such matters, distinctly lays down the proposition that the operation of railways is a government function. Indeed, when we pass a railway Bill in this parliament, we put in a clause delegating our powers, when we state that the Act is for the general advantage of Canada. We recognize that we give to private parties powers that by right belong only to the government. The railway commissions of the United States in their reports to their various states and to the central government, are continually reiterating this principle. It seems as if they are doing it in a spirit of despair, for time and again they have to draw attention to the fact that the powers they are trying to control are powers that should belong to the government. And, Sir, that principle, conceded as it must be conceded, I lay down the further proposition that this power can be exercised by government aside from the influence of politics, and that it can be used by the gov-

ernment for the public benefit without the damaging influence and interference of partisan politics. If this is a power that belongs to the government, we should not delegate it unless there are good and sufficient reasons. If it is a power that can be used by us and exercised by us properly for our own benefit, then I say it should be exercised by us for our own benefit. That it can be so exercised I am going to show by simply taking the experience of the colony of Autralia, as given by Mr. H. H. Lusk, who has been forty years in that colony, at one time being Secretary of State of New Zealand, and who has lived in the United States for three or four years, long enough to form a fair opinion of the system there.

Mr. COWAN. What are you quoting from ?

Mr. PUTTEE. I am quoting from a report of a hearing before a Senate committee of the United States in 1900, given to Mr. Lusk, whom the hon. gentleman will recognize as an authority on Australian matters :

In Australasia altogether there are 15,000 miles of government railroads, and they are operated to the entire satisfaction of the people. There are no complaints whatever as to any favouritism as between one class of persons and another. There are no complaints as to discourtesy or want of attention on the part of officials, and there has absolutely, during the last ten years, been no complaint that politics has interfered in any way with them, and my only wish here is to state what our experience has been and, as far as I may, why it has been so. Now, I think that our experience, both of the efficiency of the service and of its absolute freedom from political abuses may be referred to the mode in which the service has been organized. You see, it is not merely that we have experts from the outside to manage it, but it is that every employee of the railroad is a civil servant of the government. Not one of them can be dismissed except for cause. Not one of them can be defrauded of his right of promotion if he deserves it, in his turn. Their rights in that way are strictly preserved to them by law. If complaint is made, the employee has a right to a public investigation before he is punished by degradation or loss of office. Up to a certain age, different in different colonies, they are entitled to remain in the service and in most of them, if not in all, there is a provision made for retiring allowances at an age which is fixed. : . . . With regard to the question of politics, there is no possibility of exercising governmental influence to make the men vote one way or the other.

The CHAIRMAN. It is pretty difficult to get them to vote against the government ?

Mr. LUSK. Not the slightest in the world. Sometimes they do vote against the government. I remember one case in New South Wales in which the vote of the operatives of the railway was regarded as being very strong against the government, owing to certain legislation that was supposed to be opposed to the labour interst, and they naturally went for the most part in favour of the interest of labour, and they were certainly not in favour of the government at that time.

Then, referring to New Zealand and the question of political control there, he says :

The thing would have been a dead failure if any attempt of that kind had been made ; but no attempt was made.

I could make other quotations along the same line, but I will not take up the time of the House with them. At the same time, I believe that the matter which I have introduced from this report is valuable, and I have not seen it referred to before in this country.

I would like to call the attention of those hon. gentlemen who are opposed to this principle of government ownership on the ground that it is impracticable, to the similarity between the conditions existing in Canada and those in Australia. The people of Australia live under a government similar to ours, they speak the same language, they have the same sentiments, the same regard for their rights and the same business methods. They have practically a continent to govern, as we have. Their population is sparse, and it is important to them, as it is to us, to have lines of railway connecting the different parts of the country with each other. The mileage of their railways is large, as ours is. So that the comparison between the two countries is very apt. We have a population of over 5,000,000; they have a population of about 4,000,000. They have 15,000 miles of railway owned and operated by the government. We have over 18,000 miles. If I had time, I could quote from Mr. Lusk, to show that their experience of government railways has been altogether satisfactory. After living in the United States, where private ownership of railways is supposed to have reached almost the flower, he claims that the service there is not better than the service in his own country. In Australia, the value of money is not quite so high as it is in Canada ; but the rates on their railways are about the same as ours, except passenger rates, which, as in almost every other country, are far below ours. One thing that should not be forgotten is that on government railways, practically in all countries, school children are carried free. That country, which boasts of having made such a success of its railways, has a debt of $600,000,000 on account of the 15,000 miles of railways owned by the government—a good many of them constructed by the government, but the major portion of them, I believe, purchased from private parties, with all the disabilities that are incident to their construction and ownership by private parties. In Canada with between eighteen and nineteen thousand miles of road the liabilities are over a billion of dollars. It is not fair to contrast the United States railway system or even the British system, with that of Europe. The comparison between Canada and Australia is about as fair a one as can be made in a matter of this kind, and that comparison

is undoubtedly in favour of the government ownership and operation of railways. My great objection to private corporations operating railways under special privileges, and using powers delegated by the government, that properly belong to the government, is, after all that the system results in erecting vast private enterprises, which are naturally first and foremost for private interests, and not for the public interests. That is to a large extent the reason for my opposition to these private roads. I believe, too, that these private corporations do meddle in politics a great deal more than they care to admit and that the cause of good government will gain by not encouraging the formation of these corporations. The interests of good government lie altogether in the public ownership of our great railways. But, we are also far behind in our civil service, in the way we operate it, in the influences exerted upon it, and it seems to me that if we could reform that system, which is badly in need of improvement, it would be a good secondary result of a plan of government ownership.

Then, there is the question of discrimination—a question that can never be buried under a private railway system, a question that comes up now and again more strongly than at other times, that flourishes all the time in the United States, and is never absent from this country. The question of discrimination can never be settled except by the national ownership of railways. Then there is the other matter of fair and equal service to all. This is something which is no less important than low rates.

Before I close my remarks, I want to advocate what I think would be right and what I have advocated before in this House, and that is that questions of this kind should not be settled off-hand even in this parliament. This is a question which affects every citizen of this country. I would be prepared to support a policy of expending our own money on our own roads with the idea of keeping these roads and using them for our own purposes. But when we are making a contract with private parties, when we are giving them either our credit or large sums, when we are following a policy which, I am confident, the majority of the people would not approve, opportunity should be given to the people to declare their opinion on this policy before we finally adopt it. In my opinion, the people would gladly escape from this policy of bonusing and subsidizing and guaranteeing, which makes more distant the policy of the people owning and operating their own roads. Before committing the country to a contract of this kind, before committing it to the large expenditures involved in this contract, it is only fair that the people should have an opportunity of declaring whether they are in favour of it or opposed to it. I am a believer in the principle of the referendum. I believe that we would not be doing anything derogatory to the dignity of this parliament if this contract were sent to the country and submitted to the vote of the people. The question before the people would be this contract or public ownership. I believe that the people should be given the opportunity of declaring themselves on this question, irrespective altogether of partisan influence. I do not mean simply the return or the defeat of the government at a general election. At a general election all sorts of questions are discussed—separate schools, bonding privileges and railway policy, tariff, and each of these has more weight in some constituencies than it has in others. But what I submit is that this particular scheme should be referred to the people for their sanction or rejection. As I have said before, I believe in the nationalization of railways. I have never seen the necessity for government ownership so strongly as I do at present, and I am going to place in your hand, Sir, an amendment declaring what a really national railway policy would be.

I beg to move, therefore :

That all the words after 'that' be struck out and the following substituted :—

By reason of growth in population and the rapid development in the productiveness and trade of Canada, and especially the western part thereof, the time is opportune for the adoption of a definite policy of government construction and operation of railways, under a properly safeguarded civil service system, put entirely beyond the influence of partisan politics.

At six o'clock, the House took recess.

After Recess.

House resumed at eight o'clock.

PRIVATE BILLS.

RELIEF OF ELLEN McDERMID.

Mr. E. A. LANCASTER (Lincoln and Niagara) moved that the House go into committee on Bill (No. 229) for the relief of Ellen McDermid.

Mr. JOHN CHARLTON (North Norfolk). Mr. Speaker, before you leave the Chair, I wish to point out one or two things with reference to this case. This Bill is for the relief of Ellen McDermid, who is described in the Bill as being from the village of Gilbert Plains, in the county of Marquette, in the province of Manitoba. This lady is obliged, if she has just cause for claiming a divorce—as, no doubt, she has—to come from Manitoba to Ottawa to secure that act of justice. She comes here at great expense, beyond question. The expense and difficulty of securing a divorce is so great that the only wonder is that the attempt was made at all. I desire to call the attention of the House, not for the first time, to the absurdity of our law. If divorce

is properly granted, if there is any reason why it should be granted, it is a judicial act, and an act of justice to the one making claim for relief. As it is an act of justice it should be obtainable without the expense and difficulty attending the present proceedings. This lady, if she has just cause for claiming divorce, should have had, by the law, facilities given her to obtain that act of justice with less expense and less difficulty. She should have been able to obtain it in the province of Manitoba. There should be some provision made whereby this judicial Act could be performed in that province instead of making it necessary for the claimant to apply to the parliament of Canada. I think that this case, among many others, illustrates in a striking manner the absurdity, to say nothing of the injustice of our laws.

Mr. CLARKE. What would the hon. gentleman (Mr. Charlton) suggest ?

Mr. CHARLTON. A divorce court. Some judge connected with the courts of Manitoba should be clothed with power to hear and deal with divorce cases without additional expense to the country and without very much additional trouble to the judges on whom that duty would devolve.

Motion agreed to ; Bill considered in committee, reported, read the third time, and passed.

RELIEF OF STEPHEN WILSON.

Mr. ARCHIBALD CAMPBELL (West York) moved that the House go into committee on Bill (No. 228) for the relief of Stephen Wilson.

Mr. JOHN CHARLTON (North Norfolk). We have here another case, Mr. Speaker, just a little worse than the one we have just dealt with. Mr. Stephen Wilson, I see, is a resident of Red Deer, in the district of Alberta, North-west Territories, who, this preamble recites, has just cause for asking for divorce. He was brought to Ottawa from Red Deer, away off in Alberta, to obtain here an act of justice which, the law provides, shall be obtainable by him if the circumstances are such as to warrant it. Now, I would like to ask what reason there is for bringing Mr. Sephen Wilson to Ottawa ?

Mr. COCHRANE. To get a divorce.

Mr. CHARLTON. If Mr. Wilson is entitled to get a divorce, the law lays down the reasons for which he is entitled to it. If he claims that divorce under the law, there must be a judicial procedure to ascertain whether his claim is or is not well founded. About the most awkward body for this to be referred to that one could imagine is the Senate of the Dominion of Canada. If you referred it to a divorce court you would have a proper procedure, and a proper decision in accordance with the law. Referring it to the parliament of Canada, great expense must be incurred, and there is, perhaps, some little doubt as to whether the decree will be obtained, some uncertainty as to the manner in which the committee will deal with the matter. At all events, it can be asserted without hesitation that the matter will not be dealt with more in accordance with the principles of the statute, the decision will not be prompter or more just in its character, than if the case were referred to a divorce court. I think it would be well to call attention to this absurdity time, and time, and time again, as often as a Bill of this kind comes before this House. It is a disgrace to this government, it is a disgrace to the parliament of Canada, that this condition of things is permitted to exist. I repeat that, if a divorce is obtainable, it is obtainable for cause. If there is cause, the law must define what it is. If there is cause defined by the law, the person who claims that he has just cause for seeking a decree of divorce should go to a divorce court, which should be constituted for the hearing of these cases. Let a proper class of judges in each province be authorized to hear these cases ; let the procedure be simple, speedy and inexpensive, instead of, as in a case of this kind, bringing a man here at an expense of $1,000 or $1,500, deterring many who are justly entitled to a decree of divorce from attempting to obtain it.

Hon. DAVID TISDALE (South Norfolk). I think the hon. gentleman (Mr. Charlton) could take a much more effectual way of having the law passed which he proposes. He brought in a resolution, which was discussed at some length, in favour of a divorce court being established. I had the pleasure of strongly supporting that resolution ; and I see that the different law societies in Ontario have, in very strong articles in their journals, backed it up. But, instead of taking up the time of the House now, and on other occasions when these Bills come up, if the hon. gentleman would use his influence to induce the right hon. leader of the government, whom he follows most closely, to allow such a Bill to pass, his work would be much more effective. For the right hon. Prime Minister promptly sat on the hon. gentleman's resolution. Yet, the hon. gentleman follows his leader very closely. Although a year or two ago he seemed somewhat restive, he has suddenly become now a most devoted follower. If instead of delaying the House in going over a proposal which has been fully discussed, he should appeal to his leader and the leader of the House, and the controller of the destinies of this country. I think it is idle for the hon. gentleman to express these sentiments in public. He would better serve the object he advocates by bringing his influence to bear upon the right hon.

gentleman who leads the House, but who declines to allow his Bill to pass.

Mr. D. C. FRASER (Guysborough). I think perhaps the hon. gentleman (Hon. Mr. Tisdale) for once is wrong. The very fact that a member cannot persuade the government which he supports to bring forward a Bill like that is no reason why he should not at every opportune time raise the question in the House. That is just the way that gains can be made. If as a matter of fact there should be a majority in the House opposed to the measure that is no reason why on every occasion the subject should not be brought up.

Hon. Mr. TISDALE. He withdrew the motion, he did not press it to a division.

Mr. FRASER. I am one of those who are in sympathy with having a divorce court subject to the highest court in every province in the Dominion. But the only way we can gain that is as I said by on every occasion having the views of those who are in favour of it presented to the House.

Hon. Mr. TISDALE. Then bring in a Bill.

Mr. FRASER. We might not be able to carry it. You cannot change the views of a government on such a question and the majority of those who support the government may not be in favour of it and I understand that that has been the case with every government that ever existed in Canada.

I think on the general question of divorce the strongest case should be required to be made out, but I do think it a hardship in a case as clear as this that a man should have at great expense to come from the Northwest Territories here and to pay large fees and I shall in the House pursue the same course of expressing my views in the belief that the only way of gaining anything in a matter of this kind is by continually pressing for it notwithstanding the opinion that has been held by all governments in Canada. There never was a government in Canada that would bring in a Bill like this, that is the unfortunate part. In Nova Scotia we are much more favoured because like British Columbia and New Brunswick we had a divorce court previous to confederation and they could not take it from us. I think myself we should have this court, but I also think that the hon. member for North Norfolk (Mr. Charlton) has a right on all occasions to bring his views before parliament. As I said before only on the strongest case being made out should a divorce be granted, but there are cases in all civilized countries in which I think it would be a great hardship that a man should be obliged to live with a woman or that a woman should be obliged to live with a man during a whole lifetime, and it is only by bringing it up on every occasion in the hope that a majority on both sides will join together to bring about that which no government up to this day has done that progress can be made.

Mr. SAMUEL BARKER (Hamilton). On this occasion I have to differ from the hon. member for Guysborough (Mr. Fraser). The question before the House is whether a particular individual is entitled to a divorce. We are not discussing the general question as to whether there ought to be a divorce court in this country or not. The objection taken by the hon. member for South Norfolk (Hon. Mr. Tisdale) was that the hon. member for North Norfolk (Mr. Charlton) was not discussing the Bill before the House. He was bringing up an abstract question with which we are not dealing at the present moment. Now, Sir, I think if we are anxious to promote the particular object which the two gentlemen opposite have been advocating the better way is to introduce every session a definite and positive resolution upon that question and discuss it in the House, not to bring it up on questions of this kind where, instead of helping the gentleman or lady, I do not know which it is who is seeking relief on this occasion, by discussing an abstract question we are departing from the question before the House as to whether we shall grant the relief asked for on this occasion or not.

Motion agreed to, Bill reported, read a third time—on division—and passed.

NATIONAL TRANSCONTINENTAL RAILWAY.

House resumed adjourned debate on the motion of Sir Wilfrid Laurier for the House to go into committee on a certain proposed resolution respecting the construction of a national transcontinental railway.

Mr. A. E. KEMP (East Toronto). Mr. Speaker, this debate has continued for several days; it has been participated in by hon. members on both sides of the House with very great ability, and I would not presume to hope or think that at this stage I could add any new points to the discussion. The most I can hope for is to perhaps review some points brought up and to place them before the House in a slightly different light possibly from what we have heard them discussed by hon. members who have spoken. The hon. member for South Wellington (Mr. Guthrie) this afternoon or this morning, and I think both this morning and afternoon, spoke in regard to the opposition as having applauded the ex-Minister of Railways and Canals when he was making a speech in this House. Before proceeding to discuss this question I would like to draw the attention of the hon. member to the fact that so far as my observation goes the members on this side of the House have paid very little attention in their speeches to what the ex-minister said; they have worked out this problem from their own

standpoint and I think they can be excused for applauding some of the things the ex-Minister of Railways and Canals said, some of the principles he enunciated. The members on the government benches have as a matter of fact taken up five or six times as much time in discussing the ex-Minister of Railways and Canals than the members on this side of the House. There is another matter to which I would like to draw attention. I notice in one of the newspapers published in Toronto, a paper which lends its support to the Grand Trunk Pacific project very earnestly and very enthusiastically, that that paper is giving out from time to time reports of surveys which are being made from Winnipeg east as far as the Quebec boundary. It is stated in that paper that these surveys are being made by the Grand Trunk Railway. I would like to inquire from the government why it is that the Grand Trunk Railway are making these surveys. As I understand it this railway is to be built by the government and as I understand the situation it seems to me the government should send out exploration parties and survey parties and that as fast as these parties are able to make reports these should be placed on the Table of this House. I would like to have some member on the opposite side of the House explain what is the reason that the Grand Trunk Railway are making these surveys and whether the government intend to act upon the surveys which are made by the Grand Trunk Railway.

Mr. Speaker, I listened with a great deal of attention to the observations which were addressed to this House by the hon. member for North Norfolk (Mr. Charlton). I listened to what he had to say in regard to patriotism and I also had in my mind when he was speaking the position he took upon this question in May last. The hon. gentleman referred to the question of the patriotic motives of hon. members on this side of the House and I wish to refer very briefly to that subject. I shall read what he said :

> A first-class road from Winnipeg to Quebec and the maritime provinces for the purpose of securing the trade of the North-west for these ports—that is the object had in view by the government, that is the purpose they intend to attempt to attain ; and if our hon. friends on the opposite side wish to throw obstacles in the way of that purpose, I merely say that in that regard they are not patriotic.

I think that might have come perhaps with better grace from some other hon. member on the other side of the House. The question suggested itself to my mind when the hon. gentleman used these words whether the hon. gentleman had any recollection of document No. 4062 which was filed with Secretary Carlisle of the United States government, indexed 'Charlton, John,' on behalf of the Michigan lumber interests in which document, which was presented as a petition, the hon. gentleman undertook to advise and petition the United States government in connection with the framing of the Wilson Tariff Bill, that, in case the Canadian government imposed an export duty on logs, power should be taken under the Wilson Bill to revert to the McKinley tariff and put a higher duty on Canadian lumber ? These sentiments came with ill-grace from that hon. gentleman and I hope we will hear no more on that subject from any other hon. member on that side of the House. I think we are perfectly justified in criticising this proposition now before the House and that our patriotic motives should not be questioned.

But, the hon. gentleman was put up by the government to reply to a speech made by the hon. ex-Minister of Railways and Canals (Hon. Mr. Blair) and I listened with very much interest to what the hon. gentleman had to say remembering what he had said a few weeks ago on this very subject. When the hon. gentleman stood up to address the House I wondered what he was going to say. I wondered whether he would approve the government policy or disprove of it in some respects because he was clearly on record as being opposed to this scheme in May last. I wish to draw the attention of the House to what he said on that occasion. He spoke as follows :

> That trade will seek the waters of the great chain of lakes ; inevitably, during the season of navigation, that grain will be carried to Lake Superior, and improvements have been made in the construction of lake vessels and the deepening of channels between the head of Lake Superior and Buffalo, which enable forwarders to secure the shipment of wheat from Duluth or from Port Arthur to Buffalo at a ridiculously low rate as compared with rates prevalent a few years ago. For a cent and a quarter or a cent and a half per bushel, you can lay down your wheat at Duluth or at Port Arthur, and a cent and a half will put it in an elevator at Buffalo. . . . . So you have the possibility of carrying wheat from Port Arthur to New York for within three cents a bushel, or at most within four cents a bushel. Now there are conditions which render it, in my opinion, impossible at present to compete with that route. It is useless to think of hauling wheat from a point as far west as Port Arthur by an all-rail route to Quebec——

That was three months ago.

> —or to Halifax at prices such as those I quoted with regard to the American lines.

Then he went on to say :

> If, after having given to our seaports connections in the form of a railway to Quebec right through the country, and a railway from Quebec for winter communication with Halifax and St. John, we attempt in addition to affording facilities and the best facilities that can be given, roads with low grades and great capacity for hauling heavy loads—not the loads that can be hauled over the New York Central and Lake Shore of 2,000 tons to a train—to force trade over these roads we will make a mistake, because we have to allow this trade to find a natural outlet. . . . . We must

simply make with care and make efficiently provision for securing this trade in our own seaports under circumstances which are possible, having regard to our natural facilities and natural advantages.

Then he went on to say :

I do not believe that we are in a condition to-day, even if we decided to improve the Ottawa River Valley route, to decide what are the proper conditions upon which to proceed. For this reason I think the appointment of a commission to take this whole question under consideration is in the highest degree desirable, is not only desirable but is necessary. We are now confronting conditions that require careful consideration. We are called upon to inaugurate a policy and to proceed in a direction that has for its purpose the affording to the great North-west of transportation facilities. It is beyond all things necessary that we should make no false step, that we should proceed upon no false hypothesis or basis ; and for that reason it is a wise thing to appoint a commission, composed of men who are capable of examining this question and arriving at correct conclusions. We cannot do it here in an expert and scientific manner, we must rely upon the service of men of the character of those who are to be composed of this commission. Let us wait until we have the decision of these men as to the proper course to pursue.

It is said by the right hon. leader of the government that time will not wait. Well the hon. gentleman (Mr. Charlton) is willing to wait. We had the hon. gentleman giving the House the benefit of his knowledge and talking in a way directly opposite to these sentiments. If this is the course which hon. gentlemen opposite are going to take reliance cannot be placed upon their statements. They should not change their ground quite so soon.

As far as this transcontinental railway policy is concerned I wish first to say in regard to the Grand Trunk Railway that I feel I ought to congratulate the company on having at its head a man of such marked ability as Mr. Charles M. Hays, the general manager. It would be a good thing for the North-west Territories and for the development of transportation facilities if we could get the Grand Trunk Railway into that country under the able management of that gentleman, because I think we could accomplish a great deal. I think if we could do so it would be a good thing for the North-west Territories, good for the Grand Trunk Railway Company and good for the country generally. The position seems to be, however, in regard to this project, as far as the eastern end of it is concerned, that the Grand Trunk Railway Company and Mr. Hays did not want it, that they do not want it now, that it has been forced upon the Grand Trunk Railway Company and as a result we have before us a bargain which is full of complications and is going to lead to a great amount of trouble in the future. No doubt what has given rise to the discussion of this question of increased facilities in the North-west was the congestion which took place throughout that country last fall, a congestion caused by the shortage of cars and motive power on the Canadian Northern and Canadian Pacific Railways. This is what brought about this discussion, and this is why a great deal of enthusiasm has been created over the project we now have before us. I wish to say that it was my hope, and I stated it publicly, that when the government brought before the House this transportation policy hon. members on this side of the House would find it to be their duty to support it. I felt that it was impossible for us to be opposed to it. I felt that the appointment of a commission was a step in the right direction, and I felt that we would be able to support the policy of the government. It has been charged by hon. gentlemen opposite that we on this side of the House are making the same mistake in criticising this policy of the government that the Liberals did in criticising the policy of the Conservative government in connection with the Canadian Pacific Railway project. The ground which these hon. gentlemen take is false ground. They have no cause for making such statements. I submit, Sir, that the Conservative party have not made any very great errors in respect to any great national policy which they have ever propounded to this country. The Conservative party made no mistake as to our fiscal policy ; they made no mistake in regard to commercial union with the United States.

Mr. COCHRANE. No, siree.

Mr. COWAN. You made a bad mistake in 1896.

Mr. COCHRANE. The country made that mistake.

Mr. KEMP. The Conservative party made no mistake with regard to the building of the Canadian Pacific Railway, nor in regard to any other great national policy which they have submitted to the people of Canada. Let me point out briefly the history of this Grand Trunk Pacific Railway project. The idea seemed to prevail in certain quarters that the Canadian Northern Railway was a ripe apple ready to drop from the tree into the hands of certain men and certain financial interests, and so they prepared to gather it in. On the 24th of November last the plot or the scheme or whatever you like to call it, was launched on the public in the form of an interview given to the 'Globe' newspaper by Mr. Hays, general manager of the Grand Trunk Railway. In the 'Globe' of the following day an editorial pointed out, that the interview of the previous day was an official one given by Mr. Hays. That interview stated among other things, that the Grand Trunk Railway intended to purchase the Canadian Northern Railway, and when Sir Charles Rivers-Wilson came to Canada he also stated that such was the intention of the Grand Trunk Railway. In due course Mr. Mackenzie, of the

Canadian Northern Railway, stated that the Canadian Northern Railway would not sell out, but that on the contrary they intended to build east to Toronto, Montreal, Ottawa and Quebec. The Canadian Northern Railway proceeded to carry out its design, and they acquired the Great Northern to Quebec, and they also acquired a charter to enter New Brunswick. After this matter had been discussed in the public press for a month, and after a good deal of alarm had been expressed by the public as to whether it was the intention of the government to put through the Grand Trunk Pacific Railway, and also to bonus the Canadian Northern Railway, on the 24th of December the Toronto 'Globe' stated editorially that two lines would not be bonused. I take it for granted that this statement was inspired, because I do not think the 'Globe' would undertake to speak for itself on such a matter without having some indication as to what the government intended. Mr. Hays had been to Ottawa on previous occasions with regard to this matter, as reported in the public press, but on the 4th of December he came here and interviewed the Minister of Justice and the Minister of Trade and Commerce. I believe there was a cabinet meeting on that day, and it was stated in an interview by the Minister of Trade and Commerce, that Mr. Hays had been acquainted with the views of the government in respect to this transportation question. Nothing of moment occurred until parliament met, and then we read these words in the speech from the Throne :

> The great influx of population into our North-western Territories and the very large additional areas of fertile land which are being brought under cultivation combine to further press upon us the need for increased transportation facilities for the forwarding of our grain and other products to the markets of the world, through Canadian channels. The whole question of transportation and terminal facilities continues to occupy much attention, and my government will immediately appoint a commission of experienced men to report on the subject.

That announcement was followed by the Order in Council dated May 19th, under which a commission was appointed to inquire into the transportation question and was given instructions as to what the nature of their inquiry should be. This document has been read to the House before, but the principles laid down in it are so sound and patriotic, that it cannot be read too often, and therefore I intend to submit it to the consideraion of the House. It says :

> On a report dated April 6, 1903, from the Minister of Public Works, stating that he had under consideration questions affecting the transportation of Canadian products to the markets of the world through and by Canadian ports with a view of placing the Canadian producer in a position to compete, and compete successfully, through all Canadian channels with the producers and exporters of other countries.

The minister submits that it may be assumed that grain and other products will naturally seek their markets by the cheapest routes, and therefore the method of attaining the object desired should be to make the Canadian routes cheaper and more convenient than competing routes.

That the development of North-western Canada has manifested the inabilty of existing Canadian transportation agencies to take care of Canadian products.

That our agricultural exports can only command the prices over seas to which their natural excellence entitles them when they cease to be confounded and confused with the inferior and often adulterated articles produced elsewhere ; and to preserve their separate identity they must go through Canadian channels.

The minister further states that the questions to be considered are complicated and involved, including among the objects to be sought the transportation of western products from place of production to the markets of the world.

This involves the consideration of their transportation :—

From place of production to Canadian seaports.

From place of production to the western ports of Lake Superior.

From the western ports of Lake Superior to Canadian seaports.

From Canadian seaports to Europe

From place of production through Canadian ports on the Pacific.

As it affects the products of the eastern provinces of Canada it involves their movement :—

To the seaports.

From the seaports to Europe.

It is obvious that before any satisfactory conclusion can be reached upon these questions a thorough and comprehensive inquiry should be made regarding :—

The conditions of original shipment and the possibilities of improvement in the conditions surrounding such shipments.

The storage requirements of lake, river and ocean ports.

The harbour facilities of the inland lakes, rivers and Atlantic and Pacific ports.

The conditions with regard to the navigation of the St. Lawrence route, and, generally, any improvement, enlargements, or other matters affecting the more economical and satisfactory uses of any Canadian channel of transportation by land or water.

The minister further states that in making such investigation attention should not be confined to routes and facilities which are at present utilized, but, if necessary, new surveys should be made to determine whether any more economical and satisfactory channels of transportation by land or water can be opened up.

The forces operating against the attainment of all Canadian transport, namely :—

Competition by United States railways ;

Competition by United States vessels from Lake Superior ports ;

Diversion of Canadian products through eastern outlets to Boston, Portland and other United States ports, should be investigated, and the best and most economical methods used by our competitors should be carefully studied and reported upon.

The minister apprehends that in these circumstances it devolves upon the Dominion government to consider and adopt the best possible means of promoting such measures as may enable Canada to control the transportation of its own products, and it is thought that the

most efficient method of conducting such an inquiry and obtaining the required information is by means of a commission of competent and experienced experts who may be appointed and authorized under the provisions of chapter 114 of the Revised Statutes of Canada.

The routes to be inquired into as within the scope of the commission were the rail and water routes, and it seems to me beyond question that it was then the intention of the government to carry out the policy which they had promised last year to the Canadian Northern Railway, by bonusing it as far as Edmonton, and then to rest until they had inquired into the transportation facilities of the country. It is natural to suppose that the government did not get expert evidence in regard to the questions involved in this document of instructions to the commission; it is natural to suppose that the government knew nothing more about the questions referred to in this document now than when they appointed this commission, which has not yet sat. Is it fair to assume, however, that no expert information has been given to the government in regard to a railway running from Winnipeg to Quebec and St. John which as a transportation medium through which the grain of the North-west could be transported in competition with other routes, is entirely impracticable and therefore if it can be shown that the government went into this scheme hurriedly, and for reasons which are not very clear to the House now, it must be assumed that had this transportation commission reported, the government would not have been able to justify their position in the eyes of the country in building the eastern end of this transcontinental railway, at all events, rather than take the chance of their transportation commission condemning the scheme as they would surely have done, they took a leap in the dark.

The idea of a transcontinental railway, running across the map as nearly as possible in a straight line, seems to have seized the members of the government and made such an impression upon them that they have worked out the proposition which we have before us. The first proposition made by the Grand Trunk Railway Company was not an unreasonable one. That proposition, as I understand it, was for the Grand Trunk Pacific Railway to start at Gravenburst or North Bay, to connect with the Canadian Northern system at Port Arthur, to obtain control of the Canadian Northern system, and to build a line from its western terminus to the Pacific coast. That was the first proposition brought to the attention of the House and the country, and it seems to me that it was a reasonable one for consideration. Had that proposition been carried out, a train could have started from Halifax or St. John and reached the Pacific coast without running over a single mile of the Canadian Pacific Railway track, and it would have been altogether in Canadian territory. That would have been as truly an all-Canadian transcontinental system as the one proposed, and it would not have jeopardized our credit or our finances to the slightest extent.

But, Sir, we come to this rush policy, the policy outlined by the Prime Minister in his speech, when he said that time would not wait, and that we would be landed in the shallows unless we went on and voted the money and agreed to this bargain, and carried out this work without delay, notwithstanding the fact that the government had no intention of building this eastern section of the road, according to the statement set out in the report giving instructions to the transportation commission which they were to appoint. In passing, I may say that we have heard very little from the ministers who have spoken in regard to the appointment of that commission. It cannot be that they have dropped it because Sir Wililam Van Horne would not act upon it. Surely we are entitled to know why the government are not going on with the commission, and what they intend to do in regard to the proposition for its appointment. We have had other railway projects before this country—projects involving the expenditure of a smaller amount of money than this project, and we have given them due deliberation. They have been as important in their way as this is. But here is a great project which we had no hint of at the time this House met. The country knew nothing about it, and yet the government propose this policy of rush. The Prime Minister, in speaking on this question, spoke very eloquently, and apparently with great feeling. He used these words:

> To those who urge upon us the policy of to-morrow, and to-morrow, and to-morrow; to those who tell us, wait, wait, wait; to those who advise us to pause, to consider, to reflect, to calculate and to inquire, our answer is: No, this is not a time for deliberation, this is a time for action. The flood tide is upon us that leads on to fortune; if we let it pass it may never recur again. If we let it pass the voyage of our national life, bright as it is to-day, will be arrested in the shallows.

These, Mr. Speaker, were eloquent words, and I very much enjoyed the speech of the Prime Minister from the standpoint of eloquence. But in my opinion, this kind of language was used for the purpose of chloroforming the people of the country—for the purpose of impressing them with this scheme of the government. I cannot see any other way of explaining it. The Prime Minister also referred to the position he took when the short line to St. John across the state of Maine was being discussed in this House. He read from 'Hansard' what he stated on that occasion. This is what he said:

> Well, Sir, we took strong exception to this policy and that exception was formulated in an

amendment which I myself moved from the opposition benches and which was in these words:

In the opinion of this House, additional surveys are requisite in order to a sound decision for the short line railway, and it would be premature to adopt any line before further surveys have been made.

The right hon. gentleman goes on to say:

The surveys which had been made had not been completed. The line was simply surveyed in a portion of the province of Quebec and very little in the province of New Brunswick. We therefore demanded before the policy was adopted to run that line of railway across the state of Maine, that new surveys should be made so that we might come to a better understanding of the question and arrive at a more proper decision.

Is that not in marked contrast to the right hon. gentleman's policy in regard to this transcontinental railway? He moved that the House delay action until they got more surveys and more information. Yet he comes before this House now, and he is not willing to have a survey or to obtain the slightest information on this question except what may be obtained from books in the library, but what has really very little bearing on the question of constructing a modern railway through that section of country.

The right hon. gentleman also referred to a matter which it seemed to me was outside of this discussion. He said:

I am sorry that Sir Charles Tupper did not with equal firmness insist that not only should the terminus be in Canadian territory, in Canadian waters, but that the route itself should be in Canadian territory. When he agreed that the line should be in American territory, Sir Charles Tupper went back on the heart and conscience of the Canadian people.

No truer Canadian, no more patriotic citizen, ever stood on the floor of this House than Sir Charles Tupper, and I do not believe that he went back on the heart and conscience of the Canadian people at all. I believe the government of that day were justified in building that short line railway, and I believe that St. John has become a winter port in the truest sense of the word through the building of that railway. When the right hon. gentleman spoke of Sir Charles Tupper having gone back on the heart and conscience of the Canadian people, it occurred to my mind that in the position the right hon. gentleman had taken in years gone by on various matters, he had gone back on the heart and conscience of the Canadian people. I would like to quote what the right hon. gentleman said in this House in regard to one or two things, which, when I was a young man, went back on my heart and conscience; and I regretted that a fellow-countryman of mine was capable of making the statements which the right hon. gentleman made on those occasions. The right hon. gentleman, speaking in this House on April 5, 1888, on the question of unrestricted reciprocity, upon a resolution which was moved by the now Minister of Trade and Commerce (Rt. Hon. Sir Richard Cartwright), as recorded in 'Hansard,' gave utterance to this sentiment:

We, on this side of the House, believe that the motion of my hon. friend from South Oxford (Sir Richard Cartwright) exactly meets the case; we believe that the solution of the problem is complete unrestricted reciprocity with the great nation to the south of us.

This had for its aim and object the annexation of this country to the United States, and I claim that the right hon. gentleman went back on the heart and conscience of the Canadian people by uttering such sentiments. In Toronto, September 30th, 1899, the hon. gentleman also said:

We are asked sometimes, gentlemen, what is the programme of the Liberal party. This is the programme of the Liberal party: To obtain continental freedom of trade. That is our programme at this moment. But, gentlemen, others of you will say, is that the only question? Are there no other questions pressing for solution? Yes, gentlemen, there are other questions, and important questions, too, that will soon come into the arena of active politics; but as I read history, as I read Canadian history, one great reform at a time is as much as a party can effect, and if we fix our eyes steadily on one reform and devote all our energies to its accomplishment, success will certainly crown our efforts at no distant day; fixing our eyes steadily upon the goal, we shall go on steadily until we reach it—unrestricted continental reciprocity.

The right hon. gentleman made a very eloquent speech in this House in connection with this transcontinental railway question. This speech, which he made in regard to unrestricted reciprocity, covered 51 pages of this book which I hold in my hand. He made a mistake with regard to his policy of unrestricted reciprocity, and I fancy he wishes he had never adopted such a policy. Had the hon. gentleman, however, been in the position of Prime Minister in those days, and been enabled to put this policy into effect, he would, no doubt, have done so, and would have made a great mistake. He comes before this House to-day with this great railway project, about which we know very little. On its behalf he made an eloquent appeal, perhaps not second in eloquence to the one from which I have just read an extract, but in this case, as in the other, I think he will find that he has made a mistake. Before results of this contract can be known, this and other governments will be out of power. Many members of this House will have passed away, and the country will then experience the dire results of being saddled with this contract, which we on this side are protesting against. No time for information, no time for surveys, say hon. gentlemen opposite. This project must be rushed through without information and without reflection. What mandate have the government from the people for the scheme they have submitted to us? What mandate

have they for committing the country to the vast expenditure which this project will involve, and which will result in our not having the necessary money for improving our waterways and other transportation facilities ?

The hon. the Minister of the Interior endeavoured to show that there was a demand in certain parts of the country for this project. He quoted from certain newspapers in the North-west. He quoted a resolution of the Winnipeg Board of Trade, but that resolution was not in reference to this project at all. It was rather a resolution of censure on the government for not taking any steps to relieve the congested state of affairs which existed in the North-west with reference to the transportation of grain. It had no reference to the project before the House at all, but simply called on the government to take measures to alleviate the existing conditions. The hon. Minister of the Interior also laid particular stress on a resolution of the Board of Trade of Toronto, which was passed at a meeting of the council of that board. But I would like to impress on the House the fact that that really was not a resolution of the board of trade. On the 23rd of June, the council of the board of trade did pass a resolution upon a report of a certain committee appointed to investigate the Grand Trunk Pacific Railway charter. I had the pleasure of securing for the secretary of the board of trade a number of copies of the Bill in order that he might distribute then among the members of that body. Instead, however, of bringing the report upon that Bill before the council of the board of trade, the gentleman who had charge of the committee, who was chairman of the committee, and vice-president of the board—and I may say that my hon. friend from West York (Mr. Campbell), who also has the honour of sitting on the council of that board, was present, I believe, at the committee meeting—and my hon. friend from West York with others decided to bring in a resolution regarding the Grand Trunk Pacific Railway project. This resolution was brought in on the 23rd of June, when there was very little known about the project, when there was very little about it in the newspapers. But in some mysterious way or other, those gentlemen who supported this resolution, got an inkling of what the government intended to do, and in order to strengthen the hands of the government, a resolution was framed and rushed through the council, contrary to the practice which has prevailed for many years in matters of this kind. In all such matters, the usual practice has been to refer them to an open meeting of the board of trade, to which the public and the press are admitted. But in this case, there was a star chamber inquiry, and this resolution was rushed through, although it was not at all adopted unanimously. This resolution was in favour of an outlet by the shortest and cheapest route for the productions of the North-west. But it seems as though the committee must have been informed that the government would perhaps go further than they desired, for at the end of the first paragraph I see these words :

> And the advisability of competition without the extravagance of the duplication of lines.

They seem to have been possessed of the idea that the government intended to duplicate the Intercolonial Railway. They were afraid that the government would do something silly, and so guarded themselves in this way. What happened afterwards ? Mr. Peleg Howland, of Toronto, who is a good supporter of this government, and who also helped to put this resolution through the council of the board of trade, came out in an interview a short time ago, in which he said :

> I am strongly opposed to building a line from Quebec to Moncton, and I think for the present at least the Intercolonial Railway is sufficient. Personally I am not fully convinced that the time has arrived when a line should be built from Quebec to Winnipeg, but if so, then I believe it should be built and owned by the government, and running privileges given all roads desiring the same.

In an interview, Mr. J. D. Allen, vice-president of the board of trade, and who was chairman of the sub-committee, which investigated this question and brought in this resolution, heartily approved of the government's decision. But when I say that Mr. Allen, who is a good friend of mine, was the defeated Liberal candidate from West Toronto, I think I have said enough on this subject to show how it came about that this resolution came to be passed. It did not by any means, represent the opinion of the board of trade, and I believe the board of trade would not endorse the project to-day under any circumstances whatever.

Now, in regard to the matter of the transcontinental railway the Prime Minister seemed to rest his case mainly on two points, the question of the bonding privilege, and the question of carrying the products of the North-west to the seaboard in a more economical way than has been possible in the past. Take the question of the bonding privilege first. The right hon. gentleman seems to have been seized of the importance of this part of the question, and he represented to us that it is absolutely necessary, because of this bonding question, to have this railway built, although—a point which seems to have been largely overlooked—we have now two railways going through New Brunswick, the Intercolonial and the Temiscouata line, from Rivière du Loup to Edmundston, and from Edmundston to St. John by the Canadian Pacific Railway. The right hon. gentleman refers in his speech to the discussion which took place in this House in regard to the short line through the state of Maine to St. John,

New Brunswick. He tries to lead us to believe that the resolution which he moved at that time, had it been carried, would have prevented this railway from going through American territory. I confess, I cannot so interpret that resolution. The Prime Minister said in his speech introducing this Bill :

I am sorry to say that this motion was defeated. If it had not been defeated, if the policy which was there enunciated had been implemented, probably it would not be my duty today to ask this House to vote money for the building of another line between Quebec and Moncton, for the line would have been built on the very ground where we now propose to locate it.

The right hon. gentleman took up a great deal of time in dealing with the bonding privilege as one of the arguments in favour of this project. We all agree with the loyal sentiments he uttered. We are all loyal Canadians—it is not necessary to say that, for that is taken for granted. But I would point out to the House the position which the right hon. gentleman took with regard to this bonding question on a previous occasion. The right hon. gentleman took part in a discussion on the contract to the Canadian Pacific Railway syndicate, and his position then was directly the opposite of that which he takes to-day. The right hon. gentleman spoke on December 21st, 1880, and this is what he said, according to the 'Hansard' report :

The only point on which there is any disagreement is as to the expediency of building the whole road at once, or only as rapidly as the wants of the country require. I think it must be perfectly manifest that this section on the north shore of Lake Superior is not required at the present time, that its construction might be advantageously postponed until some future period, and that it would be quite sufficient, at present, to build the eastern section as far as Sault Ste. Marie. The fertile plains of the west are separated from the east by an extent of barren territory in the region north of the lake, while it happens that the route along the southern shore would pass through some of the best lands on the continent —through several of the most important states of the Union. Would it not be better, under these circumstances, to bring the road immediately to Sault Ste. Marie, tap the American system of railways, and secure not merely the trade of our own North-west, but a large share of the traffic from those states. This is so evident from a geographical point of view, that I will not stay to discuss it.

The policy enunciated by the right hon. gentleman on that occasion was not to build the railway north of the lakes. He was perfectly willing to take his chances on the bonding privilege, and he was also perfectly willing to cut off our great North-west from eastern Canada by making our railway connection through the United States. And he comes down now, when there is not a sign of trouble with the United States, and urges the danger of the abrogation of the bonding privilege as a justification of the whole scheme. My impression is that the Prime Minister made a great mistake in making so much of this bonding matter. It was not a good thing for us to raise the question. It is undoubtedly a great benefit to this country to have the products of the United States come to our seaports for shipment ; but it is a greater benefit to the United States to have our products go to their ports. There were times in our history when signs were not wanting that the American people might cancel the bonding privilege. But those days have long gone by. The people of the United States tried to coerce this country with a high tariff, the McKinley tariff—advocated, I am sorry to say, by some Canadians as a means of coercing Canada—they tried to force us into a commercial union with their country. But the Americans now are convinced that this policy of coercion will not succeed. They are more friendly with us now than ever before. They are holding reciprocity conventions and passing resolutions favouring closer trade relations. We have the Michigan Central Railway running through Ontario, which would be very seriously affected if the bonding privilege were withdrawn. We have the Wabash Railway and the Grand Trunk Railway also. Then it must not be forgotten that the people of New England are interested in the maintenance of this bonding privilege and would protest most strongly if it were withdrawn. We have all these railways running through Canada, helping to bring business to American ports and helping also to reduce the charges for the transportation of American products which go to the New England states. In days gone by the United States tried all their experiments of foreign policy upon this country. Now they have Cuba and the Philippines and they must have a more conciliatory foreign policy. The fact that they have launched out into colonization in this way is a guarantee of their good behaviour. In discussing this bonding question the Prime Minister laid a good deal of stress on what the New York 'Sun' had said in days gone by in reference to this question. Therefore I take the liberty of reading a few words from the New York 'Sun' to show what it thinks now on this question. A few days ago the New York 'Sun' said :

Sir Wilfrid Laurier, the Canadian Premier, addressed the parliament at Ottawa on July 30 and formally committed the ministry and the Liberal party to the support of the Grand Trunk Pacific transcontinental railway project. Mr. R. L. Borden, the leader of the Conservatives, replied on behalf of his party, and it is quite evident that Mr. Borden had not a little the best in the argument. Sir Wilfrid's speech was of considerable length, filling in solid type an entire page in the newspapers.

We have already commented upon the merits of the proposed railway plan. A point of more important immediate interest to the American people appears in the speeches of Sir Wilfrid

Laurier and Mr. Borden in reference to the bonding privileges extended to Canadian goods in transit through the United States. Upon that question Mr. Borden had much the best of the discussion, both in point of fact and of patriotism. Sir Wilfrid advanced an argument in favour of the proposed line, evidently intended as an appeal to the patriotic sentiment of his people, that the government laid it down as a principle upon which they were willing to be judged by friend and foe alike, that Canada should have a transcontinental railway 'with its terminus on Canadian waters, and every inch of it in Canadian territory.' With all respect to Sir Wilfrid, this savours of gallery play, an oratorical display for effect only. The United States has no transcontinental railway from sea to sea, unless the 'Sunset Route,' the eastern terminus of which is at New Orleans, be counted as such. We have systems and connecting lines which make up such a route, but no through single line from ocean to ocean. Although she has only one line where we have several, Canadians or Canadian products can now go from Vancouver to Halifax without touching an inch of our soil.

From this false premise, Sir Wilfrid argued Canadian dependence for transcontinental transportation upon the good-will of the United States in maintaining the bonding privilege over American lines to American ports. Having highways of their own. . . .

Whatever Canada ships through the United States is just so much an advantage to the United States. There are also articles produced in Canada whereof an increased shipment to the United States would be of mutual advantage.

Now, the Prime Minister took the liberty of quoting from the New York 'Sun,' and I take the liberty also, and I think it shows there is very little agitation or no agitation at all and no hope on their part that the bonding privilege will be cancelled, and I think so far as that excuse for this great project is concerned it falls to the ground. At all events the hon. gentlemen on the opposite side of the House who have spoken since on that subject have referred very gingerly to this aspect of the subject as enunciated by the Prime Minister.

It was said by the Prime Minister that the eastern part of this railway would cost the country $12,000,000 and not one cent more than $13,000,000 and that the cost of the western section would not exceed $3,780,000. In this connection I would like to know why no mention is made in the contract of what the grades on this railway are to be and what the curvatures are to be? it seems to me that this is a very important thing. Supposing this railway is not built to the satisfaction of the Grand Trunk Pacific can they not say afterwards that they cannot carry grain over this line because it was not built to the proper standard? It seems to me that will be the position they can reasonably take. The argument of the Minister of Finance is that the government is going to build a cheap railway and he makes his figures fit into a cheap railway. The Minister of the Interior says it is going to be a first-class railway and is going into competition with, and will carry grain as cheaply as it is carried over any railway in the United States.

Now, Mr. Speaker, I have made up the cost of this project and I am prepared to give the details of my figures and to have them open to criticism. The first cost that I made up I thought was a little high; I had calculated the interest at three and a half per cent. I think it will cost the government more than three per cent to get money. A very large amount of money will be required and with expenses and everything I think it will go over three per cent. I do not know that it will go quite three and a half per cent, but I feel justified in stating that my figures should bear three and a quarter per cent interest. A good deal has been said about the cost of this railway from Moncton to Winnipeg. An hon. member on the government side speaking in the House to-day put the cost at $35,000 a mile. From what inquiries I have made on the subject I do not believe that a railway such as it is contemplated to build for the purpose of carrying grain with grades such as a road of this kind requires can be built for anything like that. This railroad it must be remembered runs at right angles with the rivers. There will be a great amount of bridging; the country in many places is rocky and the rocky ridges or mountains run at right angles to the route of the railway and I believe the cost will be not less than $40,000 per mile. I believe that is the figure that will be necessary to build the railway. Calculating the distance from Moncton to Winnipeg at 1,825 miles at $40,000 per mile gives the cost of that section at $73,000,000. Calculating the interest as I have said at 3¼ per cent for seven years (compounding once a year)—and in this connection I want to say that I have not brought to my help an actuary as the Minister of Finance did, I have simply figured this matter in the way I figure ordinary business transactions and the way I have been taught all my life; I cannot understand the way the Minister of Finance explained it; it seemed to me he was juggling with figures—I figure the interest on $73,000,000 for seven years at 3¼ per cent (compounding that interest once a year) at $18,317,345; and then there is an additional three years during which we are likely to have to pay interest and I assume we will have to pay interest that will make in all $27,513,282.

Then we give this road to the Grand Trunk for forty years, and they pay us 3 per cent. Now, supposing they pay 3 per cent, supposing the revenue of that road is sufficient which I doubt very much—I believe it will be found that the cost of maintenance will take everything and I do not believe the Grand Trunk Pacific will be able to pay 3 per cent, but even if they are able to pay if we have to pay 3¼ per cent that leaves in the forty years $7,300,000. The five years

of construction figured as two and a half years and 3½ per cent compound interest on $73,000,000 will give $6,086,715.

Then we have the mountain section. The Prime Minister stated in the House that the length of the mountain section would be between 600 and 700 miles. The Minister of Finance makes it less and I am taking the figures of the Prime Minister at 650 miles. Taking this at $30,000 per mile we have a cost of construction of $19,500,000 and the interest on this for seven years at 3 per cent (compounded once a year) is $4,482,540. Then for an additional three years making in all ten years we have interest of $6,706,368.

I take the Quebec bridge and terminals at $5,000,000 and this totals up to $125,606,365, not including any depreciation on account of paralleling the Intercolonial.

Then we have a liability or what perhaps some might call an indirect liability of the guarantee of bonds of the mountain section 650 miles at $30,000 per mile, $19,500,000 and 1,150 miles of the prairie section at $13,000 per mile which comes to $14,950,000, these two guarantees coming to $34,450,000. This gives a grand total of $160,056,365 including cash expenditure and liability or in other words not taking into consideration the liability but only the cash payment a debt against every family in this country of $114 calculating five to a family on our population.

I would like to point out in this connection, Mr. Speaker, to show the magnitude of this thing that the paid-up capital of all the chartered banks in this country is $76,660,301, but this railway, this project according to my figures will cost $125,606,365, leaving an excess over the paid-up capital of the chartered banks of $48,946,064.

Now, Sir, something has been said about Canadian produce going over this line and two clauses, clauses 43 and 44 have been referred to as 'the pious clauses,' and I believe that they are so in every sense of the word. I think that they cannot be enforced. I do not think it is possible under these clauses to oblige the Grand Trunk Pacific to take grain from Winnipeg to St. John and transport it to a Canadian port and I believe they will not do it.

In passing I would like also to draw attention to the fact that the distance from Montreal to St. John by the Canadian Pacific Railway is 481 miles. From Montreal to St. John by Rivière du Loup and Edmundston, the line in existence to-day is 585 miles and I do not believe that the government if they build this railway through New Brunswick will get a shorter line from Montreal or Lévis to St. John, New Brunswick, than the existing lines. There was a point which was referred to in this debate by the hon. member for Hamilton (Mr. Barker). He gave it in a very graphic way when he said that Mr. Hays in the Railway Committee was willing to do almost anything that the committee wanted him to do.

He was willing to promise to build the road anywhere and everywhere and at any time and all times and to change his route on the suggestion of any particular section and to go on a thousand miles on the mere hint of some member of the committee.

As the hon. member for Hamilton pointed out that was the attitude of Mr. Hays before the Railway Committee, and while Mr. Hays was willing to extend this railway to Quebec or to the maritime provinces in committee he was downstairs later in the day making a bargain with the right hon. leader of the government that the government should build the road and assume the whole responsibility for its cost.

There is also another question about which we have not heard very much from our hon. friends opposite, and that is the arrangement made with the Grand Trunk Pacific as to running rights over the Intercolonial Railway from Moncton to Halifax and St. John. It has been said, and said very truly, that this policy of the government when carried out will largely control the policy of the Intercolonial Railway. I remember that, when a few years ago the question of selling the Intercolonial Railway to another railway company was brought up, when it was suggested that the Canadian Pacific Railway could operate the Intercolonial Railway to better advantage than the government, the people of the maritime provinces rose up in protest against any such proposition. I would like to ask if this proposition does not give the Grand Trunk Company as much control over the Intercolonial Railway as the Canadian Pacific Railway would have had if it had assumed control of the railway, and whether the Grand Trunk Railway are not going to assume control over it ?

The question of paying 3 per cent on the capital expenditure on this railway is a very important one and I have wondered if the government ever expect the railway reallly to pay this 3 per cent. The Grand Trunk Pacific Railway Company have to pay the expense of maintenance, to pay the officers' salaries, &c., and they have to put $5,000,000 worth of rolling stock upon the road which at the present prices of locomotives, freight cars and passenger cars would mean that they would put on 100 locomotives, 3,000 freight cars and 60 passenger cars. At present prices, that number of locomotives, freight cars and passenger cars would amount to $5,000,000. The ordinary rental that is charged by one railway to another for the hire of a locomotive per day is $10, for a box freight car 75 cents, and for a passenger car $4. That gives a total rental on the basis of the number of locomotives, freight cars and passenger cars that I have mentioned of $3,490 per day. I would like to find out what the agreement says in regard to the prices

the Grand Trunk Pacific Railway Company are going to charge for the hire of their rolling stock to be used upon the railway and to ask if they cannot charge almost any price they like. If they charge at the rates which I have mentioned, the total of which is $3,490 per day, it would amount in one year to $1,273,850, or 3 per cent on $40,000,000.

Now, I come to what is perhaps the most important part of this discussion—the question of freight rates. I have said that the government have largely built up their case on the bonding privilege and on the question of being able to handle the grain of the west and I have observed that the members of the government who have spoken upon this question have referred very gingerly to the question of the bonding privilege. I noticed also that the members of the government who have spoken, with one or two exceptions, have hardly touched the question of the cost of transporting grain. The hon. Minister of the Interior, however, was willing to tackle that question and he approached it with the courage of a Napoleon. You will have noticed that a lawyer very frequently, when he expresses his opinion in regard to a question of law, is very careful as to what he says, but when it comes down to a question of this kind we have an example of a lawyer expressing his opinion in regard to a matter of this importance in a very reckless manner indeed. The hon. Minister of the Interior gave us two or three illustrations of the way he figured out this matter of transportation. He had found somewhere or another—I do not know how he came across it—but he had found, he said, that grain was carried from Kansas City to Chicago for 5 cents per 100 pounds. I understand that he gave the page of the book in which he found that statement. It is not, however, to be had in the library and I was anxious to have seen it to have found out what explanation there was for such a statement, because, as a matter of fact, no such rate exists from Kansas City to Chicago. The rate from Kansas City to Chicago is 14 cents per 100 pounds, not 5 cents per 100 pounds. The average rate from Kansas City to Chicago is not less than 12 cents per 100 pounds, and I do not think it has been less than 12 cents for a long time past. That is more than half a cent per ton per mile. The hon. Minister of the Interior then went on to say that if grain could be carried—and he built up his case on that—from Kansas City to Chicago for 5 cents per 100 pounds, you could carry it from Winnipeg to St. John for 11½ cents per bushel. It seems to me that there should be a limit to what a minister of the Crown should say in this House and can send forth to the country. I challenge the hon. gentleman to produce anything to contradict the statement I make that the rate from Kansas City to Chicago is 14 cents per 100 pounds and that the average rate is not less than 12 cents per 100 pounds. The hon. gentleman also referred to the rate on the New York Central from Buffalo to New York as being 2½ cents per bushel, but later on he said that:

> I talked with a prominent member of the Winnipeg Grain Exchange the day before yesterday, and I asked him, how that 10·85 cent rate would compare with the rates which he is now paying from Winnipeg to New York by lake and rail. He tells me that, taking into account the rate by lake and the rate by rail, and a small additional charge for extra insurance which they have to pay by reason of this mixed carriage, the rate to-day from Winnipeg to New York is 16¼ cents.

He states at the top of the column that the New York Central rate is 2½ cents per bushel, and here he says that the statement which was made to him by a prominent member of the Winnipeg Grain Exchange was that the rate from Winnipeg to New York was 16½ cents per bushel. We all know that the rate from Winnipeg to the head of the lakes is 7½ cents per bushel. We all know that the rate from the head of the lakes to Buffalo is not more than 2 cents per bushel; 7½ cents added to 2 is 9½ cents, and 9½ cents subtracted from 16½ cents is 7 which, therefore, according to his own figures is the rate per bushel from Buffalo to New York. So that, he actually says himself that the rate is 7 cents from Buffalo to New York; yet, he figures out a rate of 10·56 cents a bushel from Winnipeg to St. John, on the basis of a rate of 2½ cents per bushel on the New York Central. He then comes to the Canada Atlantic Railway and he makes up this rate of 10½ or 11 cents a bushel on the basis of the rate at which the Canada Atlantic Railway carries grain for. There is a very low rate existing at the present time on the Canada Atlantic Railway to Montreal. There is very little grain offering for carriage as last year's crop was shipped by the first of July, and the boats on the lakes are trying to get a little return cargo, they are cutting each other's throats and in that way they have got the rate down to a very low figure. In the fall when the new crop comes to be handled the rate will go up to 4 or 4½ cents a bushel from Parry Sound to Montreal. The government have built their case up largely on the basis of being able to carry grain from Winnipeg to Quebec and to Halifax and St. John. Even if we could carry grain over this road upon the most favourable conditions that it is carried over the American roads, could we attempt to compete with their lowest rates in face of the climatic conditions in winter in northern Canada, which renders the motive power of a railway engine, often from 25 to 33 per cent less, than if that engine were operating under favourable conditions on an American railroad, not taking into consideration the long rail haul over this proposed railway. We have some evidence as to what it costs to carry grain. There

was an inquiry made a few years ago by a special committee of the Senate, and the evidence was published, and I have the testimony here of Mr. G. A. Thompson, of Duluth, a man who is well posted in regard to the cost of carrying grain by water and by rail, and this is what Mr. Thompson says :

There has been a magnificent reduction in the rail rates corresponding to this table which I have shown you here, but suppose we turn now to the water rates. We find that on the Erie canal the rate is very much less. Turn to the lakes. There at the outlet of Lake Superior the records are kept very close, and in 1896 the average price received for the transportation of freight which went through the canals at the outlet of Lake Superior was ninety-one hundredths of one mill. We can state the fact broadly by saying that in general the cost of deep water transportation is only about one-tenth the average cost of rail transportation. Suppose I go, just for a moment into a little further elaboration of the figures. During that same year, according to a statement made before a meeting of the Lake Carriers' Association, the average rate of freight transportation on all the great lakes was only eighty-five one hundredths of a mill, and that mainly because there was deeper water in some of the channels below than in the St. Mary's canal and some of the outlets in that neighbourhood. Let us now find the ultimate limits of competition in order to discover the cheapest known form of transportation. A careful series of experiments conducted on the Grand Trunk Railway here in Canada some years ago showed that the actual net cost of transportation, that is exclusive of interest on bonds, &c., was five mills per ton per mile. The average net cost in 1896 on the railroads of the United States was somewhat larger than that, being nearly six mills per ton per mile. There are a few coal roads where practically all the loads are carried by gravity, and the engines are used merely for the purpose of running the empty cars back again, and on these the average cost is three and half mills per ton ; but the best rate in actual railroad transportation under ordinary conditions is four mills per ton per mile.

Sir MACKENZIE BOWELL. Does that include the long and the short haul ?

Mr. THOMPSON. Yes. The road on which freight is carried at that low cost is the Lake Shore and Michigan Southern Railway. Coming back to the story I was starting to tell you about the two railway presidents, I may mention the name of one of them. The western man was Mr. James Hill, president of the Great Northern road. He said ' 'I have built some steamships myself. Those steamships are built to the full draught of water at the Sault. This was before the larger canals were opened. They carry twenty-seven hundred tons of freight, and they make the run from Duluth to Buffalo in three and half days, and cost an average of $120 per day. Now, in round numbers, almost as exactly as we can name it the distance from Duluth to Buffalo is 1,000 miles, and working that down we find that the cost is fifteen one thousandths of a cent per ton per mile. Turning that into figures that business men understand better than they cannot understand these microscopic rates, it means one-twenty-seventh of four mills, and that is the absolute net cost of carrying freight on the great lakes. That is to say, we do on the great lakes for $1 what it cost the best situated railway in the United States $27 to do. Therefore, without going further into these figures—I could give them by the hour, if necessary—you will agree with me in my conclusion that water transportation is the cheapest, and therefore if economy in transportation is the chief factor in the prosperity of nations, that nation which enlarges its waterways and developes them to the greatest possible extent will have done for its citizens, its producers and its consumers alike, the very best which can be done. But we are not through with these interesting matters.

Now, Mr. Speaker, I would like to place one or two illustrations before the House as to what it means to carry grain at so much per ton per mile, as is referred to in that evidence. Certain hon. members have dealt with this subject on the assumption that there is no basis of cost in regard to matters of this kind. They have proceeded under the assumption that railroads have been running in Canada and the United States all these years, and that they have not yet got down to any figures as to what it costs to transport grain, and as to what they have to pay for wear and tear, for coal, for the wages of men, and for all the things that enter into the operations of a railway. This report says that the figures Mr. Thomson gives do not include the interest on the bonds. Now, if it were possible to force the grain out of the North-west over this Grand Trunk Pacific Railway to the seaboard, I would like to show what it would cost to the people of the North-west, basing my calculations on what is the actual cost of transportation. As was pointed out by the leader of the opposition yesterday, the cost to the Grand Trunk Railway for hauling freight where they have return cargo, and where they have plenty of traffic, is five mills per ton per mile. I will first take the calculation at five mills per ton per mile and then I will take four mills per ton per mile, although it is quite certain that this new road can never attain to the position in this respect of the best American roads, and this gentleman says in his evidence that the best-situated railways in the United States can haul for four mills per ton per mile. I will take the calculation at five mills per ton per mile, or, a half cent per ton per mile. From Winnipeg to Quebec the distance is 1,425 miles, and at five mills per ton per mile that would mean $7.12½ cents per ton, or 36 cents per 100 pounds. The present rate from Winnipeg to Port Arthur is ten cents per 100 pounds, and from Port Arthur to Montreal eight cents per 100 pounds. I am assuming that the rate from Port Arthur to Montreal is not 3½ cents per bushel, which is a cut rate, but I am taking five cents per bushel as the rate from Port Arthur to Montreal, which I know is the current rate under normal conditions this year. Therefore the rate from Port Arthur to Montreal is eight cents per 100 pounds, and the rate from Winnipeg to Montreal would be, as I have shown, eighteen cents per 100 pounds.

The all-rail rate half a cent per ton per mile from Winnipeg to Quebec would be 36 cents per 100 pounds, whereas the present rate from Winnipeg to Montreal is eighteen cents per 100 pounds, which would leave a difference of eighteen cents per 100 pounds in favour of Montreal, as compared with any possible rate that could be charged on the new railroad to Quebec. That would mean that a bushel of wheat in Winnipeg which at present is worth eighty-five cents would only be worth 74·20 cents if carried by this new line of railway. If we had an export of 50,000,000 bushels of wheat, and if it were posible to force wheat over this railway to the extent of 50,000,000 bushels, then at a loss of 18 cents per 100 pounds it would mean a loss on that amount of wheat of $5,400,000 to the farmers of Manitoba and the North-west, at the rate of half a cent per ton per mile. Now, making the basis of the calculation four mills per ton per mile, instead of five mills, then from Winnipeg to Quebec the rate would be $5.70 per ton, or 28½ cents per 100 pounds, and that is a difference in favour of the present rate to Montreal of 10½ cents per 100 pounds. That would mean on an export of 50,000,000 bushels a loss of $3,150,000 to the farmers of the west. Now, if we attempt to force to St. John, N.B., 25,000,000 bushels of wheat over this new line, then basing the rate at five mills per ton per mile, there would be a loss on that quantity exported of $4,350,000, and on the basis of four mills per ton per mile there would be a loss of $3,000,000, calculating the present rate from Port Arthur to Montreal at 18 cents per 100 pounds. The idea of hauling grain from Winnipeg to Quebec over this road would be just as reasonable as if the Canadian Pacific Railway would talk about hauling grain from Winnipeg to Montreal to compete with the water route, with this exception, that the new railroad might possibly be a better railroad for transportation, and that is the only advantage which the Grand Trunk Pacific Railroad could possibly have over the Canadian Pacific Railway. But be that as it may, the Canadian Pacific Railway would never think of doing anything of the kind. I have made the calculation as to the carriage of this wheat to St. John, N.B., and if it could possibly be carried to Halifax the distance would be 100 miles greater, and the cost proportionately greater. I have read to the House the statement that it costs $120 per day to run one of these vessels carrying 90,000 bushels of grain, and hon. gentlemen can see how infinitesimal that cost is as compared with the expense of keeping up a railway.

It has been said that grain could be carried from Port Arthur to Port Colborne or Buffalo in one of these large vessels carrying 250,000 bushels, at from 1¼ to 1½ cents per bushel, but I believe that grain can be carried nearly a thousand miles from Port Arthur to Port Colborne at one cent, and from there to Montreal for two cents more, so that grain could in the near future be carried from Port Arthur to Montreal by water for a sum not exceeding three cents a bushel. In this connection I would like to say that it seems to me that it should be the policy of the government to equip Port Colborne, to build elevators, and to make further improvements there, in order that we may be able to compete with Buffalo, for the grain will come to one or other of these ports.

The Prime Minister referred to the possibility of the Grand Trunk Pacific Railway carrying the products of the North-west, but the hon. member for Wellington (Mr. Guthrie) admitted candidly, that it was not possible to carry grain to Quebec by this road. He said there would be other things to carry. I would like to ask the hon. gentleman, has there been any demand in this country that there should be a railway built for the purpose of carrying the manufactures of this country to the North-west? What business of that kind will there be for this road that any other road in existence could not carry without any increase of rolling stock or of capital or anything else? This road will not decrease the cost of carrying manufactured products to the North-west by one cent. The existing lines could carry six times as much of those products as they are carrying at the present time.

The right hon. Prime Minister made a great point of the importance of the proposed road for the shipment of manufactures to the North-west. I would like to read what he said on this point:

> For one, two, three generations, at least, and perhaps more, these new settlers will grow cereals, and probably nothing else. They will have need of everything that is required by civilized men. They will have need of clothing, furniture and every other kind of manufacture. Then, Sir, what shall we do? Shall we allow them to be supplied by our American neighbours, or shall we provide a railway which will enable our manufacturers in Ontario and Quebec to supply them with what they shall require? There is one thing above all which will be their chief need, and that is lumber. They must have lumber for their houses, their barns and their stables, and all their buildings. Where are they to get it? Not from the section of country where they live and work. The lumber is not to be had in that section.
>
> But luckily for us, the other section of the road, the section between Moncton and Quebec, is rich in lumber of every kind; and the moment the road is open, there will be established an important trade between the older sections of the country and these newer sections.

Now, Mr. Speaker, I think I have dealt sufficiently long with the bonding question and with the grain question, and I would like to take up this question of lumber very briefly. The Prime Minister proposes to take lumber from New Brunswick to build barns for the farmers of the North-west. I wonder what the hon. member for North Norfolk (Mr. Charlton), who knows some-

thing about the lumber business, would say of this suggestion. The hon. member for North Norfolk ventured to go as far east as the Timiskaming district in northern Ontario for lumber, but he thought he had better stop there, and not go any further east. The price of common pine in Winnipeg to-day is $19 per thousand feet. The cost of transporting lumber from the province of New Brunswick to the prairies beyond Winnipeg would be more than lumber is worth in Winnipeg. We all know that lumber cannot be transported any great distance without great cost, because it is such a cheap and bulky product; and yet the Prime Minister suggests that the people of the province of New Brunswick are going to send lumber over the proposed railway for the purpose of building barns for the settlers in the North-west. Why, the Lake of the Woods district, which is only a little over 100 miles east of Winnipeg, is full of lumber, and there will be no lumber whatever going from New Brunswick to the North-west, a distance of 1,600 miles. I merely mention this to show some of the astounding arguments which hon. gentlemen opposite have resorted to on this question.

Now, I feel very much interested in the building up of the St. Lawrence route. Some people ask, how is it that our canals do so little business, and that our great St. Lawrence waterway is not utilized to a greater extent than it is? Well, Sir, the reason is very clear. For many years we had no Canadian bottoms on the lakes, or at least very few, to move the grain from the west. The Americans had the business, and they managed to keep it, and it has been going to Buffalo. I have here a letter which was written to me on the 3rd of June, 1899, by a gentleman who used to be a member of this House, the late George H. Bertram. That gentleman, in the conduct of his business, and in this House, advocated the consideration of this transportation question on broad lines. In this letter he said:

> I am quite satisfied in my own mind from a thorough examination of the whole question, that the St. Lawrence route via the Welland canal will ultimately be the controlling route, as to rates, provided there are sufficient Canadian vessels to do the business, and ample facilities at Montreal for receiving and exporting the grain of the west.
>
> I quite agree that a greater necessity than ever exists to increase 'the number and capacity of Canadian bottoms at present engaged in the grain-carrying traffic upon the great lakes,' and that the government should encourage in some substantial way, the creating of a large Canadian marine capable of hauling the North-west grain.

Mr. Bertram was very anxious that the government should give a bounty on the registered tonnage of Canadian vessels to offset the duty on the fittings of vessels which come into this country, while British bottoms come in free of duty. He did not succeed in convincing the government of his views. Other gentlemen have urged the same views on the government. If the government adopted that policy we would have more Canadian bottoms on the lakes than we have at the present time. However, through private enterprise we are getting a Canadian marine together by slow degrees. There have been imported into Canada from Great Britain this year for service on the lakes thirteen new vessels, a large number were imported last year, and there have been three vessels made in this country this year. But what the government should do is to encourage by a bounty the building of Canadian vessels for service on the lakes, and if we succeeded in building up a Canadian marine, we should be able, with the improvements in our canals and waterways between the head of the lakes and Montreal, to carry our own grain at least. The situation is very encouraging at the present time. The increased tonnage of the Canadian marine is showing its results perceptibly in our exports. In the last few years the total tonnage of seagoing vessels which left the port of Montreal from the opening of navigation up to the 1st of August in each year was as follows: In 1900, 644,312 tons; in 1901, 719,082; in 1902, 726,820 tons, and in 1903, 922,911 tons. But what is more encouraging is that the total tonnage of inland vessels arriving at the port of Montreal from the opening of navigation up to the 1st of August was as follows: In 1900, 774,729 tons; in 1901, 743,926 tons; in 1902, 852,761 tons, and in 1903, 1,956,949 tons. So it will be seen that what we have long hoped for, namely, the development of the St. Lawrence route and the diversion of the grain traffic from the Buffalo route, is coming about. I have always claimed that the St. Lawrence waterway will be the regulator of freight rates, and that we shall not be obliged in future, as we have been in the past, to say that the Erie Canal and the New York Central Railway are the regulators of freight rates. But what we have to do is to equip the St. Lawrence waterway so that we shall be able to carry our own grain in competition with the Buffalo route, and when we have done that we will get American grain also, and carry that to our own seaports. The grain of the North-west is bound to come out of the country by the lakes and the St. Lawrence waterway, or by the Georgian bay, and then on by rail to Montreal; and if the Prime Minister would be a little patient, and instead of forcing on this railway to Quebec, would devote himself to improving the means of transportation by water, he would accomplish in that way what he will never accomplish by this railway. We have heard it said that grain has been carried to Quebec for 3½c. per bushel. There

is no doubt that Quebec will be a great port in the future. I am as much an admirer of Quebec as any hon. member of this House; but we do not want to go into the great expense of this proposed railway at the present time just because of the solicitation and the earnest appeals of the Minister of Justice and the Prime Minister, who, rightly, no doubt, because their constituencies are in Quebec, advocate this project. If the government desired to do something of real benefit to the farmers of the North-west, let them follow the example of the Manitoba government, when they said to the Canadian Northern people, You will have to reduce the cost of carrying grain from points in the west to the head of the lakes 2, 3 or 4 cents per 100 pounds. When this bargain was made, the rate from Winnipeg to the head of the lakes was 14 cents per hundred pounds. It has since been reduced to 12 cents per hundred pounds, and on the 1st of September it will be 10 cents. If this government had undertaken, in connection with this deal, to find out what the average rates were, and said to the Grand Trunk Pacific Railway: 'What you have to do is to put before us a scheme whereby the cost of carrying grain to the sea-board will be reduced one, two or three cents per hundred pounds, such a policy would have interested the people of the North-west, and carried the country. This does not in any way relieve the conditions of the North-west. It does not reduce the cost of transportation to the farmers of that country one-millionth part of one cent. But whatever this proposal may accomplish, it has led to a very interesting debate, and we have had from hon. gentlemen supporting this project demonstrations of how you can force water to flow up hill. I have given a very full statement of this question of grain rates, and challenge any member of this House to contradict anything I have said. You cannot compete with the water system of the St. Lawrence by a railway paralleling it, and I have every hope that the great bulk of the grain of the North-west will go out by way of Georgian Bay or Welland Canal, and the St. Lawrence route in the future, as well as a large share of the grain of our neighbours to the south.

When I interrupted the hon. member for Wellington (Mr. Guthrie) this morning, by calling his attention to the fact that this road could not carry grain in competition with the water route, he admitted my statement, but he said that manufactured products would go over it. But that will not be of any benefit, because the rates will not be reduced, as the railways now in existence can carry much more freight than they are able to secure. He also said that the Intercolonial Railway would not be handicapped because freight from the west to the maritime provinces would still go over that line. How does he make that out? The Grand Trunk Railway has a system which gridirons Ontario, which gathers the manufactured products from most of the cities and towns of Ontario, and the Grand Trunk Railway will take that freight to Lévis, over its own road, and will not haul it over the Intercolonial Railway. It will do what it can to earn the interest it will have to pay the government.

Again, it is said by hon. members that if we cannot take grain over this road in the summer, we surely will take it in the winter. But grain does not go out of our North-west or the American west in the winter time to any great extent. The transportation rates are so high that it pays better to store it away until the spring. Grain is sold for certain deliveries, and as much as possible is forced out of the country in the fall. What is left is held in the elevators, and the cost of carrying it in the elevators is very much less than would be the cost of taking it out in the winter.

The hon. Minister of Justice said that the day was dawning when the city of Quebec would get justice. Well, I want to see that city get justice, and I believe that the port of Quebec will benefit by the transhipment of grain, and the increased tonnage of ocean vessels which will go there. But I say that it will not be practicable to send grain to Quebec by this route. What the government should do, and what I would urge the hon. minister to advocate, is to improve the St. Lawrence system, so that vessels may go to the St. Lawrence ports just as easily and as safely as to any port on the continent, and also to improve our canal system. If that be done, the port of Quebec will be sure to reap a large share of profit.

The government have no mandate to push through this scheme at present. I believe that they should proceed along the line they laid down at the opening of the session, and appoint a commission. I look upon the government as occupying the position of trustees, and I cannot see how they are going to justify themselves before the people, when they have rushed into this project without having any expert knowledge of the cost of carrying the grain and other products, and of the capabilities of the country through which this railway will go. The have absolutely no knowledge of the conditions except the meagre information which they have placed before us, and are therefore not justified in going on with this project.

A good deal is said about diverting traffic and making it run from east to west or west to east, instead of from south to north, but in this connection you must not consider railway facilities only. In fact railways only occupy a minor position with regard to this matter. You must have your tariff so arranged that the products of the United States will not go from the south to the north. You must adjust your tariff to suit Canadian industries, and then you will have traffic for your railways

running east and west. The questions of fiscal policy and transportation policy go hand in hand, and the government will do well to consider these two questions as one. I am sorry to say that the government are weak on the tariff question, just as they have shown themselves weak on the question before the House. They would not have shown themselves weak with regard to the project before us had they followed out their original policy of appointing a commission to inquire into the whole question of transportation. A good deal has been said about wild speculation. We have heard of loan companies and private individuals going into wild speculations and gambling in stocks; but I would like to know if a more impulsive unconsidered thing was ever done by a private individual than has been done by this government, when, in a few weeks, it jumped to a conclusion and placed the project we are now discussing before this House. I would like to know if there is any record of anything of the kind having ever before been done by the government of any civilized country. If you take the cost of the railway at $125,000,000, and add that to our national debt, it brings our national debt up to the sum of nearly $400,000,000. It makes the liability to which we are committing ourselves in one session of parliament, including the guarantees we have assumed, including the estimates of this session, which I put at $65,000,000, including the guarantee of the Montreal harbour bonds, and the Canadian Northern Railway bonds, including all these, it makes a liability which we are incurring in one session, of $237,350,365. What I would like hon. members on the other side to give their attention to, when discussing this question, is the appointment of a commission on the transportation question. I would like them to explain why it was not appointed. Let us know the reasons which made the government go back on that policy? I would like to have them also show, if they can, that the figures I have given of the cost of transporting grain to the sea-board are wrong. I would like to know also how lumber can be brought from New Brunswick to points west of Winnipeg, and how the grain which the Grand Trunk Pacific Railway will bring from the lakes is going to Canadian seaports. I would like to have the government show how the farmers of the North-west are going to be benefited to the slightest extent by this project? Where the grain and the other produce of the North-west are going, while the eastern section is being constructed, and after the western section has been completed? I would also like to know if it is necessary, in connection with a great national project of this kind, that a corporation should come to this government or any government with terms, conditions and schemes. Surely if we were going to build a great transcontinental railway we should have had an opportunity of making our own plans and specifications and asking for tenders on those plans and specifications in a business-like way.

Mr. Speaker, I must apologize for having taken up so much of the time of the House. I did not intend to speak so long. In bringing my remarks rapidly to a close, I would say that there are two things which it is desirable to keep in mind. The first is to send Canadian goods through Canadian channels to the seaboard, and the other is to provide low rates in favour of the producer of the west. The result of the government's policy will be to send goods for years by way of Chicago, as the line to Quebec will not be built, and, even if it were finished, it would not be able to take the business. Moreover, the scheme will not reduce the cost of transportation. I shall be glad to have any Ontario members like my hon. friend from South Wellington (Mr. Guthrie) defend this scheme from an Ontario standpoint. I am especially interested in seeing some of my friends on the other side from Ontario attempt to defend this scheme along the line on which the government have attempted to defend it.

I am in favour of providing the west with all the transportation facilities necessary. We must adopt a generous policy with regard to Manitoba and the North-west Territory. As this scheme stands, the most objectionable part is the eastern portion of the line. That is an impracticable scheme; the road will only be a sink-hole for all time to come, and a burden upon the country. What the country wants is adequate transportation facilities to the North-west and cheaper rates. This road will be a burden upon the people of the North-west as well of the rest of this country; it will not realize the millioneth part of a cent, so far as reduction in freight rates is concerned. The effect of it will be to place the Intercolonial under the control of the Grand Trunk. The distance is not likely to be materially shortened between Montreal or Quebec and St. John or Halifax. Even if there is a shortening of the distance to the extent of 60 miles on a transcontinental railway 3,600 miles in length, this shortening of the distance will be of no practical value. The people have not shown that they are in favour of this scheme; they have not petitioned for it. There is every reason to believe that they are against it. If the government reduced the freight rate two or three cents a hundred, that would have pleased the people and would have been a good business proposition. The result of the policy of the government with regard to this scheme will be that the western part of the road will be in operation many years before the eastern part. A channel for trade through the United States will be established, a channel that we do not now use. And even when the whole railroad is

in operation, it will not be able to carry the grain in competition with the water route. I would also like to refer to sections 42 and 43 of the contract which I have referred to as the pious clauses. I would point out that there is a dispute between the Grand Trunk and the Intercolonial in reference to the wording of the traffic agreement now existing between them. I believe that the Grand Trunk will interpret that agreement strictly according to the legal and technical wording of it, and I think that nothing less can be expected than that they will do so. What I would do would be to improve the St. Lawrence water-way so as to take a large share of our trade to the seaboard, and, when this was done we could get a larger share of the American trade. This is not a party question. It it too serious to be handled in that way but impartially and carefully. I again appeal to the government to reconsider the question of the eastern portion of the road. That portion will not answer anything that is expected of it as an addition to the transportation facilities of this country. I hope that in the interests of the country, in regard to that part of the scheme, at any rate, the government will see their way clear to reconsider it, and, having withdrawn it, will secure expert evidence which will enable them to develop a plan more in accordance with the interest of the country as a whole.

Mr. JAMES J. HUGHES (King's, P.E.I.). Mr. Speaker, from certain articles I have seen in the newspapers and from information received from other sources, I am led to believe that a good deal of misapprehension exists in the minds of some persons in the province from which I come in regard to this national transcontinental railroad. I deem it my duty, therefore, to remove, if I can, some of this misapprehension. In my judgment the strongest and ablest—certainly the strongest—speech in this House against the proposed scheme, was that delivered by the ex-Minister of Railways and Canals (Hon. Mr. Blair). I believe that it was the speech that had the most effect in the country. This was not entirely due to the speech itself, but was, in my opinion, due to the fact that the ex-Minister of Railways and Canals had been for many years associated with the Liberal party and had been for seven years a member of the government and the head of the Department of Railways and Canals. The part of that speech which appeared to the hon. gentleman himself, I think, to be the strongest, that part at least, on which he laid the most emphasis, was the part in which he alleged the undue haste, unwarranted and unexampled haste with which this project had been sprung upon parliament and the country. He said there had been no demand, from any party or any province of the Dominion, that there was no need of the railway, and he could not understand what induced the government to proceed with it. In order that there may be no misunderstanding on this point, I will, with your permission, read a short extract from the hon. gentleman's speech, which was delivered on the 11th day of this month :

> The government of this country, realizing the enormous magnitude of this measure ; realizing that it is perhaps a measure without parallel in the history of this country ; realizing that no question so momentous in its nature, and involving such large responsibilities on the country had ever been presented to parliament since the confederation of the provinces of British North America ; realizing also that this decision and determination to carry this project through, if it could be carried through this parliament, and if the assent of the country could be secured for it ; realizing all this, my right hon. friend very naturally felt that the people of the country would expect that some satisfactory explanation should be furnished, as to why, with such unusual and such unexampled haste a measure of this magnitude and this character had been pressed upon them. My right hon. friend, realized this as any one with the same responsibilities and occupying the same position would have realized it, and therefore, we observe that the very first feature of this whole question to which the Prime Minister directed his attention, was to repel if possible the charge, or to answer if possible the accusation which must have entered into the mind of almost everybody from one part of Canada to the other, that this question had been sprung with undue haste and without deliberation. The right hon. gentleman undertook an answer to that phase of the case, and I will give the House in his own words the answer which he gave. Let me tell the House in the first place, however, wherein it was that the right hon. gentleman did not offer an explanation of his course. He did not deny that there had not been deliberation ; he did not affirm that the government of the country had availed itself of all proper sources of information, and had waited until they had exhausted all the means in their power to ascertain what the conditions were in the various portions of the country which this road was to traverse ; he did not tell us the need which had arisen for us to jump headlong into a scheme of this kind ; he did not tell us that he had summoned to his assistance the wisest counsels which the country could afford ; he did not tell us that he had sought the assistance of experts in order to know what the traffic conditions were which would make this railway desirable ; he did not even pretend to tell us that he had done these things. . . . . I have been a willing listener to any demand of this kind, and I am bound to say I have not heard any great outcry for another transcontinental line from ocean to ocean. I do not know where the cry was made that it reached others. It was not made, at all events, so that it reached me. . . . .
>
> I make bold to say that there is no evidence that the people of this country demand this legislation. I will commence with the province of British Columbia and ask you : Is there any call, loud or weak from the province of British Columbia that another railway should be put through the passes of the Rockies and carried to Fort Simpson ? If there is, I have not heard it. I would like to see the proof that can be brought in support of any such statement. Such a feeling does not exist.

vince of Ontario ? Have we heard even a whisper of it before this thing was suggested?

Now, Sir, in the course of his remarks he further said that there was no demand from the great province of Ontario, that there was no demand from the North-west Territories and that in fact there was railway accommodation in the North-west Territories for 5,000,000 population ; there was no demand from British Columbia. But was the hon. gentleman of that opinion a few months ago ? Some seven or eight months ago he was on the Pacific coast and this is what he was reported to have said in reply to an address from the Victoria Board of Trade, and I presume the hon. gentleman gives utterance to sentiments there in accord with the views of the Board of Trade which he was addressing. This was on the 9th of October and he said :

There is no country where the soil is more fertile than in the millions of acres in Canada which the plough has not yet touched, and which man has not yet invaded. Railways were necessary to open up these great fertile tracts. If we are to invite the people from the world outside to immigrate here, they have a right to expect that the government can assure them the means of transportation. That means a great many railways in many parts of Canada and we feel as a government that we have ample justification in going to all reasonable lengths to meet this need. The tide of immigration was just setting in full and strong towards Canada particularly from the south, and he believed the time was near when there would be a greater immigration than ever before to Canada from the motherland. This influx of settlers he said, must bring its problems ; it meant an increase of soil production and necessarily of means of transport. We cannot long remain content with only one transcontinental line.

It cannot come fast enough to satisfy me and I am doing all I can in my small way without public pretense about it to ensure its construction.

There are young men, perhaps the middle aged men, who are listening to me who will live to see four transcontinental lines running through Canada. And they will not see more than enough.

That was on the 9th of October. Did the hon. gentleman change his opinion a little later ? Of course up to this time he could not have heard of the resolution passed by the Truro Board of Trade, of the resolution passed by the Halifax Board of Trade, of the resolution passed by the Moncton Board of Trade, of the opinions expressed by the leading merchants of Montreal and other cities, of the resolutions passed by the Toronto Board of Trade, of the many articles which appeared during the previous months in the leading newspapers of the country and the expressions of opinion that had been received from various bodies.

But on the 24th of November the hon. gentleman was still of the same opinion. He gave an interview to the 'Mail and Empire.' On that day the 'Mail and Empire' correspondent 'asked the minister to-night if he had at the time in his mind the possibility of the extension of the Grand Trunk to the Pacific coast,' and Mr. Blair replied :

Well, so long as the subject is one now of public knowledge I may frankly say that I knew what was coming. Mr. Hays has discussed the matter with me on several occasions, but until a definite conclusion was reached by the company I did not feel at liberty to speak of it. I am free to confess that in my judgment the development of the Canadian North-west and British Columbia will be so rapid in the next few years as to afford ample traffic for three transcontinental lines, and I am glad to know that the Grand Trunk Railway Company seeks to share in that development. To build a railway from Gravenhurst or North Bay through New Ontario, across Manitoba and the territories to the Pacific coast via the Pine or Peace river passes—the route which, I believe, the Grand Trunk Railway contemplates to adopt—cannot be less than 2,500 miles. It is a pretty big undertaking but it has been done before, and can certainly be accomplished again.

The hon. gentleman did not believe on the 24th November last that there was ample railway accommodation in the North-west Territories for 5,000,000 of people.

But perhaps as that is some seven or eight months ago he changed his mind a little later on ; of course every man has a right to change his mind if he wants to. But here is what I find. I find that he did not change his mind up to the 13th of July. Of course I believe the hon. gentleman had very considerable objection to the extension of the line from Quebec to Moncton, but even for that piece of road he had not an insuperable objection. He had no particular objection as you will see by his letter to the Premier to the building of the line from Quebec to the Pacific ocean. On the 13th of July, he says :

As I have said, I am in favour of the whole line being built and owned by government ; but having abandoned any expectation in that regard I am equally in favour of the whole line being a company line, if any portion of it, or a substantial portion, is to be a company line, and therefore I am prepared, since Council has determined to go forward with this undertaking at once, to co-operate with my colleagues in guaranteeing the bonds over the whole line to an extent not exceeding three-quarters of the cost of the construction of the railway.

The hon. gentleman seems not to be unalterably opposed to guaranteeing the bonds of the whole line at least from Quebec to the Pacific coast. He was not opposed to the extension of the line from Quebec to St. John, no not entirely opposed to that even, although later on he said it would parallel and destroy the Intercolonial. But on the 3rd of June, I find the hon. gentleman voting in the Committee on Railways and Canals for the line to be extended to St. John. Now in my opinion if the building of this line from Quebec to Moncton will destroy the Intercolonial, will parallel the

Intercolonial, will duplicate the Intercolonial, the building of it to St. John would certainly have that effect to the same degree. Now, Sir, as I have said, in the speech made by the hon. gentleman on the 11th of this month, he dwelt particularly and emphasized strongly his principal objection to that portion of the line between Quebec and Moncton and he said it would destroy the Intercolonial and I think the hon. gentlemen opposite who have followed him since have largely followed his views in that respect up to last night. I am bound to say that last night the hon. the leader of the opposition said he would not oppose the building of the line from Moncton to Quebec for or from Moncton to Lévis which is practically the same thing so that the ex-Minister of Railways and Canals is thrown over by his friends at least to that extent. Now, Sir, would this line if built from Lévis to Moncton parallel and destroy the Intercolonial ? The only way it could do that I apprehend would be by taking trade and traffic from the Intercolonial and it could only do that if it were a shorter and better road. Now, our hon. friends opposite, most of them, say that it is almost impossible if not altogether impossible to build a road there that will be much shorter and that it is impossible, almost if not entirely impossible to build a road that will be equal to the Intercolonial so far as grades and curves are concerned. So that when they say that this road will take traffic from the Intercolonial Railway and at the same time that it will not be as good a road as the Intercolonial Railway they are proving too much and they are contradicting themselves. But, why will this line destroy the Intercolonial Railway ? According to the arrangements that have been made it will hand over to the Intercolonial Railway the transcontinental traffic that it will bring from the west, traffic which the Intercolonial Railway would not and could not obtain in any other way, traffic that it has not now, that it never had and consequently as far as that goes it will be an advantage to the Intercolonial Railway. It will not, of course, take away any local traffic from the Intercolonial Railway. Nobody has said that it will do that and it will not to any large extent take away any through-traffic from the Intercolonial. The Intercolonial Railway and the Grand Trunk Railway at the present time have an agreement which will run for upwards of ninety years that the Grand Trunk Railway has to deliver at Montreal all the trade it gathers up in the province of Ontario and at points west of Montreal which is destined for points east of Montreal to the Intercolonial, and while that agreement lasts no other railway could take away that trade that the Intercolonial Railway now gets. But, the hon. leader of the opposition (Mr. Borden, Halifax) last night said that he was not opposed to the building of another road from Moncton to Quebec, but that he would have it a government road. Then, if that were carried out the government would have two roads on its hands from Quebec to Moncton. The government would then have to hustle to provide traffic for two roads instead of one. Would that not injure the Intercolonial Railway if it could be injured ? Under the present arrangements when this road is built and leased to the Grand Trunk Pacific Railway Company the government need not worry any more about it. The Grand Trunk Pacific Railway Company has to provide traffic for that road and the government can turn its attention to the upbuilding of the Intercolonial Railway, and surely the government will be as efficient in the future as it has been in the past. The hon. leader of the opposition last night stated that he was not opposed to the building of a line from Quebec to Winnipeg but he said he would make it a colonization road. Surely, it would be well if the road were built to make it both a colonization and a transcontinental railway. Why not use it for both purposes ? Would there be any objection to having transcontinental freight going over it and at the same time making it a colonization road? The hon. gentlemen opposite who have spoken appear to be in favour of building a line from Winnipeg to North Bay. That would have no effect at all in accomplishing the object we have in view. The traffic that the Grand Trunk Pacific under these circumstances would bring down as far as North Bay would find its way to Montreal and Toronto and ultimately to Portland. Would that be a desirable thing? That is what we are anxious to prevent. If we can carry that traffic to our own country and ship it from our own ports would that not be a desirable thing to do ? Particularly as the road from Winnipeg to North Bay would cover about three-quarters of the whole distance would it not be well to go on and build the other fourth and thus complete the road to Quebec, an ocean port on the river St. Lawrence, especially as this road will bring Quebec as near to the wheat fields of the North-west Territories as Montreal now is with the existing lines. In addition to that Quebec is 180 miles nearer the ocean than Montreal and the traffic that goes over the Grand Trunk Pacific as far as Quebec must either be shipped by Quebec or sent on to some maritime province port. It cannot then go out to a foreign port. But, it has been said that it will be impossible to carry grain by this line from the North-west Territories. Sir Wm. Van Horne has been quoted as saying something to the effect that no railway would voluntarily carry grain from the wheat fields of the North-west to Montreal and to the ocean ports. As a matter of fact, according to the statement made by the hon. Minister of the Interior and even by the hon. leader of the opposition himself, large quantities

of grain are now being carried by rail from the North-west Territories. Although he is an experienced railway man Sir Wm. Van Horne is not the only man in Canada who is an authority upon these questions. There are other railway men who are second only if they are second to Sir Wm. Van Horne. There is the manager of the Grand Trunk Railway, Mr. Hays. He surely has had some experience. There is Mr. Wainwright and Mr. McGuigan who assist Mr. Hays in the management of the Grand Trunk Railway and they claim that grain can be carried by this route. They do more than make that claim; they are willing to put their money into the enterprise and back it up by their reputations as business men and railway men, and according to the ex-Minister of Railways they will put $28,000,000 of their own money into the undertaking. Whether grain can be carried or not, certainly, in the estimation of these men, sufficient traffic will go over this road to enable this company to pay interest on the cost of construction for forty-three years out of the fifty. That to my mind is the strongest possible proof that can be adduced in favour of the building of this road. When you get a company, like the old Grand Trunk Railway Company of this country, and when you get capable railway managers, like Mr. Hays and those who are associated with him, going into this enterprise and agreeing to operate the road, to keep it up to a high standard of efficiency, to pay all the operating expenses and to pay interest on the cost of construction for forty-three years it shows that in their estimation, at all events, it is going to do business. We need not worry very much about what kind of business it is going to do. It must not be forgotten that there are other kinds of trade in Canada besides the business of carrying grain. There is another industry in the North-west Territories that is perhaps second only to the business of grain growing. I refer to cattle raising. The great ranches of the North-west Territories are only beginning to be used and when better facilities are given to the people who are in the ranching business for getting their cattle out to the markets of the world, an enormous development will take place in that business as it will in other businesses in which the west is engaged. Last year ten million dollars worth of cattle were shipped out of the country, and a large portion of the cattle shipped from the North-west could not find sufficient railways to carry them east and, I think, 30,000 head had to go through the United States and be carried by United States railways to the seaboard. Is that a desirable state of things ? It is possibly true that grain during the summer months will take the lake route in preference to the rail route, but cattle cannot be carried by way of the lakes. The cattle must travel by rail the whole way from the point where they are raised to the point where they are embarked on the ocean, and it is therefore necessary that we should provide facilities for handling this large traffic. Then, there is another industry that would be very important as far as this railway is concerned and as far as the settlers in the North-west Territories are concerned. That is the lumber industry. It is impossible, according to the information that I have received, according to information that has been given to this House and according to what we know, that the North-west Territories can be settled, that immigrants can go in there, and live unless they can get lumber with which to build their houses and barns and other buildings that are necessary for them. This road when built will go through the great lumber regions of northern Ontario and Quebec, and through the mountain districts of British Columbia and will be enabled to carry lumber to the settlers on the plains. This of itself will give rise to important industries. The establishment of mills on these rivers in northern Ontario and in British Columbia where this lumber would be manufactured, will give employment to thousands of hands and call for the investment of ten of thousands of dollars.

But, the point which most concerns the province from which I come and for that matter the other provinces, I suppose, is the financial aspect of this question, and that is the point which has been most misrepresented by hon. gentlemen opposite. The Minister of Finance went pretty fully into this question and anybody who followed him closely ought to have a good knowledge of the financial side of this proposition. I need not say that the words of the Finance Minister will be accepted in this House and in this country pretty generally. He showed conclusively that $13,750,000 now invested in interest-bearing securities would provide sufficient money to meet all the demands the government would be bound to meet in connection with this transcontinental railway. There is another way of looking at the question. It appears to me that our friends opposite ignore the fact, wilfully ignore the fact, that the Grand Trunk Pacific Railway will meet its obligations. There is no doubt in the minds of sensible men in Canada that the Grand Trunk Pacific Railway will meet the obligations, because it will have deposited with the government before it commences its construction at all, a guarantee of $5,000,000 in cash or in securities that will remain in the hands of the government until the road is completed up to within $5,000,000 of its total cost. That money will only be released by the government in instalments in order to enable the company to finally build and equip its road. In addition to that, the company puts at least $30,000,000 of its own money into the enterprise. The government guarantees the bonds on the prairie section, but is not responsible for any interest in any shape or manner as regards

that section, so long as the company will meet its obligations. The government guarantees the bonds on the mountain section to the extent of not more than $30,000 per mile, or three-fourths of the cost, and it will pay the interest on that guarantee for seven years.

Now, Sir, let me refer to the part of the road which will be built by the government itself from Moncton to Winnipeg. It is said that that road will be between 1,700 and 1,800 miles in length, and I will take the longest mileage on which to base my calculation. The ex-Minister of Railways (Hon. Mr. Blair) estimated that it would cost $35,000 per mile to build that section. In criticising the project from his standpoint, it was to his interest to put the cost of the road as high as possible, and I think most people in the country will come to the conclusion that he did so. Experienced railway men have said that it will not cost more than $25,000 per mile, but be that as it may, I will take the figures given by the ex-Minister of Railways. Now, 1,800 miles of railroad at $35,000 per mile would amount to $63,000,000. I am sure that in the opinion of every reasonable man in this country, that will include the interest during the time of construction and everything up to date when the road is finished. The cost of that portion of the Quebec bridge which can be debited to the Grand Trunk Pacific Railway, according to the estimate of the Finance Minister, will not exceed $2,000,000. The hon. member for Jacques Cartier estimated that the total cost of the Quebec bridge is $5,000,000. but as four or five other railways will use that bridge, that portion which can be debited to the Grand Trunk Pacific Railway ought certainly not exceed $2,000,000. We have then as the total cost of the railway, and bridge included, $65,000,000. The interest on this amount at three per cent for seven years is $13,650,000. That is the total charge the government will have to meet, because at the end of seven years the Grand Trunk Pacific Railway takes over the road and pays the interest on the cost of construction from that time forward for the balance of the fifty years.

The mountain section is estimated at 480 miles, and supposing it is 500 miles long, then at $30,000 a mile or a total cost of $15,000,000 and the interest on that for seven years would be $3,150,000, or a total cost to us altogether of $16,800,000. That I submit is the largest amount for which the government of this country becomes responsible. It is the outside figure, because at the end of fifty years, when the bonds for the building of this railway will have matured, does any intelligent or reasonable man in Canada suppose that the railway will not then be worth a great deal more than it cost, and if the government of that day sees fit to operate the railway, will it not be worth more to the government than it has cost ; or if the government of that day will operate the railway they will certainly get a rental for it far in excess of three per cent, and possibly twice that amount. The development of the country by that time will have been such that the railway will certainly be more valuable than when it was constructed. Now then, would this $16,800,000 be an enormous sum for the people of this country to meet ? Suppose we take it over and divide the population of Canada into it. The population of Canada at present is upwards of 5,500,000, and before we are called upon to pay any large contribution to this railway our population will have reached 6,000,000. That would just amount to $2.80 per head. If the people of this country had to pay $2.80 per head in one year, would it bankrupt them ?

Mr. BUREAU. Not much.

Mr. HUGHES (P.E.I.). I think it was the hon. member for East Grey who said that the burden placed upon the people of this country by this proposed railway would precipitate his constituents into the yawning abyss of financial ruin.

The MINISTER OF CUSTOMS. Oh, my.

Mr. SPROULE. I did not make any such statement.

Mr. HUGHES (P.E.I.). Well, the statement of the hon. gentleman was a very strong statement in that direction.

Mr. SPROULE. I said that according to the estimate I made of the obligations incurred by us, it would represent from $100 to $125, standing against each family in the country, which might fairly be regarded as a mortgage on the farm of every farmer as long as the youngest member of the family was alive.

Mr. HUGHES (P.E.I.). I cannot possibly see how $16,800,000 would represent a mortgage of $125 on each family in the country.

Mr. SPROULE. Does the hon. member pretend to say that the eastern section can be built for $16,000,000 ?

Mr. HUGHES (P.E.I.) I do not say that, but I say that that sum will be the interest for seven years.

Mr. SPROULE. Is the hon. gentleman aware that we must borrow the money ?

Mr. HUGHES (P.E.I.). Yes, I am aware of that. Well, now, we are not called upon even to pay this $2.80 per head in one year, because it will be spread over a period of fourteen years, and we will be asked to pay it in fourteen annual instalments which will amount to just 20 cents a year for each one of our population. Twenty cents a year per capita the people of this country will have to pay in order to provide a transcontinental railway from Moncton to the Pacific ocean.

Mr. HENDERSON. Cheap enough.

Mr. HUGHES (King's, P.E.I.) Yes, it is cheap enough; it is an excellent bargain. I do not think there is a man in this country who will have to mortgage his farm in order to raise that 20 cents. I do not think there is a farmer in Ontario who will have to do so; I know that there is not one in Prince Edward Island. But shall we have to pay the 20 cents even? No. Before the 14 years will have expired, our population will have at least doubled. Some people think it will have trebled. I believe that hon. gentlemen opposite agree that it will at least have doubled; and consequently our per capita contribution to this railway will be cut in two, and will be down to 10 cents. But during a portion of that time our population will be no more than 6,000,000, so that I suppose it will be fair to strike an average, and say that our contribution during the 14 years will be 15 cents per capita per year. What do we get for that? We get a transcontinental railway, a railway from ocean to ocean.

But this is not all of the financial aspect of the question. This railway will pass through 1,200 miles of fertile territory in the North-west, throwing open to settlement from 25,000,000 to 50,000,000 acres of land. It will be a conservative estimate to put upon that land the value of $3 an acre. The hon. Minister of the Interior the other evening stated that he felt justified in saying that before ten years will have elapsed, the Interior Department will have sold 20,000,000 acres of land to settlers for at least $3 an acre in consequence of the building of this transcontinental railway. So that the railway will return directly to the treasury of this country from the land sales alone three or four or five times what the people of the country will be called on to pay for the building of it. That money will remain in the treasury or be used for the necessary public works throughout the country, and at the end of the fifty-year period, if the people of the country had to pay the bonds on which the money to build this railroad was borrowed, long before that period would have elapsed the money that would come from the land sales in the North-west in consequence of the building of the railway, would more than provide for the lifting of those bonds, and the railway would not therefore cost the people of this country one cent. The increased value of the lands through which the railway will pass will more than pay for the railway.

There is another way of looking at the matter. Will any man in this House deny that this country will do a largely increased business in consequence of the building of this railway, that it will induce immigration to come to this country, and $100,000,000 of capital? Surely this will give a great impetus to the trade and commerce of the country, and what will be the profits the people will derive from that increase of trade? I am inclined to think that it will be at least three or four times what we shall be called on to pay. The position appears to me to be something like this. If a farmer or a merchant or a manufacturer, or any man doing business in Canada, were morally certain that by enlarging his plant, increasing his machinery, putting up more buildings, perhaps doing a little judicious advertising, his business would be so much increased that the profit on the increased business would more than pay the interest on the expenditure, would any progressive business man hesitate to make that expenditure; and that to my mind is the position of this country with regard to the financial aspect of this railway.

It was said that this will parallel the Intercolonial; but that cry has been dropped, and it is said now that it will duplicate it. As the hon. leader of the opposition has said that he is not opposed to the building of a railway from Quebec to Moncton, the statement that this road will parallel and destroy the Intercolonial will certainly have to be dropped or modified. But are there any other places in Canada where railroads parallel or run close to each other which have been built by the people of this country? There are certainly many cases, and yet we never heard this cry raised before, that the railroads were paralleling or destroying each other. The Intercolonial and the Grand Trunk Pacific from Quebec to Moncton will average sixty miles apart. Let us compare them with other railroads which run close to each other. The Canadian Pacific Railway and the Canada Atlantic from Ottawa to Montreal are on the average sixteen miles apart. The Canadian Pacific, when it had only one line from Ottawa to Montreal, was not satisfied with that, but built another line; and there is also river navigation between these two cities. So that there are three lines of railways and the river between Ottawa and Montreal, and I suppose they all find trade. Then the Canadian Pacific Railway and the Grand Trunk between Montreal and Toronto are on the average only twenty-five miles apart, less than half the distance between the proposed railway and the Intercolonial. The Grand Trunk and the Canada Atlantic from Montreal to the Georgian bay are on the average sixty miles apart; the Canadian Pacific Railway and the Canadian Northern between Winnipeg and Port Arthur are on the average sixty miles apart; yet, these railways are not said to parallel one another.

It may be said, and it has been said, that the people of Prince Edward Island will get no benefit whatever from the building of this railway; but I have this to say, that the province of Prince Edward Island is an integral part of the Dominion of Canada, and the people of that island, if I understand them, and I think I do, are willing to pay their fair share of whatever is

required to provide the necessary public works throughout the Dominion of Canada for the development of the trade of the country, knowing and believing that their fellow-Canadians in the other provinces will give what is fair and reasonable to enable them at least to overcome the natural disadvantages and difficulties which are incidental to their insular position, and to provide the necessary public works in that province.

There are some things that we greatly require in Prince Edward Island, and I take this opportunity of presenting in a few words some of the needs of that province. At the time of confederation it was stipulated in the terms of union that we would have continuous and efficient steam communication, winter and summer, between Prince Edward Island and the mainland, and an efficient up-to-date telegraphic service. Well, Sir, reasonable efforts have been put forth to provide these requirements in the past; but I must say that these stipulations have not been carried out in their entirety. We are not unreasonable in our demands. What we require now is a third winter steamer. Our trade has grown so fast and I am sure the members from the other provinces will be glad to hear that the development of Prince Edward Island is going on as rapidly as that of the other provinces of the Dominion; so that where a few years ago we required only two steamers to accommodate our trade we now require three. The cost of a third steamer will not be large, and she could be used in the fishery protective service in the summer, and for communication between the island and the mainland in the winter. We have been demanding improved telegraphic communication for several years. Our present telegraphic service is open only twelve hours out of the twenty-four on week days, and is closed every Sunday. In that respect we are a very exemplary people. And it costs one hundred per cent more to send a telegram to or from the island than it does on the mainland. These are grievances that ought to be removed and removed quickly; and while we are willing to contribute our fair share to the construction of public works necessary for the development of the other provinces, we ask our brother Canadians in those provinces to contribute sufficiently to overcome these difficulties to which I have referred and which are incidental to our insular position. In addition we require a few more miles of railway accommodation in order to carry on our business, and I would impress on hon. members, what many of them do not seem to know, that the people of Prince Edward Island built and paid for their own railway at the time of confederation. Consequently, when we are contributing to the construction of railways in the other provinces we have a claim on them for reasonable railway accommodation in our own.

But will the building of the Grand Trunk Pacific be of any direct advantage to the farmers of Prince Edward Island? I believe it will. It will certainly develop the coal, iron and steel business of Nova Scotia such as nothing else could do. We know how valuable the markets of Sydney and other towns of Nova Scotia have been to our farmers during the last few years. We know that anything which will build up the towns and cities of Nova Scotia and New Brunswick and thus provide a market for the products of Prince Edward Island, will be of the greatest advantage to the farmers of that island. The larger markets which will be given to us in Nova Scotia, Cape Breton and New Brunswick, by the construction of this railway, will repay us three or four times at least our contribution towards its construction. These are the chief reasons why this project appeals to my support.

The leader of the opposition last night laid before this House an alternative proposition. He proposed to extend the Intercolonial to Georgian Bay or to purchase the Canada Atlantic Railway and then build from Georgian Bay to Sudbury. He proposed also to acquire by purchase the Canadian Pacific Railway from North Bay to Fort William, and to spend large sums on the improvement of the Canadian Pacific Railway from Fort William to Winnipeg and on improvement of the Canadian Northern from Fort William to Winnipeg. He did not tell us, nor has any gentleman opposite told us, what all this would cost; but in my judgment it would cost at least as much as this transcontinental line. To improve the Canadian Pacific Railway, its grades and curves, from North Bay to Fort William, would certainly cost a large sum of money. To buy the Canadian Northern Railway to Parry Sound or Geogian Bay would cost a heavy sum. The country to Sudbury is said to be a very difficult one to build through and very expensive. But even when that would be all done, we would have no more railway transportation facilities than we now possess. The facilities might be improved, but they would not be increased. But the hon. gentleman was not satisfied with that. He said he was in favour of building from Quebec to Winnipeg and from Quebec to Moncton. He was not afraid to spend money. In fact he was willing to promise anything and only invited the people to ask for whatever they wanted. He was going to improve the docks and terminal facilities at Halifax, make Montreal a free port, improve the harbour facilities at Quebec, and in fact all along the lakes. I have no doubt it would take $300,000,000 or $400,000,000 to carry out all the improvements which the leader of the opposition advocat-

ed last night, and as he unfolded his scheme, I could not help feeling compassion for the misery which the hon. member for East Grey (Mr. Sproule) must have suffered when he thought of his constituents and the mortgage that would be put upon them and the farmers of Ontario before half these improvements were carried out.

Mr. SPROULE. These improvements would be carried out for half the cost of the government undertaking.

The MINISTER OF CUSTOMS. Give us the figures.

Mr. HUGHES (King's, P.E.I.). I think my hon. friend will find out that I have not exaggerated. The scheme submitted by the government commends itself to my judgment. This proposed railway will extend from Moncton through the central part of New Brunswick and give railway accommodation and development to that province. It will extend along through the southern portion of Quebec. It will extend from Quebec westerly and northwesterly and through the northern part of the province of Ontario, opening up in that province great mineral wealth and giving access to valuable timber areas and rich agricultural lands. It will give depth to our country as well as length, and we will no longer be a fringe of settlement along the international boundary. It will provide a living band of men and women in that portion of country which is not now inhabited, that is between the east and the west, and extending on on to the Pacific coast. These are desirable things to accomplish and which cannot be accomplished in any other way.

But there is something else which commends this proposition to my approval. If the time should ever come—and it will not come through any fault of ours—when we may have to stand shoulder to shoulder in defence of our country, our institutions and our laws, think what a sense of security this continental railway extending from the impregnable fortress of Quebec in the east to a fortified fort on the Pacific ocean, will give us. Our troops could be easily transferred from the west to the east or from the east to the west and placed at any intermediate point where danger might threaten. Should that day ever come, is there a man in Canada who would begrudge this contribution of 15 cents a year for fourteen years for the power and security which such a line of communication would afford ? Mr. Speaker, the people of cities yet unbuilt will rise up to do honour to the men who had the ability to conceive and the courage to carry through, in spite of the opposition of friend and foe, this great national undertaking, an undertaking which will do much to make of Canada a nation among the nations of the earth.

Mr. W. H. BENNETT (East Simcoe). I move the adjournment of the debate.

The MINISTER OF MILITIA AND DEFENCE (Hon. Sir Frederick Borden). It it only eleven o'clock, and it seems to me we ought to go on.

Mr. GEORGE TAYLOR (South Leeds). Hon. gentlemen on that side of the House, two or three times since this debate commenced, have asked for an early adjournment. We have been running pretty late for some time, and I think the government might consent to the adjournment now. I do not think it would prolong the debate if we adjourned.

The MINISTER OF MILITIA AND DEFENCE. I would suggest that the hon. gentleman (Mr. Bennett) might go on, as has been done by other hon. gentlemen, deliver part of his speech, and finish tomorrow.

Mr. BENNETT. Mr. Speaker, when, towards the latter part of 1902, it was announced in the public press of the province of Ontario that certain gentlemen were about to undertake the construction of a transcontinental line, that announcement was hailed with considerable pleasure by people of the Dominion generally. We all had faith in the future greatness of the country and felt that a second transcontinental railway was not only a desirable project in the interests of the Dominion, but one that would probably be a remunerative undertaking to those who projected it. The announcement made at that time was a business proposition. And forthwith the Grand Trunk Railway Company, which really stood as a sponsor for the undertaking, caused to be circulated among the business men of this country a book called 'Facts concerning the Grand Trunk Pacific Railway.' At the same time they caused to be circulated throughout the Dominion a map showing where the projected line of railway was to run. And when one looks back over those six months, it seems impossible to reconcile the proposition now before parliament with the proposition announced by these gentlemen. A few words from this book issued by the Grand Trunk Pacific Railway will show what the proposition was which they had in view at that time. I quote from page 2 of this book :

> The proposed Grand Trunk Pacific Railway, which will extend from Quebec to the Pacific coast by way of North Bay, the present junction of the Grand Trunk Railway, a distance of about 3,025 miles.

So, it is plain from the prospectus that there was no intention on the part of these gentlemen, no thought present to their minds, of building from a point further east than North Bay in the province of Ontario. Further than that, in the maps that were issued by these parties at the time, it was plainly shown that the construction was to

commence at North Bay. The public will naturally wonder why, after the lapse of two or three months such a striking departure has been made from the original scheme. A reference to the 'Canadian Gazette' of that time—the original notice, I think was given about the 15th of December—shows that it was to be built from North Bay to the Pacific ocean, with branches to Winnipeg and Calgary. There is a little history concerning the change of base by these parties, and I am going to refer to it briefly.

Some year or two ago, there was granted by the parliament of Canada a charter to certain gentlemen of the city of Quebec for what was known as the Trans-Canada railway. That was a railway that was to run from the city of Quebec westward away to the north of Lake Winnipeg and through to the Pacific coast. After that charter had been issued, the proposition known as the Grand Trunk Pacific Railway came up. So, the government were face to face with a difficulty. They had a proposition with the large backing that was behind the Grand Trunk Pacific Railway, not only the magnates of the Grand Trunk, but such men, high in the councils of the Liberal party, as Senators Cox and Gibson. The government were alive to the fact that if these two charters were to be gone on with, they would have to face two gigantic railway subsidies. What were they to do ? At once, efforts were made to bring the parties together and head off either one railway or the other. Of course, it would be utterly impossible to do away with Senators Cox and Gibson, owing to the great power they have with this government. A gentleman who is a member of the government from the province of Ontario saw at once the position in which the government would be placed. One subsidy was bad enough, but what was to be done if two railway subsidies had to be paid to two distinct corporations ? The month of December went by. The application of the Grand Trunk Pacific was in, and it was well understood that the granting of a charter would be followed by a demand for a subsidy. A charter had already been granted to the Trans-Canadian people, and, of course they would make application to parliament for a subsidy. One must cast his eye over the situation in the province of Quebec to see the strong position held by the Trans-Canada people. We have all seen what has been going on for the last six or seven years in the city of Montreal. Thanks to the ex-Minister of Public Works (Hon. Mr. Tarte) great works have been going on in the harbour of that city with a view of attracting and handling the transportation traffic of this continent. Now, I would recall to the minds of hon. members the fact that two years ago the members of this House and of the Senate were treated in the most royal manner in the city of Quebec by the city council and the board of trade there. On that occasion, at a magnificent banquet that was tendered to us, it was pointed out that the great city of Quebec was being side-tracked. We were told that the Great Northern and Canada Atlantic Railway systems, by an arrangement, had succeeded in attracting a large portion of the grain trade to that port. And it was an open secret that the people of the city were loud in complaints, that the Premier, representing one of the constituencies of the city of Quebec and the Minister of Justice (Hon. Mr. Fitzpatrick) representing the county of Quebec had not been able to prevail upon the government to secure any desirable improvements in the port of Quebec, but that all the improvements were being made in the port of Montreal, and that the whole trade was tending in that direction. Plainly, if things were to continue as they then were, the city of Quebec would be left in the background, to the great advantage of the city of Montreal. The Postmaster General (Hon. Sir William Mulock) knew full well that the Trans-Canada charter had been granted and that the Premier and the Minister of Justice would not stand idly by—dare not stand idly by—nor would the other members from the Quebec district remain quiet, and see the Trans-Canada railway charter left without being supplemented with a subsidy. The Postmaster General saw the dilemma—two applications for subsidies, one on behalf of the Grand Trunk Pacific and one on behalf of the Trans-Canada. And the Postmaster General thought he would come to the front, and so on March 24, at a banquet tendered in Toronto at which the Postmaster General spoke he saw the necessity of breaking the ice in order that the government might at once be placed in a position to bring these two rival companies to an arrangement. Speaking in Toronto on that occasion the Postmaster General who had been discussing at that time that question of transportation generally in the Dominion of Canada said as reported in the Toronto 'News':

> For example, were a railway to be built direct between Winnipeg and Quebec city, the latter would be within less than 1,300 miles of Winnipeg, as against Portland's over 1,700 miles. Boston's nearly 1,800 miles and New York's 1,900 miles. We have also a corresponding shorter ocean distance to Great Britain.

Further on he said, and this was the point at which the Postmaster General desired to make himself solid with the public, and more particularly with the province of Ontario :

> Public opinion to-day appears to be more or less against subsidizing railways. Is there any prospect of capitalists out of their own capital alone building a line over the thousand miles of country to which I have alluded, which for many a year will fail to supply any reasonable return on the capital invested ? Capitalists are

not philanthropists, but expect a return upon their investments. Shall we proceed to subsidize the various railways that are now proposing to extend their lines to Manitoba ? Shall the country extend the Intercolonial Railway, say, from Quebec to the Pacific Ocean, not only investing the capital involved in the work itself, but also operating the line, or shall we simply build a railway highway available under proper regulations, as would be a canal. for the traffic of all railways between Manitoba and, say, the city of Quebec, with its branch connections with intermediate provinces, or shall we fold our arms, shrink from discharging our proper responsibilities, and let the country drift ?

There are those who, forgetting that the progressive Canada of to-day is not the old, unprogressive Canada of half-a-dozen years ago, think her affairs can be managed now as then. There are others who, for party purposes, would paralyse our action by endeavouring to deter us from having the courage to meet the altered conditions of to-day. Neither of these classes, I think, represents true Canada. There is a third, a more broad-minded, progressive, enterprising and patriotic section of the people, an 'Onward Canada' party in effect, who, recognizing the unparalleled progress our country is making to-day, demand that, instead of deterring the movement by inaction, we should take occasion by the hand, and wisely and masterfully grapple with, and if possible successfully solve, the problems growing out of Canada's great and unprecedented development.

A Serious Problem.

One of the most serious of these problems is the railway question to which I have alluded. The wise solution of this problem as, for example, by direct railway connection between Manitoba and Quebec city, means much for Canada.

Now, Sir, what was plain ? It was plain that the Postmaster General saw the dilemma facing the government, the Trans-Canada Railway Company with its powerful influence which would be exerted in its behalf demanding a subsidy, and the company headed by Senator Cox and Senator Gibson. The Postmaster General at once rushed into the foreground with his idea of putting both of these railways to one side if possible, and at all events if not putting both, at least putting one of them to one side. Then what happened ? That was the position of matters until parliament met, and when parliament met the Grand Trunk Pacific Company came along with their notice and asked then that a charter should be granted them in the terms upon which they had originally applied, namely from North Bay and North Bay alone, as the eastern point to the Pacific coast. We all know what happened in the Railway Committee, when the committee met about the 8th of May, Sir Charles Rivers-Wilson and Mr. Charles M. Hays were present as representing the Grand Trunk Pacific Company, and then, not to the amazement of hon. gentlemen in this House, because it was pretty well known to what extent matters had gone, the company at once threw up their hands and said : 'We have changed our plans, we are not going to build a railway to North Bay, but we intend to make our eastern point exactly what the Postmaster General said it would be, namely, the city of Quebec.' What happened then ? There was the dilemma hon. gentlemen had to meet with their party friends, the maritime province men up in arms one and all. We all remember the hon. member for Westmoreland and the hon. member for Cumberland as they each in turn addressed Sir Rivers-Wilson and Mr. Hays, and what was the result ? Sir Rivers-Wilson and Mr. Hays both made the positive and distinct statements that the railway would not go beyond Quebec, and the hon. member for Queen's, N.B. asked, 'Why stop at Quebec,' to which Sir Charles Rivers-Wilson answered : 'We have an agreemen with the government for the maritime ports of St. John and Halifax, and I think that answers the question.' The answer there, no doubt, referred to the arrangement that existed between the Intercolonial Railway and the Grand Trunk Railway. Further on the hon. member for Cumberland asked if they would build to the maritime provinces. Mr. Hays' answer to that was most emphatic : 'We will certainly not build there.'

Mr. BROCK. And they will not either.

Mr. BENNETT. Here was the party confronted with the dilemma that their maritime province members were to go on strike unless the government came down from their perch, and agreed to meet the wishes of their supporters from every part of the Dominion. There cannot be a doubt that as a business proposition the Grand Trunk never intended to build east of North Bay, but were driven into that by their supporters from Quebec, and after their supporters from the province of Quebec had succeeded in driving them to build it to the city of Quebec then, pleased with the prospect of what could be done by driving, the maritime province men followed suit, and the result is that to-day the people of Canada are being saddled with what was very properly termed by the ex-Minister of Railways and Canals a political railway, and not a practical railway or a business railway at all.

So much, Sir, for the inception of the road, and the position it has reached to-day. We need not here go into this fact that at about that time, when the Bill was before the committee, the government had not succeeded in dragooning the Ontario ministers into accepting the Moncton proposition. It is a notorious fact that it was only at the point of the pistol that the ministers from Ontario were driven into this arrangement, and I believe to-day that the clause that exists in the contract that parliament can at any time stop the work at this end, was the last peg upon which the ministers from Ontario are hanging their caps to-day, and that there is no intention on the part

of the government ever to build one mile east of Quebec. I say that the Minister of Customs and the Postmaster General, when they go into the campaign this fall which was announced by the hon. member for South Wellington to-day, would be held this fall, I say that every one of their ministers will pin his faith to that clause and point out to the province of Ontario that that contract contains a clause that they need not build eastward from Quebec at all, but that parliament will have the right and have the power to stop the construction of the work from that point at any time.

Now this debate was opened by the Prime Minister, and that hon. gentleman made a very lengthy speech, a speech that is being franked not by thousands, but by thousands of tens of thousands, into every province from end to end of the Dominion, and I hope and trust that a great many of them may be sent into East Simcoe. I haven't much to say about that speech, but I shall do it the courtesy of referring to it at greater length than his followers have done to-day. We may take the speech and read it under its different heads. A great part of it is devoted to the fact that this is to be an all-Canadian route, and that Canada must have an all-Canadian route. There is not the humblest back bencher on the government side who will rise and repeat his language in that regard, because it has been exploded. Every one knows and every school boy knows that there is a Canadian system of railways irrespective of this one, from end to end of the Dominion, and no single word has been heard and no single word will be heard further in this debate as to the question of an all-Canadian railroad, and as to the filling of that long desired want.

The next point in it was the bonding privileges and to-day we heard two or three gentlemen on that side of the House, and not a single one of them has mentioned the bonding privileges. There is no hon. gentleman on the other side of the House, who when he rises in his place, and I am sure no minister who speaks on this question from this on, will urge as a reason for the construction of this railway the necessity of preserving ourselves in such a position that there may be no abrogation of the bonding privilege on the part of the United States of America. Now, the fact of the matter is that the government has been driven from pillar to post on this question. In the first place the influences of Senator Cox were so great that they had to bow to them. In the next place, the influence of Trans-Canada Railway Company were so great that they had to bow to these also, and being met, as they would be met, with requests for two subsidies by these two rival roads, when they found themselves able to deal with only one, the hon. Postmaster General (Hon. Sir William Mulock), and I congratulate the hon. gentleman, that for once he has had his way, apparently has driven the government into this scheme for the construction of a part of this railway system, and as a result the Dominion of Canada is in the position in which it finds itself placed to-day. We have heard from the other side of the House some very lengthy speeches, and all of them have been tinged with one thing and one thing in particular. The ministers have seen fit not to abuse the hon. ex-Minister of Railways and Canals, and so they have delegated that work to the back-benchers and each little back-bencher seems to think it incumbent upon himself to say everything he can of an abusive nature of the hon. ex-Minister of Railways and Canals. Abuse is all very well in its way but the people of this Dominion want something else than abuse. They want argument, and I can tell hon. gentlemen opposite that abuse and vituperation of the hon. ex-Minister of Railways and Canals are not going to raise them in the estimation either in the people of this country or of the members of this House. Sir, common gratitude should prompt some of these hon. gentlemen to speak in a proper manner of the hon. ex-Minister of Railways and Canals. Can any one imagine that the hon. member for Hants (Mr. Russell) three months ago would have risen in his place and told the great big ex-Minister of Railways and Canals that he was not fit to untie the shoes of the right hon. Premier ? I can only fancy this, that if the hon. member for Hants had said that the hon. ex-Minister of Railways and Canals would have at once propounded this question : If I am not fit to unloose the latchet of the shoes of the right hon. Prime Minister of this Dominion, in the name of all that is good what menial service should the hon. member for Hants perform for that great man ?

Now, Sir, there has been a great deal said in the public press on this question and more particularly in the independent press of this country. I am going to quote some of the statements that have been published. Nobody expected to see the 'Globe' newspaper go up against this proposition. Who could imagine, in the name of all that is good, that the 'Globe' would say one word disparaging of it ? Who could imagine that the 'Globe,' after having seen the Crow's Nest deal through, the greatest iniquity that this government has ever perpetrated in the interests of the 'Globe,' could for a moment rise up and try to beat from the public gaze this great proposition of Senator Cox ? We will take the 'Farmers' Sun,' which is a pretty good paper. The 'Farmers' Sun' says in a recent issue :

> There is no justification for imposing such a burden on the farmers of Ontario and the west. They have grain to sell. They must sell it in Britain. Nothing could be more natural nor more profitable than that they should seek their market by the cheapest route.

And then we find that the government has

been unfortunate in this, that while it has the able assistance of the 'Globe' newspaper in perpetrating any scheme upon the public, unfortunately it is not always able to control the Montreal 'Witness,' and the 'Witness' says :

Curiously enough nothing is said about these branch lines in the contract, or has been announced concerning them. Yet these three are all obvious necessities. The one to Fort William would carry more freight than the main line as most of the grain will still cross the lakes by water. That to Montreal would make Portland as tempting a port as it now is to the present Grand Trunk Railway system, there being a constant tendency to take to the water as soon as possible.

Well, that seems to be different from the government, because most of the members of the government have taken to the woods and the hon. member for Hants, if all reports are true, is to have a judgeship at an early day as a reward for holding a brief in defence of this iniquitous proposition. The great question as affecting this proposition to-day is the question of the railway haul of the vast products of the west. Last fall I had great pleasure in visiting the province of Manitoba and a good portion of the North-west Territories, and any hon. member of this House who may journey to the west to see that great country must be struck with the unlimited possibilities of its resources. One of the needs, and it seems to me the growing need, if one can listen to what is said by the settlers, is more railway accommodation for the country. What particularly strikes one in listening to their complaints, is that they do not complain so much of the absence of railway systems but rather of the fact that there has been a congestion of trade due to the fact that they did not have a sufficient number of cars or sufficient amount of locomotive power. To-day the question in the west, as far as we can see and as far as all can see, is the question of getting the crop out to the seaboard in the quickest possible way, and also at the least possible rate. In all lines of business and in all walks of life the success of those engaged in similar undertakings should afford a guide and criterion for others, if we look to the western trade of the United States what is the lesson taught by it ? Go to the north-western states, to Dakota, Minnesota, and all that line of north-western states, go to Illinois, and the states that lie west and south of Chicago, and you will find this fact that with all their large railway accommodation in that country the grain is not carried from the west to the east by the all-rail route but it is carried by a mixed system of water and rail, and therefore I say that to-day in Canada it has been demonstrated that the proper way of bringing out the grain from the North-west is to pursue the system which is being pursued by the people of the United States. We have that very system in this country in carrying grain from the west to the east. I recall to mind, which is in the history of the last parliament, because it was the subject of a debate in this House, that upon one occasion the hon. ex-Minister of Railways and Canals attempted to carry 300,000 bushels of grain to St. John from the North-west. What was the result ? That grain was brought from points in the north shore of Lake Superior to Parry Sound, it was taken down over the Canada Atlantic Railway, the Great Northern Railway and the Intercolonial Railway to St. John, and the result of the carriage of that grain for that long distance was that there was a loss of $10,000 on one cargo of 300,000 bushels. If it is a fact that on one single cargo, because that amount would only make up the cargo of one of the large freighters on the great lakes, there was a loss of $10,000, how is it possible to carry grain from the far west to the east over a long grain haul, and in the case to which I have referred it was not as long a grain haul as it would be in the case of the Grand Trunk Pacific, because the grain was put into the cars at Parry Sound ? If this project is ever to go into effect, how is it possible to carry grain over this long haul from the west to St. John or Halifax ? The people of Canada to-day have in St. John and Halifax large grain elevators, and it is a notorious fact that although the Halifax elevator cost this country some hundreds of thousands of dollars not a single bushel of grain has ever been passed through it.

As to the St. John elevator, I do not think it ever held a bushel of grain outside of these 300,000 bushels. In the face of this experience the government tell us that they are going to turn the whole tide of transportation, and carry grain by rail over this immense distance from the prairies along the north shore of Lake Superior, and clear through to the tidewater of the Atlantic. Let me call the attention of the House to this fact. Toledo is only 250 miles from Buffalo, and yet they carried by rail last year about 7,000,000 bushels of grain to Toledo and there transferred it to vessels and took it to Buffalo. That proves beyond all doubt that there can only be a successful grain carrying trade on this continent by water and by rail. From Chicago to New York the distance is 950 miles, taking the average of the different railway systems connecting the two cities, but only a trifling quantity of grain is carried by all-rail between these two points and that only during the winter season. Last year's report of the Buffalo Merchants' Exchange shows that Buffalo received the immense quantity of 124,626,434 bushels of grain, and of grain reduced to flour 60,133,080 bushels, representing the total receipts at Buffalo, 184,759,518 bushels for the year. This shows that the people of the United States have made a success of the grain carrying business. I regret to say that in

this quantity of grain sent to Buffalo it embraces not only United States grown wheat, but 10,648,865 bushels of wheat from Fort William, and 542,000 bushels from Port Arthur.

This transportation question is not new to the government or to this parliament. I myself had the honour of moving two or three resolutions asking that the government should deal with it in a business-like way, but I was always met with the answer that we were going to rely on our mixed system of transportation by lake by rail and by canal. We have the opinions of masters of transportation in this country as to how grain should be carried from the west to the east. Sir Wm. Van Horne recently stated in the city of Toronto, that the long haul around the great lakes was dreaded because it was unprofitable, and that the bulk of the grain brought by that route was carried in the winter months and used by the millers in Ontario to keep their mills going during the cold season. Let us assume that the output of Manitoba and the North-west last year was 40,000,000 or 45,000,000 bushels of grain, and Sir Wm. Van Horne's statement is demonstrated to be correct when we find that only 2,500,000 bushels of that was carried by rail around the shores of Lake Superior. Mr. Robert Meighen, president of the Lake of the Woods Milling Company, has given this opinion :

> We want low-grade, double-track railways from the Georgian bay ports to Montreal. When this is accomplished you will freight wheat across the lake from Fort William to Georgian bay ports for one cent, and from there to Montreal for three and a half cents, or less, per bushel winter and summer. Do not forget that our canals are closed for six months of the year.

The opinion of those competent judges is that we have in Canada to-day a system for the carriage of grain which if we could only utilize it would bring the most successful results. The lake ports on the Georgian bay have a most decided advantage over Buffalo, from the fact that vessels plying to Midland and Parry Harbour can make three trips in the same time that they make only two trips to Buffalo.

Hon. Mr. TARTE. Hear, hear.

Mr. BENNETT. That is an immense advantage in the fall of the year. There are vessels plying on the great lakes, and we have seen some of them in Midland, which carry 250,000 bushels of wheat, and assuming that the rate in the fall of the year is two cents per bushel—and I have often seen it higher—a vessel will make $5,000 more in freight because of the additional trip which it can make to a Georgian bay port than if she were plying to Buffalo. And yet we are told by gentlemen opposite that the experience of the United States is to be brushed aside and, that the lake route is not to be utilized, because forsooth the Minister of the Interior quoted some figures here which were not substantiated by fact, and which are not figures that would be endorsed by men who know the business. Let me tell the House that the carrying trade which we have established on the Georgian bay is only to-day in its infancy. Last fall an arrangement was spoken of and was about to be put into force between the Canadian Pacific Railway and the Grand Trunk Railway, which would have resulted in millions and millions of bushels of grain being carried from Midland to Peterborough by the Canadian Pacific Railway and thence east, and carried by the Grand Trunk Railway to Belleville, and from that point to Montreal. That arrangement was a joint user of what is known as the Midland division of the Grand Trunk Railway by these two rival railroads. It has been argued in this House that there could not be a user of the Grand Trunk Pacific Railway by other companies, and it might be said that there could not be a user of the Midland division by the Canadian Pacific Railway, but the answer to that is that this piece of road is only about 90 miles long, and because of its shortness the difficulties could be overcome.

The MINISTER OF CUSTOMS. How many miles ?

Mr. BENNETT. Between 90 and 100.

Hon. Mr. TARTE. It is 100 miles.

Mr. BENNETT., It is not quite 100 miles, and if the road were straightened as contemplated, the distance would be decreased by ten miles. But even suppose it is 100 miles, if that arrangement had been carried out immense quantities of grain would have been carried over the line. Any one who passes over that portion of the Grand Trunk will see proof that the Grand Trunk Pacific Railway never intend to carry any grain by all-rail to the east, except, of course, the trifling quantity that might be taken out during the winter months. The Grand Trunk Railway are spending hundreds of thousands of dollars on the Midland division to-day, with the object of carrying their grain from Port Arthur or Fort William to Midland and thence to the east. Every one in Midland knows that even after this proposition was launched last fall, the Grand Trunk Railway owned every available foot of water frontage in that town for a distance of over two miles, and it is an open secret that the Grand Trunk Railway intend to send their grain trade to that point. What we want in this Dominion is a first-class outlet for our grain from the west, not by rail throughout, but to the head of the waters of Lake Superior.

The province of Ontario lately had the honour of a visit from Premier Roblin of the province of Manitoba, and what did he say ? I take it that anything coming from that gentleman should carry considerable

weight and authority. Premier Roblin has everything to gain by pointing out fairly and honestly the necessities and requirements of the west; it is not to be expected that he would come down to the province of Ontario and make statements which would be inimical to the interests of the people of Manitoba and the North-west; and the whole tenor of the statements made was that any congestion of trade in the west happened between Winnipeg and the head of the lakes, and that the great and pressing necessity in the west to-day was for more railway equipment and an easier and better passage for grain to the head of the lakes.

It has been urged by the government that very prompt action should be taken on this question. I need not repeat what have been termed the hysterical remarks of the Premier as to the necessity of haste. Why, Sir, what do we see ? We see this government lying dormant, not moving its hand, for six years. What were they doing ? Taking up the ends of the canal system which had been left as a legacy by the late government, and from time to time effecting improvements upon them. Beyond that this government has not lifted its hand. It could have gone to the Grand Trunk or to the Canada Atlantic Railway people, and, by perhaps offering a bonus for the carriage of grain when it reached a large amount, they might have diverted a large part of the grain trade now going to Buffalo, both that of Canada and that of the United States. But this government have stood still; they have done practically nothing for the last six years. And now at once we hear these hysterical screeches, without any surveys being made or any reports being had, to the effect that this country must be plunged into an expenditure ranging anywhere from $100,000,000 to $150,000,000 for the construction of this railway. And through what part of the country is it to run ? There has not been laid on the Table of this House the report of a single engineer who has ever gone over that territory. We have heard reports from missionaries and from other gentlemen who have seen parts of that country; but in the prospectus issued by the Grand Trunk Pacific Company itself the following language is used with reference to this very country :

> The unanimous report of all explorers who have travelled over the territory north of the Georgian bay and Lake Superior, is to the effect that it will not in the immediate future furnish business sufficient to support a railway, and it would not, therefore, be a business proposition to build one there, it was used as a link to reach the more fertile lands of Manitoba and the North-west ; the mileage through the unproductive section is estimated as 1,000.

There is the prospectus of the Grand Trunk Pacific Company condemning the very territory that is to be traversed by this railway. In the face of this fact, should not the government, before they plunge the country into this enormous expenditure, do one of two things—either submit to parliament next session or in a subsequent session a full and complete survey of that country, or, as they are going to the country this fall, after passing this Bill, if they can pass it, go to the country, and we challenge them to do so, on this very question. Speaking for myself I have rather a hard constituency; but I tell the hon. gentlemen on the treasury benches that as they are going to the country this fall, it would be more manly and more fair to the people of Canada, before they manacle them and tie them down with this immense debt around their necks, to give them a chance to say whether they will accept it or not of their own free will. But the government know that they would be hazarding too much on that throw of the dice; and therefore they propose to pass the Bill as it is, and then go to their party friends and say to them : What is the use of turning us out ? The contract is executed, the bonds are signed; if the Conservative party come into power, they cannot upset what has been done. That is the position these hon. gentlemen are in.

With regard to the canal system of this country, on which we have spent an enormous sum of money, why do the government not insist on the people of this country recognizing that the future transportation trade of the country should be done by the Georgian Bay and the connecting railways to the east ? They have certainly at all times led them to believe that our canal system was to be the solution of the transportation question, not only for the Dominion of Canada, but for a great portion of the western states. Already we have expended some $70,000,000 on that canal system, and I am gratified to be able to say that by the removal of the tolls this year, a greater quantity of grain has gone to the city of Kingston than in any previous year, and that a greater quantity has gone down the St. Lawrence system than ever before, and I think twice as much as went up to this time last year. So keen has the competition been that the fact is advertised that grain is being carried from the head of Lake Superior clear through to the port of Montreal for four cents a bushel. That is cheap transportation. When hon. gentlemen on the treasury benches have been from time to time consulted by the representatives in this House as to what their stand was on the question of transportation, what has been their answer ? I am going to quote from the hon. ex-Minister of Railways and Canals (Hon. Mr. Blair) as reported in 'Hansard' of 1901, at page 1,106. That hon. gentleman said :

> It may be three or four or five years before we get into full swing, but there is no doubt, in my mind, that the improvements which are in contemplation at Port Colborne, properly and efficiently carried out, and in the harbour of Montreal and the route perhaps below, will

make the St. Lawrence superior to any other route.

What have we done since that time? We have loaned to the harbour commissioners of Montreal vast sums, which have been expended on that harbour on the strength of the assurance of the government that the canal system would be perfected. On the strength of the expenditure of millions of dollars there, we have gone further. What have we done? You, Mr. Chairman (Mr. Archibald Campbell), I believe, are a member of a company which, with laudable energy and commendable enterprise, is seizing the occasion to construct elevators at Port Colborne. I congratulate you upon your energy, and I hope and trust that your best expectations will be realized. What is the calculation at present? We are unable to take past Port Colborne boats carrying over 70,000 bushels. We have already expended upwards of $3,000,000 at Port Colborne—for what purpose? To construct there a huge harbour, dredge it to a great depth, and construct great docks on which it is intended that capitalists shall build elevators. It is expected that vessels carrying 300,000 bushels of grain can land at the docks and deliver their grain to the elevators, where in turn it will be delivered to smaller boats, which will carry it through the canals and the St. Lawrence river to Montreal or Quebec. But these hon. gentlemen tell the enterprising vesselmen of this country that they are going to place before the public of Canada a transportation scheme that is to put all others into the background. They are going to raise in this country a spirit of disquiet and unrest among men who are proposing to go into the grain carrying business. Further on the hon. ex-Minister of Railways and Canals said this:

> We will see with Montreal properly equipped that there will be no reason in the world why shippers should not prefer the St. Lawrence to any other route.

Yesterday, in the course of the debate, some hon. gentleman quoted the Minister of Agriculture as having last year, in the debate on the motion of my hon. friend from North Perth (Mr. McLaren), in reference to transportation, practically made use of the very words of the then Minister of Railways and Canals, and endorsed in its entirety the canal system of Canada. But on the assurance thus given, these hon. gentlemen went through the country and defended the expenditure of these millions at Port Colborne and these hundreds of thousands on the St. Lawrence canal system. Let me read what the Postmaster General said at the city of Hamilton on the 26th of September last:

> As you know, the task of providing a sufficient and adequate water route from the gulf of the St. Lawrence to the upper lakes is no easy one, but from the moment of our accession to office until this date, it has been continuously prosecuted with all possible speed. When we shall have completed the improvements at Port Colborne next spring, we shall have made that port a safe harbour where grain can be received and shipped to our maritime ports.

Yet this hon. gentleman was forced to come to this parliament and say that all these predictions as to the carrying trade by the St. Lawrence canals and the mixed trade of the upper lakes by rail and water were things of the past.

During the course of this debate we have heard some very wonderful statements as to the cost of this railway. The last gentleman who resumed his seat (Mr. Hughes) said that the cost would be 15 cents per head during fourteen years for every person in the country, and had time only permitted, I have no doubt he would have been able to show that instead of our taxpayers having to pay anything, every one of them would receive a bonus from the construction of this road. We had first the statement of the Prime Minister that the cost would be $13,000,000. That statement nobody has since repeated. Nobody will do the right hon. gentleman the honour of repeating the statement made by him. The hon. member for South Wellington (Mr. Guthrie) would rather trust himself to the fickle member for North Norfolk (Mr. Charlton) than to the First Minister. But those who have trusted the hon. member for North Norfolk in the past know what a broken reed he is for any one to lean upon.

What is to be the actual cost of the railway? We heard a few days ago the statement of the ex-Minister of Railways and Canals, and I have heard so many conflicting statements in this regard that I thought, in order to be up to the times, I would make an estimate myself. This is the estimate which I propose to submit to my electors when I shall next have the pleasure of meeting them. What will be the actual cost of this railway? From Wininpeg to Moncton, 1,800 miles, at $40,000 per mile, the cost will be $72,000,000. The interest during ten years at 3½ per cent will be $25,200,000. The difference between 3 and 3½ per cent, which we will have to pay for 40 years, will be $12,640,000. The mountain section will cost for interest on the bonds during ten years, $7,200,000, making a total of $117,040,000. I may say, in passing, that the estimate of the ex-Minister of Railways and Canals was, in round figures, about $120,000,000. When people contrast this estimate of the ex-minister with the figures of the hon. member for North Norfok, who makes the amount $70,000,000, they will ask why is there so much discrepancy? And they will further ask: How is it possible that the First Minister came to make the statement that this road was only going to cost the people $13,000,000? The argument will be this, that the $13,000,000 will be the interest to be paid on a certain amount; and as the government do not ask

that the Grand Trunk Railway shall pay the interest for a certain number of years, and will make that company a present of a certain amount of interest, the right hon. gentleman estimates that at $13,000,000. And in arriving at this result, he takes good care to make the cost of the road a very trifling amount. But there is something beyond this cost of $117,000,000 to $120,000,000. There is this fact, that there are certain endorsements to be made of the bonds of the Grand Trunk Pacific Railway, and people in the province of Ontario, particularly in the county of Simcoe, have an idea what the promises of the Grand Trunk Railway mean. The Grand Trunk Railway is a debtor to this country of millions unpaid. It is a debtor to the county of Simcoe of an amount which runs into several hundreds of thousands of dollars. That liability is hoary with age, no interest or principal having been paid upon it for the last forty years. Under this arrangement, we are going to guarantee millions, because on the prairie section we guarantee that we shall pay $9,000,000 interest if the Grand Trunk Pacific Railway do not pay it. There is something more. Under the terms of this contract we are bound to purchase the Quebec bridge, which means an expenditure of from $4,000,000 to $5,000,000, and we have got to settle with the Trans-Canada people. I know not what that may amount to, but it is only a matter of common honesty and fairness that this government should deal liberally with the Trans-Canada, seeing that they were in the field before the Grand Trunk Pacific Railway was ever known. Then there is the question of betterments, which means that during the tenure of this lease the betterments are to be made by the Dominion, and upon these I understand they are to pay interest. Add these together. Had we accepted the original proposition of the Grand Trunk Railway, we would have granted them, in all probability, a subsidy on the line from North Bay to Winnipeg, and then guaranteed their bonds, as the government did the bonds of the Mackenzie and Mann system. This country would pay out in cold cash $12,800,000 of subsidy, but we know where we stand. What is going to be the result of this scheme, as a business proposition, in other parts of the Dominion? First, we are to go down to the maritime provinces, where we have spent already $70,000,000 on the Intercolonial Railway, and we are to parallel that railway, and thus practically reduce it to a position of penury. We are going to put it to one side and make it useless. But there is not a word in this contract which will prevent the Grand Trunk Railway doing what they propose to do and what they are making arrangements at Midland to do, namely, to carry the grain from Midland on to Montreal and from Montreal to Portland. There is nothing in the contract to prevent their doing this. True there is a clause providing that they shall endeavour, as far as possible, to have grain routed to a Canadian port, but there is nothing in the contract to compel them to do it. Worse than that. Does any man in his senses believe that when this Bill passes and the Grand Trunk Railway are entitled to receive aid they will not at that very moment commence the western section? Why, the rails will be laid, and I hope they will, from Wininpeg on towards Edmonton, and what will be the result? I understand that in modern times rails have been laid at as high a rate as seven or eight miles a day, and even, as an hon. gentleman near me suggests, ten miles a day. So, next year we might expect to see a large portion of the Grand Trunk Pacific extended from Winnipeg westward. And when that system is extended it will garner its trade and carry it from the west to Winnipeg. Then it will be forced to do one of three things—take the traffic down under an arrangement with the Canadian Pacific Railway to Fort William; take it down under an arrangement with the Mackenzie and Mann road to Port Arthur, or make an arrangement with an American road and take it to Duluth. Or, either they or the government might build another line from Winnipeg to the head of Lake Superior. But there is nothing to compel them to abstain from building the road west, and, as the eastern section cannot be completed—nobody pretends it can be completed—within less than five or six years, the Grand Trunk Pacific will be free, if they please, to send the traffic through by way of Portland.

Now, this contract were it not such a serious matter, would be amusing. And in all this serious matter one wonders who has been the little joker in making up this contract. If ever there was contract abounding in silly propositions, this is that contract. We heard the Premier making the announcement with all his dramatic style that no senator or member of the House of Commons of Canada is to have a contract for the construction under this scheme. Whoever expected that any senator or member of this House would have a contract for construction work? Why it would be a violation of the Independence of Parliament Act. But there is nothing in the contract—and it would have been silly to insert it—to say that a senator or member of this House may not be a member of a construction company having a contract on this road. Need I refer to the clause respecting the purchase of supplies in Canada? It is not worth the paper it is written on, not worth the trouble it took to draft it. Then take the question of duties on imports. There is a feature of the contract which will bear heavily on our Canadian manufacturers, because it allows the importation of goods by this company free of duty so far as the government section is concerned.

I listened yesterday to the statement made by the leader of the opposition, and I must say that I believe that his policy will appeal more strongly to the people of the North-west and to the people of Canada generally than will the proposition that the government has laid before us. One great reason why it will command the favour of the people is that it does not plunge this country into such enormous expenditure. Why, Sir, whither are we drifting? To-day we have a public debt, in round numbers, of $275,000,000. We are going to add to that at one sweep about $125,000,000, making a total debt of $400,000,000, or, as has been calculated, about $125 for every head of a family.

Our position is that the Grand Trunk Pacific will not give an outlet for several years to come for the increased product of the north-western country. Settlers are going in there in large numbers. Last year 100,000 people went in, and we hope and trust that this will not be the limit, but that the number will increase very much. Yet the government must admit, and every man must admit, that this eastern section will not be finished in less than from five to eight years, so that in that time there will only be the two present outlets to the head of the lakes, the Canadian Pacific Railway and the Canadian Northern. The proposition of the leader of the opposition is to go to the very root of the difficulty. He proposes to expropriate either the Canadian Pacific or the Canadian Northern line between Winnipeg and the head of the lakes. Or, if neither of these can be done, let the government take the matter boldly in hand and build a road and thus control the situation between these two points. Let this road be under government ownership, and let it be used in common by all companies that wish to use it. But I believe that every sane man will shudder at the prospect of duplicating the railway system around Lake Superior and will demand that there should be a common user of that road not only by the Canadian Pacific and the Grand Trunk Pacific, but by the Mackenzie and Mann system as well. As to the route from Georgian Bay by the Canada Atlantic system, I have to say that that would not be as good a proposition as the acquisition of the Midland division of the Grand Trunk. If this government were to acquire the road from Midland to Peterborough and to the Grand Trunk main line, not only would they put Peterborough in immediate touch with the waters of Georgian Bay and with the main line, but they would put the Canadian Pacific in immediate touch with Georgian Bay, and these two would have a quick route from the waters of Georgian Bay to their main lines running eastward.

One of the strongest reasons for condemning this proposition of the government is that it is brought before us in the dying hours of the session. On so great a question, there should be no decision until the people have been consulted. It is utterly unfair to bind the country, in an important matter of this kind, without giving them a chance to speak. This government has announced to its friends in this House that they must be prepared to go before the people this fall. One of their supporters, inadvertently, no doubt, dropped a hint to-day to the effect that this fall the members of this House may expect to face the electors. I say, in view of that fact, it would be more honest, it would be more fair, not only to this generation but to generations to come, that before thrusting upon them the heavy responsibilities of the expenditure involved by this scheme, for the government should have the courage of its convictions, if it has convictions, and meet the people face to face. Let them meet their political opponents face to face. Let them throw down the gage of battle, and let that gage be whether the country is or is not to be saddled with this great debt for all time to come. Speaking as one on this side, I invite the hon. gentlemen to dissolve the House and go to the electors on this question, and, going to the country on this question, we are prepared to abide by that result.

On motion of Mr. Macpherson the debate was adjourned.

On motion of the Minister of Finance (Hon. W. S. Fielding) the House adjourned at 12.15 a.m., Thursday.

HOUSE OF COMMONS.

THURSDAY, August 20, 1903.

The SPEAKER took the Chair at Eleven o'clock.

QUESTIONS.

INTERCOLONIAL RAILWAY—PENSION SYSTEM.

Mr. GOURLEY—by Mr. Taylor—asked :

1. In what stage is the pension system promised by the Minister of Railways to the employees of the Intercolonial Railway last year, or the present year ?

2. Has the government the said pension system under consideration, or has it finally adopted such a system ?

3. Was a system of pensions or retiring allowances for the employees of the Intercolonial Railway drawn up by the officials at Moncton, and approved by the General Manager and the Minister of Railways, last year or the present year ?

4. Was such scheme or any scheme of pensions submitted to the government for approval ?

5. Has such scheme or any scheme been approved by the government ?

6. Will an Act be introduced this session to give effect to said system ?

The MINISTER OF FINANCE (Hon. W. S. Fielding). The question of the pension

fund for the Intercolonial Railway officials was under consideration of the government in the time of the late Minister of Railways, but no action was taken thereon, and the matter has not since been dealt with.

THE JAPANESE TARIFF.

Mr. CLARKE—by Mr. Taylor—asked :

1. What classes of goods and merchandise, the product of the United States, are admitted into Japan on more favourable terms than goods and merchandise of the same classes, the product of Canada ?

2. Have any steps been taken by the government of Canada, and if so, what steps, to secure for the products of Canada equally favourable treatment in the markets of Japan to that now enjoyed by the products of the United States ?

The MINISTER OF FINANCE. The Japanese tariff is what is called a double columned tariff ; one tariff being termed the General tariff and the other the Conventional tariff. Under the Conventional tariff lower rates are granted to such countries as have specific treaties with Japan. Canada is not one of these countries and consequently all the privileges of the Conventional tariff go to such countries as have treaties, but do not extend to Canada. The items in the tariff to which this applies are quite numerous, and I can only refer the hon. gentleman to the tariff itself which he can no doubt obtain on inquiry. One of the difficulties in the way of negotiating any treaty with Japan is, what is called, the favoured nation clause. We have had the matter under consideration, and negotiations of a confidential character have passed between the Canadian government and the government of Japan. The conditions require that if any treaty is made it shall contain what is called the favoured nation clause, which would oblige Japan to give to all other countries any privilege which she may grant to us and vice versa. As hon. gentlemen are aware, that creates some complications and interferes with our freedom, and for the present we have not been able to come to an understanding. The matter, however, is still under consideration.

FATAL ACCIDENTS ON CANADIAN RAILWAYS.

Mr. CLARKE—by Mr. Taylor—asked :

1. How many accidents involving loss of human life took place on the railways of Canada during the fiscal year ending 30th June, 1903 ?

2. How many human lives were lost in such accidents, or as a result of such accidents ?

3. Has the government yet appointed any official whose duty it shall be to make a full and exhaustive inquiry and report, on oath, into the circumstances attendant upon, and the causes which may have contributed to all railway accidents which occur in Canada, including the system by which the traffic of the railway is operated ; the speed the trains were moving when the accidents occurred ; the condition of track and rolling stock ; the hours which the train men, station agents, telegraph operators and other officials of the companies were on duty, in connection with the movement of trains to which accidents occurred ; the wages paid employees ; the sufficiency and qualification of the staff employed on the trains, and at the stations, telegraph offices, &c.

The MINISTER OF FINANCE (Hon. W. S. Fielding) :

1. As far as returns have been received, there were twenty-one accidents on railways in Canada involving loss of human life during the fiscal year ending June 30, 1903.

2. Lives lost in such accidents or as a result of such accidents, sixty-three.

3. No permanent appointment has been made.

THE NATIONAL TRANSCONTINENTAL RAILWAY.

House resumed adjourned debate on the motion of Sir Wilfrid Laurier for the House to go into Committee on a certain proposed resolution respecting the construction of a National Transcontinental Railway, and the motion of Mr. Puttee in amendment thereto.

Mr. R. G. MACPHERSON (Burrard.) Mr. Speaker. I shall not attempt to follow the argument of my good friend from East Simcoe (Mr. Bennett) as I wish to view this question from a standpoint entirely different from his. He spoke for his own province of Ontario ; I shall speak from the standpoint of the province of British Columbia.

I would not have taken part in this debate were it not that the hon the ex-Minister of Railways and Canals (Hon. Mr. Blair) made the statement in attempting to justify his action in resigning, that the province of British Columbia were not asking that a new transcontinental line be built and also that there is actually no hurry as far as the west is concerned that a new line be constructed. Either the hon. gentleman has a very short memory, or he could not have taken the Victoria board of trade seriously, when on the 8th day of October last year the following request was made to the hon. gentleman in his official capacity of Minister of Railways in the city of Victoria on the occasion of his visit to British Columbia last fall.

The board desire to place themselves on record as in favour of assistance being given to the C. N. R., so as to provide at as early a date as possible a second transcontinental line across British Columbia. They desire to point out that in view of the very rapid colonization of the prairie region, it necessarily calls for the provision of a new route whereby the grain there produced can readily reach the ocean.

Now, Sir, there is only one of two deductions to be drawn from the hon. minister's remarks—either his memory failed him, or he took the Victoria board of trade to be men who were not responsible for their actions, and then paid no heed to what

irresponsible people like the board of trade in one of our principal cities of the coast might say. From either deduction the hon. gentleman does not emerge with any great degree of credit to himself. In speaking on this question, I wish to speak entirely from a British Columbia standpoint, and point out to the House the great good which has accrued to British Columbia from the building of the Canadian Pacific Railway and building it through, possibly, the poorest part of our province. Striking into our province at the Kicking Horse pass, it finds its way through the Rocky Mountains following the valley of the Columbia river, then passing through Eagle pass it strikes the head waters of the Shuswap lake and strikes the South Thompson river valley, and following down through the valley of the Thompson until it strikes the Fraser at Lytton and from there down to the tidal waters of Burrard inlet. It found little to entice the imagination outside the grandeur of the mountain scenery And we all know that scenery will not fill the pockets nor will it suffice to stay the appetite. However, I wish to show the House what has been accomplished by the construction of the great Canadian Pacific Railway.

Prior to the advent of this railway, British Columbia was a country isolated from eastern Canada, having nothing in common other than devotion to the old flag and yielding homage to the same sovereign. It was a country which, from its isolation, had no natural national aspirations. But its people were men of courage and determination in that small and isolated community, and they recognized the great future of British Columbia if it could only get a railroad carried through connecting the eastern part of Canada with the west. The building of the Canadian Pacific Railway has made what was once the fishing hamlet of New Westminster a large, thriving commercial and populous city. It made a new province for Canada, one of the brightest gems in the Crown of confederation. It made the men who, while proud to say that they are British Columbians, still prouder to say they are Canadians. It made what was in 1883 a primeval forest into our present great city of Vancouver. It made it possible where 20 years ago stood only the Douglas fir and the British Columbia cedar, that a city of 35,000 people live to-day. Where not one dollar of customs revenue was collected 20 years ago, where the past year the sum of $1,388,709 was collected. It made possible, where banks were unknown, where to-day stand six of the leading banking institutions of Canada. Where bank clearances were unknown, to where during the first six months of the present year the clearances amounted to nearly 29 million dollars. It made the great seaport of Vancouver and created what last year was the fourth largest port for customs collections in the Dominion Where ships were unknown practically 20 years ago, to-day in the harbour of Vancouver boats flying almost every maritime flag in the world can be seen loading and unloading. It has made and created a new trade with the Orient. It made and created a new trade with Australia and New Zealand. It has made and created a new trade with the United States. It made and created a new province whose inhabitants are a happy and contented Canadian people. It made possible the development of a section of our mining country, which only goes to prove that we have greater than has been found. It made it possible for us to produce in the last 16 years 31,640,303 ounces of silver, valued at $18,475,882 ; it made it possible for us to produce 280,200,845 pounds of lead, valued at $10,447,540; it made it possible for us to produce 92,652,480 pounds of copper, valued at $12,333,200; or a total value of silver, lead and copper of $41,256,603. And prior to the building of the Canadian Pacific Railway this condition of things was unknown in British Columbia.

Now, Sir, when that which is only a small part of the many wonderful things I could name can be done in the green tree, what can be done in the dry ? If that can be accomplished by the building of the Canadian Pacific Railway through the lean section of our wonderful province, what can be accomplished by the building of another line of railroad through the fat section of our province ?

That the western part of our province—that part to be traversed by the Grand Trunk Pacific—is a fat section, and that it is a section which is crying for a railroad, that the people who live there are clamouring for a railroad, that the mineral which is hid in our mountain ledges is awaiting the advent of this new road to enrich the coffers of the Canadian people. I will show and prove, and I think to the satisfaction of every hon. gentleman in the House. I will read to you a few extracts from the annual report of the Minister of Mines for the year ending 1902 ; and for fear that our good friend, the hon. gentleman who represents Centre Toronto (Mr. Brock), should say that it is cooked, I will inform him and the House that the Minister of Mines is no less a personage than Edward Gaylor Prior, a Conservative of the Tory school, who was the recognized leader of the Conservative party for British Columbia in this House and a minister of the Crown. On page 45 of that report I find the following with reference to a part of the province which the Grand Trunk Pacific will traverse :

> Two principal reasons seem to have deterred capitalists from investing here ; the first being the high price asked by prospectors for their holdings, and the other being the idea, widely prevalent, that the northern coast of British Columbia is locked up with ice and snow during the greater part of the year, with a conse-

quent very short working season. This is a very great mistake. With the exception of a very few days in mid-winter, there is not any portion of the Dominion, or northern and eastern United States, where a longer working season obtains. The snowfall at Port Simpson, which is the most northerly point on the coast of British Columbia, is much less than at Vancouver, the register for last winter, which was an average one, being 14 inches. Mr. J. H. Rodgers, who spent the winter of 1901-02 at the Bonanza mine, on Observatory inlet, and who had a gang of miners working continuously, informs me that there was only one day from January 1st till July 23rd (the date on which I saw him) on which his men could not work out of doors, and that was on the occasion of a heavy snowstorm in March.

I may say that this is a report of Mr. John Flewin, a gentleman whom I know very well, who has been mining recorder in that part of the country for many years. The following refers to a part of the country which is exactly along the projected line of the Grand Trunk Pacific Railway :

Miners in the Kitamaat, Kitsilas and Telkwa camps are still hoping for the building of the Kitamaat-Hazelton Railway, which will give access to the rich mineral belt of the coast and Kitsilas range of mountains, and the extensive agricultural, grazing and hydraulic areas of the Upper Skeena, the Bulkley and Omenica. At the present time, however, lack of transportation facilities is an effectual bar to extensive development work.

I know that country myself to a certain extent, and I know the great difficulties the miners are subjected to for want of railway communication. I will go a little further, and will read what is said about the Ptarmigan group of mines in the Kitsilas camp, which is a very rich camp :

The owners of this group, realizing that nothing more can be done to develop these claims without better transportation facilities, only employed a small gang of men during the season. Work was shut down in September, and a shipment of five tons of ore was made to test the property. The owners have applied for Crown grants for this group.

Statutory assessment work has also been performed on the Washington, Northland, Toulon, Bull-Dog, Montezeuma, Eureka, Hatzie, Golden Crown, Ruby, Granite, Golden King, Goldfinch, Golden Eagle, Golden Crown Extension, Strathcona, Helma and Monte Cristo. I do not anticipate that any extensive development work will be prosecuted on any of these properties, some of which look exceedingly promising until railroad communication with the coast becomes an accomplished fact. The Skeena river is, at best, a very uncertain highway, owing to the sudden rise and fall of the waters ; added to which the freight rates are so high as to effectually deter any one from attempting to take in the supplies and machinery necessary for conducting mining operations on a large scale.

The following refers to the Telkwa river camp :—

In this camp only the usual assessment work has been performed on the Forrest Group, the Big Blue, Surprise and Constance mineral claims. The same difficulty—want of communication—is experienced here as at Kitsilas.

Perhaps the hon. ex-Minister of Railways and Canals (Hon. Mr. Blair) would tell these men that they have no need of a railroad. Well, I can fancy the hon. gentleman going to their camp and telling them so. If he did, I think he would find a more rapid means of transit out of that camp than he is accustomed to. I take it that these men know the value of railroad building to a mining country. Then, we travel further east to the districts of the Cariboo, Omenica, and Cassiar, about which the report says :

As for the transportation facilities for getting in supplies, &c., into the district, they have not materially changed since the construction of the Canadian Pacific Railway, except that the roads are much improved. Ashcroft is the point of departure from the railway. From here a stage runs twice a week in summer and once a week in winter to Barkerville—285 miles—while from the 150-Mile House stages go once a week to Quesnel Forks and Bullion, sixty miles, and to Harper's Camp, thirty-five miles. The roads are good, the numerous stopping houses are clean, comfortable and reasonable as to price, and the stages as comfortable as stages ever are. The stage company carries both mail and express, running 'specials' whenever the traffic justifies it. The freight rate from Ashcroft to Barkerville is six cents per pound, and to Quesnel from four cents to five cents. These rates, of from $100 to $120 per ton, seem almost prohibitive as to heavy mine machinery, &c., and often amount to more than the cost of the articles ; yet, while they are high, the rates are not extortionate, as at these figures there is nothing more in it than bare wages for the freighters, so that these amounts will not be materially reduced until a railway of some sort is built into the district.

In the Cariboo country alone, under these adverse conditions, placer gold to the value of $4,168,307 has been produced during the past three years. And when you consider, Mr. Speaker, that these districts are situated three and five hundred miles from other means of transportation, consequently these have to be packed on horses and mules' backs from the seaboard or from Ashcroft on the line of the Canadian Pacific Railway, you can readily see the immense difficulties surrounding the carrying out of the enterprise. The hon. gentleman says no need for haste. Let us look further afield, and see if we cannot find the Macedonian cry : Come over and help us.

This report, which I am about to read, is from the gold commissioner of the Omineca mining division, a gentleman who has been many years in that country and on whose statements we can thoroughly rely. By it you will see that there is no doubt as to the future of the country and the immediate requirement of another transcontinental line :

Now that two transcontinental railways are heading for the Pacific coast, both of which will tap the Omineca district, and one which, if the Pine or Peace river pass is chosen, will pass within a short distance of Manson creek,

which is at present the centre of mining operations in this vicinity, the Omineca district is bound to spring into prominence, as once the great cost and difficulty of travel and transportation of supplies have been reduced, as they will be by railway communication, the hundred square miles of country that at present are unknown and unprospected will be thrown open. A vast extent of country lying north of the Omineca river and west of the Findlay is known at the present time to contain gold in paying quantities if supplies could be got into that portion of the district, and it only requires improved means of transportation to convert this locality from an undeveloped wilderness, as the greater portion of it is to-day, into one of the richest and best mining districts in the province. A railway will place Manson, as regards transportation, in the same position as Revelstoke on the Canadian Pacific Railway is at present. During this past season several parties of prospectors were in the district, but on account of shortage of supplies were unable to push their way any distance from Manson. Some, however, were so favourably impressed with what they saw of the country, that they have stored part of their outfit and intend returning next season.

As the transportation question is to-day the most important question before the people of Canada, every effort should be put forth to give additional transportation facilities between the great central wheat and cattle country of Canada and the Atlantic seaboard. But, in doing this I am afraid we are liable to lose sight of the fact that Canada has another gateway in the west which deserves consideration. Providence has been very kind to us in placing the great wheat and cattle country in the centre of this vast Dominion, and it is so situated that it is almost equally distant from each coast. In making this statement, I would endeavour to show that in the near future almost half the trade of the North-west Territories of Canada will, of necessity, go to the Pacific coast at Vancouver instead of coming eastward via Montreal or St. John. Vancouver, situated as she is on one of the greatest harbours of the world, is eminently fitted to be the great western gateway of Canada.

At the present time and for the past number of years a very large export grain trade is carried on between the western coast of the United States and continental points, and at the cities of Tacoma, Portland and San Francisco, numbers of vessels are loaded each year with grain for Europe and Japan. This grain is transported by rail, in many cases, a distance of 900 miles from the coast, and what they are now doing on the western coast of the United States we can equally well do on the western coast of Canada, and in this way relieve the channels of transportation in eastern Canada at times when it is almost impossible to handle the trade.

The best transportation authorities have stated that freight can be carried four and a half miles by water for every one mile by land. On that basis I will endeavour to show just how far east from the Pacific coast the dividing line can be. That is the line where the freight rate will divide so that part will go east and part will go west.

At the present time the government of the United States have undertaken to build the great Panama canal, which they expect to have completed within eight years. When this canal is completed it will revolutionize the trade, not only to the United States, but to western Canada, and while we are in a position to-day to take advantage of the very long water route around Cape Horn, yet when this immense undertaking is completed, the distance from Liverpool to Vancouver will be reduced about 8,000 miles and the dangers of navigation will be reduced at least 50 per cent. I have discussed this matter with ship captains, and they all agree that the dangers around Cape Horn are greater than during all the rest of the voyage. Sometimes, they say, it takes them as long as sixty days to make around Cape Horn.

Take a point 960 miles east of Vancouver which shall bring you in the vicinity of Moosejaw, and multiply that by four and a half, to bring it up to a water rate, it will amount to 4,320 miles, and from Vancouver to Liverpool via Panama canal, the distance is 8,520 miles. This gives the total distance from Moosejaw to Liverpool, via Vancouver and the Panama canal, of 12,840 miles. From said point in the North-west Territories to St. John by rail is 2,124 miles, which, when converted into water rate, will amount to 9,558 miles. From St. John to Liverpool, the distance is 2,700 miles, making a total distance of 12,879 miles, at an all water rate. This, I think will show that the time will come in the near future when the dividing line between the east and the west will be decided upon by transportation companies for their own advantage.

At the present time the greatest article for transportation from the Pacific coast to the North-west Territories is lumber. As an indication of what the trade of western Canada will be in the future, I will refer to the lumber trade as it is at present. The government of Canada are doing everything possible to encourage immigration to the North-west Territories. In doing so every effort should be put forth by the government of Canada, so that the people coming into Canada should not suffer by unnecessary hardships. It is stated that 100,000 settlers will settle in the North-west this year, and it is computed that an average of four people comprise a family. Consequently there will be, at the very least, 25,000 families who will require houses to live in within a year. Each family will require a house say 17 x 21 feet, which, when subdivided, will make two bed rooms 8 x 9 feet and a kitchen 11 x 16 feet. This house if double boarded which is necessary in a cold climate, will require

5,000 feet of lumber, figuring the roof as lumber doubled. In addition to the house, they will require a small stable suitable for four horses, which will require 3,500 feet of lumber, making in all 8,500 feet for each family. We have estimated that there will be 25,000 families. Consequently they will require in all 212,500,000 feet of lumber. The people now in the country will require for new buildings, railway purposes, elevators and the building of new towns, &c., as much more, making in all the enormous amount of 425,000,000 feet. This will load 53,125 cars at 8,000 feet per car or 5,312 trains of ten cars each, or 14½ trains for each and every day in the year. And, as nearly all this lumber must come from British Columbia, and mostly from Vancouver for the present, you can instantly see that the Canadian Pacific Railway, as now constituted, have a big contract in hand to carry on this enormous business.

In dealing with this question of transportation so far, I have only taken up the part which refers to Canada and Europe. I do not intend to omit probably the greater factor which we shall have in the near future in connection with the transportation question, and that is the trade which is increasing day by day between the Pacific coast and the orient, Australia, South Africa and India. This trade is increasing by leaps and bounds. I recollect very well when the first steamboats came into Vancouver with merchandise from the east. Their first trips were a little before my time, but I can remember when the old 'Abyssinian' and 'Parthian' were objects of interest to us, the first boats on the Pacific carrying merchandise from the orient to our ports. The cargoes were very small indeed. But the great Canadian Pacific went out for business with the orient, and they got it. And they have now five of the largest steamers of the Pacific carrying merchandise, and that trade is increasing as I say, by leaps and bounds. I would like the House to realize the immense latent possibilities in this trade. I tell you, Mr. Speaker, the half has not been told. And when the Grand Trunk Pacific with the knowledge and the capital they have, and having the desire and being under the business necessity of developing traffic—when they take the field a business will be built up as compared with which that of the present will be nothing. I do not wish to be too extravagant in my estimate. But, Mr. Speaker, I can remember, in my short sixteen years of experience on the coast the immense development which has already taken place through the advent of the Canadian Pacific Railway. The Canadian Pacific Railway has done immense things for our country; it has done the things that no other agency could ever be expected to accomplish. It went into the primeval forest and built the city of Vancouver. It has built opera houses, sugar refineries, and smelters. Will any hon. gentleman tell me that I should support a government operated road in the face of the things I have seen and know? I am as strong a believer in government control as any man in this House; I yield to no man in my desire to maintain intact the rights and interests of all the people. But I believe that under the contract now before us we have all the good features of government ownership and government control, without the incubus of government operation. If we were a people who would stand being policed like the people of Germany—and I do not want to make any reflection on that people, but it cannot be denied that we are more democratic than they are—we could operate state-owned roads. But until we come to understand that we must be governed by one man and ruled with the strong hand, we need never expect to have state-owned and state-operated railways in Canada. The theory of state-operated railroads is a beautiful thing, but it is idle to talk of it in the case of a people who have the sense of independence that inspires the people of this Dominion. I believe in state-governed railroads as this one, but I have got a little off the track——

Mr. GALLIHER. You are on a good track anyway.

Mr. MACPHERSON. I was speaking of the trade that will be developed with China and Japan. It is estimated that there are 450,000,000 people living in those two countries. Up to three years ago they had not adopted western ideas, they had not begun to wear European clothing or eat such food as we eat. But Japan has taken the initiative. Japan, Mr. Speaker, is remarkable for its power of imitating other nations. But, up to this hour, Japan was simply an imitator. Nor do I wish to make any disparaging remarks about the Japanese. I do not like them as they appear in this country, it is quite true. But they are good enough people in Japan as the Chinese are good enough people in China. These people are all right in their place, but they do not make good Canadians. If the Japanese go on as they are now going it will not be many years before they will be able to take their stand with other nations of the world. They are rapidly adopting our ideas. They have begun to eat wheat flour and are putting up roller mills to grind wheat from this continent. They are already importing considerable quantities of American and Canadian flour. They are more anxious now to get the Canadian than the American article, for our good friend the Minister of Agriculture (Hon. Mr. Fisher) has been over there and has shown them the excellent bread that can be made from Manitoba No. 1 hard. China is fast becoming Japanized, if you will allow me that expression. The Chinese people see that their Japanese neighbours are going ahead fast, and they are

following in their footsteps. While China may never use flour universally as a food, while there may be millions of people there who will never use it, owing to the fact that rice is so much cheaper, yet I believe that the better and wealthier classes in China and Japan will use flour. I think I am safe in saying that, within fifteen years—for we must remember that events move more rapidly than they used to do—150,000,000 millions in the orient will be eating flour. It is easy to see what that would mean for Canada. Mr. Hill, possibly one of the best railroad men we have in America says that the market for the North-western part of America is China and Japan, and that the demand there will keep wheat up to its normal price.

In addition to this, the trade between Canada and Australia, and also the trade between Canada and South America are increasing very rapidly. I have endeavoured to suggest that fair opportunities should be afforded for the trade I have just mentioned. For, no matter what our sentiments may be as between east and west, the trade of the country will go through its natural channels. But, unless you improve and develop these natural channels, the trade of the country will dwindle. For many years the trade of British Columbia went through American ports. It was not until the building of the Canadian Pacific Railway were we able to deal direct with the people in the orient.

We are in Canada peculiarly situated as it is only in Canada that any vast amount of unoccupied arable land exists. Now the great migrations of population have always been for the most part along the parallels of latitude of the north temperate zone. From prehistoric times the population of the far east has widened out in every widening circle of thousands of years. Vast numbers of people have moved towards the setting sun. At last the course of that movement to the western boundary of the old world was reached and then population moved across the ocean and during the nineteenth century Europe sent to the shores of the United States eighteen million souls, attracted altogether I may say by the wonderful free public lands offered by the American people. I take it, and I may diverge a little here that no country can be a great manufacturing country until its arable lands are exhausted. We know what immense strides the American people have made during the last one hundred years on account of the wonderful arable lands of that country. They have reached and have reached some time ago the point of exhaustion of these lands, but we, in Canada, are in the same position as the people of the United States were seventy-five years ago. The western half of Canada equals in area England, Ireland, Scotland, Denmark, Switzerland, Germany and most of European Russia, and the production of the Canadian soil will surpass that of the corresponding European area. There are in these sections of Canada fully two millions of acres of land fit for production and there are in the corresponding area of Europe to which I have referred two hundred and fifteen million souls. I have not mentioned in this connection the wonderful productiveness of British Columbia which has such great food resources in her waters. Salmon abound in almost incredible numbers, while halibut and cod are even more plentiful. I can tell you that the British Columbia halibut banks equal any in the world and when I say that a boat can go out from the shores of Vancouver and come back in four days with a full cargo of halibut, it is almost beyond belief.

Mr. SPROULE. We cannot tell fish stories like that in the east.

Mr. MACPHERSON. Perhaps we cannot tell fish stories. But in the waters of British Columbia there are no suckers.

British Columbia has been for years a prospecting ground for gold and it is known that in this metal that province is wonderfully rich, then there are copper, coal and iron. It is well known that the iron mines, especially in southern British Columbia, are rich and they are placed as if nature had intended them to be for the use of man, for there are rich coal fields close at hand. I have spoken already of the vast wealth of British Columbia in agriculture, fish and minerals, and I should add that our country is particularly rich in its supply of timber, of cedar and Douglas fir. The forests of British Columbia contain over two hundred billions feet of uncut fir and cedar. It has been said that British Columbia seems destined to become the shipyard for the supply of all nations.

Now, I could go on, but I have promised the House that I will not take up its time. I will only say in conclusion that the man who says we are not, in British Columbia, clamouring for another transcontinental line does not understand the feeling of the people of British Columbia.

Mr. JABEL ROBINSON (West Elgin). Mr. Speaker, I was informed this morning that I would follow the hon. member for Burrard (Mr. Macpherson). I have listened closely to the hon. member and as far as I can see, he has made very few points either for or against this Grand Trunk Pacific Railway. It seems to me that his principal arguments and language have been in favour of Vancouver or Burrard's Inlet, and it seems that the only important thing, according to the gentlemen sitting around him in that section, are suckers. Well, Mr. McCraney, who ought to know all about that country, who has been there a number of years, writes me that it is not suckers but grafters, and that there are so many of them that they are really an injury and a curse to the country. Now, whatever a grafter is, I do not know. It may be a fish for all

I know, but I have to reply and speak, I believe, in regard to the Grand Trunk Pacific Railway. But an amendment has been moved in the House, and I suppose, Mr. Speaker, that I will be able to speak on that amendment, which refers to government ownership of railways. It was on this question that the election in West Elgin hinged; if I had not been an advocate of government ownership of railroads and of no bonuses to railroads unless the railroads or whoever got the bonuses were obliged to give back to the government something for the money paid to them, I do not believe that I would be here in this House, and I am sure that the sentiment has grown all over this vast country in favour of government ownership, and I notice that one party in this House only a few days ago pledged themselves to, or at least, enunciated their policy as government ownership. I suppose owing to the unique position I occupy in this House, my speech will not commend itself perhaps to any gentleman on this side or on that side of the House, but at the same time I wish to say that I do not think it would be right, I do not think it is right, for any man in this House to discuss any question in any way other than on its merits. We have heard vituperation, we have heard some of the vilest language, language such as would not be used in a common village debate, and the desk thumping and the rattling was astonishing to me when any one would make a point which members thought was for or against them. I do not suppose there will be any desk-thumping on either side when I have made a point. I do hope there will be no desk-thumping. Those who disagree with me have a perfect right to do so, and those who agree with me have a perfect right to do so, but I do not think any gentleman has a right to abuse me because I do not belong to this or that party. We are all supposed to be here to do what is best in the interests of our country, that is what we advocate on the hustings and what we talk to our constituents—country before party. Yet, in nine cases out of ten the party elects the member and expects him to be there too. Now, Sir, I am tool to no one, and I do not expect any one to be a tool to me.

Mr. Speaker, I am sure that this country and this House, too, is getting tired of this debate. We have not had a new idea advanced for the last three or four days, and it is about time that some member started out on a fresh route. Well, we have to confine ourselves to the subject.

Some hon. MEMBERS. Hear, hear.

Mr. ROBINSON. I have no objection to the hon. gentleman saying hear hear, but I do not want them to thump the desk. Now, Sir, I would not speak on this question, because, as I said before, very little has been said on the question proper, but I wish to put myself on record as being strongly in favour of government ownership. This plan that the government have introduced may be better than my plan, but at the same time, I hold these convictions and I dare to express them.

Now, Sir, we are all aware that railroads are a great blessing wherever they are planted. We know that if we were to be deprived of railroads we would go back almost into an uncivilized condition. Therefore, we must have them, and the country must be developed. Consequently, wherever there are no railroads it is the duty of the government to see that they are built, and that the country is opened up. I will not say now whether it is proper for the government to push forward this scheme at this particular time, not knowing anything about those vast regions that we have heard of; although some gentlemen undertake to tell us how many trees, how many streams, how many mountains there are in that stretch of country 3,000 miles long, I have not seen one person yet that has ever been over the line. But we believe that sometime that country will be developed, and that there is room enough in the region to be traversed by this railroad to plant 10,000,000 of people, on a strip 20 miles wide each side of the road. The people of Europe are waiting to go in there, and we are told here that we cannot wait any longer for this road. The people of Europe are waiting for us to bring them out here and plant them on these fertile plains of the Northwest. But whether this is the proper time to build the road in the way proposed, is another question, and I am not now discussing whether the proposition is right or wrong, though those who have introduced it and have thoroughly studied it, ought to know. But speaking of the millions coming out to this country, or waiting to come, why, Sir, if the children of Israel, when the Exodus took place, and who had so much difficulty in crossing the Red sea, had known about this glorious heritage that we have on this continent, they would never have settled in Palestine, which is about the poorest land under Heaven, but they would have come out to this country, and we would now have Jews for our neighbours. Why, the people generally don't know what a glorious heritags we have here. If that land is as good as it is reported to be, then we shall want more than one road, and we shall want them built by the government. I do not mean to say that the operation of the road should be carried on by the government, because we do not want to see every man who works on that road a mere government hack, who is put there to vote as the government tells him to vote. I am strongly opposed to that. The ex-Minister of Railways said that the Intercolonial should not be placed under a commission. I think that every government railway should be operated by a commission. We do not want to see every man who works for the government obliged to vote

just as the Minister of Railways tells him to.

Now, speaking of railroads and their advantages, the first time I had the pleasure of travelling through the North-west, there were no railways built, and to get there I had to go through American territory. I struck our boundary at Emerson. Winnipeg was not very large then, it was called old Fort Garry, a little while before, and it would be old Fort Garry yet if the Canadian Pacific Railway had not been built. So you see the great good that has been done by that railroad in building up the North-west. That country has been called the great lone land, and if we had not had railroads built through it, it would be a great lone land yet, whereas it is now blossoming like the rose, with thousands of miles of railroad running in every direction.

The Canadian Pacific Railway was a very costly affair for Canada when it was built. I do not say that the promoters of that road did not act to the best of their light, according to the best knowledge they had, but they made a great mistake. We are all apt to make mistakes, but when they recognized a syndicate of men and granted them large bonuses of money, and lands, and railroads already constructed, amounting altogether, I think, to some $145,000,000, they created an enormous corporation, and I think they then made a mistake. They had the courage to secure the building of the road by a company, but they should have had courage enough to bond that road, and gone to England and borrowed the money on their own responsibility, and then the people would have owned the road. As it was they became responsible for the bonds. Then we would have owned that road ourselves, and every acre of that land, and a great portion of that country would not now be under the control of a corporation. But you have lost that opportunity, and now that another opportunity presents itself equally favourable, I hope the government will not let it pass. You have had one unfortunate experience of that kind, and don't have another. I say that $145,000,000 of money would have built that road, every inch of it; it did not cost $50,000 a mile; then you would not have a wealthy syndicate composed of Lord somebodies, and of great noblemen to look up to, but you would have had instead a railroad owned by yourselves. I have great sympathy with the hon. member for Winnipeg (Mr. Puttee) who moved that amendment yesterday, and talked so logically and with so much good sense. I am sure other hon. gentlemen who have spoken on this question will excuse me when I say that it was the best speech yet made in this House since this debate began.

This proposed Grand Trunk Pacific Railway will not pass through my constituency, it will not come within several hundred miles of it. At the same time, the people of my constituency are broad minded, and are willing to help their neighbours to develop this country. They want to see this country something more than a mere fringe along the American border, but I do not think they will complain if this road is built and owned by the people themselves. I do not think they are anxious to see another great syndicate formed, having such vast power in this country. By this proposition you are creating an incubus which you propose to place upon your own necks, something that will be a damage to the public interest. Why, Sir, with these two large corporations, the Canadian Pacific Railway Company and the Grand Trunk Company, to say nothing of this new Grand Trunk Pacific Company, if they were to unite their forces at the next election they could elect nearly every man they wished. They have influence and power enough in almost every constituency to elect nearly every man who comes to this House, and they will elect such men as will serve their purpose. They are not Grits or Tories, they are looking after their own interests. The other day a member of this House said to me, I am just between the devil and the deep sea, or words to that effect. He said, 'There are a thousand Grand Trunk votes in my constituency, and if I vote against that measure the Grand Trunk Company will use all its influence against me; and if I do not vote against it, then the farmers will all vote against me.'

It was something like the juror who was sitting on the trial of the seven bishops in the reign of James II. This juror who was a brewer was much concerned and he said: Oh Lord, I am ruined anyhow; if I give a verdict against the bishops I will never brew any more beer for the people, and if I do not, I will never brew any more beer for the king. That poor brewer was in jeopardy, and that is just the way with the members of this House who are under the control of the Canadian Pacific Railway the Grand Trunk Railway and all the other railways. Now, Sir, we want to get out from that position. So far as I am concerned I don't care for any of these corporations. I will do my duty. This country is not so old that we cannot retrace our steps and start on the right track. We started wrong some years ago; let us start right now, and we have excellent advice how to do it. The member for Westmoreland (Mr. Emmerson) took strong ground against government ownership; the member for Hants (Mr. Russell) followed him in the same strain, and the Minister of Justice supported these two gentlemen. But unfortunately for the Minister of Justice he brought some evidence in which altogether he did not like. He supported his case against government ownership by quotations from Sir John A. Macdonald, but I do not think he would swear on John A. Macdonald for every thing; however he used him because it suited his purpose. John A.

Macdonald was bound hand and foot to the Canadian Pacific Railway syndicate and could not help himself—it is quite possible that the gentlemen on the treasury benches are in the same fix to-day with other railway corporations. Now, Sir, I do not wish to take up the time of the House.

Some hon. MEMBERS. Go on.

Mr. ROBINSON (Elgin). This is about the time that I usually conclude my speech, but if the House is determined to say 'go on' I will have to be polite. You would think that the member for Westmoreland lived in the western part of Canada and knew nothing about the Intercolonial Railway. He does not seem to know that it cost $70,000,000 and that it is doing excellent service in its own way. He forgets that the country through which it runs is unsettled and that it is almost impossible to make the Intercolonial Railway pay commercially. Why, it was never intended to pay commercially. It was built as a military road, and we all remember that the Trent affair helped to bring about its construction. However, it has connected the colonies and we could not get along without the Intercolonial. It is one of the grandest things in Canada although it does cost something. I would like to see more of it. If the Intercolonial railway does not pay the Dominion in cash, it pays the people of the maritime provinces, and generally speaking it pays us all to have it.

It has been argued by gentlemen on the treasury benches that the government could not operate a railway in the public interest. I am sorry the Postmaster General is not present, because I would like to tell him that he his discharging a public duty very well, and we hear no complaints. Hundreds of thousands of dollars go through his hands and millions of people are reached, and reached pretty accurately through the instrumentality of the post office. If the government can run the post office right, what is the matter with them running the railways right. The hon. member for Hants (Mr. Russell) said it would take $50,000 a year to pay a magnate to look after a government railway. Well, Sir, there is no danger of him getting the job. If it takes $50,000 a year to pay a railway manager, I do not wonder that the shareholders get no dividend. I think $50,000 a year is more than one man can earn. I think there is a mistake in that regard, but the hon. gentleman may know that they get $50,000, I do not. It is admitted that the Postmaster General runs the post office, or at least it is run to the best of the Postmaster General's ability through his deputy. We have other institutions run by the government which I suppose you gentlemen have no experience of and I hope you never will; I mean the penitentiaries. I understand that the penitentiaries are run well enough. Then there are the asylums and other institutions managed by the government all over the country, and there is no reason why the railroads should not be managed by the government. Of course it will take some time to get into it; some time to get the right men, but we have boys growing up in Canada who will be quite competent to run our railroads and we need not go to the United States or any where else for them. Now, as to the bonding privilege, I felt pleased the other day to hear the Prime Minister with all his eloquence expound the idea that we should be independent of the Americans. But the hon. gentleman has the Intercolonial Railway over which we can bring all the stuff we want in bond. I do not think we need fear any threats about the bonding privileges. I hate to be threatened; I am just as sensitive as the Prime Minister as to that, but this threatening does not amount to much, and so long as there are such presidents as Roosevelt there is no danger of any injustice being done to us Canadians. But, Sir, if we should happen to get a crank as president as we had some years ago, then we might perhaps be in jeopardy. I do not know that I need mention his name for you gentlemen are well enough posted to know who I mean. If we are in jeopardy from that cause we cannot get straight to the ocean simply because the land that our forefathers fought for, was given away by a certain Lord Ashburton, and consequently we are hemmed in and cannot get in a straight line to our ocean ports.

I remember reading some time ago of a legislator in the United States who was very anxious to do some great good for Canada. So he cudgelled his brains and got up a resolution to have the Senate of the United States and the President and the whole machinery put into operation in order to buy Canada from Great Britain and hand it over to the United States. I believe there was one fool enough in the world to attempt to do that. I am not so big a fool as that; I will not go so far; but if our government were to appeal to the American government and tell them that there is a piece of land down there lying near our orchard which once belonged to us, and that we are willing to pay a fair price for it, I think the people living in that part of the state of Maine would be glad to come under the old flag which has waved a thousand years, and which represents more civil and religius liberty than any other flag in the world. I think we might buy that part of the state of Maine, and then we would have a straight road to St John. I think it would be just as rational for us to propose to do that as for the United States legislator to propose that the United States should buy up Canada.

While we have the Intercolonial, there is no difficulty about getting to the sea; but you people will not wait long enough to get there; you want to hurry to New York or Boston, because it will save you a few hours'

time. I think we ought to patronize our own ports, and carry as much of our produce as possible over the Intercolonial. I got a copy of the Intercolonial Railway time-table this morning, and I see that six trains run a day on that railway, and many others could be run. We are told by members of this House that it is one of the best roads in America, with the easiest grades, and that although it is a little longer, it makes as good time to the seaboard as other roads. If that is so, the question of the bonding privilege is settled. We can ship our own products over our own road through our own territory. So that I do not think we have anything to complain of so far as independence of the bonding privilege is concerned. But, as has been well argued here, the Americans themselves are not anxious to abrogate the bonding privilege, because they make a profit out of it; and the American people are not willing to give up anything that they make money out of—my hon. friend from North Norfolk (Mr. Charlton) knows that.

Now, Sir, we had a discussion here the other day on the two-cent-a-mile rate. Railways should be compelled to carry passengers for two cents a mile That would be easily accomplished if the government owned the railways. There would not be any begging of the railway magnates to do justice to the people of this country, because the government would then see that the people got justice. The railways to-day are masters of the situation, and their mandate has to be obeyed. I have had opportunities of knowing that. Some years ago the people in my section applied to this House for a charter to build a railroad through the southern counties of Ontario; they came here year after year, but they met with the direst opposition from the railway companies and the other parties interested. But finally they obtained a charter to build the road, and they built it. The Canada Southern owned it for a time, but finally leased it, I am told, to the Michigan Central for 999 years. So we are sure whose hands we are in during our time. There are managers and superintendents of railroads who are very courteous and try to accommodate the people, and to oblige them; but at other times they are not just so obliging. Some members of this House wept scalding tears and showed a great deal of sympathy for the ex-Minister of Railways and Canals because he left the cabinet. Well, Sir, I did not weep any tears, simply because I found that that hon. gentleman, while he was the Minister of Railways and Canals, was the guardian angel of the railways; and whenever the farmers of this country asked for justice from the railways, that hon. gentleman stood by them as if he owned them, and he was master of the situation. So I did not shed any tears. A town in my constituency, a growing and thriving place called Dutton, near the centre of the thriving township of Dunwich, has but one railroad crossing in the town. The people of that place appealed to the Railway Committee of the Privy Council to have another road built some sixty rods from the first one, so that the farmers might ship their cattle, draw their grain to the mill, and do other business. They sent maps and plans and letters, showing the necessity for the change. There are two railway tracks there parallel and close to each other, and when I tell you that very often a train goes thundering along one track at the rate of a mile a minute while cars are standing on the other, you will realize why the people there wanted another crossing. Their request was so reasonable that I thought no Committee of the Privy Council would refuse to grant it. I appeared before the Committee of the Privy Council and appealed to them on the subject, but my appeal had no effect whatever. The present crossing is a very dangerous one, a number of people having been killed there. The government sent their engineer, and the railway company sent its engineer, to make an examination, and I went and met them. The councils of the township and town both petitioned for another crossing; but they did not get it, and have not got it yet.

The other day I brought up the question of protecting farmers and drovers in connection with the shipment of cattle, and stated that some of the wealthiest and best men in our part of the country had been killed; and when I asked the late Minister of Railways and Canals if he could not put something in the Railway Commission Bill to protect the farmers, he just laughed at me. Well, I think the men who pay a heavy price for shipping their cattle on the railroad ought to be protected against negligence or carelessness. But the minister ignored my request altogether. If we had government ownership, do you not think something would be done to remedy the grievances of these people? Only last session I asked the Minister of Railways and Canals to compel the railway companies to make the farm gates in such a way that a small boy could go down through the farm and bring the cattle across from the other side of the track. He said he could not do it now because a great many of them, instead of swinging on hinges, were rolling along on slides and often in snow three or four feet deep, so that the children could not open them. I asked him to provide that railway companies would have to make these gates swing on hinges. And the large member for Guysborough (Mr. Fraser) came to his rescue, and of course our request was not granted. We know that in everything the farmers have applied for, they have been snubbed. We know how long the cattle-guard question was discussed in this House, session after session, and how long the farmers

have been trying to have the railway companies obliged to pay them for their injured and killed cattle. But the ex-Minister of Railways and Canals would never yield an inch until forced to do so by members of his own party. Even on the question of drainage across railway tracks, he set a determined front against the railways being obliged to contribute to the expense, but I am pleased to see that in the new act this obligation is imposed on the railway companies, and the ex-minister was the only one who voted against the amendment to this effect. I am therefore not going to shed any tears because the ex-Minister of Railways and Canals is out of the cabinet. I had no intention of making these references to the ex-minister, but it becomes my duty to do so as advocating the government ownership of railways.

I am strongly in favour of the resolution moved by the hon. member for Winnipeg (Mr. Puttee), but I am afraid that the people are not far enough advanced to adopt it. You cannot get the people advanced in a very short time. The hon. member for Winnipeg is many years ahead of his time, and in that respect perhaps he resembles the hon. member for East York (Mr. Maclean), who has been advocating the same thing for years, and whose voice no doubt will be heard on this Bill before the debate is closed.

I wish to make an appeal to this House on behalf of the farmers. We have been here since the middle of March and have had to neglect our harvest. It seems to me that this House ought to meet in January. I moved last year an amendment to a resolution, and by my amendment I asked that the House should meet in the middle of January, but it was laughed out of court. But just as soon as we have a majority of farmers in this House, we will meet the first week in January and will quit for harvest. If the farmers were represented here in proportion to their wealth and numbers, they would run this House to suit the greatest industry in this country, the agricultural interest, but they unfortunately allow the wire-pullers to run this country. No doubt some of the men here are earnest, hard workers, regular in attendance, and anxious to get business done, but there are a great many others who would give Rudyard Kipling plenty of opportunity for the exercise of his satire. We know what Kipling wrote about the English dudes, who neglect their business, squander their opportunities and waste their time. He said that they were 'flannelled fools at the wicket and muddled oafs at the goal.' If he were to see how half the members of this House fill in their time—one hour in the chamber and then dawdling around the lobbies, he would hit them off pretty sarcastically. I say this in all kindness, because I do not wish to hurt anybody's feelings, but we should do something to get on with business and go out and help the country. Our farmers are paying $2 per day for harvest hands, and half the members of this House are able-bodied men who would be willing to take a job in the harvest field. They would be better employed in that work than dawdling around here, and I hope, Mr. Speaker, that you will use your influence to have the work of the session forwarded and to induce the government to take up the policy of government ownership of railways as soon as possible.

Mr. H. J. LOGAN (Cumberland). I desire, Mr. Speaker, to congratulate the hon. member for West Elgin, who has just spoken, upon the arguments he used in favour of government ownership of railways. He arrives at the conclusion that because the government can run penitentiaries and lunatic asylums it can run railways. That seems to have been one of the leading arguments in support of the resolution moved by the hon. member for Winnipeg (Mr. Puttee).

Before going into the details of the proposition before the House, I desire to offer my sincere congratulations to the government for having grappled with this railway problem in a strong and fearless manner—in such a way as not only to do justice to the west and the provinces of Ontario and Quebec, but also to the maritime provinces which have been crying out so long for better communication with the rest of the Dominion. Some people are surprised that the maritime provinces should have put up the fight they have in order to have this railway built into those provinces. But if those people lived in the provinces down by the sea, if they knew the difficulties under which we have laboured since we came into confederation, they would find no cause to wonder that our constant endeavours have been to bring ourselves in as close communication as possible with the central provinces. Such a policy appeals to our hearty support because we recognize the position in which we have been placed by confederation. It is to be regretted that we could not have this railway problem discussed without bringing in extraneous matter, but the hon. gentleman, who has left the cabinet and who held the portfolio of Railways and Canals during seven years, took upon himself to bring into the discussion matters which had nothing whatever to do with the problem before the country; and while I have been, and I am still, a personal friend of the hon. gentleman, I must say that I do not think it was to his credit, when he discussed this question, which should be discussed on a high plane, to have brought in the name of Senator Cox. What has Senator Cox to do with the railway problem? As a matter of fact, he only consented to become an associate with the Grand Trunk Railway in this matter

after he had been urged most strongly by them to do so. And suppose he is associated with the Grand Trunk Railway, what have we got to say against him ? Is there anything in that association of which we should be ashamed ? You would think, by the way he is talked about in this country by the opposition, that he is a jailbird and only fit for one of the penitentiaries referred to by the hon. member for Elgin, The facts are that Senator Cox has risen from the humblest station to a foremost place among the leading men of the Dominion of Canada. To-day he is the president of one of the largest life insurance companies, one of the largest fire insurance companies and one of the largest banks in the Dominion. He is honoured by all who know him best ; and we know that it is an advantage to every business undertaking, however great, to have his name associated with it. This criticism of Senator Cox is only an attempt on the part of the opponents of this project to draw a red herring across the trail. My friend the ex-Minister of Railways and the hon. members on the other side of the House have contended that there was no need for this road. The hon. ex-minister said that it was never mooted until just before it was brought under the consideration of the House, and he further said that he saw no reason now for the construction of the proposed national line. He cried out in a dramatic way : Where is the crisis the Premier speaks of ? And he accused the government of being seized with hysteria. I will prove out of the ex-minister's own mouth that the construction of this railway is an immediate and imperative necessity. We have had quoted here the hon. gentleman's speech in British Columbia. Let me read a despatch from Montreal after the Minister of Railways had returned from the west. This despatch appears in the Manitoba 'Free Press' of November 3rd, 1902. This shows what the hon. gentleman thought at that time, for this is an account of an interview with him. He said :

There is ample room for at least four more railways right through to the Pacific. The thing that impressed me on my trip through the North-west most of all was the need for more railways. I went over portions of the Canadian Pacific, Northern Pacific, Canadian Northern, and Great Northern, and found that while they had advanced very rapidly they had been unable to keep up with the remarkable progress of the country.

And further on he said :

Not only should the west have at least four more railways, but I am further convinced that it must have them, or the cause of immigration which has been so active will receive a severe setting back. The out-lying districts are already filling up very rapidly, and unless transportation facilities are afforded the settlers, they will quickly become discontented and advise others not to come into the country. . . As a result of my visit——

This was the railway administrator of this country who was speaking.

—I hope to show parliament the necessity for a government railway——

That is his peculiar kind of railway, of course, but nevertheless a railway——

—through the west, for their cannot any longer be any doubt that the future of the Dominion lies greatly in the districts beyond the great lakes.

Mr. BROCK. Did the ex-minister say that all those four railways were to go from Moncton ?

Mr. LOGAN. When I read the language of the ex-Minister of Railways saying that there is room for at least four more railways——

Mr. BROCK. All from Moncton ?

Mr. LOGAN. All transcontinental railways. I take it that the maritime provinces are as much a part of Canada as the province of Ontario. And the sooner my hon. friend (Mr. Brock) from the city of Toronto, which always wants everything it can get, realizes that the province of Nova Scotia is as much a part of the Dominion of Canada as the great city of Toronto, the sooner he will reach a very important truth. The ex-Minister of Railways, in the city of Montreal—not at a Vancouver banquet, where he might be affected by a spirit of exaltation, to use the expression which he has used with regard to the government, but when he came back, and in the quiet of the eastern part of Canada—expressed himself as I have quoted. Then he proceeded to his own province of New Brunswick. At the town of Campbellton he was tendered a banquet on the 1st December, 1902. He is reported in the St. John 'Telegraph'—which should report him correctly, as it belongs to him—to have spoken as follows, in reply to the toast of 'The Land we Live in.' :

He believed there was not a Canadian who had not within the last six or ten years learned a broader and higher conception of his country and its possibilities, and in following up this idea, the minister referred to his recent trip across the continent from Sydney to Victoria. Although the several provinces through which he had passed gave evidence of abounding prosperity, it was in the great and fertile west that the marvellous promise of Canada's future was conspicuous.

This trip had led him while at the coast, to tell of what his idea of what that country might become, and what its railway requirements would be. He had on that occasion spoken of the time near at hand when four transcontinental lines would find a profitable business and it was in the nature of a vindication of that view——

Listen to this—this is where he takes credit for the Grand Trunk Pacific scheme. You will see that he is the father of the Grand Trunk Pacific scheme, according to his own language :

—that six weeks later the Grand Trunk Railway had announced its purpose to construct a line from Ontario to the coast. If the present rate of immigration was maintained, the time might also come, when, as some one competent to form a judgment has said, a railway every thirty miles in both directions would not be more than enough to handle the vast volume of traffic that would be offering. Mr. Blair then spoke of his desire to have the Intercolonial extended to the Georgian Bay to Toronto, to various parts of Ontario and later, if the ground was not then altogether occupied, across the continent.

It will be seen that the idea in his mind at that time was that the Grand Trunk Pacific would be built across the continent to the Pacific ocean, and that some time later, if it were required, the Intercolonial also might be gradually extended across to the Pacific :

This statement of the minister's personal wishes was received with great cheering, as were also his patriotic reference to the future of the Dominion.

Some time afterwards the hon. gentleman was in the city of St. John, taking part in the election for the local legislature. He was not then loved by the party of hon. gentlemen opposite, as he is to-day. He was asked by a Conservative paper in St. John the reasons for his being there and taking part in a provincial election. He said, as reported in the St. John 'Telegraph' :

I am here because I believe it is in the interests of the Candian people as it is in the intersts of the people of St. John and this province, that they should not at this juncture, at the height of our glorious prosperity and with promising results in view, strike a blow or do an injury to the government which obtains at Ottawa at the present time.

I trust the ex-minister will read these words of his own and will apply them to himself at the present time. And what did he say with reference to railways ? Speaking on February 19th, 1903, he said, as reported by the St. John 'Telegraph' :

There is an immense western country behind the business of this port——

The port of St. John——

—and the people of Canada had become convinced that their products should find an outlet through Canadian ports.

And later on he said :

The productions of the west were increasing at a rate which warranted the belief that in the course of a few years 200,000,000 bushels of grain would be available for export and that half that quantity at least would find an outlet through the ports of St. John, Halifax and possibly Sydney.

Here we have the hon. ex-Minister of Railways and Canals saying that the time was near at hand when, with proper facilities for connecting the east with the west, 100,000,000 bushels of grain would find their outlet through St. John, Halifax and, possibly, Sydney. In the speech he delivered at Vancouver on the 9th October, 1902, he said that the second transcontinental railway could not come fast enough for him. And he said further :

Nothing would prove so fruitful of magnicent realization to the people of this great west, than to run the railway right through to the Pacific coast and operate it upon, I will not say merely economical rates, but upon rates sufficient to pay working expenses, without dividend for the government or any one else.

That is his scheme—to build a railway to the coast without dividend either to the government or any one else.

That has been my dream. I dream that still, and I believe that it would be of no disadvantage even from a financial standpoint, to the people of this Dominion, either east or west ; I believe we would not feel the burden. I believe we would not know we had a road resting upon our shoulders. . . . . I can say with confidence that you have the sympathetic consideration of the government of the day. It would be, I think the proudest act which the government could achieve to lay down a broad, enlightened, progressive and imposing policy covering the grounds which I have pointed out to you.

There is where he laid down the policy, in the first place, of a second transcontinental road, declaring that it could not come fast enough for him. We see that he has also said that we needed four transcontinental railways, and that the transcontinental railway should be built and operated by the government. I happened to pick up the Halifax 'Herald,' and read an editorial upon this proposition of the ex-Minister of Railways. What does it say ? Of course, the 'Herald' talks differently now. But at that time it thus paid its compliments to the Minister of Railways :

Now, what would the country gain in return for this vast annual financial loss.

Under government ownership and operation.

Nothing whatever, so far as can be judged from the 'operating' of the Intercolonial. That road is 'operating' at an annual loss to the Dominion treasury of about $2,500,000——

Instead of the $1,5000,000 estimated by the hon. member for South Lanark (Hon. Mr. Haggart) :

—yet the part of the country specially served by it enjoys no better rates, and better service is afforded elsewhere by company roads that are making money and paying dividends. The same thing on a larger scale is all that could be looked for under Mr. Blair's 'dream.' It would afford the Minister of Railways a larger field for his 'peculiar methods' of management ; but the country has already had more than enough of Mr. Blair's 'peculiar methods' of 'operating' railways.

Sir, this is the language of the Halifax 'Herald' of last fall, after the ex-Minister of Railways and Canals had expressed his view in favour of the government owning a railway across the continent. But at the present time the newspapers of the op-

position are singing this gentleman's praises. He has not got these 'peculiar methods' apparently at the present time. When that hon. gentleman spoke in this House and denounced the government, and endeavoured to hold the Premier of this country up to scorn—endeavoured, I say, because the man does not live who is big enough to hold the Premier of this country up to scorn—but he endeavoured to do so, and for doing so the opposition cheered him loudly, and when he sat down they came over and gave him the right hand of fellowship, and welcomed him into their hearts, and into their ranks too, I presume. Only a short time ago we heard the hon. member for Compton (Mr. Pope) charging the ex-Minister of Railways and Canals with having a 'toll gate' in the Windsor hotel, in the city of Montreal, but these same gentlemen gave him the right hand of fellowship the other night. They cried out, 'hear, hear,' when the hon. member for Compton charged him with having a toll gate in the Windsor hotel, though I did not believe a word of it, and we do not believe it to-day. But these very gentlemen apparently believed it, because they cheered the statement. They have painted him in the blackest colours, they have called him a boodler, and yet he is not so black, he is not so putrified, but they are quite willing to take him to their arms. Sir, the people of this country are not blind, they are able to appreciate the value of opinions so diametrically opposed to each other, expressed by the same men. We all know how their opinions have changed within the last six months with reference to the hon. member for St. Mary's division (Hon. Mr. Tarte), whom only a few months ago they covered with approbrious epithets, and spoke of him as that 'traitor Tarte.'

Let us consider what the proposition of building a transcontinental railway to be owned and operated by the government, means to this country. The ex-Minister of Railways and Canals lately has stated that he has no quarrel with the building of the road from Quebec to Winnipeg, and thence to Port Simpson, but he does quarrel with the building of the road from Quebec to Moncton. Let us take the Intercolonial as a basis for argument for or against government ownership. The Intercolonial Railway has cost on capital account, over $70,000,000, or nearly $50,000 per mile. The deficits since 1876, after deducting surpluses, amounted to $5,281,000, or an average deficit of $200,000 per year. The Grand Trunk Pacific Railway from Quebec to Winnipeg, according to the ex-Minister of Railways and Canals would be 1,400 miles long, and he thinks it will cost $49,000,000. The prairie section is 1,100 or 1,200 miles long, and a fair estimate of the cost of that section, to make it a first class railway, is $20,000 per mile. Call the length 1,000 miles, and you have $20,000,000 as the cost of the prairie section. The mountain section is about 600 miles long. The hon. member for South Lanark, speaking the other day in this debate, said that the cost of the Canadian Pacific Railway north of Lake Superior exceeded $60,000 per mile. I do not suppose that the cost of this railroad through the mountain section will be any less than that sum. Therefore that 600 miles of the mountain section would cost $36,000,000. Adding the cost of the three sections together we have a total for the main line of $105,000,000. Now, this road cannot be operated merely as a main line without branches. There would have to be a branch into Montreal, one to North Bay, one to Port Arthur, with branches to Brandon, Regina, Prince Albert, Calgary and other points. If any one will figure out the distances of these different branches he will find that they exceed 1,000 miles. Put down the combined length at 1,000 miles, and let us estimate the average cost of their construction at $25,000 a mile, because many of these branches will have to pass through a difficult country for railway construction—1,000 miles of branch lines at $25,000 a mile, make a total of $25,000,000. Add that to the $105,000,000 and you have $130,000,000 for roadbed alone. Rolling stock and terminals for such a transcontinental railway to be operated by the government would without doubt amount to as much as $30,000,000. We cannot judge as to the cost of the elevators that would be necessary, we cannot judge as to the cost of the hotels that would be necessary, or the cost of parks, &c., or the cost of terminal facilities at Port Simpson. Therefore we will not put down anything for elevators, hotels, parks or anything of that sort, but we will simply estimate the cost of roadbed and rolling stock at $160,000,000. Suppose we borrowed that money at 3 per cent. The ex-Minister of Railways and Canals said we might have some difficulty in borrowing money at that rate, but I suppose we can borrow at 3 per cent, in which case we will have an annual interest account of $4,800,000. Now if the deficit on that road bear the same ratio to length as those on the 1,500 miles of the Intercolonial, we would have a deficit every year of $560,000. Therefore the total loss to the country in operating that government road, taking the Intercolonial as an example, would be $5,360,000 per year, or $1 for every man, woman and child in the whole Dominion.

But that is not all. It is necessary, in the operation of railways, to make good connections with them. But we would meet the antagonism of the great Grand Trunk system in Ontario, there would be the antagonism of the Canadian Pacific Railway system in Ontario, Quebec, and the west, and naturally we would have the antagonism of the Canadian Northern in the western country. Then when we had built our line from Quebec to Port Simpson it would be necessary for transcontinental trade, to have

lines of steamers running from Quebec to Liverpool on this side, and from Port Simpson to China and Japan on the Pacific. So we have now, not estimating the cost of these steamship lines, and without considering the question of elevators or the other things I have mentioned, an annual cost to the people of this country for this transcontinental road, of $5,300,000. Now, Sir, the hon. member for South Lanark does not agree with my proposition that the deficits on the Intercolonial are only $200,000 per year. In a speech which he delivered in this House in the present debate he stated,

If I mistake not, the deficit on the Intercolonial, if charged to revenue instead of being charged to capital account, would amount to $1,500,000 per year. If that is the case, if, 1,500 miles of railway occasion a deficit of $1,500,000 a year, then 3,200 miles of railway would occasion a deficit of $3,200,000. Add to that amount the interest account, and you have a loss to this country in operating this transcontinental road by the government, of $8,000,000 a year.

At one o'clock, House took recess.

House resumed at three o'clock.

Mr. LOGAN. Mr. Speaker, before the House rose I made a calculation of the cost to this country per annum of a government owned line of railway from Quebec to Port Simpson, and the operation of that railroad by the government. In the items which I gave of the expenditure was one for interest upon the capital invested. The reason that I made that calculation was that that was the proposition that the ex-Minister of Railways and Canals made in Vancouver, where he said that his ideal railway was a railway across the continent owned by the government upon which, as he said, there would never be any dividends paid, but which would simply be operated to the end that it would if possible or as nearly as possible pay the working expenses. Now I also showed that the ex-Minister of Railways and Canals, at Campbellton, N.B., claimed credit of having given the Grand Trunk Railway people the cue upon the railway proposition. Now, Sir, admitting that there was need of a railway across the continent, a second transcontinental, not four transcontinental railways, admitting that there was need of one transcontinental railway across the continent, there were two or three ways in which this railroad could be built. One of them would have been to adopt the policy of our friends opposite when they constructed the Canadian Pacific Railway. Now, Mr. Speaker, I am not going to dwell at any length upon the contract made by the late government for the construction of the Canadian Pacific Railway. I am not here to-day to quarrel in reference to that subject, but I may be permitted to as shortly as possible state what were the conditions, the arrangements made by the late Conservative government for the building of the Canadian Pacific Railway which was not a transcontinental railway, but only a railway from the centre of Canada to the Pacific coast. The government of that day gave to the promoters of that railway completed railway to the value of $30,000,000, they gave cash subsidy to the value of $25,000,000, they gave to the company 25,000,000 acres of selected lands in Manitoba and the Northwest. Of course, it is difficult to estimate the exact value of those lands, but when asking for a loan from the government in 1884, Mr. Stephen, now Lord Mount Stephen, said the lands which up to that time had been sold, had produced on an average $2.36 per acre. In 1892 Sir Wm. Van Horne said that the average selling price up to that time had been $4.05 per acre. Assuming the value of that land to be $3 per acre, we have a value of land of $75,000,000, or a total value given to this company of $135,000,000 in money and land. But besides this great assistance to this railway, they were given other important concessions. They were given, for instance, the privilege of importing their rails and other supplies for that railway free of duty. They were given exemption from taxation for twenty years from the time of the sale of the land, they were given a monopoly of the traffic of Manitoba and the North-west Territories. The government was not to assist any other railway building south of their railway towards the United States border. And lastly, there was in their contract no regulation of freight rates until 10 per cent should be paid upon the whole stock of the company, whether that stock was watered or whether it was not.

Now, Sir, the 'Weekly Sun' has been referred to here, the organ of the farmers of Ontario, so-called, I read from the 'Weekly Sun,' of Toronto a short time ago the following:

> The Canadian Pacific Railway has just declared a half-yearly dividend upon its ordinary stock at the rate of 4 per cent per annum. Its ordinary stock amounts to $65,000,000 and the half-yearly dividend just paid upon it is $1,300,000. Yet of this $65,000,000 stock only $8,500,000 at the outside went into the road. The remainder went into the pockets of the promoters and stockholders. The dividend just paid is equal to more than 30½ per cent upon the money that went into the enterprise. Yet we are told that we must not attempt to regulate freight rates until the dividend amounts to 10 per cent upon the $65,000,000 stock, or in other words, until the road pays 150 per cent, annually upon the capital which was actually expended upon it.

So much then for the experience of this country in building a railroad by land grant and cash subsidy. The government of the present day, realizing that another transcontinental railway was necessary, concluded to assist in building such a railway. They concluded to build that railway from

Quebec to Port Simpson. They had much reason for building from Quebec to Port Simpson, because they would open up a new northern empire of Canada. They had the advice of men who have traversed that country from end to end, they had the advice of Sir Sandford Fleming, who, in an interview published last autumn, stated that he was himself in favour of building from Quebec to Winnipeg. I quote from Sir Sandford Fleming :

I am inclined to think Mr. Blair is on the right track in proposing to extend the Intercolonial to the Pacific. It seems to me, however, that it would be a mistake to try to form a new transcontinental line in a haphazard way by connecting various fragments of railway which have been located without any general plans. The effect would be to lengthen the whole line and unduly lower its engineering character, and almost certainly give it features which would be for ever regarded as blemishing to a great transcontinental line. To realize Mr. Blair's conception of a new national railway, it should in my judgment begin at the Quebec bridge now building, where it would form a direct connection with the Intercolonial, and it should extend from Quebec by the most direct route to Port Simpson on the Pacific. From what I know of the general character of the greater part of the intervening distance, I believe a line with splendid engineering features could with ordinary care be secured.

That was his advice in reference to the engineering features. They are being justified every day. Only a few days ago the first report came in from the engineers of the Grand Trunk Pacific, and they report that from Winnipeg to the north of Lake Nepigon, on this route, they have found they can easily place a road with grades that are low enough for the most up-to-date railway in the country. Now, Sir, I am not going to attempt to-day to describe the country between Quebec and Winnipeg. That has been ably dealt with and it seems to me exhaustively dealt with by the hon. Minister of the Interior. It has been shown by him that we have there a vast acreage of fertile land. He has read from the report of Dr. Bell upon that proposition, but he did not read all of Dr. Bell's report, and I will only encroach upon the time of this House for one moment while I refer to another report made by Dr. Bell of the geological survey of Canada upon the climate and the character of the country in this northern domain. In his report, which is dated Ottawa, 7th March, 1887, Dr. Bell says :

The summer and winter temperatures resemble those of the county of Rimouski.

Why the hon. leader of the opposition in the province of Quebec, the member for Jacques Cartier (Mr. Monk), referred to this the other day as a sub-Arctic region. Well, if it is a sub-Arctic region, the county of Rimouski must be quite as much a sub-Arctic region.

The summers not so hot nor the winters not so cold as at Winnipeg.

The average snowfall is about three feet or a little more, still not quite so great as about the city of Quebec. Potatoes and all other kinds of root crops have been found to do remarkably well. Hay also grows luxuriantly. Barley would, I think, be a sure crop every year, and rye could also be grown with advantage. Barley is sold every year at Moose Factory and Rupert's House, and it has ripened well every year that I have visited these parts. However, these places are much further north than the region I have indicated, and what is worse for them, they are near the sea, which is said to have an unfavourable influence in the autumn. Mr. John McIntyre (now at Fort William) says he has ripened wheat at Missinaibi and New Brunswick House within the above area. I have had experiments made at New Brunswick House and at Norfolk, on the Abitibi river, with a great variety of field and garden seeds, and the results have proved that this region is capable of growing anything which can be raised, say in the county of Rimouski. I regard the region as well-suited for stock-raising and dairy farming, and it is not unlikely to prove fit for grain also. The soil at Moose Factory is heavy and cold, still vegetables, &c., grow successfully here. Among the kinds may be mentioned potatoes, beans, peas, turnips, beets, carrots, cabbage, onions, &c., &c. As showing the absence of summer frost at Moose Factory in 1887, I mention at page 27c of my report for that year, that, on our return to Moose Factory, from the north, in the end of September, we found that there had been no frost there all summer, and the most tender plants, such as beans, balsams, melons, cucumbers, tobacco, the castor oil bean, &c., growing in the open air, were still quite green and flourishing. That summer was, however, probably a finer one than usual.

Minerals are to be found in this region; nearly all the metals are to be looked for in the Huronian formation, a belt of which is believed to run all the way from near Lake Abitibi to the south of Lake Mistassini, and this would be crossed by any railway from Quebec to James Bay. Iron and gypsum are abundant in the north-west of Moose Factory.

It would be wearisome to the House if I continued to read the reports of explorers and missionaries and of the officers of the Geological Department. Suffice it to say that they all point to the conclusion that this northern country through which the proposed line shall run is a country rich in agriculture, rich in timber and rich in minerals. Why last year the Hudson Bay Company sent in $30,000 worth of the most modern flour machinery to Fort Vermillion on the Peace river, and although that settlement is more than 200 miles north of the proposed route.

Mr. BELL. To what point was that machinery sent ?

Mr. LOGAN. To Fort Vermillion on the Peace river.

Mr. BELL. That is not further north.

Mr. LOGAN. Yes, and it is even north of the Trans-Canada which my hon. friend (Mr. Bell) endorsed in the city of Quebec.

Now, Sir, the government have submitted this proposition to build a transcontinental line. The government had before them the experience of managing the Intercolonial Railway and they had before them the experience of the construction of the Canadian Pacific Railway, and in the light of this experience they have submitted the proposition which is now before the House and which we are asked to endorse. That proposition is as follows :

The government pays interest for seven years and guarantees the interest for a further period of forty-three years at three per cent on bonds of mountain section up to three-quarters of the cost but the total amount not to exceed $30,000 per mile. The old Grand Trunk Railway guarantees the balance of cost for construction; the government will take a first mortgage on the road and on the rolling stock. The old Grand Trunk Railway with its $150,000,000 of assets in order not to suffer loss must protect the government. It has been shown by actuarial calculation that the total amount of money for the payment by the government of seven years interest could be provided by the present sum of $2,334,575.90.

On the prairie section the government guarantees interest at three per cent for fifty years on three-quarters of the cost of the road, the total amount not to exceed $13,000 per mile. The eastern section from Winnipeg to Moncton is to be built and owned by the government as the neck of the great western bottle. This is to be a common highway for all railways, the government reserving right of way for the traffic of the Intercolonial Railway, the Grand Trunk Pacific to be given a lease of this line for a period of fifty years and to pay the government three per cent upon its total outlay after seven years. The government therefore borrows the money, pays interest for seven years, and after that interest will be paid by the Grand Trunk Pacific for a period of forty-three years, when the road improved and developed as it must be will revert to the government. The amount required to pay the total interest for the seven years is computed by actuarial calculation to be $8,853,504.

The total amount, therefore, required at the present time to pay all the interest as above for seven years on the mountain section as well as on the eastern section amounts to $11,188,079.90. The company is to provide $20,000,000 of rolling stock, $5,000,000 of which is to belong to the eastern section, and the government takes a mortgage upon this rolling stock of the eastern division as well as that of the western. It is almost beyond doubt that that prairie section will not cost the government of Canada one single red cent. In reference to the eastern section it is not the case of a man buying a right of way, but the government having the fee simple reserves the right of way over the property that it leases to the Grand Trunk Pacific. Of course, Mr. Speaker, when we say that the total cost of the road to us is to be $11,188,079.90, we do not deny that the government have to provide the money for building the eastern section, but at the same time we do know it to be a fact that we simply pay the interest upon that money and the interest upon the bonds of the western section for seven years, and after that we have not one dollar of interest to pay for a period of forty-three years. There are no exemptions from taxation as was the case with the Canadian Pacific Railway contract. There is no exemption from customs duties on the import of rails or other supplies as was the case in the Canadian Pacific Railway contract. There is no exemption from taxation for a period of twenty years; there is no impediment to traffic in Manitoba and the North-west, and there is no restriction that freight rates shall not be regulated by the government until the road earns ten per cent on the whole cost. There is nothing whatever of that kind in this proposition. From Port Simpson to Winnipeg the government will have control of the rates on that road, and from Winnipeg to Moncton it will own the road and therefore control it, and having reserved the right for the Intercolonial Railway to run over that line, it really means an extension of the Intercolonial Railway from the maritime provinces clear through to the city of Winnipeg. It is worth mentioning that the officers of the Ontario government have reported that the country through which this railway runs in that province contains 16,000,000 acres of good agricultural land. It has been proven by the officers of the Quebec government that in northern Quebec there are many million acres of excellent land which can be cultivated in years to come.

This proposition of the government, Mr. Speaker, doubles the size of Canada; it gives us a new empire to the north ; it gives hope and it gives encouragement to the people in Canada. It gives new life to our great west; it gives quick communication between the west and the east.

What have we got as an alternative proposition from the leader of the opposition ? Let me first point out that a picnic was held last week in Toronto, and it was heralded far and near that the picnic was to be in honour of the leader of the opposition. He was the trump card to be played, but he did not go. He wrote a letter to say that he had to speak on Thursday, and the matter was so important that he could not leave the House of Commons. He was labouring with the question on Thursday, and brought forth nothing; Friday came, with no better result; Saturday and Sunday followed, when he may have reflected and prayed over his proposition; Monday came, and nothing was done. He was listening for some echo from the back benches to tell him what to do. He heard the speech of my hon. friend from

West Simcoe (Mr. Lennox), and still nothing came forth. But finally, after struggling with this question for over a week, he comes forward with what kind of a proposition? He condemns the proposition of the government and offers to us as an alternative proposition : that we shall extend the Intercolonial Railway to the Georgian bay by purchasing the Canada Atlantic Railway or by building a new line; that we shall build a road from Scotia Junction on the Canada Atlantic to Sudbury on the Canadian Pacific Railway; and that we shall expropriate the Canadian Pacific Railway from North Bay to Port Arthur. In other words, after all that we have heard about the lean end and the fat end of this transcontinental railway contract, the hon. leader of the opposition proposes that we shall expropriate the lean part of the Canadian Pacific Railway from North Bay to Port Arthur, and make it a common highway for all railways, giving them all running rights over it. We have had the opinion expressed time and again by the railway experts of the opposition, the hon. member for South Lanark (Hon. Mr. Haggart) and the hon. member for Hamilton (Mr. Barker) that running rights over a common railway are of no use. But the hon. leader of the opposition proposes that the government shall control that line, and open it on equal terms to all railroads. But he follows that up with the further proposition to make the Canadian Pacific Railway and the Canadian Northern Railway give running rights over their roads from Port Arthur to Winnipeg. Now, let us see what the railway experts of the opposition to this contract say with regard to running rights. I read, for instance, from 'Hansard' what the ex-Minister of Railways said, at page 8710 :

> A more absolutely unworkable, and, in the opinion of every railway man in the country, a more senseless suggestion it would be difficult to make.

Then, I read what the hon. member for Hamilton said—'Hansard,' page 8595 :

> There is not a railway man in the whole of America who would contradict his statement that it would be utterly impracticable to exercise running powers over a long line such as this.

I quote these hon. gentlemen against the proposition of the hon. leader of the opposition to have running rights from Port Arthur to Winnipeg over two roads, controlled by two separate companies, in exactly the same way as the government propose to have running rights over the Grand Trunk Pacific from Quebec to Winnipeg. The echoes of the speech of the hon. ex-Minister of Railways and Canals (Hon. Mr. Blair), in which he talked about starting on a junketing tour from Quebec and going to the Pacific coast, had scarcely died away before the hon. leader of the opposition makes the proposition to obtain running rights over these two railways from Port Arthur to Winnipeg. Then, the hon. gentleman is ready to assist almost every railway in the country. In fact, it seems to me that he has been groping in the dark, and finally he says, Give me any old thing that I can put before the country as a proposition. He is very much like the Hebrew gentleman who went in a store where he saw a notice, 'If you do not see what you want, ask for it.' He went home and put up a notice in his own store, which read : 'If you do not know what you want, ask for it.' That is about the position of the hon. leader of the opposition—if you do not know what railway you want to assist, simply ask for it, and you will have your wish granted. He proposes to assist the Grand Trunk to build from Winnipeg to Edmonton, and from there, coming back to his first love, he proposes to build a line from Edmonton to Port Simpson, with equal running rights to all railways. Here we have the same proposition that has been condemned by the hon. gentleman's own railway experts. We do not gather from the hon. gentleman's remarks in what way he proposes to benefit the Intercolonial Railway by this long, crazy, patchwork policy for a railway from Montreal to the Pacific coast. He stated that Wolvin & Co. are carrying grain from Fort William to Quebec at 3½ cents a bushel, and that it has been carried as low as 3 cents a bushel. Does he think he can carry wheat by this hop, skip and jump railway of his from Fort William to Montreal at 3 cents a bushel ?

Another part of the hon. gentleman's proposal is to run a railway from Jacques Cartier Junction to Coteau, and for that purpose we would have to build a bridge over the Ottawa river. I have the estimate of a railway man that the cost of that road and the bridge would be at least $1,000,000. To purchase the Canada Atlantic would require $17,000,000. It has been stated before a committee of this House that that was the original cost of this railway, and we would not be likely to get it below cost. To build a road from Scotia Junction to Sudbury, say at $25,000 a mile, would cost $3,000,000. To expropriate the Canadian Pacific Railway from North Bay to Port Arthur, a distance of 634 miles, estimated at $60,000 per mile, which is the amount the hon. member for South Lanark says that road cost the Canadian Pacific Railway Company, which would amount in round numbers to $38,000,000. That road, if it is to be used by four or five different railways, would have to be double-tracked, and its grades and curves would have to be improved. It is admitted by the Canadian Pacific Railway officials that that portion of their road running east from Port Arthur to North Bay is not a grain road—is not in a condition to handle that kind of traffic. You would also have to provide rolling stock for it. These im-

provements, I estimate, would cost $19,000,000. These various items make a total of $78,000,000, which would have to be spent to carry out that portion of the hon. gentleman's scheme from Jacques Cartier, on the island of Montreal, to the city of Winnipeg, and the country would own only part of the road at that. Then, the hon. gentleman proposes to assist the Grand Trunk to build a line from Winnipeg to Edmonton. I cannot make any estimate of what that assistance would cost, because I do not know what kind of assistance he would give. Probably if he acted on the experience of his supporters in days gone by, it would be a cash subsidy. Then he proposes to build a line through the mountains from Edmonton to the coast, a distance of 600 miles at least. This would cost probably more than the north shore line of the Canadian Pacific Railway around Lake Superior, because in building that road, the company had easy communication by water to bring in supplies, whereas there would be no such advantage in building a line through the Rocky mountains. But put it at the same amount, $60,000 a mile, which would mean a further cost of $36,000,000. Then, we would have to provide terminals at Port Simpson and other places, rolling stock, branch lines in different directions, and a Pacific steamship line.

I have no data on which I can estimate the cost of these. But even without these, taking only the cost of getting to Winnipeg and then to Edmonton, and thence to the coast, the total, according to the data we have before us will be $114,000,000. The hon. gentleman afterwards said he proposed to build a line from Lévis to Moncton at the expense of the government. Such a line, according to the estimates of the ex-Minister of Railways, will cost $15,000,000. Then the hon. gentleman proposed to build a colonization road from Winnipeg to Quebec ; and in fact, before he got through, he endorsed the line which the present government proposes to build. Such a line will cost, according to the lowest calculation, $49,000,000. The hon. gentleman would have to provide that road with rolling stock and he also would have to provide rolling stock for the road from Montreal to Port Arthur, which he proposes to buy, and I think a low estimate of the rolling stock he would have to get for that line would be $25,000,000. That would make a total of $203,000,000, which the hon. gentleman's plan would cost this country, and what would we get in exchange ? A patchwork railway system. The hon. gentleman's policy is one of despair, a policy of the setting sun, as opposed to the policy of hope and the rising sun enunciated by this government. From Montreal to the coast the hon. gentleman does not propose to add one acre of cultivated land to the area now opened by railways, except from Edmonton through the Rockies to the coast. By this proposal we would have this immense sum of $114,000,000 paid out without having one acre of land opened up for cultivation. And if he went on to build the line from Winnipeg to Quebec, we would have the total expenditure increased to the sum of $203,000,000. Suppose he should buy the Canada Atlantic Railway and the Canadian Pacific Railway from Port Arthur to Winnipeg ; these two propositions would cost him $17,000,000 for the Canada Atlantic Railway, and $38,000,000 for the Canadian Pacific Railway, or $55,000,000 for them both. And will that scheme add any more railways to Canada ? No, Sir. Is he going to pay out that money to the workingmen, the artisans, the wholesale men and the manufacturers of Canada ? No, but to the magnates of the Canadian Pacific Railway, and a millionaire who lives in Ottawa and owns the Canada Atlantic Railway. But our proposition means more money for the manufacturer, the wholesale man, the workingman and the artisan.

We have in the Bill a clause which provides, in the most stringent way, that all supplies shall be purchased in the Dominion. What does that mean ? It means even more prosperity during the next seven or eight years added to the great prosperity we have at present.

The bitterest attacks of the opposition have been made on the line from Quebec to Moncton. I take my share of responsibility for that line. I tried to put up as good a case as I could in the Railway Committee in favour of this transcontinental road being built to a maritime winter port. In the maritime provinces we have been long enough seeing the products of Canada pass down into American territory and to American ports, while the grass almost grew in the streets of our cities, and the universal demand of our people was that no assistance should be given any other transcontinental road which would not be built into the maritime provinces, so as to utilize our Canadian maritime ports. That is not a new idea. The Intercolonial Railway does not serve that purpose. I do not want to take up the time of the House in going into the matter of the construction of the Intercolonial Railway, but I may refer to a motion made in this House by the late lamented Alexander Mackenzie, on May 17th, 1869. In this motion he condemned the proposed Baie des Chaleurs route, and advocated a route connecting Rivière du Loup with the valley of the St. John. He admitted that this meant a loss of the imperial guarantee, but he asked would it not be better for Canada to raise less than one half of the amount on its own debentures and secure the construction of the shorter and cheaper and more commercially valuable road. He believed the true policy was to have sought the most direct route to the nearest seaport. Sir Charles Tupper said :

At the Quebec conference it was agreed by an overwhelming majority that the imperial au-

thorities should decide the question of route. Therefore, it was too late in the day to raise the question. The imperial government had decided to have no other route and hence according to the agreement of the governments of the provinces no other route should be accepted by our government.

Besides setting forth the fact that the imperial government had decided the route, Sir Charles Tupper proceeded to argue in favour of building by the northern route, on the ground of intercontinental communication. He said :

The capitalists of England were spending their money lavishly in the attempt to shorten the distance between the two continents. He argued that by the Intercolonial two days could be saved in reaching England ; and he believed the day was not far distant when the line would become the great highway between the two continents. This view of the question raised it to one of immense national importance. St. John's, Newfoundland was only 1,640 miles from Queenstown, and by building a railway across Newfoundland 250 miles—a perfectly practical scheme—the port of Shippegan, in New Brunswick,——

That was the great winter port then.

—which possessed a capital harbour for seven months in the year, would be brought into direct communication with England, and the great cities of the west would be brought nearer to Liverpool by 266 miles than by the route by way of Halifax. But without building a mile of railway in Newfoundland, Shippegan was nearer to Liverpool by way of Belle Isle by 127 miles than Halifax.

I shall not quote any further. I simply point this out to show to what length they had to go to justify the building of this road by the long and circuitous route of the north shore, instead of by the shortest route across New Brunswick. The strongest argument of Sir Charles Tupper was that the imperial government had decided on the route, and, therefore, the House had no right to change that decision. In the course of that debate, Mr. Ryan, a distinguished New Brunswicker, said that in 1864, Mr. Fleming had made a survey of the central route, and that it was reported to be quite practical.

I have here a speech delivered in the House of Commons by the Hon. Mr. Fisher, also a New Brunswick man, who knew that country as well as any man of that time. I shall not quote his speech at length, but will read this statement from it, and contrast it with that made by the ex-Minister of Railways. To hear the ex-minister, one would imagine that there was a Sahara desert in that part of New Brunswick. Here is what Mr. Fisher said in 1867 :

From Green river to the mouth of the Nashwaak, there is a parallelogram of about thirty-five miles by one hundred and fifty, containing from two to three millions of acres of land of the first quality, the very garden of New Brunswick. Fleming says, judging from the portion cleared on the lower part of the Keswick valley, the soil must be of superior quality. This part of the province is settling rapidly.

Why ? Because they expected to get railway communication. But the railway communication did not come, for the road was built by the northern shore. And the people who live there have left that country. But the garden of New Brunswick still remains, and we propose to build through the garden of New Brunswick by this line from Winnipeg to Moncton. But, Sir, I do not need to quote authorities of long ago, I do not need to quote engineers. I can quote the man who to-day is looked upon by hon. members opposite—within the last few days —as the highest authority on earth, the ex-Minister of Railways. Upon one occasion, discussing the Intercolonial estimates, that hon. gentleman said :

There is no question that the Intercolonial was not located with reference to business or commercial considerations. I have remarked before, and I remark now, that there was one particular in which political considerations did fatally injure the Intercolonial Railway. That injury was done, not merely once, but for the entire life of the railway. The location of the Intercolonial was most unhappy from the point of view of achieving financial results, and was due entirely to those considerations of state—imperial, if you will--war considerations, large and potent considerations, which were thought to over-balance altogether business considerations. As everybody knows, the location is very unfavourable, not only because of the enormous distances between important points and between the termini of the railway, but because of the inferior character, from a productive business point of view, of a large portion of the country which it traverses. A large portion of the railway does not yield returns at all commensurate with the cost of its operation. That important portion between St. John and Halifax is, I think, paying quite a handsome return over its cost and the expenses of operation; but the rest of the railway is not, and that is due to the enormous distances over which the traffic has to be hauled, to the small amount of local traffic which comes to the road, and to another consideration of a very potent character, which is, that at almost every important point on the road, at all events, from Halifax nearly to Montreal, it has to face water competition.

I could multiply quotations by the hour in reference to the impracticability of using the Intercolonial for through-traffic. But the opposition have admitted that the ex-Minister of Railways speaks with supreme authority, so I do not think I need to quote further to convince them that the Intercolonial, as at present constituted, is long and circuitous, and, though its grades may be good, it is not the road for transcontinental traffic.

Now, it has been asked in this House, who is calling for this road to the maritime provinces ? Who wants it ? I will endeavour to show who wants the road. In 1884 it was considered so important to get shorter connection with the maritime provinces that a resolution was brought down in this House to grant a large sum—the resolution was afterwards amended so as to grant $250,000 a year—to the Canadian Pacific Railway to build a road from Montreal down to the maritime provinces. This was built, mark

you, to connect Montreal with the ports of the maritime provinces, Halifax and St. John being especially mentioned. Sir Charles Tupper spoke on the subject of the Intercolonial at that time. He was Minister of Railways, and an energetic administrator of his department. He took pride in the Intercolonial, no doubt, and endeavoured to make it a success. But this is what he said, speaking in this House in 1884 :

Although every effort has been made to render the operation of the Intercolonial Railway as successful as possible, although more has been accomplished in the development of the country, in the development of the trade and business of the country through the agency of the Intercolonial Railway than any person on either side of this House a few years ago supposed to be possible, still we have found we were too heavily handicapped by the distance, and that we could not, reluctantly as we are driven to the conclusion, we have been driven to the conclusion, by the force of circumstances and by the practical results, that it is impossible for the ports of St. John and Halifax to compete with the nearer ports of Portland and Boston, in the United States. Under these circumstances, the attention of the government has been drawn, as I have said on one or two occasions before in this House, to the best means by which we might secure a realization of that which we all desire, the Atlantic terminus being in Canadian territory, as well as the Pacific terminus, and thus be placed in a position to fairly compete for the great transcontinental trade and traffic that we all know must flow over that line. . .

And so on, in a long speech, in which he advocated the building of a shorter line, and admitted that the Intercolonial, much as he regretted it, could not compete with the roads leading to the United States ports. He said also :

I have only to read these figures to the House, I think, in order to show that the government, in asking for this aid, in extending practically the terminus of the Canadian Pacific Railway, involving, as it will, the transport of the traffic of both the Grand Trunk Railway and the Canadian Pacific Railway, down to our own coasts and our own ports in the maritime provinces, are asking aid, which will, without any question, assure the completion of that. I have already stated that it is proposed that this shall not only be the shortest line to Montreal, but the shortest line to Quebec.

As I say, this resolution was brought in by the Sir John Macdonald government to give a large amount of money per year to the Canadian Pacific Railway to build a road to the maritime provinces. The Prime Minister (Rt. Hon. Sir Wilfrid Laurier) has already alluded to the remarks of Sir Hector Langevin on that occasion, when that gentleman said :

Well, I am sure the hon. gentleman will be pleased to hear the declaration which the government makes through me, that in the arrangements to be made with the company to build the railway, to take advantage of this vote of money, of $250,000 during twenty years, the government will take care to secure the completion of the railway, not only to Mattawamkeag, but also to Salisbury, and if that is not secured, there will be no subsidy given. We must act in good faith ; the faith of parliament is pledged, and we must take care that that money is employed as parliament wishes.

I could quote other speeches of that kind. But that one citation from a speech of Hon. Edward Blake suffices :

We are now called upon to recognize that, at any rate, as far as the arts of peace are concerned, the Intercolonial has not answered its purpose. I do not say it has been useless; far from it. I am quite free to admit that it has developed the traffic far greater than I, for my part, expected it would ; I am free to admit that it has done more good than I expected it would, and I rejoice to know it ; but I say that we are now recognizing, in the most formal manner, that it has failed to accomplish its real, its main purpose, which was, not to protect us in case of war, but to benefit us during a time of peace and give us real and as close a connection with one another as geography allowed.

Well, Sir, that resolution passed. We did not hear anything then about paralleling the Intercolonial. And the road was built from Montreal to St. John. But it was not built to connect with the city of Halifax or the other ports in the maritime provinces. And what happened ? In 1889, Sir John A. Macdonald introduced a resolution into this House, and I wish to call particular attention to it, as I shall show that some hon. gentlemen who have spoken very strongly against the building of the road by the government and handing it over under lease to the Grand Trunk, voted for this proposition. Sir John A. Macdonald moved :

That it is expedient that a railway should be constructed as a government work, between the point of junction on the New Brunswick Railway——

At that time acquired by the Canadian Pacific Railway——

—at or near Harvey, in the province of New Brunswick, and a point of junction with the Intercolonial, at or near Salisbury, in said province or somewhere between Salisbury and Moncton, and that the sum of five hundred thousand dollars be granted towards the construction of said railway.

Sir John A. Macdonald made a speech on the subject of this Salisbury resolution. He said :

This railway is a link in the short line from Montreal to Halifax. . . . The government feel that they have pledged themselves to parliament and to the country through which this road passes, that the road should be built.

Sir John claimed that the distance from Harvey to Salisbury would be shortened by 27 miles. The Canadian Pacific Railway officials stated that it would be shortened only 14 or 16 miles. Others claimed 8 or 10 miles. The new line was to be 113 miles long, crossing the St. John river at Fredericton. Sir John said he had an offer from the Fredericton Bridge Company to build the road at $16,000 a mile. If that was a

fair estimate of the cost, we can build this new line from Lévis to Moncton for $6,400,000. Sir John Macdonald said the government would build the road and supply the bridge at Fredericton. And what were they going to do with it after it was built ? They were not only paralleling the Intercolonial from St. John to Moncton, but they were competing with that line around the north shore. In spite of this, they were going to lease the road to the Canadian Pacific Railway. And for what rental ? For 3 per cent on the total cost ? No ; they were going to give it to them free of charge for a term of twenty years. In the agreement with the Canadian Pacific Railway it was provided, in reference to any rate concession granted by the Intercolonial Railway to any railway in competition with the Canadian Pacific Railway :

Then the lessees of Canadian Pacific Railway shall be notified thereof and shall be granted corresponding concessions and further it provided the lessees shall have the right to maintain freight and passenger agents at such points on the Intercolonial Railway as they may elect and to sell tickets and make through rates for passengers and freight either way over the lines of the Intercolonial Railway east of Moncton to and from points on their lines of railway.

Mr. Speaker, that was the resolution which was moved by Sir John A. Macdonald. It was pointed out at that time—and let me call the attention of the opposition to the fact—that there was not any survey made, not an engineer had visited the proposed route. That was pointed out to Sir John A. Macdonald, and he was asked whether they were going to build it by contract or by day's labour, and he answered that they would not bind themselves to either plan, but the government would build it just as they thought best. Well, this aroused the ire of the hon. member for St. John city. It seems to be not an uncommon thing in this House for the members for St. John city to have their ire aroused. But at that time it aroused the ire of Mr. Weldon, who then occupied the same seat in this House as is occupied at the present time by the ex-Minister of Railways and Canals (Hon. Mr. Blair). Mr. Weldon moved this amendment :

That the said resolution be not now agreed to, but it be resolved, that no action should be taken by this House, authorizing the construction by the government of Canada of another line of railway between Harvey and Salisbury or Moncton, until a proper survey of the proposed line, and reliable estimate of its probable cost are laid before parliament and until time has established that the existing line of railway between the points named is not sufficient to meet the demands of passenger and freight traffic.

That, Sir, was the amendment of Mr. Weldon, the member for St. John. He merely asked that surveys should be made, that an inquiry should be made, that time should be taken. But at that time also it was said that time would not wait. So this amendment was voted down, and among the members of the Liberal-Conservative party who stood up in this chamber and voted in favour of the government building this road to compete with the other government road and with the Canadian Pacific Railway, among the members who voted for a Bill by which the government were to build a road and hand it over to the Canadian Pacific Railway holus bolus, were the hon. member for South Lanark, the hon. member for East Grey and the hon. member for Leeds ; and last, but not least, the hon. member for Queen's and Sunbury (Mr. Wilmot).

Mr. SPROULE. Might I ask the hon. gentleman if that road has ever been built ?

Mr. LOGAN. Even if the road was not built, it was provided for in this parliament, and the hon. gentleman voted that it should be constructed, and he cannot now hide himself behind the fact that the Senate threw the Bill out.

Mr. SPROULE. Should not the fact that it has never been built be a salutary lesson to-day to hon. gentlemen that there was some substantial reason for it ?

Mr. LOGAN. I am not here to contend that this Harvey-Salisbury branch should be built, but I am pointing out to the hon. gentleman that he wanted to build it as a government road and hand it over to a company, without a dollar's interest or rental, and he was willing to do that without a survey having been made, and when the government did not know anything whatever about the route.

Mr. WILMOT. What was the date of that vote ?

Mr. LOGAN. That vote was in the year 1889. Now, Sir, there was another amendment, and that too was voted down. Sir Richard Cartwright moved another amendment which you would think would have been endorsed by almost every hon. gentleman in this House. What was it ? He pointed out the fact that there was already a road known as the Temiscouata road from Rivière du Loup to Edmundston, and it was proposed to build a road from Edmundston to Moncton. They were already talking about this Edmundston-Moncton road because it would give the shortened distances as we have them to-day. In his amendment he simply asked that this road from Edmundston to Moncton should have running rights over this proposed government road that was to be built by the government from Harvey to Salisbury. You could not imagine that anybody would have the supreme audacity to get up in this House and vote against such a proposition as that. He simply asked that this road should have running rights, and he pointed out the fact that the short line railway ran through the state of Maine, and it might sometime be necessary, in case of trouble with the United States, to run down

from Edmundston to Moncton; he was even then thinking about this bonding privilege. So he moved that amendment, and you would scarcely imagine that anybody would vote against it. Let me first read his amendment:

That this report be not now received, but that it be declared, that inasmuch as the Temiscouata Railway has already been constructed entirely through Canadian territory, from Rivière du Loup to Edmundston, on the River St. John, and inasmuch as the distance from Montreal to Moncton is thereby capable of being greatly reduced, and cannot, in any event be more than a few miles in excess of the distance by the so-called Short Line Railway, across the state of Maine, and whereas it is now proposed to construct a line from Harvey to Salisbury, entirely at the public expense, it is expedient that the said Temiscouata Railway should be granted full running powers over the said line from Harvey to Salisbury.

That was voted down by, among others, the hon. member for South Lanark, the hon. member for East Grey, and the hon. member for Queen's and Sunbury.

Now, what is the next proposition we come to? I find that in that same year, 1889, the New Brunswick legislature was in session, and there was some doubt expressed in that legislature as to whether this Harvey-Salisbury branch would be built to connect Harvey with Moncton. They doubted the sincerity of some of our friends opposite, and so a Bill was introduced into the New Brunswick legislature by a number of gentlemen, most of whom resided in Fredericton. Mr. Wilson introduced the Bill. He spoke of the importance of the short line railway, and of the necessity of its being built across the province according to the promise made to the people of the province by the Dominion government. There being some doubt as to the Dominion government building the short line, incorporation powers were sought by R. C. Skinner, A. D. Richard, F. P. Thompson, who is now one of our most respected senators, and Louis G. de Bertram, of New York, for that purpose. The Dominion government failing to build the road, the company wanted to be on deck, as it were, to construct it. Now, that was the proposition for a company in New Brunswick to build this connecting link, and the members for St. John naturally opposed it. I am not blaming the members for St. John for having opposed it, because no doubt it meant the taking away of a large amount of traffic from the city of St. John. I find in the discussion of that Bill that the then member for York in the local legislature is reported in the New Brunswick 'Hansard' of 1889, page 116, as follows:

It is said that the building of this short line will interfere with the trade in St. John. He thought that the hon. members who had taken that view did not represent the best sentiment of St. John. He did not think the people of St. John were wanting in energy, pluck and enterprise. That being so, they had nothing to fear by the competition of Halifax so far as the short line railway was concerned.

Those were the words of the then member for York, in the province of New Brunswick, and to-day of the city of St. John, in the Dominion House of Commons, the hon. Andrew G. Blair. But further, at page 118, Mr. Blair is reported as saying:

The speeches of the opponents of this Bill sought to create the idea that the building of the short line would injure St. John and not benefit York or Westmoreland. No evidence had been adduced to prove this. If St. John with its great natural advantages, cannot hold its own against Halifax, 200 miles away, then he would say that the energy which has distinguished St. John in the past has departed. He did not think St. John was less enterprising than formerly, and he would have to conclude that those who had spoken against the Bill did not voice the best sentiments of the people of St. John.

I commend the words of the hon. member for York (Hon. Mr. Blair) spoken in 1889 to the hon. member for St. John city (Hon. Mr. Blair) spoken in 1903.

Now, Mr. Speaker, what follows. The next phase in the history is that we find a delegation left Halifax, a very important delegation, in May, 1890. They came to Ottawa, they interviewed Sir John Macdonald and presented to him this memorandum:

We have been instructed by the Board of Trade of Halifax to proceed to Ottawa and represent the views of that corporation to your government, respecting the application of the Maritime and St. Lawrence Railway Company.

The Maritime and St. Lawrence Railway Company mark you was an adjunct of the Grand Trunk Railway, and was to operate from Edmundston to Moncton. Towards the end of the memorandum they submitted the following in reference to a line from a point on the Canadian Pacific Railway to Salisbury and stated as follows:

That it was the declared policy of the government of Canada in 1884 to subsidize and cause to be constructed a line of railway connecting, by the shortest and most practicable routes the ports of Montreal, St. John and Halifax.

That to effectuate that policy $250,000 for twenty years was voted by parliament, and of this sum $187,000 actually expended in constructing a line of railway by the shortest and most practicable route between Montreal and St. John.

Now, they conclude this memorandum as follows, and I want you to pay particular attention to this, Mr. Speaker:

The difficulties which prevented parliament favouring the construction of the Harvey-Salisbury line——

What do they mean by difficulties? They meant the pressure of the Canadian Pacific Railway.

——have led us to consider favourably the proposition of the construction of a line between Edmundston and Moncton as a substitute.

The hon. ex-Minister of Railways and Canals is the man who never heard the idea suggested that there should be a line from Edmundston to Moncton. He said it was madness. I am now reading the solemn declaration of the Halifax deputation representing the Halifax Board of Trade and the city council in May, 1890, in which they say they had favourably considered the proposition of the construction of a line from Edmundston to Moncton as a substitute.

We understand that application has been made to parliament for a cash subsidy to aid in the construction of this line, and that if granted the Grand Trunk Railway Company will operate the same in conjunction with its own line and the International Railway, as part of a through short line between Montreal and Halifax, and that when the said through line is completed the distance between Halifax and Montreal will not exceed 710 miles.

They asked that the government of that day should make an appropriation for the construction of this line by the Grand Trunk Railway Company. So much for that, Mr. Speaker, now we find that in 1891, the Grand Trunk Railway had an understanding with the then government that they were to be paid $10,000 a mile for the building of this very line from Edmundston to Moncton. In the meantime the survey of Mr. Davey had been made which showed the practicability and the feasibility of this route, but pressure from the same source was again brought to bear and this project was nipped in the bud.

Mr. SPROULE. Might I interrupt the hon. gentleman for a moment? It seems to me that all these efforts at building a road which failed would rather suggest the impracticability of the scheme. Now, if he could give us any information that would justify the belief that it is a practicable scheme and could be built without unreasonable expense it seems to me it would be more to the purpose.

Mr. FRASER. Why did you vote for it?

Mr. SPROULE. I am only drawing the attention of the hon. member (Mr. Logan) to this with the desire to get out the information if he has it.

Mr. LOGAN. Mr. Speaker, if the hon. gentleman (Mr. Sproule) is not satisfied with the vote that he gave many years ago, I cannot help him at the present time. But, Mr. Speaker, I am now endeavouring to prove that the demand for this road from Lévis to Moncton has been almost a unanimous demand from the maritime provinces and I propose, Sir, to show that this demand had its storm centre within the confines of the city of St. John, represented by the hon. ex-Minister of Railways and Canals.

The ex-Minister of Railways and Canals said the other day:

It is a curious question as to the origin of this idea. We never heard of it until the session was half over. The proposition is absolutely unjustifiable. Who wants it? I have yet to hear the first man in the province of New Brunswick asking that this road shall be constructed. They have never asked for it, and I would decline the gift with thanks.

The hon. gentleman (Hon. Mr. Blair) surely has not been asleep. His mind is the mind of an active man. I am going to read from the report of Mr. Jarvis, the president of the St. John Board of Trade, at the annual meeting of the board held on December 1st, 1902. In his address, the president said:

He hoped they would agree with him that if the aid was given it should be only and strictly on the condition that the proposed Grank Trunk Line was in some sense an all-Canadian route and that the Grand Trunk carried their line from Montreal to Edmundston and thence over Canadian territory until it tapped the Intercolonial Railway between St. John and Moncton; and further that the Grand Trunk Railway in establishing its terminus at St. John, provided its own terminal facilities as well.

I am sorry the hon. member for Colchester (Mr. Gourley) is not present, because I find that this matter was discussed in the Truro Board of Trade at a meeting and the board passed a resolution as follows:

Resolved, that this joint meeting of the Board of Trade and citizens of Truro, having considered the question of another transcontinental railway, on Canadian territory, is of the opinion that the same is immediately necessary on account of the immense and rapidly increasing productions of the North-west, which the existing railways are entirely inadequate to transport.

Sir, I have quoted from the Moncton Board of Trade. I have quoted from the Board of Trade of the city of St. John, I have quoted from the Board of Trade of Truro. I could go on further and quote from the resolution of the county council of the county of St. John, from the resolution of the county council of Queen's and Sunbury in reference to the transcontinental line being built into the maritime provinces, but I am going higher and I will quote from the resolution passed by the highest authority in New Brunswick. If the legislature of New Brunswick does not speak for the province of New Brunswick, who can speak for the province. I find that in the New Brunswick legislature on the 8th of May last, it was moved by Mr. Robertson, who is a prominent supporter of the government——

Mr. EMMERSON. He is member for the city of St. John.

Mr. LOGAN. Yes, he is member for the city of St. John, and that resolution was seconded by Mr. Hazen, the leader of the opposition, and carried unanimously. It is as follows:

Moved by Mr. Robertson and seconded by Mr. Hazen, and carried unanimously:

Whereas, The Grand Trunk Pacific Railway Company is now making application to the federal parliament for the granting of a charter enabling the said company to build and operate a railroad extending from the Pacific seaboard across Canada to the Atlantic coast, and in said application the city of Quebec is named as the eastern terminus of said railroad in summer and no mention is made as to where the eastern terminus of said railroad is to be during the winter season ;

And, whereas, in the opinion of this House, not only the interests of the eastern provinces, but the Dominion as a whole, imperatively demand that the said road should be an all-Canadian route, both in summer and winter, and it is highly proper that all necessary conditions should be attached to the granting of such charter, so as to secure beyond question the carrying out of this national idea ;

Therefore, resolved, that the legislature assembled do strongly urge upon the federal administration that in any charter so to be granted to the said Grand Trunk Railway Company, it be specifically expressed that the winter port of such transcontinental railroad line, be in the maritime provinces of Canada, and that said railroad be an all-Canadian route from ocean to ocean, and that a copy of this resolution be forwarded by His Honour the Speaker of the House, to His Excellency the Governor General through the Secretary of State for Canada.

Sir, that is something more than a whisper; that is a voice as loud as Niagara calling on the Minister of Railways and Canals to see that this road shall be an all-Canadian road and shall go through the maritime provinces. The people of St. John became so agitated at this time that the Board of Trade met and sent the following telegram to the Minister of Railways and Canals :

Hon. A. G. Blair, Ottawa.

Grave apprehension is felt here as to Grand Trunk plans regarding maritime provinces. Strong feeling that if Dominion assistance of any kind to transcontinental road is given, stipulation that railway find a terminus in maritime provinces, and further, that all freight originating in Canada, or received along the line, should be shipped through maritime terminus, shall be an absolute condition. Can you assure us that in case of assistance being given the Grand Trunk will build through maritime provinces and ship freight thence ?

(Sgd) W. M. JARVIS, Pres.

Now, Sir, in order to show that the minister received this telegram it is only fair that I should read his reply, which was as follows :

W. M. Jarvis, St. John, N.B.

I believe that in case government gives financial assistance the Grand Trunk Pacific will be obliged to enter into a satisfactory traffic agreement, binding itself to hand over at Quebec its ocean winter traffic to Intercolonial or build a line through to a maritime port. Have been doing everything possible to bring this about.

(Sgd) A. G. BLAIR.

Now, Sir, I have quoted from the St. John city council, and from the New Brunswick legislature, and the St. John Board of Trade, and I will now quote from the newspapers of St. John. Here is an extract from the St. John 'Sun' of May 20th, 1903 :

On May 19th, the council of the board of trade, met to consider further action with reference to the extension of the Grand Trunk Pacific through the maritime provinces, and a telegram was sent to Mr. Blair, stating that the signers did not believe that any arrangement could be made between the Intercolonial Railway and the Grand Trunk which should prevent the latter from shipping practically every ton of export freight via Portland. The telegram concluded by saying 'We urge in the strongest terms that no government assistance be granted to any transcontinental railway that does not undertake to build their line through to some maritime province port.' This telegram was signed by : Walter W. White, mayor ; W. M. Jarvis, president, board of trade ; D. J. McLachlin, W. H. Thorne, T. H. Esterbrooks, W. S. Fisher, Jas. Manchester, Wm. Thompson & Co., Robt. B. Emmerson, A. W. Adams, T. B. Robinson, Troop & Son, Jas. F. Robertson, Jos. Allison, W. H. Barnaby, T. MacVeitty & Sons, T. H. Somerville, W. Frank Hathaway & Co., John Sealy, Thos. Gorman, C. M. Bostwick & Co., Merritt Bros. Co., Limited, per G. W. Merritt, manager, Geo. Robertson, M.P.P. and MacCauley Bros. & Co.

Mr. McLachlin is one of the most prominent Liberals in the city of St. John. Mr. Thorne is, I think, the president of the Conservative association, Mr. Hathaway was a candidate at the last local elections; and the signers of this document are all leading business men of the city of St. John; and yet Mr. Blair says that he never heard the first man in the province of New Brunswick asking that this road should be constructed. I read from the St. John 'Telegraph' a telegraphic despatch from Ottawa dated May 28th last, which reads as follows :

In reference to clause 13 for extension of the line to Moncton, Mr. Blair said that he had not the slightest objection to the extension to Moncton, but that would not have the purpose of shipping the products of the west by this road to the seaboard. Halifax was adapted for passenger service, but it was 200 miles distant. It would hold the passenger service, but provision should be made to take the production of the west to the nearest seaport in the maritime provinces.

According to this despatch, Mr. Blair stated in the committee that he did not object to the connection, but that there should be provision made to reach St. John so that there should be a nearer Canadian port to which to bring that traffic from the west. At a later date in the Railway Committee when the hon. member for Sunbury and Queen's (Mr. Wilmot) moved that the city of St. John be substituted for the city of Moncton as the Atlantic terminus of the Grand Trunk Pacific Railway, the hon. Mr. Blair voted at that time in favour of the terminus of the railway being at St. John. Now, I come to the St. John 'Sun,' a leading Conservative paper. In an editorial on May 8th, it says :

It has been already shown that the Intercolonial Railway route by the north shore cannot by any possibility be a competing line for winter export business. Nearly six years ago Mr. Blair declared he would be prepared in a few years to do a winter export business.

The editorial referred to Mr. Blair buying the Drummond County Railway, and making contract with the Grand Trunk Railway for that alleged purpose. 'To that end he made his contract with the Grand Trunk.' Mr. Blair's policy for the first five years of his administration was to set up export winter traffic competing with the Canadian Pacific Railway.

The scheme is a failure. The St. John and Halifax elevators have been empty, as they were last year. The Intercolonial Railway terminus at St. John has hardly been used at all for through-traffic and would have been used still less if it had not been engaged to accommodate Canadian Pacific Railway freight.

The Intercolonial Railway route would be useless for the winter business of the Grand Trunk Pacific.

On May 14th last, the St. John 'Sun' had the following editorial:

The strong resolutions sent from the different legislative, municipal and commercial bodies in the east are clear and explicit. They ask one and all that the Grand Trunk Pacific shall get no public assistance unless the company shall build to the maritime provinces and make a terminus at a maritime province port. The boards of trade and other bodies know that an undertaking to deliver freight to the Intercolonial Railway is no good for the purpose they have in view.

The Grand Trunk people, the Intercolonial Railway people, and the winter port people, all know that export and import trade between the Canadian west and Europe can never be handled by the Intercolonial route.

The people of the maritime provinces, and we believe the people of Canada, do not propose to compromise on a traffic agreement with a road that cannot profitably handle the traffic. They insist on one thing and one only. They say that the Grand Trunk Pacific Railway itself must be built to a Canadian winter port. This is the message of Mr. Jarvis, and the St. John Board of Trade. That is the resolution of the city council and the county council of St. John, of the legislature of New Brunswick, of the other bodies which have made declarations on the subject.

On May 15th, the St. John 'Sun' editorial was as follows:

It is natural that Mr. Blair should desire to protect from competition the railway under his charge, but that anxiety is carried too far if it leads him to join Mr. Hays in objecting to terms compelling the Grand Trunk Pacific to build to a maritime province port. Mr. Blair has himself laid down the rule that railways may be chartered to run parallel with each other forty miles apart in the west. He should not object to the construction of a railway by a natural route down the St. John valley 100 miles west of the Intercolonial Railway. In this province there would be no competition with the Intercolonial by that road for local traffic. The Temiscouata and Canadian Pacific Railway would be the roads to suffer. There would be competition for the traffic between St. John, Quebec and Montreal, but these are already competitive points and there is no possibility of establishing a monopoly as to the through export and import business between the maritime provinces and the west. The north shore route never got the trade and never can handle it except at great expense to the owners of the Intercolonial Railway.

I could read many other resolutions adopted in the maritime provinces; but surely I have read enough to convince you that there has been a demand there for this line from Lévis to Moncton. The Halifax board of trade adopted a resolution on July 22nd, in which they say:

We further maintain that the construction of the road west of Quebec without insuring its continuance east through Canadian territory would be manifestly unjust to the maritime provinces.

This board is also of the opinion that the building of the shortest possible line through Canadian territory from Quebec to Moncton, N.B., would be of immense advantage to the maritime provinces, as well as to the rest of Canada, and would secure for the road a large share of through freight and passenger business, which at present is done through United States ports.

This is the resolution of the board of trade of the city of Halifax, which is represented in this House by the distinguished leader of the opposition. It is no wonder that he squirmed a little in reference to that Quebec to Moncton section.

Now, let us trace for a moment the history of the proposition before the House. I am not ashamed, and I do not think the members from the maritime provinces on either side of the House, are ashamed of the part we took in discussing the Grand Trunk Railway Bill before the Railway Committee. I had a mandate from my constituents to oppose the granting of aid to any transcontinental railroad that would not have its terminus in the maritime provinces, and the fight which I put up in the Railway Committee was simply carrying out a duty which I owed to my constituents. The first proposition was to build the railway from the city of Quebec westward, and the hon. ex-Minister of Railways and Canals (Hon. Mr. Blair) said that a traffic arrangement could be made with the Intercolonial Railway by which the winter business of the road would be handed over to the Intercolonial Railway. We claimed, not only on the evidence of Liberals, but on the evidence of the St. John 'Sun,' that this proposition was moonshine, that such an arrangement could not be made, and that if it could be, the trade would not be carried over the Intercolonial Railway, but would go to Portland. We insisted that the Grand Trunk Pacific should be extended into the maritime provinces, and we succeeded. Moncton was chosen as the central point to which it should run, and from which communication could be got with the various maritime province ports. I may say that a caucus was held of members

supporting the government from the maritime provinces. It was not a caucus of all the members from the maritime provinces, but only of the government supporters, which may have been a mistake. It has been alleged for some years that there is some jealousy between St. John and Halifax, and we wanted the road constructed to a common point. We had the statement of Mr. Hays, the general manager of the Grand Trunk Railway, to the effect that there would be enough traffic coming over the Grand Trunk Pacific to the maritime provinces to fill half a dozen ports. We have not only St. John and Halifax, but we have Country Harbour, White Haven, Louisbourg and Sydney—all magnificent ports on the Atlantic sea-coast. Therefore, we agreed to make Moncton the central point, from which traffic should go in different directions. It was also agreed that the company should be given power to build a line from Chipman to St. John. That caucus was well representative of the government supporters from the maritime provinces, and among those present was the then Minister of Railways and Canals. We did not hear anything then of objection to building the line to Moncton. There is no doubt that a large amount of the heavy freight of the Grand Trunk Pacific will find its way out through the port of St. John. It will make the port of St. John the New York of Canada. The passenger business, as well as the parcel freight, and the fast freight, will pass through Halifax, and thence on over the Intercolonial Railway and the Grand Trunk Pacific to the west. Why do I say that the passenger business will go to Halifax ? Because anybody who has crossed the Atlantic knows that when passengers reach the city of Halifax, they will not stay on board to go 250 or 275 miles further, when they can go on a railway and be at the city of Montreal or further west before the ship reaches the city of St. John.

But, Sir, we are told that we should not build this line to the maritime provinces because it will parallel the Intercolonial Railway. I regret that the newspapers misrepresented a statement which I made in answer to the hon. leader of the opposition a few days ago. What I said was that if I believed the arguments of the opposition, I would be opposed to building the line he mentioned ; but, as a matter of fact, nobody imagined that I believed the arguments of the opposition. But hon. gentlemen opposite say that the proposed railway will parallel the Intercolonial Railway. We did not hear anything about paralleling the Intercolonial Railway when the Canadian Pacific short line railway was built, or when that very useful line from Oxford to New Glasgow, which cost over $1,000,000, was built to develop a magnificent part of the country, part of which is in my own constituency. We did not hear anything about paralleling the Intercolonial Railway when the government gave a large bonus to the Restigouche and Western Railway to build a line from Campbellton down to Edmundston, and on into the state of Maine to connect with the Bangor and Aroostook Railway. What did that mean? It meant that a large part of the trade of the Baie des Chaleurs country was to be taken away from the Intercolonial and carried to the United States railways. We did not hear anything about paralleling the Intercolonial Railway when the Midland branch from Truro to Windsor was subsidized by this government.

It has been stated that the distance will not be materially altered by the construction of the proposed line from Moncton to Quebec. We have had a good many figures of distances given already, but I venture to give just one or two figures more. I want first to give the distance from Halifax to Montreal. The distance from Halifax to Montreal via the Intercolonial Railway and the Canadian Pacific Railway is 756 miles; the distance via the Grand Trunk Pacific and the Intercolonial Railway will be 723 miles; and the distance by the Intercolonial Railway alone is 837 miles. In other words, the new road will bring Halifax 33 miles nearer to Montreal than it is at present by the Intercolonial Railway and the Canadian Pacific Railway, and 114 miles nearer than it is by the Intercolonial alone. The distance from St. John to Montreal via the Intercolonial is 740 miles, and the distance via the Canadian Pacific Railway is 481 miles, whereas the distance via the Intercolonial Railway and the Grand Trunk Pacific will be 535 miles. The new route would only be 54 miles longer from St. John to Montreal than the Canadian Pacific Railway through the state of Maine, and would be shorter than the Intercolonial Railway by 205 miles. We hear a good deal said about the distance being shortened only some 40 or 50 miles, but what is the fact ? We are building a line into the maritime provinces which will bring the products of the west to a maritime province port, and save 205 miles. You can go to the port of St. John and save 205 miles. Let me take some of the distances from the Chaudière. From the Chaudière to St. John, by Edmundston and the west side of the St. John river is 403 miles. From the Chaudière to St. John via the proposed route is 383 miles, and via the Intercolonial Railway 588 miles, thus making a saving in distance by the new route of 205 miles as compared with the Intercolonial Railway. A saving of 205 miles on a journey of 4,000 miles does not amount to much, but what does this mean ? It means a saving of 205 miles on a journey of 588 miles, or 35 per cent. From the Chaudière to Moncton via the Intercolonial Railway is 486 miles. Via the proposed route it is 380 miles, making a saving in distance of 116 miles, or 25 per cent. Are

we going to compel the maritime people to travel over a road 35 per cent longer than another simply because it happens to have been built in the wrong place some thirty-five years ago ? From Moncton to St. John, the distance is 90 miles. From Moncton to Montreal via the Canadian Pacific Railway the distance is 512 miles, and by the Grand Trunk Railway and Intercolonial Railway, 537 miles. So that the only difference between via the Intercolonial Railway and Grand Trunk Railway to Montreal and via the Intercolonial Railway and Canadian Pacific Railway to Montreal is 25 miles. I know that these figures are wearisome, and I shall not quote any more, but I only want to show that we are building a line which will bring a maritime province winter port 205 miles nearer western Canada, over Canadian territory, than any road we have at present.

My hon. friend the leader of the opposition, was somewhat bothered over this Quebec to Moncton proposition. I suspect that that was the cause of his delay in addressing this House. He was between the devil and the deep sea, and the deep sea, I may say, is at Halifax. Finally he concluded that if a road is to be built at all from Lévis to Moncton, it should be built by the government, and owned and operated by the government as part of the Intercolonial Railway. Before this proposition was submitted by the leader of the opposition, the building of any line at all from Quebec to Moncton had been condemned, in all the moods and tenses, by all the hon. gentlemen opposite, more particularly by the hon. member for Hamilton (Mr. Barker), and the hon. member for South Lanark (Hon. Mr. Haggart). The hon member for South Lanark said :

> We have accumulated deficits on the Intercolonial Railway during a number of years at the rate of $1,500,000, if what should be charged for revenue were charged to revenue and not to capital account. Now you want to make it so that the people will have to pay increased deficits on the Intercolonial Railway. A madder scheme never entered into the mind of man. It is a useless destruction of property already owned by the government.

Now, however, this hon. gentleman has to eat humble pie and follow his leader who wants us to build a road to Moncton as a government road, and operate it as part of the Intercolonial Railway. By the proposition before the House, the government propose to build the line to Moncton and lease it to the Grand Trunk Pacific Railway, who will pay 3 per cent on the cost of its construction, and who will bring over it the transcontinental freight of the country—freight from all the northern part of Quebec and Ontario, not to speak of the products of the west. This scheme the hon. member for Lanark described as a mad one. But if it be an insane project, what will he have to say of the project of his leader ?

The ex-Minister of Railways (Hon. Mr. Blair) said that there would be no local business for the road in connection with any other road. I may say that our proposition is to make this road part of a transcontinental line, and to give running powers over it to the Intercolonial Railway. I would like to know what more benefit the leader of the opposition could get from a road which would be operated by the government ? We propose to build the road as a part of a transcontinental scheme. We propose to bring more business to the Intercolonial Railway at Moncton to be carried by the Intercolonial from Moncton to Halifax. But the scheme submitted by the leader of the opposition would bring in no transcontinental traffic and would have no connection anywhere.

What have we to-day ? We have a transcontinental railway provided for. In the agreement with the Grand Trunk Pacific Railway it is provided that all freight originating upon any part of this line in Canada or its branches, shall be carried to Canadian ports, unless otherwise routed. What does that mean ? The reply was made that the Grand Trunk Railway would give better rates to Portland, and that people would route their freight that way. But the government forced the Grand Trunk Pacific Railway to enter into an agreement not only to carry the unrouted freight, but all freight to Canadian ports at the same price as to American ports. Have we no Canadianism in this country ? Are the farmers of the North-west devoid of patriotism ? Have the people no national feeling ? Is it to be supposed that when they can ship their goods as cheaply by Canadian as by American ports, they will send them to the latter ? I refuse to believe that there is any such lack of national spirit in this country. But the contract calls for more than that. Hon. gentlemen opposite say that the Grand Trunk Railway will arrange with a steamship line to carry freight cheaper from Portland to Liverpool than from a Canadian port. But here again they are met by a clause which says that not only shall the Grand Trunk Pacific Railway carry Canadian produce to Canadian ports as cheaply as to American ports, but to the point of destination as cheaply. So that there will be no reason whatever for a Canadian whose soul is as big as a bean to send his products to Liverpool by an American rather than by a Canadian port.

We come to the question, what does this road mean to the Intercolonial Railway ? The ex-Minister of Railways and Canals (Hon. Mr. Blair) says it means dismantling the Intercolonial Railway. But before passing to that, let me refer once more to the proposition of the leader of the opposition to build this road from Lévis to Moncton to be operated as a government road. Let us see what this would mean according to the figures we have before up. Let us take the

Intercolonial as an example. The cost of construction of this road was $70,000,000. Interest at three per cent would be $2,100,000 a year. The average yearly deficit since the opening of the road has been $200,000. The cost of the new line according to the estimates of the ex-Minister of Railways and Canals would be $15,000,000, the yearly interest at three per cent on which would be $450,000. If the deficit on the new line were in the same proportion—and even supposing it did not take traffic from the Intercolonial—there would be a yearly deficit of $53,333. Or, adding the deficit and interest of the two roads the old Intercolonial and the new road, you find a yearly cost to the people of $2,803,333. In addition to this, there will be new rolling stock required. But, according to my hon. friend from South Lanark, the true deficit on the Intercolonial is $1,500,000 a year. The Halifax 'Herald' says it is $2,500,000. Let us take the less extreme statement of the hon. member for South Lanark. How, then, will it work out? You have the old road costing $70,000,000, with interest at three per cent, say $2,100,000. You have a deficit of $1,500,000. The new line will cost $15,000,000 and the deficit on it at the same rate will be $400,000, while the interest will amount to $450,000. So, you have a total yearly charge upon the country, on the basis of the figures of the hon. member for South Lanark of $4,450,000 for the operation of the Intercolonial in the maritime provinces. And what do we get for it? We get scarcely a pound of through-freight down to the seaboard at St. John or Halifax. Why, Mr. Speaker, the people of western Canada do not realize the condition of affairs in regard to the Intercolonial. Go to Halifax and you see there an immense elevator almost touching high heaven, a standing example of the condition of affairs with reference to the through-freight of the Intercolonial. The same thing applies to St. John. These elevators are examples of the folly of preparing for through-traffic unless we actually have a through-traffic road from the west. Our opponents may say that the Halifax elevator was built by the present government. So it was, but it was only built to supply the place of one built by the previous government, which happened to be burnt down. Now we do not want elevators as playthings, but as a part of our equipment in handling through-traffic by our own ports. Mr. Hays has stated, and he should be in a position to know, that there would be traffic enough to supply half a dozen harbours. Suppose Mr. Hays is correct what does his forecast mean? It means increased traffic over the Intercolonial from Moncton to Halifax and from Norton to St. John. It means that the line from Norton to St. John will have to be double tracked and that the line from Moncton to Halifax will have to be double tracked. I have no doubt at all it will come to this, unless, in order to avoid double tracking and severe grade, you run the line to the south of the Cobequid mountains passing near Parrsboro and thence by Five Islands, Economy and Truro. I have no doubt also that in order to shorten the line between Moncton and New Glasgow and to reach the harbours of Whitehaven, Country Harbour, Louisbourg and Sydney, there will have to be built a new line from Moncton to New Glasgow along the north shore of Westmoreland, Cumberland, Colchester and Pictou counties. This road will shorten the distance between Moncton and New Glasgow by at least thirty-nine miles.

It means that we must have lines of steamers to handle the traffic. The Grand Trunk has specifically agreed to supply lines of steamers at the maritime province ports. It means, and must mean eventually, the establishment of the fast line. It means the establishment of a great through-traffic carried by the Grand Trunk Pacific to the ports of St. John and Halifax. The ex-Minister of Railways and Canals has stated that this project will ruin the Intercolonial Railway. I can hardly think he was serious. I have here a statement prepared by the Intercolonial Railway officials which gives me the total amount of the earnings for last year. The total earnings for local and through traffic was $6,056,171.97. Of this, the total amount of local traffic was $4,327,626.88. Where is there a single pound of local freight that will be taken by the Grand Trunk Pacific? They cannot get any of the local traffic from the Intercolonial between Montreal and Quebec. Nor can they get any from along the St. Lawrence and the north shore of New Brunswick. They cannot take the trade now brought to the Intercolonial by local roads such as the Atlantic and Lake Superior, the Buctouche and other lines, because they will not connect with the Grand Trunk Pacific. The Intercolonial will not lose to the Grand Trunk Pacific a single pound of local traffic in Nova Scotia or New Brunswick. As to the through-traffic, I have not as full a statement as I had hoped to have. The memorandum giving particulars has not reached me up to this time. But I would take the statement I have before me, which has been prepared by the Railway Department. This, mark you, relates wholly to through-traffic and does not affect the $4,000,000 and odd of local traffic which the Intercolonial now has and which will not be interfered with. The traffic originating in Montreal and vicinity amounts to $560,000. I have no data to show where that trade goes. No doubt, a large amount of it is dropped along the Intercolonial Railway between Lévis and Moncton, while some goes into the province of Nova Scotia. Let us assume that one-third of this will be secured by the Grand Trunk Pacific. The traffic from Nova Scotia and New Brunswick to Montreal and vicinity

amounts to $304,975.20. I have no data to show where this originates. If it originates along the north shore of New Brunswick it will continue to go over the Intercolonial Railway—the Grand Trunk Pacific cannot touch it. But suppose that the Grand Trunk Pacific can capture one-third of this traffic originating in Nova Scotia and New Brunswick. The traffic from New Brunswick and Nova Scotia to Lévis and Quebec and vicinity amounts to the paltry sum of $56,326.39. The traffic to points in Ontario and the west via Montreal amounts to $671,740.67. The freight traffic from Ontario and the west via Montreal amounts to $671,740.67; via Ste. Rosalie, $29,307.08; and via St. John, $79,938.07. The Grand Trunk Pacific would not capture the trade which at present is handed over by the Canadian Pacific Railway at Ste. Rosalie and St. John. Let me point out to the ex-Minister of Railways and Canals that when he took over the Drummond County Railway he entered into a hard and fast agreement with the Grand Trunk that every pound of freight coming from the west destined to Intercolonial points would have to be handed over to the Intercolonial for a period of ninety-nine years. There is an item of freight traffic from Ontario and western points via Montreal of $671,000, and that must come via the Canadian Pacific Railway or Grand Trunk to Montreal. Of course, the Canadian Pacific Railway is not going to hand over any part of its trade to the Intercolonial; but the Grand Trunk must hand over all of its portion of this traffic to the Intercolonial under the agreement—and the ex-Minister of Railways and Canals stated that he would stake his political future on the statement that that agreement was hard and fast. Therefore, we need not consider that, for, so far as that trade is concerned, it is bound to go over the Intercolonial under that agreement. Let us admit we lose a part of the traffic originating in Montreal. I do not admit it as a matter of fact, but let us admit it for the sake of argument. Admit in the same way that we lose part of the traffic to points in Ontario and the west. With all this the Intercolonial would be deprived of only between $400,000 and $500,000 of freight business, and this out of a total traffic of over $6,000,000. And yet the ex-Minister of Railways and Canals says that the effect of the building of this line, which, at the worst, will take this insignificant part of the trade, will be to dismantle and destroy the Intercolonial Railway. Why, the Intercolonial will make more money carrying Grand Trunk Pacific freight between Moncton and Halifax in one month than it will lose on through-traffic in a year by the building of this new road. If the Grand Trunk bring to Moncton what they have promised to do, they will fill the road between Moncton and Halifax. Consider the effect upon Moncton.

What does it mean ? My hon. friend the ex-Minister of Railways refers to the city of Moncton as going to revert back to a small village. But this means that it will become a great city in the near future, a central point for a number of railways in the maritime provinces. It means more than that, it means that every man in Moncton, in every railway workshop, every brakeman, every railway engineer, or conductor, every dispatcher and operator and other railway employee, will have more chances for promotion, will have more chances for getting increased salaries, because there will be more work to do and more pay for doing it by means of more competition between railways. Moncton being a divisional point, the Grand Trunk Pacific will have their repair shops there for their rolling stock, they will have their divisional offices in that city. But what will it mean to Moncton if the policy of the leader of the opposition is adopted, to extend the Intercolonial to Georgian bay ? How long does he suppose that Moncton would retain the general railway offices and workshops ? How long would it remain the headquarters of the government railways of Canada ? Under such conditions of affairs, not one year would pass before Moncton would suffer a severe set-back, these offices would be removed to a more central point, perhaps Montreal or Ottawa, and then would come the dismantling of the city of Moncton, and the people of that whole section would have cause to regret that such a policy had been adopted.

Now, these are some of the local advantages that would come to the city of Moncton if we built this road. I said a few moments ago that if the policy of the leader of the opposition were adopted it would mean more money to railway magnates and railway companies. Now, it has been stated that there will be spent in this country, in five years by the government, between Moncton and Winnipeg and by the Grand Trunk Pacific, between Winnipeg and the coast, between $100,000,000 and $200,000,000. What does that mean ? Sir, if there is one industry in this country struggling for existence, it is the iron industry. I am not going to discuss the question of the iron industry, but I will say this, that if all the iron concerns in Canada were to work night and day from this time until the completion of the Grand Trunk Pacific, they could not supply the rails and iron and structural steel required for the construction of the road. According to the terms of this contract, all their supplies must be secured in the Dominion of Canada. It means that more money will be paid Canadian workmen and Canadian artisans ; it means a great demand for supplies of all kinds of the products of the farm and the forest ; it means a great demand for lumber, a great demand for ties, a great demand for hay, for grain, for beef, for pork ; a great demand for engines and boilers ; a great demand for building material ; an immense

demand for woollens, for building stone, for cement, for boots and shoes ; a great demand for rolling stock ; a great demand for cars, passenger and freight ; a great demand for car wheels. Why, Sir, I have not the slightest doubt that within a very short time the car works in the town in which I live will be quadrupled in size to build the cars that will be required for the Grand Trunk Pacific. At the present time the Grand Trunk Company are not able, in its own shops, to produce the rolling stock required on their old line, and how could they produce the rolling stock required on this additional line which with branches will be over 4,000 miles in length ?

It means a great demand for an article of supreme importance to us in Nova Scotia, because it gives us our provincial revenue—it means a great demand for coal. In this northern country between Quebec and Winnipeg, while almost everything else is to be found that is for the advantage of man, there does not seem to have been discovered yet any good coal. There has been found some good lignite, but no good bituminous or anthracite coal. To-day in Nova Scotia we are not able to send our coal west of Montreal, we are not able to send our coal into the province of Ontario ; those places get their coal from Pennsylvania. Manitoba also gets its coal from Pennsylvania. But by the construction of this road from Moncton to the city of Quebec we will decrease the distance for coal carriage over 100 miles to that point. When we come to the northern country further away from the Pennsylvania coal fields, I believe as much as I believe that I am living that within a short time we will be supplying, not only the city of Quebec with Nova Scotia coal, but also that whole northern country, clear away to the city of Winnipeg, in competition with the Pennsylvania coal mines. What does that mean ? It means that in the operation of this road alone from Moncton to Winnipeg there will be required nearly 1,000,000 tons of coal per year ; more coal than is produced to-day in the whole county of Cumberland will be used upon this road alone for locomotives. This road is particularly important to the county of Cumberland, which I represent, because that county will be the best able to supply the Moncton and Quebec division all the year round with coal. We can compete for Quebec with the mines of Cape Breton and Pictou, and we can compete for the trade as far west as Winnipeg. It means another thing, so far as coal is concerned, and that is an immense quantity of bunker coal for St. John, Halifax and other ports to supply the steamers employed by the Grand Trunk Pacific. It means better wages for men on the Intercolonial, and a greater demand for labour all round.

Now, Mr. Speaker, I have to complete the remarks that I did not intend to make so long. But somehow none of us seem to be able to make short speeches upon this proposition before the House. I have had some experience as whip on the government side of the House in arranging for the speeches, and I have not yet been able to find any one who did not exceed the time he said he was going to speak by at least 100 per cent. I think I am following the example which has been set for me by those hon. gentlemen. I have only one thing more to say, and that is in reference to the bonding privilege, the necessity for which we are endeavouring to avoid. We do not want in this country any privileges from the United States, we want always to be able to stand on our own ground. Some of our friends opposite have been trying to make merry with the contention that we should have an all-Canadian route, in order to get rid of the need of this bonding privilege, the abrogation of which the Americans have been holding over our heads for so long. We are told by hon. gentlemen opposite that we are on very good terms with our American friends to the south of us, and that there is no danger of their withdrawing the bonding privilege. I do not deny that we are on friendly terms, but if we are going to remain a part of the British empire, we must take certain eventualities into account. We must expect that whenever the British empire gets into trouble in any part of the world the very first people who will hurrah for her enemies will be the people of the United States. We have found that in the Boer war, we have found it in every war in which Britain has been engaged. We need go back no further than the Venezuelan affair and the Fenian raid. They are in that state of mind that it only needs a match to set them aflame. I have the greatest possible respect for the American people and American statesmen, but there is a feeling in that country which is anti-British. We are on good terms with them, but we do not know how long we can continue to be on good terms. As the Prime Minister said, the best way to remain on good terms with our neighbours to the south is to become independent of them. They refer to us continually as the spoiled child of the empire. They refuse to deliberate with us on a fair and reasonable basis. Take the present Alaska Boundary Commission. The proposition was made to them to appoint an arbitration commission so constituted that a majority of the commission should make a final decision. And that the majority report should be final. Did they agree to it ? No. Because they imagine that with an equal number of arbitrators in the tribunal there would not be a majority report and nothing would be done and they would eventually secure the territory in the north-west of this country that they are endeavouring to obtain. What are the facts to-day, Mr. Speaker, we have been imagining all along that we owned the country north from Hudson's Bay clear to the north pole.

But, now we have the astounding statement made by American newspapers that they have a right over parts of this country and propose to maintain it. We have to-day a party going to these northern climes —what for? To assert the right of the British empire against the United States if they endeavour to encroach on our lands. We must be independent of the United States. Let us not be in the position that we fear all the time that something is going to happen that will interfere with the prosperity of this country. I belive the policy of Canada for the future to be that we should not only have Canadian ports for Canadian traffic but that we should have a preference not in tariff alone but a preference in ports as well. Two or three years ago, I put on the Order Paper of this House a resolution to the effect that the British preference should only apply to goods coming into Canada by Canadian ports.

Mr. HENDERSON. You never moved it.

Mr. LOGAN. I put it on the Order Paper and I will tell you why it was not moved. It was not moved because pressure was brought to bear on me, not by the government, but by certain parties who feared the bonding privilege would be removed if we granted a preference to Canadian ports. Every day American newspapers printed articles saying that if such a policy were adopted the bonding privilege would be taken away from us. I am not in a position to convey to the House the representations made to me at that time from official quarters, not of this country. I think I could produce evidence to prove to the House that the time has come that we should not have to ask the United States if we can give a preference to Canadian ports.

I believe when this road is built, and we have an all-Canadian route to Canadian ports that that will be the time when we should adopt my resolution, and that the principle of that resolution will form a part of the policy of the Dominion of Canada. Let us have a British preference and let us have also a preference for Canadian ports, let us endeavour to build up our Canadian ports, to build up our Canadian trade and to develop Canadian territory.

You tell me the United States do not think anything of this bonding privilege and that it does not amount to anything. Let me read to you a paper, the New York 'Scottish American,' a paper that is reliable and well known to many members of this House. Referring to the Grand Trunk Pacific Railway, it says :

> First and foremost, such a railway—one from the Atlantic to the Pacific entirely on Canadian soil—would make Canada absolutely independent of the United States, so far, at least, as regards those bonding privileges upon which this country and its people generally calculate so very much. In this sense the proposed railway may be said to be indispensable to the proper maintenance of Canadian manhood. The threat of removing these bonding privileges has been held by this country over Canada to obtain any desired concession. Even advocates for annexation are fain to handle it. Mr. Andrew Carnegie said, in effect, the other day, that Canada had better become annexed to the United States or the latter would remove the bonding privileges now enjoyed by the former ; and in saying this he was only voicing the sentiments of the people here generally.

Mark these words :

> Once she had this proposed transcontinental railway Canada could afford to tell the United States to remove its bond privileges whenever it pleased, as she no longer needed them.

Now, Sir, in conclusion let me say that I am in favour of building this road for the reasons I have endeavoured to lay before this House. Sir, I represent a constituency which gave to Canada the man who was big enough to lift the curtain and look into the future of the Canadian west and to be the foremost mind in the construction of the Canadian Pacific Railway which has done so much to develop that part of Canada. I am here to-day to say I admire Sir Charles Tupper for the part he took at that time in the building of that road. It is only just and fair and manly on my part if I believe that, to express my thoughts. The people of Cumberland, I believe, are behind me when I say that they favour at the present time as they favoured in the past the opening up of the west ; that they favour at the present time the opening up also of the great north land of this country to assist in making Canada a mighty nation. To-day we are described as a mere fringe along the United States border. We want thickness in this country. In a few years, Sir, we will have west of Lake Superior, probably ten millions of people and ten millions of people on the east of Lake Superior, but for a thousand miles between you have a mere ragged backbone of country without population. Let us while we are developing the west, while we are bringing people into the western country, at the same time fill up the middle of this country, let us have this country so developed that it shall have breadth from the Atlantic clear through to the Pacific.

I, Sir, am heartily in favour of the proposition which is before this country at the present time. I believe, that when this government does go to the country whether it be this year or next year or the year after they can appeal with confidence to the people when they say to them that they propose first to become independent of the United States of America, secondly, to convey Canadian goods to Canadian ports over a Canadian railway and thirdly, to build up the northern part of this great country, to put the people in that land which is to-day waiting for development, waiting for population, to add to this country, which is to-day so dear to us, a new empire to the north that will be as large as the whole of the New England states of

America. I know we can appeal with confidence to the people on this ground. We will go to the country, when we do go, with the words inscribed on our banner 'Laurier, progress and victory.' Our opponents will go to the country with the words inscribed on their banner 'Borden, blue ruin and Gamey.'

Now, Sir, let me conclude with the words of a distinguished Nova Scotian. The words of the late principal of Queen's University, Rev. G. M. Grant, who, having travelled from Cape Breton to the Pacific ocean, wrote :

> In all this vast expanse of 4,000 miles there is everything that man can desire and the prospect of a mighty future. If we do not build a nation out of such material it is our own fault and our sins will find us out.

Let us, Sir, devote our attention to the upbuilding of Canada, and let us above all things, endeavour to roll back the Canadian map to the northward.

Mr. E. B. OSLER (West Toronto). Mr. Speaker, there are some very material points in this contract and agreement under discussion which it would not be proper for me to refer to. If I discussed them, quite naturally and properly, I might be accused of discussing them from a partial point of view and I propose therefore treating of the general policy of this proposition and to pass that over with a very few remarks. There are other points which it will be my duty to reply to. The Prime Minister in his speech entered into a glowing description of the wonderous, the future that this road would open up, and he emphasized its simplicity and its cheapness, and gave us dismal prophesies as to what would happen if we did not build the road. He talked long on the bonding privilege, but he seemed to forget that this question has been before the country for years, although it had only struck him at this late date that the bonding privilege was a serious menace to our prosperity and to our nationhood. The right hon. gentleman apparently was not aware that we had the Intercolonial Railway which gives us connection all through Canadian territory from the Atlantic to the Pacific ; and the most advantage he could claim for the new scheme, over existing railways, is, that it would shorten the distance some 140 miles, although we have good authority for saying that the distance will be shortened only 40 or 50 miles, Speaking as to the Intercolonial Railway the right hon. gentleman said :

> A good many who oppose this scheme pretend that there is no need whatever of extending that railway from Quebec to Moncton because, between Quebec and Moncton, there is already the Intercolonial Railway. Sir, the answer which we have to make to this objection is plain, obvious, categorical, peremptory and paramount ; the answer is that the Intercolonial never was intended, and never was conceived, and never was built for transcontinental traffic. The Intercolonial was first conceived as a military road. It was built and located for political reasons, not from any commercial considerations.

This is a very strong statement from the Prime Minister, but a short time afterwards he made this statement in reference to this same scheme :

> Most of our critics look upon this scheme as a commercial venture to be judged by the only rule of profit and loss.

You will remark that the Prime Minister's first idea was that the Intercolonial Railway was merely a national necessity and not a commercial road, and he claimed distinction for his new scheme because the Intercolonial Railway was built on sentimental lines. However, the hon. gentleman seems to have forgotten that in his flights of oratory, because shortly after he made that statement, he said :

> Most of our critics look upon this scheme simply as a commercial venture to be judged by the only rule of profit and loss. We look upon it as a work of a national character necessitated by the status of Canada in the year 1903, just as the Intercolonial Railway was necessitated by the status of Canada at the opening of confederation.

Here he claims that the Grand Trunk Pacific Railway is not a road built for commercial purposes, but that it is a road built for national and sentimental purposes, just as was the Intercolonial Railway. Now, Sir, permit me to point out that whoever drew the Order in Council appointing the transportation commission knew what was required in this country. The programme laid down in these documents is a wise programme, and if it had been followed it would have been of great benefit to the parliament of Canada and to the country in judging how the transportation problem was to be solved. But the Finance Minister in his speech stated that the Grand Trunk Pacific Railway scheme had been discussed by the ministry and practically approved of six months before it was submitted to parliament. If that be so, then the scheme was accepted prior to the transportation commission being submitted to the House, and consequently the appointment of a transportation commission must have been meant simply and solely to mislead the House, for what was the use of that commission, if the government had already adopted a transportation scheme of its own ? The hon. member for North Norfolk (Mr. Charlton) in defending this project said that if we could have a road 21 feet grade, if we could have a road on which we could run 50 cars of 30 tons ; if we could have engines hauling on 90 pound rails, then we could carry grain to the seaboard at a cheap rate. Well, there are a lot of very big 'ifs' in that. The hon. gentleman reminded me when I was listening to his speech, of the saying we had in childhood :

If 'ifs' and 'ands' were pots and pans
There would be no work for tinkers' hands.

And, Sir, the word 'tinkers' in this connection would seem very appropriate in its application to those who devised this railroad scheme.

The Minister of the Interior in his speech used with much show a map which to my mind was absolutely condemnatory of the proposals he made. That map showed long lines running north and south at wide distances apart, and each of these north and south lines was intended to represent the route of an exploring party. Each of these lines showed in the vicinity of a river or a stream giving access from the height of land down towards Hudson's bay, but the minister gave not one solitary piece of evidence that the east and west lines had been surveyed, and the natural inference would be that north and south surveys had been made upon which to construct an east and west line. That is a queer mode of proceeding in the matter of surveying for a railroad. Now, Sir, we all approve of the Grand Trunk Railway Company getting into the western prairies, rivalling the existing roads, and developing that territory, with its great resources and its great energy. Letters and interviews have been quoted by hon. gentlemen opposite in an attempt to show that members on this side of the House approved of the Grand Trunk Railway getting into the west. But these gentlemen opposite forgot to point out that all these endorsations were of the Grand Trunk Railway scheme before it took its present shape. They were endorsations of the idea that the Grand Trunk Railway should get access to the west, and I do not think that any one on this side of the House suggested that this access should be obtained in any other way than by a continuation of a line from Gravenhurst or North Bay. I would endorse that proposition, and I have no hesitation in saying that I would like to see the Grand Trunk Railway in the west. But though hon. gentlemen opposite are fond of indulging in quotations to show approval of the Grand Trunk Railway getting to the west, they have not been able to produce any evidence to show that public opinion is in favour of the scheme which is now submitted. I was much struck with an article by 'Don' in 'Saturday Night,' who is a strong supporter of the government and who winds a very able article by saying: 'Preserving cans are numerous in all households, and we could keep the scheme for another year and not be injured.' He winds up with these words: 'Altogether there seems to be too much haste, too much enthusiasm, too little knowledge.' To my mind, Mr. Speaker, that most graphically and briefly describes the position we are in, and that is from an editorial written by one of the strongest supporters of the government.

Now, the contract before us is practically a secret bargain made by the government with the Grand Trunk Railway Company for the building of this road. We had all the farce of the discussion on the Grand Trunk Pacific Bill gone through in the Railway Committee when all the time there was an understanding with the Grand Trunk Pacific Railway Company as to what the government were to do. In the olden days, the Liberal policy, as I recollect it, was to build railways in the west slowly—to concentrate population, instead of scattering it over large areas, so that school buildings and everything else could be easily provided. The present scheme, as outlined, runs altogether counter to that idea. I propose in my remarks chiefly to criticise the contract which has been made, and not the scheme as submitted. I notice that very few words have been used by members on the government side in defence of the contract or in support of the scheme in principle or in its details. Clause 8 provides that 'the construction of the eastern division shall be commenced as soon as the government has made the surveys and plans.' Clause 9 provides that 'the western division shall be constructed by and at the cost of the company.' Clause 10 provides that 'the work of locating and constructing the said western division shall be commenced forthwith.' The western division will therefore naturally be completed some years before the eastern division—probably before the surveys of the eastern division are completed. The Grand Trunk Company will then be obliged to transfer all the business which it collects on the prairies to its connections running through the United States, and on to Portland. That is self-evident from this contract. If you divert the trade for several years in large volume through such a channel as that, I tell you, from a railway and business point of view, that it is going to be a very hard matter to divert that trade afterwards to other channels where the cost of carrying it will be greater. Clause 11 provides that the company shall lay out, construct and equip the western division according to the Grand Trunk standard. The Prime Minister made a great deal of that point; but the Grand Trunk standard is not that of to-day. It will take fifteen years to bring up the best road you can build to the Grand Trunk standard of to-day. Therefore, that clause is absolutely worthless; it means nothing. Clause 12 provides that the company shall deposit with the government $5,000,000. That is simply an advance payment, which will be returned to the company as they build the road. With regard to the meaning of clause 15, as to whether the $20,000,000 worth of rolling stock is to be purchased or leased, for my part, as I read the contract, I believe it means that it shall be purchased; but when I hear hon. ministers and lawyers on the other side take one view, and

when legal gentlemen on this side say that there is a doubt about that, and that the clause might be read either way, that is evidence that the contract has been drawn loosely, and without proper supervision by the government; and when such an important clause as that is loosely drawn, we may be sure that other clauses, if carefully scanned, will also be found to be loosely drawn.

Clause 17 has been drawn by an expert. I would almost imagine that the hon. Minister of Finance, and the remaining free trade members in the House had put their heads together and had drafted a clause which they thought would at all events leave a sting behind it, in case their favourite policy of free trade should be swept away a little later on. I want to bring that clause to the attention of every member of this House, because it is a more serious clause, as effecting the interests of this country, than anything else in the contract. That clause reads:

> No addition shall be made to the cost of construction or to the capital of construction account in respect of customs duties in cases where there is direct importation of material or supplies by the government.

This is a case of a government building a railroad. This road is to cost at the least estimate $80,000,000. The whole of the materials used in the construction of the road shall come into this country at all times free of duty. That represents one point. The Intercolonial Railway, on its completion, cost $21,500,000; that was about 1876. Twenty-six years after that, the additions to capital account had brought the cost up to $71,000,000, or $72,000,000, or nearly three and a half times the original cost. We may, I think, safely assume that there will be a similar increase in the cost of construction of this road. This is to be a road owned by the government, on which the government are to spend all the money that may be necessary for relaying the road, and all additional expenditures on capital account for fifty years. Therefore, for fifty years all the supplies that come into Canada in connection with this road will come in free of duty. If we take twenty-five years only of this lease, and say that the capital account will be increased three and a half times during that time, we shall have a capital account at the end of twenty-five years of $280,000,000. The hon. member for Cumberland (Mr. Logan) drew a glowing picture of what this great railway building was going to do for the merchants, manufacturers and people of this country. Let me tell you what it will do for the merchants and manufacturers. I have jotted down a few of the ordinary supplies that are necessary for the building of a railway, and for its continuous betterment. Apparently the section to be built by the Grand Trunk Pacific Railway is not to be exempt from the duties on the materials and supplies used in its construction, showing very clearly what the intention is, so far as the government road is concerned. I may say here that when the Canadian Pacific Railway was built, as I recollect it, they were to bring in free of duty for the original construction of the road the steel rails and fastenings and certain supplies, but we made no steel rails in this country in those days, and that was a reasonable proposition. But under this contract, we bring in steel rails and everything to be used in the construction of the railway free; yet, the hon. member for Cumberland says that if this contract be carried out the rolling mills of this country will be so full of orders that they will treble their capacity. Let me tell him that if this contract is carried out, there will not be a steel rail rolled in Canada for fifty years. The hon. Minister of Finance laughs.

The MINISTER OF FINANCE. I must apologize, but I cannot treat the hon. gentleman seriously.

Mr. OSLER. Then, the hon. minister does not understand what the clause means. If the English language means anything, the clause means what I am saying. I am not simply giving my own opinion, but have submitted it to able lawyers——

The MINISTER OF FINANCE. Let us have the names.

Mr. OSLER. I have no objection. I shall not weary the House with reading extracts from newspapers and quotations from old speeches. The Prime Minister took up eleven columns of 'Hansard' with quotations from the New York 'Sun' and other journals. Surely he had sufficient faith in his scheme to introduce if off his own bat and not off quotations from the New York 'Sun.' According to this contract, the government, if they construct this road themselves, or through contractors, or under the supervision of commissioners, are to bring in everything free of duty. Among these things are tents, camp equipment, provisions, flour, pork, tools, scrapers, ploughs, steam ploughs for unloading, picks, shovels, spades, sledges, axes, saws, hammers, nails, spikes, crowbars, rails, semaphores, signal lamps, electric supplies, telephone supplies, wheelbarrows, carts, wagons, harness, all kinds of rubber goods, bedding, clothing, in fact, everything used in the construction of a railway or in keeping up its supplies during fifty years. It is not simply the quantities that the contractor brings in for the railway, but this will enable him to bring in double or treble that quantity at a lower rate of duty, and thus swamp our manufacturers. I contend that no one could read that clause and put any other interpretation upon it. But as that clause is only applicable to government work, the Finance Minister may say that the government will let this by contract, and in that

case the contractor will bring in the supplies and charge the duties upon them. I contend that the clause has been put there for the very purpose of preventing anything of the kind being done. The Grand Trunk Railway Company are supposed to pay 3 per cent interest—they do not bind themselves, but they are supposed to pay it —on the capital that may be expended on this railway, and they naturally will claim that the capital cannot include any duties paid. This clause can only be treated in that way. I can only believe it was put in by the Finance Minister as a sort of dying kick to show his belief in free trade. It would have this effect, further, that if at any time during the fifty years the Canadian government should alter its fiscal policy and increase the duties—as I hope it will before a year or two are passed—we would have no power to alter this contract and charge duties on these goods.

The Grand Trunk Pacific Railway are supposed to lease the eastern division, and to put up security on that division in the shape of rolling stock. If my contention is right, they put $20,000,000 rolling stock on the whole road, of which $5,000,000 is to be on the eastern section. The $20,000,000 is covered by a mortgage to secure the government guarantee on the western section, and on the $5,000,000 the government have a second mortgage as their sole security for the operation of the eastern division by the Grand Trunk Pacific Railway. Every railway man knows that when rolling stock has been in use one year its depreciation in value, as a second hand article, is 20 per cent, and after four years it is 40 per cent. If well renewed after that, for many years it may be worth 40 per cent of the first cost. In four years' time this $5,000,000 of rolling stock will be worth at the outside $3,000,000. Upon that the government have already a first mortgage in connection with the security for the western branch, and they have a second mortgage of $5,000,000 on rolling stock worth $3,000,000, as security for operating the eastern branch. That is to say, they have a second mortgage for $5,000,000 applicable to the eastern branch, secured upon rolling stock which is worth only $3,000,000. That struck me as being so extraordinary that I submitted it to one of the ablest lawyers I know, and asked him to give me a written opinion as to the security, which the government will have for operating the eastern section, either by the Grand Trunk Railway or the Grand Trunk Pacific Railway. He writes me as follows :

I have considered the Act relating to the construction of a National Transcontinental Railway to ascertain what 'security' the government will have that the company (to use the language of section 41 of the agreement) 'at all times during the terms of the said lease—shall continuously and efficiently operate both divisions of the railway' to the satisfaction of the government. In my opinion, the only 'security,' apart from the mere promise of the company, is the second charge on five million of equipment bonds of the eastern division, authorized to be created by clause 22 of the agreement, and by subsection (c) of clause 35, made a security for the rental and operation of the eastern division. The other parts of the Act or agreement having any bearing upon the subject are section 2 of the Act ratifying the agreement and binding the government and company to do what is necessary to give full effect to it.

By clause 6 of the agreement, the company agrees to take a lease of and maintain and operate the eastern division upon the terms thereinafter set out. By clause 20, the company are to take a lease of the eastern division for fifty years, the first seven years subject to payment of working expenditure, as defined, and forty-three years paying a sum equal to 3 per cent on cost of construction, calculated and mentioned—with a right of renewal ; section 21. By clause 23, the lease is to contain necessary and proper provisions required by the government for securing maintenance and operation of the division, and by clause 24 proper and usual provisions as to certain running powers and haulage rights.

By clause 25 the lease is also to contain such other covenants and provisions deemed necessary by the government, including proper indemnity to the government to secure the proper carrying out of the agreement. The above clauses 23 and 25 are about as vague as possible. Assume that these clauses will justify stringent provisions in the lease looking to the resumption of possession by the government of the eastern division, it can hardly be said that any such provision would be a 'security' in any sense of the term unless the lease contains a provision authorizing the government on default also to enter into possession of the western division and subject to the rights of the bondholders, to operate and, after continuous default, to dispose of the line as a whole. Such a provision, it seems to me, would require authorization by the Act which it does not at present contain. Without it the government would be left to operate the eastern division alone with such rights as to damages as it would have against the heavily bonded western division. It may be contended that the company can be compelled specifically to perform the contract, but the courts have as a rule declined to enforce performance of a contract to operate a railway. I think, therefore, with the exception of the second charge on the equipment bonds of the eastern division, there is nothing that can be called a security for the operation of the eastern division.

By clause 20 the company are to take a lease of the eastern division for fifty years, the first seven years subject to payment of working expenditure as defined and forty-three years paying a sum equal to three per cent on cost of construction, calculated as mentioned, with a right of renewal ; section 21. By clause 23 the lease is to contain necessary and proper provisions required by the government for securing maintenance and operation of the division, and by clause 24 proper and usual provisions as to certain running powers and haulage rights.

By clause 25 the lease is also to contain such other covenants and provisions claimed necessary by the government, including proper indemnity to the government to secure the pro-

per carrying out of the agreement. The above clauses 23 and 25 are about as vague as possible. Assume that these clauses will justify stringent provisions in the lease looking to the resumption of possession by the government of the eastern division, it can hardly be said that any such provision would be a 'security' in any sense of the term unless the lease contains a provision authorizing the government on default also to enter into possession of the western division and subject to the rights of the bondholders to operate and after continuous default to dispose of the line as a whole. Such a provision it seems to me would require authorization by the Act which it does not at present contain. Without it the government would be left to operate the eastern division alone with such rights as to damages as it would have against the heavily bonded western division. It may be contended that the company can be compelled specifically to perform the contract, but the courts have as a rule declined to enforce performance of a contract to operate a railway. I think therefore with the exception of the second charge on the equipment bonds of the eastern division there is nothing that can be called security for the operation of the eastern division.

Mr. WADE. May I ask the hon. gentleman the name of the writer ?

Mr. OSLER. Yes, I will hand it over to the hon. gentleman.

The MINISTER OF FINANCE. Give it to us in public.

Mr. OSLER. It is Mr. J. F. Smith, of Toronto, one of the ablest lawyers in this province. I think he stands high enough to satisfy hon. gentlemen opposite.

The MINISTER OF CUSTOMS. He does not appear to have a very positive opinion.

Mr. OSLER. It is a pretty strong and square opinion. While on that point, I must say that no one reading that contract, bringing to bear upon it any knowledge of railway affairs and some little common sense, can come to any other conclusion than that there is absolutely no security for the government, and no way of compelling the Grand Trunk Pacific to operate the road if they don't like to do it. Now what will happen ? The proper security suggested there is the security of the western division, but because these two roads are split in two the security of the eastern division becomes valueless. Now, Sir, I tell hon. gentlemen opposite, if they do not know it, why it is that the two contracts are separated, and why the eastern division is kept separate from the western division : It was simply because the Grand Trunk Company forbade their general manager absolutely to sign any such contract. He could not commit himself, and his board of directors would not have kept him one week as general manager if he had recommended the signing of such a contract. The Minister of Trade and Commerce could not have been there. I do not think he could have had much to do with it. Now as to the haulage clause and running rights, there is this to be said about it : We will suppose that the Canadian Northern asks for running rights. They send out a trainload of stock or grain over that road, for Moncton. After they start out from Winnipeg they come to a steep grade where they have to drop off some of their cars, because on all roads there are certain grades so heavy that you have to drop off some of the cars and let them wait for the next train to pick them up. It takes a train about 264 hours to make the round trip from Winnipeg to Moncton. When the cars of the Canadian Northern get to Moncton and are emptied, they have absolutely no return freight, because all the return freight is handed directly over to the Grand Trunk Pacific Railway through the government road. Therefore, these cars have to be returned empty, at a minimum cost of over $1,000 for actual haulage of 40 empty cars. Now can any one imagine business being done by any road under those conditions ? It is simply absurd. The annual rental will be charged, a portion of the actual money the Grand Trunk have to pay, the cost of maintenance, the cost of fuel, which is very large in that northern section—all that has been borne by the cars returning empty. They would get no return freight, and as a natural consequence, shippers would send no grain that way, and no cattle.

Now it may be said that the Grand Trunk are not getting a bonus for this road. The Grand Trunk are getting on the western division a bonus in the shape of a guarantee which will enable them to get their money at 3 per cent. Suppose there were a condition of things which enabled them to get their money at 1½ per cent less than they could borrow it in the market on their own credit. Assuming that the Grand Trunk western division has $40,000,000 spent upon it at the end of 50 years, the sinking fund of 1 per cent would be a bonus to the Grand Trunk Railway of $62,000,000, or 50 per cent more than the cost of their road, enabling them to set aside a bonus of 1 per cent, and to redeem their bonds, and give them 50 per cent over at the end of the period. Both the Finance Minister and the hon. member for Hants (Mr. Russell) said that the member for Centre Toronto (Mr. Brock) was against railway bonuses. Now I do not need to use very strong language, but I can say that I have not changed my opinion as to railway bonuses. I find in the Liberal platform of 1896 the following language respecting the bonusing of railways :

The policy of bonusing railways by cash and land grants from the Dominion government has become a fruitful source of jobbery, speculation and corruption. Under its operation favourites of the government have become enriched. Appropriations have been made for the sole purpose of purchasing the support of constituencies, and vast sums of public money have been voted without regard to the public interest, while millions of acres of land that should have

been held in trust by the government for the future homes of the hardy and deserving settlers, have been handed over without consideration or justification, to charter-hawkers, whose intervention actually retards the construction of the land whose franchises they control, for the purpose of extorting money from the ultimate builders of the roads. The policy of granting these subsidies has repeatedly been condemned in parliament by the Liberal party, and this resolution is in harmony with the attitude of the Liberal party upon this question.

The MINISTER OF FINANCE. What is the hon. gentleman reading from ?

Mr. OSLER. From the Liberal platform adopted in Ottawa.

The MINISTER OF FINANCE. He may be reading from some document which was used, but I can assure him that the Liberal platform does not contain the words he has read.

Mr. SPROULE. That is a letter written by the Minister of Trade and Commerce to the Patrons, drawing attention to the fact that the platform of the Patrons is exactly the platform of the Reform party.

Mr. OSLER. I find at the bottom : 'See resolutions 3 and 6, Liberal platform.'

The MINISTER OF FINANCE. If, as stated by the hon. member for East Grey (Mr. Sproule), this is a quotation from a speech by a member of parliament, it should be given as a quotation from a speech, and not as an extract from the Liberal platform.

Mr. OSLER. It does not alter the facts, but I apologize if I have brought it before the House in the wrong manner. The quotation given me has the memorandum, 'See resolutions 3 and 6, Liberal platform.'

The MINISTER OF FINANCE. But it is not that.

Mr. OSLER. It is not now, I quite agree. The platform of the Liberal party now is so far from this that I do not wonder at hon. gentlemen repudiating it, and even forgetting that such a platform had even been approved by them. I can hardly understand that the Minister of Finance, the Minister of Trade and Commerce, and the other ministers, could ever read this now without feeling that they must have been entirely changed, and wondering at the state of mind which must have been theirs when they put before their followers such a programme as this. I have not very much to add, but rather more than I can finish before six o'clock, so I will ask leave to stop here.

At six o'clock. House took recess.

After Recess.

House resumed at eight o'clock.

Mr. OSLER. Mr. Speaker, I am not so used to public speaking that I can without disadvantage break off before I have finished and then resume. I think I can, without any ill-feeling, ascribe to my friends who preceded me, the fact that I had to break off before I had finished my remarks. I will rather go back a little from where I was at six o'clock, because I wish to emphasize very strongly the point I took that the contract which the government has made is one that will entail serious and abiding loss to the manufacturing community of Canada. It strikes a blow, and a blow below the belt, at the national policy and at the principle of protection, which is the platform and principle of the Conservative party, and which has been, in an underhand manner, adopted by the present government. Now, let me read some portions of this contract, as to the meaning of which the Minister of Finance and the Minister of Customs seem to be quite uninformed. Section 5 of the contract says :

The eastern division shall be constructed by, and at the expense of the government, upon such location and according to such plans and specifications as it——

That is, the government——

—shall determine, having due regard to directness, easy gradients and favourable curves.

And section 7 says :

In order to insure, for the protection of the company as lessees of the eastern division of the said railway, the economical construction thereof in such a manner that it can be operated to the best advantage, it is hereby agreed that the specifications for the construction of the eastern division shall be submitted to, and approved of, by the company before the commencement of the work, and that the said work shall be done according to the specifications and shall be subject to the joint supervision, inspection and acceptance of the chief engineer appointed by the government, and the chief engineer of the company, and in the event of difference as to the specifications, or in case the said engineers shall differ as to the work, the questions in dispute shall be determined by the said engineers and a third arbitrator, to be chosen in the manner provided in paragraph four of this agreement.

Now, this is a declaration setting forth absolutely that the government undertake to build the eastern division of this railway. This division is to cost, at the least estimate that I have heard, $80,000,000. My own belief, and in this I am within the figures given by some, is that it will cost at least $120,000,000. The contract goes on further to say that the government from time to time during this contract of fifty years shall pay, and add to the capital cost of this eastern division, whatever sums may be expended on it beyond the original cost. I have quoted you the case of the Intercolonial, which is also a government work. But I may say that the figures shown by the Intercolonial reports are not very exceptional. No railway on this continent is carried on as a paying road of which it is not true that, after being taken over from

the contractor who built it by the company that was to own and run it, it has been necessary, within ten or twelve years, to expend upon the road, on capital account, from 50 to 100 per cent of the original cost. I learn from Sir Sandford Fleming's history of the Intercolonial, published in 1876, page 234, that up to that time the total expenditure on the Intercolonial was $21,659,136.79. This included surveys, branch lines and rolling stock. I have not the figures here, but I think I am safe in saying that the expenditure on the Intercolonial on capital account now amounts to about $71,000,000. So, no hon. gentleman will contradict me if I say that from 1876 to 1902, a period of twenty-six years, the capital expenditure on the Intercolonial has increased from about $21,500,000 to $71,000,000, or between three and a quarter and three and a half times the original expenditure on capital account.

Now, I am perfectly safe from a business point of view, if I base my figures upon $80,000,000 of original cost of this section of the government railway, in saying that within 25 years the cost of that railway will be $280,000,000. Now, that is the amount of capital that would be expended on this railway under ordinary conditions, not under conditions of government supervision, but under ordinary railway conditions, and when we arrive at 26 years to be quite right we will still have 24 years of a government liability to pay for all the money that is expended on capital account on that railway. If you take it that at the end of twenty-six years the capital of that railway is $280,000,000, and I am quite sure I am within the mark, I will not take the same relative proportion but I will double that for the twenty-five years. Now if the visions of those who have promoted this scheme are attained at all, these amounts I say are far within the mark as to the amount of capital that will be required to be expended on that road before fifty years have expired, when the government will have the right to take it over. If at the end of twenty-five years we have had an expenditure of $280,000,000 or a doubling of the debt of Canada, then at the end of the fifty years we will have an expenditure of $560,000,000, and if the Grand Trunk Pacific Company carry out their agreement of operating this road, which I am very happy to say I do not believe they will do, we will have an expenditure of $560,000,000 upon this road, the Grand Trunk Pacific paying to the country three per cent of the cost.

Mr. BROCK. The minister will have to get his actuary to work again.

Mr. OSLER. This is a rule of thumb matter and does not require an actuary. Now then following that out I will read again the clause in which I have no doubt the Minister of Finance or the other members of the government, if I was wrong in assuming that the Finance Minister is the originator of this clause, was trying to leave a particular branch of free trade in Canada for fifty years as the record of his principles. If I am wrong in assuming that he drafted this clause, I am quite sure he did not know the meaning of the clause when he and other members of council passed it. Now, the government have agreed to build this road as a government road; they have agreed with the Grand Trunk Pacific and through them in a roundabout way with the Grand Trunk Railway that the Grand Trunk Pacific are to pay three per cent on the net cost of that railway and no more. Now, then, the clause that follows, and this is the final clause I think in connection with the government building the railway, because this clause is left out of the clause concerning the Grand Trunk Pacific building the western division. This clause (clause 17) provides that no addition shall be made to the cost of construction or to the capital construction account in respect of customs duties levied where there is direct importation of material or supplies by the government. Now, a bargain between the government and the Grand Trunk Pacific is the same as a bargain between any two men; each one will hold the other as far as possible to the bargain. The government have agreed with the Grand Trunk Pacific that they shall build this road and that so far as imports by the government in connection with the road are concerned there shall be no customs duties levied. Suppose the government take this technical point and say we are not going to import these things, there is no court in the land that will not say to the government that is the meaning of your clause, you have the power to import without duty, therefore you must import without duty. I do not think a man, the least familiar with business, can contradict or can disagree with the assertion I make that that would be the interpretation of that clause. Now, then, if it was affecting only the original construction of this road it might be said to be a matter that was only temporary, but this includes all the expenditure to be made by the government during the fifty years of this lease and of this contract. We will assume, because there is nothing in the contract apparently defining how it is to be built, we will assume that this road is built under a commission appointed by the government, that is by the government itself. The government perhaps may let out certain contracts, the contractors before they make the contract or the Grand Trunk Pacific before it consents to that contract will say the contract must contain a clause that if the contractor brings in materials they shall be free of duty. No other meaning can attach to that clause; it covers the great bulk of the rough manufacturing industries that are now in existence in Canada. It covers steel rails. The minister will say that steel rails now come into Canada free of duty, but I

hope that when wiser and better fiscal ideas rule in this House instead of having that abortion of bounties we will have a correct and a proper system of protection where the individual manufacturer is protected on all the articles that he makes. We will, I think, without looking forward with too great hope, within a very short time—I think myself within a shorter time than my friends opposite will agree with me—find that those who have the sound fiscal policy of this country at heart and believe in protection will rule, and they will bring in a protective tariff. If this clause passes all the materials necessary for this railway in future will come in free and no law that can be passed will alter it, and all the supplies will come in free. Now, I read to-day a few of these supplies and this list will be extended indefinitely. It extends to all the rougher manufactures of Canada. I am not lawyer enough, I am not a lawyer at all, to say, that in connection with this very bounty that the government has established, if that clause was submitted to a court the government would not have to refund to the contractors a proportion of the bounty they give on steel rails if without the bounty they could buy steel rails elsewhere. It strikes me that is probably a very reasonable thing, but I am not able to say whether that is so or not. However, I assume that under that clause we will have admitted into Canada all the materials required for the construction of the railway, and all the supplies, all the pork and the beef and the blankets, and the rubbers and the boots, and it may be the clothing of the navvies who work on that road if they work under a government contract, because what is an easier matter than to put in a contract with a body of men that they shall be paid so much and shall be provided with their clothing and supplies which will be cheaper if they are imported free of duty. It would not affect all the supplies brought in for this railway, but the Minister of Customs is business man enough to know that if I have a contract for supplying $50,000 worth of materials, which I can get in free of duty, and another contract for $50,000 on which I have to pay duty, I can very easily compete with the local manufacturer and crush him out. That must be the effect of this contract if it is carried out. I think I have made myself as clear as possible on that point.

I want to repeat the statement I made in connection with the direct bonus which the government gives to this railway. I assume that the portion built by the Grand Trunk Pacific Railway will cost $40,000,000 which the government guarantee at three per cent, and that will save to the Grand Trunk Pacific Railway one and a half per cent per year for fifty years. A sinking fund of one per cent a year for fifty years at that amount would realize at the end of that ime $62,446,000, or more than enough to pay the whole bonded debt of the company, and with the practical result that the government hand over to the Grand Trunk Pacific Railway the western section of the road free of cost. I am well within the mark when I say that the benefit to the Grand Trunk Pacific Railway of the government guarantee is at least one and a half per cent per annum, because I can state as a positive fact that no railway on this continent has yet borrowed a sum of money like that at a less rate of interest than 4½ per cent per annum. I say that no railway on this continent can now borrow the sum of money that is required for the construction of the western section of the Grand Trunk Pacific Railway at a rate as low as 4½ per cent per annum. The New York Central, probably the railway with the best credit on this continent, has lately borrowed money at 5 per cent per annum paying one per cent commission for the loan. Now, if I take 4½ per cent as the interest the Grand Trunk Pacific Railway would have to pay for the money if it were not guaranteed by this government, then at the end of the fifty years' term—which is a quite legitimate calculation because they can use that as a sinking fund to pay off their debt—the bonus you give them would amount to $93,000,000. And yet this government says that the whole cost to this country is only $13,000,000. I would like to suggest to the Minister of Finance that he should take this scheme as it is in its entirety, with all its contracts weak as they are, and ask the Grand Trunk Pacific Railway Company from whom this money is to come that is put in under second mortgage for the construction of the western section, and suggest to them that he will give them a bonus of $20,000,000 in cash if they will carry out the scheme which the government now proposes on all its lines, and I will be bound the Grand Trunk Pacific Railway directors and shareholders will turn it down without five minutes' discussion.

I do not like to see a misstatement made in this House and endorsed by a man of the position and the reputation of the hon. member for Cumberland (Mr. Logan), who I am sure will be the last man to countenance a statement which is outrageously wrong. The hon. gentleman quoted from the 'Weekly Sun.' It has struck me during this debate that the greater part of the arguments made by the government and its supporters are arguments from the newspaper press of the country. It is not so very long ago that we heard the Prime Minister state in this House that he absolutely paid no attention to letters or articles in newspapers, and yet he himself in his speech took up nine columns of 'Hansard' quoting from the New York 'Sun' and yellow journals. I do not for a moment suggest that the hon. member for Cumberland did not quote from the 'Weekly Sun'

in perfect good faith, but he certainly quoted a misstatement. It is a farmer's paper and has often very good things in it, but it often shoots off things which exist only in the imagination. This is what the hon. gentleman (Mr. Logan) quoted from the 'Weekly Sun :'

The Candian Pacific Railway has just declared a dividend at the rate of six per cent per annum upon the original issue of $65,000,000 common stock. Of the proceeds of this stock not more than $8,500,000, according to Mr. Blake, ever went into the construction of the road. The remainder went to swell the profits of the shareholders. The dividend that has just been paid amounts to nearly fifty per cent of the actual cash expended by the shareholders on the construction of the railway.

That is an absolutely false statement. The original $25,000,000 of Canadian Pacific Railway stock was bought and paid for under an agreement with the government, and of course you cannot blame individuals for making the best bargain they could, although they did not make a good bargain in that case as it happened. They paid 25 cents a share or $6,250,000 for the original $25,000,000 of stock. All the other stock that was issued from that date to this has been issued on the market at the fullest market price. I am speaking from memory now as I had no time to verify the actual figures, but there was one case where a syndicate took $20,000,000 of stock at 55 cents or 60 cents on the dollar, and when the time arrived for the payment of that stock under their agreement, the stock was worth 10 per cent or 20 per cent less than the amount they agreed to pay. They had to pay for that, however, and that money went into the company's hand, and every other dollar of Canadian Pacific Railway stock issued after the original $25,000,000 loan was issued at the fullest market rate. The last $20,000,000 which was issued under the authority of this parliament was sold to the shareholders and produced par, and that money has been expended during the last year and a half on the road. Of the original $65,000,000 I think I am quite safe in saying that over $50,000,000 was put into the road in cash by the shareholders ; not the original men who took it, but the shareholders in England, Germany, America, Canada, and all over the world. I know that the member for Cumberland will be glad that I have given this explanation, although I have a great dislike to referring to anything connected with any company I am interested in. The hon. gentleman from Cumberland (Mr. Logan) made a very strong appeal in favour of this contract because of the great benefit that would accrue to the manufacturers of this country by reason of the money that will be expended. I say that if this contract is carried out in its present shape it will be the greatest blow that the manufacturers of Canada ever have experienced, not excepting the abolition of the reciprocity treaty.

The bonding privilege question has been so often referred to that perhaps it is almost superfluous to refer to it again. But I have an idea on that subject which I believe is a sound one. It is something which I would not like to see carried out; I should very much regret if the occasion should arise to necessitate it. If under any unfortunate circumstances causing friction between the two countries, the bonding privilege should be done away with, it would do more to make Canada a nation than all that the Prime Minister of this country has done since he came into power. What we have lacked and what this government has lacked more than anything else, has been the ability to grapple properly with the transportation question. Where are we weak and where are we strong in dealing with that question ? We are proposing to spend $120,000,000 to shorten the route from Quebec and Lévis to our sea ports, 120 miles according to some, forty miles according to others. In constructing that line we do not improve our position with reference to the bonding privilege one iota. We have now an all-Canadian route by a government road. All Canadian products to be shipped through Canadian ports can go over the Intercolonial Railway, if it is provided with sufficient rolling stock. What we want is to improve our waterways and lake ports, instead of building duplicate railways. These are very well in their place, but they are not the first needs to be considered. To make Canada free and independent we must make our ports as good as any on the continent. Building a hundred railways across the continent will not improve the St. Lawrence route, the harbours of St. John and Halifax or the Georgian bay and Lake Superior harbours. Go into the Department of Marine and Fisheries, where I suppose you can see a marine map of the upper lakes and the Georgian bay ; look at that, and then be ashamed of the position we occupy and the little we have done to improve our ports. We shall see on the map three or four stars representing lighthouses on the Canadian shores from Port Arthur to Sault Ste. Marie, and from the Sault to the Georgian bay ; you can count them on your fingers. Look on the other side, and you will see lighthouses so thick that you can hardly count them. We have not a life-saving crew on our northern waters, and no attempt is made to put one there. No attempt is made to develop our natural channels for international trade. Make Fort William, Port Arthur, Midland and all the ports on the Georgian bay so perfect that the larger vessels can enter them, load and unload and tranship their cargoes at a minimum cost; and then improve the grades of your railways and double track them if you like. But, after all, the key of the situation is the St. Lawrence route. Make the channel so safe, and the ports of Montreal and Quebec so good, that our ships can safely use

them. What has happened since we came to this House this year ? Vessel after vessel has gone ashore, partly because we have not proper lighting, partly because we have not sufficient foghorns, and partly because we have not a proper pilotage system, for all of which the government is responsible, and all of which can only be remedied by the action of the government. Let us first provide what we know will bring immediate returns, and then will be time enough to spend money for developing the interior and far off portions of the country. I agree thoroughly with my leader in saying that the Conservative party are not and have never been afraid of spending money, so long as it is spent properly. The people who have been afraid of spending money up to the time they came into power, are our friends on the other side of the House. They spend it now, but they do not spend it properly.

With regard to this contract, I do not like to speak harshly; I do not like to impute motives; but if I were to judge it by the weakness I see in it, though not being a lawyer and not understanding its intricacies, I would say that it was drawn by the solicitor of the Grand Trunk Railway Company. Let me make a suggestion to my hon. friends on the other side of the House, that if ever they have another contract to make—and I hope they will not for many years—let them remember that the first principle of business between two contracting parties is that the party doing the favour should draw up the contract, and that the only modifications made in it should be those suggested by the other side. This contract has the appearance of having been drawn up by the solicitor of the men who were receiving the favour. It may have been supervised by the government and the government officials, and point after point may have come up and been conceded ; but the main points in favour of the contractors are still embodied in it. I am quite sure that this is the basis on which this contract was drawn. It was the basis on which the contract for the Yukon railway was drawn; it was the basis on which the contract for the Treadgold concession was drawn; it was the basis on which the contract for the bottle nosed ships was drawn; and it is the basis on which the contract for this enormous expenditure has been drawn.

The Minister of Finance objected to the statement I made quite innocently, as to the principles and platform of the Reform party. Now, I find the platform of the Liberal party set out by Mr. Davin in 'Hansard' of 1899, at page 9,338 :

> The policy of bonusing railways by cash and land grants from the Dominion government has become a fruitful source of jobbery, peculation and corruption. Under its operation favourites of the government have been enriched. Appropriations have been made for the sole purpose of purchasing the support of constituencies, and vast sums of money have been voted without regard to the public interest, while millions of acres of land that should have been held in trust by the government for the future homes of hardy and deserving settlers, have been handed over without consideration or justification to charter-hawkers, whose intervention actually retards the construction of the lines whose franchises they control, for the purpose of extorting money from the ultimate builders of the roads. The policy of granting these subsidies has repeatedly been condemned in parliament by the Liberal party.

Since I came into the House, and since I have had the pleasure of setting on this side of the House, the present government have granted money bonuses which to my personal knowledge were only granted for the purpose of purchasing constituencies. I could refer to many of them.

So far as I know, the quotation which my hon. friend found in the Winnipeg 'Tribune' of a few days ago, taken from a statement made in 1896, at the time of the general elections, never received any official confirmation on this side.

It then goes on :

> Principles, Policy and Platform of the Liberal Party.
>
> Copies of this pamphlet can be had by Liberal candidates from Alexander Smith, secretary Ontario Liberal Association, 34 Victoria street, Toronto.

I notice that the machine has been moved to Ottawa from Toronto, and consequently this gentleman is now very much in evidence.

> This pamphlet is intended as an aid to young men and others who wish to work on behalf of liberalism and good principles.

That ought to have been in heavy faced letters.

> No one can suppose that in so limited a space more than a small fraction of the shortcomings and misdeeds of the Conservative party can be alluded to. While some attention is paid to the system that has prevailed at Ottawa for the past fifteen years and more, the chief place is given to a short sketch of the principles, policy and platform of the Liberal party. There are also hints for organization, a few remarks upon the Patron platform, and a very brief sketch of Hon. Wilfrid Laurier, the Dominion Liberal leader. In compiling this little document, parliamentary reports and debates of the session of 1894 have been resorted to, but where later authoritative facts could be obtained they have been used. This point should not be forgotten, so that when later, blue-books and parliamentary reports are produced there may be no misunderstanding.

These statements are put forward so that if the Blue-books come out afterwards and contradict them, the Blue-books are not to be taken as correct.

> This pamphlet is not for general distribution. It is for speakers, committeemen and other workers on behalf of the cause of Liberalism and good government. Copies of the platform, however, for general distribution can be had upon application to
>
> ALEXANDER SMITH,
> Secretary Ontario Liberal Association.
> 34 Victoria street, Toronto.

Mr. WADE. Whose speech ?

Mr. OSLER. This a pamphlet from which I am quoting. It goes on to say——

Mr. COWAN. What are you quoting from ?

Mr. OSLER. From a better man ten thousand times than the one who sits opposite me now.

Mr. COWAN. If that be the case, he should not be ashamed to give his name.

Mr. OSLER. Does the hon. gentleman want to get into trouble ? The pamphlet goes on to say——

Mr. WADE. But whose speech ?

Mr. OSLER. This is a report of the Liberal Association.

Mr. OSLER. But whose speech ?

Mr. OSLER. It is a speech by one who was a better man than the hon. gentleman who interrupted me—Nicholas Flood Davin.

Mr. COWAN. Peanut politics.

Mr. OSLER. That pamphlet is signed by Alexander Smith, who is now to be seen every day in confab with members of the government and the Liberal party, and I have no doubt that he is concocting another pamphlet on the same lines to distribute to their following.

The hon. member for Hants (Mr. Russell) twitted me upon my opposition to government railway bonuses. I am not ashamed to say that as a rule I am opposed to these bonuses, but there are circumstances and conditions in which they may be properly given. In the provinces of Ontario, Quebec and New Brunswick, where it may be necessary to open up colonization roads into the public domain, in those sections where the country is not settled, and where there are timber or agricultural lands which will warrant the expenditure, it is good policy to aid the building of railways into such districts. Such a policy gives the government both an indirect and direct return. Many years ago, long before I was in politics, I was struck by the stupidity of the Ontario government in giving bonuses where they were not needed—in giving bonuses to aid the duplicating of railways —and I have studied up this question of government aid to railways. The hon. member for Hants gave many authorities, among others the United States, for the granting of bonuses. It is quite true that in the early years of the American republic, the state governments did grant bonuses, but not to the extent suggested by the hon. member. Over a year ago, I obtained the following report from one of the leading railway lawyers of the United States, with regard to the position of the various states of the union in this matter of railway bonuses. This report is headed 'State and Municipal Aid to Railways in the United States; Powers of Legislatures and Municipalities.' It states as follows :

In considering the subject of state and municipal aid to railways in the United States, the following legal principles adopted by the courts with reference to the powers of legislature and municipal corporations should be borne in mind: (1) That the legislature has full power over the municipalities, and may, unless the constitution prohibits, authorize municipal corporations to aid railways by issues of bonds and otherwise. (2) That the municipal corporations have no inherent right to issue bonds or grant aid to railways. Such power must come from the legislature.

Perhaps it may weary you a little, but it will be interesting for future reference if I give a few more extracts from this report :

In the state of Maine, the constitution of 1820, article 22, was amended in 1877. By this amendment the credit of the state shall not be directly or indirectly loaned. Municipal corporations are not prohibited from aiding railway companies, but no debt or liability can be incurred which, with previous debts, shall exceed five per centum of the last regular valuation of the municipal corporation.

New Hampshire—Constitution of 1874, part 2 article 5, amended 1879. Neither this state nor any subdivision can aid any private association or corporation.

Vermont—Constitution of 1793. No constitutional prohibitions.

Massachusetts—Constitution of 1780. There are no constitutional limitations for debt for state, county or city purposes. Aid to railways may be given by either.

Connecticut—Constitution of 1818, article 25, amendment adopted 1877. No county, city, town borough or other municipality shall ever subscribe to the capital stock of any railway corporation, or purchase its bonds, or make donations to, or loan its credit, directly or indirectly, in aid of any such corporation.

Rhode Island—Constitution of 1842. No prohibition against such aid, but restrictions.

Now mark. In nineteen cases out of twenty, the original constitution of each state authorized it to grant aid, and almost in every case the amendment to the constitution prohibits the granting of aid absolutely.

Mr. COWAN. Have you the mileage of the different states and their population at the time they ceased to bonus railways ?

Mr. OSLER. No, but I shall give the hon. gentleman what he wants. In New York and New Jersey, the amended constitution prohibits aid to railway companies. In Pennsylvania, by the limitations to the constitution, neither the state nor a subdivision can aid a railway. In Maryland, municipalities are not prohibited from aiding a railway, but counties can give or loan their aid only when authorized by an Act of the general assembly, which shall be published for two months before the next election for members of the house of delegates. The state cannot, directly or indirectly, aid a private corporation. In Delaware there is no limitation. In the Virginias, the state

cannot assist a railway. In North Carolina, the municipalities may aid a railway, with the consent of the taxpayer. In South Carolina, state aid requires the consent of the people. In Florida, the state is prohibited from granting aid to railway companies and the legislature from authorizing any county, city, borough, township or incorporated district to become a stockholder in, or aid or loan its credit to any company or individual. In Georgia there is the same prohibition as in Florida. In Alabama neither the state nor any of its subdivisions can help a railway. In Mississippi the state is prohibited from aiding by pledge or loan, any person, association or corporation, or to become a stockholder in an association or corporation. The legislature is prohibited from authorizing municipalities to loan money or to grant aid to railways.

In Tennessee, the municipalities may aid railways, provided the proposition is submitted to the voters and receives a three-fourths majority. In Kentucky, the credit of the state can never be given to aid railways. The next state on the list is Illinois, and this is the state which the hon. member for Hants (Mr. Russell) quoted as having been so greatly benefited through railways. It was my little knowledge and interest in the state of Illinois which caused me to take an interest in the question of municipal and state aid to railways. Large grants were made to various railways in the state of Illinois, not only by the state, but by the towns, cities and townships. Bonds were issued to the extent of millions of dollars, and these bonds were, to a very large extent, brought to Canada and sold. The late Mr. E. H. King, general manager of the Bank of Montreal, who had great knowledge of the west, bought $500,000 of Illinois county bonds to pay him 14 per cent, although at that time our bonds in Ontario were selling to pay 6 per cent. The scandal connected with railway bonuses in Illinois caused them, in 1870, the earliest time when it could be done, to amend their constitution, and they provided that neither the state, nor the county, city, town or township, or other municipality, could issue bonds to pay for the stock of a railway or other private corporation, or in any way aid such corporation. This provision did not appear in the previous constitution of 1848. The constitution was amended in this respect because of the absolute demoralization caused by this public bonusing of railways.

Indiana.—Counties are prohibited from subscribing to the stock of railways or issuing bonds to assist them.

Ohio.—The state is prohibited from aiding railways, nor can the legislature authorize municipal corporations to do so.

Michigan.—The credit of the state cannot be granted to or in aid of any person or corporation.

Wisconsin.—The credit of the state shall not be given to any corporation or railway.

Arkansas.—The state or any sub-division of the state is prohibited from lending its credit for any purpose whatever.

California.—Prohibits the bonusing of railways.

Colorado.—Prohibits the state or any division of the state from bonusing the railways. Under a prior constitution of 1876, state aid could be given.

Idaho.—This state was created in 1889, and had no previous experience to guide it. But from the experience and knowledge of others, in its constitution, it prohibits the state from lending its credit to or bonusing or becoming a stockholder in any corporation.

Kansas.—The state shall not be a party to carrying on any work of internal improvement.

Louisiana.—Prohibits the state from loaning its credit.

Minnesota.—Prohibits the giving of the credit of the state for any internal improvements.

Missouri.—The state is prohibited from loaning its credit.

Montana.—The constitution was adopted in 1889, and it prohibits the granting of aid to railways.

Nebraska.—This state was constituted in 1875. The constitution provides that no municipality shall make donations to any railway, unless authorized by the electors, and under certain restrictions as to amount.

Nevada.—There is no limitation.

North Dakota.—This is a comparatively new state, and when its constitution was granted it was not in anything like the condition of prosperity of our western provinces to-day, Manitoba, Alberta and the others. Its constitution prohibits the granting of aid to railways.

South Dakota.—This is not nearly so valuable a state as our Manitoba. Its legislature has never authorized aid to railroads.

Texas.—The constitution contains sweeping provisions against granting any municipal aid.

The Territories.—Are prohibited from aiding railways by Act of Congress.

Now, I call attention to these facts which, I think, are interesting and ought to be very useful. If the states to the south of us, with all their long experience, have come to the conclusion that it is a vicious thing for the state to aid in the construction of railways, we may be pretty sure that there is good reason in favour of that conclusion. That good reason was this: During the time of the early settlement of the western states, when the state government and municipalities granted bonuses to railways, there existed such a state of corruption as to absolutely demoralize the electors, insomuch that they have hardly got over it to this day. The results of that corruption were so serious that, in every case, after 1865, that is, after the close of the war—the great wave of railway building swept

over the United States from 1862 to 1868—almost every state amended its constitution, and almost the first clause put in was a clause prohibiting aid to railways. I do not go so far as that. But I have said that, on general principles, state aid to railways was wrong. I do not believe there is a single dollar of aid needed for the building of railways in the prairie portions of Manitoba and the North-west. The railway companies there will build as fast, or even faster, than the requirements of the people demand. This has been the case all over the western states. I believe that if you do not grant a dollar of aid to the Grand Trunk they will build into the North-west faster, and be there sooner than if you do grant the aid.

But the Prime Minister, all through his speech rang the changes on the idea of a crisis. Now, we have not yet had any outside explanation as to what this crisis is. I can only think that probably the crisis is the near approach of a general election and the discovery, on looking into the treasury of the various machines required for running an election, of balances which will not satisfy all demands. Is this government scheme, this magnificent expenditure of money, to be the government's way of meeting this crisis ?

Mr. C. B. HEYD (South Brant). The shortness of the time that I have allotted to myself to address the House will preclude me from devoting as much attention as I would like to the remarks of my hon. friend from West Toronto (Mr. Osler), and I hope he will not consider me discourteous if I do not attempt to refute all the arguments he has presented. He, like other hon. gentlemen on that side, insistently demand to know the meaning of the word 'crisis,' and demand to be told why there should be any call for speed in the carrying out of the project now before us. It is for the very purpose of preventing that diversion of trade into American channels that the hon. gentleman (Mr. Osler) himself has warned us against to-night. He said that long before the government could complete the eastern section the western section would be completed by the Grand Trunk, and, for want of through connection by the eastern section, the trade would be diverted through American channels to American ports—and once caused to run through those channels it would be very difficult to bring it back again to our own side. It is to prevent that crisis and that diversion of trade that the government is now proposing to build a railway through Canadian territory whose terminals shall be Canadian ports. Our hon. friend found fault with the hon. member for Cumberland (Mr. Logan) reading a list of letters from boards of trade, congratulating the government upon their attempt to build this railway, and he said they were endorsations of the Grand Trunk scheme to build from North Bay to Winnipeg and into the prairie section. In that he has made a great mistake. These endorsations covered the construction of this very road that the government intend to build to prevent that diversion of Canadian trade through a foreign country and to foreign ports.

Now our friend tells us in the early part of his address that he is not a lawyer. I am not a lawyer either, but I hope I am a better lawyer than he is, and I believe I am quite as able to interpret a clause in this agreement. I differ entirely with him in his efforts to condemn the character of this agreement. If there is anything I felt pleasure in it was the masterly skill with which this agreement was drawn up, so that a layman could understand it without the intervention of lawyers. When it is necessary to get lawyers in the House to interpret anything that may be a matter of dispute, no two of them appear to agree; therefore, it is absolutely necessary that these agreements should be couched in such language that an ordinary layman can understand what they mean. Now this clause 17, that is such a direct blow to the manufacturing establishments of this country, that is such a menace to the national policy which our good friend has so much at heart, I read in an entirely different sense from what he does. But he does not go quite far enough back. If he went to clause 16, in the Bill, which explains the motive of these particular clauses, he will find it says that the eastern section shall be built under the supervision of commissioners, and that it shall be let by public tender, and given to the lowest tenderer who can assure the commissioners that he is qualified to carry on that work. Therefore, this work will be carried on by public contractors, who will buy their goods in the cheapest markets in the world, I have not the slightest doubt, but will give Canada, as Canadians, very likely the preference, all things being equal. I take it that this clause was put in there to protect the Grand Trunk Pacific from being compelled to pay an unduly large amount for the use of this road. They say that should it be necessary for the government to import goods that go into this railway, the amount of duty that would ordinarily be collected from a contractor shall not be added to the cost price of this railway and thereby increase the annual rent to the company. That is all I see that this means. It is no blow at the manufacturing interests, it is no menace to the national policy, it is a wise provision put in, I presume, at the instance of the Grand Trunk Pacific Company. The whole explanation of clause 16 is given by the Minister of Finance in his speech, it says that this eastern or government section shall be built under the supervision of commissioners, shall be let by public contract, and given to the lowest tenderer.

But our friend shows the excess of his imagination when he alludes to the liberality with which the government is treating the Grand Trunk Pacific Railway in actually subsidizing them, or conferring a benefit on them, to the amount of $93,000,000 for building the western section of this road. He gets at it in this way, that by the guarantee of the government they are able to borrow money at 3 per cent which in other circumstances they would have to pay 4 per cent for, and, therefore, the government is giving them an extra 1 per cent which will amount at the end of 50 years to $50,000,000. He says that the government is giving them $50,000,000, while in reality the government is not giving them a single cent. Now that is an evident proposition, to every intelligent man in this House; and I am surprised that a gentleman who is a director of the Canadian Pacific Railway, who has a reputation as a financier, if not as a critic of railway construction, should deliberately, in the face of as intelligent a lot of gentlemen as I see surrounding me, make such an absurd statement as that we are going to give the Grand Trunk Pacific Company $50,000,000 when we are not giving them one single cent.

Mr. BROCK. We are saving them $50,000,000.

Mr. HEYD. We are saving them $50,000,000 if you choose to put it the way my hon. friend does. But that is quite a different thing to giving it to them, is it not?

Mr. BROCK. It is just the same thing actually.

Mr. HEYD. But is it the same thing to us?

Mr. BROCK. Yes, we take the risk.

Mr. HEYD. But we do not lose the $50,000,000, and we cannot give them that $50,000,000, because we do not give them 50 cents. But our friend excels himself when he goes on further to explain this contract. Now this contract, if anything, is one of the things that he should have left alone. He might roam in the realms of imagination, he might make prophesies as to the future, but when he comes down to plain black and white, and the thing is there so that each one can see it for himself, it is so easy to refute such a statement that I am surprised our friend made it. He says we are going to construct a railway that will cost, from Moncton to Winnipeg, $80,000,000. That is the least sum that he has heard any one estimate as the probable cost. He could not have heard the Finance Minister, he could not have heard others speak from this side of the House. But assuming that he deliberately closed his ears, there are none so deaf as those who will not hear; it may be that he heard no one estimate the cost of this railway at less than $80,000,000. But assuming he got no more accurate information than that, was he justified in telling us that this $80,000,000, before the 50 years will have expired, will reach the magnificent sum of $560,000,000? Because he said a railway when first constructed does not represent what that railway will actually cost, that it requires continuous improvement, and that improvement will go on for 50 years. I presume that is true, but that is all provided for in this contract that he intended to explain, because it says that when this road is handed over to the Grand Trunk Pacific, from that time they must keep up its maintenance, they must make constant changes, and when that 50 years shall have elapsed, they shall turn it over to the government in a first-class condition, in harmony with the condition of railways, not now, but what they may be 50 years from now. And, therefore, that statement that a railway that was going to cost according to his estimate $80,000,000 now will represent a loss to the government of $560,000,000 is absurd because the very conditions that are to bring this about, according to the hon. gentleman, are all provided for in this agreement and after we once turn it over to the Grand Trunk Pacific and they accept it, from that time not a dollar can be added to it without the consent of the government, and when we do insist upon substituting say an iron bridge for a wooden bridge, it must be added to the capital and on that capital the Grand Trunk Pacific must pay interest.

I could devote more time to answering certain objections that have been advanced, but I think it is hardly necessary. We on this side have arrived at that stage when we do not take the hon. gentleman (Mr. Osler) seriously, especially when he goes into the domain of prophecy. We have had experience before of what he is capable of saying on certain occasions, especially when it is a matter of politics. We remember that only five years ago we had an important discussion in this House as to the advisability of giving 3,750,000 acres of gold lands to the Mackenzie and Mann syndicate. Now, our hon. friend made a speech then magnifying all the dangers to the government and minimizing all the advantages that might accrue. Well, now five years have gone by, and we have an opportunity to-night of ascertaining whether he was then a true prophet or a false prophet, a prophet of Baal. Now, let us see what he had to say five years ago:

> The man who has not the cash to pay, always pays more. I make the statement here and I defy contradiction, that if I went to London to-day with the contract which has been offered to these gentlemen, of the pick of 3,750,000 acres of the best mineral lands in the Yukon region, I could sell that land to-morrow for more money than the 25,000,000 acres of land granted to the Canadion Pacific Railway.

He made that statement in all seriousness in this House. He was applauded to the echo by his friends who sat around him. That 25,000,000 acres of land will certainly

bring $75,000,000, and five years after that prophecy was made we have still got that 3,750,000 acres of rich gold land, and it is not worth 3,550 cents. I do not think our hon. friend would venture to say to-night that that land was worth $75,000,000, and five years from now, if his speech of to-night is referred to on some important question that may present itself for solution, he will be found just as far wide of the mark as we find him to-night with respect to a prophecy or a statement he made five years ago.

But, Sir, an important task presents itself to my mind. I shall try as briefly as possible to find out just exactly what we have got in this government scheme and just exactly what there is in the other proposition advanced by the leader of the opposition, which was so vociferously applauded by his followers the other night, and to which to-day they appear to still hold so firmly. I do not intend to prove, Mr. Speaker, that we need another railway. That has been made abundantly manifest by the various speakers who have preceded me. We have the statement of the ex-Minister of Railways and Canals himself, we have a letter addressed to the leader of the government only four weeks ago, in which he states :

> I have no hesitation in stating that I am as much in favour of the construction of another transcontinental line as any other member of this parliament.

That is his very latest utterance on this question. Sir, the feeling that we ought to have another transcontinental line is not confined to a few people. There is a general feeling that we should construct another transcontinental line, and so much evidence has already been presented to substantiate that that it will not be necessary for me to do more than simply allude to the action of the Railway Committee itself. There were in the committee about 175 representatives of all parts of this country. The Grand Trunk scheme, as I understood it, originally was to go from North Bay out into the west; that at the request of members of the Railway Committee was extended to Quebec, and there was not a dissenting voice; that was extended to Moncton, and there were very few dissenting voices. An attempt was made to extend it to St. John, and that the late Minister of Railways and Canals supported. At that time he was a strong believer in the necesssity of a transcontinental railway. He says himself in the letter which he presented to the House that there were three alternative propositions which presented themselves. He used these words in the letter which was dated July 13th, and read in the House on July 16th:

> Let me state our position on the main question : My decided preference is for a government owned and government operated railway across the continent.

That is his position, but he says :

> In this view I am practically alone, and therefore I admit at once that this proposition must be laid aside.

Did the hon. gentleman know what he was talking about on the 16th of July when he said :

> In this view I am practically alone.

He had the hon. member for Winnipeg (Mr. Puttee). He had one or two supporters of government owned and operated railways on this side of the House, but so far as the hon. gentleman knew he was alone in the government, he was alone on that side of the House, he was alone on this side of the House. Not one voice was raised in the Railway Committee in favour of a government owned and government operated railway, and it is only now, when some political capital may be created out of it by our hon. friends on the other side, that some few of them are beginning to adopt it.

Now, I only allude to that to show where the hon. gentleman stood with respect to government owned, government constructed and government operated railways, that he stood practically alone. An amendment has been moved in this House to the resolution that is before it by the hon. member for Winnipeg (Mr. Puttee) affirming the principle of government owned, constructed and operated railways. It may develop a stronger sentiment in its support than any of us were previously aware of. It might influence some gentlemen on the other side of the House to support it who a week ago did not know that they were supporters of government owned and government operated railways. We have heard of sudden conversions. I do not object to a sudden conversion if it is the result of conviction, but I do object to these sudden conversions that are not the result of a process of reasoning where conscience enters and dictates the course that a man should follow.

Mr. BROCK. You should not rub it in to the member for North Norfolk so hard ; be easy with him.

Mr. HEYD. The late Minister of Railways and Canals (Hon. Mr. Blair) said that when the government scheme was first propounded there was a sigh of relief among the supporters of the government. I am willing to confess that he exactly represented the state of my mind. I did heave a sigh of relief that his views did not predominate, and that the government did not commit themselves to construct and operate this railway from Quebec to the coast. There are others who entertain the views that I entertain. A resolution has been moved in the Senate by a Conservative Senator who has the confidence and respect of our friends opposite, and while I do not endorse the whole of his resolution there are certain clauses in it that are absolutely true, and this is one of them :

Resolved that governments do not operate railways as economically and with the same necessary close business attention as private companies ; that the country has had an object lesson before it in the partial failure of the Intercolonial Railway ; that this House should object in the most unqualified manner to railways being constructed and operated by the government.

I endorse these statements, and I breathed a sigh of relief when I found that these sentiments had prevailed with the government, and that the late Minister of Railways and Canals was alone in the possession of his sentiments. As an ideal sentiment, government ownership and operation is all right in itself, but I do not think the Canadian people have arrived at that stage of development where we can safely trust the management of so large a corporation into the hands of either the political parties in this country. I remember that for eighteen years every Liberal in Canada believed that our Conservative friends were running the Intercolonial Railway as a political machine, and we have applauded the Minister of Railways and Canals (Hon. Mr. Blair) here when he alluded to the time when the old Intercolonial Railway issued their bundles of 'passes' not to advance the pecuniary welfare of the railway so much as the political interest of their party. And for the last seven years we have heard our friends on the other side crriticising the management of the Intercolonial Railway ; charging it with falsifying the books and putting down to capital account sums of money that should be properly charged to working expenses. They have charged us with running the whole organization as a political machine ; and that belief is as widespread in this country as are Conservative principles. Let us extend the operations and the opportunities for running a railway of that kind as a political machine, and what would be the result ? How would our Conservative friends regard it if we the Liberal party were to run an organization of that kind ? They could find no words strong enough in the English language to condemn it. But, Sir, when the Conservative party have arrived at that stage, that such men as Sir John A. Macdonald, John Abbott, Sir Charles Tupper are revered no more, and even the present leader of the opposition is incapable to be the bright and particular star at Conservative picnics ; when they shout great is the new Diana of the Conservative party ; when the leader of the opposition steps aside and allows one of his lieutenants to explain, that the hon. Mr. Borden is absent to-day because he is making the effort of his life down in Ottawa (and I don't think we ever saw him that day in the House ;) when in the meantime our friend from Manitoulin is exalted in his place, and the Conservative party bow down and worship him—a man who does not posses the confidence of the judges at least ; a man who has been accused of peculating documents from a bank, and a man who admits that he was inaccurate in his statements—when the Conservative party can worship that kind of an ideal, they are not in that mental condition to give us credit for the proper management of a large railway like this.

There has been no criticism of the government scheme so effective as that made by the late Minister of Railways and Canals. There is no man on the other side of the House who is so well qualified to do it; who has so great a personal object in doing it and who, owing to the position in which he has placed himself, has so much to gain by doing it. Therefore we can assume that everything that can be said against this road has been said by him. He was obliged to confine himself somewhere within the limits of truth, because he had still some reputation for veracity to lose, and he would not and did not make such wild statements as have since been made by speakers on the other side of the House, who were not railway men, who were not financial men and who absolutely knew nothing about this business.

Now, what has our friend the late Minister of Railways and Canals called this scheme? He called it a hybrid scheme. He said :

At best it is but a hybrid scheme compromising to antagonistic principles. It will be difficult to explain why the government should build and own the lean section of this railway and provide the company with credit to enable them to build and operate the fat section.

Our friends on the other side enthusiastically applauded that. I want you Mr. Speaker, to bear in mind the word 'hybrid,' because we have had a counter scheme presented by the leader of the opposition. This word 'hybrid' was most enthusiastically cheered by our friends opposite, but we will be able to show by and by that this scheme that they are now enthusiastically applauding should not be entitled even to the appellation of 'hybrid', but, that we might properly call it a mongrel scheme and be within the limits of the truth.

In what sense is this railway lean and fat ? The ex-minister told us that we are going to own the lean section and the Grand Trunk Pacific Railway the fat section. If the government was going to operate and own the lean section, and the Grand Trunk Pacific Railway own and operate the western section, it might be a true definition. But, just as soon as this railway is leased, it becomes the absolute property of the Grand Trunk Pacific Railway Company for fifty years—as much their property as though they had built it and owned it ; and it ceases then to be either lean or fat, and becomes one proposition for at least fifty years. And who will say that when the fifty years shall have elapsed the western section shall be the fat section and the eastern section the lean ? May the conditions not be reversed ? In any event,

we are not in a position to brand either portion as fat or as lean.

Now, I would like to get down in 'Hansard' what I think this railway will cost. I am not in a position to give any expert opinion. I am simply going to quote the opinion of a man whom I have looked up to with respect for the past seven years; a man who has never during that time deceived us in what he stated would take place with respect to financial matters; a man who has had the opportunity of being advised by the financiers of the government and also by the Railway Department of the government. I am quite satisfied to take the opinion of the Minister of Finance (Hon. Mr. Fielding) on this question in preference to that of any other man in this House. He has a reputation to lose. He does not speak without the knowledge and the wisdom that are associated with his office. For seven years we have tried him, and when he has prophesied surplus after surplus, they have come with unvarying regularity, and always a little larger than he prophesied. Therefore, Mr. Speaker, we have a right to assume that the same caution which has characterized his utterances in the last seven years still characterize what he says to-day. If he errs at all he errs on the safe side. We have seen with what liberality he has been prepared to increase his figures to make it absolutely certain that he was right; because he cannot afford five or six years from now to be confronted with statements showing him to be incapable of discharging the duties of the position he holds, and to be made such a spectacle of as some people would be were we to quote their speeches made five years ago.

What does the Finance Minister say that this railway will cost? He says the portion from Moncton to Quebec, 400 miles, will cost $10,000,000; the portion from Quebec to Winnipeg, 1,475 miles, $41,300,000; interest during construction, $3,390,000; or, a total of $54,690,000, which will be due in about fifty-five years from now. As bonds will be issued upon which we will pay three per cent—and after seven years the Grand Trunk Pacific Company agrees to pay that interest—that is the capital that we put into this scheme—not $80,000,000, as our friend from West Toronto (Mr. Osler) said; not $500,000,000, as he afterwards said it would grow into; and, if he had been speaking yet, it would have been by this time $15,000,000,000—because these things grow. The Finance Minister tells us that during those seven years the interest on the Moncton-Quebec section will amount to $2,334,000; on the bridge capitalized, to $324,000; and on the eastern section, to $8,853,000; or a total of $11,512,000 of a direct subsidy, as I would call it, to the Grand Trunk Pacific Railway. That disposes of that question.

Mr. WILSON. Very cheap.

Mr. HEYD. That is what the Finance Minister said, and I would rather believe him than the hon. gentleman who interrupts me. If I wanted some advice as to how to buy merchandise, I would certainly take the hon. gentleman's (Mr. Wilson's) opinion: I would think he had a training in that direction; but on this subject he knows no more than I do, and I am willing to take the Finance Minister as my guide.

According to the hon. minister, the government guarantee on the prairie or fat section amounts to $16,900,000 and on the mountain section, to $14,400,000. These together amount to $31,300,000, which, together with $54,690,000, the cost of the eastern section, gives a total of government bonds and those of the Grand Trunk Pacific Company, amounting to $85,990,000. Now, if my hon. friend has never heard before that the eastern section of this railway will cost not less than $80,000,000, he can go home and say he has heard it to-night, because I have certainly made it plain.

Are we safe in our investment on that western section? That is the next question. We are guaranteeing the bonds of the company on what? On the mountain section, which at $40,000 a mile will cost $19,200,000, and on the prairie section, which at $18,000 a mile will cost $23,400,000; interest during the period of construction, amounting to $2,400,000; and equipment, amounting to $20,000,000; or $65,000,000 of Grand Trunk Pacific money, which is in that road, upon which we have a mortgage of $31,300,000, leaving us a surplus security of $33,700,000. That is what the contract says, and we are dealing with the contract. We are not dealing with an imaginary contract, into which men can read whatever they like; but we are dealing with the actual contract which we interpret according to our understanding of the English language and the intent of the parties to the contract. We do not need to worry over that end of the undertaking, that is sure, We have no anxiety about it. That is the fat end, and in addition to the fatness of the security we have a margin of $33,700,000.

That is not the only estimate that we have. That is the estimate of the Finance Minister, who is responsible, in consequence of the position he holds, to tell us what he believes to be the facts, and he is surrounded by those who are qualified to give him information that would justify his statement. But we have had another valuation of that road, that is, by the late Minister of Railways and Canals (Hon. Mr. Blair). Did he make that valuation while he was Minister of Railways and Canals, and while a certain amount of responsibility rested upon him? Not at all. But he said something after he had ceased being Minister of Railways and Canals, and while he was still friendly to the present government, which will justify us in believ-

ing that he did not think at that time the road would cost more money.

On the 16th of July, speaking in this House, he quoted from his letter addressed to the leader of the government—not the first, but the second letter—and after he had plenty of time to consider the matter. In that letter he deliberately expressed himself as follows:

> As I have said, I am in favour of the whole line being built and owned by the government, but having abandoned any expectation in that regard, I am equally in favour of the whole line being a company line. I am prepared——

I want you, Mr. Speaker, to listen to this particular clause:

> I am prepared, since Council has determined, to go forward with this undertaking at once,——

No need to investigate or to make surveys, no need to fritter away two or three years, he was ready to go on at once. He proceeded to say:

> I am prepared, since Council has determined to go forward with this undertaking at once, to co-operate with my colleagues in guaranteeing the bonds over the whole line to an extent not exceeding three-fourths of the cost of constructing the railway.

He there deliberately wrote to the First Minister, and read the letter in this House, that he was prepared to support a policy of guaranteeing the bonds of this railway from Quebec to the coast to the extent of three-fourths of its actual cost, and that at a time when, according to his later opinion, we knew nothing about those regions except that it was an absolute wilderness. I do not think he could have thought so then. He only learnt that afterwards, because had he believed it then, he was certainly betraying the interests of this country in offering to guarantee the bonds of the company which was to build a railway through an unknown wilderness. Was he sincere? Did he believe then that we had sufficient information to justify the construction of this road? He must have, or it would have been dishonest on his part to advise his colleagues to guarantee the bonds to the extent of three-quarters of the cost of the construction of that railway. He evidently did not think then that this scheme was going to cost as much money as he afterwards found it convenient to say it would. At what did he estimate its cost later when he was interested in increasing the difficulties which the government would have to surmount? He said that the road would cost $121,000,000, and as I have shown, he had previously been prepared to approve of the policy of the government guaranteeing the bonds of this railway to the extent of three-fourths of its cost. Well, three-fourths of $120,000,000 is $90,000,000, which is a greater amount than the government guarantee by their present scheme, so that the government are not doing very badly in connection with this matter. The guarantee which the hon. gentleman was prepared to support amounted to $90,000,000, whereas that given by the government does not exceed $84,000,000. But, says the hon. ex-minister,——

> The Grand Trunk Pacific Railway is being aided to a most generous extent. It cannot build its road without very liberal assistance. In giving aid the government might very properly impose terms looking to some financial advantage to the country in the future, and therefore I would insert that a share of the earnings—I would not say one-half, but I would not think it ought to be less than a third of the net earnings, or that portion of the net earnings which would not be required for the improvement or betterment of the road.

And he proceeds to say:

> My decided preference is for a government owned and government operated railway across the continent, and my chief reason for favouring it is, that it will have an equalizing and regulating influence upon all other railways throughout the western territories.

So that he puts himself on record as being willing to guarantee the bonds of the Grand Trunk Pacific Railway from Quebec to the coast to the tune of $90,000,000, and then to put his hand into the treasury of the company to the extent of one-third of their net earnings, making this country a partner in the enterprise, interested in the amount of dividends paid by that company, interested in keeping up high rates in order that we may have high dividends, and, by that very method, frustrating the chief object for which he is a supporter of the policy of government ownership of railways. Is his position as good a one as that adopted by the government? He wants his pound of flesh. We are not so grasping. All we ask is the right, when the earnings of the Grand Trunk Pacific Railway will justify it, to insist on a reduction of rates. We will reduce the freight rates instead of taking one-third of the company's earnings. That one-third of the earnings we intend shall remain in the pockets of the farmers in the west and the manufacturers in the east, and in that way we shall regulate the freights on other railway systems. When the rates of freights on the Grand Trunk Pacific Railway are lowered, the Canadian Northern Railway, the Canadian Pacific Railway and other competing railways will have to follow suit. We are looking to the regulating and lowering of freights and not to dividends and high rates.

Our hon. friends opposite say that this railway will cost $121,000,000. The Minister of Finance says it will cost $84,000,000, and a subsidy of $12,000,000. There is only about $20,000,000 difference, but anybody who goes beyond the estimate of the ex-Minister of Railways can hardly fail to be charged with using reckless language. On the other hand, I do not think we should go below the estimate of the Minister of Finance, for although his estimate of the length of the road from Quebec to Winnipeg is 75 miles longer than that of the ex-Minister of Railways, his estimate of the cost is only

$20,000,000 less, which shows with what care he has spoken.

We have heard many speeches made in this House decrying the country through which this road is to be built, and I can quite realize the position in which the manager of the road will find himself when he stands before the directors and stockholders of the Grand Trunk Railway and explains to them the reasons why they should go into this scheme. They will say to him: We have been reading the speeches of leading members of the opposition at Ottawa, and they say that this railway will pass through a barren wilderness, an unexplored country, a land of muskegs, that the scheme is a wild, mad one, and yet you come here and ask us to endorse it. It may be a safe scheme for the government of Canada, as they come first, but where do we come in? We are behind the government. They will have a railway costing $54,000,000 and $5,000,000 of equipment, and the guarantee of the Grand Trunk Pacific for the eastern section. They will have $3,300,000 surplus as security for the western section. We will be obliged to run that road fifty years and assume all that responsibility and loss. It is all right for the government of Canada, but what about the stockholders of the Grand Trunk Railway? We have read the speeches of the hon. member for East Grey (Mr. Sproule) and the hon. member for Jacques Cartier (Mr. Monk) and the other leaders of the opposition. Well, Mr. Speaker, what do you suppose Mr. Hays will say in reply? He will, no doubt, say in effect: You are paying me $50,000 a year for running the Grand Trunk Railway. I have been with you some years, and have raised it out of the mire into the position of a first-class railway. My opinions are backed up by all the officials under me. We pledge our reputation as railway men, who thoroughly understand the situation of affairs, that this is a good scheme for you to put your money into, and these men who are condemning the scheme are not familiar with railway matters and besides have a political interest in decrying it. Listen to the man to whom you are paying $50,000 a year, and do not listen to lawyers and farmers and merchants and politicians, who can not tell an air-brake from a steam engine. I suppose he would be justified in referring to some speeches made by these hon. gentlemen. He might take, for instance, our friend from East Grey (Mr. Sproule). He might say: Why, he is a very honourable man. He is. There is no doubt about his honour or about his profound wisdom. But when it comes to a matter of politics, wisdom leaves him and he becomes absolutely blind. Mr. Hays might say to his stockholders: I will read you some of the utterances of this hon. gentleman. He has condemned this Grand Trunk Pacific scheme, but on what ground? The language he used to-day he has used before. Let us go back five years. By referring to page 1665 of the 'Hansard' of 1898 you will see that this hon. gentleman advised the government to abandon the Mackenzie & Mann scheme in the Yukon, and five thousand miners would go in and locate——

An hon. MEMBER. Five hundred thousand.

Mr. HEYD. Yes. But I was almost afraid to mention that. Five hundred thousand miners would go in and locate. Two years would be the very moderate estimate of the time required for this according to the hon. gentleman. Only two years, and in that time 500,000 miners would come in and locate. Remember, Mr. Speaker, this is Mr. Hays reading the speech of the hon. member for East Grey to his stockholders who want to know what kind of men these are. The hon. gentleman went on:

> Now, 500,000 miners, at $10 apiece—what they want for a free miner's license—would be $5,000,000 for the right to go there and begin prospecting. This same amount would have had to be paid the following year. In order to take up this amount of land each miner must locate eight claims, making four million claims. At $15 each for locating claims, this would be $60,000,000. If they continue to work these claims the second year, they would pay $60,000,000 more. If they took an average of $100 of gold out of each claim—and that is moderate when you consider that men have claims that they can sell for $2,000,000, the royalty as compared to what Messrs. Mackenzie & Mann would pay, would amount to $9,000,000. This makes a total of $139,000,000.

—from 500,000 miners, I would like to ask the Finance Minister if he has got that money?

The MINISTER OF FINANCE. No, the surplus is not quite so large as that.

Mr. HEYD. I would ask the Minister of the Interior where those 500,000 miners are? They are still in the imagination of these gentlemen. But other hon. gentlemen who spoke concerning whom Mr. Hays might be asked. There was the hon. member for Jacques Cartier (Mr. Monk). He told us that the railroad would suffice to carry in the 60,000 or 75,000 people—incoming miners, I suppose—but the question was whether there would be boats enough to carry them. Then he quotes from an interview with a Mr. Bellew, whom he endorses as a practical miner, who says that the 3,750,000 acres of land given to this syndicate would make 750,000 claims, which, at $25,000 each would make $18,000,000,000. This is deliberately stated to the House as given on the authority of a practical miner. What will the stockholders of the Grand Trunk say when the opinion of the hon. gentleman (Mr. Monk) with regard to the Bill now before us is read to them? But this estimate is a little too much even for the hon. gentleman (Mr. Monk). He confesses that this is a high estimate, but

says that $5 an acre is a low estimate. This same gentleman in condemning this Grand Trunk Pacific scheme only three or four days ago, stated that the 25,000,000 of acres of land given to the Canadian Pacific Railway by the Canadian government years ago, were not worth anything, because there was no railway to develop them. But the land to be given to Mackenzie & Mann, which was away up in the Arctic regions, was worth $5 an acre though there was no railway. What do you suppose Mr. Hays would say when he was asked about that? But that is not all. He might quote Mr. McDougal, who told us that the value of this concession of 3,750,000 acres at $30 an acre was $112,500,000, added to which there would be the licenses and royalties of $37,000,000, or the total of $149,500,000. There is worse than that, but because of the friendly feeling I have for these gentlemen, I am ashamed to read their speeches. But there is one I will read. There was one sensible man in the party, a man who told the truth, though he is one whom we do not usually regard as one of the leaders of the party. I refer to the hon. member for Dorchester (Mr. Morin). He said:

> What happened once may happen again, with that snowshoe road that you are talking about building—I do not care whether a Liberal government or a Conservatve government is building it. I may call it a snowshoe road and nothing else. It is of no use to any one only to those who want to swindle the government. They put before the House that they will build a road, but who will operate that road? They cannot do it. Remember, I am going to give you truth, right and left; I have got the medicine right here. Very well, they are going to build a road. After that road is built, what will they do with it? They will just say, 'To hell with the road!'

Mr. MORIN. Is the hon. gentleman (Mr. Heyd) paid for acting as a monkey tonight?

Mr. HEYD. Why, I say the hon. gentleman (Mr. Morin) made the only sensible speech that was made on that side. He told the absolute truth. He manifested more wisdom than all the gentlemen who valued this concession up in the hundreds of millions of dollars. The hon. gentleman was called to order.

> I will withdraw it at once and apologize. What will they do with that road? Why, they will give a man five cents to take it off their hands.

I think I am paying the hon. gentleman (Mr. Morin) a compliment.

Mr. MORIN. I do not thank you for it.

Mr. HEYD. If I quote his words exactly, I do not know why he should find fault. He is responsible for what he said, not I. I think these hon. gentlemen whose utterances went so wide of the mark have more cause to complain than has the only man who told the truth among the whole party.

Now, hon. gentlemen opposite have found a mare's nest in the contract. The hon. member for West Toronto (Mr. Osler) spoke of it. In some mysterious way, the Grand Trunk Railway is to get possession of $25,000,000 worth of that common stock. We are told that they may buy it cheap. Of course, in some mysterious way, these hon. gentlemen do not seem to know how the Grand Trunk is going to be in this deal. That is quite easy to me. And it was just at this stage that our friend the late Minister of Railways and Canals showed his animus by alluding to the Grand Trunk as 'the red-headed boy.' Without 'the red-headed boy,' this road cannot be built. We are dealing with the Grand Trunk Pacific, but that company has not the means to build this road. They could not issue a dollar's worth of bonds and realize in the market unless somebody was to guarantee those bonds. And so the Grand Trunk, the yellow-headed boy, comes into this deal. The Grand Trunk Pacific guarantee that the Grand Trunk Railway shall take $25,000,000 of the stock. What for? I take it that that will put them in a position to raise the money to build the western section of the railway. But the Grand Trunk will require to guarantee $20,000,000 of preference stock which will be sold to put the equipment on the road. I see in this quite plain, businesslike transaction. They become the custodians of this common stock and guarantee the bonds of the Grand Trunk Pacific, giving that company hard cash. How much money will they have in this road? With their share of building the western section and with the equipment, they will have over $31,000,000 in the road.

They have got to provide terminals, shops, hotels, ships, loss of bonds, if sold at a loss. They have got to provide to run their road for six or seven years before it becomes productive. I do not see that the $25,000,000 security they have to give will more than compensate them for guaranteeing at least $33,000,000 of bonds of this Grand Trunk Pacific, and no one else will do it. Behind that they have got to pay interest at three per cent. Now he says this is a bad scheme. Our friends on the other side, who are absolutely irresponsible, who do not apparently understand the agreement itself, have not the slightest idea of the actual cost, or if they have, they have got beyond the range of ordinary reason. We have them on the one side, and on the other side we have Mr. Hays, Mr. Wilson, Mr. Wainwright, Mr. Bell and the men that manage the Grand Trunk Railway in this country, telling their stockholders that this is a good scheme, and if it is a good scheme for the stockholders it cannot be a bad scheme for the people of Canada.

But, if you do not like this scheme, the leader of the opposition is prepared to give you a substitute. When he gave that substitute scheme he was vociferously applaud-

ed by our friends opposite. Let us analyze that scheme, and the same moderate figures that the Minister of Finance used in valuing the Grand Trunk Pacific will apply to this scheme. What have we got? The leader of the opposition did not move it as a resolution, he did not like to commit his supporters to the quality of the scheme. They could talk without limit and no particular harm would be done, but if it was crystallized in the form of a resolution and they had to vote yea or nay they would have to proclaim themselves as something that I do not like to characterize a man that I have the least respect for, therefore I shall keep it to myself. He says: We will extend the Intercolonial to the coast, and begin by extending it from Montreal to Coteau a distance of 38 miles. Then he will unite with a little road down there, the Jacques Cartier, I think the road is called, some 38 miles of road, to meet the Intercolonial. Now to give a value to that 38 miles is a very difficult job. But as we know, a large portion of it will run right through the city of Montreal, if they built it, it cannot cost less than $2,000,000. He says we will expropriate the Canada Atlantic Railway from Coteau to Depot Harbour. He tells us that the Canada Atlantic Railway paid five per cent interest last year upon its capital stock. Now, looking into the railway book, we find that the actual cost of the Canada Atlantic Railway was a little over $20,000,000, that includes a branch that runs into the states. I presume if the government wanted that portion of the road from Coteau to Parry Sound they would have to pay just as much for it as if they took the whole outfit, for without that part the road there would be no good. Now, is that worth $20,000,000? for that is the actual amount of money that has gone into it. I think we can safely leave it there, because there were nearly $600,000 of a net profit last year. It is a good road, and will constantly increase in value. We will throw in the Canada Atlantic Railway transit line of boats, because they will have to be acquired, and that will help to make up the $20,000,000.

Now, we will take a little summer trip through the lakes in boats belonging to the government, and when we get to Fort William we find 431 miles of railway to Winnipeg in bad condition, with bad grades, with bad curves, not one, but two such railways. Now our friend proposes to modernize both these railways, to lower the grades, to straighten out the curves, and make them first class railways. But how much will that cost through that rocky region? Is $30,000 a mile for bettering those two roads running through that rocky region a high figure? If it is not, you will pay for them $12,930,000. Then we have got to give the Grand Trunk and all other rival roads running rights over it. We are told by our friends opposite that it is impossible for one company to own a road and allow a rival company to run over it. On this particular section the title is going to remain with them, but all other roads are to have running rights. You say that is impossible, but you applaud the leader of the opposition when he says it can be done. What are we to believe? When are you sincere and when are you fooling? That is what we want to know. Well, when you get west to Winnipeg you find that one of these roads unfortunately runs through American territory, and you are actually going to expend more of our money in improving a road that does not all lie in Canada. We come now to the hybrid part of the scheme, we are owning a road from Montreal to Parry Sound, from Fort William to Winnipeg, the Canadian Pacific Railway and the Canadian Northern come in. When we get to Winnipeg we are going to guarantee the bonds, I presume, of the Grand Trunk Railway who are going to build from Winnipeg to Edmonton, 690 miles at $13,000 a mile, making $11,700,000. When you get to Edmonton you are going to adopt another system. The Canadian Northern being in the field first, they are going to build a road from Edmonton to the coast, and if they cannot agree to let the Grand Trunk Pacific have running rights over it, the same old scheme that is impracticable to the Minister of Railways and Canals becomes quite practicable now when some irresponsible persons propose it. If they do not agree we will build it ourselves, and that will cost us the magnificent sum of $19,800,000. Over the prairie section to the coast, 480 miles at $40,000 a mile, represent $19,200,000, and from Edmonton to where the Grand Trunk section begins, 300 miles at $18,000 a mile, representing $15,400,000. Up to this time we spend $69,000,000, and we have not enlarged the spout. We are piling up the money, we are buying old roads, but we are not opening out a foot of fresh territory, because we can go to Edmonton by two railways already, and they tell us the road from Edmonton to the coast is not needed.

But if you do not take a summer journey, you find the lake frozen, and you have to deflect your road, and you are going to get over the difficulty, the leader of the opposition says, by expropriating the Canadian Pacific Railway from Fort William to North Bay, 634 miles. Now what is that railway worth? That railway has arrived at that condition that it is worth twice as much as it was when it was built. Our friend from Toronto (Mr. Osler), who is a railway man, says that it increases in value, and at the end of ten years will cost double what it did when we built it, owing to improvements. This has cost $70,000 a mile, and if his statement is true, it will cost us $140,000 a mile. I will take the moderate estimate of $50,000 a mile. I suppose it could not be replaced for a good deal more. That is $31,700,000 more. But they will not need the road to North Bay, and they are buying an

extra mileage in order that the Grand Trunk may connect at that point. But from Sudbury to North Bay there is 81 miles of road that we do not need even for our own purposes. Now from Sudbury to Scotia, that is the point where the Grand Trunk Railway running from Toronto to North Bay crosses the Canada Atlantic Railway on its way to Depot Harbour—from Sudbury to Scotia we have a distance of 120 miles. That is all to be a new road, and to cost $30,000 a mile. We have there $3,600,000. Up to the time, we have spent $104,000,000 and still have not enlarged the spout. Still, we have not enlarged the spout, we have a new road from Winnipeg to Edmonton and from Edmonton to the coast and a cut-off from Sudbury to Scotia but we have $104,000,000 put into the scheme and what is the result ? The distance from Winnipeg to Fort William is 431 miles, from Fort William to Sudbury 553, from Sudbury to Scotia 120 miles, from Scotia to Montreal 330 miles, from Montreal to Quebec 162 miles or a total of 1,596 miles, being 196 miles longer than the road objected to by the hon. ex-Minister of Railways and Canals between Quebec and Winnipeg and to carry it on to St. John over the old Intercolonial Railway will be 2,174 miles, while our proposed road that will have really opened up 1,800 miles of new territory from Moncton through Quebec and through Ontario will only be 1,889 miles long, and if you run by the cut-off at Chipman 1,802 miles long or 372 miles shorter than the scheme which is now propounded by the leader of the opposition.

Do you suppose that can be justified by the people ? They talk about the fat side and the lean side, but we have not got through, because the hon. gentleman having accomplished all this, says we will make surveys and at once, as soon as it is determined that it is feasible, build the Quebec section, we will start from Quebec, and we will spend $44,0000,000 on that. Up to that time we have $168,000,000 stuck into it, and if we leave out the Quebec end, $124,000,000, and have not enlarged the spout. Our friends will have a government owned railway there, a government operated railway there; they have got a hybrid scheme owned by one railway and operated by another, and you can hardly tell what nomenclature to apply to their scheme. They call this a hybrid scheme. I will let some one else invent a name for their scheme. He says : What is the use of 100,000 farmers building 100,000 barns ? Let us build elevators so that instead of building barns, they can put their grain into elevators. Well, the owners of 100,000 barns raising 1,000 bushels of wheat each will give 100,000,000 bushels of wheat, and they are going to store their wheat in elevators. The ex-Minister of Public Works (Hon. Mr. Tarte) says that an elevator for 1,000,000 bushels of wheat will cost $1,000,000, so that we have $20,000,000 more there for elevators, but he has not yet finished, because he is going to have the government guarantee all the warehouse receipts to the farmers, but they do not need any such guarantee, any man with a warehouse receipt for 1,000 bushels of grain can deposit it in the bank and get all the money he wants. But we are going also to provide terminals all along the Georgian Bay, we are going to make free the ports of Montreal, Quebec, St. John, Halifax, or any other ports that anybody chooses to bring along. We will make them all free. Where have we got at the end of all this ? Two or three hundred million dollars dropped at the Quebec end, and he is spending on this scheme millions more than we have, and has not enlarged the spout, and what has he got on his hands? We talk about the lean and the fat. He has no tenant, he has no lease, he has the whole government responsibility, he has no guarantee that the Canadian Northern or the Grand Trunk Railway will take advantage of the road or will pay interest on the investment. It is an absolutely blind venture, and he has built a railway from Montreal to go through a lean section at $2,000,000, he has bought the Canada Atlantic Railway for $20,000,000, that is fat; he has bought or subsidized the road from Fort William to Winnipeg, $13,000,000; he has built from Edmonton to the coast, $24,600,000, and he has bought from Fort William to North Bay, $31,700,000, and from Sudbury to Scotia, $3,600,000, and he has got $95,000,000 spent there. $20,000,000 is fat, the Canada Atlantic Railway, and $75,000,000 is lean, and it is not only lean, it is tough. Those are the actual conditions of his scheme as compared with ours.

Now, which would any reasonable man endorse? I have not exaggerated the cost of a single foot of that railway, the actual values that I put there harmonize with those given by the Finance Minister, not the exaggerated figures of our friends on the other side.

If our scheme goes through, and it will go through, because there is no legitimate argument that can be used against us, we are absolutely safe in building the railway now from Quebec to Winnipeg, the risks of which will be taken by the Grand Trunk Railway for fifty years, and when it has been made valuable it will come back to us. We control the situation after that and we control it until then. We can prevent rival roads going through there for fifty years, and for fifty years afterwards, and this very railway that may now be lean and may be run at a loss, which may be compensated for by the profit on the more productive sections of the railway in the west, may fifty years from now be one of Canada's most productive assets, and if the whole thing is a failure and the Grand Trunk Railway fails, we have got the government road that some of these gentlemen want, with

$39,000,000 of Grand Trunk Railway money in it. But the most important point is: Can we afford to go into this scheme? We must not look at it from the standpoint of the present, but from the standpoint of fifty years from now. Have we any reason to suppose we will not be in a position to meet the obligations maturing then? Fifty-four millions, 64 millions, 74 millions, what is an increase of $70,000,000 to the debt of Canada fifty years from now when we compare it with the marvellous growth that has taken place during the past few years. I do not need to go back far? Are we justified in going back and judging from the past what the future is likely to be? I will not assume the role of a prophet, but I will quote a few facts, and each can apply them for himself.

Take British Columbia that we have heard extolled so enthusiastically to-day. Twenty years ago it had a population of 36,000, now it has a population of 178,000, not distant from us, separated from us by uninhabited wildernesses, but by a magnificent country, traversed with railways in every direction.

Take Manitoba, when it entered confederation thirty years ago, with its 2,000 whites and 10,000 half-breeds, and compare it with the Manitoba of to-day, with a population of 350,000, producing last year 100,000,000 bushels of grain. Take Fort Garry, into which years ago 117 immigrants plodded their weary way from Port Arthur. To-day that distance is spanned by two magnificent railway systems, and Fort Garry is almost unknown, except as an historic relic. In its stead we have the magnificent city of Winnipeg, with its population of 60,000. The North-west territory, which 20 years ago was but the home of the buffalo and the wild Indian, last year produced 25,000,000 bushels of wheat and is populated by 300,000 people. We have these two provinces, with their cultivated area of 3,500,000 acres producing 125,000,000 bushels of wheat, and what will it be when the other 200,000,000 acres becomes cultivated by a hardy and thrifty people?

But we need not go so far as that to look for progress. There is a later day when our progress became marked, a day that has impressed itself on the mind of every member in this House. Let us take the last eight years only and let us see what progress has been made. Take our population, take our railway development, take the progress of the trade of our country just for eight years, and see what is the result. Eight years ago the import trade of Canada was $105,000,000; last year $224,000,000; the increase, $119,000,000 or 113 per cent. Eight years ago the exports of the products of Canada amounted to $109,000,000; last year to $214,000,000; an increase of $105,000,000 or 97 per cent. Eight years ago the total trade of Canada was $215,000,000; last year it was $439,000,000; an increase of $224,000,000 or 104 per cent. Eight years ago our revenue was $36,000,000; last year it was $66,000,000; an increase of 90 per cent. Eight years the railway earnings were $50,000,000; last year they were $83,000,000; an increase of 60 per cent. Eight years ago exports, the products of the mines, amounted to $8,000,000; last year they amounted to $34,000,000; an increase of $26,000,000 or 325 per cent. Eight years ago our export of manufactures was $9,000,000; last year it was $20,000,000; an increase of $11,000,000 or 120 per cent. Eight years the bank assets were $316,000,000; last year they were $581,000,000; an increase of $255,000,000 or an increase of 80 per cent.

But the only thing that has not maintained a proportionate increase has been the national debt of the country, which during this marked period of prosperity, after we have spent $55,000,000 on capital account and subsidizing railways, has only increased from $258,000,000 to $265,000,000. And yet, with these facts before us and with such a future in store for us as we can easily foresee, are we afraid of spending $50,000,000 in fifty years from now? What will happen when these 16,000,000 acres of good clay soil are being tilled in New Ontario; what will happen when the magnificent land in northern Quebec is opened up by that railway which shall be studded with towns and villages from one end to the other? Will we be afraid of adding $50,000,000 to our national debt, which if we quietly cease subsidizing railways for four years we can pay off out of our surplus without adding a dollar to our indebtedness? I am not afraid of this scheme. Looked at from every standpoint I see in it a scheme that will redound to the welfare of this country and to the glory of this government. There is nothing in it that does not commend itself to me. We have heard our friends opposite say that the clause in the agreement which diverts trade to our Canadian ports is not worth the paper it is written on. Well, it might not be if it were only a statute, but this road which is intended to divert the trade from the west through our own territory to our own ports; this road is actually shorter from Winnipeg to St. John than any other railway that runs over this continent, and there will be no reason for the Grand Trunk Railway not to carry out its bargain. It is bound by the statute to do it, it is bound commercially to do it, it is bound geographically to do it; the Grand Trunk Railway cannot help itself unless it is willing to develop American ports at its own loss, and to carry its freight a longer distance than on its own road to Quebec and thence to St. John.

I look forward with hope and I look forward with confidence to the accomplishment of this project propounded by the government. I look forward with more hope and more confidence to it than our friends on the other side entertain, for this scheme to

which their leader has pledged himself and which will never be endorsed by the people of Canada.

Mr. G. W. GANONG (Charlotte). The hon. gentleman (Mr. Heyd) has well followed the Minister of Finance, who seems to have been his mentor, for the hon. member quoted almost the identical figures which the Finance Minister gave to the House the other night, glorying that the country ought spend all the money we had made. The member for Brant (Mr. Heyd) is not at all afraid to expend money; he is cheerfully willing to add $125,000,000 to the debt of the country. There are a few things in his speech to which I would like to call attention, and one is that the hon. gentleman had better go home and sleep over the proposition with immediate returns of the leader of the opposition. If he does, he will learn that the proposition of the leader of the opposition is a live proposition, while the proposition of the government is a dead one and will be for years to come. The hon. gentleman (Mr. Heyd) talked about a crisis. I wonder if he knew what he was talking about. He did not explain where the crisis had come in between the 27th of May and the time this contract was signed. And notwithstanding that we have heard many things from hon. gentlemen opposite, not one indication has come from them as to why this contract was signed, or why this crisis had been so suddenly discovered. I also wish to call the attention of the House to the fact that the hon. gentleman threw in the face of Manitoba an insult that he should be ashamed of. He made a charge against the character of the Prime Minister of that province who is just fresh from the people with a majority that nearly swept every Liberal out of his seat. That is refutation enough of the hon. gentleman's statement as to the character of the Hon. Mr. Roblin. We heard considerable from the member for Cumberland (Mr. Logan) this afternoon, and do you know that I expected him to shed tears, because the pathos in his voice was somewhat alarming when he began to tell us of the sufferings of the people of the maritime provinces because they could not get to the west. The hon. gentleman (Mr. Logan) and other members opposite, have quoted Sir Sandford Fleming whom they are very anxious to quote as an authority but whom they never quote when he tells them that this line will only lessen the distance eighty miles to the city of Montreal. If this road is ever built, I will guarantee that the member for Cumberland (Mr. Logan) will never travel over it, but that he will still travel over the Canadian Pacific Railway if he wants to get to Montreal.

He intimated that the hon. ex-Minister of Railways had insulted Senator Cox. There was but one mention made of Mr. Cox in the speech of the hon. ex-Minister of Railways, but scarcely an hon. gentleman on that side of the House has risen since without talking Cox. It is quite evident that Mr. Cox needs defence, or they would not mention his name. The hon. gentleman ended with a grand peroration in which he complimented Sir Charles Tupper as one of the greatest statesmen of Canada, as one to whom was due the building of the Canadian Pacific Railway; and then he drew himself up and said, I, as member for Cumberland, proposed this in the Railway Committee—behold a greater than Sir Charles Tupper. Then he had a suggestion or two with regard to the bonding privilege. The government apparently has been fairly alarmed recently. They have been seven years without any fear; but, according to the hon. member for Cumberland, we are liable to wake up to-morrow morning and find the bonding privilege done away with. The hon. gentleman quoted from the 'Scottish American.' I will not repeat the quotation; but I would advise him to have the correspondent of the 'Scottish American' come over and learn a little more of Canada. If he does, he will learn that we have two railways by which we can be independent of the United States, if they should cancel the bonding privilege to-morrow morning.

Now, Mr. Speaker, you are aware that for a number of years the question of improved transportation has been before this House and the country. It has been brought up here from time to time, and has been discussed by hon. members on both sides of the House—discussed more perhaps as it affected their particular constituencies than from a broad national standpoint. It has been constantly brought to the attention of this government, perhaps with more persistency by the late Minister of Public Works (Hon. Mr. Tarte) than by any other hon. gentleman. It has been the persistency of that hon. gentleman on this question as well as on the question of adequate protection that has probably forced the government to take even the action that they have taken at this late date. The press of the country has also been discussing the problem of transportation, from one point of view and another, until the government should have seen that it was necessary to take up the matter in some practical form. There has been not only this feeling in the country in regard to the transportation business, but there has been a very widespread feeling in regard to the way in which the people's money has been expended in years past without any adequate return in the form of a national scheme of transportation. We have expended money in a good many directions—some on harbours along the Georgian Bay and the great lakes, some in dredging the St. Lawrence, and in other ways trying to make that great waterway what it should be, and some for terminal facilities in other parts of the country. But these expenses have not been made with

any view to a general system of transportation. They have been made, some times wisely perhaps, but more frequently in the interest of some member who is a friend of the government, for the sake of saving his constituency to him at the next election. In addition to these expenditures, we have recently abolished the tolls on the canals. This in itself has been quite an additional burden on the tax-payers of the country, who, besides paying to keep the canals in proper condition, have now also to pay for their maintenance, which was very largely paid for in former times out of the tolls collected. So that the tax-payers have now practically to pay the amount of the tolls which have been abolished. But we have had no complaint from the people on account of this additional expenditure, because they believed that it was along the line that they wished to see adopted. They believed that it was along a line that would eventually lead to some national transportation scheme. I say that the present government, with the possible exception of the late Minister of Public Works, took very little interest in this matter. They seemed to lack the initiative in this, as they do in a great many other matters. They seemed simply to drift continually, without any prospect of change. But when this House was called to meet this year, we fancied that under the pressure of the late Minister of Public Works, there might possibly be some change; for in the speech from the Throne, delivered on March 12, 1903, after reciting certain things that seemed to be necessary, they put these words into the mouth of His Excellency the Governor General:

> The whole question of transportation and terminal facilities continues to occupy much attention, and my government will immediately appoint a commission of experienced men to report on the subject.

They had at last awakened to the fact that the country was looking to them to do something. Then, we had a return which perhaps supplemented this announcement. The first sounded something like business, and the second a little more so, and I am going to read a few extracts from this. By the way, I note that this report was made by the Minister of Public Works (Hon. Mr. Sutherland). It will be interesting to know where that hon. gentleman is. He has not put in an appearance since the present resolution has been before the House. It may be, as has been suggested, that he is on strike, or possibly he may be away loading his gun to shoot at the dictation of his leader. This report says:

> The minister submits that it may be assumed that grain and other products will naturally seek their markets by the cheapest routes, and therefore the method of attaining the object desired should be to make the Canadian routes cheaper and more convenient than competing routes.

It will be very desirable for hon. gentlemen who are backing up the present scheme to demonstrate to this House and the country how this all-rail route can be made a cheaper route, and it will be especially desirable to make that appear to the hon. member for North Norfolk (Mr. Charlton).

> The Minister further states that the questions to be considered are complicated and involved, including among the objects to be sought the transportation of western products from place of production to the markets of the world.

Further on he says:

> It is obvious that before any satisfactory conclusion can be reached upon these questions a thorough and comprehensive inquiry should be made regarding the conditions of general shipment and the possibilities of improvement in the conditions surrounding these shipments.

Further on the hon. minister says:

> In making such investigation attention should not be confined to routes and facilities which are at present utilized, but if necessary new surveys should be made to determine whether any more economical and satisfactory channels of transportation by land or water can be opened up.
>
> Diversion of Canadian products through eastern outlets to Boston, Portland and other United States ports, should be investigated, and the best and most economical methods used by our competitors should be carefully studied and reported upon.
>
> The minister apprehends that in these circumstances it devolves upon the Dominion government to consider and adopt the best possible means of promoting such measures as may enable Canada to control the transportation of its own products, and it is thought that the most efficient method of conducting such an inquiry and obtaining the required information is by means of a commission of competent and experienced experts who may be appointed and authorized under the provisions of chapter 114 of the Revised Statutes of Canada.

The right hon. gentleman then recommends three gentlemen, Sir William Van Horne, Mr. John Bertram and Mr. Harold Kennedy, as suitable to be appointed. He then proceeds to say:

> I further recommend that such commission be authorized to employ such scientific and professional assistance as its members may decide.

You will readily see that it was not professional railway exploiters, but gentlemen who had some knowledge of the railway business that the government had then in view. I may say that after this policy was announced in the speech from the Throne, and repeated in this report, there seemed to be throughout the country a spirit of thanksgiving that the government had at last awakened to a sense of their duty, and I am confident that every hon. gentleman in this House will agree with me when I say that had the government carried out that pledge to the people, made in these two do-

cuments, even had the route selected by the commission not satisfied particular localities, there is sufficient spirit of loyalty in this country to have induced the people as a whole to look on it with favour. I believe that the spirit of loyalty which has bound these different provinces and races into a great nation would have led every county and province to rise above any feeling of local jealousy and combine in giving every aid to the accomplishment of whatever proposal the commission would have suggested as the best solution of the transportation problem.

But, although in the speech from the Throne, the immediate appointment of this commission was promised, as the session progressed the government did not seem at all anxious to implement that promise. When asked repeatedly why they did not put it into effect, they gave all sorts of evasive reasons ; and finally, instead of the thorough and comprehensive inquiry which the taxpayers were promised, we had this scheme—not a hybrid but a triple scheme—sprung upon us. They are dangling before the electorate three baited hooks, with which they hope to catch the popular vote in the near future. The three baited hooks are hung out for the three divisions of this country—one to catch the west, another to catch Ontario and Quebec, and a third to catch the maritime provinces. If these hon. gentlemen were sincere, why did they not carry out their pledge to the people ? If they were not sincere, they acted a most disloyal part in putting that falsehood into the mouth of His Excellency the Governor General ; and the hon. ministers who prepared the address and this report advising the immediate appointment of a commission should hide their heads with shame. What does this report say ? The situation was so grave, there was a crisis demanding the appointment of a commission. The questions to be considered—were what ? They were complicated, and involved a thorough and comprehensive inquiry. By whom ? By railway exploiters ? Oh, no ; by competent and experienced specialists, to be assisted by scientific and professional experts. What does that mean? If it means anything, is it not an absolute acknowledgment by the government that they had not the ability to cope with the conditions, that they were in complete ignorance ? Nothing can be plainer than that acknowledgement. We know nothing, they say in fact, about railroading, and we ask that a commission be appointed which will know something. How comes it now that they, who were so helpless, who had to call upon a commission to decide for them, suddenly became possessed of all the information necessary to launch a huge and expensive project on the country ? We have the evidence of the hon. member for North Norfolk (Mr. Charlton), given before he was loaded up to fire at the order of the First Minister, that the government were not competent to deal with this question of transportation. He said :

With regard to this matter of transportation we are not in a condition to-day, even if we decided to improve the Ottawa valley route, to decide what are the proper conditions upon which to proceed. For this reason, I think the appointment of a commission to take the whole question into consideration is, in the highest degree, not only desirable but necessary.

That hon. gentleman knew his own ignorance, as the government has recognized theirs ; and at that time, the 26th of May last, he was willing to put the whole matter into the hands of a reputable and competent commission. Further on he says :

We cannot do it here in an expert and scientific manner. We must rely on the services of men of the character of those who are to be appointed on the commission.

No hurry then.

Let us wait until we have the decision of these men as to the proper course to pursue.

Why, if that hon. gentleman would say what was in his mind and conscience when he made that statement, he would oppose this outrageous scheme that is being put before the country. Up to the time I have referred to, the government had absolutely conceded that they were unable to cope with the question. But, Sir, a magician came along—one whom they had seen perform aforetime ; one who could turn opportunity into ducats. And behold, this government, that knew absolutely nothing, took on at once the attributes of gods. They saw all things different. Yes, they could even discern election funds in sight. Such is the effect of coming into contact with a great magician. What did they do ? They settled the question and settled it right quickly and, in their opinion, settled it for all time. Was it by experienced experts with scientific and professional knowledge ? No, Sir, it was settled by financial and political exploiters—and the House knows it and the country recognizes it, too. Why, the report to which I have referred recommended the appointment of Sir Wm. Van Horne and other gentlemen as commissioners. It would be interesting to know whether the First Minister told these three gentlemen that they must be prepared to follow him. Possibly that is the reason they refused, being men of honour. And gentlemen who have sat in this House and spoken in favour of delay in this matter should be ashamed of themselves of being forced under the party whip to swallow what the First Minister says and shoot as he directs. There seems to be a very wide difference between these hon. gentlemen who knew nothing about railroading on the 27th of May, and those who do know something about railroading. The Minister of the Interior (Hon. Mr. Sifton) and the Minister of Finance (Hon. Mr. Fielding) knew nothing about it, by their own report, but immediately this matter

came up they claim to know everything but the very gentlemen whom they endeavoured to get to serve on their commission, comes out and makes a statement, I refer to Sir William Van Horne. Let me read a little extract, so that the House and the country may compare the statement made by the Minister of Finance and the Minister of the Interior with Sir Wm. Van Horne's statement, the statement of the man who probably is the best authority on railroading in America. Referring to the Canadian Pacific and the Grand Trunk Pacific scheme, he said :

> The Canadian Pacific Railway, the Grand Trunk Pacific Railway, or any other all-Canadian route will never voluntarily carry a carload of wheat by the all-railway route around the great lakes to an eastern Canadian port for shipment abroad, for the simple reason that it will never pay any road to do so.

You will remember the elaborate argument of the Minister of the Interior about the carriage of this grain to St. John for about 10 cents a bushel.

> Nor will the transportation problems in the west ever be solved by the construction of an all-Canadian route from coast to coast.

And further on he says :

> The long haul around the great lakes was dreaded, because it was unprofitable, and the bulk of the grain brought by that route was carried during the winter months, and used by the millers of Ontario to keep their mills in operation during the cold season. There was altogether too much talk of an all-Canadian route by people who were entirely ignorant of the situation.

He knew whom he was talking about ; he was talking about the government, men who, on the 27th of May, acknowledged that they knew nothing about this question. Now, Sir, that there was need, and is need yet, of a commission, can be shown in a hundred different ways, outside of the question of the government proclamation, outside of their report, which is still fresh in the minds of the people, and even outside of what the hon. member for North Norfolk (Mr. Charlton) said. I will give you just one authority, and I think it is one which will carry weight. I notice in 'The Northwestern Miller' a statement that shows that we need this problem of transportation to be taken up in a logical way. That journal states that of the grain exported by way of New York last year, 21 per cent was Canadian grain ; of the grain exported from Boston last year 40 per cent was Canadian grain ; and of the grain exported from Portland last year no less than 65 per cent was Canadian grain. I do not think we need much more evidence of the necessity of a commission that will look carefully into this question, instead of a commission to sign a contract to make some of their political friends rich.

Now, will the scheme now proposed meet the requirements of the situation ? I do not believe it will do so in the least. I believe it will only increase the difficulties. The road west of Winnipeg will be completed at least from five to seven years before the eastern section. Assuming that it is possible to carry grain around the north shore of Lake Superior—which I am not prepared to admit as a matter of fact—at least this Grand Trunk Pacific, so-called, really the Grand Trunk, cannot do it. They will take grain from the heart of that country, probably double the amount that they have been able to handle in the past, and they virtually come here and say in so many words : Last year we carried 65 per cent of the grain exports from Portland out of your country. We carried 40 per cent of the grain exports by Boston out of your country, we carried 21 per cent of the grain exports by New York out of your country. Give us this road and we will more than double it. And they will do it. Are they going to carry that grain down and dump it at the head of the lakes ? Common sense tells us that they will not. It is plain that every bushel of grain they carry for the next six or seven years at least is bound to go by American channels. I notice that very few hon. gentlemen meet the argument of the hon. leader of the opposition that when the grain goes to the elevators of Port Arthur and Fort William it is out of the hands of the Grand Trunk Pacific and must be routed as the Grand Trunk says. Then, of course, they will route it to the port where they have their elevators and other facilities, especially to Portland. There is another question as to this route. The ex-Minister of Railways and Canals, I believe made a very strong point when he said that the Grand Trunk Pacific Railway was simply another corporate name for the Grand Trunk. As that hon. gentleman suggested, let the agents of the Grand Trunk go through the west, and they can corall every bushel of wheat and ship it out as they please. They can utilize the Grand Trunk Pacific if they choose and the government have no redress against the Grand Trunk. But there is another phase of the question that any business man I care not who he is will understand as a shipper, more particularly those who have had business in country districts and smaller towns. You are virtually at the mercy of the agent of the railway at that station. There is no shipper but must want small favours from these local agents. The local agents have an object in getting grain shipped in a certain direction, and unless the shipper caters to that disposition of the local agent, he will be deprived of a good deal of accommodation that would be of benefit to him. I know it myself in my experience with two or three roads. There is not a man in the country who ships goods but knows that it is an object for him to keep in touch with the local agent on the railway. That is known to any gentleman who is in business. If these

gentlemen on the treasury benches do not know anything, a gentleman who is in business knows that it is a course that cannot be over-estimated so far as routing of grain is concerned.

Now, I will not call this, as I said, a hybrid proposition. I will use the words of the Minister of Finance, who, you will remember, described the road as a system of plunges, three plunges he said. Just read his speech and you will find what he said. There were three plunges, and they were all in the dark, they were plunges of hon. gentlemen who knew nothing about railway building, so what else could they be but plunges in the dark? I think it is an admirable description of the whole scheme, a triple scheme. Well, I think, perhaps, plunge No. 1 was the western plunge. The financial and political experts of the Grand Trunk came to these gentlemen and, with a few passes, they were simply hypnotized. The result was that the scheme was completed, notwithstanding the report of May 27, that these gentlemen stated they knew nothing about railroading in any manner. Well, Mr. Hays, I imagine, in that interview told them: Now you know nothing at all yourselves, let us tell you what to do. But you want to remember a number of things. Remember that we have a figurehead, we have a friend of yours, Mr. Cox, at the head of this affair. Keep your eye on the figurehead, because you will need big figures in the impending elections if you run them on this scheme. Let us build the road for you, we will do the job in good shape. Of course, we cannot do it under our own name of the Grand Trunk, but we will give it to you under a new name, the Grand Trunk Pacific, and we will keep all the powers within ourselves. Now, Sir, I think this was plunge No. 1, and perhaps the redheaded boy that was referred to some time since. But if it was, it was a redheaded boy to suit the electors of the western division, something for them to catch on in the form of a baited hook.

But the magicians had opened up new ideas. These gentlemen had begun to dream for themselves. Here was an adopted boy for the west. But now they began to want a boy of their own, and there came to the Minister of Justice, away from those Laurentian hills, a cry, fairly a wail, for a child that they could call their own. What was the result? These political and financial experts evolved a brilliant conception, a boy for the middle section. The birth was a little premature, it is true, but then that made no difference. It is true he was launched into a cold world, among a very unsympathetic electorate, as they will find when they come to face it, but they had a boy of their own—not one to be proud of but one promising election funds. Oh, no. They knew that the boy was too much like its progenitors to be any good, and so they said to the company: We will tell you what we will do, we will let you have him 50 years for his keep. Now that was plunge No. 2 by these gentlemen who know nothing of railway building, a baited hook for the electors of Ontario and Quebec.

But, Sir, there was more to follow. There was another gentleman to be reckoned with. If reports be true, he had kicked, he had often threatened to do as the ex-Minister of Railways did. He had to be satisfied or he would not shoot straight. He was the gentleman who had to furnish the money to pay the bills to support these other two boys, the adopted one and the beloved of the Miniser of Justice. Well, Sir, he had not been idle. You will remember he told you that he had an actuary at work, and he told us that he could not only support this adopted child and the other boy that was born so rapidly to suit circumstances political, for the middle section, but he had money enough left to support another child, and why should he not have a child of his own? Sir, this birth was a record breaker. The other took two or three weeks to conceive, but this was conceived over night, and launched upon the electors, and this was the dearly beloved boy of the Minister of Finance. This boy, of course, represents that section of the road from Quebec to a seaport, down to the city of Moncton, a little town 20 or 30 miles from the Bay of Fundy, on the banks of a muddy river. That is the location of the eastern terminus of this so-called great transcontinental national highway. This, Sir, constitutes plunge No. 3, the boy of the Minister of Finance. The hook baited to catch the electors of the maritime provinces.

Well, there are some things that are rather laughable, you know, because even when children are born there are relatives who do not like them. We had ample evidence of this in the member for Westmoreland (Mr. Emmerson), when we were in the Railway Committee. After these two children were brought into the cold world, he got up and denounced them vociferously, he tried to scare them to death, demanding a government railway for that western country. Well, it is surprising that he should have taken this position. Why did he take it? Why, these other two railways had had godfathers, Cox and Hays were the godfathers, guaranteeing good behaviour for both these other boys. The member for Westmoreland had a godfather, a godfather whom he had always obeyed, whom he had always followed, in the person of the ex-Minister of Railways. He was simply carrying out the same plan when he spoke in the Railway Committee and told us that ever since he entered the New Brunswick legislature he had been a supporter of the Minister of Railways, he was working at the dictation of the Minister of Railways all that time. Well, Sir, times have changed. The member for Westmoreland now dreams dreams and sees visions. He

sees himself travelling in a private palace car from Moncton through the wilds of New Brunswick, away up to the west through that plunge in the wilderness described so vividly by the Minister of Finance. Why do you find him in this position, broken away from his godfather, broken away from the hon. gentleman who made him, broken away from the gentleman who even elected him to this House without any question? —and it was rather a strange thing indeed to see some hon. gentlemen in this House when the hon. member for North Norfolk (Mr. Charlton) was charging the ex-Minister of Railways and Canals (Hon. Mr. Blair) with having thrown up his position virtually because he could not get an opportunity of getting the pickings—it was certainly rather surprising to see two hon. gentlemen in this House who had depended on the hon. ex-Minister of Railways and Canals for their political existence for years—the hon. member for Victoria, N.B., (Hon. Mr. Costigan) and the hon. member for Westmoreland (Mr. Emmerson), pounding their desks with all their might, rejoicing that their godfather had gone astray and was leaving the ministry because he could not get his hands on some of the filthy lucre that was to be had. Such is the gratitude of hon. gentlemen after their godfather has kept them straight so long. Now we have the hon. member for Westmoreland. Any one who heard him the other day knows that he is very anxious not to kill these children, but to act as dry nurse for both of them, but if the hon. gentleman makes as many mistakes as he did in that last speech in this House, it is very far away from him. I am afraid he will have to take to some other business than that of nursing. If any one can judge of these children at all by the speeches that have been made in the House, if you can judge by the speeches of the hon. Minister of the Interior, by the hon. Minister of Finance, by the hon. member for North Norfolk, there is a difference in them. There is one beloved more than the other. The Benjamin is the eastern road, because they have to defend him the most. Two-thirds of the words of hon. gentlemen on that side of the House in defence of this scheme have been in defence of the eastern road from the city of Quebec to the county town of Moncton.

The ex-Minister of Railways and Canals was the only hon. gentleman in the ministry who could claim any knowledge of railway business. Not one of them has had any practical experience, though he had had some experience during seven years, but he was the one member who refused to follow these waifs in any form whatever. He believed that they were the waifs of political and financial intriguers, and he believed the country would not support him in putting at the mercy of such gentlemen the whole of the resources of this country. Some of them were surprised that he should oppose this with all his power. They were surprised that it was possible that a man could be conscientious enough and have a sufficiently high sense of honour and loyalty to his country to break away from his party, in other words, that he could not swallow whatever the First Minister had prepared for him, and without consultation, too.

Now, I do not propose to deal with the position of the hon. ex-Minister of Railways and Canals. He has made a defence of his own, and he is amply able to defend himself, and if any hon. gentlemen think he is not, they will probably find out to their cost that he is, as a good many of us have in the past. There is another question in regard to the hon. ex-Minister of Railways and Canals that I would like to mention, and one that has not been disputed. That is that the ex-Minister of Railways and Canals was not only asked to support this scheme, but that he was asked to stultify himself, he was asked to take his seat in the House and allow the First Minister to apologize to the House and to the electors for the outrageous scheme, and to be quiet and submit to it. The matter was suggested to him in Council, he relieved the First Minister of it in his speech, but he did not relieve the other members of the Council, the other ministers, from having suggested it to him. It would be interesting to have some of them deny it, but we will not hear it from them. Now, after the hon. ex-Minister of Railways and Canals so thoroughly exposed the rottenness of the scheme, they were paralyzed, they were very anxious indeed to rush the matter through the House. They thought they could depend on more than the majority that they have behind them. They had depended on Providence being kind to them and sending the usual hot weather in July and August, so that with three sittings a day and one on Saturday they would be able to force the matter through, but Providence has been more kind to the country than to the ministry, and the country will appreciate the fact that there has been ample time to discuss this question, and to allow the people to get at the enormity of this scheme before it is forced upon them, as the government no doubt intend to force it soon. It is not surprising that the ministers were paralyzed. Why should they not be? The hon. ex-Minister of Railways and Canals, the only man who knew anything about railroads, had made a defence and an incontrovertible defence. They confessed themselves that they knew nothing about it. How could they say anything ? They had not one particle of information. At that time they were self-confessed know-nothings, and what did they do? They had to adopt a makeshift, and they took the lightning change artist of the troupe, the hon. member for North Norfolk (Mr. Charlton), and put him up to defend the question. They had no authenticated statements to

place before the House to offset the absolute facts that were produced by the hon. ex-Minister of Railways and Canals. They had merely statements made as the hon. member for North Norfolk made them, 'in my judgment' and 'in my opinion,' without any backing of any character that could bear scrutiny before the electors of this country.

I would not like to misrepresent the hon. member for North Norfolk, I am sure, but we know what position he is in to-day by his speech, August 12, on these resolutions. We know he is supporting this scheme, yet it was only on the 26th of May that, after proving that Canadian roads could not compete with the roads of the United States, he made this remark, as will be found on the pages of 'Hansard':

> Now there are conditions which render it, in my opinion, impossible at present to compete with that route.

—referring to a United States routes——

> It is useless to think of hauling wheat from a point as far west as Port Arthur by an all rail route to Quebec or to Halifax at prices such as those I quoted with regard to the American lines.

But that is not all of his speech on this resolution. If you will read his speech you find that he proves to his own satisfaction, and apparently to the satisfaction of the hon. gentlemen who cheered him, 'you can now do the very thing that on the 26th of May he claimed was an utter impossibility.' He also said on the 26th of May:

> Let us wait until we have a decision on this motion as to the proper course to pursue.

I think I have given ample reasons for suggesting that the hon. gentleman is at least liable to change his mind. I will now read some extracts from his later speech of August 12th, and you will see that the railway this hon. gentleman is going to build is a marvellous line. He said:

> We have undertaken this construction none too soon. . . . . The government I repeat are not acting with undue haste or proceeding with an ill-matured scheme. They are not entering upon an enterprise which they are not warranted in entering upon, but on the contrary they are entering upon a scheme which is called for and called for now. . . . . Consequently delay in providing these facilities is inadvisable, and I dismiss the assertion as to the action of the government in proceeding with this railway being premature, as totally without foundation and as betraying a lamentable ignorance of the conditions that exist and the probable wants of the near future.

He had forgotten that it was the ministers themselves who had displayed this lamentable ignorance, and had acknowledged it before the House and before the country.

I certainly do commend some of the suggestions of the Minister of Finance to the public, because if there was anything ever put forward in school-boy fashion, it was that speech of the Minister of Finance. He has demonstrated to this country that it is time he went to school again. If there is anything in the world in which the Minister of Finance is proficient, it is in graceful curves, and he could give pointers to the famous skater Rubenstein in that direction. I sometimes think the Minister of Finance must be rubber-cushioned, or he would strike a corner once in awhile and injure himself. It makes no difference whether he is defending protection to the great iron industry under the name of a bounty, assisting it, he says; or whether he is figuring out of his own creation a defence of this outrageous railway scheme, he is equally at home. There must be some essentials in a transcontinental railway scheme before the public will support it. One essential is that you must have for its terminals on the Pacific and the Atlantic safe harbours of large capacity and of easy access, for, unless the harbours possess these characteristics, you cannot use them because of high rates of insurance. Any gentleman who has shipped goods will recognize that one great trouble with us in the past has been that our Canadian trade has been hampered on account of high insurance rates. Now, what harbours have we in connection with this scheme? I am willing to accept the statement that in Port Simpson we have a harbour capable of all the development that is necessary for a great transcontinental line. But what have we as a terminal in the east? We have a little town on the banks of the Petitcodiac river; a harbour in which a steamboat of any size was never seen, and never will be seen; a harbour to which no steam vessel could possibly go, and if she could, the high rate of insurance would prevent trade. Then it is necessary to have a good route of large capacity. It is useless to build a railroad over which you cannot haul any goods. On that point the member for North Norfolk said this, and if he has changed his mind since I apologize to him. The hon. gentleman said:

> If you ask a railroad man anything about the capacity of a road and whether its capacity for business is measured by the length of the line he will tell you that it is not; but that it is measured by the length of the line and by the steepness of the grades.

It is not only necessary to have a good road, but you want a route of good capacity. I am willing to admit that the Pine River pass is perhaps the best pass in the Rockies. I am willing to admit also that possibly from the Pine River pass to Winnipeg it is a very good route, but after you leave Winnipeg coming east it is the merest conjecture; we are absolutely in the dark. However, there is a little information which can be obtained. If you look at the Moose river, through which discharges Lake Abitibi, you will see seven large branches, every one of which has got to be crossed by this railway at right angles. You can imagine something of the grades and curves on a road that will have to cross these rivers. There

has been some talk about the Canadian Pacific Railway as it goes around Lake Superior, but you will find that its grades present nothing like the difficulties that there will be in getting down to the valley of a river and crawling up on the other side, and doing that seven times in 100 miles, as in this instance and these are but a few of the many rivers to cross. I have it on the authority of a good railway man that instead of this road being 1,400 miles long, that when you count in the curves it will have to take, it will be not less than 1,800 miles.

I come further east now to that other section of the road, which is the pet of the Minister of Finance. The highest elevation in the much maligned Intercolonial Railway is 744 feet above sea-level. On the Temiscouta road the highest elevation is 1,350 feet, and over this summit the Temiscouata engine can only haul seven cars at a time. Did any of you gentlemen examine the profile of the new road in the Railway Committee room ? If you did, you will find that its highest elevation is 1,424 feet. This road, which the member for North Norfolk says is to be as good as any railroad on the continent, will have to climb an elevation of 1,424 feet, and yet the Temiscouata Railway is condemned as being impracticable, where the grade is only 1,350 feet, and the highest grade on the Intercolonial Railway is only 744, or about half the highest grade on the new line. I think a two thousand ton load over that elevation, as suggested by the hon. member for North Norfolk, will be a pretty steep haul for any engine. If they get a 200 ton load over it, they will be very fortunate. From Edmundston on the west side of the river, the country is irregular. The railway will have to cross rivers at right angles. It will have to go virtually to the level of the St. John river, and then over heights of land 1,200 feet high ; and I need not tell railway experts—even the ministry, who knows nothing about it, should be able to judge—what that means. In New Brunswick it will have to cross several streams, large branches of the river St. John, at right angles. It will have to cross the Green river, the Quisibis, the Seegras, the Grand, the Little and the Salmon—all at right angles and come down the west side of the river St. John. The hon. gentlemen opposite who talk about this route do not know anything about it. It was rather laughable to hear the hon. member for Westmoreland (Mr. Emmerson) say that he had travelled all over it when he had charge of the public works of New Brunswick. If he did, it was as a fisherman and hunter, and not in any other capacity, because there are no roads through it. Then we come to quite an obstruction, the Tobique river and the Tobique highlands. Did the men who built the Canadian Pacific Railway take it over the the Tobique highlands ? No. Before they reached there they crossed the river St. John and went up the west side of that river and crossed it again at Grand Falls. rather than attempt to cross that mountainous district. Some of the professional and scientific experts slide over these elevations as if they were toboggan slides, and there will be a good many elevations in that country that will answer better for toboggan slides than for 2,000 ton trains. In saying this I am not decrying the province of New Brunswick. I have as high an opinion of that province as any other man. I was born in it, and I am a true Canadian too. But I speak as I do because when we are spending the people's money, I want the people to get value for it. I do not believe spending millions of dollars just to satisfy a few supporters of the government. The Minister of Finance tells the truth—sometimes at any rate ; and he told us the truth when he said this was not a commercial road, but a political road. We knew that before. If it were a commercial road, the government would take it down the west side of the river St. John to the town of St. Andrews. Every survey shows that that is the proper route to take if you want a transcontinental line by the shortest route from the Atlantic to the Pacific. It is fifty miles shorter than any other route you can take, and will bring the railway terminus seventy or eighty miles nearer to the Atlantic ocean. The town of St. Andrews has a magnificent harbour, one that cannot be beaten in the world : and the harbour of Letang is as good and equally accessible. But these are not the considerations which the hon. gentlemen had in mind in fixing the route of this railway. The consideration was, how many men can we bring back here as a result of this expenditure ? Why, Sir, if a commission had been appointed, there is no question where the route would have gone. It might have been a little discouragement to the hon. member for Westmoreland, but there is no doubt that it would have been better for those hon. gentlemen who wished to ship grain from the west. They should be ready to advocate the shortest practicable route, and the only transcontinental route that can be built with any hope of success.

I came down the river as far as Tobique, and I want to go a little further. From Tobique to Chipman the hon. member for Westmoreland says the route will be all thoroughly timbered land. If the hon. gentleman was ever through that country—I do not believe he has ever been, even for fishing or hunting—he knows that in that section the line will be lost among what are called the Bald Mountains, so called because they are absolutely nude of trees ; and yet the hon. gentleman stands up in this House and says that he has been through that country and knows it. Well, there is only one thing that can equal that statement, and that is the hon. gentleman's sympathy with the poor people of the Gas-

pereau Valley. He will be writing a second 'Evangeline' to rival Longfellow's description of the incidents of Gaspereau Valley, Nova Scotia. If there were any timber there, any one who looks at a proper map of New Brunswick knows that this railway will never carry a stick of it. New Brunswick is too well watered, and everybody knows that water routes will beat rail routes every time, especially when the rivers down which the timber is driven are as short as they are in New Brunswick. So that the talk of this railway opening up that country to settlement is all bosh, because it is not a country adapted for settlement. There is a section of country in New Brunswick that might be properly opened up, but this railway is not going through that section; the Minister of Finance would probably not have been satisfied with the route. The hon. member for Westmoreland played a very important part in this House not long since. He was trying to rival the great comedian, Joseph Jefferson. After there had been considerable talk in regard to the two routes, and he had received considerable punching from my hon. friend from King's (Mr. Fowler), he awoke from his dream. He said he had been dreaming about it, and that instead of the road going direct to Moncton, he would take it to Chipman, so as to accommodate St. John; but he did not suggest that until my hon. friend from King's had pounded him, and pounded him well, in regard to the matter. Well, the proposition to take the line to Chipman may be a good one. Chipman does not need this railway, but there are some that may need it. The friends of the hon. member for Westmoreland have some interest in a railway that is there, and the presumption is that that railway will be loaded on to the Grand Trunk Pacific or the government railroad. That is the special interest which the hon. member for Westmoreland probably has in carrying the road on to Chipman. He needs the support in New Brunswick, of an hon. gentleman who, I understand, is most interested in that particular line of railway and the company which is to extend it to the city of Fredericton. He gives us as a reason for this route that the magnificent mineral resources throughout that portion of New Brunswick, which will be developed by means of the construction of this line. Well, the poor fellows who have expended their money in exploring these mineral resources are still out of pocket. I hope that in the future some mineral resources may be found that will pay for their development. Among other things, he spoke of the magnificent coal area that will be developed, but he must know that we have magnificent water routes in that province, and that every chaldron of coal is carried down the river St. John from the head of Grand lake. From Chipman to Moncton is no doubt a fair country through which to build a railway, but it has no suitable port for ocean steamers and no suitable harbour for the terminus of a transcontinental railway.

We have heard some question of competing lines, but it is evident that hon. gentlemen who speak of the advantages of competition are unable to see the difference between the building of competing lines by different corporations and the building by the government of a line to compete with one it already owns. What object can there be in building a line to compete with one which has cost the country some $70,000,000? It is this competition by a new government road against the Intercolonial Railway to which we object.

The Minister of the Interior made an argument regarding the shipment of grain, which I need not combat. If I were living in Manitoba or the Territories, I would have his speech sent to every elector in those sections, to show on what little foundation the Minister of the Interior can base a wide conclusion. He takes an exceptional circumstance in connection with the Canada Atlantic Railway, he takes the lowest rate ever charged by that railway and a lower rate than can possibly be charged by any railway company, according to railway experts, and on that rate—made in very exceptional circumstances—he bases his contention that it will be possible to carry grain along the north shore of Lake Superior. If an hon. gentleman occupying the position of a Minister of the Crown cannot bring any better argument to support a policy which will involve an expenditure of millions of dollars, he ought not attempt to defend it at all. And the best condemnation of that policy would be to send abroad his speech without any attempt to controvert it. That argument would be sufficient to convince any elector that the hon. gentleman was talking of something he knew nothing about, and which, on the 27th of May last he admitted that he knew nothing about. I am not prepared to say that no grain will be carried along that route. It may be possible that some little grain may be carried over it, but only under very exceptional circumstances. On the Atlantic seaboard, we sometimes find that a vessel will bring out salt as ballast, but because a vessel, in default of being able to get paying cargo, will carry salt as ballast, that cannot be taken as any basis on which to calculate freight rates. The same thing occurs in the matter of Portland cement. Western cement has few sales down in the maritime provinces, because the Portland cement is brought there in the ships as ballast. Still if we were to follow the example of the Minister of the Interior, we would figure out that a vessel, which loads cement or salt as ballast, could carry other cargo at the same rate.

As to the cost of this railway, we have an estimate made by the Finance Minister

and also one made by the ex-Minister of Railways and Canals, but the difference between the two is that the one was made by a gentleman who was simply figuring on something he had heard about, whereas the other was made by a gentleman who was figuring on something he knows about. We had the government admitting on the 27th of May, in this report of the committee of the Privy Council, that they knew nothing and would have to appoint railway experts to obtain information. On the 27th of May their pin feathers of information had not started, but to-day they are birds of plumage, ready to be plucked; and at the expense of the country, they will be plucked. When challenged across the floor of the House, there was not a minister who could come within ten million dollars of the cost of this proposed railway. The reason is evident. Men who know nothing can tell nothing. Had they appointed a commission, they would have been able to find out something. It is not against this railway that we are particularly objecting, but it is against the attempt to commit this country to something concerning which the government know nothing and concerning which they have admitted they know nothing.

The Minister of Finance gave out the text, which every one of his followers, even the hon. member for Brant (Mr. Heyd) has taken up. He started out with the statement that we have a surplus. When he made that statement, I felt sorry for the right hon. Minister of Trade and Commerce (Sir Richard Cartwright). Only a few years ago that hon. gentleman declared it was a crime, a most outrageous thing, to have a surplus; and to hear his desk mate announce that he had a surplus of over $13,000,000 must have been gaul and vinegar to the hon. gentleman. I expected to see the hair of his head rise in horror; but even when the hon. Minister of Finance repeated we have a surplus and we shall have a greater surplus, the hon. Minister of Trade and Commerce remained apparently undisturbed in his lethargy. I expected to see him rise in his indignation and heap maledictions on his desk mate——

An hon. MEMBER. If he did he would lose his job.

Mr. GANONG. Of course he would. He was told by the First Minister that he must shoot in a certain direction or he would lose the office which he now fills and which he firmly said never should have been created. But this surplus evidently worried the Minister of Finance a good deal, and he concluded that one way to get rid of it was to give some of it away. He started in by saying that they could build all this road from Winnipeg to the west—that is they could adopt this redheaded boy, and it would only take $2,334,575 of the surplus. Then he looked around, he saw that they could have their own two boys representing the road from Winnipeg to Quebec and Quebec to Moncton, and that they both could be supported by the country for $11,066.882. He found out about that time—it was a rather peculiar thing—that these boys should have been twins. And he had to afford relief to his political friends even at the expense of the poor taxpayer. He said: It will cost us $324,246 to make these Siamese Twins by taking over the Quebec bridge wrich belongs to our friends. And still we shall have a surplus, because the total will be only $13,725,703.

An hon. MEMBER. Two cents.

Mr. GANONG. We should not forget that. How did the hon. gentleman get his figures? He has an actuary. I never had an actuary in my line. If I had had one in my business thirty years ago, I suppose I could have been as rich as some of the Coxes and others. Why should we go any further? Why not give the gentleman $13,725,703—and two cents—and let them build the road, own it and run it? It would save the country great expense and trouble of managing it. I would suggest that we pay them even double that amount to build and own and run the line, and the country would be the gainer by it as compared with this contract. There is something wonderful about this actuarial business. It is fine to learn through an actuary that it will cost us just $13,725,703—and two cents—to carry out this contract. We cannot be too glad that the Minister of Finance has an actuary. The Grand Trunk Pacific ought to have an actuary too; it is a good thing to have. Let me show how this actuarial business works out. I have a clipping here from 'Hansard' of the 13th of May last. The Minister of Finance answered a question put by the hon. member for Bellechasse (Mr. Talbot). The hon. member for Bellechasse has changed his opinion somewhat. He had a little scheme of his own which has been taken out of his hands and now he is ready to shoot as the Prime Minister directs. The Minister of Finance said:

> At the time of confederation the Grand Trunk Railway owed the province of Canada, according to the accounts of that province, $25,607,393.53, and this amount was taken by the Dominion as an asset, and still remains in the balance sheet of the Dominion at that amount, no payment having been made by the railway in respect thereof.

'Still remains' as an asset. And every man knows that it is of no value. Why not wipe it out? Suppose the Minister of Finance were to put his actuary on this problem, let us see how it would work out. On the 1st July, 1867, this amount stood at $25,607,393.53. Assume that this stood at interest of 5 per cent up to 1877, at 4½ per cent from 1877 to 1887; at 4 per cent from 1887 to 1897; and at 3½ per cent from 1897 to the present time and that the interest

was compounded half yearly, these being about the terms on which the government borrowed the money, how much do you suppose this would amount to? It would amount to about $118,000,000. Why, this oppulent concern, this wonderfully strong company that is coming here to do us so much good, stands indebted to this country $118,000,000—every dollar of it owed as justly as a dollar was ever owed by one man to another. Suppose that the government had owed the Grand Trunk $25,607,393.53 on 1st July, 1867, what would have been the result to-day? Why, the actuary would have got in his work and he would have come and said: You owe us $118,000,000. And we are accepting the guarantee of this concern that already owes us this vast amount. This shows the business capacity of this business government, this combination of all the talents from the different provinces. Why, the Minister of Finance can build railways—it is no trouble to him, if his friends will pay this bill. He can build, according to his own figuring, eight transcontinental railways, and still have a surplus, if he will only collect what the Grand Trunk owes us. This indebtedness of theirs may be one of the reasons why they do not wish to acquire any more property, lest Canadians might know enough to ask them to pay their debts. I expect to see a boom in the actuarial business after this. Remember, this reasoning is not mine; it is the reasoning of the Minister of Finance, the hon. gentleman who controls the moneys of this country, as he has done for the last six or seven years. It is the reasoning of a full-fledged, competent, experienced, scientific and profesional railway expert—since the contract was signed, but one who did not know a thing about it until that time. This argument, first voiced by the Minister of Finance, has been repeated, as I said, parrot-fashion, by the rest of the gentlemen on his side who have spoken. But we have one gentleman who did even better than that. He does not propose to be outclassed even by the Minister of Finance. I refer to the hon. gentleman from King's (Mr. Hughes) who worked it all out that it would only cost us twenty cents a head to build this road from the mud-banks of the Petitcodiac to Port Simpson. Will hon. gentlemen on that side, who are presumed to have at least a modicum of common sense, accept such a statement as that? Will they have the assurance to go before an intelligent electorate and attempt to cram such stuff down their throats? I hope they will, for they will get their just deserts if they do. Since the Minister of Finance has blossomed out in the actuarial business I cannot but think of the change in him. A few years ago, you know, he favoured the factory of the cross-roads and the backwoods. Those were the days of his simplicity. Now, he finds no difficulty in granting a protective bounty to assist, as he says, a great iron industry that will cover half a township. So have his ideas grown. These are hopeful signs. I hope, should Providence treat this country so unkind as to allow the hon. gentleman to continue in his present position. that he will blossom out in a new direction. If he will get in his actuarial work and give us a statement of the losses to labour and capital by his own mistakes on tariff questions, he will show where money has been lost with which we might have built two transcontinental railroads had we so desired. It is to be sincerely hoped that the government will recede from these plunges that they have made. They have followed the Conservatives in a good many good things. I hope they will continue to follow the policy of the Conservative party on the question of transportation as laid down by the leader of the opposition. If they do, they will show some signs of a higher patriotism than that which fills the pockets of political friends.

Now, Sir, it cannot be said that we on this side of the House are against a judicious scheme of improving transportation facilities. All we have demanded in any instance is proper consideration of any scheme, instead of a plunge in the dark as mentioned by the Minister of Finance. We believe that the plan proposed by the leader of the opposition is a truly national one. It conserves the public interest in that it saves the great expenditure which is proposed by this other scheme without proper investigation. It saves the people's money, it gives the people a control of transportation rates that they can never hope to obtain under the scheme proposed by the government. It gives the great west what it requires more economically and more efficiently than the policy proposed by the government, namely, a scheme by which western grain may be carried through Canadian channels, and that cannot be done for five or seven years according to their scheme. The policy of the leader of the opposition makes it possible to carry this produce over a government railway to the harbours of eastern Canada. It becomes a patriotic scheme, as it will be a people's road, built by the people's money, and controlled by the people rather than a contribution of $125,000,000 to build up a distinctly foreign corporation over which the government can have no possible control.

On motion of Mr. Marcil (Bonaventure) the debate was adjourned.

On motion of the Postmaster General (Hon. Sir William Mulock), House adjourned at 12.05., Friday.

HOUSE OF COMMONS.

FRIDAY, August 21, 1903.

The SPEAKER took the Chair at Eleven o'clock.

OFFICIAL REPORT OF THE DEBATES.

Mr. L. N. CHAMPAGNE (Wright). Mr. Speaker, I beg to move that the sixth report of the Select Committee appointed to supervise the official report of the Debates, be adopted, with a modification of the third clause. This clause reads as follows :

That the amanuenses to the official reporters, who at present are receiving $3 per diem for their services, be, as regards salary, placed on the same footing as the extra sessional clerks, i.e., that they be paid $4 per diem, and that the said increase date from the beginning of the present session.

It is proposed to modify this portion of the report, to make it read as follows :

That the amenuenses to the official reporters who have been employed during the present session, and who have been receiving $3 per diem for their services, be paid $3.50 per day for the term they have been employed and will be so employed, and that the said increase date from the beginning of the present session.

I may explain to the House that the object of this amendment is to cover the case of a certain gentleman who has been employed as amanuenses of one of the reporters from the beginning of the session until the 1st of July, and who has since been replaced by another man. My attention has been drawn to the fact that clause 3 of the report as it is framed would entitle the gentleman who has been employed from the 1st of July until the end of the session to receive the increased pay from the beginning of the session, while the other, who served from the beginning of the session until the 1st of July, would only be paid $3 per day. It is to cover that case that this modification is suggested. The committee recommended in the report that the salaries of the amanuenses be increased from $3 to $4 per day. Representations, however, have been made to me by the government—I think there is no indiscretion on my part in saying by the hon. Minister of Finance and the Speaker of the House—to the effect that while $4 per day was not altogether an excessive salary, it would not be in accordance with what is paid to other sessional clerks. Therefore, I suggest now that the report be modified to that extent, so that these employees will be paid $3.50 per day. With this modification, I move the adoption of the report.

The MINISTER OF FINANCE (Hon. W. S. Fielding). There is always a possible question as to how far a motion of this kind, dealing with money matters, can properly be brought before the House in its present form ; but I believe the practice of the House has been to allow such reports to be made, not as conclusive in themselves, but as recommendations which, in order to have effect, must be followed by the necessary appropriation in the estimates to cover the increased expenditure. I think it would be better if my hon. friend would provide that the salaries of the gentlemen referred to should be placed on a par with those of the sessional clerks, without mentioning the particular sum. There is a regular scale of salaries for the sessional clerks—$3 ordinarily, $3.50 to those qualified as typewritters, and $4 to those qualified both as stenographers and typewriters ; and it seems to me that the same general rule should be followed in this case, so that any of these gentlemen who are qualified in the same way as other sessional clerks would receive the same pay. I understand that these appointments are not made by the House or by the committee, or by the Speaker, and I think the officers who are to be dealt with in this way should be appointed either by the Speaker, as representing the House, or by the Debates Committee. I have at present no objection to the motion, but I think it should be understood that a motion of this kind, when passed, is to be taken as a recommendation, and is not necessarily conclusive. The general rule as to money matters is not easily determined, but I am inclined to think that if one wanted to be technical, objection could be taken to many of these reports. With the understanding that the motion is passed as a recommendation, I have no objection to it going.

Mr. T. S. SPROULE (East Grey). I entirely concur with the suggestion that any expenditure can only be made on the recommendation of the government with the assent of the Crown, and of course, it is in the discretion of the House whether it will be granted or not. With regard to the other suggestion, I think now, as I did before, that these appointments should be in the hands of either the Speaker or the government and should not rest with any committee of the House. I have always held that view, and this is why I refer to it now.

Motion agreed to.

REPORT PRESENTED.

Report of Superintendent of Insurance of the Dominion for the year ending December, 1902.—The Minister of Finance.

MANITOBA GRAIN ACT AMENDMENT.

House in Committee on Bill (No. 232) to amend the Manitoba Grain Act, 1900.—The Minister of the Interior.

The MINISTER OF THE INTERIOR (Hon. Clifford Sifton). This Bill was completed in committee a couple of weeks ago, but an amendment moved by my hon. friend from Macdonald (Mr. Boyd), suggesting that the Grain Commissioner should telegraph

to all country points the prices of grain from day to day, was laid over in order that I might consider it. I was not prepared to deal with the amendment at the time, because I had not sufficient information, but I told my hon. friend that I would take the matter up at an early day. After making careful inquiries, I find that the suggestion is not practicable. I referred it to the Grain Commissioner, and he telegraphed to the managers of railway companies in the wheat growing states to the south and also to the Boards of Trade and the Grain Commissioners, and he found that such a practice is unknown in the United States and regarded as wholly impracticable. So far as Canada is concerned, it is certainly impracticable, because we have no way of getting an official price, as we have an open grain board upon which official prices are bulletined. I move that the Bill be reported.

Mr. BLAIN. As the hon. member for Macdonald is absent, would the hon. minister allow the Bill to stand until Monday ?

The MINISTER OF THE INTERIOR. I am obliged to go away to-morrow and do not expect to be here again this session. I have already held the Bill over several days, because my hon. friend from Macdonald was not here. His absence, however, makes no difference, because he left the amendment in my hands in order that I might see whether it could be worked out or not.

Bill reported, read the third time, and passed.

NATIONAL TRANSCONTINENTAL RAILWAY.

House resumed adjourned debate on the motion of Sir Wilfrid Laurier for the House to go into committee on a certain proposed resolution respecting the construction of a National Transcontinental Railway.

Mr. C. MARCIL (Bonaventure). There are, Mr. Speaker, in the history of nations, as in the history of individuals, red letter days. These are red letter days for Canada. The Liberal party, with the co-operation and approval of the Canadian people, is about placing on our statute-books a law, the preamble of which reads as follows :

Whereas, having regard to the growth of population and the rapid development of the production and trade of Manitoba and the North-west Territories, and to the great area of fertile and productive land in all the provinces and territories as yet without railway facilities, and to the rapidly expanding trade and commerce of the Dominion, it is in the interest of Canada that a line of railway, designed to secure the most direct and economical interchange of traffic between Eastern Canada and the provinces and territories west of the great lakes, to open up and develop the northern zone of the Dominion, to promote the internal and foreign trade of Canada and to develop commerce through Canadian ports, should be constructed and operated as a common railway highway across the Dominion, from ocean to ocean, and wholly within Canadian territory.

If there is anything deserving of the hearty co-operation of every true Canadian, whatever section of the country he may come from, or whatever may be his origin, it is the policy of striving to the best of our ability to develop this country and advance it in the march of progress. The span of human life, Sir, is set at seventy years. This young nation has not yet lived the average span allotted to each individual, and it is not more than half of that time since the intellectual giants, who then guided the destinies of Canada, discussed the advisability of building a transcontinental railway. To-day we are following in their footsteps. To-day we are about to repeat the lesson they taught us. Canada has made immense strides since 1871, when a transcontinental railway was first mooted, and since 1885 when it was opened to the public. The strides which Canada has made since then are without parallel in the history of modern times, and we are now facing the imperative necessity of building a second transcontinental line. This question comes before us at an opportune time, at a time when the leaders of commerce, recruited from all parts of the British empire, are meeting in our metropolitan city for the purpose of discussing the progress and advancement of that empire of which Canada forms to-day so prominent a part. It is fitting that we should realize our obligation and our duty, and it is gratifying to the Canadian people to know that the business men of the British empire realize to-day the possibilities of Canada. These men, assembled from all parts of the British empire, will shortly leave Montreal to go down to the Pacific coast. In their voyage through this country, they will see an object lesson and will learn what industry, patience and perseverance can accomplish in a few short years. The preamble of this Bill, Sir, is justified by what has taken place during the last fifteen years in the North-west. May I be permitted to read here the words of an eminent journalist, published in the city of Montreal. He thus describes the possibilities of our North-west and the actual stage which that country has reached to-day :

Canada's food producing resources, even in their present partially developed state, are giving a good account of themselves, contributing to our exports of last year a little more than one-half of the total value of goods sent abroad. Canada's total exports last year amounted to $211,640,286, and of these the food products had a value of $109,326,319, the leading articles of food exports being : grain, $32,751,400; flour and meal, $4,369,781; cheese, $19,870,072; fish, $14,187,070; animals for food, $12,342,489; meats, $14,161,565. After feeding five and a half millions of people at home the food producing resources yielded a surplus of over

one hundred million dollars. Great Britain took $81,961,000 worth, and the United States $5,023,000. The wheat crop alone amounted to 98,654,000 bushels, being 38,000,000 bushels more than were raised in the United Kingdom of Great Britain and Ireland, and 55,000,000 bushels more than the entire crop of Australia, New Zealand and Tasmania. Ontario, for many years the leading wheat producing province, now has to take second place, for last year her yield was only 26,904,000 bushels, while that of Manitoba was 54,750,000 bushels. And only patches of the Canadian west have as yet known the plough. Manitoba and the three territories, Assiniboia, Saskatchewan and Alberta, contain an area of 270,000,000 acres, of which 135,000,000 acres are good land capable of yielding abundant harvests. Of these 135,000,000 acres only 4,000,000 acres are under cultivation. Over the other 131,000,000 acres the prairie grass still waves and beckons the people of the crowded east and the still more crowded centres of the old world to come and possess the land. And here a problem in proportion suggests itself. Four million acres of Manitoba and the three territories are cultivated, and the population is 391,000; what will the population be when one-half the tillable land is under cultivation? The answer is six and one-half millions, or one million more than the present population of all Canada. This is only a hint of the possibilites of natonal growth dependent upon the development of Canada's agricultural resources.

It is easily seen that the preamble of this measure is fully warranted and fully proved by what we have at present before us. Is Canada to stand by and allow this western country to be invaded, as it was this year, by 100,000 immigrants, a number greater than the number of those who came in during all our twenty years under the so-called national policy? Are we to allow these people to take possession of our country, to become masters of the Canadian west, as others of their kind became masters of the American west? Are we to remain satisfied with our present canal system, with our present railway system? Are we who, for five years, have heard on the part of our public men nothing but demands for the improvement of Canada's waterways, the advancement of Canada's progress and the strenuous efforts that should be made to realize Canada's immense possibilities, to remain inert while others move? I am sorry that the Conservative party, which, in the past, has done great things for this country without doubt; I am sorry that to-day its policy is limited to that which has been expounded in this House by its leader. That policy, I have no hesitation in saying, is not worthy the traditions of the Conservative party. If Sir John Macdonald and Sir Charles Tupper were still in political life, men who were the pioneers of the first transcontinental railway, such a policy would never have been accepted, but we should have seen these men working with the majority of the Canadian people to-day for the building of a second transcontinental railway, which is the only natural sequence of the first constructed road.

The leader of the opposition (Mr. Borden, Halifax), in concluding his remarks, used these words:

> This, Mr. Speaker, is an outline of the policy which I would submit as an alternative to that proposed by the government. It is a policy based upon an abiding and abounding hope and confidence in the future of this country; a policy which looks to an enormous development in Canada within the next few years; a policy which, I trust, is not unworthy of the traditions of that great party which made the North-west a part of Canada, which bound together the scattered provinces of Canada by a railway stretching from the Atlantic to the Pacific, and which, from first to last, has believed in and advocated a national policy, not only for the development of our industrial life, but also for the solution of the great transportation problems of this country.

Mr. Speaker, I am but one of the humble members of this House; but, in the name of the people I represent, in the name of the constituency which was represented in this House for long years by members of the Conservative party, I know I give expression to the Conservative sentiment of my county in saying that the present policy submitted to the consideration of this House is unworthy of the past of the Conservative party. We are told that the time has come when Canada must grapple with the difficulties that confront her, when Canada must decide at the parting of the ways, whether the trade of this country shall reach the two oceans, shall reach the motherland and reach Asia, through Canadian channels or by way of American territory. We have heard the system of transportation discussed in all its phases in this House. We have heard all that can be said in favour of our waterways and in favour of our different systems of railway transportation; and, after having heard the whole discussion, after having heard that question treated in all its different phases, there is an almost unanimous opinion in this House that our waterways and transportation system are not up to the times, are not what they should be. And yet we are told to-day by the leader of that Conservative party that we must rest satisfied with what we have. We are told that we must use the Intercolonial Railway, which was built at a cost of $70,000,000 for political and military service, and in the operations of which we have lost, in round numbers, $20,000,000; we are told that we must build a branch line from Jacques Cartier junction, must use the Canada Atlantic Railway to Depot Harbour, then build another branch line or use the Canadian Pacific Railway to Port Arthur and Fort William, thence utilize the two present railway systems to Winnipeg, from Winnipeg to Edmonton encourage the present railways, or help the Grand Trunk if necessary, and then give the Canadian Northern, or the Grand Trunk, or the government, power to build from Edmonton to the Pacific coast. That, very imperfectly described, is the

policy of the Conservative party at the present moment. That is not a policy which will commend itself to the approval of the Canadian people. It will limit Canada to what it is at the present time. It will limit our inhabited area. Beyond this, it has one radical and fatal effect, which is sure to bring about the condemnation throughout the length and breadth of the Dominion. The fatal effect of that policy is that it has no reference whatever to the new portions of Quebec, the new portions of Ontario and the new portions of the Canadian west. We are told that our immense territory in the province of Quebec of 70,000,000 acres, and that the immense stretch of new land in the province of Ontario, is to be traversed by a colonization road, to be built gradually, as circumstances warrant—to be built, I suppose, at the rate of ten or twenty miles a year, as colonization roads are generally built. Is that the policy the Conservative party approves of for this country at the opening of this new century, when Canada is merging into nationhood and is taking the proud position on this continent for which Providence destined her from her earliest days? That is not a policy that will commend itself to the people of the part of the country from whence I come. And I have a conviction that it will not appeal to the national aspirations of any Canadian, no matter what province he may belong to. This policy is unworthy of the consideration of parliament, and we must therefore consider the other policy which is before us.

We are asked to assist in the construction of a transcontinental railway. The need of that transcontinental railway has been manifested over and over again during the last few years in every possible way. The immigration into the North-west justifies the construction of this road. Let me give you some figures to show the rate at which that immigration has invaded the western country. In 1897, there were 21,000 settlers; in 1898, 31,000; in 1899, 44,000; in 1900, 49,000; in 1901-2, 67,000; in 1902-3, 125,295. In one single year, Mr. Speaker, more than all the people of the province of Prince Edward Island went into that western country. The increase that has already taken place would warrant faith in the new transcontinental project.

But there are other considerations which must not be overlooked. The trade of that country must remain to Canada, and the only way in which we can secure its remaining to Canada is by giving it access to the sea. The present Canadian Pacific Railway is not able to meet the requirements of the traffic. We have heard a good deal this session and last session about the congestion of traffic. We have therefore to face the situation, we must face the obligation which is imposed upon us. Shall we undertake the task which lies at our door? I have confidence in my country, I have confidence that the generation to which we belong is worthy of the generation that has gone before us, and that we will be able to cope with the requirements of the present. What do we ask the Canadian people to do? Do we ask them to hand over to the Grand Trunk Pacific Railway Company $100,000,000 or $125,000,000, as the Conservative party did when they first opened up that western country? We have heard the statement of the Minister of Finance, we have heard the statement of the right hon. the Prime Minister, neither of which have been challenged, that all that Canada would be called upon to pay to secure a new transcontinental road of over 3,000 miles in length, is the sum of $14,000,000, equal to the surplus of one single year. Under these circumstances hesitation would be folly on our part, and if we did hesitate we would not be worthy of the position which we occupy at the present time. The steady advance in population and production in that western country fully justify the construction of this road. The hon. member for Charlotte (Mr. Ganong) who spoke last night, referring to the scheme of the leader of the opposition, used these words:

> It becomes a patriotic scheme, as it will be a people's road, built by the people's money, and controlled by the people, rather than a contribution of $125,000,000 to build up a distinctly foreign corporation over which the government can have no possible control.

That, Mr. Speaker, is not, I am sure, the feeling of the Conservative party towards the old Grand Trunk Railway Company of Canada. The old Grand Trunk Railway Company of Canada is not a foreign corporation. Those who are old enough remember the day when the Grand Trunk Company was hailed as a blessing to this country. There is not a member of the province of Ontario who would rise in his seat and depreciate the Grand Trunk of Canada; there is not a member of the province of Quebec who would attempt to do so. I presume that our hon. friend from Charlotte, hailing as he does from New Brunswick, does not know the real advantages which the Grand Trunk have conferred upon old Canada. In a slighting way he tried to make light of the $25,000,000 which was advanced to the Grand Trunk Railway by the Conservative party, by the men in whose footsteps he is trying to walk, which sum still remains as an asset in our books, to prevent the winding up of the road altogether, and to prevent the failure of the whole undertaking. That $25,000,000 was advanced to enable the Grand Trunk Railway to carry out its undertaking, and we were told at the time that it would be a last charge upon the road. That money has not been collected, but I may say also that that money has been well invested: and to-day we are proud, we in Quebec especial-

ly are glad to know that it is the Grand Trunk Railway Company that is going to undertake this great scheme. We know that our sons and our brothers and those of our people who have left the older provinces to carve out new homes for themselves in Manitoba and the North-west will feel that they are still at home that they are still in Canada when they see the old familiar name of the Grand Trunk Railway inscribed upon the cars and locomotives that run through that country. They will see that it is a contribution of eastern Canada towards the development of western Canada, and the name alone will show them that we have undertaken this work in sympathy with them in the west as well as in the interest of eastern Canada. It would be nonsense to suppose that the Grand Trunk Railway of Canada would for ever have confined its operations to the provinces of Quebec and Ontario; it was inevitable that the time should come when the Grand Trunk Railway would invade the western prairies would cross the territories of Canada and reach out to the Pacific ocean. That time Mr. Speaker has arrived, we believe that time is now upon us. We believe that that work should be commenced now. We do not believe in putting it off one year, or five years, or ten years. We want that work to proceed now. We want the Governor General of this country to come down here a few days hence and in the name of one of the greatest sovereigns who has ever honoured the throne of Great Britain, to place the seal of approval upon the scheme which is now laid before this House for consideration. We want this year to be marked as a red letter year in the history of Canada. We want, within the next two years, to set 25,000 men at work from Moncton to Port Simpson. We want the outlay of $75,000,000 to commence now. We want the good times of the last seven years in Canada to continue for seven years longer, at least, while this project is being accomplished. That is our policy, and we should adhere to it.

One of the first gentlemen to rise in this House and criticise this scheme was the ex-Minister of Railways and Canals, the hon. member for St. John city (Hon. Mr. Blair). That hon. gentleman had never previously possessed the confidence of the opposition in this House. Sir, I do not think any one can find, during all the six years that hon. gentleman has occupied a seat in this House, one single word of tribute from a Conservative to his ability as Minister of Railways and Canals. For six years no word was strong enough to denounce his management of the Intercolonial. There is not a member of the opposition whose words cannot be found in the 'Hansard' condemning the hon. gentleman who has now become the prophet of the Conservative party. I visited the county of Restigouche last fall in company with the ex-Minister of Railways, which county adjoins my own, and listened to an address by that hon. gentleman to the people there. His policy then was to extend the Intercolonial via the Canada Atlantic Railway, and to carry it up to the great lakes. There is no novelty in this policy now proposed by the government, it is the old policy of the hon. ex-minister. Therefore we are driven to the conclusion that the Conservative party have had to adopt the policy of the ex-minister since they have no policy of their own.

Now, Mr. Speaker, I do not wish to think unfavourably of our hon. friends opposite, and I feel that before the final word has been said in regard to this project, there will be found members on the other side of the House who, if they do not support this scheme, will at least refrain from condemning it by either their words or their votes. There are men on the other side of the House who represent constituencies in Ontario and who know by experience what is meant by the Grand Trunk Railway of Canada undertaking a scheme like this. There are men on the other side of this House who will not condemn this undertaking when it has the approval of the Grand Trunk Railway Company.

But, Mr. Speaker, I do not intend to detain the House for any great length of time and I have no intention at the present time of covering the whole ground involved in this debate which has already been so prolonged and which promises to be continued during several days yet. We have heard from the members of British Columbia of the immense advantage which the construction of this railway would be in the northern part of British Columbia, we have heard the story told us of the immense riches of British Columbia, of its timber, of its forests, of its fisheries, which are unsurpassed in the whole world, we have heard the story of the North-west, we have heard that of Manitoba, we have heard that of Ontario and Quebec, but the story of Quebec has not all been told. There is an hon. member sitting in this House who is styled by his colleagues the Conservative leader for the province of Quebec. That hon. gentleman, Mr. Speaker, lays claim to occupy in our province the proud position that was once held by Sir George E. Cartier. Sir George E. Cartier would never have come before this House in 1903 to ask for the construction of a colonization railway in the northern empire of the province of Quebec. The hon. member for Jacques Cartier (Mr. Monk) has laid before us a policy of that kind. I know, understanding as I do, the sentiment that exists in the province of Quebec, that the province of Quebec will not adopt any such policy. Let it not be forgotten, though misinformed people or misguided people have in the past declared the province of Quebec was the most backward province in the

Dominion of Canada, that the first link in the Canadian Pacific Railway was built by the province of Quebec out of its own resources as a provincial undertaking. The mother province of this Dominion, because Quebec is the mother province of this Dominion, the province which gave the signal for the construction of the first transcontinental line in Canada, will never go back upon the revered leader of the Liberal party who undertakes to build a second transcontinental line. I have no hesitation in saying that the hon. member for Jacques Cartier will not be able to find in the province of Quebec half a dozen constituencies to support his policy, or the policy of the Conservative party, and that if that is the policy upon which he intends facing the people in the coming election, the seven members who now support him in the House will be reduced still more in number. That is my candid opinion, and it is the opinion that prevails throught the province of Quebec. As I have said, I intend more especially to refer to the province of Quebec. When we, some years ago, obtained the addition to our territory of 70,000,000 acres of land, when the limits of Quebec were extended up to Lake Abitibi on the west, to Hudson bay on the north, and to Labrador on the east, a problem rose immediately before the people of Quebec. The idea was at once to invade that land, to inhabit it, to people it and to repeat in that northern territory what the French Canadian people have done in Canada, a thing that is unparalleled in the history of the world—the sixty thousand people of 1763 who were in Canada at the time of the cession of the treaty of Paris raised to 2,000,000 people in 100 years. Where is there an example of that kind? We wish, in promoting this scheme, to repeat what has been done during 100 years by the people of Quebec. We want to invade those new lands, we want to take possession of them and we want to keep them for this country and for the flag under which the French Canadians have attained the position they occupy today. During the last thirty or forty years in the history of Canada what has become of the million of surplus of our population, what has become of that million of souls who to-day inhabit every state of the American union, who are to be found from Portland, Maine, to Portland, Oregon, who have gone there to find the sustenance, to find the livelihood which they were unable to find in their own country, being limited as it is to within forty or fifty miles from the banks of the St. Lawrence beyond which is the wilderness We want to reverse what has been going on during the last forty years. We want, during the next twenty years, to retain the million in the surplus of our population in the province of Quebec, and we want them, instead of going south, to go north. We want to give another object lesson. When the Canadian Pacific Railway stretched its road through Nipissing and Algoma, those districts were a wilderness. Look at them to-day; look at Nipissing, look at Algoma. We wish to repeat along the line of this new transcontinental railway what has been done in Nipissing and Algoma. We want to retain in Canada the citizen of the province of Quebec, because he loves his native country. It is his native soil, in which is to be found everything he cherishes, and in which he has the liberty and protection of his institutions, in which he has prospered and for which he is willing to live and to die, and to remain, regardless of what may be said and what has been said so often, to the last ditch the most devoted and loyal citizen that Britain has at this time. The opening up of this region from Quebec to Lake Abitibi opens up for us a new area, a new vista. While the old country settler, while the Scotchman, the Irishman, the Englishman and the German will go to Manitoba and the North-west Territories, and take up a farm on the fertile prairie where he can raise a crop in the first year, and where he can make a fortune in five years, the French Canadian habitant will go to the wilderness, he will go into the rough woods, he will go where he will have to cut down the trees, to hew out the timber, and where it will take him twenty years, if necessary, to establish a farm that will be a worthy counterpart of the farm that the European settler will find in Manitoba and the North-west Territories two years after he goes there. Our people are well qualified for this particular section of the country, and for this particular work. They have proved it abundantly in the past, and I believe that what we are doing to-day is one of the most patriotic works which we can do for the future solution of the question of Canadian nationality and British supremacy. There are men in this House to-day who will see in twenty years hence rise cities, towns and villages, rise on the whole course of the new transcontinental railway from Quebec to Winnipeg. We have in that country immense waterpowers, we have fertile lands testified to by our missionaries, by our explorers, and by all who have travelled through that country. We have magnificent wood of all kinds. We have pulpwood, from which we will in twenty years supply the whole British Empire. We have all the conditions that are necessary to the doubling in our own lifetime of the population of the province of Quebec, and what will be done in the province of Quebec will be done in the province of Ontario. And what we have done in Quebec will be done in Ontario, but I am speaking now more specially of the province of Quebec. The government of Ontario has realized its duty in that regard. The Temiscamingue Railway which is now building is the first stage towards the invasion of that northern

country. We wish in a word to open up Canada. We wish to develop its area; we wish to keep our people at home. We do not wish to meet young Canadians full of brawn and sinew, men of energy, who tell us we must go to the United States for our living; we must go to the United States for our work. We must find work for them in Canada; we want to develop our own resources; we want to make Canada what it should be; we want to put an end to that state of affairs which has existed for so long, when almost as many people from the maritime provinces were found in the United States as remained in the maritime provinces. We want to put an end to the exodus from Quebec which fortunately has stopped during the last five or six years and without saying one word derogatory to the hon. gentleman who has preceded me—the hon. member for Charlotte (Mr. Ganong)—I would say that I was sincerely pained last night when I saw that hon. gentleman, one of the representatives of New Brunswick, one of the representatives of the people of that province, rise from his seat and blinded by party exigencies and partisan motives, stand up against a project that will be the salvation of New Brunswick. Here is New Brunswick with its magnificent rivers, with its splendid lumber, with its splendid soil, with its population drawn from the old United Empire Loyalist stock, second to none in Canada, second to none in the world. Here New Brunswick for the last twenty years has been going back and back and losing population. We shall pass in a few days in this House a law which shall deprive New Brunswick of another of her representatives. Is it not time for the people and the representatives of that province to rise to the exigencies of the hour? I was sorry to see the position that the hon. member for Charlotte (Mr. Ganong) took, but the position he took was the natural sequence of the ideas that unfortunately prevail on the other side of the House. He was willing it is true to have a railway through New Brunswick but that railway would have to go to St. Andrews and it should not go to Moncton; that was the qualification which he placed upon it. Mr. Speaker, I represent a portion of Gaspesia. The transcontinental railway is not going to Gaspesia. It is a country which has been deprived of railways for many years. We have in the peninsula 10,000 square miles. We have there at the present time 75,000 people, 25,000 in Gaspé, 25,000 in Bonaventure and 25,000 in Matane—75,000 people and practically we are without railways. There are none in Matane none in Gaspé and a limping bankrupt railway in Bonaventure. In the name of the old settlers of the Gaspesian peninsula, they who have contributed their mite and their share to the building of railways all through Canada, I am willing to come forward now to support this scheme because I feel that it is to the general advantage of Canada. Now, Mr. Speaker, if I were to take the position in this House that was taken last evening by the member for Charlotte, and would have to go back to my people and render an account of my stewardship, I would be ashamed to show my face because the people in that part of the country realize that the advancement and progress of Canada can only be assured by the construction of railways. The railway is the modern agency; the railway is the modern lever. Blighted is the country without railways. Blighted is the country through which the shrill cry of the locomotive is not heard. There is no part of Canada which has not been benefited by a railway; lines have been duplicated between Montreal and Ottawa. They have been duplicated in every part of Ontario. In the western peninsula of Ontario the saying is that you cannot go ten miles in any direction without striking a railway. The result of that is that Ontario and especially the western peninsula of Ontario has become one of the most fertile, one of the most prosperous parts of Canada. We wish to do for other parts of Canada what railways have done there; we wish to increase our territory, and to develop it to the best of our knowledge.

The part of the scheme to which I wish to refer more especially now is that extending from the city of Quebec to the city of Moncton because it traverses the part of Canada from which I come. That portion of the road has been greatly criticised, and still it is but a small part of the undertaking. It is a small part; but it is a necessary part. From all time we have heard from experienced men that the port of Quebec was beyond peradventure the great port of Canada, but the port of Quebec unfortunately is closed for some months in the year. The port of Quebec stands second to none in the world during the summer time. You have there a magnificent frontage from Pointe-à-Carcy up to the new Quebec bridge that is building, a frontage of ten or twelve miles, one of the finest harbours you could find anywhere. We are bringing this transcontinental railway to Quebec; we are bringing it back to the point from which civilization started in this country, from which the colonization movement began in this country. We are coming back from the portals of the west and of the new land, back to the city of Quebec from which the original explorers of this continent started. We are coming back with the modern locomotive to the rock of Champlain and Montcalm from which the explorers left in bark canoes to cover this continent from end to end. We are as the hon. member for North Norfolk (Mr. Charlton) has said, bringing back to Quebec that which Quebec gave to this continent, but unfortunately our climatic conditions are such that we can concentrate the trade of Canada at Quebec for only seven or eight months of the year. We have to find an out-

let for the other months. There is one thing we might have done. We might have been satisfied with the Intercolonial Railway, we might have continued to accumulate deficit upon deficit as did the Conservative party for twenty years, losing probably $500,000 a year. Is there any Canadian in Canada who is not satisfied that the Intercolonial Railway can never be a commercial success ? Has that not been demonstrated by thirty years of experience ? Is there any railway man in Canada or out of Canada who will contend that a road which has to cover 700 miles when only 400 need be covered will ever be a success ?

Why should we continue any longer to struggle against nature, to struggle against distance when the Gordian knot can be cut and the problem solved ? I have not a word to say against the construction of the Intercolonial Railway where it was constructed; at the time it was necessary. The population of New Brunswick, the population of Quebec, lived along the shores of the St. Lawrence and along the shores of the Baie des Chaleurs. It had not yet penetrated into the interior of New Brunswick or the province of Quebec, but those days are long since gone by. The original settlements which were stretched along the St. Lawrence have now extended to the Maine frontier and beyond the Maine frontier and are invading the United States. We wish therefore to open up the rear portion of Quebec along the state of Maine. We do not wish the Canadians who live there and who have lived there for many long years to have to drive 25, 30, 40 and 50 miles to reach a railway station in this modern age of progress in Canada. That is the reason therefore, Mr. Speaker, why this new line is being built; to benefit materially seven or eight constituencies immediately concerned.

There are constituencies in that district represented in this House by Conservative members, and I am interested to know what position those members will take if they undertake to give expression to the feeling that prevails in that district. From there the railway crosses the province of New Brunswick. The exact line has not yet been defined; but we can trust to the engineers and surveyors to lay it out properly. The distance to our winter ports will be cut down by at least 100 miles, which is a great gain. From Moncton to Halifax the road will be doubled tracked, the distance to St. John will be made much shorter than it is, and we shall have at last a through railway bringing the products of Canada to the winter ports of Canada. Why should we stop at North Bay, and be content that Canada should have some of the western traffic during six months of the year, and lose the whole of it during the other six months ? We know that during the summer time a great deal of the traffic goes by the canals and the railways to Montreal, but that in the winter time the whole of it goes to Portland, Boston and New York. We have constructed elevators at Halifax for the Intercolonial, in the hope of filling them with grain, but they have remained empty. We have spent money to improve the service at St. John ; but the task has been beyond us, because we are struggling against nature and against distance, like a man struggling against the current. We want to solve this problem once and for all by taking the shortest and most direct route to the maritime provinces after the port of Quebec is closed, and the proposed railway will take it. We want the people of the maritime provinces to know that they are still part and parcel of this Dominion. We want them to help us to build up our country, and to share in any benefits that may come to the country.

But there is another feature of the scheme which has been overlooked by our Conservative friends and by the hon. ex-Minister of Railways and Canals (Hon. Mr. Blair). The hon. gentleman seems to have conveyed to the members of this House the idea that has prevailed for many years that the Intercolonial Railway was built solely for the purpose of connecting the maritime provinces with the old provinces of Canada, and that the sole object of the management of that railway was to see in how short a time a train could be rushed from Halifax to Quebec and Montreal. In the Matapedia valley, in my own constituency, we have Intercolonial trains running at the rate of forty or fifty miles an hour during the night, and stopping at only two or three stations in a run of 100 miles. Thirty years of experience have demonstrated that the Intercolonial Railway as a through line has been a dead failure, and that it should be used for other purposes. Speaking in the name of the people who inhabit that district, I say that we want the Intercolonial to be used for the benefit of the district through which it runs. We want to abandon this phantom race, this attempt to make time and to cover endless distances uselessly. We want the Intercolonial Railway to benefit the district through which it runs. The main line of the Intercolonial Railway is about 837 miles in length, and it has about 500 miles of branches in different parts of the provinces of Nova Scotia and New Brunswick. Hon. members would not probably imagine, but the fact is, that we have not one mile of branch line or of feeders to the Intercolonial Railway in the province of Quebec, although we have more of the main line in the province of Quebec than there is in the maritime provinces. The distance from Matapedia to Montreal is 452 miles, which is greater than the distance from Matapedia to Halifax. We want, therefore, to use this short line which we are about to build for the purpose of local and through-traffic, and we want to utilize the Intercolonial Railway for the development of local and through-traffic where

it can be found. In the Gaspesia peninsula there are at the present time 75,000 people. Build the Matane Railway from St. Octave to Metis, to Matane and ultimately to the Gaspé Basin, assist in completing the Atlantic and Lake Superior Railway, on which $1,600,000 of the public money of this country has been wasted; assist it to reach the Gaspé Basin, and to secure at once the traffic of a peninsula of 12,000 square miles, rich in fisheries, rich in farming lands, rich in pulp wood. You have there a local traffic which will more than duplicate any through-traffic which you may obtain for the Intercolonial Railway. Build the short line from Fraserville to Matapedia and open up over 100 miles of splendid country in Temiscouata, Rimouski and Bonaventure. Mr. Speaker, that is the first condition that should not be overlooked. Then, the Intercolonial Railway has been brought by the Liberal party up to its present state of efficiency. It is now a railway second to none on the American continent. Its bridges have been strengthened and improved, and some of them have been replaced by new ones. The steel rails have been replaced by larger ones; the whole roadbed is in prime condition; and the equipment of the line is in first-class order. It no longer stops at Lévis, but runs to the city of Montreal, where it has a binding agreement with the Grand Trunk Railway for 99 years for the transfer of traffic. The future of the Intercolonial Railway is assured. But are we to rest satisfied with what our fathers did thirty or thirty-five years ago? We want to improve on their work. We want to develop that portion of the country through which the Intercolonial Railway passes. We built the eastern extension to Sydney and to Cape Breton when there were not 100,000 people in the whole of Cape Breton. We have now 75,000 in the Gaspesia peninsula without any railway at all. Develop that district. Develop the whole district along the south shore of the St. Lawrence, where you will find lumber mills and other industries every few miles, as well as on the north shore of the Baie des Chaleurs. At present the peninsula of Gaspesia is a terra incognita to us, almost as much as the far-off regions of Canada. We have had a government railroad running through that country, but making no attempt to increase the local traffic or to develop the resources of the country, whether in agriculture, fisheries or anything else. We have had encouragement from the present government towards that end, but I hope that this House will realize that the Intercolonial Railway, when it was built, had not for its sole object the connecting of the maritime provinces with the old provinces of Canada, but that it was also the intention of the men who built it, that it should benefit the country through which it runs. That can be done, and done easily, and I know that the government of the day, and any other government that has at heart the interest of eastern Quebec and of western New Brunswick, will see that what can be done in that direction shall be done. The traffic of the Intercolonial Railway is now $6,500,000, of which only one million is through-traffic, and our local traffic could be doubled within the next five years if means were taken to develop it and if all our energies be not bent on running fast through trains over the road. I intended to give some facts and figures in connnection with the local traffic, but as these were laid before the House yesterday by my hon. friend from Cumberland (Mr. Logan) I shall not take up the time of the House by doing so.

I am in favour of this transcontinental road because it is going to open up all parts of Canada, because it is going to develop new regions, because it will bring the west closer to the east. I am in favour of it, further, because it will develop the province in which I am more particularly interested, and also because it will give expression to the national aspirations and ambitions of the Canadian people. On the threshold of this twentieth century, with the portals of the future opening broadly before us, this is not the time for a sturdy young nation like ours to hesitate in her march of progress. This is the time for us to be up and doing, and I believe that every man who casts his vote in favour of this measure will have reason in after years to feel proud of what he has done. He will realize that he did something to break down provincial barriers and prejudices, to bring the various provinces nearer together, and to hasten the advent of that day when a citizen of the province of Quebec can go to Fort Simpson and feel that he is still in his own home. I shall not, like the hon. member for West Toronto (Mr. Osler), look merely at the mercenary side of the question. I shall not stop to calculate what the extent of our dividends may be or the amount of our earnings. A government which is worthy of its mission, has other things to do than earn dividends. It does not exist for that purpose It exists for the purpose of advancing the interests of the country confided to it, and there is no project which can be laid before this House which would do half as much for Canada as this will. It can no longer be said that the Liberal party is nothing but a party of critics who spent their time criticising the building of the Canadian Pacific Railway. The Liberal party, Sir, in the days when that great transcontinental railway was being promoted, were not opposed to the idea, but to the methods employed. There were no more patriotic Canadians than the Dorions, the Blakes, the Haltons, and our present leader, who took part in the debate on the Canadian Pacific Railway project. What the Liberal party is now doing is to give expression to the wishes of the Canadian

people. It is putting another entrenched camp in British North America. Our present transcontinental system is within twenty-four hours' march of any American army which would invade this country, but by the projected system we shall be able, in case of necessity, to maintain our communications from ocean to ocean, which we cannot do at present. Ask the Minister of Militia what would happen between North Bay and Winnipeg if difficulties should intervene. Who would guard that immense territory to the north of Lake Superior, that hinterland which divides eastern from western Canada ? But once build this new railway, open up that northern region to the children of our soil, let the Canadians from our eastern provinces invade it, let them know that it is their home, and we shall have nothing to fear. We shall see then in that country what Martha Craig so graphically described in Western Ontario. Martha Craig uses these eloquent words:

> On either side, from the placid shore to the foothills of the protecting mountains, stretched fertile lands on which hundreds of thousands of fruit trees flourish. In this earthly paradise live a happy, rich and prosperous people. As we wander through the orchards in the springtime and inhale the delightful perfume of the breezes laden with drifts of apple blossoms, we can hardly realize that a hundred years ago this fertile land was a trackless forest, the abode of the Indian and the savage beast. But the hand of time has worked this transformation, using as its instruments the energy and perseverance of the Saxon. Those men who have made the wilderness blossom as the rose are true heroes. Theirs was not one dash of bravery and then victory. No, the battle they fought was waged from day to day from year to year, in heat and cold, without flinching and without turning back. These are true noblemen and heroes that all men delight to honour.

Those are the men we should imitate. It is in the fields of peace, of human activity, that we must use the energies of our young Canadian nation, and if the time should ever come when we must shoulder the musket, Canadians will be found ready to answer the call. But militarism is not the idea which we must foster in this country. What we require to develop are the arts of peace, and we can never do so more effectively than by putting through this measure, which will double the present inhabited area of Canada, almost double its resources, and unite our provinces in one great and happy land.

Mr. URIAH WILSON (Lennox). I have very little fault to find, Mr. Speaker, with the tone of the address of my hon. friend who has just taken his seat. Of course, there are many things on which we disagree, but I may say that in his anxiety to have the young men of his province kept in our own country, I am in full sympathy with the hon. gentleman. I should like to see our people kept in our own country and would do anything in my power to help the development of our country and institutions in such a way that our enterprising youth would find here more profitable employment than anywhere else. But I fear that my hon. friend is supporting a government that is not doing what it should to keep the young men in this country. I fear that the building of one transcontinental railway will do but little to find employment for the million settlers that he talks about as coming into his province during the next ten years. If he would support the Liberal-Conservative policy and give us protection, so that, instead of importing very much more per head of our population than, perhaps, any other country in the world, much more than the United States, we should manufacture in this country the goods we require, we should keep the money in our own country, and furnish employment for our own people. I think that is a sound doctrine. The hon. gentleman is the first Liberal I can remember having heard say that the Liberal party did not oppose the building of the Canadian Pacific Railway. The Hon. G. W. Ross, who is premier of the province of Ontario, said, in a speech he made in this province not long ago, that the Liberal party had opposed the Canadian Pacific Railway, and that they regretted having done so. He said that Sir John A. Macdonald had been more far-seeing than they. These hon. gentlemen seem to be continually going astray and that is why the people of this country, I believe, will lose faith in them.

The hon. gentleman spoke about the $25,000,000 that was loaned to the Grand Trunk. I shall have something to say about that later on.

The hon. gentleman says that he cannot wait, that the Conservative policy is too slow, that our policy does not develop the country rapidly enough. If, instead of supporting the building of this transcontinental railway, he would support the policy proposed by the leader of the opposition, I am sure he would not have to wait nearly so long for the development of the country. If we were to build the Intercolonial Railway to connect with the Canada Atlantic and go on through to North Bay to connect with the Canadian Pacific Railway, we should make the connection through much more quickly than can possibly be done under the government's policy. Why, we should be able to have this through service inside of one year. I do not see any reason why the government should have been in such a hurry to make a bargain before considering what they were making a bargain about. The Minister of Finance (Hon. Mr. Fielding) the other day said that they knew much more about the route through which this road is to run than the Conservative government did of the route for the Canadian Pacific Railway when they made the contract for the building of that line. I totally disagree with the hon. gentleman, and think that I can show in a moment

that he is altogether wrong. The bargain with British Columbia for the entrance of that province into confederation was finally settled on the 20th of July, 1871. And, on the 10th of April, 1872, the government had a report—I have a copy of it here—of the surveys of the whole length of the Canadian Pacific Railway from Mattawa to the Pacific coast. In contrast with this, the lack of information in possession of the government as to the route of this new road proves that they have shown undue haste in the matter.

Then, we come to the hon. member for South Wellington (Mr. Guthrie). He says he supports this railroad because it is not local or provincial, but national, and will tend to devlop a national spirit among Canadians and give us national aspirations. I did not know before that we were lacking particularly in these respects. I thought that every Canadian was feeling more and more strongly from day to day an honest pride in his country and was learning to see more clearly that we have as good a country as any other people in the world, and a great deal better than most.

Several of the hon. gentlemen on the other side criticised the late Minister of Railways and Canals (Hon. Mr. Blair). I thought this criticism came with very bad grace, especially from the younger men, men who had followed the ex-minister through thick and thin, and who, if he had stayed in the government, would have been delighted to follow him still. I would like to know how they can justify their criticisms of the hon. gentleman (Hon. Mr. Blair). What motives could have actuated him in the step he took ? He left a high position, one in which he wielded great influence. He was second to no man except the Prime Minister. He came into contact with the leading spirits of this country from one end of it to the other, and exerted great influence and wielded great power. Not only that, but in resigning his position he gave up his salary of $7,000 a year. What motives could he have but high and patriotic motives? He could not hope to do so well in opposition, at least for the present. Why should he have sacrificed so much if it were not that he had conscientious scruples and felt that he could not support this scheme, he believing that it was not in the best interest of the country.

We all remember very distinctly the great fight there was in the Railway Committee over the Grand Trunk charter. There was great opposition to many of the proposals made. The first application of the Grand Trunk was for a charter to build from North Bay to Manitoba and the North-west Territories, and it did not want to build east of North Bay. But influences were brought to bear to bring them down to Quebec. Then the maritime provinces men said : You cannot get this charter unless the maritime provinces also participate in the benefits of this road. The government were in a dilemma. There was the Canadian Northern pressing them for support, and the result was that they guaranteed the bonds of that company. Then there was the Trans-Canada, which was making a big effort to build a transcontinental railway, and which had the backing of a large proportion of the members from the province of Quebec, the province that gives the government, practically, the whole of its majority. Then came the Grand Trunk with its demand. The government knew very well they could not give substantial aid to three lines, for the people would not stand it. The feeling in this country, I think, is positively and strongly against the bonusing of railways. The government had to do something, and I think they did, perhaps, the very worst thing they could do. if they had had enough backbone, they might have said to the millionaires who want to build railways in this country: You will have to do as the millionaires in the United States have to do. If you go into a business enterprise, you must depend upon your own capital and your own brains to make it pay. I am personally strongly opposed to bonusing railways or any other kind of company, because I think the time has passed for that sort of thing. In the United States, so far as I have been able to learn, no railway bonus has been granted by the federal government since 1871. I shall have more to say on that subject later on.

As I have said, we want to know what the haste was about. We have the word of the ex-Minister of Railways and Canals that this project loomed up and became part of the policy of the government only after half this session had passed away. Even when the First Minister announced the policy of the government in this House, I believe it came upon his followers like a bolt out of a clear sky. So careful were the government to keep it so that nobody should know anything about it that, when the leader of the opposition complained of want of courtesy on the part of the leader of the government in not giving him a copy of the Bill in advance that he might have an opportunity to look it over and be prepared to answer, the Finance Minister (Hon. Mr. Fielding) said that not a single member of the House outside of the government knew anything about the Bill or had even seen it. I do not know what there is about any public business that should make it necessary to keep it so secret. I thought the business of the parliament of Canada was to be done by the representatives of the people, that there should be no secret, that everything should be done openly and above-board. That is the doctrine I preach everywhere, that is the doctrine I hope I shall always be able to preach, because I think it is the proper doctrine. I do not see why that Bill was

not distributed like other Bills, why the resolutions were not placed on the Order paper in the ordinary way. I have not heard any excuse for it up to the present time, either from the First Minister, from the Minister of Finance or from the Minister of the Interior, all of whom have spoken. When the First Minister brought down his Bill to this House, he said :

To those who tell us, wait, wait, wait ; to those who advise us to pause, to consider, to reflect, to calculate and to inquire, our answer is : No.

Now, Sir, that does not seem to me to be a very sensible view to take of this great question. I think in view of the instructions of the good old book which says that every man should be able to give a reason of the hope that is in him, we would have been in better shape to follow them if he had not been keeping things so closely to himself. Then he goes on to say :

This is not a time for deliberation, this is a time for action. The flood tide is upon us that leads on to fortune ; if we let it pass it may never recur again.

Well, now, I would like to know what signs there are of a flood tide being upon us, or what need there is of this great hurry. I cannot see anything within the range of my vision except that these railway magnates have been chasing them up and down, here and there, and pressing their claims upon them.

If we let it pass the voyage of our national life, bright as it is to-day, will be bound in shallows.

Well, what a pity.

We cannot wait, because time does not wait. . . . . It is immediate and imperative. It is not of to-morrow, but of this day, of this hour and of this minute. Heaven grant that it be not already too late. . . . and that an ever vigilant competitor does not take to himself the trade that properly belongs to those who acknowledge Canada as their native or their adopted land.

Now, Sir, we have entered into an agreement with the Grand Trunk Pacific Company. We have agreed, as I understand, to build from Moncton to Winnipeg at government expense, while we give a charter to the Grand Trunk Pacific to build from Winnipeg west to the Pacific coast. Now it has been presented to this House by several hon. members that the Grand Trunk Pacific will have their share of the road built long before the section can be built from Winnipeg to Moncton ; and it has been pointed out that there is no provision in the contract whereby the Grand Trunk Pacific will operate the eastern part of the road until it is all finished. Now the question is : What will they do with it ? Will they keep it lying idle, put the rails on, and let them rust, and have nothing to do with it ? Not only that, but the Grand Trunk Pacific will be busy gathering its trade in the North-west, they will be bringing it to Winnipeg and finding an outlet for it. As was pointed out very clearly the other night by the hon. member for Hamilton (Mr. Barker), after they find it they will carry it into the United States, where they have lines running to St. Paul, and they can easily make their through-connections with that system so that they will ultimately take it through the United States to the seaports. In that case what will become of the all-Canadian route ? Now, it seems to me that after all, the ex-Minister of Railways took the proper position. He says that if you want to go into this arrangement, let us say to parliament, we are prepared to build another transcontinental railway if it is found to be necessary. Let us ask for an appropriation to explore the country and to survey a route, then we will be in a position to act intelligently. I think that was the proper course. I understand that the government tried every means possible to induce the ex-minister not to retire, but to retain his position, and he laid down the principles on which he would stay, and they were very strong ones, and they were pretty sensible, in my judgment. The letter of the ex-minister of the 16th of July, 1903, you will find in the 'Hansard' on page 6743:

I would require that the government should abandon its present intention :—

1st. Of building or authorizing the building of a line of railway to Moncton, which would be paralleling and destroying the Intercolonial; or building or authorizing the building of any other line of railway more remote from the Intercolonial, until the need of such latter railway becomes apparent, and proper surveys and an estimate of its cost are first made and thoroughly considered.

Now, we have been spending, as everybody knows, a large amount of money on the Intercolonial, I believe since these gentlemen came into office they have spent $15,000,000. This very last year they had an appropriation for $3,260,000 more to be spent on the Intercolonial. Before they had made up their minds to go into this new scheme they brought down in their estimates another appropriation for the present year which, if they are going to build a new railway and destroy the usefulness of the Intercolonial, I do not think they will require. They ask this year for $2,054,550 for repairs on the Intercolonial, yet some of the hon. members opposite have said that if they built this road it would ruin the Intercolonial altogether, and in a country such as that through which the Intercolonial passes I think one railway can do all the business that is to be done. Then the ex-minister lays down his second proposition :

2nd. The idea of immediately proceeding with a railway from Quebec to Winnipeg. The government should be content with declaring itself in favour of the policy of building a government line from Quebec to the prairies, and across the prairies to the Pacific coast, as soon as the need shall arise ; and in the meantime

that parliament be asked for an amount to enable a thorough exploration of the country to be made, so that it might be possible to judge whether or not a suitable traffic producing route could be found through this district, and its cost and the character and conditions of the country through which it is to pass ascertained.

Now, Mr. Speaker, it seems to me that that statement commends itself to the common sense of every business man. But I want to say one thing more. While the Railway Committee was fighting hard to get a charter through, supposing they were honestly providing a charter for the Grand Trunk Pacific Railway, it appears that the First Minister was making a bargain with Mr. Hays, the manager of the Grand Trunk Railway. I think any person who knows the two men will agree with me that while the leader of the government might be a better statesman in some respects than Mr. Hays, he is not in any way equal to him so far as railway matters are concerned, and I think it was absolute folly for the First Minister to try to make a bargain. I think it is evident, as was pointed out by the hon. member for East Hastings (Mr. Northrup) the other night, that this bargain was very one-sided, and evidently the contract between the government and the Grand Trunk Pacific was drawn up by the solicitors of the company.

Now, Sir, no man in the government pretends to know anything about railways, except the ex-Minister of Railways, who has had a large experience, and who is well known to be an able man. The idea of the First Minister ignoring him and trusting to his own knowledge, in pretending to be an expert and to be a good business man, is absurd. I know that the hon. member for South Wellington (Mr. Guthrie) said that the right hon. Prime Minister had a perfect right to ignore his cabinet, or any member of his cabinet, if he saw fit. Nobody disputes that, but the question is was it wise, was it in the best interests of this country, was it in the best interests of the government itself ? My own impression is that it was not. I think if you have an expert at any particular thing, connected with any business you have to do, you had better use his knowledge and influence to keep you right. That is my view, and that is the course that every successful business man must pursue. If he does not know how to do a thing himself he calls in the best assistance he can find. But, Sir, there was no calling in about it. The minister was on hand, and he was prepared to do his part and do it well. Everybody who knows him will admit that. There was another request that would have had to be complied with if he had stayed in the government :

That the policy of giving a present guarantee or other aid to the company to build a railway and continuation of the Quebec-Winnipeg line through the fertile prairie district, the most valuable and promising section of the whole system, should not now be entertained, and that the final decision of the matter be deferred until it became reasonably clear that settlement along the probable route of such railway would justify its construction.

I think that is just as sensible as the rest, and that it is on the right lines. The hon. ex-Minister of Railways and Canals points out the folly of pouring money into this enterprise, notwithstanding these surpluses we have had year after year, of which the hon. Minister of Finance (Hon. Mr. Fielding) is so proud. But it is not difficult to have a surplus if you only keep your books in the right way. All you have to do is to charge enough to capital account and then you will have a surplus, because you can take the balance out of income. The government has been particularly fortunate since they came in, because they have had an overflowing treasury, but I am afraid they have not been able to make very good use of it. They have listened too much to the demands of what are called the grafters and the wire pullers. The hon. ex-Minister of Railways and Canals has told us that the government must adopt these terms or he would retire from the government. I admire his pluck, I admire the courage of a man who will sacrifice, not only social position, but a large salary in the interests of the country. There was an effort made by the government, or by some member of the government, to induce him to stay in. The hon. gentleman said in his letter that there was a proposition made in Council, or by some of his colleagues, to him that if he could not endorse their policy he could simply sit by and allow somebody else to put the Bill through the House, and he would have nothing to do with it. I admire the pluck of a man who would stand out against any such insinuation, because, as the hon. ex-Minister of Railways and Canals said, if he had done that he would have been worse than the others. He would have been dishonest through and through. But he took a more courageous and more manly course. He has thrown all the responsibility of this policy upon the right hon. Prime Minister and his ministers, and they have to bear it. I think if the government had carried out the policy announced in the speech from the Throne, that they were prepared to appoint a royal commission to investigate the transportation question, they would have had the support of both sides of the House, because this has been a burning question and it has been discussed in this House for a good many years. That was a proposition that was worth considering, and not only was it worth considering, but the transportation question should have been submitted to the men who are the best informed upon that question and upon the wants of the country in that regard. That was a promise that was made by the whole government, but the right hon. leader of the government did not seem to be nearly so anxious about his own promises as he pretended to be about a promise which he said was made by this parliament on a former occasion.

He said that there was a promise to build a railway from Salisbury to Fredericton made in 1885, and that it was to implement that promise that he introduced this Bill. As the hon. member for East Hastings (Mr. Northrup) pointed out very clearly the other night, the Bill providing for the construction of the Salisbury-Fredericton line passed this House, but it did not pass the Senate, and that consequently there was no promise contained in the Bill as far as this parliament was concerned. It was only a promise that the House was willing to fulfil, provided the other Chamber agreed to it. The right hon. leader of the government told us of a resolution that he had moved in reference to the short line going through Maine, which was as follows :

In the opinion of this House, additional surveys are requisite in order to a sound decision for the short line railway, and it would be premature to adopt any line before further surveys have been made.

Why has the right hon. gentleman gone back on the views that he held in 1895 ? He considered it necessary that the route of the short line, which had been surveyed once or twice before, and perhaps oftener, should be again surveyed ; yet he has completed a bargain with the Grand Trunk Pacific Railway Company before he knows where the line is to be located, or before he knows how much it will cost, and which is going through a country of which he himself has no knowledge whatever. But there are other promises which he and his party have made. I recollect reading a speech that he made in Winnipeg, I think, in 1895, when he said that when the Liberal party came into power they would submit a plebiscite, and that if it carried they would give the country prohibition if it cost the Liberal party power for ever. He did carry out part of that pledge. He took into his cabinet a gentleman who he thought would give him weight with the temperance people. He took in the hon. Minister of Agriculture (Hon. Mr. Fisher). He also submitted a plebiscite to the people, and it was carried by good majorities in every province except one. Why is he so anxious to carry out the pledges made by Sir John Macdonald and by the Conservative party and to ignore his own ? These are things for the right hon. gentleman to explain, because these are things that it is difficult for the people to understand. I recollect that he made a speech at Toronto, in which he said: We are going to reduce the public expenditure year by year from one, two, three, and the Hon. Mr. Mills says $4,000,000 per annum. Has the right hon. gentleman and his party implemented that promise ? Have they reduced the public expenditure ? It is about $20,000,000 per annum more now than it was then, and still they were howling on every platform all over the country about the extravagance of the Conservative party. Now, the right hon. gentleman went to Winnipeg—I think it was at this same time, in 1895—and he said : I come to preach to you a new gospel, the gospel of free trade as they have it in England. I would like to know how he has implemented that promise. These are only a few of the promises made by the Liberal party. They talked about superannuation ; that was one of their hobbies, and I recollect that Mr. McMullen, now Senator McMullen, used almost to weep on every platform about how the public money was being spent, and he said that civil servants who had been superannuated, and who were able-bodied men, were walking around the streets of Ottawa drawing larger salaries than they could earn if they were working at any ordinary calling. He said : When we come into power we will change all that. Since the Liberal party have come in they superannuated a great many more civil servants than we did during the same number of years.

I just want to refer to a resolution and I think the Bill passed through the House the other night. The judges previously had been allowed superannuation at two thirds their salaries. Well, Sir, that was not sufficient for these gentlemen. These men had had the best of it all their lives at least since they had been on the bench where many of them were making two or three times as much as they had made before they got on the bench and the other night a Bill was passed by which they are allowed to be superannuated at full pay. It does seem to me that these people have entirely forgotten their principles.

At one o'clock, House took recess.

House resumed at three o'clock.

Mr. WILSON. Mr. Speaker. When you left the Chair at one o'clock, I was speaking about the question of superannuation and about some of the broken promises of the government. There is another important matter to which I would like to refer and that is the promise that was made in the speech from the Throne, that was put into the mouth of His Excellency the Governor General. In that speech the government pledged itself to appoint a commission to investigate the transportation question. Now Sir, that promise has not been fulfilled nor has any one of the speakers on the government side so far as I am aware explained any reason why it has not been fulfilled, or what has caused the change of front. I think, as I said before, that I regard this as one of the most important things they could have done, and one that would certainly have met with the unanimous support of this side of the House, because I think whether we are in opposition, I mean the Conservative party, or whether we are on the government benches, there is one thing you can always depend on, and that is that we are for the best interests of Canada. We have not taken up the popular

cries and deserted our principles which we advocated when in power. Although the government has largely adopted protection and has forsaken their principles and their promises we have stood true to the principle of protection and we intend to do so, and I think that perhaps before another session the government itself will find it necessary to adopt the course.

Now, Mr. Speaker, I have a document here, a copy of the Order in Council assented to by His Excellency on the 19th of May, 1903. It is very important and although it has been read by other hon. gentlemen in the House still, as I desire to have it in my speech in order that it may be read by those whom I desire to read it, I shall ask permission of the House to again place it on 'Hansard':

On a report dated April 6, 1903, from the Minister of Public Works, stating that he had under consideration questions affecting the transportation of Canadian products to the markets of the world through and by Canadian ports with a view of placing the Canadian producer in a positon to compete, and compete successfully, through all Canadian channels with the producers and exporters of other countries.

The minister submits that it may be assumed that grain and other products will naturally seek their markets by the cheapest routes, and therefore the method of attaining the object desired should be to make the Canadian routes cheaper and more convenient than competing routes.

That, the development of North-western Canada has manifested the inability of existing Canadian transportation agencies to take care of Canadian products.

That our agricultural exports can only command the prices over seas to which their natural excellence entitles them when they cease to be confounded and confused with the inferior and often adulterated articles produced elsewhere; and to preserve their separate identity they must go through Canadian channels.

The minister further states that the questions to be considerd are complicated and involved, including among the objects to be sought the transportation of western products from place of production to the markets of the world.

This particular part, Mr. Speaker, of this order or report of the Privy Council looks particularly to the export of our products in the North-west Territories and Manitoba, and I think that is what the government had in view at the time this report was made. I think that is what they had in view when the Grand Trunk Railway asked for their charter from North Bay into Manitoba and the North-west, but the force of circumstances apparently caused them to change front, and they went in for the all rail route from the Atlantic to the Pacific.

This involves the consideration of their transportation:—

From place of production to Canadian seaports.

From place of production to the western ports of Lake Superior.

From the western ports of Lake Superior to Canadian seaports.

From Canadian seaports to Europe.

From place of production through Canadian ports on the Pacific.

As it affects the products of the eastern provinces of Canada it involves their movement:—

To the seaports.

From the seaports to Europe.

It is obvious that before any satisfactory conclusion can be reached upon these questions a thorough and comprehensive inquiry should be made regarding:—

The conditions of original shipment and the possibilities of improvement in the conditions surrounding such shipments.

The storage requirements of lake, river and ocean ports.

The harbour facilities of the inland lakes, rivers and Atlantic and Pacific ports.

The conditions with regard to the navigation of the St. Lawrence route, and, generally, any improvement, enlargements, or other matters affecting the more economical and satisfactory uses of any Canadian channel of transportation by land or water.

The minister further states that in making such investigation attention should not be confined to routes and facilities which are at present utilized, but, if necessary, new surveys should be made to determine whether any more economical and satisfactory channels of transportation by land or water can be opened up.

The forces operating against the attainment of all Canadian transport, namely:—

Competition by United States railways;

Competition by United States vessels from Lake Superior ports;

Diversion of Canadian products through eastern outlets to Boston, Portland and other United States ports, should be investigated, and the best and most economical methods used by our competitors should be carefully studied and reported upon.

The minister apprehends that in these circumstances it devolves upon the Dominion government to consider and adopt the best possible means of promoting such measures as may enable Canada to control the transportation of its own products, and it is thought that the most efficient method of conducting such an inquiry and obtaining the required information is by means of a commission of competent and experienced experts who may be appointed and authorized under the provisions of chapter 114 of the Revised Statutes of Canada.

The minister recommends, therefore, that a commission be appointed consisting of Sir William Van Horne, John Bertram and Harold Kennedy, of whom Sir William Van Horne shall be chairman and convener, for the purpose of making such inquiry, obtaining such evidence and information and making such reports and recommendations as in their opinion (and subject to any further instructions which may be given by the Governor General in Council) the exigencies of the reference may require.

That is a report to which I attach a good deal of importance. We have not yet heard it satisfactorily explained, and I would like if possible, to impress upon the other side of the House the importance of explaining why these experts were not chosen to give us the necessary information. The right hon. the First Minister, when he laid this matter before the House, said:

Most of our critics look upon this scheme simply as a commercial venture to be judged by the only rule of profit and loss. We look upon

it as a work of a national character necessitated by the status of Canada in the year 1903, just as the Intercolonial Railway was necessitated by the status of Canada at the opening of confederation, and just as the Canadian Pacific Railway was necessitated by the bargain made with the province of British Columbia.

The right hon. gentleman told us in another place that he did not expect that this would be a commercial road—that it would not be able to carry grain all the way from the North-west to the seaboard at as low a rate as it could be carried by utilizing the waterways. The hon. member for South Wellington (Mr. Guthrie), in his speech, laid great stress on this all-rail route on Canadian soil as a commercial railway, which, if properly equipped, would be able to compete with the part rail and part waterway routes. Now, it is a very serious question whether such a road as has been advocated by the hon. member for North Norfolk and by other hon. gentlemen on the government side of the House can be built. I can quite understand the position taken by the hon. member for North Norfolk, because he has spoken so often upon so many sides of almost every question, that he is getting a little more guarded as he grows older. He specified a kind of railway which I think he must have known it would be almost impossible to build through the section of country through which the proposed road is projected.

Mr. CHARLTON. The hon. gentleman had better be careful about assertions that he does not know.

Mr. WILSON. I only give my opinion ; the hon. gentleman is not obliged to take it unless it agrees with his. The suggestion is made that perhaps the hon. gentleman has changed his opinion again. However, that is not a matter of very great concern just now. Another thing that I think surprised every person when this great scheme was launched on this House and the country was that the First Minister told us that it was only a matter of paying interest on the cost for about seven years, and that the total outlay that the country would be called on to make would be $13,000,000. Well, Sir, that was a most astounding statement to make. It was nearly as bad as the statement once made by an hon. member of this House to the effect that the government would be able to buy the Canadian Pacific Railway and the Grand Trunk Railway for a dollar apiece. I did not just understand what he meant by that, nor do I understand what the right hon. First Minister means when he talks of building a railway through this country from ocean to ocean at a cost to the country of only $13,000,000. That was the statement he made, however ; and it was largely backed up by the hon. Minister of Finance, who, when he comes down to details, gives us reasons for believing that it will cost a good deal more, and that it will involve a considerable increase to the national debt. The hon. Minister of Finance first gave the cost as follows :

Cost of Winnipeg to Moncton section	$54,609,677
Interest for seven years	11,468,030
Share of cost of the Quebec bridge	2,000,000
Interest on that for seven years	324,246
Guarantee of bonds on the Mountain section	2,334,575
Total	$70,736,528

Now, this is what will be added to the public debt. There is another matter that all the speakers on the government side seem to have overlooked. The government made a bargain with the Grand Trunk Pacific Company under which that company shall have the use of the railway for seven years from the time of completion for nothing. That is to say, we will pay the interest on the cost of building the road during that time, and if it cannot earn money enough over working expenses to pay the interest for the next three years, that will be added to capital expenditure, and will be charged up against the company. But I have not heard that there is any provision for the time of building the road. I do not see how they can possibly commence building the road until it is surveyed, and it will not be surveyed, under any circumstances, in less than one year and the shortest computation made by any person for the building of the road is five years. So that you may easily add to the ten years for which the government is providing the interest, the interest on say one-half the cost of construction for two and a half or three years more. This would add considerably to the cost of the railway, even taking the figures which the hon. gentleman has given us.

I have another authority, who not long ago was considered a very great authority on the other side of the House—a gentleman who probably knows more about railways than any of those whom he left behind in the cabinet or perhaps than any on that side of the House. I refer to the ex-Minister of Railways and Canals. He made a speech in this House in which he estimates the cost of this railway. Here are his figures :

Cost of the Winnipeg to Moncton section	$65,000,000
Interest during construction	7,800,000
Ten years free rental	19,500,000
One-half per cent loss on interest during term of contract	18,500,000
Interest guaranteed and to be paid on mountain section	4,050,000
Guarantee on prairie section	9,750,000
Guarantee on mountain section	13,500,000
Interest on prairie section during half period of construction	750,000
Total	$138,850,000

It is just possible that there is one item which should not properly be charged, because it is to be hoped that the government

will be able to borrow money as cheaply as they lend it. If not the country will have to pay the difference. The ex-Minister of Railways and Canals put in $18,500,000 for the loss of one half per cent, which he expects the country will have to pay, over and above what it will get from the Grand Trunk Pacific Railway.

I have here an estimate made by a newspaper, which some people say was started for the purpose of defending this Grand Trunk Pacific Railway scheme. I refer to the Toronto 'News.' There is one thing certain, that it has been very favourable to this scheme, and I think on the whole, has put the best side out, and it has done so in such a way that while it does not come out straight for the road, its criticisms led people to believe that it is all right. It cavils a little here and there, but concludes that after all, the scheme is the best one that could have been devised, under the circumstances. The newspaper gives the cost of construction as follows :

From Moncton to Winnipeg..	$54,000,000
Interest during construction..	4,215,000
Interest during ten years in operation..	14,233,320
Interest on mountain section bonds, ten years..	4,744,440
Total..	$77,193,450

In this calculation, the interest is made up favourably to the Grand Trunk Pacific Railway, and the total amount of interest they allow is $23,193,450. That is pretty well up to double the amount the First Minister said it would cost.

Mr. HOLMES. Will the hon. gentleman allow me to put him a question ? Does he not know that that paper is owned by well known Conservatives of Toronto ?

Mr. WILSON. I know that, but I know that he is a very intimate friend of the man who is very much interested in this work. He is the bosom friend of Senator Cox. And the hon. gentleman will remember that the ex-Minister of Railways and Canals said that Senator Cox would not wait.

I wish to give another extract from a paper which is not so favourable to this road. I refer to the Toronto 'Mail and Empire.' That paper has made a statement of the cost of this road to the country, and its figures are as follows :

From Moncton to Winnipeg..	$ 72,000,000
Seven years without rent..	17,640,000
Three years without rent..	7,500,000
Forty years at 3 per cent rental—less of one-half per cent..	12,640,000
Seven years interest on bonds of mountain section..	5,040,000
Total	$114,880,000

This calculation made by the Toronto 'Mail and Empire' shows that we will pay the interest during the duration of this lease, amounting to $42,888,000, but it is just possible that we will get the money at three instead of at three and a half. If we do, we will have to reduce that amount by $12,640,000. In any event suppose we borrow the money at the same rate as we lent, the interest alone will cost $20,180,000.

After carefully looking over the 'Globe' from day to day for an estimate of the cost of the road, I have failed to find any. The best it would do was to give the figures on the Moncton and Winnipeg section, estimated by the First Minister at $13,000,000 then it said that on the mountain section we will have to pay interest $3,780,000. But even that calculation brings the cost up to $16,780,000.

I cannot see any good reason why we should give any bonus at all, especially on the prairie section. Why should we pay a bonus or pay anything on the debentures of this road, which is to be owned by this company. It is a well known fact that the United States since 1871 have not been paying bonuses. Does anybody pretend to say that the United States have not been going on developing their country, that they have not been building railways. I do not think so. I am of opinion that the United States have got down to a business basis. The hon. member for West Toronto (Mr. Osler) gave us last night a lot of information about what the constitution provides so far as the giving of bonuses to railways by the different states is concerned. Many states have no power under the constitution to give bonuses, and others are so hedged about that it is almost impossible for them to grant aid to railways.

This scheme is, as the Finance Minister said, a leap in the dark. I cannot see why he was in such a hurry, because we cannot have the surveys immediately ; and until we get the railway built, we will get nothing from the Grand Trunk Pacific Railway. I would like to know if anybody thinks that the Grand Trunk Pacific Railway would not lease the road three or four years from now just as well. Why, I think, it is folly. No business concern would attempt to do business on these principles ; or, if they did, I think they would soon find themselves in the position of some institutions which are now receiving bonuses from the hands of this free trade government to help them float their enterprise.

I wish to say a few words on a subject which I intended to refer to early in my address—the proposed Yukon Railway. This was referred to last night and a good deal of sport was made of statements made by some members of this House a few years ago about the number of people who would go into that country. I have shown you that the hon. member for North Norfolk (Mr. Charlton) said it was not the policy of this government to give land grants to the railways. I can remember when it was their policy, and not very long ago either. Every hon. member who has been in this House through two parliaments can remem-

ber the bargain made with Mackenzie & Mann for the building of the Yukon Railway. That bargain was made only a few days before meeting of parliament. The government did then as they have done in the case now before us—they signed a hard and fast bargain for the building of a railway for a certain subsidy. But the result in the case of the Yukon Railway was that the road was not built, and this country was mulct in damages to the extent of $300,000. One would think that this government would have learned a lesson from this experience. Under this bargain made with Mackenzie & Mann in 1898, the government agreed to give 3,750,000 acres of land in the Yukon district for the building of the road. On the 7th of July, 1898, the government passed an Order in Council fixing the minimum price of the land to be sold there at $10 per acre, and they would only sell 40 acres to any one individual in the same place. According to their own figuring then, the bonus they were giving to Mackenzie & Mann amounted to $37,500,000—and this for the building of a short narrow gauge railway. That is the kind of business men we have in this excellent business government.

The hon. gentleman from Bonaventure (Mr. Marcil) compared this bargain with the bargain for the building of the Canadian Pacific Railway. I do not think there is any ground for such comparison. Before the construction of the Canadian Pacific Railway we had only entered upon confederation. Previous to that time we had been a few scattered provinces that had not much to do with one another. Circumstances arose which made it to the interest of all the provinces to federate. That involved the buying of the North-west Territory from the Hudson's Bay Company, which was done for about $1,500,000. It was very desirable that we should have British Columbia enter the confederacy, and they did enter it on the 20th of July, 1871. As a matter of course, it was part of the bargain with British Columbia that we should build a railway to connect that province with the others, just as it was part of the bargain with the maritime provinces that we should build the Intercolonial Railway. We could not have had confederation without these two railways. And when the Prime Minister speaks about the necessity for this proposed railway being as great as that of the Canadian Pacific Railway when it was built, it seems to me he is plainly and entirely mistaken. I do not see the necessity for this road, nor do I hear any outcry for it from any part of the country. The ex-Minister of Railways says there is no demand from his part of the country, and certainly I have not heard of any demand for it from Ontario, except on the part of interested persons. It is said that we made a bad bargain with the Canadian Pacific Railway Company. We gave them $25,000,000 cash, 25,000,000 acres of land, and a piece of railway we had built. I am credibly informed that the Mackenzie government offered even more than this, and could not get a taker.

Now, I would like to give the opinion of a gentleman who is fresh from the electors of his own province. I refer to Hon. Mr. Roblin, the Premier of Manitoba. At a convention in Toronto the other day, he spoke on the subject of this Grand Trunk Pacific project. He said he believed that he spoke for the people of Manitoba—and he is a railway commissioner of that province. He could not see any great benefit that this road was going to do to Manitoba more than any other road would do. He does not doubt the patriotism of the right hon. Prime Minister (Rt. Hon. Sir Wilfrid Laurier) in proposing this scheme, but when that right hon. gentleman proposes to spend $100,000,000 to benefit the farmers of the North-west, Mr. Roblin failed to see where that benefit came in under this scheme. He pointed out that it now costs to carry grain to Montreal by rail, 19 cents per bushel, while it can be carried by rail and water for 14 cents per bushel. He believes that he himself and the people of Manitoba are as patriotic as Sir Wilfrid Laurier and his friends, but they cannot see any good reason why they should be compelled to send grain by all-rail route to the sea-board at a cost of 5 cents per bushel more than it would cost them by the other route. Nobody believes that they will do it. You can make any law you like, but commerce knows no law but its own; and it is absurd to expect commerce to go by the more costly route. This principle is manifested in all the walks of life.

I spoke a short time ago of the Toronto 'News' being rather favourable to this railway. But that paper begins to sound a warning as to the route through New Brunswick. It says:

> Warnings have begun to come from New Brunswick that the building of a commercial route through the wilderness is impossible. Abundant evidence exists as to the nature of the country. In 1865 the whole question was debated with great thoroughness. The projectors of the Intercolonial Railway were anxious to find a practicable line across central New Brunswick. They were fairly driven to the alternative of an extreme frontier or an extreme coastal route.

If this were fully discussed in 1865, and no route that was thought feasible could be found, what is the use of talking about it now? The country is not changed so that you could make to-day a commercial road such as the hon. member for North Norfolk (Mr. Charlton) talks about. And we do not want to spend a mountain of money simply to save a few miles of railway. While our time is very valuable, I do not think it is so valuable as that. Here is another extract from the same paper:

> Central New Brunswick is a mass of rugged and irregular hills, from which flow numerous

rivers to empty into the Baie des Chaleurs, the Gulf of St. Lawrence and the Bay of Fundy, by way of the St. John River. Some of these hills are 2,000 feet high.

I would like to know how we are to make a practical railway over hills of that description.

Now, I would like to give a little attention to an old parliamentarian, a gentleman who has been in this House a long time, and who, as I think hon. members who have been in this House for two or three parliaments will understand, has been on almost every side of every question at different times. I speak of the hon. member for North Norfolk (Mr. Charlton). He issued an address to his people in the last general election, in which he said:

I feel called upon to announce it as my firm conviction that our public improvements are now as far advanced as the interests of the country, in the near future, are likely to require, and that the time has arrived more fully to redeem the pledges of the Liberal party by practicing greater economy in public expenditures and by reducing the public debt.

The hon. gentleman goes on to say:

The expenditure shall not in any case, in my opinion, exceed the amount of the revenue, and the public debt should be reduced each year to at least the extent of the sinking fund.

This hon. gentleman—I am sorry to say he is not here—has never failed to shoot as the First Minister asked him, and to vote in the same way, irrespective of whether it was costing this country a great deal more than it ought to. That was no part of the consideration.

The government was fortunate in assuming office just at the beginning of a period of prosperity, which not only applies to us, but to all commercial nations, and which it is well to realize has been due to the blessings of Providence, and to causes beyond the control of the Canadian government.

It is the duty of the government under such circumstances to follow the example of a wise ruler of old, and in years of plenty, provide for meeting the exigencies of succeeding years of scarcity.

Now, Mr. Speaker, it seems to me that that was good advice, that was the right kind of an address to the people, if you are going to publish anything, because the people are very fond of hearing public men say that they are looking after their interest, and seeing that the public moneys are not wasted. But when the people come to realize as they must, that under this economical government there has been a vast increase in the expenditure, they will begin to consider that such men as the hon. member for North Norfolk have not carried out the pledges made to them. Now, Sir, this same hon. gentleman made a speech which has been referred to a good many times in this House, on the 26th day of last May, in which he pointed out the impossibility of carrying grain on an all-rail route in comparison with that from Port Arthur by water. He gives us figures, and he tells us that wheat can be carried from Duluth or Port Arthur to Buffalo, and put in an elevator for 1¼ to 1½ cents per bushel, and 2 cents is more than an average rate. He said:

So you have the possibility of carrying wheat from Port Arthur to New York for three cents a bushel, or at most not more than four cents a bushel.

Now, I would like to know if anybody believes that this new railway that is to be built by the government will be able to carry grain at that rate from Port Arthur, or west of that, to Quebec, or St. John, or Halifax. I do not think there is any man in this country believes it, I do not believe that the people who are promoting this scheme believe it. He says further:

Now these are conditions which render it in my opinion impossible at present to compete with that route. It is useless to think of hauling wheat from a point as far west as Port Arthur by an all-rail route to Quebec or to Halifax, at prices such as I have quoted with regard to the American lines.

Now, the hon. gentleman apparently has made this route his study, but when he made that speech defining the government's policy on this railway, he did not take into account the kind of country over which the road was passing, and he knew that he was perfectly safe in saying that if they build a railway such as I have described, and put on cars and locomotives such as I have described, there will be no difficulty. But he knew, I think, that it is utterly impossible to build such a railway, and it is just as impossible to carry wheat, or grain, or other products from the west at prices such as those charged by an all-rail route. He went a little further in that speech on the 26th of May and said:

I do not believe that we are in a condition to-day, even if we decided to improve the Ottawa river valley route, to decide what are the proper conditions upon which to proceed. . . . Let us wait until we have the decision of these men as to the proper course to pursue.

Now, I agree with him fully in that part of his speech. Then this government, when they were looking around to get commissioners to investigate this transportation question, the very first man they approached was Sir Wm. Van Horne, and I would say a wise choice, but it seems he refused to act. Sir Wm. Van Horne has made a statement, and I will read from it.

The Canadian Pacific Railway, the Grand Trunk Pacific Railway, or any other all-Canadian route, will never voluntarily carry a carload of wheat by the all-railway route around the great lakes to an eastern Canadian port for shipment abroad, for the simple reason that it will never pay any road to do so.

Now, I think that no matter what we may think of this route, we all respect the opinion of Sir Wm. Van Horne, and I feel

that here he states the truth, the whole truth and nothing but the truth. Then the Montreal 'Gazette' comments on his views :

In these few words are summarized all the necessary objections to the proposed government railway. If it cannot haul wheat there is not the slightest use spending $75,000,000 on its construction. It cannot haul wheat because the rates it will be compelled to meet will render it necessary for it to make its charges as low as a fifth of a cent per ton per mile, a rate utterly out of the question. With grain eliminated there is not sufficient traffic available and will not be in a score of years to pay the cost of maintenance.

Now, that is a fair proposition in reference to this railway, that if it was built to-morrow we could not get freight for it at a rate that would pay expenses, I do not think we could get freight that would pay running expenses. I cannot tell though, strange things happen sometimes. I would not like to venture the statement that many a Liberal member ventured in the old days when the Conservative government were promoting an undertaking to build the Canadian Pacific Railway, namely, that it would never pay for the axle grease. I am not familiar enough with railway business to venture an absolute opinion of my own on this question; in fact I think I am in the same position as most other members of this House. Now, there was a very good article in the Montreal 'Star' on this question, the heading of which was 'How much ?—Where ?—When ?—What for ?'

The debate on the government's 'trunk line' scheme ought not to close until some one has told us authoritatively what it is going to cost, where—exactly—it is expected to run, how long it is expected it will take to make the surveys, and when it is expected to be ready for use.

I don't think that so far we have been told that from any quarter.

It is a most remarkable situation—a vast government proposal laid before the country, including the spending of many millions and the building of a railway half way across the continent; and yet no statement as to how many millions are to be spent, or precisely where the railway is to be built.

I think if such a proposition as this had been brought down in the old days when the hon. gentlemen opposite sat on this side of the House, we would never have heard the last of it, indeed I do not think that the government could have got their estimates through the House unless they had given a great deal more information than we have been given in the present case. I feel that that would be a proper thing, because, after all, we are only the custodians of the people's money. We are here to do their business and we ought to do it in a business like way. We ought not to beat about the bush, we ought not to take any byway, but we ought to be prepared to deal frankly in all such matters as this. I have several other quotations but I will defer them to a future day.

Now, I want to deal a little more particularly with the bonus view of the question. We have been spending in this country very large sums of money in assisting railways. Cash bonuses have been granted amounting to $201,372,591. Loans have been made on favourable terms to the extent of $24,027,800, and grants of public lands have been made amounting in all to 52,064,650 acres. Allowing $100,000,000 as the value of the land and neglecting the advantage of government credit we have the sum of $300,000,000, as the total cash value of subsidies in land and money granted by the federal, provincial and municipal governments of Canada, chiefly within the last twenty years.

If the railways of the United States had been as highly subsidized per mile as the Canadian roads have been they would have got $3,500,000,000 from their government, but they got wisdom earlier apparently than we did because they have stopped it almost altogether. The Dominion government has bonused railways in this country to the extent of $9,166 per mile, the provincial governments to the extent of $1,757 per mile, and the municipalities to the extent of $873 per mile, or a total of $11,796 per mile of railway in this country. It seems to me that is a considerable amount of money to be paid out by the Dominion of Canada. I would like to give the House the opinions of some men who have had some experience of railway business in reference to bonuses. Mr. James J. Hill is a well known railway man in the United States whose name is almost a household word in this country as well as in the United States ; in fact, I may say that this is his country because I understand that he was originally a Canadian and I am sorry that we have lost him, because I think he is a pretty good man as he has done a good deal to develop the country in which he now lives and at the same time he has done a good deal for himself. Mr. Hill, in an authorized interview, declared that any railway that needed a subsidy before being built was not needed in the country through which it ran. If Mr. Hill could build a railway and pay his way across the continent without a dollar of bonus I do not see why we should be so free with our money as to give every tu-penny ha'penny railway in the country a bonus of $3,200 a mile no matter whether it parallels another line or not. Sir Thomas Shaughnessy is opposed to granting subsidies to railways. He excuses the Canadian Pacific Railway because it was built at a time when such an undertaking could not hope to pay within twenty years. If a Grand Trunk Railway subsidy is given then, he says, the Canadian Pacific Railway will ask subsidies for its various branches building or to be built. Subsidies are a gift from the people, for a railway

when built cares not for the wishes of the people. The fact is the people practically rear up the railway which when finished gets away from their care. The principle is wrong. All right to aid in the construction of a railway, but every dollar of aid should be returnable in full if not with interest. The doing away with subsidies would do away with jobbing in railway charters and railway promoting. There would be nothing in the railway but what a business man could get out. A railway would be a business proposition. Railways would then be built where they were needed and not where there would not be sufficient traffic to warrant their building. There may be places where it is desirable for one reason or another to have a railway that could not be run as a successful business proposition. Then the government should build the road itself. That is what they are doing now. They are building the lean end. That is what the hon. ex-Minister of Railways and Canals says. I shall now deal with the changes that the government have made in the law respecting railway bonuses since they came into power. Bonuses were very unpopular in the country when they came in and some of their leading men were pledged against the bonusing of railways. They therefore came to the conclusion to put the bonus in another form. I shall quote from 60-61 Vic., chap. 4, of the statutes of 1897, sec. 7 :

Any company receiving a subsidy as aforesaid, in excess of $3,200 per mile, shall be bound to carry Her Majesty's mails for a term of ten years free of charge over the portion of the railways subsidized.

Then they amended this in 1899 by 62-63 Vic., chap. 7, sec. 8 :

Every company receiving a subsidy under this Act, its successors or assigns, and any person or company controlling or operating the railway, or portions of railway subsidized under this Act, shall each year furnish to the government of Canada transportation for men, supplies, materials and mails over the portion of its line in respect of which it has received such subsidy, and whenever required, shall furnish mail cars properly equipped, for such mail service, and such transportation and service shall be performed at such rates as are agreed upon between the minister of the department of the government for which such service is being performed and the company performing it, and in case of disagreement, then at such rates as are approved by the Governor in Council ; and in towards payment for such charges the government of Canada shall be credited by the company with a sum equal to 3 per cent per annum of subsidy received by the company under this Act.

As nearly as I can make out and I am not quite sure of the year 1901, the last year for which I have the figures as I took the statement from the Year-book for that year, hon. gentlemen opposite have voted in subsidies the following amounts :

1897, subsidies voted by parliament ...			$7,671,683
1899	"	"	6,957,487
1900	"	"	3,493,000
1901	"	"	8,491,966
Total amount voted..			$26,608,136

The last is from Year-book, 1901.

They have paid out on account of these subsidies the following amounts :

In 1897..	$ 480,156 11
" 1898..	2,641,040 77
" 1899..	1,253,559 67
" 1900..	1,509.119 99
" 1901..	2,512,329 00
" 1902..	2,093,439 00
" 1903 to April 1st	1,368,480 34
Total..	$11,853,624 88

I took occasion to ask a question with reference to whether this interest was being paid or not and this qustion was answered on the 3rd of June, 1903. The question was :

1. On what part or parts of the bonuses or subsidies, voted in 1896 and up to 1st of May, 1903, was interest payable ?. How much of each of the said bonuses or subsidies, on which interest is payable, has been paid ; and what are the details with reference to each railway ?

2. What is the amount of interest paid in each of these years by each of the said railways on the bonuses or subsidies they have received ?

The MINISTER OF RAILWAYS AND CANALS (Hon. A. G. Blair). The answer to both questions is that no interest has been paid on these accounts.

The point is this : If we pass Acts of parliament and the government perfectly ignore them and do not enforce the conditions on which money is paid out, how are we going to remedy such a condition. There is only one way, to educate the people up to see that these people are not to be trusted and to put them out. I say that when public men are elected to represent the people when they fail to carry out their pledges they should be dealt with just as you deal with a man with whom you are doing business. When he does not do as he agreed to do, quit dealing with them, and if you have suffered damages you can collect them from him. Now, Sir, I asked another question on this point or nearly the same point. I wanted to know if mail matter had been carried free by these roads and this question was answered on the 9th of July, 1903, by the Postmaster General and I do not think his answer is much. I think it was one of these off-hand answers which he gave without even asking his department about the matter. The answer is :

The POSTMASTER GENERAL (Hon. Sir Wm. Mulock). It is not the case that any railways that have received aid from the government, under legislation passed since 1896, have not complied with all the conditions attaching to such aids, but they have rendered the services required to be rendered under the terms of any aids granted to them.

Now, I would like to know, Mr. Speaker, how anybody is going to reconcile these two answers ? One said that no interest has been paid, although that was the condition on which they got the money. The Postmaster General on the other hand says they have fulfilled all the conditions. Now, they cannot both be right, and I prefer taking the answer of the Minister of Railways and Canals for the reason that he brought an answer from his department and gave it to the House and he did not give an off-hand answer as did the Postmaster General.

Now, it has been said by some people that we cannot build railways in this country unless we give a bonus, that people will not build without aid. A question was asked by the hon. member for East Grey (Mr. Sproule) in the House the other day, and the answer came that we had built 150 miles, nearly 151 miles of railway in this country without bonuses. Let me tell the House that the Canadian Pacific Railway alone has built 1,100 miles of railway without bonuses in this country. Now, Sir, that is a statement which knowing, as I do, that it is a fact coming from an authoritative source, I think ought to be a pointer for the government that the time has come when railways will be built whether they are bonused or not, and I certainly think the government ought to quit giving bonuses. With reference to the loan that was made to the Grand Trunk Railway, the hon. gentleman who preceded me this morning seemed to make light of it. He looked on it simply as $25,000,000 that had been loaned by the government long ago which did not amount to anything. Now, Sir, I have here a statement which as been read in the House but I think it is worth reading again as it is a thing that people should know. It is the statement of the Grand Trunk Railway debenture and interest account :

Taking the amount of the debenture accouat and interest account, which were $15,142,633 and $10,457,458 respectively on July 1, 1867, making in all $25,600,091, as principal on that date, and taking the average interest paid by the government as five per cent from that time until 1877, four and a half per cent for the ten years, 1877 to 1887, four per cent from 1887 to 1897 and three and a half per cent from 1897 to 1903, and compounding the interest each half-year (as the government has to pay for its money), the principal and interest would now amount to about $118,000,000.

I have got a method to suggest to the government by which they might get this money. I think if they can only get the Grand Trunk Railway to build this other road and build it on account we would be all right. I make that suggestion and although there is only one member of the government in the House at the present moment, I trust he will make a note of it and perhaps he will speak to the Prime Minister and they may make a deal with the Grand Trunk Railway to build that railway on account. And we would be glad to have it done if they do it in that way.

Mr. WILSON.

I have been very anxious to know what the farmers in my section of the country thought of this Grand Trunk Pacific Railway scheme since it has been introduced into this House. We have in our riding a farmers' association which is composed of men of both sides of politics and they are watching carefully what this government is doing. When I was home I sent word to the secretary of that association that I would like to see him and have a talk with him and gave him a copy of the Bill. I did not see him, but my son saw him and gave him a copy of the Bill, and he wrote me his opinion with reference to it and I think his opinion is worth putting on 'Hansard.' This, Sir, is from a gentleman who hitherto has been a Liberal. The president of this association has heretofore been a Conservative so you see they are a mixed lot and they are anxious that the business of this country shall be done in a straightforward manner. It is as follows :

Napanee, August 17, 1903.

Dear Sir,—I found it impossible to meet you on Saturday night till a rather late hour, and as your son, Mr. U. M. Wilson had explained matters to me, I decided not to disturb you so late in the evening.

As to the matter in question, that of the Grand Trunk Pacific Railway, I shall in a general way give my objections to the Bill. At the outset, I do not think it has been conclusively proven that a great necessity for the building of such a road exists. Were such the case, the profits from the carrying trade of the road would amply recoup the promoters of the scheme without looking to the government for aid.

And if a new transcontinental road were needed, and a private company like the Grand Trunk Pacific Railway Company would not undertake the construction of a road unless aided by the people, then I would say let the government build the road, but let it remain the property of the state and be operated for the benefit of the whole people of the state, not be turned over to a railway company such as the Grand Trunk Pacific or any other railway company for their sole benefit. But there should be no doubt of the existing necessity for a railway before undertaking the construction.

In the light of past experience the evils of bonusing railways are in evidence, and I think we have a striking object lesson of the loss to the country from the guaranteeing of the bonds of a railway company in the case of the Grand Trunk Railway. The reasons given for the building of a new transcontinental road are founded largely on sentiment. There would be ample outlet for the produce of the northern country by extending branches north from either the Canadian Pacific, the Northern Pacific or the Canada Northern.

The railway requirements in Quebec and the maritime provinces can be amply met by the railroads now existing or by short lines from time to time as the necessity for them arises. The building of a shorter paralleling line to the Intercolonial will mean a large addition to the public debt and an unnecessary addition. Then too the leasing of the road to the Grand Trunk Pacific will rob the people of any possible gain which might obtain from the building of the road at least for fifty years. Of course it may

please national pride to regard Quebec as a connecting railway centre. Then again the guaranteeing of the bonds of the western division is not in the public interest, and is in marked contrast to the terms on which the Northern Pacific secured a charter from the Roblin government for the building of branch roads in Manitoba.

I have not attempted to criticise the Bill in detail. That it would require some time and a thorough study of all the clauses of the Bill, not a cursory examination such as I have been able to give it. Besides I do not feel that I have the qualifications which would enable me to deal exhaustively with it. And of course you are asking for a criticism of the principles underlying the Bill.

I believe the views I have given regarding aid to railways are largely held by the people here of both parties and the position you have taken on this railway question should stand to your credit.

Yours very truly,

W. R. LOTT.

Mr. Uriah Wilson, M.P.

This gentleman is the secretary of the farmers' association in my riding. This association passed the following petition to the House of Commons :

To the honourable the House of Commons of the Dominion of Canada in parliament assembled.

The Lennox Farmer's Association are of opinion and hereby unanimously resolve, that the time has come to discontinue the practice of subsidizing railways by grants of public lands or public money.

The great prosperity which the railways of Canada are now enjoying warrants this association in protesting against further aid being given them by the parliament of Canada.

And your petitioners respectfully ask that your honourable body grant no subsidy to any railway at the forthcoming session of parliament.

And your petitioners will ever pray.

Signed on behalf of the Lennox Farmer's Association.

R. M. BRISCO, President. W. R. LOTT, Secretary.

I have still a later resolution passed by the same association on June 20, 1903, as follows :—

The Lennox Farmers' Association, at a meeting held to-day passed a resolution re government aid to railways, to the following effect, viz.:—

That the association is strongly of the opinion that the further granting of aid by the Dominion government towards the construction of railways by companies or individuals, whether the aid be a land grant or money, is not in the public interest, and should be discontinued, and futhermore, we as an association protest against government guarantee of the Grand Trunk Pacific Railway bonds.

Now, Mr. Speaker, I am about through. But I wish to call the attention of the House to this one fact. We had last night standing before us the hon. member for West Toronto (Mr. Osler), who is a director of the Canadian Pacific Railway Company, and who is strongly opposed to bonusing or giving public aid to railways. The Canadian Pacific Railway Company has already built 1,100 miles of railway without any public aid, and I have read to you an extract from an interview with the president of that company, in which he says that the time for granting bonuses to railways has come to an end, and I believe that is the general opinion of the people of this country.

Mr. ANDREW BRODER (Dundas). Mr. Speaker, as the government and their friends have already got out of steam on the new railway policy, it falls to my lot to say something without being obliged to reply to the previous speaker. I suppose that as the difficulty of getting coal into the country through which the new railway is to run will be so great, and as it will be necessary to have coal at every 100 miles along that line, it is no wonder that they have got out of steam. That factor in the requirements of the new railway is worthy of serious consideration at the hands of the government. I do not appear here as the apologist for the Conservative party in regard to their policy of opening up the country, which has made Canada what it is, against the oposition of hon. gentlemen opposite. When the Canadian Pacific Railway was built, the conduct of hon. gentlemen opposite and their friends was such that it became necessary for the Conservative party, in the interest of the country, to build that road, as the ancient city was built, with the sword in one hand and the trowel in the other. That will never be the condition of things in this country while the Conservative party may happen for the time being to be in opposition. They will stand, as they have always stood, on the patriotic side. But that cannot be said of hon. gentlemen opposite. If they were in our places to-day, they would pursue the same unpatriotic course they have pursued in the past.

I want to make reference to the speech of the hon. member for Bonaventure (Mr. Marcil), who eulogized to the skies the memory of the late Sir John Macdonald. I, for one, would rather have men put a few blossoms in my way while I am alive. It ill becomes men who laid in Sir John Macdonald's way nothing but thorns and briars and brambles during his life, to come after he is dead with their arms full of wreaths of flowers to lay on his grave. It ill becomes them now to justify that great man and his policy, which they are trying to emulate; for they will be as Lilliputians compared with Gulliver when they get through.

The hon. Minister of Finance was good enough to say the other night that his party, in the folly of their youth, had opposed this great scheme, but that, in the light of the experience of twenty years, they had found out their mistake. But is there any analogy between the two questions ? What

was the condition which called for the construction of the Canadian Pacific Railway ? Upon the building of that transcontinental road the integrity of this country depended. It was a question whether or not British Columbia should become a province of this Dominion, and hon. gentlemen opposite were prepared to follow their leader when he said : Let British Columbia go rather than build the Canadian Pacific Railway. The Minister of Finance has told us that was the time of their youthful folly, that they were all children, but I doubt whether hon. gentlemen opposite have yet outgrown the infant stage. I believe they are children yet. What was the conduct of that hon. gentleman at a more recent date, when he had reached more mature years, and one might suppose that he had acquired some common sense ? It was said by a prominent man in England that it was no crime to be young, as that was a fault that could be outlived, but that it was a crime not to learn by experience. We might say of hon. gentlemen opposite that experience does not appear to have taught them anything. They are apparently as immature as they were years ago, and are continually making mistakes to-day as they did in the past. What did the hon. Minister of Finance do in 1887, when he was no longer in the first flush of youth, but had reached maturity, and was the premier of his province ? When the late Mr. Mercier, premier of Quebec, called together the premiers of all the provinces in the Dominion to consult on federal matters, and the position of the various provinces with regard to the federal authority, where did we find the Minister of Finance ? At that conference, where he was present as premier of Nova Scotia, what was his attitude with reference to the integrity of this Dominion ? I am going to read from the report of the conference to show what his attitude then was. Let me here remark that at that conference the only Conservatives present was Mr. Norquay, then premier of Manitoba. Among those present were Sir Oliver Mowat, Hon. G. W. Ross, Hon. A. M. Ross, Hon. C. Fraser, and Hon. A. S. Hardy, from the province of Ontario, and the serious part is this, that whereas one would expect from these men sentiments of loyalty, nationalism and patriotism, sentiments in favour of the integrity of the Dominion, we found just the opposite. We find that these men, the leading Liberals from every province of the Dominion, consented to the resolution which I am about to read being placed on the minutes of that conference. And when we find ministers of the Crown to-day proclaiming that they are looking after the great national interests of this Dominion, and taunting the Conservatives with laxity in that regard, it is time we should ask them to take a retrospective view of their conduct in the past. Here is the resolution entered on the minutes, at the request of the Finance Minister and his colleagues :

> The representatives from Nova Scotia present at this conference desired the following minute to be entered upon the record of the proceedings and the conference agreed to the entry being made accordingly ;
>
> In view of recent movements in the province of Nova Scotia, the representatives of that province desire to place on record that they participate in the deliberations of this conference upon the understanding that, while they join the representatives of the sister provinces in seeking reforms in matters which are of common interest, they do so without prejudice to the right of the government, legislature or people of the province of Nova Scotia to take any course that may in the future be by them deemed desirable with a view to the separation of the province from the Dominion.

That was the position then taken by the Finance Minister of Canada, and which was endorsed by the premiers from the other provinces—all Liberals but one. These were the sentiments of the men who preach loyalty in this House of Commons to-day. Who were the representatives of Nova Scotia who took part in that conference ? They were : W. S. Fielding, Prime Minister ; J. W. Longley, Attorney General ; A. McGillivray, of the executive council. That was the position which these men took in 1887, when they were children. It would be well if they had never been born.

Let me say that there is no analogy whatever between the proposition to build the Canadian Pacific Railway and the one before this House to-day. The great question before this country demanding solution, and which will not be solved after this measure has received the sanction of His Excellency the Governor General, is the question of transportation. Cheaper transportation is what the people require. The transportation rates are a tax on the energy and industry of our people, and you relieve them of so much direct tax when you make the rates cheaper. Is there a man on the opposite side of the House, from the right hon. gentleman who leads it, down to his most humble supporter, who is able to show that in the slightest degree this proposition will lessen the charges of transportation in this country ? Why, the furthest extent to which they have gone is to provide that the Grand Trunk Pacific Railway shall not charge any higher freight rates to St. John or Halifax than to Portland. The Grand Trunk Railway has a line to Portland to-day equipped with every facility. All the government ask is that the Grand Trunk shall not charge any more to carry freight to our Canadian ports than they do to Portland. That is the utmost they ask, and that does not involve any cheapening of rates. Any scheme which ignores our waterways in connection with railways is not a feasible scheme by which you can give the people cheaper transportation. And the difficulty is that when we impose the large obligation upon the shoulders of the people,

which this contract calls for, we shall not have solved the question of transportation. This road will be simply a colonization road. Nobody made that clearer than the hon. member for Bonaventure (Mr. Marcil), and the right hon. gentleman who leads the House had to admit that he did not look upon it from a commercial view only, but from a national point of view. In this connection, let me read what the right hon. gentleman said in 1898, on a subject that affects perhaps the question of transportation and the lessening of rates more than does the one before the House. In 1898, the position which he took on the construction of the Georgian Bay canal was far different from the one he takes now. But hon. gentlemen opposite will support any proposition which their leader may submit to them without the slightest regard for their past record or principles. Replying to Mr. Poupore, who introduced that resolution with reference to the Georgian Bay canal, the right hon. gentleman said that the government were simply asked to endorse the bonds of the company and would not be called on to disburse any money until the canal was in operation. And he added :

> My answer is this, and I submit that in this the government will have the support of both sides of the House ; the government should not give either its sanction or approval to any scheme unless it is satisfied in advance that the scheme will be a commercial success.

They only have the support of one side. The other side is against them on principle. He said further :

> The government should not give even its sanction or approval to any scheme, unless it is satisfied in advance that the scheme shall be a commercial success.

Apply that to the present proposition, and where are you ? What about your commercial success in this case ? Why, isn't it perfectly clear that opportunism, and not principle, guides hon. gentlemen opposite ? There is no talk of commercial success now. All we hear of now is colonization, and sending people into that northern country. The hon. member for Bonaventure (Mr. Marcil) opened up a fine prospect through his speech to the men of his race. He would send Englishmen, Irishmen, Scotchmen and Germans to the North-west country, where they could get rich in five years, but he wants to send the Frenchmen up to the woods, where they will be poor all their lives. He wants to send the Frenchmen up to that country timbered with spruce, tamarac, jack-pine, poplar and white birch. I do not decry my country ; I am too good a patriot for that. But the Prime Minister and the Minister of Finance stigmatized that region as a poor country for agriculture, when they told us, as they did, that this was the kind of timber growing there. When they said that, every sensible man who knows anything about soil, knew that there was a poor soil there. And when the hon. member for Bonaventure spoke of sending the Frenchmen up there, I thought his own countrymen might well pray : ' Deliver us from our friends.' And the Minister of Finance, when he told us what timber grew there——

Mr. TAYLOR. He didn't know the difference.

Mr. BRODER. If these gentlemen do not know the difference between pine and basswood, they should not talk about these things. They stigmatize that country as the possessor of inferior soil. That is on ' Hansard,' and there it will remain. Now, while I am on this subject, I would just like to point out one or two things to show what the building of this road actually means. It means that if a man gets on a train at Winnipeg to come through by that road, he sees no further sign of civilization until he reaches the city of Quebec. Suppose he wants a bag of flour, suppose he wants a pair of boots, suppose he wants to see his clergyman; why, he must go through the 1,800 miles to the city of Quebec. That is a glorious position to put the poor Frenchmen in in that country. Why, the only proper colonization system for us is to run railways from the main lines out to the north country as fast as settlement requires, so that the people may have the nearest possible way to the centres of our country throughout its whole length and breadth. If you carry out this policy, you will do something in the interests of civilization. The Liberals had a policy on that matter. I would like to read to you what they told the country in 1896. Of course, if there is anything they do not want to see it is their own tracts.

Mr. SPROULE. They are not like the Indian who was lost.

Mr. BRODER. I have here the campaign book issued by the Liberals in 1896. That ought to be good literature.

Mr. HOLMES. Fine.

Mr. BRODER. Then, why don't you live up to it ? The hon. gentleman (Mr. Holmes) has not lived up to it an hour since it was sent out. The Prime Minister has not lived up to it for ten minutes since he came into power, nor has any follower he has got. This book was sent out with a request to the reader to read, mark, learn and inwardly digest. It was for campaigners, speakers, candidates, and so on. It was not for the ordinary readers—too profound for them—but only for the intelligent and brainy men who are to instruct the people. The common man was not to interpret this for himself. On page 43 I find this :

> The Liberal party have always favoured dense and continuous settlements.

What about this road, removed hundreds of miles away from present settlements ?

> They have opposed the adoption of a policy which is annually spreading the population over

distant districts and sections of country which necessitates further railway construction, further land grants for that purpose, enhanced prices of land to the settler, without affording to the existing railway lines that amount of travel and of traffic, which will enable companies to pay the expenses of operation and management, without excessive burdens upon the people who may reside in the country through which they run.

That is fine, is it not? But where are these hon. gentlemen now?

Mr. BELL. In the bush.

Mr. BRODER. Yes; and the jack-pines ain't high enough to hide them. What are the people going to do up in that country through which you are to run this road? I have read your principles in 1896. Of course, I do not expect you to have them now. But there was strong reason why these gentlemen should attempt to do something before they met the country. When they look over their political nursery they find not a single child that belongs to them—every one of them adopted. They do not want to go to the country without some offspring of their own, and so they have brought this measure before the House. And who is the godfather of it? The Grand Trunk. But the Grand Trunk will only become responsible for the head, while the rest has to be fathered by the government. But the hon. gentlemen are bound to go down to history as having done something during their seven years of office. Now, this road does not mean successful settlement if it is a colonization road, for the simple reason that you leave the people too far from the centres of the country, and the rates on this road will be too high. Why do I say that? Any railway that ignores the necessity of passenger traffic to help in securing lower rates on freight ignores a principle that should form the very basis of its calculations. Do you suppose that a man leaving Winnipeg coming east will want to come down through that country where he will see not a single town or village? No; he will want to come down through the settled parts of the country. As to passenger traffic, this road cannot successfully compete, and wanting passenger traffic, its freight rates on the products of the country must be high. Another point is that this road will not be built in a day. The right hon. Premier says there is no time to lose. But he will have to wait seven or eight years before he gets the road. And, before he gets it, the easily built western portion will have been finished and put in operation. And the peculiar idea of this idea is that the Grand Trunk people do not take that road over until it is completed. So the government will have the expense and trouble of taking care of and running it until the whole road is built. In the meantime the Grand Trunk Pacific built in the western part of the country west of Winnipeg, will have large quantities of grain brought down to Winnipeg and will be obliged to find an outlet for that grain. What are they going to do with it? Are they going to send it down over the Canadian Pacific Railway? No. Are they going to send it down over the Mackenzie & Mann system? No, they will see that it finds its way to Chicago. That is what they will do, they will see that it finds its way to Chicago, their business connections are there now, and they will continue there for some years, while you are trying to build this difficult part of the road which they are really not obliged to accept after it is built. What will happen then? The large dealers in Chicago, the grain kings, will go into that western country and build their elevators and buy your grain, and when you get your road built these gentlemen will be the routers of your grain and not the railways, and they will send your grain by the Chicago route. Why? Because the route from Chicago to New York is the cheapest freight route in the world. I do not ask you to accept my word for it. I will give you the reason why it is the cheapest freight route in the world. I will read from a book published very recently entitled 'The Canal System of England,' but it has some reference to the American canals and to this particular route:

The following extract on the subject is from an address by Mr. E. R. Johnson, instructor in political and social science, Haverford College, U.S.A.

The cheapest freight rates by rail to be found in the world are those for grain between Chicago and New York. And why? Because the cheapest inland water transportation rates in the world are between the same points.

That is the crucical question:

The following table showing the wheat rates per bushel from Chicago to New York for the years 1868, 1870, 1880 and 1881 by water, by water and rail combined, and by rail, indicates very plainly how freight rates have fallen, and how this movement has been led by the waterways.

	By Lake and Canal.	By Lake and Railway.	By Rail.
	Cents.	Cents.	Cents.
1868..	22·79	29·0	42·6
1870..	17·10	22·0	33·3
1880..	12·27	15·7	19·9
1891..	5·96	8·53	15·0

Still nearly 10 cents difference. Now, Sir, the hon. gentlemen opposite, in their scheme, ignore altogether the importance of any water route in connection with their proposed development scheme by rail. The cheapest grain route in the world is where they have water and rail connected, the water portion commencing the route. Now, 200,000,000 bushels of grain come to Buffalo alone. Do hon. gentlemen say that this proposed road will take one bushel of that grain away from Buffalo? It will not come by your road. There is another factor which they overlook altogether. Any man who has any experience in shipping grain or

products of any kind to the old country, or to any foreign country, knows that a great factor in the freight rate and consequently the route, lies at the very door of ocean freight. The port that will give you the best ocean freight connected with the through route is generally the port that gets the business. That is lost sight of altogether by hon. gentlemen opposite. Not a word of that, they ignore the very difficulty that will determine to a large extent the route which the grain will take, supposing it goes over that road, and they cannot get away from it.

There is another matter I shall refer to as I notice that the hon. member for Brant (Mr. Heyd) has just come in. He talked very wisely about this Bill. He said he was glad that it was written so plain that anybody could understand it; in fact he could shut his eyes and read it. Now, Sir, the Minister of Justice is not so wise as the hon. gentleman, because the Minister of Justice had to admit that he had to call no less than three lawyers to find out what the clause meant. Sir, I want to say this, that it is a humiliation, not only to the government, but to this House, that the Minister of Justice, who ought to be the last resort as to the meaning of this Bill in a legal sense, had to send out and bring in lawyers to help him find out what it meant, a contract that he is supposed to have drawn up himself. That is the position of things. Well, the Minister of Justice made a mistake when he sent for these three lawyers to consult as to the meaning of this contract, he made a mistake in not sending for the hon. member for Brant.

I am not going to say that the Grand Trunk do not deserve well of this country. The Grand Trunk has been the pioneer road in Canada, and deserves well at the hands of this country. It has served the people well under difficult circumstances; but we have a perfect right, when we are dealing with an individual or with a concern, to inquire into the character of their business, to ascertain what their policy has been in reference to matters which concern the people of this country. The Grand Trunk Railway Company have been very slow in extending their line. The Canadian Pacific Railway Company, as was mentioned by the hon. member for Lennox (Mr. Wilson), have built, within the last twenty years, 1,100 miles of road, including four important bridges, at an outlay of $35,000,000, without one dollar of aid from the government of this country. Now I want to refer to their mileage. They have a very recent history, they are not an old road. Their main line was 2,905 miles long from Vancouver to Montreal; but since their inception as a road their total mileage has increased to 8,646½. Well, what about the Grand Trunk? The Grand Trunk Company have increased their mileage very slowly in this country, and I want to point out that the policy of the Grand Trunk that has prevailed in the past in this respect is very likely to continue in the future. No one who looks into that agreement but must see that the fact of their getting $25,000,000 of stock will give them a control to that extent that nobody else will have the right to interfere with. The old Grand Trunk will still be the dominant influence in reference to the new road, and if they are still the dominant influence in the policy of the new road, there will be nothing like the branch lines reaching out into new sections such as the Canadian Pacific Railway system has constructed, notwithstanding the efforts of hon. gentlemen opposite to put obstacles in their way. This is a very important matter for us to consider. What is the condition of things? Why, go back to the 80's, and see what the Grand Trunk were doing? When there was a charter granted for a road called the Ontario and Quebec Railway, upon which there were grants by governments and municipalities of no less than $1,000,000, what did the Grand Trunk do? They bought that charter, if I remember correctly, at a cost of some $34,000, notwithstanding that there were $1,000,000 attached to that charter by way of bonuses and grants which they allowed to lapse. What for? For the purpose of hindering the Canadian Pacific Railway getting from Toronto to Smith's Falls. When you travel over the Canadian Pacific Railway in the neighbourhood of Perth you will notice a road graded, but which never went any further, that is the road I refer to.

Who was the man who helped to do that mischief? Senator Cox was the man who came in to buy up that road and kill the interests of the locality between Smith's Falls and Toronto. The Canadian Pacific Railway built the road at their own expense notwithstanding the fact that the Grand Trunk tried to block the undertaking. We have a perfect right to consider these things and to consider how far the influence of Senator Cox may permeate this new proposition. We find from their report of 1884, that the Grand Trunk Railway Company owned 1,530½ miles, that they part owned and had under lease 538¾ miles and that they had under lease 843 miles of road. In 1892 they only owned 2,981 miles, and I want to draw the attention of the House and of the country to the fact that the largest outlay in improvements and extensions has been made not in Canada but in the United States. Their enormous outlay has been made in American territory in making extensions in order to carry out their business. Does anybody pretend to say that with that great outlay the proposition that the government are now making is going to remedy all the difficulties that exist in this country in reference to railway rates and railway busi-

ness ? The Grand Trunk Railway have gone very slowly in the matter of railway extension in this country and now the government are building a road and giving it to them. The hon. member for Hants (Mr. Russell) was good enough to say, that we ought to be thankful to be able to unload this scheme on the Grand Trunk Railway which means that if this turns out to be a bad bargain it is ours because we stand behind it. If the horse is lame we must keep it; that is what it means. After we do unload it it will come back to us, if it is no good to the Grand Trunk Pacific Railway Company. The guarantee that the government proposes to give to the Grand Trunk Pacific Company by this measure carries with it an obligation which the government cannot say does not amount to anything. Why do you give them a guarantee if this road is any good ? Are you not giving them a guarantee in order that they may finance the undertaking and because of the possibility that they may not be able to meet their obligations ? It is because of that contingency that the government steps in and gives them a guarantee. I want to call the attention of the House to the form of guarantee which has been given by the French government to the railways in France. They have changed their system in France because of political changes and of the financial difficulties of 1881. They have about six companies which control the railways of France all converging at Paris and each company is allowed a certain territory in the country. The policy of the government has been to guarantee the earnings of these roads and not the interest on the bonds which means virtually that the roads will always be in a position to pay their obligations as far as interest is concerned. There is only one road and that is the Northern road running through a portion of France that represents fifty-three per cent of the population that has not called upon the government to carry out the guarantee. What does any sensible man think of this proposed road running through a country where there are no people ? Does any sensible man mean to say that this obligation assumed by the government does not mean anything ? To show how little idea the government and their friends have as to what it means, we have only to refer to the argument used yesterday by the hon. member for South Brant (Mr. Heyd) who compared the interest charged on the road to be built under this proposed scheme with the total cost of the road under the scheme proposed by the hon. leader of the opposition (Mr. Borden, Halifax). He represented that the cost of one would be $13,000,000 and that the other would be $200,000,000. If the hon. gentleman would figure out the total outlay involved in the scheme proposed by his friends he would be surprised at the result to which his arithmetic would lead him. No reasonable man can claim that you can go through the province of New Brunswick and construct a suitable road ten or fifteen miles north of the present railway where there is a difference between the valleys and the tops of the ridges of from 1,000 to 1,200 feet. If you are going to give cheaper freight rates you will have to construct a road that will cost $75,000 per mile. Then, hon. gentlemen opposite talk about the water-powers on the height of land. Even the right hon. leader of the government and the hon. Minister of Finance talked about the water-powers away up on the height of land. Who ever heard of water-powers where the rivers start upon their courses ? What rubbish to give the country ? Water-powers away up the height of land where the rivers take their rise. Water-powers ? You can go out from the city of Ottawa only a few miles and find enormous water-powers undeveloped. Why do not hon. gentlemen give their attention to the water-powers nearer home ? Right on the Ottawa river thousands upon thousands of horse power are going to waste and nobody is saying anything about them. Yet, these hon. gentlemen are proposing to spend millions of money to reach the water-powers away up in the north country when nobody wants to use them. The only reasonable solution of the question to my mind is to utilize the railways that we have now in existence. We have now no less than seven different roads running from the main lines northward between Lake St. John and Lake Nipissing. These roads have received considerable government aid. Why do not hon. gentlemen opposite adopt the policy of extending these roads into the northern country and encouraging people from the present settlements to go up into that country ? Bring them nearer the source of supply and let them procure their supplies and send out their products in this way instead of running a road 1,800 miles from Winnipeg to Moncton. That is a great scheme. It is a great national scheme and no great nation would ever touch it. The great national scheme ought to be the solution of the transportation question in the interests of the people of this country. Then, there was a bugaboo raised about the bonding privilege. The right hon. leader of the government based his whole argument upon the fact that the bonding privilege might be taken away. Let anybody go and look up the interstate commerce report and find what they say about that matter. Then we have in the other House a gentleman who has but lately been elevated from this House to the other by the right hon. gentleman. He is talking about war with the United States. He says that the United States want to go to war, that they are getting ready for it. It occurred to me that if the hon. gentleman is serious, and the government, of course, endorse him as one of their supporters, we ought to get a minister of war instead of a

Minister of Militia. The hon. Minister of Militia and Defence (Hon. Sir Frederick Borden) is too peaceful and kindhearted a man for that. He will never be able, to fill that place properly during this terrible war that is coming on us from the United States

An hon. Senator talking in the other House only yesterday about the United States going to war insisted on the building of this road. The need for this road is that the United States is going to war. What are you going to do with that road in war time? Are you going to send your troops out there to meet the United States? The probability is that the hon. gentleman wanted to take to the woods if there should be trouble and wanted that road to get there. Most of the hon. gentlemen opposite would do so after all the loyalty we have heard about. Such nonsense to be talked by serious men; war, taking away the bonding privileges! Does not any reasonable man know that there is no one as much interested in the bonding privileges as the United States. New England particularly, and the railways of the United States also are more interested twice over than Canada. If we look at that aspect of the question the only true solution of our position is to run lines north and and give back to the front settlements that now exist. The only possible way—and I am speaking of peaceful avocation, I am not speaking of war—the only successful way to compete with the influence of American commerce is to give more breadth to the present country; is to give feed to the centres that now exist from the north country in the rear and you can only do that by running railways into that northern country and opening up settlement. Hon. gentlemen propose to run a road from Moncton away to the north of the height of land to Winnipeg and in that way they will create a north and south in this country. Any serious candid man will see the reasonableness of that proposition as opposed to the one the government propose. Are the lumbermen and the men who are interested in the timber of this country anxious to see a road run up there long before the timber that is there will be taken out and utilized? There are millions of cords of wood between this and where you are proposing to go. It would do this country and the pulp business a great deal more good if hon. gentlemen would have the courage to put an export duty on pulp wood. An export duty on pulp wood would do more to develop that industry than three railways such as hon. gentlemen propose to build and yet, Sir, with one stroke of the pen the Finance Minister could bring that about, but he has not the courage to do it, nor has the government the courage to back him up. One stroke of the pen would do more to develop the pulp business of Canada than this railway will do. Put an export duty on pulp wood and what do you find? Paper mill after paper mill brought over into this country from the United States. Why? Because Canada owns nearly all the pulp wood on this continent. Travelling through the country you will find agents of American large manufacturers of pulp wood machinery going into this country and building mills for Canadian people. One of these gentlemen said to me the other day, a man who has been in London putting in machinery for the Lloyds and men of that class, that if Canada put an export duty on pulp wood the American mills would move over to Canada. They could not do anything else. Why do not hon. gentlemen do something of that kind. They could save their $300,000,000 with one stroke of the pen and do Canada more good than all their proposition will do. But they dare not do that; they could not do that; that would be businesslike.

Before I sit down, I want to say that the government are obligating the country to an enormous outlay and are not solving the question. You would think to hear these gentlemen talk that there was no road now across this country. No way of getting down to a Canadian port. That is the only inference that can be drawn from what they say, that there is no outlet and there is no grain brought over a Canadian route. Who can say the traffic they talk about will go over the road they propose to build after it is built, and there is this to be said further that the western people must get to the lakes, that is the important factor to them. Once they get to the lakes, competition will take care of the grain and we have the best waterway on the continent. Yet, Sir, hon. gentlemen do not realize the importance of making it any part of the grain route and the traffic route of this country. They are married to this scheme. They think that they will never have a name if they do not build this road. It is a question if they will ever have it, after they get through with it, but, I want to say this that they will realize before they are through that the difficulties in carrying out a proposition of this kind have not been provided for in the agreement submitted to the House. Who is going to run the road when you get it built? Who is going to run the part you complete before the eastern section is completed? The Grand Trunk Railway are not obliged to take it until it is all built, and I do not know if there is anything that will oblige them to take it then unless they think it is a paying scheme. The Grand Trunk Railway do not become responsible for the eastern end of the road and that is the important part to find responsibility for. The government are taking all the responsibility in reference to that and are giving the paying part, the part that will be able to take care of itself, up through the Peace River district one of the most fertile in this country, to the company.

Referring to what the leader of the government has said in reference to the wheat section of the country, it will be remembered that he traced the develpoment of wheat growing in this country, first on the St. Lawrence then in the Genessee valley, then Ohio, Illinois, Wisconsin and Dakota and now it has gone over from Dakota into Manitoba. Who ever dreamed of raising more grain than the United States? Who ever dreamed of raising more than the Americans? He said it has left Minnesota and Dakota and gone to Manitoba and the reason for building this road is that the centre of wheat growing will leave Manitoba and go to the Peace river. What will Manitoba think of the fertility of her soil being exhausted in two or three years? Surely the right hon. gentleman did not talk seriously. Yet that is what he said, it appears in 'Hansard,' and the wheat growing section of the country has moved over into Manitoba and it is surely going to move into the Peace river district; hence the necessity of the road. Well, Manitoba will be raising wheat I think long after that road is built and her fertile soil will be still growing wheat when many changes will have come to pass in this country.

We cannot, for a moment, consider the condition of things in the west without seeing the necessity of giving them an outlet to the lakes and then using the water-ways to the markets of the world. The ocean freight will largely control the route of the grain and that is what the government has not provided for, and I think that if they are going to make this scheme a success that is something that ought to be considered in the undertaking. There ought to be some obligation in reference to that. But I wish to show that the true solution of this question will not be accomplished at all even if this road is built. It will not lessen the shipping of grain by American ports one solitary cent, because it is only stipulated in that agreement that they will not charge more than somebody else charges. What does that give? It gives to the company which carries the grain the alternative of going to the other place. We do not charge any more for going to Halifax than they charge for going to Portland—you can go to Portland. I do not see that any other construction can be put upon it. The hon. member for Brant (Mr. Heyd) understood all about the contract last night, but that is something which I am afraid he has not looked into. The Minister of Justice will have to bring in a few more outside legal gentlemen to see what it means. He has already had to do it. It is evident that the Minister of Justice, in dealing with the question the other night, did not feel at home. It is easy to see that he did not get all he wanted in the agreement, and he did not like to talk about it, for fear he would make a mistake. I do not believe there is one in the cabinet who got what he wanted. They got what the Grand Trunk would give them, that is all. C. M. Hays, as general manager of the Grand Trunk, just gave them what he thought the Grand Trunk could best get along with; and now they are obliged to try to justify it. That is the position they are in, and they cannot get away from it. The Grand Trunk people would not touch the eastern division; they would not sign any guarantee for it. They would only guarantee the part that was sure to pay. They have not a particle of responsibility for the eastern section. The government are going to build that, and hand it over to them, and maintain it for fifty years. Nobody knows what it will cost. The road will have to be run or go to the bad, and the government will have to face that responsibility. There is nothing to oblige the Grand Trunk Pacific to run that road, if I understand the agreement. Then, who is to run it? It is your road; it is your capital that is put into it; all they agree to give you is a certain interest. Suppose they refuse to touch it, what recourse have you? You can take what belongs to you; that is all the security you have got. It is like a man giving a mortgage on his own farm, and thinking he has made a splendid bargain. The Grand Trunk have a controlling interest in the stock, and will dictate to the Grand Trunk Pacific what they must do about this, that, and the other; and you cannot help yourself. That is why they do not touch the eastern division. They feel safe with the western division, because it is going through a country that will develop rapidly, and will yield large receipts both for freight and passenger traffic. But that does not apply to the eastern division, which is going through a country where there is nothing but trees and lakes. Where is your traffic to come from? The only traffic you can get is from the far west. But it is said that we will bring down a lot of timber by rail. The history of the past does not prove that you will bring the timber down by rail. You will bring it down the rivers, if you bring it down successfully and at the lowest cost. Then, where is your railway business to come from? Logs are floated down the Ottawa river for hundreds of miles, and that is the cheapest way to bring them down. You can easily see why the lumbermen will not saw their lumber in the woods and bring it down by railway. They prefer to float the logs down the streams and saw them near the centres of population, where the haulage will be short. Then, this idea of the railway getting a large business from pulp wood is all in the air. That is not the way the business will be developed. Your passenger traffic is not there, because, as I said before, no sensible man will travel from Winnipeg to Quebec and through Halifax on this road, when he can go on others

which will take him through the centre of population. Then, your freight rates have to be higher, or your road will not pay.

Now, I have detained the House long enough; but I wish to say, before I sit down, that I think the government ought to consider, and consider seriously, the question that is at the door of parliament seeking for solution—the question how to reduce freight rates most effectually. You cannot afford to pay fifteen or twenty cents a bushel to carry sixty cent wheat to market. If you want to encourage immigration to the North-west and make the people happy and contented, the way to do it is to give them lower freight rates. If you do not do that, you will have irritation, disaffection and trouble. This road will not do it, and I do not believe the government think it will. As the Premier said, it is not a commercial scheme, but a national scheme. The idea of building up a great nation has seized that gentleman, and they are going to run this road through, not in the interest of the country, not in the interest of the settlements now clamouring for relief, but in the interest of people whom they say they are going to send into the new country. The question has occurred to me whether the hon. gentlemen have the idea of bringing in some people from northern Europe, such as Finns and Norwegians, and settling them there. They do not pretend to say that they are going to settle that country with people from Ontario and Quebec; and if they are going to such an enormous outlay, I suppose they are doing it with the intention of putting some people on the land along the line of the railway. The strongest advertisement that can be put out against this railway as a colonization road is the statement of the hon. member for Bonaventure (Mr. Marcil), that if you send a man to the North-west, he will get rich in five years, while if you keep him where he is he will be poor all his life. So that, according to this statement, you are building this road to keep the people poor all their lives. I think the hon. gentleman's compatriots will resent that sort of treatment. We have built a railway into the Lake St. John district, yet it takes a good deal of trouble to keep the people there. They get tired of the place after they have been there a little while, and move out; and I think that the hon. gentlemen who are cognizant of the facts realize that the same difficulty will exist along the line of this railway; the people will move out, and you cannot hinder them. The Lake St. John country, I understand is a good country. That country is not settled. The Lake St. John Railway has cost money. We have no less than seven roads running northward from the main line of the Canadian Pacific Railway and other lines between Quebec and Lake Nepigon. My idea is that the proper system would be to push out these roads into the new country and let settlement go in from the present settlements northward, instead of running the line as the government proposes. The question really before the country is the giving of cheaper transportation by means of utilizing our great waterways. We have a great waterway, intended by nature to be a thoroughfare between the east and the west, and, Sir, whatever scheme of transportation or development overlooks our interests in that respect, overlooks the real interests of the people of this country. You cannot solve that question if you ignore that great system of lakes waiting for the legitimate business that ought to cross it. Why can Chicago send grain around Lake Michigan to Buffalo and then carry it to New York, so much cheaper than we can? We have a better route if we will only take care of it. The government took the tolls off the canals this year, which was good policy. We only got about $43,000 per year from these tolls, and what has been the result of taking them off? The result has been that down the St. Lawrence this season over 7,000,000 bushels of grain went to Montreal, while less than 2,000,000 went to New York. That shows you how a very little lessening of the cost of traffic will affect the trade. If the government are anxious to lay out a lot of money anl control the outlay of millions of dollars, let them put the money they propose to expend on this road into a twenty-five foot waterway from the Georgian bay. That would not only give an outlet for the grain and other products of our great west, but the products and grain of the south-western states as well. All the grain of the western country on the American side would come down our route. If you are anxious to lay out millions, there is a proposition which will give you some return for your outlay. I am opposed to the government handing over our waterways to any company. They ought to be held by the government in the interests of the people and developed along the line that would best suit the interests of the people generally. You can best settle this country east and west by making it the best country in the world to live in. But this proposition before the House will not solve the question. Neither the government nor its friends can say it does. What do they do? They wave the flag. There is nobody in the country more pleased to see them loyal than I am. There never was anything they needed more, judging by their past? Why, in 1891, they were willing to go right into the arms of the United States. The United States, they said, was the only natural market for this country, and the hon. gentleman who declared war the other day (Mr. Charlton) was the greatest advocate of that policy. But now they are the direst enemies of the United States. What was the reason they gave to the people, why the people should elect them at that time? Their main rea-

son was that because the Conservative party were not friendly with the American government, that party could not get anything from the Americans. But inasmuch as the Liberal party were the friends of the United States, they could get all kinds of good things from that country for Canada. Well, they have now been in power seven years and have not got anything. They went to Washington and came back as empty as they went. Consequently to-day they are declaring war upon that country. In my opinion the best thing we can do is to mind our own affairs and solve what questions come before us for solution with regard solely to Canadian interests. We have questions to solve which require a good deal of patient study, a good deal of research, a good deal of careful looking into before we can reach a proper solution. But these gentlemen rushed into this important undertaking without a moment's consideration or warning and cast it into the arena of public discussion. If there is one thing more than another which this government ought to do, but which they have not the courage to do, it is to appeal to the country on this scheme and get the verdict of the country upon it. They intend instead to send their friends around after the session to feel the pulse of the people, and if they think that pulse beats favourably, they will likely go to the country. But if the pulse does not beat just as they think it should, they will wait a little while longer. But they ought to have the courage of their convictions, and appeal to the country, and let the great tribune of the people decide whether or not this scheme is to the interests of Canada. I do not wish to detain the House further except to say, as a humble member of the Conservative party, I do not intend to take any lecture from the other side as to what kind of loyalty I should have. Just think of hon. gentlemen opposite lecturing this side on the quality of loyalty. I am aware that new converts are always most enthusiastic, and I can therefore quite understand the strong enthusiasm which permeates the ranks of these new converts to the sentiment of loyalty to Canadian interests. But the people will be justified in watching them carefully. They remind me of a man who was cutting down a tree and was not sure of how it was going to fall. He came to me, about 150 rods away, and asked me to go with him and show him just which way it would drop.

Hon. gentlemen opposite are waiting to see which way the tree is going to fall. But it is not down yet. I do not propose to be lectured by that side as to my loyalty. We have had on this side to fight for the Canadian interests against hon. gentlemen opposite. We had to fight in the London market, the Grand Trunk Railway influence when we were financing to build the Canadian Pacific Railway. We had to fight the influence of hon. gentlemen opposite on the London market as well, when they were decrying Canadian interests and declaring that the Canadian Pacific Railway would never be a profitable undertaking. We had to fight all these influences before we could push the great Canadian Pacific Railway to completion and make the Dominion what it is to-day. These gentlemen climb on top of the House that Jack built. They think themselves very tall, as they stand there and say: 'Look at the house we have made.' And if they were not on top of the house that Jack built, nobody would ever see them or know about them. The right hon. Prime Minister wants his name to go down to posterity linked with some great scheme as Sir John Macdonald's was linked with the Canadian Pacific Railway. He hopes that it will be Sir John Macdonald and the Canadian Pacific Railway, and Sir Wilfrid Laurier and the Grand Trunk Pacific. But the hon. gentleman had better be careful how he carries out his idea. He does not know who is to own this road when it is completed. Who will it belong to, anyway? The government cannot own it, for the road will cost $100,000,000 or more, and the Finance Minister says that the only cost to the government will be about $8,500,000, if I remember well, while the leader of the House says the cost to the government will be $13,000,000. It will hardly be pretended that the government can own the road when it pays so very little, and the Grand Trunk is not very likely to admit their claim. But does any man in Canada consider seriously this statement of the Prime Minister that the cost of this road to the country will be only $13,000,000? The right hon. gentleman says that we are only going to pay the interest on the money. But who is to pay for the bonds in fifty years? If the calculation of the government is right and this road is going to cost the country only $13,000,000, then, there never were in public life men deserving of stronger condemnation. If they have the secret of building roads for one-eighth of what they are worth, then, there should not be a square mile in Canada to-day which they had not provided with railway accommodation. They are going to get this road according to their story for less than one-eighth of its cost——

Mr. THOMPSON (Haldimand). That is pretty cheap.

Mr. BRODER. Very cheap. But if you get the goods at that rate you may be certain they are pretty poor. But nobody supposes that the right hon. Prime Minister is serious when he says that the expense to the country will be so small as this. Like myself he likes his little jokes once in a while, and this is one of his jokes. Otherwise, he has not been true to Canada in not using this secret of his to provide railways everywhere. Why, on the basis of the hon.

gentleman's figures our public debt really amounts to very little. Hon. gentlemen opposite went up and down the country for years talking about the rascally Tories increasing the public debt. Now we find there is nothing in it, for we only pay the interest on that debt. These hon. gentlemen are going to reduce the debt by $3,000,000, and they make a great deal out of that statement. But three millions, according to their figuring is only a few thousand, so they have nothing to brag about. When I was a boy at school I studied a certain kind of arithmetic. But these hon. gentlemen seem to have a new style. It has no multiplication table in it, and no addition—just subtraction. In the old Irish arithmetic of Foster & Goff that I studied, there was what was called the rule of false. You solved a problem by supposing something which was not so and working from that supposition. It seems to be that is how this road is going to be built. A man who knew the dark corners of Foster & Goff, in my early days was supposed to be able to do anything. It is evident that the government have studied the dark corners of Foster & Goff, and they are going to build this road on the basis of an arithmetic not known to most of us. Still, they are not able to tell us who will own the road when it is all done. I think they will find that the western end, which will pay, will belong to the Grand Trunk, and the eastern end, which will cost something to run, will belong to the government. The Grand Trunk does not touch your eastern end of the road at all—they have no responsibility for it. They know too much about railways for that. The ministers are under the impression that they know all about railways. They went to bed one night knowing nothing of the subject and they woke up next morning first rate railway men. Still, they cannot get Mr. Hays to have anything to do with the eastern end of this line. The right hon. leader will have the eastern end of the road as a monument to the folly of this House and of the government, if he does not look out. It is not going to pay, and I have already quoted what the hon. gentleman said in 1898 to the effect that the government should not touch anything that would not pay in a commercial sense. He does not pretend to say that this will pay, but tells us that it is not altogether a commercial, but a national undertaking. But I will not even give it that credit. It will be left as a national undertaking with the Dominion government simply because no one else would have anything to do with it. But the western section will pay its way right along, and the Grand Trunk will take that end of it.

I have spoken at greater length than I intended. In closing I merely express the hope that the government will consider the larger proposition that has been laid before parliament by the leader of the opposition, a proposition which will help to solve the question of cheapening freight rates for the people of the country, a thing which cannot be done by the policy of the government.

Mr. THOMAS MACKIE (North Renfrew). Mr. Speaker, I had not intended to say anything on this question until I heard my hon. friend from Dundas (Mr. Broder) giving such awful descriptions of the route over which this road is to run. He spoke of mountains two thousand feet high and other obstacles just as great. I think, perhaps I can enlighten the hon. gentleman as to a portion of the route. As to the extreme eastern end, I do not pretend to know anything about that; but as to the central portion, from Quebec to Winnipeg, I have been over a good deal of that country, and possibly I know a little more about it than almost any other member in this House. Well, I want to tell them that the height of land on this portion of the road is as level as it is on either side, or nearly so. There are no mountains or hills.

Mr. BRODER. I did not say that it is not a level country along all the height of land, but that is where you will have to go to get a level country, it is not level outside of that.

Mr. MACKIE. There is no doubt that when this road leaves Quebec it starts off in a north-westerly direction, and it will not touch the height of land for 300 or 400 miles. I do not see any reason why it should cross the height of land until you get into Ontario, not in Quebec, because the country is as level there on one side as it is on the other. The member for Dundas says that people won't run railroads into that country for fear of setting fire and burning up the pine, and he wants to know if we are going to take pine timber out by railroad. I do not know what corner of the earth the hon. gentleman lives in if he has not seen timber coming down the Ottawa river here for the last thirty years and carried off by rail, millions of feet. I can tell him that there is a great quantity of pine in that country, part of it in Quebec, that we cannot get out in any other way.

Mr. BRODER. Did not that timber largely come over the road owned by Mr. Booth, to his own mill?

Mr. MACKIE. No, the hon. gentleman does not know what he is talking about. He will be safe in talking about woollens but not about lumber. Millions of feet of lumber have come down over the Canadian Pacific Railway from a region 200 or 300 miles on the other side of North Bay, and that is brought down and rafted from Ottawa. Now, Sir, we have heard it said that the country through which this road is to run from Winnipeg to Quebec is a worthless country. Well, I am well acquainted with the country on both sides of the height of land, for a length of 500 or 600 miles, and I can tell the hon. gentleman that it is not worth-

less. There is some of the finest pine grown there in the Dominion of Canada, on both sides of the height of land, especially on the south side. There is a large tract of country around Grand Lake Victoria, on the Ottawa river, containing thousands of miles of limits, and which cannot be got out except by railway. We have been trying to get a route by the Gatineau river to strike into that country and get a railroad built there, but we have never succeeded. When this new road goes in there I think it will touch a bay of that lake. The lake is forty or sixty miles long, very large and wide, and it has one bay that runs twenty miles north, right up to the height of land. I think it would pay well to strike that bay with this road, and if it does, there is pine enough in that country to keep that road running for ten years, giving it all it can do. There is as fine board pine there as ever went into the English market, and it must come out by railway. The country is a forest country, there is hardly any burnt land in it. It is forest from 100 miles of Quebec, I suppose, away into Ontario about 300 miles. I venture to say that when that road is built there will be more sawmills along it than there are on the Ottawa river at the present time. There is tamarack, yellow birch and pine; in fact you will hardly find any part of that country on either side of the height of land that has not pine, though perhaps not in as large quantities as we used to get out years ago.

Mr. CLANCY. The report of the Ontario surveyors says there is no white pine to speak of north of the height of land.

Mr. MACKIE. The report of the surveyors possibly refers to the Abitibi and Moose river regions, that is the route they all take. But I am talking about the bush, away in the interior where there are canoe routes beyond the lake. I do not think there is any pine in that country the surveyors speak of, but there are other large rivers that start from the height of land, and you do not have to go many miles before you reach large quantities of white pine. Talk about the engineers going into that country to find pine, I think the lumbermen, outside the Indians, know more about it than any other people in the world. I have travelled over that country myself, and I have paid thousands of dollars to explore it. We get reports from our bushmen; we keep bushmen travelling all the year round in that country. I have a report book at home that will show the character of the country north of Ontario and Quebec, showing whether it is level or rough, and the character of the forest. But of course that is private information. That is not to be given to the hon. gentleman. Each lumberman is supplied with a report showing where the best pine is, and on what river it is, but this information is not given out to the public. Hon. gentlemen might get information from some lumbermen that would not cost them anything, but they could go there and locate the timber as well as I can. I think the lumbermen know more about the route this road is going to take than most of the engineers. You will hardly find a lumberman in the city of Ottawa that has not a report book dealing with some parts of that country.

We hear it reported that the land is no good, that it won't raise grain or anything else. Now, I have seen as fine potatoes, cabbage and turnips and all such things grown at Lake Abbittibbi as I have seen in any part of Ontario. That is near the boundary line between Quebec and Ontario. The boundary line is at Lake Abbittibbi, about 400 miles from Quebec. I am speaking of the country this side of the line, in Quebec. There are blocks of a thousand acres, or two or three hundred acres—it may be broken a little—of as fine land as there is anywhere within 500 miles of the city of Ottawa. I do not know but that it will raise as good crops, it may be a little far north for wheat. But Manitoba at one time did not raise good wheat, wheat used to get frozen there, but now it does not, and farmers understand better how to regulate their crops. But my intention was only to give a description of a part of this country that this road will run through, and I do not think that there is a better country in Canada for a railroad than a region 500 or 600 miles long that will be traversed. I do not see why there should be any fault found with a road being built there. It is a direct route from Quebec to Winnipeg, and you cannot get a more direct route. The idea of going away around by Toronto, and I suppose by North Bay, to get to Winnipeg—why, the thing is ridiculous. When you have such a country as that you want to open it up, and I think Ontario will get more benefit from this road than any other part of the country. That is a new country, the lumberman has never got back that far because it costs too much to get in supplies. It means taking them in with canoes in summer, and drawing them in winter over miles and miles of snow. Any man who has worked up there don't make much out of the run, because it costs too much to take in his supplies. This pine I speak of on Grand Lake Victoria, is about 200 miles above where any lumber has been cut.

Mr. CLANCY. Is that in the district of Nipissing or Algoma ?

Mr. GRANT. It is in the Lake Abitibi district.

Mr. CLANCY. But I mean this Lake Victoria ?

Mr. MACKIE. I am not talking about the Nipissing district. I am talking about the route of this proposed railway. The district to which I am referring now is at the head of the Ottawa river. The railway will

have to run parallel with the Ottawa river for about 200 miles until it crosses the boundary between Quebec and Ontario. That portion of the Ottawa river has never been improved and it is not likely that it will be, and the pine in that country will have to come out by rail. The square timber will be made with the axe and the logs will be sawed up there. The lumber will be taken out by rail. Lake Abitibi is near the watershed. It is on the canoe route to Hudson's bay. You cannot get any transportation by steamboat within about 300 miles of it. You have to go in your canoe, and that is the reason why that country is not settled. This railway will open up the region to which I refer. No branch railway can open it up as well as a through line, because the proposed line follows along the boundary and a country in which fine agricultural land is found. There is as good farming land on this side of Lake Abitibi, in the province of Quebec, as there is to be found in any portion of that province, and when you get across the boundary line into the province of Ontario you will find that settlers are located right up to the boundary line. The boundary line follows the Ottawa river until it gets to the head of Lake Témiscamingue, when it strikes due north towards James bay. Settlement on the Ontario side extends away northward along the boundary line, and there are some settlers near the height of land now. There are twenty good townships in that region that are filling up very rapidly. This road will go very close to these settlers, and the Témiscamingue Railway, which is being constructed by the Ontario government, will go right through the settlement, and the two will likely join at some point in that neighbourhood. I do not speak only from my own knowledge, but I base my statement also on the reports which we have received, that there is as fine land in the townships to which I have referred as there is in any part of Ontario. I am also told by the Indians and trappers that the land for 200 or 300 miles beyond is equally as good. This road is going to be a great benefit to the northern portions of Ontario and Quebec. I do not know of any other proposition that would confer as great a benefit upon this portion of the country. The government road running from North Bay will tap the transcontinental line somewhere in this vicinity, and there will be roads running from Port Arthur, from Quebec and other places, which will also connect with it, so that important centres south of the railway will have the benefit of branches connecting with the transcontinental line, which will also be an advantage to the settlements along the route of the road. As to the route below Quebec, I cannot say anything, as I do not know very much about that country. But I can tell the House one thing that surprises me, and it is the contrat that the government have made with these railway people. I think it is all a one-sided contract. I do not think there ever was a contract in Canada like it before.

Mr. CLANCY. Hear, hear.

Mr. MACKIE. It is all in favour of the people.

Some hon. MEMBERS. Hear, hear.

Mr. MACKIE. The hon. gentleman (Mr. Clancy) was shouting before he was out of the bush. I think this scheme will confer a greater boon upon Canada than anything that any government has ever done. I know that some of the strongest supporters of hon. gentlemen opposite in their own counties have told me that if they oppose this road they need not go back for re-election. Of course, we do not expect some hon. gentlemen on the other side from western Ontario and around Toronto to do anything else. They will oppose any road that is not going into Toronto, or at least into Ontario. That is their general policy in this House. I think that some hon. members opposite from the province of Quebec, and especially the hon. member for Jacques Cartier (Mr. Monk), do not know anything about the north-west portion of their own province. The hon. member for Jacques Cartier does not think that that country has any value at all. I am surprised that an hon. gentleman who occupies the position of a leader of his party should not know anything about his own province. I do not think he is qualified to represent the province of Quebec.

Mr. CLANCY. He may have obtained his information where the hon. gentleman did—from the Indians.

Mr. MACKIE. I do not need to go to the Indians or to any white man for any information that I have. I am, I think, well qualified to speak upon this subject. I have travelled through that country with my pack on my back and slept on three feet of snow every night. When you are travelling through that country it is impossible for you to tell when you have arrived at the height of land until you see which way the streams are running. If the streams are running northward, you know you are over the height of land. I do not want any hon. gentleman to tell me that this is not a good country to run a railway through. I never saw a better. Travelling on the Canadian Pacific Railway around the north shore of Lake Superior a man is in danger of his life going around those curves. I never want to go back to the North-west until there is another road built, and I think I will wait for this one, because this road will traverse a level country. Some hon. gentlemen have said that there are no water-powers on this route. There are the greatest water-powers on the Ottawa river not far from the proposed line of this road that I suppose there are any place in Canada. Of course, you cannot find water-powers byond the height

of land unless you go quite a distance from it. I do not see why this road should go beyond the height of land. I think it should be built on this side, because then it will open up a large tract of fine agricultural country. Any man who opposes this scheme who lives in Ontario is not doing Ontario justice, and I will say the same of any man living in the province of Quebec who adopts a similar course. There is no other proposition that can open up the country as advantageously as this. I hope that when the time comes some hon. gentlemen opposite will change their ideas a little. When I was in Quebec the other day I met a strong supporter of the hon. leader of the opposition (Mr. Borden, Halifax), who asked me about this railway and who expressed the idea, strong Conservative as he is, that the hon. leader of the opposition should not oppose it. Possibly, when the vote comes that hon. gentleman will not be here, because we do not see him about very much. This railway will run through twenty-five or thirty townships of as good farming land as can be found in any part of the older province of Ontario, and it will open it up. I do not know that I have much more to say, except to express the hope that hon. gentlemen will consider the matter well before they vote.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

PRIVATE BILLS.

TORONTO AND HAMILTON RAILWAY.

House went into committee on Bill (No. 147) to incorporate the Toronto and Hamilton Railway Company.—Mr. Campbell.

On section 11,

Mr. BARKER. With regard to clause 11, I notice that the word 'communication,' an unusual word, is used there. Now that is certainly a word that is not common in Canada, and I would suggest that it should read 'or other public communication or place without first obtaining the consent.' That would make it quite clear. I do not know what a communication is in regard to a street or anything else. It may have a significant meaning. I have no objection to using the words 'street or other public communication' if the words 'or place' are added after it. I cannot see any objection to that alteration, and it might happen that a square in the middle of a city or a park, might not be called a communication; it would be a place, however.

Mr. CAMPBELL. I may say, that this Bill, as everybody knows, was very carefully considered in the Railway Committee for several days, and the amendments that were made to it were mutually agreed on by both parties and it went through the committee unanimously, without any discussion, after this agreement. I do not like to see any changes made in the Bill now, and I think so far as those two words are concerned, 'communication' or 'place,' they mean identically the same thing. The word 'communication' means, I suppose, a park, a square, a street, a highway. If you look at the dictionary you will find that the word 'communication' in this sense is derived from an old English phrase, and it means a place such as a park, a square, a street, a highway, where people communicate with one another. I understand the object Mr. Barker has in view, that the city of Hamilton wants to take precautions that this railway shall not have the right to go through a park. Well, I think the word 'communication' will fairly cover that, so that it cannot possibly do that, and any way there should be no objection to it, because under this clause, you will see that the railway has no right to run along any street or highway in any city or town without the consent of the municipality, and the municipality in giving their consent to run along any street or highway can easily stipulate that it shall not run through any park or any where else they choose. I have not had very much time to consult the promotors of the Bill, and I trust that my hon. friend will not press the alteration.

Mr. BARKER. I quite admit all that the hon. gentleman has said. This Bill as it stands to-day was, as I understand, agreed upon at one o'clock in the morning, between the solicitors, but I have a duty to perform to my constituents, and I am not quite clear that notwithstanding the words 'public communication' this railway company, if they get into the city of Hamilton, may not be able thereafter to run across two public parks in that city, which the citizens regard as so important that rather than have them interfered with they would keep this railway out altogether. I may mention that a short time ago a proposition was made to construct a railway from Galt into Hamilton, and the one point upon which the railway was prevented from going into Hamilton was that they wanted to run through the parks of the city, and get off the street. Now I understand the hon. member for West York (Mr. Campbell) to argue that 'communication' does cover in the broadest sense a public place. All I desire is to make it quite clear that a public place is included. I do not desire to force the question unnecessarily, but it is an important matter to the citizens of Hamilton, and I submit that when the hon. gentleman says that the word 'communication' will cover the word 'place' he cannot have any objection to the words 'or place' being inserted in the Bill, so that there may be no doubt about it. That is all I contend for, and I do not want to hamper the hon. gentleman now in his Bill in the least. Personally, I am opposed to the Bill from first to

last, but the Bill having been agreed to I am content to allow it to pass. I want simply to add 'or other public communication or place,' that is public communication or public place. I have no objection to striking out the word 'communication,' but if they desire particularly to have that word in, I want to add the words 'or place,' and I do think the House will see the reasonableness of what I ask for. I would therefore, Mr. Chairman, move, that after the word 'communication' in the third and sixth lines of clause 11, the words 'or place' be inserted.

Mr. CAMPBELL. I would suggest to the hon. member for Hamilton that as there is no difference of opinion as to what is desired and my contention is simply that the word 'communication' covers all that is required. If my hon. friend thinks that it does not, I would suggest that you strike out the word 'communication' and insert the word 'place' in its stead.

Mr. BARKER. I have no objection to that.

Mr. BLAIN. This is a new clause, which was not printed until to-day. I think this is the first time it has come into my hands. The first part of it reads, 'notwithstanding anything contained in the Railway Act.' Why should that not be, 'notwithstanding anything contained in this Act'? It seems to me that the clause was wide enough to give the company the right to construct their line of railway along the highways under the General Railway Act without the consent of the municipality.

Mr. BARKER. I was present in the committee when this alteration was discussed. I think that if the words, 'notwithstanding anything contained in the Railway Act,' were left out, the streets would be protected as against everything in this Bill. These words were inserted because some hon. gentleman in the committee thought that although this Bill might not permit the construction of a railway on the streets, the general Railway Act might do so.

Mr. FRASER. I think there will be greater security by leaving the words in, otherwise there might be some clause in the Railway Act which, despite the words in the Bill, might allow a railway to come in.

Mr. CLARKE. The intention was to prevent any possibility of that.

Amendment agreed to, and section as amended, agreed to.

On the question that the Bill be reported,

Mr. BARKER. Before you report the Bill, I desire to say in the House what I said in the Railway Committee upon the subject of this Bill. I consider that this Bill is totally outside the jurisdiction of this parliament. I have not opposed it in the House, because it was assented to by the parties immediately concerned on both sides. They, in good faith, as between themselves, agreed upon the clauses of the Bill; and although perhaps my objection and my voting against the Bill may be somewhat inconsistent, I desire to repeat here what I said in the committee, that I do not think this parliament has any power to pass this Bill at all. My motive for stating this in the House is this. One of the legal gentlemen who acted for the promoters of this Bill said, when the Bill passed the Railway Committee, that if the municipalities were unreasonable in refusing the permission under clause 11, it might be necessary for them to come back to the committee. In view of that statement of the counsel who was acting for the promoters of the Bill, I desire to say that I protest, and strongly protest, against such measures as this as an infringement upon provincial rights. I think it is wrong, extremely wrong, for this parliament to assume jurisdiction, contrary to the terms of the constitution under which we sit here; and whenever such a Bill as this comes up, I will always vote against it, as I would desire to vote against this Bill. I do not know that I need say anything more. I simply make this statement now to protect myself, and I think to protect other gentlemen, perhaps on both sides of this House, who are opposed to such legislation as this, against the idea going forth that by passing this Bill any precedent is created under which other Bills of a similar character can be brought forward. I think it is necessary to say this, and to say it very emphatically, because all through the discussions of this Bill in the Railway Committee, we were met at every step by statements that similar Bills had already been passed by this House. For my part, I am not going to sit silent here and allow without protest a Bill to pass which may hereafter be brought forward as a precedent to authorize similar legislation in the future. I am very glad to be able to say here that in what I assert I have been endorsed, and very strongly endorsed, by the acting Minister of Railways and Canals, who expresses substantially the same view.

Mr. INGRAM. I would like to ask the hon. gentleman why this Bill conflicts with provincial rights. He has not made that very clear.

Mr. BARKER. I have simply entered my protest. I do not wish to occupy the time of this House in re-discussing a principle which has already been fully discussed. When the measure was up on a previous occasion I went into that question, stating my reasons for believing that this measure does not come within the functions of this House, and I do not think it neces-

sary to occupy the time of the House or 'Hansard' in repeating what I then said.

Mr. RUSSELL. There is one observation of the hon. gentleman which I think perhaps he did not mean. I do not suppose the hon. gentleman intended us to understand that he thinks this measure is beyond the power of this House ?

Mr. BARKER. I think it is beyond the power of this House, for this reason, that we state in this Bill a fact to give us jurisdiction, which fact I believe is contrary to the opinion of every hon. gentleman in the House.

Mr. RUSSELL. Does the hon. gentleman mean that any court would hold that this Bill is ultra vires ?

Mr. BARKER. No, I believe not, it would be precluded from so holding, by our misstatement of the fact.

Mr. RUSSELL. That was my only purpose in asking the question ; because the hon. gentleman's statement was beyond what he really intended. On the main question, I entirely agree with the hon. gentleman, that we ought to have that fact proved in a general way to the satisfaction of any committee of this House before we assume jurisdiction over purely local and provincial matters. As far as the general principle is concerned, I wish to express my agreement with it.

Mr. BARKER. I quite agree with what has been said by the hon. member for Hants (Mr. Russell). He has stated the legal position, I think accurately. I have no doubt whatever in my mind that if this House chooses to state as a positive fact in a Bill that a work is for the general advanage of Canada, there is no remedy—it follows, from the statement of the fact, solemnly made by the parliament of Canada, that the work is for the general advantage of Canada, that the Bill relating to it comes within our jurisdiction. But what I contend for is this, that when those words are used as a mere-pretense, when there is no possible foundation for the state ment, we have no more moral right, sitting in this House, to enact such a measure, than we would have for supporting a Bill to authorize the construction of a village pound because we should choose to state that such a pound was for the general advantage of Canada.

Mr. CLARKE. I just wish to emphasize what the hon. member for Hamilton has said, by remarking, that there have been a great many measures similar to this passed through the Railway Committee and the House. The abuse, if I may use that expression without giving offence, of the privileges of this House has been carried to such an extent that the municipalities have had to make a very special and very strong appeal to the sense of justice and fair play of members of this parliament to stop this class of legislation. With the co-operation of hon. gentlemen on both sides, this measure has been shorn of its most objectionable features. As the hon. member for Hamilton has said, a compromise was reached which we are bound to stand by, but I hope that this will be the last Bill of this kind which will ever be presented to a Dominion parliament. This is an invasion undoubtedly of provincial and municipal rights. The intention of the promoters in coming here was to evade the obligations which would have been imposed upon them had they applied to the Ontario legislature.

Mr. FRASER. While I agree in much that has been said, I would not like to say that a special case could not be made out. The general principle is correct, but I can understand, for example, that in the case of a city which a railway crossed and re-crossed, a great continental line, it might be necessary that we should assume jurisdiction in the interest of the travelling public.

The POSTMASTER GENERAL. I am sure that my hon. friend, the senior member for West Toronto (Mr. Clarke), when he spoke of the practice of passing Bills by this parliament, which were of a provincial character, had no reference to this particular parliament or to any particular session, but to the Dominion parliament, speaking in the broadest sense of the word.

Mr. CLARKE. Hear, hear.

The POSTMASTER GENERAL. I well remember, as far back as twenty years, when this abuse of the British North America Act began ; and year after year since then, measures have been passed through the Dominion parliament which should have been dealt with by a provincial legislature. This was done by declaring such measures to be for the general advantage of Canada when they really were not. On many an occasion, in days gone by, I have protested against this practice. I raised the same protest which has been raised in this case by the hon. member for Hamilton and others. It is well that parliament has been brought face to face with the situation resulting from this lax system of legislation. It is well that this measure has been thoroughly discussed in the Railway Committee, as we have thereby arrived at a clear idea as to how similar applications should be treated in the future. I would not venture to lay down a rule, but it seems to me that if I had to determine the policy and practice of the Railway Committee in a question of this kind, I would think it proper, if we are to give a fair interpretation to the British North America Act, that we should, in the first place, assume that every work which

is within the confines of a province is prima facie subject to the jurisdiction of that province only, and let the onus rest on those who seek to obtain legislation here to prove that the work is properly the subject of Dominion legislation. Unless they can establish that point clearly, the committee should not proceed to deliver judgment and give a federal charter to a work which it does not possess. This debate will not prove unprofitable if it results in educating members to the consequences of continuing the practice which has so long prevailed. As has been remarked, where are you to stop, if you are to declare, without inquiry or reflection, that any work that may be in existence in any nook or corner, municipality or parish, of this broad Dominion, is a work for the general advantage of Canada, and thus remove it from the jurisdiction of the local legislature, which ought to deal with it. Although this measure may become law, I venture to say that it will be many a year before parliament will be asked to pass legislation of a similar character.

Mr. BORDEN (Halifax). No doubt whatever that the clause of the British North America Act has been given a scope it was never intended to have. It has been used over and over again, as a matter of course so that a declaration is made more as a matter of form than anything else, and I am inclined to think that probably it will be good policy for this parliament in the future to insist that any measure of this kind, by which it is intended to bring within the jurisdiction of this parliament an undertaking which is prima facie within the scope of provincial jurisdiction, should be either referred to a select committee of the House, in order that the question of a fact may be absolutely proved, or be submitted to the determination of some judicial authority. There are of course many cases in which parliament itself would be the best judge. The Railway Committee or the Committee on Private Bills possibly might be the best judge. Those promoting the undertaking should be put into the position in which the promoters of private Bills in England are placed. If I understand the practice there, it is practically a judicial inquiry and a judicial determination upon important questions of fact involved in the preamble of the Bill. They are very much more strict than we are in such matters, and so far as this particular question is concerned, it would be very desirable that in the future we should adopt some such principle with regard to measures of this kind.

Mr. SPROULE. It is interesting, after the lapse of many years, to see parliament coming back to what was the intention of the framers of the British North America Act. I remember away back in 1879-80-82 and 1883, when the French Canadian members in this House were the only parties who objected to our legislative interference with what are undoubtedly the rights of the provinces. I remember very distinctly men who were regarded as eminent lawyers giving their opinion in the Railway Committee to the effect that although the declaration be made that the work is for the general advantage of Canada, unless the other conditions existed which brought it within the legislative authority of the federal parliament, it would not be held by the Judicial Committee of the Privy Council to be such a work. I have often regretted that these discussions did not take place in the House instead of in committee, as we then would have had a record of the debates. But I remember distinctly Mr. Hector Cameron and Mr. MacMaster, of Montreal, and several other prominent legal authorities, and Sir Hector Langevin as well, frequently expressing the opinion that we could not bring a work within the legislative jurisdiction of the federal parliament by the simple statement that it was for the general advantage of Canada, and that if the question came before the Judicial Committee of the Privy Council it would so decide.

It seems that since that decision has been given which leaves the impression that a declaration in the Bill that the work referred to is for the general advantage of Canada, of itself brings the subject within the legislative jurisdiction of this parliament. What I think ought to have been done with a great many of these Bills is to submit the question to the Supreme Court. This is one of the objects for which the Supreme Court was established—to advise parliament on these questions of jurisdiction as between the provinces and the Dominion. A case could be stated at any time and submitted to the Supreme Court. We should have at least the advantage of their judgment, and if it was deemed advisable to carry the case further, that could be done. But it seems that we are getting back to where we were twenty years ago, with the added difficulty that this decision has been given which seems to show that the mere declaration, in a Bill, as I have said, brings the subject within the jurisdiction of this parliament. But, because of this very fact, it is all the more necessary that we should surround these measures with safeguards that will secure to the provinces the right of control over provincial corporations. When we deal with Bills relating to works that extend beyond the bounds of one province or with corporations that have rights or interests in more than one province, there may be some justification for our dealing with them. But surely a short electric railway, even though it may cross lines of railway which are within our jurisdiction, can hardly be fairly called a work for the general advantage of Canada

and so removed from provincial to federal jurisdiction.

Mr. BARKER. The discussion is very interesting, and I think, very important. I do not go quite so far as to say that Bills of this kind should be referred to the Supreme Court, or to a judge of that Court. I am afraid it would interfere with the practical working of parliament.

Mr. SPROULE. But we have done it before.

Mr. BARKER. I know it. But I doubt if we could do it in all these cases. But I would suggest that in all cases where a Bill contains a declaration that the work is a work for the general advantage of Canada, there should be a report from the government or from the Minister of Justice to the committee having charge of the Bill, giving the opinion of the government or of that minister, as to the propriety of the declaration in regard to the particular work dealt with in the Bill. That would not preclude the committee from deciding the question, but it would put upon the government of the day the responsibility of saying whether they thought parliament had jurisdiction in the matter or not. I believe that if the present government had had this question referred to them under such a rule, they would have reported to the Railway Committee that the work referred to in the Bill was not one for the general advantage of Canada. The subject was brought before a committee of the government and they heard statements of counsel representing the province of Ontario and other provinces. But the government saw fit to refer the matter back to the Railway Committee. Considering that such matters affect the working of our constitution, the committee should have the benefit of an opinion from the government or the Minister of Justice, stating whether on the face of it the Bill appears to be one providing for works which are within the juridiction of this parliament. I would not desire for a moment that the Railway Committee should be debarred from the right to discuss or decide upon the question. But I do think the committee should have the opinion of the minister for their guidance. And I feel fairly certain that if such protection were afforded to the public we should have very little trouble on the score of such Bills as this. I doubt whether a government representing either political party would report that the work referred to in this Bill was a work for the general advantage of Canada.

Mr. HEYD. I think we ought to go even a little further than the suggestion of the hon. member for Hamilton (Mr. Barker). There should be certain conditions agreed upon that a railway company must comply with before it could be declared a work for the general advantage of Canada. The conditions should work automatically, and not be left to a majority of the Railway Committee, for that majority is always uncertain. The meaning of this phrase 'work for the general advantage of Canada' should be declared so that a railway company, before it even aspires to be clothed with the powers vested in these magical words, it should have to comply with certain conditions. The effect would be to relieve the committee of a great deal of unnecessary work. It seems to me that the practice has insensibly grown up in the Railway Committee of granting the benefit of these words to railways that were not really entitled to use them. And many members did not know what the effect of the words was. I have asked in the House and in the Railway Committee what advantage accrued to a railway company to which these words applied, and no one has been able to tell me. The impression has gone abroad that an attempt has been made in this House to take from the provinces rights that belong to them. I am sure that no such desire exists on the part of any hon. members of this House. If we have erred in the past in granting to companies the privilege of having their works called works for the general advantage of Canada, it has not been with the intention of robbing the provinces of any right belonging to them. If my suggestion were adopted and the conditions defined, our work of legislation would be done more smoothly and consistently. It should not be left to the majority of the Railway Committee in this general fashion to say whether a work is or is not a work for the general advantage of Canada. A majority of the Railway Committee might be friendly to one promoter, and declare the work he represented to be for the general advantage of Canada, while refusing the privilege to another equally entitled to it. We should define what those words mean, so that railways will be obliged to comply with the conditions laid down, and, complying with these conditions, they would be entitled to be called works for the general advantage of Canada.

The POSTMASTER GENERAL. With reference to the suggestion of the hon. member for Hamilton (Mr. Barker) that a clause of this kind should be subject to report from the government, I hardly think that, on reflection, the hon. gentleman will adhere to that view. The question that lies at the very threshold of the inquiry in each of these cases is one of facts, and parliament is the proper tribunal to inquire into that question of facts, either directly or by such machinery as it may invoke. When the facts are known, it is for parliament to apply the legal consequences by either bringing the work under the jurisdiction of the parliament of Canada or refusing to do so. But I would not favour parliament abnegating its functions to any govern-

ment or committee. It should retain the right to deal with those questions in its own way. Difficulty has arisen in the past because——

Mr. BARKER. The hon. gentleman totally misunderstood my suggestion. I did not suggest that the government should have the power to prevent parliament dealing with the question. I only said that when such a statement was made in a Bill coming before the Railway Committee, the Minister of Justice or some other minister should send a report to the committee for their information, stating that in his opinion he considered that work to come within our jurisdiction, that is to say, that it was a work for the general advantage of Canada. But I said moreover that I would not propose to preclude the Railway Committee or the House from deciding upon the question; I only proposed that the committee and the House should have the advantage of the ministry speaking with the responsibility of a ministry upon that question.

The POSTMASTER GENERAL. I quite understood the hon. gentleman. My view is that the first inquiry is to ascertain what are the facts. Are the facts such as to warrant the statement, not within the meaning of the British North America Act in the first place, but to warrant the statement in the ordinary acceptation of the words that the work is of such general importance as to warrant its being removed from the jurisdiction of the provincial legislature and being brought under the jurisdiction of the Dominion parliament. That is a question of fact in the first instance, and I do not think that the Minister of Justice is any better qualified to pronounce upon this question of fact than any other member of parliament. I was going to say that in my opinion parliament should not allow this procedure to be hampered or interfered with by a report of a government or by a report of any tribunal that is not appointed by this House.

Mr. BARKER. I quite agree.

The POSTMASTER GENERAL. The government is after all no better able to judge of the facts than any dozen members of this House. But I was going to make a suggestion, seeing that we are all seeking to accomplish the same end and to make suggestions that may hereafter bear fruit and cause proper consideration to be given to this point in connection with all other applications. I have not taken the opinion of my colleagues on this point, I merely give it offhand, the same as other hon. gentlemen are giving their views I presume. I was going to say that there are a number of rules in the standing rules of this House governing the procedure before Railway Committees, and it seems to me that the House itself might fairly formulate a rule dealing with a question of this kind, providing that when a Bill of this kind came before the committee the first step to be taken should be to make the proper inquiry, leaving it with the committee of course to take such steps as it saw fit. But I think that some good would come by having one of the rules of this House provide for dealing with such cases in the future.

Mr. CLARKE There is another suggestion that might be made, and it is that when legislation of this kind is being sought for which affects the rights and interests of great urban municipalities, it should be a prerequisite of such application before being considered by the proper committee, that the municipality to be affected should be specially notified that such legislation was being promoted, and the municipality should also be notified in what way its rights might be affected by legislation passed by this House as compared with provincial legislation.

The POSTMASTER GENERAL. A rule of the House might cover that.

Mr. CLARKE. In this connection I may say that the city of Toronto has spent three quarters of a million dollars on what is known as the Don improvement. The work was constructed by the city, with the sanction of the legislative assembly. It was practically a local improvement work, but by some means it has been declared to be a work for the general advantage of Canada, and the city of Toronto is getting a rental of $750 a year for that enormours expenditure. Muncipalities whose rights have been invaded by legislation of this kind are naturally suspicious, and I think if the onus of responsibility were thrown upon promoters of notifying municipalities that were likely to be affected by proposed legislation, additional safeguards for the rights of municipalities would be afforded which do not exist at the present time.

The POSTMASTER GENERAL. On Monday next the House will be called upon to consider the report of the select committee on the rules of the House. It would be out of order for me now to refer to those rules further than to say that one of the proposed rules is that in connection with an application of a telegraph or telephone company for legislation, in addition to the notice being published in the 'Canada Gazette,' a similar notice should be published in some leading newspapers. Perhaps that might not altogether meet the case, perhaps the notice, instead of appearing only in the 'Canada Gazette' and one other paper, should be published in the papers of the locality to be affected by the proposed legislation. If that does not go far enough, perhaps my hon. friend from Toronto (Mr. Clarke) would consider this suggestion, and when this Bill comes before us on Monday next, he would suggest something of the nature he has mentioned, for example, an additional notice.

Mr. CLARKE. A specific notice to the clerk of the municipality.

The POSTMASTER GENERAL. This would afford a good opportunity, at all events, to discuss that point.

Mr. FRASER. We must remember that a work that may now be considered for the general advantage of Canada, ten years hereafter may not be so considered, because new circumstances will arise. I would not wish to be bound by a rule made even by the wisest House that ever sat in Canada, as to any particular work being for the general advantage of Canada. You must leave that to the evolution that takes place in all countries and societies. Growing as we are, each succeeding parliament will be called upon to deal with the facts as they then exist. You cannot deal on hard and fast lines with a clause like this, because year after year and decade after decade circumstances will change.

Motion agreed to. Bill reported, read the third time, and passed.

SECOND READING.

Bill (No. 236) for the relief of Harford Ashley.—Mr. Porter.

NATIONAL TRANSCONTINENTAL RAILWAY.

House resumed adjourned debate on the motion of Sir Wilfrid Laurier for the House to go into committee on a certain proposed resolution respecting the construction of a national transcontinental railway, and the motion of Mr. Puttee in amendment thereto.

Mr. J. R. LAVELL (Leeds and Grenville). We have had the pleasure of listening to the hon. member for North Renfrew (Mr. Mackie), who gave us his opinions on this Bill, which of course he is entitled to do, as is every other member of this House, but his opinions can only have weight according to the weight of the reasons that he alleges in support of them. We have also heard from him certain statements which we may speak of as statements of fact and which were of interest to the members of this House. Among other statements made by the hon. member was that he knew more of that country through which this road from Winnipeg to Quebec is to pass than any other hon. member of this House. I presume, in making that statement, he also included the right hon. leader of the government. He then proceeded to tell us what he knew. I sincerely trust that much of the northern portion of Ontario, as also of Quebec, is of the quality which he describes but we have to confine ourselves to the country that he specially knows and not give weight to any opinion he may form. He tells us that he has gone through the north country, that he has seen the height of land, that he has crossed it and that he has examined the country on both sides of it. For what distance has he examined it ? He tells us that he has knowledge of it for 400 or 500 miles and he also tells us that he has personal knowledge of it for 100 miles.

Mr. MACKIE. I did not say that. I said I had personal knowledge of it for 100 miles in Ontario.

Mr. LAVELL. Very well. The hon. gentleman has personal knowledge of it for one hundred miles in Ontario, and also, I presume, he has personal knowledge for 300 miles in Quebec ?

Mr. MACKIE. Yes.

Mr. LAVELL. That is personal knowledge of 400 miles of country in all. This railway covers a distance from Winnipeg to to Quebec of a little over 1,400 miles in a straight line, not an air-line, because it is impossible to build an air-line. That, I think has to be admitted. The most optimistic speaker on this proposition, the hon. member for North Norfolk (Mr. Charlton) added 10 per cent to the distance to find out how much farther the road would have to go. The least distance was 1,500 miles, according to his estimate. His estimate is altogether too small, because I think it would be easily ascertained that no railway between points in eastern Canada has even been built within a distance of 10 per cent more than the air-line. Not long ago the Canadian Pacific Railway in building a piece of line without a subsidy and desiring to get the shortest possible distance between Perth and Toronto, built the line as straight as it could, but it did not succeed in keeping it within 15 per cent of the air-line. When you add the percentage of additional distance that it would be necessary to build in connection with this proposed new line, the mileage will be more nearly 1,500 or 1,600 miles than 1,400 miles between Winnipeg and Quebec. The hon. member has been over some 400 miles of this distance. He admits that he does not know the location of the line and he has only knowledge or professes to have information of less than one-quarter of the distance to be covered by the line as to its fertility and resources. There are others who have crossed the height of land and there are various heights of land that have to be crossed all over this country. It has been noticeable that the height of land is generally level, but that by no means proves that the height of land is fertile. I know that in the days when I could find time to go on long canoe trips, I had the pleasure to cross the height of land some distance north of the Canadian Pacific Railway. I admit that the height of land was level, I admit that it was very difficult to tell even when you came to the height of land, save by the waters flowing each way, but even the imagination of the hon. member for North Norfolk could not conjure up any fertility

in that region. Of course, I was simply hunting for scenery. The hon. member for North Renfrew (Mr. Mackie) was hunting for lumber. We probably both found what we were seeking. This shows the singularly small amount of information which we have concerning that region, and the possibility of building a railway through it. I will probably touch upon that again.

Notwithstanding all that has been said upon this question, it is necessary either in starting to criticise it or in expressing the opinions of an hon. member of this House on it to review the proposition even although it has been already done. There is a story told about a certain lawyer in one of our courts of appeal. He had been defeated in the court below, and having appealed to a higher court, he commenced to lay down some elementary principles when the chief justice interrupted him and asked him if he would not give the court credit for knowing something about the primary principles of law. His answer was this: That is just the mistake I made in the court below, my lord. I think from the way in which hon. gentlemen opposite have carefully avoided some of the principal facts in connection with this whole transaction, that they should be repeated very often, for after all, we have to come down to some preliminary principles which ought to be put forth in connection with any such proposition as that which is now before the House. What is the proposition? It is one that involves, as the right hon. leader of the government said, two principles, one the granting of a charter to the Grand Trunk Pacific Railway Company to build a road from Winnipeg to the Pacific ocean, and in connection with that road to give a guarantee and a certain amount of cash subsidy for that is what the payment of interest on the bonds for a number of years means, and the other part of the proposition is that the government shall build the road itself from Winnipeg to Moncton via. Quebec, and having built it hand it over to the Grand Trunk Pacific. That is the proposition in short subject to the details as they will be found in the agreement attached to the Bill. What is the reason given for the building of this road? We have in this House heard as many different reasons as there have been different speakers on the government side. But, I presume that we may give the right hon. leader of the government credit for knowing the reason for the faith that is in him better than any of his followers, and he has given practically three reasons. I am going to quote from his own words the reasons given by him upon introducing this Bill. He said that this work is undertaken, this contract is made:

> To provide immediate means whereby the products of these new settlers may find an exit to the ocean at the least possible cost.

He is referring to the new settlers in Manitoba, the North-west and British Columbia. Then, here is his second reason:

> Whereby, likewise, a market may be found for those who toil in the forests, in the fields, in the mines, in the shops of the older provinces.

It is well to look again at this second reason, and to follow the elaboration of the right hon. gentleman. He is referring to these settlers pouring into the North-west Territories in countless numbers, thousands and hundreds of thousands, he has mentioned, and he says that for one, two or three generations, the new settlers will grow cereals and probably nothing else. He proceeds:

> They will have need of everything that is required by civilized men. They will have need of clothing, furniture and every kind of manufacture. Then, Sir, what shall we do? Shall we allow them to be supplied by our American neighbours, or shall we provide a railway which shall enable our manufacturers in Ontario and Quebec to supply them with what they shall require?

I would ask the House to bear in mind these two main reasons, although there is another and very important reason given by the right hon. gentleman:

> These are the two main reasons for building the road. There is a third which I will deal with more fully and dispose of before touching on these two reasons.

And that third was the need of being independent of bonding privileges. Now, Sir, this is the argument of the right hon. gentleman that has been carefully analysed already by the ex-Minister of Railways, and has been referred to repeatedly by different speakers who touched on this matter. Attention has been drawn to the way in which the right hon. gentleman dealt with this matter. I might read his words. They are worthy of repetition. In speaking with regard to this bonding privilege, of our position with regard to the United States, and of the necessity of our being commercially independent of the United States, he says:

> What is our position to-day?

He does not say what was our position a good many years ago, but 'What is our position to-day?'

> What is our position to-day? From the early days of railway development of this country, we have been dependent on American good-will for the transportation of our goods across American territory. From the early days of Canadian railway development, we have been forced to make use of American territory and harbours.

He repeated almost this same language further in his address. He says:

> If we have used American ports and the bonding privilege it was not because our harbours were ice-bound in winter but simply because we have no railways of our own to reach them.

Now, notwithstanding the fact that the fullest prominence has been given to the

error made by the hon. gentleman in that, and that not only to-day, but for many years, we have had not only one, but two railways that connect with the harbours on the Atlantic coast; notwithstanding this, that statement has been repeated over and over again. Surely, Sir, any school boy attending at any of our schools who went up to a departmental examination and gave such an answer as that when asked about our railway connections, would be, and most certainly would deserve to be plucked. It should be something well within the knowledge of every member of this House and of every citizen of this country that not long ago the exportation of cattle through the United States from certain parts of the interior was stopped. The Canadian Pacific Railway could not carry them across to St. John, because it would have to go through the state of Maine, and the Grand Trunk Railway could not carry them to Portland, and they were carried around by the Intercolonial Railway; and not only have we the Intercolonial Railway, but, as has been repeatedly referred to, we have another route by Edmundston connecting with the Intercolonial Railway for St. John. I emphasize this, not to call attention to the particular mistake, but to call attention to the fact that that simply illustrated the vagueness of detail and of knowledge of fact on which this whole project is based. There is a lack of exactness which augurs very ill for the successful carrying out of such a gigantic undertaking. That lack of exactness and the vagueness is not only illustrated by the statements made with regard to the bonding privileges, but it is further illustrated by what is proposed to overcome this difficulty. The member for Bonaventure (Mr. Marcil), referring to the need of our having an all-Canadian line, said the Intercolonial Railway had been built without regard to commercial principles, and was 300 miles too long. We have heard some pretty wild statements, but I think that is the largest estimate of the excess of distance of the Intercolonial Railway that has been made in this House. Well, that is one estimate, but we have on the other side the estimate of the ex-Minister of Railways, who said that 63 miles could be saved in a distance of several hundreds. We have further the estimate made by the right hon. gentleman who moved the resolution. He says that 120 to 140 miles can be saved—at least he says that in one part of his speech. I have said that these estimates of the distance by which this proposed new railway might shorten the road between Quebec and Moncton, or Montreal and Moncton, were very vague, that the figures presented disagreed, but it is not simply the different speakers that disagree. We find in the speech of the right hon. gentleman when he was moving this Bill three different statements of the distance that could be saved. When he first refers to it he says:

If the truth must be told it must be said that those who conceived and carried out the Intercolonial Railway added to its length, to its normal length several hundred miles.

That is the first statement. The next statement is that it being necessary to make the shortest possible line, a line will have to be made going direct to Edmundston, close around the north of the state of Maine and from there to Moncton. That is the shortest possible way of making an all-Canadian line. By doing this we can shorten the distance between Moncton and Lévis by from 120 to 140 miles. I might suggest that that is very different from several hundred miles, but probably it is just as clear as most of the facts that we have in connection with this new road. However, the right hon. gentleman desired to give a reason for the faith that was in him, and he referred to the knowledge that we had, and after speaking of knowledge that had been gained by lumbermen, by early explorers and others, he said that we have an exact survey, a survey of this very country that had been made under the government of Sir John A. Macdonald. He quotes from this the report of the engineer in charge, Mr. Davey, and this is the only exact report that is quoted by the right hon. gentleman, or that has been quoted by any member of this House. I am not going to quote that this session but at the close of this report Mr. Davy, according to the quotation made by the right hon. the Premier, says that the survey made by him showed that the distance from Montréal to Moncton could be shortened to 759 miles, but he said there was one place where 100 miles more could be taken off, and the total length from Edmundston to Moncton be reduced to 199 miles, which makes 749 miles from Montreal to Halifax. According to the time-table of the Intercolonial Railway, which is the only authority I have had an opportunity of consulting since reading that, it seems that the present line from Halifax to Montreal is only 87 miles more than that, so we find in the speech of the right hon. Premier three separate estimates of the distance by which the line from Moncton to Montreal may be shortened. The first is several hundreds, the next 120 to 140, and then when he comes down to read an engineering report, he is not larger than 87 miles. Well, that report is on paper, and is still a report, the line has to be built, and engineering difficulties always arise, and no one ever yet knew of a line being built in quite as short a mileage as the original estimate of the first engineer who went over it. I think we can take it for granted that the statement of the hon. the ex-Minister of Railways was correct when he said that 63 miles is probably the very utmost by which the line between Montreal and Moncton, or Quebec and Moncton, can be shortened.

And it is for the sake of gaining 63 miles,

or let us say 87 miles, out of some 836, that this project of building a new line from Quebec to Moncton and then handing it over to a rival company, is to be undertaken. The cutting off of these 87 miles or less is to be undertaken, it is said with great gusto by the right hon. the Premier, for the sake of relieving us from the bondage of the bonding privilege. Well, that is worth examining. Suppose the United States did cut off its nose to spite its face; suppose it did injure its own railroads and ports for the sake of causing injury to our Canadian railroads—because that is after all the meaning of it—what would be the result? Of course, it would mean that Canadian goods for export would have to go around the north of the state of Maine. That question is settled, and rightly enough. As all who have examined the map know, that would be a most expensive route; but what will be the best route? The right hon. gentleman says that the route proposed by this Bill will be the shortest and the best. But this route would be considerably longer than the Canadian Pacific Railway short line to St. John or the Grand Trunk line to Portland; consequently the haul over it would be more expensive per mile, and therefore it would be a more expensive route. But in the event of our railroads being attacked by means of any such hostile act as the repeal of the bonding privilege, who might better in the interests of Canada own this short route from Quebec to St. John or Halifax? Would it not be infinitely better as has been suggested by the hon. leader of the opposition, that if that route needs to be built as a better and shorter route, that it should remain in the hands of the people of Canada? Would it not be infinitely better that it should remain not only owned by the Dominion, but operated by the Dominion, so that in the event of such an act of hostility, the Dominion, if necessary, would be willing to lose a certain amount of money in order that our commercial interests should not be injured? If necessary we could make it haul from Montreal or Quebec to St. John or Halifax at as low a rate as any of the railways of the United States offer to their seaports. The country could well afford to do that in order that our commercial interests would not be imperilled; but could we compel a private corporation to do that? No legislation under the sun could compel private corporations to carry freight at a loss, though the country could afford to do it to meet that special emergency. If the proposed railway can get us out of the difficulty of the bonding privilege, it only shows that it should remain in the possession of and under the control of the government in order to serve the interests of Canada as a whole in the event of such a contingency.

There is another thing which, although attention has been called to it before, is worth repeating. If this contract is carried out, and that road is built, it must of necessity be built to the injury of the Intercolonial Railway. That matter has been treated so exhaustively by the hon. ex-Minister of Railways and Canals, that I do not propose to go into it; but I do desire to answer a somewhat serious proposition made by the hon. Minister of Finance. He asked how the building and running of this road would hurt the Intercolonial Railway. The Canadian Pacific Railway, he said, had built a short line to Montreal, the Canada Atlantic, did not object to it, and the two roads are running. It seemed to me that the hon. Minister of Finance must have laughed up his sleeve when he said that. He must know that the two cases are not in the slightest degree parallel. In the first place, the two roads run through a populous district between two large centres of business. It would have been a closer parallel if when the proposition was mooted that the Canadian Pacific Railway should build a short line to Montreal, the Canada Atlantic Company had offered to build the line, had entered into a guarantee to see that it was kept up to date, and at its completion handed it over to the Canadian Pacific Railway on condition that after a few years the Canadian Pacific Railway would pay a small percentage for its use. That, I admit, is an insane proposition; but it is hardly less insane than the proposition of the government to enter into a contract with a private company to build a better road than it has at present, and at the end of a certain number of years to hand it over to that private company for an annual payment of 3 per cent on the cost, without taking any guarantee that the road would ever be paid for. So much for the bonding privilege, which has been dealt with pretty freely by others.

The right hon. the Premier said that this new road would form an exit for the products of Manitoba and the North-west Territories to the ocean at the least cost. What exit is there now? One would almost imagine from the speech of the right hon. gentleman that there is no exit now, but that the farmer of the North-west grows his crop and piles up his grain, and leaves it there until some one with a dray comes along and takes it out, or until settlement grows up in the neighbourhood large enough to consume it all. We have at present, I think, some means of getting our crops out of the North-west. I should imagine that our Trade and Navigation returns would prove that. How do they come out? It seems ridiculous to have to state it; but, from the speeches of hon. gentlemen opposite, it seems to be necessary to inform them of the fact. There are at least two main lines and a great many branch lines of railway running through the country. I would like to see a great many more; and when I first saw the proposition of the Grand

Trunk Pacific to build a line from North Bay westward, I was very glad to see it, and to give it my support in the Railway Committee; because I believe that in a country as well fitted for settlement as the North-west, into which so many thousands of people are thronging, it is all the better to have a fair number of railways so long as they do not interfere with each other, and so long as they are spread over the territories, to help to develop them properly. The grain is carried by these roads, and what becomes of it ? It has been repeated often enough here : we know that the vast bulk of it is sent to the ports of Lake Superior, and we know that it will continue to go there, no matter what railways are built across the country.

It has been so clearly demonstrated that carriage by water is cheaper than carriage by land. No amount of figures could get over the fact that even railways which extend from the furthest west to the furthest east, find it to their advantage, when they come in contact with our great central water-ways, to tranship to those water-ways. Not only the Canadian Pacific Railway, but practically all the American roads which have ports on Lakes Michigan and Superior and the other great lakes, transship their grain at these ports, and in many cases millions of bushels of grain are transshipped by railways having eastern connections. That grain is carried by water three times the distance that it is by rail, and transhipped again at Buffalo, simply because the water route is the cheaper. That fact speaks volumes more forcibly than all the fantastic theories hon. gentlemen can invent to justify the building of a railway over that wonderful prairie section between Winnipeg and Quebec, and a railway, as the hon. member for North Norfolk (Mr. Charlton) described it, with no greater curves and grades than the lines from Detroit to Buffalo. Such a conception is not one which adds to the reputation of the hon. member for North Norfolk, as a gentleman who pays any attention to the fact, and it was not entertained by the hon. Minister of Finance, who referred to it in such a manner that showed he was afraid the hon. member for North Norfolk might insist on the government building a road which would cost pretty nearly as much per mile as the Finance Minister estimated for the whole distance. Beyond question there exists now two roads leading to Lake Superior and a water route from Lake Superior, over which may be carried all the grain that can reach the ports of transshipment on that lake. That being the case, I can understand the proposition of the Grand Trunk Pacific Railway. It is willing simply to connect with its own system in the older provinces, not for the purpose of carrying the grain, which would undoubtedly be carried by it, simply to Lake Superior, but for the purpose of having connections by its own lines between the older provinces and the western provinces.

The second reason given in support of this proposition is that it will help the workers of the older provinces to supply the markets of the North-west, that it will afford an outlet for the manufacturers of Ontario and Quebec who desire to get their goods into the territories. I would like to ask those who advocate the construction of this road from Fort Simpson on the Pacific coast to Winnipeg, then north to Lake Nepigon close to the waters of Lake Abitibi, then on to Quebec and Moncton, how that line is going to benefit the toilers of the east. Are these toilers located in the vicinity of Lake Abitibi ? Are the manufacturers situated very largely in the region north of Lake Nepigon ? In the name of common sense, how are the manufacturers of Ontario and Quebec, save those who are located at Quebec city, to reach this road, or to have their goods carried over it to these hundreds of thousands of consumers who are going to the territories ? It will be simply an impossibility unless very expensive cross lines are built.

I believe that in discussing a matter of this kind we should consider the general advantage of Canada, not technically, as in the case of a private Bill, in which this declaration is merely formally made to bring it under the jurisdiction of this parliament, but in the broadest sense of the word. The farmers of Ontario and Quebec have consented to the aid and the assistance of the government being given to the opening up of the North-west, although such a policy operated in a sense to their direct loss. They willingly contributed to this aid and helped on the movement, but they had good and strong reasons for supporting such a policy. They were willing to suffer some financial loss in the first place because it was to the general advantage of the country that the territories should be opened up and our various provinces brought into touch with each other. It was the essence of confederation that that should be done, and those who desired confederation, desired above all things to see it carried out properly. The feeling therefore was almost unanimous on the part of older Canada in supporting a policy of opening up our North-west. There was another reason which influenced our people. By opening up Manitoba and the territories, they were creating homes for their sons and relatives, and at the same time providing direct communication with them. Further, that was being done by a government which constantly kept the general interests of Canada in view, so that while in the opening up of the North-west there was brought about indirectly a depreciation in the farm values of the east, still the government were at the same time carrying out a policy which helped to develop the east by enlarging the opportunities of the farmers and by lay-

ing the foundation of a broad and strong industrial movement. The policy of opening up our North-west and the policy of encouraging our manufacturing industries went together and constituted that national policy, which our hon. friends opposite have so frequently taken occasion to decry, and have found so much reason to copy. It was that policy which induced the farmers of Ontario and Quebec to contribute so largely out of their substance to the development of our western territories. They knew that the country as a whole would benefit, even though they should have to suffer some loss. But admitting that this proposition may help to develop a remote part of the west, in what way can those gentlemen, who have in such florid language said it would be such a wonderful help to Ontario and Quebec, justify their statement that it is going to develop those parts of Ontario and Quebec, which are now business centres and in which is to be found the great bulk of our population. I submit that when a proposition is made involving so heavy an expenditure, involving such a pledge of the credit of the whole country, it should be one that will assist the country as a whole. When the right hon. the First Minister said that this road would enable the manufacturers in the east to get their products into the west and bring the toilers of the east in touch with consumers of the west, he was stating a proposition which certainly is not justified by the measure he has submitted for our approval. I do not think that we can, in any sense of the word, be called sectional or selfish, if we insist that in any undertaking involving so heavy an expenditure on the whole country, both the east and the west should be considered. But the right hon. gentleman reminds me of a woman who spends most of her time attending missionary meetings and neglects her own home. When somebody asked some ragged children if they knew her, they said, yes she is our mother. And when asked where she was, they replied: she is off attending to the children of the heathen and leaving us children to go to the devil.

I have referred to the expenditure involved. I wish that it were possible to build a road such as the one proposed for the figures given by the First Minister and the Minister of Finance. I wish it were possible for me to persuade myself that this was one of those cases to which the statement of the old Scotchman did not apply, when he said that there were three kinds of lies: white lies, black lies, and the worst lies of all, statistics. The road will not be built for nothing; good money must be paid for it. In fact the Prime Minister not only showed this in his speech introducing the Bill, but I think he laid the foundation for most of the errors that have been made by his followers in discussing it since. He said that we should not only have to advance the money, but we should have to pay interest upon it. And what do we receive in return? We receive interest at the same rate. We pay interest and we receive interest. But we pay out the principal, and how about that? It is quite clear that the return of the money is not provided for in anything that the right hon. gentleman says. So, when this financial burden is discussed simply from the standpoint of the payment of interest, then the argument rests upon a purely fictitious basis. It seems to me it is not worthy of the position which the Minister of Finance occupies to so utterly ignore the expenditure of principal or to attempt to get round it by his peculiar actuarial method.

I have wondered sometimes as this discussion has gone on, and as the legislation has proceeded in the committee, where on earth this contract came from. Nobody seems willing to father it. We know that the ex-Minister of Railways and Canals (Hon. Mr. Blair) did impute the fatherhood of it to one person, Senator Cox. Apparently, there is no justification for placing it on any one else. Personally, I have no knowledge of the matter. But this much I do know—that when the first application came up in the Railway Committee such a contract as this was not suggested, and I believe it was not even thought of. It may have been dreamed of by some, but undoubtedly nothing was said to convey any suggestion of it. We found the first application of the Grand Trunk opposed and opposed particularly by a set of men who had their minds fixed on the project of a railway straight across the country from Quebec. I think I state what is well within the knowledge of members of the committee when I say that the bitterest opponents of the Grand Trunk project were members of this House who advocated the project of a railway westward from Quebec. I am not quarrelling with their right to advocate such a railway; I am simply dealing with the fact. But in some mysterious way the scene was changed. The original proposition was practically withdrawn and a proposition made that was totally opposed to the ideas of the original promoters of the Grand Trunk Pacific as set forth in their circular. According to that circular it is clear that they did not want a line running eastward from Winnipeg. They spoke of a stretch of a thousand miles of that territory being unproductive and of it being a country through which a line should not be run. I admit they are not building it. I do not know how this change of which I speak came about. President Castro of Venezuela tells of a case that arose in his own country. A certain man died leaving a will dividing his property among two distant relatives. But two friends who were near him in life, and who had expected bequests in their favour, were much disappointed. They made up a scheme to fix the bequests to their liking before the heirs

came. They succeeded to getting a notary in with them. The three went into the room where the dead man lay, tied a string to his head and gave the end of the string into the hands of one of the would-be heirs. The notary took his pen and asked, do you give so and so to such and such a person ? A pull of the string and the head nodded, so the notary recorded the bequest. And so the property was distributed until every one had been remembered but the notary. The question was then asked, do you give so and so to the notary ? But the man who held the string did not pull. The notary laid down his pen and said, 'this string pulls for everybody, or there is no will.' I do not know whether this story illustrates what went on with regard to this contract, but I do know that in some mysterious way, by some evolution, the working of which is unknown so far as this House is concerned, this contract has been prepared as we have it before the House. It is presented by the Prime Minister backed by reasons that have been almost completely dropped by those on his own side who have spoken. The right hon. gentleman failed to show that there was any emergency or any crisis justifying such a tremendous expenditure, such an extensive mortgaging on the credit of the country on information as meagre and as vague as that in possession of the government. In fact, it would not be too much to say that there is practically no information in their possession. And still, the measure is being pressed before the House. I would join my voice with the voices of those who have pressed upon the government the necessity of referring such an important proposal to the people of the country before finally disposing of it. Six months ago, as I have said, this project had never been thought of. In fact, we might say that no longer than three months ago it had never been thought of. In the general election of 1900 nobody even dreamed of such an undertaking. Yet, surely, the needs of the country were as pressing then as they are now. And, for the government now to lay such a proposal before the House, and force it through on a principle laid down by the hon. member for North Norfolk (Mr. Charlton) that because the captain says, 'shoot,' he must shoot, I submit, is carrying party government and the discipline of party to an extent that must be, if carried out, be injurious to the country. If there ever was a time when a proposition should be submitted to the electors or when the government that formulated that proposition should ask for the confidence of the people, it is a time when such a proposition as this is proposed. And it would not delay the work involved in this project to delay the legislation now before us. The government could easily obtain the consent of this House to an appropriation of money to make the necessary surveys and obtain all information to be laid before the House. That must be done before the work can go on in any case. Even the contract says that delay is to take place. In fact the contract would show that as to the eastern section, which is the one part most open to objection, that the Grand Trunk care little about it. Otherwise, they would not allow the government to stop the work whenever they wanted to. They could if they chose, before attempting that work, go to the country in the meantime under that very clause, and then act according to the mandate of the people, provided they did it in such a way as not to make the country liable for a heavy bill of damages.

There is one other thing that I have not touched upon that has been discussed in recent speeches by hon. gentlemen opposite, and that is the argument that this is a colonization road. What in the name of common sense do we want with a colonization road at the present time, when, according to the statement of the right hon. the Premier, we have more than we can do to supply the wants of the territories that are already opened up to colonization ? This road is primarily suggested to meet the wants of the North-west, to meet the wants of the people that are already settled there. No other suggestion was made by the right hon. gentleman. It is for the prairie section, for the mountain section, for the mining section, for the people that are already in the North-west, that this road is primarily to be built ; no suggestion of colonization. I do not believe for a single moment that the Prime Minister would have thought it consonant with the gravity of the situation to suggest that we should spend $120,000,000 for a colonization road in northern Ontario and Quebec. Roads of that kind should be undertaken by the provinces, and I am glad to know that the province of Ontario is building its own colonization roads, and it can well do so for a number of years. For our part, we can wait until more is known about that country, and I trust that as more is known, the people will be still more encouraged to build colonization roads, roads that will start from the centres of the older population. How on earth can this road help on the colonization of the central parts of the country ? What centres of population will it touch ? It touches the two terminals, Winnipeg and Quebec only, and everything that is carried into that country or carried out of it would have to go either to Quebec or to Winnipeg, until a few costly cross roads have been built, and these cross roads will form the best colonization roads. I hope sincerely that some day they will be undertaken, that some day we will see this road now proposed going from Winnipeg to Quebec on the shortest possible line. When that day comes, I think it will be built by a private corporation, using its own money, or better still, be built by the government, owning and operating its own road, instead of being built by the government and hand-

ed over to a private corporation who does not want it, who does not expect to make any money out of it, and who gives no valid undertaking that they will operate it. While the North-west is filling up, we will have ample opportunity to explore the routes for these colonization roads, and there will be ample time for some future parliament to discuss the question of a road from the east to the west across that northern section.

It is not because we have no faith in the country that we oppose the proposition embodied in this Bill; it is not because we have no desire to see the country settled; it is not at all because we have no desire to see trade developed, rather the reverse. The whole proposition as it stands before us is one that will give us the least benefit at the greatest possible outlay. We cannot undertake any such expenditure as this without imperilling our ability to engage in any other public work for many years to come.

Notwithstanding some of the criticisms that have been made by hon. gentlemen opposite of the scheme propounded by the leader of the opposition, I submit that it is one that will appeal to every business man, and every citizen, and every person looking to the interest of the country as a whole, and desiring to see a more economical use made of our money. It is not to the expenditure of the money that we are opposed, as our leader has said, but it is to the way the money is to be expended, and the little benefit that the country will reap from it. In view of the fact that our water routes will for years to come, possibly for all time, be the regulators of railways from the North-west to the east, in view of the fact that they will be the means, probably for all time to come, so far as we can now see, of carrying the surplus products of the west to the east for consumption and exportation, in view of the fact that we have in the past undertaken the development of our water-ways and to improve the navigation of the lakes in order to secure cheaper transportation of goods, in view of the fact that only recently the government, wisely in my opinion, in order to make transportation still cheaper from the west, took away the canal tolls and made those canals to a greater extent than before a benefit to the country as a whole, and principally to the North-west—in view of all these facts, I say the immediate necessity of this proposed new railway has not been made out. Surely no person will say that we have brought these water-ways entirely up-to-date, that we have made them as efficient as possible for all the purposes for which they are required. We must remember that in years to come, if we do our duty by the people of this country, we will have to expend large sums of money in improving these water-ways in different directions. I submit that a proposition that involves the building of our own roads, to be owned and operated by the government, is one that will not only have the best results at present, but will in future lead to infinitely better results. It may be that the amendment proposed by the hon. member for Winnipeg (Mr. Puttee), though at present perhaps it is somewhat academic, can in the near future be beneficially applied. That is a principle which, sooner or later, we will have to face, and it is well perhaps that we are face to face with the general principle even now. It is with very great pleasure indeed that I heard the leader of the party to which I have the honour to belong, make the proposition that practically meant government control of freights east and west, over a government line owned and operated by the country. If there is any way by which we can get the produce of the west to our own seaports, it will be by means of the control of their transport from the time those products are put on the train. If there is any way by which we can most effectually control rates, it is by having a government road which will establish the rates for all other lines running in the same direction.

The hon. member for Bonaventure (Mr. Marcil) said that this was a red letter day for Canada. So it is, Sir. We are now in the full midsummer of our prosperity, a prosperity that was established by the wise and fruitful work of the statesmen who preceded the hon. gentlemen now sitting on the government benches. You cannot have a harvest without a sowing, and if the sowing is not wisely done, the harvest will amount to but little. It says but little for the knowledge of national development possessed by hon. gentlemen opposite when they call attention to the spectacular results of this midsummer, and forget the work by which the prosperity of this midsummer has been brought about. It is this very fact, I believe, which makes it so difficult for hon. gentlemen opposite now to rise to a sense of their duties and responsibilities. It is one thing to enjoy a harvest from the work of the men of the past, and it is another thing to use that harvest wisely. It is to be hoped that the party now in power will use its opportunity in such a way as to help on the general prosperity we now enjoy, instead of giving it a setback. It will not use unwisely or extravagantly the revenues that come in, it will not use unwisely the opportunities that it now has on account of the great credit the country enjoys, but it will use them in such a way that development will go on upon the old lines, that the old will not be neglected for the new, that one part of the country will not be set against another, but that the development, the growth and the prosperity of the whole country will move harmoniously together. For this reason it is a matter of duty that causes one to oppose such a proposition as that which has been made by the right hon. leader of

the government in this Bill, and to support the alternative policy proposed by the hon. leader of the opposition.

Mr. R. F. SUTHERLAND (North Essex). Mr. Speaker, coming a little late in this debate I wish to say at the outset that the character of the debate has appeared to me to be higher than any I have yet listened to in this House since I became a member of it, and that I scarcely wonder at it when I consider the measure which has been introduced by the government and which is the subject of debate at this particular time. A subject that involves the expenditure of such a large sum of money and the giving of such a large guarantee, a subject that involves the building of a transcontinental line over which the freight of Canada is to go in Canadian channels and to Canadian seaports and which will not only develop new parts of Canada, but which will be a benefit to Canada as a whole, is certainly one that should invite the best possible debating talent in this House and I certainly congratulate those who have preceded me on the magnificent character of the speeches which have already been made. I desire, however, to differ from much that several hon. members on the other side of the House have said in reference to this measure. It would appear from what they have said that the people scarcely expected such a measure to be introduced by this government, but, on the contrary it seems to me that the record of the government has already shown it to be of a character that would be very apt to introduce such a scheme as this for the general advantage of Canada. When we look over the record of a few short years of this government we see how the anticipations of the people have been answered by the introduction of this scheme. It is said that every progressive government is constantly undertaking new duties or performing old ones more thoroughly and efficiently and when we look at the record of the past few years of the government which is in power in almost every direction, in almost every department we see how apt that statement is as applied to them. They introduced a tariff for revenue in 1897, and we see how that tariff has stimulated trade in this country until in this year we have the enormous surplus of $14,000,000 and we have on record the fact additional that many millions of dollars of our debt are to be paid off as a result. When they introduced the preferential tariff they introduced, I believe, a patriotic measure, when they introduced postal reduction they introduced another patriotic measure and when they perfected a successful immigration policy which is bringing people by thousands into this country they again showed their ability to grasp the situation as it in this country. So that in one direction and another, this government have shown themselves to be a successful government and I have little or no doubt that when the people learned that the government were about to introduce a measure looking to the construction of a transcontinental railway, that as the government had taken up one measure after another that had operated to the prosperity of this country, that as they had been successful in every measure they had taken up, as has been shown in the increase of trade, in the increase of prosperity and in the increase of the population, they expected that the measure which they were taking up at this time would be a measure which would redound to the present and future advantage and prosperity of this great country of ours.

Now, in the first place, I desire to correct a statement which was made last evening by the hon. member for Toronto (Mr. Osler), in regard to the question of the exemption from customs duties on supplies coming into this country for the construction of this railway. The answer to his statement last evening is set out so fully, so cogently and so definitely in the speech of the hon. Minister of Finance (Hon. Mr. Fielding) at page 8582 of 'Hansard' that I will not attempt in my own words to discuss the matter, but, I will give the House his statement of the matter. The hon. Minister of Finance said:

> But, Sir, as this road is to be built by contractors, and the contractors will have to tender for the work, they will receive no exemption whatever. Therefore any man who has anything to do with the construction of that road, if he imports materials, he will have to pay the duty, and if he buys the goods in Canada the Canadian manufacturer will have the benefit of the duty in so far as that is of any advantage to him. The Minister of Customs calls my attention to the fact that the government will let the construction of this road by contract and that the contractors will have to pay customs duties on the materials they import. I think I stated that. Of course, if you could imagine such a thing as the government building this road themselves, and if the government were importing materials, they would, as in the case of the Intercolonial Railway, not enter these goods at the customs house. They would be for the government service. But I say that even there we do not as respects the eastern division, take any advantage of that, because we provide that it shall be built by tender and contract, and the contractors will not have any exemption, but will have to buy the goods in Canada or else pay the duties if they see fit to import them. When we come to the western division, we deal with the company. They will build the road, and will not have any exemption in any shape or form. They will not be at liberty to import a penny's worth of goods without paying the same duty that is paid by any private individual. The grant in the way of exemption from customs duties in the contract with the Canadian Pacific Railway Company was a vast privilege. I do not attempt to compute it in money, but I am sure that it would run into a vast sum. We do not give any exemptions of any sort.

There is a complete and definite answer to the statement made by the hon. member for Toronto last evening.

Mr. BLAIN. Would the hon. gentleman give us the section under which he arrives at that conclusion ?

Mr. SUTHERLAND (Essex). Section No. 17 :

No addition shall be made to the cost of construction or to the capital of construction account in respect of customs duties in cases where there is direct importation of material or supplies by the government.

Now, Sir, we have been hearing during this discussion a good deal from hon. members on the other side of the House and very much to my surprise from hon. members from the province of Ontario about the condition of New Ontario. It has been sought to belittle the reports that the Ontario government had from time to time put out and the reports which are based upon the surveys of the surveyors they sent out several years ago. I have been very much surprised to see hon. members from the province of Ontario seeking to belittle New Ontario and to belittle these reports, because, if they recollect that when the provincial contest was on a little over a year ago and when Mr. Whitney was in New Ontario making his speeches, this whole question was a matter of considerable controversy in that province. I think it is well known to the members of this House that for many years past the policy of the Liberal party under the present premier particularly, has been for the development and colonization of New Ontario. Now I may say that has been the policy of both parties in Ontario, and I find what ought to be an unanswerable argument to those hon. members on the other side of the House who seek to belittle New Ontario and who seek to belittle the reports which the Ontario government has put out because these reports are not signed and because they give simply the substance of what the surveyors reported, and who on this account seek to make out that these reports are not authentic. That was not the position taken by the Conservative party a year and a quarter ago during the provincial contest. I propose to read some extracts from the 'Mail and Empire' editorials of that time to show that not merely was it not disputed that New Ontario was wonderfully rich in agricultural resources and was wonderfully rich in mineral and timber resources, but that the charge then was that Mr. Ross and the Liberal party were not realizing the extent of the riches of that country, and that they were not alive to the opportunities that were presented to them of developing and colonizing it, but that they were derelict in their duty in that respect. Here are some extracts from the Toronto 'Mail' which go to show the position of the Conservative party in Ontario at that time. In the 'Mail' of May 8, 1902, we find the following in an editorial under the caption, 'Ontario's forward movement':

In the great clay belt, stretching from Quebec to the Thunder Bay district, are 24,500 miles of unbroken farming land, where settlers would build up a new province.

Again, in the issue of May 9, we read this:

We have much to gain in business by the development of the newer parts of Ontario.

Again, under date of May 15, it says :

Nature has decreed that the expansion of Ontario must be northward, but a narrow and incompetent administration has hitherto maintained barriers against the onward march of settlement. The mistake of the government has been that it accepted the dictum of Mr. Ross that the soil of the north was barren and the climate unfavourable, and made no effort to open up the country, while at the same time it shut the settlers out of vast stretches that it handed over to the corporations. As a matter of fact New Ontario is south of a large portion of Dakota, and is more fit for agriculture and stock grazing than prairie lands of the west.

But in the issue of May 17, perhaps the most comprehensive statement appears :

The government refused to make a move until 1900, when several exploring parties were sent out.

These are the exploring parties, upon whose statement the report which was laughed at by hon. gentlemen opposite during this debate, was founded. The 'Mail' goes on :

They have reported that there is an almost unbroken stretch of good farming land, a great clay belt stretching from the Quebec boundary to the Thunder bay district, comprising an area of 24,500 miles. Until this proof was forced upon him Mr. G. W. Ross maintained that the soil of New Ontario was barren and the climate unfavourable. Yet nearly as large a province, fit in every sense for profitable development, lies in our vacant north land as we have in old Ontario. This territory is in part south of Dakota, and its climate is less severe than that of the Canadian west. The whole country, we are assured, is a network of lakes, rivers and streams, well-wooded, teeming with game, and specially adapted to agriculture and stock raising. It is, moreover, well stocked with minerals, and has abundance of water-power for industrial purposes. . . . It will be a big thing for southern Ontario to have a New Ontario in the north, growing up to contain perhaps millions in the near future. It will give a stimulus to our cities and our industries, and will afford splendid openings for our young men. We are of course glad to witness the progress of the west, but we shall be happier and better off besides when Mr. Whitney inaugurates and carries to a successful issue the policy that will populate Ontario.

These are the statements of the 'Mail' newspaper in reference to the very reports issued by the Ontario government which are sneered at by the members of the opposition as furnishing no proof of the wonderful fertility and resources of that great New Ontario which this transcontinental scheme will do so much to develop.

Since I came into this House I have heard a great deal about the development of the west, and no one desires more than I do

that the west should be developed. I am perfectly well aware that for many years past the development of the west has been perhaps more attributable to the influx into that country of people from Ontario than to almost any other cause. The province of Ontario has given many thousands of her people to the development of the west, and we are glad of it. We want to see Canada as a whole developed. But now that the North-west Territories are getting a splendid start, now that not only people from Ontario, but from the old land and the United States, are going into the North-west in large numbers, we in Ontario are beginning to think that it is time that we should look a little to the development of the newer portions of our own province.

Prior to the local elections of last year, Mr. Ross laid down his policy in a number of paragraphs, among which this was stated as a prominent feature :

> The early settlement of the unoccupied lands of the province by colonization and by the projection of railways into New Ontario.

When the legislature met he crystallized that paragraph into an Act, and under that Act the Temiskaming and Northern Ontario Railway is now being constructed. And it seems to me that it was most opportune that that railway should have been commenced this year. When the proposed transcontinental railway shall be completed across the country, this provincial railway, now being constructed by the government of Ontario, will tap that railway, and so not only bring the whole of New Ontario into connection with the older parts of the province, but place Ontario in probably a better position than any other province of the Dominion to send supplies of all kinds to Manitoba and the North-west, and in that way serve the interests of the people of Ontario at large. Let us look at the preamble of the Act of the Ontario legislature for the construction of the Temiskaming and Northern Ontario Railway, and see how it accords with the preamble of the Act for the construction of the national transcontinental railway. The preamble of the Ontario Act reads as follows :

> Whereas exploration of the province has shown that in that district of Ontario which lies between Lake Nipissing and Lake Abitibi and north-westerly from Lake Temiskaming there are large areas of arable land well fitted for settlement and extensive tracts of merchantable pine and other valuable timber, and deposits of ores and minerals which are expected, upon development, to add greatly to the wealth of the province ; and whereas the said district is now difficult of acess from the lack of railway communication ; and whereas an increasing number of settlers are taking up lands in portions of the said district ; and whereas it is in the public interest that the said district should be, at as early a date as possible, brought into communication with the existing lines of railway.

I desire here to express my appreciation of this Bill. The province of Ontario has, we believe, for many years past been a pioneer in legislation in almost every direction. If time permitted, I could show how measure after measure which has been passed by the Ontario legislature has later on been imitated, not only by the various provinces of the Dominion, but by some of the states to the south of us. This Ontario Bill provides that the railway shall be constructed by a commission. That and other provisions in the Bill have perhaps suggested one or two of the clauses which appear in the measure now before this House. I have read the preamble of that Bill just to show, by way of comparison, how far it resembles the preamble of the Bill before this House, which reads as follows :

> Whereas, by reason of the growth in population and the rapid development in the productiveness and trade of Canada, and especially of the western part thereof, and with a view to the opening up of new territory available for settlement, both in the eastern provinces and in the west, and the affording of transportation facilities for such territory, and for other reasons, the necessity has arisen for the construction of a national transcontinental railway.

It seems to me that these two measures are supplementary of each other, so far as the province of Ontario is concerned ; that just as Ontario projected its railway for the purpose of developing the magnificent heritage which we have in the north, and which is awaiting colonization and population, so the project now before this House is brought forward just at a time to enable the Ontario railway to connect with it near the height of land, and so to enable the province to populate and colonize that splendid clay belt very much faster than she could otherwise have done. The scheme, it seems to me, so far as Ontario is concerned, amounts to this. One of these days, in the not very distant future, the province of Ontario would have had to build on its own account, and along this very direction, a railway of a colonization character. But by this scheme, many years earlier perhaps than we would have built it, and without its costing one dollar more, perhaps not nearly so much as it would have cost if constructed by the province alone, we will have this road which otherwise we would have had to build ourselves, built by the Dominion, and in that way will reap an immense advantage.

Another feature which commends it to me is this. The various provinces, except perhaps the province of Ontario, have very considerable debts to meet. The debts of some of these provinces are very large, and the provinces are beginning to look out in various directions for the means to meet them. There are methods being adopted in Ontario to-day which were not followed some years ago. One of the merits of this scheme is this, that instead of the various provinces having to build railways of this kind themselves, and in that way pledge

their credit and assume a responsibility which many of them cannot very well afford, the Dominion will finance largely the matter, so that instead of each province having to pay directly, as it would have to do, if it financed the matter itself, it will only pay indirectly its contribution to the cost by means of customs duties and the like. That will be an advantage to every province of the confederation.

I did not intend, Mr. Speaker, to speak at length in this discussion at all; but coming from Ontario I considered it advisable that I should point out some of the advantages which will accrue to that province from this scheme. I recognize, as every speaker on this side has done, that this is a great scheme for the advantage of the Dominion as a whole. Much has been done in the past few years to attract attention to the Dominion. Various things have caused us to be advertised and become known. Population and capital, these two things which this young country has so long needed, are beginning to flow in more than at any period within our history, and I believe that when this scheme becomes understood, this movement will receive still greater impetus. The outside world will realize that we are alive to our responsibilities and following the example set by other nations. We find Great Britain talking about spending $15,000,000 to connect Glasgow and Edinburgh for trade and imperial purposes. In the very heart of Egypt, she is spending $20,000,000 on the construction of a great dam for the purpose of irrigation, which, it is estimated, will add $25,000,000 to the value of lands in that country. In Australia, we find that the government of that colony has commenced the construction of a transcontinental line across the whole island. In India, the British government is spending millions of dollars on canals, and in the neighbouring republic the great Panama canal scheme is being actively promoted. In almost every country we find the people realizing their responsibilities and investing large sums in gigantic enterprises, in order to attract trade and population. Canada must not lag behind. We have immense resources awaiting development. All we need is population and capital, and this scheme, coupled with the other undertakings which the government have accomplished, will attract still more capital and population to our shores, and this young country will become, what we all hope to see it at an early day, one of the strongest, most prosperous, enterprising and powerful nations in the world.

I could hardly sit down without saying a word about the railway company which is associated with this scheme. The old Grand Trunk Railway has done much for many parts of Canada, particularly the western part of Ontario. It went into that section practically as a colonization railway. It is to the Grand Trunk Railway that is due the first settlement of western Ontario, and when it is known that that section of country has become one of the most fertile, best settled and most progressive of the whole Dominion, one can realize what will result from the activity and enterprise of the Grand Trunk Pacific Railway in New Ontario, New Quebec, New British Columbia, and New New Brunswick. One can realize what will result when this great, strong, enterprising concern, assisted by this government, will open up these new portions of Canada. Just as it has made western Ontario prosperous and successful, so it will develop these new sections, and in this way be a great boom to the people of Canada.

We are just now having a great meeting in Montreal of leading men from all parts of the empire, assembled there to discuss imperial matters. From Montreal they will go out through the length and breadth of Canada to see this young country, and the more they learn about it, the more they realize that we have arisen to the measure of our responsibility and are seeking to construct a great Canadian transcontinental railway, which will redound to the credit of the empire as a whole, the more they will have confidence in our future and be prepared to invest their money and capital in the development of Canada.

The more I have studied this contract and listened to this debate, the more I am convinced of the merits of this scheme. In his opening speech, my right hon. friend the First Minister showed how this scheme was intended to serve broad, imperial interests. The hon. member for North Norfolk (Mr. Charlton) and the Minister of the Interior dilated upon the practical necessity for this railway and its utility in the interests of the country. The Minister of Finance showed, in the most practical, clear manner, that every financial arrangement was provided for in this contract; and when the hon. member for Hants (Mr. Russell) spoke, he proved abundantly, from the weight of authority and experience, that the most efficient system of government owned railways was when the railway owned by the government was operated by some practical business concern, such as the Grand Trunk Railway. And when I heard the Minister of Justice going through the clauses of that contract—and I appreciated perhaps as a lawyer his statement of the case more than that of any of the other ministers—when I heard him go through these clauses and saw how the interests of the country, in clear, concise, plain phraseology, were safeguarded in every way, I came to the absolute conclusion that no scheme ever put forward by any government had the interest of the people at large so well protected.

Mr. HACKETT. As this is Friday evening, Mr. Speaker, and it is now half past ten, I think we ought to adjourn the debate; and with the consent of the hon. gentleman who is leading the House, I would move the adjournment of the debate.

The MINISTER OF MILITIA AND DEFENCE. I think we might go one hour longer.

Mr. HACKETT. The hon. gentleman who is a military man is perhaps inclined to be rather strict and has more endurance than I have. After being here all day and up to this hour at night, I do not feel in a condition to do justice to the subject, and I would ask the hon. gentleman to allow us to adjourn. For a man of my years, it would be rather an arduous task to address the House at this hour.

The MINISTER OF MILITIA AND DEFENCE. Since the hon. gentleman makes an appeal of that kind, and as he is a very old personal friend of mine, I think we must give way and consent to the adjournment.

Motion agreed to, and debate adjourned.

On motion of the Minister of Militia and Defence, House adjourned at 10.30 p.m.

HOUSE OF COMMONS.

MONDAY, August 24, 1903.

The SPEAKER took the Chair at Eleven o'clock.

TRANSCONTINENTAL RAILWAY SERVICE.

Mr. A. A. WRIGHT (South Renfrew). Mr. Speaker. Before the Orders of the Day are called, I wish to call your attention to a number of incidents that took place at the Canadian Pacific Railway station in my own town of Renfrew yesterday. I do this to attract notice not to the incidents themselves but to the alleged causes of these incidents. I was taking a short stroll yesterday morning on one of our residential streets in Renfrew, in the neighbourhood of the Canadian Pacific Railway station, when I heard a tremendous cheering in the direction of the station. As our town is rather noted for its quietness and orderly conduct, especially on the Sabbath day, I thought it very strange and as the noise continued and the cheering became more boisterous, I went to the station to see what was the matter. As I approached I could see a train standing there and people running in and out of the rear end in a hurried manner, like bees from a hive, and when I reached the station, the train was moving out. I went on the station platform and as I reached it our village constable and a driver came up and having alighted the constable said that it was no use trying to stop the train then or trying to do anything when it arrived at Pembroke because you could not tell who the culprits were, and it might be dangerous to go in to arrest any one on the train. I was told that the trouble was that a number of the passengers who came off this train which was the second train going through that morning, got off the train in search of water, and not finding any at hand went across the street to an ice house belonging to a townsman and undertook to take the ice out in order to melt it down. Three or four men went up into the ice house and threw down the ice and three or four others got the baggage trucks and commenced hauling it to the train, while others carried it into the car in order to provide themselves with water. A number of others seeing a pile of dressed lumber there, belonging to Mr. McDougal, a brother of the Auditor General, came to the conclusion that it would be a good opportunity to improve their sleeping facilities in the car, so they took four or five hundred feet of the lumber into the car while the others were taking the ice. There was also a car on the siding in which a man was preparing to ship a horse and a number of these passengers took out the hay and straw and carried it into the cars in order to make beds for themselves.

I would wish to draw attention particularly to the alleged fact that the origin of all this trouble was that there was not sufficient water in the train for the passengers; it seems to me that something should be done to prevent a recurrence of incidents of this kind. As another train was expected to pass in fifteen minutes our town constable came to the conclusion that he had better remain and see that no trouble occurred on its arrival and I thought that I would remain also. In about fifteen minutes another train came in and immediately upon its arrival a very well dressed lady and gentleman came out of the train and wanted to know if there was any place where they could get water to drink. They were shown into the ladies waiting room and they got water. Then half a dozen more came out and wanted to know if they could get some. I pointed to a pump across the way, and they went across with tins and all manner of dishes. Seeing that they were really in need of water I went through the cars one after another, and I found that not one of the tanks had water in it. I went to the conductor and asked why there was no water in these cars for the passengers. 'Well,' he said I cannot tell you how it is but it has all disappeared, and I do not know what we are to do.' I said, 'but there is an abundance here.' He said. 'It would never to do to leave this train here and there are no hands to put in the water, but I will telegraph from here and see that arrangements are made at Chalk River, the divisional point, to supply the train with water. Furthermore, after I leave here I wish you would go in and see that the operator sends this telegram. After the train passed, I went in and asked the operator if he had telegraphed and he said he had. I wish to inform the House that these gentlemen

treated me in the most courteous manner, both the conductor and the operator, but they said they were utterly helpless to do anything. It seems strange to me that a train like this, leaving Ottawa at five o'clock in the morning and reaching Renfrew at 8.30 and not likely at the rate it was travelling to reach Chalk River before ten or eleven o'clock, should not be supplied with water. I believe the attention of the House has been drawn to this matter before and I think it is best it should be drawn to it once again, in order that we may see if the Canadian Pacific officials cannot be induced to do something to remedy this evil.

There is another thing to which I wish to draw the attention of the House. On Friday about forty-five persons from our town and the vicinity wished to go west, and went down to the train, but when they got there they found the train was filled and it was impossible for a single individual to get on board. They waited until Saturday and then went down again but again found the train was crowded. A number did get on but the conductor told them to get off. While some of them were being put off the train others got on at the other end and the majority of them got on board. Now, it seems to me that this is an evidence that it is time we had some more facilities for getting out into the North-west than we have now, and that it is a good argument in favour of a transcontinental railway—that, as the right hon. the Prime Minister said, this is not the time for deliberation but this is the time for action, and every one of the people there who wanted to get on that train said the same thing. I move that the House do now adjourn.

The MINISTER OF FINANCE (Hon. W. S. Fielding). I presume the hon. gentleman does not suppose we can do more than draw the attention of the Railway Committee to the matter to which he has referred.

Motion to adjourn negatived.

IMPERIAL CONFERENCE CORRESPONDENCE.

Mr. R. L. BORDEN (Halifax). Before the Orders of the Day are called I would like to draw the attention of the House to a press despatch that appeared on Saturday to this effect :

Correspondence on the subject of the publication of the proceedings at the colonial conference of last summer has been issued. In reply to a telegram from Mr. Jos. Chamberlain, Lord Minto, on behalf of the Canadian government, objected to any departure from the arrangement previously made that the proceedings should be considered confidential. Newfoundland, and Cape Colony took the same positon. New Zealand had no objection to the publication of the discussion on the trade question, while Australia favoured the publication of a full report and Natal replied that that government had no objection to publication in full.

I would like to ask the government whether or not this statement is correct so far as the Canadian government is concerned, and whether or not the correspondence will be laid on the Table of the House ? I suppose there can be no further objection to that as the papers appear to have been placed before the imperial parliament.

The PRIME MINISTER (Rt. Hon. Sir Wilfrid Laurier). Some time ago, the attention of the government was called to this subject and I informed the House at that time that there had been some correspondence concerning it, but, that we were not at liberty to lay the papers on the Table of the House, and would require to have some further communication with the Colonial Office. We have had that communication, and have permission to lay the papers on the Table, which will be done to-morrow.

TRANSPORTATION COMMISSION.

Mr. R. L. BORDEN (Halifax). Before the Orders of the Day are called I would like to ask the government whether or not any further steps have been taken with regard to the proposed transportation commission. On the last occasion when I brought the matter to the attention of the House, the right hon. Premier (Rt. Hon. Sir Wilfrid Laurier) informed the House that a letter had been received from Sir William Van Horne stating his inability to become a member of that commission. I think the right hon. gentleman was good enough, on that occasion, to hand me a copy of Sir William Van Horne's letter. Has the First Minister any thing further to communicate with regard to this matter ?

The PRIME MINISTER (Rt. Hon. Sir Wilfrid Laurier). I will try to give further information on this subject also to-morrow.

QUESTION.

PAYMENT TO MR. JAMES CUMMINGS.

Mr. BLAIN asked :

How much was paid to James Cummings for remuneration, and how much for expenses in connection with his trip to South Africa ?

The MINISTER OF FINANCE (Hon. W. S. Fielding) in the absence of the Minister of Trade and Commerce (Rt. Hon. Sir Richard Cartwright). I beg to answer the hon. gentleman's (Mr. Blain's) question as follows :

The payments made to Mr. James Cummings in connection with his trip to South Africa were, for remuneration, $3,600 ; for expenses, $1,852 ; total, $5,452.

THE NATIONAL TRANSCONTINENTAL RAILWAY.

House resumed adjourned debate on the motion of Sir Wilfrid Laurier for the House to go into committee on a certain proposed resolution respecting the construction of a National Transcontinental Railway, and the motion of Mr. Puttee in amendment thereto.

Mr. EDWARD HACKETT (West Prince). Mr. Speaker, before addressing myself to the question before the Chair, I desire to thank the Minister of Militia and Defence (Hon. Sir Frederick Borden) for his kindness in agreeing, as leader of the House on Friday evening, to adjourn the debate at an early hour. It is what I should have expected from an old friend, and as he said that he extended his courtesy to me as an old friend, I thank him for his kindness on that occasion.

When a question of such magnitude as as the one now before the House comes up for decision, it becomes the duty of every hon. member who represents any portion of the people to state his views. Therefore, representing, as I do, an important constituency, I make no apologies when I rise, to speak on this important question. Sir, we are asked now, towards the end of a very protracted session to deal with this question which involves the expenditure of scores of millions of the people's money. This session began on the 12th of March, and it was not until the 30th of July that this measure was tabled. It is only now, after the session has lasted nearly six months that we are called upon to express our opinions and give our votes on the subject. I believe that a question involving such vast consequences to the people of this country should not be decided without being submitted to the people at the polls, for their opinion and their decision. We heard nothing of this question in the last general election. It was only on the 24th of November last, when Mr. Hays, in an interview with the correspondent of the Toronto 'Globe,' stated that it was the intention of the Grand Trunk to build a railway from North Bay to the shores of the Pacific, that we had the first intimation of this project. But we now find at the end of a session lasting, as I have said, nearly six months, that the government is to come to the aid of this company, and not only assist them to build the railway, but actually build that expensive portion, 1,800 miles long, from Winnipeg to Moncton, an undertaking which must cost over $100,000,000. This proposition comes before us without due information. The leader of the opposition (Mr. Borden, Halifax) day after day and week after week asked for information with regard to it, but no information was vouchsafed him until the 30th of July, when the Bill was placed on the Table by the right hon. Prime Minister. Now, as showing the rights of the people in a matter of this kind to have the question submitted to them I desire to quote a very high authority, one that I know will be accepted by hon. gentlemen opposite, and certainly will be approved by the right hon. leader of the House. I have here a speech delivered by Mr. Laurier, in 1880, in this House speaking to a motion made at that time he said :

> It is the basis of all free government that the acts of the administration should be judged by the representatives of the people. In this case the same rule, it must be conceded, should apply. It is a well-known principle, that the people have a right to judge, not only of the honesty of those entrusted with the managemet of their affairs, but even of their judgment in action. The people have a right to say they have erred in judgment. How are we to deal with or decide this question, or whether the government have accepted the best offer. It is impossible for the country to say ; we have only the word of the government. I am quite disposed to take the word of the government, as an individual, but not as a member of the House. As a representative of the people, I think every one of us has a right to say the acts of the government should be done in broad daylight, so that every elector may have an opportunity of judging whether or not the government and every individual member was right, not only in motive, but in judgment. This is the reason of the motion, and I think it will be the duty of every member to affirm its principle, that nothing should be concealed from the representatives of the people.

Is this being done in broad daylight ? Have the elements of this measure been worked out in broad daylight ? Why, I remember when Sir Charles Rivers-Wilson was asked in the Railway Committee : Are you going to receive aid from the government ? His answer was : That is a matter for consideration. The government would give us no information, and we certainly had no information from the directors of the Grand Trunk Railway Company. It is only now, after we have been thus long in session, that we are placed in a position to even consider this very important measure.

It is said that the questions involved in the building of this railway are not materially different from those involved in the building of the Canadian Pacific Railway. I shall show you, Sir, that the questions are entirely different. The Canadian Pacific Railway was the pioneer railway of the west. For years the government had been endeavouring to secure a company to build that railway. The hon. member for West Toronto (Mr. Osler) the other day read from a law placed upon the statute-books of this country by the Mackenzie government in 1877 inviting companies to tender for the building of the Canadian Pacific Railway, laying down the broad principle that there should be a bonus of land and a bonus of cash. In accordance with the statute. notices were inserted in both the newspapers of Canada and of the United Kingdom, and in the leading periodicals

on the continent of Europe. What was the result of that ? After these notices had been given for a year the government received one tender, and that tender was of no value, it was simply a mockery, and nothing was done. In 1880, when Sir John Macdonald, Sir Charles Tupper and other gentlemen, who were then at the head of the government, received this offer from the Canadian Pacific Railway Company to build this great transcontinental line, it was in accordance with the statute placed on the statute-books of our country by Mr. Mackenzie, and that had not been acted upon by the Liberal party. The Conservative government succeeded in securing a company to build this railway. But the project was met with the greatest opposition on the part of hon. gentlemen now sitting on the treasury benches, then sitting on this side of the House. The most strenuous opposition that it was possible to give any measure was offered by these gentlemen to that great measure. I can well remember, because I had the honour of being a member of this House at that time, how day after day, night after night, they rose in their places and denounced this measure as one antagonistic to the interests of Canada ; as one that would eventually place the country in the hands of a great syndicate, and would ultimately result in disaster to this country. Well, Sir, what do we find to-day ? The Conservative government succeeded in carrying through this great project. The Liberal-Conservative party, under the leadership of the late Sir John A. Macdonald, having as his lieutenant and Minister of Railways Sir Charles Tupper, Baronet, having also as his colleague Sir Hector Langevin, from the province of Quebec, and Sir Leonard Tilley, from the province of New Brunswick—those gentlemen, being at the head of affairs, called parliament to meet on the 9th day of December, 1880. There was no concealment, everything was done in broad daylight. Parliament assembled on the 9th day of December, and on the 10th day of December Sir John A. Macdonald placed before parliament this resolution. He did not wait for four or five months, tampering with a company, selling the rights of the people to a company that would ruin the country. But on the second day after the meeting of parliament he laid on the Table of this House a resolution empowering the company to go on and build this railway.

Sir, these gentlemen were not satisfied, they believed that something more should be done. They assembled their friends, and they said : We are going to obtain an offer from another syndicate. So they brought other gentlemen here, and after they got here it was found out that their offer was only a bogus offer, it was only an offer on paper, made by parties who had not the necessary means, who could not produce the cash to enable them to go on and construct this great work. So their unpatriotic effort failed. Well, now, we heard the hon. gentleman who addressed the House a moment ago (Mr. Wright), speaking of the great difficulty he had in the town of Renfrew yesterday with regard to immigrants I suppose, or perhaps parties of harvesters for the North-west, and he said that their experience showed that they wanted another transcontinental railroad. The police officials in the town of Renfrew, or in the township, were not sufficient to keep order, and they must have another transcontinental railway, without which there would be confusion, rebellion, riot, murder and destruction in this country. They must have another transcontinental railway in order that these poor people leaving Ottawa in the morning and arriving at Renfrew in three or four hours, might have water to drink on the train.

Now, Sir, reference has been made to what has been done by the Canadian Pacific Railway for this country. I want to quote you a few words from a speech delivered the other evening by the hon. member for Burrard (Mr. Macpherson), a very good speech, a very sensible speech, in which he bestowed the highest praise on the Canadian Pacific Railway Company and indirectly on the Liberal-Conservative party, which had pushed that project through. I wish to read from it at length, because some of his words should be written in letters of gold all over this country, as showing what that great railway has accomplished for Canada. He says :

> I wish to show the House what has been accomplished by the construction of the great Canadian Pacific Railway.
>
> Prior to the advent of this railway, British Columbia was a country isolated from eastern Canada, having nothing in common other than devotion to the old flag and yielding hommage to the same soverign. It was a country which, from its isolation, had no national aspirations. But its people were men of courage and determination in that small and isolated community, and they recognized the great future of British Columbia if it could only get a railroad carried through connecting the eastern part of Canada with the west. The building of the Canadian Pacific Railway has made what was once the fishing hamlet of New Westminster a large, thriving commercial and populous city. It made a new province for Canada, one of the brightest gems in the Crown of confederation.

Remember, Mr. Speaker, that I am quoting the words of a gentleman who is no doubt a strong Liberal, but who is honest enough to state his views in this way :

> It made the men who, while proud to say that they are British Columbians, still prouder to say they are Canadians. It made what was in 1883 a primeval forest into our present great city of Vancouver. It made it possible where 20 years ago stood only the Douglas fir and the British Columbia cedar, that a city of 35,000 people live to-day. Where not one dollar of customs revenue was collected 20 years ago, where the past year the sum of $1,388,709 was collected. It made possible, where banks were

unknown, where to-day stand six of the leading banking institutions of Canada. Where bank clearances were unknown, to where during the first six months of the present year the clearances amounted to nearly 29 millions dollars. It made the great seaport of Vancouver and created what last year was the fourth largest port of customs collections in the Dominion. Where ships were unknown practically 20 years ago, to-day in the harbour of Vancouver boats flying almost every maritime flag in the world can be seen loading and unloading. It has made and created a new trade with the Orient. It made and created a new trade with Australia and New Zealand. It has made and created a new trade with the United States. It made and created a new province whose inhabitants are a happy and contented Canadian people. It made possible the development of a section of our mining country, which only goes to prove that we have greater than has been found. It made it possible for us to produce in the last 16 years 31,640,203 ounces of silver, valued at $18,475,882 ; it made it possible for us to produce 280,200,845 pounds of lead, valued at $10,447,540 ; it made it possible for us to produce 92,652,480 pounds of copper, valued at $12,333,200 ; or a total value of silver, lead and copper of $41,256,603. And prior to the building of the Canadian Pacific Railway this condition of things was unknown in British Columbia.

Sir, no greater tribute could be paid by any one to the benefit of the Canadian Pacific Railway, and to the wisdom of the great Liberal-Conservative party of Canada, that party which have been untiring in their efforts to promote the interests of the people of this country, notwithstanding that hon. gentlemen opposite preached the blue ruin and the desolation which would overtake this country by the building of the Canadian Pacific Railway, which nevertheless has accomplished all that has been stated by the hon. member for Burrard. The hon. gentleman has not only paid a compliment to the Canadian Pacific Railway, but he has also paid a tribute to the energy, ability, integrity and honesty of the Liberal-Conservative party. This proposed railway is a differenet affair altogether. At the time the Canadian Pacific Railway was undertaken, it was undertaken by a company receiving, it is true, large bonuses in land and money, but it was undertaken as a pioneer railway. It was to open up those great fertile western plains that were lying unknown as a sealed book as far as the people of Canada were concerned, known only to the Indian and the fur trader. Now we find that owing to the construction of this railway, owing to the great work done by the Liberal-Conservative party 100,000 settlers have been taken into that country, each year and yet hon. gentlemen opposite endeavour to take the credit for the present tide of immigration. It was said by a leading member of this House some years ago that they were only flies on the wheel and as far as immigration is concerned, they still are only flies on the wheel. It was the great Liberal-Conservative party that opened up this country by building this railway through those fertile plains and thus enable people from the congested centres of Europe and the United States to go in there and create for themselves happy homes on the soil of Canada.

One great objection I have to the resolution is that it contemplates the building of a railway without this parliament knowing at all what are the conditions of the country to be traversed by this railway. The most complete information the right hon. gentleman can give us was the statements of missionaries and explorers whose information has been gained some two hundred years ago. He had no recent surveys to guide him. We do not know the conditions of the country through which this railway passes. I am in hopes that we have as promising a country as that which has been described by hon. gentlemen opposite, and as that which has been termed by the hon. member for Bonaventure (Mr. Marcil) a great northern empire, but before we throw away millions of dollars of the people's money on building a railway, we should have some data, some facts, some surveys, something to guide us as to the nature of the country, something to show whether the country can only produce forests of spruce, pine, cedar, &c., or whether it is capable of the production of grain crops upon which the people may subsist. The hon. member for North Renfrew (Mr. Mackie) stated the other evening that he had gone over a large part of the country to the north of us. The hon. gentleman does not address this House very frequently, and I listened with much pleasure to his statements, because I am sure that he made them in sincerity and honesty, but the most he told us in regard to the agricultural capabilities of the country was that he saw cabbages and turnips growing. He did not know whether the country was capable of growing wheat or not, but he was certain that it could grow vegetables. It may be possible that, when the timber is cleared away, if you have a good clay soil, and if you have no early frosts, you may be able to produce wheat, but if the season is short you may only be able to produce short lived vegetables. The hon. gentleman said another thing that he may also have considered to be true, but, if it is true, it is miraculous. He said that the rivers flowed up hill in that country, that a great plateau existed extending for hundreds of miles—I think he said that he had explored 500 miles of this tremendous plateau—and that the rivers flowed both ways upon it. We have no further data than that. We have nothing further to show us whether we would be justified in expending such an enormous amount of money to build this railway. What we insist upon, and what the people of this country, I am certain, will insist upon, is that this question shall not be pressed with undue haste through

this parliament, but that time shall be given for its consideration, that a matter of two or three months will not be sufficient and that after threshing it out in this parliament and after every phase of the subject has been considered by the representatives of the people, the matter shall be submitted to the people at the polls for consideration and decision.

The hon. member for King's, P.E.I. (Mr. Hughes) has made a computation of the cost of the building of this railway. The hon. gentleman is no doubt a good business man and you would think that when he was dealing with figures he would have some regard for the accuracy of the estimate he made. He has made a singular estimate. He has estimated the cost of the line between Winnipeg and Moncton at $65,000,000, and of the line west of Winnipeg at $15,000,000. Thus the whole cash payment and liability incurred by the people for the road, according to that hon. gentleman, will be $80,000,000. Then he tells us that that liability in seven years will amount to 15 cents per head of the population. Even taking his own figures, and he was far away from the correct figures, because, as I stated at the beginning, the liability will be at least $150,000,000, he tells us that the interest charge on even this large amount will only entail on the people of this country a liability equal to 15 cents per head of the population. That is a most singular statement. If it is true that we are only going to expend $80,000,000 upon this great project, and if it is only going to cost the people 15 cents per head for seven years, we should make the hon. gentleman Minister of Finance, and let him carry on the affairs of the country, because, if he could do it as advantageously as his estimate would lead us to believe, we would all support him. But, there is another side to this question. The interest, as the hon. gentleman will see on this $80,000,000, at 3½ per cent, which is about the lowest rate at which he can borrow money in the money markets of the world, would amount to over $3,000,000 per year. We have a population in this country of about 6,000,000, and if we divide 6,000,000 by 3,000,000 we will find that the interest charge will represent 50 cents per head of the population per year instead of 15 cents per head, which for a family of six people means an annual tax of $3. An estimate of six people to a family in Canada is a moderate one. We have families ranging from six to fifteen but if we place it at six and base our estimate on the amount which the hon. gentleman says the railway will cost, it will mean that the man living on his farm who has to work long hours to maintain his family, to clothe and feed them, will be called upon to contribute, in addition to his other taxes, to maintain municipal institutions and schools for the education of his children, to the Grand Trunk Pacific Railway 50 cents per head, or $3 per family per year. This is a matter that should be seriously considered by the people of this country. The farmers of Canada have not riches to throw away in that direction. It is a matter to ponder over seriously as to whether the country can afford to undertake such a project as this. We have now two lines of railway running west of Winnipeg providing the best means of transport from the fertile plains of the west to Port Arthur. Let us then utilize our great water-ways and afford facilities such as has been suggested by the leader of the opposition. Accommodate the people of the country through means of utilizing the Intercolonial Railway and extending it to North Bay, and thus afford transportation facilities that will be equally efficient and will not cost one-fortieth part of the amount that the government are going to contribute to this Grand Trunk Pacific Railway scheme.

I heartily approve of the proposition of the leader of the opposition. It views the affairs of Canada from a broad standpoint, and it is a statesmanlike policy. Why did Mr. Blair resign ? Why did the late Minister of Railways and Canals resign a lucrative and honourable position in the cabinet ? It was because he could not conscientiously hold his position and support a measure of this kind. Mr. Blair had a strong conviction that where the people of Canada have expended from $71,000,000 to $72,000,000 in the construction of a railway from Halifax and St. John to Montreal ; while they were paying large interest on that amount year after year ; while it meant a large addition to the taxation of the country ; he could not conscientiously support a measure that would parallel that railway for the greater part of its length and render it almost useless from the point of view of carrying freight. My hon. friend from King's, P.E.I., (Mr. Hughes) told us the other night that this Grand Trunk Pacific Railway was going to be a great military line. The hon. gentleman got mixed up in his figures, because one time he told us that it would cost only $2.80 a head, and another time he told us that it would cost us 15 cents a head. I don't blame him at all for mixing up his figures because the hon. gentleman (Mr. Hughes) was seized with a fit of military enthusiasm. He imagines himself a Roberts, or a Kitchener, or a Wellington, or a Napoleon, standing somewhere at the eastern terminus of this great railway and looking along a line 3,000 miles in extent, seeing it carrying on its trains, soldiers, and guns, and armoured cars, and everything of that kind. It is no wonder he should forget his figures. Speaking of this great project, he said :

> But there is something else which commends this proposition to my approval.

This great military man ; this great warrior for King's, P.E.I. !

If the time should ever come, and it will come through no fault of ours, when we may have to stand shoulder to shoulder in defence of our country, our institutions, and our laws, just think what a sense of security this continental railway extending from the impregnable fortress of Quebec, to a fortified port on the Pacific Ocean will give us. Our troops——

Just think of his strategy; what a strategist the member for King's, P.E.I., is? He spoke about conveying our troops 3,000 miles.

Our troops could easily be transferred from the west to the east and from the east to the west, and placed at any intermediate point. Should that day ever come, is there any man in Canada who would begrudge this contribution of 15 cents a year for fourteen years, for the power and security which such a line of communication could afford.

Sir, there was the spirit of military enthusiasm inflaming the hon. member for King's, P.E.I., but what do we find? Only last Saturday evening in the good old city of Montreal, the hon. member for Labelle (Mr. Bourassa) who sits almost at the same desk with the hon. member (Mr. Hughes), denounced imperialism, denounced spending one cent of the people of Canada for imperial purposes or for imperial defence. How can these two gentlemen reconcile their position, and each support the same government. The hon. member for Labelle called Chamberlain almost an idiot and the Earl of Minto a second to him. While this great military strategist from King's, P.E.I. (Mr. Hughes) is going to build this railway for military purposes extending from the impregnable fortress of Quebec, as he says, to another impregnable fortress on the Pacific coast; while he is willing to spend millions of money for this, his confrere from Labelle (Mr. Bourassa) denounced the spending of one cent of public money for the purpose of defence in Canada. That is the kind of following the government has on the other side of the House.

I suppose, Sir, that after all that one thing which is expected from a member in this House is to speak in favour of the province whence he comes. I have said pretty much all I have to say in connection with this transcontinental line and I repeat again that the people of Prince Edward Island will expect some consideration from the government, and they will also expect that I should make reference to their claims. I had the honour of moving an amendment a few days ago advocating that Prince Edward Island should be connectel with the Grand Trunk Pacific Railway. I presume this Grand Trunk Pacific Railway will be carried out. I do not know that our protest will have any effect on the government to prevent them from carrying out their views. It was my intention, if at all possible, to have the province of Prince Edward Island connected with this system of Railways. For years we have been suffering in this island province for the want of communication in the winter time. In summer time we have facilities for transporting our produce and developing our industries, but the great drawback is that when the ice forms in the Straits of Northumberland, Prince Edward Island is to a certain extent isolated and shut out from communication with the rest of the world. In 1873, when Prince Edward Island entered confederation, the government of Canada guaranteed that continuous steam communication would be established and maintained between Prince Edward Island and the mainland. Very little has been done to carry out that treaty. We have two winter steamers it is true, one of which is getting pretty old and will have to be replaced soon by a better one. The Postmaster General told us that this great railway scheme of the government was going to be a great transcontinental national railway which would unite all the provinces of the Dominion together, and I thought, now was the time for Prince Edward Island to assert herself and to show that if it was going to be transcontinental and national the little province of Prince Edward Island should not be neglected. I moved an amendment to the Grand Trunk Pacific Railway Bill asking that the company should acquire the branch of railway from Sackville to Cape Tormentine, placing suitable steamships on the route between Cape Tormentine and Carleton point, constructing a pier at Carleton Point, and thus giving Prince Edward Island connection with this transcontinental railway.

While we have unexcelled fisheries around the coast of Prince Edward Island, these great resources remained undeveloped for the want of this communication with the mainland. Consequently, our young men are obliged to leave their homes in the autumn season and go to the lumber woods of Maine or New Brunswick for employment, although the waters of their own province contain this teeming wealth. Last winter a large portion of the products of the fisheries, after they had been frozen and prepared for the American market, remained at Georgetown until the month of April, owing to the fact that the government steamers were fast in the ice. As a result of that, our young men, who spent their money and their time in the fisheries, lost some $5,000 or $6,000 in cash. A petition was sent to the government asking the government to recoup them for this loss, inasmuch as it was occasioned by the want of government steamships for keeping up communication with the mainland; and I hope that the government will see their way to reimburse these people, who are endeavouring to prosecute an industry of great value to the province and to the Dominion, in the loss they have sustained, and thus encourage them to continue in the industry for another year, and keep them from going to the United States. Is it any wonder that our popu-

lation has fallen off 5,000 or 6,000 in the last ten years when our young men have so little encouragement to stay at home?

Referring again to my amendment, I was astonished to meet with the opposition of the hon. Minister of Finance (Hon. Mr. Fielding). When he was in the province of Prince Edward Island he was very generous. When he had a candidate contesting an election, he would promise the people all kinds of things; but when he is asked to do anything in this parliament for the people, he forgets all his promises and pledges, and will not do anything at all. But, surprised as I was at the action of the Minister of Finance, I was amazed at the conduct of the hon. member for King's, P.E.I. (Mr. Hughes), who said it was an unreasonable thing to ask that Prince Edward Island be connected with the mainland—that it was an unreasonable proposition that a pier should be built at Carleton Point, and that boats should be placed on the route between Carleton Point and Cape Tormentine. Sir, the fathers of confederation, the gentlemen who, on behalf of Prince Edward Island, negotiated the terms of union with the Dominion of Canada—the late Senator Hawthorne, the Hon. Alexander Laird, the Hon. James C. Pope, the Hon. George W. Howlan, the Hon. T. Heath Haviland—were all unreasonable men when they asked for this communication; and my hon. friend opposes them. I am almost ashamed to mention it, but I can only leave the hon. gentleman to the tender mercies of his constituents.

Another proposition was the building of a third steamer. I have already told you that one of the steamers, being some eighteen years of age, is growing old, and will shortly be unfit for the service, unless she is repaired. The other boat, the 'Minto,' is a newer and better boat. But we want a third steamer. The people of Summerside and of the western part of Prince Edward Island desire a steamer in that section of the country. We do not wish to deprive our friends in the east of their communication between Pictou and Georgetown; but we insist that between Summerside or Carleton Point and Cape Tormentine communication should also be kept up; and that cannot be done without another steamer. I was told by the hon. Minister of Marine and Fisheries a few days ago that the government had no intention of building another steamer for that service; but I do trust that while they are expending hundreds of millions of dollars in western Canada, they will see their way clear to do something for Prince Edward Island.

There are some other matters which I would like to bring to the notice of this hon. House, especially the right hon. leader of the government, whom I see in his place, and also the energetic and able Minister of Public Works (Hon. Mr. Sutherland), who is sitting beside him. I would like to see a branch railway built from O'Leary Station, on the main line of the Prince Edward Island Railway, to the west coast of the island. I brought this matter to the notice of the hon. ex-Minister of Railways and Canals some time ago, and he gave me the answer that the question was under consideration. O'Leary Station is only twelve miles from Cape Wolfe, on the coast, which is about eighteen miles from the coast of New Brunswick, at the terminus of the Kent Northern Railway, which is operated from Richibucto to the Intercolonial Railway. I am informed by the gentlemen who own and operate that railway that if these twelve miles from O'Leary Station to the coast are built, they are willing to put on a steamship in the summer season between Prince Edward Island and the mainland, and thus to furnish another connection between the island and the Intercolonial Railway.

Another branch that is required is from Wiltshire, on the main line of the Prince Edward Island Railway, to Victoria Crapaud, on the west shore of the island. We also require a branch from a point on the railway to New London on the north shore. These are sections of the country that require consideration in the way of improvements.

Sir, it has been said by our opponents: You are making the same mistake that we made in 1880, when we opposed the building of the Canadian Pacific Railway; you have not learned by experience, and in opposing this measure you are opposing the best interests of the country. Sir, I deny that. As I have already said, the Canadian Pacific Railway is the great pioneer railway of the North-west. At the time the fertile plains of that country were opened up, it was the duty of every man in Canada to see that the railway was assisted. But we have an alternative proposition made by the hon. leader of the opposition. That proposition is to utilize the Intercolonial Railway, which has cost the people of this country $71,000,000 or $72,000,000, and which is now extended to the city of Montreal; to extend it to North Bay on the Canadian Pacific Railway, and to the Georgian bay; to provide proper terminal facilities there and at Port Arthur, because those who have studied the transportation question know that the largest quantities of wheat and other products of the west are carried by water; to nationalize the Canadian Pacific Railway around the north shore of Lake Superior, and make it a common highway for all railways. In this way, with a small expenditure of public money, you will place the farmers of the North-west in direct communication with the people of the east, and make Montreal and Quebec the summer ports of Canada. Improve the terminal facilities at Montreal as well as at Quebec. Do the same thing for St. John and Halifax as winter ports, and you will have Canada enabled to take her

position among the nations of the world with a moderate expenditure of public money, but do not pledge the credit of our country to this enormous expenditure while we have these facilities.

I oppose this resolution and the building of this railway on the following grounds: The government has no mandate from the people of Canada to build this railway. They are not authorized by the people of Canada to build it or to expend this large amount of public money in that way. If they desire to consult the people of Canada let them dissolve the House and go to the country on this question and we are not afraid to meet them in any part of Canada on this important point. I oppose it also because no surveys, or explorations, or estimates of the cost have been made. You know nothing of the mountains you will have to pierce, or the rivers you will have to bridge, or the valleys you will have to traverse, in building this railway. It is not a business proposition that you should undertake a work of such great magnitude without first having estimates and reports by competent surveyors. I oppose this measure too because the House had been in session from the 12th of March until the 30th of July before this resolution was placed on the Table. It was not in the form of a consultation with hon. members of this House, it was simply a contract binding hard and fast the people of Canada to an agreement. I oppose it, Sir, because it is the dying kick of a moribund government, of a government that is falling to pieces day by day. What have we seen within the last year, or within the last six months? Two of the leading members of that government resigning their portfolios and going into the cold shades of opposition. The hon. member for St. Mary's Division, Montreal (Hon. Mr. Tarte), resigned because he was not in accord with his colleagues upon the great fiscal questions of this country, because he believed in protection for Canadian industries, because he believed in Canada for the Canadians and he was forced to resign his position and to leave this government. The hon. member for St. Mary's division was at the head of one of the most important departments of the government and was looked upon as one of its ablest members; it was said of the right hon. the Premier that he said: 'Anything that is not good enough for Tarte is not good enough for me.' Mr. Tarte was forced out. A short time afterwards, the hon. Minister of Railways and Canals (Hon. Mr. Blair)—also at the head of an important department of the government of this country—because of his honest convictions, because of his honest desire to serve the best interests of the people of Canada, knowing, Sir, that these tricksters—if I may use the word in a parliamentary sense—knowing that this government in its dying days was about to bring to its support the Grand Trunk Pacific Railway and to endeavour, by boodle and by promises of boodle, to obtain a few more years of support and power in this country, felt as an honest man, having strong convictions on this point and anxious to protect the interests of Canada, felt it his duty to resign his position, one of great honour, which he had acquitted with credit to himself. I am surprised that formerly these hon. gentlemen were willing to laud him to the skies; as soon as he resigned, they commenced to pour abuse on him. They chided us upon this side of the House because we applauded the hon. the ex-Minister of Railways and Canals. Yes, Sir, we applauded him, and are always pleased on this side to applaud an honest man, always pleased to give credit where credit is due and where an honest man, because of his own honest and sincere convictions, felt it his duty to resign an honourable and lucrative office and stand alone in this parliament, I say it is an honour to this side of the House if they applaud such a man. Now, I do not know that I should detain you any longer, and I will bring my address to a conclusion.

An hon. MEMBER. Hear, hear.

Mr. HACKETT. My hon. friend says 'hear, hear,' it cannot be possible he wants to hear more of it, because if he does I am prepared to give him a great deal more, but I think it is better that I should stop. As an old member of this parliament, representing as I do an important constituency in Canada, knowing that this is a crucial time in the history of our country, knowing that our rights are about being sold—if I may use the word—that our liberties are about being tampered with, that the government of this country is binding the people of Canada to such an enormous expenditure that it will grind them down for years to come, knowing that the government, in making this agreement with this company, are bestowing upon it vast franchises and great privileges—privileges so great that it is going to be a question in the future who are to rule in this country, the government of the day, the people of Canada, or the Grand Trunk Pacific Railway. I think it my duty to rise in my place and, although I may never speak again in this parliament, raise my voice against what I think a most iniquitous measure.

Mr. O. E. TALBOT (Bellechasse). Mr. Speaker, it is with a certain amount of diffidence that I rise on this occasion to address the House upon the very important resolution which has already been the subject of an interesting and prolonged discussion. The hon. gentleman who has just taken his seat has quoted at length from the speech made by the hon. member for Burrard (Mr. Macpherson), in which the hon. member was praising highly the undertaking of the Canadian Pacific Railway and the immense things that the realization

of this project had done for the country. Does any hon. member believe that what was done twenty years ago and what is now resulting from the construction of that immense railway undertaking cannot be now and in the future repeated by the construction of another trancontinental railway. He says also that nothing is known of the country through which the projected railway will go. I hope, that before I resume my seat, I shall have convinced even the hon. gentlemen himself that a great deal is known about that country. He also tells us that the farmers have no money to throw away, suggesting, I suppose, that by the construction of this road, the farmers of this country will be impoverished. Representing, as I do, a rural constituency, I know as well as does the hon. gentleman that farmers are too sensible to throw away their money. But I never knew a farmer who would object to investing fifty cents if he thought he could make five dollars by it. And I consider that this undertaking, although I admit that the comparison is hardly possible, will, in the same proportion, do immense things for Canada. He quoted also from the speech of the hon. member for King's, P.E. I. (Mr. Hughes) that hon. gentleman expresses his views with regard to the military value of this proposed road. I had not intended to say anything on that point, but the remarks of the hon. gentleman (Mr. Hackett) brought to my mind a conversation I had in Quebec last winter, on the subject of the Trans-Canada, with an American gentleman whom I afterwards found to be a military engineer. He told me that the Trans-Canada, built as it was proposed to build it in the northern part of the country would certainly be a great advantage to Canada in a military sense. He said: In case any trouble should take place between our country and yours, it would be the easiest thing in the world for a party in a small vessel to cross Lake Superior, blow up the bridges on the Canadian Pacific Railway on the shores of the lake at Jackfish bay and Heron bay, and, this done, the whole of the North-west Territories and Manitoba would be in our hands. This is the weak point of your country. The weak portion of the human system is in the small of the back, and it is the same way with Canada. I consider that the construction of the railway will be of the greatest possible benefit to Canada from a military point of view. It will run away north of the shore of Lake Superior and will be of great advantage for the transportation of troops should such a thing at any time, be necessary. The hon. gentleman (Mr. Hackett) also referred to the hon. member for Labelle (Mr. Bourassa) mentioning the hon. gentleman's speech made yesterday in Montreal on the subject of imperial defence. I am not here to defend the hon. member for Labelle; that hon. gentleman is well able to defend himself. Nor do I hold the same views as that hon. gentleman in every instance. But there is one point upon which he and I are agreed. I believe, I sincerely believe, that it is far better for Canada to spend its money in developing its own resources and building railroads such as this than in taking part in the wars of Great Britain all over the globe and wasting its energies and its resources. The hon. member for West Prince (Mr. Hackett) makes a strong appeal for more branch railways in Prince Edward Island. I know the value and the importance of Prince Edward Island; I know that that province is a terrestrial paradise, not only because of the fertility of its soil, but because of the works of improvement which have been carried out by its intelligent and energetic people. But if we study the history of railway administration in that part of the country, I think, we shall find the appeal of my hon. friend is not very strong in one respect at least. When we find that it costs $135 for every $100 which the railways in Prince Edward Island bring to the country we cannot but feel that this is a fact to be considered. And it seems to me that this fact is an answer to the argument in favour of government ownership and administration of railways in Canada. This is about all that struck me, Mr. Speaker, in the speech of the hon. member who has just taken his seat.

Very interesting and very instructive have been some of the speeches made on this question. Very wearisone, lengthy and misleading, to say the least, have been some others. Nevertheless, I am of the opinion that the government has everything to gain by this long discussion. The undertaking is an immense one and its importance and necessity grow from day to day in the minds of the people. I shall be brief, Mr. Speaker, for I shall limit myself to matters concerning my own province, and with which I am somewhat familiar. The other parts of the Dominion interested in the construction of the transcontinental road have been very clearly dealt with by hon. members on this side of the House who are more familiar than I am with their local wants and details. As to the legal aspect of the contract between the government and the Grand Trunk Pacific, nothing that I might say could make it clearer than the luminous and frank explanations that have been so profusely given about it by the best legal authorities in this House.

I should say, however, Mr. Speaker, that since last fall I have devoted a good deal of my time, scanning maps and reading reports of all kinds concerning the northern portion of our vast and rich Dominion. It was also my good fortune to make a very interesting and pleasant trip, during the past winter, through Manitoba, the north-west Territories and British Columbia. In the in-

terests of the Trans-Canada Railway Company, I addressed, in the principal cities and towns of these provinces, several meetings attended by the most influential and representative business men of the different places which I visited. I am somewhat surprised, Mr. Speaker, when I hear hon. gentlemen on the other side of this House say that the government is hasty and premature in its present action, that no demands or expressions of opinion have come from any part of this Dominion asking for the construction of this new transcontinental road, that, in fact, the people of this country know nothing of the immense region through which this proposed line of railway is to pass. I am not aware of any city or town of importance where boards of trades or municipal councils have not framed resolutions, giving emphatic expression to the necessity of this construction. Columns after columns of the most important newspapers of Canada have been filled with the most minute descriptions of the vast and magnificent area of country to be developed by this new undertaking. There is hardly a citizen of Canada who does not, at the present time, possess a very fair knowledge of the northern and valuable portion of our Dominion. The Trans-Canada Railway Company alone has distributed many thousands of copies of prospectus and reports of the physical features and of the resources of a great portion of the territory tributary to this projected railway.

May I be permitted here, Mr. Speaker, to say that much credit is due to the promoters of the Trans-Canada Railway Company for the very effective missionary work they have performed in this connection. The gentlemen composing this company have spent considerable money in important surveys and have devoted considerable time to gathering valuable and numerous data and have published a very interesting compilation of reports from engineers, missionaries, explorers and Hudson's bay officials. Several thousand copies of this compilation, accompanied by maps and profiles made by one of the best engineers of Canada, a graduate of the Royal Military College, and second Sir Percy Girouard in railway construction, have also been freely distributed. Much credit is due to these gentlemen, for they have traced the way for a great portion of an undertaking which is now attracting the attention of the people of Canada and indeed of the whole world. For Canada, although small in population as yet, is forging its way ahead with sure and gigantic strides. I still hold the strong belief that, by the time this Grand Trunk Pacific Railway is completed, the necessity of shortening the line by building north of Lake Winnipeg will be strongly felt, and instead of an immense curve of 300 miles to the south, the population of northern Saskatchewan, of northen Alberta and of southern Athabasca, will render it necessary, in my humble opinion, for another railroad to be built on the line of the Trans-Canada project.

May I be allowed here to take strong exception to certain statements that have been made in and out of this House that the Trans-Canada Railway Company have sold out to the Grand Trunk Pacific. Looking over the list of names of the promoters and shareholders of that company should be sufficient to prevent any one from making such a ridiculous and unqualified statement. The Trans-Canada Railway Company still believes in the merits of its undertaking, and in its realization in the near future. Let me quote a few words from the acting manager of the Trans-Canada Railway Company, the active manager of the Quebec and Lake St. John Railway, and the ex-manager of the Great Northern Railway, which is now placed in the hands of the Canadian Northern. I think every one in this House and out of it will admit that Mr. J. G. Scott is a good railway authority, and I am not afraid to pit his knowledge and his authority in railway matters against those of the hon. member for Hamilton (Mr. Barker). Last week Mr. Scott was interviewed on the subject of the Grand Trunk Pacific Railway, and was asked by a reporter of the Quebec 'Chronicle' what he thought. Here are his words, Mr. Speaker, quoted in the Quebec 'Daily Telegraph' of August 10:

> Mr. Scott declined to express any opinion as to the policy of the government in assisting the Grand Trunk, but said that although the Trans-Canada directors are deeply disappointed that their line, which is the shortest, and, in their opinion, in every way the best for the country, has not been adopted, nevertheless he personally could not but admit that the proposed government line from Quebec to Winnipeg would be of very great advantage to this city, especially if a level location is selected.

Further on Mr. Scott gives his opinion as to the possibilities of grain transportation by an all-rail route, and here again I think his opinion will rank favourably with that of any other railway expert in this House:

> Although some high authorities think that an all-rail route cannot compete with the great lakes and canals for the transportation of grain from the North-west, he is firmly convinced that if the government select a level location with grades not exceeding thirty feet to the mile, they will not only be able to compete with the water route, but will soon cut down freight rates very considerably, and save a great deal of money to the western farmer. People are apt to forget that the water route is only open for about two months after the crop is harvested, whilst a railway is open all the year round. They also forget that although you can send a vessel from Duluth or Fort William to Buffalo or Parry Sound, drawing eighteen feet of water and carrying 7,000 tons of grain, you can only send a vessel drawing fourteen feet and carrying about 2,000 tons through the Welland and St. Lawrence canals to Montreal or Quebec. This is what makes the

water route to the St. Lawrence ports expensive, and when to that you add the inland railroad freight from the interior to Lake Superior and the cost of elevating and transhipment, it will make it possible for a railway with good grades to compete readily for the transportation.

This, Mr. Speaker, I consider a very high opinion coming from a recognized authority on railway matters in Canada. Now, Sir, much has been said in this debate that might have remained unsaid by hon. members on the other side of the House. If every vestige of shame has not been destroyed in them by ardent partisanship, they will blush when, in a few years, they read of the things they have spoken during this debate of a part of our country of which they admit they know nothing. How can hon. gentlemen who, after all, occupy responsible positions, so far forget themselves, for no other motive than the advancement of their party, as to utter such absurdities and offer such ridiculous assertions ? Self-esteem and the consideration of their fellow members, the dignity of this parliament and the respect of the citizens from whom they hold their mandate, should have been more than sufficient to prevent them from placing themselves on record with such exhibitions of extravagance and want of good faith. Mr. Speaker, I shall now deal with a few facts and figures in order to refute some of the very lame arguments advanced by hon. gentlemen on the other side of the House. First of all I shall devote a few moments to the hon. member for North Victoria (Mr. Hughes). According to this hon. gentleman's own autobiography he was at one time engaged in the honourable profession of teaching. He also, according to his own statement written by his own hand, devoted a good many years to the development of his muscles, giving his time to athletic training. Here is what he says about himself :

> As teacher and lecturer in history, language and literature, I was a recognized success. There is none whose students have taken higher standing or are filling higher places than mine, and there is none with better record or who is more beloved by his students than I am. . . . My athletic and political victories, my successes as educationist, writer on history and geography, and railway developer, have not been the result of chance or mere blind doggedness. The head, heart, nerve and muscle have each and all been taxed, and their forces judiciously combined.

If his knowledge at that time was not any more accurate about the geography of the country he should love and know more about, I pity the pupils he has formed. It is true that my hon. friend, as well as some other hon. gentlemen on the other side of the House, coming from the so-called banner province of Canada, do not think it is worth their while reading about this part of the Dominion for which they seem to have had deepest contempt, and which is called the province of Quebec. It it very preciptible that what galls them in this new project is the fact that the province of Quebec will receive from it considerable benefit through relief being afforded to old settled townships and villages, and the immense development which will follow the opening of a new part of the province. They would prefer that the northern part of Ontario should remain a wilderness than to see the province of Quebec deriving any advantage from this undertaking. One can readily gather that, had the Grand Trunk Pacific Railway started from Gravenhurst or North Bay, it would have met with their unanimous approval, for they cannot reconcile themselves to the idea of Quebec and the maritime provinces securing any immediate and considerable advantage from this policy.

It shall be a somewhat arduous task to follow the hon. member for North Victoria, who, thanks to his athletic development and elevated opinion of himself, traverses the province of Quebec over the tops of the Alleghaney mountains, jumping from summit to summit, and builds a railway without any trestle work to fill the gaps between them. He so often mentions the word 'air-line' in his descriptions of the country, that one would imagine he was constructing an air road without a flying machine. I notice, however, reading the unrevised edition of 'Hansard' reporting his speech, that he has thought prudent to eliminate certain figures which he had mentioned in the House in relation to distances from points of the Intercolonial Railway to imaginary points of this new government construction. He said that 8 miles from Trois Pistoles was the starting point of the central route described by the hon. Minister of Finance, when in reality Trois Pistoles, by as straight a line as the crow flies, is 44 miles to the nearest point of the projected railway. Then he gives us what he calls the border line across the counties of Temiscouata, Kamouraska, L'Islet, Montmagny, Bellechasse and Lévis.

The figures I shall now give will simply corroborate the statement made by the hon. the Finance Minister as to the actual distance by an air-line from the nearest stations on the Intercolonial to probable stations in a southerly direction along the new projected line :

	Miles.
From River Du Loup the distance is.....	25
From St. Pascal the distance is.....	17
From Ste. Anne the distance is.....	17
From St. Jeanport Joli the distance is....	25
From L'Islet the distance is.....	25
From Montmagny the distance is.....	20
From St.Valier the distance is.....	25
From Anselme the distance is.....	20

With the exception of the last station, which is along the Quebec Central Road, the others are stations served by the Intercolonial, and the closest to the projected railway. This will answer the question

raised as to the point of paralleling the Intercolonial.

The hon. member for North Victoria was also good enough to tell us, when he gave us the different elevations in feet of the different summits of the range of mountains back of which the proposed line of railway is to pass, that he was taking an opportunity of placing on record from official reports of the surveys of the United States survey department, a statement as to the topography of our country. This House must bear in mind that this double range of mountains, between which runs an almost continuous valley, follows a direction from west to east through this part of the province of Quebec, but the unfortunate mistake that the hon. member for Victoria made was to give to this House the summits for passes. What he describes are cross-sections of these mountains taken at different points running north and south. He gave the summits as follows :

	Elevation. Ft.
Woodbridge..	1,878
River Verte..	2,231
Painchaud Centre..	1,936
Chapais..	1,868
Garneau....	1,898
Patton..	1,720
Montmagny..	1,727
Roux township..	2,358
Roux township..	1,972
Ware township..	1,995

I have only given some of those mentioned by the hon. gentleman. There is on the wall of the Railway Committee room upstairs a complete profile of the entire route made by an eminent engineer, Mr. Hoare, and if you follow that through the entire country, you will find that the highest altitude which this railway will have to surmount is 1,450 feet. Of course, it is the report of an American surveyor that the hon. gentleman has referred to. I am sorry that the hon. gentleman has made use of it in this House, because we have Canadian engineers who have reported upon this country, and if he had taken the trouble to read their reports, he would have found that it would have been more satisfactory to himself, more satisfactory to this House and more satisfactory to the country to quote from them.

I should have thought, Mr. Speaker, that the hon. gentleman would have refrained from alluding to the construction of the St. Charles branch of the Intercolonial. The cost of this construction is a scandalous monument to the memory of the former administration. The $2,000,000 paid for the construction of that branch was not caused by the difficulties in the construction of the railway, but are due to exorbitant prices for rights of way paid to friends of the party. I fail to see, Mr. Speaker, why the hon. member for North Victoria made use of an American engineer's report, when so many surveys have been made by good Canadian engineers over this part of the province from the boundary of New Brunswick to Chaudière Junction.

The hon. member for South Lanark (Hon. Mr. Haggart) referred to one made by Mr. Davey. He took advantage of that survey to exaggerate the difficulties to be encountered by the government in the construction of its new line. The hon. member for Westmoreland (Mr. Emmerson) showed clearly that Mr. Davey's line was a diagonal one, and had no relation whatever with the new project. The same hon. gentleman referred to a line run by Mr. Crawford from Rivière Ouelle. This one is of the same nature, and also meets with the same objection. The only explanations and locations to be considered of real value are the ones made by Mr. Tetu in 1889 and 1890, and one made by Mr. Hoare in 1891. They cover the entire territory from St. Francis river, N.B., to St. Anselme, in the county of Dorchester. I shall refer more particularly to these two. I may also add that two more explorations have been made ; one by Mr. Sullivan, beginning at St. Claire, in the county of Dorchester, and the other by Mr. Light, starting from a point four miles west of St. Charles Station on the Intercolonial Railway. All of these surveys and explorations cross at a given point.

Now, in order to make this particular part of the undertaking clear to the people, and to show how possible and practicable it is, I shall read from Mr. Tetu's report, page 29, taken from the general report of the Commissioner of Public Works of the province of Quebec for 1891. These were the instructions received by Mr. Tetu from the Hon. Pierre Garneau, Commissioner of Public Works, before Mr. Tetu started this exploration :

Sir,—A portion of the information required by the report of the Committee of Agriculture, &c., adopted by legislative assembly on the 14th June, 1886, being already in the possession of the Department of Crown Lands——

Hon. gentlemen will remember that this report was adopted after a prolonged and interesting debate, in which some 15 or 20 members of the Quebec legislature took part.

—the main object of the exploration with which you have been entrusted by letter of the 31st of August last, should be to discover an easy line for a railway and to prepare a sketch of the level from St. Anselme to Lake Etchemin, and from Lake Etchemin to the frontier, passing through St. Justine. You should also explore from Lake Etchemin, taking a northeasterly direction to the frontier of New Brunswick.

At the same time, while preparing these sketches, with a view to the eventual construction of a railway, that is to say, in keeping account of the grades and curves to be overcome or avoided, &c., &c., you should take note of your observations on the value of the soil and on the different kinds of forest trees you may meet with in the course of your expedition.

Should you discover indications of mineral deposits, you should also take note of them and bring back specimens of the minerals, which you will deposit in the Department of Public Works.

The House will see that these instructions were very clear, and that they were given for the purpose, and the only purpose, of ascertaining the possibility of the construction of a railway in this very part of the country. I will read a few extracts germane to the question, anl as briefly as possible, from Mr. Tetu's reports. He made three different surveys and three different reports, and in his general observation, here is what he says about that part of the country :

Soil.—The soil in these townships is exceedingly fertile and most suitable for agricultura' purposes, the forests well wooded with merchantable timber, while almost the whole extent of ground contained in my tracings shows only much more stony land, due to its position in the near neighbourhood of the mountains.

Grade.—Although, owing to the proximity of the mountains, I was sometimes obliged to go round, I always maintained an easy grade, never exceeding one foot in a hundred, with the exception of one-half mile, where I was obliged to allow 18 inches to the hundred feet.

He goes on to describe from the first mile, giving a general idea of the country and speaking very highly of the country until he strikes that part between the 85th and the 100th mile, as to which he says :

At this point, I am at the height of 1,450 feet above the level of the sea, in a region of mountains, but the line which I have followed is in a fertile valley, well wooded with maple birch, &c., through which run numbers of small streams, tributaries to the lake.

From the 85th to the 100th mile, I followed the valley of the River Noire (which is the discharge of Lake Violon) for a distance of about 10 miles, always keeping on the north slope of the hill. The lay of the land here permitted of my running the line for a distance of 15 miles almost perfectly straight, through a forest heavily wooded with spruce timber of large size, together with a small quantity of pine. On each side of the high lands are magnificent forests of maple.

This is a general description of that part of the country over 130 miles of that line running all the way from the Etchemin river to Lac du Loup, the source of the Rivière du Loup. That was the limit of Mr. Tetu's survey, and there he was met by Mr. Hoare. Here is the information furnished by Mr. Hoare in 1890 in his letter to the Hon. Mr. Garneau :

Quebec, August 24th, 1891.

Hon. P. Garneau,
Commissioner of Public Works,
Quebec.

Sir,—Acting upon your letter of instructions, dated September 29th, 1890, for the completion of the exploration surveys authorized by the legislature, for the purpose of ascertaining the possibility of constructing a railway line through the counties of Lévis, Dorchester, Bellechasse, Montmagny, L'Islet, Kamouraska &c. I have the honour to inform you that I have completed the surveys and plans for everything comprised in the four sections in your letter of instructions, and to report as follows on each section, in the order that the work was conducted in the field :—

A railway located only to satisfy the requirements of the country through which it passes, without regard to the position that it might take in some important through-route, when it can be so placed, will not be as successful, unless the local resources are abundant. Upon these principles the surveys have been made. Any line up the Etchemin valley to the boundary line can be constructed at reasonable cost : there are no bridges to build at any size, the crossing of the Abenakis river being the longest, which would take a span of 100 feet. The crossing of the Etchemin beyond Standon can be made with a less span. The other streams are few in number and can be crossed on low grades with 30 or 40 spans. The rise from St. Anselme to the summit is gradual, by following the River Etchemin and tributaries The summit is reached at the head of Lake Etchemin, 38½ miles from St. Anselme, at an elevation of 762 feet above the Quebec Central Railway at St. Anselme, or 962 feet above the Intercolonial Railway at St. Henri. The descent to the boundary line is very easy. The maximum grades shown are 49 feet to the mile, but with a small additional expense they can be reduced to 40 feet. I started from the Etchemin valley line, 8 miles south of St. Anselme, and half a mile from the north bank of the Abenakis river, following the same side of that valley as far as Lac Vert, then crossing over to the opposite side and following the south shore of that lake to Lac Godbout, thence the north-west branch of River du Sud, following that river to its head, then crossing over to River aux Pins, connecting there with Mr Light's Short Line survey, then continuing in the direction of the Chemin Taché, till a connection was made with Mr. Tétu's line near Lac Boilard,a distance of 40 miles from St. Anselme. This line passed through the partly settled parishes of Notre Dame de Buckland, St. Philémon, St. Damien and St. Paul de Montmagny, passing the church of the latter parish, 20 miles from the mouth of the Abenakis river.

This is what Mr. Hoare says, after having gone over the same territory that Mr. Tetu had covered two years before. I shall now quote what he says about the route connecting the line surveyed by Mr. Tetu with the Temiscouata Railway :

The line follows the valley of the Cabano to the head of Long lake, then along the St. Francis valley to the foot of Lake Pohenegomook, passing at a point close to the United States boundary line. The line so far proved to be very good for grades and alignment, the country along this course rises so gradually that no grade need exceed fifty-three feet per mile.

This covers the most difficult part of the country, of which I have here a map showing mountains running north and south on both sides of Lake Pohenegomook. Further he says :

Although the surveyed line may not have the advantages as a through route, by its position it is admirably adapted to colonization purposes and it would get a share of foreign business without a doubt.

And he goes on :

To determine more exactly which is the best combined colonization and through route, closer surveys are required of the river Noire line.

These are the reports of two first-class surveyors—reports which are very complete, and which were at the disposal of my hon. friend from North Victoria ; and if he had read them, they would have saved him the trouble of sending to the United States for reports of the surveys of American engineers. Here are the figures given by Mr. Hoare as to the distances between Edmundston and Chaudière station : From Chaudière, via Intercolonial Railway and Quebec Central Railway, via St. Anselme, 207½ miles ; from Chaudière direct, via St. Anselme, 205½ miles ; from Chaudière via Intercolonial Railway by St. Charles, 202½ miles ; from Lévis via Intercolonial Railway and Quebec Central Railway, via St. Anselme, 209½ miles ; from Lévis via Intercolonial Railway and St. Charles, 205½ miles ; from Chaudière via the Intercolonial Railway and Quebec Central Railway, via Etchemin valley through the state of Maine, connecting with the St. Francis branch of the Temiscouata Railway, 190 miles ; from Chaudière via direct line, 186 miles. This is the line I am now discussing. From Chaudière to Edmundston, via the Intercolonial Railway and the Rivière du Loup and Temiscouata Railway, the distance is 199 miles. This is the line to which the hon. member for South Lanark (Hon. Mr. Haggart) alluded to. These are the distances from Edmundston to Chaudière, as given in the reports of the very best engineers we have, who have made a complete and th rough survey of that country.

At one o'clock, House took recess.

House resumed at three o'clock.

Mr. TALBOT. Mr. Speaker, when the House rose at one o'clock I had been speaking of the information at our disposal in regard to the country through which the Quebec and Moncton line would run and had alluded to the reports that had been made upon it. Among others, I alluded to the report of Mr. Henry O'Sullivan an eminent geographer, engineer and explorer, recognized by no less an authority than the Royal Geographical Society of England. This is what Mr. Henry O'Sullivan says, speaking of a route south of the 2nd range of mountains between the boundary of Maine and the different counties which I have already named :

That line would give access to a vast area of cultivable and well timbered lands in the counties of Bellechasse, Montmagny, L'Islet and Kamouraska and by touching the River St. John at its confluence with the St. Francis, would bring the forest wealth of 3,000 square miles of United States territory, drained by the River St. John and Allaguash, a tributary to Canadian markets and to the port of Quebec. The distance between Quebec and Edmundston by this route is estimated at 156 miles, or 30 miles shorter than by the Etchemin valley, but the lower summit (by 500 feet) of the latter route with its easy grades will make up for the increased distance.

Therefore, you see there is ample evidence that every part of that country has been well explored and thoroughly surveyed and with the exception probably of a last definite location of the route we have in our possession now sufficient data to determine that this road can be easily constructed in its entire length, at any rate from the province of Quebec to the borders of New Brunswick.

In order to give the House an idea of how far advanced are colonization and cultivation on each side of the entire length of the proposed line of railway, I shall quote from the last census the population of the different parishes which will be served by the construction of this road and which at present are deprived of any railway communication.

County of Lévis—	Population.
St. Jean Chrysostôme	1,757
St. Lambert	1,280
Dorchester—	
St. Malachie	1,372
St. Léon de Standon	1,674
Ste. Justine	959
St. Claire	1,758
St. Edouard de Frampton	1,935
Ste. Germaine d'Etchemin	1,587
St. Isidore	1,766
Bellechasse—	
Notre Dame de Buckland	1,069
St. Cajetan d'Armagh	1,741
St. Magloire	1,367
St. Damien	1,174
St. Philémon	968
St. Camille	300
Montmagny—	
St. Paul de Montminy	1,612
Notre Dame du Rosaire	661
L'Islet—	
St. Cyrille and St. Marcel	1,656
Ste. Perpétue	676
St. Pamphile	1,307

Now, Mr. Speaker, the inhabitants of several of these parishes at present have to drive from thirty to forty-five miles to the nearest Intercolonial Railway Station. I shall not weary the House with more figures in regard to the populations of other parishes, but the same remarks will apply to the counties of Kamouraska and Temiscouata. The Minister of the Interior, during the remarkable speech which he delivered in this House the other day expressed his surprise that these people, who for the last thirty years have been clamoring for a railway, had not long before this risen in arms against such a state of things. Petitions have been signed by the entire population of these parishes, resolutions have been passed by municipal and county councils asking for the construction of this railway. I have myself forwarded a large number of them to the Railway Department here,

but, they have either been pigeon-holed or thrown into the waste basket because nothing has been done. The representatives of these other constituencies have also pressed their claims, but every time we have been told that a new construction would injure the Intercolonial Railway. The Intercolonial Railway, after all, is only a local road, but it should be developed and it should be extended to meet the wants of the entire population. Why not follow the sound and reasonable advice given by my hon. friend from Bonaventure (Mr. Marcil) in his admirable speech of last Friday, and extend the Intercolonial Railway throughout the entire peninsula, from a point near Matapedia right down to Gaspé passing through one of the most fertile and beautiful portions of the province of Quebec. Why not build a branch along the north shore of the St. Lawrence river as far as Ste. Anne des Monts. We have in these two portions of country admirable parishes which are well settled and which would furnish any amount of traffic, and I cannot understand why the Intercolonial Railway should not extend its line throughout that part of the province. I remember that a couple of years ago when we were before the Railway Committee of the House in connection with the Gaspé and North-western Railway charter, the ex-Minister of Railways and Canals (Hon. Mr. Blair) took very strong exception to granting the charter giving us the old song that the Intercolonial Railway should not be touched. Arguments were brought forward to prove that the Intercolonial Railway would not suffer by this construction, but on the contrary would be given a greatly increased revenue, but we made no progress and nothing could be done.

With your permission, Mr. Speaker, I shall leave the south shore of the St. Lawrence and cross over the bridge at Quebec to the northern part of the province of Quebec. I may be allowed, however, to remain a few minutes in the old historic city of Champlain and say a few words of Quebec and of the great advantages of that city as a shipping port. You will pardon me if I am somewhat partial in my references to this city. Quebec, with its great and numerous natural beauties, appeals very strongly to the heart of every citizen of the province of Quebec. Let me read the words so admirably written by Mr. O'Sullivan as to the advantages of Quebec as a shipping port. These words are found in the report of progress of explorations in the country between Lake St. John and James Bay in 1898. Here is what Mr. Henry O'Sullivan says :

Nature destined Quebec to be the emporium of trade between Europe and North America, even from San Francisco, the distance is shorter to any European port via Quebec, than by any port on the United States coast.

It is useless to work against nature. The more we denude the forests and the more we dredge and swell the channel the more the water will evaporate, and the sooner will it flow off, and the diversion of a good portion of our waters at Chicago will certainly not improve the shipping facilities on the St. Lawrence above tidal water.

We have had examples enough, last summer to open the eyes of the general public.

Nature has provided every thing for Quebec ; a deep water shore line, with very little interruption on either side of the river from the Louise basin to Cap-Rouge, a distance of nine miles ; and if more room is required, a canal may be made along the St. Charles valley, giving wharfage room on both sides, right up to Cap-Rouge, at moderate cost. This canal might be fed by the Des-Mères, St. Charles, Ancienne Lorette and Cap-Rouge rivers, making Quebec, once more, an island, as it certainly must have been in ages gone by.

The Jacques Cartier, the St. Charles and Montmorency, on the north and the Etchemin and Chaudière rivers, on the south, can furnish unlimited electric power, &c., which in this age of lightning and steam, is a necessary adjunct to a growing city.

Frontenac, on ariving in Canada, wrote home as follows:—

" Rien ne m'a paru si beau et si magnifique que la situation de la ville de Québec, qui ne pourrait pas être mieux postée, quand elle devrait devenir un jour la capitale d'un grand empire." Which translated reads thus :

'I have never seen anything so fair or so grand as the site of Quebec. That city could not have been better placed had it been purposely intended to become the capital of a great empire.'

The more we study the geography of our country the more strikingly true do we find the above prophetic words. The question may however be asked, since Quebec has such natural advantages, why has her trade languished? Why are her wharfs idle ? In a word, why is she at a standstill ?

It is the only port on the Atlantic slope that can rival New York.

It is as close as the latter city is to St. Paul and Minneapolis, 300 miles nearer to Winnipeg, the centre of North America, and 469 miles nearer to Liverpool.

With a bridge at Quebec, the winter traffic could continue on to the Canadian seaports, via the Intercolonial, or, still better, by the proposed route that would leave the Intercolonial at St. Charles and run directly by the valleys of the Rivers du Sud, Noire and St. John to Edmundston, and thence, via the Restigouche, to any point on Baie des Chaleurs, and may be chosen, in connection with the now strongly advocated Galway route.

We have also the report of 1901. I quote the following from page 78 :

Some will say : 'Where is the use of talking of Quebec ? You cannot get the freight there,' &c., &c.

What is there to hinder the canal boats and railways from bringing freight to Quebec as well as to Montreal ?

Surely, it is not the difference of 160 miles on such level railway lines as we have on both sides of the St. Lawrence, that would make freight trains, loaded in the west, and after covering thousands of miles of rougher roads, stop short before reaching Quebec.

Let the railways and canal boats have the sailings that would be made by the ocean steamers making three or four trips more of a season from Quebec, and it would make a mighty

big paying freight rate on their lines between Montreal and Quebec.

The sailing craft of the whole Atlantic seaboard, and of the world for that matter, can come to Quebec with unfurled sheets, but they must be towed to Montreal.

I appeal to the representatives of the Dominion at large, from Halifax to Vancouver, to take an impartial view of the matter, and they must decide in favour of Quebec.

Yes, let the St. Lawrence route be improved and equipped on the same scale as that of New York, which can be done at comparatively small cost, from Quebec to the ocean, and with a shortening of six or seven hundred miles in our favour even with the great city of New York, which the Americans are proud to call the 'Hub' of the world, shall not long outstrip us in the race for supplying the European markets with the breadstuffs of our country.

So much for the advantage of Quebec as a seaport. Now, as to the northern country from Quebec and on to Lake Winnipeg. I shall quote further from the reports of Mr. Henry O'Sullivan, and the admiral reports of Mr. Doucet, the eminent engineer to whom I referred this morning. From these you will see that the statement of our hon. friends on the other side that we know nothing about that country are not correct. I shall read first from the report of 1895, which is contained in the sessional papers of Quebec for that year departmental reports, page 113. This is the report of an exploration of part of the Hudson's bay slope, made by Mr. Henry O'Sullivan, inspector of surveys. He begins his report which is addressed to Hon. E. J. Flynn, Commissioner of Crown Lands, Quebec, as follows :

Sir, in accordance with instructions of your department, dated Quebec, 16th August, 1894, I have the honour to inform you that I have completed the survey intrusted to me, north of the Ottawa river, and have also explored a considerable portion of the country drained by the rivers flowing into Hudson's or James bay, on which I have now the honour to report as follows.

He then goes on to give a very elaborate description of the rivers and lakes in the country through which he travelled, and he winds up with the following general observation :

There can be very little doubt, from what I have seen, that there exists beyond the sources of the Ottawa a fertile region several thousand square miles in extent, where there is an abundance of merchantable timber, principally tamarack, of which there is a sufficient quantity to supply sleepers for all the railways in the Dominion.

Roughly speaking, this vast region extends over about three degrees of latitude, and five degrees of longitude, containing about 50,000 square miles, or 32,000,000 acres ; equal in area to the whole of England, and one-third larger than Ireland.

That such an extent of country should remain unexplored and unknown at the end of the nineteenth century appears hardly credible. Still, the fact is, that with the exception of what was learned from the explorations of my esteemed old confrère, Mr. John Bignell, in 1872, at the heads of the St. Maurice, Gatineau, Mekiskan and Ottawa rivers, and his subsequent expedition to Lake Mistassini, and the conflicting reports of the same, the government had no official data regarding that northern region.

Now follows the report of the same gentleman of 1898, addressed to Hon. Mr. Turgeon, Minister of Colonization :

In accordance with instructions from your department, authorizing me to make an exploration of the country beween Lake St. John and James bay, and to examine the shore line and take the necessary measurements and soundings to find the most suitable harbour there ; to take notes of the general topography and geology of the country : soil, timber, climate, &c., and to furnish your said department with a plan, profile and report of the same, showing the obtainable grades and alignment, in view of future railway construction, for the development of that vast region, I have the honour to submit you the following report. . .

The country between Lake Chamouchouan and the height of land is a sandy loam, well wooded with black and gray spruce, tamarack, bouleau, &c., from 8 to 16 inches in diameter, a vast improvement on the country between there and the surveyed townships of the Lake St. John basin, which is mostly all second growth, since the conflagration of 1870. . . .

We passed through several large and beautiful lakes unknown to geography on the nameless river we followed from the height of land down to its junction with the discharge of Lake Chibougamou. These will be more fully described in a subsequent report, as soon as my plans and profiles of that section are completed.

One of these lakes is about 32 miles in length, with many winding bays and beautiful islands. Its shore line measures over 200 miles, and is generally well timbered with large white and black spruce, tamarack, poplar and bouleau, &c.

Some of the spruce here is over 2 feet in diameter, and from 75 to 90 feet in height. . . .

The distance from the height of land to Waswanipi by our canoe route is about 150 miles, and the difference of elevation from the lowest summit above mentioned is 325 feet. The country is level, or gently undulating ; very few mountains can be seen in any direction, and the fall is pretty evenly divided over the entire distance ; therefore, any desirable grades and alignment can be had for railway construction throughout this section. . . .

The main object of the expedition, as far as the practicability of constructing a railway from Lake St. John, over the height of land, to Waswanipi, was successfully ascertained, and before any line from there to the seaboard could be chosen, some point on James bay where, according to my instructions, 'vessels of sufficient draught for the navigation of Hudson's bay could enter,' should be decided on. . . .

At Waswanipi post, about midway between Lake St. John and James bay, it is surprising to see the fine vegetables and grains that Mr. Baxter, of the Hudson's Bay Company, has grown. I never saw better cabbage, carrots and turnips, and he gave me samples of wheat which he had grown from seed raised there the year before, and other wheat which he had grown from seed obtained from the agricultural farm at Ottawa. They are equally good, and can compare favourably with wheat grown in other parts of the province.

The surrounding country is all level, rich clay land, and Mr. Baxter is clearing up a piece of ground, not far off, that will certainly give still better results. . . .

Myself and assistants had a swim in Lake Waswanipi, on the 9th September, and we found the water warmer than we find that of Lake Chigobiche it the middle of August. . . .

About 40 miles above Moose Factory, we passed through splendid beds of gypsum.

I regretted being unable to remain longer at Moose, as much for the kind treatment I received there, as for the interesting information they were ready to impart on every side. The Right Reverend Dr. Newnham, resident bishop; Mr. Broughton, the Hudson's Bay Company's head factor, and Captain Taylor, who has been navigating Hudson's and James bay for the last thirty years gave me every information they could, and did everything in their power to make my sojourn there as pleasant and agreeable as possible. I was pleased to see the interest the Lord Bishop has taken in farming and gardening.

Here is a list of some of his garden stuff, which the right reverend gentleman gave me in his own hand-writing, with full liberty to use it as I pleased :

'Splendid celery, tomatoes, vegetable marrows, 15 to 40 pounds each ; salsify, kohl rabi, carrots, parsnips, turnips, beets, pease, beans, all kinds of cabbage, cauliflower, rhubarb, red and black currants, lettuces, radishes, herbs : all a good size, some not to be beat anywhere.'

We have a big country to develop, and our knowledge of it is very limited.

Up to 1894, the resources of all that region bounded on the north by the Rupert river, on the south by the height of land dividing the St. Lawrence from the James bay waters, and on the west by the province of Ontario, embracing an area of 50,000 square miles, was practically unknown.

Now, I shall read from the report of 1901, 'Second report of progress and exploration in the country between Lake St. John and James Bay.' In this report, Mr. Henry O'Sullivan has divided the entire stretch of country into sixteen sections, and gives a description of them in turn. I will not weary the House with all these details, but will content myself with summarizing these accounts. Mr. O'Sullivan first quotes from Mr. Lowe, and says :

Mr. Low says spruce for pulp wood is seen along the East Main river all the way up, and that areas of the same extend beyond the northern limit of the province of Quebec. He also says that new Quebec will be found better than new Ontario for agricultural purposes, and that no doubt rich minerals will be found in the northern areas of our province as well as in Ontario.

Then he goes on saying :

Many routes have been suggested and more or less advocated to reach James bay and Hudson's bay, at least seven in the province of Quebec and probaly as many more in Ontario. . . . . Having had occasion to examine more or less during the last twenty years the country traversed by the different proposed routes, I have prepared a table of the distances of the seven possible lines, which is herewith submitted, giving the number of miles of railway already in operation that may be used, and the number of miles to be built to reach James bay by each route. . . . . I take it that in spite of all opposition Quebec must become the principal shipping port of the St. Lawrence, and that the future transcontinental imperial trunk line of the Dominion must pass close to, or touch the southern extremity of James bay, and I have therefore taken these points as terminals for the accompanying table of distances. I will now endeavour to give an outline of each route in numerical order from east to west as shown by the red lines on the accompanying key plan.

I will not read the description he gives of these different routes, I will merely go over what he says of the two principal ones :

Route No. 1 follows the Quebec and Lake St. John Railway, from Quebec to Roberval, 192 miles, and thence via the Chamouchouan and Nottaway valleys to James bay.

This route was surveyed and reported on by me in 1897 from Roberval to Waswanipi and thence via Little Nottaway and Lake Namuska to Rupert House. The portion of the Great Nottaways from Gull lake to James bay was only surveyed in 1899, and the description of that section is given in the reports transmitted herewith.

With the exception of a few miles along the Chamouchouan river, there is no difficulty in getting a good line on this route. Quebec and Lake St. John summit 1,535 feet ; Lake St. John and James bay summit, 1,200 feet above sea level. Total distance 622 miles, 430 to build.

Route No. 2 follows the Quebec and Lake St. John Railway about seventy-seven miles to the mouth of the River Jeanotte, thence follow the Jeanotte and Algonquin valleys westward to Latukue ; thence following the St. Maurice to its source and westward over the height of land to the old Mekiscam Hudson's bay post, and down the Mekiscam valley to Lake Matagam ; and thence direct to James bay.

I surveyed the Jeanotte and Algonquin waters and traversed from there to the St. Maurice below Latuque in 1891-2, and in 1899 I followed the St. Maurice valley from Latuque to Kikindatch, Hudson's Bay Company post, and thence over the height of land ; and the region between the Mekiscam post and James bay was explored by me in 1894 and 1899.

I do not apprehend any trouble in getting a good railway line over this route with the exception perhaps of part of the distance between the Algonquin waters and Latuque. My line passed through Lake Wayagamack and the fall from there to the St. Maurice is too sudden to overcome with ordinary grades, but I think that by keeping farther north towards the mouth of the Bastonnais river better ground and easier grades may be had. The highest summit of this line would be between 1,300 and 1,400 feet above sea level. Total distance 557 miles, 480 to build. . . . .

Taken as a whole, a comparatively easy line can be had throughout this section and owing to the enormous distance that timber would have to be driven in following the Ottawa waters, a railway through here would secure an immense lumber traffic. Part of this line would likely be followed by the Quebec and Lake Huron projected railway.

The highest summit on this line is only 1,000 feet above sea level, the total distance 640 miles, 545 to build. . . . .

Reviewing the different routes above described, route No. 1 as a colonization road takes

first place, but as part of a future transcontinental railway system, first place must be given to route No. 2, and for the development of lumbering industries, first place must be given to route No. 2 also.

And he gives the different lengths of these routes :

In distance route No. 2 has the advantage over all the others as follows :—

Route	No. 2 is	65	miles	shorter than	No. 1
"	"	83	"	"	3
"	"	170	"	"	4
"	"	223	"	"	5
"	"	253	"	"	6
"	"	443	"	"	7

You can easily see, Mr. Speaker, that this part of the country has been pretty well surveyed, and that we have a very fair general knowledge of it, and sufficient data to justify the government in its present action. I shall now refer briefly to another magnificent report of this part of the country made by Mr. Doucet. Mr. Doucet has subdivided this entire portion to Lake Winnipeg into seven sections; the first section from the height of land, from the 375th mile to the 447th mile; the second section from the 447th mile to the 557th mile, and so on, until the 1,237th mile. Here is what Mr. Doucet says :

From Roberval to the western limit of the province of Quebec, is a distance of 375 miles. The line runs through a good farming country, the soil being chiefly clay.

Then from the 375th mile to the 557th mile, he says :

The country presents excellent facilities for railway construction. On the north side of the height of land no rock cutting is necessary, very little cutting and filling would be required, and, owing to the level nature of most of the country, the gradient would be easy. Tamarack for ties and sand ballast are to be had in abundance. The rivers and streams, more especially the Mattagami and Kapuskasing rivers furnish numerous valuable water powers with falls from ten to twenty-five feet, which can be utilized in the development of mechanical industry.

He goes on with this section from the 557th mile to the 637th mile :

Generally speaking, the climate is similar to that of Manitoba, the weather in midsummer being equally hot. No destructive frosts are experienced until the end of September and rains are frequent but not excessive.

Between the Missinaibi and Kabinakagami rivers, from mile 557 to mile 637, a distance of eight miles, the land as a whole is level, rising slightly along the water courses where it is rolling. The soil is clay and sandy loam, covered in the lower levels with boggy peat and moss, varying from two to four feet in depth. The country can be easily cleared, and for farming purposes the soil will be equal to the best in the older portions of the province. Much of the area which is at present swampy will secure natural drainage when the country is cleared, owing to the incline of the land.

The mixture of clay forming the prevailing sub-soil with the surface soil will prove rich and productive. This district is well watered by numerous rivers and streams, some of which are well stocked with fish. This district is heavily timbered with spruce and tamarack interspersed with other varieties. Owing to their density of growth, the spruce and tamarack are for the most part too small for any other commercial use than pulp wood, not being proportioned to the height they frequently attain. In some places, however, they are of larger dimensions. The spruce will yield in some places 40. 50, or even 60 cords to the acre, especially in the country along the Kabinakagami river. There is also a heavy growth of spruce along the Mattawishgwani river, which will produce from 20 to 35 cords to the acre. The dense spruce and tamarack forests of the Moise river basin are of great value and cover an immense area.

Now comes a description of the country from mile 637 to mile 687, from the Kabinakagami river to the Albany river, a distance of about fifty miles :

About half of the territory comprised within this distance is good arable land, not found in large continuous areas, but principally in the neighbourhood of streams. The trees growing along the river banks have usually attained a fair size. The best timber district is between the Kanakasha river and Lake Eskyanaga, where extensive groves of spruce and tamarack up to 36 inches in diameter are found. The poplar which grows everywhere along the river is singularly free from ' black heart ' which renders it of value for pulp wood. At Pine lake on the Kenongami river, iron pyrites occur in considerable quantities, though it carries only small traces of gold, nickel and copper. The climate is similar to that part of the North-west, being in the same latitude. Frost is unusual during the summer season and all the ordinary garden vegetables are raised without difficulty. Barley and oats can also be matured successfully.

Then the report gives a description of that portion of country along the Ogoki river, and you will see what a beautiful part of the country it is——

The total area of arable land ten miles inland on each side of the Ogoki river, for a distance of 140 miles, is estimated at 1,500,000 acres. There are great quantities of excellent pulpwood throughout the district, the principal varieties being spruce and jack pine. From the mouth of the Ambabika river to the Albany river, the land, exclusive of brulé, will yield 38 cords to the acre, or a total of 56,346,400 cords. The Ogoki river country will average 44 cords to the acre, making a total estimated output of 78,846,000 cords, being 135,194,400 cords in all from the territory tributary to these two water-courses.

I think this is sufficient to prove to any hon. member of this House what a valuable country that is and how quickly we should develop it. Now, comes a portion of the country 250 miles in extent. The exploration of that portion has not been completed. Last spring, when the Trans-Canada people found that their undertaking was not meeting with the approval that they were hoping for from the government, they suspended further explorations which were then under the direction of Mr. Vaughan Roberts. But here is a description from a

point beyond this 250 miles to Lake Winnipeg. Then the report proceeds :

From mile 937, opposite the Severn river, to Mile 1112, opposite Gunisac lake, the following description is taken from a report made by Dr. Bell in 1879 on the country around God's and Island lakes :—

The land about Island lake is level and has an average elevation above the water of apparently less than 50 feet. The level of Island lake itself is 900 feet above the sea. The woods in the neighbourhood are mostly green. The proportion of soil to rock is also much greater than in the neighbourhood of God's lake. Large areas of low sandy land occur on Oxford and Hare lakes, especially on their northern sides. The soil is very good indeed, being generally clay of a light brownish colour, mixed in most places with a little fine gravel. In nearly every case where explorations were carried on inland from Island lake the rock seen along the lake shore disappeared or was covered with soil, and the trees were of a larger and better growth than near the water. There is a very good garden at Island lake post, and certainly I have never seen potatoes look better than they do here.

The other varieties of soil noticed in the district include clay, sand, vegetable loam and sandy gravelly loam. Spruce is the most abundant wood everywhere in this region. Next in order comes aspen, white birch, tamarack, balsam, poplar and banksian pine. In many places the spruce attains a very good size and is used in the form of logs and beams for building purposes. It is also sawn into planks and boards for all sorts of carpenter work. The tamarack and banksian pine sometimes have a diameter of 20 inches. Balsam fir is common and of good size around Island lake, some of the trees measuring nearly 4 feet in circumference. The rowan and mountain ash is to be found at Island lake, as well as ground maple.

Mr. Doucet concludes his remarks on that part of the country by saying :

1. That no obstacles of a serious nature, as regards construction, exist throughout the whole route.

2. That the amount of rock work is inconsiderable.

3. That the gradients will be easy as the country is so level.

4. That the soil, composed mostly of clay or of clay formation, is fit for agriculture for the greater part of the distance.

5. That there are valuable areas of timber lands on the route.

6. That the lands and the timber will assure to the railway an immediate return in produce, lumber and minerals.

I do not think I need refer any further to this matter because I do not wish to weary the House any more than is necessary, but I was very anxious to give these facts. I was very anxious that no other hon. gentleman on the other side of the House would be able to offer the excuse that this information was not obtainable although it is in the library and although the government of the province of Quebec has published complete reports. I am firmly of the belief that we have discovered sufficient data to enable us to go on now and complete the surveys and that we will be in a position to start with the construction of this road within this year.

You will pardon me, Mr. Speaker, if at this stage of the debate, I have been somewhat lengthy. My excuse for thus trespassing upon the indulgence of the House is because of the fact that even the hon. member for Jacques Cartier, in order to make capital for a party which has no following in the province of Quebec, has so far forgotten himself as to belittle his native province by calling the part of the country I have just described, a subarctic region. Having heard such an expression of opinion from an hon. gentleman who should know better, is it a surprise to any one, if the eloquent and fluent member for East Grey (Mr. Sproule), his voice choked with tears, and his genial face distorted with the expression of the deepest sorrow, exclaims in the most pitiful tone that once again the great province of Ontario is being bled to death in order to increase prosperity in Quebec and in the maritime provinces. Ontario, said he, will not view this undertaking with pleasure. If the Grand Trunk Pacific should be a success, the Grand Trunk, the Canadian Pacific and the Canada Atlantic shall become impoverished. It will destroy the prosperity of our harbours, towns and villages, and 455,000 families will be loaded with a new incumbrance of $45,000,000. Jeremiah could not have been more tragical in his tone and more heartrending in this description. This new scheme, said the hon. member for Jacques Cartier, will not in any way help immigration and colonization, and prevent the exodus which is as large as ever. In answer to this statement I can say without fear of contradiction that where the exodus was the rule during the former administration it is now the exception, and far more people are coming from the States into Canada than going out of it.

In conclusion, Mr. Speaker, I wish to congratulate the government on this broad-minded policy. The government may proceed promptly and fearlessly with this great enterprise. The contract is a good one, and is surrounded by all possible precautions against fraud and default. And in answer to the challenge of the hon. member for East Simcoe (Mr. Bennett), I may tell him that no hon. member on this side of the House dreads going to the country with this project.

The amount of the country's credit temporarily engaged in this undertaking is very small when compared with the immense and permanent benefits that Canada, as a whole, will derive from the construction of this new transcontinental road, and the opening of these immense areas of arable and timber land, and mineral resources. It will greatly broaden the belt under cultivation, fill in the gap which separates the east from the west, afford relief to the farmer of the western prairie, in giving him lower rates for his exports and imports, and thus

create greater demands for the articles produced by the eastern manufacturers.

And last but not least, it will stimulate better relations, social and commercial, between the inhabitants of the different provinces by means of freer intercourse and greater facilities of communication.

Mr. RICHARD BLAIN (Peel). Mr. Speaker. I do not propose to make any extended reference to the speech of the hon. gentleman (Mr. Talbot) who has just taken his seat. I may say, however, that I was a little surprised that a gentleman coming from the province of Quebec should make such an unkindly reference to the distinguished leader of the Liberal Conservative party in that province. More especially when we remember that the Liberal Conservative party polled 100,000 votes in Quebec at the last general election does it not come with bad grace from the hon. gentleman, to say that the Liberal-Conservative leader and his party have no following in the province of Quebec. I noticed in the course of his remarks the hon. gentleman told us that up to last summer his opinion of the northern part of the country through which this railway is to run was that it is a wilderness. I think it fair to say that the hon. gentleman being a resident of the province of Quebec and very likely born in that province, and now having the distinguished privilege of representing a constituency in this House—I think it is quite fair to assume that the hon. gentleman learned more of the northern part of Canada up to last summer, than he has learned since and down to the time he presented his facts to the House this afternoon——

Mr. TALBOT. I do not think the hon. gentleman wishes to misquote me. I do not think the hon. gentleman will find in anything I said that I stated that up to last year the northern portion of Quebec was to me a wilderness.

Mr. BLAIN. I said the northern portion of Canada through which this transcontinental railway was to run, and if the hon. gentleman will look at 'Hansard' to-morrow he will see what I said was correct.

Mr. Speaker, the resolution which we are called on to discuss reads as follows :

> That it is expedient, in connection with the Bill now before this House, respecting the construction of a national transcontinental railway, to ratify the agreement set forth in the schedule to the said Bill, entered into on the 28th of July, 1903, between the government and certain persons on behalf of the Grand Trunk Pacific Railway Company, a company to be incorporated by parliament at the present session thereof, and to authorize the government to do whatever is necessary to give full effect to the said Bill and agreement.

When this resolution was submitted to the cabinet by the distinguished Prime Minister, the Minister of Railways and Canals differed from his colleagues upon this question, but not to the extent that he thought well to resign his portfolio. I read from his letter and his statement made in the House, a very special request made to the Prime Minister and the government in connection with this transcontinental railway project. The Hon. Mr. Blair made no threat against the government ; he had no disposition to leave the party ; no desire to differ from his colleagues with whom he had been working for years, but he makes this special request, and I ask the House to consider if it was not a fair and reasonable request. Here are the words of the Hon. Mr. Blair :

> That parliament be asked for an amount to enable a thorough exploration of the country to be made, so that it might be possible to judge whether or not a suitable traffic producing route could be found through this district, and its cost and the character and conditions of the country through which it is to pass ascertained.

Is there an hon. gentleman on either side of the House who will consider this an unreasonable request coming from the Minister of Railways and Canals and asking his colleagues to stop to consider before they ask the people of Canada to expend $100,000,000 in the construction of a transcontinental railway. The hon. Mr. Blair in making this request did his duty as a representative of the people in the cabinet, and after the Prime Minister and his colleagues refused to listen to him, he sent in his resignation, and I take these words from his statement made in the House :

> I am not in favour of impetuously rushing into the construction of a transcontinental line from Quebec, through an unknown country to Winnipeg and the west, until we know something about it—until we have the fullest information about it. The project is one of very great magnitude, and should be dealt with only after the maturest deliberation. . . . .
>
> The only cause which has led me to take that regretable step is because I have been unable to justify to my mind, to my own conscience, and to my own duty to my people, the support of the proposal which the government have decided upon making to this House and the asking of legislation to pass with respect to the project known as the Grand Trunk Pacific Railway.

And he makes a conclusive reference to this matter which is as follows :

> The step which I have taken, Sir, can only be justified in respect of my duty to my constituency ; of my duty to the party ; of my duty to this House and of my duty to the country, upon the clearest and plainest and strongest grounds.

That is what was said by the distinguished gentleman who was taken into the cabinet to take charge of the Department of Railways and Canals. From 1886 down to the moment he tendered his resignation, I have heard hon. gentleman opposite applaud him, for what reason ? Because for seven years he had applied himself to gath-

ering information in respect to the railway interests of this country and the transportation question generally. When any railway question came up for consideration in this House and his opinion upon it was given, hon. gentlemen opposite applauded. I wonder what has happened ? What has that hon. gentleman done to cause these hon. gentlemen so suddenly to change their minds? I have read the request he made to the cabinet ministers to stop and consider before they plunged the country into this enormous expenditure. I have also read what he said after he sent in his resignation. I leave hon. members of this House on both sides and the people of the country, to consider whether, in the statements he made to the House in respect to the dispute he had with the government over this question, there is anything that throws any discredit upon that hon. gentleman, or whether he has not cautiously prepared every word in speaking out on behalf of the people of Canada.

I come from the province of Ontario and, while I do not say that we have any right to discuss this question from a provincial standpoint, yet I think it is my duty to say something as a representative of that province. I ask myself first, can the people of Canada afford to enter upon the construction of another transcontinental railway? I answer that question by a statement which has been prepared by hon. gentlemen on the other side of the House. I find that when they came into office in 1896 the debt of the Dominion of Canada was for the last year given, 1895 $253,074,927. The debt has grown under this this splendid business government, until in 1902 it reached $271,829,090, or an increase in these seven years of $18,754,163, a little too much, Mr. Speaker, for a party who promised the people that they would reduce the national debt. Now, what proportion of this debt does the province of Ontario bear ? It has been stated by an hon. gentleman occupying a distinguished position on the other side of the House that on a close calculation the province of Ontario bears 40 per cent of the whole debt of the Dominion of Canada, and pays 40 per cent of the taxes. Therefore, it is not unfair or unreasonable that we who come from that province should have something to say when there is a proposition before the House to expend $100,000,000 of the people's money. If the parties holding the bonds and mortgages against the Dominion of Canada were to ask this afternoon that these bonds and mortgages be paid, the people of Ontario would be asked to contribute $108,731,636. If this Grand Trunk Pacific scheme goes on, and $100,000,000 is expended—and that is a reasonable estimate of the cost of this great work—there will be added to the debt of this country to be borne by the people of the province of Ontario $40,000,000 more, which will bring their share of the debt up to $148,731,636. With that state of affairs before us, I think I have a right to ask that the government of this country, no matter what their political complexion may be, to stop and consider whether or not a new transcontinental railway is wanted, and, if it is, what route it should take from ocean to ocean.

One reason given for the construction of this road is that it will assist the western farmers to bring their grain down to tide-water at Montreal or Quebec. Last year, according to a statement given to this House by the hon. Minister of the Interior, the total amount of grain of all kinds brought from Winnipeg was 39,264,407 bushels, of which 5,826,000 bushels, or 13 per cent, went out by all-rail routes. Here is a distinction between the two parties in this country upon this transportation question. The men who are best posted on this question state emphatically that it is not possible to move the grain from the west as cheaply by an all-rail route as it is by a route part rail and part water. Then, I ask, how is it that this government are willing to expend such an enormous amount of money for the construction of another railway for the purpose of bringing wheat from the west to the seaboard ?

Many of the papers have discussed this transcontinental question; but I will quote one, and one only. It is the 'Farmers' Sun,' published in the city of Toronto. It cannot be said that this paper is a supporter of the hon. leader of the opposition or his party. It heads an article 'The All-Canadian Falacy,' which reads as follows :

> There is an encouraging revolt in parliament against the plausible argument that Canadian produce should be sent by an all-Canadian route to the Atlantic. To carry Canadian grain around through the maritime provinces would be as absurd as to carry it twice across the continent. . . . . The object of every scheme of export transportation should be to get the grain to the British market with the least expense. . . . . There is no justification for imposing such a burden on the farmers of Ontario and the west. They have grain to sell. They must sell it in Britain. Nothing could be more natural nor more profitable than that they should seek their market by the cheapest route.

That is the leading farmers' journal of the province of Ontario, and I leave it to the hon. gentlemen on both sides of the House to consider whether that opinion is valuable or not. I notice that hon. gentlemen opposite frequently quote the 'Farmers' Sun,' and that is why I direct their attention to this article. Many quotations have been given in this House, from time to time, from business men of the country, in respect to the proposition that is now before the House. I will quote one, that of Mr. E. C. Whitney, who says :

> In my mind the Grand Trunk Pacific project is a most unbusinesslike proposition and I can-

not find any reason why such a proposition should be supported by the business men of the country.

This is said by Mr. E. C. Whitney, the managing director of the St. Anthony Lumber Company, and a leading lumberman of eastern Ontario. This is the opinion of a business man of this city who represents a leading business firm in the province of Ontario.

Following up the question of grain rates, I think it would not be unfair for me to quote the opinion of the hon. the Prime Minister of Manitoba, who speaking in Toronto the other day, is reported as follows :

Sir Wilfrid Laurier had said in the House of Commons that by the expenditure of $100,000,000 of the people's money the government proposed to add to the value of every farm in the Northwest by carrying the products thereof cheaper to the markets of the world.

Now, the hon. Prime Minister of that province gives his opinion, which ought to be valuable in a discussion of this kind, as he has just come from the people of that province with a handsome majority at his back, the people of that province having endorsed his railway policy. He says :

The rate at present that had to be paid on grain from Winnipeg to tide water at Montreal over the Candian Pacific Railway by way of Port Arthur was nineteen cents a bushel. With regard to this haul the Canadian Pacific Railway management declared that they had carried it absolutely and positively at a loss, therefore they did not want the business, and very little went that way. How then did the produce of the west get to the markets of the world ? It went to Port Arthur and was there transferred to steamers and carried either to Buffalo or to Georgian bay and there it was reshipped and sent on to Montreal or New York as the case might be. The rate for this journey under present conditions was less than fourteen cents a bushel as against nineteen cents by the all-rail route or a saving of five cents a bushel on the wheat. 'Now,' he continued, 'Sir Wilfrid Laurier may be more patriotic than I am but I want to say that patriotic as we are in the west are we not willing to build a railroad with the people's money and then allow our produce to be forced through a channel for shipment at a loss of five cents a bushel to us. You can understand the farmers of the west would not tolerate it.

This is an up-to-date statement made a few days ago by the Prime Minister of that province, that he is not in favour of the construction of a road of that kind, saying that that road would not be of any more advantage than any other road going into the province of Manitoba, and he points out that the farmers of that province will not thank this administration for the expenditure of $100,000,000 that will not benefit them one cent in respect to their sending wheat from the west to tidal waters.

The hon. the Minister of the Interior is an important representative from the west, and the other evening, in the course of a long speech in this House, he advanced some reasons why, in his opinion, the government of this country should construct this transcontinental railway. I have not time to go over all the points in his address, but I propose to refer to one or two and to point out to the House and to the people of this country how weak is the argument of this hon. gentleman, who among all the members of this government, should speak for the west in reference to transportation questions. In the course of his speech he said :

Grain was carried from Kansas City to Chicago at five cents per 100 pounds, a distance of 488 miles.

When that statement was made in the House, gentlemen who are conversant with this question thought it was an alarming statement to be made by a distinguished representative of the government, so telegraphic communication was entered into with the result that it was found that to-day's rate between the points mentioned, from Kansas city to Chicago, is not 5 cents per 100, but 14 cents per 100 pounds. With this condition of things, Mr. Speaker, I ask this House and the country whether that is a fair proposition for the hon. the Minister of the Interior to place before the representatives in this House, calling upon them to support this railway because a special rate from Kansas city to Chicago was only 5 cents per 100 pounds. He gives that as a reason, and there can be no other reason for his making this statement than to convey the idea to the members of this House that grain is now carried 488 miles at 5 cents per 100 pounds, when to-day's rate is 14 cents per 100 pounds between these two cities.

Mr. SCOTT. Does the hon. gentleman deny that grain has been carried between Chicago and Kansas city at 5 cents per 100 pounds ?

Mr. BLAIN. I thought some one from the west would rise in rebellion, because some of them are always in rebellion. I quoted the hon. minister's statement in this House. It is to-day we are asking the people of Canada to construct this road, and would not the hon. gentleman regard it as a fair thing for me to give to-day's rate upon wheat ? Would the hon. gentleman like me to give him another rate—a bargain day rate, such as the Minister of the Interior gave us? Is that the kind of rate the hon. gentleman would like the people of this country to base their decision on as to whether they should expend $100,000,000 or not ? Let me give the hon. gentleman an illustration. I called up the Canadian Pacific Railway ticket office in this city this morning, and I asked them : What is your passenger rate from the city of Ottwa to the city of Winnipeg ? The agent replied : The ticket would cost $36. I said : Have you not been sending out men at a very cheap rate ? He said : Oh, yes ; last Thursday

we had a harvesters' excursion. I asked him how much the fare was, and he said $10. In the discussion of this question, do you think it would be fair for hon. gentlemen to urge that because the Canadian Pacific Railway on Thursday last took men from Ottawa to Winnipeg for $10, that with an expenditure of $100,000,000 people would be carried to Winnipeg for $10, when to-day's rate is $36 by the Canadian Pacific Railway? I do not think it is fair for the hon. gentleman to bring up some special bargain day rate in order to induce people to vote for this expenditure. The hon. Minister of the Interior was going to teach the people of Ontario why, in his opinion, they should vote for this expenditure of money. I would like the hon. member for West Assiniboia (Mr. Scott) to listen to this argument also, because I would like him to answer it when he speaks upon this resolution. He told us that the people of eastern Canada, and particularly the people of Ontario, should be willing to vote for this measure for the reason that the new road would carry a large number of lean cattle up from the east to the west to fatten them on the grazing lands there. This is what he says:

> Why, Sir, it only needs to be stated for us to understand what a profitable business it would be for the farmers of the eastern provinces, who can raise cattle, but who are not able, on account of the want of pasture facilities, to finish them for the English market.

So, the hon. gentleman called upon the representatives of the people in this House to be satisfied with this for one reason among others that there will be a splendid carrying trade on lean cattle from the provinces of Ontario, Quebec and eastern Canada to feed on these splendid grazing lands of the west, and further he says:

> We have in that business a large and important item, which will prove a great and substantial source of revenue to the new railway when it is constructed.

This is the promise to the people of Ontario. I would like to investigate that for a moment from the point of view of the representatives of the west. I have read about this matter for a good many years, and a short time ago I had the opportunity of making some personal investigation into the question. Is it likely that the people of the province of Manitoba and the territories should be willing for all time to buy their cattle from eastern Canada, or is it not more reasonable to suppose that the farmers of the west will breed their own cattle? I notice that the former premier of that province, Mr. Greenway, has a splendid herd of well-bred cattle. Every day farmers who went to the west to settle there are coming back to buy thoroughbred cattle to take to their farms in Manitoba or the territories. The hon Minister of the Interior (Hon. Mr. Sifton) should have known that this business of sending lean cattle to the west is not likely to continue, in fact, I understand that to-day it does not amount to very much. But, even if there is such a trade to-day, is it to be supposed that it will grow, or even that it will continue? Do the farmers who have sent their sons to populate and develop that country propose that these young men who learned the breeding of cattle in eastern Canada will be content to bring cattle from the east to be fattened? I am within the hearing of farmers representing constituencies in Ontario on both sides of the House, and I am within the hearing of the hon. Minister of Agriculture (Hon. Mr. Fisher), and I venture to say neither the hon. gentleman nor any of his supporters will dare to contradict me when I say, that the time is coming, and is almost here, when the farmers of Manitoba and the North-west will breed their own cattle, and when there will be no traffic of this kind between Ontario and the west. And we were told that many other things would happen. Listen, for instance, to what the hon. Minister of the Interior said for the city of Toronto, the very heart of the province of Ontario:

> If you take the route by the Canadian Pacific Railway——

That is the route now constructed and regularly in use.

> —from the city of Toronto to Winnipeg, you find that the distance from Toronto to North Bay is 226 miles, and the distance from North Bay to Winnipeg is 1,060, or a total of 1,286 miles, as against 1,200 miles by the projected road. So that, making a fair allowance for deviations, the length of the new line will be substantially the same as that of the Canadian Pacific Railway.

There is a promise to the people of Toronto and Ontario. Coming, as I do, from the very centre of that province of Ontario, I ask myself what has been the trouble in communicating with the west? Have the farmers' sons who have left Ontario for many years past to go to Manitoba had any difficulty in getting there? You know very well, Mr. Speaker, and the House knows well, that they have had no difficulty whatever; for the reason that in earlier days the Liberal-Conservative party constructed a national highway to take the farmers of eastern Canada to the west to settle that country and now we have a promise held out, and what is it? Is it that this proposed expenditure of $100,000,000 will bring the city of Toronto nearer to the west than it is at present? Why, the hon. gentleman himself does not pretend that it will shorten the distance. The route will be a roundabout route as compared with the one we have now. The hon. gentleman's promise will hardly appeal to the farmers of Ontario. Will it appeal to the manufacturers who are sending their goods to Manitoba? Where is the manufacturing done in the province of Ontario? It is done in the city

of Hamilton, in the city of London, in the city of Stratford, and in the east, the city of Belleville, and the city of Toronto itself. Have the manufacturers of this country any trouble in getting their goods to Manitoba, the North-west Territories and British Columbia ?

Mr. SCOTT. Yes.

Mr. BLAIN. 'Yes,' says the hon. member for West Assiniboia (Mr. Scott). Why, such a statement is unworthy of the hon. gentleman or of any representative of the west. I read an article in the hon. gentleman's newspaper condemning the Canadian Pacific Railway and calling upon them to spend millions in putting on more rolling stock. And what was the text of the hon. gentleman's condemnation of the Canadian Pacific Railway last year in this House ? Was it because there had been a call from the west or from his own town for another railway ? It was not, and the hon. gentleman knows it well. His appeal, like the appeal made at that time by the hon. Minister of Agriculture, and joined in by all the gentlemen from the west on both sides of this House was, not that they required a new transcontinental railway, but that, owing to the business being brisk in Canada at this time, as it is all over the world, and owing to the Canadian Pacific Railway being taxed to its utmost to carry traffic, there was a scarcity of cars. And the Minister of Agriculture made a statement that it was not a new railway that was wanted—and I have his statement here—but what was required was the railway companies should spend money in providing new cars and engines. Of course, things have changed since then. And I think I should have referred to the fact that the remarks of the hon. gentleman (Mr. Talbot) who has just taken his seat—and very well prepared remarks they were—were prepared not to support this railroad at all. The hon. gentleman told us that he had travelled through the west and that resolutions had been passed by city councils and boards of trade in support of the Trans-Canadian Railway which has disappeared so suddenly. But these resolutions did not refer to the railway now under discussion. The hon. gentleman's influence was not so powerful as that of this new company, which is not yet even incorporated, and which is going to have a new road at a cost of $100,000,000 to the people of Canada.

I want to say one thing further in respect to the province of Ontario. That was an appeal made by the Minister of the Interior to the farmers of Ontario. I have answered that in the short time at my disposal, and I propose now to answer it on behalf of the manufacturers of the province of Ontario, and of the province of Quebec, and of eastern Canada as well, because there is no distinction in that respect. One would almost think that for all time to come cattle were to go from eastern Canada to the west, and manufactured goods too ; one would think this condition was going to prevail for ever in that country, to hear hon. gentlemen opposite talk. I think it is a fair question to ask if that condition of things is likely to continue, and if the manufacturers of eastern Canada will always want so many cars to carry their products up to the west. Sir, the time is coming when the province of Manitoba and the west will manufacture a great deal for themselves. I wrote to a leading manufacturer of the city of Winnipeg since this House opened, and received an answer dated the 5th of May. I asked him something about his business, and his answer will show the House whether the people of that province are likely to be able to manufacture goods for the wants of the people of the west. I will read only a portion of the letter :

> In reference to hands, all told, we employ about 225 in our business in the city of Winnipeg. We are now doubling our capacity for manufacturing at Winnipeg and Calgary. We buy our leather principally in Ontario, but we import some from the United States, especially our saddle leathers, and a little from England. We have ten retail stores, all our own, two wholesales and two factories. Our retail stores are situated at Macleod, Calgary, Prince Albert, Strathcona, Edmonton, McGregor, Portage la Prairie, Selkirk, Winnipeg and Rat Portage.

All these stores doing business in different towns of Manitoba and the North-west Territories. Where are they getting their supplies ? From the province of Ontario and eastern Canada ? No, but from the province of Manitoba, manufactured in the province of Manitoba, in the city of Winnipeg. What was the output last year, I asked the gentleman who represents this House in the city of Winnipeg, and he replied that they sold $1,000,000 worth of harness and saddlery, all manufactured within the province of Manitoba, and almost every dollar of it sold within that province, the North-west Territories and British Columbia. Last year, I notice, there was a binder twine manufacture established in the city of Brandon, and an agricultural implement manufactory. I could name a number of other manufacturing establishments that have sprung up in the city of Winnipeg in the last two or three years, for making articles that are used throughout the North-west country. I mention these things as showing what the people of Ontario and eastern Canada may expect very soon. Notwithstanding the great increase of population going into the west, a fact of which the Liberal-Conservative party are very proud, the time will come in the near future when neither Ontario or Quebec, or the lower provinces, will have as great a market in the west as they have at the present time for manufactured goods, for the reason that the people there are beginning to manufacture their own goods, and will be able largely to supply their own wants.

Now, Sir, we are told that this new road is to go through the province of Ontario. I have heard hon. gentlemen opposite say, how is it possible that any member from the province of Ontario can vote against this scheme? One would imagine, to hear these hon. gentlemen talk, that there is at present scarcely any railway communication in the province of Ontario. I have here a statement from the Minister of Crown Lands of the province of Ontario. Indeed I wondered myself when I heard so much about this clay belt in northern Ontario. In view of the fact that a Liberal government in Ontario have been for the last 25 years expending so many thousand dollars of the people's money in surveying northern Ontario, I wondered how it was that they found this wonderful clay belt only just a little while before the last general election. Of course, as a native of that province, I hope to find that we have a splendid clay belt up there, and magnificent timber limits, and everything that will tend to make that province increase in wealth. Now, starting from the western boundary of Quebec, and going up to the eastern boundary of Manitoba, we find that country divided into four parts, one called the Nipissing district in the east, the next the Algoma district, then the Thunder bay, and the Rainy river districts. Those are the four districts through which this transcontinental railway is to go, if it is ever constructed. Let us see what the Ontario Minister of Crown Lands says about that country, whether there is any railway communication now, or whether the people are suffering for the want of it. First, he speaks about the agricultural lands:

> The great clay belt running from the Quebec boundary west through Nipissing and Algoma districts and into the districts of Thunder bay. This region is watered by the Moose river, flowing into James bay and its tributaries, the Abitibi, Mattagami and Missinabie, and by the Albany and its tributaries, the Kenogami and Ogoke. Each of these rivers is over 300 miles in length, and they range in width from 300 to 400 yards. They are fed by numerous smaller streams, and these, in turn, drain numberless lakes of larger or smaller size, so that the whole country is one network of waterways, affording easy means of communication with long stretches fit for navigation.

This is the condition with respect to that district. Hon. gentlemen opposite do not claim that it is all agricultural land, they say there are timber limits. Now let me ask them what those who are engaged in the lumber business require. They require lakes and rivers, such as I have read about in the statement prepared by the Minister of Crown Lands. What do we find to-day in this very capital of the Dominion? Why we find logs floating down the Ottawa river by the hundred thousand. Why has not a railway been constructed long ere this if it is so necessary for the lumber business? Simply because the natural water-courses sufficient for the purposes are found in the northern parts of Ontario, and these afford the best means of getting the logs down to the mills. Now here is a statement in respect of railways. The Commissioner of Crown Lands says:

> The southern boundary of this great tract of fertile land is less than 40 miles from Missinabie station, on the Canadian Pacific Railway.

So, with the Canadian Pacific Railway main line running westward and eastward, and the clay belt lying forty miles north of this main line, what would the natural man say was wanted to develop that country? Would he say another transcontinental railway? Would he not say just what the provincial government of the province of Ontario have said: We will construct a line of railway up there to tap the clay belt, and give the people who are settled there an opportunity of getting down to the main line of the Canadian Pacific Railway? Where would they naturally want to go? Would they want to go to the city of Quebec or the city of Montreal, or down to the seaboard, or away up to Manitoba, the North-west Territories or British Columbia? Would a man living in that part of the country want to go in those directions? I ask this House that reasonable question. Every man can answer it, and every man on both sides of this House if he were asked that simple question would say: No, what the people want is to give access to that country, and it will not take seven years to build 40 miles of railway up there. What the people want in that clay belt, if that clay belt is so large and productive as hon. gentlemen opposite would lead us to believe, are colonization railways running up through into northern Ontario to bring the products of the people down to the centre of the province of Ontario, where they are required, and to take back the supplies which they need. I will briefly touch upon the different districts of that northern country. The first is Nipissing, and I will read a statement concerning it from the provincial government's report, as follows:

> Nipissing is the most eastward district of New Ontario. It is bounded by the Ottawa river tributary waters on the east, separating it from the province of Quebec, and extends to the district of Algoma on the west. Several towns have grown up in the eastern portion of this district. Mattawa, on the line of the Canadian Pacific Railway, is the principal one, and there are other smaller settlements reached by railway and steamboat. There is a branch line to Temiscamingue on the lake of that name, and in this neighbourhood a number of townships have been surveyed and are ready for settlement.

Do they need another railway? There is already a railway constructed in that locality. There are several townships surveyed, unoccupied at the present time, and waiting for settlers to go in and occupy them.

At North Bay on Lake Nipissing, a point of junction of the Canadian Pacific Railway and the Grand Trunk Railway, there is an important settlement, and from this point a railway is to be built due north, towards and eventually terminating at James bay—the southern sweep of Hudson bay—which will open a very desirable country in which a settler can find immediate remuneration for his labour, in the sale of the timber which he cuts on his holding, as well as for his farm produce. A person, desiring to reach Nipissing can do so either by the Grand Trunk Railway to North Bay—north of which there are a number of surveyed townships —or by the Canadian Pacific Railway to the same place, or to Mattawa on the Ottawa river, from which town he can choose the direction in which he will go to take up land. This is the route to Temiscamingue, where a number of people have recently gone to settle. The railway and steamboat fare from Toronto is about $13, and from other places in proportion. Arrangements can be made with the railways for the carrying of settlers' effects by the carload.

Is there any demand from that section of the country for another transcontinental railway? They have a railway now, so the Ontario government say, and the Ontario government have entered into a contract for the construction of another railway to reach the northern part of that province. Turning now to the district of Algoma the report says :

Algoma extends from the western boundary of Nipissing to the eastern boundary of Thunder Bay district. In this wide expanse of territory there is a great variety of timber for nearly all of which there is a market at the railway stations or with the buyers for pulp mills.

That is the condition of things in Algoma —a splendid market for everything they have to sell at the railway stations on the Canadian Pacific Railway.

Sault Ste. Marie, the point at which Lake Superior empties into Lake Huron through the St. Mary's river, is in Algoma, and is one of the rising places of the west. It attained its first importance from the canals around the rapids, but recently a wealthy syndicate have established a very large pulp mill and other works, and are about to build a railway north into the interior.

Not with government aid, not a transcontinental railway, but a railway running north to carry supplies to places to be settled.

There are a number of surveyed townships open to settlement in this district, and near the Sault Ste. Marie—commonly called 'The Soo.' The factories established at the Sault, as well as the other enterprises pending, will insure markets for everything that a farmer can raise as well as for the timber he may cut. There is a great deal of mineral in this district that has been very slightly exploited, but the construction of the Algoma Central Railway and the new life which has been imparted to that section by the extensive works at Sault Ste. Marie will result in these minerals being worked at an early date. Algoma is served by the main line of the Canadian Pacific Railway and the branch which runs from Sudbury into the Canadian North-west, and in adition by the lake steamers.

That is the report on this part of Algoma about which there is so much talk in this House, and which is already served without the construction of another highway. Then comes the Thunder Bay district :

Thunder Bay district lies between Algoma on the east and the Rainy River district on the west. The country throughout is well timbered and watered, and possesses several water powers near the bay that will have considerable commercial value, though at present unused. The commercial centre of the district is created by two towns on the bay, about four miles from one another. Fort William is the summer lake terminus of the Canadian Pacific Railway. Here are three immense grain elevators through which pass the greater part of the exported wheat grown in Manitoba and Western Canada. It is the divisional point of the railway and a town of increasing importance.

Port Arthur is the other town on the bay. It is the terminus of the Canadian Northern Railway, which runs through this and the Rainy River district and through Manitoba into the North-west Territories, apparently intending to reach the Pacific ocean.

These two points are also the termini of the lake steamers which run between Owen Sound, Collingwood, and ports on the United States shores of the lakes, carrying passengers as well as freight.

The Thunder Bay and St. Joe Railway will run from Port Arthur north through a country of great wealth in timber and minerals as well as through sections affording good farming land.

That is how the northern part of Ontario is being opened up at the present time. Lastly :

Rainy River district is west of the Thunder Bay district and extends to the eastern confines of the province of Manitoba. This is a lumbering, mining, and farming country. The chief town is Rat Portage, at the outlet of Lake of the Woods into the Winnipeg river. This is the chief commercial centre of the whole district, though some saw-mills and the large Lake of the Woods flour mill is at Keewatin, practically a suburb of Rat Portage.

A little distance eastward of Rat Portage is Wabigoon, the centre of a mining district, but recently found to be in the middle of some excellent farming country. The government here established an experimental farm as a guide and assistance to the incoming settlers, and as a standing testimony to the quality of the land. Wabigoon, Rat Portage, and Keewatin are on the main line of the Canadian Pacific Railway, and from their end of the lake is a steamboat service across the lake and up the Rainy river to the falls at Fort Francis. Beyond these are other steamers for points in the interior. The Canadian Northern Railway crosses the Rainy river on its way to Manitoba, and forms another outlet for produce to the markets east and west.

Now, touching upon these four districts, which comprise the northern part of the province of Ontario, I have given the report, not of the Liberal-Conservative party, but the report of a Liberal minister in the Ontario legislature, which points out that

with the present railway communication is very good, the policy of individuals who are interested in that northern country is not to build another trancontinental railway, but to build roads to the north in order that the timber and minerals shall be brought down to the main line of the Canadian Pacific Railway.

I just want to say a word or two and then I shall conclude, about the Intercolonial Railway. I am free to say that, living in the province of Ontario, I do not understand so much about it as those who come from eastern Canada, but I have listened to some discussions in this House in regard to the Intercolonial Railway during the last three sessions, and I will give a statement, not of my own, but the statement of the hon. ex-Minister of Railways and Canals (Hon. Mr. Blair, and this is a statement that I want the farming representatives, the representatives of the province of Ontario and the representatives of every part of Canada where the Intercolonial Railway does not touch, to listen to. The ex-Minister of Railways and Canals said this in respect to the freights that are now charged on the Intercolonial Railway :

I had a careful study made and a careful statement furnished to me by the traffic officers of the Intercolonial Railway as to the general traffic of tolls and freight charges which governs on the Intercolonial Railway and those which govern on the Grand Trunk Railway and the Canadian Pacific Railway ; and the result of that statement, keeping well on the safe side, is that the rates upon those two railways are from fifty to one hundred per cent higher than those upon the Intercolonial Railway.

That is what the people of this country have to bear for the Intercolonial Railway. That is not my statement, but it is a statement endorsed by the hon. gentleman from Westmoreland (Mr. Emmerson), who is coming into the cabinet to take the place of the ex-Minister of Railways, and it was endorsed by the hon. gentleman (Mr. Emmerson) in his speech in this House. The ex-Minister of Railways says further :

The gross earnings of the Intercolonial Railway on its traffic, not including passenger traffic, for the year 1902 were $3,900,000. Add fifty per cent to that and you get $1,950,000 of addition. In other words, if we could have collected on the Intercolonial Railway the minimum rates charged by other railways, we would have had $1,950,000 more freight collected than we did, and this would have brought our total earnings up to $7,600,000, including passenger traffic. Deducting working expenses, we would have had a surplus for 1902 of $2,046,000. These figures cannot be gainsaid.

I quote this statement for one purpose, and for one purpose only, and that is to show the people of the province of Ontario and the other parts of Canada who are not served particularly by the Intercolonial Railway, how cheap their freight rates are. We are not complaining about it, but I say that we are not served particularly by the Intercolonial Railway, and if the government is going to put a burden of $100,000,000 on the people of Canada to build a line paralleling the Intercolonial Railway, then it is not unfair for the people of Canada to say that the people of the maritime provinces through which the Intercolonial Railway runs for about 1,500 miles, should pay the same rates that are charged to the rest of us who have to ship our goods on the Grand Trunk Railway and the Canadian Pacific Railway. The Intercolonial Railway has cost us $70,000,000, and the deficits on its operation have been borne cheerfully by the people of Ontario and other parts of Canada, in order that we shall maintain our splendid confederation. But if the people of Ontario and the rest of Canada are to continue to do that, surely we should not be asked to construct another line of railway which will take away the little traffic which is now carried by the Intercolonial Railway.

One word about the policy of the leader of the opposition, and as to that perhaps it is as well that I should give, not my own statement, but the statement of a reform newspaper which is a supporter of this government. I refer to the Ottawa 'Journal.'

Mr. HOLMES. You do not call that paper a supporter of the government.

Mr. BLAIN. Does the hon. gentleman say that the Ottawa 'Journal' is a supporter of the opposition ?

Mr. HOLMES. I say its editor and proprietor is a well-known Conservative who was formerly on the staff of the 'Mail.'

Mr. BLAIN. Did you ever see a Liberal-Conservative editing a reform paper ?

Mr. HOLMES. If you quote the 'Journal' as a reform paper you are not quoting right ; that is all.

Mr. BLAIN. Neither the Postmaster General nor the Minister of Agriculture, who are present, will deny that the Ottawa 'Journal' is a supporter of their administration. That being so, I place the opinion of the Postmaster General and the Minister of Agriculture alongside the opinion of my hon. friend from West Huron (Mr. Holmes) and the House will be able to draw its own conclusion. The Ottawa 'Journal' says :

Mr. Borden's Policy.

Mr. R. L. Borden, the Conservative leader, has probably sprung a surprise upon the country by his speech of yesterday in parliament. Criticism of the government policy was expected ; what was probably not expected was the plain, strong, clear-cut definition of what might be substituted instead of the government policy. Mr. Borden shows the calibre of a leader who leads.

Let me continue further for the benefit of my hon. friend (Mr. Holmes) :

Practically, it seems to us, Mr. Borden is for immediate government ownership of a nature which would give to the people of this country a splendid check at once and for all time upon

all transportation business and rates in Canada. Practically, it seems to us, the Liberal government is for a railway scheme which may gain nothing for the people for fifty years save some local convenience along a route a great part of which is barren ; and moreover a scheme which meantime will inevitably hinder early redress of transportation grievances by any other plan of government action.

Let me quote a little further :

In brief, and apart from the many interesting details of Mr. Borden's ideas, the main thing is this : He is for immediate control by the people of Canada of the transcontinental outlet from the west, where the Liberal government is merely for control fifty years hence.

Mr. Borden says in effect Let us have at once—and it can be had at once—a government road from Halifax to Port Arthur, the head of the great lakes ; let us arrange—and it can be done—for immediate control of running rights from Port Arthur to Winnipeg ; and at Winnipeg let us offer transportation facilities east to all western roads, ready and able advantageously at any moment if desirable to carry a government road clear across the continent.

This is Mr. Borden's alternative to the government plan which would build a road from Moncton to Winnipeg to lease to a private company for fifty years, and offer enormous aid to the same private company to build further west for itself.

That is the statement of the Ottawa 'Journal.' Let me quote another paper for my hon. friend from West Huron (Mr. Holmes). I refer to the Montreal 'Witness.' The hon. gentleman will not deny that this paper is a supporter of the present administration. Here is the opinion of the Montreal 'Witness' :

Mr. Borden's proposal has the merit of business sense as compared with that of the government.

Let me quote again from another paper which no Liberal in this House will deny is a supporter of the present government. I refer to that king of supporters, the Toronto 'Globe.' It says :

Quite naturally the next extension of this Intercolonial Railway system would be from Montreal to the Georgian bay.

Quite naturally, the 'Globe' says. That is the statement of the leading reform journal on the policy that is announced by the leader of the opposition.

I have not much further to say, Mr. Speaker, only this, that in my humble opinion proper surveys of the country should be made before this railway is constructed. In my humble opinion, when the House is in session at least, and when a large proposition of this kind is before the people of Canada, the members of the cabinet, instead of making a binding bargain on behalf of the people of Canada without consulting this House would come forward and say—We propose to construct a line of railway. And after having made that statement, before they sign and seal a bargain for the work, they should come and ask the people's representatives whether the time has arrived when the people are prepared to spend $100,000,000 to construct a new transcontinental line of railway. I say that the members of the cabinet have taken upon themselves more power in this matter than was intended to be given them by the British constitution which governs this country. I think there can be no justification for this government pledging the people of Canada to an expenditure of $100,000,000 without first consulting the representatives of the people of Canada in parliament assembled. For myself, speaking for the province of Ontario, I say, whether my opinion is valuable or not, when I examine this contract and see how little this transcontinental railway will do for the province of Ontario; when I am told by the hon. Minister of the Interior that it will not bring the province of Ontario one mile closer than it is at present to the west or to the east, when this and other statements are made, I have arrived at the conclusion that the people of the province of Ontario, regardless of party, will say that this government should be condemned for the expenditure of $100,000,000 to construct another transcontinental line of railway.

The MINISTER OF AGRICULTURE (Hon. Sydney Fisher). Mr. Speaker, I am sorry that the hon. gentleman (Mr. Blain) who has just taken his seat has spoken from such a narrow and provincial standpoint in dealing with this scheme of a transcontinental railroad, which is essentially a national undertaking, broad and far-reaching, and embracing in its scope the whole of our great Dominion of Canada from the Atlantic to the Pacific. The hon. gentleman has brought forward one or two points which in the course of my remarks I will allude to ; but, at present I prefer to take up one or two matters which I think have not yet been brought out prominently in this debate.

Hon. gentlemen opposite have alluded to what they call the inconsiderate haste and pressure with which this scheme of the Grand Trunk Pacific Railway has been brought before the House. I take exception to that characterization of the proposal of the government, because, although this particular proposal has not been long before the country in its details, it has been the undoubted feeling of the people of Canada for some time past—certainly for one year, and probably for two years—that the condition of affairs in our North-west is such as to require another outlet for the products of that country in the near future. And when I say in the near future, I want to draw attention to the fact that this scheme, or any other scheme which may be put before the people of Canada, for relieving the pressure on the railroad systems of our country, must necessarily take some years for its completion ; and that if to-day we lay the foundation for such a scheme, it will be several years, to say the least, before the congestion of freight traffic in

our North-west Territories can be relieved. I need not dwell upon the many evidences of that congestion. I would point, however, to one which I think is authoritative, although I believe it has been alluded to already in this debate ; that is, the resolution of the Winnipeg Board of Trade, passed last winter, urging upon the government of Canada the necessity for immediate and prompt action to relieve the congestion of traffic from Manitoba and the North-west Territories to the Canadian seaboard. Those who are not responsible for the conduct of affairs in this country may think that the congestion is not a matter of great consequences ; but to the government of the country, whose duty it is not only to provide for present necessities, but also to look to the future and see that the growing needs of the country are provided for as they arise, I contend that it is a crying duty to provide for the future trade of our country. By the scheme which is proposed we do provide for the creation of another transcontinental channel of communication, which will be ready for operation five years hence. Were we to delay the inception of this work, I venture to say, without fear of controversey, that we would delay it too long. If within the next five years such a channel of trade were not created, I venture to say that a condition of affairs would arise in the country which would be a menace to our national existence. We have in Canada to-day two great corporations managing the railroads of eastern Canada—the Canadian Pacific Railway and the Grand Trunk Railway. The Cnadian Pacific Railway has an entry into our North-west Territories, and it is able to bid for the traffic of those growing territories; but the Grand Trunk Railway has no such entry through Canada, and it is therefore hampered in the carrying on of its eastern traffic. Everybody concedes that it is right that the Grand Trunk Railway should get an entrance into the North-west Territories, and should be able to take a share in handling the products of that growing country. If we do not provide a means by which the Grand Trunk corporation may be able to get an entry into the North-west Territories, through our own country and under our own flag, we all know that the Grand Trunk Railway has its connections with the railroads of the western states of America, and that it will obtain an entry by means of those roads into our North-west, and will bring down a large portion of the traffic of that country through American territory and by American lines of communication instead of through Canadian channels of communication. It is the duty of the government of this country to see that an evil of that kind shall not arise in the near future ; because we know that the interests of the people follow the channels of traffic ; and if a large portion of the people of our North-west Territories are looking to the great railroad corporations of the American union in alliance with the Grand Trunk Railway of eastern Canada, they will be looking towards the American union for other purposes ; they will be buying the necessaries of life in that country instead of buying them in eastern Canada, who can rightly and properly supply them. With this in view, it is a crying and immediate necessity that the government of Canada, supported by the parliament of Canada, should immediately arrange that the Grand Trunk Railway corporation should have an entry into the North-west Territories, and that in doing that we should provide a new and better line, the shortest and the cheapest means of communication for these territories, not only with eastern Canada but with our seaports so that their produce may be carried to the natural market of our food products, the mother country.

In this connection let me say a word upon the development of the North-west Territories. In all the discussion of this question the carriage of wheat has been brought prominently forward, and it has almost always been treated as the only product that would have to be carried by this railroad. That is one of the greatest mistakes that it is possible to imagine. While wheat is an important product of our North-west, and one of the greatest freights which will be carried by this road, and which has been carried by the Canadian Pacific Railway, I venture to say that in the near future, when the North-west Territories and the province of Manitoba are developed in the same way as the states of the Mississippi valley and the great north-western states have been developed during the last twenty-five or thirty years, the carriage of wheat will become an insignificant portion of the freight that will have to be carried out of the western country to our seaboard and across the Atlantic to the natural markets of our food products. I have made a little calculation in regard to the development of our North-west. In taking the census a couple of years ago, it was my duty to look into this development, and if it will not weary the House, I would like to lay before the members a few actual figures in regard to this development, and what I think may be taken to be a conservative estimate. well within what may be fairly and justly expected, of the probable development of that country in the decade between 1901 and the taking of the census in 1911. In 1891, in Manitoba and the North-west Territories as now organized, there were 31,800 farms, occupyling 8,140,000 acres, while in 1901, ten years later, there were 54,600 farms, occupying 15,400,000 acres. The remaining unoccupied land in these territories has an extent of 213,600,000 acres, or enough to make 758,000 farms of the average size of the farms in 1901.

The area of improved land in this decade

went from 1,403,000 acres in 1891 to 5,590,000 acres in 1901, and during the same period the area of land under crops was increased from 1,421,000 acres to 3,600,000 acres.

I will now take the area of the main staple crops in these two years—the main staple crops only. In 1891 there was 1,010,000 acres in wheat, in 1901 there were 2,495,000 acres in wheat. In 1891 there were 64,000 acres in barley, in 1901 there were 162,500 acres in barley. In 1891 there were 318,000 acres in oats, and in 1901 there were 833,000 acres in oats.

I also desire in this connection to make a statement in regard to the live stock of those territories, and later on I will draw the attention of the House and the country to the importance of this industry in comparison with that of the production of the crude grain or the crude crops taken off our lands.

In 1891 there were 147,700 horses in the North-west Territories, in 1901 there were 305,000 horses. In 1891 there were 120,000 milch cows, in 1901 there were 228,000 milch cows; and of other cattle, in 1891 there were 343,000, and in 1901 637,000, showing a splendid development of the live stock industry.

In 1891 the population of the territory was 219,000 and in 1901 it was 414,000, being a growth in ten years of 195,000, or 89 per cent. During the same period the growth of rural population was from 178,000 to 305,000, or 70 per cent.

The records of the Department of the Interior show that in the period between the taking of the census of 1901 and the 30th of June last, 48,858 homestead entries were made in the territory, and that 158,658 settlers have gone into it. I have had a calculation made based upon these figures and upon the records of the last two years, and I have discovered, taking an absolutely conservative estimate, not dealing with any exceptional years, but going over a term of years, taking averages, we may confidently expect that when one-half of this decade has passed, in 1906, we may count upon having 970,000 souls in Manitoba and the North-west Territories, and that in 1911, when the next census will be taken, we may confidently count upon 1,638,000 souls in Manitoba and the North-west Territories. Should the growth of the North-west Territories continue throughout this decade as it has begun, this estimate will be greatly exceeded, and we may be quite sure that the figures I am here giving are well within the mark. Now, Sir, I wish in all this calculation to keep well within the mark, but I think that the figures I shall give will be abundantly sufficient to justify a confident hope in the enormous increase in the production of that western country, and in the greatly increased demand for transportation facilities which that production will cause. The result is that it is absolutely necessary for us to-day, now, without the loss of a single week or a single month, to take steps to bring about the building of a new railway which will make the facilities for that transportation much better than they are to-day.

Sir, I say that these estimates are very conservative. In a country like this, new and growing, and with conditions changing very rapidly, we cannot make estimates in the same way that we can in an old and settled country like those of Europe, but in these calculations I have taken that arithmetical progression of increase in population which is taken in Europe and under conditions such as prevail there. Were I to make an estimate based on the conditions in Canada during the last few years, the figures, as I shall show in a minute, would be far, far under the mark. Supposing we had taken the trade of Canada in 1896 to estimate for the following eight years what the trade of Canada would be for the next eight years and had based that estimate on the history of preceding eight years, what would the result have been? In the period preceding 1896 the volume of our imports and exports was, in round numbers, $1,733,000,000. In the latter it was $2,713,000,000. That is an increase in the latter period over the former period of $979,000,000, or an average increase per year of $122,000,000.

In other words, the trade of Canada during the last eight years has averaged $122,000,000 greater than it did in the eight years preceding 1896; and, if we had based an estimate in 1896 of what was going to happen in eight years during which this government has been in power, on what had happened during the previous eight years of the former administration, we should have been too low by $122,000,000. I have taken the lower estimate in the figures I have given. I have not based my calculations of the future on the geometrical progression which Canada has shown during the last few years, but simply on the arithmetical progression, believing that in the next few years it will be at least as great as it has been in the immediate past. I think, therefore, that the estimates I shall give are conservative estimates. In 1901, we had 2,495,000 acres in wheat. In 1906 we ought to have 3,700,000 acres in wheat, and in 1911, at the end of the decade, we ought to have 6,200,000 acres in wheat. In 1901, we had 162,500 acres in barley. This, we may expect to increase to 250,000 acres in 1906, and to 432,000 acres in 1911. In 1901 we had 833,000 acres in oats. In 1906 we may expect to increase to 1,300,000 acres in oats, and in 1911, 2,200,000 acres. Now, take the average production. I do not base my estimate on any exceptional or particular year, but on the average production of five years before and after the last census. On this basis I think it is fair to believe that, as Manitoba and the North-west Territories produced 63,310,532 bushels of wheat in 1901, we can safely count on 70,300,000 bushels

of wheat in 1906, and on 117,800,000 bushels in 1911. Of barley, that country produced 7,331,255 bushels in 1901. This, I expect, will increase to 8,000,000 bushels in 1906, and to 13,824,000 bushels in 1911. In oats, our produce of 38,909,654 bushels in 1901 will increase to 58,000,000 in 1906 and 81,400,000 in 1911. Taking live stock, and basing our calculations on exactly the same principles, I find that we had, in 1901, 418,542 horses, and I estimate that in 1906 we shall have 750,000 and in 1911, 1,240,000. Of milch cows, we have not the figures for 1901, but I expect that in 1906 we shall have 560,000, and in 1911, 920,000. Of other meat cattle, we may expect to have in 1906 1,560,000, and in 1911, 2,500,000. These figures are important because on these figures we shall have to base our calculations and expectations of what the railroads and other means of transport will have to carry out of the North-west Territories and Manitoba between 1906 and 1911.

According to the contract that is before the House to-day, the new road ought to be built five years after the contract is signed. In 1908, then, the road should be built. We may safely believe that it will be a year or so after its construction before it is at its best in the carriage of freight. What we have really to do, therefore, is to provide for the needs of the country in 1911; and the figures I have given will indicate to some extent what we shall have to provide for. I said a few minutes ago that these estimates are what the railroad would have to do, but I have not gone quite far enough in my calculations. A certain amount of wheat, barley and oats will be needed for food and seed in Manitoba and the west; only a certain number of the animals in the west will be exported. I estimate that the surplus of wheat for export in 1906 will be about 60,000,000 bushels, and in 1911, 100,000,000 bushels. We may expect also that oats will be exported, either in the form of grain or in the form of meal, to the extent of 28,000,000 bushels in 1906, and 40,000,000 bushels in 1911. As to cattle, we may expect that in 1906 about 156,000 head will be available for export, and 250,000 head in 1911. Reducing these export carloads, we find that in 1906 we may fairly expect that, in wheat, oats and cattle, there will be available for export in Manitoba and the North-west Territories 120,000 carloads, and in 1911, 165,000 carloads. In other words, in 1906 there will be an average of ten trains a day of thirty cars each for every day in the year, and in 1911 fifteen trains of thirty cars each for every day in the year. We can see what this means when I say that, according to the last census, for three years the average had been about 120 cars per day, or four trains of thirty cars each for every day in the year. In other words, in 1906 we ought to have two and a half times as many train loads come out, and in 1911 nearly four times as many carloads of these products of the North-west Territories coming out that we have to-day. Now, hon. gentlemen opposite, and the leader of the opposition amongst them, have pinned their faith to the advantages of lake and rail transportation as against all-rail transport.

Mr. HENDERSON. Hear, hear.

The MINISTER OF AGRICULTURE. The hon. member for Halton (Mr. Henderson) says, 'hear, hear.' I have no doubt he pins his faith to that of his leader, whatever it may be. Nevertheless, though the leader of the opposition pinned his faith to water and rail transportation, he proposes to provide for all-rail transportation and many hon. gentlemen on the other side have discussed that very favourably. The argument in favour of water and rail transportation is supported almost entirely by statements in regard to the transportation of wheat and wheat alone, upon the fact that wheat may be carried by lake and rail more cheaply than it can be carried all-rail. My hon. friend the leader of the opposition, in the course of his statement of programme announced that he favoured the acquiring of the Canadian Pacific Railway track from Sudbury westward to Fort William, and then nationalize the track from Fort William to Winnipeg. This must be for the purpose of providing an all-rail route and shows that the hon. gentleman appreciated the importance of that route, and sees that the water and rail route is not sufficient for the needs of our transportation. I can quite understand, if the hon. gentleman depends on the Canadian Pacific Railway line north of Lake Superior, that the argument that the all-rail route cannot compete with the lake and rail route has a good deal of force, because everybody knows the impossibility of the Canadian Pacific Railway north of Lake Superior competing with the lake and rail route. We are all aware of the fact that that railroad has grades on it of one per cent; we are all aware of the fact that, spend as much money as you like upon it, do what you choose to improve that road, you never can make it, from the nature of the country through which it is going to pass, a portion of a great transcontinental railroad which can and ought to carry freight at the lowest possible figure.

But, Sir, I will take the hon. gentleman's contention that we must have a lake and rail route. Nobody on this side of the House objects to that route during a portion of the year, in summer. But I want to point out this, that while grain alone, and especially wheat, will probably be carried when the lake and rail route is available, chiefly by the lake and rail route, wheat is not by any means the only product that will be carried out, in fact is not the greatest product that,

in the near future, will have to be carried out from the North-west. My hon. friend from Peel a few moments ago alluded to the argument of my hon. friend the Minister of the Interior about the carriage of cattle into the North-west Territories from the east by this railroad route. My hon. friend perhaps is not aware of the extent of that trade. This last season over 25,000 head of store cattle were carried from eastern Canada beyond Lake Superior into the North-west Territories, for the purpose of supplying that country with stock; and my hon. friend is not aware of the fact perhaps that at the same time there was no less than 40,000 head of cattle came from Mexico into our North-west Territories. Why? Because there was not a convenient route by which to take them at a low rate from eastern Canada into the North-west. Now, Sir, I venture to say that while the 25,000 head that went into the North-west Territories last year and an almost equal number that went in the year before, came largely from the province of Ontario, in the near future the maritime provinces and Quebec, and even that northern country through which the Grand Trunk Pacific transcontinental road is going to pass, will be able to raise young cattle which can be profitably taken into our North-west Territories for the purpose of being fattened there and then sent back to the east to be exported to the mother land. My hon. friend shakes his head. Perhaps he forgets the fact that during the last few years we have been sending from eastern Canada into the states of the American west thousands of cattle for the same purpose. My hon. friend perhaps does not know that although the western states of the union have been the greatest cattle producing country in the world, notwithstanding that fact, buyers from the western states, from Iowa, Missouri, Kansas, Colorado and Nebraska, have been scouring the Dominion of Canada to get store cattle to take into the western states to be fattened there and then sent east to Chicago, to be re-exported to England. Now, Sir, if that condition of affairs obtains in the cattle industry of the western states of America which have been developing it for years, may we not expect that in the North-west Territories of Canada, as their cattle trade develops, the same thing will obtain.

Mr. BLAIN. The hon. gentleman says that the export of cattle from Canada to the Unites States is increasing. Can he give us the figures for the last three years?

The MINISTER OF AGRICULTURE. No, the trade has not been increasing. Why? Because our own people have wanted all their cattle to reproduce in this country, they have been refusing to sell them to the Americans because they have found a new market for them in our own North-west. That is the reason why our cattle trade has been increasing. But it is not because the western states do not want them, it is not because the western states are not getting them, but to-day the western states are getting their store cattle from Mexico just as our people in the North-west are doing, because they cannot get them in Canada; and it is only because they cannot get them in Canada in sufficient quantity that they have been turning their attention to the south and they are getting them from Mexico.

But the hon. gentleman has entirely supported the view which I am expressing to the House. The hon. gentleman is quite right when he says that in the near future the people in the North-west will breed cattle for themselves. They are doing it to-day, and they are going to do it much more in the future. It is just as important, and indeed more important for the development of our North-west, that the cattle and stock industries should be developed than that wheat should be raised. The people of eastern Canada know well that the live stock interest is the basis of their prosperity. They know also that those people who have gone from eastern Canada to the North-west and Manitoba, while for a few years they do without live stock by reason of the virgin fertility of their soil and the ease with which they can raise great crops of wheat on the fertile prairies, in the near future they will have to adopt what is known as mixed husbandry and establish a live stock interest. When they come to do that the amount of animal products which they will want to send out of the North-west Territornes will make the amount of wheat that is sent out pale into insignificance in comparison. Sir, we are going to have in Canada the same condition of affairs in the development of our North-west that the United States republic has had. When the people from the east went into that country and began to spread out over the Mississippi plains and further west, they began to raise wheat and corn. They afterwards took to raising cattle to such an extent that to-day Chicago is the centre of a far greater trade in animal products than it is of a wheat and flour trade. I venture to predict that while to-day the people of Manitoba and the North-west are thinking of hardly anything else than wheat and flour, they will in the near future devote their attention to the animal industry in the shape of packing houses, in the shape of abbatoirs, in the shape of a live stock trade, which will cause the grain trade of our North-west to sink into insignificance. When that time comes, as it surely will come in the near future, no part of that trade in animal products will go by lake and rail but the whole of it will be obliged to go by rail, and can go in no other way. I emphasize this fact, because in all the discuss-

ion of the transportation question, not only in this House but in the newspapers of the country, the problem has been held to hinge upon the grain trade, in comparison with which everything else seems to be considered of no importance.

I have some figures here which will show what the trade of Chicago is in reference to this matter, and I think we may fairly judge of what is going to happen in our own country by what is happening in the United States. Winnipeg is held to be the future Chicago of our country. Chicago is situated at the head of lake navigation. Winnipeg is nearly 500 miles away from lake navigation. If there is any place on the continent of America where lake transportation can advantageously compete with all rail, it is Chicago. When anything has to be sent from Chicago to the Atlantic seaboard it can only go by lake to Buffalo, and then rail from Buffalo, or by the Erie canal with only one transhipment, or it can go all rail from Chicago to the Atlantic seaboard without any transhipment at all. Now, anything that comes from Winnipeg—and Winnipeg must be in the future the centre for the gathering of all the products of our great North-west—anything that comes from Winnipeg, if it has to come by water as well as by rail, will have to come down to Lake Superior before it can reach the water. It will then have to be transferred into the ship, be brought down to some other point and there it will have to be transferred again either to the rail at the Georgian bay ports, or into the ocean vessel at the port of Montreal, or at some other of the seaports. In that respect water and rail transport is at a less advantage from Winnipeg than from Chicago. But, what is the fact as regards the transportation of the products of the west from Chicago ? I have some figures taken from the Chicago Board of Trade returns which show how the products of the great west which are assembled at Chicago go to the Atlantic seaboard. I fear I may weary the House——

An hon. MEMBER. Go on.

The MINISTER OF AGRICULTURE. But these figures are interesting and important to the argument. The figures which I am going to quote are for the years 1900-1901 and 1902. In 1900 grains, including wheat, corn, oats, rye, barley, grass and flax seeds to the amount of 3,449,000 tons were sent from Chicago eastward by the water route, and grains amounting in quantity to 2,287,000 tons were sent eastward by all-rail. There were of flour alone 109,000 tons sent by water and 614,000 tons sent by rail. I will now take animal products, including barrelled pork, bacon, dressed beef, hides and wool, lard, cheese and butter, not live animals, but only animal products. By water there were sent 20,000 tons from Chicago to the east and by rail there were sent 1,445,000 tons. If you take the three things together, grain, flour, and animal products, there were sent from Chicago eastward in the year, 1900, 3,579,000 tons by water and 4,347,000 tons by rail.

Mr. REID (Grenville). Is that from Chicargo to the seaboard direct ?

The MINISTER OF AGRICULTURE. Yes, direct.

Mr. BELL. Not all to the seaboard ports ?

The MINISTER OF AGRICULTURE. Not all to the seaboard ports. The return only shows what went eastward without specifying that which went to the seaboard, but the great bulk of it went to the Atlantic ports. This calculation does not take into account the shipments of the enormous quantities of grain which go through Chicago south and east and do not enter Chicago at all but which are sent straight on without any delay. The return which I am quoting are returns only of what goes to Chicago and is sent on from there and that which goes to south Chicago goes on by all-rail. I venture to say that there are ten times as much of these as of the quantities which I have given which do not go to the Atlantic seaboard. In 1901, taking the figures from the same source. we have of grain alone, 2,169,000 tons going by water and 2,439,000 tons by rail. We have of flour 89,000 tons going by water and 724,000 tons going by rail the whole way. We have of animal products 15,000 tons going by water and 1,444,000 tons going by rail. Taking the total of these products—and these are the same kinds of products which are going to go out of our North-west and which from Winnipeg must be carried to the seaboard for export to the old country—in 1901, 2,276,000 tons went by water from Chicago and 4,608,000 tons by all-rail or over double as much.

I shall go over the same figures for 1902, because I wish to show that this is no exceptional result, but that this is what takes place year after year. In 1902 we had of flour 105,000 tons shipped by water and 463,000 tons by rail, of grains 1,760,000 tons shipped by water, and 1,609,000 tons shipped by rail, the only time that more grain was sent by water than by rail. Of animal products 775,000 tons went by water and 1,269,000 tons by rail. Of the total during the year, 1,867,000 tons went by water and 3,342,000 tons by rail, or double as much. Now, I shall summarize these figures very shortly. Taking the total for the three years, we had of grain and animal products that went by water 7,720,000 tons, and by all-rail 12,298,000 tons, or a yearly average for these three years of 2,573,000 tons by water as compared with 4,099,000 tons by rail. The average yearly excess of shipments by rail is 1,525,000 tons. The statement is as follows :

SHIPMENTS by water and rail from Chicago, 1900.

—	By water.	By rail.	Total.
	Tons.	Tons.	Tons.
Flour	109,921	614,945	724,876
Wheat	797,317	302,181	1,099,498

SHIPMENTS from Chicago by water and rail, 1900-1-2.

—	By water.	By rail.	Total.
1900.	Tons.	Tons.	Tons.
Flour, grain and seeds	3,559,384	2,902,158	6,461,542
Animal products	20,094	1,445,636	1,465,731
1901.			
Flour, grain and seeds	2,258,770	3,163,410	5,422,185
Animal products	15,208	1,444,851	1,460,059
1902.			
Flour, grain and seeds	1,866,718	2,072,733	3,939,452
Animal products	775	1,269,405	1,270,281
1900-1-2.			
Total grain and animal products	7,720,952	12,298,195	20,019,147
Yearly average	2,573,650	4,099,398	6,673,049

The average yearly excess of shipments by rail is, therefore, 1,525,747 tons of grain and animal products.

This shows clearly and distinctly that the arguments which might be brought up in detail, a little here, and a little there in the course of this debate, are not conclusive in favour of the water and rail route. I think this statement is a direct and complete answer to the statement made the other day by the hon. leader of the opposition (Mr. Borden, Halifax) in his speech, when he said, quoting the words of a rail expert:

> Not more than ten per cent of the wheat is caried by the rail route and it is so carried only in times of necessity when it is absolutely necessary to bring the grain forward at almost any cost. In the United States the rail and water routes carry over seventy-five per cent of the grain in the United States and it must be remembered that the rail competition there is over railroads which run through a thickly populated country having large commercial interests.

Sir William Van Horne is quoted as saying that not a single bushel of the grain can be carried along the north shore of Lake Superior.

Mr. BELL. I do not think Sir William Van Horne said that.

The MINISTER OF AGRICULTURE. I do not know but it would be the most severe condemnation of the route of his own railway that could possibly be brought before this country and it would have no bearing whatever upon the argument on this question because the grades on the route which we are proposing are doubly as good as the grades along the north shore of Lake Superior on the Canadian Pacific Railway.

Mr. BELL. Is it settled what the grades are to be?

The MINISTER OF AGRICULTURE. It is settled to this extent: We know that the grades of the Canadian Pacific Railway around the north shore of Lake Superior are as high as one per cent, and we know from the statements which are made in regard to the country through which this proposed road will go that instead of it being an extremely rocky and hilly country with high elevations and deep ravines, it is generally level country with a gradual slope the whole way, and I am informed that the Grand Trunk surveying parties who are now in the country have been able to secure as far as they have gone a route with grades as low as one-half per cent, or in other words, that it is double as good as the route of the Canadian Pacific Railway around the north shore of Lake Superior in the matter of grades. That is one of the weaknesses of the proposition of my hon. friend the leader of the opposition, because, in comparison with the route which we propose, the proposition which he puts forward cannot compete with the lake and rail transport and will not be able to do so. If we are going to provide facilities for transporting the grain products of our North-west we must provide for the construction of a railway which can and will be able to successfully compete with the lake and rail transport, and the proposition which we have put forward will do that, and I believe that no other proposition which can be brought forward will be able to do it.

Now, Sir, I will allude to another fact in connection with the argument put forward a few minutes ago. I said that not only wheat and grain, but also animal products from our North-west must be brought forward. I will turn to the report of the Winnipeg Board of Trade and point out that in that report they draw attention to the remarkable fact that last year the Minneapolis millers obtained a concession from the United States government by which they have been able to get Canadian grain and grind it in bond for export to Europe. The board of trade says: that apparently the result was satisfactory, as it has been announced in the press that a large quantity of the Manitoba wheat of this season's crop has been shipped to Minneapolis millers for grinding. That means that a large proportion of the Canadian wheat crop, instead of being exported to Europe in the shape of grain, is being ground into flour by the enterprise of our neighbours to the south, and according to the statement of the Winnipeg Board of Trade they are making a profit out of it. Is it not reasonable to suppose, yea, is it not necessary to the proper development of our western country that our own people at Winnipeg, Rat Portage and other places in the west, shall grind the wheat of western Canada in flour, and send it as flour to the eastern parts of Canada as well as for export. I know that to-day the reason why so much wheat is brought from the west into eastern Canada to be ground into flour, is because there is no market in the North-west for the by-products. The people of the North-west have not yet got into the way of feeding bran and middlings and shorts to their cattle and hogs, but when they get to be a live stock-producing country in the North-west, and have an abundant market for the by-products of the wheat when it is ground into flour, then you will see in Winnipeg or somewhere else another centre like Minneapolis where to-day the wheat of the western states and of Canada as well, is ground into flour; you will see the erection of enormous flour mills, and the products of our western plains will be shipped to the east in the shape of flour instead of in the shape of wheat. When that comes about, the flour will come from the west to the east by rail, and little or none will be shipped by the water and rail route. Here we have another proof that an all-rail route is absolutely necessary. And that all-rail route must be the best possible one. The kind of route which the leader of the opposition has spoken of will not do. He proposes to have it along the north shore of Lake Superior where the grades are

most difficult, and through Ontario and Quebec in a roundabout way, in contradistinction to the straight road proposed by the government, which will go through the hinterland from Winnipeg to Quebec in the most direct way. The leader of the opposition proposes to do this by buying the Canadian Pacific Railway around the north shore of Lake Superior; by purchasing the Canada Atlantic Railway; by building a long link; and by improving the grades by some arrangement between Port Arthur and Winnipeg. The leader of the opposition presents to parliament a patchwork scheme, presents to parliament a patchwork plan, which will not accomplish the end desired, of a straight road with low grades and a direct course between two important points. The leader of the opposition proposes to carry out his plan by an expenditure of tens of millions of dollars; I do not know how many tens of millions. He himself said that he did not object to free expenditure, and I must say that his plans show that he seems to delight in expenditure.

An hon. MEMBER. It would cost hundreds of millions.

The MINISTER OF AGRICULTURE. It may, but I am not able to go into a detailed calculation at the present moment, although we know that the cost would be enormously greater than the cost of the government plan, which the Finance Minister has stated to the House and to the country will only cost us $13,500,000.

Some hon. MEMBERS. Oh.

The MINISTER OF AGRICULTURE. My hon. friends opposite laugh.

Mr. HENDERSON. So well we might.

The MINISTER OF AGRICULTURE. Do they laugh at the figures brought forward by the Finance Minister? Let me tell them that neither in this House nor anywhere else in the country has a single figure ever announced by the Finance Minister been controverted or attempted to be controverted. More than that, in the seven years that my hon. friend (Hon. Mr. Fielding) has held the position of Finance Minister, he has year after year put before this parliament and before the people of Canada financial statements, and they have all been of so conservative a character that in no single instance have hon. gentlemen opposite been able to point to any error or misstatement in his calculations.

Some hon. MEMBERS. Hear, hear.

The MINISTER OF AGRICULTURE. Yes, the reputation of the Finance Minister is so high in Canada that the people of Canada will accept his statements and will feel absolutely sure that the price which the hon. gentleman puts upon this great project is the outside figure it will cost the people of the country. I venture to say that never in the history of Canada has any plan of such transcendent importance been submitted to the people that involves such a mere bagatelle of a burden upon them.

Mr. TAYLOR. The Minister of Finance found it hard to get money enough to pay the cost of taking the census.

The MINISTER OF AGRICULTURE. The Minister of Finance has been able, during the last year, to show to the people of the world that the revenue of Canada is so abundant that we have a larger surplus by double than ever was known in history before, and that notwithstanding the hon. gentleman's insisting upon the fact that the census has been expensive.

I do not wish to enter into the general terms of this debate. The question has been dealt with ably by gentlemen on both sides, and I compliment gentlemen opposite that they have put their best foot foremost and given their ablest and severest criticism to the plan of the government. But all they have been able to show is that the plan of the leader of the opposition has not the full concurrence of the gentlemen behind him. These gentlemen opposite have recognized that the hinterland must be developed and that Canada should be widened from north to south so as to get a firmer grip on our area for agricultural operations. The leader of the opposition states that he is willing to build a colonization railway from Quebec to Winnipeg. He is quite willing to do that after having spent millions after millions in acquiring the Canada Atlantic Railway and the Canadian Pacific Railway on the north shore of Lake Superior and improving the grades on the Canadian Northern Railway or the Canadian Pacific Railway from Lake Superior to Winnipeg. And after all these millions have been spent, he is willing to build a colonization road from east to west.

Mr. CLANCY. When?

The MINISTER OF AGRICULTURE. In his speech.

Mr. CLANCY. At what time does he propose to do it?

The MINISTER OF AGRICULTURE. Just as soon as the information can be obtained and as the information is now before the House and the country, no doubt the leader of the opposition wants to do it at once.

Mr. CLANCY. When the interests of the country demand it.

The MINISTER OF AGRICULTURE. The hon. gentleman from Peel said that plan would not do, and the hon. gentleman from Jacques Cartier said that it would not do either, and that you did not want a railway from Quebec to Winnipeg, but that you wanted colonization roads to be run

from the old settled parts everywhere to the north. There is not the slightest doubt in the world that such roads would not develop the country as the plan which the government proposes. The plan promulgated by these gentlemen will not afford good and cheap transportation facilities for the products of the western country, but the plan which the government has proposed will without doubt render that blessing. By this plan we propose to give to that part of Quebec and Ontario one of the best railroads on the continent of America, a road which will be on the main line of our communication between the great west and our seaports on the Atlantic; a road which will be able to carry the products of our western country at the cheapest possible cost, and will, therefore, promote the colonization of that country to the best advantage. As I have pointed out, the hon. leader of the opposition proposes to a great extent to follow our lead. But his followers do not believe in his scheme; they want to build the road in a totally different way. Sir, we make a clean-cut proposition embodied in a contract signed and sealed with a reputable corporation of great resources, which is going ahead with the project as rapidly as possible. In opposition to that and in contrast to that, my hon. friend the leader of the opposition proposes a scheme which involves dickering and bargaining with three or four railway corporations, each of them with its hand on the throat of this country, so that if his party were in power they would be committed to this scheme, and would be obliged to yield to their demands. We do not know, we cannot know, what that will cost. We do know, and the country knows, what our scheme will cost, and the cost is so ridiculously small that the difficulty is for the people to believe that so much can be got at so little cost. But, as I said a moment ago, the people of this country have had experience of the work of the Minister of Finance, and when he tells them that this scheme can be put through at a cost of $13,500,000, they will believe him, and will support and vote for the scheme. I for one, shall be glad to go before the people of the country and ask for their endorsation.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

Mr. A. A. LEFURGEY (East Prince, P.E.I.). Mr. Speaker, at this late stage of the debate, I would not have ventured to occupy the time of the House were it not that the importance of the subject makes it the duty of each one of us to pronounce upon it. The hon. Minister of Agriculture (Hon. Mr. Fisher), who preceded me, promised that he would give us some new points to excuse this scheme which the government are forcing upon the country; but in the course of the hon. gentleman's argument, I found that he was not dealing with the transportation question at all, but was giving us some very interesting figures about the development of the agricultural products of the west, and the bright prospects of that country for the future. I am sure that we are all very glad that the North-west is going to have the great future which we all predict for it; but that has nothing whatever to do with the transportation question. The hon. minister quoted figures which in themselves, may be all right and proper; but they had nothing to do with the issue before us on the present occasion. They show the real need of deliberation on this question. The hon. gentleman pointed out that in ten or twenty years hence the products coming out of the North-west would be enormous. That is all the more reason, Mr. Speaker, why we should pause now to get the right solution of the question of how to bring these products out by the cheapest outlet. But the hon. Minister of Agriculture is a docile follower of his leader, and therefore he did not wish to trench on the poor excuse which the right hon. leader of the government gave for bringing this project before the House, but contented himself with damning the whole scheme with faint praise. After telling us that the water-ways afforded the cheapest outlet for the transportation of the products of our western country, he went on to excuse the project of a railway to supplement them, without developing any comprehensive scheme by which our water-ways could be improved.

Now, this question of transportation is the most important question that can come before this parliament, in view of the place commercially which Canada is to take in the future amongst nations of the world. We have reached a stage in the history of the development of transportation in all parts of the world, that should cause us to pause and deliberate before we commit this country to a project which will probably keep back the true solution of the transportation question in this country for years to come, and possibly place the country financially in a position that would put her capability of coping with this question and her ability to carry as cheaply as the United States entirely beyond our reach for an indefinite period. The struggle for supremacy in international trade continues at the present time in all its vigour. It is recognized in all commercial countries that that struggle is one of the foremost issues that confront them to-day. Not only is our international trade bound up in this transportation question, but the whole internal development of the country is involved in it. If Canada is going to take commercially her place among the nations of the world, it is absolutely necessary that

the country should have transportation facilities equal if not superior to those of the nation to the south of us. Undoubtedly we are not prepared for the solution of this question at the present time. It is not without grave and thorough deliberation and ample knowledge, gained from all sources, that we can hope to find a solution of this question. This was the position of the government at the opening of the present session, for we find in the speech from the Throne these words :

The whole question of transportation and terminal facilities continues to occupy much attention, and my government will immediately appoint a commission of experienced men to report on the subject.

This shows the position of the government at that time. It shows that they were not prepared to deal with this question without having expert opinions upon it. Five months have since elapsed, and have we got that commission yet ? Mr. Speaker, I believe that not one member of that commission has been appointed, and no report on the subject has been brought in by the government. If further evidence were necessary, we have only to refer to the Order in Council passed on the 19th of May last, and subsequently brought down to this House, which contains some very interesting statements, in view of the project now before the House. This Order in Council has been read by several hon. members, but I think it is a good thing to bring it once more before the promoters of this scheme. The members of the cabinet apparently had a pretty comprehensive idea of what should be done in order to arrive at a true solution of the transportation problem. This Order in Council states :

That the development of North-western Canada has manifested the inability of existing Canadian transportation agencies to take care of Canadian products.

That our agricultural exports can only command the prices over seas to which their natural excellence entitles them when they cease to be confounded and confused with the inferior and often adulterated articles produced elsewhere ; and to preserve their separate identity they must go through Canadian channels.

The minister further states that the questions to be considered are complicated and involved, including among the conditions to be sought the transportation of western products from place of production to the markets of the world.

It appears to me that with a statement of that kind, an acknowledgment by this government that expert opinion should be had in order to thoroughly investigate the different phases of this question, it is premature and ill-considered to bring down a scheme to this parliament three or four months after the opening of the House. The Order in Council goes on :

It is obvious that before any satisfactory conclusion can be reached upon these questions a thorough and comprehensive inquiry should be made regarding :—

The conditions of original shipment and the possibilities of improvement in the conditions surrounding such shipments.

The storage requirements of lake, river and ocean ports.

The harbour facilities of the inland lakes, rivers and Atlantic and Pacific ports.

The conditions with regard to the navigation of the St. Lawrence route, and, generally, any improvement, enlargements, or other matters affecting the more economical and satisfactory uses of any Canadian channel of transportation by land or water.

The minister further states that in making such investigation attention should not be confined to routes and facilities which are at present utilized, but, if necessary, new surveys should be made to determine whether any more economical and satisfactory channels of transportation by land or water can be opened up.

The forces operating against the attainment of all-Canadian transport, namely :—

Competition by United States railways;

Competition by United States vessels from Lake Superior ports;

Diversion of Canadian products through eastern outlets to Boston, Portland and other United States ports, should be investigated, and the best and most economical methods used by our competitors should be carefully studied and reported upon.

The minister apprehends that in these circumstances it devolves upon the Dominion government to consider and adopt the best possible means of promoting such measures as may enable Canada to control the transportation of its own products, and it is thought that the most efficient method of conducting such an inquiry and obtaining the required information is by means of a commission of competent and experienced experts who may be appointed and authorized under the provisions of chapter 114 of the Revised Statutes of Canada.

Now, it would not be supposed, having this view at the opening of parliament, having enunciated this view and having brought it down to the House on the 19th of May, that this government would plunge into a scheme of this kind without having any thorough or well-considered plans, surveys or information to present to this House.

The hon. the Minister of Agriculture said that this was not introduced hastily, that the country had really been considering it for two years. Well, if the country has been considering it for two years, how is it that the government had not a scheme to present to this House at the opening of parliament ? How is it that they brought in these different resolutions and finally at a very late period of this session brought in the present scheme. The minister quoted the Winnipeg Board of Trade to help out his argument, but what do we find the Winnipeg Board of Trade saying :

That a thoroughly qualified expert in the management of railways be appointed to make a report on existing conditions, and what, in his opinion, would make the Intercolonial a paying concern and of the greatest benefit to the country, and also to study and make recommendations on the following alternative schemes for the consideration of the government and the people.

The hon. minister apparently forgot to

quote that part of the recommendation of the Winnipeg Board of Trade. But we have not only this resolution, we have further the opinions of a man whose life has been devoted to railroad and transportation questions, and who, I believe, was asked to take the chairmanship of this proposed commission, a man who has pronounced against this scheme as a means of solving the transportation question of the west. Sir William Van Horne spoke as follows :

> The Canadian Pacific Railway, the Grand Trunk Pacific Railway, or any other all-Canadian route will never voluntarily carry a carload of wheat by the all-railway route around the great lakes to an eastern Canadian port for shipment abroad, for the simple reason that it will never pay any road to do so. Nor will the transportation problems in the west ever be solved by the construction of an all-Canadian route from coast to coast.

Now, Mr. Speaker, this House and the country well know the reputation of Sir William Van Horne. They know his connection with the Canadian Pacific Railway, and they know very well that if any means could be devised by which the Canadian Pacific Railway could carry their grain to the eastern ports over their own line, they certainly would not use lake transportation.

One might also say that we have the opinion of another man who is considered perhaps an equally good authority on the transportation question in the estimation of hon. gentlemen opposite, the manager of the Grand Trunk Railway, Mr. Hays. When this scheme was first brought forward the Grand Trunk Railway had no idea of building a transcontinental railway through from coast to coast via Quebec and Moncton. Their idea was to go in by Gravenhurst or North Bay in order to tap the wheat fields and to establish their line in the North-west Territories. Why the government departed from this and adopted this last scheme, by what means they were pushed into this, is beyond my comprehension, unless it was to satisfy the call of their political grafters. The ex-Minister of Railways and Canals (Hon. Mr. Blair), who, among the members of the government, had the widest experience in connection with railway matters, and to whom one would naturally suppose his colleagues would look for information and guidance on this question—why was he not taken into their confidence at an early date, and why were his opinions not listened to ? We find that this minister, whom we naturally should have looked to, leaves the government because he does not agree with this scheme as a solution of the transportation problems of the west, and in a masterful and well-considered speech which up to the present time has not been answered by the government or its supporters, absolutely condemned this proposed scheme. But it seems to me that we do not even have to point to such high authorities as I have mentioned for the condemnation of this scheme in the light of the experience of one hundred years of the transportation problem in the United States. The scheme is condemnatory in itself. There is indeed not one point of merit in the whole scheme to recommend it. It is true that the right hon. the Prime Minister announced that it was designed for two purposes. First, to transport grain from the west to the seaboard ; and, second, to protect Canada in case the bonding privilege should be taken from us by the United States. In all fairness, except from this announcement it must be said that one would not judge that it was designed for any such purpose, but rather that some ulterior object was to be served in running a line into the country where for years to come there will be absolutely no traffic to warrant such an expenditure. Surely we have never had a scheme proposed in the history of legislation in Canada which was supported by such weak and flimsy arguments as those which were advanced by the hon. the leader of the government. The bonding privilege ! The hon. the leader of the House grew eloquent over the fact that the bonding privilege was going to be taken from us ; the commercial advancement of Canada was to be stopped if we did not devise some means of freeing ourselves from dependence on the bonding privilege. Let us look for a moment at the annual report of the Inter-State Commerce Commission of 1892, about the time that the fears of the hon. the leader of the government were awakened in this regard. The report says :

> The 'foreign transit trade' has also been a great mutual benefit to the two countries. The statistics indicate that the 'foreign transit trade' of Canada through the United States is very much greater than that of the United States through Canada, but that the reverse is the case as to the 'domestic transit trade' of the two countries. In both the 'foreign' and 'domestic transit trade' the merchandise of each country is permitted to pass through the territory of the other without payment of duty, and the continuance of this commerce and the conditions on which it is to be conducted are dependent on mutual concessions, good will, and fair dealing.

Now, there is just as much fear of war with the United States as there is of the bonding privilege being taken from us. No man can suggest any reason for the bonding privilege being taken away, except the event of war with the United States—and we all know that that is a very distant prospect. Moreover, I firmly believe, that, even if the bonding privilege were taken from us, the only effect would be to throw us on our own resources. In one or two years, if we used the means at our disposal to improve our lines of transportation, this loss of the bonding privilege would be found to be more of a bugaboo even than it is now. But this is not the only occasion when this bonding scare has been brought in to excuse schemes of the government. A few years ago it was

brought forward to frighten parliament and the country into the acceptance of that Yukon steal. On several other occasions, the leader of the House and his colleagues have grown eloquent over the bonding privilege. This excuse for unwise actions on the part of the government should be worn pretty thin by this time.

Now, generally, what are the pressing needs with regard to transportation that call for the construction of the eastern division of this proposed line ? Surely, there is none in New Brunswick. None have been pressed upon us during the last three or four years since I first became associated with the work of this House. I am pretty well acquainted with the maritime provinces, and I can fairly say that I have never heard any distinct demand from the people down there for a new railway in New Brunswick. And, surely, if there is any possible need for opening up more territory in New Brunswick and spending millions of dollars there, we could afford to follow the course of the government at the opening of this House in recommending that proper surveys be made and expert opinion had that a comprehensive scheme would be laid before us. As to the line from Winnipeg to Quebec, there is absolutely no excuse for it at present. It is advocated as a colonization road, but it seems absurd to decide to build a colonization road for 1,300 miles before a survey is made, especially in view of the fact that we have millions of acres of land available in the western part of this country known to be superior to any in this section and awaiting only proper settlement to turn it into profitable wheat fields. In the North-west Territories alone we have 150,000,000 acres of land fit for the cultivation of wheat. Will anybody argue that the less fertile lands between Winnipeg and Quebec can be properly settled while these western lands are opening, with railways already built and others rapidly extending ? And on the other hand, I feel sure that even in the old-settled portions of Ontario and Quebec, we can find thousands of farmers who are upwards of forty miles away from any railroad centre. The construction of this road from Winnipeg to Quebec involves a useless expenditure of public funds and anticipates any possible need for the opening up of that country by fifty, sixty or even seventy years. The idea of a new colonization road in a large, sparsely settled country like Canada, with railways built into territory not yet settled or even a vestige of habitation, is certainly opposed to all ideas of economical and fruitful development of the country. The few scattered settlements which will grow up along this line of 1,300 miles will do much to retard the progress of Canada, to increase the cost of the government of Canada, and to interfere with the settlement of the transportation question by pandering to colonization railroads when our plans should be to serve the country by a great trunk system across the continent. What do we find in the United States ? Do we find them, in the history of their development, rushing railways into every unsettled portion of the country ? It is only a few years ago that Oklahoma was settled, and even then the government did not aid railways with large bonuses. The settlement of the country had gone forward until Oklahoma could be opened up. People were awaiting for the opportunity to go there. We find there now a most prosperous state of affairs, the territory having a population of 500,000 souls. Only when the question of diminishing returns from the fertile plains of the west arises or population so increased that the good lands are taken up, will there be any necessity for opening up this large territory from Winnipeg to Quebec.

Now, with regard to the west, some hon. members on the other side apparently forget that we have a transcontinental line building through there. If what the Minister of Agriculture (Hon. Mr. Fisher) tells us is correct, that the government have known about this need for two years, how is it that for two years Mackenzie & Mann have not been aided to push the Canadian Northern through the Saskatchewan country through to Edmonton and so on to the coast ? If they have known it for two years, how is it that this road was neglected and not pushed forward for two years ? And how is it, let me here remark, that the running rights reserved by the government over railways aided by the government as the Canadian Northern has just been aided to the amount of ten million of dollars, are not utilized to tide over the crisis which the leader of the government appears to think is upon the country at the present time ? Now, this Canadian Northern is opening up a large belt of fertile country that it will be impossible to settle in less than ten years from now. The reason for pushing new lines through that country is beyond my comprehension.

The leader of the government has told us that this is a time for action and not for deliberation. But during the seven years he has been in power and while the west has been growing, how is it that the needs of the country with regard to transportation have not impressed themselves upon the government, and why has not a comprehensive scheme been formulated and brought before this House ere now ? Hon. members on the other side have been getting up year after year and talking about the transportation question. This government has not made any substantial efforts—except such as have been made by some individuals who are out of the government now—to bring before this country a comprehensive scheme to settle this question. And yet they have the audacity to bring before this parliament and to herald in this country a

scheme that on the face of it and in the light of all statistics on transportation that we can get, is an ill-considered and ill-advised measure. As to the eastern section, regarding it in the most favourable light, if it were needed, for colonization purposes, it could be constructed by easy stages through the most inviting portion of the country. That is the usual method of colonization—not to rush through 1,300 miles of territory, but to construct by degrees along the easiest routes and through the most inviting portions of the country. As to the west, its needs are not so much more railways, but more facilities, more rolling stock on existing railways in order to get the products out of the country. The west wants cheaper transportation and control of rates. That is the cry of the west.

I had the pleasure of going through the west last year with the hon. the leader of the opposition, and I did not find any great cry of more railways. The cry was for cheaper transportation, control of rates, more facilities, more rolling stock, for getting the grain to the great lakes. The west wants cheaper transportation and control of rates. This scheme will certainly not fulfil the needs of the west for grain shipments to ocean ports, as it does not touch the present wheat centres, and relief can only come to them from the free use and increased equipment of existing outlets. Perfection of our lake service, the building and enlarging of our canals, the establishing of elevators at both ends of the lakes, the improving of the St. Lawrence route and ocean carriage, is what is wanted at the present time.

Every country rightly regards transportation outlay as expenses to be reduced in every possible way. The wisdom of getting surplus products to outside markets in the cheapest possible way is so obvious that no other country has ever questioned it, and to subordinate this proposition to the bugbear of the bonding privileges, is certainly unworthy of statesmanship and of the leader of the government of this country. The Americans, wedded to every form of protecting their own internal interests, are prepared to cross Canadian territory to the north or Mexican territory to the south, or adopt any other method so long as they can lessen the cost of reaching markets. All Canadians are certainly desirous of shipping through Canadian territory and using Canadian resources. But why get away from the inevitable factor of cheaper water transportation ? You cannot force transportation out of the course of least resistance, that is, the cheapest route. It is contrary to every principle of economy or reason, and by adopting a scheme such as this, to meet the transportation of the west and allay a vague suspicion in relation to bonding privileges, is to sacrifice a certain part of the return of every farmer's crop. No individual would do this, but apparently this government, to satisfy the calls of political grafters for subsidies, are willing to sacrifice the farmers and shippers of this country, and in fact to threaten the commercial development of all Canada. We want a true solution of the transportation question. We want an all Canadian route if possible, and it is possible if we only use the means at our disposal and not minimize the greatest inland waterways in the world. The only way to have the cheapest and best transportation system and to hold it as an all-Canadian route to cement together the interests of the east and west is by utilizing our great waterways and canals.

There is surely no problem of more importance than that of transportation to the west. The west must have cheap transportation, but this transportation question is one in which the future of the east is also at stake. Mistakes made now by too much haste may retard the problem as to the west, but it will eventually reach its true base. You cannot throttle traffic out of its true, its cheapest, course. You may as well try to turn back the tide; you may retard but you cannot keep it back. The east, therefore, in the event of mistakes of this kind, will eventually be the main sufferer. A worse plan for carrying the manufactures of the east to the west than the Grand Trunk Pacific, could hardly be devised. The line which the government proposes to build touches not a single manufacturing centre in Ontario and none in Quebec until it reaches the city of Quebec. It goes clean over the heads of the industrial districts of both provinces, and can reach them only by branches. It is 200 miles north of Montreal; 300 miles north of Toronto, and still farther from Hamilton, Brantford, Galt and other manufacturing centres. There is already one all-rail route much nearer to these manufacturing centres than the new one, and it is not overburdened with traffic, either eastbound or westbound. It may be found necessary some day to build another but at present the case is not urgent.

There are two important points to bear in mind, the necessity of obtaining the cheapest possible effective outlet for western produce and the necessity of obtaining the cheapest possible inlet for its supplies, with regard to the development of the east. As to the first, as I shall later point out, this scheme does not meet the necessities of the case, as you are trying to force traffic from its points of least resistance—water transportation—and you are surely, as to the second, getting farther away from the source of our western supplies, the manufacturing centres of the east. Now, the only reasonable way to hold the western markets is to deliver at reasonable rates to compete with United States goods, and this they cannot do by any scheme of political coercion. Protection by means of giving our products cheap transportation is just as important to

the development of this country as protection by a customs tariff. This proposed scheme is too far north to fulfil this requirement. It cannot provide an economic transfer to the west from the leading manufacturing centres of Quebec and Ontario.

Knowing these conditions is it not idle to think that we can serve these provinces by any consideration of merely local traffic and a colonization road. The local traffic of New Ontario and New Quebec has little in common with the through-traffic of the east and west. There is no satisfactory reason for sacrificing the all important purposes of a trunk line to what is at best, only the secondary interests of the local and colonization traffic. It cannot be but a great mistake to spend millions of the public money on a road which does not directly connect the west with the water highways of the great lakes, or with Montreal, the geographical as well as the commercial distributing point of the east, or which does not make as close connection as possible with the great industrial centres of Ontario. The Canadian Pacific Railway is far superior in this regard to the present scheme, for it is much nearer the manufacturing centres of Ontario and Quebec, and touches many of them.

Again, seeing that the Intercolonial, the Grand Trunk and the Canadian Pacific already have their connections from Montreal with Quebec to the lower provinces and the seaboard generally, while the Canadian Northern is establishing similar connections, it is an unaccountable waste of public money to add a totally new line, whose proposed directness will be more than likely offset by other physical defects owing to the nature of the country through which it will pass, it will certainly have as many windings and other physical difficulties as the Canadian Pacific Railway; while, to be of any degree of success it should be more economic in its operation than existing lines. The Canadian Pacific Railway admirably located for serving the needs of an all-rail route is far from being taxed to its capacity, as the operation is too expensive to compete with the water route. The average traffic over the Canadian Pacific Railway from North Bay to Winnipeg is not more than a train and a half per day, and as the hon. leader of the opposition pointed out, if we spent a small portion of the money that this government proposes to expend on this new scheme to perfect the Canadian Pacific Railway, we could equip it so that its capacity would be equal to ten or fifteen times the present capacity of the road. The road would then be an economic saving to this country because there is no economy in building the line through a territory in which you have existing lines serving the same purpose. With the government in possession of such a trunk line, with the other leading railways granted running powers over it, as proposed by the hon. leader of the opposition, there would then be every possibility for real improvement in service and rates between the east and west. The western farmers and producers and the eastern manufacturers and importers, would then have an opportunity of getting in and out of the west at all seasons of the year. Under the present scheme the country is to make its heaviest expenditure on the part of the plan that is the least necessary, while the expenditure of even a small part of the hundred million or more that will be put into this eastern section, would go a long way to establishing an economic settlement of the transportation problem between the east and the west.

Now, it was not my intention or purpose to take up the different clauses of this agreement as to their uselessness, in detail, as they have been pointed out ably by capable men on this side of the House. It is an unworkable proposition, and its proposal of running rights to other railways over a line controlled by another private corporation is beyond the reach of a practical, working, business reality, as was pointed out by the hon. member for South Lanark (Hon. Mr. Haggart) and the late Minister of Railways and Canals (Hon. Mr. Blair). The clauses as to unrouted traffic in the plain view of business and common sense are absurd and contrary to all commercial principles of control of traffic, unless the scheme presents in itself the cheapest method of transportation, which it assuredly does not. I shall rather confine myself to the broader ground than even supposing the Bill in all its details workable. The scheme in its entirety does not meet the question of a true solution of the transportation problem.

But let us look for a short time at the history of the western transportation problem of the United States, and see what lessons we have to gain from that source. What do we find from this? That the experience of a hundred years has fully, amply and undeniably established the advantages of the lake and canal service to cheap transportation, that the growth of the traffic along this line has more than kept pace with the required improvement, and that the people of the United States, alive to these economic savings in transportation, are planning to send hundreds of millions in the perfection of them. On inland schemes of water economy over $300,000,000 is in course of spending and recommended as meritorious and necessary. Besides the Erie canal, on which $100,000,000 is proposed to be spent to meet the call for grain and other shipments of the great lakes, there is the great work nearing completion under the state of Illinois, connecting Lake Michigan and the Illinois river, and having in view the ultimate creation of a 14-foot channel to the Gulf of Mexico. The connection of the vast deposits of coal in western Pennsylvania and Virginia with the iron ores of the Lake Superior region by means of a ship canal across the portage separat-

ing Lake Erie from the Ohio river, is under consideration. These and many others are in view. These schemes have been kept back by railways, but the facts and experience of a century have demonstrated the inability of the railways to compete with water transportation. The reason I say that water-ways in the United States have been kept back is that the legislation controlled by great railway corporations has throttled the development of the country along those lines. I could point out to the House, if necessary and if opportunity favoured, instances in different states in which the canal systems are sought to be throttled and kept back by the powerful influence of the railways, as an instance of which a state passed a law that only canals of three miles in length are allowed to be built, and that canals should not pass through any borough, town or village. In the United States they are realizing now the improvements that are necessary to develop the canal system of that country to its full capacity.

No nation is enriched by hoarding its surpluses in warehouses or vaults or in permitting prohibitive tariff or physical obstacles to obstruct its tariff. Nor do we on this side of the House object to money properly spent in forwarding the present and future interests of this country. Our trade must spring from the productive capacity and labour of an industrious and intelligent people, aided by the greatest possible facility of distribution as determined by the cost. And so, we must treat this transportation question. Statistics go to show that the cost of transportation by canals is about the third of rail, while by open water it is still lower, and a nation that ignores an economy of 66 per cent in transportation is wasting its resources and imposing onerous burdens on the people. The possibilities of this country on water transportation are enormous, and we have yet time to pause and think before committing this inevitable blunder. We must not lose sight of the farmer and producer. The market range of any commodity is mainly determined by the cost of overcoming the resistance to its movement, and as these resistances are less by water than by any other medium, the water route possesses the physical advantages that cannot be ignored without loss.

In the report by L. M. Haupt, published in Bulletin 21, United States Department of Agriculture, we find the following :

> The value of a farm or mine depends not only upon its productivity but also upon the cost of transportation to market ; for if this latter item exceed the margin of profit there will be no return for the labour. Hence the character of the way becomes an important factor in fixing the value of property. Thus, on a common earth road the average cost of hauling a ton one mile, as determined by the Agricultural Department of the government, is 25 cents ; the average of the railroads of the United States is but 0·72 cents, or 7·2 mills per ton-mile ; while the rate by canal of limited draught is but 2·4 mills ; and by the lakes a small fraction of a mill only.
>
> On this basis the market range of the different groups of commodities over the several systems of ways may be most successively presented in tabular form, assuming that one-half its value is available for transportation charges. This is more than it should be, but the results are merely illustrative of the relative importance of the resistances.
>
> Limits of market range, by wagon, rail or water.

Commodity.	Margin.	Earth-road. miles.	Rail-road. miles.	Canal.
Forest produce	$ 5 50	22	764	2,293
Agricultural product..	19 00	76	2,640	7,920
Manufactures..	18 50	74	2,570	7,710
Merchandise	153 00	612	21,250	63,750

These figures show at a glance the enormous advantages of the water route over rail route, and they also show the almost prohibitive cost of freighting on the common road which is 33 times more expensive than by rail and about 100 times more expensive than by water. The Minister of Agriculture said that wheat was only a small portion in the products to be taken out of the west, but we all know that at the present time the transportation of wheat is the important factor that we have to consider and the government themselves admit that what they are after is to provide facilities for transporting wheat. If we can take our wheat from the west to the east the other products can wait until some comprehensive scheme is presented to this House. The hon. member for King's, Prince Edward Island (Mr. Hughes) said in his speech :

> Would there be any objection to having transcontinental freight go over the Grand Trunk Pacific Railway, and at the same time making it a colonization road.

The hon. gentleman (Mr. Hughes) tried to make out that the Independent-Liberal organ, the Charlottetown 'Guardian' did not comprehend the situation, but the only thing he succeeded in proving was that he himself has not the faintest idea of what this government project is, or for what purpose it is intended, because he confounds a colonization road with a system of transportation which is intended to convey to the seaboard the products of the west in the cheapest possible manner. Taking the comparative rate on wheat in cents per bushel Mr. Haupt gives the following figures :

	Cents.
1868—	
Lake and canal..	16·23
Lake and rail..	20·76
All rail..	30·49
1897—	
Lake and canal..	4·35
Lake and rail..	7·37
All rail..	12·32

Therefore, in 1868, the rates by all water were nearly half of those by all rail, and in 1897, notwithstanding the great economies introduced on railways, the ratio was still

further reduced to about one-third in favour of the all water route. The benefit of our water system in giving us cheap transportation affects all industries and classes, and is clearly manifested in the case of the prime necessities of life. It is well set forth by Mr. Haupt whose opinion and accompanying statistics will be interesting for gentlemen on the other side of the House. Mr. Haupt says :

Thus low rates create traffic ; and whatever tends to this results, provided there be a profit, is beneficial to the railroads as well as to other interests. Deep-water competition is an important element in securing this end. Its influence on the general prosperity of the country is amply shown by the following extract from the Senate report of the Committee on Commerce, made by Senator William P. Frye, in 1892, when, in speaking of the commerce of the great lakes, he said :

No other distinctive type of commerce has contributed more to our industrial development. It has created a means of transportation costing to-day only one-ninth the cost of the same service by rail. . . . . The ton-mileage of the lake marine for 1890 was 18,849,681,384 ton-miles, or about 27·5 per cent of all the railroads of the United States.

The Minister of Agriculture quoted figures to show the comparative amount of tonnage carried over the railways as compared with lake and rail transportation. But we find here that 27·5 per cent of all the ton mileage of the United States railroads was carried over the lake and canal system :

At the average rail rate, say, of nine mills it would have cost $169,647,132 ; but at the lake rate of 1·2 mills it was approximately $22,619,617 or a saving of $147,027,514. . . . . The total expenditure for water improvements of the lakes has amounted to about $30,000,000, or approximately one-fifth of the annual saving effected in transportation. . . . Our waterways have acted as the most powerful regulators of rates. . . . When it is considered that a diminution of the freight charges of one mill per ton on the railroads of the country effects a saving of nearly $100,000,000 to the shippers in transportation, the value of this restrictive power cannot be overestimated.

By such statements of fact the general benefit of the waterway is established.

The only idea the hon. gentlemen opposite can have in forcing this scheme upon the people without giving them an opportunity to speak their wishes, is to glorify themselves in their dying moments by building monuments to themselves in order to try and hide their shame and their conduct for many years in decrying the Canadian Pacific Railway which was built by a Liberal-Conservative government. Now they are trying to immortalize themselves by building a tombstone, but they fail altogether to take into consideration the benefits which our waterways system would confer on the people of the west in the matter of cheap transportation rates. In order to show the range of prices and the influences on the prices of prime necessities. I quote the following from Mr. Haupt's article :

For example, in 1901 Kansas had 5,355,638 acres of wheat and produced 99,079,304 bushels, while Nebraska, its neighbour, planted 2,456,543 acres, yielding 42,006,885 bushels. The yield per acre in Kansas being 1·4 bushels greater than in Nebraska, the price in the former state under the law of supply and demand, should be lower ; on the contrary it is five cents higher. The principal shipping point in Nebraska is Omaha, on the Missouri river, 492 miles, by rail, from Chicago, and 412 from St. Louis, on the Mississippi, whence the rate on wheat in bulk by water to New Orleans is but one mill per ton-mile. The principal port of Kansas city, also on the Missouri, but about 230 miles lower down. From this point to Chicago by rail the distance is 458 miles, and to St. Louis 285 miles. Kansas city therefore has a shorter rail haul to Chicago by 34 miles, and to St. Louis by 129 miles, and it is 230 miles nearer the low water rate to the gulf. As the yield per acre was 18·5 bushels, this grain of five cents would represent a revenue of 92·5 cents over the price in Nebraska ; and had the entire state been sown in wheat this profit, due to proximity to water routes, would have aggregated nearly $50,000,000.

On the actual wheat crop it was $4,953,965. Kansas only has the advantage of nine cents per bushel on her corn crop of 61,506,034 bushels, giving a gain over her neighbour, on the yield of $5,535,543. For her oat crop she received, in 1901, six cents more per bushel than Nebraska, so that her increased revenue from this source was $1,039,944. On these three products of the soil, therefore, had they all been shipped abroad, Kansas would have saved on her freight bills $11,530,000 in the last year. Conversely, at the same differences per bushel on the farm, Nebraska would have lost on the value of her crops about $14,267,000, because of her geographical position. This, if capitalized at three per cent would, it is believed, exceed the total expenditures on our rivers and harbours. Yet the Missouri river commission was abolished because the results secured did not appear to justify the appropriations.

Now, Mr. Speaker, I am going to take up the subject of the Erie canal for a few moments. This waterway, extending from Buffalo to Albany, a distance of 352 miles, was opened in 1826, with a capacity of 5,000,000 tons. The products were first carried in 76-ton boats ; but the canal has been improved from time to time to meet the growing trade. Its present capacity is not at all sufficient to cope with the demands of trade, and it is proposed now to spend $100,000,000 on this canal—to construct practically a new canal, as large an enterprise for this day as the old ditch was at the time it was built in 1826. But its worth has been demonstrated, and the political parties are a unit in its favour, and have pledged themselves to enlarge the canal to accommodate the largest sized boats. The fact that the political leaders would not divide their parties on the question is evidence of the popularity of the enterprise. And so there would have been unanimity in this country and in this House if the government had carried out their first proposition, and had appointed a commission to look into the transportation question and present to this House a reasonable and

practicable scheme, instead of rushing headlong to meet the political wishes of their friends. The history of the Erie canal, from a statistical standpoint, is given in an article by Mr. Wilner in the 'American Monthly Review of Reviews' for July, 1903:

Canal versus Railroad as a Freighter.—The most attractive arguments, however, are not historical, but statistical. The estimates of engineers put the cost of carrying a ton of freight from Buffalo to New York in barges of 1,000 tons capacity at 26 cents. Compare that with the $100 a ton from Buffalo to Albany previous to 1825, and with the $10 per ton that was paid originally for canal transportation. This rate of 26 cents a ton is equal to ·8 of a cent for a bushel of wheat, or ·52 of a mill per ton per mile. On the present Erie canal the cost of transportation averages 87 cents a ton, or 2·62 cents for a bushel of wheat, or 1·9 mills per ton per mile. The cost of railroad transportation from Buffalo to New York for the last few years has averaged about 6 mills per ton per mile. The cost of carrying wheat, which is the principal article is competition between the railroads and the canal, has been considerably lower, but it has still kept in the neighbourhood of 3½ cents a bushel, or $1.17 per ton, or 2⅓ mills per ton per mile. Arithmetic is dry reading, but no one who appreciates the importance of commerce in developing the prosperity of a commonwealth can fail to be interested in these figures. The contention is incontrovertible that, with such a reduction in freight rates between New York and Buffalo as this canal would cause, New York would again become master of the trade of the west as absolutely as when the cost of carriage from Buffalo to Albany was cut from $100 to $10 a ton. The difference between ·52 of a mill and 2⅓ mills per ton per mile is as great for this age as was the difference between $100 and $10 per ton for 1825.

The traffic that awaits the development of the Erie canal and that awaits the development of our canals and transportation system is immense. You will also find in this article statistics showing the immense tonnage that comes down through the great lakes:

The traffic which passed through the canals at Sault Ste. Marie in 1901 amounted to 28,403,065 tons, of which 23,087,742 tons came east.

This would seem to conflict somewhat with the statements of the hon. Minister of Agriculture:

The Suez canal, in 1901, passed 10,823,840 tons. And the trade that comes down from Lake Superior is only a part of the grand total which concentrates in Lake Erie. Almost as great a quantity originates in Lake Michigan ports. Of grain alone, flour reckoned as wheat, the port of Buffalo received, in 1902, 119,534,437 bushels, and the figures have reached as high, in 1898, as 262,912,849 bushels. That represents only a little of the great price for which the people of New York are reaching in building this canal.

While we, in adopting a scheme such as the one the government have brought before us, are putting back for an indefinite period any possibility of Canada participating in this great traffic that is coming down through the Sault canal, and that is rapidly growing every year:

In 1901, the rail rates were so high that Pittsburg tried successfully the experiment of shipping its steel to Conneaut, on Lake Erie, transhipping it by lake to Buffalo, and then by canal to New York. Cleveland also has tried the experiment of shipping steel in canal boats to Buffalo, and thence to New York. It is obvious that, if a water route is of such vast importance to iron manufacturers, a locality which can combine the advantages of all-water transportation both for the raw materials and the finished products, affords exceptional attractions.

The same writer says:

The price of wheat is now made in Liverpool. The New York price is, roughly speaking, the Liverpool price, less the cost of transport across the ocean, and the Chicago price which controls the west is the New York, price less the cost of transport from Chicago to New York. Wheat is now brought from Chicago to Buffalo by lake often for as low a rate as 1·2 cents a bushel. The average for 1902 was 1·5 cents. It costs about 3½ cents a bushel to send the grain on from Buffalo to New York. The new canal is calculated to take 2½ cents off this charge. Whether this means a higher price to western farmers or a lower price to eastern consumers is a matter for argument. But if it causes a higher price, New York farmers will benefit by it too, and if the consumers get the saving, New York has more of them than any other state.

I have pointed out these figures to show you how the people of the United States have, with an experience of over a hundred years, viewed the question of transportation, with reference to utilizing their waterways in every possible way; and they have now come to the conclusion that water transportation is so vastly superior to transportation by rail, and that it leaves such a large proportion of the profit in the hands of the farmers and producers, that they are willing to spend upwards of $300,000,000 on these inland projects alone.

Now, let us look at the situation from the standpoint of present rates in order that we may understand the position of this new project as a competitor for carrying grain from the west, using the rate from Fort William to Winnipeg as a basis, we would have the rate on wheat over the new route as follows:

	Per Bushel. Cents.
Wheat, Winnipeg to Quebec..	19·98
Wheat, Winnipeg to St. John..	26·97
Wheat, Winnipeg to Halifax..	28

It is true the Canadian Pacific Railway carried grain from Fort William to Montreal and St. John for twelve cents which would mean eighteen cents from Winnipeg, but this was under exceptional circumstances and really was compulsory in order to supply their vessels with ballast and as Sir Wm. Van Horne pointed out could not and would not be done again under any other circumstances. Now, what have we on other rates? Wolvin

& Company have been carrying wheat from Duluth to Quebec by water for from 3 to 3½ cents per bushel, and wheat is now being carried from Fort William to Montreal via Depot Harbour for 3¾ cents, which would mean from Winnipeg 9¾ cents. From Fort William via Port Colborne, to Montreal, it has been carried for 3 cents, which would mean from Winnipeg, 9 cents; so that our cheapest rail transportation by the new route would be Winnipeg to Quebec, 19·98 cents, or Fort William, 13·98 cents. By water and rail to Montreal, 9¾ cents via Depot Harbour, or from Fort William 3¾ cents. Against these rates along Canadian routes we have a rate through the United States by the Grand Trunk Railway, Chicago to New York of 10·9 cents per bushel, under the most fierce competition; by rail from Chicago to Buffalo the rate is 7⅕ cents, and by water from Chicago to Buffalo it is 1½ cents, or a saving by water of 57-10 cents over the prairie route; from Chicago to New York by water and rail it is 5·89 cents, and from Chicago to New York by water and canal, 5·26 cents, or a saving by the latter of 63 cents.

In the report of the United States Industrial Commission, the all-rail route from Chicago to New York is given as 12 cents in 1898, and the lake and canal rate with charges at Buffalo, 4·45 cents. Taking it at 5 cents the average price of 1902, with proposed changes by enlargement of the Erie canal, it will be reduced to 2½ cents. The lake and rail over the same route would be 5·54 and the all-rail 9·88 cents.

These figures serve to show the absolute worthlessness of the new route as a means of solving this problem with regard to our present use of the lake and rail or canal service, and the necessity of using every means in our power to perfect the transportation along these latter lines if we are at all to cope with the rates over the United States service and preserve not only our own tonnage from the west, in grain and other products, but also share the large increase of tonnage that will come from Lake Superior and Chicago ports. Haw can we hope to get our fair proportion of this great traffic if we do not use the opportunities at hand to develop our resources, and if we are to use up our credit and resources on an ill-advised, ill-thought-out and unworkable scheme. I have been pointing out the experiences of the United States with the transportation question, and the conclusions they have come to, and the immense traffic that awaits the country that provides the cheapest transportation, in the hope that mayhap in conjunction with the light that has been thrown upon it by others, it may be possible to induce the government yet to pause in their mad course. There is a feeling throughout this whole country that this may yet be done and that the government may deliberate on the best and most feasible methods of solving the transportation question. There is yet time for the course to be changed and I cannot understand that the government will continue on in this course and place this country in a situation from which it will take years and years to recover. The hon. leader of the government seems to think there is a crisis at hand but on the other hand he does not seem to realize that he is adopting a method that will take from five to eight years to overcome the difficulties and that will be useless in the end. Well, we have only to call his attention to the most excellent scheme outlined by the hon. leader of the opposition, which will meet any possible glut in the transportation of the west and will afford a fair solution of the transportation question. It will meet all the present exigencies besides giving the western people cheaper transportation and control of rates owing to the existence of a government line to Depot Harbour and Scotia Junction and thence by North Bay to Winnipeg, the proposed scheme of the government, while not affording relief to the western people absolutely takes out of our hands any possibility of giving voice to the growing popular idea of government control for at least fifty years or more by handing over this line to the complete control of the Grand Trunk Pacific Railway. We do not even know whether it is being handed over to the Grand Trunk Pacific people or not for we have received from the government no distinct statement as to whether the control of this great project is going to lie with the Grand Trunk Pacific or with the Grand Trunk Railway.

This sentiment that the government should hold some control of the transportation of this country has been growing for years and has been more acute in the west where the people have been complaining of unjust and unreasonable rates. The feeling is now strong throughout Canada for government ownership and operation of the transcontinental line in order that the control of rates may be in the hands of the government, and now is the opportunity for the government to act in the matter. We have been granting subsidies and have practically built the whole railway system of the Dominion of Canada, and handed it over to private corporations. We have surely reached the time now when, if railways are to be built and public moneys expended, the country should hold control of the situation. Competition in railway rates will not bring the desired relief to the west. The controlling factor of water and a government owned and operated line is necessary. The remedy of building one railway and handing it over to a corporation and then trying to remedy the evils of the situation by building another and giving it to another corporation is absurd. Nor is this duplication of railways desirable or economic. It is a mere waste of public resources and the public pays the cost.

As to the successful operation of state owned lines ample proof by statistics and otherwise are available ; it is no new theory. Prussia, Germany, Switzerland, Belgium, Austria-Hungary, and the Australasian colonies, are operating state owned roads with marked success. With reference to the Intercolonial Railway its earnings have been steadily increasing. In 1896-7 they amounted to $2,866,028, while in 1902, they had increased to $5,671,381, and substantial surpluses have been claimed for the last few years.

Besides, if we make a fair comparison of rates on the other railway systems of Canada with those on the Intercolonial Railway, we shall find that they show strongly in favour of the government owned line. The charges for freight per train mile on the Intercolonial Railway is only 98 cents compared with the $1.51 on the Grand Trunk, while the operating expenses are a great deal less on the Intercolonial Railway than on the Grand Trunk. This comparison of operating expenses on government-owned lines and privately owned lines holds good not merely for Canada but for European countries as well. And the freight rates over the state-owned lines on the continent of Europe are very much lower than are those on the English railways which are owned by private corporations. The Intercolonial Railway, mile for mile, is equipped equally well with the Grand Trunk, though it has only half as much traffic, and its operating expenses, including the maintenance of the line, buildings, &c., would not be greatly increased by an increase in the traffic. At very little additional expense that road could handle double the traffic that it has at the present time. The possibilities of this road under proper management, if it were placed in the hands of a commission independent of politics would be greatly improved. During the past seven years we have spent upwards of $15,000,000 on the Intercolonial Railway, all with a view of extending it westward in order to reach the wheat fields of the west. But now it is proposed to spend $100,000,000 to undo the work of the past seven years, and prevent the realization of the objects which the ex-Minister of Railways and Canals (Hon. Mr. Blair) with the approval of his colleauges has been striving to attain since he first had the honour of holding the portfolio of Railways and Canals.

Now, as to the cost of this project, it is variously estimated at from $120,000,000 to $150,000,000. And I believe that one gentleman, the hon. member for West Toronto (Mr. Osler) who has had a great deal of experience in railway matters, says that the cost will be upwards of $280,000,000. That is, he points out that during the first twenty-five years' operation of a railway, the improvements that are necessary double the original cost. Suppose that this railway cost originally $120,000,000, it will double in the first twenty-five years of operation to $240,000,000, and, at the end of fifty years we shall find the cost nearer $500,000,000. To put a moderate estimate on the present cost of the road, the figures will come out in this way. Estimating the eastern section from Winnipeg to Edmonton at 1,800 miles, and $40,000 a mile, we have $72,000,000 for that section. Interest for ten years at 3½ per cent would be $25,200,000, and the difference between 3 per cent and 3½ per cent for forty ears, $12,640,000. For the mountain section, interest on bonds for ten years $7,200,000. This makes a total of $117,040,000. This does not take account of interest that should be legitimately charged to capital account for the time the road is building—or probably $4,000,000 or $5,000,000 more. Then there is the guarantee on the bonds which will easily put an incumbrance on the credit of Canada of $30,000,000. or $40,000,000. Besides which we have the Quebec bridge which will probably cost the country some $5,000,000. So that the estimate with which the right hon. First Minister tried to mislead the House and the country, that the cost of the road would probably be only $13,000,000, is absurd. The Minister of Agriculture (Hon. Mr. Fisher) is the only member on the other side who had the temerity to say that this estimate of $13,000,000 was a ridiculously low one. But as I said before, the Minister of Agriculture is a docile follower of his leader.

Now, I do not want to trespass on the time of the House, nor do I want to trench on any provincialism in connection with so vast a problem as this. But, since the leader of the House has brought down a project that has no inherent good qualities as a transportation system to recommend it to the country as a whole, as this is evidently a project to serve the political purpose of hon. members on the other side and their friends, and is giving additional rail facilities to every province at confederation except Prince Edward Island, I think I may fairly ask why Prince Edward Island has been left out of any consideration, and would say just a few words for railway needs in Prince Edward Island and in support of the proposition brought down by the hon. member for West Prince (Mr. Hackett) some time ago, and voted down, that we should at least receive some consideration in the way of transportation facillities in Prince Edward Island. On this point I am quite ready to agree with the right hon. leader of the House and say that this is a time for action and not for deliberation. There has been long, long deliberation in the case of improving transportation facilities in Prince Edward Island, and now we want action. As this House knows, we have been labouring under a great disability in regard to transportation between Prince Edward Island and the mainland. I do not want to enter again into a history of the terms of

confederation, but it is well known that the Dominion government bound itself to provide continuous steam transportation between the island and the mainland, winter and summer, thus putting the island in direct communication with the railway system of Canada. Now, that the transportation question is the uppermost in all our thoughts, and now that the government is trying to satisfy all the other provinces, it seems to me that something should be done to satisfy the legitimate requirements of Prince Edward Island. I have already pointed out the deplorable condition of affairs last winter by which a large number of our shippers lost heavily and which loss I trust this government has seen the justice of redressing. I do not wish to present a large array of figures on this question, but it would be easy to show the great disparity between the treatment meted out to Prince Edward Island and that meted out to other provinces with regard to the expenditure on transportation facilities since confederation. Take this scheme that is now before us. Prince Edward Island will be obliged to contribute one-fiftieth part of the expense. That will amount to somewhere in the neighbourhood of $2,000,000. The railway in Prince Edward Island was built entirely at the expense of the province, being charged to us at confederation at a valuation of $3,144,214, or an average of $32.50 per head of the population. Since that time there has been spent in public improvement on the island $1,485,090. But only one small branch to Cape Traverse has been built until the last year or two, when the branch was built to Murray Harbour. Now, Mr. Speaker, we in Prince Edward Island have not been getting our fair proportion of railway improvements. This was recognized by the late Conservative government, but unfortunately too late to remedy, and this government, although urged repeatedly to build branches to meet the requirements have turned a deaf ear and now suggest an immense scheme, touching all the provinces of confederation, but absolutely ignoring the most pressing needs of transportation with Prince Edward Island and mainland and the railway branches in several parts of the island much more thickly populated and whose needs are more pressing in order to open up unknown territories with unknown resources.

I have on several occasions brought forward the necessity of a branch from North-Wiltshire to Crapaud and there are lines of equally pressing necessity in western parts of the island—namely at or near O'Leary station to west shore of the island.

All we want is fair reasonable treatment, and while not objecting to any reasonable scheme and expenditure for our great and rapidly growing west we want to keep in mind our older provinces.

A comparison of railway mileage according to population will show that Prince Edward Island has much coming to her aside from the facts of her actual wants. The following figures speak for themselves: Take railway mileage according to population.

	Population. per cent.	Ry. Miles. per cent.
Ontario..	40·16	37·84
Quebec..	30·60	18·26
Nova Scotia..	8·44	5·57
New Brunswick....	6·09	7·65
Prince Edward Island	1·88	1·11
Manitoba..	5·01	11·28
North-west Territories.. ..	4·29	11·02
British Columbia..	3·53	7·27

When you take into consideration the fact that out of $4,629,304 spent in Prince Edward Island, $3,144,214 was paid for by Prince Edward Island, or charged against her at confederation the comparison is odious, so small has been our portion. The Cape Traverse branch was built with a view to offering some relief by maintaining transportation across the strait in winter as well as in summer.

But the government has seen fit to abandon us, and we are very much in the situation that we were when we entered confederation in this regard. Now that they have at their disposal means and opportunities of relieving the situation, they ought to put us in direct communication with the railway system of the Dominion of Canada, and for this purpose they could well acquire the New Brunswick and Prince Edward Island Railway, leading from Sackville down to Cape Tormentine. They would then have only seven or eight miles to cross by steamer, and, as I have pointed out several times in this House, it is the natural and shortest route between the island and the mainland as an alternative route when the ports of Summerside and Charlottetown are not available. If they would put on a proper steamer at these points, if they would give us more facilities, facilities for which the people have been petitioning year after year by making a pier and affording landing facilities on the island side, they would do a great deal to relieve the transportation problem in Prince Edward Island.

But transportation is not our only grievance. There is the matter of telegraphs, about which we have been petitioning this House, and in respect of which the government is under obligation to provide us a reasonable service. We have down there a company that has been claiming to possess a monopoly of the situation, and has been charging us exorbitant rates, while only giving us a twelve-hour service. This question came up the other day in a committee of the Senate, and it was clearly pointed out that no monopoly existed, and the Senate, in reply to an amendment brought forward by the attorney of the Anglo-American Company, asking that right to establish a cable be not granted the Dominion Telephone and Telegraph Company's Bill, threw out the amendment and virtually

declared that no monopoly existed. It remains now for this government to act and provide us an up to date service.

Now, Mr. Speaker, I have pointed out what I consider the means at the disposal of this parliament for solving the transportation question of this country. As I said at the beginning, it is an all important question which will put Canada in the foreground as a commercial nation. We should utilize our great water-ways, and we should supplement those water-ways with the most easy and natural means to reach our ocean ports. The scheme outlined by the leader of the opposition presents, as I said, a comprehensive and easy method, and I trust that the government will yet pause in its mad career and consider this question anew.

Mr. WM. ROCHE (Halifax). I agree with the hon. gentleman (Mr. Lefurgey) who has just taken his seat that it would be almost impossible to offer anything new on this subject, and in view of the great accumulation of information that we have before us, it would be perhaps in vain to attempt to add anything to it. As you and I, Sir, generally sway the opinions of others in the House, and as you, I believe, are going to form your own judgment in regard to this question, permit me to remind you that we have been exhorted by my hon. friend from South Simcoe (Mr. Lennox) to approach this subject in a judicial manner. In order to do that, I would suggest that we should, first of all, determine for ourselves what has been proved and admitted on this question. In the first place, it is proved that it is the duty of the country, as represented by the government, to assist the North-west. What was the condition of Manitoba? We have been told that there was an accumulation of produce, notably of grain, and that the people of that province had no facilities for obtaining the full value of their products by taking them to market at a reasonable cost. Who advocated the railways? Who represented that condition of the country? The gentlemen who represent public opinion in the North-west. The press complained of the accumulation of produce, the members from Manitoba in this House represented truthfully that the inhabitants of that territory were sadly injured by the lack of proper facilities, and the House believed the testimony that was given on their behalf. Now, Sir, the government—assuming this to be correct, and there has been no one to gainsay it, no one to refute it—agreed that to provide for the present and future there should be some facility for relieving that accumulation of produce and benefiting the people who inhabit that territory. They agreed that that facility should be the shortest, the best and most economical means of transportation between the west and the east, in the form of a transcontinental railway. In the second place, as the cost of furnishing this facility is great, and as the whole country has to contribute to the payment, it is admitted to be right and proper that all the provinces of the Dominion who contribute to the accomplishment of that desired end should participate in the advantages accruing from the transport of the produce of the North-west and should share in the benefits of the productions of that land. In addition to that, it is provided that the carriage of these commodities should end at our own ports. Therefore, in view of these considerations, we have the government proposing to build a railway from Moncton to Winnipeg and to aid in the construction of a railway from Winnipeg to the coast. Let us see whether this proposal accomplishes the ends we have in view, and whether the cost will be too great in proportion to our resources.

I have taken the liberty of suggesting that that facility should be a railway, and I do it with great deference to my hon. friend from Prince Edward Island who has just addressed us ,and for the following reasons: First of all, that a canal is a very expensive work. Secondly, it is unfortunate that we have no rivers flowing from that country, and that the construction of a very expensive work like a canal, where there is no water in the country, does not afford much facility for the carriage of produce. Against this proposal what does the opposition contend? Among other things, they contend, firstly, that the government cannot economically build the road. I might ascribe the assertion of that proposition to my hon. friend from Lanark (Hon. Mr. Haggart). Secondly, that the government will not build the road. I think, on the other hand, we may safely attribute the defence of that proposition to my hon. friend from Hamilton (Mr. Barker). Thirdly, that the government will build the road at an enormous cost. Without any hesitation whatever, I think the House will attribute the sponsorship of that proposition to the hon. member for East Grey (Mr. Sproule). Fourthly, that the Grand Trunk Pacific will not operate the road, that traffic will not go over it (a) from natural causes; (b) by some great treachery on the part of the government; (c) by some hocus pocus on the part of the Grand Trunk Pacific Railway; and, fifthly, we have the proposition of the hon. and learned leader of the opposition (Mr. Borden, Halifax).

The first hon. gentleman who attracted my attention on coming into the House was my hon. friend for Hamilton, whom we on this side regard as a mild and modest gentleman who comes into the House at times from a sense of duty only, and presents us with some calculation or argument which has been omitted, or suggests that there is some view of the question which has been overlooked or some item in the calculation which has been eliminated. But, on this occasion he passed beyond his usual attitude in the House, and the usual language

that he adopts. He exhibited himself to our admiring gaze as a verbal artist of no mean pretensions. I think no hon. member of this House could excel in the description of the locomotive rushing over the muskegs and through the desolations of that country to the north of Lake Superior and in the northern part of Ontario and belching forth fire and smoke from the consumption of the jack pine. Indeed it was a most graphic picture—and no cattle-guards. The next picture was that of an heroic billing clerk. There he sat in his office in Manitoba with his panama hat on, with perhaps a cigar in his mouth and the flies buzzing about his head calmly and heroically discharging his duty by billing the traffic in the direction that he thought would best suit the interests of the company he served. When Nelson was at Copenhagen it was reported to him by his signal man that the commander in chief, Sir Hyde Parker, had sent a signal for him to retire. Nelson took the spy glass out of the hands of the sailor and putting it to his blind eye, said : I do not see the signal, keep my signal for close action flying still. The heroic billing clerk keeps on at work taking no notice of the fact that he is not carrying out the instructions and that the traffic is not being billed over the line which has been prescribed. Mr. Wainwright rushes into the office, Mr. Hays rushes into the office, Sir Charles Rivers-Wilson rushes into the office, and say this to the clerk : You are violating the solemn contract which has been entered into with the government of Canada and you are creating a great risk. It will be very detrimental to our interests. Upon which he will say : It is very true that there is a contract that :

> At all times during the terms of the said lease, the company shall continuously and efficiently operate both divisions of the said railway, giving due and sufficient service for the accommodation of all traffic to the satisfaction of the government.

It is quite true that in clause 42 :

> It is hereby declared and agreed between the parties to this agreement that the aid herein provided for is granted by the government of Canada for the express purpose of encouraging the development of Canadian trade and the transportation of goods through Canadian channels. The company accepts the aid on these conditions, and agrees that all freight originating on the line of the railway, or its branches, not specifically routed otherwise by the shipper, shall, when destined for points in Canada, be carried entirely on Canadian territory, or between Canadian inland ports, and that the through rate on export traffic from the point of origin to the point of destination shall at no time be greater via Canadian ports than via United States ports, and that all such traffic, not specifically routed otherwise by the shipper, shall be carried to Canadian ocean ports.

I admit what you say to be true but to me the interests of the company are paramount and notwithstanding that I shall continue to route these goods wherever I think it is best because I have the obligation upon me of doing what I think best in the interests of the company. I am afraid the heroic clerk would soon take up his residence in a foreign clime.

The hon. member for Hamilton declared that it would be impossible to operate the railway up in that locality because there was no coal. I say that one of the great causes of the operation of the railway, that one of the great resources that the railway will have, and one of the great sources of revenue will be that the railway will be able to carry coal not only for the consumption of the locomotives but for the use of the inhabitants in those localities from places in the lower provinces where coal is abundant, that the carriage of that coal will afford a revenue to the railway from the fact that it does not exist in the neighbourhood and that the railway will be employed in carrying it in the cars that otherwise would be empty and that are to be returned from the places at which they originally started. Not only will the railway carry back coal but heavy commodities of all kinds and we are also in hopes that it will carry back the products of the lower provinces to the west, and that it will be able to carry them at extremely low rates in consideration of the large trade that will ensue to it as a result which the provinces will be benefited by the construction of this road. But, Sir, if it should be discovered that the directors and managers of this road were either openly or covertly allowing the diversion of the trade which ought to pass over this road through our country to the maritime ports, we could invoke a source of interference by which the House might bring to bear upon them a pressure which would compel them to observe the terms of the contract. We have abundant resources in the pecuniary penalty which they have incurred from the fact that the original loans made by the government and the provinces have multiplied by interest and compound interest until they now amount to the very respectable proportionate sum of $58,000,000.

Mr. THOMSON (Grey). Would the hon. gentleman tell us what amount of trade he expects to pass over the eastern division of the Grand Trunk Pacific Railway ?

Mr. ROCHE (Halifax). Yes. The Grand Trunk Pacific Railway will start from a maritime port. Are we to have no connection whatever with the west and will the west receive none of our products, and are we to be content for ever that the trade shall all be downwards and none of it upwards ? And do you think that the resources and requirements of that country, when developed, will not require commodities from Europe, and will they not come through maritime ports ? Do we not import a large quantity of British and other European goods, and is it not preferable to

bring these goods through maritime province ports than through Boston, and Portland, and New York, whence they are coming now. Are we to take all from the west and imagine that the west will take nothing from us? When they have products that we require and we have products that they require, will not mutual interchange result in benefit to both ends of the country? Are we to look for nothing in the future or are the hopes and expectations of the people in both ends of Canada to be realized that there would be an exchange of products, that commerce will increase, that traffic will be multiplied and that the people will be bound together not only by sentiment and not only by two steel rails, but by the exchange of values and by participations in the benefits which will be mutually derived from each other.

Some hon. MEMBERS. Ask another question now.

Mr. THOMSON (Grey). He did not answer my question.

Mr. JOHNSTON (Cape Breton). He answered it too well.

Mr. ROCHE (Halifax). We had a speach in this debate by the ex-Minister of Railways (Hon. Mr. Blair), and another by the ex-ex-Minister of Railways (Hon. Mr. Haggart). As you are aware, Mr. Speaker, I entertain the highest respect, and I may say almost admiration for the ex-Minister of Railways (Hon. Mr. Blair). His conduct in this House; his mastery of the details of business; the successful manner in which he has piloted railway legislation through the House command our admiration and respect. I have no desire, even if I had the ability, to belittle in the slightest manner or to the slightest extent the reputation of the hon. gentleman. I only regret that he has left the government at this time when his experience and services would be most valuable to the country in assisting in the passage of this most valuable measure. But although the ex-Minister of Railways (Hon. Mr. Blair) was a most valuable administrator of railways, I possess no knowledge of his ever having constructed a mile of railway, and although his opinion as an operator of railways would be perhaps as valuable as almost any administrator, still on a question of the location, or the construction, or the practicability of a railway, I would prefer to take the evidence of an engineer, or of one who had to do with the practical construction of a railway. Now, Sir, we are not at a loss for the opinion of a railway engineer of eminence, Sir Sandford Fleming, the most celebrated engineer in Canada, or perhaps in America, who has just completed the great project of a Pacific telegraph cable from Canada to Australia, and who has an intimate knowledge of the whole of the country to be traversed by the trans-Canada, was interviewed by a reporter when it was announced that the Grand Trunk Railway contemplated building a transcontinental road. His opinion, which follows, is a remarkable confirmation, by the greatest known authority, of the wisdom of the selection of the route provided for in the Trans-Canada charter:

I am inclined to think Mr. Blair is on the right track in proposing to extend the Intercolnial Railway to the Pacific. It seems to me, however, that it would be a mistake to try to form a new transcontinental line in a haphazard way by connecting various fragments of railway which have been located without any general plan. The effect would be to lengthen the whole line and unduly lower its engineering character, and almost certainly give it features which would be for ever regarded as blemishing to a great transcontinental line. To realize Mr. Blair's conception of a new national railway, it should, in my judgment, begin at the Quebec bridge, now building, where it would form a direct connection with the Intercolonial, and it should extend from Quebec by the most direct route to Port Simpson on the Pacific. From what I know of the general character of the greater part of the intervening distance I believe a line with splendid engineering features could, with ordinary care, be secured. It would pass away to the north of the rugged shore of Lakes Huron, Superior, Nepigon, and Winnipeg, through a vast region reported generally of alluvial soil, with abundance of wood and water.

First—The Quebec bridge is in progress, that structure I have always favoured, but it would have been a bold man to have proposed such a work a quarter of a century ago. The Quebec bridge will give the needed connection with the Intercolonial as well as the Grand Trunk Railway, and along with a junction with these railways access and egress to and from Atlantic points at all seasons

Second—The greater part of the vast region through which the new line might pass between Quebec and Port Simpson is woodland, and we have to-day a new value given to the timber, which was undreamed of twenty-five years ago. The territory to be traversed is the natural home of pulp wood, and in this vegetable substance the unoccupied regions of Quebec and Ontario have an inexhaustible crop ready for harvesting. A crop of a perennial character, which, in extent, I venture to say, is unsurpassed in the North American continent—perhaps in the whole world.

I have already expressed my doubts as to the wisdom or expediency of proceeding in a haphazard way to establish a new transcontinental railway. I regard the shortest line obtainable between the tide-waters of the two oceans as quite long enough. For that and other cogent reasons I would advocate the most favourable route which can be had between the port of Quebec and Port Simpson for a new Dominion Grand Trunk line, and at the same time to have in view the establishment of railway service with all desirable points by branches judiciously laid out. By having regard to these leading principles, great advantages would, in my judgment, result. It seems to me there is ample room for the new railway. It would in no way interfere with any other line, and it may be regarded as a natural development of the railway system of Canada. I am satisfied that it is possible to establish a splendid national railway on the route proposed with the best ocean ports at its terminal. With a Rocky Mountain passage very much lower than that of any

railway yet constructed across the North American continent, and with general engineering features even more favourable than those obtained on the Intercolonial Railway, such a line would give breadth to Canada and admit of settlements and profitable industries where such are not now possible. In the far Northwest it would open up for ranching the rich plains of the Peace river and Northern British Columbia, and render the more distant gold fields more easily accessible at all seasons.

When the day arrives to open the railway as a through route it will be found to possess advantages, in respect to distances, as compared with the route via San Francisco and New York. From Yokohama to Liverpool the passage across the Pacific ocean would be 605 and across the Atlantic 195 nautical miles less. While the land distance would be 502 statute miles less, making a total saving on the whole distance of about 1,423 statute miles.

Regarded simply from a Canadian standpoint, I cannot conceive any public undertaking which would better meet the wants of the New Dominion, throughout its whole extent. I rejoice to know that it has so soon in Canadian history been brought up for serious consideration.

That is the opinion of Sir Sandford Fleming, and my friend from Prince Edward Island (Mr. Lefurgey) is to the contrary.

The next gentleman who attracted our attention in this debate was the ex-Minister of Railways and Canals, my hon. friend from South Lanark (Hon. Mr. Haggart). Although my hon. friend was supposed to have had great experience in the construction of canals, his experience in the construction of railways was quite as limited as the experience in that respect of the ex-Minister of Railways (Hon. Mr. Blair); and although I cannot compliment him in the same terms as I can the ex-Minister, on the economical and satisfactory administration of his department, I must admit that his experience in the operation of a railway is far greater than his experience in the construction. But I have often admired my hon. friend. He comes into this House charged with the subject upon which he is going to speak, and he employs all his vehemence and positiveness of manner. When he is right, he is irresistible; he bears down on his opponents like a frigate with all sails set, and guns out on both sides. I am free to admit that when he is wrong—and he is wrong very often he is equally positive, and if possible more vehement; he will not listen to any reasons to the contrary; and, by vociferation, assertion and obstinate adhesion to himself, though he is in the wrong, he bears down all opposition, and comes out triumphant in the end. My learned friend, the regulator of the opposition, sent to my hon. friend and called him to come to this House to curse Quebec and defy Nova Scotia, and he carried out that request with the utmost circumspection. He took up his parable like the prophet of old; and, when he began to curse Quebec and to defy Nova Scotia, he turned his face to the wilderness, and what did he say? He said that a railway through that country was positively impracticable; that it was a region utterly unfitted for a railway to pass through; that it was rough; that it was full of jungles, abounding in muskegs, and traversed by granite ridges throughout its length. Well, a gentleman who has passed through that region declares that this is one of the reasons why people in a certain state of mind are subject to hallucinations. This is what is said by Mr. O'Sullivan, who was employed by the transcontinental railway people and the government of Quebec to survey that region during the winter of 1897-98:

> During the winter of 1897-98, I left a party at Rupert House who surveyed the shore line and the estuaries of the rivers in that locality, and in March and April traversed in a direct line across country from Rupert House to Lake Abitibi, and thence homeward via Lake Temiscaming. A proof of the favourableness of that country for railway construction, no obstruction of any kind was encountered on this traverse, but an optical illusion was often experienced, for in the morning when they would strike an open plain, they would perceive ahead of them what appeared like mountain ranges in the distance at right angles to their course, but continuing their march day after day without changing course they never came to them—it is all a gently rolling plain.

If the government should send out their surveying parties—and they will send them out—and if they should find geysers, uphill torrents, glaciers, crevasses, serbonian bogs

> Like that 'twixt Ida and Mount Cassius old
> Engulfed whole armies,——

—places where the earth's crust gets so thin that you can smell fire and brimstone, or mountains of granite rock; why, they can stop. They can come back and go some other way; they need not build a railway through it. When Bill Nye, the traditional governor of Nevada, sent out a surveying party, he made them go east. They surveyed through the various states and territories until they came to the Atlantic, where they stopped and sent back a message to Bill Nye asking him what they should do; and he replied telling them to go on, though it was through the Atlantic. But we can stop. My hon. friend from Lanark has no surveys; he had no location of the line; he had no estimates; he had no means of forming a conclusion; nobody could tell him within ten millions or more what this line of railway would cost. But there was a plain man like ourselves, without any reference to experts, without any incumbrance of engineers, who gave the exact cost, providing for every bolt, every bridge, every culvert, every mile of rails, all excavation of rock and earth, and whatever it might be, without any consultation with anybody, at $125,000,000, not a dollar less nor a dollar more; and that was my hon. friend from East Grey (Mr. Sproule). But, Sir, upon what do we rely? We rely upon the reports of disinterested men who have been sent into that country, without any political bias, without any reference to the proposal which is now before the coun-

try, without any disposition to assist one view of the case or another, who have given their disinterested declarations as to the entire feasibility of constructing a road through that country, and the entire desirability of that region for cultivation and settlement. And what are the proofs upon which we rely ? We have the results of the geographical survey which has been made by Prof. Bell and others. We have the testimony which was given by the hon. member for Gaspé (Mr. Lemieux). He gave the testimony of engineers and the declaration of the clergy of two of the most prominent denominations, the Oblate Fathers and the bishops of the Established Church. He gave in extenso their declarations that they had passed through these territories and that they had found them admirably adapted for cultivation and in every respect fit to be the homes of a large population. Then there were the authorities cited by the hon. Minister of Finance, by the hon. Minister of the Interior and by others who spoke upon this question. I have some of these here, and may read one or two of them. One, which is a letter from Prof. Bell, contains one or two paragraphs which bear upon this question. I shall read it and shall be glad to submit the others to any gentleman who wishes to traverse what I have said. The letter from Prof. Bell is as follows :

Head of the Geological Survey Department,
Ottawa, March 7, 1887.

J. G. Scott, Esq., Quebec.

Dear Sir,—Your favour of the 4th reached me this morning, and I beg to answer your questions seriatim as follows

1. A considerable portion of the territory southward of James bay is fit for settlement.

2. My own explorations have not extended eastward of the basin of Moose river. In that basin a great deal of good land is found between the water shed of the great lakes and the commencement of the low level country to the south westward of James bay. This would comprise about one-third the region between Lake Superior and James bay. The soil is mostly brownish gravelly loam and light coloured clay, with sand in some parts. In the coniferous forests, when the ground is level, the surface is apt to be coverd with deep moss, but when this timber has been burned off and replaced by deciduous trees, the ground is dry.

3. The summer and winter temperature resemble those of the county of Rimouski. The summers not so hot nor the winters so cold as at Winnipeg.

4. The average snow-fall is about three feet or a little more, still not quite so great as about the city of Quebec.

5. Potatoes and all other kinds of root crops have been found to do remarkably well. Hay also grows luxuriantly. Barley would, I think, be a sure crop every year, and rye could also be grown with advantage. Barley is sown every year at Moose Factory and Rupert's House, and it has ripened well every year that I have visited these parts. Still it is said to fail some years. However, these places are much further north than the region I have indicated, and what is worse for them, they are near the sea, which is said to have an unfavourable influence in the autumn. Mr. John McIntyre (now at Fort William) says he has ripened wheat at Missinaibi and New Brunswick House, within the above area. I have had experiments made at New Brunswick House and at Norfolk, on the Abitibi river, with a great variety of field and garden seeds, and the results proved that this region is capable of growing anything which can be raised, say in the county of Rimouski. I regard the region as well suited for stock raising and dairy farming, and it is not unlikely to prove fit for grain also.

And so on. I have other testimonials to the same effect, but I shall not read them. We may be disposed to slight in some degree the testimony of professional men because they may be influenced by the undertakings which pay them. They may be thought to colour their reports and to make them more favourable than that the ordinary witness would make them. But we have also the testimony of plain men, not professionnal men, not geologist, not surveyors, but men who are well acquainted with these regions, who have passed through them in pursuit of their employment, and who tell a plain unvarnished tale of these regions and of their capabilities for cultivation and for lumbering. I happened to be in the city of Quebec recently and met on the platform a man who is operating in this country, an extensive lumberman. This question had just been raised in the House, and I asked his opinion upon the project. I do not know if he is a Conservative or a Liberal, but he told me he had passed through that region and that there were in it none of those obstacles of which the ex-Minister of Railways spoke; that it was perfectly open and fit for the construction of a line of railway; that it was fit for cultivation ; that there was an abundance of timber and that in every respect it was a most valuable country, which should be exploited and settled. Then we have the testimony of gentlemen in this House, of lumbermen, of hon. members who have passed their time in their youth in going over this country and who know its capabilities ; they have declared unhesitatingly that the unfavourable accounts which have been given are unjust and that they slander the country. They say that the country is well adapted for cultivation ; that it is fit for the building of a railway ; that it is in every respect a valuable addition to the Dominion.

I spoke the other day, in the hotel, to a man who was born in the immediate vicinity of this territory, who had gone over all that region, and he corroborated in every detail the particulars I have just given. He informed me that it was a most valuable country which invited the settlers and those who could use the timber and other valuable resources for the benefit of the Dominion. Thus we have on the one hand the deprecatory remarks of my hon. friend from Lanark (Hon. Mr. Haggart), and my hon. friend from Hamilton (Mr. Barker), and on the other hand we have the weight of this testimony from men who have actually visited the localities ; who have inspected

them; who are familiar with them and who declare unhesitatingly that a line of railway can be successfully carried through that district. They say that it is most valuable for purposes of cultivation and that it possesses resources of the most valuable and rich description.

The next hon. member who addressed the House in my hearing was the hon. and learned leader of the opposition, and I sympathized with him in this struggle between his party and the constituency which he represents. That difficulty was apparent throughout the course of his speech because after he had criticised the proposition of the government, after he had denounced it, after he had found fault with it, he took it up piece by piece and in detail and he told us that he approved of most of the parts of it, that is that he was ready to give his support to any proposal which would give a better fighting chance to the lower provinces; that he would help by his vote to assist in the consummation of the desired results, but he would not support this proposition. He was ready to build a railway from Winnipeg to the coast, if necessary, but not in connection with this project. He was ready to build the road from Winnipeg to Quebec, but not in connection with this. And, in excess of all that, he was willing, as a last resort, to favour the construction of a railway from Quebec to Moncton, if he could see satisfactory evidence that it was for the benefit of the lower provinces. My hon. friend in the course of his remarks asked: What will the government do with its 1,600 miles of Intercolonial Railway; and how much of it will be used? He was speaking in answer to the argument of my hon. friend from Hants (Mr. Russell) who had addressed the House on the subject of government ownership of railways, and he said: If you do away with the governmental ownership of railways, what will you do with the Intercolonial Railway; will you sell it, or how will you dispose of it? My hon. friend is sufficiently acquainted with the use of language, and when he talks about disposing of the ownership of railways and asks whether the government will sell this railway, he knows how to draw the exact distinction; he knows that this is mere popular conversation and is not an accurate expression of the question that is before us. How much of the Intercolonial will be used? The Intercolonial would be used from Halifax to Moncton; it will be used from Moncton to St. John; it will be used from Halifax to Pictou and Sydney; it will be used from Lévis to Montreal; it will be used from Moncton to Lévis and back for freight and passengers. And its use will be most beneficial in connection with the Grand Trunk Pacific. For, as the grades on the Grand Trunk Pacific will be more favourable for traffic passing from Quebec to Moncton and the lower provinces, while the Intercolonial Railway will afford better grades for the westward haul, it will be more profitable to use the Intercolonial Railway in carrying cars back, either empty or loaded with the productions of the lower provinces. The hon. leader of the opposition intimated that he was prepared to discuss with the Minister of the Interior whether we should hand over the Intercolonial to the Grand Trunk Pacific. No doubt, if a discussion of this kind should take place the leader of the opposition would be a most formidable champion. But, unfortunately for him, in entering into that conflict he would have to bear the weight of Saul's armour in the shape of his past utterances, particularly speeches by himself and Mr. Kenny, in St. Patrick's Hall, in Halifax; previous to the campaign of 1900, as reported in the Morning 'Herald.' Now, Mr. Kenny needs no introduction in this House. He is one of the most highly esteemed citizens of Halifax; he has been a representative here of the county of Halifax, and is known to many of the older members of this House. The Morning 'Herald' is also well known. My hon. friend the leader of the opposition has his office in the 'Herald' building, and some say that the 'Herald' has its office in his. But along the hall near my hon. friends office, there is a passage. In printing offices, sometimes there are very dark and narrow passages. But this is a very broad passage. I am sure that when my hon. friend passes a certain door in that passage he always turns back to it. Why? Because in the room you enter through that door is the Tory Machine. There, this very day the committee sat who are deciding who shall be personated in the next election—which they think will come off on the 14th of October—and who shall be satisfied, and the names will be placed on the list. Those who are dead will be taken up and voted in the approaching contest. And to-morrow morning, from the room downstairs, there will come out a most moral and most affecting article describing the improper and mischievous doings of the Grit machine up in the wicked city of Toronto. Well, the question that is discussed in these speeches recorded in the 'Herald' is one which touches very closely upon the question before the House, and that was the ownership of the Intercolonial Railway, 'the people's railway,' which is now so precious in the eyes of my hon. colleague the leader of the opposition, but which at that time was not considered such a very valuable asset, for it was proposed by his colleague and himself to hand over what they now call the people's railway to the management and control of the Canadian Pacific Railway. The proposal was that the Canadian Pacific Railway should get running powers from St. John to Moncton in return for similar privileges for the Intercolonial for trains between Quebec and Montreal. On October 13th the Morning 'Herald' authoritatively announced as a declaration before the electors by these

gentlemen the granting to the Canadian Pacific Railway of similar running powers from St. John to Halifax. We know that the term 'handing over the management' of a railway means no more than the granting of running powers, for it participates in the use of the track for traffic purposes. But before the populace and when it may excite some prejudice against an opponent, this is spoken of as handing over the railway to the control of another corporation. In St. Patrick's Hall, on October 26th, 1900, Mr. Kenny, the colleague of my hon. friend and my hon. friend himself appeared before the electors, and this is a report of what was said :

Mr. Kenny—The Canadian Pacific Railway, if it had been offered just arrangements, would have commenced at Halifax and would go right through Canada to British Columbia. Now, Sir, if the Canadian Pacific Railway had a fair business arangement, if it had such running arrangement such as exists between railways in the United States, or even between some railways in Canada, if we had such arrangement, between St. John and Halifax, an immense business would accrue to the port of Halifax. Today, the Minister of Railways says it must stop at St. John ; I won't carry the freight unless it is done in the way I wish it. The Intercolonial Railway is stopped at Montreal ; the grain is gathered west of Montreal.

Mr. Borden expressed satisfaction at what had been so far begun. The tide was certainly with us, but we must beware of the Grit machine.

This is the proposition which the Canadian Pacific Railway made to the Intercolonial Railway. What did the ex-Minister of Railways say ? Let me read :

Carleton, N.B., October 27, 1900.

Mr. Blair declared the fight was the outcome of politics on the one hand and inordinate greed on the other, and that now an election was pending pressure would be used to get friends of the Canadian Pacific Railway something to which they were not entitled as a matter of right.

After explaining the Canadian Pacific Railway's contention that they should be allowed to solicit business in Intercolonial Railway territory and have it delivered to them in St. John, Mr. Blair pointed out that if conceded this would result in the Canadian Pacific Railway year by year taking away from the Intercolonial a large part of business to which it was entitled and on which it depended for success, making the line from Moncton to Montreal little more than a branch. No surrender to Canadian Pacific Railway. The question to him was whether he ought, as Minister of Railways, to surrender business advantages and interests that belong to the Intercolonial Railway in order that greater advantages and benefits would accrue to the Canadian Pacific Railway, and that he had not been able to say that it was his duty to act in manner detrimental to the best interests of the people's railway.

Upon what reasonable ground, he asked, could the Canadian Pacific ask us to haul our cars back to Montreal empty in order that more of their cars may go back full ? After referring to the Intercolonial Railway's largely increasing business since its entry into Montreal, Mr. Blair declared that he never would have extended the line had he thought of acceding to the Canadian Pacific Railway's demand.

My hon. friend, figuratively speaking, rolled up his sleeves and put on his most severe forensic look, and defied the hon. member for Hants to go home and declare to his people whether he was prepared to hand over the Intercolonial to the Grand Trunk Railway or to the Canadian Pacific Railway. Now, we will have to contest this election. We have been defied, and this scrap must come off in Dartmouth, Queensbury rules, and may the best man win. 'Go tell the people of Nova Scotia,' he said, 'if you propose to give the Intercolonial to the Canadian Pacific Railway or to the Grand Trunk Pacific.' Now, the ex-Minister of Railways was pronounced by hon. gentlemen opposite to be incompetent, and to have done the things which he ought not to have done ; but now they pronounce him to be the ablest administrator. In the discussion which took place in Dartmouth, when Mr. Kenny and the leader of the opposition appeared before the electors, the leader of the opposition poured out upon the head of the ex-Minister of Railways one of the most withering invectives which was every pronounced upon a criminal in a court of justice, and he treated him as such. Now they are taking sweet counsel together, and I think I can hear my hon. friend say, 'It is true I called you a boodler, it is true also that I said that you took part in the Drummond County deal ; but, my dear sir, I assure you it was all political, I assure you that I personally entertain for you the highest respect, and that I have no animosity against you.'

Well. Mr. Kenny opened the ball, and he announced that the Intercolonial stopped in Montreal, that it was unable to obtain traffic from the west, and that an effort should be made to bring the traffic over a railway which would go right up to the farmers' homes in the west, and would carry the produce of the west uninterruptedly down to the ports of the maritime provinces. He announced to the electors that they had been defrauded of their just rights in participating in the labour which that railway would afford, owing to the obstinate conduct of Mr. Blair in trying to prevent the Canadian Pacific Railway from having running powers over the Intercolonial. He said that the labourers and the merchants of Dartmouth, and the inhabitants of the county, were deprived of their just rights by the conduct of this individual in hanging on to the Intercolonial. My hon. friend sat and heard that all announced, and he offered not one word of dissent. He did not then speak of the people's railway, he did not then speak of the evil of handing it over to the Grand Trunk, or to the Canadian Pacific Railway, or to any other railway. This was the language of Mr. Kenny:

It is our interest, irrespective of party, to do what we can to get the Candian Pacific Railway

into Halifax, and I fear we can never do it so long as Mr. Blair is Minister of Railways.

That was on October 30th. The leader of the opposition said :

It was desirable that the port of Halifax should be connected with the Canadian Pacific Railway.

Whence this new-born zeal for the Intercolonial ? Why this assertion of its being the people's railway ? Why is it that everything is to be sacrificed to the Intercolonial? As the Prime Minister observed, the Intercolonial was for the people and not the people for the Intercolonial. Then my hon. friend the leader of the opposition said that we ought to wait, that this railway should not be immediately constructed, that the benefits should not be obtained for the people of the North-west. He wanted the opinions of the experts of the Intercolonial before deciding whether the railway should be built or the location chosen. I want to ask, except the Deputy Minister of Railways, what official of the Intercolonial could give the desired opinion as to the territory over which the railway should pass, or of the mode in which it should be constructed, or could give a decision to the government and parliament which would warrant them in taking immediate steps for its construction ? Then he went on to speak of a crisis. 'What crisis took place between the 19th of March and the 30th of July, in those ninety-two days ?' As if a crisis could not take place in a shorter period that months and years. Why, Sir, the greatest events have taken place in the shortest time, have come without any announcement, like thunderbolts out of a clear sky. Think of the great events that took place in the hundred days between the landing at Grenoble and the overthrow at Waterloo. Think of what took place in the thirty days between the first conflict of Strasbourg and the occupation of Paris, not very long ago. Statesmen see clearly and distinctly at once what ought to be done in the premises, and when they see it is desirable to make a bold stroke, to do something that should be formative in the destinies of the people, the government have the courage to act promptly, to avail themselves of the opportunity to perform an act beneficial to the people, and which will make them grateful to such a government for ever.

My hon. friend went on to cast some ridicule upon the selection of the route at no greater distance than two miles from the American border, and he also ridiculed the old bogie of the abolition of the bonding privilege. We know that the bonding privilege enables Canadian railways to run trains through American territory and to American ports, and we know that this railway will not pass through American territory. Is it not sufficient if it passes half a mile from the American border ? A track's breadth away from the American border is sufficient to relieve the railway from passing over American territory. In times of peace that would be satisfactory, but in times of war we cannot say what distance will be satisfactory. The hon. leader of the opposition then went into a most elaborate argument on the subject of water stretches and canals and on this branch of the subject he was preceded by the hon. member for Victoria (Mr. Hughes), who went into statistics most voluminously and most exhaustively to prove that canal carriage for ocean borne traffic in the United States was cheaper than we could carry goods and produce over a railway in Canada. My hon. friend from East Prince (Mr. Lefurgey) this evening gave us a similar argument to prove that canal carriage in the United States was cheaper. Unfortunately for us, we have no canals stretching throughout the entire length of the country between the east and west. A canal is a most valuable work when it connects great waterways, but it is a most expensive work. For a short distance connecting great waterways it affords facilities for cheapening transportation, but it is a most enormous work. Unfortunately our rivers run through the length of the country instead of running south, as the American rivers do. Therefore, in that species of internal transit we never could rival the United States, and we never could participate in the carriage of the products of the west if we relied upon that means of transportation. We would have to abandon all our hopes as to this trade and hand it over to the United States if we had not a facility to rival the facilities of the United States. The only facility which we do possess is our railway, because our rivers are frozen during winter. At the time these products are to be brought out from the west we must employ the only facility at our hand, and it is the long haul upon the railway where there is no interruption of the traffic, where there is no transhipment, where there is no transmission to canal boats or to elevators between the place where the grain is obtained in the fields and the place where it is shipped to its destination in Europe. It is carried in one continuous line, affording cheap and uninterrupted communication and that is the only facility which will rival the canal and river system of the United States. But, here is the dilemma of my hon. friend the leader of the opposition. He thought to himself : If I should advocate any plan like that, if I should advocate cheap transportation on the canals, what would my constituents say ? They want the spending of the money, they want the transport of goods through our own territory. I have my last year's speeches that I must atone for. I must meet the government on this proposition and I must go one better. I believe the hon. gentleman deliberated for some time because the plan that he proposed to the House showed marks of alterations. But a happy thought was suggested to him, I think it

must have been in passing through a museum where he saw the skeleton of ichthyosaurus and he saw the great bones of the skeleton representing his schemes. The long tail with its joints represented the joints of his proposition. One of the flappers on one side and one on the other represented the colonization roads and as the one on the lower side might suggest the diversion of the traffic to the United States, he seemed to argue that it would be better to cut off the lower flapper and put it on the upper side so that he should have two colonization roads. Suppose my hon. friend is in the city of Montreal and that he has received that mandate which he says is coming from the people to carry out his proposition and to reject and relegate to the realms of darkness that which is proposed by the government. Whom will he take with him to carry out his proposition ? He cannot take the hon. ex-Minister of Railways and Canals, because that would offend the hon. member for Lanark (Hon. Mr. Haggart), and he cannot take the hon. member for Lanark, because that would offend the hon. member for Hamilton (Mr. Barker). Therefore, he would have to take his faithful purse-bearer, the hon. member for East Grey (Mr. Sproule). He would start from the city of Montreal and he would find that he could obtain no traffic. The people who have brought down the goods from the west will not give any of it to him to carry over his railway. They want it for themselves and they want to take it to American ports. So, he says : I must obtain traffic and to do that I must carry my railway further west in order that I may command it. He builds a road from Jacques Cartier Junction to Ste. Rosalie, thirty-seven miles long, at a cost of $2,000,000. Then, he says : I must go farther, I must command the traffic, and he says to his purse-bearer : Can we afford it ? I will buy the railway extending to Depot Harbour, 342 miles long, and I will pay $20,000,000 for it. His purse-bearer groans but he goes on and when he arrives at Depot Harbour he cannot obtain any grain there. It is being carried past him. Those who have brought it from the west carry it by so as to compete with him. He sees in the distance a dark object, as the bold Sir Bedivere saw the enchanted boat. And as it drew nearer he sees it is a long dark steamboat vomiting clouds of black smoke. When she draws into the pier, in place of the dusky queens robed in stoles of darkest samite there comes ashore a crowd of summer girls in white jackets and red roses in their hats and after them a crowd of men in overalls and plug hats who vent forth strong expressions that are not contained in any book of poetry I wot of. When he got on board the boat he exclaimed : Quid times ? Cæsarem vehis. When he arrived in Port Arthur with his $2,000,000 boats, he found that there was no grain there for him. He found the grain was being carried from Duluth down to Portland, and down to Buffalo and that he could obtain no grain there unless he went further west. He found he would have to go further, and so he buys the road to Depot Harbour 342 miles long which cost $12,000,000, and from Depot Harbour to Sudbury he buys or constructs a line of 120 miles, at a cost of $30,000 a mile which amounts to $3,500,000. And when he arrives there he finds that he is no nearer to controlling the traffic, and so he goes to the Canadian Pacific Railway and says : I want to participate in the trade of the west; I want you to give me running powers over your railway. But the directors of the Canadian Pacific Railway say : No, Sir, we constructed that line for our own advantage; we are not here for our health; if you want that road you will have to pay us for it. Perhaps the leader of the opposition has his blood up by this time, and he says : I will have the road in spite of all consequences. Perhaps he expropriates that road, and he expropriates 80 miles of road from North Bay to Sudbury, and he expropriates from Sudbury to Fort William 450 miles more, and we are told that that railroad cost the Canadian Pacific Railway $80,000 a mile, and they will take good care to make the government pay for it, and so we have a further expenditure of $45,000,000. And when he gets to Fort William with that railway he finds that the traffic is not there, and he buys from Fort William to Winnipeg a distance of 426 miles at $50,000 a mile, and there is $21,000,000 more. And thus for his 1,500 miles of railway the leader of the opposition has laid out a sum of $96,000,000. I dare say that at this point his purse bearer from East Grey (Mr. Sproule) would leave him and go home. And when the leader of the opposition gets there and is now able to control the traffic he looks around and then he says : I must go further ; I have not consulted the people of British Columbia; I have not consulted the popular voice there, I must go further. And then he builds a road from Winnipeg to Edmonton 900 miles at $13,000 a mile, which means $12,000,000 more. And then he must build from Edmonton to the coast 400 miles at $18,000 a miles which means $7,000,000. And then there is the mountain section 480 miles at $40,000 a mile which means $19,000,000, and then he finds that he has 3,340 miles of railway for $115,000,000. And now the leader of the opposition is monarch of all he surveys, but he is not satisfied with his transcontinental road. He now begins to see that there is something in the Northwest and he wants two colonization roads. He begins to see that that valuable territory would be a great adjunct to the Dominion and he builds two colonization roads 500 miles each at $18,000 per mile which means $20,000,000. And now that this government has proposed to build from Quebec to Winnipeg the leader of the opposition thinks that he would also like to build from

Quebec to Wininpeg and there he would have 1,475 miles more at $28,000 a mile which would mean $42,000,000 additional. Then the leader of the opposition would build his elevators as he has promised in all parts of the country, and we might put that down with the other incidentals he has promised at $20,000,000 more as a moderate estimate. Then there are improvements to the harbours in Montreal, Halifax, and St. John, and terminals in all these places and free ports and the enlargement of the canals, and the improvement of waterways, and all other facilities which we might put down at the moderate estimate of $50,000,000 more. Thus we have a total of 5,815 miles of railway for $247,000,000, or $542.83 and 22-455 of a cent per family for every family in Ontario. That is what the scheme of the leader of the opposition amounts to. But the defect in that scheme is that at every link in it the trafic could be diverted to United States ports. The defect of that scheme is that it adds no new railway to the existing facilities for getting our grain and produce from the North-west Territories. The government railway is to be utilized for all the railways to have running powers over it, but the railway of the leader of the opposition gives no more power to transit than we have to-day, even if it has been procured at an enormous expense. It is a railway deficient in grades and modern character; it is a most expensive road to work; and it gives no further accommodation to the business of the country. On the other hand you will remark, Mr. Speaker, that the government railway first takes up the produce of Manitoba and the North-west and carries it continuously over territory which is new, territory which is being exploited by it, and it carries it from the farms in the North-west right to the seaboard in a direct line. It is not a diagonal course; it is not a traffic which can be diverted, but every mile of that railway carries the western produce uninterruptedly to its destination and lands it on shipboard. I would ask my hon. friend from Winnipeg (Mr. Puttee) if he wishes his amendment to be attached to the proposal of the hon. leader of the opposition ? Does he consider that proposal an embodiment of his resolution ? Does he consider that his proposition of government ownership of railways is carried out and given effect and shape in the proposal of the leader of the opposition, involving an expenditure of $247,000,000 ?

Now, Sir who approves of the government scheme ? Is it acceptable in the country ? British Columbia approves of it. The members representing that province have spoken in its favour. Manitoba approves of it; all the members from that portion of the country have recommended the railway and supported it. Ontario approves of it; the members from that province regard it as an enterprise which will produce great results for that province in developing the north country, which has been explored and found to be most valuable. Quebec approves of it; the eloquent members from Gaspé, Bonaventure, and Bellechasse have spoken on its behalf; they know that it will be of great advantage to the labourers and the inhabitants of the country, that it will create a demand for materials required in its construction; that its cities, its merchants, its partisans will be benefited. New Brunswick approves of it; its members have spoken on behalf of the enterprise. The route through the northern portion of New Brunswick has been declared to be most favourable, although at the outset of this debate it was thought that the country and the grades would be difficult. St. John will be benefited. It will be brought nearer to the west. It is already the terminus of one transcontinental railway, and it will be brought within easy communication of another. The province of Prince Edward Island will be benefited from this enterprise; some members have told us that that province gives its adhesion to this scheme. Nova Scotia will be benefited. Although not one mile of the railway is to be built in that province, still we hope that the traffic brought over the line and sent to the city of Halifax will result in benefit to the labourer and the merchant, and to the city at large, which has been long suffering from neglect and from the want of facilities for communication with the west, and for the passage of the products of the west through its portals. I say that the province of Nova Scotia will be benefited. We trust that its iron for bridges, car-wheels and structures, and its lumber for the construction of cars, houses, and other purposes, will be required. The manufacturers will be benefited; the car builders will be benefited; the agricultural interests of the province will be benefited; all classes of people will be interested in the consummation of this most valuable scheme. I would like to know why the hon. leader of the opposition applied such a buffet to my hon. friend from East Grey. The hon. member for East Grey was on the economical tack, and described the dire effects of a great expenditure on this railway. Yet the hon. leader of the opposition submitted a mixed programme which calls for an expenditure of about $250,000,000. My hon. friend from East Grey announced that he would go through the province of Ontario, and inform the farmers that the consummation of this government project would involve a mortgage on their farms and would mean so much taken from their earnings. On the other side of the line, in the states of Vermont and New Hampshire, and other states on the border, the people are proud of describing the sacrifices which their fathers made in the war of the revolution, when their sons and their brothers left the bloody prints in the snow at Valley Forge, when they carried on the war midst the horrors

of that campaign. They describe with satisfaction the contributions of the villages, and the homesteads, and the efforts made by the women to keep their fathers and brothers in the field. They pride themselves on the toils and sacrifices of the past, and they have their great land before them as the result of those toils and sacrifices. But my hon. friend from East Grey will tell the farmers: 'Oh, your hoards lying in the banks will be diminished by twenty cents a year of interest, it may be, as a consequence of this great loan that will be fastened upon you. The money will be spent in the country. It will not be spent for munitions of war; it will be spent among the people for commercial purposes; it will not be wasted; it will be for the development of the country for a hundred years to come.' I would urge the government to press on. There are those who call upon the government to stop, to pause. I would say, press on; heed not those siren voices which call opon you to pause. Listen to the nations that are coming into that country—the Swedes and the Norwegians, the fair-haired races of Europe, who will see that land like their own, and will be ready to go in and possess it. The inhabitants of the overcrowded regions of Europe will come to it. Let the government lead the van, and carry into that country civilization and empire——

> To the regions of the home-wind,
> Of the North-west wind Keewaydin,
> To the islands of the blessed,
> To the land of the hereafter!

Mr. T. I. THOMSON (North Grey). Mr. Speaker, I have the honour of being one of the latest arrivals in this House, coming fresh from the moulds of the people; and from the fact of a large subsidy to a transcontinental railway line having been discussed from every platform during that election, I think that I would not be doing my duty to my constituents if I failed to give expression to the mandate I received from the people of North Grey seven months ago.

I have listened with a great deal of pleasure to the remarks which have fallen from the lips of the hon. member for Halifax (Mr. Roche). He reminds me very much of Falstaff, his imaginings are so vivid and his juggling with figures so remarkable. He stated that Canada could not compete in the matter of transportation with the United States. I regretted to hear any hon. gentleman, no matter on which side of the House he may be placed, make such a statement as that. Canada occupies a position which gives us by the lakes and the River St. Lawrence the greatest highway to the markets of the world for the grain of the wheat fields of the west. Now, Sir, the hon. gentleman, speaking of the transportation proposition as outlined by the leader of the opposition, said that he never heard of American grain coming to Depot Harbour, and that there would be no freight there. for the Intercolonial Railway, if extended to this point. The hon. gentleman is not very well posted, concerning the routes by which the grain of the west seeks the seaports, because millions of bushels both last year and this year have come to Midland, Depot Harbour, Owen Sound and Meaford, and from there been transported to Montreal and the seaboard. I may tell him that more grain has passed through the canals of Canada this year than in any previous year up to this time, not less than from eight to ten million bushels have already passed through our canals. When these waterways are perfected, I have not the least doubt but that this will be the great highway by which the grain of the western states and of our North-west will find its way to the seaboard.

Gulliver's Travels is not to be compared with the hon. gentleman's speech, when he talks about that country lying between Quebec and Winnipeg, away to the north of us, the country that this road is likely to traverse. The hon. gentleman described this is a splendid agricultural country, abounding in splendid timber, minerals, fertile land and everything in fact to make a peo- prosperous and happy. Now, Sir, I am surprised at this statement, two ex-ministers of the Crown—one a gentleman who had been Minister of Railways in the late government for a great many years, and also the gentleman who has withdrawn from the present administration, are men who have given it a great deal of consideration, who have conversed with parties passing through this country and who have given a great deal of time to the study of these questions, who have given opinions as regards the character of the country through which this road will pass from Winnipeg to Quebec; and yet, both of these differ materially from the opinion of my hon. friend from Halifax, and the difference is so great that one cannot understand from what source or sources my hon. friend from Halifax gets his information. Both of these gentlemen described this country as being composed of granite rocks, muskegs and lakes, and my hon. friend the ex-Minister of Railways in the late government, the hon. member for Lanark (Hon. Mr. Haggart), stated that there was a large tract of country lying north towards James bay that was fertile to a certain extent, particularly for vegetables, barley and rye. He was not, however, prepared to say that wheat could be grown there. He also stated that this line did not go within fifty miles of this region fit for cultivation, so I gathered from this that it is not a country fit for settlement. From the class of timber that they say grows in abundance it is evident that the soil is not fertile, and that it is not a country fit for settlement in the ordinary sense of the term. I asked the hon. member for Halifax (Mr. Roche) what they intend to carry on this road between Winnipeg and Quebec or Halifax. He replied that the

merchandise imported from Great Britain and elsewhere would be landed at Halifax and shipped to the west over this road. Why, Sir, we have already a line from St. John, a short line going to the west, and I do not know that this road is overburdened with what it has to carry to the west. But, Sir, the government has stated that this road is being constructed to relieve the congestion of the west. Why did my hon. friend not state that? The figures presented to this House by the different speakers all go to prove that the Grand Trunk Pacific if constructed from Winnipeg to Moncton could never carry grain at a profit in competition with the rail-water haul. I believe that is clear to every member of this House; I believe it is clear to the country, and when I ask the hon. gentleman what he expected to carry over that road, he did not tell me that it was the grain of the west or anything going from the west, but, speaking from a provincial standpoint, in order to make himself right with the people of Halifax, he told us it was being built because the ocean steamers would come to Halifax to unload the merchandise for the west, and that this merchandise would be carried to the west on this Grand Trunk Pacific. Now, Sir, if they cannot present a better argument for the construction of this road, I do not think the people of Canada will endorse the construction of that line.

I was very much struck with some remarks which fell from the Minister of Agriculture with reference to carrying freight from Chicago partly by rail and partly by water. He wanted to prove that there was a far larger amount of freight sent from Chicago to the east by rail than by water. He did not tell us to what points in the east it is shipped. When asked the question, he said he could not say that much of it was freighted to New York. That is quite evident, because he must be well aware that very little of the freight sent by rail from Chicago east goes to New York. If the hon. gentleman will look on the map he will find that Chicago is situated at the foot of Lake Michigan, about 225 miles south of the most northerly part of Michigan, and a vessel leaving Chicago must pass away around the state of Michigan and go down the lake to the St. Clair river, 450 or 500 miles out of the way. Hence, if grain is not shipped by water, it leaves Chicago and gets to the water at Buffalo, or Toledo, or Detroit. But Port Arthur, the Canadian port, lies at the head of navigation, hence grain coming from Winnipeg to this point and passing from there by water to the market is being sent by the shortest possible way by which it can go to the seaboard. Now, Sir, I am going to give the Minister of Agriculture a conundrum. If it requires two pages of the pamphlet issued by his department to explain to the farmers how to wring the neck of a chicken, I would ask him how many pages would be required to convince the farmers that it costs more to haul grain by water than by rail, and also to satisfy the farmers that the construction of the Grand Trunk Railway will only cost the farmers of this country $13,000,000? That is a conundrum for the Minister of Agriculture to solve. But I would not ask him to deal with it until he has finished his one-million-five-hundred-thousand-dollar census. After he has done with that, he may explain to the farmers these little points to which I have referred.

Now, Mr. Speaker, the people of Canada have made great sacrifices in order that the provinces may be bound together and a great Canadian nationality built upon this north American continent. When it was agreed that Nova Scotia and New Brunswick should confederate with upper and lower Canada, a part of that agreement was that the Intercolonial should be constructed at the expense of the new Dominion. And the Dominion of Canada made great sacrifices to construct that road. At a later period, the province of British Columbia came into the confederation, one of the terms of the arrangement being that the Canadian people should construct a line of railway across the continent in ten years. At this time it became known to the best informed of our people that we had a splendid heritage in the North-west. Many of our farmers were flocking to the prairie lands of the western states in order that they might find cheaper lands for their children. The fact presented itself to the minds of the Canadian people that it was necessary to open our western country so that the people of the older provinces, instead of going to a foreign land, would be able to find cheaper homes for their children under the flag beneath whose folds they were born. And, with this consideration in view, the government of Canada went to work to construct a line across the continent. In 1880, or 1881, the government entered into a contract with the Canadian Pacific Railway Company to construct this line in ten years, for which the company were to receive 25,000,000 acres of land, $25,000,000 in cash, and that portion of the road which was constructed or under construction, which cost the people of Canada $34,000,000. In all, the Canadian Pacific Railway cost the people of Canada $84,000,000. And the people at that time felt that they had made a great bargain. It was a great undertaking for the company to build that line across the continent. The hon. gentlemen opposite had magnified the financial burdens to be borne in constructing this road. They said it would cost $300,000,000, and the picture they gave of British Columbia and the north-western country, of which they now speak so highly was enough to dampen the ardour of the people of Canada. It is no wonder, therefore, that

when the government found a company ready to construct a road on these terms, the people felt that a great burden had been taken off their shoulders. We all felt that the government had made a great bargain. And I think that that is borne out by the fact that the first $25,000,000 of Canadian Pacific Railway stock that was placed on the market only brought twenty-five cents on the dollar, while the whole $85,000,000 of stock realized only $50,000,000. The people who invest their money in these stocks are the best judges of the merits of an enterprise of this kind. There were a few people at the head of affairs who had confidence in Canada, who had confidence that the road would ultimately pay. The result was that the Canadian Pacific Railway was constructed not in ten years, but in six years. In 1886 the first train passed over the road to Vancouver. And, Sir, after seventeen years of operation of that road what is the result ? The gross earnings of the Canadian Pacific Railway last year were no less than $43,000,000, a larger sum than the money received for customs throughout the whole of Canada. The $85,000,000 of Canadian Pacific stock which had been sold for $50,000,000 in the market of the world, was worth, a few months ago, no less than $125,000,000, or $75,000,000 more than was paid for it in the first instance. This company for years has paid on its common stock no less than 5 per cent, and this year it is declaring a dividend of 6 per cent. I say that the construction of the Canadian Pacific Railway was one of the greatest financial achievements in our history, in fact it was the greatest financial success ever achieved in this country. I say that if the people of Canada supported the construction of a road under these conditions, I ask why should the people of Canada to-day, with the different conditions, with trade waiting for the railway, a trade which must make the road profitable from its inception, be called upon to saddle themselves with an expenditure of from $150,000,000 to $250,000,000 in order that we may have a fresh batch of multimillionaries at the expense of the people ? I would present this as the strongest fact, the fact that the Canadian Pacific Railway has been a great financial success, and that the conditions for railway construction and operation are much more favourable than they were. The company constructing a road across the continent to-day will find it a profitable undertaking if they never receive a dollar from the people of Canada. The fact that the people of Canada assisted in building a railway for the purpose of cementing the provinces and uniting the Canadian people, as well as to develop sections of the country at that time unopened, is no reason why we should be called upon at this late day to add this immense sum to our national debt in order to construct a railway to which these reasons cannot apply.

Now, I should like to say a few words with regard to this eastern division. I know that a great many figures have been placed before the House, but I have my own ideas, and my own opinions, which I desire to state. In my opinion, whatever justification there may be for constructing the road from Winnipeg westward, there is positively no justification for constructing the road from Winnipeg to Moncton. I believe it is a waste of the people's money. And we have the statement of the ex-Minister of Railways (Hon. Mr. Blair) to the effect that the road from Winnipeg to Moncton will cost from $70,000,000 to $75,000,000. In making up his estimate of the amount, that hon. gentleman did not take into consideration the interest on the money during construction. Then we are to pay interest on this indebtedness for ten years after the road is finished. Then we hand it over to the Grand Trunk Pacific, and they pay us 3 per cent for the balance of the period of fifty years. There is something about this agreement still more unsatisfactory. When I first heard of the contract, I was under the impression that the earnings of the whole line would be placed under contribution to pay the interest of 3 per cent on this section, which is the lean and unprofitable portion of the road. But I find that this agreement does not carry that out, that only the earnings of the eastern section, the unprofitable section, are taken into consideration when they pay this 3 per cent. That is, we have the unprofitable end, we have constructed the eastern division; and there is no railway expert in Canada will tell you that the eastern division in 25 years will earn its working expenses. Yet this is the portion of the road that we expect to receive 3 per cent upon after it has earned its working expenses.

There is another feature in connection with this matter more disagreeable still. After having built this road and handed it over to the Grand Trunk Pacific Railway Company for 50 years, according to this agreement we have to pay everything for the betterment of that road, and we do not know where this expenditure is going to end. Everything for the betterment of that road must be paid for 50 years by the people of Canada. I ask you to go back and look at the Intercolonial, a railway which originally cost this country $21,000,000. Inside of 15 years, the betterments of that road, everything in the way of permanent improvements, had cost more than the original construction; and railway men everywhere say that in ten or twelve years after the construction of a road the betterments, or the permanent improvements put on it, will cost quite as much as the original construction. Now, this line of railway from Winnipeg to Moncton is to cost this country $75,000,000 at first; then, according to the precedent of the Intercolonial, it will cost us $150,000,000, and we are handing this road over to the company to operate it

without the least prospect of ever receiving a dollar in return. I ask you. What is there to warrant such an expenditure as this? We are sending out settlers to a country which can never become a desirable country to live in. A few may exist there, but it must for ever remain an unattractive country for settlers so long as we have these fertile lands in the North-west; and I ask you why should we send our people up among the jack pines, the spruce and the birch in northern Quebec or in northern Ontario, while there are millions of acres of fertile prairie lands in the west open for settlement?

Now, Sir, I wish to say a few words as regards the probability of this road ever being able to relieve the congestion in the west. If there is anything in connection with the construction of this line that must affect every ratepayer in Canada, it is that this eastern section never can by any means carry the cereals of the west to the seaboard. The distance from Winnipeg to Port Arthur is 425 miles. We have two lines of railway, the Canadian Pacific Railway and the Canadian Northern, both stretching from Winnipeg to Port Arthur. Both have low gradients and small curvatures, both are in a position to carry an immense number of cars loaded with grain, at the least possible cost. This is proved by the action of the government of Manitoba, who, on gaining control of the Canadian Northern, immediately fixed the rate of grain from Winnipeg to Port Arthur and from the west to Winnipeg, at the lowest possible cost to the farmer, so that in the shipment of his grain he would receive as much as possible after deducting the cost of carriage. I think this is the best evidence that the amount that is charged for carrying grain from Winnipeg to Port Arthur is the least rate at which it it is possible that the grain can be carried. Now, Sir, to-day they are charging twelve cents per 100 pounds, and I understand that on the 1st of September they are going to try to carry that grain for ten cents per 100 pounds, equal to about six cents per bushel from Winnipeg to Port Arthur. If it costs ten cents per 100 pounds to carry grain from Winnipeg to Port Arthur, a distance of 425 miles, and I have shown that is the least rate at which it can be carried over that distance, I ask you what will it cost to carry 100 pounds of grain from Winnipeg to Quebec, a distance of 1,600 miles? It is true that by a straight line it is 1,400 miles, but if you add ten or fifteen per cent for curves, you get 1,600 miles as the shortest distance that it will work out. Well, now, if it costs ten cents per 100 pounds from Winipeg to Port Arthur, at the same rate over the 1,600 miles, it will cost just thirty-six cents per 100 pounds, or twenty-three cents per bushel. Now, the cost of carrying a bushel of grain from Winnipeg to Montreal by rail and water haul is only about eleven cents per bushel—eleven cents against twenty-three, or a difference of twlve cents. If the farmers of the west were to ship 100,000,000 bushels of grain over this road which the government propose to build, it would cost them $12,000,000 more than by rail and water. Do you think a farmer is going to pay twelve cents more to ship his grain over this road than he could ship it by rail and water route? Not by any means. He will hold his grain till navigation opens. We are told this road is only to carry grain when navigation is closed. But do you mean to tell me that after navigation is closed the farmer of the west will sell his grain for twelve cents less in order that he may ship over this special line to be constructed by the government? No, he will borrow the money on his grain, and he will hold it until spring in order to save twelve cents a bushel. I think that is clear as noonday. I do not hink that grain ever can be shipped over this road, and if this road is being built in order to afford the farmers relief, it will prove to be a perfect failure.

Now, Mr. Speaker, I wish to say a few words in support of the splendid policy which has been enunciated to this House by the leader of the opposition. It is quite evident that the leader of the opposition has given a great deal of study to this problem; I have no doubt that he has also had the assistance of experts in the preparation of this scheme. Let us look at this problem for a moment. He tells us that we can acquire the Canada Atlantic Railway. Remember that the Canada Atlantic Railway to-day is a paying institution. If we purchase the Canada Atlantic Railway we have got an asset that is worth the money that we pay for it. Now, if it is paying to haul grain from Depot Harbour to Coteau, I ask you: Would it not be equally profitable to carry grain from Depot Harbour to Montreal by all-rail? I see no reason why we could not acquire running powers over the Grand Trunk railway from Coteau to Montreal, and then we would have a railway from Montreal to Depot Harbour, which will prove the very best security and a paying road. In addition, this proposition extends the Intercolonial from Halifax to the foot of the great lakes, which will make the Intercolonial Railway a much more valuable property than it is to-day, while it would not cost the people of Canada one copper. I say that this is a masterly, a splendid proposition, and I ask you to compare it with the scheme of running a road up through northern Quebec and northern Ontario, a distance of 1,600 miles, in order to carrry out the grain of the west.

My hon. friend stated that if the policy of the hon. leader of the opposition were adopted: the extension of the Intercolonial Railway to the foot of the great lakes, what freight would it haul? He did not know that there were over 29,000,000 bushels of grain shipped from the lower ports

of the Georgian bay last year and that this year the quantity will be still greater. If we acquire the Canadian Pacific Railway from Sudbury to Port Arthur what position are we in? That has been an expensive road and we will require to spend more money to put it in proper shape, but when we have purchased that road we will give running powers to the Grand Trunk Railway, to the Canadian Northern to the Canadian Pacific Railway and to the Intercolonial Railway and the receipts or rentals from these companies having running powers over the line (because it would be taxed to its fullest capacity where it has now but one-tenth of the business it could do) will pay the interest charges, and the road is ours. The House will remember that the proposition of the hon leader of the opposition was that these roads should acquire running rights over the Canadian Northern and the Canadian Pacific to Winnipeg and they will have to pay for them. What is the use of hon. gentlemen opposite dealing out figures as to the cost of the scheme which has been proposed by the hon. leader of the opposition? The only cost that would be the cost of acquiring these roads and when we have acquired them they are ours and they become a paying property the moment we have acquired them. This proposition if carried into effect would tremendously enhance the value of the railway property of the people of Canada. It would give the Grand Trunk Railway Company immediate access to the wheat fields of the west. The Grand Trunk Railway has a magnificent network of railways, a splendid railway property in Ontario and Quebec. There is not a city, town or village of any importance in the province of Ontario that it does not touch and hon. gentlemen can imagine the importance it is to this line to have immediate access to the wheat fields and carrying trade of the west. If the policy propounded by the hon. leader of the opposition were to go into effect to-morrow the stock of the Grand Trunk Railway would advance fifty per cent in thirty days. This is the scheme worthy of the traditions of the Conservative party and we are proud of the traditions of the Conservative party, which, as the hon. leader of the opposition has said, is the party that had the heart to construct the Intercolonial Railway and to construct the Canadian Pacific Railway which have done so much for the development and consolidation of Canada and it is the party that is prepared to solve this difficult problem that is before us to-day. I ask the right hon. leader of the government to appeal to the people on this question. Let the people have an opportunity of expressing their views and I believe if such an opportunity is given them it will be the best thing that could be done in the interest of Canada to-day. If the right hon. gentleman does not appeal to the people he should at least abandon the scheme and thereby save the honour and national credit of Canada.

On motion of Hon. Mr. Ross (Victoria, N.S.) the debate was adjourned.

On motion of the Minister of Finance (Hon. W. S. Fielding), House adjourned at 11.40 p.m.

HOUSE OF COMMONS.

TUESDAY, August 25, 1903.

The SPEAKER took the Chair at Eleven o'clock.

INTERCOLONIAL CONFERENCE.

The PRIME MINISTER (Rt. Hon. Sir Wilfrid Laurier) moved for copies of cablegrams between the hon. the Secretary of State for the colonies and His Excellency relative to the publication of the proceedings of the colonial conference.

Motion agreed to.

TRANSPORTATION COMMISSION.

The PRIME MINISTER (Rt. Hon. Sir Wilfrid Laurier). Mr. Speaker, with reference to the transportation commission which my hon. friend the leader of the opposition (Mr. Borden, Halifax) called my attention yesterday, I have to inform my hon. friend and the House that after the intimation by Sir Wm. Van Horne of his inability to accept the position of chairman of the commission, we applied to another gentleman to take the place. I have reason to believe that we shall have his official acceptance, and that the commission will be issued to-morrow.

INQUIRIES FOR RETURNS.

Mr. WM. J. ROCHE (Marquette). Before the Orders of the Day are called, I desire to draw the attention of the right hon. Prime Minister to an order moved for by me and passed on the 1st day of June, which has not yet been fulfilled. It was for a return with reference to the appointment of members of parliament to positions of emolument under the Crown.

Mr. E. F. CLARKE (West Toronto). I beg also to draw the attention of the Prime Minister to the fact that a return with regard to Intercolonial Railway passes, moved for by me in March, 1902, has not been brought down.

The PRIME MINISTER (Rt. Hon. Sir Wilfrid Laurier). I will make a note of these returns.

NATIONAL TRANSCONTINENTAL RAILWAY.

House resumed adjourned debate on the motion of Sir Wilfrid Laurier for the House

to go into committee on a certain proposed resolution respecting the construction of a National Transcontinental Railway, and the motion of Mr. Puttee in amendment thereto.

Hon. WM. ROSS (Victoria, N.S.). Mr. Speaker, I am at considerable disadvantage in addressing the House, as I have not that command of the English language which I would desire to have to express my ideas on the varied and important questions involved in the project placed before us by the government. I was brought up in a Gaelic community and have been accustomed to speak that language to the people from one week's end to the other. Therefore, I have not the command of English which would make my speeches interesting. Before going further, I wish to say to the hon. member for Montreal, St. Mary's (Hon. Mr. Tarte) that if I said anything unkind with reference to him on the occasion when I last addressed the House, I deeply regret it, because I do not wish to have anything but kindly feelings between myself and him. I know that he likes to sit on this side of the House, and I will say to him:

> While the lamp holds in to burn,
> The greatest sinner may return.

We would be quite willing to extend to the hon. gentleman the right hand of fellowship and of friendship, and to welcome him again into our ranks, but I am afraid that he is too far gone, that the germ of Tory hypocrisy has entered into his whole system and that he is past recovery. However, he differed from the government on the question of the fiscal policy, and his action in that matter may be some excuse for him. He made his views, his heretical views, known to the country, and, in doing so, he risked his seat in the government. This he did rather than deny the fiscal policy which seemed to him the right one. I have full sympathy with my hon. friend, and wish him to understand me when I say that, as it has been stated that I read him out of the party, I would be very glad to lead him into the party again if he would have sense enough to come back into the fold.

Now, coming to, perhaps, a more important personage, the late Minister of Railways and Canals (Hon. Mr. Blair), that hon. gentleman delivered in this House a very bitter, acrimonious speech, one that, I think, did no credit to himself and was most unkind to the government of which he was a supporter. The Prime Minister took that hon. gentleman out of partial obscurity, from being the leader of what I was going to call a mongrel government, more properly composite government, in the province of New Brunswick, half Tory and half Liberal, placed him at the head of one of the most important departments in the government, and gave him a free hand so far as expenses were concerned, in conducting the affairs of the Intercolonial. Under these circumstances, I think he should have acted very differently from the way he has acted.

Life is composed of compromises. We must yield to one another in order to carry on the business of life amicably.

Even in our households we must not act the part of tyrants if we do not get our way. Now the late Minister of Railways and Canals put one in mind of a certain character in Milton's Paradise Lost who would rather fill a certain place in a certain region than to occupy a subordinate place in the region above. Those of us who have read Dante's Inferno will remember that he apportions different punishments to different sins, and he places the sin of ingratitude below almost every other sin in the decalogue. So I think the late Minister of Railways and Canals has been guilty of the sin of ingratitude in the way that he has treated his friend and patron, the Premier of the Dominion of Canada. I wonder, if he had been asked to be the leader of this great commission that is to conduct this railway policy, what his conduct would be, and where we would find him now. Almost in a night the scene has changed, and he has become the fast friend of the gentlemen who sit on the opposite side of the House; they are ready to embrace him now as one of their friends and their hope of assistance in the future. Well, let me say to them that an ex-Minister of Railways and Canals does not count much in this country now, and when a man loses his seat in the government he loses his power and his influence. The late Minister of Railways and Canals, I must confess, has done much to build up the Intercolonial and to raise the standard by laying heavier rails, procuring heavier engines, and placing the road in a much better condition than it had been from the first. The Intercolonial Railway has been a political hack from the very outset; it was never located or built where it should have been, or where it would have been if Sir Sandford Fleming had had his own way. But there was influences brought to bear here and there to shift it from one place to another. I remember that the hon. member for South Lanark (Hon. Mr. Haggart) insisted that the Intercolonial was located in the best place, and that the line could not be shortened. I have the authority of Sir Sandford Fleming in stating that from Moncton to Amherst the line might be shortened twelve miles, and with a better grade, and that it would be to the advantage of the people of Nova Scotia if this change were made. When you consider that twelve miles could have been saved in a distance of about seventy, you can fancy what reduction could have been made between Montreal and Halifax.

Now, I am going to quote something from Sir Sandford Fleming himself, who is perhaps the highest authority on this subject. And here I may say for the information of hon. gentlemen on both sides of this House, that the first piece of railway in British North America was built in Nova

Scotia, and that the engineer who ran the first engine the 'Sampson,' went to Chicago with his engine and showed it at the exhibition. So I think that in the matter of railways the province of Nova Scotia has been in advance of all the other provinces in Canada, as she has been in a great many other things besides railways. My great friend the late Hon. Joseph Howe, returned from England in 1851 with the assurance of a government guarantee of £800,000 for the Nova Scotia portion of the line. He says :

> The imperial government with a magnanimity which does honour to the British people, sustained by that uanimity of sentiment among the great leaders of public opinion at home that promises for a long continuance of the honourable relations existing between us, has offered to the three British American provinces seven millions of pounds sterling, at the lowest interest at which money can be obtained in the world. This money is offered for the purpose of enabling them to complete, in an incredibly short space of time, and with security and ease, great internal improvements. . . . . Halifax has been formed by nature, and selected by the dictates of sound policy, as a common terminus for these great intercolonial railways.' . . . But when Montreal is reached, shall we stop there ? Who can believe it ? Who can think so lightly of the enterprise of western Canada as to apprehend that she will not continue this iron road, link by link, till it skirts the shores of Ontario and Erie, and draws its tributary streams of traffic from the prolific regions of Simcoe, Superior and Huron ?

Then he goes on to say :

> Throwing aside the more bleak and inhospitable regions, we have a magnificent country between Canada and the Pacific, out of which five or six noble provinces may be formed, larger than any we have and presenting to the hand of industry, and to the eye of speculation, every variety of soil, climate and resource. With such a territory as this to overrun, organize and improve, think you that we shall stop even at the western bounds of Canada ? Or even on the shores of the Pacific ? Vancouver Island, with its vast coal measures, lies beyond. The beautiful islands of the Pacific and the growing commerce of the ocean, are beyond ; populous China and the rich east are beyond.

Then just one sentence more :

> I believe that many in this room will live to hear the whistle of the steam engine in the passes of the Rocky mountains, and to make the journey from Halifax to the Pacific in five or six days.

Who could believe that fifty-one years ago any one would have such a prophetic insight into the future as to utter these sentences ? Still, with all his efforts the Intercolonial Railway was battered about from pillar to post and it took twenty-five years before it was built. Now, the hon. member for South Lanark (Hon. Mr. Haggart) stated very emphatically, and when he does speak he speaks in the most emphatic language possible, that no change or improvement could be made in the Intercolonial Railway. He is contradicted by the ex-Minister of Railways and Canals (Hon. Mr. Blair) who speaks like this :

> He could have taken a portion of that money to the harbours of Halifax and St. John and could have equipped those harbours so that they could have handled the traffic coming through for ocean shipment. He would have done some good with the money in that way. He will do no good with it now except the temporary good that may be done while the money is in the course of expenditure.

He has said that in another part of his speech that the money might be spent in removing heavy gradients that are so objectionable to the successful running of the Intercolonial Railway. The Intercolonial Railway, as I stated before, can be shortened from the shores of New Brunswick to Halifax at least fifty miles and there is no necessity for those heavy gradients to be there at all. The road was originally forced up to Springhill because some interested party had influence enough to bring it near the mine so that it would be convenient for the shipment of coal. I know something of the Intercolonial Railway, and it was moved about and it is a matter of surprise that Sir Sandford Fleming had the patience with the influences which he had to contend against before he succeeded in building this road. Sir Sandford Fleming in his history of the Intercolonial Railway says that :

> The survey was made in 1844. The reports set forth that in traversing the highlands, the most difficult grades would not exceed 1 in 15.

The following statement is made upon the authority of Sir Sandford Fleming, the most eminent engineer in British America, perhaps on the continent of America :

> The distance between Montreal and Halifax might thus have been lessened nearly 200 miles. St. Andrews would have taken the place of Portland as the winter terminus of the Grand Trunk Railway, and would have commanded, together with St. John, a traffic now cut off from both places, and centered at a foreign port.
>
> The direct route would have brought the Springhill coal fields of Nova Scotia some 200 miles nearer to Montreal than by the present line of the Intercolonial, and would have rendered it possible to transport coal by rail at a comparatively moderate cost.
>
> If, under such circumstances, an intercolonial line to connect the cities of the maritime provinces with those of the St. Lawrence had been constructed, the building of 250 miles of railway representing an expenditure of $10,000,000 would have been unnecessary. Great as this saving would have been, the economy in working it and in maintenance would have been more important. The direct line would also have attracted certain branches of traffic, which by the longer route must either be carried at a loss or be repelled.

The engineer insisted that the bridges should be built of iron but the stupid commissioners backed by a government that knew no better decided that they should be built of wood. Just fancy the condition that the Intercolonial Railway would be in today if the bridges were built of wood in-

stead of iron. They would have to be renewed and renewed in a great many instances.

The position was one of difficulty. The chief engineer was desirous of avoiding all cause of difference with the commissioners; but his deliberate opinion was on record. The ground assumed by him had not been lightly taken, and the more the subject was considered by him, the more convinced he felt of the correctness of the principles of construction which he had advocated. No argument, however, which he could advance, appeared to have the least weight with the commissioners. They had determined to make certain changes; that the recommendations of the chief engineer should be set aside; and that iron should not be used, but that timber should take its place.

In January, 1869, the chief engineer made his first appeal in the matter, to the premier, Sir John A. Macdonald, and he submitted at length the arguments why iron and not wood should be used. This letter was referred to the commissioners in the usual course. It has never been replied to; and the arguments advanced in that communication remain to this day without refutation.

He was not then treated with the ordinary courtesy that was due him of having his letters answered, because, notwithstanding that his communications were of such great importance and that they were from so important a man, it was not deemed worth while to reply to them.

But the decision of the commissioners was sustained. Five of the bridges were, however, exempted from the principle originally laid down by the commissioners; otherwise, the order was given that all the bridges should be built of wood.

In May, 1870, the chief engineer recurred to the question, in a statement prepared for submission to parliament. A complete list of the bridges was given, and it was there set forth that the cost of constructing them of iron would be but slightly in excess of building them of wood, and accordingly he recommended that iron should be used.

The railway commissioners still adhered to the view they had previously expressed, for, in a majority report, signed by Messrs. Brydges, Chandler and McLelan, they repeated the recommendation that, with the exception of five bridges named, wood should be used throughout the line. This report is dated July 3. Mr. Walsh, however, the remaining commissioner, and the chairman of the board, on July 5, gave his opinion in favour of iron. The matter was thus again brought before the government, and on July 7, an Order in Council was passed, affirming the decision of the majority that wood should be used. The chief engineer took another opportunity of appealing to the authorities on the subject. On July 25, he wrote to the premier, Sir John A. Macdonald, and on August 22, to the commissioners. In the latter communication he asked a delay of ten days for some work in progress, so that the matter could be reconsidered by the government.

In September, Mr. C. J. Brydges, one of the commissioners, addressed, on his own account, a communication to the Privy Council on this subject. He argued that the fear of wooden bridges catching fire was groundless; that, in his experience of eighteen years as a railway manager, he had known no instance of a wooden bridge having been injuriously affected through the cause assigned. He contended that the chief engineer's calculations of quantities and cost were erroneous; that iron bridges would cost at least $300,000 more than the sum named, and their introduction would probably add $500,000 to the cost of the line and would cause delay and confusion.

Mr. Fleming replied to the communication. He cited two instances of bridges on the Grand Trunk Railway, under the management of Mr. Brydges, having been destroyed by fire, but a few weeks before the date of Mr. Brydges' statement. Mr. Fleming contended that his estimates were correct, and challenged examination into their accuracy: and he further made a final appeal in favour of iron bridges.

After an examination which established that the estimates of the chief engineer were correct, the commissioners eventually withdrew their objections and recommended that all bridges over 60 feet span should be built of iron. But, the chief engineer persisted in his efforts to have every bridge, down to the smallest span—24 feet—made of iron, and at last, by an Order in Council, dated May 12, 1871, authority was given to have them so constructed.

With the exception of three structures built of wood by direction of the commissioners, against the protest of the chief engineer, all the bridge spans, of whatever width, throughout the line, have the superstructure of iron.

You will therefore see the big fight that the engineer had with the commissioners in order to get iron bridges on the Intercolonial Railway instead of wooden ones, but at last he succeeded and he was in the right.

The statement that the new line of railway is to parallel the Intercolonial Railway is just a kind of by-play, because when the facts are inquired into you find that in most instances the two railways are a long distance apart. Mr. W. E. Thompson, a competent engineer, states that for from 20 to 100 miles they are 35 miles apart, and in some cases they are 60 miles apart, and so on. The new line of railway runs through a well-wooded and well-watered country, and it will open up a territory for settlement through New Brunswick and Quebec that will be occupied by the people of both provinces. The French people of the province of Quebec are attached to their homes and are not fond of emigrating, and when they find in their neighbourhood opportunities to earn a livelihood they will readily avail of these opportunities. The French Canadians are the only people on the continent of America who have fulfilled the command of the Lord: to multiply and replenish the earth. They have done that to a larger degree than any other people in British North America, and when they find that this railway will open up a well-wooded and well-watered country they will settle along its line. This new road will pass through seven thickly settled counties in the province of Quebec, and as it is separated by long distances from other railways, there will always be a considerable amount of local traffic that will go to the advantage of that road. I shall not enter into the details

of this great scheme that has been promulgated by this government, further than to say that it has my entire approval. At the outset I was foolishly carried away with the idea of government ownership and government management, but I have found that I was mistaken. I read the history of the Australian government railways, and I found that they had to send to Montreal for a Mr. Tait to go to Australia to manage their railroads and to try if he could stop the loss of $5,000 a day which they were incurring by the operation of government railways in that country.

The history of the Intercolonial Railway in the past shows us that that railway was not run on business principles, but, on the contrary, that it was run according to the interests of the different political parties, and was to a considerable extent used as a political hack. To the credit of the late Minister of Railways (Hon. Mr. Blair) be it said that he has done more to take that road out of politics than any other minister who ever had control of it. The management of the Intercolonial Railway in former days was not creditable to any government or to any party. If a railway conductor or any other employee was suspected of having Liberal leanings, he would be sent out of the district on polling day so that he could not cast his vote, but I know that there was no interference of that kind by the Minister of Railways (Hon. Mr. Blair), or by those under him, during the last two elections. I have nothing to say against the gentlemen who manage the Intercolonial Railway, and I can say that for my own part I have received from them every fair consideration. I am in the unfortunate position of representing a county 120 miles long, bounded by the ocean on one side and the Bras d'Or lakes on another, and that whole county has only eight miles of railway. My friends from Prince Edward Island are like the horse leach, and it is: Give, give, with them all the time; and when they ask for more railways, and more steamboat communication, and more wharfs it is time for me to speak up for my own county and to look forward to the time when the government will interest themselves in building a railway from the rich, fertile parts of Inverness county, through Margaree and through the fertile valley of Middle river and Baddeck. I look forward with interest to the time when something of this kind will be done, but meantime the government have quite enough in hand to see this new road opened up and in working order. No person can foretell or foresee what the future of this great railway is going to be. The opposition to the construction of the Canadian Pacific Railway came largely from the people of Ontario, and the opposition to the present project comes from the same source. The hon. member for Colchester (Mr. Gourley) suggested that some of the people of Ontario should go down to Truro to have their minds enlarged and to be instructed in the duties of citizenship, in dealing with public questions. I think it would be well that they should take broader views on questions of this kind. I believe it will be found that little objection will be raised by the people of Nova Scotia, to the building of the Grand Trunk Pacific Railway; the representatives from Nova Scotia as a rule are broad-minded and they are always willing to support what they consider to be great improvements in the country. The attempt is made to frighten us with the bugbear of debt, debt, debt. I heard that cry for eight years in the province of Nova Scotia; the debt was increasing, we were going to be taxed and going to be ruined. Now is there any person in this House, any person with intelligence, who will say that a man, woman or child in the Dominion of Canada will ever be called upon to pay a cent for the support of this great railway? The government of Canada is quite capable of building this railway and it will be built in a way that will be satisfactory to the people of Canada, without a claim being made upon a single individual, and the persons who will go about the country preaching that this is going to be a cause of debt and that people are going to be called upon for taxes for this railway, have too low an instinct to be public men, and they should be hooted out of society, because they know that, when they are preaching such politics as that, they are not telling the truth.

The hon. member for Peel (Mr. Blain) asked why a railway was not built along the Ottawa river. If he would go up the Gatineau he would find a railway there built quite close to the Gatineau river, bringing down the products of the farm and the forest in that country into the city of Ottawa and when this railway is built through a rich and fertile country it will be found that villages, towns and cities will spring up in what is now a wilderness.

I should like to read to the House what Mr. Hawkes, of Carnduff, Assa., a leading Conservative, says:

> The Grand Trunk Pacific Railway will, in my humble opinion, be a boon to Canada at large, and to no part of Canada more than to the Territories. As an old resident of the Territories, I welcome it as the best and most encouraging event that has ever crossed the horizon of the prairie country, and if I might venture a word of advice to my fellow residents in the Territories, it is to study the matter on its merits and refuse to allow any more questions of party to influence them when the development, and to a large extent the whole future of the Territories are in the balance, for if we do not get this road, what else is there in sight that will do one tithe as much for us as we may reasonably expect from this trunk road.

Mr. W. A. Wier, a member of the legislative assembly of Quebec, addressing the members of the Manufacturers' Association of Montreal on the resources of northern

Quebec, took occasion to quote, with respect to the wood and clay belt north of the height of land, the very reports now being quoted in defence of the Quebec-Winnipeg project. Mr. Weir made this remarkable citation from the meteorological records :

The average temperature from May to October, inclusive, is one degree warmer at Moose Factory on James bay, than at Dalhousie, in New Brunswick, and twenty-one degrees warmer than at Rimouski, on the lower St. Lawrence. Abitibi, the centre of the clay belt, is seven degrees warmer still. In the matter of snowfall Abitibi has 105·5 inches in the year, Montreal 139:2 inches.

Mr. Weir quoted from the reports of Mr. O'Sullivan, the Quebec explorer, this description of the Hudson's Bay factor's garden at Wasanipi in the clay belt :

I never saw better cabbage, carrots and turnips, and he gave me samples of wheat which compare favourably with wheat grown in any other part of the province. The surrounding country is all level, rich clay land. At Moose river, Mr. O'Sullivan found in Bishop Newnham's garden, ' splendid celery, tomatoes, vegetable-marrow weighing 15 to 40 pounds each, kohi-rabi, carrots, parsnips, turnips beets, pease, beans, cabbage, cauliflower, rhubarb, red and black currants, lettuce, radishes, herbs, all a good size, some not to be beaten anywhere.

Mr. Weir also quoted the following information furnished by the hon. the Minister of the Interior (Mr. Sifton) as to the extent of this country.

Proceeding westward from Quebec, one comes across, according to reports made to the Geological Survey, 3,000,000 acres of agricultural land fit for settlement in the St. Maurice river section. In the Upper Gatineau district the country is generally level, with occasional rocky hills, sandy loam soil, timber abundant. The whole country is a flat undulating plain, with good flats of farming land. And again, further west, back of the rocky land through which the Lake Superior division of the Canadian Pacific now runs, there is a belt of fine agricultural land, clay and sandy loam, which forms part of the great clay basin of Moose river, and its numerous tributaries, which take their rise near the Canadian Pacific line, north of Lakes Huron and Superior. The headwaters of the rivers are well timbered, and the country is described as an undulating plain, gently sloping towards James bay. Soil is good for farming throughout the greater portion of the country.

I think enough has been said to prove that this railroad is going to pass, not through a scrubby, bare country, full of muskegs, morasses and swamps, but through a rich, cultivable tract. The hon. member for South Lanark (Hon. Mr. Haggart), in describing the condition of the country, reminded me of the spies sent out to spy out the land. They came back with an evil report; but when the honest, truthful spies were sent out they found very different conditions; they came with a branch of the grapes of Eschol, so large that they had to be carried on a pole, on the shoulders of two other men, which showed the character of the country they were to occupy.

This reminds me of the speech of my hon. friend from North Renfrew (Mr. Mackie), who went to that country, and saw for himself the forests of great pine trees there. Admiring these splendid trees, he would naturally say : I would like to have a railroad into this region. I might make selection of a limit here and make another fortune to add to what I have already made in the timber business. Why it is the timber business that has built the city of Ottawa and has made its millionaires. And a new generation of millionaires will be made out of the vast country through which this road is going to pass. Let us not be discouraged as to the result of this great undertaking. I was amused at the remarks of the hon. member for North Grey (Mr. Thomson). That hon. gentleman said that the result of building this road would be to make multimillionaires in the future. Well, the result of the building of the Canadian Pacific Railway has been the making of titled lords on the other side of the Atlantic. And if this road is going to be so successful that fortunes of this kind are to be made out of it, the fact that these results are looked for is a very good omen for the future of the undertaking. Then, hon. gentlemen on the other side enter upon the most elaborate calculations as to the cost of this road. They throw millions of dollars here and there as though they were matters of no concern. Sometimes they tell us this road is going to cost the government $150,000,000, at other times it is to be $250,000,000, and so it has gone on until one hon. gentleman has reached the sum of $500,000,000. These calculations are utterly without basis, for not one of these hon. gentlemen has gone into that district to learn what the nature of the country is or what the road is likely to cost. The only man who has given the calculation correctly is the Minister of Finance (Hon. Mr. Fielding), whose figures can be always accepted as correct. That hon. gentleman secures expert information before he attempts any calculations of cost. I do not think it is necessary to say much about this road, more than has already been said. We had first the Prime Minister (Rt. Hon. Sir Wilfrid Laurier), with his magnificent speech, which I am happy to say is being freely distributed throughout the length and breadth of this Dominion. And I am proud to say that I have sent a copy of it to every elector in the county of Victoria, whether he be Tory or Liberal. Then we had the speech of the hon. gentleman from North Norfolk (Mr. Charlton), who went thoroughly into the details of the calculations with respect to this road. Then we heard the hon. Minister of the Interior (Hon. Mr. Sifton), who made one of the ablest speeches, perhaps the ablest speech, delivered on this subject. His knowledge of the country gave him that advantage of information which many others did not possess. Then we had the speech of my hon. friend the Minister

of Finance, who always speaks well and with full consideration. Everything he says can be relied upon as gospel truth. He exaggerates nothing. What he says is within the bounds of truth in every instance.

But hon. members of the opposition were perplexed. The scheme was so complete, the contract drawn up so carefully, that they could not raise any reasonable objection to it. They did not know what to do. They were like the two boys who were upset in the river. As they clung to their boat, one said to the other : ' Can you pray ?' ' No,' was the answer, ' I can't pray.' ' Well,' said the first, ' something must be done, and that —— soon.' The opposition were in such a plight that they did not know what to do. The result was that they promulgated a scheme that nobody else understands and that they do not understand themselves. The hon. leader of the opposition had a hard part to play. But it is a pleasure to compliment that hon. gentleman on the courtesy which he always displays when he addresses this House. He is too much of a gentleman to say anything unworthy of a gentleman. I wish I could say as much for the ex-Minister of Railways (Hon. Mr. Blair), when he accused his former friend the Prime Minister, of being influenced by Senator Cox. Is there any man in this House having any claim to gentlemanly feeling or aspiration who would think for a moment that the Prime Minister of Canada could be influenced by any Senator in his conduct in regard to this undertaking ? Why, the man is too high above anything of that kind for it not to be even thought of, and the man who says such a thing descends to personalities that are unworthy of a member of this House.

The hon. member for Peel was surprised at the stand taken by us on this side of the House with respect to the late Minister of Railways, when that hon. gentleman threw in his influence with hon. gentlemen opposite. If the hon. member for Peel were to leave his party and come over to this side of the House, what would his friends think of him ? What would they say of him ? They would say of him everything that was bad, and very properly so. The late Minister of Railways and Canals professed to be a Liberal, and I sometimes think that if he were asked to be the head of this proposed commission, we should find him still supporting the government, instead of conducting himself as he has done. He gave us one speech and then he ran away as if he were afraid to face the members of this House again. No doubt he had in mind the old saying :

> He who fights and runs away
> May live to fight another day ;
> But he who fights until he's slain
> Will never live to fight again.

An hon. MEMBER. Carried.

Hon. Mr. ROSS (Victoria, N.S.) No, it is not carried. But this railway scheme is going to be carried, carried by a large majority, and carried by the unanimous vote of the supporters of the government. Let the members of the opposition lay that unction to their restless souls. We are going to carry this measure and this road is going to be built, and I hope myself to have a pleasant ride over it from Moncton to the Pacific coast. We do not know the possibilities which are in store for us in this country. We do not know what the requirements of our great railway will be ten years hence ; and it is in order to meet some of those requirements, it is in order to provide requisite facilities for carrying our surplus agricultural products to our seaports, that this road is to be built. People indulge in all sorts of pessimistic theories. They say that no wheat can be carried over this line, that it will never pay, but let the road be built with easy grades and let the rates of freight be as low to Moncton as they are to Portland, and you will see a large portion of the products of the North-west going over this road to St. John and Halifax. Once you build the road to Moncton, then you have to reduce the length of the Intercolonial Railway, as I have said, you have to level the grades so that heavy loads may be carried with ease and passenger trains run with greater speed, and then you will find trade going to the proper channel. Take the case of a hundred cars of cattle. At present these cattle go to Moncton, but by going to St. John they would save about four hours time, and by going to Halifax they would save on the distance to Liverpool or London some 250 miles. And once they got on board a steamer at Halifax, whether in the middle of the night or day, that steamer could sail at once without any reference to the tide. I am not going to say a word against the port of St. John. Perhaps I did so before, and I wish to take it back, for the people of St. John deserve a great deal of credit for their enterprise in improving their harbour. It has been considerably improved since I was there. I remember when I had a barque loading there for Melbourne, and at that time St. John was not the best harbour in the world, but great improvements have been made since, and greater will follow, and I am sure that there is not a man in this House from Nova Scotia who would oppose any grant or any subsidy for the improvement of that harbour.

The ex-Minister of Railways and Canals spoke about the destruction of the machine shops at Moncton. They were going to be dismantled and sold as scrap iron. Why, that is just like the old story we used to hear about the tall chimnies which were going to be smokeless when the present government introduced its tariff. But Moncton, Sir, will in ten years double its population; and instead of its machine shops being dismantled, they will be enlarged to meet the requirements of the Grand Trunk Pacific Railway. I am not afraid that this new rail-

way is going to injure the Intercolonial Railway, because in the winter the produce of Ontario goes largely over the Intercolonial Railway to Halifax to be shipped thence to the west and east and elsewhere. A wrong impression, I am afraid, prevails among Ontario members that the Intercolonial Railway was built for the benefit of the people of Nova Scotia. In my opinion, it has been of more advantage to the people of Ontario because Ontario sends all her manufactured goods in the winter down to the maritime provinces over the Intercolonial Railway, and when Ontario wants to send exports to Trinidad and Jamaica and other British West India ports, she sends them to Halifax. Our steamers there are loaded with flour and other products of Ontario for export, so that the Intercolonial Railway has been built for the benefit of the Ontario people just as much as for the benefit of the people of Nova Scotia. Of course we benefit by the local traffic largely, but we do not benefit by the traffic going west, because the people of Ontario and Quebec do not buy anything from us. The fact is that the people of Nova Scotia have to export their products to the West Indies in order to procure the money with which to buy the goods that they require from Ontario and Quebec. Some people are carried away with the idea that the rates are too low. Is there any man in this House who would want the rates on the Intercolonial Railway to be raised? If they were raised, that would be to the injury of the western provinces, because they are the ones who benefit by the low rates.

Mr. TAYLOR. Does the hon. gentleman say that the people of Ontario and Quebec do not buy anything from Nova Scotia?

Hon. Mr. ROSS (Victoria, N.S.) I am not aware that they buy anything.

Mr. TAYLOR. Why, hundreds of thousands of dollars are paid for iron and coal brought to Ontario and Quebec from Nova Scotia. I am a large purchaser of iron from Nova Scotia every year.

Hon. Mr. ROSS (Victoria, N.S.) That is quite a different thing. There is no coal coming to Ontario, I am sorry to say, from Nova Scotia.

Mr. TAYLOR. We buy lots of steel and iron and coal too.

Hon. Mr. ROSS (Victoria, N.S.) It is news to me that coal from Nova Scotia is sent to Ontario I am very glad that that is the case.

Mr. TAYLOR. What about your steel, where does that go?

Hon. Mr. ROSS (Victoria, N. S.) There is one thing I would like to impress on the government and that is the necessity of reducing the traffic and passenger rates. The moment you reduce the passenger rates you increase the traffic and benefits the railway. This is a report of Sir A. Nicolson, British Consul for Austria Hungary.

The year 1899 will be noteworthy in the history of Hungarian railways, as it witnessed the introduction of the zone tariff on all Hungarian state railways. I have on former occasions reported on this subject, so that it is needless to go into details, beyond mentioning that since the introduction of the new cheap traffic on the 1st of August, 1889, to the 31st of December, 1889, the passenger traffic increased by over 3,000,000 persons and the gross receipts by over £50,000.

Another authority says on this matter:

Wherever reasonable passenger rates have been tried the result has been not only accommodation to the public, but increased profits to the railway.

So, if we succeeded in getting a reasonable passenger rate we may expect an increased number of passengers and increased profits. Passengers from Australia will come to the new port in British Columbia, and passengers from China and Japan will come there, because it is two miles shorter than to go to Vancouver. The mails from Australia and New Zealand will come there, and people from the east who are travelling for pleasure will come by this route to Halifax, and then take the fast line of steamers across the Atlantic. I happened to be a delegate from the Halifax board of trade to the great Congress of Chambers of Commerce held in Montreal last week, and I wish to impress upon the government, and upon the Premier particularly, that they insisted that if we are going to have a fast line, it should be the very fastest that is going, and unless we have that, by all means let us not disgrace ourselves by having anything inferior to the lines now running between New York and Great Britain. If this is done, you will then have a service from Halifax of three days and a half or four days to the other side of the Atlantic, and you will have a flow of passengers going by these fast steamers that will amaze people. One of the finest results from the construction of this road when it begins to be successfully operated, will be the fast line service in connection with it. Great things may be expected from this new road; and the time will come when the next generation will look with amazement and regret at the stand taken by the opposition in this House against this road; their children will be filled with sorrow that their fathers should have been so stupid as to make any objection to the construction of this road. However, it is the province of an opposition to object to what the government does, and these gentlemen have done so in this instance. Their leader has presented a scheme of his own which not one of them so far has been able to explain or to justify. I may say, for the credit of the leader of the opposition, that I think probably this scheme was prepared and placed in his hands by some expert railway men who had different views from his

own. He would have to obtain the ownership of these roads, he would have to purchase them at probably double their cost, and the Canadian Pacific Railway would not allow him to use their track without paying a heavy price for it.

I think, Mr. Speaker, that I have said enough on this matter. I have wearied the House with my tedious and disconnected remarks; and I will conclude by quoting one sentence which I recommend the Prime Minister to study when he comes to read the Book of Psalms, and to apply it to the conduct of the late Minister of Railways. This is what David says:

> For it was not an enemy that reproached me, then I could have borne it; nor was it he that hated me that did magnify himself against me, then I would have hid myself from him, but it was thou, a man, mine equal, my guide and mine acquaintance; we took sweet council together.

Yes, they 'took sweet counsel together.' But remember that the late Minister of Railways and Canals was guilty of the sin of ingratitude in his conduct towards his late colleagues in the government. I think perhaps that they are well rid of him, and that another sentence might be quoted in regard to him: 'The toun is well rid o' this deil o' Dundee.' I think the government is well rid of the late Minister of Railways and Canals, and they can breathe more freely, and can act with more harmony. We will have a successor before long who will perhaps be just as acceptable to the whole people of the Dominion, to the people of New Brunswick and of Nova Scotia particularly, than the late Minister of Railways and Canals.

Mr. E. GUSS. PORTER (West Hastings). I regret exceedingly that, either through my lack of hearing, or of the lack of continuity in the arguments of the hon. member who has just taken his seat (Hon. Mr. Ross), I have been unable to follow clearly the speech just made by him, or to understand the reasons which he was urging upon this House to decide it to support the measure which has been introduced by the government. I failed to discover in his speech any reason or any point that would determine me to support that measure. I could only discover in the speech made by the hon. member for Victoria that he is now, as he has always shown himself to be in this House, willing blindly to follow the dictates of the government, no matter what the merits or demerits of the scheme might be, or whether it was for the advantage of this country or not. I had the pleasure yesterday of listening to the very able remarks made by the Minister of Agriculture, and I was somewhat impressed with the careful manner in which he had apparently studied out this whole question, and with the figures that he offered to commend this scheme to the House and the country.

But, Sir, I have taken occasion since these remarks were made to investigate to some extent in the short time at my disposal the statements made by the hon. minister and I am forced to say that a further investigation of the remarks of the hon. minister has convinced me in an opposite direction, and it has convinced me that the scheme is not for the benefit or advantage of the people of this country. The hon. minister at considerable length endeavoured to point out what I think is acknowledged by every hon. member in this House, and I think every hon. member in this House is glad to acknowledge it, that the future of the great west of this country is one in regard to which the very greatest expectations may be entertained. That that country is going ahead and is going to prosper and develop we all believe and we are glad of the fact. The hon. minister took occasion from the development that has taken place during the last few years to make an estimate of what that development would be during the next decade, and after making his comparisons he drew the conclusion in the winding up of his speech that with the natural increase in the productions of the west it would take fifteen trains of thirty cars each to handle the products of the west in 1911. That was the principal feature of the argument addressed to this House by the hon. minister as I understood it. Now, I want to call his attention and the attention of the House to the fact that there exists already in that country two railways—the Canadian Pacific Railway and the Canadian Northern, and I would ask the hon. minister to pursue his investigation a little bit further. He quit just at the point, where, if he had proceeded, he would have been able to have convinced himself that another transcontinental railway was not needed in this country. We have those two railways now and as he tells us as a result of his investigation it will require fifteen trains of thirty cars in 1911 to move the products of the west to the seaboard. Now, does that hon. gentleman think, or does any hon. member in this House think, that either one of these railways which now exist, the Canadian Pacific Railway or the Canadian Northern, could not run upon their railway fifteen trains a day? The hon. minister says that it would take fifteen trains a day of thirty cars each every day of the year. Could not the Canadian Pacific Railway run over their lines fifteen trains a day every day in the year? They could do it, and so could the Canadian Northern had they the equipment, the cars and the engines. That brings me to the argument that has been offered by every hon. member on this side of the House who has spoken that it is not a question of another transcontinental line but simply a question of equipping the railways that are already existing in the country and furnishing them with additional facilities. Let us pursue the proposition that is offered by the hon. minister just a few steps further.

If it will require fifteen trains per day of thirty cars each in 1911 to move the products of the west to the sea, I think it can be fairly argued that either one of these railways could run that number of trains if they had the equipment. They could run fifteen trains a day, yes, they could run twenty-five trains upon their railways every day. We have now two existing railways and each one of these railways if equipped could run at least fifteen trains per day over their lines, and so we would find by investigation that the railways already existing in that country, if properly equipped would be able to move the quantity, to put it in the mildest possible form, that the hon. minister argues that will be required to be moved at a time as far as postponed from to-day as the year 1911. He was pleased to refer to the cost of the alternate scheme proposed by the hon. leader of the opposition (Mr. Borden, Halifax), and it was argued by hon. members on the government side of the House that this scheme would in all probability cost far more than the scheme which is advocated by the government. I would point out to hon. gentlemen which is an important feature that for every dollar which it is proposed to be expended on this scheme offered by the hon. leader of the opposition and which is supported by hon. members on this side of the House we will have one dollar of assets and that there is a broad distinction between that and the scheme which is proposed by the government. The scheme as proposed by the government is one on which it has been estimated that $150,000,000 will be expended by the country and after that expenditure is made the road will be handed over to the Grand Trunk Pacific Railway Company for a period of at least fifty years. I was somewhat amused a day or two ago in listening to the speech of the hon. member for Cumberland (Mr. Logan), when, in concluding his remarks upon this question, he was pleased to use the following language as reported in the city press:

> He concluded by saying that the Liberal party would go to the country with the words, 'Laurier, prosperity and victory,' emblazoned on its banner.

It occurred to my mind when I read the report of the speech of the hon. gentleman that his position was similar to the position of the Irishman who was watching a procession passing down the street with the words emblazoned upon its banner 'God bless Ireland.' I think the remark made by the Irishman at that time is very apropos when applied to the statement made by the hon. member for Cumberland. In referring to the words upon the banner as I have to the words to be emblazoned upon the banner of the Liberal party, the Irishman made the remark that the banner was not complete, but that there should have been added the words 'God save Canada from the likes of us.' There is an old fable in which it is related of an individual who was the possessor of one of those long eared quadrupeds of the horse family that he had occasion to make a lengthy journey through the country and in making that journey was obliged to pass over a bridge of considerable length. The bridge was very unsafe but the possessor of the animal had no knowledge whatever of its insecurity. It is also related of that individual that he possessed a very vacillating mind and with his animal and his vacillating mind he started upon his journey. And it is related that he got fairly well across the bridge before he discovered his weakness and the peril in which he and his animal stood; and his vacillating mind did not come readily to his rescue, and he sought the advice and the assistance of his friends. Those before him urged him to come on, those behind him urged him to turn back, and in his endeavour to compromise between the conflicting advice that was given by his friends on the one side and on the other, it is related that the old man in trying to please everybody pleased nobody and lost his ass into the bargain.

Now, Sir, the old fable fairly illustrates the position that the government of the day will occupy after they have passed this measure. With the Trans-Canada on one hand, with the interests of the supporters of the government from the maritime provinces on the other, and with the Grand Trunk Railway in the middle, pulling in all directions, I venture to believe that the government will repeat the experience of the old man to whom I have just referred. I used the expression 'after the government had passed this measure,' for, Sir, I entertain no reasonable doubt but that the government will, notwithstanding the want of merit of this measure, and notwithstanding any opposition that may be offered from this side of the House; they will pass that measure by the force of their majority, and that, irrespective of merit or any consideration of the advantage or disadvantage it may be to the country. In the discussion of this question it has pleased the government supporters to urge upon the House and especially upon the opposition, that this Bill should be considered apart entirely from every political consideration and upon broad national grounds.

Some hon. MEMBERS. Hear, hear.

Mr. PORTER. An hon. member says 'hear, hear.' Does he realize the position in which the government has placed him? Does he know that the government has had this contract signed, sealed, and delivered, and that after all this is done, they ask their supporters to confirm the act which they have already done?

An hon. MEMBER. Order them to support it.

Mr. PORTER. Yes, as my hon. friend suggests, the government order their followers to support this measure. The government has tied the hands of every supporter of theirs in the consideration of this measure, and the only thing left for them is to try and justify as best they can the course adopted by the government. They have only the alternative to discredit this goverment for the act they have perpetrated, or stand up when this vote comes on and deliver the goods. But, Sir, one member of the Liberal party in this House has had the courage to stand up for his rights; one member of the government has refused to be gagged and refused to allow the cabinet to do his thinking for him. He has refused to allow them to deprive him of his manliness, and he has shown his willingness to sacrifice his own personal advancement in order that he may advocate in the parliament of this country, at least, what he believes to be right. And, Sir, I take this first opportunity of tendering, humble though it be, my heartiest congratulations to the ex-Minister of Railways (Hon. Mr. Blair) for expressing the courage of his convictions upon this momentous question. Let me say that it would be very much to the advantage of this country, and it would be very much to the honour of the members on the government side of the House, were they to follow the wholesome example that has been set them by the ex-Minister of Railways in this matter. The speech of the hon. Mr. Blair was delivered in this House on the 11th of August last, and since that time, although I have followed the debates in this House as carefully as it has been possible for me to do, I have not heard any single one of the reasons urged by him against this measure, answered by any member of the government. His objections were stated so precisely and so clearly that one might reasonably expect that members of the government would at least make an attempt to answer the arguments of that hon. gentleman. But, Sir, their silence leads one to the logical conclusion that the arguments advanced by the ex-Minister are unanswerable, that the government feel they are unanswerable, and so they are driven to the contemptible alternative of heaping abuse and calumny on the head of the ex-minister (Hon. Mr. Blair). That is the kind of answer the cabinet and their supporters have resorted to, and that is a case of history repeating itself, for I have yet to see a criminal condemned and convicted who has not abused his judge and his accusers.

And, Sir, the arraignment of the government by the ex-minister, and the uncontradicted evidence tendered by him in support of that condemnation and the argument used by him must convince the public that he is right. The louder gentlemen on the government side of the House denounce the ex-minister, the more convinced will the public be of the justice of the conviction of the government, and the more confidence they will have that the ex-Minister of Railways has spoken and acted in the best interest of this country. It is a sorry spectacle to have presented to this House—an hon. gentleman who so recently occupied one of the most important positions in the councils of the nation; a man who was trusted and who was applauded and who was honoured by his colleagues in the cabinet and by his followers alike; in the twinkling of an eye, without any reason having been advanced by members of the government for doing so, we see that hon. gentleman derided, decried, ridiculed and accused of improper motives by the very friends whom he has served so faithfully, so long, and so well. And why do these gentlemen now condemn the ex-Minister of Railways and Canals? Simply because he has had the courage of his convictions and has stood up for what he, at least, believed to be right and in the interests of the country. While that is the position of hon. members on the government side of this House, hon. members on the opposition benches are in an entirely different position. They are not bound by any fetters; they are not subject to the dictates of any minister or of any combination of ministers, they are untrammelled by the exigencies of the occasion they are not afraid to speak and act as seems best to each and every one of them, and I have no doubt that every member on this side of the House has approached this question and has considered it with an eye single to the advancement of this great country, single to the development of those great resources, those unlimited resources which nature has so lavishly bestowed upon the Dominion of Canada.

But, Sir, I regret, as other hon. members on this side of the House have had occasion to regret, the lack of that scientific knowledge upon this all important question which would enable members on both sides of the House to pass the very best judgment upon it. It is remarkable that while opposition members feel themselves circumscribed in their action for want of such scientific knowledge as would enable them to fully investigate the whole situation in regard to this transcontinental railway and the whole question of transportation, hon. members on the government side of the House, notwithstanding the fact that they are not possessed of any greater knowledge, although they are in practically the same position as members of the opposition, still, without any excuse, or without any reason so far advanced, are willing to rush into this matter and to push through, if possible, this transcontinental scheme. It would have been, in my opinion, very much better for the government, very much better for the country, very much better for the opposition members, had the government fulfilled the promise made by the hon. the First

Minister at the opening of this session ; he was pleased then to announce to this House and to the country that the government had been considering this great transportation question, and that they thought it advisable to appoint a commission to investigate the whole matter and to report to the House during the present session. Now, without that knowledge which they then declared they should possess before undertaking to solve this transportation problem, suddenly, blind-folded so far as surveys are concerned, blind-folded so far as the advantages or disadvantages, the cost, the difficulties or the possibilities of this railway are concerned, blind-folded in regard to all these matters, we find this government willing and ready to rush in and construct a transcontinental railway, involving, as it does, the expenditure of millions of dollars, pledging as it does the credit of this country by the guaranteeing of the bonds of the Grand Trunk Pacific Railway for millions of dollars more, involving the possible destruction or the crippling of the Intercolonial Railway, involving as it does the possibility of our not being able to profitably work the great canal system of this country, involving the credit of Canada and the commercial life of this country—I say that they have shown a disposition to rush into this project without a full and fair consideration of it. Let me ask, in the words of my honoured leader, who addressed the House upon this question a few days ago, why has this sudden transformation taken place ? What magic wand has been wafted over these gentlemen to inspire them to go on and construct this railway without the knowledge which they themselves declared they ought to possess before undertaking it ? This question has been asked many days ago and it was asked in all earnestness by the leader of the opposition, yet no answer has been forthcoming from the government from that day to this. They have not answered the leader of the opposition nor have they shown to this House or to the country why they have changed their minds so suddenly. Sir, there must be some reason either good or bad. I would not undertake to accuse hon. members of having been influenced in this matter by improper motives, but I shall await with anxiety, as the country is waiting with anxiety, for this government to disclose a good reason influencing them to take this action. The hon. the First Minister has declared that it is a bold and fearless policy ; it is a bold and reckless venture, I would say, which is leading this country to—I can scarcely say destruction—but in a direction that will not be to its advantage, and it is time now, before it has gone too far, for this parliament to stop and consider well this proposition before endorsing it or saddling this great responsibility upon the country.

During the course of this debate hon. gentlemen on both sides of this House have taken occasion to quote the resolutions of the boards of trade throughout Canada expressing their opinions upon this question. They have also quoted from the newspapers published in the interests of both political parties and from independent newspapers. To my mind the want of scientific knowledge, the want of that knowledge which the government of the day promised this country and this parliament we should have before we would be called upon to decide upon this matter, is the very thing that has caused such a wide divergence of opinion among the boards of trade and in the newspapers, and in the public mind of this country ; it is the very strongest possible proof that can be offered in that regard. Let me refer to an editorial in the Toronto 'Evening News,' a newspaper which cannot be said to be favourable to the opposition in this parliament, one which is well known to be, in fact, favourable to the government of the day. In its issue of August 22nd, on Saturday last, speaking in connection with this subject, it uses the following language :

> The whole question demands very thorough discussion. There are undoubtedly great public advantages to be derived from the extension of the Intercolonial to the lakes and the nationalization of the Canadian Pacific North Shore road, if that line can be brought up to standard at any reasonable expenditure. We want much fuller information than we have yet obtained as to the efficiency of the projected road between Quebec and Winnipeg for grain carrying purposes, and particularly as to the feasibility of the route from Quebec to Moncton. The government's plan for the construction of the Grand Trunk Pacific across the prairie and through to the Pacific is an improvement upon Mr. Borden's proposition, but it is by no means so clear that the proposals to extend the Intercolonial, to nationalize the Canadian Pacific from North Bay to Port Arthur, and to improve the existing lines to Winnipeg do not offer a better solution of the transportation problem than the government's proposition for an air line from Winnipeg to Moncton, and it must be remembered that great as might be the cost the country would have substantial assets for almost every dollar that would be invested.

At one o'clock, House took recess.

House resumed at three o'clock.

Mr. PORTER. When the House rose, Mr. Speaker, I was endeavouring to point out the disparity between hon. gentlemen supporting the government and those in opposition on the question before us. I was endeavouring to show how the members supporting the government were handicapped, bound down, and fettered by the action of the cabinet, whereas, on the other hand, the members of the opposition are free to give expression to whatever opinion their conscience may dictate. I was endeavouring also to show that the want of scientific knowledge on the part of this House was such as to render it unable to pass the very best possible judgment on the question. I would like to ask whence

comes the cry for this great transcontinental undertaking? Does it come from the Dominion as a whole or is it only sectional? So far as I have been able to discover from my reading of the public press and listening to the debates, I am certainly convinced that the cry is purely sectional. It is only an appeal from the west for more transportation facilities, to enable them to get their products to the markets of the world in the shortest time and at the lowest possible cost and thus promote settlement by furnishing settlers with every possible advantage. Hon. gentlemen opposite say that it is a cry affecting the whole Dominion and that it is incumbent upon the government to give relief. But, Sir, even admitting that argument, it seems to me that it is where the pain exists, the remedy should be applied, and not elsewhere. I venture the assertion that if any hon. gentleman occupying the government benches were to experience a pain in his back, he would hesitate long before applying a blister from the crown of his head to the sole of his feet. Is it just to punish the whole of this Dominion in order to relieve one section of it? It has been well pointed out by the speakers who have preceded me on this side that the cry coming from Manitoba and the great North-west is a sectional one, raised, not for the purpose of securing the building of a transcontinental railway, but for greater accommodation from the railways that already exist in that country; and I would like to ask why the government have shown such haste to answer this cry, when they have, for more than two years, turned a deaf ear to a cry for relief that has been going up, not from any sectional part of this country, but from the whole Dominion? I refer to the cry of the Manufacturers' Association and those engaged in industrial pursuits. For two years that cry has been going up from one end of the Dominion to the other, urging this government to give them such assistance as will enable them to meet foreign competition. This cry from the industrial interests of Canada is one which does not affect one province alone, but the Dominion as a whole.

It is undoubtedly the fact that stagnation has existed in the industries of this country, and that those gentlemen who have been coming to the parliament of Canada for the past two or three years representing the manufacturing industries of this Dominion have been crying out for relief; and justifiably, because they were not able to compete with their rivals under the conditions imposed upon them. I ask, in the name of everything that is reasonable and in the name of common sense, why has not this business government, as it has been called, evolved some mighty scheme out of the great brain it is supposed to possess, that would relieve the manufacturing industries of Canada and secure to them the conditions to which they are justly and honestly entitled? But it has been suggested that Senator Cox, who is said to be at the head of this Grand Trunk scheme, is not engaged in industrial pursuits, and that is one reason why the government have not been so anxious to come to the rescue of those who are engaged in those pursuits in this country. It has been further suggested that in the readjustment of the tariff and the establishing of an adequate system of protection there would be no rake-off, and it does not require the expenditure of hundreds of millions of dollars of public money. And, Sir, it has been suggested that there is an election close at hand. Can it be possible that any of these considerations have actuated the government to take the step it has taken in regard to the Grand Trunk Pacific Railway scheme now before the country? Let the government answer why this cry from the manufacturers and those engaged in industrial pursuits has been lost in the lesser cry of the people of Manitoba and the North-west. Both are cries that affect the commerce of this country, but one is sectional, while the other is of national importance. Do not the industrial enterprises of this country demand as much attention at the hands of this government as agriculture? Both are magnificent in their proportions, and it is a disgrace to this government to neglect the one and favour the other. I do not advance this argument because I think the agriculturists should be neglected and the manufacturing interests promoted, but I advance it to show that the government should not be neglectful of one while it is especially careful in its attention to the other. Both these industries are great and both should receive at the hands of this government the relief they need. Why has the government neglected one and shown such pretended haste to answer the calls of the other? With a boasted surplus of $13,000,000, as announced by the Finance Minister in his Budget speech, and an expressed desire to promote the internal and foreign trade of Canada as stated in the preamble to the Bill before the House, one would have expected that a mighty effort would be put forth by the government of the day to relieve not only the one but the other. The very fact that the government has neglected the strongest and most important cry that has been uttered in this country for years, and that it has shown such great haste to relieve the other, is a matter that, I think, the people of the country will say should speak loudly in condemnation of this government. I have already said that, in the revision of the tariff so as to protect the interest of the manufacturers there is no rake-off, there is no opportunity for the expenditure of millions of dollars, as there will be in the carrying out of the scheme which is now engaging the attention of the House. But

it has also been suggested, and I am not disposed to quarrel with the suggestion, that railway contracts are a most prolific source for replenishing a depleted election fund treasury. Happily, it does not rest entirely with this parliament to determine this question. The leader of the government must appeal to the country and ask it to endorse the course which they have pursued in this important matter. And I venture the opinion, and entertain the hope, that the country, when it is appealed to and this question is brought forcibly and formidably before it, will answer with no uncertain sound and say to this government that they have betrayed the interest of the country, they have played to the gallery, so to speak, they have favoured one individual interest as against the interest of the whole country, they have forfeited the confidence of the people, and for that reason they stand condemned.

Now, this agitation, which has been going on in the west, is not a new thing. It has been going on for the past two or three years. And during the course of that agitation, and notwithstanding all that has been said pro and con in regard to the matter I have not yet heard it mooted, nor have I seen it discussed in the newspapers of this country, that there was any difficulty in the way of carrying the products of that great western country to market, once they had reached the head of Lake Superior. The difficulty, so far as I have been able to discover, has been in getting the products of that great western country down to the head of Lake Superior to be carried by the various means of transportation already existing from that point eastward to the sea. I have heard no complaint that the railway and canal system of Ontario and Quebec are not sufficient or not sufficiently equipped to handle all that product once it is at the head of the lake. Nor is such the case. And let me, for a moment, direct the attention of the House to the position we in the older provinces occupy in relation to that matter. Some hon. members have made comparison between the government's policy and the results of railway operation in some of the states of the great union adjoining us. Such comparisons, I submit, are not fair, because on the one hand it is sectional while on the other hand it is national. On the one hand is taken a state with a dense population, with all its resources developed to the greatest possible extent, while on the other hand is taken the entire country, the whole Dominon of Canada, developed but a little beyond the state of nature. By such comparisons hon. members on the government side of the House have endeavoured to belittle and disparage this great Dominion. They have endeavoured to show that Canada has not taken a position in railway development that she should and could have taken, and that she is fully justified in undertaking to build this great transcontinental railway on the basis of the proposition laid down by the government. If a comparison is to be made at all between the two countries, it should be made between one nation as against the other, and permit me briefly to do so. Canada is larger than the whole of the United States, excluding Alaska. The population of the United States is said to be 78,000,000 of souls, the population of Canada is only 5,500,000 of people; in other words, the population of the United States is fourteen times greater than that of the Dominion of Canada. The per capita wealth of the United States upon the same basis is fourteen times greater than the per capita wealth of the Dominion of Canada. Now, Sir, if Canada is justified in building this transcontinental railway line, the United States, with fourteen times the number of our people and fourteen times our wealth, should have fourteen transcontinental railways, or fourteen times as many as Canada. So the absurdity of the argument adduced by hon. members on the government side of the House by a comparison of the States of the Union as against the whole Dominion of Canada, becomes apparent. It is useless to argue from such a hypothesis with a hope of drawing any just or proper conclusion.

Now if hon. gentlemen opposite would, in making their comparisons, take into consideration the province of Ontario as against any state in the union, I venture to say that their investigation would turn out to be largely in favour of Ontario. Let us look at the financial aspect of such a comparison as hon. members opposite have drawn between states of the union and the Dominion of Canada. Such a comparison in respect to the burden of debt that is being imposed upon this country by the government proposition, is really appalling. If Canada builds this proposed line it will mean an expenditure for construction—and I add the cost of equipment, because the hon. gentlemen who preceded me in this debate have confined their remarks almost entirely to the cost of construction. But we have to take into consideration, besides the cost of construction, the cost of equipment of this railway, and I think I am placing it well within the mark when I say that the construction of this railway will cost at least $150,000,000. I am told that the average cost per mile of the eastern section for construction alone cannot be less than $40,000 a mile, and I am told that by gentlemen who have had large experience in railway construction, not only in Canada but in the United States. Now if we would be justified is assuming such a debt as $150,000,000, the United States, to be put on an equal basis, would have to assume an additional debt for railway purposes alone fourteen times as great, which would reach the enormous sum of $2,210,000,000, a sum almost equal to the greatest amount the war debt of the United States

has ever assumed. Such a proposition would stagger even so generous a people as those who inhabit the United States of America; and while it would stagger them, it is enough to bury the smaller number of people that we have in Canada.

Let me pursue this inquiry a step further. The proportion of railways in Canada to-day is greater that the proportion of railways in the United States per capita, without taking into consideration this proposed new line. With a population of 78,000,000 the United States has 202,000 miles of railway; with a population of 5,500,000 the Dominion of Canada has 19,000 miles. Canada to equal the United States' per capita would require to have only 14,000 miles of railway; in other words, the Dominon of Canada to-day has 5,000 miles of railway in excess of the mileage of the United States per capita, with all its boasted progress and advancement. But if Canada does not suffer by a comparison with the United States in her railway development, no more does she suffer by a comparison in other respects. According to the area of cultivated lands that we have in the Dominion of Canada, we produce more than the United States can produce, and in industrial pursuits likewise we produce a greater percentage than do the people of the United States. Our revenues are greater in proportion than the revenues that are derived by the United States of America. So, Sir, I refuse to allow any man to point me to the United States as an example to Canada. On the other hand, I am bold to point out to Canada as a proud example not only for the United Sates but for the whole continent of America.

Now, Sir, one has only to look at the map of the older provinces of Canada, or to refer to statistical reports, to become convinced that these provinces are already a perfect network of railways as far east as the port of Quebec. Consider also the waterways and the canal systems already in existence, while there are now under construction other canals in the province of Ontario, and still others that are contemplated by the government. I refer particularly to the construction of the Trent valley canal, upon which large sums of money have already been expended with a view of bringing the products of the great western country down to the St. Lawrence water-way. I also refer to the project which has been spoken of in this House by the hon. member for Montreal, St. Mary's (Hon. Mr. Tarte); that is to construct a great water-way by way of the French river, Lake Nipissing and the Ottawa river, thereby increasing the water transportation facilities of this country. Let me for a moment refer to the development that has taken place in railways and canals in these older provinces. I do so because it assists us in arriving at a proper conclusion as to the solution of this great question. Take the railways of the older provinces of this Dominion and we find from the statistical reports that Ontario has now 7,139 miles of railway, Quebec has 3,445 miles, New Brunswick has 1,444 miles, and Nova Scotia 1,051 miles, making a grand total in the older provinces of 13,079 miles. These railways are so situated that they reach out in every direction in these various provinces and most of these railways have direct connection with the water-ways of this country. Let me refer for one moment to the great canal system of the Dominion, and I only refer in this connection to the system known as the St. Lawrence canal system. I find upon reference to the statistical Yearbook that we have the Lachine canal which has a mileage of 8½ miles; Soulanges canal, 14 miles; Cornwall canal, 11 miles; Farran's Point canal, 1 mile; Rapide Plat, 3⅔ miles; Galops, 7⅓ miles; the Welland canal, 26¾ miles, and the Sault Ste. Marie canal, 1⅓ miles, or a grand total of over 52 miles of canals. Let me ask the attention of this House for a few moments to the further consideration of this railway and canal system. Towards aiding the construction of these railways this Dominion has contributed in subsidies alone since the subsidy system was inaugurated in 1883, no less a sum than $52,831,830, and upon the construction of canals the government of the Dominion has already expended $83,000,000, making a total expenditure for the construction of railways and canals in the older provinces of $135,831,830. This sum does not include the cost of the Intercolonial Railway, or of its connections. This is a most enormous expenditure. These distances that I have stated that are covered by the railways and canals of this country might be described as magnificent distances, but to all that expenditure must be added many millions of dollars of the capital that has been invested by private individuals in the construction of the railway system of the various provinces, and the expenditure of the provincial governments as well. One can scarcely grasp the magnitude of these expenditures. Let me ask in connection with this: Why has all this expenditure been made? Has this expenditure been made for the accommodation of local conditions only? Do local conditions in the province of Ontario, or the province of Quebec or in the maritime provinces, require such an expenditure of money as that which I have already pointed out? No, Sir, but that expenditure has been made by the government of the country, and by the capitalists not only of this country, but of foreign countries, because they saw that great development was going to take place in the North-western portion of the Dominion, and that there would be need of the lines of railways and canals that were being constructed in the older provinces, and they saw that these lines of railway and these canals that have been constructed

would be a proper means of relieving any congestion that might exist as it is said to exist in Manitoba and the North-west Territories for want of proper communication. The predictions of the government, the predictions of the capitalists who have invested their millions of dollars in these various enterprises have come true, and to-day we realize the fact, that they were far-seeing at the time when they made up their minds to expend these enormous sums of money in properly establishing and equipping the railways and canals of these older provinces to which I have referred. But, no sooner are the hopes of the capitalists and the government realized than we see the government of to-day entering into a contract with the Grand Trunk Pacific Company, and if the expectations which have been expressed in the speeches that hon. gentlemen opposite have delivered during this debate are to be realized we will see all the efforts of the capitalists and of former governments which have been striving for years to provide proper transportation facilities, brushed aside at one stroke. Hon. gentlemen opposite hope to establish a new system by which the legitimate trade, that, under the circumstances as they now exist would be filtered down through these older provinces to the advantage of the older provinces, will be diverted from its natural and legitimate channel and carried, as they tell us, through the wilderness, through the northern part of Ontario and Quebec, with the result that the millions of money which have already been expended in the development of the railway and canal systems of the older provinces will be allowed to take care of themselves, and the people who have invested this money must do the best they can. This government—this business government, as they have been pleased to call themselves—are about to expend no less than $150,000,000 to wipe out and destroy all that capitalists and governments have been striving to do for years. Let me point for one moment to a matter that I think ought to weigh heavily with the government in the determination of this question which is now agitating this House. It is only a few short weeks ago since the hon. Minister of Finance (Hon. Mr. Fielding) came down with his budget speech. In his budget speech he was glad to announce to the House and to the country with a great flourish of trumpets, what the government was doing for the advancement of the interests of this great Dominion of Canada. One thing which he specially advocated was to make the whole canal system of the Dominion of Canada free to any one who might see fit to use it. On the 16th of April, in this House ('Hansard,' page 1421) the Minister of Finance used this language in his budget speech :

> The Dominion has spent a vast sum of money in the construction of canals and in the improvement of our waterways from the great lakes to the ocean, by way of the St. Lawrence river. Some years ago, these canals had but little depth of water. It was deemed wise to enlarge and deepen them, at a very heavy cost to the Canadian treasury. The canal system is now about complete, and we are looking to it, as well as to our railways, to carry the great volume of traffic which must pass between the western and eastern portions of Canada. Those who are most closely associated with the operation of the waterways are naturally anxious that every possible obstacle may be removed and every reasonable encouragement given for the transportation of our products through these channels to Montreal and other ocean ports. A large deputation of gentlemen interested in the traffic recenty waited upon the government and urged that, with a view to giving greater encouragement to the business, canal tolls should be abolished, and the inland waters made as free to ships as the ocean is. The government have given the subject very careful consideration. There is room for some doubt whether the tolls that are charged are large enough to be a serious obtsacle to the traffic. . . . . This, as I have said, we will try as an experiment. We hope it may be justified, and we reserve our right as to what may be done at the end of the two years. We think that a trial of that kind will be all that those more particularly interested in this matter can ask us to do, and we do it with the desire that our great waterways shall carry the traffic which nature has destined they should carry.

After making such a statement to the House on the 16th of April last, with regard to our canal system, what apology has the Minister of Finance to offer for being one of those who originated and adopted a project that must be the means if the hopes of the government are realized, of diverting the trade which he says legitimately and properly belongs to the railways and canals of the older provinces ; diverting it to the wilderness of northern Ontario and Quebec, and thus by one scheme destroying the other.

The Canadian Pacific Railway has been alive to the great needs of our west and North-west; the Canadian Northern Railway has also been alive to the situation, and both of these extensive railway systems have been, to the very best of their ability, improving their equipment and extending their lines to meet the wants of that western country. Not only have these two railway companies been interested in the matter, but the Trans-Canada Railway came forward with a project which to a large extent, if not altogether, met with the support of the people of this country. The Canada Atlantic Railway and the Grand Trunk Railway of Canada have also been alive to the necessities of the situation. But not until the Trans-Canada and the Canada Atlantic Railway and the Grand Trunk Railway and all these interests combined, pressed this matter upon the attention of the government did the government feel that it ought to act and become interested. The proposition as at first advanced by the Grand Trunk Pacific Railway is one which I think would meet with the approval of the electorate of this whole Dominion. The Grand Trunk Pacific

Railway seeing the great needs of the west and the North-west of Canada, did not enter into this enterprise without having carefully examined the situation. I have no doubt that with the able experts which they have at their command, and with all the resources they could employ in an investigation of this question, the Grand Trunk Railway Company before coming to parliament carefully investigated the whole matter, and using the best skill they could and with unlimited means at their disposal with which to construct a line of railway that would not only relieve the west and the North-west but would also be advantageous to them from a financial standpoint, they came before the government with their proposition. That first proposal of theirs was not a proposition to build a great transcontinental line from ocean to ocean. After having satisfied themselves not only of the requirements of our western country, but of the possibility of constructing a line that would not only relieve the west but that would be remunerative to them, they came before this government, and proposed to build a railway from the Pacific ocean, extending east only as far as North Bay. I have no doubt that the Grand Trunk Railway saw that by the construction of their main line through Manitoba and the Territories they would secure traffic that would feed their lines of railway now in existence in Ontario and Quebec, and at the same time using as an auxiliary our splendid canal system. I have no doubt that they saw that by the construction of the line as far east as North Bay, they would be able to offer the very fiercest competition to the existing transportation companies. Had the first proposition of the Grand Trunk Railway been given effect to, this enormous traffic would continue to filter down through the settled portions of Ontario and Quebec, and as the Minister of Finance truly said in his budget speech, it would give to these old provinces the trade that justly and properly belongs to them. The completion of this project as first advanced by the Grand Trunk Pacific Railway would have been of inestimable value to the people of the west and the North-west, not only from the fact that the Grand Trunk Pacific in constructing their line in that way would be able to offer keen competition to existing railways which must affect the rates charged, but it also would be of great advantage to the people of the western provinces because of the rapidity with which their products could be handled in the immediate future.

The government had perhaps the best opportunity in that proposition that will ever be offered in this country of applying the remedy to the spot that had the pain. Granting that what was originally asked by the Grand Trunk Pacific Railway was not sufficient to relieve entirely the difficulties experienced by the people of the North-west, the government was not driven to the alternative of building a transcontinental railway. They could have, and they should have, aided the Grand Trunk Pacific Railway to get into that western country upon very favourable terms. They could have, and they should have, encouraged the Grand Trunk Pacific in building this main line through those western provinces and in extending its lines north and south for the purpose of relieving the people who were going into that country and colonizing it. If that was not sufficient to relieve the needs of the province of Manitoba and the North-west Territories, there was still another alternative left to the government which would not have involved the expending of millions of dollars and the saddling on this country of a debt which it must feel for many and many a long year. There are now completed two lines of railway from Winnipeg to Port Arthur and Fort William, the Canadian Pacific Railway and the Canadian Northern Railway. The government could have gone to these two railway companies and made this proposition to them : we will assist you in double-tracking the Canadian Pacific Railway and the Canadian Northern, or if need be in converting these lines into four-tracked roads from Winnipeg to Port Arthur and Fort William and securing running rights for any other railway over them. Mr. Speaker, that is the only point in the whole system of railways at which congestion has been felt, and the government could have relieved the North-west by adopting that plan. This would have many advantages, to my mind ; it would have afforded material relief, and almost immediate relief, to the western people, and that is what they want. They do not want a scheme by which relief would come to the people of the great western country five or seven years from to-day ; they want a scheme evolved by this government and assisted by this government that will bring relief at once.

Let me for a moment consider the proposition made by the government in regard to the relief that they are proposing to the western country. If the only relief that is to be given is such as will come from a scheme of the kind advocated by the government, that will require at least five or seven years to carry out, what are the settlers of that great portion of the Dominion to do in the meantime ? The congestion that existed in that country and of which so much complaint was made in 1902, will no doubt be greatly augmented in 1903, and, with the immense immigration that has been going into the country this year and which we expect to see continue year after year, the congestion that will exist from 1903 to 1908, a period of five years, will be very serious, and I ask the government what is to become of the people who will suffer from that congestion ? There is only one result, one conclusion, to be drawn from such a state of af-

fairs, either the people who are going into that country must cease producing crops as they have been producing them during the past two years or they must sacrifice their production for the want of assistance in transportation, from this business-like government. It has been repeatedly stated during the course of this debate, the words of the First Minister have been repeated over and over again, that we cannot wait, we must act now. At the same time, Sir, the First Minister and his colleagues have evolved a scheme and their supporters are endorsing a scheme which will take at least five years, and which it has been estimated—and I think conservatively estimated—will take seven years, to complete before any relief will be afforded to that country. That is the great advantage of the plan that is advocated by the hon. leader of the opposition, as it appeals to my mind, over the project evolved by the government. The plan of the hon. leader of the opposition would give to that western country immediate relief and would avoid the expenditure of the millions of dollars that must be expended in the construction of the government's proposed transcontinental railway, and besides, it would preserve our provincial railway interests, and would also preserve the national canal system. The policy of the government, which they have seen fit to characterize as a policy of haste, is a policy of delay, and the only result that can flow from it will be deserted homesteads in the North-west and disappointed settlers as monuments to the inability of this government.

While I am upon that subject let me refer to an article appearing in the Winnipeg 'Telegram,' of Saturday, August 22nd. It is an interview with a gentleman who is known to possess strong Liberal proclivities and who is one of the largest wholesale merchants in the city of Winnipeg, Mr. Alexander Macdonald. Speaking in regard to this question, Mr. Macdonald is reported in the interview as follows :-

There can be no two opinions, on the Grand Trunk Pacific deal. It's the worst yet, and none know it better than the promoters and their creatures in and outside of parliament who are pushing the deal through. All will welcome the Grand Trunk Pacific or any other road that will tap our fertile plains and relieve the present disgraceful congested condition of freight and passenger traffic. If we had half a dozen railways we would have better accommodation, but rates would remain the same and they are now sufficiently high to pay six per cent on three times the cost of our railways. That the handing over of the Canadian Pacific Railway to a company was a mistake as clearly shown by members of the present government at the time, goes without saying. Still, there was some excuse for the Canadian Pacific Railway blunder, but there can be none for the Crow's Nest railway, Yukon deal, the Canadian Northern Railway. 'Enabling Act,' and still less for the Grand Trunk Pacific swindle. In this deal the principle of government ownership is admitted, but the road, or rather the people who are to build the road, are to be handed over to the tender mercies of a company for fifty years. But the government say they have running powers and the control of rates over the Grand Trunk Pacific. That story is old. We had it first when the Canadian Northern Railway deal was put through.

Still we are paying higher rates than ever to Kootenay points. The Americans would have all the Yukon trade if this railway deal did not go through, but it did not, and still our trade in that quarter is increasing. They told us they had the control of rates and running powers over the Canadian Northern Railway when they were giving away millions of acres of our land, millions of our money. If they had, it would not be necessary to bring on this Grand Trunk Pacific deal, so big and yet so weak that it was thought necessary to get Sir Wilfrid Laurier himself behind it with outstretched arms exclaiming 'Pray heaven that we be not now too late.' What a farce !

'You do not then approve of the scheme as a whole ?'

'No. On the contrary, it is so thororoughly bad that I do not think the road will ever be built. If it is, it will be of little or no benefit to the west, because it will not reach Winnipeg for years. It is to be located somewhere north of the trade centres of Ontario and Quebec and away from the natural outlet of this vast territory—our great lakes. What it will cost no one knows or seems to care. The people have to pay, and the promoters and their friends get the benefit.'

'You refer to the eastern section ?'

'Yes. When they get to Winnipeg, where there is more traffic than three roads can handle and where the local rates are excessive, all is handed over to the promoters, and the government guarantees their bonds for the cost of the road at least, and allows the company to bond and stock it for twice its cost. Here's where the grafters and their political allies make the big haul, and here is where the settler has to pay. The poor bondholder must get his interest, and the poor settler must pay, even if he has to deny himself and his family the necessaries of life, for it would never do to expose the promoters and their pals, because those men are looking for honours.'

'What would you suggest as a solution of the transportation question ?'

'If the government have control of rates and running powers over the Canadian Northern Railway let them use it, and as the Grand Trunk Railway is now tapping our great lakes at several points and have their steamboat connections, they can get to Winnipeg and west this fall and bring us immediate relief. But then we are wasting time talking. It's not the interests of the country that are being looked after by the government, it's their own and the promoters.' There is only one solution to this burning transportation question, and that is a road built, owned and operated by the people and for the people, and our government knows it. The contract should be submitted to the country for ratification, and if it is, I venture to say that the government will have fewer supporters from Manitoba than they had at the last election, and that was only one, who obtained his seat by the customary vote of the returning officer.

While the government had such a favourable opportunity as was presented by the original scheme of the Grand Trunk Pacific Railway, they in their wisdom saw fit to

tack on the eastern section, under the specious plea that they were going to build an all-Canadian road; and they advanced as a reason for building this transcontinental railway through the northern portions of the provinces of Ontario and Quebec that it would open up a large portion of those provinces which are fit for settlement. I do not think that any sufficient justification for placing such a great burden on the people. I look upon the development of Ontario and Quebec and the maritime provinces as being very largely a matter of provincial concern. Each one of these provinces owns its Crown lands, and these lands are always available for the aiding of railway construction or any other improvements, necessary to develop these provinces so that I think such matters might be very well left to the provinces themselves. Of course, I do not say that we should apply that principle to the North-west Territories. It is only applicable to those portions of the Dominion which enjoy provincial autonomy, and it ought not to be too rigorously enforced with regard to them. The application of that principle would not prevent the Dominion government from giving assistance where it was justly and properly due, nor would it prevent the Dominion government from giving assistance in matters which concerned Dominion development. I venture the assertion, in answer to the proposition stated by the government, that the building of this railway through the northern portion of Ontario and Quebec will have the effect of colonizing and opening up those portions of these provinces, that if the same amount of money were expended in providing quick and close communication by rail and water between the settled and unsettled portions of those provinces, their development and settlement would be very much more rapid and satisfactory than by the scheme we are discussing. As to the eastern section or this scheme, I do not know that I can add anything particular to what has already been so ably said by the leader of the opposition. I can only say that I most heartily concur in the opinion he has given, that if there is to be a paralleling of the Intercolonial Railway through the province of New Brunswick or from Lévis to Moncton, that paralleling should be done by the Intercolonial Railway. It should be a part of the Intercolonial Railway system. Let it be a portion of the railway built by the people owned by the people, and, as my leader has said, operated for the benefit of the people.

I have refrained from discussing at all the terms or the particular paragraphs and conditions of this contract, because, having at least satisfied myself that the scheme as a whole is a bad one and not for the advantage of this country, it seems to me to be wasted time to discuss the particular features. I may, however, be pardoned for using just one illustration of the manner in which this contract was prepared as between the government and this great railway corporation. I am not passing by the consideration of the terms of the contract, because I have not considered them. I have considered them very carefully and to the best of my ability. The feature of the contract that I wish to refer to is the fact that it is made up of so many 'ifs' and 'buts,' and provisos, that almost any result may reasonably be expected to be worked out from it. Going over the Bill as a whole, I find that the road is to be built in five years—if possible. I note that the interest of three per cent upon the construction of the eastern division is to be paid after seven years—if it is earned. I find that the traffic is to be carried through Canadian ports—if the shippers do not say otherwise. I find that supplies for the construction and operation of this railway are to be purchased in Canada—if produced; they are to be purchased in Canada—if produced in sufficient quantities; they are to be purchased in Canada—if produced of the proper quality; if they are to be purchased in Canada—if they can be purchased at as good a price as anywhere else; they are to be purchased in Canada—if they can be purchased on as good terms as anywhere else. In short, this is a very 'if'-ty agreement.

The alternative policy which has been offered by the leader of the opposition, and which I most heartily support, is a policy that is broad, a policy that is specific, a policy that is convincing and a policy that, above all, is patriotic. And although the announcement of that policy was made in this House by my honoured leader several days ago, we have scarcely had a reference to that announcement from the government side of the House since the day it was delivered. They seem, Sir, to have been paralyzed by the force of national sentiment for development and advance contained in that admirable address. Sir, I do not wonder that hon. members on the government side of the House have not had the courage to attack the policy that has been advocated by the leader of the opposition. But I am surprised that, with the exception of one who spoke in advance, there is not a single member of the government or a single member of this House supporting the government who has had the courage, in view of the arguments that have been advanced in support of that policy, to shake off, as it were the fetters that have been placed upon him by his party, and assert his manhood by supporting the alternative policy of the leader of the opposition on this question. The policy that has been offered by the opposition is one that secures for the people the key to the whole transportation problem and the consequent control of rates for the benefit and advantage of the whole people. And, Sir, that policy affords means for immediate and permanent relief to the con-

gested trade conditions existing in our western country, whereas the government policy postpones for fifty years even an attempt to control the situation. The scheme of the government has a detrimental effect on the existing railway systems of the older provinces, and a most detrimental effect upon the waterways upon which, as I have already pointed out, so many millions of dollars have been expended, by diverting into another channel the trade which legitimately belongs to them and which, if undisturbed, would naturally benefit the provinces through which these railways and these canals run. And, Sir, the policy of the government refuses immediate relief to the west and postpones the possibility of the west receiving any relief for at least a period of five, and possibly seven years. And, with regard to the policy that has been announced by the hon. leader of the opposition, I would trouble the House by referring to a few comments by leading newspapers with regard to them. Let me first refer to the St. John 'Globe,' which is a Liberal newspaper. It says:

The speech of the leader of the opposition is one with which the government party can find little fault.

The Montreal 'Witness,' a paper most friendly to the First Minister, spoke of the policy of the leader of the opposition in this way:

Mr. Borden, the leader of the Conservative party, has performed the feat of his life in his great speech against the Grand Trunk Pacific scheme, and in offering in exchange therefor the policy we have so much urged of developing to the utmost the connections between the lakes and tidewater and between the harvest fields and the lakes. He has been specific and urges the Blair policy of extending the Intercolonial to the lakes, and also the acquisition and improvement of the unprofitable section of the Canadian Pacific from North Bay to Fort William, using that line, which is capable of carrying ten times the business it now does, as a common highway for the all-rail traffic of all the railways to the prairies and the coast.

Let me refer also to the Montreal 'Herald.' In discussing the policy announced by the leader of the opposition, it said:

Mr. Borden does, at all events, discharge the prime duty of an opposition leader in circumstances like the present by submitting an alternative proposition, and one which, it were useless to deny, has some features of merit.

The foregoing is from the paper of the Minister of Agriculture (Hon. Mr. Fisher). Now let me refer to the Ottawa 'Evening Journal,' which claims to be an independent paper, but which is well known to favour the party in power. It speaks of the policy of the leader of the opposition in this way:

He is for immediate control by the people of Canada of the transportation outlet from the west, where the Liberal government is merely for control fifty years hence.

Mr. Borden says, in effect Let us have at once—and it can be had at once—a government road from Halifax to Port Arthur, the head of the great lakes; let us arrange—and it can be done—for immediate control of running rights from Port Arthur to Winnipeg; and at Winnipeg let us offer transportation facilities east to all western roads, ready and able advantageously at any moment if desirable to carry a government road clear across the continent.

Winding up the article, the 'Journal' says:

Practically, it seems to us, Mr. Borden is for immediate government ownership of a nature which would give to the people of this country a splendid check at once and for all time upon all transportation business and rates in Canada. Practically, it seems to us, the Liberal government is for a railway scheme which may gain nothing for the people for fifty years save some local convenience along a route a great part of which is barren; and moreover a scheme which meantime will inevitably hinder early redress of transportation grievances by any other plan of government action.

Now, Sir, I do not consider that I should be confined in my quotations to newspapers that are friends of the government. It is well recognized that the public press of the country, be it Liberal or Conservative, represents the opinions of the people, while it is also a moulder of public opinion, in this Dominion as in any other country. Let me for a moment refer to the comments made by the 'Mail and Empire,' a Conservative paper, upon the policy announced by the leader of the opposition. The 'Mail and Empire' closed its article in reference to the alternative proposition offered by the leader of the opposition, as follows:

Mr. Borden has propounded a really national policy on this great subject. He will bring the Grand Trunk into the west, and open up new territory there. He will give us three transcontinental lines instead of two. He will make us independent of the bonding arrangement. He will conserve the Intercolonial, and he will bring Canadian trade through Canadian channels to Canadian ports. The whole will be accomplished without mortgaging the country forever. This solution is the wisest that could be propounded. It looks to development, to cheaper rates, to increasing business for the merchants and the manufacturers of Canada, to trade for Canadian ports, and to prosperity for all lines of Canadian effort. It opposes waste and national loss, and is in harmony with the great policy of 'build up Canada.'

Let me go a step further towards the west and quote the opinion of the Hamilton 'Herald':

Mr. Borden has taken a bolder step than has been taken by any other party leader in Canada with reference to the question of transportation. He has committed himself, and as leader of the Conservative party he has committed that party, to the principle of government ownership and control of a transcontinental railway system. His speech has raised and strongly defined a great dividing issue between the two political parties. It was, therefore, one of the most momentous speches ever delivered in parliament.

Let me go still further west and read from another Winnipeg paper. I have al-

ready read from the Winnipeg 'Telegram' the opinion of one of the leading Liberals in that city; now let me read from the Winnipeg 'Telegram,' itself, a Conservative paper.

Mr. Borden's great spech in parliament last night reveals to the Canadian people for the first time the full statute of his statesmanship. With the occasion has come the man. Those who know Mr. Borden personally know that he is a worthy successor to the great leaders of the Conservative party. All Canadians know it now. Need it be said that the Conservatives of the west will be delighted with the sound, competent, courageous and genuinely patriotic policy he has announced and not only Conservatives, but the whole west, with the exception of those who have the misfortune to be entangled inextricably in Liberal party organization.

Canada from sea to sea will, we are sure, applaud the great unifying, upbuilding national railway policy announced by the Conservative leader.

Now, let me refer to an interview that was held between a newspaper reporter and the Premier of Manitoba, Mr. Roblin, who has lately come back from the country endorsed by a very large majority of the electorate of that province, who have not only sanctioned the general policy of his government but has approved of his railway policy, that he advocated throughout that province. The interview took place on the 19th of August:

Premier Roblin, asked as to the feeling in Ontario about the Grand Trunk Pacific project said:

Sentiment in Ontario, so far as I was able to judge it, is against the government building the road and then giving it away without securing any practical or material advantage for the people. In fact the people in the east appear to think there is no guarantee that the so-called Grand Trunk will operate the road from Winnipeg to Moncton unless it absolutely appears in their own interest to do so.

The fact that they are proposing to build a road from Moncton to Winnipeg, north of the height of land through the country of which Laurier and every other member of the government who has spoken has admitted that they have made no railway survey, seems to have created doubt as to the reality and genuineness of the whole scheme, particularly when it is remembered that one provision of the Bill gives the Governor in Council power to stop all construction until the meeting of parliament.

Not to belittle that great friend of the government, Senator McMullen, let me quote from some remarks made by him in the Senate upon this question:

He thought the increase of population in the North-west and the desire to keep the trade arising from that would justify the construction of the line. At the same time he believed the bulk of the grain would be brought out by the canals.

Now, Mr. Speaker, in conclusion, let me say that my remarks have not been intended nor have I any desire to belittle the scheme advanced by the Grand Trunk Pacific Company when it first came before the government with a proposition to afford relief to the west, and to the north-west portion of this province, as well as to benefit itself. I am not opposed and have never been opposed to reasonable assistance being given by this government for the construction of such a line of railway as they then proposed. In fact I think it was the duty of this government to give such assistance, and I think the opportunity then offered was one which they should have embraced, and that they will regret having tacked on to that proposition such conditions as will render the operation of that railroad neither profitable to the Grand Trunk Pacific Company nor advantageous to the people of this country. I am not opposed to the Grand Trunk Pacific, but I am opposed to the scheme that is offered by this government, particularly to that portion of it respecting the eastern division, which will be of no possible advantage to the country, but which must be on the contrary a great detriment to it. I oppose it because it will cripple the railways that are already established in the older provinces; because it will destroy, or at least cripple, the great canal interests of this country; because it will injure if not destroy the government system of railways in connection with the Intercolonial; because it postpones for a period of at least five years the granting of relief to that great western country; because it postpones even an attempt to place the key of the situation of this great transportation question in the hands of the people for at least a period of fifty years; and because it imposes a burden of obligation upon this country which is wholly unnecessary, and which is contrary to the interests of the Dominion. Sir, I support the policy which has been advocated by the leader of the opposition because it obviates those difficulties and disadvantages that I have pointed out in connection with the government policy. I support the policy of the hon. leader of the opposition, because, Sir, while the Conservative party of the Dominion of Canada inaugurated a national fiscal policy for this Dominion, the honoured leader of the opposition to-day has inaugurated a national railway system for the Dominion of Canada and I support that policy because it is a policy of preservation and development as against a policy of waste and national loss.

The MINISTER OF TRADE AND COMMERCE (Rt. Hon. Sir Richard Cartwright). Mr. Speaker, at this stage of the debate it would be a mere waste of time on my part to enter into anything like an elaborate discussion of the financial or commercial details of this matter more especially because both these aspects of the question have been already handled and admirably well handled by my hon. friend the Finance Minister (Hon. Mr. Fielding) and by my hon. friend the Minister of the Interior (Hon. Mr. Sifton) as well as by many other hon. gentle-

men on this side who have addressed the House on this subject. What I more particularly desire to do on the present occasion is to address a few words to the House and to the country as to the general policy pursued by the Liberal party in times past on this great question and also as to the merits of the general policy which the leaders of the Liberal party have now the honour to propound for the consideration of this House and of the people of this country. It is just two and thirty years almost to a day since this question of a continental railway was first propounded in this chamber for the consideration of the people. Probably of those who then took part in the discussion, there are remaining at this moment scarcely as many as I could count on the fingers of one hand in both chambers of parliament, and bearing in mind that we had not then provided ourselves with the same facilities for recording the opinions of both parties that we now have, it is not unreasonable or unnatural that considerable ignorance should prevail, I may say, on both sides of the House as to the true position which the Liberal party adopted on that occasion and as to the policy which, when they succeeded in displacing the government of Sir John A. Macdonald, they were prepared to recommend. Now, Sir, I have noticed in some sections of the press, and I have noticed among some weak-kneed brethren even in the Liberal party, a disposition of which I do not at all approve to intimate that the Liberal party were to be blamed for the criticisms that they bestowed on the government policy as regards the construction of the Canadian Pacific Railway. Sir, for myself, I desire to say that I have no apology to offer and no retraction to make as to anything I may have said in condemnation of the course of the Conservative government on that occasion. My opinion is that the Liberal party were right then and that the Liberal party are right now. I am prepared on the floor of parliament or on the hustings before any Canadian audience from Vancouver to Halifax, to maintain that the events of the last seven years, that the events of the last five and twenty years, not to say of the last two and thirty years, have most amply justified in every respect and justified to the hilt all the objections that the Liberal party brought forward against the policy of their opponents at that time and most amply justified the policy which they were prepared themselves to recommend. It is not very long ago since, I believe, with the approbation of both sides of the House, we raised a statue to my honoured friend the late hon. Alexander Mackenzie on the grounds of this paliament, and I am not prepared here and I do not think the Liberal party are prepared, having done that, to underrate his ability or to depreciate the policy which was pursued by him. More than that, I want to say, as I have the right to say, and I know whereof I affirm that I have the right to say, that while Mr. Mackenzie disapproved and disapproved very strongly, as I disapproved very strongly, of the terms and conditions under which the Canadian Pacific Railway was originally constructed, when he became a minister of state and Premier of this Dominion no man could have applied himself more diligently, more zealously, more earnestly or with better results to the task before him of preparing the way by the making of proper surveys and by the construction of the essential link required to bring the two sections of the country together than Mr. Mackenzie during his term of office, and if the Canadian Pacific Railway was constructed within a reasonable space of time after his leaving office those who were concerned in it would I think endorse in full what I am stating here that it was very largely due to his energy and enterprise that they were able to bring that work to a successful termination at the time they did. I distinguish, and I think the House and the country should distinguish, between the men who conducted the Canadian Pacific Railway to a successful termination and the politicians who originally made the bargain under which the road was constructed. Scarcely too much can be said in praise of the energy and enterprise displayed by the one and scarcely too much can be said in condemnation of the short sighted policy which marked the proceedings of the other. These gentlemen have said that the Canadian Pacific Railway was a colossal undertaking and having reference to the resources of Canada at that time I am inclined to agree with them. It was a colossal undertaking but the blunders which marked it on the part of those who carried it on were colossal too. However good the record of the Canadian Pacific Railway may be looked at as a commercial undertaking, I think the future historian of Canada would bear me out when I say that no possible combination of blunders could be conceived or could have been more injurious to Canada than those which marked the initiation of that enterprise. I say in the first place that the bargain which they made in 1871 with the people of British Columbia by which, without the smallest knowledge of the actual circumstances or of the facts that they ought to have known, they bound themselves within ten years by a treaty with that state, unasked for by them, to construct that railway, was a fatal mistake, a mistake which resulted in a very great injury and very great loss to the people of Canada and which in its direct result seriously affected the permanent usefulness of the road. I say further, and I say it with full knowledge that their conduct in entering into that undertaking, and in proposing the construction of that railway without any consultation with the English government of the day, also showed great recklessness

and great folly and great short sightedness on their part in not availing themselves of the advantage of the position they possessed. Some years after it fell to my lot to endeavour to retrieve that blunder and I very well recollect that after bringing the matter before Lord Carnarvon and the late Lord Salisbury, who was then Indian Secretary, I was referred to the Chancellor of the Exchequer, Sir Stafford Northcote, to whom I made the request that the British authorities would at least come to our assistance to the extent of guaranteeing the sums which were necessary for us to raise for the purpose of building that road. I very well recollect that when I came to lay my proposition before Sir Stafford Northcote, while he admitted the substantial truth of my suggestion that the road was of imperial concern, that its construction would be a great benefit to the whole British empire; he told me nevertheless in so many words: that although he believed that my request would have been acceded to at once at the time that the union of British Columbia was affected, yet, that as we had chosen to bind ourselves by treaty to the people of British Columbia to build that road within a certain period of time, it was out of his power under the circumstances to propose to the British parliament to grant us any assistance.

Over and above all that, I say that the whole future of the North-west was for a great many years most seriously hampered and impeded by the atrocious land policy—I can use no milder term—which the Conservative government put in force, not merely by the granting of huge quantities of land for the purpose of constructing the railways, which might have been excused, but by the extraordinary folly which induced them, in a country in which it was of the greatest importance to prevent settlement from becoming straggling and scattered, and where it was eminently desirable that we should concentrate settlement, their policy brought about such a state of things that for a long period of time a great portion of the whole North-west was practically held in mortmain, and no settler, unless he was a man of means and able to purchase a large tract of property in the immediate vicinity of his farm, could be nearer than, from a mile to a mile and a half to his next neighbour.

There is not the slightest doubt that the Canadian Pacific Railway is a great enterprise. There is not the slightest doubt that the managers of the Canadian Pacific Railway showed great ability. On the whole, the work that they performed reflected very great credit on their enterprise and on their energy, and to my certain knowledge they did not spare, many of them, to risk their whole fortunes in the prosecution of that enterprise. But, Sir, while I grant that to the full ; still I say that as regarded the chief object and end of the Canadian Pacific Railway, the Canadian Pacific Railway looked on as a colonizing enterprise, was for a period of 18 years at least, a most lamentable failure. If ever there was a case of the end being sacrificed to the means, it was in the policy which was pursued by the late Conservative government with respect to that same Canadian Pacific Railway. The object that the people of Canada had in view ; the object which alone, in my judgment, justified the huge sacrifices that they were called upon to make, was a two-fold object, namely, the filling up of the North-west, and the stopping of the exodus which we had so much reason to deplore, and which went on in Canada, as everybody knows, for a period of nearly 20 years.

How stand the facts ?—and I am willing to be judged by the facts. In the 18 years to which I refer ; if you include the value of the railway that we gave the Canadian Pacific Railway ; if you include the money we spent ; if you take the value of the land we gave ; we expended in money or money's worth, about $100,000,000 for the avowed purpose of colonizing the North-west. And what did this government find when they took office, in 1896 ? I have the facts here from the Department of the Interior. They are noteworthy facts, they are facts which I trust every man who wants to know how the policy of the present Liberal government and of the Mackenzie government, and how the policy of our Conservative predecessors in office contrasted, will do well to bear in mind. What did we find in 1896 ? We found that all over Canada immigration had come to a dead standstill ; we found all over Canada that the settlement of the North-west had likewise come to a complete full stop. In 1896, the last year, bear in mind, of our predecessors' regime, the total number of homesteads taken up in the North-west had sunk to the pitiful figure of 1,340. I have to-day received from the Department of the Interior their list of homestead entries for the year ending the 30th of June, 1903, and they amount to 31,383, as against 1,340 in 1896, just seven years ago. Some of our friends opposite are fond of comparative statements and I suggest for their consideration that that is a fair comparative statement as between Liberal performance and Conservative promise—as 1,340 is to 31,383, so stands the policy of the two governments, in respect to each other.

And what has been the contrast with regard to our trade and commerce In these 18 years to which I have referred, our trade and commerce had come to almost a standstill. From the year 1878 to the year 1896 the volume of our trade and commerce increased in the ratio of two per cent per annum—36 per cent in all for the 18 years. That is very considerably less than the growth and increase which has taken place during one single year of the present Liberal government. And, Sir, what to my mind

is worse still, during that same period of 18 years our population, if the truth had been known, was barely increasing at the rate of one half of one per cent per annum. I doubt very much if the natural increment to the population of Canada from 1878 to 1896 exceeded 30,000 a year, which would be about one-fourth of what ought to have been the natural increase of a population like ours in a country like Canada. And if you refer to the records of my own department it is not too much to say that during these 18 years, Canada was nowhere, while to-day Canada is first in the march of progress among the nations of the world. I do not intend to inflict any great number of statistics on my friends here, but I had lately placed in my hands a short summary of the progress of Canada from the year 1896 to the year 1903. It varies slightly from the one I gave before, but it is worth repeating as a sort of illustration of the progress made during 18 years of Conservative rule and of the progress made during seven years of Liberal rule. It also confirms the ground upon which my hon. friend beside me (Hon. Mr. Fielding) has deemed it right to assure the people of Canada that they may, without undue pressure on their resources, hope to construct this railway on the terms that he has laid before them.

In 1896 (the year concluding on the 30th of June), the gross trade of Canada, coin and bullion excepted, amounted to $211,000,000; in this present year of grace, the trade of Canada amounted to $439,000,000, being an increase in these seven years of 107 per cent. Next to us comes the little kingdom of Japan, with an increase of 97 per cent, but if you turn to the great republic of the United States, you will find that their total increase during these seven years instead of being 107 per cent, was a bare 47 per cent. Canada had grown more than twice as fast as the United States in the volume of trade and commerce. If you compare with England or France or Germany you will find that in the case of England the total increase of trade in these years amounted to just 26 per cent, while in the case of France it amounted to 21 per cent, and in the case of Germany to 38 per cent:

STATEMENT showing the Trade of the following Countries (Merchandise only) during the years 1895 and 1902, together with the Increase and Percentage of Increase.

—	1895.	1902. (unrevised).	Increase, year 1902 over 1895.	Percentage of Increase, 1902 over 1895.

NOTE.—Years ended December 31, 1895 and 1902 unless stated otherwise; Imports for Consumption and Exports of Domestic Merchandise, unless stated otherwise.

(*a.*) Years ended June 30, 1896 and 1903.

(*b.*) Includes Total Imports, not Imports for Consumption.

Sir, I said just now, during eighteen years Canada was stagnant and still; had practically made no increase at all for the increase of two per cent per annum during these years can hardly be considered as anything worth taking seriously into account, and that both as respects the present growth of the population and as respects the growth and volume of our trade, it is absolutely and literally true that we are advancing now almost as fast in one year as we were doing before in ten years.

What was the policy that my friend Mr. Mackenzie desired to inaugurate? I have alluded to it before and may repeat it now. Mr. Mackenzie pushed forward with all his power the construction of the essential link between the waters of the great lakes and Winnipeg; he pushed forward, with all his energy, the surveys which it was absolutely necessary to make if the Canadian Pacific Railway was to be constructed at all, but, above all and before all, Mr. Mackenzie had placed before him the necessity of establishing, in the case of Manitoba,

a strong central province from which the Canadian Pacific Railway would radiate east and west as occasion demanded, and I say here now, having fully considered the whole situation, I say here now, with the additional experience of the last five and twenty years, that I fully believe that had Mr. Mackenzie's policy been carried out, had he remained in office, that Manitoba and the North-west Territories at least would have been as far advanced in 1885 as it is to-day in 1903. What we are doing now is practically, and literally almost, to repair the shortcomings which were committed during these eighteen years, and it is not an insignificant thing, it is not a slight thing, that the very track of these railways that we are now considering goes as nearly as possible over the line which had been selected five and twenty years ago by Mr. Mackenzie, and which I well believe the gentlemen of the Canadian Pacific Railway regret exceedingly that they had not been required to adopt themselves.

Now, Sir, we have had placed before us two schemes; there is the scheme of my right hon. friend the First Minister, and there is the scheme of the hon. leader of the opposition. With respect to that, I might say with some degree of truth that whereas the hands are hands of Esau, the voice is the voice of Jacob. My hon. friend, peradventure, had been instructed—I will not say dry-nursed, as he objects to that phrase—he had been instructed apparently by my hon. friend the ex-Minister of Railways and Canals (Hon. Mr. Blair) in propounding that scheme to the House. There are two or three things that strike one forcibly on looking at that scheme. I had not the advantage of hearing my hon. friend, but I read what I believe is a correct report of his speech. One suggestion that occurred to me was this, that as Canada east of Montreal had practically ignored my hon. friend and his followers, he thought it would be a good piece of policy to ignore Canada east of Montreal. That was not natural, but I do not know that it was good policy. Looking at the whole scheme, according to such lights as I possess, it struck me forcibly that the leader of the opposition, whatever else he might or might not have done, had certainly supplied my right hon. friend beside me with a very excellent argument in favour of his scheme. So far as I could see, the hon. gentleman proposed to spend a great deal more than would be necessary for us to spend, on any fair construction of the contract we are making with the Grand Trunk Pacific Railway. He proposed to spend a great deal more than my right hon. friend beside me proposes to spend, and he likewise proposes to get a great deal less for our money. If I followed him correctly, he wants to buy a large portion of the Canadian Pacific Railway line, which he would not get for nothing ; he also proposes to double-track it—a somewhat expensive operation—he is willing to purchase the Canada Atlantic Railway, and I suppose double-track and improve that, also an expensive operation. He has views at some convenient time, not stated, but which he might find would come upon him soon, of building a railway along the height of land, too. I am told he is willing to expend a very large sum of money for the purpose of constructing and owning and operating also—an expensive amusement, I may venture to state—the section of road from Port Simpson or some other point on the coast to the edge of the Rocky mountains, and he will likewise, I believe, be prepared to provide for the railways that would be required for the development of the prairie section. Take it all in all, I am inclined to think that for one penny my right hon. friend's scheme would cost, the plan of the leader of the opposition would cost us ten. However, that is a matter which we can discuss or which has been discussed already, and will be further discussed, on another occasion.

Now, Sir, with respect to our policy, I would like to point out to the hon. gentlemen opposite that there is more than one object to be aimed at in this project which is now before the House. Our objects are threefold : we desire in the first place—and that, of course, lies at the base of the scheme we are proposing to the House—to develop, and develop early, the whole of the North-west. We desire, in the second place, to knit together, as far as in us lies, the several sections of this Dominion ; and in the third place, to prevent the diverting of traffic, which unless some such project as this can be carried into effect, is almost certain to occur, I believe to the very considerable detriment of the people of Canada.

Now, under these circumstances and granting that these are worthy ends, worthy of a great party, and a policy to be desired in itself, there are two questions to be asked of us : first of all, can we afford it under the circumstances, and, in the second place, is this the best method. Here, Sir, I will pause for one instant to review an argument preferred by an hon. gentleman on the other side. Now, I hate discussing these questions from a sectional standpoint. I think that in a federated commonwealth like ours, that is the very worst policy ; we must view these questions as a whole, as they will affect all Canada, not as they will affect one or two sections, however important. But if it is necessary to have regard to sectional arguments, and if my hon. friends opposite ask what Ontario is to gain under this project, I must for once answer them according to their own line of argument. I say Ontario has a great deal to gain under this project. I say, Sir, speaking as an Ontarian, that, in the first place, about 1,000 miles of this projected

railway are to be constructed through the northern portion of Ontario, no insignificant advantage, on the whole, to that province. I say, in the second place, that the construction of that road on the terms on which we propose to construct it will bring almost every town and village of the smallest importance in Ontario into direct communication with the whole of the North-west Territories. I say, Sir, in the third place, if there should be any foundation at all for the statement made, apparently on good authority, by the government of Ontario, that the construction of this railway will open, to the advantage of the province and of the Dominion a very large and important section of territory in Ontario, which otherwise might remain for a whole generation locked-up and useless. Sir, if I correctly followed the hon. gentleman who spoke last, I would judge that he approves of about 75 per cent of our scheme. If I followed him correctly, he would find no fault, I think he said he would find no fault, with the construction of this road from North Bay to the coast of the Pacific. It is not very often that a great project can be brought forward by one party and exposed to the criticisms of the other and get as many as 75 per cent good marks. It is some time since I stood my examination in the hall of any college, but if I recollect aright, in my days a gentleman with 75 per cent on his papers generally got first-class honours.

The true objection, although the hon. gentlemen opposite do not dwell very much upon that phase of it, the true objection as far as I could judge and I do not pretend to be a thought reader, that they had to this bargain of ours was that it was too good a one. They would have preferred we should have brought down a vey much worse one. Some of them hinted broadly—and I think inconsiderately—that the bargain is so good, they do not believe that the Grand Trunk Railway will ever live up to it. Well, I am not one of those who believe it to be necessary, in order that a bargain be a good one, that the other party to it should be defrauded or injured in any shape or way. I believe that a really good bargain may be one which is to the advantage of both parties. I think that this is notably an instance of the sort. The Grand Trunk Railway could not finance conveniently a transcontinental railway on its own resources. Strong as may be the hold, it undoubtedly has on a large section of the English public, I think that is rather beyond its power, and the government guarantee is worth many millions to it, if not absolutely indispensable. On the other hand, I equally strongly believe that the government, by the terms it has made, by the mode in which it proposes to deal with this great question, is likely to escape from a sea of difficulties. Sir, were the government to own and operate, as has been suggested, this transcontinental railway, and in particular to own and operate a section so remote as that west of Winnipeg, there would be no end to the demands that would almost of necessity be made upon it for the construction of branches here, there and everywhere, for the lowering of rates, and for concessions in every possible shape and form. I have seen enough in my time of government management of railways, and I do not hesitate to say that, in the present condition of Canada at any rate, under the form of government which subsists in Canada at any rate, it would be highly impolitic and prejudical to the best interests of the country for the government to own and operate a great system of railways. So far our experiments have been costly and not altogether satisfactory; and although I could understand that, under certain and totally different conditions, the policy of government ownership might be a fair subject for discussion. I beg leave to say that, as a rule, if the government is to own and operate railways, it must own and operate them all. I beg leave further to say that our present system of government is one which imposes no end of difficulties in the way of the successful operation of railways.

Not to take the proposition exactly of my hon. friend the leader of the opposition, but to take the proposition advanced by several of his followers, what would we have if we had stopped at North Bay? Given the desirability of having an all-Canadian route, it is plain that we have taken the only possible way in which that can be attained. In this business, I hold that it is idle, and worse than idle, to discuss the commercial side alone. While I grant that that is a very important side of it, still after all it is but one side of a great national question like this. That is the greatest difficulty which besets us in the task of opening up and settling and consolidating the various sections of this Dominion. Every man who has traversed that country, or who has examined the map, will agree that the greatest practical and pressing difficulty in the matter of consolidating the interests of the various portions of Canada, lies in the huge gap we have to bridge which extends from the borders of Manitoba nearly to the province of Quebec. At this moment that bridge, as it was described lately by Sir William Van Horne, can only be traversed by one single track railway. The difficulty is accentuated by the fact that there is a large influx of immigrants coming in from the United States. In many respects those are the choicest we can get, the very best settlers that can come in. They are men of experience and capital, who will not be daunted by a single frost or disaster. They are, in every respect perhaps but one, the very best immigrants that can be had. One thing too may be said of them, that a very large number are men or descendants of men who, in former years, left Canada, and whom we

will be all delighted to welcome back to our territories. But while that is perfectly true, we must also remember that these men, from the necessity of the case, unless they are provided speedily with rapid means of communication, will tend to throw their traffic and commerce southward instead of eastward. That everybody will admit, and the circumstances are such that it is comparatively easy for them to do it. That, in my opinion, is the justification for the government of Canada incurring very considerable expense and taking very considerable risk for the purpose of securing as soon as we can, and on the best terms we can, another line of railway communication from older Canada to the new settlements. If we can create settlement along that new line, as there is reasonable hope we may do, no doubt we can go a very long way towards overcoming these difficulties. But my right hon. friend was perfectly right when he said time presses. At the best it will be some years before we can put this railway of ours into operation. In the meantime, population is pouring into the west, I am happy to say, at the rate of from 100,000 to 150,000 per year, and there is every reasonable probability that they will continue to do so (if they find railway facilities are being provided for them) during the next four or five years. At this moment, although a very large number of the immigrants who have come in have hardly had time to break the sod, the resources of the two systems, which are now operating in the North-west, are taxed, as everybody knows, to the utmost to meet the demands of the settlers. What will they be five years hence when five hundred thousand or six hundred thousand of additional settlers will have found their way to the prairies of the Saskatchewan or the Peace river valley? It is impossible for us to entirely prevent the tendency of trade to go south, and it would be absurd for us to attempt to prohibit it, but we have it in our power to provide other channels, and for this purpose, the aid of the Grand Trunk Railway is likely to be invaluable. For this purpose, we require, as in former days, the Canadian Pacific Railway required, to establish a system bringing our new line into communication with the majority of the people of Canada. Any man who knows anything of the history of the Canadian Pacific Railway knows that it was in the greatest difficulties until it had supplied itself with a system, such as the Grand Trunk Railway now has ready made; and my right hon. friend never showed his statesmanship better than when he seized the opportunity which the Grand Trunk Railway placed in his hand—the opportunity of securing the aid of a going concern with ramifications extending throughout the Dominion. Why, at the very outset a great volume of trade will be supplied to this new line of railway, which could be obtained by no other means whatever.

And, there is another consideration which it may be as well for the House to bear in mind. The Grand Trunk Railway has numerous connections. It is already extended to Chicago; and if we were to refuse to cooperate with it, if we were to refuse to accept the hand which is stretched out to us, the Grand Trunk Railway, beyond all question, would find its way into Manitoba and the North-west, but not through Canadian territory.

I do not know whether my friends opposite, I do not know whether my friends beside me, have appreciated the full significance of this fact, that, as the crow flies, the distance from Winnipeg to Chicago is just 700 miles, if the Grand Trunk so desired, it would be quite possible for it to obtain a very easy and effective entrance into the North-west through American territory. It is quite true—and there is the advantage we possess—that in any such attempt as that it would be impossible to get aid from us for the construction of a transcontinental railway. But, I repeat that if we do not choose to accept the offer they make, we should only have ourselves to blame, and we could not reasonably pass censure upon them if they avail themselves of their present connections and run their line to the North-west in that way.

Let me review the objections which my hon. friends opposite have brought forward. Those objections, as I took them down are in brief as follows: They demand that we shall have surveys and that we shall take more time. They allege though, I think, inconsiderately and without fairly estimating the value of the concessions which have been made to us by the Grand Trunk, that the price is much too high. They allege that we ignore great centres of commerce. Some allege that this road should be owned all through by the government, some that it should be owned and operated all through by the government. Now, Sir, as I have said, I was one of those who, two and thirty years ago, took part in the debates on the construction of the Canadian Pacific Railway. Unfortunately, there are few left to bear witness to what took place then, but I assure the House that we know at the very least, a thousand times more of the route we are proposing to traverse than did the gentlemen who agreed, in 1871, to build the Canadian Pacific Railway within a period of ten years. Why, Sir, it took ten years before they could find a practicable route through British Columbia; and it is my profound belief that, as the late lamented Sir John A. Macdonald did not know, when he made the treaty of Washington, whether he had the right to navigate the Yukon or not, so neither he nor his colleagues, when they made that bargain with British Columbia, knew whether they would have to cross one ridge of mountains or twenty. Certainly, surveys should be made, and they will be made and are being made; and most as-

suredly the government and the Grand Trunk would be guilty of the most consummate folly and imbecility if they did not make sure to have proper surveys made, and make sure that a proper line could be constructed, before they spent a cent of public money on that construction. And, in this bargain that we have made we are taking all reasonable precautions on that score. It is in the highest degree, not merely our interest, but the interest of the Grand Trunk Railway, which stands behind the Grand Trunk Pacific, in the first place, that the road should be well built, and, in the next place, that the road should be as cheaply built as it can be, consistent with durability. They have every interest to have it so built. They have undertaken to operate it, and we have bound them in severe penalties to operate it. They have undertaken to pay interest on the whole amount spent in construction of the road, and in that way the people and the government have good security that reasonable precautions will be taken to build the road well and on reasonable terms.

Now, Sir, I have listened with some interest to the calculations as to the probable cost to the country of this road which we propose to construct. I think the hon. gentleman (Mr. Porter), who spoke last, intimated that it would cost about $150,000,000. He did not condescend to details, but those, as he said, were a matter which might be conveniently deferred to another time. I have made some calculations, too. I agree with the hon. gentleman that we assume a large liability ; but after all, the large liability must be measured by the cost to the people of Canada. And I say this, that if the plan we have laid down be carried out, if the Grand Trunk fulfil the stipulations we have made with them, it will be found that the statement made by the Premier is literally correct, and that we shall not require to spend on this road more than an interest payment of about $2,000,000 a year for a period of seven years. It is quite true that for another period of three years on certain portions of the line, the interest may be capitalized. But on that interest so capitalized we shall draw interest. Therefore, the Premier was undoubtedly correct in saying that, if the bargain be implemented—and we have taken all reasonable security that it will be implemented—we shall have this result, we shall have a road, 3,500 miles, available for the people of Canada, and in large part owned by the people, for a total expenditure of about $14,000,000. Sir, I do not wish to make unpleasant comparisons, but this is a contrast with the arrangements that were made by which at least $100,000,000 was given as a free gift, without any ownership by the government of any part of the line, to the gentlemen who constructed the Canadian Pacific Railway.

But, Sir, what are the general results that we may reasonably hope for from the project we are now discussing ? I will take first of all that section as to which there will probably be least dispute, that is to say, the prairie section. Now, in that section for, probably, a distance of 1,000 miles you may depend on taking your road through a reasonably fertile country, the vast proportion of which may probably be used for agricultural purposes. I am under correction, but this is a calculation which has been frequently made by railroad experts, and, I think, is substantially true, that where a railway passes through a fertile country such as the North-west, every mile of railway will practically provide homes for about 100 settlers, and their families, that is to say, for a distance up to fifteen or twenty miles on each side of the road. I do not think anybody will very seriously object to that estimate. As I have said, the settlers pouring into that country are settlers of the very best quality, settlers with capital, with experience, settlers who, given the road, will probably at once make use of it to the best possible advantage. They are at once large producers and large consumers. Here let me call the attention of the House to the well-known fact that, for the first four or five years at any rate, the rapidity or progress in a prairie country is out of all proportion to the rapidity of progress in a wooded country. I do not say that, after a certain lapse of time, the wooded country may not hold its own; but I do say that before this road comes into actual operation, there is every reason to believe that the vast bulk of settlers going in there, especially the settlers from older Canada and the United States will be very large producers indeed. I do not wish to exaggerate or to draw any pictures which we may be accused hereafter of painting in too rosy colours ; nevertheless, I believe that with the advantages which modern agriculturists possess, there is every reasonable ground to hope that the bulk of these settlers, some more and some less, will average a production of something like $1,000 a year. And I invite the House to consider, if that calculation be a fair one—and my hon. friends from the North-west Territories, I think, can bear testimony to the fact that, within five years a great many settlers known to them have succeeded in doing better than I estimate—what would be the worth of 100,000 settlers to the people of Canada ? I have said nothing of what may be called the possibilities, of what may be hoped from the great stretch of country from Quebec to Winnipeg. Nevertheless, if you are to put any dependence upon the surveys made by the Ontario government, which have taken a considerable space of time, and which have been taken without any reference to this projected railway of ours, there is every reason to believe that a very large tract of good agricultural country will be added to the resources of this country. I say nothing of the British Columbia sec-

tion. Nevertheless, it must be remembered that the construction of the road through British Columbia means easy access to the territory we possess in the Klondike, to which it is becoming more and more desirable we should have easy access within a reasonable space of time; and quite possibly it may lead to the development of other equally rich Klondikes after that road is built. Now, Sir, what we hope to do, what we propose to do, what I think we can do, is this: By the construction of this railroad we can probably provide homes within a reasonable space of time for something like a million, or it may be two millions of people, in addition to those who will locate themselves along other lines which are now opened or being opened throughout the North-west.

Sir, it is alleged that we are taking risks in this matter. I do not desire to deny it, we are taking risks, no question about it. But I would like to know when any great national project was ever successfully put through unless the government that proposed it and the people that took it up were willing to take certain risks. But what we say is that we have guarded those risks well. We say that as the scheme stands we are providing a traffic that we could provide in no other way, and we are taking all reasonable precautions that this road shall be well built and cheaply built. Here let me say one word as to another objection which I notice has been taken to our project and that is that these lines to a certain extent will parallel other lines within the fertile belt. Now, my opinion is, and I give it for what it is worth, that within due limits, it is a great advantage, in dealing with a country such as we have to deal with there, a country which may be roughly defined as consisting of a fertile belt having an average breadth of 200 miles and an average length of 1,000 miles or thereabouts—I say it is a great advantage that a system of railroads should be put through which are in reasonable proximity to each other. In my judgment, in a country like this, groups of population should not be strung out at great distances from each other. I think it is a great advantage on the other hand that the population should be concentrated that the population should be, I won't say dense, but at any rate sufficiently close together to enable them to enjoy the advantages they have been accustomed to enjoy in older sections.

More than that, in all the journeys I have made through the North-west I have noticed, and the older and more observant settlers have noticed the same thing, that one of the great dangers which we have to guard against in the North-west is the temptation, particularly in a fertile country like that, recklessly to impoverish the land by taking from it a succession of grain crops and attending to nothing else. Now, I think that the multiplication of railways and the consequent concentration of population is one of the best means you can devise for the purpose of averting such a danger. How real the danger is, those who have paid any attention to the progress of agriculture in the United States can testify. It is on record that in many sections of the United States, probably quite as fertile as the North-west, the grain crops have fallen from thirty bushels an acre to twenty bushels, to fifteen bushels, to twelve bushels, to ten bushels, to eight bushels. That is the record of American agriculture, and that is a danger we desire to avert in the North-west. That is one of the questions that, if he continues in his present position, it is the intention of my hon. friend the Minister of Agriculture to devote his special attention to, and it is one in respect to which, if we are wise, we will profit by the errors and the mistakes of our neighbours.

Sir it appears to me, there are three things absolutely essential to the progress of the North-west. One of those, as I have said, is to supply a sufficient number of railroads to meet the needs of transport, and thoroughly to develop the country. Another thing, I think and in saying this I may differ in opinion from some hon. gentlemen opposite, and especially from the hon. gentleman who spoke last—another thing is a just system of taxation under which the people should receive a fair reward for their labours. A third thing, I believe, is the establishment of sound principles of farming which I trust we will see to it shall prevail in the North-west. Now I do not very often read newspaper quotations——

Mr. HUGHES (Victoria). That is rather rough on some of the right hon. gentleman's colleagues who read newspaper extracts.

The MINISTER OF TRADE AND COMMERCE. I have not noticed that my hon. friends read newspaper extracts. But, I have here an opinion from a Conservative journalist and a gentleman who, I believe, gave a considerable amount of trouble to some of my friends at the recent election. I will read what a Conservative journalist and a Conservative speaker of considerable merit, I believe, had to say in respect to my right hon. friend's scheme. That gentleman writes:

> The inhabitants of the territories would be justified in welcoming the Grand Trunk if for one reason only. That reason, which stands out, to my mind, in bold and convincing relief is that not one of the burdens or abuses which the territories have complained of in the Canadian Pacific Railway charter are to be found in the Grand Trunk proposal.
>
> If the territories were asked to contribute of their remaining wild lands to the Grand Trunk, then might we well pause, and ask ourselves whether we were not paying too great a price for the road. But the territories do not give an acre. There is no cash bonus; and the territories do not give a dollar. We shall have the Grand Trunk with spur lines and branch

lines opening up the country north and south of it ; we shall have the evil spell of monopoly and one-road ascendancy broken absolutely without any first cost to ourselves. With another outlet to the two oceans, and the control of the rates in the hands of the government, should we not be even as the ass that brayeth, if we troubled ourselves very much about the Intercolonial, or hybridization, or any such secondary matters ? Truly we should.

If there were any exemption from taxes we might have cause to kick vigorously. But there is no tax exemption. The Grand Trunk will come in as a great taxpayer. It will contribute its share to the expense of schools and roads and bridges. Instead of being a legalized pirate, preying on the labour of the people, it will be a help to school districts, local improvement districts, and to towns and villages. This seems to me an important consideration ; and who in the territories would like to assume the responsibility of keeping out this company which will help develop the country as a taxpayer as well as a common carrier.

If the Grand Trunk were receiving a cash bonus, then we in the territories might complain, and say we had given enough of our lands to the Canadian Pacific Railway and other railroads, without paying a toll of cash to the Grand Trunk. But as before said, the territories pay not one dollar.

If the Grand Trunk were coming into the territories with power to impose whatever rates it chose on the people of the territories, then I would indeed be the first to call a halt, till the people had protection. But the Grand Trunk will not be like the Canadian Pacific Railway. It will not have a free hand and a cloudy charter under which it can demand whatever tale of brick it chooses to levy. There will be government control of rates.

If the Grand Trunk were coming in with a monopoly of any kind we might well consider whether we had not just cause to look with suspicion on its advent. But it has no monopoly. No disallowance agitation will ever be necessary.

The Grand Trunk Pacific will, in my humble opinion, be a boon to Canada at large, and to no part of Canada more than to the territories. As an old resident of the territories I welocme it as the best and most encouraging event that has ever crossed the horizon of the prairie country ; and if I might venture one word of advice to my fellow residents in the territories it is that they study the matter on its merits, and refuse to allow any mere question of party to influence them when the development, and to a large extent the whole future, of the territories are in the balance.

For if we do not get this road, what is there in sight that will do one tithe as much for us as we may reasonably expect from this new trunk road?

I think, Sir, that testimony, from a consistent opponent of the government, both with his pen and with his voice, is not to be entirely disregarded.

Mr. HEYD. Who was it ?

The MINISTER OF TRADE AND COMMERCE. A gentleman by the name of Hawkes, the editor of a Conservative paper somewhere up in the Territories.

Mr. DAVIS. At Carnduff ?

The MINISTER OF TRADE AND COMMERCE. I dare say my hon. friend (Mr. Davis) knows something of him. I think he has heard from Mr. Hawkes of the delinquencies of the present government on more than one occasion, as I have knowledge. Now, Sir, as I have said, given these conditions, it appears to me that the future of the North-west is reasonably assured. It appears to me that every cent we may expend we are justified in believing we will have returned to the public treasury tenfold by the policy we have entered into. If the scheme is carried out on the lines we have laid down, then, Sir, I venture to say that before five years have expired, by the end of which time we expect a large proportion of this road will be in active operation, the trade and commerce of this country will have increased, thanks to the production which we may reasonably expect to follow, to such a degree that the duties we will receive on our additional imports will probably in one single year more than implement the entire sum we will require to lay out on this road. And, Sir, in conclusion let me say, that if in 1871, when the revenue of Canada amounted to barely $20,000,000, when the trade and commerce of Canada collectively amounted to barely $17,000,000, we might have had cause to hesitate before we committed ourselves to a project involving a gift of $100,000,000 for the construction of a little over 2,000 miles of road, it does not follow, that in 1903 when the trade and commerce of Canada amounted to $440,000,000 in place of $17,000,000 and the revenue to $66,000,000, in place of $20,000,000 we cannot afford to donate $14,000,000 for the construction of a road 3,500 miles in length.

Hon. J. I. TARTE (Montreal, St. Mary's). Mr. Speaker, I do not rise with the hope of saying anything new in this debate, because the question under discussion has been dealt with from all standpoints. But the position I have occupied and the attention that I have endeavoured to give to the transportation question make it a duty for me to ask the indulgence of the House on this occasion. One thing is cheering. We have not heard anybody during this long and interesting debate talking blue ruin or talking about the absence of the credit of this country. On both sides hon. members of the House have expressed the fullest confidence in the future of Canada and in its ability to grapple with the biggest problems. Mr. Speaker, we possess in the North-west Territories a vast and fertile domain. Last year 100,000,000 bushels of grain of all kinds were grown in those territories, 53,000,000 bushels of wheat in Manitoba, and 14,000,000 bushels of wheat in the territories. During the last couple of years we have heard a good deal about the condition of trade in the west. Complaints have been made to this parliament over and over again. It was said that there were not enough elevators, not enough granaries either in the Territories or at the ter-

minals. The railways had not foreseen the great development that was coming on. They had not supplied themselves with the equipment which they could have, perhaps, provided. Undoubtedly, there was, as I have said, not enough elevators, not enough granaries, and undoubtedly there was not enough rolling stock at the disposal of the railway companies. The congestion existed from the wheat fields to the outlets. There was no congestion from the outlets to the seaboard. About the same congestion took place in the American territories, not quite to the same extent, but a good deal of congestion took place there. The evils of others do not cure our own. I fully recognize, and all men who have given some attention to the condition of affairs in this country have recognized that something ought to be done. I do not share the views of some of our colleagues in this parliament when they say that there has been no question of another transcontinental railway. The question was discussed in the press. It was discussed, specially, perhaps, in the province of Quebec, where the Trans-Canada Railway Company was organized four or five years ago, with the object of constructing a transcontinental railway. However, I do not mean to discuss that side of the question now. Let me call to the attention of parliament the geographical position of Canada. Our North-west Territories are tributary to Lake Superior, differing in that respect from the American states or from a good many of them at any rate. Some of the American states are tributary to Lake Superior, some others are tributary to Lake Michigan, and some others are tributary to the Gulf of Mexico. Our territories are tributary exclusively from the water-way standpoint to Lake Superior. We have no share in the ownership of Lake Michigan. During the last ten or twelve years the tendency of the grain and flour traffic has been towards Lake Superior. The construction of the Minneapolis, St. Paul and Sault Ste. Marie Railway which was completed in 1888, contributed greatly to make Duluth and West Superior more and more the head centres of the grain trade. Let me quote from the 'Monthly Summary of Commerce and Finance' of the United States:

> Spring wheat markets, reporting for eleven months, including Minneapolis, Milwaukee, Duluth, and Chicago, have thus far this year received 162,675,462 bushels, against 172,717,364 bushels in 1902 and 146,508,740 bushels in 1901. A marked feature in the wheat trade of the North-west is the concentration of the crop at Minneapolis and Duluth, at the former point for milling and at the latter for lake shipment eastward. More than half of the total receipts have gone to Minneapolis, and there is a steadily increasing volume drawn to that centre of consumption. Duluth likewise has gained in wheat receipts from 18,002,583 bushels in 1901 to 41,465,290 bushels in 1902 and 34,008,376 bushels in 1903. On the contrary, Chicago has been handling a steadily diminishing volume of wheat. From 43,391,337 bushels in 1901 to 38,007,346 bushels in 1902 and 34,761,870 bushels in 1903 is evidence of the change that is gradually taking place in the course of the country's grain trade.

Chicago will, of course, be always one of the most important trade centres for wheat, corn and flour, because it is at the outlet of the corn and soft wheat belt. Our Canadian railways are drawing a good deal of the trade from Chicago, and let us hope that when we have carried out contemplated improvements we will draw to Canada more and more of that western trade. But, again, Lake Superior, is the natural outlet of our Canadian North-west, and the great trade from the American states is being diverted gradually towards Lake Superior. That is the clearest evidence of the strategic importance of Duluth in a commercial sense. Lake Superior is the key of the St. Lawrence route. It is the first link in the great water-way through Canadian channels from the west to the east. From the very beginning of civilization on this continent, the waters between Montreal and the upper lakes were recognized as the natural trade route. In 1798 the North-west Company built the first lock at Sault Ste. Marie to be used by the fur traders in French bateaux and in English boats. That first lock was 38 feet long by eight feet wide, and Mr. Clergue has renovated that interesting relic as a curiosity for those who visit Sault Ste. Marie. I feel that it is unnecessary to say much in support of the superiority of waterways as a means of transportation. That is self-evident, but the two transportation systems, the railways and the waterways are not enemies; they are allies. They must be made to work in harmony. There has been a very severe struggle between the railways and the waterways in the United States. In 1861 the lakes were carrying the greatest quantity of grain and flour, but in 1865 the railways began to encroach on the lake vessels for the carriage of these products, and especially flour. In 1881 the railways were carrying 96 per cent of all the flour transported, and had practically the whole trade in their hands. From that date, however, the lake vessels increased their flour shipments year after year, and to-day they are carrying 40 per cent of the flour from Chicago, as well as a large quantity of corn and a larger quantity of wheat. A great deal of that trade is carried to Buffalo. Chicago has lost ground. I was not in the House when the Minister of Agriculture made his excellent speech, but I notice that he gave figures to show that a large quantity of grain, and flour especially, as well as other products, were being carried from Chicago. Chicago will always be a large centre of trade, as I have said, and the many railways that are centreing there will always bring to it a trade in grain and flour. But it is undoubtedly a fact that Chicago is losing its grain

trade year after year, and for the excellent reason that the wheat fields of some years ago are being displaced, and that the northern states are to-day the wheat-growing states par excellence. Chicago is exceptionally well located as far as railways are concerned. The distances are favourable to Chicago. The distance from Chicago to Buffalo by rail is a little over 500 miles, and the distance by lake is 889 miles. In spite of that, the lake vessels are carry ing from Chicago to-day about 40 per cent of the flour and 70 per cent of the wheat, not quite 70 per cent but over 60 per cent of the wheat. The same thing may be said of Milwaukee. In 1900 only 12 per cent of the flour from Milwaukee was shipped by rail; 39 per cent was shipped by the transit lines and 50 per cent all lake. Let us not lose sight of the fact that a large quantity of the traffic which is represented as being carried all rail is destined for local points for local consumption. Nearly all of the grain, especially of the wheat and corn, which is destined for export is carried by lake. The railways must necessarily carry grain to ports that are not reached by the lakes, and that is the reason that such a large quantity of rail traffic still appears to the credit of Chicago. I have insisted on these points to establish, to the best of my ability, the superiority of water transportation.

Let me quote on that point from the report of the proceedings of a conference that has been held in the month of June of this year. I will quote the words of Mr. Alfred Noble, who is president of the American Society of Civil Engineers :

> The average haul during the season of 1902 on the lakes has been 827·4 miles. The freight was 0·89 mills per ton mile.
>
> If the freight had been carried by rail the average could hardly have been less than three mills per ton-mile.
>
> On this basis, the saving in transportation by the water route during one year was nearly $63,000,000. This amount of saving on Lake Superior commerce alone, during a single year, is within $5,000,000 of the entire amount appropriated by the United States for all harbours and waterways on the lakes above Niagara Falls from the formation of the government; if the commerce between Lake Michigan and Lake Erie be included, the annual saving greatly exceeds the amount thus appropriated. Indeed, the savings during one year on a single article, iron ore, would repay all the money expended up to this time on the waterways and harbours which it traverses on its way from mine to furnace. Viewed in this way, no great investment was ever made by a corporation or government with such a magnificent showing of profit. But a far broader view may be taken justly; this water route has not merely afforded inexpensive transportation, but has been creative of a large part of the wealth of the nation. Without it, the development of our manufactures of iron and steel and other industries dependent on them, related to them, all constituting a great share of the national wealth, would have been retarded or impracticable; without it, the prairies of the North-west would have remained unproductive and unpeopled for a much longer time. With these broad considerations in view, we may place to the credit of lake transportation a sum perhaps hardly definable, but compared to which the largest above mentioned is a mere trifle.

My hon. friend the Minister of the Interior has quoted some rates from Kansas City to Chicago. I did not intend to say anything at all on the question of rates which has been so fully dealt with by many members of this House, but in view of the statements made by the hon. minister, I shall refer briefly to this question. The rates on wheat from Chicago, Duluth, Port Arthur and Fort William to Meaford, Midland, Owen Sound, Goderich and other lake ports this season are between 1⅛ and 1¼ cents and even 1 cent. The highest rate between Chicago and Buffalo in 1902, has been 2½ cents. The lowest rate has been 1⅜ cents, an average for the season of 1·5 cents. Let me compare the rates by rail and canal. The average rate from Chicago to New York by lake and canal in 1900—and the rates were about the same last year—was 4·49 cents; by lake and rail, 5·10 cents; by all-rail, 9·96 cents; The comparison is worth noting.

In 1901 by lake and canal between the same points, that is from Chicago to New York, the rates were as follows: By lake and canal, 5·11 cents; by lake and rail, 5·54 cents; by all-rail, 9·88 cents.

The Duluth rates are the same. I could quote from the reports of the Chicago Board of Trade and of the New York Produce Exchange, but I will not worry the House with quotations of rates which are available to any one who wants to look them up. They all prove in the clearest possible manner that the difference between railway transportation and lake transportation is about 60 per cent in favour of lake transportation, at least 60 per cent.

So far I have quoted the rates of to-day, the rates that have been in force. What are going to be the rates of the future ?

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

Hon. Mr. TARTE. For about five cents a bushel of corn or wheat is carried from Chicago to New York. We should not forget that Chicago is only 912 miles from New York and about 800 miles from Baltimore and Philadelphia, so that it is in an exceptionally favourable position for railway transportation. What are going to be the rates in the future ? As I have said, grain is carried at the rate of five cents per bushel to-day between Duluth, Chicago, New York, Philadelphia and Boston. Our American friends do not mean to stand idle. They do not intend to rest on the laurels they have gained. The legislature of the state of New York has adopted a project

by which $100,000,000 will be spent on the Erie Canal. That canal was started as a ditch. It began with four feet depth, when Governor DeWinton opened it in 1825, and was only able to carry vessels of seventy-five tons capacity. It was subsequently improved and is to-day seven feet deep. A few years ago the state legislature voted a pretty large amount to deepen it to nine feet. The work was stopped because it was found too expensive, but last year the legislature voted $100,000,000 to deepen it to twelve feet. If the electorate of the state of New York ratifies the vote of the legislature, the canal will then be able to accommodate barges of a thousand tons capacity. The average rate on a bushel of wheat in the Erie canal to-day is 2½ cents; and it is estimated that when the improvements to which I have just alluded, are carried out, the cost of carrying a bushel of wheat will be reduced to one-half cent or one cent per bushel. Then where will you be? It costs one and a-half cent from Chicago, from Duluth, from Fort William and the Georgian Bay ports to Buffalo, to carry a bushel of wheat. It has cost so far three cents or three cents and a-half in the summer to carry a bushel of wheat by rail to Buffalo and two and a half cents by the Erie canal. If the rates should be reduced to one-half or one cent between Buffalo and New York, I ask again where you are going to be and what you are going to do? Our American friends have improved their organization on the lakes in a marvellous manner. I had the advantage of making a round trip on the lakes last year. I visited nearly all the American harbours on those inland waters. I was amazed at the energy and activity that the Americans have displayed. Their organization is simply perfect. We must not be surprised at the great volume of lake trade. Lake vessels have been built with great rapidity. In 1881 the number of American vessels on the lakes was 4,000. In 1890 that number had increased to 10,555. In 1899 the number of American vessels in the lakes had risen to 20,255, and at this moment, if I am not mistaken, the number of American vessels on the lakes is 22,000. They have improved the St. Mary river and the Detroit river and deepened it to a depth of nineteen feet. Their vessels carry to-day, thanks to those improvements, as much as 250,000 bushels of grain. The size is increasing year by year. The Americans are contemplating adding an additional foot of depth on the St. Mary and Detroit rivers. Instead of nineteen feet, they will have twenty feet, which means an addition of ten per cent to the capacity of their large ships. Those waterways, the St. Mary river, the Detroit river, and the lakes, are buoyed and lighted up as the streets of Montreal and Toronto. Ships of the largest tonnage can navigate those channels just as safely at night as in the day time. The result of their improvement has been simply marvellous. I have just given the number of ships that are navigating those waters. They number 22,000 now and the rates have been decreased from year to year as fast as the improvements have taken place. When there were only fifteen feet of water from Lake Superior to Lake Erie, the freight rates, for instance, on iron were $2 per ton. As soon as there were nineteen feet depth, the rate fell to $1 per ton. In every port of any importance, there are elevators of the most modern kind. Duluth and Lake Superior ports are gaining rapidly on Chicago, as wheat and flour centres. Duluth and West Superior have twenty-two elevators, with a capacity of 34,000,375 bushels. Buffalo has twenty-eight elevators, with a capacity of 21,390,000 bushels. St. Paul and Minneapolis have forty-two elevators, of a capacity of 34,475,000. In connection with those elevators, there are flour mills in Duluth, West Superior, Minneapolis, St. Paul, Chicago, Buffalo—in fact in all the harbours worthy of mention. Those elevators are not all of the elevating kind, but there are storage elevators, which are used in connection with elevating machinery. I think that the best elevators in the United States are at Duluth. How are those storage elevators used? All the grain from the west cannot possibly be shipped in two or three months. Shipments of grain begin in September and terminate in December at the outside. The reason why the Americans have equipped Duluth, Chicago, West Superior, St. Paul with these elevators of more than a million of bushels capacity each, is because they have realized that they cannot possibly ship all their grain in two or three months. They ship all the grain they can in the season of navigation, then they store in their elevators all the grain that the different railways carry from their wheat fields. A good deal of that grain is used for milling purposes. A certain quantity is shipped to the seaboard, but very little. Let me remind all those who take some interest in the transportation question, that very little grain is handled in the winter months. Let my hon. friends look at the reports of the Chicago and Duluth boards of trade and the New York Exchange, and they will find that the largest quantity of grain is handled in the summer months, especially September and October. The grain that is shipped in the summer season is shipped to the different ports. We speak often of New York, Boston and Portland. But let us not forget that Philadelphia, Baltimore and Newport News are also very important reshipping points indeed. In the winter months, as soon as the season of navigation is opened, the railways raise their rates. I said a moment ago that the rates between Buffalo and New York were between three cents and three and one-half cents during

the season of navigation. But the very day the season of navigation closes the rates go up to five cents.

Mr. ROCHE (Halifax). Will my hon. friend (Hon. Mr. Tarte) permit me to ask him a question ?

Hon. Mr. TARTE. Certainly.

Mr. ROCHE (Halifax). Does that refer to wheat or to corn ? Corn shipped from American ports is generally grown south, and shipped earlier than wheat, which grows further north.

Hon. Mr. TARTE. Chicago is the most important centre, of course, and rates are about the same for corn as for wheat, and they are about what I have quoted. There may be a fraction of difference at times, but the rates are just about as I have given them.

Well, Sir, bearing these facts and figures in mind, bearing in mind the plain and undeniable fact that grain is carried by our American competitors for the rates I have quoted, what is our position and what are we going to do ? My hon. friend the Minister of the Interior (Hon. Mr. Sifton) has built up an argument by quoting the rates between Kansas city and Chicago. He told us that wheat had been carried for five cents per bushel between these two points.

Mr. BROCK. Five cents per hundred pounds ?

Hon. Mr. TARTE. Yes. The hon. gentleman (Hon. Mr. Sifton) has made a mistake, unwillingly no doubt. The regular rates between Kansas city and Chicago are nineteen cents per 100 pounds. Let me say immediately that the rates from points on the western Canadian side and the American side are about the same. A good deal has been said in this parliament as to the hign rates charged by the Canadian Pacific Railway and the Canadian Northern. Without quoting the figures, let me say, in a general way, that the rates are practically the same for the same distance. Or rather, I should say that the American railways, the Northern Pacific and the Great Northern, for instance, have a shorter haulage than the Canadian Pacific Railway has. Yet, their rates for that shorter haulage are about the same as the rates of the Canadian Pacific Railway for about double the haul.

Mr. BOURASSA. If the hon. gentleman (Hon. Mr. Tarte) will permit me, may I ask if he is speaking of the through rates from the west or the local rates ?

Hon. Mr. TARTE. I speak of the rates from the wheat fields of the American west and of the Canadian west to the outlet on the lakes. The rates are about the same. Well, I ask again, what are we going to do ? Are we able to compete with our American friends ? In my humble opinion we can, by taking the proper means. If we want to compete with them, I think we must take our lessons from them and from our own experience. Some of our hon. friends on the other side of the House have often told us and some have repeated the statement during this debate, that the present cabinet never did much for transportation. Well, I am, to a certain extent responsible for what has been done and what has not been done. All that I wanted done has not been done. I will refer to that later on. But the question of what we have not done is, after all, of less importance that the question of what we ought to do. In what position are we ? We are joint owners of the great lakes, except Lake Michigan. Now, here are some figures showing relative distances :

	Miles.
Chicago to Depot Harbour, via lakes.. ..	579
Depot Harbour to Port of Montreal, via rail..	379
Total	958
Chicago to Buffalo via lake..	889
Buffalo to New York via New York Central..	440
Total	1,329

Difference in favour of the St. Lawrence route and the port of Montreal, 321 miles.

	Miles.
Duluth to Depot Harbour via lake..	644
Depot Harbour to Montreal via rail.. ..	379
Total	1,023
Duluth to Buffalo via lake..	997
Buffalo to New York via New York Central..	440
Total..	1,437

Difference in favour of Montreal, 414 miles.

	Miles.
Port Arthur to Depot Harbour..	510
Distance to Midland about the same.	
New York to Liverpool..	3,105
Montreal to Liverpool..	2,821
Difference in our favour..	284

Sir, nothing is better fitted to educate us than facts. Let us see what Mr. Booth is doing to-day. Mr. Booth is a simple individual, a gentleman of large means, but he is only one man. He has built a railway. He started it as a colonization railway, and a railway to serve his own lumber business, but to-day he is carrying a vast amount of grain. I shall never forget an occasion when I was making an address at a banquet in the city of Montreal. My neighbour to the left happened to be a railway magnate. I had studied with some care the location of Mr. Booth's road and had given a good deal of attention to our geographical position. In my address I said that in my opinion Mr. Booth's road was destined to a great futrue, that it would before long carry millions and millions of bushels of grain. I was interrupted by my

neighbour in a voice loud enough to be heard 'rot.' I kept cool, but I felt that I would have my revenge by and by. A couple of years after, Mr. Booth published a statement saying that he had handled 20 million bushels of grain by the Canada Atlantic Railway. I took the statement to the railway magnate, one of my best friends, and I said to him 'rot.' He asked me what I meant, and I reminded him of his interruption. Mr. Booth is competing to-day with the great American railways, not only for the grain trade and the flour trade, but for trade of all kinds. He has a fleet on the lakes of six boats; four are under American register, for the good reason that he is handling not only Canadian trade but a larger volume of American trade, and is consequently obliged to use American registered boats. Mr. Booth will carry this year over twenty million bushels of grain from Depot Harbour. He would handle fifty million bushels of corn and wheat if he could get accommodation in Montreal or elsewhere. That simple but eloquent fact is the strongest evidence of what we are capable of doing if we only do the right thing and do it now.

Lake Superior is the headquarters of the trade, but at the same time all the lakes are tributary to the St. Lawrence route. The distance from Milwaukee, from Chicago, from Duluth is shorter to Canadian ports, to the port of Montreal, than to the ports of Buffalo and New York; in other words, a bushel of grain can be carried cheaper from those ports to the Georgian Bay ports than it can be carried to the port of Buffalo—it cannot be carried, at any rate, at the same rate, because the distance is longer than by our route. Depot Harbour is not the only harbour on the Georgian bay, all the harbours on the Georgian bay can be trade centres for grain and traffic. There are to-day, Midland, Collingwood, Meaford, Owen Sound, and on Lake Huron, Goderich—all these harbours are reservoirs of grain. A large quantity of grain is carried, not only from Canadian points but especially from American points, to these Canadian harbours. Why is it so? Because they are located in such a way that they offer more advantages. If they were equipped as the American harbours are equipped, they would handle a great deal more trade.

To help us to compete with the Americans we have two systems: The all-water system through our lakes and canals, and the lake and rail system. I had the honour of being Minister of Public Works six years and a half. A year ago last January, I presented to the right hon. gentleman, then my leader, and to my colleagues, a memorandum which was the result of my investigations on the transportation question. Before the estimates were discussed I thought it my duty to place before my colleagues a report expressing my views, and giving the result of the attention I had bestowed upon the transportation question. I then advised my colleagues to take up energetically the question of the waterways from the head of Lake Superior down to the sea. Starting by the all-water system I advised the equipment of Fort William and the further equipment of Port Colborne. Fort William and Port Arthur are the natural and necessary outlets of our North-west domain. It would be necessary in my humble opinion to spend a pretty large amount of money to place those two harbours in a proper condition to handle trade.

The Department of Public Works is carrying out a certain amount of work now. The Mission river, which is the outlet of the Kaministiquia river to the lake should immediately be widened and deepened to a depth of 20 feet for the reason that the ice accumulates at the entrance of Port Arthur harbour. By deepening the Mission river we would certainy get two or three weeks' additional navigation in the fall months which would mean a good deal indeed. I suppose a half a million dollars could accomplish that particular work at Fort William. I beg to call the attention of my former colleagues to the statement I am making now. I have studied the question carefully, I have been to the spot on several occasions and let me tell them that I know what I am talking about. Then, following our way down the lakes, I would say that all the waters should be overhauled. We should have on the lakes testing machines, as we have on the St. Lawrence, so as to be sure that we have the depth of water that we say we have in our reports, and so as to be sure that there is no obstacle to navigation. At Port Colborne a couple of million dollars should be spent, and I will tell the House how, in my humble opinion, it should be spent. The Public Works Department is completing the breakwater on the north side of the harbour. That breakwater will not be sufficient. That port cannot be used by ships for loading and unloading unless there is another breakwater on the other side. The waves on Lake Erie are nearly as big as on the Atlantic ocean, and unless you protect the ships you cannot possibly handle the trade there. I was advising my colleagues in the memo. which I hold in my hand, that an elevator and warehouses ought to be built at Port Colborne, and that the port should be equipped as a national harbour. Before I started for the Paris exhibition my colleagues were good enough to permit me to place in the estimates of the Department of Public Works the sum of $250,000 for an elevator at the port of Montreal. I had advised, and my advice had been accepted by my former colleagues, the building of an elevator at Port Colborne, at the port of Montreal and at Lévis. I will explain later on why I gave that advice then. At Port Colborne we should immediately make the necessary expenditure

to provide a harbour that would allow the large boats in the carrying trade on the lakes to load and unload. On the American side, Buffalo, with its 22 elevators, with its magnificent improvements, with its good and safe harbour; on the Canadian side, nothing. We are in that position. We are public carriers. We have spent $80,000,000 in building our system of canals. It is not surprising that we are not handling more trade in our canals. We have no equipment. It would be necessary to spend a couple of million dollars to make Port Colborne what it should be. There is an obstacle at that point to which I have called the attention of the House. When a ship loaded too heavily to go through the Welland canal arrives at the entrance it is obliged to light its cargo. The Grand Trunk Railway Company has a small elevator at Port Colborne and another one at Port Dalhousie. The Grand Trunk Railway charges 2 cents a bushel to carry grain for 27 miles; in other words, it costs more to carry a bushel of grain between these two points, 27 miles apart, than it costs to take it from Chicago to Buffalo, Port Colbourne or to Depot Harbour. That state of affairs should be put an end to immediately. The government should either acquire that piece of railway or take some means to give relief to the trade. If we want our water-ways to compete with the American water-ways we must take means to bring about that result. The distance between Port Colborne and Montreal is 367 miles, out of which there are 63 miles of canals, and the balance is composed of lake navigation. As I have said, that part of our Canadian system of navigation should be overhauled with the greatest care. The Department of Railways and Canals has had charge in the past of these water-ways. I do not want to make any unfair reproach, but I know that our water-ways have not been overhauled and taken care of as they should have been taken care of. The government should overhaul them without delay. The channels should be made wider, they should be made deeper, and they should be made as safe as American waters are. Now, we have reached the port of Montreal. I advised my former colleagues in the same memo. to make in that important harbour the necessary expenditure to make it free as far as it is possible to do so. Montreal is not a local port. It is the head of navigation. It is the centre where the trade from the lakes accumulates and it is also the centre where ocean navigation comes up. We have, in the port of Montreal, been borrowing money on which the harbour commissioners have paid interest so far. The trade is increasing and there is no doubt whatever that the harbour commissioners will be able to continue to pay their interest. They will honour the obligations that they are incurring. There is no doubt as to that, but that is not the point. If by not making the port of Montreal as free as it can be made, we oblige the trade to pay tolls, that is an impediment in the way of the development of our trade. The debt of the port of Montreal, with the advance that parliament has allowed this year, will reach the very large amount of $10,000,000. Let me ask my former colleagues in the House to weigh my humble words. This is a mistake that parliament is committing. The St. Lawrence route, if we want to compete with the American route, must be made as free and as cheap as it is possible to make it. I do not mean to say that there shall be no charges at all in our national harbours. But we should only exact tolls sufficient to enable us to pay the cost of maintenance and nothing more. Let us make our national ports free as we have made the canals free. It would be necessary to spend in the port of Montreal at least $7,000,000 or $8,000,000 to properly equip that port. The warehouses that must be built, if we want to handle trade, will certainly cost $3,000,000. The wharfs that are being built to-day are not sufficient to give accommodation. The Grand Trunk Railway, the Canada Atlantic Railway and the Canadian Pacific Railway will tell you that they cannot direct more trade to the port of Montreal because they have no accommodation there. That fact is indisputable. I had advised my colleagues in that memo. to expend the money necessary to build an elevator, to build new wharfs, to equip the port with cranes and every other modern implement that we find in every well equipped harbour in the world. Since that memo. was handed to the right hon. gentleman, the harbour commissioners of Montreal, under the direction of the Department of Public Works, have started to build an elevator with borrowed money. Sir, the government should lose no time in assuming the debt of the port of Montreal to the extent at any rate of every future expenditure including the advance that has been made this year. I am not speaking from a Montreal standpoint; I am speaking from the standpoint of the St. Lawrence route from beginning to end.

In speaking of the elevators in the west I forgot to mention that it cost four cents a bushel to store grain the whole winter season in Duluth, Chicago, Minneapolis and St. Paul. I make this statement now because it will be necessary to refer to it later on.

We should not, I say, lose any time in carrying out the necessary policy to make the port of Montreal as free as it can be made. Let us not borrow any money. Let the government assume not only the debt, but the management of the port of Montreal. Montreal is the terminal of our Canadian canal system. Is it reasonable that this country, having spent $80,000,000 on canals, and spending large sums of money to-day to equip our harbours on the lakes and to deepen and widen the St. Lawrence

river; is it reasonable that the terminals should not be in our own hands? Is it a good policy? I have nothing to say against the Montreal harbour commissioners, but I do say that the system is bad. I have been long enough a minister to know that the system is thoroughly inefficient. Twelve or thirteen men meet there a couple of hours a week; business men who have their occupations waiting for them. They discuss matters in a very light way at times. I do not make any personal allusions, for I speak of the past commissioners just as I do of the present ones. The work costs at least 30 per cent more than it should cost, and the work is not attended to as it should be. There is nobody responsible. I am speaking within hearing of friends from Montreal who know that I am speaking the truth, and not all the truth either. The commissioners are men of good-will, but they are not competent for that kind of business. A minister is responsible to this parliament; the government is responsible to this House; you can lay your hand on them when they make a mistake, but the harbour commissioners are irresponsible, and you cannot do anything with them. They do the best they can, but I repeat that they are not competent to handle a large proposition like the most important harbour of this country. Last year the trade of the Montreal harbour reached the wonderful amount of $191,000,000, being nearly half the total trade of this country. Is it reasonable that such a harbour should not be under the control of the nation itself?

I had advised my colleagues to equip the ports of Three Rivers and Quebec; the St. Lawrence route for me is all the one thing. I had advised the building of elevators at Three Rivers and at Lévis. The government has reduced the plans that my department, under my direction, had prepared for the harbour works at Quebec. I believe they made a mistake in reducing these plans, but nevertheless they are doing a useful work. In Quebec they are perhaps a little better off than we are in Montreal; they are, of course, not handling the vast quantity of trade that Montreal handles, but nevertheless the port of Quebec is not eqpipped as it should be.

I had also advised the beginning of what is called the Georgian Bay canal. I do not advise the whole project immediately, but I did advise the immediate improvement of the French river. The distances have not perhaps been given the attention that they should receive, and I propose to state what they are here. From Fort William to Buffalo the distance is 750 miles, and from Fort William to North Bay the distance is 543 miles, difference in favour of North Bay of 207 miles. The distance from Duluth to Buffalo is 857 miles, and from Duluth to North Bay 575 miles, a distance in favour of North Bay of 282 miles. The distance from Milwaukee to Buffalo is 716 miles, and from Milwaukee to North Bay 463 miles, a difference in favour of North Bay of 253 miles. The distance from Chicago to Buffalo is 733 miles, and from Chicago to North Bay 520 miles, a difference of 213 miles in favour of North Bay.

That work from the mouth of the French river to North Bay would cost in the neighbourhood of $5,000,000. It has been represented to me on several occasions that the distance to Midland, another Georgian Bay port, is about the same as to North Bay, and there is something in that point.

Mr. CLARKE. Depot Harbour the same.

Hon. Mr. TARTE. Yes, it is. All these harbours on the Georgian bay are within a few miles of the same distance. There is perhaps something in that point, but let us not forget that we must not think only of to-day, and we must not think only of one railway line. The Canadian Pacific Railway have no harbour on the lakes except at Owen Sound, from which trade cannot be profitably carried to the eastern ports. The improvement of the French river would, no doubt, induce the Canadian Pacific Railway to place a fleet on the lakes. But while we were discussing the French river scheme, another discussion took place, and in these negotiations the right hon. gentleman (Sir Wilfrid Laurier) and myself took part. It was represented that if the Canadian Pacific Railway could be induced to extend its line from Peterborough to Midland, a distance of 100 miles, both the Canadian Pacific Railway and the Grand Trunk Railway could work from that port to the St. Lawrence route. It was in view of the possibility of such an arrangement being made, and after having several interviews with Mr. Hays, that I did not insist more during the last session of parliament that my colleagues should immediately provide money to begin the works on the French river. The two schemes are worthy of consideration. My own opinion is that both could be carried out with advantage, and that there would be trade enough for the two routes. However, if the French river scheme and the Georgian Bay canal cannot be started immediately, let us not lose sight of the Peterborough and Midland project.

In connection with these improvements in the harbours on the great lakes and in the port of Montreal, the improvements of the St. Lawrence itself must be taken into account and brought to a speedy completion. I expect that within the next two seasons the St. Lawrence between Quebec and Montreal will be thoroughly deepened to a depth of 30 feet and widened to 450 feet in the straight parts. There were about 65 miles of dredging to be done, and I suppose that there are now nearly 40 miles completed, as all the dredges are at work. May I call the special attention of my hon.

friend the Prime Minister himself to the immediate necessity of better buoying and better lighthouses and better fog signals on the St. Lawrence from the straits of Belle Isle up. Let me tell him that after the numerous trips I have made on the St. Lawrence route from Belle Isle up, I have come to the conclusion that the St. Lawrence route has not been attended to as it should have been and that it is not to-day receiving the attention it should. The Prime Minister himself should take that matter in hand. The Department of Marine and Fisheries should be strengthened.

Some hon. MEMBERS. Oh, oh.

Hon. Mr. TARTE. Well, I mean strengthened as far as officials are concerned. We had better have strong officials; let us have officials who would listen to instead of resisting arguments. I have nothing to say against the present officials. I know one thing, that when the minister does not travel himself he is making a mistake. Now, we have accidents—we will have accident after accident, unless better attention is given to the St. Lawrence. The pilotage system should be attended to without any delay; it is bad. The St. Lawrence, I say it again, is not attended to as it should be and what is the result? The result is that the insurance rates are higher from the ports of Montreal and Quebec than from American ports. There is no great danger between Quebec and Montreal; if a boat grounds it only scratches its bottom a little, that is all. But if unfortunately a boat is grounded in the gulf, well, the scratch is a little deeper, the ship is lost and then up go the insurance rates.

We should have a system of elevators at Port Colborne, at Montreal and at Lévis. How do the Americans handle their business? First let me remind the House and the Prime Minister, there is not one single American transcontinental line which goes from ocean to ocean. They go to the Pacific ocean but their terminals are at Omaha, St. Paul, Duluth and Chicago. They carry the products of the west, of the wheat belt and the corn belt, to the outlet. They load their elevators with this grain that they have not been able to carry in the summer months, during the seasons of navigation. In winter the manufactures mill it and flour and grain are carried to the seaports: New York, Boston, Portland, Newport News, Philadelphia and Baltimore, and a certain quantity of grain to fill the boats. My hon. friends from the maritime provinces will perhaps be kind enough to give some attention to what I am now saying. When I was Minister of Public Works I always endeavoured to study their case and their position to the best of my ability.

Now, what are the Americans doing? They carry grain to Buffalo, to Duluth, to Chicago and in winter months they ship it to their winter ports. Between Buffalo and New York the distance is 440 miles by the New York Central; between Lévis and St. John it is only 578 miles on the Intercolonial and it will be only 500 miles on the new railway which my hon. friends are asking the House to allow them to build. We will be able to compete with our American friends if we carry the wheat by our waterways as the Americans are doing. What I suggested nearly two years ago not only stands good to-day, but stands better than it did then. Our policy must be a policy of cheap rates, otherwise we will not be able to compete. My hon. friend the Minister of the Interior was reminding us the other day that a few steps from the Canadian frontier the American system of railways is working. My hon. friend is perfectly right and the distance between Winnipeg and American ports is not very great. From Winnipeg to St. Paul is only 500 miles; from Winnipeg to Duluth is only 450 miles; from Winnipeg to Port Arthur is 440 miles by the Canadian Northern Railway and 425 miles by the Canadian Pacific Railway. From Chicago to New York is only 912 miles. Now we have to be careful. For if we do not provide cheap means to carry our traffic the Americans will get it in the future as they have done in the past. St. John and Halifax, our Canadian winter ports, will get more grain and flour traffic by the waterways than they ever will by any all-rail project. What the Americans have accomplished is clear evidence of what we could do. Let us not lose sight of one thing. We have to compete, not only as regards distances, but we have to compete against strongly entrenched rivals. Those ports of New York, Boston, Philadelphia and Baltimore are great centres of trade. The railways are always sure to get there return cargoes, but the ports of St. John and Halifax have not so far been profitable centres in that respect. The Canadian Pacific Railway have taken a good quantity of traffic but the east-bound traffic has been always about ten times larger than the west bound traffic. Of course, conditions will improve and they will improve more if we take the means to give to our harbours and winter ports better equipment. Let us equip the St. Lawrence route in the way I am now suggesting. Let us accumulate a grain trade in the St. Lawrence in the fall months, and Halifax and St. John will have more trade to handle. There will always be a certain quantity of through trade handled in the winter months. Cattle will be handled by rail, and the winter months are fairly good for that trade. These are in resumé my views on the question of waterways and transportation. I think that there is urgent necessity for us to apply our energy and our financial means to improving our waterways immediately, otherwise we will lose trade. Holding these views, I awaited with a great deal of interest and anxiety the ministerial explanation on the project before us. I

stand in this happy position that I have no party purposes to serve. I am speaking for myself and without any bias or prejudice.

What is the project we have to discuss to-day ? The Grand Trunk Railway applied during this session for a charter from Quebec to the Pacific ocean. When the Bill was discussed before the Railway Committee, Sir Charles Rivers-Wilson and Mr. Hays positively declined to agree to build the eastern section at the same time as the portion in the North-west Territories. Their views was to build a railway from Gravenhurst or North Bay to the Territories. We had a vote on those points. The Grand Trunk Railway positively declined to agree to build the eastern portion of this project simultaneously. I quite understand that position in which the government was placed. I am not going to impute to them any improper motives. That is not my way of discussing questions of broad policy. I quite understand their position. When the Grand Trunk Pacific Railway declined to build the eastern portion, the government were urged by their followers to build the eastern portion from Quebec to the west ? Then our friends from the maritime provinces appeared on the scene and insisted on having the line extended to their territory. The government could not induce the Grand Trunk Pacific Railway to take up the scheme. The Minister of Trade and Commerce told us to-day very frankly that the Grand Trunk Railway credit could not build the whole enterprise, and in that my right hon. friend was right. No private company could safely build that part of the project. Then the government made up their minds to build it themselves. Let me say here that I do not share the views of those who believe that there are not good agricultural lands in the territories through which this road will go. I cannot possibly agree in the views expressed on that point. I happen to know some parts of that country well. I lived eighteen years in the city of Quebec and took special interest in the Lake St. John district. That was a great colonization district, and at its inception I took a great interest in connection with my newspaper in that part of the province. I can assure the House that from Roberval towards the west there is a magnificent fertile district, splendid lands, lands just as good as any in this country. I see some of my hon. friends nodding no, but let me tell them that I am speaking of what I know. I had properties there, not very extensive, and I have been out there fifty times at least so that I know the country pretty well.

I know that part of the country well, and it was because I know it well that I urged, with the help of my right hon. friend—that we urged upon our colleagues in 1900 to give to the Lake St. John Railway Company a subsidy on sixty miles from Roberval towards James Bay. I think the government would have done well to increase the distance covered by that subsidy and also to increase the rate of subsidy itself, for $3,200 per mile cannot possibly build a road there. It is a fine district. The Lake Temiskamangue district is also a very fine country. I was there some years ago, and I was there again last year. It is a fine district, capable of giving to settlers all the advantages that the best lands can give. The region of Lake Nipissing is also a good district. There are fertile belts, there is no doubt about that, and there are also barren lands. Behind Quebec, on the Ste. Anne river there are some lots fit for colonization, but there is no very great extent of good land. In my younger days I have often been on hunting and fishing expeditions over the height of land, across the Laurentian range. I know that part of the country fairly well. The road will pass through a country, so far as the province of Quebec is concerned, in which there are large stretches of cultivable land. Below Quebec, I happen to know the country. My hon. friend from Bellechasse (Mr. Talbot) made a statement as to the region below Quebec through which the line will pass. I have had the honour to represent L'Islet in this House, and I know the parishes through which the road will pass. They are very, very fine settlements. The whole of that district is good land. The settlers to-day are at a distance of from thirty to forty miles from the Intercolonial Railway. As to this part of the project, I believe that it is wrong to say that the lands are not good. We have no interest in saying that the lands that we possess are not good when they are good. I will not discuss the project of the government on those lines. Now, having said that much, I will discuss the question from another standpoint.

My right hon. friend the Prime Minister, in introducing this Bill, told us that the project was imperative, that it was necessary not to lose any time. Well, I shall not say that we have no survey, no information at all, but I would ask my right hon. friend whether we could not have had more information than we have now, whether before embarking on this project it would not have been the part of prudence to get more information ? We know that there are good lands through which this road will pass, but no survey has been made for the construction of a railway. We do not know what obstacles are to be met. Nobody knows. Then, nobody knows the financial aspect of the project. It is very well to say that the road will not cost more than $35,000 or $30,000 a mile, but I ask my right hon. friend whether he is sure that it will not cost more ? I am not afraid of spending money. In point of fact I have been accused of being a spender of money. But I find myself a very moderate man indeed in the face of the schemes of the leaders on either side of this House. It is evident that I am not so progressive as these hon. gentle-

men are. Why was this scheme imperative? Was it from a transportation point of view? I do not think it was imperative, and when my right hon. friend thinks it over, I believe he will agree with me. The road will be useful. I am glad, for one, that the Grand Trunk Railway Company gets into the North-west. I should like to see them there for good. I will deal with the position of the Grand Trunk later on. But the government have resolved to build a railway from Winnipeg to Moncton. For local purposes, it will be a useful road. I never knew of a railway that was not useful. It will develop the part of the country through which it passes—there is no doubt about that. The questions are, first, what would be the cost? And, second, could we have done better? As to the project being imperative, I think that the House has made up its mind that it is not so urgent as my right hon. friend said it was. It is not imperative, but the project is an attractive one from certain standpoints. This road will not afford us the means of competing for the trade of the west. It will not cheapen the rates on wheat or any other commodity by a fraction of a cent. Nobody on either side has tried to show that the rates will be made cheaper. It is simply out of the question that the road can have that effect. Let us compare the figures. Mr. Wolvin, to-day is taking grain from Duluth and Chicago to Quebec for less than 3 cents in the summer months. This road will not carry grain at that rate, will it? It is out of the question. The season of navigation lasts for more than seven months. On the American side very little grain is handled in the winter months. Some is brought down during those months, just as some is brought down over the all-rail route of the Canadian Pacific Railway. But nobody pretends that this new road will cheapen the rates by a single fraction of a cent. No business man in this House will contradict me on that point. From that standpoint, then, the scheme is not imperative. Would it have been better for the government not to make an arrangement with the Grand Trunk? What is going to be the result of our policy? The government has made the agreement, and, of course, the House will support the proposal of the government. For that proposal was submitted to a ministerial caucus, and it must be carried now. We may as well discuss things as they are. The scheme is to be carried—it will be carried. There are members of parliament who are not enthusiastic, but, of course, party government is party government.

Some hon. MEMBERS. Hear, hear.

Hon. Mr. TARTE. Yes, and when my Conservative friends are on this side of the House the government will be a party government, as it always has been. We are here to talk business, and not to make theories. Well, now, we have no information, the government has no more information than I have to enable them to reach a definite conclusion as to the cost. It may cost $40,000 a mile, it may cost more. The Grand Trunk Pacific is going to pay 3 per cent interest after seven years, and is exempted for three years more in certain contingencies—I think we may safely call it ten years. When the ten years are over, if the road is not paying, then the government will be approached by the Grand Trunk Pacific and will be urged not to exact interest. That is the ordinary course of affairs. It is just as well to look these things in the face. We are undertaking an enterprise that will certainly involve the credit of the country for a large amount of money. It is 1,500 miles from Winnipeg to Quebec, if that costs $40,000 a mile—it may cost more than that—there will be $60,000,000. Add $15,000,000 for the road from Quebec to Moncton, and you have $75,000,000. Well, we must make allowance for contingencies, and I think we may say $20,000,000 without hesitation for interest, &c. We are not very far from $100,000,000. Now, the country is rich and prosperous, and if the money is well invested we can stand it. But is it a good investment? Are we sure? Are my hon. friends on the treasury benches sure that the Grand Trunk Pacific Railway will pay interest? They are no more sure of it than I am. We are undertaking, as I said, an enterprise that will involve the credit of the country to the extent of nearly $100,000,000. What I fear is that we are embarking in an enterprise that will prevent us from doing something else that is more necessary. If the government are sure, if my hon. friends who support the government do feel confident that the government are making a safe calculation, I think their duty is to join me in using all legitimate constitutional pressure on my right hon. friend and his colleagues to induce them to go on with our waterway development immediately. We cannot cheapen transport by the new project, we cannot cheapen rates for our western territories. With the waterways we can certainly do it, that fact is indisputable. Our friends from the maritime provinces would derive more benefit for their winter ports through a waterway policy than they will from this railway policy. They will not get any trade from this railway, they would get a vast amount of trade through a good waterway policy.

Hon. Mr. ROSS (Victoria, N.S.) What about the winter trade?

Hon. Mr. TARTE. I am glad of the interruption. The Canadian winter ports will be served just as the American winter ports are served, through the accumulation of trade at certain points, let us say our Georgian Bay ports, and Montreal, Quebec, Lévis—these will be fed in the same

way as the American ports are fed. The American ports are fed from Buffalo, most of them.

Hon. Mr. ROSS (Victoria, N.S.). They are frozen, then.

Hon. Mr. TARTE. The land is frozen, but the railways are not frozen. If my hon. friend will give me his attention for a few minutes he will agree with me. During the fall months Americans are carrying grain to Chicago, Buffalo and other points, a vast quantity of grain that cannot be shipped to the seaboard. In the winter months they take that grain and carry it to their winter ports. I suggest the same policy for us. That policy succeeds with our American friends. They could have built through railways from New York to the Pacific Ocean; they have not done so. They carry very little grain in the winter months by railways. In the winter months they feed their ports with the grain accumulated in the fall months. I suggest the same thing. The two projects are not antagonistic. If this project did not cost more than $25,000,000, I would stand it; I would not be afraid of that. But it seems to me the government are making a big mistake, a tremendous mistake, in overlooking our waterways. Of course, the right hon. gentleman may not have said his last word. Indeed, his attention has been called over and over again to this question of transportation.

Now, what would be the result of a waterway transportation policy? On the lakes there are 22,000 American vessels carrying, not only grain, but trade of all kinds, developing the North-west and all that region west of and around the lakes. They have easy and cheap water communication between the different states. I suggest the same policy for ourselves. The same thing is being done to-day. What do we see in the St. Lawrence? Every day in Montreal we see ships bringing coal from the maritime provinces. The railway does not carry much coal, the St. Lawrence route carries it. In the winter the St. Lawrence is frozen up, so is the Erie canal, so is Lake Superior. But there is an accumulation of grain before the freezing takes place. Now, what would happen if the suggestion that I made to my colleagues formerly, and that I make again to-day, were carried out? What would be the result? There would be an accumulation of grain in Montreal, in Three Rivers, in Quebec, in Lévis, in all the ports to which ships come loaded with coal from the maritime provinces. These ships would simply take down the grain to the sea. We would build up a big merchant marine on the St. Lawrence and on the Atlantic Ocean. If we were true to ourselves, if we would only look carefully at the maps, we would realize the great possibilities that are before us. Not only can we command our Canadian trade, but we can command a large volume of American trade. In spite of the very inferior accommodation we have, we are commanding to-day a large American trade. We are attracting to our shores large volumes of trade of all kinds. Perhaps my hon. friends, and even my hon. friends on the treasury benches, have no conception of the volume of trade that Mr. Booth is carrying, not grain only, but trade of all kinds. We could do the same thing. We could establish a trade that would simply create a revolution. I am afraid that my hon. friends are embarking on a project that will prevent them from attending without any delay to the most pressing needs of this country. Are the government sure of the date at which the eastern portion of the project, that is to say, the road from Winnipeg to Quebec, will be completed? There is no date mentioned. I would like to have some information upon that point before I give my vote. The contract says that the Grand Trunk Pacific Railway Company will have to approve of the grades, that the plans must be submitted to them and that surveys will have to be made. Of course, surveys will be made. I grant that the government will not embark upon the construction of that road without making surveys. They must do it. When will the road be completed? I would like to have a clear statement on that point? The government are building the road from Winnipeg down to Quebec. Winnipeg is not a wheat centre. It is a big city, a city that is growing bigger every day, but it is not a wheat centre. Will the government have control of the rates that they think they will have? I have never known as yet of a railway company which has been fully controlled by any government as to rates. After a very long experience I have some doubt as to that. Of course, government ownership would have settled the case. I would like also to have some explanation as to the location of the road in the North-west Territories. I hold in my hands a map of the North-west Territories and of Manitoba. There are already two railways in that country without taking into account the Northern Pacific. These two railways have about 4,000 miles all told of rails laid down. The House, no doubt, would like to know before the vote is taken, from the government, if they are in a position to tell us, where the location will be. That is a very important point because we are told that the new enterprise will give additional value to a large quantity of land. There is already a pretty large quantity of land available in the North-west Territories. I think there are about 80,000,000 acres available inside of the two railways. I would like to know what the location of the road will be if the government are in a position to tell us.

I shall be glad to deal shortly with the motion of the hon. member for Winnipeg

(Mr. Puttee). The hon. member for Winnipeg is asking the House to state that the time has so come for the government to assume the ownership and management of railways. In Europe nearly all the countries are the owners of their railways and I am surprised—I confess my former ignorance—to find out that the statistics prove that the railways managed by the governments are managed cheaper and better than the railways managed by private corporations. That is the case in Belgium, it is the case in Holland, it is the case in Germany, it is the case in almost every country of Europe. France is, perhaps, the only country where that statement cannot be applied but the case of France is a peculiar one. In France the government owns only 1,600 or 1,700 miles of branch lines. All the other railways are in the hands of private companies but with this condition that all the railways will come back to the state in 1950. The government has given a guarantee to the different railways amounting to four and one half per cent with a sinking fund. In 1915 the sinking fund will have extinguished part of the debt, and under the system in force in France in 1950 the railways will come back to the state. But, France has taken good care to have the system of transportation controlled by the state. There are 12,000 miles of canals, small streams and rivers which are under the direct control of the French government and competing with the railway companies as to rates. In Germany state ownership has simply accomplished wonders. Not only is it a great military organization, but it is a great commercial organization. The railways are managed in a more democratic way because the people are consulted as to their wishes and requirements. When it is found that certain German commodities are undersold in certain markets of the world, the German management of railways comes in immediately and lowers the rates so as to enable that merchandise to compete. That is business. Well now, before embarking on the scheme that we are discussing, would it not have been the part of prudence to have the commission that has been announced to us take charge of that matter and see what we can do ? I know the feeling on both sides of the House. There is no reluctance to vote all the money necessary to be used in developing this country. The feature of this debate which will tell well in the country and outside of it, is the tone of confidence that we have heard from both sides of the House. An admirable confidence has been expressed in the future of the country. But would it not have been the part of prudence to have paused and to have had the whole matter submitted to a commission instructed to see what we can do and what is the best thing to do. The project will be useful. I hope that nobody, even the strongest opponent of the government, will claim that a railway is not a useful thing. It may be expensive but it is a useful thing. Perhaps it would have been better from a colonization standpoint to have done something else. Perhaps it would have been better to have built railways from colonizing centres. Perhaps that would have accomplished much. I express my views just as I feel them. The country has the right to have the views of those who have given some attention to a great question like this. There is a good deal in that, but for all that, the scheme will be carried out. Now, I have only one word more to say as to the Grand Trunk Railway. The position of the Grand Trunk Railway is a peculiar one. It is partly an American railway system and partly a Canadian railway system. Portland is their chief port ; it has been always their winter port and it has often been their summer port. I cannot blame them too much for that, because they could not find accommodation in Montreal or elsewhere in Canada, and they had to ship their goods somewhere. They have not spent much money in Portland itself ; not more than $2,000,000, but they have spent $25,000,000 in their system between Montreal and Portland. They have a railway from Chicago to Buffalo which is a large carrier of freight and especially of cattle, and where is their future trade going to go ? We will not live long ; even those of us who live to a good old age will not live for a great many years. The same thing is true of the representatives of the Grand Trunk Railway who are negotiating with us. They will leave this world, but the geography of the country will remain the same. The Grand Trunk Railway will never be able to carry grain during the winter months in any large quantities over that new road. What is the Grand Trunk Railway going to do in the future ? Under the administration of Mr. Reeve, the Grand Trunk Railway was altogether an American road. I had several more or less friendly quarrels with him. He was a Portland man. Fortunately, Mr. Hays succeeded him, and wide-awake man as he is, he saw that the Grand Trunk Railway Company would require some friendship or attention from this country and he looked to the port of Montreal. It was I who negotiated with him as to the Grand Trunk Railway settling in Montreal. At my request my colleagues upheld me in declining to give to the Wolvin syndicate the site at the Windmill Point and the Grand Trunk Railway to-day have that site and are building warehouses and elevators on it. Last year the Grand Trunk Railway carried about 10,000,000 bushels of Canadian grain, and during the last six months ending the first of June they carried 6,000,000 bushels of Canadian grain to Portland. In point of fact we have fed the port of Portland all through, because only an indifferent quantity, say 1,000,000 bushels of American grain, was shipped from that port. The Grand Trunk Railway did this because

they had no accommodation at Montreal, and moreover they are bound to support that part of their system. It is not a question of love with them, it is a question of business, and as they are business men they must support that part of their line. They go all through Ontario and they take pease and oats, &c., and they take wheat from Midland and they ship it via Portland. The government are going to build a line from Winnipeg. The Grand Trunk Railway will not come straight to Lake Superior but they must find an outlet somewhere. Has the government provided for that point? There will no doubt be a branch line from the government line, but is it sure that the Grand Trunk Railway will ship their trade through Canadian channels—I don't speak of to-day; I speak of things that may happen in five years or in ten years. If we improve our waterways, if we do our part on a sufficient scale, they may come through Canadian channels, but if not they will not do it. If we do not improve the spout they won't use it, they cannot use it. If we do not improve the port of Montreal, and the St. Lawrence route, and give accommodation on the lakes, the Grand Trunk Railway will not come our way, but they will go to the American seaports, as they are going now. Let me call the attention of my right hon. friend to that point, which is an essential point, and to which I am very much afraid the government has not given sufficient consideration.

My hon. friends on the treasury benches have gone fast. I do not like to lose time. I am not slow myself, but I believe they have gone fast. It would have been better for them to wait for another year to give more consideration to this scheme. However, they have not done so, and I therefore call earnestly their attention to these important points. The Grand Trunk Railway will develop the North-west. It is my wish that the North-west should remain Canadian from the transportation standpoint, as well as from the fiscal standpoint. I have always advocated the two policies side by side. Let us do our part from the fiscal standpoint and from the transportation standpoint as well, and then we can rest assured that our country will march rapidly in the path of progress and prosperity.

I have to apologize to the House for having spoken so long, but the question is of great importance. In expressing the hope that before the debate closes the Prime Minister will give us more positive information, especially as to the eastern portion of the project, I am sure that I am expressing the feeling of many members of this parliament. We have not received sufficient assurances to make up our minds. We have no idea as to the location in the North-west, we have no assurances as to the future of the policy of the Grand Trunk Pacific Railway. And the Grand Trunk Railway being both an American and Canadian concern we have to take more precaution than would perhaps be necessary in another case. I resume my seat, Sir, thanking the House for the indulgence it has extended to me.

Mr. HENRI BOURASSA (Labelle). Mr. Speaker, I have followed with a great deal of interest the speech of the member for St. Mary's (Hon. Mr. Tarte), and I must regret from a psychological standpoint, at all events, that the hon. gentleman has failed to tell us whether he was in favour of the policy of the government or not. On that point, however, I do not feel disposed to reproach him very much, because up to the last few days I will candidly admit that I had no very clear mind as to which way I would vote myself. I may say at once to the hon. gentleman (Hon. Mr. Tarte) that if I have made up my mind to vote for the project of the government it is not because any influence has been brought to bear upon me, as he seems to think is the main reason of all those who support this Bill.

Hon. Mr. TARTE. Oh, no, no.

Mr. BOURASSA. I admit that this question is of such magnitude that for any man with a will of his own, any man who has an intellect of his own, it is not an easy thing to decide immediately. At the same time I think that a man of the position of the hon. gentleman, a man who has made this transportation question his own question for five years, should, when he comes before the parliament of Canada and the people of Canada to express his views on it, be able to tell the people whether the scheme is good or not. If he cannot make up his mind as to all the good qualities or all the difficulties of the proposal I submit that he might very frankly tell the House that there are some features of the scheme of which he does not approve and some of which he does approve; but at the same time he should be in a position to tell us whether he is going to vote for the scheme or not. Perhaps the hon. gentleman is hoping that as the leader of the opposition is of somewhat the same turn of mind as he is, no vote will be taken, so that if the scheme turns out all right he will be free to say that he was favourable to it and if it turns out all wrong that he was against it.

I am not going to follow the hon. gentleman in his lengthy review of our waterways system. I admit that the hon. gentleman has in the past given to this question a good deal of attention, that he has proposed to the government and to the country at large a good many improvements to our waterways, but I do not think this is the time to discuss that part of the transportation question. As the hon. gentleman has said we have now to decide whether we are going to approve of the Grand Trunk Pacific scheme or whether we are going to disapprove of it. The questions of elevators at Port Colborne, improving the harbour of

Montreal, deepening the channel of the St. Lawrence, are questions that are not germane to the subject of this debate. Of course when the hon. gentleman discusses the question of the wheat trade I perfectly understand that he may make a comparison between the carrying of wheat by water and by rail ; but I am surprised that a man of the breadth of mind which the hon. gentleman generally displays on political questions, has discussed this question to-night from the narrow point of view of carrying grain. Certainly if the government had come before parliament and asked this House to ratify a proposal by which the credit of this country would be largely involved simply for the sake of carrying wheat I would be inclined to take the position the hon. gentleman has taken, but I would carry it to its logical conclusion and I would say 'I am going to vote against the scheme.' I have been struck during all this discussion with a remark which I may recall to the hon. gentleman, the words once uttered by a man for whom he has a great deal of admiration, whose policy he is now recommending to the people of Canada, a man for whose intellectual capacity I myself have a great deal of admiration, Mr. Chamberlain. Mr. Chamberlain was once explaining to the people of Great Britain his idea as to the change that should take place in the imperial policy of Great Britain and just in the midst of a sentence, interrupting even the grammatical construction of that sentence, he said : 'Oh that the lack of imagination should always be the drawback of Englishmen.' I am surprised that the hon. gentleman, who cannot be accused of any lack in that respect, has not realized that a scheme like this cannot be seen only from one point of view, cannot be studied only from the point of view of the actual requirements of this country. I may say that when the discussion on this resolution commenced fifteen days ago I was myself so convinced that this road could not carry wheat that I hesitated a great deal before I made up my mind to support the project. But the more I looked at the question from a broader point of view, from the point of view of the general trade of Canada, and especially from the national point of view of the general benefit of this country, from the point of view of the development of the northern districts of the province of Ontario and the province of Quebec, and from the broad, general, national point of view that it is better for the government to lend the credit of this country, to expend the money of this country, upon one large national enterprise, than to expend it piecemeal upon small enterprises, the more decided I became—and I am going to express my decision although I still entertain some doubts as to some features of the measure—that I would support the Bill. I might say that the arguments advanced by the hon. Minister of the Interior (Hon. Mr. Sifton) and the hon. Minister of Agriculture (Hon. Mr. Fisher) as to the possibilities of general trade being carried by this railway, had some influence upon my mind; but if a deep impression was made on my mind I must say that the touch of light did not come either from the caucus of the Liberal party or from any expression of opinion from the treasury benches, notwithstanding all the respect I have for the ministers of the Crown ; the one speech which induced me most strongly to uphold the government policy was the speech of my good friend the leader of the opposition. After all, on a business matter of this kind, although I find myself as does the hon. member for St. Mary's division, Montreal (Hon. Mr. Tarte) quite often in the deep sea between the two parties, we have to choose between the policy of the government and the policy of the opposition. I do not know if my hon. friend the leader of the opposition is going to offer to this House an amendment in which he will give a material form to his policy, and by which he will tell the people of this country that he has a policy of his own and that he will stand by it. If he does not do so, even if I should come to the conclusion that the government's scheme was not a good one and that I should vote against it, I would have to vote to put the accomplishment of this object into the hands of men who profess to a policy but who will not dare to formulate it, even in the mild form of a motion. If the hon. gentleman was sincere and serious in his speech, as I have no doubt he was, he is bound, before this debate is over, to put his policy in the form of a motion, and to have that motion framed on the lines of his speech of the other day so that the people of Canada can choose between the two policies. Therefore, I assume that in the speech of the other day we find the policy of the opposition on the transcontinental railway question ; and it is by making a comparison between the two schemes that I have come to the conclusion that, not being able to find an ideal scheme, I will certainly support the better of the two and to my mind the government's policy is by far the better.

As to the amendment offered by the member for Winnipeg, it is most probably going to be snowed under. At the same time there is no doubt that the hon. gentleman is putting before the House and the country a question which is going to grow in importance from day to day. I can well remember the days when my good friend from East York (Mr. Maclean) was speaking in the desert, when he was laughed at by nearly all the speakers on both sides because he was advocating the principle of government ownership. Now, however, that principle is making its way. I may say at once that I am in favour of it. First, because all the large avenues of trade belong by right to the people just as much as the King's road and the water-ways. We have no right to alienate them for ever.

Secondly, because when the trade and population of the country will have increased to a large figure, our railways might become one of our greatest sources of revenue. My third reason is because the ownership of railways by the government is the best means of regulating rates. No law we can try to put in force against a company having sovereign right over its property, will be as effective as a right which a government will have that owns the road against a company that merely operates it. In the case of Canada there is special reason why we should stand by the principle of government owership. The geographical conditions of our country are such that it is only by the building of railways we can make one country of it. Without these connecting links, the different parts of our country would be utterly divided from each other; and it stands to reason that we should protect our integrity as a nation by assuming the ownership of what might be at certain times used as the greatest disruption of the unity of this confederation.

But to adopt the principle proposed by the hon. member for Winnipeg (Mr. Puttee) would be going too far, and for a number of years government ownership should be limited to the right of ownership and not be extended to construction and operation. The hon. member for St. Mary's (Hon. Mr. Tarte) made a comparison with different European countries. Comparisons are always more or less deceitful, but we must admit that continental European countries have given the railway problem much more attention than we have. They have tried different systems and if the hon. member for St. Mary's had gone to the root of the question, he would have found out that government operation of railways has been successful only in cases where you have two things. The first condition is that there should be such an immense amount of traffic that the railways are paying by themselves, without government support, that the local traffic is such that there is almost no war of rates between the government and other railway companies. The second condition is that you must have a civil service entirely free from any political influence. In Germany the railway service is conducted just as the army is: political influence has nothing to do with it; but it will be a long time, whatever party be in power, before we can adopt such a policy. My hon. friend to my left reminds me that in those cases I have given, the country owns practically all the railways, which is different altogether between the government owning some of the railways and competing with private companies. Besides, in a new country like this, I would not be in favour of closing up immediately the avenues of railway enterprise for the investment of private capital. We should, on the contrary, invite private capital to come and aid in the operation of railways.

Coming to the present scheme, I would prefer that the government should keep the right of ownership from the Atlantic to the Pacific, that they should give a contract for the construction and a lease for the operation of the line to one private company, under one system of administration from east to west, instead of the dual system which has been adopted. To my mind the lease should have been longer, and a smaller, rather than a larger rate of interest should have been levied from the company as a rental; or, as an alternative, the company should have been required to invest a portion of its capital, and the state reserve its right to redeem it within a number of years. Anyhow, whatever, might have been the details, what I would have preferred above all would have been unity of system. The reason given against that unity of system is this, that the state cannot go into the building of hotels and branch lines, and equipping ports and fitting up steamers. But that reason applies just as much to the eastern section as to the western section. If the government are sincere in making the eastern section a colonization railway, they will have either to do these things themselves or have the Grand Trunk Railway do them. I know something about colonization. I represent a constituency where colonization has been carried on for twenty years, I have myself opened up lands for settlers, and sold them lands, and I know what arguments attract the settlers. The settler has to be directed, he has to be guided. If you leave him to himself, if you simply open a large tract of land and build a railway, and tell that settler to go there he will choose every time the worst land. He will choose that which is easiest to clear. But the good lands in Quebec and Ontario are thickly covered with wood and these do not attract settlers. You will have to build houses for the settlers, and have government agents to take them to the good land. You will have to build branch lines down the valleys you cross, otherwise you will repeat the mistake made in some districts of the province of Quebec. By settling the country across the valleys and not along the valleys, you will then have the settlement along the line poor and deprived of good land, while the settlers, who went into the valleys along the waterways, will have no railway facilities. To be complete as a colonization scheme, it will have to include the building, not of expensive hotels, but houses of refuge, such as were established by the federal government in several districts of Quebec several years ago. And you will have also to build steamship lines to give communication to the settlers along the water-ways which this road is going to cross.

It has been stated that the line from Winnipeg to Quebec should be built as a national

railway because it would be used as a great highway and a regulator of rates for the carrying of trade from western Canada to the east. But the same reasons that were given as far as the principle is concerned, for state ownership of the eastern will apply as well to the western section.

It seems to me that we very often ignore the real facts of the geography of our country. We think of this line as being a great national highway, and as destined to act as a regulator of rates between the west and the east. But, as proposed, it will simply affect that part of Canada from the centre to the east. Why should not the same principle apply to the carrying of freight from the centre to the west? I have great hopes of the future of British Columbia. I think British Columbia is one of the finest provinces of the Dominion. Certainly, the day is not far distant when there will be as much trade between the prairie country, the wheat-growing region, and British Columbia, as there is to-day between the wheat-growing region and the east. The Prime Minister has said that we are not legislating for a few years, but for a long time to come. Therefore, I regret that the principle having been adopted of having a national highway and regulator of rates between the centre and eastern parts of Canada, we do not also have a great national highway and regulator of rates between the centre and the west, and that the whole line should not be undertaken and built as a great national highway and regulator of rates for all time to come from the Atlantic to the Pacific. This is enough to show that there are things in this project which I do not like. On the other hand, there are features that I like. I take the same position as my hon. friend from Alberta (Mr. Oliver)—not being able to get all that I want, I take what is given to me. I accept this as a great improvement upon the railway policies of all past governments. I take it as a great improvement upon the time when we were giving lavishly the money of the people and the lands of the people also to assist railway companies that were not only free to do as they liked in the opening up of a country and in the carrying of trade, but that were free at any time to connect their railways with American railways and sell the future of this country from a commercial as well as a political point of view. And, when I see that the only alternative presented to the House is the scheme of the leader of the opposition (Mr. Borden, Halifax), I am bound to say that it takes a great deal from the remorse I should have had, perhaps, in voting for this project.

I have no doubt that, during my absence from the House—I have been absent for some days—a good deal of attention has been given to the project of my hon. friend from Halifax (Mr. Borden). I have not followed the discussion. But, in order to make my views quite plain, so far as the financial phase of the question is concerned, I have had some work done for me by a very competent engineer who was, I may say, one of the resident engineers of the Canadian Pacific Railway for the building of that part of their line north of Lake Superior, which is the very part which the hon. leader of the opposition proposes that the country should take over. I suppose the figures have been given to this House, but if I take the liberty of wearying the House once more with a list of figures it is because this estimate that I shall read has been very carefully prepared by this engineer, who overlooked the building of the Canadian Pacific Railway line north of Lake Superior, who knows thoroughly the Canada Atlantic system and the Canadian Northern system, and who has himself made two explorations in the district in which the road here proposed is to traverse. Therefore, I think he is the one engineer in Canada who is most competent to speak both on the project of the government and on the project of the opposition.

Mr. CLANCY. To whom does the hon. gentleman (Mr. Bourassa) refer?

Mr. BOURASSA. I refer to a gentleman who is now the manager, I believe, of the Quebec and Lake St. John Railway, and who was resident engineer of the Canadian Pacific Railway on the section north of Lake Superior, Mr. Doucet. I have asked that gentleman to make an estimate of the proposed scheme of my hon. friend, and here are his figures. The first proposition of my hon. friend is to buy the Canada Atlantic Railway and connect at Montreal. His estimate is, first, to construct a railway from Jacques Cartier Junction to Coteau, 37 miles, at $35,000 per mile, $1,295,000. To purchase the Canada Atlantic system, which cost about $17,000,000, would undoubtedly require $19,000,000. I think this is $1,000,000 less than an estimate that has been placed before this House.

Mr. BORDEN (Halifax). Does the hon. gentleman (Mr. Bourassa) know how much it has been offered for within two years?

Mr. BOURASSA. No.

The MINISTER OF FINANCE (Hon. Mr. Fielding). Does my hon. friend (Mr. Borden, Halifax) know how much they are asking for it now?

Mr. BORDEN (Halifax). I did not know that any price had been set.

The MINISTER OF FINANCE. I understand the price has advanced lately.

Mr. GERMAN. Seventeen million.

The MINISTER OF FINANCE. This is the growing time, you know.

Mr. BOURASSA. I have no intention of giving extraordinary figures. I do not think my hon. friend (Mr. Borden, Halifax) will contradict me on this estimate, when I say that it would not be safe to approach Mr. Booth with a much lower figure now. The hon. gentleman suggested the building of a branch to connect the Canada Atlantic with the Canadian Pacific Railway at or near Sudbury. This line would be about 120 miles in length. Estimating it at $30,000 a mile, we find that the cost of this would be $3,600,000. So, this would bring that part of the scheme up to $23,895,000. I may say that Mr. Doucet has forgotten to make an estimate of the building of the line that would certainly be required from Ste. Rosalie to Montreal to make a complete system to connect with the Intercolonial. Now, the hon. gentleman has suggested, in order to make the connecting link between this proposed new system of government railway and the railways in the North-west, and realize the idea of giving through transportation, to acquire or lease from the Canadian Pacific Railway the line from North Bay to Fort William. That is the very part of the line which this engineer was supervising during the time of the building of it. And, as will be noticed, he gave much more moderate figures for the cost of this line than we find given in some newspapers and also given by some hon. members in this House.

Mr. BARKER. Can the hon. gentleman tell us precisely the position occupied by Mr. Doucet when he was on the line on the north shore of Lake Superior?

Mr. BOURASSA. I could not state exactly. He was one of the superintending engineers.

Mr. BARKER. The hon. gentleman (Mr. Bourassa) knows how many grades of engineers there are?

Mr. BOURASSA. I know that there are many. But Mr. Doucet is considered one of the best railway engineers not only in Quebec——

Mr. BORDEN (Halifax). His experience on the line north of Lake Superior was many years ago.

Mr. BOURASSA. Yes, about eighteen years ago, I believe. He gives the figures here of actual cost, this is not a question of estimate. This is the cost of the line that the hon. gentleman suggested that we should buy.

North Bay to Sudbury, 79 miles at $30,000 per mile, $2,370,000; Sudbury to White River, 304 miles, at $35,000 per mile, $10,640,000; White River to Peninsula, 64 miles at $40,000 per mile, $2,560,000; Peninsula to Nepigon, 118 miles at $60,000 per mile, $7,080,000; Nepigon to Port Arthur, 64 miles at $30,000 per mile, $1,920,000; making a total from North Bay to Fort William of $24,570,000.

This added to the estimated cost of the Canada Atlantic, as purchased and connected at Sudbury with this part of the line, would be $48,465,000. I am simply giving the cost price. I do not want to give too high figures, because, even by giving the lowest figures, my conscience feels safe when I say that the scheme of the opposition is still worse than that of the government. Now, the hon. gentleman says—I am quoting from 'Hansard':

> The third point which I would submit to the consideration of the House, as a sound policy is to assist in improving the grades of one or both lines from Winnipeg to Fort William, upon condition that complete control of rates is obtained, and that the Grand Trunk Railway, as well as the Intercolonial Railway shall have running powers from Fort William into Winnipeg.

Well, this engineer estimates that to reduce the grades on the Canadian Pacific Railway between Fort William and Rat Portage would cost $3,000,000; and to reduce the grades on the Canadian Northern from Fort William northward would cost $1,500,000. Now the leader of the opposition has also suggested that in case the Canadian Northern and the Grand Trunk Pacific could not agree, the government should build the mountain section. Here is his estimate, and I think it is a very conservative estimate. It is divided into two sections: From Edmonton to Dunvegan, 250 miles, at $28,000, $7,000,000; from Dunvegan to Port Simpson, 550 miles at $48,000, $26,640,000; terminals at Port Simpson, $1,500,000. Total $35,140,000.

Mr. CLANCY. That is pretty hard on the Minister of Finance.

The MINISTER OF FINANCE. On the mountain section my limit was the $30,000 that is provided in the contract. Therefore my hon. friend from Labelle does not differ from the Minister of Finance.

Mr. BOURASSA. Now, there are certain other improvements that would have to be made. It is admitted on all hands that between Depot Harbour and Madawaska, in order to make it a wheat carrying road as the hon. gentleman is anxious to do, there should be a reduction of grades estimated at $10,000 a mile. That would mean an expenditure of $1,330,000. Now I have not read the whole speech of my hon. friend, and therefore I do not know but that he has suggested what I am going to say. But there is no doubt that if his scheme was adopted, if there were any carrying trade of a general character on that line, in conjunction with the carrying of the freight on the Canadian Pacific Railway over their own system, in conjunction with the carrying of freight over the Canadian Northern and the Grand Trunk Pacific to the east, before long a double track would have to be laid on that

part of the Canadian Pacific Railway which my hon. friend has suggested to the government to take up. Therefore, according to a low estimate, one-third of the cost of the original cost of the line would have to be added. Taking the estimates I have already given for that part, it would mean an addition of $8,190,000. My hon. friend therefore cannot deny that the Canada Atlantic Railway carrying its present trade together with the trade which is developed along its line by the settlement of the lands, and taking all the western trade that would come over that part of the Canadian Pacific Railway which my hon. friend suggests we should buy, and also all the freight that would come through the big lakes, with all the trade which is already now carried by Mr. Booth's line—all this trade would certainly necessitate a double track.

Mr. BORDEN (Halifax). I would not be prepared to admit that at all. I would ask my hon. friend if he has made inquiries, as his researches seem to have been somewhat extended, as to what the Great Northern Railway of the United States carries over a single track now.

Mr. BOURASSA. No, I have not, but I have been told that if the plan suggested by my hon. friend was carried out, the Canada Atlantic Railway could not do justice to the amount of traffic that would have to be carried over that line.

Mr. BORDEN (Halifax). In that connection would my hon. friend inform me if he had considered the proposal of the government to provide for double tracking from Winnipeg to Quebec ?

Mr. BOURASSA. No, but I will come to that later on. I am simply taking the scheme of the hon. gentleman.

Mr. BORDEN (Halifax). I suppose you will admit that it would be as necessary in the one case as in the other.

Mr. BOURASSA. I do not, for this reason, that if the scheme of my hon. friend was carried out, the line of railway north of Lake Superior would be the one connecting link between all western railways and all eastern railways, and all the freight carried by the Canadian Northern, by the Grand Trunk Railway and by the big lakes, would have to go over the Canada Atlantic Railway ; while with the government's proposal, there will be two main lines north of Lake Superior to connect the east with the west. But leaving aside the question of double tracks or the question of improvements, his scheme includes the purchase of the Canada Atlantic Railway, the building of the line to Sudbury, the purchase of the lease of the Canadian Pacific Railway line, and the building of the line through the mountains, which would bring the government expenditure up to the figure of $83,605,000. Now, if you add the improvements that would certainly be necessary, that will be imperative, it would increase the figures by $17,580,000 bringing up the grand total to $101,185,000. That is leaving aside entirely the question of a line between Quebec and Moncton. My hon. friend concedes that we may have to build a line in the northern part of Quebec and of Ontario before many years have passed. Therefore, from a financial point of view, I think the scheme proposed by the leader of the opposition is far from being as acceptable as the scheme of the government.

Now, I was dumfounded when I read, coming back from New Brunswick, the report in a newspaper of my hon. friend's speech suggesting the acquisition of the Canadian Pacific trunk line between North Bay and Fort William. The strongest argument against the government's project, so far as the transportation of wheat is concerned, was made by the ex-Minister of Railways, whom the leader of the opposition and his followers applauded so highly, namely, that the proposed line would probably not carry freight because the grades in the eastern section would not justify the company in doing so. If it is possible that the proposed railway of the government will not be in a position to carry grain. And to remedy this my hon. friend comes in and gives us an alternative in respect to a part of the line of the Canadian Pacific Railway which is known throughout America as being the most impossible line as far as the carrying of grain is concerned that there is in existence. My hon. friend comes here and says, that because we may not be able to carry grain over the line from Winnipeg to Moncton, we should not build it, but rather acquire a right of way over a piece of railway which is the greatest drawback to the carrying of freight between central and eastern Canada that is in existence. If I wanted to use the line of argument that has been used by the ex-Minister of Railways and Canals and by some of the followers of my hon. friends opposite, and if I had not for my hon. friend a deep personal respect and a thorough conviction that he is perfectly honest and sincere in everything that he proposes, I would say that this looks very much like a bait offered to the Canadian Pacific Railway to enable them to get rid of the most costly and least profitable part of their line. As far as the carrying of freight is concerned, the scheme of my hon. friend opposite is far from being as acceptable as the scheme of the government is. But, from the freight point of view, as I have said, I have followed with deep attention the argument of the hon. member for Montreal, St. Mary's (Hon. Mr. Tarte), and to my mind he has entirely forgotten that in a country like this where we contemplate the building of a railway such as that which is proposed, we not only have

to take into consideration all the conditions as they exist to-day but all the conditions as they will exist ten years hence. This railway cannot be built in one, two, three or four years. It will take some years to build it; and though the needs of the trade to-day may not be such as to make the building of this road immediately imperative, it would be improvident on our part to delay the construction of the road, if it were possible that the needs of the country would not be satisfied in a few years hence and possibly before the completion of the railway. With the development of the North-west going on, with the changing conditions in the system of farming in that country, I think it is very imprudent to say that because grain cannot be carried by the all-rail route we should not build this railway. There is one part of the speech of the right hon. leader of the government (Rt. Hon. Sir Wilfrid Laurier) which I will say very truly and very sincerely struck me much more than that part in which he spoke of the possibility of the United States repealing the bonding privilege. I am not very much afraid as to that; but one argument which my right hon. friend gave, and to which I attached more importance was embodied in his reference to the change that is taking place in the growth and cultivation of wheat. There is not the slightest doubt that before ten years are over, people in Manitoba and the North-west Territories will have adopted a different system of farming. There will be dairy industries and there will be much more mixed farming carried on than there is now. There will be an immense increase in the raising of cattle. The hon. member for Montreal, St. Mary's, was obliged to admit that cattle could not be properly transported by the water route, and therefore are we confined to the carrying of wheat? I say no, because, before this railway is completed it will be found that the road is a necessity and under these circumstances I say that we should undertake the work at once.

I regret that some changes have not been made in the scheme. If I may make a personal reflection, I might remind the House that at the opening of the session last year I asked the government to consider at once the question of railway transportation both from the commercial point of view and from the political point of view. I insisted upon the necessity of changing our railway policy and I may say very humbly that if at that time consideration had been given at once perhaps the scheme that is now before us would have had some of its features changed. I think the minister of the Crown who then stood up and asked the House to put my motion aside was the then Minister of Public Works (Hon. Mr. Tarte), who now comes forward and says we acted too quickly and that the government should have studied the subject further. As far as colonization is concerned, I have nothing more to add to what I have already said. I will not say from a political point of view whether the scheme of the government or the opposition should be carried by this House. As far as I am concerned, and as far as three-quarters of the members from the province of Quebec are concerned, it would not affect a vote. The election is not going to be contested only on that ground. The people of the province of Quebec will study the different political questions, but I may say this to my hon. friend, that leaving aside the small point of view that some of his followers have taken, and leaving aside the still smaller point of view that the hon. ex-Minister of Railways and Canals has taken, I may say that all the provinces, Quebec and Ontario as well, have a right to say that in an enterprise of this kind, due consideration should be given to all sections of this country. The province of Quebec is the oldest province in the Dominion of Canada. It is the part of the country that was settled first. We have made heavy sacrifices not only for the development of Quebec but for the development of Canada at large. At the time of Union we took from our riches to pay the debt of Upper Canada and we have paid debts that were incurred by Upper Canada to improve their ways of transportation. We have paid taxes for works that have been done for the particular benefit of Upper Canada. We have never complained very much about that, and now, when we have a railway enterprise like this, which is a national project, we ask that due consideration should be given to our interests, and the people of Ontario ask the same thing. I think we have a right to ask this without being under any necessity of giving way to sectional prejudices. We do not do it because it goes through Ontario or Quebec, but we say that when we are going to give more transportation facilities to the people of western Canada, we can at the same time give help to the provincial governments of Ontario and Quebec in settling and developing their unoccupied lands.

Now, I must say that there is one part of the government's scheme that I cannot accept. That is the line from Quebec to Moncton. It may be said that the same principle that I have just enunciated applies to the Quebec-Moncton line—the need of settlement; but I will remind my hon. friends that there is this difference: We do not ask the government to build colonization railways in Quebec and in Ontario, but we say that when a transcontinental railway is being built it should be located in such a way that the province shall derive the utmost benefit from it. If the government had already a line which was fit for through transportation, we would not ask the government to duplicate it, and therefore, under the circumstances, as far as that part of the scheme is concerned, I cannot agree to

support the line from Quebec to Moncton, inasmuch as the traffic can be carried over the Intercolonial Railway. If a colonization railway is needed let the government aid the construction of a line of railway in the province of New Brunswick for the purpose of promoting settlement. Therefore, when the Bill goes to the committee, if a motion is made to amend the contract as far as that part of it is concerned, I will vote for it. On the general question, while I have more or less diffidence in accepting some parts of the scheme and though I do not hail it with as much enthusiasm as that displayed by the hon. Minister of the Interior (Hon. Mr. Sifton), at the same time there are several features of the Bill which certainly induced me to vote for it, and which certainly permit me to endorse it with very great pleasure.

Mr. BORDEN (Halifax). May I ask the hon. gentleman whether he has any engineer's estimates of any part of the route ?

Mr. BOURASSA. Of the Quebec-Moncton line ?

Mr. BORDEN (Halifax). Yes, and of the line from Quebec to Winnipeg—I mean estimates as to the grades which he says are necessary ?

Mr. BOURASSA. No, certainly not, but as I say, I consider the railway necessary there. I consider that we should not simply build a railway in the west without extending it to the east. I consider that the fact that the government own this railway is the beginning of a new policy involving the principle of government ownership, and therefore I am in favour of that part of the line. Let me say to the leader of the opposition, that he himself has made his suggestion without having much information with regard to it. As far as one portion of his scheme is concerned, and that part of it about which we have the most information, namely the purchase of a portion of the Canadian Pacific Railway line, the information which we have in regard to it is sufficient to prove that it is absolutely unacceptable to the country.

Mr. BORDEN (Halifax). Surely the hon. gentleman knows that I stated expressly that my scheme would be subject to the best expert advice as to carrying it out.

Mr. BOURASSA. Yes. Let me say to the hon. gentleman that all the information we can gather enables us to say that the building of the railway between Quebec and Winnipeg is certainly more feasible than the Conservative government could have declared the building of the Canadian Pacific Railway at the time they undertook it. It is only a question in this case of whether you choose the St. Maurice Valley or whether you come to the head waters of the Ottawa river to cross the height of land. I may say, Sir, that I had no intention to speak on the subject to-night and the debate has been so protracted that I have left aside many other considerations that I intended submitting to the House.

Mr. BORDEN (Halifax). My hon. friend told us in the early part of his speech that he came to the conclusion that the scheme I proposed was much more expensive than the government scheme. How can he arrive at that conclusion, as he tells us he has no estimates as to the cost of obtaining these grades which he says are necessary from Quebec to Winnipeg ? How does he make any comparison when he has no estimate ?

Mr. BOURASSA. I admit that the comparison cannot be final.

Mr. BORDEN (Halifax). I see. I may hope to convince my hon. friend yet.

Mr. BOURASSA. I have given the lowest figure I could get. I asked the engineer to give the lowest figure possible. As far as the proposed government road is concerned we could give very high figures and very low figures, but take the figures that were given by the member for St. Mary's for instance, namely 1,500 miles at $40,000 a mile, and that would make it only $60,000,000 after all, and I believe we would have a better line.

Mr. BORDEN (Halifax). The hon. gentleman has made a very carefully prepared speech and I want to be perfectly clear about it. He has placed an estimate on the lines comprised in my proposal upon the basis of certain grades which he says are necessary for the economic hauling of freight. Can he tell me from any data which he has in his possession, within $10,000,000 of the cost of the government proposal based upon grades of that kind ?

Mr. BOURASSA. Certainly not.

Mr. BORDEN (Halifax). I should think not.

Mr. BOURASSA. I admit the estimate is not complete, but if the hon. gentleman (Mr. Borden) wants to leave the financial point of view, I may say that even if it were proven to me that his scheme would cost $10,000,000 or $20,000,000 less than the government scheme, I could not support it because—and that is a point which I had forgotten—the great objection made by the ex-Minister of Railways and Canals to the government scheme was an objection that I had myself in mind, namely, the dual system of the project of the government. But the hon. gentleman (Mr. Borden) asks parliament to adopt a railway system upon which we have government ownership on one part, joint ownership or lease of the Canadian Pacific Railway on another part, then running over the Grand Trunk Pacific and the Canadian Northern Railway; and again government ownership at the other

end. Under his scheme you would have government control on part of the line, Grand Trunk Railway control on another part of the line, Canada Pacific Railway control on another part of the line, and this, after fifteen days of protracted debate on the part of the opposition to prove that the government project lacks unity. Well, Sir, it certainly lacks unity in my opinion, but if there is no unity in the government project what does the hon. gentleman (Mr. Borden) think of the unity of his project ?

Mr. JAMES CLANCY (Bothwell). I am sure that the Prime Minster who has been a very constant attendant at this debate is not in a mood to listen to a two hours or three hours speech to-night, and I shall ask the right hon. gentleman to consent to my motion that the debate be adjourned.

The PRIME MINISTER. I do not like to refuse the request of my hon. friend (Mr. Clancy) but if we are to have prorogation before the snow flies we must make some progress with this debate. I understood that it is agreed that the debate would come to an end on Tuesday next. If that is so, then I will agree to the motion of my hon. friend, but it must be understood by both sides that the debate will be concluded on Tuesday next.

Mr. TAYLOR. Hear, hear.

Motion agreed to, and debate adjourned.

On motion of the Prime Minister, House adjourned at 10.55 p.m.

HOUSE OF COMMONS.

WEDNESDAY, August 26, 1903.

The SPEAKER took the Chair at Eleven o'clock.

QUESTIONS.

CIVIL SERVICE EMPLOYEES.

Mr. LEONARD—by Mr. Ingram—asked :

1. How many Civil Service employees are there, and into how many classes are they divided ?
2. What is the annual salary in each class ?
3. How many employees are there having an annual salary of not less than $1,500 ?
4. What are the hours of work for these last-mentioned employees ?
5. Is there one or several permanent federal employees who work fifteen hours per day, viz.: from nine o'clock in the morning till midnight ?
6. If so, what are their names ?
7. How many requests for increases of employees' salaries have the different Ministers received since July 1, 1902 ?
8. Who are the employees whose salaries have been increased since July 1, 1902 ?

The MINISTER OF FINANCE (Hon. W. S. Fielding). I am afraid that I shall be unable to give the hon. gentleman the information which he desires in detail, as his question is a very comprehensive one. Perhaps it would be sufficient if I indicated in general terms where the information may be found, because that which is available is already in possession of the House. The number of the civil service, the officials in each department, their classification, their salaries and their names are all set forth in detail in the civil service list. The hours of duty are from half-past nine to four o'clock, but, of course, it is expected that, when necessary, officials will work later, and many of them do. I am not aware whether there are some who work the long hours mentioned by the hon. gentleman, fifteen hours ; it is quite possible ; but I should say that if that takes place it is exceptional and in emergencies. I thought the privilege of these long hours was only restricted to cabinet ministers.

Mr. INGRAM. Or to members of parliament.

The MINISTER OF FINANCE. Or to some members of parliament, that is, those who attend. In the outside service there are officials who have longer hours, but I do not attach much importance to the question of official hours, because I think it is the duty of a civil servant to do the work that is required, irrespective of official hours. That is certainly done in my department, and I know that many civil service officials do work much longer than the ordinary official hours, and do it very cheerfully. With regard to increases of salaries since 1902, I think I am safe in saying that all the civil service officials have received what is called the statutory increase. I am not aware at the moment of any exception ; if there has been, it has been for some good reason. But speaking generally of the civil service, they receive the statutory increases. As to applications for an increase, I cannot recollect any special application, but a formal application was made on behalf of the civil service generally, by a deputation, for an increase of pay.

HAULAGE OF OFFICIAL CARS.

Mr. CLARKE—by Mr. Ingram—asked :

1. What sum was paid each year, since June 30, 1889, up to June 30, 1903, for the haulage of government, official, and private cars, over railways in Canada and the United States ?
2. How many government, official, and private cars were owned by the government on the 30th day of June, 1896 and 1903, respectively ?

The MINISTER OF FINANCE (Hon. W. S. Fielding) :

1. The government have made no payment for haulage of government, official or private cars over railways in Canada and the

United States since June 30th, 1889, up to June 30th, 1903.

2. The number of official cars on the Intercolonial Railway on June 30th, 1896, was four; the number on June 30th, 1903, was six.

One of the additional cars was required for the use of the official occupying the office of general traffic manager, which office was created to meet the changed conditions on the Intercolonial Railway by reason of the largely increased volume of traffic.

The other car was ordered in connection with the visit of the Duke and Duchess of York, and was used on the royal train during Their Highnesses' trip throughout Canada.

BAND OF THE COLDSTREAM GUARDS.

Mr. HUGHES (Victoria) asked:

1. Has the government been officially advised that the band of the famous Coldstream Guards is about to visit Canada, to play at the Toronto Exhibition?

2. If so, has it been arranged that other metropolitan centres in Canada shall have the opportunity of hearing this world-renowned musical organization?

The PRIME MINISTER (Rt. Hon Sir Wilfrid Laurier). The government has not been officially advised that the band of the Coldstream Guards is to visit Canada.

THE NATIONAL TRANSCONTINENTAL RAILWAY.

The House resumed adjourned debate on the motion of Sir Wilfrid Laurier for the House to go into committee on a certain proposed resolution respecting the construction of a National Transcontinental Railway, and the motion of Mr. Puttee in amendment thereto.

Mr. JAMES CLANCY (Bothwell). Mr. Speaker, I am sure you will consider it presumption on my part to attempt at this stage of the debate to offer anything particularly new. The discussion has been a long one, and I am not at all certain that it has been barren of what may turn out to be good results, or that it has been unprofitable to the country. One thing has been made clearly apparent during this debate, and that is that the government who have launched the scheme and those who are supporting it have no fixed ideas, absolutely no uniform notion, of the utility of the road, or of anything beyond the fact that the scheme has been placed before the House, and that they have been asked to support it. We find both the press supporting the Liberal party and Liberal members in this House, declaring, from the Prime Minister downward, that we are mostly to lose sight of every commercial consideration in connection with this enterprise, and that we are to follow what the Bill itself discloses. One main idea of it is to appeal to every sectional jealousy, to satisfy every sectional ambition, to appeal to each locality at the expense of the scheme itself. Now, Sir, the Prime Minister tells us that we are not at all to consider this as a commercial line; we have the Minister of Trade and Commerce telling us that it is idle to discuss this question in its financial aspect; and we have the Minister of Finance declaring that the short line feature of it is not of much importance, but that we must consider other interests, namely, such interests as we find in the maritime provinces. I may perhaps be permitted to say, speaking entirely for myself, that if we are to have a national scheme, if we are to have a road that may be called a national transportation road, then the country will conclude that the government ought to be strong enough to have fixed by themselves a route that would have made it purely national. The hon. gentleman dare not do that, because it will destroy every vestige of local reasons for supporting the Bill. The Prime Minister made, at least by inference, a very strong appeal on behalf of the city of Quebec and of that locality. The Minister of Justice could not refrain from strongly dwelling upon the fact that the city of Quebec and that portion of the province of Quebec had been neglected in the past, and it was time now that something should be done for them. Now, Sir, it seems to me that in undertaking a railway that is worthy to be dignified by the name of a national transcontinental railway, it should be built on some better grounds than an appeal to local and sectional interests.

Now what is this after all? The right hon. gentleman—and I do not desire to speak in severe terms of the right hon. gentleman—knows himself that this scheme is surrounded with very grave party difficulties. The right hon. gentleman had behind him a strong section of the province of Quebec, mainly from the locality where his constituency is, from which a very large delegation came to this House; and he was confronted with a very grave difficulty because on the one hand he had applications from those who were promoting a transcontinental line, and on the other from those who wanted to build it. These gentlemen have been in the field for some time. They no doubt had their applications before the government, they had no doubt had these applications heard, and they had no doubt had promises made, not only directly, but by inference, of grants of money and of land. The right hon. gentleman saw in the earlier part of the session that there was one way to deal with this business. He adopted the plan which was put in the mouth of His Excellency the Governor General, who, in the speech from the Throne, said that there was only one way to deal with it, and that was to submit this important matter to a commission of experts and let them

lay down a plan. I would like to ask the right hon. leader of the government why he abandoned that course? I know that the right hon. gentleman will not be disposed to answer that question. He would not care for this country to know the reasons why he abandoned that plan, but the country knows perfectly well what his surroundings were and that he was forced as a matter of fact by party exigencies to take a different course rather than to launch a scheme which is now merely one on paper. What did the right hon. gentleman do when he found himself in this difficulty? He could not give what the Trans-Canada people asked, because very naturally, they were asking for large subsidies. Mackenzie & Mann came at the same time seeking aid of some kind either by way of endorsing their paper, giving guarantees or otherwise. We found the Grand Trunk Railway people coming at the same time asking for assistance. The right hon. gentleman saw the impossibility of dealing with each and every one of these schemes upon its merits. He must refuse some of them. He could not afford to yield to all the demands that were made by these other corporations, each of which was no doubt very powerful in a party sense. What did the right hon. gentleman do? He abandoned his original idea, one that the country applauded at the time, and would still applaud if carried out, he abandoned the only sane and sound idea which should guide any public man leading a great political party to which the interests of this country have been entrusted for the purpose of getting out of what was purely a party difficulty. The right hon. gentleman changed the plan in a few hours, as was told us by one of his own colleagues. I may say that the hon. gentleman who made the statement was not one who was compelled to guess, as many of us guess and guess pretty acurately at what was going on; he knew what was going on, he was the colleague of the right hon. gentleman, he was perfectly well able to speak as to what was in the mind of the right hon. gentleman, as every other colleague of the right hon. gentleman knows what is in his mind, and he told us how it came about that he abandoned the whole thing. What was done? A pencil was drawn across the map of Canada. There were no surveys, there was not a particle of information, there was not a single attempt made to get any information from the moment that the right hon. gentleman was induced to declare, and to declare with good reason, that he must have a commission of experts to inquire into the conditions and necessities of the country, but a mere pencil mark was drawn across the map, and it was brought down here as a great transcontinental railway scheme. What is the right hon. gentleman's position? It is a matter of notoriety, although it is not a strange thing nor am I going to say that it is a matter that does not happen in all parties, because it is a daily occurrence under our system, that the right hon. gentleman found his friends rebelling against it from one end of Canada to the other. As to that we have the evidence of a number of gentlemen. We have the evidence, for instance, of the hon. member for North Norfolk (Mr. Charlton), who declares that he himself was opposed to it, who declares that in the caucus there were party difficulties, and who declares that he afterwards gave up his own opinion, and so on. We have innumerable declarations in this House and notably one made last night that the rank and file of the Liberal party rebelled, and if it had been possible on the part of the Liberal followers of the government in this House to have dissuaded the right hon. gentleman from the course he has taken we would have had a different state of things. But, the right hon. gentleman had to get out of his party difficulties.

It has been said by the Prime Minister, and by nearly every other hon. gentleman in this House that this will be a colonization road, that it will serve this district and serve that district. I do not lay any the less stress upon the importance of a colonization road or its utility in this country, because it is the duty of the government to assist in every possible way the building of colonization railways, but I deny that you can sacrifice a single feature of the great transcontinental line for the purpose of colonization. We must meet the necessities of colonization in some other way. Would any hon. gentleman launch a transcontinental railway scheme involving an expenditure of from $110,000,000 or $120,000,000 with colonization features that would result in the impairment of the main scheme? Had he considered for one moment the impairment of a strong feature of that scheme for the purpose of promoting colonization? Such a consideration absolutely undermines every particle of the transcontinental railway scheme. What must a transcontinental railway mean in Canada? It must mean that Canada is setting out now for the first time to solve a great problem, and the solution of that great problem not only requires that we shall have the best road that Canada can produce, but that we must have a national competing scheme that will compete with the railways that Canada comes into competition with to-day. Can we afford to consider the locality we are giving a colonization road to? Can we consider whether this or that small part of the country will be served or not? Can we consider whether this particular locality or that particular locality will gain by this railway or whether the railway should be designed for the purpose of serving the greater interests of Canada as a whole? The right hon. gentleman has sacrificed the

strong feature of a transcontinental railway by giving consideration to interests of that kind.

Having said so much, I desire now to deal shortly—and I hope I shall be able to redeem the pledge to be brief which I gave—not with the contract which has already been dealt with in very great detail, but with the two schemes which are now proposed, one by way of Bill and the other as enunciated by the hon. leader of the opposition (Mr. Borden, Halifax). I think the country will have no better means of judging than by putting these two schemes side by side, the one as declared in the Bill, the other as declared from his place in this House by the hon. leader of the opposition. Let me say at the outset that I know of nothing more unprofitable, nothing that would have a greater tendency to becloud and deceive than to make extravagant statements on the one side or the other for the purpose of showing the strength or weakness of one side or the other. Each scheme ought to be dealt with entirely on its merits. We should lay down one given rule which should be applied to both schemes, as that is the only means by which we can arrive at a fair conclusion. Thus it would be well to entirely free the question from the surroundings which hon. gentlemen have dragged into this scheme. The hon. leader of the opposition, in outlining a transcontinental railway scheme for Canada, has incidentally mentioned some matters that are only remotely connected with it. In order to make an intelligent comparison we must place these two schemes side by side at the points at which they meet and at which they may diverge and where each of them may end. I think that is the only way to give the public an intelligent idea as to the merits of the two schemes. We are told that the hon. leader of the opposition has committed himself to the building of a road from Moncton to Quebec city, and also from Quebec city to Winnipeg. Now, I am sure that hon. gentlemen who desire to discuss these two schemes upon their merits will not drag into what is after all, a clear enuciation of what the general policy will be, irrelevant considerations. In order to make it clear, I will read what the leader of the opposition said in referring to the line between Quebec and Moncton. He said :

> If within a certain number of years a practical route be found, then extend that road to the Pacific coast. Build it as a government road from Quebec to the coast. Be not afraid to undertake that project, but do not undertake it until you have the information, the data which will enable you to deal with it. I am not saying this for the purpose of delay. I believe in going ahead with the work once you get the information and the data which are necessary.

That means nothing more nor less than that when such information is obtained and when the necessity arises, the work would be undertaken, and then it would be extended as a part of the Intercolonial Railway and be a scheme under the direction of the government of the day in some way. I make that statement in order to divorce the proposal from what is after all the live question, namely, a transcontinental railway from ocean to ocean. The hon. leader of the opposition similarly dealt with the road from Quebec to Winnipeg, and he said :

> So far as the line from Quebec to Winnipeg is concerned, I am not disposed to minimize the possibility of that northern country. Looking at the history of the great west, there may be a great flood of settlement into that country north of Lake Superior some day or other, at least up to a certain point west, but I do not think we know enough at present to justify us in saying there will or will not be, because I do not know how far that country is capable of competing in the early future with the magnificent country we have in the North-west. I have some doubts as to whether or not that great northern country may compete as early as we would desire with the great western country. But I am not disposed to minimize its importance in any way, and to my mind the rational way of dealing with that road from Winnipeg to Quebec is this.

Mark the words :

> To thoroughly explore and understand it, and then to build that line from Quebec to Winnipeg, as a colonization road according as the requirements of the people and colonization demand.

Now, Mr. Speaker, it is perfectly clear that that is to be a colonization road and no more, and that colonization road is to be built when we have obtained all necessary information and when the interests and requirements of colonization demand it. Colonization alone is the main feature of that undertaking. I have dealt with these two points in order that we may consider them apart from the live question of the transcontinental road proposed by the government, and as to which the two parties are asunder. I have no doubt that the right hon. gentleman would agree with the view expressed by the leader of the opposition if he looked upon this from the point of view of a colonization road, and I believe that, because he has laid great stress upon the colonization utility of his scheme. If there was no transcontinental line in view, I have not the slightest doubt but that the Prime Minister would agree with the views expressed by the leader of the opposition, both as respects the Moncton section and the Quebec and Winnipeg section. I now propose to make a comparison between the scheme of the leader of the opposition and the scheme of the government with respect to that portion of the line which commences at the end of the Intercolonial Railway at Montreal and that part of what is called the national transcontinental railway, commencing at Moncton both ending at Winnipeg. I think such a comparison is the only

intelligible plan that can be adopted to give to the people of the country a fair conception of the two schemes. I need offer no apology to this House when I say that I would not attempt to give any figures on this point on my own initiative, because the House would properly regard such figures as being of little value. I shall not, therefore, give information that is my own, but I shall give information which has been obtained from the most reliable source possible. When the leader of the opposition laid down this scheme he particularly emphasized the fact that he would proceed with his project only on the strength of the best expert evidence that could be produced in Canada, and consequently it must be remembered that the scheme proposed by the leader of the opposition may be deviated from or changed in the light of the best expert evidence obtainable.

The hon. leader of the opposition proposed, in the first place, to extend the Intercolonial Railway from Montreal to the city of Winnipeg. We have a 99 years' lease from the Grand Trunk Railway for the use of its line from Ste. Rosalie to Montreal, so that it will not be necessary for me to refer to that part of the line to any detailed extent. We have expended large sums of money in acquiring terminals at Montreal. It is proposed by the leader of the opposition that a first-class road shall be built from Jacques Cartier junction to Côteau junction on the Canada Atlantic Railway. Mark you, we speak of a first-class road, because if a transcontinental railway is to compete for traffic with existing railways in the United States, and in Canada for that matter, no second or third rate road will do. It is estimated that the thirty miles from Jacques Cartier junction to Côteau would cost $40,000 a mile. That will not shock hon. gentlemen opposite, because the member for Labelle (Mr. Bourassa) stated that he had expert evidence from a gentleman of long experience that it would cost $30,000 a mile. It is then proposed to acquire the Canada Atlantic Railway from Côteau junction to Depot Harbour, if it can be acquired upon favourable terms, and if not, that a road should be constructed. Hon. gentlemen may say that we have to deal with corporations, and that corporations are very exacting in the amount which they require a government to pay for their property.

It would be just as well for this House and this country to understand that the people of Canada are the possessors of the soil of Canada, and that we have the right to use our power to expropriate, dealing justly and prudently, as I am sure any government would do. Canada is not a railway company dealing with another railway company. It is a nation dealing with its own affairs; and the railways of this country, whether they exist now or shall come into existence in the future, must be subject to the will of the people of Canada; so that the question as to whether we would have any trouble or not in dealing with this matter amounts to nothing. But I am now proceeding on the plan which has been clearly enunciated by the hon. leader of the opposition. It might not be thought prudent or advisable for us even to acquire the Canada Atlantic. That is entirely an open question. The estimate is that that road of 342 miles, with its equipment, could be acquired for the sum of $12,000,000. Every hon. member of this House knows that within the last two years, if not within the last year, there has been an option open to the world for that road for $11,000,000. But suppose we did not acquire the Canada Atlantic, we might have to construct a railway from Coteau Junction to Depot Harbour at a cost of $12,000,000, which would be very nearly $40,000 a mile.

Mr. WRIGHT. Would the hon. gentleman allow me to ask him a question? If you do not purchase the Canada Atlantic, how do you propose to get through the Wilno Pass? Hon. members know that there has been a lawsuit between the Canada Atlantic Company and the Canadian Pacific Railway Company as to who has the right to go through that pass.

Mr. CLANCY. I am afraid my hon. friend did not pay attention to what I said a moment ago. I said that this is not a case of one railway company dealing with another. The people of Canada will take over every pass they require in the interest of the country. That does not mean that the Canada Atlantic people will be unfairly dealt with. It means that the people of Canada must preserve and maintain their own rights, and exercise those rights whenever it is in the interest of Canada to do so.

Taking the next section of the proposed line, from Scotia Junction to Sudbury, a distance of 104 miles, our knowledge as to the character of the country or the cost of that road, is no surmise. There are actual plans made from surveys, under which contractors could put in their tenders to-morrow if they chose to do so; and the cost of that section of 104 miles is put down at $40,000 a mile. I wish in this connection to call attention to the fact that the hon. member for Labelle (Mr. Bourassa), on the evidence of an engineer whom he states to be a gentleman of repute, now connected, I believe, with the Trans-Canada scheme, gave as the cost of that section $30,000 a mile; and my figures are considerably in advance of that estimate.

Then, to acquire the Canadian Pacific Railway from Sudbury to Fort William, 555 miles, I put down as costing $25,000,000. Hon. gentlemen have laid a good deal of stress on the difficulty of dealing with that section. It seems to me, Mr. Speaker, that the hon. leader of the opposition has found a rational and final solution of that question, namely, that this unprofitable piece of

railway be used jointly by all the railways. He pointed out that the two sections of Canada are separated, as it were, by a bridge; that no single railway company could operate this unprofitable section and make it profitable; and, therefore, that the Canadian Pacific Railway Company would, as business men, without the slightest doubt, be glad to get rid of that section. What is the proposal of the hon. leader of the opposition? We have several great railways running from the west to the east—I say the more the better. At a certain season of the year that section of railway would have to be operated, either by a single company or by all the companies in common. The hon. leader of the opposition proposes to nationalize that unprofitable section of 555 miles, and offer all the railways of Canada inducements to use that bridge, which they could do combined at much less cost than could a single company. Could any proposition be made that would appeal more to the business sense of the people of Canada than that all the railways of Canada, including the people's railway owned by the government, would use that section in common? I am told that it costs the Canadian Pacific Railway, in round numbers, $1,000,000 to operate that piece of road, which is a drag on their earnings all over their system. Let us suppose that we had running over it not only the Canadian Pacific Railway, but the Canadian Northern, the Grand Trunk and the Intercolonial. We would have four railways running over that unprofitable section, reducing the cost to each three-fourths; in other words, each railway bearing one-fourth of the cost. Is that not a scheme which appeals to the good sense and the business experience of the people of this country? The estimate of the cost of that section which I give, $25,000,000, is equivalent, in round numbers, to $45,000 a mile. The estimate given by the hon. member for Labelle, obtained from Mr. Doucet, an engineer, was $40,000 a mile. Therefore, hon. gentlemen opposite will see that in every case the figures I am giving are above the estimate of their own friends, and therefore they are not in a position to quarrel with them.

The hon. leader of the opposition proposes that $3,000,000 be put down for the betterment of the road between Sudbury and Fort William; because it is recognized that if that road were acquired, it would be necessary to spend a considerable sum of money upon it for the purpose of improving the gradients.

The hon. leader of the opposition further proposes that we should acquire or lease or obtain running powers upon, or build, whatever the best railway experts in Canada, would recommend, a line from Fort William to the city of Winnipeg. You will remember, Mr. Speaker, that the hon. leader of the opposition wisely and prudently said what must be done, if you build a railway in the interests of Canada, namely, that it might be to the best interests of Canada to get running powers over the railways now going from Winnipeg to Fort William, which is the seaboard of the North-west. No one would attempt to do more than provide for the building or the acquiring, or getting running powers over the road, just as a commission would advise in such a case, and I have taken, therefore, the plan of making a calculation based upon the cost of building a road which may be a possibility in order to compare the scheme from end to end with that suggestion by the government. To acquire or construct a line from Fort William to Winnipeg, 426 miles, would cost $30,000, a mile, or $12,780,000. For the betterment of that road, we would have to spend $2,100,000, in order to make it a first class road. With your permission, Sir, I shall now go over the road from Coteau Junction to Fort William, giving what each section would cost. From Jacques Cartier to Coteau Junction, thirty miles to be constructed at $40,000 per mile would make $1,200,000. From Coteau Junction to Depot Harbour, by the Canada Atlantic Railway, the distance is 342 miles. We would have either to acquire the Canada Atlantic Railway or build another line, which would cost $12,000,000. From Scotia Junction, on the Canada Atlantic Railway, to Sudbury, on the Canadian Pacific Railway, 104 miles at $40,000 per mile would cost $4,160,000. To acquire or construct if necessary—but I am going to assume that it will be acquired, because it will be in the interest of the Canadian Pacific Railway to enter into an agreement of that kind—555 miles of railway between Sudbury and Fort William at $45,000 per mile would cost $25,000,000. For the betterment of that section, to make it a first-class road, it is estimated that $3,000,000 will be necessary. To acquire or construct—because the latter might be a possibility—the railway from Fort William to Winnipeg, 426 miles at $30,000 per mile, would cost $12,780,000. For the betterment of that piece of road, it is estimated that $2,100,000 would be required to make it a first-class road. There would be, if we add the section between Scotia Junction and Sudbury 104 miles, a matter of interest amounting probably in round numbers to $200,000.

The POSTMASTER GENERAL. With reference to the last item which the hon. gentleman gave, the item of betterment, is that intended to be applied to the road he proposes to build? Twelve million seven hundred and eighty thousand dollars he gave as the cost of building an independent line from Fort William to Winnipeg, and then he spoke of betterments on that line.

Mr. CLANCY. When I say that the construction of the road would cost $30,000 per mile, such a road might not be up to

the standard and would require additional expenditure for betterment. If, on the other hand, you were to acquire one of the roads in existence, you would have to spend that same amount on betterment to make it a first-class road. The sum total which will bring the Intercolonial Railway from Montreal into the city of Winnipeg will be $60,470,000. You remember that we are dealing now entirely with the roadbed, with its terminals, and with the equipment which belongs to a railway outside of its rolling stock. The scheme proposed by the government from the town of Moncton to the city of Winnipeg is precisely that class of work, and I wish to make a comparison upon similar terms. I propose now to deal with the scheme proposed by the right hon. gentleman, alongside the one enunciated by the leader of the opposition. I wish to ask any hon. gentleman in this House if he is prepared to say that you can build a mile of the road from Moncton to Winnipeg any cheaper than you can a mile of the road from Montreal to Winnipeg. Can any hon. gentleman state within ten million dollars what that road will cost? Will any hon. gentleman assume the responsibility, even upon better information that the government have, of saying that mile for mile the road from Moncton to the city of Winnipeg can be built as cheaply as the road proposed by the leader of the opposition, namely, the extension of the Intercolonial from Montreal to Winnipeg? They both pass through a country somewhat similar, and the estimates I have given are based on the experience of a country traversed by railways, where we have reliable information as to the cost of a first-class road. If we wanted to begin work to-morrow, we have all the information necessary to ascertain the approximate cost. But the question of policy, how it shall be done, the most economical and efficient way to do it, is a question to be determined on better information than you can get in this House.

I shall now make a comparison upon the same basis of cost, between the government scheme and the proposition of the leader of the opposition. The cost of the eastern section of the Grand Trunk Pacific Railway is as follows: From Moncton to Winnipeg is 1,875 miles. I am taking the figures given by the Finance Minister, and I am going to take the mileage given all through by hon. gentlemen opposite, so that there will be absolutely no mistake in making a fair comparison. According to the Minister of Finance, the distance between Moncton and Winnipeg is 1,875 miles, and the average cost per mile, as set forth in the extension of the Intercolonial Railway is $41,500, including everything. I, therefore, apply the same rule and calculating 1,875 miles of road from Moncton to Winnipeg, at the same cost per mile as the extension of the Intercolonial, we have a cost of $77,812,000. Then there is the interest during the period of construction, taking the figures given on the cheaper plan outlined by the Minister of Finance, this would come to $3,309,000, and the contribution to the Quebec bridge would be $2,000,000, as estimated by the Minister of Finance. The total capital expenditure in this case would be $83,122,000. I will ask you, Mr. Speaker, to mark the words 'capital expenditure,' because it is an important feature in this scheme.

In the scheme laid down by the hon. the leader of the opposition there is absolutely no interest expenditure involved beyond the paltry some of something like $200,000, but the interest expenditure upon this road as proposed by the government, from Moncton to Winnipeg, a distance of 1,875 miles, would come to $29,238,000. Then there is another sum involved which the hon. the Minister of Trade and Commerce (Rt. Hon. Sir Richard Cartwright) and the Minister of Finance (Hon. Mr. Fielding) termed the cost to the country. The Prime Minister estimated this at $13,000,000; the Minister of Finance raised him half a million, and called it $13,500,000; the Minister of Trade and Commerce went still further and told us yesterday that it would be $14,000,000. Now, let me tell the whole truth as to what this is to be. There is an expenditure on capital as I have said of $83,122,000; and the interest on the cost of construction on this eastern section—and I am dealing now with the eastern section alone, leaving out the prairie and mountain sections for the purposes of this comparison—the interest on the cost of construction, in ten yearly payments, which the government in their contract have agreed to pay, and must pay, would be $2,493,665 a year for ten years. Some hon. gentlemen may say: Well, we may have to pay that for only seven years. There is something in an argument of that kind, speaking generally, but the probability is overwhelmingly on the side of having to pay it for ten years; and for this reason, that it is no small matter for the Grand Trunk Railway to have to finance each year so large a sum in interest as $2,493,000. There is another danger; it has not been contended in this House that this will be a paying, competing road. No hon. gentleman has offered the statement so far, or even the suggestion that this will be a competing road through Canada. They have said time and again: Oh, there is a good deal of fine national sentiment in this. It is going to promote colonization. But no man has ventured to deny the one fact that is overwhelmingly more important than this, namely, that this is not to be a national competing road from one end of Canada to the other. There is the other danger that the Grand Trunk Pacific Railway will not have net earnings sufficient to pay that interest or any portion of it. The doubt is, and this doubt was in the minds of the men who made the bargain—for the Grand Trunk Pacific Railway

people are not in any sense infants—that for the first seven years they will not be able to pay anything. They contemplate that for the next three years it may be possible, nay, it is probable, that they cannot pay one cent and they therefore ask you to capitalize that and to charge them the interest on it. The Grand Trunk Railway thus compels the government to finance for it something like two and a half millions of dollars. If the Grand Trunk pays that, it will go into the public treasury of Canada. If the Grand Trunk does not pay it, it is not a debt against the Grand Trunk Railway, it is a sum upon which interest is to be paid, and therefore constitutes a part of the cost of the road without one dollar going into the road in return.

For ten years we must pay in interest out of the treasury of Canada, $2,493,000 a year, an enormous sum. Let it be remembered that each of these payments must be carried, one of them over nine years, one over eight years, one over seven years, one over six years, one over five years, one over four years, one over three years, one over two years. Therefore we must pay out of the treasury of Canada to carry each of these payments during the period of ten years a sum amounting to $3,366,000. There is absolutely no doubt that this will have to be carried. If you had made a payment nine years ago you would have borrowed the money to pay it, and therefore must pay the interest on the money for that nine years, and in this case the interest will constitute part of the cost of this scheme. Then the government have entered into a contract with the Grand Trunk that the rental, if any is paid, is to be paid annually. They have undertaken by their Bill and by the contract that the commissioners appointed to construct and manage this road shall issue the bonds of Canada, payable half yearly. Therefore a sum of money is borrowed that is paid to the government if it is paid at all, yearly, and the government has to pay the interest upon that half yearly. The difference thus arising during that period is nearly one million dollars that the country will lose directly by that transaction, $935,150 is the net sum. The whole sum involved, Mr. Speaker, is $29,238,000 not one cent of which will have gone into that road, every cent of it being a dead loss to the country. There will be nothing to show for it.

I have given you the capital expenditure at $83,000,000 in round numbers. I have pointed out in detail—and I challenge hon. gentlemen to successfully controvert a single statement I have made—that you are paying out nearly $30,000,000 interest on this scheme after it is constructed. The Minister of Finance made an allowance for interest during the period of construction, but I am now dealing with that future interest which amounts in round numbers to $30,000,000 for which you have to carry a dead scheme for ten years. Now if that can be said then this road will have cost $83,000,000 with $29,000,000 added to it, altogether $112,000,000. I wish to say and to emphasize this particularly, that thirty-five per cent of the money will be paid out by Canada, $83,000,000 of it for construction and nearly $30,000,000 paid out for interest for which Canada will have not one copper to show. I know of no more alarming condition of affairs than that Canada should have to enter upon a scheme of this kind.

I know of no more alarming condition of affairs than that Canada should have entered upon a scheme that involves, not the cost alone, for if the cost went into the road you could use it as an asset, but that Canada should be asked to commit herself to a scheme that involves the payment of a subsidy to a railway without any return for ten years, a cost that will amount to two million and a half dollars, in round numbers, in order to get the company to take over the road and run it. Is it any wonder that the Grand Trunk Company refuse to enter into a scheme of that kind, or to finance it? It was stated by way of apology, by the Minister of Trade and Commerce that the reason for doing that was that the Grand Trunk Pacific, although a great and rich corporation, backed by the Grand Trunk Railway Company, was unable to finance so great a scheme. The Minister of Trade and Commerce was cautious, prudent, as he always is, and refrained from entering into details of that kind. The hon. gentleman did not tell us that we could have got over the difficulty without costing us one cent, by way of guarantees, if we considered the security good. But the hon. gentleman skated over the thin ice without falling in. I only regret that the hon. gentleman did not improve the opportunity to give scope to his intellect and experience upon a question of this kind. Had he done so, he would have denounced the scheme as the rottenest scheme that was ever proposed in Canada. He would have told the country that we had entered upon a scheme that would involve an expenditure of $30,000,000, in interest and that for all the good we would get out of it, we might as well throw the money into the Ottawa river.

Now, that is the essential difference between these two schemes? The first one is a scheme that loads Canada with interest for many years to come. The best evidence that it is a scheme that should not be entered upon is the fact that the shrewd railway men of Canada would not touch it. It has been said in this House over and over again that the Grand Trunk Pacific did not want this scheme. It has been said in this House that it was a miserable compromise of local conditions and party conditions, and that what might have made it a scheme of national utility has been sacrificed to the meanest motives. The Grand Trunk Pacific Company know that perfectly

well. They refused it, and they said: If you want a scheme of that kind you must carry it out yourselves. The government said: If we build the road you will operate it? The company said: No, you must give us two million and a half dollars a year, or we will not operate it for ten years. What does that mean? It means that we have to build a road that will be no good as a competing transcontinental line; it means that we have to build a road that cannot earn dividends above the cost of operation; it means that if you want a railway of that kind, it will be so expensive and of such a character that Canada must bear the burden and folly of it, because the Grand Trunk Pacific is not in a position to bear it.

But we have that scheme financed by the Finance Minister. I am sorry he is not in his place, but I am delighted to see the Minister of Trade and Commerce is here. The Minister of Trade and Commerce has been an authority for many years upon questions of finance. I sympathized last night with the hon. gentleman's embarrassment. He is a gentleman of long experience, a gentleman of more caution than the Minister of Finance, and in his utterances he took very good care not to commit the country to the extravagant statements made by the Minister of Finance. Now, Sir, let us see how the Minister of Finance deals with this great question. Before I go further, I want to call the attention, both of the Postmaster General and of the Minister of Trade and Commerce, to this fact, that what the Minister of Finance terms the cost of the road to the people, is only a portion of the loss to the people in addition to the cost. It is not the cost at all. The leader of the opposition has never shirked his responsibility. He has never given any uncertain sound on any question which he is discussing. He is prepared to say, as his followers are prepared to say, that every dollar that goes into this work costs the people that much money. If we borrow the money, the credit of Canada is pledged to that extent. The sums paid out in interest are absolutely lost to the people, in addition to the cost of this scheme. Now, I wish to read what the Minister of Finance says:

> If at the close of the year, when we are making up the accounts, we lay aside the surplus which will have accrued as stated in the budget speech, and subject to the improvement which we hope will take place in the final adjustment of the accounts, and if, instead of using that surplus to build railways elsewhere, to reduce our debt, or in the many other ways in which we could use it, we place that $13,000,000 in the hands of financial managers, I hope to show the House that that money would meet every financial responsibility which the government of Canada have assumed under this contract. How is this brought about? We have to consider not the mere multiplication of interest for seven years. What we have to consider is what use we could make of that $13,000,000.

Now, Mr. Speaker, I ask the Minister of Trade and Commerce if he is prepared to commit himself to this government handing over $13,000,000 to be invested by finance managers? Does he propose to hand it over to an insurance company, as has been suggested by the Minister of Finance? Does he propose to take $13,000,000 and invest it in that way? I ask the right hon. gentleman now if he is prepared to sanction any such plan; and without being offensive I ask him to give me an answer now, because it is important. The right hon. gentleman, prudent as he always is, cautious and wise, will never commit himself to a folly of that kind. Yet the Finance Minister, who sits alongside of him, has made that statement in this House, he would commit such a folly. I call it folly, Mr. Speaker, but the word is a mere euphemism for a much stronger term that might be applied to a proposition of that kind. I know of no more palpable fraud upon the people of this country than to propose a matter of that kind. It is something that no government would think of doing. It is something that no government in Canada has any authority to do. But he told us that apart from that he was going to use it. We have had surpluses in past years as follows, according to the statement of hon. gentlemen opposite:

1898	$1,722,712
1899	4,837,749
1900	8,054,714
1901	5,648,333
1902	7,291,398

Now, the hon. Minister of Finance proposes to invest, as he says, $13,000,000 of surpluses that he is going to have in cash. I desire now to ask the right hon. Minister of Trade and Commerce (Rt. Hon. Sir Richard Cartwright) what has become of these past surpluses? Will that hon. gentleman tell us where that money has gone? These surpluses aggregate $27,554,000 during these past years. Will that right hon. gentleman tell us where that money is? Has there been one dollar invested in any way? Has it been placed at the credit of the people of Canada in any of the chartered banks? Has it been invested in securities? Has there been such a thing in existence? The right hon. gentleman will not answer such a question. Nobody knows better than that right hon. gentleman himself that this is a perfect fraud upon the people. No such thing is possible. The money did not exist, it is a mere bookkeeping fiction, and there was no surplus. I shall not ask that right hon. gentleman to account for it, because it did not exist in any sense. I say that when you have to call to the aid of any scheme such frauds as that, such pretensions, it requires no better answer for the people of this country than the complete silence of the right hon. gentleman. If any man in Canada knows, he does. Where has that money

gone ? There is a difference, as the hon. Postmaster General (Hon. Sir William Mulock) will see, between the cost of the two schemes, including interest and capital expenditure in both cases. The one leaving Moncton and going to the city of Winnipeg, and the other leaving the city of Montreal and reaching Winnipeg, of $51,000,000. Where is that difference thrown away ? I have calculated the cost per mile in each case as being precisely the same, because it is the only way of making the comparison. There has been thrown away at the commencement of the line, in paralleling the Intercolonial Railway, $15,000,000 or $16,000,000. We have evidence beyond doubt of that fact. We have the evidence of the hon. Minister of the Interior and we have the evidence of the hon. ex-Minister of Railways and Canals that the Intercolonial Railway can compete, and compete successfully, even with a shorter line. In order that there may be no mistake, I will give to the House what was stated in this House as evidence. I will give to the House the views of the hon. ex-Minister of Railways and Canals, a gentleman of experience greater than any other man in this House, who declared from his place here that the Intercolonial Railway could compete successfully and compete with the shorter line, because it had a better road, and that by attempting to shorten that road 60 or 70 miles, you do not improve it in any way, because you cannot get as good a road, and the difference is so small that it is not recognizable. He says :

It must not be forgotten—and I wish to emphasize this fact—that the Intercolonial Railway has such exceptionally favourable grades, is so well laid, and is such an exceptionally favourable road for traffic, running along the coast line, that it can haul heavier traffic 259 miles further—

In this case it would only be 60 or 70 miles further.

—than the Canadian Pacific Railway in shorter time. You can therefore see how small a figure 77 miles would cut under such circumstances.

But that is not all. I am going to give the evidence of an hon. gentleman in this House who, it has been said, made the speech of the season in regard to this question. I have now reference to the hon. Minister of the Interior (Hon. Mr. Sifton). He had made a reference to the earnings of the Intercolonial Railway, as hon. gentlemen will see by reference to 'Hansard,' and then he proceeded to say :

The figures that I have given prove that the Intercolonial Railway was able to do a substantial amount of business, and that the Intercolonial was able to do it in competition with the Grand Trunk Railway and the Canadian Pacific Railway ; both lines much shorter than the Intercolonial Railway ; both lines—and this is the point I wish to emphasize—both lines shorter than the new Grand Trunk Pacific Railway line will be. Then, Mr. Speaker, if the Intercolonial Railway under its traffic agreement can compete with the short line to Portland and with the short line to St. John, why in the name of common sense cannot it compete with the new line by way of the Chaudière Junction ?

We have the evidence now of the hon. Minister of the Interior that such an expenditure is wholly unwarranted. The only reason given for building a shorter line was to enable the transcontinental line to be a competing line. We are told by the hon. ex-Minister of Railways and Canals that the Intercolonial Railway is a competing line, and that it will be a better competing line than the proposed short line, as hon. gentlemen may term it, and we have the further evidence of the hon. Minister of the Interior that the Intercolonial Railway is competing, and can compete, with the existing short line. Then, I say you have thrown away $15,000,000 or $16,000,000 of their $51,000,000 in constructing that alleged shorter line through the province of New Brunswick. But you have done more. You have paralleled the Intercolonial Railway. You put a road alongside the Intercolonial Railway when it is stated by one of the hon. ministers that the Intercolonial Railway will be a better competing line than the proposed short line, and I say it is the rankest folly to build a road alongside the Intercolonial Railway and thus render the Intercolonial Railway less efficient. You will destroy the efficiency of the service for the people living along that line, you build a line to no purpose, and you will enter upon a scheme which is an absolutely unjustifiable one, as a supporter of the government declared from his place in the House last night, and one that he was prepared to vote against.

Where does the balance of the $51,000,000 go ? The other part of it disappears in the payment of interest. The sum payable in interest will be about $30,000,000.

Now, I want to come to another feature upon which much stress has been laid, and that is the colonization feature of this road. I shall not say anything in regard to the province of Quebec, because I confess to a very limited knowledge of the character of the country in that province. I am, therefore, leaving out the question of colonization in New Brunswick and Quebec. I believe that to be a question of general policy, which must be dealt with by itself. But I will take the province of Ontario, and I shall not have one ill word to say of that country.

The hon. member for St. Mary's (Hon. Mr. Tarte) delivered an admirable speech last night, in which he said that both parties had faith in the country and I venture to say that for the first time in his whole parliamentary experience, he had seen both sides of the House professing abiding faith in the possibilities of Canada when discussing a controver-

sial policy. It was a feature that he had never witnessed in the course of his whole public life. I believe that the hon. gentleman (Hon. Mr. Tarte) came to parliament a very young man, and he has grown up in wisdom, and experience brought to him by those two greatest schools in Canada, namely: Membership in the House of Commons and membership in the profession of journalism. The hon. gentleman (Hon. Mr. Tarte) was pleased to notice that no matter what the scheme before this House may be, the present opposition, the Conservative party of Canada, refuse to decry the country when they are discussing it. The opposition in this House, Sir, will use no unworthy weapons in meeting any scheme promulgated by the opposing political party. In that respect they differ from another parliamentary opposition in Canada in days past. The opposition in this House have chosen to examine the scheme itself and to base their criticisms upon its merits or demerits, and I will not go so far even as to tell what I believe to be the whole truth about the country through which this government railway will run. Let me say in general terms, that I believe that part of Canada is worth something. But, if you put colonization roads there to-morrow, the northern part of the older provinces cannot possibly compete with the great west for many years to come. As an evidence of that let me refer to the reports of the Ontario government surveyors, upon which hon. gentlemen opposite have been compelled to rely entirely for their information. There are about 100,000,000 acres of land in that territory, and if you take what is called the clay belt and every patch of agricultural land that can be collected in it, you have something like 15,000,000 or 16,000,000 acres of agricultural land in northern Ontario, or about one-seventh of the whole. I shall not decry the country; I need not say more than that. I believe that some day, even perhaps in this generation, young men may go into that territory when the lands in more favourably situated parts of the country are exhausted for agriculture. Sir, I shall not follow the member for Bonaventure (Mr. Marcil) in his manner of justifying the government scheme. He told us that this country would be settled up immediately, when as a matter of fact every one knows that it cannot compete in agricultural possibilities with the fertile lands of the west, for many years to come. The hon. gentleman (Mr. Marcil) proposed to subject French Canadians to be hewers of wood and drawers of water. He told us that there were people in Quebec who would go into that country and grub up stumps. I shall not allow the remarks of the hon. gentleman to dispel from my mind my long-cherished belief, that the French Canadian people are as intelligent and progressive as any other people in Canada. My experience of them is that they are as much alive to public questions, that they are as keen in business questions as any other class of our people; and to say that French Canadians would go into such a country as that and be too dull to see the advantages of the west, is a statement which I for one do not believe. Are our French Canadians or any other Canadians for that matter, less intelligent than the Europeans who are flocking into our west to reap the many advantages which that country possesses? The hon. gentleman (Mr. Marcil) driven into a corner for an argument in favour of the government scheme, was forced to say that his fellow French Canadians were duller than other people and could not see the advantages of fertile lands as compared with these regions in the north. It is a slander on the French Canadians, and I do not think, Mr. Speaker, that your own experience has been, that French Canadians will dig up stumps when they can get clear and fertile lands on which to settle.

I have said, Sir, that the question of colonization must be dealt with separately, and I have also said that it would be folly amounting to insanity to subordinate a single feature of a strong national transcontinental competing railway to the idea of colonization. What is going on in the province of Ontario just now? Commencing at Quebec until we reach the line between Manitoba and Ontario going west, what do we find in the matter of railway construction? We have the Lake Temiscamingue and Pettawawa River Railway, under the Canadian Pacific Railway, built some distance into that country. We have the Ontario government constructing a line from North Bay and penetrating that country into the fertile lands of Lake Temiscamingue. We have the James' Bay Railway, now under construction, I understand, that will run from Sudbury to Lake Abitibi also in what is called the fertile belt. This has been given by the Ontario government a cash subsidy of $2,000 a mile and a land grant of 5,000 acres a mile for 175 miles running north. We then have the Ontario, Hudson's Bay and Western Railway, that runs from Missanabie Station further west, through the valley of the Missanabie and within forty miles of the clay belt. In order that hon. gentlemen may not be sceptical let me read what this report says:

> The southern boundary of this great tract of fertile land is less than 40 miles from the Missanabie Station on the Canadian Pacific Railway, and the country north of the height of land being an immense level belt sloping off towards James Bay, the construction of a railway and wagon roads through every part of it would be comparatively an easy matter.

But that is not all the railways that are projected or under construction. There is as I have said, the Ontario, Hudson's Bay and Western Railway running from Missanabie station to Moose river or James bay, going through the whole length of that coun-

try. It has from the Ontario government a cash subsidy of $2,000 a mile and a land grant of 5,000 acres a mile for 240 miles. Then we have from Peninsular Harbour, a station still further west, the Lake Superior Long Lake and Albany River Railway, running from Peninsular Harbour to Hudson's bay. It has a cash subsidy or ten miles of $3,000 a mile from the Ontario government. Then we have the Nepigon Railway, running from Lake Nepigon to Long lake and James bay, also penetrating that country. It has a cash subsidy of $3,000 a mile for the first fourteen miles, which, I believe, are being constructed. Then, we have the Thunder Bay, Nepigon and St. Joe Railway, which runs from Port Arthur to St. Joseph's lake, on the Albany river, which, as you know, forms the boundary line between Keewatin and the province of Ontario. The length of this railway is 225 miles. It has received from the Ontario government a cash subsidy of $2,000 a mile for the first ten miles, which, I understand, are in operation, and a land grant of 5,000 acres a mile for the whole length. It is abundantly clear that an effort is being made in the direction of colonizing that country. I have pointed out seven lines of railway which will be feeders to what in the near future I contemplate will be the Intercolonial Railway of Canada. Much has been said as to the value of developing that northern country. That country has both mining and agricultural features; and, although the latter may be and will be delayed in their development for many years, for the reason I have given, some day the country will be developed and colonization roads will be built through it; but they will be built from other parts of Ontario than from the city of Quebec or the city of Winnipeg into Ontario. The natural flow of capital into that country will not come from either of these quarters. The men who put their money into these schemes are men who live in the great cities of the province of Ontario. No man can be considered sectional because he says that the capital for these purposes is more likely to come from the great cities of the province than from either end of it. Some day it may be found necessary to build a colonization road through that country, or the necessity may never arise. It must depend entirely on the information which may be obtained, and the circumstances which it will disclose.

Now, Mr. Speaker, I have just one matter more which I desire to deal with, and that is with regard to the relative cost of the two schemes before us. I am assuming, as I have a right to assume, that this House will not of necessity consent to the scheme placed before the House by the government. I have a right to assume that hon. members on both sides of this House will exercise their prudence and their independence—will recognize their responsibility, not only to their constituents, but to this country. This is not a question that involves merely the responsibility of a member of this House to his own constituents. It is, I am glad to say, a bigger and more important question. I am going to assume, as I have a right to assume, that this is an open question—that this parliament may not adopt the scheme proposed by the government. I go further, and say, after all, before this debate closes, the government, before they ask the House to commit the country to so rash a scheme, will have the grace themselves to withdraw it. I do not despair of either of these events happening. I therefore assume that this is an open question; and I appeal to you, Mr. Speaker, as to what would be the proper course to be pursued by every independent member of this House, having both schemes placed before him. One is a scheme that involves the expenditure of some $83,000,000 of capital, and a further expenditure of $30,000,000 of interest, which is absolutely thrown away. One contemplates a paralleling the Intercolonial Railway uselessly, as has been shown by one member of the government, who has set up a defence on behalf of this scheme, and also by an ex-minister who has made no little sacrifice by the course he has taken with regard to it. The other scheme is for the construction of a line from the city of Montreal to the city of Winnipeg, into which not one dollar shall be put that will not the next day earn interest and pay its way. If the scheme proposed by the government is so rational that it can be as fittingly called a national railway as the Intercolonial, we shall have to wait five years before we derive any benefit from it, and during those five years we shall have to pay for it. The one is a scheme that meets the wants of the people to-day. The other is a scheme that involves a delay of from five to seven years before the people can derive any benefit from it. Under these circumstances, is there any difficulty in any person, either inside or outside of this House, concluding which of these schemes he should support? One is for the development of the people's railway. In one case we invest our own money and accomplish more. The proposition of the government is not for a competing national railway. It cannot be a national competing railway. Let me give you the reasons why it cannot be. Whether the trade of the west goes to the city of Quebec or to the city of Montreal is a matter of no importance to the shipper, because ocean freights from the city of Montreal to Liverpool are precisely the same as from the city of Quebec to Liverpool. To show you that it is not a competing line, I want to give you the all-rail distances. The distance from Winnipeg to Montreal, by way of the Canadian Pacific Railway, is 1,426 miles; the distance from Winnipeg to the city of Quebec by the proposed Grand Trunk Pacific, as given by the Minister of Finance,

is 1,475 miles; and the distance from Winnipeg to Montreal over what will be the Intercolonial Railway is 1,406 miles. I have pointed out that the distance by the Canadian Pacific Railway to tide water is much shorter than by the proposed line. I have pointed out that by the Intercolonial Railway it is 1,406 miles from Winnipeg to Montreal as against 1,475 miles from Winnipeg to the city of Quebec, and it makes no difference to the shipper whether his goods are transhipped for Liverpool at Montreal or Quebec. But there is another point. During the season of navigation the distance by rail and water. From Winnipeg to Fort William is 426 miles, from Fort William to Depot Harbour, 444 miles; and from Depot Harbour to Montreal, 379 miles; or by that route the distance is 1,249 miles to Montreal as against 1,475 miles to Quebec.

But let us compare the rail and water route, which will be used for 90 per cent of the freight, with the proposed competing line. From Winnipeg to the port of Quebec by the rail and water route is 1,411 miles, and by the all-rail route—which is the more expensive route—the distance is 1,475 miles, or 64 miles longer than would be the extension of the Intercolonial Railway, using rail and water, during the season of navigation. That clearly demonstrates, first of all, that we need not make any invidious distinction between the city of Montreal and Quebec. Montreal is the great metropolis of the Dominion, and Quebec is an important city, but the Canadian people are not going to consider the local jealousies of these two places as against the general interests of Canada. They will adopt, therefore, the shortest and cheapest means of getting to Liverpool and other ports, and I have shown you that the rail and water route to Quebec, as proposed by the leader of the opposition, is shorter than the other.

With regard to the mountain section, I have only this to say. The leader of the opposition laid down this as a feature of what he considers a national scheme, that the Grand Trunk Railway will be in no worse position under it than it is in to-day. His proposition involves the giving to the Grand Trunk Railway or any other railway, such assistance, by way of guarantee or otherwise, as will ensure the most speedy construction of a railway in that country. I may, therefore, dismiss for the moment any discussion of that phase of the matter, but there are two important features he did point out. One was that the Grand Trunk Pacific Railway should locate that road where it would be in the interests of the territories, namely, that it should go north a reasonable distance in order to ensure some benefit to that section where there is now no railway communication. The other was that any subsidy given to the Grand Trunk Railway, or any other railway, to build through the mountains should be given under such conditions that no company should control that line, but should be obliged to give running powers over it to other companies on such conditions as would be fair all around. Some stress was laid on the fact that the hon. gentleman went further and said that, in the event of the railway companies not agreeing on the terms, the government would construct the road itself. But that is a remote consideration. We would have the power to regulate the rates and other matters, and it would not be in the interest of the railway companies to contend over questions of that kind, so that we may leave that point entirely aside.

I desire to say in conclusion, that we have the two schemes now placed before the country. With the one case we have a live scheme, on which there will not be a dollar expended for which we do not get value. In the other case, we have a scheme of procrastination, and one that will impose a burden upon the people to the extent of $30,000,000, for which there will be nothing to show, and more than that, we will be investing money in the building of railways which will not belong to the people of Canada. The ex-Minister of Railways and Canals (Hon. Mr. Blair) was forced from a strong sense of duty to go out of the government because he was not prepared to give his sanction to such an insane proposition. Hon. gentlemen opposite frequently make unworthy references to that hon. gentleman for the course he took; but I would ask what had he to gain? Had he anything to gain personally? Did he not know that the moment he failed to agree with his colleagues in the cabinet, the moment he failed to lend his experience and ability in bolstering up the insane scheme they proposed, he would be blackguarded by the supporters of the government from one end of Canada to the other. Is it an argument against the ex-Minister of Railways and Canals for any hon. gentleman to declare—as an hon. gentleman opposite has done—that the reason he resigned was because he wanted the manipulation of the government contracts, and could not get it? We had another hon. gentleman who, I believe, is slated for a judgeship—I should hope that support of the government scheme is not the price of a judgeship in this country—declaring that the ex-Minister of Railways and Canals was not fit to latchet the shoes of the Prime Minister who put such a scheme on foot. We had another hon. gentleman, the member for Victoria, N.S.—who is reading a newspaper now, and I would ask him to turn his eyes this way—declaring that the chairmanship of the Railway Commission had something to do with the stand taken by the ex-minister. I am surprised that a gentleman of his long parliamentary experience should be obliged to call to the aid of so insane a scheme the attributing of unworthy motives. The ex-minister

is suffering now the penalty of his loyalty to his country. He has to submit to the taunts of hon. gentlemen opposite. He has to endure being hounded all through the country by his former supporters. Let me say that never was a man actuated by more worthy motives. Never was there a man who made greater sacrifices. Never was there a man in the history of this Dominion who had a greater opportunity offered him to serve his country, and to his great credit be it said, that there are few men, who, although the opportunity might fall to their lot, would be strong enough to avail themselves of it as he did. I desire to say—and this is the least that ought to be said by every honest man sitting on that side of the House if he would express his honest views—that there is no man to whom the people of Canada owe a greater debt of gratitude, no matter what may happen to this scheme.

I desire in conclusion to say a word in reference to the hon. gentleman whom, as an humble member of this House I have the honour to follow, the leader of the opposition. The Conservative party to-day are not living upon the achievements of our great leaders in the past; their achievements were great enough, Mr. Speaker, to be recalled and the Conservative party might well fall back upon its record and that of the great leaders who have preceded the hon. gentleman who now with such signal ability leads the opposition in this House. The opposition to-day are not living upon the great deeds of statesmanship of former leaders of the Conservative party, we are living to-day upon live issues, led by a great leader. What are the evidences of that, Mr. Speaker? At a supreme moment in the history of Canada when we had to decide upon an immense expenditure only to be justified because it was a great national undertaking, when we were at a point that if we were to spend a dollar we must spend it wisely and must divorce our decision from every consideration other than the national welfare, we have found a leader strong enough to propose what he believes and what the country, I am sure will believe is a great national scheme for the reasons I have already stated and one that would justify any expenditure of money. There is no small risk in a leader taking that position. But he has not only undertaken to criticise, but I believe has successfully criticised, what he believes to be, what I believe to be, what I believe every hon. gentleman opposite believes to be, a mistaken policy and one which Canada should not adopt. The leader of the opposition has taken upon himself to point out the difficulties of that scheme, difficulties so great that it is evident that if we are to build a railway, that is not the way to build it. He has propounded what we believe to be not only a rational scheme but a national scheme, which he is prepared to defend from end to end of this country, a better scheme than that one proposed by the government and one that would cost less money, a scheme that will give an asset to Canada for every dollar that is spent upon it and that will earn returns from the day of its inauguration, a scheme that belongs to the people, a scheme that challenges admiration, a scheme that will control the railway rates on all the railways of this country. I realize that the Grand Trunk Railway is a great system and that it would be a fatal mistake to cripple that, or the Canadian Pacific or any other of our railways. But the plan proposed by the leader of the opposition is so perfect that it will not cripple a single interest in railway building in Canada. It gives full scope to all of them; it goes so far as to nationalize sections of road in order to make it possible for all those roads to prosper. In a word, Mr. Speaker, it is a scheme that I believe will be approved by the people of this country and that is worthy of the great leader of the Conservative party.

At one o'clock, House took recess.

House resumed at three o'clock.

Mr. W. M. GERMAN (Welland). Mr. Speaker, I apprehend that it is very seldom a matter of greater importance comes before the parliament of Canada for consideration than the one which we are considering at the present time, a question of greater interest to the people of Canada, or of greater importance in the development of our national industries. Though this debate has been somewhat protracted and will likely last for some time longer, I feel impelled to express my views on the subject and not to give merely a silent vote.

Every hon. gentleman who has addressed the House so far, I believe, has had something to say in reference to the late Minister of Railways and Canals, and I do not know I will hold myself up as an exception to that rule. I will say that I regret exceedingly that that hon. gentleman found it incumbent upon himself to retire from the government. He was a gentleman whom I, at any rate, always admired as chief executive of the Department of Railways and Canals. I trust that there were no other reasons than purely patriotic reasons that induced him to retire from the government. But I could not help but think, in listening to his speech, that he did exhibit something of the spirit of a spoilt child, that he had had his own way for so long in his native province of New Brunswick, and had been a dictator, an autocrat, in that province for so long a time, that he could not submit to the suggestions of any one else when he came to Ottawa. Now, Sir, there is this particular coincidence in connection with the resignations from the government. It was only a short time ago that every Conservative speaker and every Conservative newspaper

in this country were claiming that the two hon. gentlemen who have lately left the government were the masters of the administration, that they were the men who controlled the situation. Possibly, Sir, these gentlemen had seen that statement so frequently and so continuously made throughout the country, that they began to think so themselves. But when the time came for decisive action these gentlemen found that there was only one master of the administration, and that was the right hon. Premier of Canada. Now, Sir, hon. gentlemen opposite cheered very lustily the ex-Minister of Railways and Canals when he made his statement. I thought that if it had not been for the argumentative powder which he furnished the opposition they would have been absolutely without ammunition to bombard this proposition. They have apparently followed almost entirely in his lead; he was the bell-wether that led the flock on the other side. It is not so very long ago that these gentlemen were not so fond of the ex-Minister of Railways and Canals. It is only last session of parliament that these gentlemen cheered with great fervor the hon. member for Compton (Mr. Pope) when he made on the floor of the House a most bitter personal attack on the ex-minister, not only impugning his executive ability as a minister of the Crown, but challenging his honesty as a man. That statement was cheered by these hon. gentlemen. They condemned him right and left, but now, forsooth, after he has picked out for them a policy which they think will be of some benefit in the approaching elections, they cheer him lustily.

Now, Sir, I did regret that the ex-Minister of Railways and Canals went out of his way to make a personal attack upon his late colleagues, and I feel very confident that had he exhibited less vindictiveness, his remarks would have had greater weight, at any rate with hon. members on this side of the House, than they will have under the circumstances. However, I regret very much that he has seen fit to leave the government. He was an able administrator, and I believe an honest man, notwithstanding the assertion of hon. gentlemen opposite. I would be very glad indeed if I could see him back again at the head of the Department of Railways and Canals of Canada.

Now, Sir, what is the position of this transcontinental railway question? The ex-minister says that we are rushing into this project with undue haste, without sufficient knowledge. The leader of the opposition says that before anything is done in the way of construction of a transcontinental railway we should have a transportation commission appointed, and that view was followed up this morning by the hon. member for Bothwell (Mr. Clancy). These gentlemen became exceedingly eloquent on the question of a transportation commission, arguing that we should have had commissioners appointed who would investigate the whole problem and report to this parliament before anything was done. Now, what is the position with regard to the appointment of a transportation commission? Why, Sir, we all know that when the question of transportation first came up in this House two seasons ago, there were very diverse opinions in regard to the matter. But transportation of what kind? Not railway transportation, but water transportation. The then Minister of Public Works was demanding very loudly and eloquently that the French river navigation should be improved, that millions of money should be expended by the government in improving the French river, so as to allow freighters of the largest class on the upper lakes to go through to North Bay. The hon. member for South Lanark (Hon. Mr. Haggart) and the hon. member for Pontiac (Mr. Murray) were both contending that the government should build, or aid in constructing, the Georgian Bay canal, besides improving the French river. The hon. member for Renfrew (Mr. Wright) was also in favour of that proposition. Many hon. members were in favour of deepening the Welland canal to twenty-two feet. Large sums of money were being expended at Port Colborne for the betterment of the Welland canal route; the harbours on the upper lakes were being improved, and considerable sums of money were being expended in those places. And, Sir, it was by reason of the divergent views of hon. members of parliament in regard to the best mode of transporting the cereal products of the west to the seaboard, that the question of the formation of a transportation commission was taken up. I venture to say that you cannot find within the pages of 'Hansard' a speech made by any member of this House in which it was at any time suggested that the problem of a transcontinental railway should be at that time taken into consideration by this transportation commission. Why, Sir, the very fact that Sir William Van Horne was suggested as chairman of that commission absolutely disproves the argument that there was any question of a transcontinental line of railway to be inquired into. What would he say? He would simply say to the government: Why, the Canadian Pacific Railway can carry all the products of the west that need to be carried for many years, and the best thing you can do is to give a further bonus to the Canadian Pacific Railway, and we will carry the products. That is very likely what he would have said. I say the very fact of his being nominated on that commission disproves the idea that there was a question of a transcontinental railway involved in the appointment of that commission.

Now, Sir, has there been undue haste and want of deliberation in this matter? When this session of parliament opened, a Bill

was presented by the hon. member for Simcoe (Mr. McCarthy) on behalf of some gentlemen asking incorporation under the name of the Grand Trunk Pacific Railway Company. That Bill went before the Railway Committee of this parliament. The proposal was to construct a line of railway from the city of Quebec to Port Simpson on the Pacific coast. When the Bill came before the committee there was not an hon. member of this House, there was not a man in the Dominion of Canada, but was delighted to know that the Grand Trunk Pacific Company proposed to construct a second transcontinental railway. There was not a dissenting voice from any member of this House against the proposition for the construction of a second transcontinental railway. Well, Sir, what occurred then? This Bill came before the committee. Where did the obstruction arise? Not from people in the west, not from people in Ontario, not from members from Ontario but from hon. members from the maritime provinces who suggested that the Grand Trunk Pacific Company should be compelled to continue the line to the city of Quebec, and to the city of Moncton. There is where the opposition came from. The Grand Trunk Pacific did not want to build it, the western members were not asking that it should be built; but the eastern members, and most notably the hon. member for King's county, New Brunswick, (Mr. Fowler), wanted it built. The hon. member for King's county insisted most loudly that the Grand Trunk Pacific Company should be, not only allowed, but compelled to extend their line from Quebec to Moncton, thus paralleling the Intercolonial, concerning which hon. gentlemen opposite are so much concerned at the present time.

There was then no suggestion in the Railway Committee by any hon. gentleman opposite that the Intercolonial was being paralleled. A few hon. members on this side of the House supporting the government, did suggest, I believe, that we were paralleling the Intercolonial. The ex-Minister of Railways and Canals condemned the proposition of members from his own province because it would parallel the Intercolonial. He said that he was prepared, if Minister of Railways and Canals at the time this railway was constructed, to give them running rights, to enter into running arrangements with the Grand Trunk Pacific over the Intercolonial. Well, Sir, Mr. Hays agreed to that. But no, that would not satisfy these gentlemen from the lower provinces. They simply insisted that that portion of the line should be built, and that it should not only be built, but should be begun at the same time as the western section. Mr. Hays said, very well, I want to construct this railroad. Here is a great country, we want the advantages of opening up this enormous territory between Quebec and Winnipeg, and we are willing to go a step further and construct the line from Quebec to Moncton. Now, Sir in that situation of affairs we were to have a transcontinental line not only to Quebec but from Quebec to Moncton, paralleling to some extent the Intercolonial. That was the position. That was agreed to by the Railway Committee. And, Sir, what hon. gentlemen in this House stood up and condemned that proposition? I have failed to find anything in 'Hansard' and I certainly did not hear while sitting in parliament any hon. gentleman on the other side of the House stand up in his place and condemn the construction of the Grand Trunk Pacific Railway either because it was going through this wilderness which they claim of no value or because it was paralleling the Intercolonial Railway.

Now, we are face to face with this proposition: The Grand Trunk Pacific Railway Company intended to build. They intended to parallel the Intercolonial Railway. The whole proposition was based on the hypothesis that they were to have government assistance. Mr. Hays most emphatically and very frankly stated before the Railway Committee that if they built this road they must have government assistance. Every argument before the Railway Committee was based on the assumption that parliament would grant assistance and grant very large assistance. Now, what amount of assistance would have been granted? The hon. senior member for West Toronto (Mr. Osler) gives a cue as to what assistance would at any rate have been demanded. He said the other night that the Grand Trunk Pacific Company would have in five minutes turned down an offer of $20,000,000 to build this road. I believe they would have. If they had in mind what the government gave to the Canadian Pacific Railway they would have turned it down certainly. If they had in mind what the government of Canada has granted by way of assistance to other railways in this country and what the government of the United States has granted towards railways in that country, they would have turned down a proposition of that kind. I do not know what government assistance would have been granted to the Grand Trunk Pacific Railway Company for the construction of the road, but this I do know and it is something that we can take as a settled positive fact that the government would have granted substantial assistance, and that it would have granted substantial assistance with the approval of this parliament, and I believe that assistance would not have been much less than $35,000,000 or $40,000,000. The government was face to face with this proposition: The road was to be built, government assistance was to be asked—was it better for the government to take hold itself of the eastern section of the road and to build it as a government work, or hand over to the Grand

Trunk Pacific Railway Company $35,000,000 or $50,000,000 and let them build the road and own it? That seems to be placing the matter in a fair and reasonable position. The road was to be built either by the government or by the Grand Trunk Pacific Company with government assistance. The government steps in and says: We will build the eastern section of the road if we can enter into an agreement with the Grand Trunk Pacific Company on such terms as will be satisfactory to the people of this country and on such terms as will safeguard the public interests. The contention that this line is paralleling the Intercolonial Railway is one that is absolutely valueless when we come to consider the fact that the Intercolonial Railway was bound to be paralleled, if not by a road built by the government, then by a road built by the Grand Trunk Pacific Railway Company. The question is: Which is the better business proposition, whether we should give to the company the large assistance which the company would have demanded and which parliament would have approved and allow the company to build and own the road or whether the government should construct the road, and then, having constructed it, own it absolutely and own it for all time to come? Hon. gentlemen say that the Intercolonial Railway is side-tracked and that you are killing the effectiveness of its operation. I take issue most emphatically with any hon. gentleman who makes that suggestion. I think it is just the reverse. Instead of side-tracking the Intercolonial Railway we are extending the Intercolonial Railway to the city of Winnipeg. We are building a government road from Quebec to Winnipeg over which the Intercolonial Railway will have the same running rights as any other railway company in the country. Then why say that we are side-tracking the Intercolonial Railway? Section 24 of this agreement says:

> 24. The said lease shall also contain proper and usual provisions,—
>
> (a) Reserving to the government in respect of its ownership, present and future, of the Intercolonial Railway and any other line or lines of railway, running powers and haulage rights over the said Eastern Division upon equal terms with the lessees.

The fact of the matter is that we will have Intercolonial Railway trains running through to Winnipeg and competing with the Grand Trunk Pacific over this line owned by the government and operated by these different companies. So that the contention that the Intercolonial Railway is being side-tracked is manifestly a fallacious one. It is said that all the expenditure that was made on the Intercolonial Railway between Quebec and Montreal goes for nothing. The hon. ex-Minister of Railways and Canals (Hon. Mr. Blair) said that we were condemning what he did last year. I say that we are doing nothing of the kind. The Intercolonial Railway has its present arrangement with the old Grand Trunk Railway Company by which that company agrees to deliver to the Intercolonial Railway freight at Montreal. That agreement still stands and the Intercolonial Railway will get an equal amount of haulage from the Grand Trunk Railway at Montreal in future as it has in the past. How in the name of all that is sensible can the Intercolonial Railway be injured by the construction of a second line from Quebec to Winnipeg, whereas, as a matter of fact, the Intercolonial Railway has up to the present moment never got one dollar's worth of haulage from any place west of that section of the country. The Intercolonial Railway has never derived any benefit from any haulage of freight from the North-west. Under the very excellent agreement entered into between this government and the Grand Trunk Railway Company the position of the Intercolonial Railway was improved with respect to haulage, but as a matter of fact the Intercolonial Railway never did get a dollar's worth of haulage from the North-west. But, Sir, the construction of this railway from Quebec to Winnipeg, will place the Intercolonial Railway in a position to compete with the Grand Trunk Pacific Railway, and not only get its proper share of the haulage from Ontario under the existing agreement with the Grand Trunk Railway, but it will compete with the Grand Trunk Pacific Railway in its grain haulage to the seaboard from the territories.

The ex-minister (Hon. Mr. Blair) desired not only that the government should own the road, but should operate the road, and we have an amendment before us suggesting the idea of government ownership and government operation. For myself, I am free to state now, that I am absolutely and emphatically opposed to any system of government operation of railways in Canada. Our government has enough to do looking after the development of this country without going into the railway business. We have got business men in Canada who are capable of looking after and operating our railways. The conditions existing in certain European countries where they have government operation of railways, do not correspond with the conditions existing in Canada. Our government as at present constituted, and in view of the great work of developing our country before us, cannot spend its time in the operation of railways. That matter should be left, and wil be left to private corporations, not only for the present, but for a long time in the future.

It has been said that there was undue haste on the part of the government in entering into this agreement, and that they should have had further information and further data to proceed upon. To my mind that question simply depends on whether the agreement is a good agreement or a bad agreement. If it is a good agreement

we could not have entered into it too quickly—if it is a bad agreement we should not have entered into it at all. Now, is it good or bad ? We have heard very little criticism of this agreement from the opposition, that it fails to protect the public interests, assuming that this road is to be built. I venture to say that there is no gentleman in this House who can successfully criticise this agreement as an agreement not calculated to protect the public interest. I never saw an agreement more carefully prepared and more thoroughly safe-guarding and protecting the interests of the people of this country. Why, Sir, the agreement is so good that the hon. member for Simcoe (Mr. Lennox) suggested that he did not believe the Grand Trunk Railway would ever carry it out. He thought it was so good an agreement for the country that there must be something underhand, something unseen in it, some private deal in it between the company and the government. The tenor of the discussion on the opposite side of the House has been, that this agreement is too good, and that it cannot be a bona fide agreement or else the Grand Trunk Pacific Railway Company would have never entered into it. Therefore, Sir, I am safe in saying that no just criticism can be offered to this agreement. The ex-minister (Hon. Mr. Blair) told us that the agreement, although signed by Mr. Hays on behalf of somebody, placed no responsibility and no liability on any person whatever. Well, if the agreement is not carried out by the company it need not be carried out by the government. But remember that the company have to deposit with the government $5,000,000 as security that they will carry out the agreement, and with that $5,000,000 we have money enough to make the explorations which hon. gentlemen opposite are so keenly anxious for. If the company deposit $5,000,000 and do not carry out the agreement, then that handsome sum is appropriated by the Crown. If they do carry out the agreement, well then we have our agreement perfected and the money is returned to the company. But what was the security given by the Canadian Pacific Railway ? It was not $5,000,000, but $1,000,000, and Sir Charles Tupper stated that $1,000,000 was ample security for the due performance of that immense contract by the Canadian Pacific Railway Company. We therefore have five times the security from this company that the Conservative government demanded from the Canadian Pacific Railway.

Now, Sir, the ex-minister (Hon. Mr. Blair) said we were binding ourselves to construct a railway through a country which was absolutely unknown, and the hon. member for South Lanark (Hon. Mr. Haggart) repeated that statement so far as Quebec and New Brunswick were concerned. The ex-Minister of Railways also said that in constructing through New Brunswick, we would be obliged to make a detour into the state of Maine. Well, to start with, the agreement prevents that. This government has not undertaken to do impossible things, and the contract says that the railway shall be constructed wholly upon Canadian territory. If it cannot be constructed upon Canadian territory then it will not be constructed at all. The contract says that the eastern division shall be constructed, by and at the expense of the government, upon such location and according to such plans and specifications as the government shall determine, having due regard to directness, easy gradients, and favourable curves. If we cannot locate the line through this section of the country with easy gradients and favourable curves, then we are not bound to locate it at all. The contract also says :

> The construction of the eastern division shall be commenced so soon as the government has made the surveys and plans and determined upon the location.

The location is to be of easy gradients and of favourable curves. That is all the government is binding itself to do. Hon. gentlemen opposite talk as though the government had entered into a contract whereby they must at once, without surveys, without consideration, without an examination of the country, rush ahead and at any sort of unlimited expense construct a line of railway from Moncton to Winnipeg. That argument is absolutely fallacious and misleading. If hon. gentlemen opposite will read the agreement and interpret it as any reasonable, sensible man would interpret it, they will find that the government, when the agreement is ratified by parliament, will immediately begin to enter on the survey of this territory. The agreement expressly says that the work shall not be begun until they have made surveys and plans, and until they have determined upon the location of the road, having reference to easy gradients and favourable curves. Why, Sir, the people of this country would not stand for this government, or for any government, rushing ahead blindfold into an enterprise without making full and ample inquiry. The Grand Trunk Pacific Railway Company are as much interested in securing the best line, with the easiest grades and the most favourable curves as the government is. All the surveys, all the plans, all the specifications, are to be submitted to the engineer of the Grand Trunk Pacific Railway Company. That company is to have a voice in the construction of this road, and very properly so, because they have to pay 3 per cent interest on the cost of its construction ; and they will certainly see that a modern and up-to-date road is built, and built as cheaply as it can be, consistently with efficiency and proper construction.

Now, Sir, compare for a moment the sections of this agreement which are binding on the government as to construction and the section which is binding on the company as to construction. Section 10 says:

The work of locating and constructing the said western division shall be commenced forthwith after the ratification of this agreement by the parliament of Canada, and shall proceed with the utmost despatch and shall be completed within five years from the 1st day of December, 1903.

So that we have this condition of affairs, that the company must, immediately after this contract is ratified by parliament, begin the construction of the western division of this railway, and must have it completed within five years, whereas the government, in constructing the eastern division, can take as much time as is necessary to have proper surveys made and to construct the railway in a modern up-to-date way. I think the contract submitted to the people of this country will receive the approval of every business man in the Dominion of Canada. I doubt if any man can successfully criticise it.

There has been something said in regard to the cost of constructing this railway. I do not think I need occupy the time of this House at any great length in discussing that question. The hon. member for Bothwell (Mr. Clancy) this morning had compiled a peculiar set of figures, which were somewhat incomprehensible to me, and I am very much inclined to think also to himself. He says that the line of railway from Moncton to Winnipeg will cost $41,500 per mile. He makes that assertion, comparing the cost of that line with the cost of procuring a right of way for the Intercolonial Railway between Point Lévis and Montreal, under the agreement which was entered into by the government a year or two ago. That, I understood to be his suggestion, and it is absolutely erroneous. I have had the pleasure of asking railway men what, in their opinion, that portion of the railway would cost. Railway men differ in opinion on these matters; but there appears to be a strange unanimity of opinion on the part of hon. members of this parliament as to the cost of railway construction through this country. My information is that the line of railway from Moncton to Winnipeg, speaking generally, at a fairly conservative estimate, will cost about $30,000 a mile. The hon. member for Bothwell suggested that that line would cost $77,812,000. According to my information, it will cost about $54,000,000, so that the hon. member is out $23,812,000. Probably that is not very much for the hon. member for Bothwell. Probably that is not so much out as he will be after the Redistribution Bill goes into force. He made some other suggestions as to cost which I will refer to in a moment.

Well, Sir, the hon. leader of the opposition has propounded a policy. Some one, whose name I have forgotten just at the moment, has said, 'Oh, that mine enemy would write a book!' It occurred to me that the right hon. Premier felt, 'Oh, that the hon. leader of the opposition would propound an alternative railway policy!' And he has done so, and a more absurd proposition I think was never submitted, not only to parliament, but to any body of sensible men. I think I could hear the inward growls of the hon. member for South Lanark (Hon. Mr. Haggart) when that proposition was made by his leader. I would like to know what the hon. member for Hamilton (Mr. Barker) thinks of it. I would like to know what a good many other hon. gentlemen on that side of the House think of the proposition of their hon. leader. The hon. member for Bothwell made a suggestion as to the cost of carrying out that proposition. I will take the liberty of stating what my information leads me to believe is the fairly correct probable cost of the proposed road of the hon. leader of the opposition.

In the first place, he has to construct a line from Montreal to Coteau. My information is that that will require a line 37 miles in length, which, at $40,000 per mile, the figure given by the hon. member for Bothwell, would cost $1,480,000. The next part of the proposition was to buy the Canada Atlantic line from Coteau Junction to Depot Harbour. The hon. member for Bothwell states that that line has been in the market for the last two or three years. He says there is a standing option on it. We know that Dr. Seward Webb, of New York, who is connected with the wealthiest people in the United States, came here and put up $1,000,000 with Mr. John R. Booth as an option for the purchase of the Canada Atlantic Railway, at the price, if my recollection serves me, of $11,000,000 or $12,000,000. But that option was not carried out—why? Dr. Seward Webb had behind him all the weath of the New York Central Railway Company, all the wealth of the Vanderbilts, with whom he is connected, practically the wealth of the city of New York. Why, then, was that purchase not carried out? Rumour makes the sugestion, whether it is correct or not we do not know, that the suggested earnings of that road were not the same as the actual earnings. For some reason or other Dr. Seward Webb did not carry out the purchase. At any rate, the hon member for Bothwell says that the Canada Atlantic Railway is in the market for sale. I do not know whether the government of Canada need to purchase a railway that is in the market for sale. At any rate, I understand Mr. Booth now wants $17,000,000 for that railroad, and it is very certain that it would cost at least $3,000,000 to put it in a satisfactory shape to be used as a transcontinental line, bringing its cost up to $20,000,000.

The hon. leader of the opposition next proposes that we build a railway from Scotia Junction to Sudbury, the length of which he puts at 120 miles. The hon. member for Bothwell puts it at less than that. My information is that its length is 120 or

122 miles. That road cannot be built for less than $30,000 per mile. The hon. member for Bothwell (Mr. Clancy) said it would take $40,000 per mile to build it. There is a sum of $4,200,000 more. The leader of the opposition had another feature in his scheme. He proposes that we should purchase the Canadian Pacific Railway from North Bay to Fort William. This is a road which was practically built with the people's money, which was subsidized to an amount that would perhaps have built two such roads, and the hon. gentleman coolly asks that after we have built this road for the Canadian Pacific Railway Company we should buy it back again and make them a present of all this money. He says that eminent railway men are in favour of that proposition. I could imagine that Sir Thomas Shaughnessy would be in favour of it. I have been told—I do not know whether it it true or not —that the hon. member for Toronto (Mr. Osler) is the father of the proposition submitted by the leader of the opposition, that it was he who suggested the purchase of this line from the Canadian Pacific Railway Company. No doubt the Canadian Pacific Railway Company would be willing to sell. As the hon. member for Bothwell (Mr. Clancy) has told us, it is absolutely an unprofitable section of road. The Canadian Pacific Railway Company would have no use for it in the future at all because they have the Soo line running to Minneapolis from the North-west which they could use. They have a line, which is just as short, by the Soo line running up to Moosejaw and reaching the Pacific coast, with better grades and equipment and better fitted to do a profitable business than the line along the north shore of Lake Superior. Certainly they would like to sell the latter line. They built it with the people's money, and now they would like the people to buy it back, and $50,000 per mile is the lowest price at which it could be purchased. I believe that the hon. member for South Lanark (Hon. Mr. Haggart) said it would cost $60,000; but taking it at $50,000, that would make $27,500,000.

Then the hon. gentleman started on another equally extravagant project. His great desire appears to be to assist the Canadian Pacific Railway. He proposes to improve the grades of the Canadian Northern Railway and the Canadian Pacific Railway from Fort William and Port Arthur to Winnipeg. Those are two lines, both of which have been heavily bonused by the government, which have received enormous government subsidies; and now the hon. gentleman says we should devote a large amount of the revenues of this country to improving these lines of railway, provided they will give us the right to control the rates. Well, so far as the Canadian Northern is concerned, we have control of the rates now. But that is another item of expenditure which, I am credibly informed, will amount to $7,500,000.

Then he has a proposition to build a railway from Edmonton to the coast. He is to give aid to the Grand Trunk Pacific Railway from Winnipeg to Edmonton, and then suggests that we should build a government road from Edmonton to the coast. That road will be about 700 miles long, and will cost, at any rate, $40,000 per mile, which would make $28,000,000 more. Then he comes on with a colonization scheme. He proposes to spend on this great transcontinental scheme from Montreal to Coteau and thence to Winnipeg, $88,680,000. And although he condemns this government for making a line paralleling the Intercolonial Railway for a few miles through the province of New Brunswick, the hon. gentleman suggests that as soon as he has paid out $88,680,000 to procure this transcontinental line, he will immediately start out building a new line to parallel it from Quebec to Winnipeg and from Winnipeg to the coast, because he says eventually it will be necessary to make a through line from Quebec to the coast. And this colonization road of which he speaks certainly could not be built for less than $42,000,000. So that we have the snug little expenditure of $130,680,000, and a railway several hundred miles longer than the one proposed by the government, a railway which does not open up one acre of new territory, which is running through the older settled portions of Canada and which will not be approved by the people of this country.

Hon. gentlemen opposite seem absolutely to forget or ignore the true principle involved in this proposition. They appear to think that the sole object of the government is to secure a transcontinental line of railway. But that, as I understand it, is not the exclusive object. The object of the government is to have a railway through the new portions of Canada, which will bring to light the hidden wealth that exists there. The proposition of the hon. gentleman will cost over $130,000,000, and you will have really nothing in the way of a transcontinental railway. What would be the use of purchasing this road from the Canadian Pacific Railway Company north of Lake Superior and this line of the Canada Atlantic Railway Company from Coteau? Every pound of freight that would go from the west to the east over these lines of railway go there now. The quantity of freight coming from the North-west to the seaboard would not be increased. The government would not take any more traffic than is being taken by these private corporations. But the hon. gentleman would give running rights over these lines to other companies. Very well, let them run their trains over them. We have got the Canadian Pacific Railway and the Canada Atlantic Railway now, and I do

not believe that the haulage from the west to the east would be increased by one thousand pounds by the purchase of these railways. I can easily imagine that eminent railway men anxious to dispose of their property would approve of this proposition. I do not think it should be called a transcontinental proposition. I think a better name would be a scheme for the relief of John R. Booth and the Canadian Pacific Railway Company.

But on the proposition of the government, there is something more than the transcontinental feature, and something stronger. Hon. gentlemen opposite have argued very strongly that we are going through a territory of unknown quantity and quality, that we are going to construct a railway through a country which is of no importance. I would like to call the attention of the House to this fact, that this is not the first railway enterprise which ever proposed to traverse land of an unknown value. One has but to read the history of the transcontinental roads through the United States, and even of the Canadian Pacific Railway, to know that it has been the experience of them all to traverse lands of which little was known in the first instance, but which in the end turned out to be valuable assets.

Consider, Sir, the tremendous task that lay before the Northern Pacific Railway in traversing what was known as the bad lands of Dakota, and the other arid portions of that North American desert. Before the Northern Pacific entered that section of country that is now the state of Montana, it was supposed to be a howling wilderness, absolutely valueless in every respect, but the entry of the railway into that country opened it up and developed it, developed more particularly the copper industry of that state, and to-day the state of Montana which when that railway was projected was considered to be an absolute wilderness, is one of the richest states in the American republic. The process everywhere has been that the explorer goes into the country; he locates mining claims which he considers to be of some value, but which are absolutely valueless until the railway comes along affording transportation facilities to bring in the fuel for the transfusion of the ore and to convey the product to market. That is what we expect in our own country, particularly in the province of Ontario. The principal ore which has made the wealth of the states lying east of the Rocky mountains has been copper ore, and we know, Sir, from very positive information which we have received that throughout new Ontario, particularly on the line of this proposed Grand Trunk Pacific Railway, we have indications of copper which are exceedingly rich. We have further large areas of iron ore, such iron ore as is found on the south shore of Lake Superior, from which 25,000,000 tons is taken annually to supply the furnaces of Illinois, Ohio, Pennsylvania and New York. If this iron ore exists in Ontario, as I believe it does exist, it would almost pay us to build this Grand Trunk Pacific Railway for the single purpose of opening up those mines. We would in that way do something at any rate to bridge the gap of which the hon. leader of the opposition speaks as now existing between eastern Canada and western Canada. A great iron industry on the north shore of Lake Superior would, I assert, do something to bridge that gap, and would create a greater solidarity, a closer kinship and brotherhood between the Canadians of old Canada and the Canadians of that new Canada lying west of Lake Superior. We have this further fact that we have already established in that northern portion of Canada at Sault Ste. Marie a very considerable iron industry, an industry which at the present moment is practically in its infancy. But, Sir, I would ask what will be its position when this Grand Trunk Railway comes to be constructed? I believe, and I am informed that the Grand Trunk Pacific Railway Company will require for its purposes 100,000 tons of steel rails annually for the next five years. Canada's importation of steel rails to-day is about 150,000 tons annually, so that this new customer will add to the wealth of the iron industry 100,000 tons, making a demand for 250,000 tons of steel rails annually. These will be the product of the steel rail mills of Canada if they can be produced here as cheaply, as economically, as they can be produced in other places. The hon. member, the junior member for West Toronto (Mr. Osler) the other night suggested a very peculiar proposition. He said that under this agreement the government had absolutely given away all possible chance of protection to the iron industry of this country. He bases this statement on clause 17 of the contract, which provides :

> No addition shall be made to the cost of construction or to the capital of construction account in respect of customs duties in cases where there is direct importation of material or supplies by the government.

I was not at all surprised to hear the hon. Minister of Finance suggest to the hon. member for West Toronto that he certainly could not be serious ; a more absurd proposition I never heard emanate from any man claiming to have the ability that the hon. member for West Toronto claims to have. There was never the slightest intention of allowing steel rails or any other material which shall be consumed in the construction of this railway to come into Canada to the injury of our own producing industries.

Now, Sir, I say that we have that large industry now at the Soo, and the construction of this railway will give an impetus to that enterprise so that, possibly within a short time, the men who so courageously pioneered that industry in Canada will reap some benefit from their investments.

We have also territory further to the north, and I believe that when this Grand Trunk Pacific Railway passes through that country it will serve as a basis of operations and as a basis of exploration in that country around James' bay and Hudson's bay. We know, Sir, that three years ago certain Philadelphia gentlemen sent one of our Canadian geologists, Mr. Low, of Ottawa, up into that country with an exploring party to look for copper. They found not only copper, but they also found several islands in which there was a large quantity of iron ore. These Philadelphia gentlemen are now at work, and either this year or next year at the latest their ships will be carrying iron ore from these islands through Hudson's strait to the markets of United States. Surely what these gentlemen have done as a private enterprise, we Canadians, with the Grand Trunk Pacific Railway running through that country as a basis of operations, running through that country, can investigate every nook and cranny of that northern region and ascertain for ourselves whether we cannot devote some portion of its wealth to our own purposes instead of allowing it to be taken off to foreign countries to increase their wealth.

There is one other factor in connection with this proposition that seems to me the strongest, perhaps, of all, and that is the fact that the old Grand Trunk Railway Company is behind it. Had the government adopted the suggestion of the ex-Minister of Railways and Canals (Hon. Mr. Blair), and extended the Intercolonial to Winnipeg, we would have had a single pair of rails running from Quebec to Winnipeg without a branch line in the country. It is well known that a through-trunk line cannot possibly be made to pay without branches. What would the Canadian Pacific Railway, as a trunk line, have amounted to without branch lines as feeders, had it not gone into outside enterprises, into the shipping industry, into different industries in order to bring traffic to the main arteries. Sir, every trunk line of railway must have branches, must have feeders stretching out in all directions, to bring into the main artery the products of the surrounding country. The present Grand Trunk Railway possesses unrivalled facilities for collecting merchandise in Ontario and Quebec for despatch to the west, and for distributing the hard wheat of the west among the millers and merchants of Ontario and Quebec. It is, without doubt, of the greatest importance, to Ontario at any rate, that the government has so managed that behind the proposed transcontinental line stands the Grand Trunk Railway Company with its large mileage in Ontario and Quebec, with its splendid equipment in both of these provinces. The government might have constructed branch lines, but will any one say that the government could have constructed a system of branch lines that would have been in any way equal to the system of branch lines owned and operated by the Grand Trunk Railway Company? The Grand Trunk has spent half a century and millions of dollars in perfecting its present system and its present mileage, and that whole, huge organization for the collection and distribution of products becomes, by the government's policy, the auxiliary of our transcontinental road; whereas, had the government extended the Intercolonial, we would have had no benefit, in Ontario at any rate, from the proposition suggested by the ex-Minister of Railways and Canals for constructing a single trunk line across that territory between Quebec and Winnipeg. Hon. gentlemen opposite have suggested that that country can be opened up and explored by extending lines to the north. It might be after some years that colonization roads extending north would develop and open up that country. But who will say that by the construction of this transcontinental railway as suggested by the government, that country will not be opened up very much more quickly? The wealth of that country will be developed very much more quickly than it would be by any system of local lines running north and south. The whole system of the Grand Trunk will be brought to bear to make this transcontinental line a success, the whole organization of the Grand Trunk will be brought to bear to transmit and distribute the products of the west among the people of Ontario, and Quebec, and the maritime provinces, who desire them for their own consumption. What this railway will do for Ontario it will do for Quebec, it will do for New Brunswick. I do not know much of New Brunswick, but having made a short visit there, I feel that I know this much at any rate, that the one thing New Brunswick needs is more railway accommodation. I cannot imagine how any hon. member of this House from the province of New Brunswick can stand up and denounce the attitude of the government in constructing this line of railway through that province. Their conduct is to me inexplicable.

Mr. JOHNSTON (Cape Breton). We will see no more of it.

Mr. GERMAN. I venture to think we will see no more of it, because I believe the people down there desire this railway, they are anxious to have this railway, notwithstanding that some hon. gentlemen say it will parallel the Intercolonial. They want more railway facilities there, and I will be surprised indeed if the people down there do not heartily support the government's proposition.

Now, Sir, the whole history of railway development proves conclusively that railways are the magic wand which turns the wilderness into a land of activity and wealth, and this Grand Trunk

Pacific cannot fail to open up the country to the north of the older settled portions, and to direct population into those regions. These people will create industries, and open up what is at present a vast wilderness, and make it a valuable portion of our national domain. The ex-minister says that we should wait, hon. gentlemen opposite say we should wait. For what should we wait? For exploration? We have had explorations, the whole province of Ontario has been explored, the government of the province of Ontario has had exploring parties out for years. The gentlemen who are interested in the iron industries of Sault Ste. Marie have had exploring parties out in the province of Ontario for years. We have the reports of those gentlemen, and we know, in the province of Ontario at any rate, that we have unbounded natural wealth only waiting to be developed by the introduction of a railway such as this. We know that the province of Quebec has been explored as well as the province of Ontario. Then why should we wait? Is it merely to suit the wishes of the hon. gentlemen opposite? Sir, the people of this country will not wait. The ex-Minister of Railways and Canals said that Senator Cox would not wait. I do not know whether he will or not, but I do know that the people of Canada demand that we shall have a transcontinental railway. Therefore I do not see any necessity for delay.

If we are ever to have another transcontinental railway constructed, now is the time to begin operations, while we are on the crest of the wave of prosperity, while there is wealth in abundance, while money is plentiful and can be secured at a low rate of interest. Now is the time to take the initiative, now is the time to go ahead with the construction of this road. We are warned by some that hard times will be on us shortly, that there will be depression in the money markets of the world, that there will be depression in our financial institutions. Why, Sir, it appears to me that the construction of this Grand Trunk Pacific, and the millions of dollars that it will be necessary to expend upon it, the money being brought in from a foreign country, will go very far to turn back the tide depression that is said to be approaching, and will prevent for many long years to come financial depression in this country. I say that now is the time for us to advance.

A good deal has been said about the transportation problem. We are told that grain cannot be carried from the west to the east by railway. Well, it seems to me that he must be a bold man who will prophecy anything about the carrying trade of the future. We know not to-day what conditions will exist five years hence when this Grand Trunk Pacific is constructed. We do know this, however, that grain is being carried from the west over the Canadian Pacific Railway to St. John. We know further that the Canadian Pacific Railway Company with their usual enterprise has purchased a line of steamships for the Atlantic ocean. They must have wheat as freight, and how will they get that wheat to St. John without carrying it, at any rate for five months in the winter, by rail? They will certainly carry it by rail, and if the Canadian Pacific Railway can carry wheat by rail from Winnipeg to the coast, how much more readily can the Grand Trunk Pacific, with its easier grades and its more modern appliances? The Grand Trunk Pacific, under agreement with the government, is bound to supply shipping accommodation not only on the Pacific, but on the Atlantic ocean, they must take care by their own ships of all the freight that is hauled over their line. So they will get grain from the west, and they will give a greater measure of competition than we have existing at the present time. They will give lower rates of freight by reason of that competition, and that is exactly what the settlers in the North-west require. What they must have is low freight rates in order to compete with the agriculturists in other parts of the world. I believe that large quantities of the wheat of the North-west will be carried by rail. The Minister of Agriculture told us in his speech the other day of the large quantities of wheat that were being carried from Chicago to the Atlantic ports by rail. If wheat can be carried from Chicago to the Atlantic ports by rail, it can be carried in the same way from Winnipeg to the Atlantic ports, and this, I believe, is what this new railway will accomplish.

Now, Sir, what have we in this proposition? We have a line of railway extending from Moncton to the Pacific coast, we have the shortest transportation line from the wheat fields of the west to the markets of Europe. There is no line on the American continent which will afford as short a haul for the wheat which is grown in the north-western part of the north American continent as the Grand Trunk Pacific will afford by the route from Winnipeg to Moncton and St. John and by steamer from there to Liverpool. So that, we have the shortest transcontinental line from the west to the east. We will have a line of railway which will cost this country a trifle compared with the enormous resources of the country and compared with the amount of money which other railways have cost this country and cost other countries. We have a proposition which will be approved of by the people of this country and in contradistinction to the policy stated by the hon. leader of the opposition (Mr. Borden, Halifax). I submit that there can be no reasonable or fair comparison made between them. I will not take up the time of the House any longer. Looking, at this proposition, Sir, from every point of view, I believe it to be sound, businesslike and patriotic, the best thing that

can be done under existing circumstances for the North-west Territories, for Ontario, for Quebec, for the maritime provinces and for Canada at large. I venture to believe, moreover, that when this debate is ended, when the heat of partisanship has passed, at least some hon. gentlemen on the other side of the House will come over to our opinion in the matter and join with us in assisting the right hon. leader of the government in carrying out his wise and energetic policy to the end. I cannot believe that many intelligent Conservatives either here or elsewhere will remain long if ever attached to that monstrous absurdity the policy of the hon. leader of the opposition which will involve an enormous expenditure, an expenditure far greater than that involved in the policy proposed by the government and give us nothing in return but a system of shreds and patches of remnants and job lots which will be of no avail in opening up our country either east or west. Notwithstanding our political differences we are all Canadians proud of our name and heritage, proud of the mighty future which seems to be ours, if we but be true to ourselves. Let us then get together and when this debate is ended strengthen and uphold the great Canadian at the head of the government while he devotes the next four or five years to consummating indeed work which promises to be a fitting crown to a long, meritorious and useful career.

Mr. W. J. ROCHE (Marquette). Mr. Speaker, it is not my intention to follow very closely the hon. gentleman (Mr. German) who has just taken his seat, because a considerable portion of his speech has been based upon assertions and upon idle street rumour the employment of which I thought was rather unworthy of the hon. gentleman and which are deserving of very little consideration at the hands of this parliament. The hon. gentleman has referred to the scheme proposed by the hon. leader of the opposition (Mr. Borden, Halifax), as being fathered by the hon. member for West Toronto (Mr. Osler). The hon. gentleman knew perfectly well when he stated that, that it was absolutely without foundation and if he did not know it I can assure him now, although I do not know that it will prevent him from repeating that assertion, that the hon. member for West Toronto had just about as much to do with formulating the policy of the hon. leader of the opposition as the hon. gentleman (Mr. German) had himself. However, I will say that if he had been consulted on the question it would have been no discredit to the hon. leader of the opposition, as a gentleman of the business experience in railway and financial matters, the hon. member for West Toronto is quite competent to advise the hon. leader of the opposition and is much more competent to do so than the hon. member for Welland. Now, if I am correctly informed the hon. gentleman who has just taken his seat, when the 'Globe' newspaper outlined this scheme a few weeks ago, was one of those to take exception to it, but, evidently the party lash has been called into action since then with the result that the hon. gentleman meekly responds to it, gets up and addresses the House and praises the scheme of the government in language so extravagant as to almost make you believe that he was speaking from conscientious conviction. I believe that the hon. gentleman's second christian name is Manly, but I think he was most unmanly in the manner in which he referred to the hon. member for Bothwell (Mr. Clancy). He said that the hon. gentleman was as much out in his figures as he would be out of the House when the gerrymander got through with him. I do not think that is anything to the credit of the hon. gentleman or to the credit of the committee which dealt with that subject. However, let us hope that should the hon. gentleman be so unfortunate as to be gerrymandered out of his own constituency he will be back here as a representative of the people from another constituency, but, should it be the misfortune of the country that he should not be returned, I feel confident at any rate that it will not be because he has done anything to cause his disqualification or to prevent him from being able to exercise his franchise during the next seven years. The hon. gentleman who has just addressed the House has spoken as if this transportation commission had nothing whatever to do with transportation by rail. He said: You can search the pages of 'Hansard' in vain to find there any intention expressed or referring to the transportation commission anything except the question of transportation by water. If the hon. gentleman had been in his place in this House during the last few days he would have heard quoted on more than one occasion the Order in Council passed on the 19th May, 1903, in which the duties of this transportation commission are laid down. I am not going to read it all again but I will just quote sufficient to show that the hon. gentleman has been ignorant of the duties that were to be assigned to the transportation commission. Amongst other things the commission were to inquire into:

> The conditions with regard to the navigation of the St. Lawrence route, and, generally, any improvement, enlargements, or other matters affecting the more economical and satisfactory uses of any Canadian channel of transportation by land or water.

I think that is a sufficient answer to the hon. gentleman when he states that the commission had not referred to the question of rail communication. Then the commission proceeds:

> The minister further states that in making such investigation attention should not be confined to routes and facilities which are at present utilized, but, if necessary, new surveys should be made to determine whether any more economical and satisfactory channels of

transportation by land or water can be opened up.

The hon. gentleman will see that he is entirely in error in assuming that the transportation commissioner's duties would be exclusively devoted to the question of transportation by water. Now, Mr. Speaker, one of the reasons assigned for the construction of this line is to relieve the grain congestion in the west and to afford more adequate facilities for carrying the products of our farms in the west to Canadian seaports. As a representative of the west, I desire to engage the attention of the House for a short time and I will do so as concisely and succinctly as possible. I am sure it must be a source of gratification and pride to every true Canadian when he comes to review the history of western Canada in particular during the past quarter of a century and when he comes to compare its condition to-day with what it was at the beginning of that period to see the great strides and the marvellous development that has taken place. A country that had in years gone by been referred to as one too cold for human habitation, whose climate was considered to be antagonistic to the successful production of cereals and too far removed from the markets of the world as to render their profitable rearing impossible, has to-day become the happy home of thousands and hundreds of thousands of contented people, the products of whose labour have justly earned for themselves a world-wide reputation because of their quality and quantity.

The wonderful resources of that country have attracted these immigrants to our shores by the thousands, and they are to-day making their homes in that new and progressive land. Now, Mr. Speaker, this primarily is attributable to the foresight and sagactiy of Conservative statesmen; to men who had every confidence in their country and in its future, and who did not hesitate to grapple with these questions and carry them to a successful issue so as to bring about these wonderful results, the benefits of which we are now reaping. Many years ago a former Governor General of Canada referred to western Canada as being 'the great lone land,' coupling with it the expression, that it was a country of illimitable possibilities. No longer can that term be properly applied to the Canadian west—the Indian and the Buffalo having long since given place to the white man and his accompaniments of civilization. Farming operations have long since passed their experimental stage; the 100,000,000 bushels of grain grown by our farmers last year is a sufficient guarantee that the future prosperity of that country is assured. Possessing a road as we do; a national transcontinental highway that has been the pioneer in bringing about this development, that unites us with eastern Canada, as well as affords us an outlet at the head of lake navigation; we are no longer, as we were in the early history of the country, depending upon American roads for transportation. Therefore, in discussing this question we should not lose sight of the fact that the western Canada of to-day is not the western Canada of twenty-five years ago; and that railway construction to-day is not the hazardous undertaking it was at that time. A great and a growing trade has developed largely through the enterprise of those who had sufficient courage to invest their capital to open up that country, and to bring about that development which now demands more accommodation and greater facilities to meet the requirements of our western people. We should not be slow in expressing our appreciation of those who in that day were optimistic, but who nevertheless builded even better than they knew. To-day we have the Canadian Pacific Railway as a trunk line with its branches extending particularly in Manitoba, as a net work, and which has rendered possible the profitable raising of grain. We have as well, the Canadian Northern Railway system tapping these districts not touched by the Canadian Pacific Railway and affording competition at competitive points. Each of these roads has an outlet at the head of lake navigation. Notwithstanding this, during the past two years those roads have been taxed to their utmost capacity in their efforts to cope with the immense traffic of the country. I am free to admit that that is largely and mainly due to the fact that there was a great scarcity of rolling stock and motive power. The cry was 'more cars' from weeks end to weeks end during the period of congestion. This congestion was in turn brought about because the firms which supplied the rolling stock were so overtaxed—not only by orders from Canadian railways but from American railways, and from railways in every country in the world by reason of the immense prosperity which has visited almost every country in the universe of recent years—that they had been unable to fill their orders for often one or two years after the receipt of the same. Owing to the large influx of population to this western country in recent years (and which we hope will continue) and owing to the constantly increasing acreage brought into cultivation year after year, more facilities will be required in the immediate future in order to cope with the growing trade of that country.

A proposition has been submitted to this House by the Prime Minister ostensibly for the purpose of meeting this condition, as well as—so he states—to make us independent of the American system of transportation from the use of which he says we may be prohibited by the abrogation of the bonding privilege. Dealing first with the former of these reasons, the vital questions that present themselves are: Will this road, even after its construction, afford the necessary

relief; will it reach the congested districts; will it be able to handle any great quantity of grain over its all-rail system during the close of navigation on the great lakes? Will it, because of its location, be able to compete successfully with other lines by rail and lake; will it in short be the best means that can be devised to accomplish the purpose for which it is designed? If, Sir, these questions could be truthfully answered in the affirmative, then notwithstanding the immense outlay that will be caused by the construction and completion of the road; notwithstanding the immense liability incurred; this outlay and this liability will not have been incurred in vain. But, on the other hand, if it can be successfully demonstrated to members of this House that even after its completion this railroad will not fill the bill, will not meet the requirements of the people; if it is found that it is not the best means that can be devised; then, Sir, it will not only be a wilful waste of public money, but if it is persisted in after its defects have been pointed out to its promoters, they will deserve and no doubt will receive, just condemnation at the hands of an indignant electorate. So far as the question of the abrogation of the bonding privilege is concerned, I think it is scarcely deserving of serious consideration from the members of this House. The argument has been so effectively disposed of that scarcely a member on the other side discusses the question now at all. They have dropped it so suddenly, that it is evident they themselves have recognized that it was a mere bogey set up by the Prime Minister to coerce the people of Canada into this large expenditure, when there was absolutely no fear on that score whatever. The Prime Minister was driven to a considerable extremity when he had to go back fifteen years to bolster up his opinion by quoting from a message delivered to congress by the then President of the United States, Grover Cleveland, wherein he suggested the abrogation of the bonding privilege—a suggestion by the way which has never been acted upon up to the present date, and for the good reason that its adoption would react more upon American railways than on Canadian railways. Nor was the Prime Minister more fortunate in his quotation from Mr. Andrew Carnegie, a gentleman who of very recent date has been misrepresenting Canada and everything Canadian. Why, the Prime Minister himself had to take exception to the letter from which he quoted, in which Mr. Carnegie stated that our harbours and our ports were ice-bound during five months in the year. But still the right hon. gentleman used Mr. Carnegie as an authority to bolster up his views on this question of the bonding privilege. What would become of the great traffic that is passing from Chicago and the western cities over the Grand Trunk Railway system through Canadian territory to Portland, Maine, if the bonding privilege were abrogated? What would become of the Canadian division of the Michigan Central owned and operated by Americans—a double track system nearly all the way on which an immense traffic is being carried from the eastern to the western states and vice versa? What would become of other systems of railway traversing our country in which millions of dollars of American capital are invested, should this bonding privilege be abrogated by the American government? Sir, the bonding privilege is in no more danger to-day of being abrogated than it has been at any time during these last fifteen years, or than it will be during the next fifteen years, and for the very good reasons that if it were abrogated the greater injury would be inflicted on the American people themselves. At any rate, suppose that the privilege were abrogated, the Prime Minister would leave the impression upon this House and upon the country that we would be absolutely at the mercy of the American people, when as a matter of fact we would be just as well off now as we will be after the completion of this government transcontinental road.

What do we find to-day? We find that we can get on a train at the Pacific ocean and go through to the Atlantic and vice versa, without traversing one single foot of American territory. It is therefore that I say that this is a mere bogey put up by the Prime Minister in order to vent spurious convictions on his own part, and to inoculate other people with similar convictions, if he were successful in his attempt.
